"I am pleased to announce the NESC and Aquarion combination and look forward to working with Aquarion's leadership team on a smooth transition for our customers and employees," said Don Vaughan, NESC Chairman. He also noted, "Aquarion is well-positioned to deliver the reliable high-quality water service that our customers expect." NESC President, Nicholas LaChance, added "The stockholders, customers and employees of NESC will benefit from this deal with Aquarion. We view this transaction with Aquarion as a win for all of our stakeholders, and we look forward to working closely with their team."

The completion of the transaction will require approval by the stockholders of NESC, and the NESC Board of Directors has resolved to recommend the adoption of the merger agreement by the stockholders. The transaction is also subject to the approval of regulatory authorities, including the Connecticut Public Utilities Regulatory Authority, Massachusetts Department of Public Utilities, and New Hampshire Public Utilities Commission, and satisfaction of several other conditions. The parties plan to file all required regulatory applications over the coming months with an anticipated closing by the end of 2021.

***Advisors and Counsel***

Ropes & Gray LLP served as counsel to Aquarion Company and Eversource Energy in the transaction. Boenning & Scattergood, Inc. provided a fairness opinion to the Board of Directors of New England Service Company. Cranmore, FitzGerald and Meaney served as counsel to New England Service Company.

***About Aquarion Water Company:***

Aquarion Water Company is the public water supply company for more than 625,000 people in 52 cities and towns throughout Connecticut, as well as serving customers in Massachusetts and New Hampshire. It is the largest investor-owned water utility in New England and among the seven largest in the U.S. Based in Bridgeport, CT, Aquarion has been in the public water supply business since 1857. Across its operations, Aquarion strives to act as a responsible steward of the environment and to assist the communities it serves in promoting sustainable practices. Aquarion Company is a wholly-owned subsidiary of Eversource.

*This news release includes statements concerning Aquarion and Aquarion Water Company's expectations, beliefs, plans, objectives, goals, strategies, assumptions of future events, future financial performance or growth and other statements that are not historical facts, including statements regarding the planned merger with New England Service Company, the timing of such transaction and benefits anticipated from such transaction. These statements are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Generally, readers can identify these forward-looking statements through the use of words or phrases such as "will," "estimate," "expect," "anticipate," "intend," "plan," "project," "believe," "forecast," "should," "could" and other similar expressions. Forward-looking statements involve risks and uncertainties that may cause actual results or outcomes to differ materially from those included in the forward-looking statements. Factors that may cause actual results to differ materially from those included in the forward-looking statements include, but are not limited to: the transaction is subject to conditions to closing, including regulatory approvals, that may not be satisfied; it may take longer than anticipated to consummate the transaction; we may not realize the benefits we anticipate from the transaction; unforeseen liabilities; risks relating to integration of the acquired business; and other presently unknown or unforeseen factors.*

*Other risk factors are detailed in Eversource Energy's reports filed with the Securities and Exchange Commission (SEC) and updated as necessary, and are available on Eversource Energy's website at www.eversource.com and on the SEC's website at www.sec.gov. All such factors are difficult to predict and contain uncertainties that may materially affect Aquarion or Aquarion Water Company's actual results, many of which are beyond our control. You should not place undue reliance on the forward-looking statements; each speaks only as of the date on which such statement is made, except as required by federal securities laws, and Aquarion Water Company undertakes no obligation to update any forward-looking statement or statements to reflect events or circumstances after the date on which such statement is made or to reflect the occurrence of unanticipated events.*

***Additional Information***

*This communication does not constitute an offer to buy or solicitation of any offer to sell securities. This communication relates to a proposed business combination transaction between Aquarion Company and New England Service Company. In connection with the proposed business combination, Eversource Energy will file a registration statement with the SEC. This communication is not a substitute for any registration statement, prospectus/proxy statement or other document Eversource Energy, Aquarion Company and/or New England Service Company may file with the SEC in connection with the proposed transaction. INVESTORS AND SECURITY HOLDERS OF NEW ENGLAND SERVICE COMPANY ARE URGED TO READ CAREFULLY THE REGISTRATION STATEMENT, PROSPECTUS, PROXY STATEMENT AND OTHER DOCUMENTS FILED WITH THE SEC WHEN THEY BECOME AVAILABLE BECAUSE THEY WILL CONTAIN IMPORTANT INFORMATION ABOUT EVERSOURCE ENERGY, AQUARION COMPANY, NEW ENGLAND SERVICE COMPANY AND THE PROPOSED TRANSACTION. Investors and security holders may obtain free copies of these documents (when they are available) and other related documents filed with the SEC at the SEC's web site at www.sec.gov or by directing a request to Eversource's Investor Relations department at (860) 665-5154 or by email to jeffrey.kotkin@eversource.com.*

***Certain Information Regarding Participants***

*This filing may be deemed solicitation material in respect of the proposed business combination transaction between Aquarion Company and New England Service Company. The directors, trustees, executive officers and certain other members of management and employees of Eversource Energy, Aquarion Company and New England Service Company may be deemed "participants" in the solicitation of proxies from stockholders of New England Service Company in favor of the proposed merger. You can find information about Eversource's trustees and executive officers in Eversource's annual report on Form 10-K for the year ended December 31, 2020, which was filed with the SEC on February 17, 2021 and its proxy statement for its 2021 annual meeting filed with the SEC on March 26, 2021. Information regarding the persons who may, under the rules of the SEC, be considered participants in the solicitation of the stockholders of New England Service Company in connection with the proposed merger will be set forth in the registration statement, prospectus/proxy statement or other documents filed with the SEC if any when they become available. You may obtain these documents (when they become available) free of charge at the SEC's web site at www.sec.gov and from Investor Relations at Eversource as described above.*

**VALLEY WATER SYSTEMS, INC.**

Notes to Financial Statements
Years Ended December 31, 2020 and 2019

## 1. Description of the Company

Valley Water Systems, Inc. (the "Company"), a wholly owned subsidiary of New England Service Company ("NESC"), is a public utility distributing water to approximately 6,760 customers in the towns of Plainville, Farmington, and Southington, Connecticut area. As a public utility operating in Connecticut, the Company functions under rules and regulations prescribed by the State of Connecticut Public Utilities Regulatory Authority ("PURA").

## 2. Summary of Significant Accounting Policies

### *Basis of Presentation*

The Company maintains its accounts in accordance with the PURA Uniform System of Accounts as prescribed for Water Utilities Class A. The Company prepares its financial statements in accordance with accounting principles generally accepted in the United States of America which include the provisions of the Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") Topic 980, *Regulated Operations* ("ASC 980"). Under ASC 980, regulated companies defer costs and credits on the balance sheet as regulatory assets and liabilities when it is probable that those costs and credits will be recognized in the rate setting process in a period different from the period in which they would have been reflected in income by an unregulated company. These deferred regulatory assets and liabilities are then reflected in the income statement in the period in which the same amounts are reflected in rates charged for service.

### *Use of Estimates*

The preparation of financial statements require management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities, and the reported revenues and expenses. Accordingly, actual results could differ from these estimates.

### *Cash and Cash Equivalents*

Cash and cash equivalents includes cash balances held in bank accounts and highly liquid debt instruments with maturities of three months or less at the time of purchase.

From time to time, the Company had on deposit at financial institutions cash and cash equivalents which exceed current federal deposit insurance limitations. The Company had not experienced any losses in such accounts to date and believes it is not exposed to any significant credit risk on cash and cash equivalents.

### *Accounts Receivable*

Accounts receivable are stated at the amount management expects to collect from outstanding balances. The Company continuously monitors the creditworthiness of customers and establishes, when necessary, an allowance for amounts that may become uncollectible in the future based on current economic trends, historical payment and bad debt write-off experience.

subsidiary water companies, serving approximately 200,000 customers in 52 towns and cities with a population of approximately 674,000 throughout Connecticut's seven counties.[2] A map showing AWC-CT's current service area is attached to the Joint Application as Exhibit I. AWC-CT has provided water and water services to Connecticut residents and customers continuously since 1857. AWC-CT is well known to PURA and well respected by the water industry in Connecticut, and nationally. AWC-CT had over $1.68 billion of utility plant assets as of December 31, 2020 and operating revenues of $189.6 million in 2020.

**Q. Please describe New England Service Company.**

**A.** NESC is a Connecticut stock corporation. NESC was formed in 1996 as a holding company to operate in both regulated and unregulated water utility markets. NESC has one regulated water distribution operating subsidiary in Connecticut. VWS, a utility established in 1884 as the Plainville Water Company, delivers water to over 6,800 customers or a population of approximately 18,000 in Plainville, Southington, and Farmington, Connecticut. A map showing VWS' current service area is attached to the Joint Application as Exhibit I.

In addition to owning VWS, NESC is also the sole stockholder of Colonial Water Company, a utility that provides water to about 1,530 customers in Dover and Plymouth, Massachusetts; Mountain Water Systems, a utility that provides water to about 490 customers in Sheffield, Massachusetts; and Abenaki Water Company, a combination of

[2] AWC-CT has acquired and integrated 16 new water systems since its last general rate proceeding in September 2013 via the acquisitions of the assets of the Indian Fields, West Service Corp. (2 systems), Bedrock, East Derby, Litchfield Hills, Southeastern CT Water Authority Lantern Hill Division, Hickory Hills Corporation, Arlington Acres, Pleasure Valley, Hillside Water Corporation, Town of Marlborough, and Town of New Fairfield systems, in addition to the transfer of the Laurel Ridge, West Shore Owners Association and Interlaken Water System assets.

**The Water Utility Industry consists of seven companies that provide water services to residential, commercial, and industrial customers. The group is now ranked 46th for relative year-ahead performance, which is near the middle of the pack of the 97 industries followed by *Value Line*.**

**Many investors are drawn to the water utility group for its well-defined earnings and dividend growth prospects. The stocks also have low Beta coefficients.**

**Every company here is in the midst of a large construction program. This is due to the nation's water infrastructure being in poor shape. Capital budgets should remain meaningful for years to come, which will require external financing.**

**The role of regulators cannot be overstated. Fortunately, relations between the water companies and authorities has been constructive.**

**Stocks in the Water Utility Industry do not come cheap. Indeed, they trade at high price/ earnings multiples. Scarcity is one of the reasons. The market capitalization of the entire industry is small compared to others, on a relative basis.**

**INDUSTRY TIMELINESS: 46 (of 97)**

### COVID-19 Update

Since the pandemic began, water utilities' earnings and revenues have been not been affected. Demand for water is very inelastic when it is priced reasonably, as is the case in most of the country. The biggest change was just the cessation of shutoffs for nonpayment. This has never been a major issue in this industry, as water is essential and is often one of the first bill paid by consumers. Going forward, even if more deviant types of the coronavirus emerge, the impact on these companies' bottom line ought to be marginal.

### Fragmented Industry

An overwhelming majority of water districts in the United States are small and operated by local municipalities or states. Indeed, there are easily more than 50,000 separate water entities operating throughout the country. As a result, it is a very inefficient market. *American Water Works* has been the most active acquirer of these smaller districts. With the average age of a typical domestic pipeline being well over 50 years (more below), many operators do not have the needed funds to modernize their assets. We expect consolidation to remain a trend.

### Aging Infrastructure

For decades, there was too little investment made in replacing pipes, valves and other assets associated with the collection and distribution of water. Customers bills were also kept artificially low. This caused the water infrastructure to become old and badly in need of repair. In addition, as the nation's population grew, water usage increased significantly. As water supplies came under more pressure, especially in the Southwest, the amount of water lost while being transported because of broken pipes took on more importance.

### Large Building Programs

Investment in infrastructure has increased significantly over the past decade, as the industry is now trying to upgrade its water systems. Every company in this group is now undertaking a strategy of spending heavily to address the problem. To finance the new construction, water bills have had to be raised. Regions of the country where water is not plentiful even had to raise the price to consumers to reduce excess consumption. In one of the spending bills now before Congress, the federal government would allocate $111 billion toward helping the water industry. The aid would be meant mostly for the many different water authorities that are owned by cities and states, however.

### Financial Strength And Regulation

These construction projects forced utilities to issue debt to finance a healthy part of the expenditures. Thus, balance sheets in the group, are just in average condition. We expect them to become slightly more leveraged in the future, as borrowing increases.

As we stated earlier, the role played by state water authorities in the process is critical. They establish the rate of return that water utilities can earn on their equity. Should regulation be too restrictive, utilities will be less inclined to spend money. Regulators have to find that fine line between where water customers aren't being overcharged, but their monthly bill are high enough so that these companies can make a profit. Unlike gas and electric utilities, where there can discord between the parties involved, the water industry has generally been harmonious. This has enabled large sums to be spent by companies to better maintain and refurbish their existing assets.

### Conclusion

In the Water Utility Industry, *California Water* is the only stock that is ranked favorably for year-ahead price performance. Investors typically have to pay a premium to own these stocks. Also, because the stocks in the group have performed so well over the past five years, almost all of them have well-below average total return prospects over the pull to 2024-2026. As always, we recommend that subscribers read each individual report before making commitments.

**BUSINESS:** American States Water Co. operates as a holding company. Through its principal subsidiary, Golden State Water Co., it supplies water to 261,976 customers in 10 California counties. Service areas include the metropolitan areas of Los Angeles and Orange Counties. The company also provides electricity to 24,545 customers in Big Bear Lake and San Bernardino Cnty. Provides water & wastewater services to U.S. military bases through its ASUS subsidiary. Sold Chaparral City Wtr. of AZ. (6/11). Employs 841. BlackRock, Inc. owns 16.4% of out. shares; Vanguard, 12.0%; off. & dir., 1.0% (4/21 Proxy). Chairman: Lloyd Ross. Pres. & CEO: Robert Sprowls. Inc: CA. Address: 630 East Foothill Blvd., San Dimas, CA 91773. Tel.: 909-394-3600. Internet: www.aswater.com.

**American States Water has raised its dividend.** In the September interim, the quarterly share payout was increased from $0.335 to $0.365. This 9% hike was well above the average growth rate compared to the other water utilities that make up this group.

**The company is on track for a decent showing in 2021.** Thanks to a better-than-expected first half, we think that earnings per share could well rise 5% this year. This is not bad, considering that utilities often do not perform well when operating in the final year of a three-year-old rate case.

**Earnings from 2022 will be heavily influenced by a pending regulatory case.** In California, utilities petition state authorities for permission to charge higher fees triennially. American States filed for rate relief for the 2022 to 2024 period several years ago, and a ruling by the California Public Utility Commission should be made early next year. (Any rate hike would be retroactive to January 1st.) Management has been in discussions, and it's possible that a settlement can be reached earlier. In any case, the decision on the previous request for higher rates was relatively constructive.

**Inflation may stall some of the expected growth in the nonregulated segment.** Through its ASUS subsidiary, the company provides water services to military installations in the United States. The armed forces are in the midst of privatizing these operations, and ASUS has done well winning its fair share of the contracts. In the second quarter, shares earnings were off here about 8% due to a spike in the price of commodities and other costs. Unlike its water operations, profitability in this business is not controlled. Hence, there is greater risk, as well as a chance to make more income from investments. Should inflation not be transitory, it would not be helpful because the company operates on 50-year contracts.

**Theses shares are only expected to perform in line with the broader market averages in the year ahead.** Looking further out to 2024-2026, AWR total return prospects are well below the *Value Line* median, which is the case for most stocks in this industry.

**BUSINESS:** American Water Works Company, Inc. is the largest investor-owned water and wastewater utility in the U.S., providing services to approximately 15 million people in 46 states. Nonregulated business assists municipalities and military bases with the maintenance and upkeep as well. Regulated operations made up 86% of 2020 revenues. New Jersey is its largest market accounting for 24.5% of regulated revenues; Pennsylvania, 22.5%; Missouri, 10.6%. Has 6,800 employees. The Vanguard Grp, owns 11.7% of outstanding shares; BlackRock, Inc., 8.1%; officers & directors, less than 1.0%. (3/21 Proxy). President & CEO: Susan N. Story. Chairman: George MacKenzie. Address: 1 Water Street, Camden, NJ 08102. Tel.: 856-346-8200. Internet: www.amwater.com.

**American Water Works' earning prospects are among the best in the water utility industry.** The company got off to a strong start in 2021, as share earnings were up 13% in the first half. For the full year, our share-net estimate remains at $4.25, which would represent a 9% gain over 2020's record showing. We think this will be followed in 2022 by an 8% increase to $4.60 a share. What's more, the bottom line ought to grow 7%-10% through mid-decade.

**The company's strategy is very straightforward.** By far, it is the largest publicly traded water utility in the United States. Thus, it has the financial wherewithal and widespread distribution to better take advantage of a very inefficient fractured industry. American Water is able to buy a number of small municipally owned water districts each year and absorb them into its operations. Moreover, because there are such redundancies in this group, substantial cost savings are able to be realized. American is also able to expand its plant base, upon which is earns a return.

**The building budget is massive.** The country's water pipelines, valves, and treatment plants are outdated and in urgent need of replacement and repair. With it sprawling operations, American Water plans on spending almost $2 billion this year alone. The level of annual outlays ought to remain elevated, as the company believes that once this decade is completed, its capital expenditures budget will have been between $22 billion-$25 billion.

**Regulatory treatment remains a key factor in the company's performance.** As a regulated utility, American Water and its subsidiaries must file rate cases in the states where they operate. In the past, most authorities have had a constructive relationship with water companies because there is general agreement that underinvestment in the past was the reason for the poor state of the country's water infrastructure. Should the relationship become more adversarial, earnings growth would be hurt.

**These shares do not stand out at this juncture.** In addition to a 3 (Average) Timeliness rank, AWK's long-term total return potential is subpar.

*James A. Flood* *October 8, 2021*

(A) Diluted earnings. Excludes nonrecur. losses: '08, $4.62; '09, $2.63; '11, $0.07. Disc. oper.: '06, ($0.04); '11, $0.03; '12, ($0.10); '13,($0.01). GAAP used as of 2014. **California Water's second-quarter results markedly exceeded expectations.** The stronger-than-anticipated showing can be largely attributed to the company's December, 2020 general rate case approval (as noted in our previous report). Specifically, cumulative rate increases and the continuation of various regulatory benefits helped bolster California Water's June-period operating results. Revenues of $213 million improved 21% year over year, easily outpacing our $200 million projection. Likewise, earnings of $0.75 per share smashed consensus estimates, jumping more than six times the previous-year tally. Positives from the abovementioned rate case vastly outweighed a modest uptick in administrative expenses. All told, we are adding $15 million and $0.35 to our current-year top- and bottom-line estimates, to $815 million and $2.05 per share, respectively.

**The West Coast utility recently received the nod to acquire the water and wastewater systems of Preserve community in Millerton.** The planned community consists of 1,400 mixed-use units, including residential, commercial, parks, and offices. California Water will begin operating and servicing the community upon official occupancy, which is slated for early next year.

**Business prospects are bright 3- to 5-years out.** First, economic conditions are apt to improve over the coming years, which ought to support residential and commercial water consumption. Second, the ball has just started rolling on the company's strategic capital investment initiatives (service pipeline and wastewater treatment facility upgrades). To this point, further rate case filings are likely to follow, suggesting higher rates for customers will eventually be on tap as well.

**Momentum investors are best suited here, at the moment.** California Water is favorably ranked (Timeliness: 2) for relative year-ahead price performance. But at the recent quotation, the stock does not particularly stand out for the pull to mid-decade, as total return potential is below the *Value Line* median. In sum, patient subscribers looking to add a noncyclical utility to their portfolios should probably turn the page, for now.

*Nicholas P. Patrikis* *October 8, 2021*

**BUSINESS:** Essential Utilities, Inc. became the new name for Aqua America on Feb. 3, 2020, to reflect the acquisition of Peoples, a natural gas utility, which occurred in 3/20. In 2020, Aqua Amer. provided water and wastewater services to about 5 million people in PA, OH, TX, IL, NC, NJ, IN, VA NS WS. Employed 3,180 Acquired AquaSource, 7/13; North Maine Utilities, 7/15; and others. Water respn. for 65% of revenues in 2020; residential, 39%; commercial, 10%; industrial, wastewater & other, 16%. Gas 35%. Off. & dir. own less than 1% of the common stock; Vanguard, 10.1%; BlackRock, 10.0%; Canadian Pension Plan about 8.8% (5/21 proxy). Pres. & CEO: Christopher Franklin. Inc.: PA Addr.: 762 W Lancaster Ave., Bryn Mawr, PA 19010. Tel.: 610-525-1400. Int.: www.essential.co.

**Shares of Essential Water have not performed well of late.** Since our July report, the price of the stock is up less than 1%. This compares unfavorably to the equities of other water utilities and the S&P 500 Index. Indeed, WTRG has trailed all but one equity in the group.

**A major rate case has been filed in Pennsylvania.** In late August, the company petitioned state regulators to recover the $1.1 billion (an average of $2,235 per customer), it has invested since its last filing. These funds were spent on replacing more than 400 miles of pipes and upgrading treatment plants. Historically, the regulatory commission has reached constructive decisions, as it's a recognized fact that like most other members in the industry, Essential's water infrastructure is badly in need of repair. If the full request is permitted, the average residential monthly bill would rise from $55.51 to $73.95. So, even though previous rulings have been positive, regulatory commissions are under pressure to keep rates low. Due to the necessity of these outlays, and knowing that the company must continue making large expenditures, we think state authorities will be fair.

**Second-quarter earnings were better than expected.** The June period was the first three-month income report in which Essential's numbers could be compared on an apple-to-apple basis to the previous year. (Recall that the company is the result of a large acquisition of the natural gas utility Peoples in mid-March of 2020.) Share net of $0.32 was 23% higher than we had forecast. This came despite weak demand for gas resulting from warmer-than-anticipated temperatures. We now expect the company to post earnings per share of $1.70, slightly above management's $1.64 to $1.69 range. In 2022, a more moderate advance of about 6% seems to be in the cards.

**This neutrally ranked stock does not stand out for near- or long-term total return potential.** However, its prospects are still better than most in the industry, and its dividend was recently raised a healthy 7%. Investors should also bear in mind that WTRG is no longer a pure water utility play, as its gas operations are now substantial.

**BUSINESS:** Middlesex Water Company engages in the ownership and operation of regulated water utility systems in New Jersey, Delaware, and Pennsylvania. It also operates water and wastewater systems under contract on behalf of municipal and private clients in NJ and DE. Its Middlesex System provides water services to 61,000 retail customers, primarily in Middlesex County, New Jersey. In 2020, the Middlesex System accounted for 59% of operating revenues. At 12/31/20, the company had 348 employees. Incorporated: NJ. President, CEO, and Chairman: Dennis W. Doll. Officers & directors own 2.0% of the com. stock; BlackRock Inst. Trust Co., 7.8% (4/21 proxy). Add.: 485 C Route 1 South, Suite 400, Iselin, NJ 08830. Tel.: 732-634-1500. Int.: www.middlesexwater.com.

**Shares of Middlesex Water established a fresh all-time high price during the month of September.** In fact, since our previous report, the stock has surged more than 20% in value and, year to date, has logged about a 30% gain. Underpinning recent investor support for the water utility, in our view, is a combination of strong second-quarter financial results (discussed below) and a broadly increasing adoption of a flight-to-safety investment approach.

**We are lifting our 2021 bottom-line estimate.** For the June period, Middlesex delivered revenues of $36.7 million, which was roughly on par with consensus expectations. The figure improved about 4% year over year, helped along by higher water consumption and an expanding customer base in its Delaware systems. Meanwhile, net income jumped 13% from the previous-year tally, to $0.62 per share. On balance, we are adding $0.10 to our current-year forecast, to $2.30 per share.

**The company has agreed to an asset divestment.** Specifically, Middlesex inked a deal to sell its wholly-owned wastewater subsidiary Tidewater Environmental Services to Artesian Wastewater Management for $6.4 million in cash. The unit services approximately 3,600 customers in the Delaware area. The transaction, which is slated for completion within the fourth quarter, is subject to approval by the Delaware Public Service Commission and other customary closing conditions.

**Business prospects three to five years out are solid.** Our outlook for modest annual revenue and earnings expansion has not wavered. Middlesex's operations, which are largely uncorrelated to economic conditions, ought to perform decently over the pull to mid-decade.

**We think the recently elevated quotation presents an opportunity for current shareholders to book some profits.** Good-quality Middlesex shares are merely an Average (3) selection for relative year-ahead price performance. Moreover, the stock is trading at an extremely lofty price-to-earnings multiple. Patient subscribers should turn the page, too, as nearly all of the growth we envision out to 2024-2026 appears to already be baked into the recent price.

**BUSINESS:** SJW Group engages in the production, purchase, storage, purification, distribution, and retail sale of water. It provides water service to approximately 231,000 connections with a total population of roughly one million people in the San Jose area and 16,000 connections that reach about 49,000 residents in the region between San Antonio and Austin, Texas. The company merged with Connecticut Water (10/19) which provides service to approx. 138,000 connections with a total population of 450,000 people. Has 361 employees. Officers and directors own 8.3% of outstanding shares (3/21 proxy). Chairman & CEO: Eric Thornburg. Incorporated: California. Address: 110 West Taylor Street, San Jose, CA 95110. Telephone: (408) 279-7800. Internet: www.sjwater.com.

**SJW Group reported better-than-expected second-quarter financial results.** The East and West coasts water utility generated revenues of $152 million in the June period. The figure came in marginally above our $150 million call, thanks to cumulative water rate increases and higher customer usage. More impressively, SJW posted net income of $0.69 per share, matching the previous-year tally, while handily topping consensus estimates. Operating margins are indeed on the mend, but it is worth noting that roughly $0.09 can be attributed to a one-time gain from holdback funds received from the sale of equity interests in 2017.

**We are upping our current-year top- and bottom-line projections.** Our 2021 revenue estimate is moving higher by $5 million, to $590 million, while our earnings-per-share forecast is being raised by $0.15, to $2.20. Over the back half of this year, SJW's operations stand to benefit from a further rebound in economic activity, resulting in increased water consumption across both residential and commercial arenas.

**Share-net growth ought to accelerate next year and beyond.** For 2022, we look for earnings to expand 20%, year over year, to $2.65 per share. Moreover, the company has filed a relatively new rate case with the California Public Utilities Commission seeking approval to boost revenues up to $90 million, a $435 million capital budget to invest in water delivery infrastructure and upgrades, along with nearly $20 million in memorandum account recovery. All in all, the filing, which would be effective through 2024, should allow SJW to periodically increase customer rates over the next few years, thereby supporting top- and bottom-line growth.

**The stock has fallen out of favor on our Timeliness ranking scale.** Shares of SJW have been downgraded one notch, to 4 (Below Average) and, thus, are slated to lag the broader market over the coming six to 12 months. Moreover, at recent levels, total return potential over the 2024-2026 time frame is unenticing. Although long-term business prospects are favorable, we advise interested subscribers to remain on the sidelines until a better entry point is available.

*Nicholas P. Patrikis* *October 8, 2021*

**BUSINESS:** The York Water Company is the oldest investor-owned regulated water utility in the United States. It has operated continuously since 1816. As of December 31, 2020, the company's average daily availability was 35.6 million gallons and its service territory had an estimated population of 202,000. Has more than 72,600 customers. Residential customers accounted for 66% of 2020 revenues; commercial and industrial (26%); other (8%). It also provides sewer billing services. Incorporated: PA. York had 108 full-time employees at 12/31/20. President/Chief Executive Officer: J.T. Hand. Officers/directors own 1.3% of the common stock (3/21 proxy). Address: 130 East Market Street, York, Pennsylvania 17401. Telephone: (717) 845-3601. Internet: www.yorkwater.com.

**York Water delivered good share-profit growth in the June interim.** As expected, the regulated water utility posted net income of $0.35 per share for the second quarter, representing sequential and annual improvements of 25% and 9%, respectively. The bottom-line advance was aided partly by lower income taxes stemming from wider deductions under IRS tangible property rules. Meanwhile, revenues of $13.8 million rose nicely compared to the previous-year tally, thanks to a growing customer base and increased billings/collections. For this year, revenues of $55 million (up $0.5 million from our previous estimate) are likely on tap. At the same time, we are leaving unchanged our 2021 EPS call, at $1.35. Looking at 2022, our model suggests that revenues will improve by $2 million, to $57 million, and earnings ought to jump a nickel, to $1.40 per share.

**The stock price has bounced around over the past three months.** In fact, the equity was trading near all-time high territory in early September before sliding back into the mid-$40-per-share vicinity. Year to date, the stock is largely flat, despite some uncharacteristically choppy price movements.

**Long term, we think York Water is well positioned for sustainable, albeit modest top- and bottom-line growth.** Our relatively rosy thesis has a few legs to stand on, including prospects for a healthier economic backdrop (higher water consumption), further expansion in its customer base, as well as the likelihood for additional rate hikes (granted periodically by state regulators to help York replenish and maintain a strong capital spending budget). To this point, robust investment in clean water infrastructure and delivery and pumping system upgrades is probably in the cards.

**But investment appeal is limited at this juncture.** Based on our Timeliness ranking scale, shares of York Water are merely an Average (3) selection for relative year-ahead price performance. In addition, at the recent quotation, total return potential over the three- to five-year pull is nothing to write home about. Overall, we recommend subscribers turn the page, for now.

*Nicholas P. Patrikis* *October 8, 2021*

(A) Diluted earnings. Next earnings report due early November.
(B) Dividends historically paid in late February, June, September, and December.
(C) In millions, adjusted for split.

Mr. Thomas F. Rafferty
Director, Business Development
Aqua Pennsylvania, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010

Dear Mr. Rafferty,

ScottMadden, Inc. ("ScottMadden") is pleased to provide Aqua Pennsylvania, Inc. with this engagement letter and our proposed fees for a PA Act 12 valuation study and associated valuation report for the City of Beaver Falls Wastewater System ("Beaver Falls") to be completed within the 90-day Act 12 requirements. The study will establish a fair value for the operations of Beaver Falls in accordance with Public Utility Code (66 PA.C.S.) - Valuation of Acquired Water and Wastewater Systems for Ratemaking Purposes.

ScottMadden is highly qualified and strongly positioned to provide the requested services in a thorough, efficient, and cost effective manner. The remainder of this letter is intended to describe our proposed approach to this engagement, and summarize our proposed commercial terms.

Please be assured we will work with you to deliver the results you require. If you have any questions regarding this engagement letter, or require any additional information or clarification, I may be reached at ddascendis@scottmadden.com or 609.680.8695.

Sincerely,

Dylan W. D'Ascendis

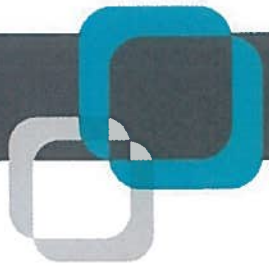
MANAGEMENT CONSULTANTS



## SCOPE OF WORK

## VALUATION STUDY AND ASSOCIATED VALUATION REPORTS

### Description of Analysis, Work Plan, and Schedule

ScottMadden, Inc. ("ScottMadden") is pleased to provide Aqua America, Inc. with this engagement letter for a PA Act 12 valuation study and associated valuation report for the City of Beaver Falls Wastewater System ("Beaver Falls"). The overall requirements of this assignment fall into four general categories: (1) planning and administration; (2) data collection and verification; (3) analysis and financial modeling; and (4) report generation. These general categories are discussed in the context of our proposed approach, which consists of the following tasks.

#### Task 1: Kick Off Meeting

The purpose of this task is to begin the project planning and administration as well as better understand the goals of Beaver Falls regarding this valuation study. We plan to accomplish this task by holding a kickoff meeting. Specific activities related to this task include:

- Gathering of relevant data and information relating to the valuation study, including, but not limited to:
  - Asset listing by NARUC account (if available);
    - Date in Service
    - Original Cost
    - Accumulated Depreciation
  - Historical Financial Statements;
    - Income statements from 2017-2021
    - Cash flow statements (if available) from 2017-2021
    - History of last five rate increases (% increase, year enacted)
  - Forecasted Financial Statements;
    - Assumptions regarding revenues long-term (20 years)
    - Assumptions regarding operating expenses (20 years)
    - Assumptions regarding capital expenditures (20 years)
    - Assumptions regarding financing of capital (20 years)
      - Type of debt financing (e.g., sinking funds)

Copyright © 2022 by ScottMadden, Inc. All rights reserved.

### Task 2: Data Analysis and Interviews

After compiling the data outlined in Task 1, it will be necessary to meet with people familiar with the Beaver Falls operations (in person or via telephone) to discuss trends in the data. It will also be necessary to tour the facilities to determine the condition of the assets. After these meetings, we will solidify our assumptions with respect to the valuation analysis.

### Task 3: Development of Valuation Study

After gathering the data and discussing with Beaver Falls, the valuation study will be developed. The study will consider the national, regional, and local economy and its impact on Beaver Falls as well as industry trends and competition in the space. The study will consider three valuation approaches; the Asset (or Cost) approach, the Market approach, and the Income approach, to determine our conclusion.

### Asset Approach

The Asset (or Cost) Approach is used to estimate a value of property based on the current cost of the subject assets, minus physical deterioration, functional obsolescence and economic obsolescence. In the asset approach, an analysis must be made of the property that is actually and physically being valued. The method ScottMadden will use to determine the current cost of the assets will be a trended original cost study. This will be completed by trending each individual asset forward to current cost by use of the Handy-Whitman Index of Public Utility Construction Costs. From this current value the accumulated depreciation of those assets will be subtracted to provide an indication of the value of the assets using the Asset Approach.

### Market Approach

The Market Approach develops a value through an analysis of recent sales of comparable property. These transactions must be actual transactions (or current offerings) involving similar property. The transactions can be broken down into specific multiples (e.g. purchase price per customer / connection, purchase price / EBIT, etc.) and applied to Beaver Falls' asset, or the actual purchase price can be adjusted to reflect differences between the completed transactions and Beaver Falls' asset. Unfortunately, an active market may or may not exist, which means there can be too few transactions or non-representative transactions for the approach to be meaningful. ScottMadden will conduct searches for similar market transactions for regulated water / wastewater companies and will apply judgment on which adjustments to use, or which multiples are applicable to regulated water / wastewater companies. ScottMadden will also determine if the transactions identified are meaningful and if the Market Approach is valid in this case.

### Income Approach

The Income Approach measures the present value of monetary benefits anticipated to be derived in the future from asset ownership. The present value of monetary benefits is measured by taking into account the duration and pattern of the income stream and the risk inherent in realizing that income stream. ScottMadden will use historical and projected income statements to determine a realistic pattern of cash flows over a 20-year time frame then determine an appropriate capitalization rate to discount those cash flows back to present value which determines the indicated value.

Report Generation

Copyright © 2022 by ScottMadden, Inc. All rights reserved.

The valuation study will be used to generate the valuation report. As mentioned above, each valuation approach will produce an indicated value for the assets. ScottMadden will incorporate all three valuation approaches in the final report.

## PROJECT TEAM

The project will be led by Dylan W. D'Ascendis, CRRA, CVA, Partner of ScottMadden, Inc. Mr. D'Ascendis will co-author the reports and testify in any subsequent regulatory filing (if needed). Mr. D'Ascendis will be supported by Matthew Howard, Manager, who will be Mr. D'Ascendis' co-author, but will not testify. Resumes and prior testimonies are available upon request.

In addition to Mr. Howard, the Project Team will be supplemented by ScottMadden's pool of highly qualified consultants, as needed, throughout the engagement.

## PROPOSED COMMERCIAL TERMS

Based on the above Scope of Work, which outlines our approach to developing the valuation study, associated report, and related appendices, ScottMadden proposes a fee of $35,000. Any travel related to the study will be billed at our direct cost with no markup and is not included in the $35,000 fee.

Any additional services required after delivery of the report (*e.g.,* testimony, discovery requests) will be billed at the following hourly rates:

| Position | Hourly Rate |
|---|---|
| Partner / Executive Advisor | $325 |
| Director | $295 |
| Manager | $270 |
| Senior Associate | $230 |
| Associate | $200 |
| Senior Analyst | $150 |
| Analyst | $125 |
| Administrative Assistant | $65 |

Should you have any questions, or wish to discuss the proposed terms, please feel free to contact me directly at your convenience via phone (609) 680-8695 or email ddascendis@scottmadden.com. We look forward to working with you and your staff.

Please indicate your acceptance of these terms by signing in the space provided on the following page.

CITY OF BEAVER FALLS

ORDINANCE NO. 4028

AN ORDINANCE OF THE CITY OF BEAVER FALLS (THE "CITY"), BEAVER COUNTY, PENNSYLVANIA, APPROVING THE ~~CONTRACT~~/AGREEMENT BETWEEN THE CITY OF BEAVER FALLS AND Gannett Fleming *, PROVIDING FOR appraisal valuation engineering analysis services.

BE IT ORDAINED AND ENACTED by the Council of the City of Beaver Falls, a Third Class City under the laws of the Commonwealth of Pennsylvania, and it is hereby ordained and enacted by virtue of the authority of the same as follows:

SECTION I. That the contract/agreement between the City of Beaver Falls and GFV+RC, LLC., a true and correct copy of which is attached hereto, and by reference made a part hereof, is hereby approved.

SECTION II. That the Mayor and City Clerk are hereby authorized to execute duplicate counterparts of the attached contract/agreement and to affix the Seal of the City of Beaver Falls.

SECTION III. That following the execution, attestation and ensealing of said duplicate counterparts of said contract/agreement, the City Clerk is hereby directed to provide one duplicate counterpart to each of the parties and to file the remaining counterpart in the appropriate City Office.

SECTION IV. That City Council, from time to time by Resolution, amend and/or enter into similar agreements in the future.

SECTION V. This Ordinance shall take effect immediately on final passage.

SECTION VI. Any ordinance, or parts of any ordinance inconsistent herewith are hereby repealed.

PASSED AND ADOPTED BY THE COUNCIL of the City of Beaver Falls, this 28th day of December, 20 20.

*Excellence Delivered* ***As Promised***

October 1, 2020

Via email to CJones@beaverfallspa.org

Mr. Charles R. Jones, Jr.
City Manager
City of Beaver Falls
715 15th Street
Beaver Falls, PA 15010

Dear Mr. Jones:

Fair Market Value Appraisal

In response to your request, Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") is pleased to submit this cost proposal to provide the City of Beaver Falls ("City") with a fair market value appraisal of the Beaver Falls' Wastewater System assets ("Wastewater System") consistent with the date of the Engineer's Assessment.

## SCOPE OF SERVICES

Gannett Fleming proposes to conduct a fair market value appraisal of the Wastewater System in compliance with the Uniform Standards of Professional Appraisal Practices, employing the cost, market and income approaches. It should be noted that Gannett Fleming will utilize asset cost information provided by the Engineering Assessment of the Wastewater System's assets.

Fair market value is defined as "the price, expressed in terms of cash equivalents, at which property would change hands between a hypothetical willing and able buyer and a hypothetical willing and able seller, acting at arm's length in an open and unrestricted market, when neither is under compulsion to buy or sell and when both have reasonable knowledge of the relevant facts."

As stated, the standard of value for this engagement is fair market value. The premise of value is going concern. The going concern premise of business value assumes that the business will continue running normally using all of its assets to produce income and will continue operating beyond the valuation date.

Gannett Fleming will value the Wastewater System's assets as a group under the premise that they collectively comprise an ongoing operating business enterprise. In accordance with 66 Pa. C.S. Section 1329, the original source of funding for any part of the assets of the selling utility will not be relevant to the determination of the value of said assets.

We will accept all information and data provided by the Wastewater System as it pertains to this assignment "as is" after a limited review. That is, we will neither audit nor verify any data, original cost study, financial records or operating data provided for this assignment.

We will provide direct testimony summarizing our fair market value appraisal suitable for filing before the Pennsylvania Public Utility Commission (PaPUC).

## SITE INSPECTION

We will visit or inspect the Wastewater System's facilities and rely on the information provided by the Engineering Assessment of the Wastewater System's assets provided by the Wastewater System.

## APPRAISAL REPORT

We will prepare a written document to substantiate our opinion. Our appraisal will be developed consistent with the Uniform Standards of Professional Appraisal Practices. Our valuation will include a detailed analysis and will be presented in a narrative comprehensive, "stand-alone" document for your use. The estimate of value that results from a valuation engagement will be expressed as a conclusion of value to be used for the purposes stated above.

Although our valuation is intended to estimate fair market value, we assume no responsibility for the inability of a seller or buyer to obtain a sale or purchase contract at that price.

## QUALIFICATIONS

Since 1915, Gannett Fleming and its predecessors have been helping clients in public pricing policy and related financial matters for managerial purposes, before regulatory commissions and in courts of law. Our staff has considerable experience in providing an array of specialized financial services to support the core needs and objectives of our clients.

Our specialized financial services encompass utility valuations, economic valuation studies, cost of capital studies, depreciation studies, rate studies, lead lag studies, analyses of public utility accounting systems, debt financing reports, economic and demographic studies, financial decision studies, optimum capital structure, debt service levels, dividend policy, private placement of debt, financial benchmarking, and conducting property inventories.

We design each study and its related report to meet the specific requirements of our clients. These studies require objective analyses of basic data, informed professional judgment, and clear presentation of the results. Our staff includes professionals specialized in public utility accounting and ratemaking, valuation, cost of capital, lead lag, depreciation, associated technical services, and financial analysis. We are experienced utility valuation experts who determine fair market value using the cost, market and income approaches in accordance with 66 Pa. C.S. Section 1329. We are a registered Municipal Advisor with the Securities & Exchange Commission (SEC); and are a subsidiary of Gannett Fleming, Inc.

Gannett Fleming is approved as a "Utility Valuation Expert" by the PaPUC within the context of 66 Pa. C.S. Section 1329, Valuation of Acquired Water and Wastewater Systems.

## FIDUCIARY DUTY

Gannett Fleming has a fiduciary duty to, and will, provide a thorough, objective, and fair market valuation using the cost, market and income approaches in accordance with 66 Pa. C.S. Section 1329 and Pennsylvania laws.

Gannett Fleming attests that it does not derive any material financial benefit from the sale of, or purchase of, a selling utility other than fees for services rendered. Gannett Fleming also verifies it does not have any immediate family members who are directors, officers or employees of either an acquiring public utility, entity or selling utility within a 12-month period of the date of hire to perform an appraisal. We further affirm that Gannett Fleming is not directly or indirectly owned, partnered or in any way affiliated with a water/wastewater distribution company.

## BASIS FOR COMPENSATION

Gannett Fleming will perform the above services, and other related services that you may authorize, based on hourly billing rates for our personnel in effect when we perform the work, plus the reimbursement of direct expenses. Direct expenses include transportation, meals, lodging and incidental expenses incurred while traveling and any other expenses required as a result of the assignment that are not incidental to the normal conduct of business. Attached is a copy of our billing rates currently in effect. We will render invoices monthly for services performed during the preceding month.

Based on our experience, we estimate that the cost for a complete study, direct testimony, and other filing requirements will range from $30,000 to $35,000. The actual charges for these services will, of course, depend on the time required to complete the assignment and the extent to which data are provided. The availability and quality of the required data sources of information will affect the final cost.

**SCHEDULE**

The fair market value appraisal should be completed within 45 to 60 days of completion of the Engineering Assessment, and timely receipt of an executed proposal and the requested data.

Based on the understanding outlined in this letter, we propose that the City of Beaver Falls retain Gannett Fleming Valuation and Rate Consultants, LLC to perform the services as outlined in this letter. If this letter proposal is acceptable, please have it executed below by an individual authorized to bind the City of Beaver Falls, and then scan and email a copy to me at hwalker@gfnet.com, with a copy to Cheryl Rutter at crutter@gfnet.com.

We thank the City of Beaver Falls for this opportunity to provide valuation services in connection with the fair market value appraisal of the Wastewater System's assets. We look forward to acceptance of our proposal and to a successful project.

Respectfully Submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

HAROLD WALKER, III
Manager, Financial Studies

The City of Beaver Falls accepts the foregoing Proposal and authorizes Gannett Fleming Valuation and Rate Consultants, LLC to proceed with the services described herein.

Mr. Charles R. Jones, Jr., City Manager
City of Beaver Falls
715 15th Street
Beaver Falls, PA 15010

Dear Mr. Jones:

Official Notification to Begin Fair Market Value Appraisal of
Beaver Falls' Wastewater System Assets

As you are aware, on December 28, 2020, the Council of City of Beaver Falls passed and adopted Ordinance No. 4028 approving the agreement between Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming) and City of Beaver Falls regarding our fair market value appraisal of the Beaver Falls' Wastewater System assets (Wastewater System) consistent with the date of the Engineer's Assessment. It is our understanding that the Engineer's Assessment will be completed later in June 2022.

The purpose of this letter is to request your official notification, via signature and date, for Gannett Fleming to begin the fair market value appraisal of the Wastewater System as soon as the Engineer's Assessment is completed. Please email a signed copy of this document to me at hwalker@gfnet.com, with a copy to Cheryl Rutter at crutter@gfnet.com.

We thank the City of Beaver Falls for this opportunity to provide valuation services in connection with the fair market value appraisal of the Wastewater System's assets, and we look forward to a successful project.

Respectfully Submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

HAROLD WALKER, III
Manager, Financial Studies

This is official notification that the Engineer's Assessment of the Beaver Falls' Wastewater System assets has been completed and Gannett Fleming Valuation and Rate Consultants, LLC should proceed with the services previously described herein, in accordance with Council's Ordinance No. 4028.

# VERIFIED STATEMENT

I, Dylan W. D'Ascendis, C.V.A., C.R.R.A., Partner of ScottMadden, Inc. ("ScottMadden"), a Utility Valuation Expert in the Commonwealth of Pennsylvania, hereby state the following subject to the penalties of 18 Pa. Cons. Stat. § 4904 (relating to unsworn falsification to authorities):

1. ScottMadden was selected by Aqua Pennsylvania Wastewater, Inc. to perform a fair market value appraisal of the City of Beaver Falls wastewater system assets ("System");

2. As Partner of ScottMadden, I prepared the foregoing Fair Market Value Appraisal of the System at or under my direction;

3. The facts set forth in the Fair Market Value Appraisal are true and correct to the best of my knowledge, information, and belief;

4. ScottMadden has no affiliation with either Aqua Pennsylvania Wastewater, Inc. or the City of Beaver Falls;

5. As Partner of ScottMadden, I determined the fair market value of the System in compliance with the most recent edition of the Uniform Standards of Professional Appraisal Practice as of the date of the Appraisal, employing the cost, market and income approaches;

6. As Partner of ScottMadden, I applied applicable jurisdictional exceptions to the submitted Appraisal;

7. Neither ScottMadden nor I have derived any material benefit from the sale of the System other than fees for services rendered; and

8. I am not an immediate family member of a director, officer or employee of either Aqua Pennsylvania Wastewater, Inc., or the City of Beaver Falls, Beaver County, within a 12-month period of the date ScottMadden was engaged to perform the appraisal.

Dylan W. D'Ascendis, C.V.A., C.R.R.A.

# VERIFIED STATEMENT

I, Harold Walker, III, Manager of Financial Studies of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett"), a Utility Valuation Expert in the Commonwealth of Pennsylvania, hereby state the following, subject to the penalties of 18 Pa. Cons. Stat. § 4904 (relating to unsworn falsification to authorities):

1. Gannett was selected by the City of Beaver Falls, to perform a fair market value appraisal of the City of Beaver Falls wastewater system assets ("System");

2. As Manager of Financial Studies of Gannett, I prepared the foregoing Fair Market Value Appraisal of the System at or under my direction;

3. The facts set forth in the Fair Market Value Appraisal are true and correct to the best of my knowledge, information, and belief;

4. Gannett has no affiliation with either the City of Beaver Falls or Aqua Pennsylvania Wastewater, Inc.;

5. As Manager of Financial Studies of Gannett, I determined the fair market value of the System in compliance with the most recent edition of the Uniform Standards of Professional Appraisal Practice as of the date of the Appraisal, employing the cost, market and income approaches;

6. As Manager of Financial Studies of Gannett, I applied applicable jurisdictional exceptions to the submitted Appraisal;

7. Neither Gannett nor I have derived any material benefit from the sale of the System other than fees for services rendered; and

8. I am not an immediate family member of a director, officer or employee of either the City of Beaver Falls, Beaver County, or Aqua Pennsylvania Wastewater, Inc., within a 12-month period of the date Gannett was engaged to perform the appraisal.

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is William C. Packer. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Essential Utilities, Inc. ("Essential"), as Vice President, Regulatory Accounting and Regional Controller. In this position, I am the Regional Controller of Aqua Pennsylvania, Inc. ("Aqua PA"), and Aqua New Jersey, Inc. ("Aqua NJ"). Additionally, I oversee rate issues for all subsidiaries of Essential. Aqua PA is the parent company to Aqua Pennsylvania Wastewater, Inc. ("Aqua" or the "Company").

**Q. Please provide a brief description of your education and work experience.**

A. I graduated from Richard Stockton College of New Jersey in 1998 with a Bachelor of Science degree in Business Studies with a concentration in Accounting. In 1998, I joined GE Capital Mortgage Services Inc. as a Staff Accountant. In September 1999, I joined New Jersey American Water Company ("NJ American") as a General Staff Accountant responsible for financial statement preparation, account reconciliation, financial support for rate cases, and account analysis. In September 2001, I was transferred to American Water Works' Service Company ("American"), in its Shared Services operation located in Mt. Laurel, New Jersey. I was employed there for four years in several roles, including Senior Fixed Assets/Job Cost Accountant, Financial Support Analyst, and Accounting Supervisor Fixed Assets. At American, I had the opportunity to support the

rate-making process by working closely with operating subsidiaries in 23 states, preparing schedules and answering interrogatories.

In March 2005, I joined Aqua NJ, where I served as Assistant Controller until December 2006, when I transferred to Aqua America, Inc. In July 2008, I was promoted to the position of Mid-Atlantic Manager of Rates. In April 2011, I became the Manager of Rates and Planning – Northeast Divisions. I was promoted to Regional Controller for the Aqua PA and Aqua NJ subsidiaries in October 2012. In April 2017, I was promoted to Vice President – Controller of Aqua PA. In 2020, I was promoted to my current position of Vice President, Regulatory Accounting and Regional Controller where I have additional responsibilities to oversee rates and regulatory accounting matters of Essential.

In addition to my corporate experience, I served three terms as a Councilman in the Borough of Woodbury Heights, New Jersey. In that role, I served as the Chairman of the Finance, Administration, and Personnel committee; in addition, I served as a member of the Public Safety and Streets/Roads committees.

I was elected as Mayor of the Borough of Woodbury Heights in November of 2018 and was sworn in on January 5, 2019. I was re-elected as Mayor in November of 2022 and sworn in on January 8, 2023. The Borough of Woodbury Heights is one of 565 municipalities in New Jersey and has a population of approximately 3,000 residents.

**Q. Have you testified before this Commission before?**

A. Yes, I have testified in several proceedings before the Pennsylvania Public Utility Commission ("PUC" or the "Commission"), including Aqua PA's petition to charge a 7.5% Distribution System Improvement Charge ("DSIC") at Docket R-2008-2079310,

Aqua PA's last four rate cases at Docket Nos. R-2009-2132019, R-2011-2267958, R-2018-3003558 (water) & R-2018-3003561 (wastewater), and R-2021-3027385 (water) & R-2021-3027386 (wastewater, and Aqua's eight previous Section 1329 proceedings in Docket Nos. A-2016-2580061, A-2017-2605434, A-2018-3001582, A-2019-3008491, A-2019-3009052, A-2019-3015173, A-2021-3024267, and A-2021-3026132. I have also testified in Aqua PA's recent Section 1329 proceeding in Docket No. A-2022-3034143. I have also testified in various other proceedings before the Commission.

**Q. What is the purpose of your testimony?**

A. The purpose of my testimony is as follows: (1) to provide a general overview of Aqua; (2) to provide a general overview of the proposed transaction ("Proposed Transaction") between Aqua and the City of Beaver Falls ("Beaver Falls" or the "City"); (3) to describe Aqua's legal and financial fitness to own and operate the Beaver Falls Wastewater System (the "System"); and (4) to explain the benefits of the proposed transaction.

**Q. Are you sponsoring any Exhibits with your testimony?**

A. Yes. Attached to my testimony as Appendix A is a schedule showing the revenue deficiency and overall impact on customers.

**Q. Are there any other witnesses submitting testimony with this application?**

A. Yes. In addition to my testimony, Aqua is submitting the following statements in support of the Application:

- Aqua Statement No. 2 – Direct Testimony of Mark J. Bubel, Sr. Mr. Bubel will provide testimony regarding the specifics of the System being acquired from an operations/engineering perspective and Aqua's technical fitness.
- Aqua Statement No. 3 – Direct Testimony of Zach Martin. Mr. Martin will provide testimony regarding the operations of the System and the benefits of Aqua's ownership.
- Aqua Statement No. 4 – Direct Testimony of Charles R. Jones, Jr. Mr. Jones will provide testimony regarding the background of the Proposed Transaction from Beaver Falls' perspective and benefits of the Proposed Transaction.
- Aqua Statement No. 5 – Direct Testimony of Dylan W. D'Ascendis. Mr. D'Ascendis will provide testimony regarding the appraisal conducted on behalf of Aqua.
- Aqua Statement No. 6 – Direct Testimony of Harold Walker III. Mr. Walker will provide testimony regarding the appraisal conducted on behalf of Beaver Falls.

**Q. Has the Company filed an application with the Commission for regulatory approval to acquire the wastewater system assets of the Beaver Falls (the "Acquired Assets")?**

A. Yes. Aqua filed its Application on February 17, 2023.

**Q. What is Aqua seeking in its application?**

A. There are five requests. First, Aqua is requesting approval of the acquisition under Section 1102, 66 Pa.C.S. § 1102, similar to many requests that come before the Commission. Second, Aqua is requesting Commission approval to begin providing

wastewater service in the requested territory, as shown as the area outlined in red on the map attached to the Application as **Exhibit A** (the "Requested Territory"). Third, pursuant to Act 12 of 2016 ("Act 12" or the "Act"), 66 Pa.C.S. § 1329, Aqua is seeking to utilize fair market value for the determination of the ratemaking rate base of the Acquired Assets. Fourth, Aqua also requests that the Commission, to the extent necessary, issue certificates for filing, pursuant to Section 507 of the Public Utility Code, 66 Pa.C.S. § 507, for the Asset Purchase Agreement between Aqua and the City, and for certain municipal contracts which will be assigned to Aqua or entered into by Aqua at closing on the Proposed Transaction. Fifth, to the extent that certain municipal customers do not enter into a new conveyance and treatment agreement, the Company requests that the Commission amend certain municipal contracts pursuant to Section 508 of the Public Utility Code, 66 Pa.C.S. § 508.

**Q. What does Section 1329 require to be included in the application?**

A. Section 1329 requires that the application include (1) copies of the two appraisals, (2) the purchase price, (3) ratemaking rate base, (4) transaction and closing costs, and (5) the proposed tariff. A rate stabilization plan could also be required if it is applicable to the transaction.

**Q. Can you generally opine on the purpose of Section 1329 and the Commission's view of this provision of the Public Utility Code?**

A. Yes, as stated by the Commission, "Section 1329 works to: (1) provide certainty as to the value of acquired utility property; (2) remove regulatory barriers to the prudent sale of

public water and wastewater assets; (3) protect a Seller from having to offer public assets for sale at below-market rates; and (4) allow a Buyer to recover market-based investment in those public assets through regulated rates."[1] I also agree with the Commission that Section 1329 "encourages a realistic approach to the sale of public assets based upon the fair market value of those assets."[2] Moreover, as further explained by the Commission:

> Section 1329 recognizes that no reasoned argument would propose that these public assets are of marginal value simply because the book value and the Commission's traditional rate setting methodology dictate as much. Rather, the valuation methods of Section 1329 provide municipalities and authorities with a wholistic recognition of the fair market value of the public assets they seek to sell based on a balancing of accepted business valuation principles, specifically, the cost, market, and income approaches. 66 Pa. C.S. § 1329(a). Thus, for sale purposes, Section 1329 works to value the public assets as the businesses they are as opposed to what their value might be under regulatory accounting for depreciated utility assets.[3]
>
> …
>
> Section 1329 enables a Seller to price its public assets at a market value based on reasonable business valuation principles and enables a Buyer to recover its investment in those public assets at that market-based value.[4]

**Q. What does the Commission require for the approval of the certificate that utilizes Section 1329?**

A. In its Final Implementation Order entered October 27, 2016, in Docket No. M-2016-2543193 ("Final Implementation Order"), the Commission referenced the checklist in the Tentative Implementation Order for items to include with the application for it to be processed in a six-month time frame. This checklist was subsequently updated in March

[1] *Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 Tentative Supplemental Implementation Order at 4 (Sep. 20, 2018) (hereinafter "TSIO").
[2] TSIO at 7.
[3] TSIO at 6.
[4] TSIO at 7.

2017. The Commission released its Final Supplemental Implementation Order on February 28, 2019 at Docket No. M-2016-2543193, which included an updated checklist, standard data requests ("SDR"), jurisdictional exceptions, and form testimony for Utility Valuation Experts ("UVE"). Aqua has included references with the Checklist indicating where in the Application the relevant information is located.

## II. OVERVIEW OF AQUA PA AND AQUA

**Q. Please provide a general overview of Aqua PA and Aqua.**

A. Aqua PA is the second largest investor-owned regulated water/wastewater utility operating in the Commonwealth of Pennsylvania. Aqua PA provides water and wastewater utility service to approximately 508,000 customers, consisting of 448,000 water customers and 60,000 wastewater customers. Aqua PA employs approximately 600 highly trained utility professionals to achieve its mission to provide safe, adequate, and reliable utility service at reasonable rates. In addition, Aqua PA is one of eight regulated water and wastewater subsidiaries of Essential, which brings to bear its own financial, technical, and managerial resources to assist in our mission.

Aqua is a subsidiary of Aqua PA and is engaged in the business of collecting, treating, transporting, and disposing of wastewater for the public. Aqua provides wastewater service to approximately 60,000 customers in Adams, Berks, Bucks, Carbon, Chester, Clarion, Clearfield, Delaware, Lackawanna, Luzerne, Monroe, Montgomery, Pike, Schuylkill, Venango, and Wyoming Counties.

**Q. Please provide a description of Beaver Falls.**

A. Beaver Falls is a duly organized and validly existing city under a Home Rule Charter. The City owns the sanitary wastewater collection and treatment system which provides sanitary wastewater service to approximately 3,190 customers in the City, and provides transmission and treatment service for 7 contributory municipalities/municipal authorities, including Big Beaver Borough, West Mayfield Township, White Township, North Sewickley Township, Eastvale Borough, Patterson Township, and Patterson Heights Borough ("Contributing Municipalities"). Please see Aqua Statement No. 4, Direct Testimony of Charles R. Jones, Jr., for a further description of the City.

**Q. Please provide an overview of the proposed Transaction.**

A. After arms-length negotiations between Aqua and the City, the Asset Purchase Agreement ("APA") was signed and executed on October 20, 2021, providing for the sale of the Acquired Assets, which have the meaning specified in Section 2.01 of the APA. The purchase price totaled $41,250,000. According to the APA, Aqua will implement Beaver Falls' sanitary wastewater rates in effect at closing as reflected on Schedule 7.04 of the APA. Aqua's tariff rules and regulations will apply following closing.

## III. FITNESS

**Q. Please describe how the Company is legally fit to own and operate the System.**

A. Aqua is a public utility operating under Commission granted certificates of public convenience. There are no pending legal proceedings challenging Aqua's ability to provide safe and adequate service to customers.

**Q. Please describe how the Company is financially fit to own and operate the System.**

A. As I mentioned in my overview, Aqua PA, as parent company to Aqua, is a Class A water utility in the Commonwealth. Aqua PA is the largest water/wastewater subsidiary of Essential, with total net utility plant assets of $4.1 billion and annual revenues of $495 million in 2021. Aqua PA had operating income of approximately $260 million and net income of $194 million. Aqua PA's cash flows from operations equaled approximately $275 million.

Aqua is a Class A wastewater utility in the Commonwealth, with total net utility plant assets of approximately $490 million and annual revenues of approximately $70 million.

Aqua PA has an A rating from Standard and Poor's Rating Service and has approximately $1.9 billion in outstanding long-term debt at a weighted average interest rate of approximately 4.04%. Aqua PA also utilizes low-cost long-term debt financing instruments through the Pennsylvania Infrastructure Investment Authority ("PENNVEST"), representing about 1.4% of Aqua PA's total debt portfolio. In addition to Aqua PA's access to long-term debt, Aqua PA has its short-term credit facility of $100 million and has access to equity capital as a subsidiary of Essential. Aqua, as a subsidiary of Aqua PA, has access to all of Aqua PA's financing capabilities.

## IV. FUNDING

**Q. Please explain how Aqua plans to fund the Proposed Transaction.**

A. The Proposed Transaction will be funded using existing short-term credit lines. The short-term credit funding will be converted to a mix of long-term debt and equity capital at a later date.

**Q. Do you anticipate the Proposed Transaction will affect Aqua PA's corporate credit rating?**

A. No. The Company does not anticipate that the Proposed Transaction will affect Aqua PA's corporate credit rating.

## V. APA RATE PROVISIONS AND RATE STABILIZATION PLAN

**Q. Please explain the rate provisions in Paragraph 7.04 of the APA.**

A. Under the provisions of Paragraph 7.04 of the APA, Aqua will implement Beaver Falls' sanitary wastewater rates in effect at closing as reflected on Schedule 7.04 of the APA. At and after closing, the Company shall apply its then-existing miscellaneous fees and charges in the Company's Tariff.

**Q. What is a rate stabilization plan?**

A. A rate stabilization plan is defined in Section 1329(g), 66 Pa.C.S. § 1329(g), as a plan that will hold rates constant or phase rates in over a period of time after the next base rate case.

**Q. Does the Application include a rate stabilization plan?**

A. No.

**Q. Does the Application include a proposed tariff that includes language that would constitute a rate stabilization plan?**

A. No. The Company is proposing to implement the City's current rates. There is no language in Aqua's proposed tariff requesting that rates be held constant or phased in over a period of time after the next rate case. Section 7.04 of the APA, accordingly, does not constitute a rate stabilization plan.

**Q. Are you requesting the implementation of a DSIC for City customers at this time?**

A. No. Following closing, Aqua intends to amend its Long-Term Infrastructure Improvement Plan ("LTIIP") to include Beaver Falls in the LTIIP and file the amended LTIIP with the PUC. The Company will include a request in that filing to initiate the DSIC to Beaver Falls customers as permitted by Section 1329.

**Q. Please explain how the Company will bill the City's customers after closing.**

A. Currently, the City bills on a quarterly and monthly basis based on water usage. Metered water usage information is provided by Beaver Falls Municipal Authority ("BFMA"), which provides water service to customers in the City and in the Contributing Municipalities. The Company will continue to bill customers on a quarterly and monthly basis. A schedule of rates tariff page implementing monthly and quarterly rates for City customers post-closing is attached to the Application as **Exhibit G**. The Contributing

Municipalities are billed quarterly, with the exception of North Sewickley Township which is billed monthly, based on water meter read data on a volumetric basis.

## VI. PUBLIC INTEREST

**Q. Please explain why the proposed transaction is in the public interest.**

A. The PUC has a long-standing record of support for consolidation/regionalization of water/wastewater systems. The PUC understands that in doing so, the utility industry will have a better chance to realize the benefits of better management practices, economies of scale, and the resulting greater customer/environmental/economic benefits. The Commission has previously stated that "acquisitions of smaller systems by larger more viable systems will likely improve the overall long-term viability of the water and wastewater industry. Additionally, these types of acquisitions will also enhance the quality of ratepayers' daily lives, promote community economic development, and provide environmental enhancements."[5] Ultimately, these benefits inure to customers both existing and acquired. The Proposed Transaction with Beaver Falls is no exception to the principles noted in the aforementioned Policy Statement, and Aqua PA and Aqua have successfully acquired numerous water/wastewater utilities in over approximately 135 years of operation.

[5] Pennsylvania Public Utility Commission, Final Policy Statement on Acquisitions of Water and Wastewater Systems, Docket No. M-00051926, Final Order at 18 (Aug. 17, 2006) ("Policy Statement").

**Q. Please discuss the Company's track record of acquiring and improving wastewater systems in the Commonwealth.**

A. Aqua currently provides utility service to approximately 60,000 wastewater customers in the Commonwealth and has years of experience operating wastewater treatment and collection systems in a safe, reliable and efficient manner. Moreover, Aqua has the managerial, technical, and financial resources to continue to operate, maintain and improve the Beaver Falls System.

Aqua has acquired 14 wastewater systems over the past 10 years.[6] Many of these systems required significant investment to correct service and environmental issues. Other systems did not need substantial capital investment. Aqua and Aqua PA are essentially the compilation of smaller systems that have been acquired over the last 135 years and make both utilities what they are today. The inherent diversification of systems and customers provides a foundation of stability in the day to day, month to month, and year to year operations of the utility, in that, they are all not requiring major capital investments at the same time. Thus, spreading the financial impacts over the long-term operations of the utility. I would submit that if Aqua were permitted to acquire only non-viable systems, rather than a mix of viable and non-viable, this would have a significant impact on its existing customers' rates and service. Both types of systems, viable and non-viable, are consistent with the Commission's policy statements regarding acquisitions. The acquisition of the Beaver Falls System will continue to address the Commission's supported policy of consolidation and regionalization.

[6] East Whiteland, Lower Makefield (2022); New Garden, East Norriton (2020); Cheltenham (2019); East Bradford, Limerick (2018); Tobyhanna, Avon Grove (2017); Emlenton, Honeycroft (2016); Bunker Hill (2015); Penn Township (2014); and Treasure Lake (2013).

**Q. Did the Commonwealth Court refer to the Commission's policy of consolidation/regionalization and Aqua's expertise in system operations and ability to raise capital in its opinion in *McCloskey v. Pa. P.U.C.* addressing Aqua's transaction with New Garden Township?**

A. Yes. Although I am not an attorney, I have read the Court's Opinion in the *McCloskey* case. At the end of Section A of the Opinion, the Court refers to Commission findings that Aqua, as owner of numerous water and wastewater systems in Southeastern Pennsylvania, has sufficient expertise to operate a system and ability to raise capital to support a system and that the Commission has a policy of consolidation and regionalization that allows for increased maintenance, upgrade and expansion of public facilities. The Court concludes that the foregoing are reasons of the type that the Supreme Court in its *Verizon* decision held were sufficient to meet the public benefit standard and substantial evidence to support the notion that there is a public benefit for the transaction. This same analysis is sufficient to support the public benefit and substantial evidence of public benefit in this proceeding.

**Q. Will the City's customers benefit from the transaction?**

A. Yes. The City's customers will become part of a larger scale, efficiently operated, wastewater utility. The Company is already the owner and operator of wastewater systems in nearby Venango County, and Aqua PA owns and operates water systems in nearby Lawrence County. As such, we have key operations in nearby service areas and will be able to assume the operations of the Beaver Falls System, fold them into a larger

scale, efficiently operated wastewater utility that over time will likely yield further operating efficiencies and improve long term viability as envisioned in the PUC Policy Statement.

Aqua is not anticipating any physical, operational or managerial changes at its Southeastern Office or Western divisional offices as a result of the acquisition. Aqua will be hiring seven operational staff from Beaver Falls to address the day-to-day operations of Beaver Falls. These seven staff members represent the full complement of Beaver Falls sewer employees, and as such Aqua will be ensuring continued employment for the Beaver Falls sewer employees. The retention of this operational staff will benefit customers served by the Beaver Falls System by ensuring that system-specific knowledge and expertise is retained.

Additionally, the acquisition will not have any immediate impact on the rates of either the City's customers or the existing customers of Aqua. The Company is projecting less operating and maintenance costs under the Company's ownership that will likely be realized through reductions in costs for wastewater maintenance, as well as efficiencies in administrative and general costs, such as insurance, auditing and legal, among others. Specifically, referencing Beaver Falls 2021 Financial Statements, Total Operating and Maintenance Expenses for the System (i.e., the Joint Sewer Users Fund and the City Sewer Users Fund) were approximately $2.03 Million, whereas the Company is projecting annual expenses of approximately $1.46 Million, or an approximate 29% reduction.

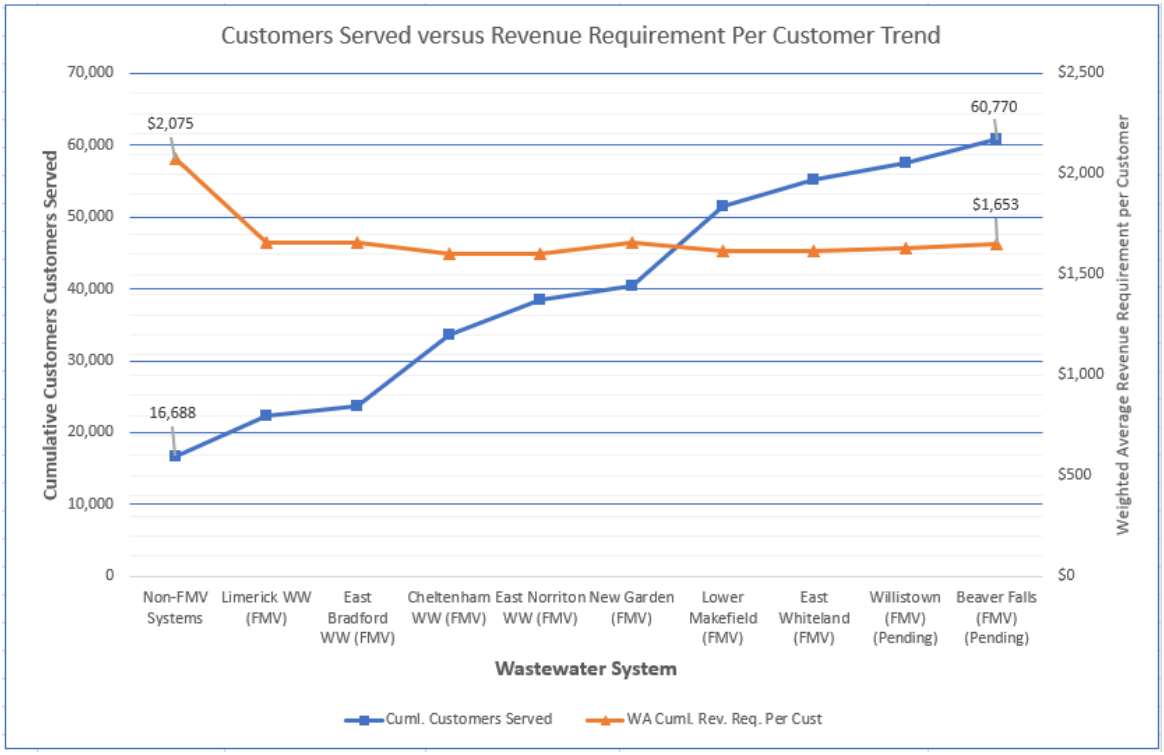
Lastly, given the fact that there are meaningful investments needed in this System, as noted in the testimony of Mark J. Bubel, Sr., Aqua Statement No. 2, the customers of

the Beaver Falls System will benefit greatly from the Company's technical experience and fitness in deploying resources towards capital improvements.

**Q. Will Aqua's existing customers benefit from the acquisition?**

A. Yes. The acquisition of the Beaver Falls System will be an approximate 5% increase in Aqua's customer base. By virtue of the Company's larger customer base, future infrastructure investments across the state will be shared at a lower incremental cost per customer for all of Aqua's customers. This is demonstrated in the below chart (Figure 1) I have developed using revenue requirement data for Aqua's legacy non-fair market value systems, all acquired prior to 2018, and also includes subsequent fair market value systems acquired, approved to be acquired, and including the Beaver Falls system. Figure 1 shows the linear trend line of the combined weighted average revenue requirement per customer of Aqua's legacy non-fair market value systems at $2,075 annually, which is a declining trend and demonstrates economies of scale that have been realized from prudent acquisition growth including systems such as Beaver Falls:

Figure 1



The above chart is an example of the economies of scale realized by the Company as a result of acquisitions. Aqua is providing wastewater utility service to more customers at a lower overall cost per customer.

I note again that both Aqua and Aqua PA have developed into the utilities they are today by acquiring and operating smaller and mid-sized systems. This progression has successfully happened over the last several decades and taken the form of both viable and non-viable systems. Over the long term, this process has benefitted both current customers, future customers that were acquired, and the Commonwealth.

**Q. In *McCloskey*, the Commonwealth Court concluded that the Commission must address rate impact "in a general fashion" when deciding whether there is substantial public benefit. Please address the rate impact of the Proposed Transaction.**

A. The current average bill of a residential customer in Beaver Falls, is approximately $97.24 per quarter. As my calculations in Appendix A show the average bill could increase to approximately $266.52 per quarter or a 174.09% increase, which assumes that one hundred percent of the revenue requirement deficiency is borne by the acquired customers of Beaver Falls. While this quantification is on possible outcome, as the Commission noted in its Final Supplemental Implementation Order "the Section 1329 valuation could have a highly unlikely rate effect of $0. Equally unlikely is the full allocation of all costs – acquisition and perhaps others – to a rate division consisting of only the customers of the acquired municipal system. The more likely *outcome* is indeterminate; it will be found somewhere between possible extremes."[7]

Again, this System has characteristics that demonstrate that economies of scale can be achieved as a result of this acquisition. Given this fact and the fact that there are meaningful future investments needed to address deficiencies in the System, those future rate impacts could be spread across a broader customer base thus moderating those future rate increases over time. Yet, while the rates of the Beaver Falls System are reasonably expected to increase, either on their own, or whether acquired by the Company, the fact is

[7] *Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 Final Supplemental Implementation Order at 32 (Feb. 28, 2019) (emphasis original) ("FSIO").

that there is more flexibility and opportunity to deal with those impacts over a much larger customer base. This benefits both existing and acquired customers alike.

**Q. Is the impact on rates outweighed by other positive factors from the Proposed Transaction?**

A. Yes. While Appendix A shows there could be future increases in rates as a result of the transaction, this is not unexpected, and the possibility of increased rates is noted by the Commonwealth Court in *McCloskey*. The positive factors from the transaction noted in my testimony, as well as the other witness who have submitted testimony in this Application, outweigh the possibility of increased rates. These types of transactions further a recognized legislative objective and are consistent with the Commission's consolidation/regionalization policy. The Company's application demonstrates that there will be both tangible and intangible positive factors that are likely realized as a result of the Proposed Transaction, including capital improvements, expense efficiencies, and economies of scale.

## VII. SECTION 1329 FAIR MARKET VALUE CONSIDERATIONS

**Q. Is Aqua proposing that its application be evaluated utilizing the Fair Market Value provisions of Section 1329 of the Public Utility Code?**

A. Yes. The Company's Application has been prepared with this in mind. Specifically, the Company is requesting that the ratemaking rate base of the Beaver Falls System be based on the lesser of the average of the Fair Market Value Appraisals included in the Application or the purchase price pursuant to Section 1329 of the Public Utility Code.

**Q. Has Aqua prepared its application in compliance with the Commission's Final Implementation Order and Final Supplemental Implementation Order?**

A. Yes. Aqua has complied with all required documentation according to the PUC's application checklist including, but not limited to, the Engineering Assessment of Assets, responses to SDRs, testimony supporting the Application, and two independent Fair Market Value appraisals.

**Q. Please provide an overview of the valuation process.**

A. Following the execution of the APA, the Company and the City agreed to engage Gannett Fleming, Inc. to complete the Engineer's Assessment, which is attached to the Application as Exhibit D. Both parties engaged their respective UVEs to perform a Fair Market Value analysis of the System in accordance with the Uniform Standards of Professional Appraisal Practice ("USPAP"), utilizing the cost, market, and income approaches. Aqua engaged the services of ScottMadden, Inc. ("ScottMadden") and has attached to its Application their Fair Market Value Appraisal as Exhibit Q. The City engaged the services of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett") and their Fair Market Value Appraisal is attached to the Application as Exhibit R. Both firms have been pre-certified as authorized UVEs by the PUC and are on the list of qualified appraisers maintained by the PUC.

**Q. Please describe the conclusions of the two appraisals used to determine the fair market value of the City's assets.**

A. The two appraisals used the USPAP employing the cost, market, and income approaches to arrive at the fair market value of the System. The City sponsored appraisal performed by Gannett arrived at a System value of $44,292,000. The Company sponsored appraisal performed by ScottMadden arrived at a System value of $40,199,348. Therefore, the fair market value as defined in Act 12 is the average of these two appraisals which is $42,245,674.

**Q. Pursuant to Section 1329 of the Public Utility Code, what is the resulting rate base determination for the Beaver Falls System?**

A. According to Section 1329, the ratemaking rate base is the lesser of either the purchase price in the APA, which is $41,250,000, or the fair market value which is $42,245,674. In this instance, since the purchase price is lower than the fair market value, the ratemaking rate base for the Beaver Falls System is $41,250,000.

**Q. Please state the total of the UVE fees incurred by the Company.**

A. The UVE fees for the Company's appraisal received as of the date of the Application totaled $37,055.00. The Company's UVE fees will be included in the transaction and closing costs of this Proposed Transaction as stated below.

**Q. Please explain whether you believe the UVEs' fees are reasonable?**

A. Based on the scope of work, the methods used as accepted industry practice, and that the UVEs' fees were less than 5% of the fair market value benchmark noted in the Final Implementation Order and Final Supplemental Implementation Order, I believe the fees are reasonable. Per the Final Implementation Order, Final Supplemental Implementation Order and Checklist, the contract engaging the Company's UVE, ScottMadden, along with ScottMadden's invoices are included as Exhibit S1. The contract engaging the City's UVE, Gannett, along with Gannett's invoices are included as Exhibit S2.

**Q. Please comment on the transaction and closing costs?**

A. The Company anticipates that the transaction and closing costs will be approximately $714,980 including the Company's UVE fees. The exact closing costs will be determined at closing.

## VIII. SECTIONS 507 AND 508

**Q. Is Aqua requesting the Commission issue certificates of filing for certain municipal contracts that will be entered into or assigned to Aqua at closing?**

A. Yes. Aqua is first asking for the Commission to approve the APA between the City and Aqua. As noted in the Application, Beaver Falls accepts wastewater flow into its collection system from seven Contributing Municipalities, which is treated at the Beaver Falls WWTP, pursuant to certain agreements with the Contributing Municipalities. Flow is conveyed from the Contributing Municipalities through the City's gravity sewers, force mains, and pump station. As noted in the Application, the Company could not locate

certain agreements that set forth the terms and conditions under which flow is sent from Patterson Heights Borough, West Mayfield Borough, and White Township. In addition, for the Contributing Municipalities that did have agreements that could be located (Big Beaver Municipal Authority, Eastvale Borough, North Sewickley Township, and Patterson Township), there are certain provisions regarding the annual recalculation of rates that the Company cannot implement as it is not a municipality. As such, the Company has developed pro forma agreements that it intends to negotiate with the Contributing Municipalities so that all the Contributing Municipalities, both those that had agreements and those that did not, will be under the same arrangement for rates and service. The arrangement for conveyance and treatment of flow is set forth in the pro forma agreement between Aqua and the Contributing Municipalities.

To the extent that the pro forma agreement cannot be negotiated by closing of this Transaction, the Company is requesting that for those Contributing Municipalities that have existing agreements that certain provisions be amended under Section 508 of the Public Utility Code to provide for Aqua to charge for service provided under a regulated public utility ratemaking model. The changes proposed to these exiting agreements are reflected in Exhibit CC to the Application. Those Contributing Municipalities that do not have existing agreements, and that do not enter into a negotiated agreement with Aqua, will be charged the Bulk Rate as set forth in Aqua's tariff supplement included in the Application as Exhibit G.

**Q. Does the pro forma agreement set forth how the Contributing Municipalities will be charged for wastewater conveyance and treatment?**

A. Yes. The pro forma agreement currently provides for the implementation of the existing base rate that Beaver Falls charges to the Contributing Municipalities. This base rate will then change by a Consumer Price Index ("CPI") on January 1 of each year, except for years where Aqua will have new base rates effective through a base rate case. In the years where new base rates will be effective from a base rate proceeding, the increase will be what the Commission determines is a just and reasonable increase for the Contributing Municipalities.

**Q. Could the terms of this pro forma agreement change through negotiation?**

A. Yes. As stated above, the Company is intending to negotiate this pro forma agreement. Through such negotiation, it is possible that the final terms may be different from what is presented in the initial Application filing. The Company will provide any updated agreement to the parties for their review. The Company will present the final form of agreement to the Commission for approval under Section 507.

**Q. Are there any other municipal contracts to be approved under Section 507?**

A. Yes. The Application includes additional contracts to be approved under Section 507 in Exhibits F11 and 12.

## IX. CONCLUSION

**Q. Does this conclude your direct testimony?**

A. Yes it does. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of this proceeding.

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Mark J. Bubel, Sr. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Aqua Pennsylvania, Inc. ("Aqua PA") as a Project Engineer III.

**Q. Please provide a brief description of your education and work experience.**

A. I received a Bachelor's of Science Degree (B.S.) in Civil Engineering in 1980 from Lehigh University and a Master's Degree in Civil Engineering (M.C.E.) with a concentration in Environmental Engineering in 1983 from Villanova University. I have worked in various engineering roles and have over 40 years of experience in environmental engineering related to municipal and industrial wastewater treatment and operations. I have worked at Essential Utilities, Inc. *f/k/a* Aqua America, Inc. since 2003 in roles related to wastewater treatment facilities including planning, design, start-up, and operational troubleshooting. I am a Registered Professional Engineer in Pennsylvania, Delaware, Maryland, North Carolina, and Florida. I am also a Licensed Water and Wastewater Operator in Pennsylvania.

**Q. Have you previously testified before the Pennsylvania Public Utility Commission ("PUC" or the "Commission")?**

A. Yes. I provided testimony in Aqua Pennsylvania Wastewater, Inc.'s ("Aqua" or the "Company") New Garden, Limerick, East Bradford, Cheltenham, East Norriton, Delaware County Regional Water Quality Control Authority, Lower Makefield, Willistown, and East Whiteland Section 1329 Application proceedings at Docket Nos. A-2016-2580061, A-2017-2605434, A-2018-3001582, A-2019-3008491, A-2019-3009052, A-2019-3015173, A-2021-3024267, A-2021-3027268, and A-2021-3026132 respectively. I also provided testimony in Aqua PA and Aqua's 2018 base rate case proceeding at Docket Nos. R-2018-3003558 and R-2018-3003561

**Q. What is the purpose of your testimony?**

A. The purpose of my testimony is as follows: (1) to provide a general description of the acquired system and (2) to discuss environmental compliance of the System.

**Q. Are you sponsoring any Exhibits with the Company's filing?**

A. Yes. Attached to my direct testimony as Appendix A is Aqua's 10-year capital plan for the City of Beaver Falls ("City" or "Beaver Falls") wastewater collection and treatment system ("System").

## II. OVERVIEW OF AQUA AND THE BEAVER FALLS SYSTEM

**Q. Please provide a general overview of Aqua.**

A. Aqua, a subsidiary of Aqua PA, is engaged in the business of collecting, treating, transporting, and disposing of wastewater for the public. Aqua serves approximately 60,000 customers in Adams, Berks, Bucks, Carbon, Chester, Clarion, Clearfield, Delaware, Lackawanna, Luzerne, Monroe, Montgomery, Pike, Schuylkill, Venango, and Wyoming Counties. Aqua operates 39 wastewater treatment plants ("WWTP") throughout the Commonwealth of Pennsylvania, and four systems of Aqua's Western Division are in proximity to the City allowing for operational efficiencies. Aqua, and its parent company Aqua PA, have approximately 600 employees bringing extensive expertise in providing water and wastewater service to citizens of Pennsylvania.

**Q. Please provide a description of the Beaver Falls System.**

A. The City is located in the north central part of Beaver County, Pennsylvania and the entirety of the City is served by a public sewer system. The Beaver Falls System is a collection, conveyance, and treatment system owned by the City that collects wastewater from within City and from the seven contributing municipalities – Big Beaver Borough, West Mayfield Borough, White Township, Patterson Township, Patterson Heights Borough, North Sewickley Township, and Eastvale Borough, collectively the "Contributing Municipalities". The wastewater from North Sewickley and Eastvale is pumped via the Eastvale pump station into the City and then flows by gravity sewers to the City owned wastewater treatment plant ("WWTP"). The other Contributing Municipalities' flow is

pumped via pump stations owned by those municipalities and flows into the City via gravity sewers to the WWTP.

Description of the System

The City WWTP began treatment of wastewater in about 1938. The plant receives flow from the Contributing Municipalities from one force main and gravity sewers. Flow from the one force main discharges to gravity sewer about mid-way through the City's collection system. The plant raw wastewater influent structure provides fine screening meters and diverts the flow into three primary clarifiers, which are operated in parallel, for gravity settling to remove heavy inorganic and organic solids as well as to reduce biochemical oxygen demand ("BOD5"). Following the primary clarifiers, further reduction of BOD5 (sufficient to also allow nitrification) occurs biologically in the two circular trickling filters ("TFs") which provides fixed film biological treatment of the wastewater. Final settling is achieved following the TFs in five final settling tanks. The final treatment step prior to discharge to the Beaver River is chlorine gas disinfection.

Wastewater solids produced during primary clarification are pumped through cyclone de-gritters where grit is removed from the wastewater and separated into a sanitary waste bin for landfill disposal.

The City WWTP is permitted at an annual average flow of 4.8 million gallons per day ("MGD") and has a maximum monthly average flow of 2.59 MGD. The 2021 annual average flow was 2.02 MGD and the 3-month maximum average flow was 2.3 MGD. The WWTP is permitted for a maximum organic loading of 9,207 pounds per day (lbs./day). The 2021 maximum month organic loading was 6,225 lbs./day.

The City collection and transmission piping is summarized in the Engineering Assessment included as Exhibit D to the Application.

**Q. Please provide the elevations for the City WWTP, Eastvale Pump Station, and the Requested Territory.**

A. City WWTP: elevation generally varies between EL 722 to EL 738.

Requested Territory: Area elevations vary generally from:

- EL 885 to EL 1150 along the western boundary.
- EL 720 to EL 985 along the southern boundary.
- EL 755 to EL 850 along the northern boundary.
- EL 720 to EL 820 along the eastern boundary.

Eastvale Pump Station: The Pump Station elevation is approximately EL 741.

**Q. Please state the approximate time of the installation of the component facilities of the system.**

A. With regard to the approximate time of the original construction, the City's WWTP was constructed and placed in service in approximately 1938 and provided basic primary treatment. The plant was most recently upgraded in 1996 with the installation of a second oxidation tower, three additional final settling tanks, a grit wash and grease separator building, aerated sludge holding tank, thickened sludge storage tank, and upgrades to the garage, belt filter press and secondary pump station.

The majority of the City System was originally constructed between 1936 and 1938 with the above-described additions made in the 1990s. The average age of the pipe in the City System is approximately 74 years old.

**Q. Is Aqua planning any capital projects over the next 10 years?**

A. Yes. Aqua looked at upgrades to the treatment plant, and gravity collection systems based on facility conditions observed, facility age, and safety. Aqua estimates that it will invest approximately $10.2 million over the next 10 years.

Upgrades to the treatment plant include improvements to filter tower No. 1 and sludge collectors, along with electrical work associated with the Supervisory Control and Data Acquisition ("SCADA") systems to provide greater assurance of continued process control and compliance. Aqua also plans to complete headworks upgrades and gas to liquid chlorine conversion to improve safety. Gravity collection system pipe rehabilitation and replacement will occur based on an assessment of pipe age and condition. Aqua will work with City and the DEP to address the inflow and infiltration ("I&I") and sanitary sewer overflows ("SSOs") within the System if they were to occur. Aqua will also work with the Contributing Municipalities regarding the Corrective Action Plans ("CAP") of those Contributing Municipalities. There were no reported SSOs in 2020 or 2021 as reported in the respective Chapter 94 Reports.

**Q. Do you foresee any other projects that would be required in the immediate future?**

A. Replacement and upgrade of facilities will continue beyond Aqua's 10-year capital plan based on facility age and expected facility life span.

**Q. Please state the actual number of City customers by class and gallons billed.** The City has 3,190 customers and 7 Contributing Municipalities. The breakdown by customer class and usage is shown in the below table.

| Service Area | Residential | Commercial | Public | Industrial | Contributing Municipalities | Bulk Other (Dalton) | Total |
|---|---|---|---|---|---|---|---|
| Beaver Falls | 2,879 | 276 | 17 | 7 | 7 | 1 | 3,187 |
| Gallons | 109,238,000 | 44,017,000 | 4,710,000 | 2,708,000 | 177,925,000 | 1,762,115 | 340,360,115 |

Gallons billed in the above table are based on water meter data. Total Gallons treated at the City WWTP for 2021 was 738,580,000.

**Q. Are the acquired City customers currently Aqua PA water customers?**

A. No. City wastewater customers are currently served by the Beaver Falls Municipal Authority within the City.

## III. ENVIRONMENTAL COMPLIANCE

**Q. Does the Application include National Pollution Discharge Elimination System ("NPDES") permits?**

A. Yes, the NPDES discharge permit for the City WWTP is included in the Application as Exhibit N1.

**Q. Does the Application include Water Quality Management ("WQM") Permits?**

A. Yes. The WQM permits for the City WWTP and Eastvale Pump Station are included with the Application as Exhibit M1 and M2.

**Q. Are Act 537 plans included in the Application?**

A. Yes. The City's Act 537 plan is included with the Application as Exhibit P1.

**Q. Are there any Notices of Violation ("NOV") issued to City by the DEP in the last five years?**

A. Yes. The City received an NOV in July 2021 related to total suspended solids ("TSS") violation and from the sampler refrigerator which was not keeping the sample at six degrees Celsius. No formal action was taken as the TSS violation was noted in the March 2021 discharge monitoring report, and a new sampler and industrial refrigerator was already ordered to replace the existing refrigerator.

The City received an NOV in August 2017 and November 2018 related to effluent limitation exceedances of its NPDES permit, and had noted exceedances in an August 2019 inspection report. The City provided a response in August 2017 to address DEP's letter. The City provided an email response to the November 2018 NOV related to the by-pass plant flow during a 6.05 inch rain event (discussed below); there was not a formal letter response. The effluent exceedances during this time period were addressed in a Consent Assessment of Civil Penalty ("CACP") discussed below.

**Q. Were there any other environmental issues concerning the System the last five years?**

A. The City experienced a secondary bypass of 1,035,000 gallons in September 2018 due to high levels of rainfall. This incident was reported to DEP via email included in Exhibit O1 to the Application. Aqua understands that the November 2018 NOV resulted from discharge monitoring report ("DMR") exceedances from July 2017 to June 2018.

**Q. Have there been any CACPs entered into by the Township and the DEP?**

A. Yes. The City entered into a CACP with DEP in 2019 for failure to comply with effluent limitations under its NPDES permit on multiple occasions from 2016-2019. The City agreed to pay $8,500 to resolve the exceedances during this period. The CACP is included with the Application as Exhibit O2.

**Q. Please state if there are any current environmental compliance issues for the City System.**

A. The City is currently under a CAP on file with DEP. The CAP is included in the Application as Exhibit O3. The CAP does not require physical upgrades to the system, but does require updating the existing sewer collection system mapping, administering the Tap Control Plan (Connection Management Plan), and continuing to prevent unpermitted discharges. The Contributing Municipalities also have CAPs submitted to DEP, except Eastvale Borough, Patterson Heights Borough, and West Mayfield Borough who have not submitted a CAP to DEP. Aqua believes that what prompted DEP to require a CAP was the fact that there were a number of City customers who would experience basement flooding due to surcharged sewers in rain events even though the City's collection is not a combined system, that is, conveying both sanitary and stormwater flow. As Aqua

understands, the City addressed the basement flooding condition through the installation of backflow prevention devices on the subject customer laterals.

The Company's review of the flow and billing data from the City indicates that there is likely I&I present in the system. While this is expected for a system of this age, Aqua has planned main and manhole repairs in its capital plan and will continue reviewing ways to address sources of I&I within the system. Aqua plans on conducting manhole inspections as well as developing a Geographic Information System ("GIS") map of the collection system to supplement and confirm work that the City has also conducted as part of the CAP. This work is planned for the first full year of ownership and budgeted to cost approximately $80,000. In addition, flow metering of the collection system will be conducted to identify basin areas contributing the greatest amount of flow in comparison to the City customers present within the basin areas, thereby providing targeted areas for Closed Circuit Television ("CCTV") and subsequent I&I repair work. This study may cost approximately $100,000. Sanitary sewer lateral repair work is also included in the capital plan to be conducted on an annual basis; $50,000 per year has been budgeted. Laterals can be a significant source of I&I present within a system.

CCTV inspection of pipes will be conducted following completion of the temporary flow metering program once those basin areas identified as generating the greatest amount of I&I can be determined. CCTV work is presently planned for years 4 through 6 after taking ownership of the system and is projected to cost approximately $375,000. Prioritized sewer main rehabilitation and replacement will be conducted in the same time period and $90,000 has been allocated; a total of just over $2 million has been budgeted in years 8 through 10 for sewer main rehabilitation and replacement to address the defects

identified during the CCTV phase of the work. $400,000 has been allocated for manhole rehabilitation during the same period. Aqua's 10-Year Capital Plan is attached to my Direct Testimony as Appendix A.

**Q. Are there any noncompliance issues pending with the United States Environmental Protection Agency ("EPA")?**

A. None of which Aqua is aware.

**Q. Please state the estimated number of future connections for the system for the next 5 years.**

A. The below table provides projected equivalent dwelling units ("EDU") for the next five years (2022-2026):

| Year | 2022 | 2023 | 2024 | 2025 | 2026 | Total |
|---|---|---|---|---|---|---|
| City | 36 | 34 | 36 | 38 | 39 | 183 |

**Q. Is there present system capacity to meet the demands of current and future customers?**

A. Yes. Based upon the permitted capacity of the WWTP at 4.8 MGD, the average annual flow ranging from 2-3 MGD over the last five years, and the projected EDUs over the next five years, there is system capacity to meet the demands of present and future customers.

## IV. CONCLUSION

**Q. Does this conclude your testimony?**

A. Yes, it does. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of this proceeding.

I. INTRODUCTION ..... 1
II. AQUA OPERATIONS, INTEGRATION OF THE SYSTEM, AND TECHNICAL FITNESS ..... 3
III. CONCLUSION ..... 13

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Zach Martin. My business address is 665 South Dock Street, Sharon, PA 16146.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Aqua Pennsylvania, Inc. ("Aqua PA"), as the Western Pennsylvania Area Manager.

**Q. Please provide a brief description of your education and work experience.**

A. I graduated from the Kent State University with an Associate of Science degree in 2009 and then a Bachelor of Business Administration in 2021. I have worked in the water and wastewater industry for nineteen years. I began my career in the utility industry in the spring of 2004 with the City of North Canton, Ohio as a water plant operator where I secured my Class III Water Supply Certification from the Ohio EPA. I moved into a leadership role in early 2009 as the Regional Water Superintendent for Portage County Water Resources where I was responsible for managing plant and distribution employees in the county operations of three water systems. I also served as backup to the wastewater superintendent there for the 13 wastewater treatment plants and 113 lift stations. In 2010, I moved to Aqua Ohio, Inc. as the Production Manager for the Struthers Division. There I was responsible for the operations and maintenance of the large surface water system including the 5 million gallon per day ("MGD") surface water treatment plant and the five

source water lakes and their six dams. In 2013, I was promoted in Aqua PA as the Assistant Division / Production Manager and later a Plant Manager II in 2017, and I held that position through 2021. During those eight years I was responsible for all aspects of production, treatment, and distribution facilities of the eight drinking water systems in Western PA. In 2021, I was promoted to the position of Area Manager II. In total I have worked for the Aqua subsidiaries of Essential Utilities, Inc. ("Essential") (*f/k/a* Aqua America, Inc.) for 13 years. I am responsible for leading a team of employees delivering drinking water to customers and returning treated wastewater back to the environment in nine counties of Western Pennsylvania. I am involved in all aspects of operations including budgeting, planning, employee relations, and process control. I am also involved in the business development functions in my area of operations. I am also a veteran of Operation Iraqi Freedom III and served in the U.S. Army and Ohio Army National Guard.

**Q. Do you hold any professional licenses or certifications?**

A. Yes. I hold three environmental operator certifications in two states. I am a Class-A certified water and Class-A certified wastewater operator in Pennsylvania with 18 subclasses in total. I am also a Class 3 water supply licensed operator in the state of Ohio. I have maintained operational laboratory certifications in both states as well.

**Q. Have you previously testified before the Pennsylvania Public Utility Commission ("PUC" or the "Commission")?**

A. No.

**Q. What is the purpose of your Direct Testimony?**

A. The purpose of my Direct Testimony is to discuss Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") operations and how Aqua will integrate the City of Beaver Falls ("City" or "Beaver Falls") wastewater system ("the System") into Aqua's operations; and to discuss the public benefits of this transaction.

**Q. Are you sponsoring any Exhibits with the Company's filing?**

A. No.

## II. AQUA OPERATIONS, INTEGRATION OF THE SYSTEM, AND TECHNICAL FITNESS

**Q. Please describe Aqua's operations in relation to the System geographically.**

A. Aqua's Western Division office in Sharon, PA is located approximately 34 miles from the City. Aqua's Western Division oversees nine water and four wastewater systems serving 30,031 customers in 34 municipalities. Aqua's Western Area office will oversee and provide operations support for the System, along with management support from Aqua's Southeast Headquarters.

**Q. Please state how many miles the City System is from Aqua's existing service territory.**

A. The City System's distance from Aqua's existing service territory is as follows:

| Buyer's Plant | Location | Approximate Distance to City (miles) |
|---|---|---|
| Emlenton System | Emlenton, PA (Venango) | 42 |
| Western Area Office | Sharon, PA (Mercer) | 32 |
| Mahoning Township System | Hillsville, PA (Lawrence) | 19 |

**Q. Will the System be physically interconnected with Aqua's system or be operated as a standalone system?**

A. The System will be operated as a standalone system within Aqua's footprint.

**Q. Please describe how Aqua will integrate the operation of the System into its current operations.**

A. The operation of the System will be managed from Aqua's Western Area office in Sharon, PA. Management, customer service, regulatory compliance, engineering, financial, and ancillary services will be provided seamlessly from there with support from our Southeastern Headquarters office. Aqua plans to offer employment to seven current employees of the City to address the day-to-day operations of the System.

**Q. Will other Aqua PA employees assist in the operation of the system, if needed?**

A. Yes. Aqua has 12 wastewater operators in the Western PA Area, many holding dual water and wastewater certifications, which may be called upon to assist in the operations of the system. There are also 20 certified water operators in the Western PA Area that

are familiar with treatment systems and can follow standard operating procedures ("SOPs") if needed. These operators are also supported by Aqua PA employees, which will benefit customers through engineering and field service functions.

**Q. Please explain the support services that Aqua Services will provide to the System.**

A. Aqua Services, Inc. ("Aqua Services"), the Service Company for the Aqua subsidiaries, provides expertise in a variety of areas to the water and wastewater subsidiaries of Essential. Aqua Services will provide support to the operation of the system through its employees' expertise in accounting and financial, administrative, communications, corporate secretarial, customer service and billing, engineering, fleet services, human resources, information systems, operations, regulatory compliance, rates and regulatory, risk management, water quality, legal, and purchasing, contracts and sales of real estate.

A benefit to the community of Beaver Falls and the City customers will be the access to expansive customer service provided by the Aqua-owned customer service call centers, the Everbridge after hours call center, and the customer service work order programs. City customers will have access to customer service centers during normal business hours and emergency call centers 24/7. Customer calls are recorded for training and complaint resolution, account status can be confirmed, outages and emergencies like broken meters, obstructed or leaking service connections, and water or wastewater main breaks can be reported and dispatched with date and timestamped record keeping. The City's customers will benefit from Aqua's extensive list of internal and external resources

in the immediate Western PA Area, throughout all the Aqua PA operations, as well as all of Essential.

Another example of the support that Aqua will provide to the City System is through its purchasing and supply chain management groups. Aqua sources materials and supplies to include chemicals, pipe, fittings, equipment, and vehicles through national contracts. Through leveraging our purchasing power and economies of scale, Aqua can secure the best materials and supplies at very competitive costs. Aqua maintains relationships with suppliers large and small, and Aqua has a history of being able to shift inventories of materials and supplies across areas, companies, and regions to meet customer service and maintenance needs of systems. Aqua will be able to extend these cost savings to the City System and ensure that capital investments can be completed as cost effective as possible. The increases of supplies and materials that the City System adds to the total Aqua purchasing will help maintain or even lower costs as quantities increase.

**Q. Does Aqua plan any physical, operational, and managerial changes after closing?**

A. As mentioned in the Direct Testimony of Mark J. Bubel, Sr., there are planned capital improvements and Aqua plans to offer employment to seven City employees. The System will be operated from Aqua's Western Area office. There will be no other physical, operational, and managerial changes after closing.

**Q. Is the System similar to other systems owned and operated by Aqua?**

A. Yes. The System, as stated above, is a wastewater collection and treatment system. Aqua owns four other collection and treatment systems located within Western Pennsylvania.

**Q. Do you believe that Aqua is technically fit to own and operate the system?**

A. Yes.

**Q. Please describe the Company's technical fitness and how the Company can provide quality and reliable service to City wastewater customers.**

A. Aqua PA and Aqua are Class A utilities that already have certificates to operate throughout the Commonwealth and have acquired many systems in the last three decades. Aqua will provide quality and reliable service to the City wastewater customers given the Company's operational expertise as well as engineering support local to the City System. Aqua has expertise in troubleshooting mechanical equipment as well as wastewater treatment processes. Aqua also has expertise in operating wastewater collection and conveyance systems. Aqua strives to ensure the collection, conveyance, and pumping systems which the Company owns provide continuous safe and reliable service. Aqua has worked with the Commission and statutory advocates to acquire and improve troubled wastewater systems (e.g., Washington Park Wastewater, Docket No. A230550F2000). In addition, Aqua was appointed receiver for the North Heidelberg Sewer Company system in Berks County by the Commission effective March 5, 2018.

Aqua took over daily wastewater operations of the facility serving approximately 274 customers on March 5, 2018. Aqua has provided operations service and improvements to the system to ensure quality and reliable service.

Specifically in the Western Area of its operations, Aqua has replaced six sewer lift stations, upgraded treatment plant headworks to include a new equalization tank, and increased permitted capacity of the Treasure Lake wastewater system plant. Aqua has installed a state-of-the-art ultraviolet disinfection system at this plant. Aqua also navigated strict Pennsylvania Department of Environmental Protection ("DEP") regulations to install chemical treatment systems and optimize the plant for copper removal to benefit an impaired receiving stream.

In Emlenton, Aqua has worked to rebuild rotating biological contactors, we have improved residuals management practices, rebuilt the influent lift station and headworks of the treatment facility, as well as installed new de-chlorination facilities to meet compliance requirements for the receiving stream.

Aqua will immediately incorporate the equipment and facilities acquired from the City into the established asset management programs to include preventative maintenance programs and corrective maintenance management.

**Q. Does Aqua have emergency preparedness measures in place?**

A. Yes. Aqua currently has emergency preparedness measures in place to ensure security and continued service in emergency circumstances all of which have been reviewed by

the Commission. Aqua maintains a cyber security, physical security, and business continuity plan.

Aqua has an in-house IT department that is dedicated to preventing and responding to security concerns, including actively monitoring for cyber threats. Aqua has physical security plans including door locks with card swipe functionality on all major facilities. Aqua reviews new acquisitions for potential physical security improvements to ensure the continued viability of its facilities. Finally, Aqua maintains a business continuity plan which allows for management of the Company to continue should facilities be compromised. The System would come under each of these plans and would therefore benefit from Aqua's planning.

**Q. Please explain Aqua's safety programs.**

A. Aqua and Aqua PA maintain safety programs that entail basic safety training in all the major categories which operators and operations management personnel are required to complete including but not limited to:

- Confined Space Training
- Back and Lifting Safety
- Work Zone Traffic Control
- Excavation Safety Awareness
- Fall Protection Training
- Hazard Communication
- Personal Protective Equipment
- Emergency Egress, Exits and Fire Safety
- Electrical Safety Training
- Control of Hazardous Energy | Lockout Tagout
- Arc-Flash Assessment and Protection
- Respiratory Protection
- Hearing Conservation

- Occupational Safety and Health Administration ("OSHA") Process Safety Management ("PSM") Program
- U.S. Environmental Protection Agency ("EPA") Risk Management Program ("RMP")

Aqua's safety program and procedures provide public benefits in that the City's customers will have a leader in the wastewater industry providing service. The City employees will benefit from the implementation of programs that have been proven effective and compliant with state and federal regulations.

**[BEGIN CONFIDENTIAL]**

[redacted]

[redacted]

[redacted]

**[END CONFIDENTIAL]**

**Q. Please describe Aqua's current arrangements to supply power to its facilities.**

A. Essential has a national contract with a number of energy companies for purchased power. These national contracts allow Aqua PA to acquire power at a favorable rate across all its water and subsidiary wastewater operations. Essential employs a full-time energy manager to ensure that it is getting the best price for power across its footprint. Aqua also maintains an inventory of emergency portable generators across all the Aqua subsidiaries. The Western Pennsylvania operations team currently maintains two portable generators as backups to the stationary generators at all critical facilities. Aqua also maintains several portable drinking water pumps as well as several solids handling wastewater bypass pumps. One of each of these pumps is stationed in Western Pennsylvania for emergency support of operations.

**Q. Please summarize why you believe Aqua is technically fit to own and operate the system.**

A. My explanation of Aqua's current operations, the System's similarity to other systems operated by Aqua, the additional support that will be provided by Aqua as an experienced wastewater utility, all support that Aqua is technically fit to own and operate the System.

## III. CONCLUSION

**Q. Does this conclude your Direct Testimony?**

A. Yes, it does. However, I reserve the right to supplement my Direct Testimony as additional issues and facts arise during the course of this proceeding.

VI. CONCLUSION ..... 10

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Charles R. Jones, Jr. My business address is 715 15th Street, Beaver Falls, PA 15010.

**Q. In what capacity are you affiliated with the City of Beaver Falls?**

A. I am the appointed City Manager for the City of Beaver Falls (the "City"). My duties as defined by the City's Home Rule Charter are to manage day-to-day operations and oversee administrative functions of all City departments. I report directly to the Mayor of the City and City Council.

**Q. Please provide a brief description of your education and work experience.**

A. I am a United States Air Force Veteran, with extensive training and experience with law enforcement management and operations. I am a graduate of the F.B.I. National Academy and currently serve on several local and regional boards, including my role as an executive board member of our local Chamber of Commerce. I have an Associate's Degree in Criminal Justice and Police Technology. I have an undergraduate degree and graduate degree in leadership and organizational management, and I am a recent recipient of an honorary doctorate degree in leadership from Geneva College.

**Q. Have you testified before the Pennsylvania Public Utility Commission ("Commission") before?**

A. No.

**Q. On whose behalf are you testifying in this proceeding?**

A. I am testifying on behalf of the City, and in cooperation and support of Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") application to purchase the City's wastewater collection, conveyance, and treatment system (the "Acquired Assets").

**Q. Please describe the purposes of your direct testimony and summarize the key points it will address.**

A. The purpose of my testimony is to provide: (1) a description of the Acquired Assets, (2) a description of the anticipated benefits of the sale of the Acquired Assets in accordance with an Asset Purchase Agreement ("APA") between the City and Aqua, and (3) a description of how the City sets its annual rates.

There are numerous benefits of the proposed transaction that are most important to the City and the customers who use the Acquired Assets, which include:

- The ability of the City to avoid Act 47 status and distressed community status, under the Municipalities Financial Recovery Act, Act of July 10, 1987, P.L. 246, No. 47 ("Act 47"), by improving the City's financial condition and outlook and by paying down debt and funding unfunded pension liabilities which will provide budgetary relief.
- Avoid navigating stringent United States Environmental Protection Agency ("EPA") and Pennsylvania Department of Environmental Protection ("DEP") regulations and rules which have grown increasingly more challenging to comply with.

- Ability to secure future financial stability for the City and its residents.
- The ability and flexibility to make necessary future capital investments within the City that will benefit residents of the City.
- The ability to preserve all wastewater collection system jobs.
- Aqua's ability as a Commission-regulated company to provide high quality professional wastewater services to the public.
- Anticipated additional property on the City's property tax rolls as a result of more development opportunities.
- Benefitting from Aqua's expertise, long-standing capital improvement programs, and its experience in improving and investing in aging systems in need of capital investments.
- Accessing Aqua's well-established and accessible programs to provide assistance for qualifying low-income customers.
- Improving the Acquired Assets' defenses against cyber-security attacks targeted at municipal-owned utilities with less sophisticated technology infrastructure and defenses.
- Benefitting from enhanced customer service and operational functions through expanded customer service center hours, more streamlined payment options (including by phone), enhanced customer information and education programs, access to Aqua's customer assistance program, and Aqua's team of experienced water and wastewater professionals.
- Benefitting from Aqua's proven record of environmental stewardship for the operation of wastewater systems; and

- Receiving the benefit of regulation by the Commission, which will ensure regulatory oversight, require approval for all rate increases, and provide significant consumer protections.

**Q. Are you sponsoring any Exhibits with your testimony?**

A. No.

## II. DESCRIPTION OF THE CITY AND ITS WASTEWATER SYSTEM

**Q. Please provide a general overview of the City.**

A. The City is a Home Rule Charter Municipality (as of January 3, 2022; the City was formerly a City of the Third Class) located in Beaver County, Pennsylvania, approximately 31 miles north of the City of Pittsburgh. The City is governed by a Mayor and a City Council comprised of four members. There are approximately 9,005 residents in the City (based on the 2020 U.S. Census). The City is approximately 2.317 square miles. According to the 2020 American Community Survey by the U.S. Bureau of the Census, the City's median household income is $35,951.

**Q. Please provide a description of the City's wastewater system.**

A. The City owns, operates and maintains the Acquired Assets, consisting of a sanitary wastewater collection and conveyance system and the Beaver Falls Sewage Treatment Plant. Along with the residents of the City, a total of seven municipalities contribute flow to be treated at the plant, including North Sewickley, Patterson Township, West Mayfield Township, White Township, Patterson Heights Borough, Big Beaver Borough, and

Eastvale Borough (the "Contributing Municipalities"). The City does not own any of the collection and conveyance sewers of the Contributing Municipalities. The City's collection and conveyance system includes approximately 36.3 miles of pipe serving approximately 3,190 customers within the City. The treatment plant has a hydraulic design capacity of 4.8 million gallons per day.

A majority of the Acquired Assets' sanitary sewer pipes were installed in the 1930s, with a few smaller sections installed in 1982 and 1996. The City does not have a long-term capital plan for the Acquired Assets as a result of the City's financial condition.

## III. SALE PROCESS

**Q. Please describe the City's decision-making process in concluding that a sale of the Acquired Assets was in the best interest of the City.**

A. The sale of the Acquired Assets was a result of extensive considerations and discussions with City leadership, staff and with the public. The City conducted a thorough internal review and solicited outside experts to review the Acquired Assets taking into account future costs and the potential liabilities of managing the wastewater system.

An evaluation was conducted to determine both qualitative and quantitative factors in reference to selling or maintaining ownership of the Acquired Assets. The careful and well-thought-out decision to sell resulted from the following main considerations. First, the City wanted to exit the business of providing sanitary sewer service and instead focus on its core governmental functions while still ensuring that our

residents would have safe and reliable service at affordable rates. Second, we wanted to generate revenue that would help secure the City's financial stability in the coming years.

After City Council made the decision to sell the Acquired Assets based on the above considerations, the City issued a Request for Qualifications to select a pool of qualified buyers, and, after preparation of the APA, a Request for Bids. Once the City reviewed the responses, we determined that Aqua, submitted a bid for our system that was in the best interest of, and provided the greatest value to, the City and its residents.

**Q. Did the City request public input on the sale?**

A. Yes, multiple public meetings were held in the City to receive input from residents on the state of the Acquired Assets and the advantages and disadvantages of the potential sale. The potential sale was discussed at various public meetings throughout the process including timely updates provided by the City's financial advisor, PFM Financial Advisors, LLC.

**Q. Did the City Council hold a vote at a regularly schedule public meeting on the sale, following input from the City residents?**

A. Yes, the duly elected members of City Council decided that the Proposed Transaction was in the best interests of the City. After public meetings, as detailed above, the City Council voted to authorize the City's solicitor to prepare an ordinance/resolution to accept Aqua's bid. In compliance with the Third Class City Code, two readings of the proposed ordinance to approve the APA were held on September 14th and September

28th, 2021, after providing notice to City residents publication was made in the Beaver County Times on September 22, 2021.

**Q. Please describe the process that the Township used to hire a Utility Valuation Expert ("UVE") for the Proposed Transaction.**

A. When City Council voted to unanimously approve the sale on September 28, 2021, it also authorized the City Manager to select a Utility Valuation Expert. On October 1, 2020, the City received a proposal from Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming"), which was accepted after confirming their qualifications. Gannett Fleming is not otherwise affiliated with the City. The City authorized Gannett Fleming to begin working on the fair market value appraisal on June 16, 2022.

## IV. BENEFITS OF THE PROPOSED TRANSACTION

**Q. Please describe the benefits of the Proposed Transaction for the City.**

A. The City will benefit from the Proposed Transaction in many ways, as its wastewater collection and treatment system will be operated by a well-run public utility with a history of providing excellent service and a proven track record. Furthermore, the key benefits of the Proposed Transaction to the City and its residents are: (1) improve the City's financial condition and outlook, and (2) enable the City to reallocate its administration time to focus on other key initiatives of the City.

First, the Proposed Transaction will greatly improve the City's financial condition. The City has historically experienced financial difficulties, particularly during periods of economic recession, and is vulnerable to future economic downturns. This infusion of cash

will help prevent the City from being named by the Commonwealth Department of Community and Economic Development ("DCED") to distressed community or Act 47 status, which indicates severe financial difficulties and could lead to the City being placed in receivership.

Second, with respect to reallocating administrative time and expense, given the time and economic impact on the City of dealing with the Acquired Assets, by reallocating City administration time to focusing on other key initiatives of the City, the Proposed Transaction will provide significant public benefits.

The purchaser took great care with explaining their commitment to assist lower income residents and the importance of being a part of our community.

**Q. Please describe any further benefits from the Proposed Transaction.**

A. The City will realize many additional benefits from the sale of the Acquired Assets to Aqua. These benefits include, but are not limited to, the following:

- Property will be added to the City's property tax rolls through increased development opportunities;
- Aqua can draw upon a broad range of engineering and operational experience, as well as deeper financial resources than are available to the City, to address the environmental compliance challenges of the wastewater system;
- The City will benefit from Aqua's capital improvement programs, and its experience in improving wastewater systems and correcting potential future compliance issues that may arise;

- City residents will benefit from enhanced customer service and operational functions through expanded customer service center hours, additional payment options (including by phone or online), enhanced customer information and education programs, access to Aqua's customer assistance program, and Aqua's team of experienced water and wastewater professionals;
- Aqua has the capability and experience to make long-term investments in necessary capital improvements to the Acquired Assets;
- Aqua has a proven record of environmental stewardship for the operation of wastewater systems; and
- The City will acquire a new corporate citizen. Aqua's commitment to the communities it serves through investment in the community is clear throughout the Commonwealth.

**Q. Do you believe that the Proposed Transaction is in the public interest?**

A. Yes. For the reasons I set forth above, I believe that the Proposed Transaction provides substantial affirmative public benefits and is in the public interest. I urge the Commission to promptly approve the Proposed Transaction.

## V. RATES

**Q. How does the City of Beaver Falls set the rates it charges customers for wastewater treatment and collection?**

A. Rates are governed by the Third Class City Code and the Home Rule Charter and are set by City Council by ordinance and resolution after consideration of the costs of providing

service. Any rate increases must be approved by City Council through an ordinance. Rates to the inside City residents are billed based on a base and volumetric charge. Customers within the City are mainly charged a quarterly service charge which includes the first 3,000 gallons of consumption and a volumetric charge per additional 1,000 gallons used. Certain larger commercial and industrial customers are billed on a monthly basis. City customers are billed quarterly by the Beaver Falls Municipal Authority, which provides water service within the service area of the Acquired Assets. The Beaver Falls Municipal Authority remits the sewer portion of residents' payments to the City. The Contributing Municipalities are billed wholesale based on a set usage charge per 1,000 gallons of water used. The City's Sewage Department bills outside municipalities on a wholesale basis based on water usage readings provided by the Beaver Falls Municipal Authority.

**Q. How frequently does the City of Beaver Falls adjust rates?**

A. On November 8, 2022, the City adopted a rate ordinance confirming rates for residential and commercial customers and for the Joint Sewer Users. As was the case with the City's prior rate ordinance, this ordinance provides for late fees and an automatic 3% increase on an annual basis in order to account for inflation and cost increases.

## VI. CONCLUSION

**Q. Does this conclude your testimony?**

A. Yes, it does. However, I reserve the right to file additional testimony at a later date as may be necessary or appropriate.

**PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**AQUA PENNSYLVANIA WASTEWATER, INC.**

**DOCKET NO. A-2022-3033138**

# AQUA STATEMENT NO. 5

# DIRECT TESTIMONY OF DYLAN W. D'ASCENDIS

**February 2023**

# DIRECT TESTIMONY OF
# DYLAN W. D'ASCENDIS

**Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS FOR THE RECORD.**

A. My name is Dylan W. D'Ascendis. My business address is 3000 Atrium Way, Suite 200, Mount Laurel, NJ 08054.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am employed by ScottMadden, Inc. ("ScottMadden") as Partner.

**Q. PLEASE DESCRIBE YOUR PROFESSIONAL EDUCATION AND EXPERIENCE.**

A. I offer expert testimony on behalf of investor-owned utilities on rate of return issues and class cost of service issues. I am a Utility Valuation Expert ("UVE") in the Commonwealth of Pennsylvania approved by the Pennsylvania Public Utility Commission ("PUC" or the "Commission") (Utility Code 9919278). I also assist in preparing rate filings, including, but not limited to, revenue requirements and original cost and lead/lag studies. I am a graduate of the University of Pennsylvania, where I received a Bachelor of Arts degree in Economic History. I also hold a Masters of Business Administration from Rutgers University with a concentration in Finance and International Business, which was conferred with high honors. I am a Certified Rate of Return Analyst ("CRRA") and a Certified Valuation Analyst ("CVA"). My full professional qualifications, including my expert witness appearances, are provided in Attachment A.

**Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE COMMISSION?**

A. Yes. I have testified before the Commission on several occasions as shown on Attachment A.

**Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?**

A. The purpose of my testimony is to describe the fair market value appraisal of the wastewater operations of the City of Beaver Falls ("Beaver Falls" or the "City") that my staff and I performed on behalf of Aqua Pennsylvania Wastewater, Inc ("Aqua"). Beaver Falls is selling their operations to Aqua. Our report is entitled "Valuation Report City of Beaver Falls Wastewater System As of September 7, 2022." The valuation and its report were developed to meet the criteria established in Section 1329 of the Pennsylvania Public Utility Code ("Code"), 66 Pa.C.S. § 1329 ("Determination of the fair market value of water and wastewater assets").

In its 2015-2016 legislative session, the Pennsylvania Legislature passed Act 12 of 2016 and Governor Wolf signed into law Section 1329 of the Code establishing the legislative guidelines facilitating the acquisition of municipal water and wastewater systems by private investor-owned utilities and other entities which are rate-regulated by the PUC.

## QUALIFICATION AS UTILITY VALUATION EXPERT

**Q. ARE YOU ON THE COMMISSION'S REGISTRY OF UTILITY VALUATION EXPERTS?**

A. Yes. I am considered a UVE in the Commonwealth of Pennsylvania approved by the PUC (Utility Code 9919278).

**Q. PLEASE DESCRIBE THE PROCESS BY WHICH SCOTTMADDEN WAS PLACED ON THE COMMISSION'S REGISTRY OF UTILITY VALUATION EXPERTS.**

A. After passage of Section 1329 of the Code, the Commission established an application process by which the Commission would approve and designate firms to be placed on the Commission's "Registry of Utility Valuation Experts." ScottMadden submitted its application and the required proof of experience on October 13, 2016 and received confirmation and approval from the Commission of ScottMadden's placement on the Commission's UVE Registry on December 7, 2016. ScottMadden has remained on the Commission's registry ever since.

**Q. HAVE YOU EVER HAD YOUR PROFESSIONAL CREDENTIALS REVOKED OR SUSPENDED?**

A. No.

**Q. DO YOU HAVE SPECIFIC EXPERIENCE WITH THE VALUATION AND APPRAISAL OF UTILITY ASSETS?**

A. Yes. Please see Attachment A for the details of my valuation assignments.

**Q. HAVE YOU, SCOTTMADDEN, OR ANY OF ITS STAFF DERIVED ANY MATERIAL FINANCIAL BENEFIT FROM THE SALE OF BEAVER FALLS' ASSETS OTHER THAN FEES FOR YOUR SERVICES RENDERED?**

A. No.

**Q. ARE YOU, SCOTTMADDEN, OR ANY OF ITS STAFF AN IMMEDIATE FAMILY MEMBER OF A DIRECTOR, OFFICER, OR EMPLOYEE OF EITHER BEAVER FALLS OR AQUA?**

A. No.

**Q. IS SCOTTMADDEN IN COMPLIANCE WITH APPLICABLE PENNSYLVANIA LAWS?**

A. Yes.

**Q. DOES SCOTTMADDEN HAVE THE FINANCIAL AND TECHNICAL FITNESS, INCLUDING PROFESSIONAL LICENSES AND TECHNICAL CERTIFICATIONS, TO PERFORM A FAIR MARKET VALUATION OF THE ASSETS OF BEAVER FALLS?**

A. Yes.

**Q. ARE YOU AWARE OF ANY FACT, INCLUDING BUT NOT LIMITED TO ANY POTENTIAL CONFLICT OF INTEREST, THAT WOULD CAST DOUBT UPON YOUR ABILITY TO PROVIDE A THOROUGH, OBJECTIVE, UNBIASED, AND FAIR VALUATION IN THIS PROCEEDING?**

A. No.

**Q. ARE YOU ADVOCATING FOR ANY PARTY OR OUTCOME?**

A. No.

## FEES PAID FOR UTILITY VALUATION EXPERT SERVICES

**Q. HOW IS SCOTTMADDEN BEING COMPENSATED FOR ITS SERVICES IN THIS MATTER?**

A. ScottMadden is being compensated on a fee basis, which includes a fixed fee upon delivery of the initial valuation report, and hourly rates for any services rendered thereafter. True, correct, and complete copies of ScottMadden's invoices to Aqua for this matter, as of the date of Application filing, are attached to Aqua's Application as Application Exhibit S1 and I incorporate those invoices in my direct testimony as if set forth in their entirety.

**Q. WILL SCOTTMADDEN RECEIVE FEES FOR ITS SERVICES REGARDLESS OF WHETHER THE COMMISSION APPROVES THE PROPOSED TRANSACTION OR WHETHER IT CLOSES?**

A. Yes.

**Q. ARE THESE FEES CONSISTENT WITH COMPENSATION RECEIVED FOR SIMILAR SERVICES PROVIDED TO OTHER CLIENTS?**

A. Yes.

## FAIR MARKET VALUATION OF BEAVER FALLS' ASSETS

**Q. PLEASE IDENTIFY EXHIBIT Q TO THE APPLICATION IN THIS PROCEEDING?**

A. Exhibit Q of Aqua's Application includes my Valuation Report dated September 7, 2022, which I prepared for Aqua to be filed in this proceeding.

**Q. HOW DO YOU RECOGNIZE IT?**

A. I personally prepared and supervised ScottMadden personnel in preparing the Report, and recognize it as ScottMadden's work product.

**Q. IS APPLICATION EXHIBIT Q A TRUE, COMPLETE, AND ACCURATE COPY OF YOUR VALUATION REPORT?**

A. Yes, and I incorporate it into my direct testimony as if set forth in its entirety.

**Q. PLEASE DESCRIBE THE PROCESS BY WHICH YOU PREPARED THE VALUATION REPORT.**

A. In accordance with Section 1329 of the Code, Aqua and Beaver Falls engaged Gannett Fleming, Inc. ("Gannett Fleming") as the licensed engineer to conduct an assessment of the City's tangible assets. Aqua engaged ScottMadden to prepare the fair market valuation

report for their operations. Beaver Falls provided financial statements regarding their operations and a copy of the City of Beaver Falls Engineers Assessment of Wastewater System Assets ("Engineer's Assessment") developed by Gannett Fleming as required by Section 1329(a)(4). After those activities and data gathering, we developed the appraisal.

The appraisal contains a letter of transmittal; a narrative report explaining our methodology and conclusions; a statement of assumptions and limiting conditions; a statement of the Valuation Analyst's Representations; a statement of the professional qualifications of Dylan W. D'Ascendis, CVA, CRRA and Matthew R. Howard, CRRA; and various schedules and appendices.

The intent of the valuation report is to provide the appraisal results, as well as the entire appraisal work file, in sufficient detail to satisfy the parties' and Commission's review requirements of Section 1329 and the Commission's Final Implementation Order, *In re: Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 (Order entered October 27, 2016). In addition to a copy of my appraisal report, I have provided supporting work papers for the appraisal report. The relevant work papers have been submitted to the Commission with the Application and provided to the statutory advocates in live electronic format. ScottMadden considers the live electronic files, which are in Excel format, to be CONFIDENTIAL.

**Q. IS THERE ANYTHING THAT YOU WOULD CHANGE IN THE VALUATION REPORT SINCE ITS PREPARATION?**

A. No.

**Q. WAS THE FAIR MARKET VALUATION OF THE CITY'S ASSETS DETERMINED IN COMPLIANCE WITH THE UNIFORM STANDARDS OF PROFESSIONAL APPRAISAL PRACTICE ("USPAP")?**

A. Yes. Included in ScottMadden's cover letter is a statement of our report's compliance with USPAP.

**Q. DID YOU EMPLOY THE COST, MARKET AND INCOME APPROACHES IN PREPARING YOUR VALUATION?**

A. Yes. We developed our appraisal utilizing the cost, market, and income approaches as required by USPAP and Section 1329 of the Code. These approaches are summarized below.

**Table 1: Summary of Indicated Values**

| Valuation Approach | Indicated Value |
|---|---|
| Cost Approach | $11,446,928 |
| Market Approach | $46,817,319 |
| Income Approach | $39,970,803 |

**Q. DID YOU RELY UPON A LICENSED ENGINEER'S ASSESSMENT OF THE TANGIBLE ASSETS OF BEAVER FALLS IN PERFORMING YOUR VALUATION?**

A. Yes. Aqua and Beaver Falls engaged Gannett Fleming as the licensed engineer to conduct an assessment of Beaver Falls' tangible assets. Beaver Falls provided a copy of the Engineer's Assessment developed by Gannett Fleming as required by Section 1329(a)(4). A copy of the Engineering Assessment is included as Appendix E to the Valuation Report.

**Q. DID THE ENGINEER'S ASSESSMENT INCLUDE AN INVENTORY OF THE USED AND USEFUL UTILITY PLANT ASSETS TO BE TRANSFERRED COMPILED BY YEAR AND ACCOUNT?**

A. Yes.

**Q. DID THE ENGINEER'S ASSESSMENT LIST ALL NON-DEPRECIABLE PROPERTY SUCH AS LAND AND RIGHTS-OF-WAY?**

A. Yes.

**Q. TO THE BEST OF YOUR KNOWLEDGE, WAS THE ENGINEER'S ASSESSMENT DEVELOPED FROM AVAILABLE RECORDS, MAPS, WORK ORDERS, DEBT ISSUE CLOSING DOCUMENTS FUNDING CONSTRUCTION PROJECTS, AND OTHER SOURCES TO ENSURE AN ACCURATE LISTING OF UTILITY PLANT INVENTORY BY UTILITY ACCOUNT?**

A. Yes. However, Gannett Fleming noted that in certain instances there was not original cost data available. In those instances, Gannett Fleming developed a current replacement cost based on its estimated probable construction cost.

**Q. DO YOU HAVE ANY REASON TO DOUBT THE ACCURACY OF THE ENGINEER'S ASSESSMENT OF THE ASSETS?**

A. No.

**Q. DID YOU INCORPORATE THE ENGINEER'S ASSESSMENT INTO YOUR COST APPROACH IN DEVELOPING YOUR VALUATION?**

A. Yes.

**Q. DID YOU HAVE TO EXERCISE PROFESSIONAL DISCRETION IN DEVELOPING ANY ASPECT OF YOUR VALUATION?**

A. Yes. The use of professional discretion is detailed throughout ScottMadden's Valuation Report, where applicable.

**Q. PLEASE DESCRIBE ANY ASSUMPTIONS, EXTRAORDINARY ASSUMPTIONS, HYPOTHETICAL CONDITIONS, AND/OR LIMITING CONDITIONS THAT YOU APPLIED TO THE VALUATION.**

A. The Statement of Assumptions and Limiting Conditions and the Valuation Analyst's Representations are provided in Appendices A and B to ScottMadden's Valuation Report. Three examples of the limiting conditions for this valuation are:

- Financial statements for the year 2021 were not available; nor were projected capital expenditures as developed by Beaver Falls;
- The reporting nature of Beaver Falls consumption data made it difficult for ScottMadden to verify their reported consumption totals; and
- Original costs for certain items were not available, as outlined in the Engineers Assessment.

**Q. HOW DID YOU DEVELOP THE WEIGHTING APPLIED TO EACH APPROACH IN YOUR APPRAISAL AND WHY ARE THE INDIVIDUAL WEIGHTS YOU CHOSE APPROPRIATE FOR THE PROPOSED TRANSACTION?**

A. No method of valuation will produce the exact value of a business. A valuation study cannot incorporate market conditions at the time of sale or predict a potential investor's desire, or lack thereof, to acquire the business. Beaver Falls' desire to sell additional assets to the potential acquirer may increase the desire of some investors, and as a result, increase the value of both sets of assets. Our valuation and report cannot incorporate these considerations.

I have determined the range of values of Beaver Falls based on the relative weighting of the three valuation methods, as will be discussed below. The weightings indicate the value placed on each appraisal method from the valuation expert. In my opinion, the income and market approaches should receive weights of 45%, and the cost approach a weight of 10%. The reason for this is the Cost Approach does not accurately represent Beaver Falls' value as it cannot reflect the revenues from the residents outside the City, which are the majority of Beaver Falls' historical and expected revenues. Beaver Falls' wastewater operations provide wastewater treatment, conveyance, and collection services to residents within the City of Beaver Falls, and wastewater treatment and conveyance services to residents outside the City of Beaver Falls, including customers from Big Beaver Borough, Eastvale Borough, North Sewickley Township, the Borough of Patterson Heights, Patterson Township, West Mayfield Borough, and White Township

(collectively, the "Contributing Municipalities")[1], as well as customers serviced by Dalton's Service Co. ("Dalton") which provides sewer hauling services.

In this instance, the value of Beaver Falls is not only reflected in its physical assets, but its intermunicipal flow volumes. The indicated result based on the Cost Approach would remain the same regardless of whether the City's assets continue to serve the Contributing Municipalities or not. The range of values and relative weightings of the valuation approaches are set forth in Table 2, below:

**Table 2: Conclusion of Value for Beaver Falls**

| Valuation Approach | Indicated Value | Weight | Weighted Value |
|---|---|---|---|
| Cost | $11,446,928 | 10% | $1,144,693 |
| Market | $46,817,319 | 45% | $21,067,793 |
| Income | $39,970,803 | 45% | $17,986,861 |
| **Indicated Value** | | **100%** | **$40,199,347** |

**Cost Approach**

**Q. REGARDING YOUR APPLICATION OF THE COST APPROACH, WHAT METHOD DID YOU USE TO DETERMINE THE COST APPROACH RESULT?**

A. I used a trended original cost method to determine the reproduction cost new, less depreciation ("RCNLD") of Beaver Falls' assets. In order to arrive at the Reproduction Cost New for Beaver Falls' assets, I began with the original cost of the assets provided by the Engineer's Assessment and used the Handy-Whitman Index ("HW Index") to determine the current reproduction value, or for assets which only a replacement cost was

[1] Referred to as the Joint Sewer Users in the ScottMadden Appraisal.

available, to determine an estimated original cost. The HW Index is prepared specifically for electric, gas, and water utilities, and is the only publication of its kind available to the public. The HW Index has been published continuously since 1924. The Index is comprised of historical index values for various accounts prescribed by the NARUC Uniform System of Accounts, as well as for construction, material, and labor, by geographic region of the United States. For assets not included in the HW Index, specifically laboratory equipment, office furniture, computer equipment, audio/video equipment, communication equipment, truck trailers, and storage equipment, I used the Producer Pricing Index. I also used the Consumer Pricing Index for various small tools owned by Beaver Falls.

The trended original cost method consists of the development of adjustment factors from the time when the asset was put into service to the current date. For example, an average main (NARUC account 331) placed into service in 1985 with an original cost of $100,000 would be trended forward by the ratio of the index value at the current date divided by the index value at the time of installation. The index value of NARUC account 331 in July 2021 is 911.00, and the index value in 1985 when the assets were installed was 254.00, which means the ratio applied to the original cost of the main would be 3.59.[2] This would translate into a current cost for that main of $358,661.[3]

The next step in deriving the RCNLD for Beaver Falls' assets is to quantify the amount of physical deterioration, functional obsolescence, and economic obsolescence of the assets. Physical deterioration is caused by use, wear and tear, and the aging process. Functional obsolescence is caused by changes in design or construction to create efficiencies not present in the current asset. Economic obsolescence is a loss in value due

[2] 911.00 / 254.00 = 3.59.
[3] (911.00 / 254.00) x $100,000 = $358,661.

to external factors not in the control of Beaver Falls such as economic conditions. The most common measure of physical deterioration is the reserve held for depreciation, which is based on the asset's remaining life versus its average useful life. Functional obsolescence is measured by comparing the subject asset to a replacement asset with current technology. The Engineering Assessment found no significant functional obsolescence for Beaver Falls' assets. Economic obsolescence is usually measured by market conditions, which have been supportive towards the water and wastewater industries in the recent past, as well as prospectively, so I do not believe there is significant economic obsolescence present in Beaver Falls' assets. Since the only applicable measure of loss of value is physical deterioration, the useful lives for each asset were determined, and reserves for depreciation were calculated for each Beaver Falls asset if original costs were available. As mentioned previously, certain assets did not have original costs assigned, so I relied upon the estimation of original cost provided by the Engineer's Assessment.

**Q. HOW DID YOU CALCULATE THE DEPRECIATION RESERVE FOR EACH ASSET?**

A. First, I determined the useful life for each asset,[4] then I reduced the original cost of each asset each year by 1/useful life until the asset was fully depreciated or through 2021, which ever one came first and put that value into the depreciation reserve.

[4] Useful lives are based on the System of Accounts for Water and Wastewater Utilities – with 200 or more connections from the Public Utility Commission of Texas with several exceptions. I used a 75-year useful life for mains as determined by the PUC in Docket No. A-2019-3008491, a 50-year useful life for structures, and a 10-year useful life for transportation equipment. My use of both 50 and 10-year useful lives for structures and transportation equipment was not challenged by the parties in Docket No. A-2021-3024681.

**Q. WHAT IS THE INDICATED VALUE OF BEAVER FALLS BASED ON THE COST APPROACH?**

A. Using the HW, and Producers and Consumer Pricing Indices to trend the original cost, less depreciation of Beaver Falls' assets forward, I derived a RCNLD of $11,446,928 as shown on Schedule 1 of ScottMadden's Valuation Report.

As stated above, the value derived from the cost approach is based solely on Beaver Falls' underlying assets, which means it does not take into account the expected cash flows of these assets. This is especially important given the impact of the Contributing Municipalities (as outlined above) that Beaver Falls provides wastewater treatment and conveyance for. Additionally, even though the HW Index takes into account the changes in the cost of various factors over time in different regions throughout the country, it cannot take into account intricacies such as terrain (e.g., mountains in Appalachia versus farmland in Pennsylvania) or changes in development and zoning since original installation. All else remaining equal, different terrains or changes in laws will translate into different timeframes to complete the project, which will directly affect costs.

**Market Approach**

**Q. REGARDING YOUR APPLICATION OF THE MARKET APPROACH, WHAT METHODS DID YOU USE TO DETERMINE THE MARKET APPROACH RESULT?**

A. I used the market value of invested capital to net plant multiple and comparable sales methods.

**Q. PLEASE DISCUSS THE MARKET VALUE OF INVESTED CAPITAL TO NET PLANT METHOD.**

A. The market value of invested capital to net plant method applies a market value of invested capital to net plant ratio of a comparable risk group to the original cost less depreciation ("OCLD") of the subject company to derive an indicated market value. As shown on page 2 of Schedule 2 of ScottMadden's Valuation Report, market value of invested capital to net plant ratios of the water utility proxy group used to derive the weighted average cost of capital ("WACC") in the income approach range from 1.3723x to 2.4940x. Using Beaver Falls' OCLD of $5,003,844,[5] indicated values range from $6,866,665 to $12,479,523, with an average of $9,496,121 as shown on page 3 of Schedule 2 of ScottMadden's Valuation Report. Again, since Beaver Falls' assets do not reflect its full value, this measure would significantly understate the indicated value of Beaver Falls.

**Q. PLEASE DESCRIBE THE COMPARABLE SALES METHOD.**

A. I also researched transactions involving companies who acquired 100% of a water or sewer interest since 2016. That research returned 107 results from around the country, 27 of which were acquisitions in Pennsylvania, which are contained on pages 4-5 of Schedule 2 of ScottMadden's Valuation Report. A common ratio which can be used to determine Beaver Falls' market value is transaction value per equivalent domestic unit ("EDU"). The purchase price per EDU ratios for the relevant transactions are shown on page 5 of Schedule 2 of ScottMadden's Valuation Report. As shown on page 5 of Schedule 2 of ScottMadden's Valuation Report, the nationwide average purchase price to EDU is

[5] Page 2 of Schedule 1, Column [4]

approximately 4.22x, while the Pennsylvania average purchase price to EDU is 6.63x. Given the 9,392 EDUs served by Beaver Falls,[6] indicated values using this approach range from $39,667,839 to $62,260,398.

**Q. WHAT WERE THE RESULTS OF EACH ANALYSIS YOU PERFORMED?**

A. The market value of invested capital to net plant analysis produced an indicated value of $9,496,121.[7] The comparable sales method produced a result of $50,964,118.

**Q. WHICH RESULTS WERE USED TO DETERMINE YOUR MARKET APPROACH RESULT? PLEASE EXPLAIN WHY THESE RESULTS WERE USED.**

A. I applied a 90% weight to the average comparable sales method and a 10% weight to the market value of invested capital to net plant method to come to an indicated value of $46,817,319. The reason for these recommended weightings is because, as previously outlined, Beavers Falls' assets do not reflect its value and this measure would significantly understate the indicated value of Beaver Falls. Given the number of comparable sales transactions Nationwide and in Pennsylvania, the comparable sales method was determined to be most applicable in this case.

[6] Calculated as total consumption divided by the average residential consumption: 109,238,000 / 2,880 = 37,930; 356,245,793 / 37,930 = 9,392. Average residential consumption based on customers within the City of Beaver Falls.

[7] Indicated Market Value of Net Plant Based on Average Market Value Invested Capital to Net Plant Ratio.

**Income Approach**

**Q. WHAT ASSUMPTIONS DID YOU EMPLOY TO DEVELOP YOUR INCOME APPROACH RESULT?**

A. In determining the indicated value using the income approach, I made assumptions regarding Beaver Falls' operating revenue, operating expenses, and capital requirements**.**

The vast majority of Beaver Falls' revenues are tied to fees for the collection, treatment, and conveyance of wastewater for customers within the City, and fees for treatment and conveyance of wastewater for the Contributing Municipalities and Dalton. As such, revenues are dependent on two factors; population growth and rate increases.

In regard to rate increases, given capital improvements identified by Aqua, and detailed below, it was determined that yearly rate increases of 10% for the period 2022-2027 were necessary to recover those capital outlays, which I applied to Charges for Services both inside and outside the City. Subsequent to that period, I applied 3% increases for inside and outside City customers consistent with the City's ordinance authorizing yearly increases of 3% for both sewer users within Beaver Falls and for the Contributing Municipalities on December 8, 2020.[8]

General operating expenses for the City are primarily comprised of administrative, wage and benefit maintenance, operational, contractual, utility, and various miscellaneous expenses. All expenses are assumed to increase at the projected level of the Consumer Price Index[9] ("CPI").

---

[8] ScottMadden applied a 3% rate increase for the years 2021 and 2022 as consistent with the Beaver Falls Ordinance; see, ScottMadden's Valuation Report, Appendix G.

[9] I employed a CPI projection of 2.25% per year, based on the long-term CPI projection published by *Blue Chip Financial Forecasts*. *See, Blue Chip Financial Forecasts*, Vol. 40, No. 12, December 1, 2021 at 14; Appendix H, at 23.

Regarding the Repairs and Maintenance expense, ScottMadden assumed this expense would be comparable to the 2019 amount due to the corrective action plan Beaver Falls is under. The expense was increased by the projected CPI through 2025, which is when the corrective action plan is scheduled to be completed. Stating in 2026, ScottMadden assumed the expense would be comparable to the 2020 level grown at the projected CPI through 2026, and subsequently grown at the projected CPI into perpetuity.

Regarding the Sewer Line Reimbursement expense, based on information from Beaver Falls, ScottMadden understood the expense to be non-operational in nature. Because it does not reflect the ongoing operations of Beaver Falls, it was removed.

For the expected system improvements for the period used in the income approach, because Beaver Falls did not have an internal capital improvement plan as noted above, I relied on the needed capital improvements as outlined by Aqua. I sought to only include projects that addressed issues of safety, compliance, and equipment failure. Those projects are outlined in Table 1 of my appraisal (also shown on page 5 of Schedule 3 of ScottMadden's Valuation Report). For the period 2022, I relied on the median yearly level of capital improvements based on Aqua's projections ($569,250). Lastly, for the period 2033, I grew the median level of capital improvements by the projected CPI through 2033 ($727,109), and subsequently into perpetuity.

**Q. WHAT DISCOUNT RATE DID YOU USE TO CALCULATE YOUR INCOME APPROACH?**

A. The discount rate is the investor-required expected rate of return on the assets. An investor in any company needs to be compensated for the risk of that investment, and a higher level

of risk equates to a higher required rate of return. The overall rate of return in this instance is defined by the WACC. I have calculated a discount rate which relates to the traditional method of financing for publicly-traded water companies, which uses an equal mix between debt and equity capital.

For the common equity cost rate, I applied the Discounted Cash Flow ("DCF"), Risk Premium ("RPM") and Capital Asset Pricing Models ("CAPM") to a proxy group of publicly-traded water companies and a group of non-regulated companies comparable in total risk to the water utility group. Application of these cost of common equity models to these groups results in an indicated cost of common equity of 10.19% which is presented in Appendix H of ScottMadden's Valuation Report.

The representative capital structure is a hypothetical capital structure based on the range of capital structures for fiscal year 2020 of the publicly-traded proxy group companies used to derive the cost of common equity.[10] For the debt cost rate used in the WACC calculation, I used a 30-day average Moody's A2 public utility bond rate of 3.04%.[11] Table 3 below illustrates the assumed WACC of an investor-owned water utility.

**Table 3: Assumed WACC for Water Utility Company**

| Type of Capital | Cost Rate | Ratio | Weighted Cost |
|---|---|---|---|
| Long-Term Debt | 3.04% | 50.00% | 1.52% |
| Common Equity | 10.19% | 50.00% | 5.10% |
| **Total** | | **100.00%** | **6.62%** |

[10] The range of equity ratios of the proxy group companies were from 40.05% to 59.28% at 2020 fiscal year end.

[11] ScottMadden Valuation Report, Appendix H, at 2.

**Q. IF YOU USED A TERMINAL VALUE IN YOUR DISCOUNTED CASH FLOW ANALYSIS WHAT IS THE NUMBER OF YEARS OVER WHICH THE CASH FLOWS ARE CONSIDERED?**

A. I considered those cash flows over 29 years (2022 – 2050).

**Q. WHAT IS THE INDICATED VALUE OF BEAVER FALLS USING THE INCOME APPROACH?**

A. Inputting the estimated revenue, expense, and capital expenditure data into the model resulted in an indicated value of $39,970,803.

## CONCLUSION

**Q. WHAT IS YOUR CONCLUSION REGARDING THE FAIR MARKET VALUE OF BEAVER FALLS' WASTEWATER OPERATIONS TO BE PURCHASED BY AQUA?**

A. The fair market value of Beaver Falls' wastewater operations is $40,199,347 as of September 7, 2022. The results of my appraisal and conclusions are summarized in the following table:

**Table 4: Conclusion of Value for Beaver Falls**

| Valuation Approach | Indicated Value | Weight | Weighted Value |
|---|---|---|---|
| Cost | $11,446,928 | 10% | $1,144,693 |
| Market | $46,817,319 | 45% | $21,067,793 |
| Income | $39,970,803 | 45% | $17,986,861 |
| **Indicated Value** | | **100%** | **$40,199,347** |

**Q. DID YOU MAKE ANY UPDATES TO YOUR APPRAISAL AFTER IT WAS SUBMITTED TO THE BUYER, AND IF SO, WHAT WAS THE UPDATE, WHEN WAS IT MADE, AND WHY WAS IT NECESSARY?**

A. I did not update or revise my appraisal after it was submitted to the Buyer.

**Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

A. Yes. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of the proceeding.

**Partner**

## *Summary*

Dylan is an experienced consultant and a Certified Rate of Return Analyst (CRRA) and Certified Valuation Analyst (CVA). He has served as a consultant for investor-owned and municipal utilities and authorities for 13 years. Dylan has extensive experience in rate of return analyses, class cost of service, rate design, and valuation for regulated public utilities. He has testified as an expert witness in the subjects of rate of return, cost of service, rate design, and valuation before 30 regulatory commissions in the U.S., one Canadian province, an American Arbitration Association panel, and the Superior Court of Rhode Island.

He also maintains the benchmark index against which the Hennessy Gas Utility Mutual Fund performance is measured.

## *Areas of Specialization*

- Regulation and Rates
- Utilities
- Mutual Fund Benchmarking
- Capital Market Risk
- Financial Modeling
- Valuation
- Regulatory Strategy
- Rate Case Support
- Rate of Return
- Cost of Service
- Rate Design

## *Recent Expert Testimony Submission/Appearances*

| *Jurisdiction* | *Topic* |
|---|---|
| Massachusetts Department of Public Utilities | Rate of Return |
| New Jersey Board of Public Utilities | Rate of Return |
| Hawaii Public Utilities Commission | Cost of Service, Rate Design |
| South Carolina Public Service Commission | Return on Common Equity |
| American Arbitration Association | Valuation |

## *Recent Assignments*

- Provided expert testimony on the cost of capital for ratemaking purposes before numerous state utility regulatory agencies
- Maintains the benchmark index against which the Hennessy Gas Utility Mutual Fund performance is measured
- Sponsored valuation testimony for a large municipal water company in front of an American Arbitration Association Board to justify the reasonability of their lease payments to the City
- Co-authored a valuation report on behalf of a large investor-owned utility company in response to a new state regulation which allowed the appraised value of acquired assets into rate base

## *Recent Publications and Speeches*

## INTRODUCTION

**Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS FOR THE RECORD.**

**A.** My name is Harold Walker III, and my business address is 1010 Adams Avenue, Audubon, Pennsylvania.

**Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

**A.** I am employed by Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") as Manager, Financial Studies.

**Q. WOULD YOU DESCRIBE BRIEFLY GANNETT FLEMING?**

**A.** Yes. Since 1915, Gannett Fleming and its predecessors have been helping clients in public pricing policy and related financial matters for managerial purposes, before regulatory commissions and courts of law. Gannett Fleming is registered as a Utility Valuation Expert ("UVE") in the Commonwealth of Pennsylvania. Gannett Fleming is also a registered Municipal Advisor with the United States Securities and Exchange Commission ("SEC") and I am a licensed Municipal Advisor Representative (Series 50) with the Municipal Securities Rulemaking Board ("MSRB") and the Financial Industry Regulatory Authority ("FINRA"). Gannett Fleming is a subsidiary of Gannett Fleming, Inc.

**Q. WHAT ARE YOUR RESPONSIBILITIES AS MANAGER, FINANCIAL STUDIES OF GANNETT FLEMING?**

**A.** I supervise and develop financial and economic studies on behalf of investor-owned and municipally owned water, wastewater, electric, natural gas distribution and transmission, oil pipeline, and telephone utilities, as well as resource-recovery companies.

**Q. PLEASE DESCRIBE YOUR QUALIFICATIONS AND YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE?**

**A.** My educational background, business experience and qualifications are provided in a Curriculum Vitae included as **Appendix A**.

**Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION?**

**A.** Yes. I have testified before the Pennsylvania Public Utility Commission ("Commission" or "PUC"), as well as other state regulatory commissions, on many occasions, as shown on **Appendix A**.

**Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

**A.** My testimony describes and explains the fair market value appraisal of the City of Beaver Falls ("City") wastewater system assets ("Wastewater System") that I and staff, working under my direction, performed. Gannett Fleming was engaged by the City to perform this appraisal. Our report is entitled "City of Beaver Falls Wastewater System Assets Fair Market Value Appraisal at December 31, 2021" ("Gannett Fleming Appraisal Report"). The appraisal and its report were developed to meet the criteria established in Section 1329

of the Pennsylvania Public Utility Code ("Code"), 66 Pa. C.S. § 1329 ("Determination of the fair market value of water and wastewater assets").

In its 2015-2016 legislative session, the Pennsylvania Legislature passed Act 12 of 2016 and Governor Wolf signed Act 12 into law adding Section 1329 of the Code which established the legislative requirements facilitating the acquisition of municipal and authority water and wastewater systems by private investor-owned utilities and other entities which are rate-regulated by the Commission. This legislation was intended to facilitate the acquisition of water and wastewater systems in order to facilitate capital improvements to the water and wastewater properties.

## QUALIFICATION AS UTILITY VALUATION EXPERT

**Q. IS GANNETT FLEMING ON THE COMMISSION'S REGISTRY OF UTILITY VALUATION EXPERTS?**

**A.** Yes. Gannett Fleming is a UVE in the Commonwealth of Pennsylvania approved by the PUC (Utility Code 9919244).

**Q. PLEASE DESCRIBE THE PROCESS BY WHICH GANNETT FLEMING WAS PLACED ON THE COMMISSION'S REGISTRY OF UTILITY VALUATION EXPERTS.**

**A.** After passage of Section 1329 of the Code, the Commission established an application process by which the Commission would approve and designate firms to be placed on the Commission's "Registry of Utility Valuation Experts." To be included on the registry, the UVEs must establish their qualifications. Gannett Fleming submitted its original

application and the required proof of experience in September of 2016 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in December of 2016. Renewal of inclusion on the Commission's UVE Registry must be done annually. Gannett Fleming submitted its 2018 renewal application and the required proof of experience in December of 2017 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in January of 2018. In 2018, Gannett Fleming submitted its 2019 renewal application and the required proof of experience in December of 2018 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in January of 2019. Again in 2019, Gannett Fleming submitted its 2020 renewal application and the required proof of experience in December of 2019 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in January of 2020. In 2020, Gannett Fleming submitted its 2021 renewal application and the required proof of experience in December of 2020 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in February of 2021. Gannett Fleming submitted its 2022 renewal application and the required proof of experience in December of 2021 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in March of 2022.

**Q. HAVE YOU EVER HAD YOUR PROFESSIONAL CREDENTIALS REVOKED OR SUSPENDED?**

**A.** No.

**Q. DO YOU HAVE SPECIFIC EXPERIENCE WITH THE VALUATION AND APPRAISAL OF UTILITY ASSETS?**

**A.** Yes. In addition to serving as an expert witness on various financial and economic matters before utility regulatory commissions for over 35 years, I have also provided valuations of utility asset services for more than 20 years. In that capacity I have testified on valuation matters before the Commission and sponsored or adopted Gannett Fleming's UVE appraisals under Section 1329 of the Code in the New Garden Township proceeding, the Limerick Township proceeding, the East Bradford Township proceeding, the Mahoning Township (water) proceeding, the Mahoning Township (wastewater) proceeding, the Exeter Township proceeding, the Cheltenham Township proceeding, the East Norriton Township proceeding, the Kane Borough proceeding, the Delaware County Regional Water Quality Control Authority proceeding, the Borough of Royersford proceeding, the Valley Township (water) proceeding, the Valley Township (wastewater) proceeding, the Upper Pottsgrove proceeding, the Lower Makefield Township proceeding, the East Whiteland Township proceeding, the Willistown Township proceeding, and the Shenandoah Borough proceeding. In addition to testifying in Section 1329 proceedings, I have also testified and filed reports on valuation matters in California, Illinois, New Hampshire, and Pennsylvania in courts of law and regulatory commissions.[1]

[1] An electronic link to the PUC Dockets where I have testified in the last two years is provided in response to Section 1329 Application Standard Data Request 15-d. All other testimony relating to valuation is more than two years old and, therefore, is not provided.

**Q. HAVE YOU OR GANNETT FLEMING OR ANY OF ITS STAFF DERIVED ANY MATERIAL FINANCIAL BENEFIT FROM THE SALE OF THE WASTEWATER SYSTEM ASSETS OTHER THAN FEES FOR YOUR SERVICES RENDERED?**

**A.** No.

**Q. ARE YOU OR GANNETT FLEMING OR ANY OF ITS STAFF AN IMMEDIATE FAMILY MEMBER OF A DIRECTOR, OFFICER, OR EMPLOYEE OF EITHER AQUA PENNSYLVANIA WASTEWATER, INC. ("AQUA") OR THE CITY?**

**A.** No.

**Q. IS GANNETT FLEMING IN COMPLIANCE WITH APPLICABLE PENNSYLVANIA LAWS?**

**A.** Yes.

**Q. DOES GANNETT FLEMING HAVE THE FINANCIAL AND TECHNICAL FITNESS, INCLUDING PROFESSIONAL LICENSES AND TECHNICAL CERTIFICATIONS, TO PERFORM A FAIR MARKET VALUATION OF THE WASTEWATER ASSETS OF THE CITY?**

**A.** Yes, to be placed on the Commission's "Registry of Utility Valuation Experts" Gannett Fleming had to establish its qualifications.

**Q. ARE YOU AWARE OF ANY FACT, INCLUDING BUT NOT LIMITED TO ANY POTENTIAL CONFLICT OF INTEREST THAT WOULD CAST DOUBT UPON**

**YOUR ABILITY TO PROVIDE A THOROUGH, OBJECTIVE, UNBIASED, AND FAIR VALUATION IN THIS PROCEEDING?**

**A.** No.

**Q. HAVE YOU CORRESPONDED WITH BUYER'S UVE WITH REGARD TO ITS RESPECTIVE FAIR MARKET VALUE APPRAISAL OF THE ASSETS AT ISSUE IN THIS CASE?**

**A.** No.

**Q. DO YOU HAVE ANY AFFILIATION WITH EITHER THE SELLING UTILITY OR THE ACQUIRING PUBLIC UTILITY?**

**A.** No. Other than the current assignment to provide the subject appraisal, and similar assignments to provide appraisals of other utility systems, I have no business or personal relationships with any party to the proposed acquisition.

## FEES PAID FOR UTILITY VALUATION EXPERT SERVICES

**Q. WHAT IS THE GANNETT FLEMING FEE ARRANGEMENT TO DELIVER THE APPRAISAL?**

**A.** Gannett Fleming is being compensated on an hourly basis. Our fee arrangement is included as Exhibit S2 to Aqua's Application. True, correct, and complete copies of Gannett Fleming's invoices to the City for this matter, as of the date of Aqua's Application filing, are also included in Exhibit S2.

**Q. WHAT IS THE ESTIMATED TOTAL COMPENSATION THAT GANNETT FLEMING WILL RECEIVE FOR ITS SERVICES IN THIS MATTER?**

**A.** The estimated total compensation that Gannett Fleming will receive for its services in this matter as of the date of Aqua's Application filing is approximately $34,000, which represents approximately 0.08% of the fair market valuation. I estimate our fee will total $75,000 if this proceeding is fully litigated, which represents approximately 0.18% of the fair market valuation.

**Q. PLEASE DESCRIBE THE PROCESS BY WHICH THIS COMPENSATION WAS NEGOTIATED?**

**A.** Gannett Fleming submitted a proposal to provide the required services in October 2020, which the City accepted. The City sent us an official notice to begin our work in June 2022.

**Q. ARE THESE FEES CONSISTENT WITH COMPENSATION RECEIVED FOR SIMILAR SERVICES PROVIDED TO OTHER CLIENTS?**

**A.** Yes.

**Q. WILL GANNETT FLEMING RECEIVE ITS FEE REGARDLESS OF WHETHER THE COMMISSION APPROVES THE PROPOSED TRANSACTION OR WHETHER IT CLOSES?**

**A.** Yes. 66 Pa.C.S. § 1329(a)(3) mandates that I comply with the Uniform Standards of Professional Appraisal Practice ("USPAP") when developing an appraisal. Under the

USPAP, I cannot perform the appraisal with bias, and acceptance of a fee contingent on a particular outcome, like closing or Commission approval, would violate the Ethics Rule.

**Q. ARE YOU ADVOCATING FOR ANY PARTY OR OUTCOME?**

**A.** No. The Ethics Rule of the USPAP, applicable here pursuant to 66 Pa.C.S. § 1329(a)(3), requires that I perform the appraisal with impartiality, objectivity, and independence, and without accommodation of personal interests. I have not performed this appraisal assignment with bias, and I am not advocating the cause or interest of any party or issue. Further, I have not accepted this or any assignment that includes the reporting of predetermined opinions and conclusions.

## FAIR MARKET VALUATION OF WASTEWATER SYSTEM ASSETS

**Q. PLEASE IDENTIFY EXHIBIT R TO AQUA'S APPLICATION IN THIS PROCEEDING?**

**A.** Exhibit R of Aqua's application includes Gannett Fleming's appraisal report dated August 10, 2022.

**Q. HOW DO YOU RECOGNIZE IT?**

**A.** I personally prepared, and also directed and supervised Gannett Fleming personnel in preparing, the report, and recognize it as Gannett Fleming's work product.

**Q. IS EXHIBIT R A TRUE, COMPLETE, AND ACCURATE COPY OF THE GANNETT FLEMING APPRAISAL REPORT?**

**A.** Yes, and I incorporate it into my direct testimony as if set forth in its entirety.

**Q. PLEASE DESCRIBE THE PROCESS BY WHICH YOU PREPARED THE GANNETT FLEMING APPRAISAL REPORT.**

**A.** In accordance with Section 1329 of the Code, the City engaged Gannett Fleming to prepare the fair market valuation report of the Wastewater System. The City provided financial statements and budget statements regarding the Wastewater System and a copy of the Engineering Assessment[2] as required by Section 1329(a)(4). In addition, Gannett Fleming reviewed the assets, reviewed additional information provided by the City and conducted additional research regarding the City and the Wastewater System, including a site visit. After those activities and data gathering, we developed the appraisal.

The appraisal contains a letter of transmittal; a table of contents detailing all the sections of the report and work papers; and a narrative report explaining our methodology and conclusions.

The intent of the valuation report is to provide the appraisal results, as well as the entire appraisal work file, in sufficient detail to satisfy the parties' and Commission's review requirements of Section 1329 and the Commission's Final Implementation Order, *In re: Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 (Order Entered October 27, 2016), and Final Supplemental Implementation Order, *In re: Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 (Order Entered February 28, 2019). In addition to a copy of the appraisal report, I have provided supporting work papers for the appraisal report in Exhibit R of

[2] "City of Beaver Falls, Beaver County, Pennsylvania, Engineers Assessment of Wastewater System Assets," dated June 9, 2022, and related files prepared by Gannett Fleming, Inc.

Aqua's Application. The relevant work papers have also been submitted to the Commission and provided to the public advocates in **CONFIDENTIAL** live electronic format.

**Q. IS THERE ANYTHING THAT YOU WOULD CHANGE IN THE GANNETT FLEMING APPRAISAL REPORT SINCE ITS PREPARATION?**

**A.** No.

**Q. WAS THE FAIR MARKET VALUATION OF THE WASTEWATER SYSTEM ASSETS DETERMINED IN COMPLIANCE WITH USPAP?**

**A.** Yes. Our fair market valuation was determined in compliance with USPAP 2020-2021 Edition. On February 19, 2021, the Appraisal Foundation's Appraisal Standards Board ("ASB") announced that the current edition of the USPAP would be extended by one year. The 2020-2021 USPAP is now effective until December 31, 2022.

**Q. DID YOU EMPLOY THE COST, MARKET, AND INCOME APPROACHES IN PREPARING YOUR VALUATION?**

**A.** Yes.

**Q. DID YOU INCLUDE ANY EXTRAORDINARY ASSUMPTIONS OR HYPOTHETICAL CONDITIONS IN DEVELOPING YOUR APPRAISAL?**

**A.** No.

**Q. DID YOU INCLUDE ANY LIMITING CONDITIONS IN DEVELOPING YOUR APPRAISAL?**

**A.** Yes. We accepted all information and data provided by the City as it pertains to this assignment "as is" after a limited review. That is, we neither audited nor verified any data, engineering assessment, financial record or operating data provided for this assignment. We assumed all title to all assets included in the appraisal is good and marketable and no hazardous conditions or materials exist which could affect the assets. We have not made a specific compliance survey or analysis of the subject property to determine whether it is subject to, or in compliance with, the American Disabilities Act of 1990, and this valuation does not consider the effect, if any, of noncompliance.

The economic and industry information and data included in our Appraisal have been obtained from various printed or electronic reference sources that we believe to be reliable. We have not performed any corroborating procedures to substantiate that information and data.

**Q. PLEASE SUMMARIZE YOUR RESULTS OF THE APPLICATION OF THE COST, MARKET, AND INCOME APPROACHES.**

**A.** Please see the below table:

| Approach | Indicated Value | Weight | Weighted Value |
|---|---|---|---|
| Cost Approach | $32,994,154 | 25.00% | $8,248,539 |
| Market Approach | 50,664,671 | 37.50% | 18,999,252 |
| Income Approach | 45,450,675 | 37.50% | 17,044,003 |
| | | 100% | $44,291,794 |
| | | | |
| Conclusion | | | $44,292,000 |

**Q. PLEASE FURTHER DESCRIBE EACH APPROACH IN THE DEVELOPMENT OF YOUR APPRAISAL.**

**A.** We developed our appraisal utilizing the cost, income, and market approaches as required by USPAP and Section 1329 of the Code. We used seven methods under the Cost, Market, and Income Approaches to valuation: Original Cost Method, Replacement Cost Method, Capitalization of Earnings Method, Market Multiple Discounted Cash Flow Method, Capitalization Discounted Cash Flow Method, Market Multiples Method, and the Selected Transactions Method.

The results from the market multiple discounted cash flow method and the capitalization discounted cash flow method form the basis for our Income Approach. Our Market Approach is supported by the market multiples method and selected transactions method. The results from the original cost method form the basis for our replacement cost method, and both methods form the basis for our Cost Approach. These approaches are summarized below.

*Cost Approach.* The cost approach utilized the original cost method and replacement cost method. The original cost method determined the original cost of the assets when "new" or first constructed based on the information contained in the Engineering Assessment. The original cost new inventory was then trended using the Handy Whitman Index of Public Utility Construction Costs for the water industry to produce the trended cost, or reproduction cost, and was converted to replacement cost new after obsolescence was factored. The calculated accrued depreciation was determined for the original cost new and for the replacement cost new as of December 31, 2021. The calculated accrued depreciation was based on the assets' attained ages, and the service life

of the assets. The cost basis of depreciable assets was reduced annually by the accumulated depreciation to reflect the loss in the service value of the assets since being constructed. All land and land rights were valued at original cost.

*Income Approach.* The income approach utilized the capitalization of earnings (cash flow) method and two discounted cash flow methods. The capitalization of earnings method converted a single base economic income number to a value by dividing it by a capitalization rate. The discounted cash flow methods used estimates of future debt free net cash flow and discounted them to arrive at a present value or price of the cash flows. The capitalization rate and the discount rate were developed based on market debt and equity rates at the appraisal date. The discounted cash flow methods reflected two types of discounted cash flow analyses, the EBIT and EBITDA terminal value model (market multiple discounted cash flow method) and a capitalization of terminal value model (capitalization discounted cash flow method).[3]

*Market Approach.* The market approach was developed based on the market multiples method and the selected transactions method. The market multiples method was based on the market price data of publicly traded corporations engaged in the same or a similar line of business as the Wastewater System. The market price data of these comparable publicly traded corporations was used to calculate the market multiples for the comparable publicly traded corporations at the appraisal date. The selected transactions method used certain public information relating to the purchase or sale of businesses involved in the same or a similar business line as the Wastewater System to calculated market multiples at the time of transaction (sale/purchase). The calculated market

[3] "EBIT" is earnings before interest and taxes and "EBITDA" is earnings before interest, tax, depreciation, and amortization.

multiples determined by the market multiples method and the selected transactions method were then multiplied by the corresponding Wastewater System financial and operating statistic to produce an indicated value for the Wastewater System.

**Q. PLEASE STATE THE NUMBER OF CUSTOMERS YOU USED IN DEVELOPING YOUR APPRAISAL AND THE SOURCE OF THAT NUMBER.**

**A.** The number of customers I used was 3,259. This customer count number was provided by the City. The Wastewater System's 3,259 customers include seven wholesale customers (Big Beaver Borough, Eastvale Borough, North Sewickley Township, Patterson Township, Patterson Heights Borough, West Mayfield Borough, and White Township) who provide service to 3,760 customers ("ultimate wholesale customers"). In total, the Wastewater System provides wastewater service directly and indirectly to 7,019 customers ("ultimate customers").

**Q. DID YOU MAKE ANY UPDATES TO YOUR APPRAISAL AFTER IT WAS SUBMITTED TO THE SELLER, AND IF SO, WHAT WAS THE UPDATE, WHEN WAS IT MADE, AND WHY WAS IT NECESSARY?**

**A.** No.

**Q. DID YOU PERFORM AN ON-SITE INSPECTION OF THE WASTEWATER SYSTEM?**

**A.** Wastewater engineers from our parent company viewed or observed the Wastewater System's facilities on February 26, 2021, August 20, 2021, and January 28, 2022.

**Q. DID YOU RELY UPON A LICENSED ENGINEER'S ASSESSMENT OF THE TANGIBLE ASSETS OF THE WASTEWATER SYSTEM IN PERFORMING YOUR VALUATION?**

**A.** Yes. The City provided a copy of the Engineering Assessment and this information was incorporated into our Cost Approach in our appraisal.

**Cost Approach**

**Q. DID YOU USE THE REPRODUCTION COST OR THE REPLACEMENT COST IN YOUR COST APPROACH?**

**A.** We utilized the original cost new ("OCN") to calculate the trended original cost ("TOC") measures, or the reproduction cost of the depreciable assets by multiplying the OCN by specific cost indices. We converted reproduction cost new to replacement cost new after factoring in obsolescence. We used the TOC method because the mandated use of the Engineering Assessment's original cost essentially dictates the use of TOC over the reproduction cost or the replacement cost methods.

**Q. WHAT INDEX, IF ANY, DID YOU USE FOR THAT METHOD?**

**A.** The original cost new inventory was trended using the Handy Whitman Index of Public Utility Construction Costs for the water industry to produce the reproduction cost new.

**Q. UNDER YOUR APPLICATION OF THE COST APPROACH WHAT ASSETS DID YOU VALUE OR TREND DIFFERENTLY FROM OTHER ASSETS AND WHY WAS THAT NECESSARY?**

**A.** We did not trend land and land rights. That is, all land and land rights were valued at original cost. Plant accounts were trended mainly using the Handy Whitman plant account indices. In limited instances, when Handy Whitman plant account indices were not available, we used the U.S. Bureau of Labor Statistics, Producer Price Index which best matches the assets being trended.[4]

**Q. UNDER YOUR APPLICATION OF THE COST APPROACH, WHAT YEAR-END DATE DID YOU USE FOR CALCULATING THE DEPRECIATION RESERVE?**

**A.** We used the date of December 31, 2021.

**Q. HOW DID YOU DETERMINE THE DEPRECIATION PARAMETERS OF SURVIVAL/RETIREMENT CHARACTERISTICS AND SERVICE LIVES FOR THE UTILITY PROPERTY UNDER THE COST APPROACH?**

**A.** We determined the average service lives of depreciable assets based on the materials used for construction and how long the depreciable assets are likely to meet service demands.

**Q. WHY ARE THOSE PARAMETERS APPROPRIATE?**

[4] The plant accounts for which Handy Whitman indices were not available included: 390.00 Office Furniture and Equipment; 390.70 Computers; 391.70 Transportation Equipment; 392.70 Stores Equipment; 393.70 Tools, Shop and Garage Equipment; 394.70 Laboratory Equipment; 395.70 Power Operated Equipment; 396.00 Communication Equipment; and 397.70 Miscellaneous Equipment.

**A.** We believe our average service lives of depreciable assets are appropriate based on our experience of having determined average service lives for numerous other water and wastewater utilities and given the fact they resemble those used by other Pennsylvania wastewater companies.

**Income Approach**

**Q. REGARDING YOUR APPLICATION OF THE INCOME APPROACH, WHAT METHOD DID YOU USE TO DETERMINE THE INCOME APPROACH RESULT?**

**A.** We used the Market Multiple Discounted Cash Flow Method ("Market Multiple DCF"), and Capitalization Discounted Cash Flow Method ("Capitalization DCF") to determine the Income Approach result. We refer to the Market Multiple DCF and the Capitalization DCF collectively as the DCF method. We used the capitalization of earning method to estimate value under current ownership and operations. The capitalization of earning method was not used to determine the Income Approach result.

**Q. WHAT ASSUMPTIONS DID YOU EMPLOY TO DEVELOP YOUR INCOME APPROACH RESULT?**

**A.** All general assumptions are listed on page 3 of Exhibit 12, and page 6 of Exhibits 13, 14, 15 and 16.[5]

[5] Exhibit references herein are to the Exhibits in the Gannett Fleming Appraisal Report.

**Q. DID YOU USE AQUA'S CAPITALIZATION RATE OR THEIR DISCOUNT RATE IN YOUR INCOME APPROACH TO VALUATION?**

**A.** No. Use of Aqua's capitalization rate or their discount rate in an income approach to valuation is not consistent with the standard of value of fair market value because the "buyer" under the standard of value of fair market value is not a specific entity (i.e., Aqua), but rather a hypothetical buyer. Use of Aqua's capitalization rate or their discount rate in an income approach to valuation is only used under the standard of value of investment value.[6] In accordance with Section 1329 of the Code, the standard of value is fair market value, not investment value.

**Q. PLEASE EXPLAIN THE CAPITALIZATION RATE AND THE DISCOUNT RATE USED IN YOUR INCOME APPROACH TO VALUATION.**

**A.** The capitalization rate used in the capitalization of earnings method and the discount rate used in the DCF method are related. The discount rate is the opportunity cost rate related to the risk of the cash flows. The capitalization rate is simply the discount rate minus the expected growth rate. If no growth is assumed, the capitalization rate is equal to the discount rate.

As explained previously, under the standard of value of fair market value the "buyer" is not a specific entity (i.e., Aqua), but rather a hypothetical buyer. Accordingly, the hypothetical bidder/buyer may range from large regional municipal authorities ("MUNI") to investor-owned utilities ("IOU"). For a MUNI, the appropriate discount rate is the current municipal revenue bond yield on December 31, 2021 of 2.85%. The

[6] Pratt, Shannon P. "Defining Standards of Value." Valuation 34, no. 2, June 1989. http://www.appraisers.org/docs/default-source/college-of-fellows-articles/defining-standards-of-value.pdf.

appropriate IOU discount rate is the current net of tax overall cost of capital (weighted average cost of capital) on December 31, 2021 and ranges from 6.59% to 8.50%.[7]

For a MUNI, the appropriate discount rate is the current municipal revenue bond yield, 2.85%, because debt is the only major source of capital available to finance an acquisition (developed on Exhibit 22, pages 2-5). Although a MUNI likely carries equity on their books (balance sheet), all existing equity is already invested in other assets and therefore, cannot be used to finance an acquisition.[8] For valuation purposes, an embedded cost of debt, or the historical cost of all debt issuances outstanding is not used because this capital is already invested in assets. Whereas the marginal cost of debt, 2.85%, at the valuation date is used in accordance with accepted valuation practice and used for market valuation purposes.

As discussed previously, for an IOU, the appropriate discount rate is the net of tax overall cost of capital (weighted average cost of capital), 6.59% to 8.50% (Exhibit 22, pages 2-8). In this instance, the net of tax overall cost of capital (weighted average cost of capital) is based on the Comparable Group's market value capital structure of 22.7% debt and 77.3% equity, a market cost of debt of 3.08% and a range of market cost of equity of 7.87% to 10.35%.[9] The Comparable Group's net of tax overall cost of capital (weighted average cost of capital) is used as a proxy to conform to the "hypothetical buyer" or

[7] Both the American Society of Appraisers, ASA Business Valuation Standards, 2009, and the National Association of Certified Valuation Analysts, Professional Standards, 2007, use the same definition: "Weighted Average Cost of Capital (WACC). The cost of capital (discount rate) is determined by the weighted average, at market values, of the cost of all financing sources in the business enterprise's capital structure."

[8] For example, when a municipal or government entity, such as the Commonwealth of Pennsylvania, finances construction of a road or bridge, they only consider the marginal debt cost despite having "equity" reflected on their books (balance sheet).

[9] For an example of the net of tax overall cost of capital, see http://www.investinganswers.com/financial-dictionary/financial-statement-analysis/weighted-average-cost-capital-wacc-2905. Also see http://www.wallstreetmojo.com/weighted-average-cost-capital-wacc/, or http://accountingexplained.com/misc/corporate-finance/wacc.

"hypothetical seller" of fair market valuation. Use of the buyer's net of tax overall cost of capital (weighted average cost of capital) would produce an investment valuation, not a fair market valuation. The supporting documentation for the development of the MUNI and IOU discount rates is shown on pages 2 to 8 of Exhibit 22.

**Q. WHY IS THE NET OF TAX OVERALL COST OF CAPITAL APPROPRIATE TO USE?**

**A.** The net of tax overall cost of capital is appropriate because the cash flows being discounted are after tax, or net of tax. The income approach uses estimates of future free cash flow and discounts them to arrive at a present value or price of the cash flows. Generally, this analysis begins with an estimate of the Debt Free Net Cash Flow over the next five to twenty years along with a terminal value. In each year, the Debt Free Net Cash Flow is comprised of projected EBIT, minus income taxes, plus projected depreciation and amortization, plus or minus projected changes in net cash working capital, less projected capital expenditures.

**Q. WHAT IS THE BASIS FOR THE GROWTH RATE USED TO CALCULATE THE CAPITALIZATION RATE USED IN THE INCOME APPROACH?**

**A.** The growth rate used to calculate the capitalization rate reflects the growth in the Debt Free Net Cash Flow after the terminal value year. For the City, a growth rate of 0.1% was used based on the current level of cash flow and rates. Under both MUNI and IOU ownership a growth rate of 0.1% was used based on the projected growth in population (0.3%), projected inflation (3.0%) and the actual growth in the Debt Free Net Cash Flow in the

years prior to the terminal value year. Under MUNI ownership the average growth in the Debt Free Net Cash Flow for the last two years prior to the terminal value year was 0.1% and 0.1% under IOU ownership. A growth of 0.1% was deemed reasonable based on the aforesaid.

**Q. WHAT UTILITY EARNINGS REPORT WAS USED TO CREATE THE CAPITAL STRUCTURE USED IN YOUR APPRAISAL?**

**A.** As documented previously in footnotes 6 and 8, book value capitalization is not used in fair market valuation determination. Therefore, we did not use the 6.15% Comparable Group's DSIC (distribution system improvement charge) related net of tax overall cost of capital in our valuation because a "hypothetical buyer" cannot finance an acquisition at such a rate and, therefore, its use would provide a meaningless result. The Comparable Group's 6.15% DSIC related cost was determined based on the Comparable Group's book value capital structure of 48.1% debt and 51.9% equity, a cost of debt of 3.08% and a DSIC cost of equity of 9.80% based on the June 2021 Earnings Report (public meeting October 7, 2021). However, we note the 6.15% Comparable Group's DSIC related net of tax overall cost of capital falls below the 6.59% to 8.50% range of discount rates used in our Income Approach.

If we used the 6.15% Comparable Group's DSIC related net of tax overall cost of capital in our valuation shown on Exhibit 16, the results of the Capitalization DCF would show a value for Wastewater System of $41.5 million. Further, the results of the Market Multiple DCF would show a value of $59.5 million and collectively, the DCF method based on the IOU ownership scenario and a 0.1% growth assumption indicates a value of

$50.6 million for the Wastewater System. The DCF method based on the MUNI ownership scenario indicates a value of $49.6 million and the DCF method based on the IOU ownership scenario using DSIC indicates a value of $50.6 million. Collectively, the DCF method indicates a value of $50.1 million when DSIC is considered.

**Q. IF YOU USED A TERMINAL VALUE IN YOUR DISCOUNTED CASH FLOW ANALYSIS WHAT IS THE NUMBER OF YEARS OVER WHICH THE CASH FLOWS ARE CONSIDERED?**

A. The use of a "terminal value" in a Discounted Cash Flow analysis is reasonable and is in accordance with accepted valuation practice. Simply put, the "terminal value" is a mathematical shortcut to avoid having to show and/or calculate annual Debt Free Net Cash Flows for hundreds of time periods, or hundreds of years. Within the Discounted Cash Flow analysis, the "terminal value" is simply a point in time in which the growth in annual Debt Free Net Cash Flows changes from multiple growth rates to a constant growth rate. For example, in our Discounted Cash Flow analysis, the growth rate of annual Debt Free Net Cash Flows during time periods 1 through 20 changes multiple times due to the various general assumptions listed in the Gannett Fleming Appraisal Report. After time period 20, the growth in annual Debt Free Net Cash Flows is a constant growth rate. Accordingly, period 20, or year 20, is the "terminal value" year in our DCF method.

**Market Approach**

**Q. REGARDING YOUR APPLICATION OF THE MARKET APPROACH, WHAT METHODS DID YOU USE TO DETERMINE THE MARKET APPROACH RESULT?**

**A.** I used the market multiples method and the selected transaction method.

**Q. WHAT ASSUMPTIONS, ANALYSES, AND/OR ADJUSTMENTS DID YOU MAKE UNDER EACH METHOD?**

**A.** The general assumptions used for the market multiples method are listed on page 1 of Exhibit 17. No assumptions were made under the selected transaction method.

**Q. REGARDING YOUR APPLICATION OF THE MARKET MULTIPLES METHOD, DID YOU LIMIT YOUR PROXY GROUP USED FOR CALCULATING MARKET VALUE TO ONLY COMPANIES WHICH ENGAGE IN PENNSYLVANIA FAIR MARKET VALUE ACQUISITIONS?**

**A.** No.

**Q. REGARDING YOUR APPLICATION OF THE COMPARABLE SALES USED TO ESTABLISH THE VALUATION, DID YOU LIMIT THE TRANSACTIONS SELECTED TO THOSE THAT YOU PREVIOUSLY APPRAISED?**

**A.** No.

**Q. PLEASE STATE THE COMPARABLE TRANSACTIONS YOU USED IN DEVELOPING YOUR MARKET APPROACH.**

**A.** Please see Aqua's Application Exhibit R (the Gannett Fleming appraisal), Exhibit 18, pages 2 and 3, which shows that we reviewed the following transactions[10] in developing the selected transactions method:

- Sale of the City of McKeesport Wastewater system to Pennsylvania-American Water Company in 2017.
- Sale of New Garden Township Sewer Authority to Aqua Pennsylvania in 2017.
- Sale of Limerick Township Wastewater system to Aqua Pennsylvania in 2017.
- Sale of East Bradford Township Wastewater system to Aqua Pennsylvania in 2018.
- Sale of Mahoning Township Water system to Suez Water Pennsylvania in 2018.
- Sale of Mahoning Township Wastewater system to Suez Water Pennsylvania in 2018.
- Sale of Sadsbury Township Wastewater system to Pennsylvania-American Water Company in 2018.
- Sale of Exeter Township Wastewater system to Pennsylvania-American Water Company in 2019.
- Sale of Steelton Borough Authority Water system to Pennsylvania-American Water Company in 2019.

[10] The years listed indicate when the applicant sought approval or when the Commission approved each of the transactions.

- Sale of Cheltenham Township Wastewater system to Aqua Pennsylvania in 2019.
- Sale of East Norriton Township Wastewater system to Aqua Pennsylvania in 2019.
- Sale of Kane Borough Authority Wastewater system to Pennsylvania-American Water Company in 2020.
- Sale of Royersford Borough Authority Wastewater system to Pennsylvania-American Water Company in 2021.
- Sale of Upper Pottsgrove Township Wastewater system to Pennsylvania-American Water Company in 2021.
- Sale of Valley Township Wastewater system to Pennsylvania-American Water Company in 2021.
- Sale of Valley Township Water system to Pennsylvania-American Water Company in 2021.
- Sale of Upper Pottsgrove Township Wastewater system to Pennsylvania-American Water Company in 2020.
- Sale of York City Sewer Authority Wastewater system to Pennsylvania-American Water Company in 2021.
- Sale of Lower Makefield Township Wastewater system to Aqua Pennsylvania in 2021.
- Sale of Willistown Township Wastewater system to Aqua Pennsylvania in 2021.

- Sale of East Whiteland Township Wastewater system to Aqua Pennsylvania in 2021.

As a check on the transactions I studied, that are listed above, I also reviewed the purchase of Connecticut Water Service, Inc. by SJW Group (Exhibit 19 page 2), which was approved in 2019 and the purchase of New England Service Company, Inc. ("NESC") by Aquarion Company, parent of Aquarion Water Company (Exhibit 19 page 3), approved in 2021.[11]

**Q. WHAT WERE THE RESULTS OF THE MARKET APPROACH ANALYSIS YOU PERFORMED?**

**A.** The results of the market multiples method and the results of the selected transactions method are shown on Exhibit 20. The conclusion regarding the Market Approach analysis is explained on pages 50 and 51 of our appraisal.

## CONCLUSION

**Q. WHAT IS YOUR CONCLUSION REGARDING THE FAIR MARKET VALUE OF THE WASTEWATER SYSTEM'S ASSETS TO BE PURCHASED BY AQUA?**

**A.** Fair market value is defined as "the price, expressed in terms of cash equivalents, at which property would change hands between a hypothetical willing and able buyer and a hypothetical willing and able seller, acting at arm's length in an open and unrestricted market, when neither is under compulsion to buy or sell and when both have reasonable knowledge of the relevant facts."[12]

[11] NESC was the sole stockholder of four regulated water companies operating in three separate states.
[12] The International Glossary of Business Valuation Standards.

Based on our analysis, as described in our appraisal report, the estimate of the fair market value of the Wastewater System as of December 31, 2021 is $44,292,000 (rounded). The results of the analyses and calculations are summarized in Table 1 for the Wastewater System as follows:

| Valuation Approach | Indicated Value |
|---|---|
| Cost Approach | $32,994,154 |
| Income Approach | 45,450,675 |
| Market Approach | 50,664,671 |

**Table 1**

We considered the results of each approach as an indicator of value individually, or as independent indicators of value. Therefore, all three approaches to valuation were given consideration in arriving at our estimate of the fair market value conclusion. We gave less weight to the Cost Approach due to our concerns stated on pages 31 to 33 of our appraisal. At a minimum, we believe the Cost Approach does not fully account for the intangible value of ultimate wholesale customers. We gave equal weight to the indicated values produced by the two economic approaches, Income and Market, as they best capture the intrinsic value of the ultimate wholesale customers. Based on these facts, our conclusion regarding the fair market value is $44.3 million. Our conclusion regarding the fair market value can be described by the weights and the specific results of the three approaches to valuation that are shown on Exhibit 21. The results of our analyses, shown on Exhibit 21,

indicate a range of value for the Wastewater System of $33.0 million to $50.7 million and collectively indicate a fair market value of $44,292,000 for the Wastewater System.

**Q. GENERALLY SPEAKING, IS IT COMMON FOR DIFFERENT APPRAISERS TO REACH VARYING OPINIONS OF FAIR MARKET VALUE?**

**A.** Yes. I do not think the underlying results of the models employed for valuation purposes are ever the same from one appraiser to another appraiser. Further, the conclusion of value from one appraiser to another appraiser usually differs as well. I believe these are some of the reasons the results of the conclusion of value from two different UVEs are averaged under Section 1329, 66 Pa.C.S. § 1329.

**Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

**A.** Yes. However, I reserve the right to supplement my testimony as additional issues or facts arise during the course of this proceeding.

# APPENDIX A

Professional Qualifications
of
Harold Walker, III
Manager, Financial Studies
Gannett Fleming Valuation and Rate Consultants, LLC.

## EDUCATION

Mr. Walker graduated from Pennsylvania State University in 1984 with a Bachelor of Science Degree in Finance. His studies concentrated on securities analysis and portfolio management with an emphasis on economics and quantitative business analysis. He has also completed the regulation and the rate-making process courses presented by the College of Business Administration and Economics Center for Public Utilities at New Mexico State University. Additionally, he has attended programs presented by The Institute of Chartered Financial Analysts (CFA).

Mr. Walker was awarded the professional designation "Certified Rate of Return Analyst" (CRRA) by the Society of Utility and Regulatory Financial Analysts. This designation is based upon education, experience, and the successful completion of a comprehensive examination. He is also a member of the Society of Utility and Regulatory Financial Analysts (SURFA) and has attended numerous financial forums sponsored by the Society. The SURFA forums are recognized by the Association for Investment Management and Research (AIMR) and the National Association of State Boards of Accountancy for continuing education credits.

Mr. Walker is also a licensed Municipal Advisor Representative (Series 50) by Municipal Securities Rulemaking Board (MSRB) and Financial Industry Regulatory Authority (FINRA).

## BUSINESS EXPERIENCE

Prior to joining Gannett Fleming Valuation and Rate Consultants, LLC., Mr. Walker was employed by AUS Consultants - Utility Services. He held various positions during his eleven years with AUS, concluding his employment there as a Vice President. His duties included providing and supervising financial and economic studies on behalf of investor owned and municipally owned water, wastewater, electric, natural gas distribution and transmission, oil pipeline and telephone utilities as well as resource recovery companies.

In 1996, Mr. Walker joined Gannett Fleming Valuation and Rate Consultants, LLC. In his capacity as Manager, Financial Studies and for the past twenty years, he has continuously studied rates of return requirements for regulated firms. In this regard, he supervised the preparation of rate of return studies in connection with his testimony and in the past, for other individuals. He also assisted and/or developed dividend policy studies, nuclear prudence studies, calculated fixed charge rates for avoided costs involving cogeneration projects, financial decision studies for capital budgeting purposes and developed financial models for determining future capital requirements and the effect of those requirements on investors and ratepayers, valued utility property and common stock for acquisition and divestiture, and assisted in the private placement of fixed capital securities for public utilities.

Head, Gannett Fleming GASB 34 Task Force responsible for developing Governmental Accounting Standards Board (GASB) 34 services and educating Gannett Fleming personnel and Gannett Fleming clients on GASB 34 and how it may affect them. The GASB 34 related services include inventory of assets, valuation of assets, salvage estimation, annual depreciation rate determination, estimation of depreciation reserve, asset service life determination, asset condition assessment, condition assessment documentation, maintenance estimate for asset preservation, establishment of condition level index, geographic information system (GIS) and data management services, management discussion and analysis (MD&A) reporting, required supplemental information (RSI) reporting, auditor interface, and GASB 34 compliance review.

In 2004, Mr. Walker was elected to serve on the Board of Directors of SURFA. Previously, he served as an ex-officio director as an advisor to SURFA's existing President. In 2000, Mr. Walker was elected President of SURFA for the 2001-2002 term. Prior to that, he was elected to serve on the Board of Directors of SURFA during the period 1997-1998 and 1999-2000. He also previously served on the Pennsylvania Municipal Authorities Association, Electric Deregulation Committee.

**EXPERT TESTIMONY**

Mr. Walker has submitted testimony or been deposed on various topics before regulatory commissions and courts in 26 states including: Arizona, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Indiana, Kentucky, Maryland, Massachusetts, Michigan, Missouri, New Hampshire, Nevada, New Jersey, New York, North Carolina, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia, and West Virginia. His testimonies covered various subjects including: fair market value, the taking of natural resources, appropriate capital structure and fixed capital cost rates, depreciation, fair rate of return, purchased water adjustments, synchronization of interest charges for income tax purposes, valuation, cash working capital, lead-lag studies, financial analyses of investment alternatives, benchmarking, and fair value. The following tabulation provides a listing of the electric power, natural gas distribution, telephone, wastewater, and water service utility cases in which he has been involved as a witness.

**AQUA PENNSYLVANIA WASTEWATER, INC.**

**DOCKET NO. A-2022-3033138**

**AQUA STATEMENT NO. 1 SUPP**

# SUPPLEMENTAL DIRECT TESTIMONY OF WILLIAM C. PACKER

**With Regard To**
**Updates to Appendix A**
**Reasonableness Review Ratio**
**Section 507 and 508**

**March 2024**

**TABLE OF CONTENTS**

I. INTRODUCTION ..... 1
II. UPDATED APPENDIX A ..... 2
III. REASONABLENESS REVIEW RATIO ..... 2
IV. SECTIONS 507 AND 508 ..... 4
V. CONCLUSION ..... 5

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is William C. Packer. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

**Q. Are you the same William C. Packer that has provided direct testimony in this proceeding?**

A. Yes

**Q. What is the purpose of your supplemental direct testimony?**

A. The purpose of my supplemental direct testimony is to update Appendix A to my testimony and withdraw Aqua's request to the Commission to modify the existing agreements between the City of Beaver Falls ("City" or "Beaver Falls") and the Contributing Municipalities due to a settlement of the Civil Action filed by Patterson Township, Patterson Heights Borough, White Township and West Mayfield Borough ("Litigating Municipalities").

**Q. Are you sponsoring any Exhibits with your supplemental direct testimony?**

A. Yes. Attached to my testimony as Appendix A is an updated schedule showing the revenue deficiency and overall impact on customers.

**Q. Except for the below changes, do you agree with your previous direct testimony submitted in this proceeding?**

A. Yes.

## II. UPDATED APPENDIX A

**Q. You previously testified that in *McCloskey*, the Commonwealth Court concluded that the Commission must address rate impact "in a general fashion" when deciding whether there is substantial public benefit. Please address the rate impact of the Proposed Transaction.**

A. The current average bill of a residential customer in Beaver Falls, is approximately $100.13 per quarter. As my calculations in Appendix A show the average bill could increase to approximately $265.96 per quarter or a 165.61% increase, which assumes that one hundred percent of the revenue requirement deficiency is borne by the acquired customers of Beaver Falls. This is due to the intervening increases applied by Beaver Falls since the initial Application was filed with the Commission.

## III. REASONABLENESS REVIEW RATIO

**Q. Are you aware that the Commission has issued a Tentative Supplemental Implementation Order[1] ("TSIO") regarding the implementation of Section 1329 of the Public Utility Code?**

A. Yes.

[1] *Valuation of Acquired Municipal Water & Wastewater System – Act 12 of 2016 Implementation*, Docket No. M-2016-2543193 (Feb. 7, 2024).

**Q. Do you believe the Reasonableness Review Ratio ("RRR") as set forth in the TSIO and what will be determined by the Commission in a final order should apply to this Proposed Transaction?**

A. No. The City issued its request for bids ("RFB") in July 2021. The Asset Purchase Agreement between Aqua and the City was signed n October 2021. Aqua, the City, and the Litigating Municipalities have worked diligently to arrive at a settlement that to allow this transaction to move through the Commission's approval process. The Commission itself has stated:

> The Commission would acknowledge that some transactions may be in the midst of negotiations, and as such, provide due consideration to the timing of the initial RRR release and any initial Section 1329 applications under this proposal. This would particularly be emphasized in the instance where an asset purchase agreement may be completed in close proximity to the issuance of the initial RRR.[2]

The City, Aqua, and the Litigating Municipalities have spent significant time and energy to move this Proposed Transaction forward, and therefore, this Proposed Transaction should be grandfathered.

[2] TISO at 8.

## IV. SECTIONS 507 AND 508

**Q. You previously testified that Aqua has developed a pro-forma agreement to negotiate with the Contributing Municipalities. Has Aqua entered into a new wastewater service agreement with the Contributing Municipalities?**

A. Yes. In Aqua's effort to settle the civil proceeding filed by the Litigating Municipalities, and to ensure that all the Contributing Municipalities have treatment agreements on substantially similar terms, Aqua has developed and negotiated new Wastewater Service Agreements with all of the Contributing Municipalities. I will note as I previously testified, several of the Contributing Municipalities did not have a written agreement prior to Aqua's involvement with the City and the Contributing Municipalities through the proposed transaction.

**Q. You previously testified that Aqua was requesting that to the extent necessary the Commission amend certain provisions of the prior agreements under Section 508 of the Public Utility Code and that those Contributing Municipalities that do not have an existing agreement be charged the Bulk Rate as set forth in Aqua's tariff. Is the Company still requesting this modification?**

A. No. Since new Wastewater Service Agreements have been negotiated and entered into between Aqua and the Contributing Municipalities, no amendment is needed under Section 508 of the Public Utility Code.

## V. CONCLUSION

**Q. Does this conclude your supplemental direct testimony?**

A. Yes it does. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of this proceeding.

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Zach Martin. My business address is 665 South Dock Street, Sharon, PA 16146.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Aqua Pennsylvania, Inc. ("Aqua PA"), as the Western Pennsylvania Area Manager.

**Q. Please provide a brief description of your education and work experience.**

A. I graduated from the Kent State University with an Associate of Science degree in 2009 and then a Bachelor of Business Administration in 2021. I have worked in the water and wastewater industry for nineteen years. I began my career in the utility industry in the spring of 2004 with the City of North Canton, Ohio as a water plant operator where I secured my Class III Water Supply Certification from the Ohio EPA. I moved into a leadership role in early 2009 as the Regional Water Superintendent for Portage County Water Resources where I was responsible for managing plant and distribution employees in the county operations of three water systems. I also served as backup to the wastewater superintendent there for the 13 wastewater treatment plants and 113 lift stations. In 2010, I moved to Aqua Ohio, Inc. as the Production Manager for the Struthers Division. There I was responsible for the operations and maintenance of the large surface water system including the 5 million gallon per day ("MGD") surface water treatment plant and the five

source water lakes and their six dams. In 2013, I was promoted in Aqua PA as the Assistant Division / Production Manager and later a Plant Manager II in 2017, and I held that position through 2021. During those eight years I was responsible for all aspects of production, treatment, and distribution facilities of the eight drinking water systems in Western PA. In 2021, I was promoted to the position of Area Manager II. In total I have worked for the Aqua subsidiaries of Essential Utilities, Inc. ("Essential") (*f/k/a* Aqua America, Inc.) for 13 years. I am responsible for leading a team of employees delivering drinking water to customers and returning treated wastewater back to the environment in nine counties of Western Pennsylvania. I am involved in all aspects of operations including budgeting, planning, employee relations, and process control. I am also involved in the business development functions in my area of operations. I am also a veteran of Operation Iraqi Freedom III and served in the U.S. Army and Ohio Army National Guard.

**Q. Do you hold any professional licenses or certifications?**

A. Yes. I hold three environmental operator certifications in two states. I am a Class-A certified water and Class-A certified wastewater operator in Pennsylvania with 18 subclasses in total. I am also a Class 3 water supply licensed operator in the state of Ohio. I have maintained operational laboratory certifications in both states as well.

**Q. Have you previously testified before the Pennsylvania Public Utility Commission ("PUC" or the "Commission")?**

A. Yes. I previously submitted Direct Testimony in this proceeding, and I have submitted testimony in Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") acquisition of Greenville Sanitary Authority.

**Q. You stated you filed Direct Testimony in this proceeding, what is the purpose of your Supplemental Direct Testimony?**

A. The purpose of my Supplemental Direct Testimony is to supplement my Direct Testimony and provide additional discussion regarding operations of the City of Beaver Falls ("City" or "Beaver Falls") wastewater system ("the System") and to discuss the public benefits of this transaction.

**Q. Are you sponsoring any Exhibits associated with the Company's filing as a part of your Supplemental Direct Testimony?**

A. Yes. I am sponsoring ZM-SUPP Appendix A, which contains CONFIDENTIAL and HIGHLY CONFIDENTIAL portions that have been marked as such.

## II. AQUA OPERATIONS, INTEGRATION OF THE SYSTEM, AND TECHNICAL FITNESS

**Q. In your direct testimony, do you describe the location of Aqua's operations in relation to the System and how Aqua will integrate the System into its operations?**

A. Yes.

**Q. Is there further information that you can provide at this time about how Aqua will integrate the System into its operations?**

A. Yes. As discussed in my Direct Testimony, the operation of the System will be managed from Aqua PA's Western Area office in Sharon, PA. Management, customer service, regulatory compliance, engineering, financial, and ancillary services will be provided seamlessly from there with support from our Southeastern Headquarters office. Aqua plans to offer employment to seven current employees of the City to address the day-to-day operations of the System. The existing employees coupled with the over 30 front line employees and management staff located within 40 miles of Beaver Falls provide significant resiliency and improves operational support for the System. Combining System and Aqua PA employees in conjunction with Aqua PA's "One PA" program creates purposeful knowledge sharing opportunities for employees across all sectors of the Company. In concert with the One PA program, Aqua has for more than a decade, a corporate -wide "One Company Initiative" which solicits knowledge sharing from all areas of Aqua which benefits all employees. By extension, Aqua PA's One PA philosophy and the One Company Initiative benefits customers of both the System, Aqua PA and Aqua by

creating a platform for sharing of best practices, table-top exercises, sharing of standard operating procedures ("SOPs"), sharing of existing or new equipment such as generators, lessons learned that may include new operating techniques or technologies, safety practices and more.

Further, Aqua has significant equipment that can be shared with the System, including for operation (vehicles, excavation, heavy haul), portable generators, common supplies and material storage, and mobile safety systems that can be moved between locations. While physical connection of the collection systems is not anticipated, connection of security and computer systems will occur. Aqua has an integrated Supervisory Control and Data Acquisition ("SCADA") system used to operate and monitor operating systems such as pumps, treatment units and status alarms, such as chlorine gas alarms. Aqua's SCADA system allows our operators to have better insights into the operations of the system at all hours of the day and to be proactively alerted of any issues. Currently, Beaver Falls does not have a full scale SCADA system. Aqua also maintains an integrated security system that allows physical security to be observed in different locations around the state. In the case of the Beaver Falls System, once systems are installed and integrated with Aqua's security system, the physical security alarms will notify operations staff at the Company's water treatment plant in Sharon, PA which is staffed 24/7/365. In addition, security alarms from Aqua PA's Sharon, PA water treatment plant will be shared at Beaver Falls which will alert those operators of possible problems in Sharon, thus providing mutual assistance to both system's customers. This will ensure safety of operations and personnel, as well as nearby residents and the environment.

**Q. In addition to what you have explained in your Direct Testimony, how else will other Aqua PA employees assist in the operation of the System, if needed?**

A. In addition to the information provided in my Direct Testimony, the support of Aqua PA employees, electricians, mechanics, laboratory staff, and instrument technicians, will benefit both the Beaver Fall's employees and customers. Aqua has 12 wastewater operators in the Western PA Area, many holding dual water and wastewater certifications, who may be called upon to assist in the operations of the system. There are also 20 certified water operators in the Western PA Area who are familiar with treatment systems and can follow SOP if needed. These operators are also supported by Aqua PA employees, which will benefit customers through engineering and field service functions as well as electricians, mechanics, laboratory staff, and instrument technicians, which will benefit both the Beaver Fall's employees and customers.

A few examples of operational support that will be provided by Aqua to the Beaver Falls System (which support does not exist today for the System) include:

(1) Environmental Compliance Audits conducted by staff that do not report to the operation management group;

(2) Safety teams that conduct "housekeeping" and safety audits that seek to find and eliminate potential dangers;

(3) A "Near-Miss" program that allows any employee to report an observed safety concern and a process that ensures the issue is resolved timely;

(4) A full-time Aqua PA One-Call management team (Damage Prevention) that ensures the requirements of Act 50 of 2017 are met, and that staff receive regular training;

(5) Mapping updates by an in-house Geographic Information System (GIS) team;

(6) Wastewater process experts that will review the processes for targeted parameters and if needed, assist in resolving any process upset situations;

(7) Emergency response support in the form of "national contracted vendors", fleet operations, and access to the approximately 600 Aqua PA employees who can deploy to the location in support of Western PA operations, all orchestrated through Aqua PA's Emergency Response and Communications process.

It is equally beneficial and important to note that eventually Beaver Falls employees will be called upon to assist in others areas of Western PA operations. In so doing, continued cross-training benefits the Systems as well customers of Beaver Falls and Aqua. This sharing of employees from new acquisitions and existing systems is a mainstay of our southeastern Pennsylvania wastewater operations where we have integrated wastewater employees for Cheltenham, East Norriton and Lower Makefield. This integration ensures operator familiarity with these systems and ensures continuity of operations during normal and emergency operations. This type of planning and integration also ensures that Beaver Falls will not be in the situation it is now – no supervisory personnel or adequate backup personnel.

**Q. Please describe how the Beaver Falls employees will be integrated into and develop their careers at Aqua.**

A. Following acquisition of the Beaver Falls System, Aqua will implement site-specific training, as well as off-site cross training in other Aqua facilities to promote continuous improvement and optimization, and to introduce compliance metrics to shift the plant into high performance operations.

**Q. In your Direct Testimony, you indicated that the System is similar to other systems owned and operated by Aqua. Is that the case?**

A. Yes, it remains the case. However, after further investigation and review of the System, as described below, the System is troubled, distressed and in need of significant investment and operations review.

**Q. Do you believe that Aqua is technically fit to own and operate the system?**

A. Yes.

**Q. Are there any further reasons why Aqua has demonstrated itself to be fit to operate this system after conducting additional investigation and review?**

A. As noted in my direct testimony, Aqua has experience replacing wastewater infrastructure while also navigating strict Pennsylvania Department of Environmental Protection ("DEP") regulations to install chemical treatment systems and optimize the plant for copper removal to benefit an impaired receiving stream as defined by Section 303(d) of the Clean Water Act. The improvements to this watershed were recently recognized by the DEP following stream assessments in 2022 and 2023 which identified material improvements to the stream eco-systems downstream of its outfall. This experience will assist Aqua in addressing the additional issues identified with respect to this system.

**Q. How does Aqua maintain and enforce safety, compliance, and security programs throughout its operations?**

A. Aqua requires a high level of employee training and monitors completion of training requirements. Most safety programs are trained initially and reinforced through annual refresher trainings. Aqua employs internal safety experts, internal compliance experts, and routinely conducts internal audits of operations. Aqua also contracts with external experts to perform random inspections and audits of employee and contractor operations. These cover operations throughout the system, including maintenance and construction activities in immediate contact with the community.

**Q. Can Aqua provide adequate wastewater treatment capacity to meet present and future customer demands?**

A. Yes. Through the existing facilities, coupled with the planned upgrades to the WWTP, which are discussed in the Direct Testimony of Mark Bubel, Sr. (Aqua Statement No. 2), Aqua can provide adequate treatment capacity for present and future customers. Aqua will continue to make improvements to the System, as may be required, to ensure any future customer demands are met.

**Q. Please summarize why you believe Aqua is technically fit to own and operate the System.**

A. My explanation of Aqua's current operations, the System's similarity to other systems operated by Aqua, and operational support that will be provided by Aqua, an experienced

wastewater utility, all support a finding that Aqua is technically fit to own and operate the System, and that ownership of the System by Aqua is in the public interest. In addition to this, I detail below the current areas for improvement needed in the System, as well as the additional process improvements identified that will be remedied by Aqua, and capital improvement needs of the System. Aqua's planned improvements in this regard establish substantial affirmative public benefits. Moreover, these capital and operational improvements have not been addressed by Beaver Falls, nor is Beaver Falls in a position to do so as explained by Mr. Jones (Aqua Statement No. 4-Supp.) in his Supplemental Direct Testimony.

## III. SYSTEM ASSESSMENT & CURRENT OPERATION OF THE BEAVER FALLS SYSTEM

### A. GENERAL SYSTEM ASSESSMENT

**Q. Since Aqua submitted its Direct Testimony, has it further analyzed the System and its current operations?**

A. Yes, it has. Below, I will provide supplemental detail on Aqua's assessment of the system generally and Aqua's identification of specific issues that evidence the System is currently troubled. These issues include hazardous gas problems, safety and security problems, and the lack of an asset management plan or computerized maintenance management system. I also identify how Aqua would address these issues as the owner and operator of the System, and how such ownership and operation will result in significant public benefits.

**Q. Did you visit the facilities?**

A. Yes, multiple times. Specifically, the Company conducted initial due diligence and post-agreement in-depth review to assess the operations, facilities, personnel, standard operating procedures, compliance, safety, and security of the System.

**Q. How old is the original WWTP?**

A. The wastewater treatment plant was built in 1938. While some work has been done over the years, the original WWTP is over 80 years old. The system is troubled, distressed and in significant need of attention.

**Q. Based on your experience in visiting the plant, did you feel safe and would you feel safe allowing Aqua employees to work at the WWTP under the current conditions?**

A. No. I did not feel safe and we would not allow Aqua employees to work at the WWTP under the current conditions. I note that these observations were made over the course of approximately ten visits during various seasons, and most recently in October 2023. I will further expand on this, highlighting the issues I saw while visiting the WWTP.

**Q. Please describe your findings and areas that can be improved by Aqua's ownership of the System.**

A. The System is currently under a Corrective Action Plan ("CAP") under the DEP. Under the City's ownership, significant quantities of raw sewage and/or partially treated wastewater have entered into the receiving Beaver River where fishing and recreation

occurs. The river serves many purposes, including that it discharges into the Ohio River, the largest volume tributary of the Mississippi River, only a few miles South of the outfall. Downstream of the WWTP are several public water systems that serve an estimated 5 million people in the Ohio Valley.

**Q. Can you please further describe why you believe this system is troubled, distressed and in need of attention?**

A. Based on my site visits, discussions with operations personnel, and observation of plant activities, I note the following areas of concern for future safe, adequate, and reliable wastewater utility service for the Beaver Falls System:

- Lack of Licensed Operators, Access to Training, and Redundancy of Operators;
- Limited or Lacking Process Control Testing;
- Laboratory Sample System Management;
- Permit Compliance Issues;
- Lack of Emergency Preparedness Planning;
- Lacking Safety & Security Equipment & Training;
- Hazardous Chemical Storage, Labeling, and Safety;
- Compliance with Federal EPA Risk Management Program regulations for extremely hazardous chemicals;
- WWTP Ventilation Issues creating health and safety risk for employees;
- WWTP physical safety measures;
- WWTP Security deficiencies;

- Inadequate SCADA and operator alarm systems;
- Use of homemade patchwork of physical assets;
- Insufficient emergency/standby power generation; and
- Non-use of Asset Management or Compliance Management Software Systems.

**Q. Can you explain the current staffing of the Beaver Falls WWTP, and any related challenges experienced?**

A. Based on my experience, the team operating the WWTP lacks experience, training, struggles to operate the System and are in danger based on the safety issues that I observed. The System should be operated with a team consisting of 3 maintenance mechanics, 2 licensed operators, a WWTP manager, and an administrative employee. When the Company visited the facility in October 2023 there were a total of four (4) employees. The WWTP superintendent was on medical leave for the past several months and had recently taken a disability retirement and was not expected to return. There was one experienced maintenance foreman, however, the foreman is unfamiliar with wastewater treatment process control, an unlicensed operator with less than one year experience, one mechanic with less than two years' experience, and an administrative employee. The three operator/maintenance staff cover the WWTP seven (7) days a week and are continuously on-call. These employees cover for each other when one may not be available to respond.

City officials shared their difficulty securing labor to work at the WWTP. There are no internal wastewater experts to assist at the City and any assistance would have to come from consultants, which had not been planned for or implemented as of our visit.

Assistance from consultants regarding operations is not budgeted for by the City. The loss of the WWTP manager shows that there is no redundancy, succession or contingency plan should such a vacancy occur. The Company compliments the skeleton staff on the work they are doing with limited experienced labor and resources. However, this clearly indicates that additional expertise is needed to ensure reliable and compliant operations for the long term which is a benefit specific to Aqua's acquisition of this system. The City has been unable to obtain experienced workers to fill the open positions.

**Q. What wastewater treatment process control and treatment operations did you observe at the WWTP?**

A. Process control and SOPs were significantly lacking. Many of the processes were well beyond normal acceptable operating conditions, possibly leading to future violations. For example, the primary clarifiers had floating trash in/on them, and the skimmers were not operating at all. The primary clarifiers were black in color indicating septic conditions. See Appendix A, Section 1.[1] This creates odor issues and more significantly prevents the naturally occurring processes from happening in an efficient manner. While all the tanks were on-line, flow coming out of the tanks was only at 50% of design capacity which suggests something very wrong and a clear operational inefficiency. The extra on-line tankage creates long hydraulic retention times coupled with lower than ideal sludge

[1] Portions of Appendix A to Statement No. 3-Supp contain confidential, non-public information and have been designated as such.

wasting and black, odorous septic conditions. It also creates additional costs because the WWTP is powering more equipment than necessary.

**Q. Please expand on further concerns of process control and treatment operations.**

A. Also of significant concern is that there were no air blowers online to supply aeration and/or mixing to any process tanks. These tanks can contain hydrogen sulfide and other gases that displace oxygen that are very hazardous. Proper aeration and mixing is vital for safety reasons. The trickling filter facility at a wastewater treatment plant consistently moves wastewater and pushes it to the bottom of the facility. Upon review the trickling filter facility had excessive biomass growth reducing its effectiveness. See Appendix A, Section 2.

**Q. Please further expand upon your concerns when visiting the WWTP.**

A. There are floating solids atop the secondary clarification tanks. This accumulation was also on the surface of the chlorine contact tank where disinfection of the process stream should have been occurring. See Appendix A, Section 3. This is not where floating solids should appear. All tanks were extremely turbid (dense, murky) and it was difficult to see more than a couple inches into the water column. This is not a good sign for a tank, especially near final treatment. Most protrusions from the tanks, channels, launderers, and flumes were coated with excessive solids accumulation. Again, not a good sign. Sludge wasting, which is an important tool in the normal operational process, seemed to be limited to periodic and nonspecific volume instances. All of this is an indication of the need to have

a fully staffed system along with a knowledgeable and engaged lead operator, supervision, and qualified backups to the same.

**Q. How would Aqua address the staffing challenges and the concerns regarding the condition of the System identified above?**

A. Aqua maintains a staff of compliance and operations experts that will implement changes upon closing of the transaction to ensure SOPs are in place and followed. We also have robust preventative and corrective maintenance programs with asset and process based minimum standards of service that will be discussed in detail later in this testimony for mechanical and maintenance personnel to adopt. We incentivize operators to secure DEP operating licenses, and support that with continuing education assistance. In addition, our corporate resources and local operations management are skilled at operating wastewater facilities. Also, Aqua has been successful in attracting talent across Pennsylvania for all our systems. We have robust onboarding and training programs for supervisors and operators that encompass all facets of operations from safety to process control. Since Aqua filed its initial application, the City has had vacancies at the WWTP that have not been filled as of the date of this Supplemental Direct Testimony.

**Q. What else would Aqua do to correct the troubled and distressed nature of the Beaver Falls system?**

A. The Beaver Falls system would receive an intensive review by our engineers, process control specialists, and infusion of experienced operators and leadership to establish the

operating protocols and bring the plant back to normal operating conditions quickly. This should occur within 30 days of the start of operations. Process control testing criteria, including adequate laboratory equipment will be provided on-site and operators trained to perform tests and interpret the results, from which process control adjustments can be made with confidence. The Aqua-owned state certified laboratory in Bryn Mawr will support this facility from the start with certified analytical results and a quick turnaround time. Continued observation of the process by both on site personnel and broader Aqua resources would be a constant through operations, allowing independent evaluation of the process to ensure nothing is being missed.

Maintenance activities would immediately improve under our defined asset management program with proactive work orders issued for the plant, equipment, and collections system. Maintenance staff would be supported by outside services and vendors to ensure the specialty elements of maintenance program undertaken correctly. Aqua's workforce development program from recruitment through continued education, supported by management and technology, is a significant benefit to Beaver Falls ensuring plant reliability, environmental compliance, protection of receiving waterways, and elimination of the odors for the plant experienced by the public.

**Q. Please expand upon why treatment and process controls are so important for the community in Beaver Falls and the surrounding communities downstream.**

A. Adequate treatment and timely process control decisions are necessary to ensure adequately treated wastewater safely reaches the discharge of the WWTP, which ultimately

reaches the Beaver River where recreation occurs. The river serves many purposes, including that it discharges into the Ohio River, the largest volume tributary of the Mississippi River, only a few miles South of the outfall. Downstream of the WWTP are several public water systems that serve an estimated 5 million people in the Ohio Valley. The Company has proven its expertise in optimizing treatment in wastewater systems like the Beaver Falls system to protect drinking water sources from diseases such as hepatitis A and cholera, scum discharge, and the Company excels at maintaining optimum oxygen levels and minimized regulated compounds in treated water outfalls which helps protect the environment and our watersheds. The Beaver and Ohio Rivers are home to 159 species of fish alone. Effluent water quality from this system is paramount. While the WWTP is currently compliant with DEP requirements, Aqua has significant concerns that proper process controls and treatment are not in place which can further degrade the WWTP and lead to future violations.

**Q. Does the Beaver Falls staff perform adequate process control testing?**

A. No. The City only performs the bare minimum for sampling and analysis for the WWTP. Aqua will require the additional routine process control testing analysis above the regulatory requirements of the DEP to the discharge permit parameters to include alkalinity, suspended solids, biological oxygen demand ("BOD"), settleable solids, pH, nutrients like ammonia and phosphorus, and dissolved oxygen analysis of the trickling filter effluent. Aqua will also monitor (i) total suspended solids, dissolved oxygen, and sludge age in the process; (ii) total suspended solids in the mixed liquor, and (iii)

microscope analysis of the process bacteria. Aqua will increase the frequency of analysis in the effluent to include chlorine, ammonia, and phosphorus.

The addition and/or increased frequencies of the testing of the above parameters will facilitate optimization of the facility and processes, which will allow operators to make educated decisions and meet the permit effluent requirements. These process enhancements will also drive towards the optimization and cost control of the WWTP, which will directly benefit the environment and the community meeting the principal objectives of the Clean Water Act – fishable, swimmable, and drinkable waterways.

**Q. Does the City employ a laboratory information management system ("LIMS") to track analytical results and compliance with critical standards in its laboratory space?**

A. No, it does not. Physical bench sheets are used with common spreadsheet applications (*e.g.*, excel) for reporting of testing results. These bench sheets are not capable of being audited and lack critical access controls and compliance adherence. This means that any changes to the data are not automatically logged to a unique user, and justification may not be required to submit a change in testing results.

**Q. Please explain how Aqua will address this issue of data tracking and confidence.**

Aqua will implement its LIMS program to ensure that analytical data follows processes and procedures, including quality assurance and quality control standards. Data that is entered into LIMS includes the regulatory and process control data which includes sample

results and plant process key performance indicators. The data will be tracked and is fully auditable as each employee will have individual credentials so that any entries are tied to that specific user with process checks in place so that any changes to results must be authorized and notes provided to explain the change. Internal and external laboratory analysis will be cataloged in the LIMS system.

[redacted]

[**END HIGHLY CONFIDENTIAL**]

**Q. Are there other examples of general safety issues in the System?**

A. Yes. Throughout the Beaver Falls facility there are multiple safety deficiencies of low to moderate risk. By way of example, most pumping systems are missing guards on the rotating equipment creating unsafe conditions that could cause workers to be pulled into the rotating equipment or hands crushed. There are missing railings or railing components like toe or kick plates to prevent a slip/trip and fall from becoming an immersion into the process tanks. There are numerous locations where employees use temporary ladders to access equipment that circumvent fall protection.

Chemicals were not stored properly at the WWTP. There are no containment devices for the chemical drums. Drums in service were propped up on blocks to permit emptying, but this leaves the heavy drums unstable and teetering in common areas of the

WWTP near floor drains. There is a general lack of labeling throughout the facility and no evidence of the exit signage nor emergency lighting. Multiple fire extinguisher hooks were empty.

There are several roofed structures that are accessible by stairway that do not have any fall protection devices, railings, lighting, or signage to ensure occupant awareness. There are also confined spaces without any signage and no evidence of a program, nor regulatory compliance for the documentation of training and entry. See Appendix A, Section 6.

**Q. How will Aqua address these general safety issues?**

A. These issues will be cataloged and will become a part of Aqua's already robust capital and operational plan to be addressed within Year 1 of Aqua ownership. Our safety teams and operational management will make these items a priority in Year 1 by educating our new employees in the safety requirements of Aqua, investing to correct deficiencies, and provide on-going safety housekeeping, near miss reporting, and safety audits on a regular basis. Safety of our employees, most who are members of the community, is priority so they return safely home. The public benefits of this cannot be measured.

**Q. Is there a system in place at Beaver Falls to document near-misses?**

A. No. Aqua, however, implements a Near Miss program (a.k.a. "Safety Learning Opportunities") where all employees are encouraged to look for and report potential and real unsafe conditions so they can be addressed in a timely manner. This program is key

to both creating a safe working environment and a culture of safety. The employees have little support in the way of safety programing currently, and this program will be beneficial both to them, their families, and the community at large.

[**BEGIN HIGHLY CONFIDENTIAL**]

[redacted]

[redacted]

[**END HIGHLY CONFIDENTIAL**]

**Q. Does the facility have emergency/standby power generation on site?**

A. Yes, however, it is not clear what equipment in the WWTP is supplied with emergency power from backup generators. Only critical pumping systems are supported by the back-up generator and even those systems are not completely supported. There is limited operation of secondary treatment and pumping operations. There is no emergency power supplied to the aeration processes meaning these systems will not operate during a power failure and it is unclear as to the capabilities of that emergency power for supplying the

chemical feed systems and limited process monitoring equipment. These shortfalls mean that while wastewater will continue to enter the WWTP, it will not be fully treated and enter the receiving stream. This will be fully assessed as part of Aqua's ongoing capital improvement processes and addressed through capital projects identified.

## D. ASSET MANAGEMENT

**Q. Does Beaver Falls have an asset management plan or computerized maintenance management system ("CMMS") in place and what is Aqua's plan for post-Closing asset management?**

A. The team at Beaver Falls maintains a basic calendar and spreadsheet to track preventative maintenance needs. Some written records are maintained to track assets over time. Aqua will implement several layered approaches to asset management through financial modules. Aqua will also implement a CMMS system to schedule and automate preventative maintenance schedules for the employees. This system will also capture reactive and corrective maintenance tasks for all aspects of the System. Aqua will work with the Beaver Falls team to fully document existing SOPs and to employ Aqua SOPs where none exist through these work order systems to record tacit knowledge and improve succession planning and operational consistency.

**Q. Are there specific examples of assets and processes that are not operating correctly due to lack of maintenance or expertise? If so, does Aqua have a plan to remedy the situation?**

A. Yes. Aqua personnel witnessed a complete absence of aeration in the WWTP. There is also evidence of incomplete or insufficient maintenance of the trickling filters. The distribution spray arms rotate continuously. The employees noted that it is common practice for them to create their own parts to maintain and patch operations of these large assets for this critical and continuously operating equipment. To avoid this patchwork approach, Aqua would engage manufacturers and experts to ensure that the correct parts are installed, and specialists are utilized to ensure this large rotating equipment is correctly balanced.

**[BEGIN CONFIDENTIAL]**

**Q. Did you observe the condition of the concrete at the WWTP?**

A. Yes.

**Q. What concerns are presented by the condition of the structures?**

A. The WWTP structures are concrete and steel. There was evidence of deterioration of the concrete throughout the WWTP in the form of cracks, spalling and other defects. See Appendix A, Section 7. Due to the freeze thaw conditions experienced at this WWTP, the concrete will begin to accelerate its deterioration if not addressed. There appears to be no plan to invest to address this situation based on conversations with Beaver Falls and the lack of any evidence of recent work being done.

**Q. How does Aqua plan to address these concerns?**

A. As part of Aqua's standard maintenance program and capital improvement plan, maintenance of structures is considered and implemented. Aqua's engineers will evaluate the WWTP and undertake a program to stabilize the concrete deterioration as they deem appropriate.

**Q. How will Aqua's plan benefit customers?**

A. This proactive approach would reduce the need for any large-scale replacements of very expensive structures, which could also cause interruption of normal treatment process while the structure is removed from service. This supports the long-term reliability of the facilities and proper control of expenditures to sustain the WWTP and level of service to the customers and the larger community.

**[END CONFIDENTIAL]**

**Q. Does Beaver Falls utilize any compliance assurance software?**

A. No. To address this, Aqua will implement its current compliance assurance software. This software system generates compliance-focused work orders for regulated wastewater system processes and functions. Employees will be assigned a combination of daily, weekly, monthly, quarterly, annual, and less frequent work orders to ensure that critical compliance requirements are completed on time and in a manner that is well documented. The system will generate monthly, quarterly, and annual regulatory reports for consistency

of calculations and to Aqua's standards. These systems will support the staff of Beaver Falls in the rapid adaptation to the operational excellence for which Aqua is known.

## IV. CONCLUSION

**Q. Does this conclude your Supplemental Direct Testimony?**

A. Yes, it does. However, I reserve the right to supplement my Supplemental Direct Testimony as additional issues and facts arise during the course of this proceeding.

# APPENDIX A

# (CONFIDENTIAL Version)

CONTAINS CONFIDENTIAL INFORMATION

# City of Beaver Falls WWTP

## SECTION 1

**March 3, 2021 – Primary Clarifier**

**September 19, 2023 – Primary Clarifier**

# SECTION 2

**March 3, 2021 – West Trickling Filter**

**September 19, 2023 – West Trickling Filter**

# SECTION 3

**March 3, 2021 – Chlorine Contact Tank**

**September 19, 2023 – Chlorine Contact Tank**

**September 19, 2023 – Chlorine Contact Tank**

**September 19, 2023 – Chlorine Contact Tank**

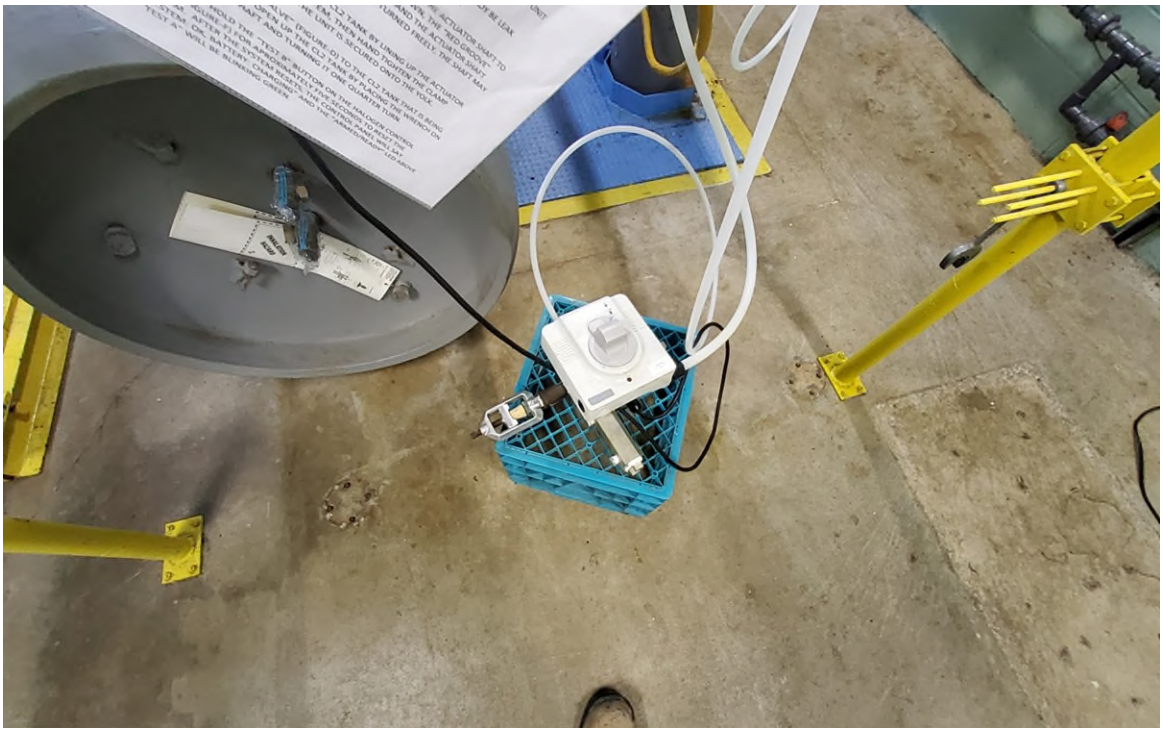
# SECTION 4

**[BEGIN CONFIDENTIAL]**

**March 3 2021 – Chlorine Gas Room (Extremely Hazardous Chemical)**

**Ton cylinder scale showing full 2,000 pound cylinder loaded.**

**Four additional 150 pound cylinders of chlorine gas on site. Total 2,600 pounds of gas on site.**



**Ton cylinder valves sealed but left unprotected and unconnected.**

**Two chlorinators and flow tubing installed on West and South wall of chlorine room. Note exhaust fan that is not gasketed and severely corroded. Corrosion in a chlorine room is an indication of leaks as chlorine is a very aggressive oxidant.**

**Chlorinator. Note tag is dated 2017 for last service. The tubing is marked with a 2016 date on this unit. These should be serviced annually and tubing should be replaced annually at minimum. Note discolored braided hose on the hypochlorous acid lines that is not rated for that service and severely discolored. The electrical junction box of this chlorinator is left open and severely corroded.**

**This chlorinator is newer, however had no dated service tag on it. There was one tag hanging from the tubing in the left of the photo that merely warned of proper use. There were no dates indicated on any of this gas tubing. Note the vacuum gauge at the top of the equipment is almost at the minimum limit which indicates injector fouling and a lack of preventative maintenance. This newer unit is still severely corroded.**

**Exterior of chlorine gas room looking East. Chlorine crane shown.**

Chlorine gas comments:

- Federal EPA Violation
  - This facility does not have a Risk Management Program ("RMP") filed with the U.S. EPA. The facility is operating with more than 2,500 pounds of chlorine gas on site which is the threshold for RMP regulations.
- Maintenance
  - Equipment maintenance is significantly overdue on critical equipment that must operate continuously. Tubing and hoses are severely aged and pose an increased risk of leaks.
  - An RMP would require formal maintenance programs and record keeping for these functions.
  - Electrical connections are left exposed subjecting equipment to corrosion and defeating the seal of the room.
  - The robotic isolation valve is powered by a residential office style battery backup hanging from the hazardous gas piping.
  - There is no labeling on the piping to indicate contents for first responders in an emergency.
- HVAC
  - The exhaust fan is not gasketed to seal and prevent gas from escaping the chlorine room.

    - There are no audio or visual indicators in the interior or exterior of the chlorine gas room for employees or first responders to be aware a gas leak is occurring.
- Lifting equipment
    - The crane beam is not labeled with a rated capacity.
    - The trolley is not labeled with a rated capacity.
    - The lifting bar is not labeled with a rated capacity.
    - There is no evidence of annual inspection and service by a certified inspector.
- Additional Safety
    - The heavy ton cylinder protective cover is hung from the wall over sensitive plastic piping carrying extremely hazardous chemicals.
    - There is no emergency lighting in this area.
    - There is no exit sign.
    - The large doors do not have panic hardware on them and bolt shut to the floor.
    - Milk crate is used to house sensitive hazardous gas feed equipment on the floor.
    - There is no indication of the water shutoff valve that would be necessary to stop the vacuum generation from the eductors and stop the withdrawal of chlorine from the cylinders.
    - None of the plastic tubing nor valves are labeled as approved for chlorine service.
    - There are no traps on the floor drain piping to prevent a leak from exiting this room and entering another through the floor drains.
    - Slips trips and falls.
        - There are cords and equipment left strewn on the floor. Anyone working in this room should be wearing an air purifying respirator which will limit visibility and range of motion of the head. It is critical that this room be kept free from obstructions.

**[END CONFIDENTIAL]**

# SECTION 5

**[BEGIN CONFIDENTIAL]**

**March 3, 2021 – Headworks**

**Inside below grade headworks. Note blue tarp covering opening over screening/grit hopper. Note gas fired torpedo heater on extension cord in classified electrical space. Significant explosion hazard.**

**Northern end of headworks looking South. Note exposed bar rack in floor to process tank.**

**Exposed bar rack at Northern end of headworks room without railings or protective surface.**

**Exposed bar rack behind screen at Southern end of headworks room.**

**Screen equipment with exposed hydraulic drive with missing guards and mismatched hoses. Note the creative rigging on the dumpster to lift it from this hazardous space overhead to the parking lot.**

**East wall of headworks room. Note draped extension cords and outlets that are not explosion proof. No labeling on pipes, conduits, or hoses.**

**South influent pump suction well that was offline during visit. Note scum and floating debris. Note wooden railing modifications around the base.**

**North influent pump suction well that was online during visit. Note turbulence and consider ability to enter tank through exposed bar racks and absent grating.**

Influent / Headworks comments:

- Explosion hazards
  - This entire space is below grade and only accessible by an inclined set of stairs. This space is subject to anything that enters the sewage system and is a classified space, requiring explosion proof electrical equipment.
  - There is a fuel powered open flame torpedo heater placed in this explosive space. This is like holding a lit match over a case of dynamite.
  - There are extension cords and temporary wiring draped throughout the space. There are light fixtures and outlets that are not explosion proof.
  - The only major ventilation in this area was covered by a blue tarp during our visit.
- Slip, trip, and fall hazards
  - There are railings that prevent a fall into some of the process tanks. But there are also several exposed bar racks in the common walkways that would permit someone to fall into the process flows and into the influent pump station pump suction piping below.
  - The grating is mismatched and poorly supported in work areas like around the screen equipment.
- Maintenance
  - Through mechanical screening equipment and past multiple iterations of passive bar racks, there was still floating debris and solids accumulation in the headworks tanks.
  - Hoses and cording left strewn and draped throughout the space. Some hoses left to dangle in pump suction wells.
- General
  - No exit signs
  - No fire extinguishers
  - No emergency exit lighting
  - No atmospheric monitoring in the room
  - No E-Stops for the mechanical screening equipment no influent pumps

**[END CONFIDENTIAL]**

# SECTION 6

**[BEGIN CONFIDENTIAL]**

**March 3, 2021 – Thickener, Digester, and building exterior**

**Thickener tank, digester tank, and building from the North.**

**Top of thickener and digester tanks.**

**Looking onto top of floating lid. East tank.**

**Exterior of thickener / digester building. Gas detector with failing screen and negative reading.**

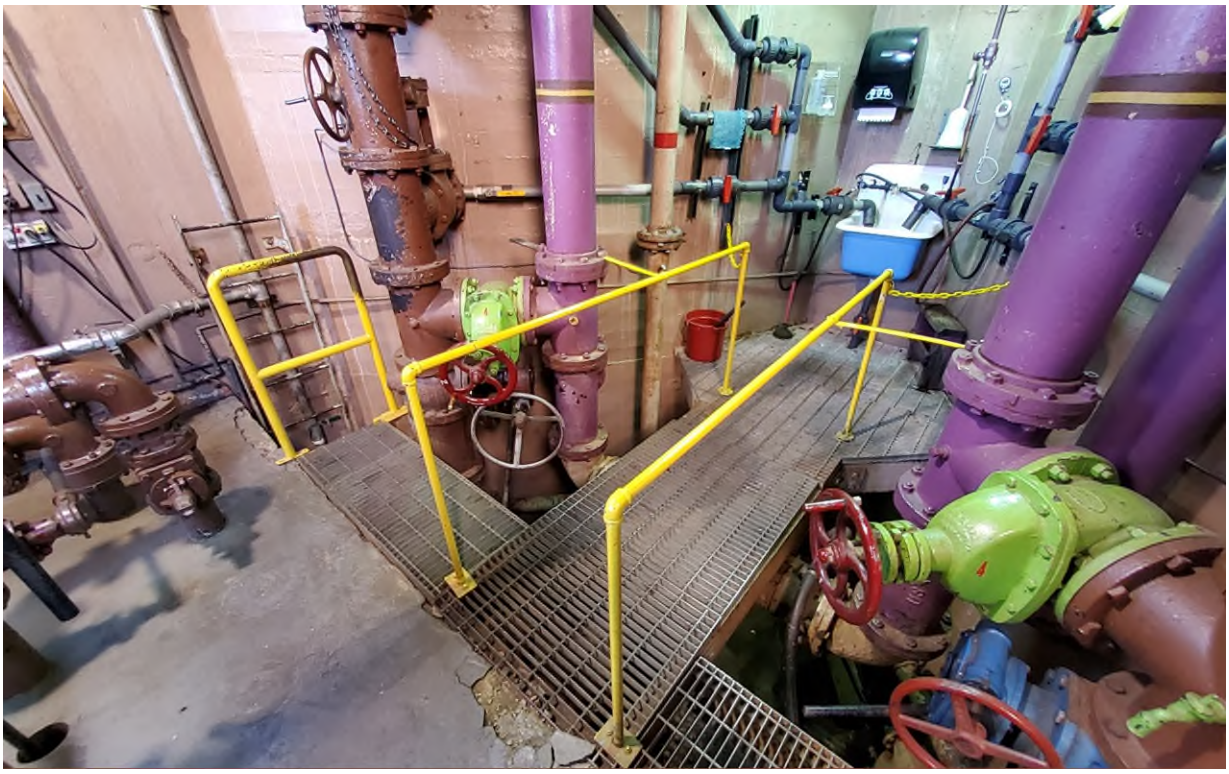
Thickener tank, digester tank, and building exterior comments:

- Stairway provides easy and unrestricted access to the concrete area and tops of the tanks.
    - There is no railing around the work area to prevent a fall into the tanks onto the floating lids.
    - These floating lids are confined spaces, with sloped surfaces, and can hold hazardous gases that are heavier than oxygen.
    - The area around the perimeter of the lid is not sealed to the walls and provides exposed to sludge to create hazardous atmospheric conditions.
    - There are multiple trip hazards on this working surface that we were escorted up on to.
- Exterior wall gas detector.
    - This gas monitor had a faded screen and no calibration tags.
    - The display was reading a negative value during our visit.
- Structures
    - There are multiple cracks in the concrete on and around the cylindrical tanks.

**March 3, 2021 – Thickener, digester, and building interior.**

**Inside of thickener / digester building from Northeast door.**

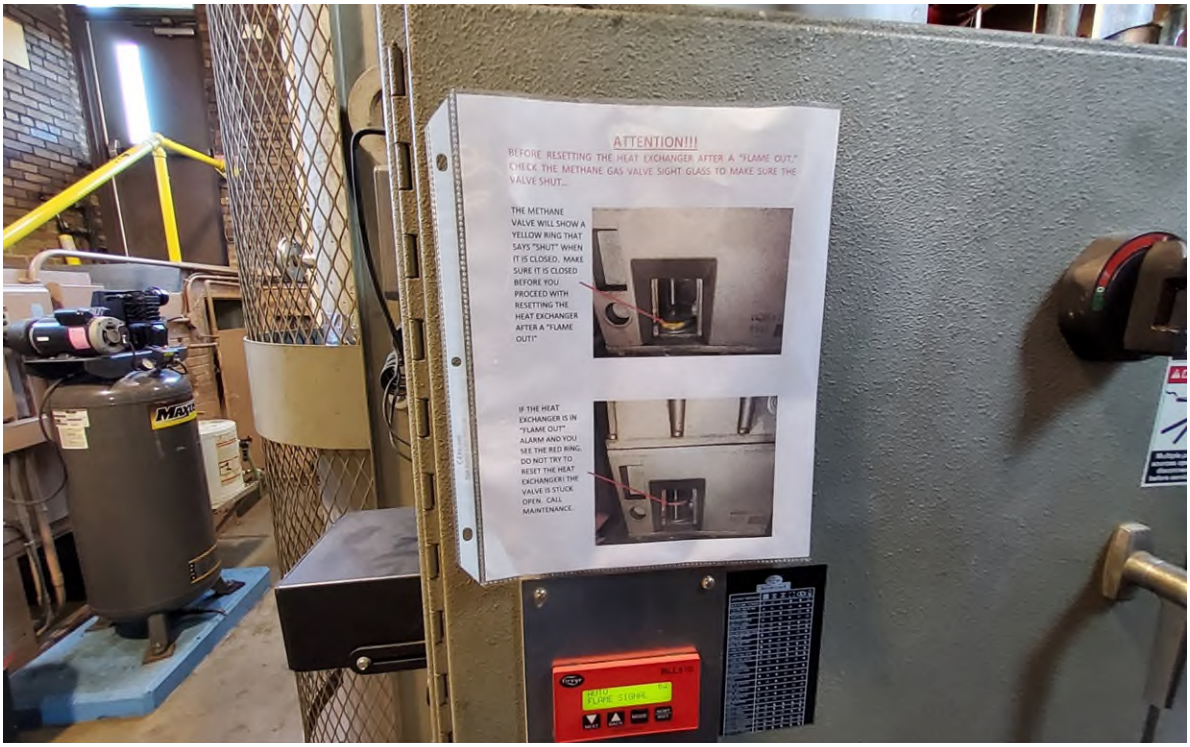
**Inside of thickener / digester building from main floor and Northeast corner of room.**



**South end of the thickener / digester building between the two tanks.**

**South end of the thickener / digester building between the two tanks.**

**Gas fired sludge heat exchanger. Note extensive modifications to electrical enclosure.**



**Gas fired heat exchanger warning sign. Note residential air compressor in background.**

Thickener / Digester building interior comments:

- Explosion hazards
    - This space is a classified space as the thickener and digester tanks produce methane and other combustible gases under the floating lids.
    - The gas detector on the exterior of the structure appears to be in a non-operational state preventing warning and/or alarm of employees.
    - The electrical enclosure on the gas fired heat exchanger shows multiple signs of bolt-on and add-on equipment modifications with no UL labeling to certify the integrity of the cabinet is maintained. This creates potential for spark for an explosion.
    - Note that the some of the motors are TEFC (totally enclosed fan cooled), however, none of the motors in this room were explosion proof. The air compressor for maintenance use is residential in nature and has several electrical capacitors exposed on top of the motor. This is another explosion hazard.
    - Note the handmade sign on the gas fired heat exchanger warning employees to not ignite the heat exchanger if the gas valve is not closed. There is no signage to indicate the gas valve.
    - There are no E-stops in this building.
- Trip and fall hazards.
    - Note the handmade railings on the elevated bridge between the tanks. It is bolted to the grated platform. There are no middle rail or toe board to prevent tools from being knocked into the workspace below.
    - There are multiple locations where railings do not exist between the tanks that would permit a fall to the area below.
- Structure
    - Note the crumbling concrete around the grated bridge between the tanks. This also creates slip, trip, and fall hazard.
- General
    - No fire extinguishers in this room
    - No exits signs
    - No exit lighting
    - No PPE signs

**[END CONFIDENTIAL]**

**March 3, 2021 – Grease Skimmer**

**Grease skimmer from North side on concrete floor.**

**Grease skimmer from platform.**

Grease skimmer comments:

- No railing to prevent employee from falling into the process vessel.
    - Step added to platform to reduce the height of the side wall making a fall into the vessel easier
- No E-Stop within reach of exposed moving equipment
    - Exposed chain drive
    - Exposed auger
    - Multiple pinch points unguarded

**March 3, 2021 – Belt Filter Press**

**Belt filter press from North side of room.**

**Belt filter press from North side close.**

**Belt filter press from West side of room.**

**Belt filter press room West wall.**

Belt filter press comments:

- Chemical Storage.
    - Note various chemical drum storage areas without labeling, spill containment, or measuring equipment.
    - Chemical drums not labeled with globally harmonized system (GHS) as required by OSHA.
    - Drum in service is tipped up on end by a stone and left balancing that could easily topple, spill, and cause injury.
    - It was unclear if the chemical drums were compatible with each other should a spill occur without separate containment.
- Platform / working surfaces.
    - Note the pooling/ponding water around the process equipment and electrical cabinets.
    - The platform around the press has a ladder on it that would make it easy to overtop the railing and fall to the concrete floor.
    - The platform is also installed elevating the worker higher than the yellow safety E-stop cable. This cable should be at waist level and easily accessible. If an employee was to get entangled in this moving equipment, the safety cable for the E-stop is at their ankles and out of reach.
    - Notice that the railing only exists on the outside perimeter of the work platform, permitting unobstructed fall potential into the moving equipment.
    - There are no guards on the pinch points of the equipment.
- Building
    - No exit signs
    - No emergency exit lighting
    - No fire extinguishers
    - Inadequate chemical storage signage
    - No signs for personal protective equipment requirements

# SECTION 7

**[BEGIN CONFIDENTIAL]**

**March 3, 2021 – Primary Clarifier Tank**

**Southeast corner of primary clarification tanks.**

**Northwest corner of primary clarification tanks.**

**East side of primary clarification tank.**

Clarification tank comments:

- Spalling concrete with signs of efflorescence which may indicate a leak and forecast structural failure.
- Unsupported process piping hanging from tanks.

**[END CONFIDENTIAL]**

AQUA PENNSYLVANIA WASTEWATER, INC.
SUPPLEMENTAL DIRECT TESTIMONY OF ZACH MARTIN

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Zach Martin. My business address is 665 South Dock Street, Sharon, PA 16146.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Aqua Pennsylvania, Inc. ("Aqua PA"), as the Western Pennsylvania Area Manager.

**Q. Please provide a brief description of your education and work experience.**

A. I graduated from the Kent State University with an Associate of Science degree in 2009 and then a Bachelor of Business Administration in 2021. I have worked in the water and wastewater industry for nineteen years. I began my career in the utility industry in the spring of 2004 with the City of North Canton, Ohio as a water plant operator where I secured my Class III Water Supply Certification from the Ohio EPA. I moved into a leadership role in early 2009 as the Regional Water Superintendent for Portage County Water Resources where I was responsible for managing plant and distribution employees in the county operations of three water systems. I also served as backup to the wastewater superintendent there for the 13 wastewater treatment plants and 113 lift stations. In 2010, I moved to Aqua Ohio, Inc. as the Production Manager for the Struthers Division. There I was responsible for the operations and maintenance of the large surface water system including the 5 million gallon per day ("MGD") surface water treatment plant and the five

source water lakes and their six dams. In 2013, I was promoted in Aqua PA as the Assistant Division / Production Manager and later a Plant Manager II in 2017, and I held that position through 2021. During those eight years I was responsible for all aspects of production, treatment, and distribution facilities of the eight drinking water systems in Western PA. In 2021, I was promoted to the position of Area Manager II. In total I have worked for the Aqua subsidiaries of Essential Utilities, Inc. ("Essential") (*f/k/a* Aqua America, Inc.) for 13 years. I am responsible for leading a team of employees delivering drinking water to customers and returning treated wastewater back to the environment in nine counties of Western Pennsylvania. I am involved in all aspects of operations including budgeting, planning, employee relations, and process control. I am also involved in the business development functions in my area of operations. I am also a veteran of Operation Iraqi Freedom III and served in the U.S. Army and Ohio Army National Guard.

**Q. Do you hold any professional licenses or certifications?**

A. Yes. I hold three environmental operator certifications in two states. I am a Class-A certified water and Class-A certified wastewater operator in Pennsylvania with 18 subclasses in total. I am also a Class 3 water supply licensed operator in the state of Ohio. I have maintained operational laboratory certifications in both states as well.

**Q. Have you previously testified before the Pennsylvania Public Utility Commission ("PUC" or the "Commission")?**

A. Yes. I previously submitted Direct Testimony in this proceeding, and I have submitted testimony in Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") acquisition of Greenville Sanitary Authority.

**Q. You stated you filed Direct Testimony in this proceeding, what is the purpose of your Supplemental Direct Testimony?**

A. The purpose of my Supplemental Direct Testimony is to supplement my Direct Testimony and provide additional discussion regarding operations of the City of Beaver Falls ("City" or "Beaver Falls") wastewater system ("the System") and to discuss the public benefits of this transaction.

**Q. Are you sponsoring any Exhibits associated with the Company's filing as a part of your Supplemental Direct Testimony?**

A. Yes. I am sponsoring ZM-SUPP Appendix A, which contains CONFIDENTIAL and HIGHLY CONFIDENTIAL portions that have been marked as such.

## II. AQUA OPERATIONS, INTEGRATION OF THE SYSTEM, AND TECHNICAL FITNESS

**Q. In your direct testimony, do you describe the location of Aqua's operations in relation to the System and how Aqua will integrate the System into its operations?**

A. Yes.

**Q. Is there further information that you can provide at this time about how Aqua will integrate the System into its operations?**

A. Yes. As discussed in my Direct Testimony, the operation of the System will be managed from Aqua PA's Western Area office in Sharon, PA. Management, customer service, regulatory compliance, engineering, financial, and ancillary services will be provided seamlessly from there with support from our Southeastern Headquarters office. Aqua plans to offer employment to seven current employees of the City to address the day-to-day operations of the System. The existing employees coupled with the over 30 front line employees and management staff located within 40 miles of Beaver Falls provide significant resiliency and improves operational support for the System. Combining System and Aqua PA employees in conjunction with Aqua PA's "One PA" program creates purposeful knowledge sharing opportunities for employees across all sectors of the Company. In concert with the One PA program, Aqua has for more than a decade, a corporate -wide "One Company Initiative" which solicits knowledge sharing from all areas of Aqua which benefits all employees. By extension, Aqua PA's One PA philosophy and the One Company Initiative benefits customers of both the System, Aqua PA and Aqua by

creating a platform for sharing of best practices, table-top exercises, sharing of standard operating procedures ("SOPs"), sharing of existing or new equipment such as generators, lessons learned that may include new operating techniques or technologies, safety practices and more.

Further, Aqua has significant equipment that can be shared with the System, including for operation (vehicles, excavation, heavy haul), portable generators, common supplies and material storage, and mobile safety systems that can be moved between locations. While physical connection of the collection systems is not anticipated, connection of security and computer systems will occur. Aqua has an integrated Supervisory Control and Data Acquisition ("SCADA") system used to operate and monitor operating systems such as pumps, treatment units and status alarms, such as chlorine gas alarms. Aqua's SCADA system allows our operators to have better insights into the operations of the system at all hours of the day and to be proactively alerted of any issues. Currently, Beaver Falls does not have a full scale SCADA system. Aqua also maintains an integrated security system that allows physical security to be observed in different locations around the state. In the case of the Beaver Falls System, once systems are installed and integrated with Aqua's security system, the physical security alarms will notify operations staff at the Company's water treatment plant in Sharon, PA which is staffed 24/7/365. In addition, security alarms from Aqua PA's Sharon, PA water treatment plant will be shared at Beaver Falls which will alert those operators of possible problems in Sharon, thus providing mutual assistance to both system's customers. This will ensure safety of operations and personnel, as well as nearby residents and the environment.

**Q. In addition to what you have explained in your Direct Testimony, how else will other Aqua PA employees assist in the operation of the System, if needed?**

A. In addition to the information provided in my Direct Testimony, the support of Aqua PA employees, electricians, mechanics, laboratory staff, and instrument technicians, will benefit both the Beaver Fall's employees and customers. Aqua has 12 wastewater operators in the Western PA Area, many holding dual water and wastewater certifications, who may be called upon to assist in the operations of the system. There are also 20 certified water operators in the Western PA Area who are familiar with treatment systems and can follow SOP if needed. These operators are also supported by Aqua PA employees, which will benefit customers through engineering and field service functions as well as electricians, mechanics, laboratory staff, and instrument technicians, which will benefit both the Beaver Fall's employees and customers.

A few examples of operational support that will be provided by Aqua to the Beaver Falls System (which support does not exist today for the System) include:

(1) Environmental Compliance Audits conducted by staff that do not report to the operation management group;

(2) Safety teams that conduct "housekeeping" and safety audits that seek to find and eliminate potential dangers;

(3) A "Near-Miss" program that allows any employee to report an observed safety concern and a process that ensures the issue is resolved timely;

(4) A full-time Aqua PA One-Call management team (Damage Prevention) that ensures the requirements of Act 50 of 2017 are met, and that staff receive regular training;

(5) Mapping updates by an in-house Geographic Information System (GIS) team;

(6) Wastewater process experts that will review the processes for targeted parameters and if needed, assist in resolving any process upset situations;

(7) Emergency response support in the form of "national contracted vendors", fleet operations, and access to the approximately 600 Aqua PA employees who can deploy to the location in support of Western PA operations, all orchestrated through Aqua PA's Emergency Response and Communications process.

It is equally beneficial and important to note that eventually Beaver Falls employees will be called upon to assist in others areas of Western PA operations. In so doing, continued cross-training benefits the Systems as well customers of Beaver Falls and Aqua. This sharing of employees from new acquisitions and existing systems is a mainstay of our southeastern Pennsylvania wastewater operations where we have integrated wastewater employees for Cheltenham, East Norriton and Lower Makefield. This integration ensures operator familiarity with these systems and ensures continuity of operations during normal and emergency operations. This type of planning and integration also ensures that Beaver Falls will not be in the situation it is now – no supervisory personnel or adequate backup personnel.

**Q. Please describe how the Beaver Falls employees will be integrated into and develop their careers at Aqua.**

A. Following acquisition of the Beaver Falls System, Aqua will implement site-specific training, as well as off-site cross training in other Aqua facilities to promote continuous improvement and optimization, and to introduce compliance metrics to shift the plant into high performance operations.

**Q. In your Direct Testimony, you indicated that the System is similar to other systems owned and operated by Aqua. Is that the case?**

A. Yes, it remains the case. However, after further investigation and review of the System, as described below, the System is troubled, distressed and in need of significant investment and operations review.

**Q. Do you believe that Aqua is technically fit to own and operate the system?**

A. Yes.

**Q. Are there any further reasons why Aqua has demonstrated itself to be fit to operate this system after conducting additional investigation and review?**

A. As noted in my direct testimony, Aqua has experience replacing wastewater infrastructure while also navigating strict Pennsylvania Department of Environmental Protection ("DEP") regulations to install chemical treatment systems and optimize the plant for copper removal to benefit an impaired receiving stream as defined by Section 303(d) of the Clean Water Act. The improvements to this watershed were recently recognized by the DEP following stream assessments in 2022 and 2023 which identified material improvements to the stream eco-systems downstream of its outfall. This experience will assist Aqua in addressing the additional issues identified with respect to this system.

**Q. How does Aqua maintain and enforce safety, compliance, and security programs throughout its operations?**

A. Aqua requires a high level of employee training and monitors completion of training requirements. Most safety programs are trained initially and reinforced through annual refresher trainings. Aqua employs internal safety experts, internal compliance experts, and routinely conducts internal audits of operations. Aqua also contracts with external experts to perform random inspections and audits of employee and contractor operations. These cover operations throughout the system, including maintenance and construction activities in immediate contact with the community.

**Q. Can Aqua provide adequate wastewater treatment capacity to meet present and future customer demands?**

A. Yes. Through the existing facilities, coupled with the planned upgrades to the WWTP, which are discussed in the Direct Testimony of Mark Bubel, Sr. (Aqua Statement No. 2), Aqua can provide adequate treatment capacity for present and future customers. Aqua will continue to make improvements to the System, as may be required, to ensure any future customer demands are met.

**Q. Please summarize why you believe Aqua is technically fit to own and operate the System.**

A. My explanation of Aqua's current operations, the System's similarity to other systems operated by Aqua, and operational support that will be provided by Aqua, an experienced

wastewater utility, all support a finding that Aqua is technically fit to own and operate the System, and that ownership of the System by Aqua is in the public interest. In addition to this, I detail below the current areas for improvement needed in the System, as well as the additional process improvements identified that will be remedied by Aqua, and capital improvement needs of the System. Aqua's planned improvements in this regard establish substantial affirmative public benefits. Moreover, these capital and operational improvements have not been addressed by Beaver Falls, nor is Beaver Falls in a position to do so as explained by Mr. Jones (Aqua Statement No. 4-Supp.) in his Supplemental Direct Testimony.

## III. SYSTEM ASSESSMENT & CURRENT OPERATION OF THE BEAVER FALLS SYSTEM

### A. GENERAL SYSTEM ASSESSMENT

**Q. Since Aqua submitted its Direct Testimony, has it further analyzed the System and its current operations?**

A. Yes, it has. Below, I will provide supplemental detail on Aqua's assessment of the system generally and Aqua's identification of specific issues that evidence the System is currently troubled. These issues include hazardous gas problems, safety and security problems, and the lack of an asset management plan or computerized maintenance management system. I also identify how Aqua would address these issues as the owner and operator of the System, and how such ownership and operation will result in significant public benefits.

**Q. Did you visit the facilities?**

A. Yes, multiple times. Specifically, the Company conducted initial due diligence and post-agreement in-depth review to assess the operations, facilities, personnel, standard operating procedures, compliance, safety, and security of the System.

**Q. How old is the original WWTP?**

A. The wastewater treatment plant was built in 1938. While some work has been done over the years, the original WWTP is over 80 years old. The system is troubled, distressed and in significant need of attention.

**Q. Based on your experience in visiting the plant, did you feel safe and would you feel safe allowing Aqua employees to work at the WWTP under the current conditions?**

A. No. I did not feel safe and we would not allow Aqua employees to work at the WWTP under the current conditions. I note that these observations were made over the course of approximately ten visits during various seasons, and most recently in October 2023. I will further expand on this, highlighting the issues I saw while visiting the WWTP.

**Q. Please describe your findings and areas that can be improved by Aqua's ownership of the System.**

A. The System is currently under a Corrective Action Plan ("CAP") under the DEP. Under the City's ownership, significant quantities of raw sewage and/or partially treated wastewater have entered into the receiving Beaver River where fishing and recreation

occurs. The river serves many purposes, including that it discharges into the Ohio River, the largest volume tributary of the Mississippi River, only a few miles South of the outfall. Downstream of the WWTP are several public water systems that serve an estimated 5 million people in the Ohio Valley.

**Q. Can you please further describe why you believe this system is troubled, distressed and in need of attention?**

A. Based on my site visits, discussions with operations personnel, and observation of plant activities, I note the following areas of concern for future safe, adequate, and reliable wastewater utility service for the Beaver Falls System:

- Lack of Licensed Operators, Access to Training, and Redundancy of Operators;
- Limited or Lacking Process Control Testing;
- Laboratory Sample System Management;
- Permit Compliance Issues;
- Lack of Emergency Preparedness Planning;
- Lacking Safety & Security Equipment & Training;
- Hazardous Chemical Storage, Labeling, and Safety;
- Compliance with Federal EPA Risk Management Program regulations for extremely hazardous chemicals;
- WWTP Ventilation Issues creating health and safety risk for employees;
- WWTP physical safety measures;
- WWTP Security deficiencies;

- Inadequate SCADA and operator alarm systems;
- Use of homemade patchwork of physical assets;
- Insufficient emergency/standby power generation; and
- Non-use of Asset Management or Compliance Management Software Systems.

**Q. Can you explain the current staffing of the Beaver Falls WWTP, and any related challenges experienced?**

A. Based on my experience, the team operating the WWTP lacks experience, training, struggles to operate the System and are in danger based on the safety issues that I observed. The System should be operated with a team consisting of 3 maintenance mechanics, 2 licensed operators, a WWTP manager, and an administrative employee. When the Company visited the facility in October 2023 there were a total of four (4) employees. The WWTP superintendent was on medical leave for the past several months and had recently taken a disability retirement and was not expected to return. There was one experienced maintenance foreman, however, the foreman is unfamiliar with wastewater treatment process control, an unlicensed operator with less than one year experience, one mechanic with less than two years' experience, and an administrative employee. The three operator/maintenance staff cover the WWTP seven (7) days a week and are continuously on-call. These employees cover for each other when one may not be available to respond.

City officials shared their difficulty securing labor to work at the WWTP. There are no internal wastewater experts to assist at the City and any assistance would have to come from consultants, which had not been planned for or implemented as of our visit.

Assistance from consultants regarding operations is not budgeted for by the City. The loss of the WWTP manager shows that there is no redundancy, succession or contingency plan should such a vacancy occur. The Company compliments the skeleton staff on the work they are doing with limited experienced labor and resources. However, this clearly indicates that additional expertise is needed to ensure reliable and compliant operations for the long term which is a benefit specific to Aqua's acquisition of this system. The City has been unable to obtain experienced workers to fill the open positions.

**Q. What wastewater treatment process control and treatment operations did you observe at the WWTP?**

A. Process control and SOPs were significantly lacking. Many of the processes were well beyond normal acceptable operating conditions, possibly leading to future violations. For example, the primary clarifiers had floating trash in/on them, and the skimmers were not operating at all. The primary clarifiers were black in color indicating septic conditions. See Appendix A, Section 1.[1] This creates odor issues and more significantly prevents the naturally occurring processes from happening in an efficient manner. While all the tanks were on-line, flow coming out of the tanks was only at 50% of design capacity which suggests something very wrong and a clear operational inefficiency. The extra on-line tankage creates long hydraulic retention times coupled with lower than ideal sludge

[1] Portions of Appendix A to Statement No. 3-Supp contain confidential, non-public information and have been designated as such.

wasting and black, odorous septic conditions. It also creates additional costs because the WWTP is powering more equipment than necessary.

**Q. Please expand on further concerns of process control and treatment operations.**

A. Also of significant concern is that there were no air blowers online to supply aeration and/or mixing to any process tanks. These tanks can contain hydrogen sulfide and other gases that displace oxygen that are very hazardous. Proper aeration and mixing is vital for safety reasons. The trickling filter facility at a wastewater treatment plant consistently moves wastewater and pushes it to the bottom of the facility. Upon review the trickling filter facility had excessive biomass growth reducing its effectiveness. See Appendix A, Section 2.

**Q. Please further expand upon your concerns when visiting the WWTP.**

A. There are floating solids atop the secondary clarification tanks. This accumulation was also on the surface of the chlorine contact tank where disinfection of the process stream should have been occurring. See Appendix A, Section 3. This is not where floating solids should appear. All tanks were extremely turbid (dense, murky) and it was difficult to see more than a couple inches into the water column. This is not a good sign for a tank, especially near final treatment. Most protrusions from the tanks, channels, launderers, and flumes were coated with excessive solids accumulation. Again, not a good sign. Sludge wasting, which is an important tool in the normal operational process, seemed to be limited to periodic and nonspecific volume instances. All of this is an indication of the need to have

a fully staffed system along with a knowledgeable and engaged lead operator, supervision, and qualified backups to the same.

**Q. How would Aqua address the staffing challenges and the concerns regarding the condition of the System identified above?**

A. Aqua maintains a staff of compliance and operations experts that will implement changes upon closing of the transaction to ensure SOPs are in place and followed. We also have robust preventative and corrective maintenance programs with asset and process based minimum standards of service that will be discussed in detail later in this testimony for mechanical and maintenance personnel to adopt. We incentivize operators to secure DEP operating licenses, and support that with continuing education assistance. In addition, our corporate resources and local operations management are skilled at operating wastewater facilities. Also, Aqua has been successful in attracting talent across Pennsylvania for all our systems. We have robust onboarding and training programs for supervisors and operators that encompass all facets of operations from safety to process control. Since Aqua filed its initial application, the City has had vacancies at the WWTP that have not been filled as of the date of this Supplemental Direct Testimony.

**Q. What else would Aqua do to correct the troubled and distressed nature of the Beaver Falls system?**

A. The Beaver Falls system would receive an intensive review by our engineers, process control specialists, and infusion of experienced operators and leadership to establish the

operating protocols and bring the plant back to normal operating conditions quickly. This should occur within 30 days of the start of operations. Process control testing criteria, including adequate laboratory equipment will be provided on-site and operators trained to perform tests and interpret the results, from which process control adjustments can be made with confidence. The Aqua-owned state certified laboratory in Bryn Mawr will support this facility from the start with certified analytical results and a quick turnaround time. Continued observation of the process by both on site personnel and broader Aqua resources would be a constant through operations, allowing independent evaluation of the process to ensure nothing is being missed.

Maintenance activities would immediately improve under our defined asset management program with proactive work orders issued for the plant, equipment, and collections system. Maintenance staff would be supported by outside services and vendors to ensure the specialty elements of maintenance program undertaken correctly. Aqua's workforce development program from recruitment through continued education, supported by management and technology, is a significant benefit to Beaver Falls ensuring plant reliability, environmental compliance, protection of receiving waterways, and elimination of the odors for the plant experienced by the public.

**Q. Please expand upon why treatment and process controls are so important for the community in Beaver Falls and the surrounding communities downstream.**

A. Adequate treatment and timely process control decisions are necessary to ensure adequately treated wastewater safely reaches the discharge of the WWTP, which ultimately

reaches the Beaver River where recreation occurs. The river serves many purposes, including that it discharges into the Ohio River, the largest volume tributary of the Mississippi River, only a few miles South of the outfall. Downstream of the WWTP are several public water systems that serve an estimated 5 million people in the Ohio Valley. The Company has proven its expertise in optimizing treatment in wastewater systems like the Beaver Falls system to protect drinking water sources from diseases such as hepatitis A and cholera, scum discharge, and the Company excels at maintaining optimum oxygen levels and minimized regulated compounds in treated water outfalls which helps protect the environment and our watersheds. The Beaver and Ohio Rivers are home to 159 species of fish alone. Effluent water quality from this system is paramount. While the WWTP is currently compliant with DEP requirements, Aqua has significant concerns that proper process controls and treatment are not in place which can further degrade the WWTP and lead to future violations.

**Q. Does the Beaver Falls staff perform adequate process control testing?**

A. No. The City only performs the bare minimum for sampling and analysis for the WWTP. Aqua will require the additional routine process control testing analysis above the regulatory requirements of the DEP to the discharge permit parameters to include alkalinity, suspended solids, biological oxygen demand ("BOD"), settleable solids, pH, nutrients like ammonia and phosphorus, and dissolved oxygen analysis of the trickling filter effluent. Aqua will also monitor (i) total suspended solids, dissolved oxygen, and sludge age in the process; (ii) total suspended solids in the mixed liquor, and (iii)

microscope analysis of the process bacteria. Aqua will increase the frequency of analysis in the effluent to include chlorine, ammonia, and phosphorus.

The addition and/or increased frequencies of the testing of the above parameters will facilitate optimization of the facility and processes, which will allow operators to make educated decisions and meet the permit effluent requirements. These process enhancements will also drive towards the optimization and cost control of the WWTP, which will directly benefit the environment and the community meeting the principal objectives of the Clean Water Act – fishable, swimmable, and drinkable waterways.

**Q. Does the City employ a laboratory information management system ("LIMS") to track analytical results and compliance with critical standards in its laboratory space?**

A. No, it does not. Physical bench sheets are used with common spreadsheet applications (*e.g.*, excel) for reporting of testing results. These bench sheets are not capable of being audited and lack critical access controls and compliance adherence. This means that any changes to the data are not automatically logged to a unique user, and justification may not be required to submit a change in testing results.

**Q. Please explain how Aqua will address this issue of data tracking and confidence.**

Aqua will implement its LIMS program to ensure that analytical data follows processes and procedures, including quality assurance and quality control standards. Data that is entered into LIMS includes the regulatory and process control data which includes sample

results and plant process key performance indicators. The data will be tracked and is fully auditable as each employee will have individual credentials so that any entries are tied to that specific user with process checks in place so that any changes to results must be authorized and notes provided to explain the change. Internal and external laboratory analysis will be cataloged in the LIMS system.

**B. HAZARDOUS GAS**

**[BEGIN HIGHLY CONFIDENTIAL]**

**Q. Are there any noncompliance issues with regulations established by the EPA that you witnessed on your visits?**

A. Yes. The City System stores an extremely hazardous chemical in excess of EPA threshold and does not maintain a RMP as required.

**Q. Are there specific items of concern at the Beaver Falls WWTP relative to the extremely hazardous gaseous chemical systems and processes?**

A. Yes, throughout several due diligence visits to the WWTP, Aqua personnel identified several items of concern.[2] As an update to my Direct Testimony, the WWTP currently inventories over 2,500 pounds of chlorine gas on the property. Chlorine gas is a regulated extremely hazardous chemical that is a toxic gas relative to direct human exposure.

Based on my review, the facility does not have a compliant RMP and is not operating nor maintaining this chemical, the storage facility, nor the feed systems with

[2] The observations of Aqua's team resulting from the site visits are detailed with photographs in Appendix A.

standards that would be found in a RMP. The safety equipment is either lacking or inadequate to address a potential release of chlorine gas. See Appendix A, Section 4.

**Q. Can you please expand on this chlorine gas issue?**

A. Yes, the quantity of chlorine gas stored on-site is not supported by the daily demands (use) for the chemical. Aqua will address this issue immediately after closing the Proposed Transaction. An inventory of this magnitude creates an unnecessary and increased risk of a hazardous condition from a chlorine cylinder leak which, if it occurs, may require an evacuation of the public for a large portion of the community and even neighboring down river and/or downwind communities.

To provide more background, the EPA regulations require that if more than 2,500 pounds of a toxic gas are stored in a common location that the facility operator must have a RMP meeting the requirements of the associated regulation. The system does not have a RMP, which would require documentation of standards and policy to be reviewed and filed with the EPA every five years. The most basic RMP requires a management of change processes to prevent changes from occurring without a review from a multi-disciplined panel. The RMP also stipulates and provides site specific SOPs and documented On The Job Training for all personnel prior to their work on the chemical and related facilities. There is no evidence of quality assurance/quality controls on this hazardous gas system.

The City is a public agency and is not regulated by the Operational Safety and Health Administration ("OSHA"), and therefore, it does not have to follow the more stringent safety requirements of OSHA's Process Safety Management ("PSM") program

either. Aqua, which is subject to OSHA's PSM standard, is therefore required to have a PSM program in place that follows fourteen specific practices to ensure proper training and operations. Given the toxicity of chlorine gas, a release to the environment poses a significant risk to employees and neighbors, making training and proper equipment and maintenance of same critical. Aqua makes safety a high priority and will handle the hazardous chemical feed systems in the WWTP according to industry best practices and as part of its PSM and RMP.

**Q. What will be Aqua's first step in addressing chlorine gas at the WWTP?**

A. Aqua's operations team will immediately assess the required inventory at the WWTP to right size the inventory based upon daily usage and supply chain variables. Aqua will also assess the needs for the chlorine gas system and evaluate replacements as part of the Year 1 safety and compliance capital projects for the facilities at the WWTP. Aqua's current plans for the System include planned replacement of the chlorine gas on site by Year 5 with a Sodium Hypochlorite or Ultraviolet Light for a safer disinfection system in this facility that is unmanned for several hours a day. In the interim, Aqua will incorporate the System into its PSM program and develop and submit an RMP to the EPA. Aqua has a track record of maintaining both EPA and OSHA programs that are fully compliant with the regulations and which are consistent with industry best practices. As a general matter, Aqua routinely voluntarily adds hazardous chemicals and gases that may fall short of PSM-mandated thresholds to the PSM programs. The voluntary addition of such chemicals to PSM programs enhances (a) the safety of employees, (b) the safety of the community, and

(c) the asset management programs. Aqua has lined up internal and external resources to allow it to implement the PSM and RMP for the System within the first months of operations. The programs will establish SOPs, as well as employee and contractor training requirements for operations and minor maintenance. The programs will also establish a management of change process requiring a thorough review of any changes to the System to ensure that compatible equipment and components are used.

**Q. Does Aqua have a validated track record of OSHA PSM compliance?**

A. Yes, the Shenango Valley Drinking Water Treatment Plant in Sharon, Pennsylvania currently inventories up to 22 tons (44,000 pounds) of chlorine gas on site and is regulated under both EPA RMP and OSHA PSM programs. During the most recent OSHA audit in 2018, no comments or findings were identified for this facility in the Western Area. Aqua is very proud of this and looks forward to improving the safety in the Beaver Falls community and for the System facilities. Aqua's safety departments also push out frequent tailgate talks and supervisor talking points to constantly engage with team members providing relevant information and risk mitigation techniques. The Shenango Valley Water Treatment Plant recently celebrated a tremendous milestone of 10 years without a lost-time incident.

**Q. What other issues were observed with the chlorine gas systems during Aqua's site visits?**

A. In addition to the chlorine quantity issue, Aqua personnel noted during the site visits that there is a general lack of labeling/signage throughout the WWTP, specifically, in the chlorine gas feed system. This lack of labeling, coupled with the existence of mismatched plumbing materials and inconsistent insulation and pipe sizing in the WWTP, makes the system extremely difficult to follow and operate, which during an emergency could be catastrophic. Many of the materials used in the chemical system appear to have been replaced with materials that are not compliant with best practices for this type of System. For example, brass fittings, hoses and the associated barbed hose fittings that I witnessed in the system are not compatible materials for a hazardous gas system, yet they are prevalent in the WWTP's chlorine gas piping systems. The valves used in the process piping were not indicated as "rated for chlorine gas use" and the piping systems were not labeled as to whether they contained chlorine gas, potable water, or hypochlorous acid under pressure. The use of these materials and lack of labeling increases the risk of a leak and subsequent toxic health exposure to plant workers and the community at large including emergency response personnel such as firefighters who respond to the facility in an emergency. See Appendix A, Section 4.

**Q. What other safety issues were observed related to the chlorine gas system?**

A. Aqua also discovered that several safety systems are ineffective. For example, there are open penetrations through floors, doors, and walls that could permit gas leaks to go

unnoticed and/or to escape the confines of the facility. The exhaust fan is at the floor of the chlorine room and does not have gasketed louvres and would fail to contain gases in a leak situation. In addition, the WWTP and community is not protected by a scrubber. A best practice, as found in the RMP, is to have a chlorine gas "scrubber" which engages automatically if a leak is detected by instrumentation and pulls the escaped gas through a container that has media that neutralizes, or scrubs, the gas before discharging it to the atmosphere, ensuring safety of the surrounding public and plant workers.

The electrical system that supports the chlorine system is not labeled and is stretched across most of the piping systems creating additional hazards and limiting efficient and effective operations. None of the three chlorinators used has a solenoid on the motive water supply to permit an automatic shutdown of the system. There is a robotic valve operator to close an online cylinder, however, it is dependent upon a consumer grade battery backup device. Several of the chlorinators have exposed electrical terminations with evidence of corrosion and generating an unsafe electrical hazard. A failure of the system coupled with the inability to shut down the water supply would limit the ability to quickly contain a chlorine gas leak. Aqua will be installing the equipment to facilitate an unmanned automatic shutdown of the chlorine gas system in the event of a leak to prevent any discharge into the atmosphere.

Through poorly coordinated installations of mechanical equipment in the chlorine room and old equipment that was left in place though no longer in use, there are several physical clearance issues that could result in a higher than necessary risk for damage and

dangers to employees as well as emergency responders who may not be able to navigate the space to enter, fight fires, or retrieve downed employees. See Appendix A, Section 4.

**Q. How will Aqua address the issues you noted in the chlorine gas system?**

A. First, Aqua's approach to reduce the gas inventory both negates the cost of installing and maintaining a scrubber resulting in short- and long-term savings and achieves the public safety objective. Second, Aqua will form a Management of Change panel consistent with RMP and PSM standards to document how the System has been modified and why. This panel will also determine the correct modifications and documentation needed to both restore the System to compliance with the engineered design and meet the needs of the WWTP if changed from the original design and construction. Issues like mismatched plumbing materials, incompatible plumbing materials, and incorrectly sized plumbing materials will all be documented and changed in a methodical process with oversight of this panel of experts.

The panel will consist of a licensed professional engineer, a certificated employee health and safety specialist, and other stakeholders including control technicians, operators, and the leadership team. The panel will ensure that adequate documentation of changes occurs, that plans for training personnel on the changes are developed and carried out, and that items like protective devices, safety interlocks, labeling, color coding and other critical parts of this hazardous gas system are properly maintained to protect the staff, the customers, the environment, and the community as a whole. Within the first month of closing, Aqua will host a facility tour with first responders to include city police and fire

departments as well as the county hazardous materials response team. This is a standard practice for all Aqua facilities with extremely hazardous chemicals and is conducted on an annual basis.

## C. ADDITIONAL SAFETY AND SECURITY ISSUES

**Q. Are there examples of any other significant safety issues or violations in the System?**

A. Yes. Unfortunately, there are multiple and overlapping issues. Of most significance is the handling of raw sewage in the headworks of the WWTP. This is an enclosed area and gases can be emitted from raw sewage that can be both toxic to workers and explosive in sufficient accumulated concentration. The area where raw sewage is handled is a classified area under the National Electric Code and OSHA as an electrical space requiring specific and unique protective equipment and devices to ensure worker safety. These provisions also promote longevity of equipment by preventing corrosion of metal and electrical components, replacement of which is expensive.

In addition, the influent into the WWTP is received below grade and is only accessible via a single inclined staircase. This area of the WWTP is immediately below the chlorine gas storage/feed room and the main electrical switchgear for the entire WWTP. Ventilation in this area is inadequate and, as a result, the exterior door to this area of the main plant building is inappropriately, but out of necessity, left open, climate permitting.

**Q. Have you witnessed any issues that could be considered at a level of Immediately Dangerous to Life or Health ("IDLH")? If yes, please explain.**

A. Yes, as I described earlier in my Direct Testimony, I have witnessed very unsafe practices. During a visit in March of 2021, I witnessed the influent headworks area of the plant completely sealed with blue tarps over openings and HVAC systems and the door closed. Upon entry I found a kerosene torpedo style heater installed in this classified space. The staff was storing combustible fluids below grade, in a potentially explosive atmosphere. In addition, the staff had also provided the ignition source for their stored combustible fluids or any flammable gases or fluids that may enter the facility from the collection system. See Appendix A, Section 5.

**Q. What did you do when you witnessed a kerosene heater installed in the headworks of the plan?**

A. I immediately brought this to the attention of the plant staff, and we quickly left the area. This is a recipe for an explosive disaster similar to the Struthers WWTP incident discussed later in my testimony. Since I brought this to the attention of WWTP staff, the heater has been removed, and but for Aqua bringing it to the attention of the WWTP staff I do not think any changes would have been made. Additionally, I have not seen any improvements made to this space to address ventilation and heating needs in the winter.

**Q. Please discuss other issues that you witnessed.**

A. In addition, (i) screening equipment exposed on both the influent and effluent sides of the channel to protect employees from open and moving machinery; (ii) the grating is ill fitting around the screens and "reinforced" with lumber that is not rated for such a use; and (iii) there are no emergency stops, safety cables, or railings around the moving equipment. The screening equipment is driven by a hydraulic oil system that is pressurized and at eye level with no guarding around the system. These issues present a real danger to the staff and any visitors that enter that area of the WWTP because they could easily fall into the wastewater treatment processes. See Appendix A, Section 5.

The bar racks are installed improperly because there is no grating or railing to prevent personnel from walking into or falling into the process flow. If someone fell into the process flow and there was no one around to help them, they would likely drown because of the weight and suction of the fluid in the process flow. Additionally, the equipment in this area is not designed to be submerged, but the space showed signs of flooding that could cause equipment failures and require costly rebuilds and more frequent corrective maintenance in the hazardous surroundings. To layer an additional hazard to this single and initial process area, the operations are supported by general outlets and extension cords that are not explosion proof. Finally, the atmosphere in this area is immediately below the chlorine gas facilities for the WWTP and could be filled with hazardous chlorine gas in the event of a leak. This below grade and the neighboring influent pump room were not monitored for chlorine gas that could accumulate in these low levels. Chlorine gas is 2.5 times heavier than air. See Appendix A, Section 5.

**Q. Please describe the troubled and distressed nature of the South end of the plant, which deals with methane gas.**

A. This is another area in the WWTP which is distressed and troubled. Specifically, there are significant safety issues in the digester building on the South end of the property as part of the residuals management side of the process. I have significant safety concerns for anyone entering that part of the facility.

In the wastewater treatment process, solids are removed from the process and sent to the two digester tanks. Here, an anaerobic process breaks down solids and produces methane gas which is flammable. The building that connects the two digester tanks is filled with methane gas piping and contains a gas fired boiler to heat the sludge to sustain the process in periods of cold weather and water temperature. This is the oldest building and many of today's codes are not followed. The general lack of labeling, coupled with incorrect and hazardous combinations of electricity, ignition sources, and a potentially flammable atmosphere is an extremely dangerous combination. As referenced above, the number of these situations raises a severe concern for anyone entering the facility. See Appendix A, Section 6.

**Q. How will Aqua address these specific safety issues?**

A. Aqua plans to address these safety issues in the sewage treatment area to include proper lighting, access controls, safe ventilation, isolation of the hazardous areas from commonly occupied spaces, the installation of fixed explosive and hazardous gas monitoring,

emergency shutoffs for OSHA compliance, proper labeling and equipment identification for lock-out/tag-out and arc-flash compliance, employee training, and has planned for upgrades throughout the initial years of ownership to address the larger screen and screening and headworks shortfalls of the facility. These improvements to safety are set forth in the capital plan included in the Direct Testimony of Mark J. Bubel, Sr. (Aqua Statement No. 2).

**Q. Can you give an example of how the types of improperly installed and functioning equipment you referenced above may cause substantial injury or death to employees?**

A. Yes. In 2012, the City of Struthers, OH (which is 33 miles away from Beaver Falls) had an explosion that caused two City of Struthers employees to lose their lives. Many of the same circumstances that were cited as contributing factors in that tragedy are present in the Beaver Falls WWTP. See Appendix A, Section 4. The following ten contributing factors were cited in the OSHA incident investigation of the Struthers event:[3]

(1) The workers were exposed to hazards of fire and explosion from the ignition of methane gas.

(2) The workers were not given enough space to work away from grounded and ungrounded pipes and other equipment.

(3) The workers did not have training on electrical hazards.

(4) The workers did not de-energize gas compressor control-circuit parts before working on them.

(5) The workers did not lock or tag the circuits that energize the current-carrying parts.

[3] *See* https://vindyarchives.com/news/2012/aug/25/ohio-cites-struthers-over-fatal-explosio/.

(6) The city did not establish and provide access to written electrical energy-control procedures for maintenance workers.

(7) The workers used instruments that were not approved for use in the location where they were working.

(8) The workers were not wearing proper protective equipment.

(9) The workers were not required to use insulated tools or equipment in case of contact with current-carrying parts.

(10) Electrical switches, circuits and other equipment were not marked to warn workers of potential hazards.

Aqua will ensure that corrective actions are taken at the Beaver Falls WWTP to prevent another community from experiencing the tragic loss of life that uncorrected hazards such as those listed above can cause when present in a wastewater treatment facility.

[**END HIGHLY CONFIDENTIAL**]

**Q. Are there other examples of general safety issues in the System?**

A. Yes. Throughout the Beaver Falls facility there are multiple safety deficiencies of low to moderate risk. By way of example, most pumping systems are missing guards on the rotating equipment creating unsafe conditions that could cause workers to be pulled into the rotating equipment or hands crushed. There are missing railings or railing components like toe or kick plates to prevent a slip/trip and fall from becoming an immersion into the process tanks. There are numerous locations where employees use temporary ladders to access equipment that circumvent fall protection.

Chemicals were not stored properly at the WWTP. There are no containment devices for the chemical drums. Drums in service were propped up on blocks to permit emptying, but this leaves the heavy drums unstable and teetering in common areas of the

WWTP near floor drains. There is a general lack of labeling throughout the facility and no evidence of the exit signage nor emergency lighting. Multiple fire extinguisher hooks were empty.

There are several roofed structures that are accessible by stairway that do not have any fall protection devices, railings, lighting, or signage to ensure occupant awareness. There are also confined spaces without any signage and no evidence of a program, nor regulatory compliance for the documentation of training and entry. See Appendix A, Section 6.

**Q. How will Aqua address these general safety issues?**

A. These issues will be cataloged and will become a part of Aqua's already robust capital and operational plan to be addressed within Year 1 of Aqua ownership. Our safety teams and operational management will make these items a priority in Year 1 by educating our new employees in the safety requirements of Aqua, investing to correct deficiencies, and provide on-going safety housekeeping, near miss reporting, and safety audits on a regular basis. Safety of our employees, most who are members of the community, is priority so they return safely home. The public benefits of this cannot be measured.

**Q. Is there a system in place at Beaver Falls to document near-misses?**

A. No. Aqua, however, implements a Near Miss program (a.k.a. "Safety Learning Opportunities") where all employees are encouraged to look for and report potential and real unsafe conditions so they can be addressed in a timely manner. This program is key

to both creating a safe working environment and a culture of safety. The employees have little support in the way of safety programing currently, and this program will be beneficial both to them, their families, and the community at large.

[**BEGIN HIGHLY CONFIDENTIAL**]

**Q. Does the Beaver Falls WWTP have adequate security?**

A. No. The facility is fenced in with a bar gate closer at the entrance of the property. The WWTP sits back off the main road a fair distance on a dead-end isolated by railroad tracks. There is limited site lighting and no visibility from the road to the WWTP. There are no security systems installed on any of the buildings and none of the access points are equipped with card swipe access, and some lacked functioning locks. There are no cameras on site. There is a lack of signage to indicate restriction of access to the public, such as "keep out" or "no trespassing". Nearly all the process tanks could be fallen into by an intruder if the perimeter fence is left open or breached. It is important to reiterate that the WWTP is unmanned for a majority of each day and has no after hours or night shift coverage. This significant lack of security should be considered given the storage of chlorine gas discussed above.

**Q. How will Aqua address these security concerns?**

A. Preliminarily, Aqua's immediate plans to improve safety and security at the property include enhanced lighting, proper identification, signage, reinforcement of existing security measures (working locks, card swipe access that will log entry, and security

cameras) and the implementation of new standards and installation of new equipment to protect the facility and the community from any preventable incident.

**Q. Does the System currently employ SCADA systems?**

A. Partially, the System utilizes a very localized control system in the WWTP to control critical processes. There is no remote (control) access, only some remote monitoring, and the System is dependent upon only a couple staff members to respond. Aqua plans to act in the first and second year of ownership to integrate the System into its Enterprise SCADA system. This will allow for complete and continuous monitoring, which will occur by connecting critical process operations like chlorine and hazardous gas leak detectors, pump and power failures, and others to the Shenango Valley Drinking Water Treatment Plant that is staffed 24/7/365. The Beaver Falls operations team will be equipped with remote access to the WWTP operations with intelligent alarming and notifications as well.

[**END HIGHLY CONFIDENTIAL**]

**Q. Does the facility have emergency/standby power generation on site?**

A. Yes, however, it is not clear what equipment in the WWTP is supplied with emergency power from backup generators. Only critical pumping systems are supported by the back-up generator and even those systems are not completely supported. There is limited operation of secondary treatment and pumping operations. There is no emergency power supplied to the aeration processes meaning these systems will not operate during a power failure and it is unclear as to the capabilities of that emergency power for supplying the

chemical feed systems and limited process monitoring equipment. These shortfalls mean that while wastewater will continue to enter the WWTP, it will not be fully treated and enter the receiving stream. This will be fully assessed as part of Aqua's ongoing capital improvement processes and addressed through capital projects identified.

## D. ASSET MANAGEMENT

**Q. Does Beaver Falls have an asset management plan or computerized maintenance management system ("CMMS") in place and what is Aqua's plan for post-Closing asset management?**

A. The team at Beaver Falls maintains a basic calendar and spreadsheet to track preventative maintenance needs. Some written records are maintained to track assets over time. Aqua will implement several layered approaches to asset management through financial modules. Aqua will also implement a CMMS system to schedule and automate preventative maintenance schedules for the employees. This system will also capture reactive and corrective maintenance tasks for all aspects of the System. Aqua will work with the Beaver Falls team to fully document existing SOPs and to employ Aqua SOPs where none exist through these work order systems to record tacit knowledge and improve succession planning and operational consistency.

**Q. Are there specific examples of assets and processes that are not operating correctly due to lack of maintenance or expertise? If so, does Aqua have a plan to remedy the situation?**

A. Yes. Aqua personnel witnessed a complete absence of aeration in the WWTP. There is also evidence of incomplete or insufficient maintenance of the trickling filters. The distribution spray arms rotate continuously. The employees noted that it is common practice for them to create their own parts to maintain and patch operations of these large assets for this critical and continuously operating equipment. To avoid this patchwork approach, Aqua would engage manufacturers and experts to ensure that the correct parts are installed, and specialists are utilized to ensure this large rotating equipment is correctly balanced.

**[BEGIN CONFIDENTIAL]**

**Q. Did you observe the condition of the concrete at the WWTP?**

A. Yes.

**Q. What concerns are presented by the condition of the structures?**

A. The WWTP structures are concrete and steel. There was evidence of deterioration of the concrete throughout the WWTP in the form of cracks, spalling and other defects. See Appendix A, Section 7. Due to the freeze thaw conditions experienced at this WWTP, the concrete will begin to accelerate its deterioration if not addressed. There appears to be no plan to invest to address this situation based on conversations with Beaver Falls and the lack of any evidence of recent work being done.

**Q. How does Aqua plan to address these concerns?**

A. As part of Aqua's standard maintenance program and capital improvement plan, maintenance of structures is considered and implemented. Aqua's engineers will evaluate the WWTP and undertake a program to stabilize the concrete deterioration as they deem appropriate.

**Q. How will Aqua's plan benefit customers?**

A. This proactive approach would reduce the need for any large-scale replacements of very expensive structures, which could also cause interruption of normal treatment process while the structure is removed from service. This supports the long-term reliability of the facilities and proper control of expenditures to sustain the WWTP and level of service to the customers and the larger community.

**[END CONFIDENTIAL]**

**Q. Does Beaver Falls utilize any compliance assurance software?**

A. No. To address this, Aqua will implement its current compliance assurance software. This software system generates compliance-focused work orders for regulated wastewater system processes and functions. Employees will be assigned a combination of daily, weekly, monthly, quarterly, annual, and less frequent work orders to ensure that critical compliance requirements are completed on time and in a manner that is well documented. The system will generate monthly, quarterly, and annual regulatory reports for consistency

of calculations and to Aqua's standards. These systems will support the staff of Beaver Falls in the rapid adaptation to the operational excellence for which Aqua is known.

## IV. CONCLUSION

**Q. Does this conclude your Supplemental Direct Testimony?**

A. Yes, it does. However, I reserve the right to supplement my Supplemental Direct Testimony as additional issues and facts arise during the course of this proceeding.

## TABLE OF CONTENTS

I. INTRODUCTION ..... 1

II. CURRENT OPERATIONS AND CONDITION OF THE SYSTEM ..... 2

III. BENEFITS OF THE PROPOSED TRANSACTION ..... 3

IV. CONCLUSION ..... 6

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Charles R. Jones, Jr. My business address is 715 15th Street, Beaver Falls, PA 15010.

**Q. In what capacity are you affiliated with the City of Beaver Falls?**

A. I am the appointed City Manager for the City of Beaver Falls (the "City"). My duties as defined by the City's Home Rule Charter are to manage day-to-day operations and oversee administrative functions of all City departments. I report directly to the Mayor of the City and City Council.

**Q. Please provide a brief description of your education and work experience.**

A. I am a United States Air Force Veteran, with extensive training and experience with law enforcement management and operations. I am a graduate of the F.B.I. National Academy and currently serve on several local and regional boards, including my role as an executive board member of our local Chamber of Commerce. I have an Associate's Degree in Criminal Justice and Police Technology. I have an undergraduate degree and graduate degree in leadership and organizational management, and I am a recent recipient of an honorary doctorate degree in leadership from Geneva College.

**Q. Have you testified before the Pennsylvania Public Utility Commission ("Commission") before?**

A. Yes. I previously submitted Direct Testimony in this proceeding.

**Q. Do you hold any professional licenses or certifications related to wastewater?**

A. No. I have no expertise in operating a wastewater system.

**Q. On whose behalf are you testifying in this proceeding?**

A. I am testifying on behalf of the City, and in cooperation and support of Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") application to purchase the City's wastewater collection, conveyance, and treatment system (the "System").

**Q. Please describe the purposes of your supplemental direct testimony and summarize the key points it will address.**

A. The purpose of my testimony is to supplement my Direct Testimony by providing additional discussion regarding current operations of the City's System and discussion of additional public benefits of this transaction.

**Q. Are you sponsoring any Exhibits with your testimony?**

A. No.

## II. CURRENT OPERATIONS AND CONDITION OF THE SYSTEM

**Q. Have you reviewed the Supplemental Direct Testimony of Zach Martin regarding the current operations of the System?**

A. Yes. I was not aware of the serious operational deficiencies and unsafe conditions at the WWTP until I reviewed the Supplemental Direct Testimony of Zach Martin. I am concerned about the current operations of the System and the deterioration of the City's 80

year-old wastewater treatment plant ("WWTP") since Aqua's initial review of the System in 2021. The Plant Manager has been out on medical leave for nearly two years and is unable to work for the City. He is on permanent disability. We have also lost other skilled operators since 2021. We have tried to hire people to fill these open positions for many months but have been unsuccessful.

**Q. Does the City have a plan to address the issues raised in Mr. Martin's Supplemental Direct Testimony?**

A. No, it does not at this time. The City will do its best to alleviate any serious and dangerous conditions but does not have the expertise or the financial resources to support the adequate operations of the System long-term.

**Q. Does the City have a capital plan for the System?**

A. The City does not have a long-term capital plan for the System as a result of the City's financial condition. The City attempts to fix problems with the System as they arise but does not have the ability to do more than that.

## III. BENEFITS OF THE PROPOSED TRANSACTION

**Q. Please describe the benefits of the Proposed Transaction for the City in addition to those provided in your Direct Testimony.**

A. Given the deterioration of the System and the serious deficiencies in the operation of the System since the City has been unable to employ the necessary experts, the City feels the urgent need to sell the System to Aqua to ensure that the System will be operated safely

and its customers will be provided with the excellent service they deserve. In addition the City believes Aqua will provide critical environmental compliance, and protection of the System's receiving waterways which I am very concerned about given the raw sewage seepage into the Beaver River from the System as described in Zach Martin's Supplemental Direct Testimony.

The City has historically experienced significant financial difficulties. Because of the financial condition of the City, the City likely will not be able to keep up with the growing capital needs of the aging System. If the City sells the System to Aqua, the capital needs will be met and the proceeds from the sale of the System will help prevent the City from being named by the Commonwealth Department of Community and Economic Development a distressed community or Act 47 status, which indicates severe financial difficulties and could lead to the City being placed in receivership.

Another benefit of the sale is Aqua's extensive financial assistance to lower income customers struggling to pay their wastewater bills. I understand that rates will increase for the City's customers if Aqua owns and operates the System, however, Aqua took great care explaining their commitment to assist the low income residents which could be a significant portion of the City's residents. As I stated in my Direct Testimony, the median household income based on 2020 data was $35,951. In 2022 the median household income was $39,194.[1] For a household of 4 persons at $39,194 they would be at the 130.65% of the federal poverty income guidelines ("FPIG"), and thus could qualify for Aqua'a low income

[1] See https://data.census.gov/table/ACSST5Y2022.S1903?q=Beaver%20Falls%20city,%20Pennsylvania&t=Income%20and%20Poverty

program.[2] Similarly, households of 2 and 3 persons at the median household income would be at 198.75% and 157.66% of FPIG, respectively, and could qualify for Aqua's low income program.[3] There are approximately 292 4-person families, 433 3-person families, and 696 2-person families in Beaver Falls which represents the vast majority of the population of Beaver Falls.[4]

**Q. Do you believe the System is a troubled system?**

A. Yes. For the reasons set forth in Mr. Martin's Supplemental Direct Testimony and as I explained above regarding the City unable to fill positions at the WWTP, the lack of capital planning, and the deficiencies in the System operations, Beaver Falls does not have the financial, managerial or technical ability to operate the System.

**Q. Do you believe that the Proposed Transaction is in the public interest?**

A. Yes. For the reasons I set forth in my Direct Testimony and above, I believe that the Proposed Transaction provides substantial affirmative public benefits and is in the public interest. I urge the Commission to promptly approve the Proposed Transaction.

[2] See https://www.hardshiptools.org/IncomeCalculator.aspx
[3] Id.
[4] See https://data.census.gov/table/ACSST5Y2022.S1903?q=Beaver%20Falls%20city,%20Pennsylvania&t=Income%20and%20Poverty

## IV. CONCLUSION

**Q. Does this conclude your testimony?**

A. Yes, it does. However, I reserve the right to file additional testimony at a later date as may be necessary or appropriate.

# APPENDIX A

# (CONFIDENTIAL Version)

CONTAINS CONFIDENTIAL INFORMATION

# City of Beaver Falls WWTP

## SECTION 1

**March 3, 2021 – Primary Clarifier**

**September 19, 2023 – Primary Clarifier**

# SECTION 2

**March 3, 2021 – West Trickling Filter**

**September 19, 2023 – West Trickling Filter**

# SECTION 3

**March 3, 2021 – Chlorine Contact Tank**

**September 19, 2023 – Chlorine Contact Tank**

**September 19, 2023 – Chlorine Contact Tank**

**September 19, 2023 – Chlorine Contact Tank**

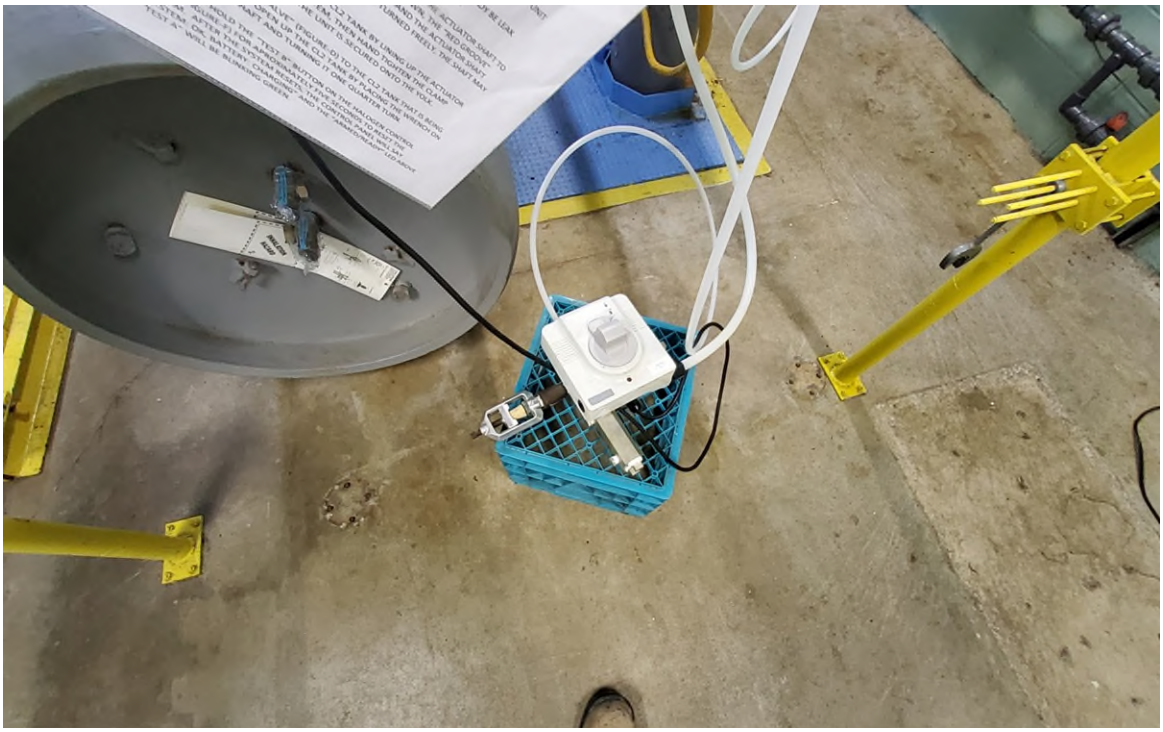
# SECTION 4

**[BEGIN CONFIDENTIAL]**

**March 3 2021 – Chlorine Gas Room (Extremely Hazardous Chemical)**

**Ton cylinder scale showing full 2,000 pound cylinder loaded.**

**Four additional 150 pound cylinders of chlorine gas on site. Total 2,600 pounds of gas on site.**



**Ton cylinder valves sealed but left unprotected and unconnected.**

**Two chlorinators and flow tubing installed on West and South wall of chlorine room. Note exhaust fan that is not gasketed and severely corroded. Corrosion in a chlorine room is an indication of leaks as chlorine is a very aggressive oxidant.**

**Chlorinator. Note tag is dated 2017 for last service. The tubing is marked with a 2016 date on this unit. These should be serviced annually and tubing should be replaced annually at minimum. Note discolored braided hose on the hypochlorous acid lines that is not rated for that service and severely discolored. The electrical junction box of this chlorinator is left open and severely corroded.**

**This chlorinator is newer, however had no dated service tag on it. There was one tag hanging from the tubing in the left of the photo that merely warned of proper use. There were no dates indicated on any of this gas tubing. Note the vacuum gauge at the top of the equipment is almost at the minimum limit which indicates injector fouling and a lack of preventative maintenance. This newer unit is still severely corroded.**

**Exterior of chlorine gas room looking East. Chlorine crane shown.**

Chlorine gas comments:

- Federal EPA Violation
  - This facility does not have a Risk Management Program ("RMP") filed with the U.S. EPA. The facility is operating with more than 2,500 pounds of chlorine gas on site which is the threshold for RMP regulations.
- Maintenance
  - Equipment maintenance is significantly overdue on critical equipment that must operate continuously. Tubing and hoses are severely aged and pose an increased risk of leaks.
  - An RMP would require formal maintenance programs and record keeping for these functions.
  - Electrical connections are left exposed subjecting equipment to corrosion and defeating the seal of the room.
  - The robotic isolation valve is powered by a residential office style battery backup hanging from the hazardous gas piping.
  - There is no labeling on the piping to indicate contents for first responders in an emergency.
- HVAC
  - The exhaust fan is not gasketed to seal and prevent gas from escaping the chlorine room.

    - There are no audio or visual indicators in the interior or exterior of the chlorine gas room for employees or first responders to be aware a gas leak is occurring.
- Lifting equipment
    - The crane beam is not labeled with a rated capacity.
    - The trolley is not labeled with a rated capacity.
    - The lifting bar is not labeled with a rated capacity.
    - There is no evidence of annual inspection and service by a certified inspector.
- Additional Safety
    - The heavy ton cylinder protective cover is hung from the wall over sensitive plastic piping carrying extremely hazardous chemicals.
    - There is no emergency lighting in this area.
    - There is no exit sign.
    - The large doors do not have panic hardware on them and bolt shut to the floor.
    - Milk crate is used to house sensitive hazardous gas feed equipment on the floor.
    - There is no indication of the water shutoff valve that would be necessary to stop the vacuum generation from the eductors and stop the withdrawal of chlorine from the cylinders.
    - None of the plastic tubing nor valves are labeled as approved for chlorine service.
    - There are no traps on the floor drain piping to prevent a leak from exiting this room and entering another through the floor drains.
    - Slips trips and falls.
        - There are cords and equipment left strewn on the floor. Anyone working in this room should be wearing an air purifying respirator which will limit visibility and range of motion of the head. It is critical that this room be kept free from obstructions.

**[END CONFIDENTIAL]**

# SECTION 5

**[BEGIN CONFIDENTIAL]**

**March 3, 2021 – Headworks**

**Inside below grade headworks. Note blue tarp covering opening over screening/grit hopper. Note gas fired torpedo heater on extension cord in classified electrical space. Significant explosion hazard.**

**Northern end of headworks looking South. Note exposed bar rack in floor to process tank.**

**Exposed bar rack at Northern end of headworks room without railings or protective surface.**

**Exposed bar rack behind screen at Southern end of headworks room.**

**Screen equipment with exposed hydraulic drive with missing guards and mismatched hoses. Note the creative rigging on the dumpster to lift it from this hazardous space overhead to the parking lot.**

**East wall of headworks room. Note draped extension cords and outlets that are not explosion proof. No labeling on pipes, conduits, or hoses.**

**South influent pump suction well that was offline during visit. Note scum and floating debris. Note wooden railing modifications around the base.**

**North influent pump suction well that was online during visit. Note turbulence and consider ability to enter tank through exposed bar racks and absent grating.**

Influent / Headworks comments:

- Explosion hazards
  - This entire space is below grade and only accessible by an inclined set of stairs. This space is subject to anything that enters the sewage system and is a classified space, requiring explosion proof electrical equipment.
  - There is a fuel powered open flame torpedo heater placed in this explosive space. This is like holding a lit match over a case of dynamite.
  - There are extension cords and temporary wiring draped throughout the space. There are light fixtures and outlets that are not explosion proof.
  - The only major ventilation in this area was covered by a blue tarp during our visit.
- Slip, trip, and fall hazards
  - There are railings that prevent a fall into some of the process tanks. But there are also several exposed bar racks in the common walkways that would permit someone to fall into the process flows and into the influent pump station pump suction piping below.
  - The grating is mismatched and poorly supported in work areas like around the screen equipment.
- Maintenance
  - Through mechanical screening equipment and past multiple iterations of passive bar racks, there was still floating debris and solids accumulation in the headworks tanks.
  - Hoses and cording left strewn and draped throughout the space. Some hoses left to dangle in pump suction wells.
- General
  - No exit signs
  - No fire extinguishers
  - No emergency exit lighting
  - No atmospheric monitoring in the room
  - No E-Stops for the mechanical screening equipment no influent pumps

**[END CONFIDENTIAL]**

# SECTION 6

**[BEGIN CONFIDENTIAL]**

**March 3, 2021 – Thickener, Digester, and building exterior**

**Thickener tank, digester tank, and building from the North.**

**Top of thickener and digester tanks.**

**Looking onto top of floating lid. East tank.**

**Exterior of thickener / digester building. Gas detector with failing screen and negative reading.**

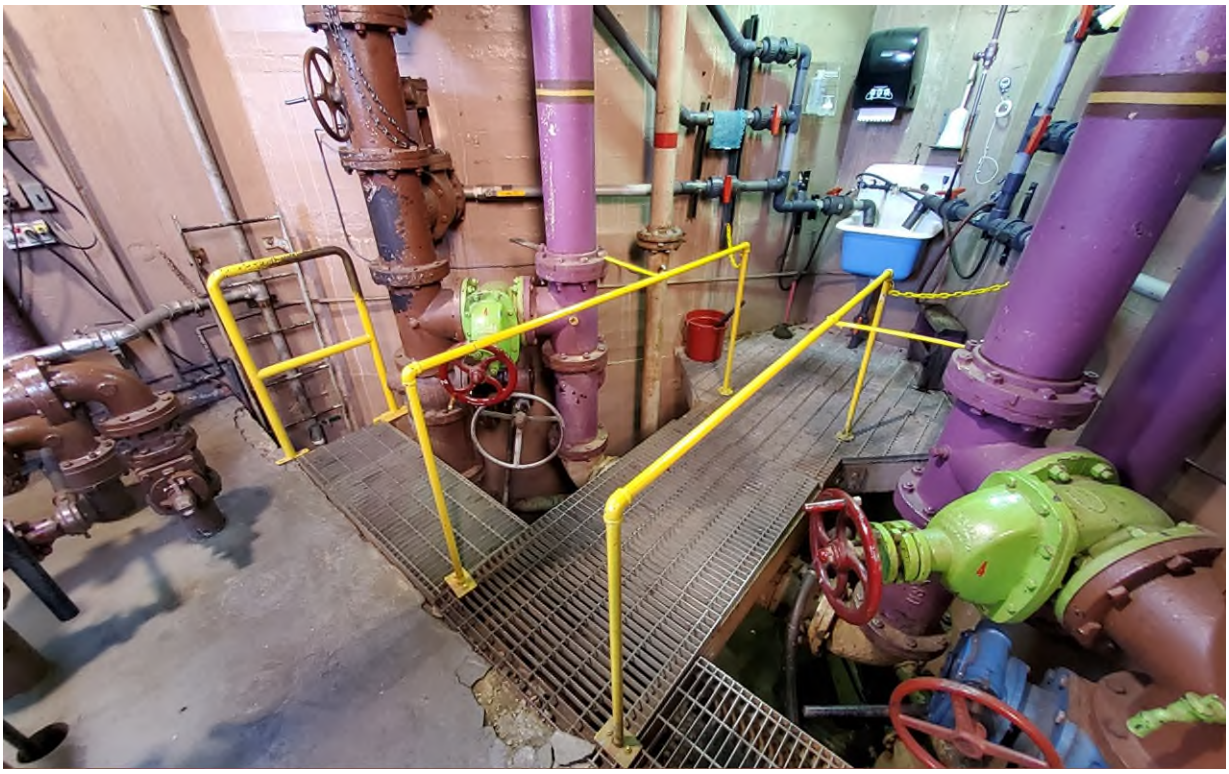
Thickener tank, digester tank, and building exterior comments:

- Stairway provides easy and unrestricted access to the concrete area and tops of the tanks.
    - There is no railing around the work area to prevent a fall into the tanks onto the floating lids.
    - These floating lids are confined spaces, with sloped surfaces, and can hold hazardous gases that are heavier than oxygen.
    - The area around the perimeter of the lid is not sealed to the walls and provides exposed to sludge to create hazardous atmospheric conditions.
    - There are multiple trip hazards on this working surface that we were escorted up on to.
- Exterior wall gas detector.
    - This gas monitor had a faded screen and no calibration tags.
    - The display was reading a negative value during our visit.
- Structures
    - There are multiple cracks in the concrete on and around the cylindrical tanks.

**March 3, 2021 – Thickener, digester, and building interior.**

**Inside of thickener / digester building from Northeast door.**

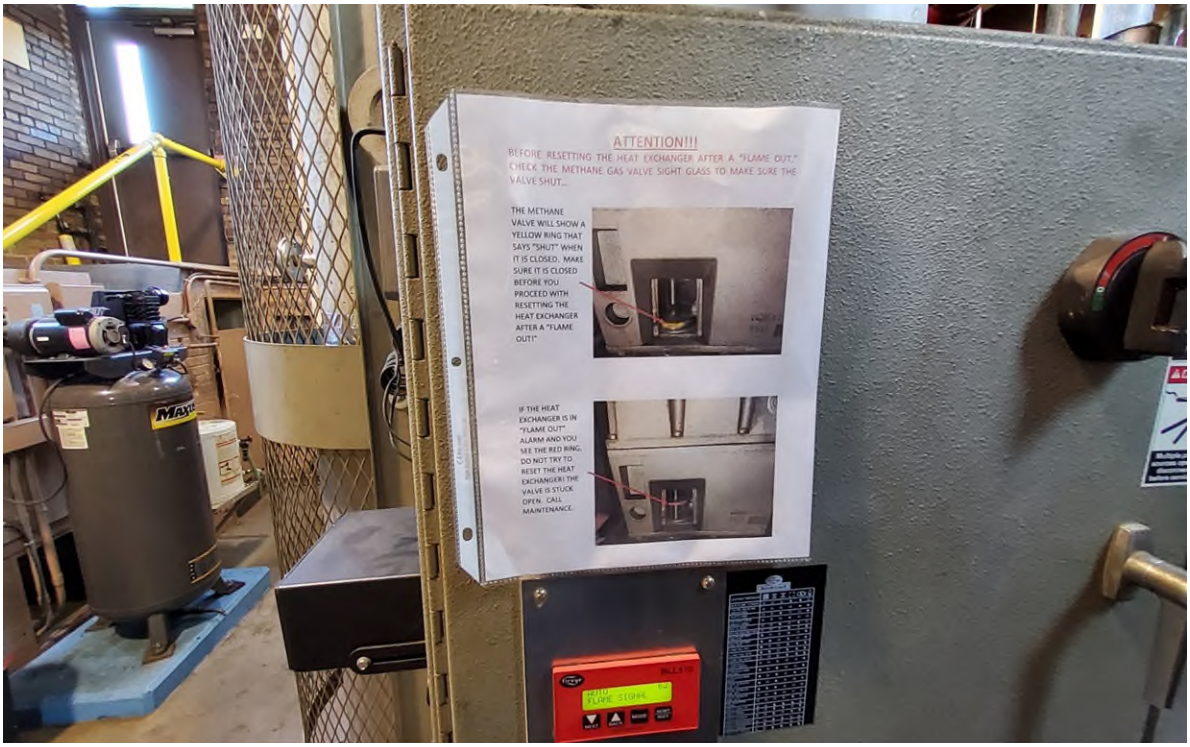
**Inside of thickener / digester building from main floor and Northeast corner of room.**



**South end of the thickener / digester building between the two tanks.**

**South end of the thickener / digester building between the two tanks.**

**Gas fired sludge heat exchanger. Note extensive modifications to electrical enclosure.**



**Gas fired heat exchanger warning sign. Note residential air compressor in background.**

Thickener / Digester building interior comments:

- Explosion hazards
    - This space is a classified space as the thickener and digester tanks produce methane and other combustible gases under the floating lids.
    - The gas detector on the exterior of the structure appears to be in a non-operational state preventing warning and/or alarm of employees.
    - The electrical enclosure on the gas fired heat exchanger shows multiple signs of bolt-on and add-on equipment modifications with no UL labeling to certify the integrity of the cabinet is maintained. This creates potential for spark for an explosion.
    - Note that the some of the motors are TEFC (totally enclosed fan cooled), however, none of the motors in this room were explosion proof. The air compressor for maintenance use is residential in nature and has several electrical capacitors exposed on top of the motor. This is another explosion hazard.
    - Note the handmade sign on the gas fired heat exchanger warning employees to not ignite the heat exchanger if the gas valve is not closed. There is no signage to indicate the gas valve.
    - There are no E-stops in this building.
- Trip and fall hazards.
    - Note the handmade railings on the elevated bridge between the tanks. It is bolted to the grated platform. There are no middle rail or toe board to prevent tools from being knocked into the workspace below.
    - There are multiple locations where railings do not exist between the tanks that would permit a fall to the area below.
- Structure
    - Note the crumbling concrete around the grated bridge between the tanks. This also creates slip, trip, and fall hazard.
- General
    - No fire extinguishers in this room
    - No exits signs
    - No exit lighting
    - No PPE signs

**[END CONFIDENTIAL]**

**March 3, 2021 – Grease Skimmer**

**Grease skimmer from North side on concrete floor.**

**Grease skimmer from platform.**

Grease skimmer comments:

- No railing to prevent employee from falling into the process vessel.
    - Step added to platform to reduce the height of the side wall making a fall into the vessel easier
- No E-Stop within reach of exposed moving equipment
    - Exposed chain drive
    - Exposed auger
    - Multiple pinch points unguarded

**March 3, 2021 – Belt Filter Press**

**Belt filter press from North side of room.**

**Belt filter press from North side close.**

**Belt filter press from West side of room.**

**Belt filter press room West wall.**

Belt filter press comments:

- Chemical Storage.
    - Note various chemical drum storage areas without labeling, spill containment, or measuring equipment.
    - Chemical drums not labeled with globally harmonized system (GHS) as required by OSHA.
    - Drum in service is tipped up on end by a stone and left balancing that could easily topple, spill, and cause injury.
    - It was unclear if the chemical drums were compatible with each other should a spill occur without separate containment.
- Platform / working surfaces.
    - Note the pooling/ponding water around the process equipment and electrical cabinets.
    - The platform around the press has a ladder on it that would make it easy to overtop the railing and fall to the concrete floor.
    - The platform is also installed elevating the worker higher than the yellow safety E-stop cable. This cable should be at waist level and easily accessible. If an employee was to get entangled in this moving equipment, the safety cable for the E-stop is at their ankles and out of reach.
    - Notice that the railing only exists on the outside perimeter of the work platform, permitting unobstructed fall potential into the moving equipment.
    - There are no guards on the pinch points of the equipment.
- Building
    - No exit signs
    - No emergency exit lighting
    - No fire extinguishers
    - Inadequate chemical storage signage
    - No signs for personal protective equipment requirements

# SECTION 7

**[BEGIN CONFIDENTIAL]**

**March 3, 2021 – Primary Clarifier Tank**

**Southeast corner of primary clarification tanks.**

**Northwest corner of primary clarification tanks.**

**East side of primary clarification tank.**

Clarification tank comments:

- Spalling concrete with signs of efflorescence which may indicate a leak and forecast structural failure.
- Unsupported process piping hanging from tanks.

**[END CONFIDENTIAL]**

## AMENDED APPLICATION

**To the Pennsylvania Public Utility Commission ("Commission"):**

## I. BACKGROUND

1. The name and address of Applicant are:

Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010

2. The name, address and contact information for Applicant's counsel are:

Michael W. Hassell, Esq. (ID # 34851)
Garrett P. Lent, Esq. (ID # 321566)
Post & Schell, P.C.
17 North Second Street, 12th Floor
Harrisburg, PA 17101
Phone: 717-731-1970
E-mail: mhassell@postschell.com
E-mail: glent@postschell.com

3. Pursuant to Sections 1102 and 1329 of the Pennsylvania Public Utility Code, 66 Pa.C.S. §§ 1102 and 1329, Applicant hereby requests that the Commission: (1) approve Aqua's acquisition of the wastewater system assets ("**Acquired Assets**") of the City of Beaver Falls ("Beaver Falls" or "the City"); (2) approve the right of Aqua to begin providing wastewater service in the requested territory, as shown as the area outlined in red on the map attached hereto as **Exhibit A** (the "**Requested Territory**");[1] and (3) include, in its Order approving the acquisition, the ratemaking rate base of the Assets as determined under Section 1329(c)(2) of the Public Utility Code, 66 Pa.C.S. § 1329(c)(2). As discussed in Section XII *infra*, Aqua also requests that the Commission, to the extent necessary, issue certificates for filing, pursuant to Section 507 of the Public Utility Code, 66 Pa.C.S. § 507, for certain municipal contracts that Aqua has included in the Application, including new service agreements that Aqua will enter into with Big Beaver Borough, West Mayfield Borough, White Township, North Sewickley Township, Eastvale Borough, Patterson Township, and Patterson Heights Borough ("Contributing Municipalities") prior to Closing and which will replace any prior agreements.

4. The map of the Requested Territory includes a north arrow depicting map orientation, a graphic scale, the municipal boundaries of Beaver Falls and identification and depiction of all private and public roads relative to the Requested Territory. A bearing and angle description of the Requested

[1] A CONFIDENTIAL facilities map is included with the Asset Inventory as addressed *infra*.

Territory is included on Exhibit A. The Requested Territory is approximately 2.3 square miles (1,468.8 acres).

5. Aqua and Beaver Falls have reached an agreement regarding the acquisition of the Acquired Assets, as evidenced by the *Asset Purchase Agreement*, dated as of October 20, 2021, and attached hereto as **Exhibit B** (the "**Agreement**"). Applicant respectfully requests that the Commission issue an *Order* and *Certificates of Public Convenience* approving and addressing the items requested in this Application.

6. An **Application Filing Checklist** identifying topics addressed and the section, paragraph and page number where they can be found is included with this Application as Appendix 1.

## II. AFFECTED ENTITIES

7. Aqua is a regulated public utility company, duly organized and existing under the laws of the Commonwealth of Pennsylvania. Aqua is engaged in the wastewater service business and furnishes wastewater service to approximately 60,000 customer accounts, as reflected in documents already on file with the Commission. Aqua's existing service territories cover various Counties throughout Pennsylvania with wastewater operations in nearby Venango County and water operations under Aqua Pennsylvania, Inc. ("Aqua PA") in nearby Lawrence County.

8. Beaver Falls is a duly organized and validly existing city under a Home Rule Charter. The City owns the sanitary wastewater collection and treatment system which provides sanitary wastewater service to approximately 3,190 customers in the City, and provides transmission and treatment service for the seven (7) Contributing Municipalities.

9. Applicant incorporates into this Application other information on file with the Commission that establishes the fact that Aqua is qualified to provide adequate public wastewater service. Aqua will supplement this Application with all additional information the Commission may

require. Balance Sheet and Income Statement reports from Aqua's financial system for calendar year 2021 are attached hereto as **Exhibit C**.

## III. PLANT-IN-SERVICE

10. Aqua will acquire Beaver Falls' wastewater collection and treatment system assets as defined in the Agreement, i.e., the Acquired Assets. All of the Acquired Assets are located in the City except for the Eastvale Pump Station which is located in Eastvale Borough, the force main that connects the Eastvale Pump Station to the City collection system, and a meter located in West Mayfield Borough.

11. An Engineer's Assessment of Wastewater System Assets, prepared by Gannett Fleming, Inc. ("Asset Inventory"), is attached hereto as **Exhibit D**. The facilities map included with the Asset Inventory as Appendix B thereto is considered CONFIDENTIAL.

12. The Asset Inventory explains that the Beaver Falls' collection and treatment system has one wastewater treatment plant, approximately 36 miles of gravity sewer collection mains, in sizes ranging from 8 inches to 24 inches in diameter, and the system has approximately 1,400 lineal feet ("LF") of 8 inch force mains. The Asset Inventory also details the one City owned pump station.

13. A list of non-depreciable property is presented in Appendix A of the Asset Inventory. The Beaver Falls System has no plant held for future use and none is included in the Asset Inventory.

14. All component facilities are installed. The approximate time of installation of component facilities is addressed in Appendix A of the Asset Inventory and in Mr. Bubel's testimony (Application **Exhibit V**, Aqua Statement No. 2).

15. Wastewater treatment is provided by the City at its Wastewater Treatment Plant ("WWTP") located in Beaver Falls, Beaver County. The Chapter 94 Report to the Department of Environmental Protection ("DEP") of Beaver Falls for the Beaver Falls WWTP, which includes

Chapter 94 Report questionnaires for the Contributing Municipalities, is attached hereto as **Exhibit E**. The Beaver Falls WWTP has a permitted capacity of 4.8 million gallons per day ("MGD") with elevation ("EL") between EL 722 and 738.

16. Beaver Falls accepts wastewater flow into its collection system from the Contributing Municipalities, which is treated at the Beaver Falls WWTP. Flow is conveyed from the Contributing Municipalities through gravity sewers, force mains, and pump stations owned by the Contributing Municipalities. Once flow enters the City from Big Beaver Borough, West Mayfield, White Township, Patterson Township and Patterson Heights Borough, it is conveyed by gravity to the WWTP. Flow coming from Eastvale Borough and North Sewickley Township is conveyed to the Eastvale Pump Station and pumped into the City. The Eastvale Pump Station has design capacity of 610 gallons per minute ("gpm"). The arrangement for conveyance and treatment of flow from the Contributing Municipalities is discussed below in paragraph 25 and Sections XII and XIII.

17. Elevation of the Beaver Falls collection system and the service area varies:

EL 885 to EL 1150 along the western boundary.

EL 720 to EL 985 along the southern boundary.

EL 755 to EL 850 along the northern boundary.

EL 720 to EL 820 along the eastern boundary.

18. Water service in the Requested Territory is provided by the Beaver Falls Municipal Authority ("BFMA").

19. The original cost, by year and major plant category, of Beaver Falls' used and useful plant in service is $12,898,487 with a related calculated depreciation reserve of $7,866,277.

20. Tentative journal entries to record the transaction are presented in Section IV.

## IV. ASSET PURCHASE AGREEMENT

21. The Asset Purchase Agreement is dated October 20, 2021. The purchase price is Forty-One Million Two Hundred and Fifty Thousand Dollars ($41,250,000.00).

22. The purchase price is based on arm's length negotiations. Aqua and the City are not affiliated with each other.

23. Aqua will use short term debt initially for the purchase of the Acquired Assets with the expectation that the short-term debt will be converted to long-term debt and equity capital at a later date.

24. The wastewater system Acquired Assets to be transferred are the "Acquired Assets" and have the meaning specified in Section 2.01 of the Agreement. The Acquired Assets include the assets, properties and rights of the City used in the system and all treatment facilities, pipes, pumping stations, generators, manholes and pipelines and billing and collections related assets necessary to run the system.

25. Acquired Assets at the time of the Application filing also include the four contracts identified on Schedule 4.15 of the Agreement to which City is a party (the "Assigned Contracts"). The Assigned Contracts are attached hereto as **Exhibit F1**, **Exhibit F2**, **Exhibit F3**, and **Exhibit F4**, respectively:[2]

F1 – Agreement, dated April 28, 1977, between the City of Beaver Falls and Township of Patterson.

F2 – Cooperation Agreement, dated May 1, 1983, between the Borough of Eastvale and the City of Beaver Falls.

F3 – Agreement, dated November 1998, between the Big Beaver Municipal Authority and the City of Beaver Falls.[3]

[2] As noted below, Exhibits F3 and F4 are missing certain pages and/or exhibits. The Company and Beaver Falls have sought to obtain the missing items from the parties to the contracts through Right to Know Law ("RTKL") requests. Should the documents/information requested via RTKL be located and become available, Aqua will supplement the Application and record accordingly.

[3] Missing Signature Pages for Big Beaver Municipal Authority and City of Beaver Falls, and Exhibit A.

F4 – Agreement, dated January 9, 2003, between North Sewickley Township Sewer Authority and the City of Beaver Falls.[4]

While these agreements are listed as part of the Acquired Assets, the Company is submitting with this Application new Wastewater Service Agreements which the Company has negotiated with each of the Contributing Municipalities which will terminate and replace all prior agreements for the conveyance and treatment of wastewater ("New Wastewater Service Agreements"). The New Wastewater Service Agreements are meant to standardize wastewater conveyance and treatment service to each of the Contributing Municipalities, including the Contributing Municipalities which do not have a conveyance and treatment agreement that could be located.[5] The Company requested any agreements regarding conveyance and treatment under the RTKL to Patterson Heights Borough, West Mayfield Borough, and White Township and those responses are attached as **Exhibit F6**, **Exhibit F7**, and **Exhibit F8**. The New Wastewater Service Agreements are included in this Application as **Exhibit F9**, **Exhibit F10**, **Exhibit F11**, **Exhibit F12**, **Exhibit F13**, **Exhibit F14**, and **Exhibit F15**. The City has disclosed an April 8, 2014 Capital Lease Agreement, which is attached as **Exhibit F5**. The City notes that it included the document for the sake of disclosure, but has not been able to identify the counterparty entity and makes no representation as to the validity of that agreement. Moreover, the New Wastewater Service Agreements cancel all prior agreements concerning wastewater service between the parties, and, therefore, the Capital Lease Agreement will terminate if it was a valid agreement. Additionally, included as **Exhibit F16** is an agreement between Aqua and the City for certain charitable contributions. The Company is also submitting a pro-forma meter reading agreement between Aqua and BFMA for the provision of water meter read data for billing

[4] Missing Exhibits A and B.

[5] The Company could not locate any conveyance and treatment agreements for Patterson Heights Borough, West Mayfield Borough, and White Township.

purposes post-closing. The meter read agreement is included in this Application as **Exhibit F17**. Finally, the Company is submitting a settlement agreement ("Settlement") by and between Aqua, the City, Patterson Township, Patterson Heights Borough, West Mayfield Borough, and White Township, included as **Exhibit F18**. Further details regarding the Settlement are provided in Section XIII, *infra*.

26. Acquired Assets also include all Authorizations and Permits of or held by Beaver Falls (to the extent transferrable to Aqua under applicable Law), including all Authorizations and Permits which are environmental permits, other operating permits and those items listed or described on Schedule 4.14 of the Agreement.

27. "Excluded Assets," which are those assets not being transferred to Aqua, has the meaning specified in Section 2.02 of the Agreement. Excluded Assets include Stormwater System Assets, contracts that are not Assigned Contracts, cash and cash equivalents and the assets, insurance policies, Beaver Falls' Plans, properties and rights set forth in Schedule 2.02(h) of the Agreement.

28. "Assumed Liabilities" has the meaning specified in Section 2.04(a) of the Agreement and include all liabilities and obligations arising out of or relating to Aqua's ownership or operation of the wastewater system and the Acquired Assets on or after Closing.

29. The tentative journal entries to record the transfer in Aqua's accounts are:

| | Debit | Credit |
|---|---|---|
| Utility Plant Purchased | $41,250,000 | |
| Cash/Short Term Debt | | $41,250,000 |

## V. CUSTOMERS

30. Beaver Falls provides wastewater service to approximately 3,197 customers, which includes 2,879 residential, 276 commercial, 7 industrial, 17 public, 7 Contributing Municipalities, and 1 bulk pumping and hauling customer.

31. Wastewater flow billed for Beaver Falls customers within the City was approximately 162,435,115 gallons for 2021.[6] Wastewater flow billed to the Contributing Municipalities was 177,925,000 gallons.[7]

32. City projects growth of 183 Equivalent Dwelling Units ("EDUs") over the next five years.

## VI. RATES

33. After Closing, Aqua will implement Beaver Falls' sanitary wastewater rates in effect at closing as reflected on **Revised Exhibit G**. The Contributing Municipalities will be charged in accordance with the New Wastewater Service Agreements after closing. The City presently bills on a quarterly and monthly basis. Aqua will continue to bill Beaver Falls customers on a quarterly basis and monthly basis. A schedule of rates tariff page implementing monthly and quarterly rates for City customers post-closing is attached hereto as **Revised Exhibit G**.

34. As presented in **Revised** Schedule 7.04 of the Agreement, Beaver Falls bills customers inside the City of Beaver Falls a quarterly base fee of $43.64 ($14.54 monthly) which includes an allowance of 3,000 gallons and a consumption charge of $8.71 per 1,000 gallons based on water usage. Pursuant to the Settlement, the rate to the Contributing Municipalities at Closing will be $3.66 per 1,000 gallons based on water usage. Dalton Service Company, LLC is billed $4.68 per 1,000 gallons based on water usage. A copy of the City's currently effective Rate Ordinance is attached hereto as **Exhibit H**.

35. Upon Commission approval of this Application and completion of the proposed transaction, Aqua will begin to provide wastewater service in its name to the customers in the

[6] Billed flow is based on water usage.
[7] Billed flow is based on water usage.

Requested Territory. It will implement its *Rules and Regulations* to govern the provision of wastewater service in the Requested Territory, as those *Rules and Regulations* are in effect from time to time for Aqua.

36. Copies of the notices that will be sent to customers of Aqua and to customers of Beaver Falls describing the filing and the anticipated effect on rates are attached hereto as **Revised Exhibit I1**, **Revised Exhibit I2**, and **Revised Exhibit I3**.

## VII. COST OF SERVICE

37. Copies of Beaver Falls' Annual Financial Report for 2020 and 2021 are attached hereto as **Exhibit J1** and **Exhibit J2**. For the year ended December 31, 2021, the City had approximately $6,899,152 of long-term debt, and the details of long-term debt obligations are described in Note 9 in Exhibit J2. This debt is the long-term debt of the City, and there are no outstanding loans on the utility plant.

38. Copies of Beaver Falls' Adopted Annual Budgets for 2022 and 2023 are attached hereto as **Exhibit J3** and **Exhibit J4**.

39. A copy of Beaver Falls' most recent annual report filed with the Department of Community and Economic Development is attached hereto as **Exhibit K**.

40. Aqua projects annual revenue of $2,534,808 from the City's customers based on City's current rate schedule, calculated as follows:

| *Address Type* | *Service* | *Billed Dollars* | *Quarterly Minimum Fee Up to 3 Kgal* | *Rate per Kgal* | *Customers* | *EDUs* | *Total Usage* |
|---|---|---|---|---|---|---|---|
| | | | | | | | |
| Domestic | Wastewater | $1,153,108 | $43.64 | $8.71 | 2,879 | 3,078 | 109,238,000 |
| | | | | | | | |
| **Domestic/Residential Total** | | **$1,153,108** | | | **2,879** | **3,078** | **109,238,000** |
| | | | | | | | |
| Commercial | Wastewater | $402,719 | $43.64 | $8.71 | 276 | 376 | 44,017,000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Commercial Total** | | **$402,719** | | | **276** | **376** | **44,017,000** |
| | | | | | | | |
| Industrial | Wastewater | $24,077 | $43.64 | $8.71 | 7 | 7 | 2,708,000 |
| | | | | | | | |
| **Industrial Total** | | **$24,077** | | | **7** | **7** | **2,708,000** |
| | | | | | | | |
| Public | Wastewater | $42,215 | $43.64 | $8.71 | 17 | 17 | 4,710,000 |
| | | | | | | | |
| **Public Total** | | **$42,215** | | | **17** | **17** | **4,710,000** |
| | | | | | | | |
| Bulk | Wastewater | $832,689 | | $4.68 | 7 | 3,767 | 177,925,000 |
| | | | | | | | |
| **Bulk Total** | | **$832,689** | | | **7** | **3,767** | **177,925,000** |
| | | | | | | | |
| Bulk Other | Wastewater | $80,000 | | $4.68 | 1 | 1 | 1,762,115 |
| | | | | | | | |
| **Bulk Total** | | **$80,000** | | | **1** | **1** | **1,762,115** |
| **Total Service Revenue** | | **$2,534,808** | | | **3,187** | **7,246** | **340,360,115** |

41. Aqua estimates annual operating and maintenance expenses of $1,462,000 based on Beaver Falls' operating expenses presented in the 2021 financial statements, adjusted by the Company.

## VIII. PROOF OF COMPLIANCE

42. Aqua will operate and manage the Beaver Falls wastewater system as a standalone collection system, but within Aqua's footprint, from its Western Division Office in Sharon, Pennsylvania with operations and management support from Aqua's Southeastern Division Office in Bryn Mawr, Pennsylvania. The system is approximately 32 miles from the Company's Western Division Office. Mr. Joseph Durish will be the assigned Certified Wastewater Operator for the system. Mr. Durish's currently effective Wastewater Operator's License is attached hereto as **Exhibit L**.

43. The Water Quality Management ("WQM") Permit for the Beaver Falls WWTP issued in 1996 is attached as **Exhibit M1**. Other WQM permits related to the WWTP and the System are included

in **Exhibit M1**, in reverse chronological order. The WQM permit for the Eastvale Pump Station is attached as **Exhibit M2**. The National Pollution Discharge Elimination System ("NPDES") Permit for the Beaver Falls WWTP is attached hereto as **Exhibit N1**. Copies of Discharge Monitoring Reports ("DMR") for the Beaver Falls WWTP from 2017 through November 2022, are attached hereto as **Exhibit N2**.

44. Notices of Violation ("NOVs") issued to Beaver Falls are attached hereto as **Exhibit O1**. Beaver Falls' response to the NOVs is also included in Exhibit O1. Beaver Falls entered into a Consent Assessment of Civil Penalty ("CACP") with DEP on September 26, 2019 in relation to violations of effluent limitations between December 2016 and June 2019. The CACP is attached hereto as **Exhibit O2**. Beaver Falls and the Contributing Municipalities have entered into Corrective Action Plans submitted to DEP and attached hereto as **Exhibit O3** (Beaver Falls), **Exhibit O4** (Big Beaver Municipal Authority), **Exhibit O5** (North Sewickley), **Exhibit O6** (Patterson), and **Exhibit O7** (White), respectively. Eastvale Borough, Patterson Heights Borough, and West Mayfield Borough have not submitted CAPs to DEP. Beaver Falls employed Gannet Fleming, Inc. ("Gannett") to perform a limited hazardous materials assessment at the WWTP in 2021, and Gannett reported through a technical memo that there were suspected asbestos containing materials at the WWTP. Gannett then performed a Phase I Environmental Site Assessment of the WWTP in July 2021. Beaver Falls informed the bidders that it would be engaging professionals to safely remove the material as of July 19, 2021. Attached hereto as **Exhibit O11** is the Gannett Technical Memorandum, the Phase I Environmental Site Assessment, and Beaver Falls' memo to bidders. As stated in Schedule 4.12 to the APA (*see* Application **Exhibit B**) the City removed asbestos in 2021.

45. Aqua is a Class A utility. It is in good standing with DEP and in general compliance with DEP with regard to the provision of wastewater service.

46. The service area comprising the Requested Territory is consistent with Beaver Falls' sewage planning and in compliance with DEP approved Act 537 Plans. A copy of Beaver Falls' Act 537 Plan documents is attached hereto as **Exhibit P1**.

47. The web address for the Beaver Falls Comprehensive Plan is: https://beaverfallspa.org/wp-content/uploads/2022/03/Beaver-Falls-Comprehensive-Plan-2013.pdf. The web address for the Beaver County Comprehensive Plan is: https://www.beavercountypa.gov/Depts/Planning/Documents/BC_ComprehensivePlan_May2010.pdf. Aqua is not requesting service territory beyond the existing plant footprint.

48. Aqua has wastewater operations in Venango County and Aqua PA has water operations in Lawrence County. The acquisition will easily fold into Aqua's existing wastewater operations. A listing of Aqua's nearby territory and facilities is as follows:

| Aqua Facilities | Location | Distance from City |
|---|---|---|
| Emlenton System | Emlenton, PA | 42 miles |
| Western Division Office | Sharon, PA | 32 miles |
| Mahoning Township System | Hillsville, PA | 19 miles |

49. Aqua is not anticipating any physical, operational or managerial changes at its Southeastern Office as a result of the acquisition. Aqua also does not anticipate any physical, operation, or managerial changes at its Western Division Office. Aqua will be offering employment to seven (7) operational staff from Beaver Falls to address the day-to-day operations of Beaver Falls.

50. Planned capital improvements are addressed in Mr. Bubel's testimony (Application **Exhibit V**, Aqua Statement No.2).

## IX. AFFECTED PERSONS

51. No corporation or entity, except Beaver Falls, is now furnishing or has corporate or franchise rights to furnish wastewater service in the Requested Territory, and no competitive condition

will be created by approval of this Application. Water and wastewater service providers abutting or within one mile of the Requested Territory are as follows:

i. Within neighboring Big Beaver Borough, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by Bradys Run Sanitary Authority and private septic systems.

ii. Within neighboring West Mayfield Township, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by West Mayfield Municipal Authority and private septic systems.

iii. Within neighboring Chippewa Township, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by Bradys Run Sanitary Authority and private septic systems.

iv. Within neighboring White Township, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by White Township Municipal Authority and private septic systems.

v. Within neighboring Patterson Township, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by Patterson Township Municipal Authority and private septic systems.

vi. Within neighboring Patterson Heights Borough, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by Patterson Township Municipal Authority and private septic systems.

vii. Within neighboring Fallston Borough, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by New Brighton Borough Sanitary Authority and private septic systems.

viii. Within neighboring New Brighton Borough, water service is provided by Beaver Falls Municipal Authority. Wastewater service is provided by New Brighton Borough Sanitary Authority and private septic systems.

ix. Within neighboring Pulaski Township, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by New Brighton Borough Sanitary Authority and private septic systems.

x. Within neighboring Daugherty Township, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater service is provided by New Brighton Borough Sanitary Authority and private septic systems.

xi. Within neighboring Eastvale Borough, water service is provided by Beaver Falls Municipal Authority. Wastewater service is provided by Eastvale Borough.

xii. Within neighboring North Sewickley Township, water service is provided by Beaver Falls Municipal Authority and private wells. Wastewater Service is provided by North Sewickley Township Sewer Authority and private septic systems.

## X. REASONS SUPPORTING THIS APPLICATION

52. Approval of this Application is necessary or proper for the service, accommodation, convenience or safety of the public. As summarized below and discussed further in the testimonies of Mr. Packer, Mr. Bubel, and Mr. Martin which as identified in Section XI below, are attached hereto as **Exhibit U** and **Supplemental Exhibit U**, **Exhibit V**, and **Exhibit W** and **Supplemental Exhibit W**:

a. Aqua has the technical, regulatory, financial and legal fitness to operate the Acquired Assets of Beaver Falls, and to maintain the operations and make improvements to meet continuing and future customer needs.[8] The proposed transaction will not have an adverse effect on the service provided to existing customers of Aqua;

b. Beaver Falls has agreed to sell its assets. The public interest and need will be served by allowing Aqua, in lieu of Beaver Falls, to provide wastewater service in the Requested Territory and to address the issues of regulatory requirements and capital expenditures. The Beaver Falls system will benefit from the support of wastewater professionals throughout Aqua's organization;

c. The acquisition is consistent with the Commission's long-standing policy supporting the consolidation/regionalization of water/wastewater systems. Through consolidation/regionalization, the utility industry has a better chance to realize the benefits of better management practices, economies of scale, and the resulting greater environmental/economic benefits. The Commission has previously stated that

[8] As a certificated provider of utility service, Aqua's fitness is presumed. *See Re Pennsylvania-American Water Company*, 85 PA PUC 548 (1995).

"acquisitions of smaller systems by larger more viable systems will likely improve the overall long-term viability of the water and wastewater industry."[9] The benefits of consolidation/regionalization, ultimately, inure to customers both existing and acquired;

d. Aqua provides utility service to approximately 60,000 wastewater customers and has years of experience operating wastewater treatment and collection systems in a safe, reliable and efficient manner. Aqua has the managerial, technical, and financial resources to improve the operations of the City;

e. In *McCloskey v. Pa. P.U.C.*, 195 A.3d 1055 (Pa. Cmwlth. 2018), *petition for allowance of appeal denied* No. 703 MAL 2018 (April 23, 2019), the Commonwealth Court held that Commission findings: (i) that Aqua, as the owner of numerous water and wastewater systems has sufficient operational expertise and ability to raise capital to support system operations; and (ii) that the Commission has a policy of consolidation/regionalization of wastewater system assets that allows for increased maintenance, upgrade and expansion of public sewer and water facilities, are substantial evidence, consistent with *Popowsky v. Pa. P.U.C.*, 937 A.2d 1040 (Pa. 2007), to support a conclusion that there is a public benefit to a transaction;

f. The acquisition of the Beaver Falls Sewer system will increase Aqua's customer base by approximately 5%. With a larger customer base, future infrastructure investments, Statewide, will be shared at a lower incremental cost per customer for all Aqua customers; and

g. The acquisition will not have any immediate impact on the rates of either existing customers of Aqua or City customers, except as through the Settlement and New

[9] Pennsylvania Public Utility Commission, Final Policy Statement on Acquisitions of Water and Wastewater Systems, Docket No. M-00051926, Final Order at 18 (Aug. 17, 2006).

Wastewater Service Agreements, if approved, with the Contributing Municipalities described in Section XIII, *infra*. As discussed in the testimony of Mr. Packer and presented in the Notice to customers, the increase in rate base may ultimately require an increase in revenue. The hypothetical impact on rates is outweighed by the recognized benefits of Aqua's ownership including its expertise and ability to raise capital; the furtherance of consolidation/regionalization of wastewater services; repairs and process improvements to ensure safe operation of the WWTP; adequate staffing at the WWTP; and the spreading of costs over a larger customer base. Perhaps more significantly, the acquisition furthers the objective of the General Assembly with the enactment of Section 1329. While *McCloskey* concludes that rate impact should be addressed, it recognizes that it is not dispositive in the Commission's determination of substantial affirmative benefits.

## XI. ADDITIONAL INFORMATION REQUIRED BY SECTION 1329 OF THE PUBLIC UTILITY CODE AND THE PUBLIC UTILITY COMMISSION'S 1329 CHECKLIST

53. Aqua and Beaver Falls have agreed to use the process presented in Section 1329 of the Public Utility Code, 66 Pa.C.S. § 1329, to determine the fair market value of the Acquired Assets and the ratemaking rate base. Aqua's verified statement that it selected ScottMadden, Inc. ("ScottMadden") as its Utility Valuation Expert is attached hereto as **Exhibit BB1**. Beaver Falls' verified statement that it selected Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") as its Utility Valuation Expert is attached hereto as **Exhibit BB2**.

54. As required by Section 1329(d)(1)(i), copies of the Fair Market Value Appraisal Reports of ScottMadden, Utility Valuation Expert, and Gannett Fleming, Utility Valuation Expert, are attached hereto as **Exhibit Q** and **Exhibit R**, respectively. Confidential and Proprietary Work Paper

Files, in Excel Format, of ScottMadden and Gannett Fleming are provided with the Application, as explained in the cover letter thereto.

55. Applicant states that the purchase price of the Acquired Assets of the selling utility as agreed to by Aqua and Beaver Falls is $41,250,000.

56. The ratemaking rate base determined pursuant to Section 1329(c)(2) of the Public Utility Code is $41,250,000, being the lesser of the purchase price of $41,250,000 negotiated by Aqua and Beaver Falls and the average of the fair market value appraisals which is $42,245,674 – determined by $40,199,348 presented in the appraisal of ScottMadden and $44,292,000 presented in the appraisal of Gannett Fleming.

57. Aqua will incur transaction and closing costs of approximately $714,980, which it will include in its rate base.

58. A schedule of rates tariff page implementing rates equal to the rates of Beaver Falls at the time of closing is attached hereto as **Revised Exhibit G**, as previously stated.

59. Applicant verifies that ScottMadden was selected by Aqua, the acquiring public utility, and that Gannett Fleming was selected by Beaver Falls, the selling municipality.

60. The Utility Valuation Experts were paid $71,297.50 for the completed Fair Market Value Appraisal Reports. Documentation of the fees paid to ScottMadden and Gannett Fleming, including the valuation service agreements and all associated invoices, are attached hereto as **Exhibit S1** and **Exhibit S2**, respectively. Fees paid to the Utility Valuation Experts did not exceed 5% of the fair market value of the selling utility.

61. Statements of ScottMadden and of Gannett Fleming verifying that they have no affiliation with Aqua or Beaver Falls as specified in Section 1329; that their Appraisals determined fair market value in compliance with the most recent edition of the Uniform Standards of Professional

Appraisal Practice as of the date of their report, employing the cost, market and income approaches; and that they applied applicable jurisdictional exceptions to their submitted Appraisal are attached hereto as **Exhibit T1** and **Exhibit T2**, respectively.

62. The testimony of William C. Packer, in support of this Application is attached hereto as **Exhibit U** and **Supplemental Exhibit U**.[10] Mr. Packer's testimony explains that Aqua is not presenting a rate stabilization plan. Aqua is proposing to implement Beaver Falls' existing rates after Closing and to maintain those rates until the next Aqua rate proceeding following Closing of the transaction.

63. The testimony of Mark J. Bubel, Sr., in support of this Application is attached hereto as **Exhibit V**.

64. The testimony of Zach Martin, in support of this Application is attached hereto as **Exhibit W** and Supplemental **Exhibit W**. Mr. Martin's revised testimony includes additions to describe the current state of System operations, including operational and safety issues after further review.

65. The testimony of Charles R. Jones, Jr., City Manager, in support of the Application is attached hereto as **Exhibit X** and **Supplemental Exhibit X**. Mr. Jones' revised testimony includes additional information on the public benefits of the transaction.

66. The testimony of Dylan W. D'Ascendis in support of the ScottMadden Appraisal is attached hereto as **Exhibit Y**.

67. The testimony of Harold Walker, III, in support of the Gannett Fleming Appraisal is attached hereto as **Exhibit Z**.

[10] Electronic workpapers of Appendix A to Aqua Statement No. 1 are being submitted to the Commission under CONFIDENTIAL cover.

68. Answers to the Section 1329 Application Standard Data Requests are attached hereto as **Exhibit AA.**

## XII. SECTION 507 APPROVAL OF CONTRACTS

69. Section 507 of the Code, 66 Pa.C.S. § 507, provides that, except for contracts between a public utility and a municipal corporation to furnish service at tariff rates, no contract or agreement between a public utility and a municipal corporation shall be valid unless filed with the Commission at least 30 days prior to its effective date.

70. Aqua requests that the Commission, to the extent necessary, issue certificates for filing, pursuant to Section 507, of the New Wastewater Service Agreements which are included in this Application. The New Wastewater Service Agreements are included as **Exhibit F9** through **Exhibit F15** to the Application. Aqua requests approval of the charitable contribution agreement between Aqua and the City included as **Exhibit F16** to the Application. Aqua also requests that the Commission, to the extent necessary, issue certificates for filing, pursuant to Section 507, upon execution and filing of the pro-forma meter read agreement with the BFMA included as **Exhibit F17** to the Application. Further, as explained next, Aqua requests approval of the Settlement among Aqua, the City, Patterson Township, Patterson Heights Borough, West Mayfield Borough, and White Township included as **Exhibit F18.**

## XIII. SETTLEMENT WITH CERTAIN CONTRIBUTING MUNICIPALITIES

71. As indicated previously, the City provides conveyance wastewater treatment services for seven Contributing Municipalities.

72. On or about September 22, 2022, the Contributing Municipalities of Patterson Township, Patterson Heights Borough, White Township and West Mayfield Borough (collectively, the "Plaintiff Municipalities") filed suit against Aqua and the City. The suit alleged, *inter alia*, that the Plaintiff Municipalities are part owners of the City's treatment facilities.

73. Aqua and the City answered the suit, and denied that the Plaintiff Municipalities were part owners of the City's treatment facilities.

74. Aqua, the City and the Plaintiff Municipalities undertook negotiations, that resulted in the Settlement that is included herein as **Exhibit F18**. The Settlement provides, *inter alia*, that in exchange for certain payments by Aqua and the City to the Plaintiff Municipalities, the Plaintiff Municipalities agree to withdraw their suit, agree to withdraw their protests to this Application, and agree to enter into a wastewater service agreement, which was negotiated, entered into, and included in this Revised Application.

75. Aqua will not seek recovery from customers, either through inclusion in rate base or as an expense in future rate proceedings, of the payments made by Aqua or the City to the Plaintiff Municipalities through the Settlement.

## XIV. OTHER APPROVALS, CERTIFICATES, REGISTRATIONS AND RELIEF, IF ANY

76. Aqua asks that the Commission issue such other approvals, certificates, registrations and relief, if any, that may be required with respect to Aqua's acquisition of the Beaver Falls wastewater system assets.

## XV. CONCLUSION

**WHEREFORE**, Aqua requests that the Public Utility Commission approve this Application, filed pursuant to Sections 1102, 1329, 507, and 508 of the Public Utility Code, and:

a. Issue *Certificates of Public Convenience* under §1102 of the Pennsylvania Public Utility Code:

(1) Authorizing Aqua to acquire, by purchase, the wastewater system assets of the City of Beaver Falls; and

(2) Authorizing Aqua to begin to offer, render, furnish and supply wastewater service to the public in the Requested Territory covered by this Application.

b. Authorize Aqua to file tariff revisions, effective upon one day's notice, to:

(1) Include within its territory all the Requested Territory covered by this Application;

(2) Adopt and apply the City of Beaver Falls' rates as set forth in this Application as Aqua's Base Rates within the Requested Territory; and

(3) Apply Aqua's *Rules and Regulations* within the Requested Territory.

c. Enter an *Order* approving this Application and Aqua's acquisition of the Acquired Assets and, as part of that *Order* include the ratemaking rate base of the City of Beaver Falls as $41,250,000 pursuant to Section 1329(c)(2) of the Public Utility Code;

d. Approve Contracts, including the New Wastewater Service Agreements entered into by Aqua and the Contributing Municipalities, the charitable contribution agreement between Aqua and the City, the pro forma meter read agreement between Aqua

and the BFMA, and the Settlement Agreement entered into by Aqua, the City and the Plaintiff Municipalities pursuant to Section 507 of the Public Utility Code; and

e. Issue such other approvals, certificates, registrations and relief, if any, under the Public Utility Code that may be required with respect to Aqua's acquisition of the City of Beaver Falls wastewater system assets.

Respectfully submitted,

**AQUA PENNSYLVANIA WASTEWATER, INC.**

*Counsel for Aqua Pennsylvania Wastewater, Inc.*

Date: March 28, 2024

# EXHIBIT F9

# WASTEWATER SERVICE AGREEMENT

THIS WASTEWATER SERVICE AGREEMENT (the "Agreement "), is made as of the 19th day of December, 2023 (the "Execution Date"), by and between AQUA PENNSYLVANIA WASTEWATER, INC., a Pennsylvania public utility company ("Aqua") and the BOROUGH OF BIG BEAVER, a municipal corporation of the Commonwealth of Pennsylvania (the "Municipality"). Aqua and the Municipality are each a "Party," and collectively, the "Parties."

## RECITALS

WHEREAS, Aqua and the City of Beaver Falls (the "City") have entered into an Asset Purchase Agreement dated October 20, 2021 (the "APA"), which provides that the City has agreed to sell and convey to Aqua the wastewater collection system that the City owns (the "Acquired Collection System"), the wastewater treatment plant that the City owns (the "Acquired Treatment Plant," and collectively together with the Acquired Collection System, the "Acquired System") and substantially all of the City's assets related to the Acquired System; and

WHEREAS, the Municipality owns, maintains and operates a system of gravity sewer mains, force mains, laterals and other necessary infrastructure and means for the collection and conveyance of wastewater emanating from the Municipality (the "Municipality System") which is connected to the Acquired System (either directly or indirectly through a third party's collection system) and wastewater emanating from the Municipality System is collected and conveyed to and treated and disposed of by the Acquired System; and

WHEREAS, prior to the closing of the transaction contemplated by the APA (the "Closing"), the City is providing for the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System; and

WHEREAS, effective as of the date that the Closing occurs (the "Closing Date"), the City and the Municipality desire to terminate any and all existing agreements between them regarding the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System including, without limitation, that certain Agreement by and between the Big Beaver Municipal Authority (the "Authority") and the City dated November 1998, as the same has been assigned to the Municipality by operation of law on the dissolution of the Authority (the "Existing Agreement"); and

WHEREAS, effective as of the Closing Date, this Agreement shall govern the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System and the charge for such services; and

WHEREAS, operation of the Municipality sanitary sewer system is, and shall remain, subject to the sole requirements of the Pennsylvania Department of Environmental Protection ("DEP") and Municipality's ordinance applicable to the Municipality System as may be modified from time to time by the Municipality and that further modification requested by Aqua shall not be unreasonably withheld by Municipality.

NOW, THEREFORE, in consideration of the mutual covenants contained herein, and intending to be legally bound hereby, the Parties hereto agree as follows:

1. Incorporation of Recitals. The recitals set forth above are hereby incorporated into and made part of this Agreement as though fully set forth herein.

2. Definitions

2.1. Defined Terms. The following terms shall have the following meanings, except as otherwise expressly provided or unless the context otherwise requires. Other terms are defined in the text of this Agreement, and throughout this Agreement, those terms shall have the meanings respectively ascribed to them.

2.1.1. "Aqua Meter." A flow meter that Aqua installs at a Connection Point.

2.1.2. "Aqua Tariff." Aqua's tariff on file with and approved by the PUC as the same may be amended, supplemented, restated, replaced or revised from time to time.

2.1.3. "Connection Points." The locations at which the Municipality System connects to the Acquired Collection System or a Third-Party System as identified on Exhibit A attached hereto.

2.1.4. "Contributing Users." The Borough of Eastvale, City, Municipality, North Sewickley Township Sewer Authority, Township of Patterson, Borough of Patterson Heights, Borough of West Mayfield and Township of White and any other municipality or authority that enters into an agreement with Aqua during the Term related to the collection, conveyance and treatment of such municipality's or authority's wastewater through the Acquired System.

2.1.5. "Designated Person." A single person that the Municipality designates in writing to Aqua as being the point of contact at the Municipality regarding the Municipality System.

2.1.6. "Effective Date." The Effective Date as defined in Section 3.1.

2.1.7. "Facilities." Facilities means with respect to (a) Aqua, the components of the Acquired System, and (b) the Municipality, the components of the Municipality System.

2.1.8. "Flow." The quantity or volume of wastewater that emanates from the Municipality System and is collected, conveyed, treated and discharged by the Acquired System.

2.1.8.1. "Metered Flow." Any Flow through the Metered Point.

2.1.8.2. "Un-Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or Third-Party System which do not employ a formal wastewater flow metering device and are identified on Exhibit C attached hereto. The Flow values for these interconnection points are based on water consumption data provided

to Aqua by the Contributing User or its water provider, multiplied by a factor of 1.5 to account for inflow and infiltration. Un-Metered Flow originating from the Acquired Collection System flowing to the Municipality System will be deducted from the bill to the Municipality System. Un-Metered Flow originating from the Municipality System flowing to the Acquired Collection System will be added to the bill of the Municipality System. Un-Metered Flow between Outside Users will be added to the bill of the Outside User where the Un-Metered Flow originated, and deducted from the bill of the Outside User who received the Un-Metered Flow. If new Un-Metered Flow interconnections occur, or existing connections are removed, to or from the Municipality System which would alter the interconnection points listed on Exhibit C, Exhibit C shall be amended accordingly. If at some time in the future any of these interconnections become metered by a formal flow metering device, Exhibit B and Exhibit C shall be amended accordingly, and the flows at such points shall be considered actual and included in the regular Metered Flow calculations.

2.1.9. "Governmental Authority." Any federal, state or local government or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations or orders of such organization or authority have the force of Law), or any arbitrator, court or tribunal of competent jurisdiction.

2.1.10. "Industrial Waste Survey." As defined in Section 12.

2.1.11. "Law." Any statute, law, ordinance, regulation, rule, code, order, constitution, common law, judgment, decree or other requirement or rule of law of any Governmental Authority.

2.1.12. "Losses." Losses, damages, liabilities, deficiencies, actions, judgments, interest, awards, penalties, fines, costs or expenses of whatever kind, including reasonable attorneys' fees and the cost of enforcing any right to indemnification under this Agreement.

2.1.13. "Metered Point." The Wallace Run pump station; provided, however, if Aqua elects to install an Aqua Meter, "Metered Point" shall mean the Connection Point at which the Aqua Meter is located. If Aqua elects to install an Aqua Meter, Exhibit B shall be amended to evidence the Connection Point at which the Aqua Meter is installed.

2.1.14. "Municipality Meter." The flow meter located at the Wallace Run pump station and any replacement of such flow meter that the Municipality installs.

2.1.15. "Notice Date." The date that Aqua provides written notice to the Municipality that Aqua intends to make a modification, upgrade or expansion to all or any portion of the Acquired System.

2.1.16. "Outside Users." The Contributing Users excluding the City.

2.1.17. "Permit." Any permit, license, franchise, approval, authorization, registration, certificate, variance or similar right obtained, or required to be obtained, from any Governmental Authority.

2.1.18. "Person." An individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

2.1.19. "Prohibited Discharge." Any waste, pollutant, or other substance which is prohibited to be discharged into the Acquired System as set forth in the Aqua Tariff.

2.1.20. "PUC." The Pennsylvania Public Utility Commission.

2.1.21. "Third-Party System." A system for the collection and transportation of wastewater that (a) is owned by a third party, and (b) directly or indirectly transports and conveys wastewater to the Acquired System.

2.2. Terms Defined in Aqua Tariff. Terms used in this Agreement which are defined in the Aqua Tariff and not otherwise defined herein shall have the respective meanings ascribed to such terms in the Aqua Tariff.

3. Effective Date; Term.

3.1. Effective Date. This Agreement shall become effective on the Closing Date (the "Effective Date"). If Aqua's purchase of the Acquired Systems pursuant to the APA does not close and the APA is terminated, this Agreement shall automatically terminate and be null and void and of no force or effect.

3.2. Term. The term of this Agreement shall be a period of three (3) years (the "Term") commencing on the Effective Date.

4. Treatment and Disposal of Wastewater. Subject to the terms of this Agreement, during the Term, Aqua shall accept, treat and dispose of the wastewater that emanates from the Municipality System from the Municipality. The wastewater that emanates from the Municipality System from the Municipality shall be delivered to the Acquired Treatment Plant from the Municipality System to the Acquired Collection System (either directly or indirectly through a Third-Party System). The Municipality covenants and agrees that all wastewater from the Municipality emanating from the Municipality System to the Acquired System shall be in accordance and compliance with all requirements of the Municipality's Ordinances, Aqua Tariff and applicable Laws, as they may be amended from time to time.

5. Prohibited Discharges; Hauled Waste.

5.1. No Prohibited Discharge shall be permitted to be discharged into the Acquired System from the Municipality System,

5.2. No hauled waste shall be permitted to be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, obtained a permit from the DEP permitting the discharge of such waste into the Municipality System (a "Hauled Waste Permit"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Hauled Waste Permit issued to the user.

6. Nondomestic Waste/Industrial Waste. No nondomestic waste or industrial waste shall be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, entered into a written agreement acceptable in form and substance to Aqua related to the pretreatment and discharge of such waste (an "Industrial Waste Agreement"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Industrial Waste Agreement.

7. Operation and Enforcement.

7.1. Flow Calculations. As of the Closing Date and until Aqua installs flow meters to measure the Flow from each Contributing User, Flow for billing purposes shall be calculated based on the existing practice of using water meter read information supplied by the Contributing User or its water provider. After flow meters are installed to measure the Flow from each Contributing User, Flow from the Municipality System shall be determined by combining (i) the Metered Flow and (ii) all remaining Un-Metered Flow. The presence of the Municipality Meter shall be deemed Aqua installing a flow meter in the Municipality System for purposes of this Section 7.1. During the period in which an Aqua Meter has not been installed, the Municipality shall communicate to Aqua flow calculations from the Municipality Meter for each quarter within thirty (30) days of the end of each quarter. If Aqua elects to install an Aqua Meter, after the installation of the Aqua Meter, Aqua shall communicate to the Municipality Flow calculations from the Aqua Meter for such quarter within thirty (30) days of the end of each quarter. All daily Flow calculations (whether by Aqua or the Municipality) from be based on a twenty-four (24) hour period utilizing 7:00 AM as the daily meter reading time.

7.2. Record Keeping/Flow Meter Maintenance. The Municipality shall (a) maintain accurate Flow records for Metered Flow based on the Flow meter readings from the Municipality Meter; and (b) own, operate, maintain and replace, if necessary, the Municipality Meter and shall calibrate the Municipality Meter in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings. If Aqua installs an Aqua Meter, Aqua shall (x) maintain accurate Flow records for Metered Flow based on the Flow meter readings from the Aqua Meter; and (y) own, operate, maintain and replace, if necessary, the Aqua Meter and shall calibrate the Aqua Meter in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings.

7.3. Calibration and Testing.

7.3.1. Meter equipment and remote readouts (a) for an Aqua Meter (if Aqua elects to install an Aqua Meter) shall be tested, calibrated, maintained, and repaired at least annually by Aqua at Aqua's cost, and (b) the Municipality Meter shall be tested, calibrated, maintained, and

repaired at least annually by the Municipality at the Municipality's cost. The party responsible for the testing and calibration of a meter (the "Testing Party") shall provide the other party (the "Non-testing Party") with the results of such testing and calibration upon request and no later than fourteen (14) business days from such request. If the Non-testing Party requests additional testing, calibration, maintenance and repair, such expenses associated therewith shall be at the cost of the Non-testing Party.

7.3.2. If the Municipality and Aqua cannot agree as to the inaccuracy of any meter, the party that does agree to the accuracy of a meter may request that the meter be tested by an independent testing facility mutually agreed to by the Municipality and Aqua and such independent testing facility's determination of accuracy shall be conclusive. All costs related to the testing shall be borne fifty percent (50%) by the Municipality and fifty percent (50%) by Aqua.

7.3.3. If upon any test, the percentage of inaccuracy of any metering equipment is found to be in excess of three percent (3%), the calibration thereof shall be corrected, and any billing shall be adjusted, for a period extending back to the time when such inaccuracy began, if such time is ascertainable. If such time is not ascertainable, then for a period extending back one-half (1/2) of the time elapsed since the most recent date of calibration, but in no event further back than a period of six (6) months where such time is not ascertainable.

7.4. Estimated Meter Readings. Whenever it is necessary to estimate Flow meter readings due to equipment malfunction, failure, power outage, or similar events, Aqua or the Municipality, as applicable, shall notify the other for any period of time such estimated readings were utilized within 72 hours of discovering such event. Any estimated reading shall be calculated using the average monthly Flow for the Flow meter in question, for the previous month, for each day the estimated reading is made. The amount of wastewater conveyed during such period may be estimated (i) by correcting the error if the percentage of the error is ascertainable by calibration tests or mathematical calculation, or (ii) estimating the quantity of delivery by deliveries during the preceding periods under similar conditions when the meter or meters were registering accurately.

7.5. Storm-water / Groundwater Inflow & Infiltration ("I&I"). The Municipality shall enact, keep in force and enforce appropriate ordinances and/or regulations prohibiting the direct discharge of storm water, surface water runoff and groundwater into the Municipality System, and for the maintenance and repair of sewer lateral vent caps and cleanouts, so as to ensure that the waters or wastes discharged by any party into the Municipality System shall not contain, to the maximum extent possible, storm water, sump pump discharges, roof or surface drainage, or any discharges other than wastewater. Should sources of excessive I&I exist as determined by Aqua or any Governmental Authority having jurisdiction, the Municipality shall in a timely manner use its best efforts to locate and correct these conditions, in accordance with any Government Authority requirements. If the Municipality does not have an ordinance regarding the inspection and repair of sewer laterals in effect on the Effective Date, within one (1) year of the Effective Date, the Municipality shall enact an ordinance regarding the inspection and repair of sewer laterals and be responsible for the management and enforcement of such ordinance.

7.6. Violation of Permit or Law. In the event the Flow or wastewater characteristics from the Municipality System causes a violation of any Law or Permit related to the Acquired

System, as may be established by specific, split sampling and independent laboratory and engineering analysis performed by Aqua and the Municipality or DEP, and whereby external fines or penalties may result, the Municipality shall be solely responsible for such fines and penalties, and all costs and expenses incurred by Aqua as a result thereof, including reasonable attorneys' and consultants' fees and expenses. If external fines and penalties are a result of shared violation of Aqua and the Municipality, Aqua and the Municipality shall share the burden of such fines and penalties based upon their proportionate share of the total Flow. If there are external fines and penalties resulting from a shared violation which is attributable to multiple Contributing Users, but the Contributing User or Users who caused the violation cannot be identified, then the obligation to pay the fines and penalties shall be shared by the Contributing Users in proportion to their share of the total Flow. The provision of this Section shall survive the expiration of this Agreement.

8. Metering Devices. If Aqua elects to install an Aqua Meter, Aqua shall pay for all costs and expenses that Aqua incurs related to the installation and maintenance of the Aqua Meter, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining any metering device. The Municipality shall pay for all costs and expenses that the Municipality incurs related to the installation or maintenance of the Municipality Meter, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining such metering device.

9. Compliance with Laws. Each Party shall comply with all applicable present and future Laws having jurisdiction over such Party or such Party's Facilities, all present and future Permits applicable to such Party's Facilities and all applicable grant agreements, unless the same are being contested in good faith by appropriate proceedings.

10. Sampling and Monitoring Equipment. Aqua may install, in its sole and absolute discretion and at its sole cost and expense, sampling and monitoring equipment ("Sampling Equipment") at any Connection Point or at the Wallace Run pump station or at such other location in the Municipality System on which Aqua and the Municipality may agree for the purpose of sampling and analyzing the wastewater delivered to the Acquired System and to ensure compliance with the Aqua Tariff. Aqua shall provide the Municipality 15 days notice before the installation of any permanent sampling equipment at the Wallace Run pump station or within the Municipality's System. Aqua shall own and operate any Sampling Equipment that it elects to install and shall be responsible, at its sole cost and expense, for designing, installing, operating, maintaining, updating and replacing any Sampling Equipment that it elects to install. Aqua shall collect 24-hour flow proportional composite samples, if feasible, and shall split samples with the Municipality for concurrent independent analysis by the Municipality. Aqua and the Municipality will use best efforts to cooperate on obtaining samples from the Wallace Run pump station in the case of emergency or as may otherwise be reasonably requested by Aqua.

11. Easements and Licenses Regarding Flow Meters and Sampling and Monitoring Agreement. Aqua shall provide notice via e-mail to the Designated Person prior to accessing the Municipality System in relations to the installation, accessing, operation or maintenance of any Aqua Meter that Aqua elects to install or any Sampling Equipment that Aqua elects to install

pursuant to Section 10, which access shall not be unreasonably withheld, hindered or delayed and the Municipality shall timely grant. Aqua may utilize the Sampling Equipment on a routine basis, in its sole and absolute discretion. The Municipality may request Aqua to conduct a sampling of the wastewater outside of Aqua's normal sampling and testing procedure, at the Municipality's sole expense and the Municipality shall share the results of the sampling with Aqua upon Aqua's request and expense.

12. Industrial Waste Survey. The Municipality shall maintain a current list of users of the Municipality System that generate nondomestic waste or industrial waste in accordance with the following (a "Industrial Waste Survey"):

12.1. The Industrial Waste Survey shall include the facility name and address of all users that generate nondomestic waste or industrial waste whose wastewater passes through the Municipality System to the Acquired System, the nature of each user's business and the name and contact information of a responsible individual to be contacted at each user.

12.2. An updated Industrial Survey shall be provided to Aqua within thirty (30) days of the Effective Date. The list shall include users that have been added as well as those that have been removed or where site operations have changed.

12.3. The Municipality shall provide to Aqua the results of its updated Industrial Waste Survey on or prior to March 31, June 30, September 30, and December 31 of each year during the Term.

13. Rates for Service. In connection with Aqua's collection, conveyance, treatment and disposal of wastewater from the Municipality emanating from the Municipality System, the Municipality shall pay to Aqua a rate based on thousands of gallons of Flow as determined pursuant this Agreement (the "Rate"). For the period commencing on the Effective Date through the first full year, the Rate shall be Three and 66/100 Dollars ($3.66) per thousand gallons. For each of the next two (2) years during the Term following the first full year, the then current Rate shall increase by three percent (3%). The PUC retains ultimate jurisdiction over setting the Rate, and this Agreement shall be subject to PUC review and approval. To the extent the PUC determines the Rate set forth in this Agreement is unjust or unreasonable, this Agreement shall remain in effect and Aqua's shareholders shall be responsible for the difference between the rate the PUC determines is just and reasonable and the Rate in this Agreement.

14. Invoicing and Payment Terms. During each year during the Term, Aqua shall bill the Municipality quarterly for service through March 31, June 30, September 30 and December 31 in arrears. Any quarterly amount due for any partial quarter during the Term shall be prorated based on the number of days within such quarter that fall within the Term. The Municipality shall pay each quarterly bill to Aqua in full within forty-five (45) days after the date of the bill. Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due.

15. Peak Flow Limitations. The Municipality shall be limited to a peak daily flow of four (4) times its three-year annual average daily flow rate (the "Peak Flow Limitation Amount"). Aqua

shall notify the Municipality within 30 days of any exceedance of the Peak Flow Limitation Amount and shall also notify the Municipality in a timely manner of any daily flows that exceed 90% of the Peak Flow Limitation Amount for a period of 3 consecutive days. Should the Municipality exceed the Peak Flow Limitation Amount, the Municipality shall be penalized $1,000.00 for each day in which the flow exceeds the Peak Flow Limitation Amount. The Municipality shall submit payment for each flow exceedance within 60 days of being notified by Aqua of the flow exceedance. In lieu of the Municipality paying the subject penalty payment to Aqua, the Municipality shall be permitted to use this money to address I&I within the Municipality System. If the Municipality elects to make improvements to the Municipality System to address I&I, the Municipality shall (a) notify Aqua in writing within 60 days of receiving notification of the flow exceedance that the Municipality intends to make improvements to the Municipality System, which notice shall include what improvements the Municipality intends to make to the Municipality System, (b) complete such improvements to the Municipality System within two (2) year of the date of its notice to Aqua of its intent to make such improvements (the "Improvement Completion Period"), and (c) within 30 days of the end of the Improvement Completion Period, submit documentation acceptable to Aqua certifying that such improvements have been made. If the Municipality elects to make improvements to the Municipality System, and such improvements are not fully completed within the Improvement Completion Period, within 60 days of the end of the Improvement Completion Period, the Municipality shall pay $5,000 to Aqua. The provisions of this Section 15 shall become effective on the third anniversary of the date on which Aqua commences billing the Municipality solely on flow metering. The intent of this peak daily flow limitation requirement is to encourage the Municipality to make I&I repairs to the Municipality System.

16. Municipality System. During the Term, the Municipality shall, at its sole cost and expense, maintain the Municipality System in good repair and operating condition, and continuously operate the same in accordance with prudent industry practices and standards. Aqua shall have no obligation or liability to repair, maintain, expand or modify any part of the Municipality System and any repair, maintenance, expansion or modification of all or any part of the Municipality System shall be at the sole cost and expense of the Municipality.

17. Indemnification

17.1. Indemnification by the Municipality. The Municipality shall indemnify and defend Aqua, and Aqua's directors, officers, employees, representatives and agents (collectively the "Aqua Indemnified Parties") against, and shall hold the Aqua Indemnified Parties harmless from and against, and shall pay and reimburse the Aqua Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Aqua Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.1.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of the Municipality in connection with the collection or conveyance of any wastewater emanating from the Municipality System except to the extent that any such injury, death or damage is caused by Aqua (including, without limitation, resulting from any breach of this agreement by Aqua);

17.1.2. any claim, litigation, proceeding or action of any kind whatsoever by any Governmental Authority or third party related to (i) any action or inaction of the Municipality with respect to the Municipality System, or (ii) the collection, conveyance, treatment or disposal of any wastewater emanating from the Municipality System except to the extent that any such claim or action is the result of any action or inaction of Aqua; or

17.1.3. any breach by the Municipality of any of its covenants or obligations under this Agreement.

17.2. Indemnification by Aqua. To the extent that the Municipality is not immune under applicable Law, Aqua shall indemnify and defend the Municipality, and the Municipality's elected officials, directors, officers, employees, representatives and agents (collectively the "Municipality Indemnified Parties") against, and shall hold the Municipality Indemnified Parties harmless from and against, and shall pay and reimburse the Municipality Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Municipality Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.2.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of Aqua in connection with the treatment or disposal of any wastewater emanating from the Connection Points of the Municipality System except to the extent that any such injury, death or damage is caused by the Municipality (including, without limitation, resulting from any breach of this Agreement by the Municipality) and/or any third party (including, without limitation, any other Contributing User); or

17.2.2. any breach by Aqua of any of its covenants or obligations under this Agreement.

If any claim is made or action or proceeding filed against the Municipality for which the Municipality could potentially seek indemnification from Aqua pursuant to the provision of this Section 17.2, the Municipality shall not waive or seek to waive any immunity afforded to it pursuant to applicable Law.

17.3. The provision of this Section 17 shall survive the expiration of this Agreement.

18. Enforcement Obligation. The Municipality shall, at Aqua's request, enforce, promptly and to the fullest extent of its authority and at its sole cost and expense, all standards, criteria, requirements, and thresholds established by any Law (including any ordinances or regulation of the Municipality), Governmental Authority or Permit or the Aqua Tariff (each, a "Wastewater Standard"), against any Person, which violates a Wastewater Standard and which Aqua in good faith has identified as having a wastewater flow which violates a Wastewater Standard.

19. Consent to Sale of Acquired System. Effective as of the Execution Date, the Municipality (a) hereby consents to Aqua's purchase and acquisition of the Acquired System and related assets, (b) hereby waives any and all objections it has or may have in regard to the City's sale and Aqua's acquisition of the Acquired System and related assets, and (c) shall take any and all actions reasonably requested by Aqua and/or the City to effectuate the City's sale and Aqua's acquisition

of the Acquired System and related assets, including, without limitation, executing and delivering any consents or other documents or passing any ordinance or resolution. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19.

20. Consent to City Updating of City's Act 537 Plan. The Municipality acknowledges that in connection with the City's sale of the Acquired System to Aqua, the City is required to update the City's Act 537 Plan. On the City completing its updating of its Act 537 Plan, at the request of Aqua or the City, the Municipality shall review the update to the City's Act 537 Plan and, if appropriate, shall pass a resolution in form and substance acceptable to DEP and the City approving the City's updated Act 537 Plan. Review and approval shall not be unreasonably delayed or withheld. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19. The terms of this Section 19 shall be effective as of the Execution Date.

21. Future Plant Expansion. In accordance with DEP Chapter 94 regulations, should the Acquired Treatment Plant be projected to exceed its design capacities within a five year term, Aqua shall send notice of such event to the Municipality; and, within six (6) months of the date of such notice, the City or Aqua and the Municipality shall initiate planning in accordance with Act 537 to evaluate the need for expansion of the treatment facilities.

22. Planning Modules. For any changes within the Municipality (for example, subdivision, land development, system expansion, among others) that requires DEP Sewage Facilities Planning approval, the Municipality will provide the complete and appropriate planning module components to Aqua for review. For any planning modules that do not cause an overload condition, Aqua will review the planning modules in a timely manner for Municipality's use in submission to DEP, and Aqua's approval will not be unreasonably withheld.

23. Miscellaneous.

23.1. Inspection and Audit. Aqua and the Municipality agree to maintain complete and accurate records and accounts concerning their responsibilities under this Agreement. All Parties shall, at all times, have the right to examine and inspect said records and accounts upon thirty (30) days' written notice. If required by law or regulation, Aqua and the Municipality shall make said records and accounts immediately available to federal and state authorities.

23.2. Waiver of Rights. The failure of any party hereto to insist upon strict performance of this Agreement or any of the terms or conditions hereof shall not be construed as a waiver of any of its rights hereunder.

23.3. Modification. This writing constitutes the entire Agreement between the parties and there are no representations or agreements, verbal or written, other than those contained herein. This Agreement may be modified, amended or supplemented by the written agreement of the Parties.

23.4. Necessity of Permits. In the event that a Governmental Authority refuses to issue any material Permit and the Parties have no recourse to appeal and obtain such denied Permit

during the Term, and such Permit may be necessary to accomplish the intent and purpose of this Agreement, then the Parties hereto shall be relieved from further compliance with the terms of this Agreement, except for payments for services actually being rendered, until such time when such Permit or Permits shall be issued and then this Agreement shall become fully operative and the Parties hereunder shall be bound by all the terms hereof.

23.5. Severability. Should any one or more of the provisions of this Agreement for any reason be held illegal, invalid or unenforceable, such illegality, invalidity or unenforceability shall not affect any other provision of this Agreement and the remainder of this Agreement shall, in such circumstances, be construed and enforced as if such illegal, invalid or unenforceable provision had not been contained herein.

23.6. Interpretation. For purposes of this Agreement, unless the context otherwise requires, references in this Agreement to (a) Sections are to Sections of this Agreement; (b) exhibits and schedules are to exhibits and schedules attached to this Agreement and (c) an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof. This Agreement shall be construed without regard to any presumption or rule requiring construction or interpretation against the Party drafting an instrument or causing any instrument to be drafted.

23.7. Counterparts. This Agreement may be executed in two (2) or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, e.g., www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof.

23.8. Addresses. Whenever a notice is required to be given in writing by mail, the following addresses shall be used, unless a different address is specifically called for:

Municipality: Borough of Big Beaver
114 Forest Drive
Darlington, PA 16115
Attn: Mayor

Aqua: Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010
Attn: President

with required copy to:
Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Ave
Bryn Mawr, PA 19010

Attn: General Counsel

23.9. Termination of Existing Agreements. On the Effective Date, all existing agreements, whether written, oral or implied, between or among the City and the Municipality with respect to the conveyance and/or treatment of wastewater**,** including, but not limited to the Existing Agreement, shall terminate and be of no further force or effect.

23.10. Choice of Law. This Agreement shall be governed by and construed with the laws of the Commonwealth of Pennsylvania except for those requirements, terms, duties and conditions regulated by federal law, and jurisdiction shall be in the Court of Common Pleas of Beaver County.

23.11. Arbitration. Any controversy, claim or dispute arising out of, or relating to this Agreement, or the breach thereof, may, if agreed by the parties, be settled by arbitration, and judgment upon any award rendered by the arbitrator or arbitrators may be entered in the Court of Common Pleas of Beaver County. Notwithstanding the above, any controversies, claims and disputes that are within the jurisdiction of the PUC shall be resolved before the PUC.

23.12. Force Majeure. Notwithstanding any other provision of this Agreement, no Party hereto shall be responsible for damages to the other for any failure to comply with this Agreement resulting from an act of God or riot, sabotage, public calamity, flood, strike, unforeseeable breakdown of the Acquired Treatment Plant, or other event beyond its reasonable control. The Party having the responsibility for the Facilities so affected, however, shall proceed promptly to remedy the consequences of such event, with costs to be shared, if applicable, to the extent provided elsewhere herein.

23.13. Most Favored Nation. During the Term, Aqua shall not enter into any bulk treatment agreement with any municipality or authority related to the acceptance, treatment, and disposal of wastewater by the Acquired System (a "Bulk Treatment Agreement") which provides for, or modify any existing Bulk Treatment Agreement to provide for, a bulk treatment rate per thousand gallons that is less than the then current Rate being charged to the Municipality under this Agreement.

23.14. Entire Agreement. This Agreement, together with all schedules and exhibits attached hereto, constitutes the sole and entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such the matter hereof.

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed and their respective corporate seals affixed the day and year first above written.

EXECUTION VERSION

# WASTEWATER SERVICE AGREEMENT

THIS WASTEWATER SERVICE AGREEMENT (the "Agreement "), is made as of the 4th day of December, 2023 (the "Execution Date"), by and between AQUA PENNSYLVANIA WASTEWATER, INC., a Pennsylvania public utility company ("Aqua") and the BOROUGH OF EASTVALE, a municipal corporation of the Commonwealth of Pennsylvania (the "Municipality"). Aqua and the Municipality are each a "Party," and collectively, the "Parties."

## RECITALS

WHEREAS, Aqua and the City of Beaver Falls (the "City") have entered into an Asset Purchase Agreement dated October 20, 2021 (the "APA"), which provides that the City has agreed to sell and convey to Aqua the wastewater collection system that the City owns (the "Acquired Collection System"), the wastewater treatment plant that the City owns (the "Acquired Treatment Plant," and collectively together with the Acquired Collection System, the "Acquired System") and substantially all of the City's assets related to the Acquired System; and

WHEREAS, the Municipality owns, maintains and operates a system of gravity sewer mains, force mains, laterals and other necessary infrastructure and means for the collection and conveyance of wastewater emanating from the Municipality (the "Municipality System") which is connected to the Acquired System (either directly or indirectly through a third party's collection system) and wastewater emanating from the Municipality System is collected and conveyed to and treated and disposed of by the Acquired System; and

WHEREAS, prior to the closing of the transaction contemplated by the APA (the "Closing"), the City is providing for the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System; and

WHEREAS, effective as of the date that the Closing occurs (the "Closing Date"), the City and the Municipality desire to terminate any and all existing agreements between them regarding the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System including, without limitation, that certain Cooperation Agreement by and between the Municipality and the City dated May 1, 1983 (the "Existing Agreement"); and

WHEREAS, effective as of the Closing Date, this Agreement shall govern the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System and the charge for such services; and

WHEREAS, operation of the Municipality sanitary sewer system is, and shall remain, subject to the sole requirements of the Pennsylvania Department of Environmental Protection ("DEP") and Municipality's ordinance applicable to the Municipality System as may be modified from time to time by the Municipality and that further modification requested by Aqua shall not be unreasonably withheld by Municipality.

NOW, THEREFORE, in consideration of the mutual covenants contained herein, and intending to be legally bound hereby, the Parties hereto agree as follows:

1. Incorporation of Recitals. The recitals set forth above are hereby incorporated into and made part of this Agreement as though fully set forth herein.

2. Definitions

2.1. Defined Terms. The following terms shall have the following meanings, except as otherwise expressly provided or unless the context otherwise requires. Other terms are defined in the text of this Agreement, and throughout this Agreement, those terms shall have the meanings respectively ascribed to them.

2.1.1. "Aqua Tariff." Aqua's tariff on file with and approved by the PUC as the same may be amended, supplemented, restated, replaced or revised from time to time.

2.1.2. "Connection Points." The locations at which the Municipality System connects to the Acquired Collection System or a Third-Party System as identified on Exhibit A attached hereto.

2.1.3. "Contributing Users." The Borough of Big Beaver, City, Municipality, North Sewickley Township Sewer Authority, Township of Patterson, Borough of Patterson Heights, Borough of West Mayfield and Township of White and any other municipality or authority that enters into an agreement with Aqua during the Term related to the collection, conveyance and treatment of such municipality's or authority's wastewater through the Acquired System.

2.1.4. "Effective Date." The Effective Date as defined in Section 3.1.

2.1.5. "Facilities." Facilities means with respect to (a) Aqua, the components of the Acquired System, and (b) the Municipality, the components of the Municipality System.

2.1.6. "Flow." The quantity or volume of wastewater that emanates from the Municipality System and is collected, conveyed, treated and discharged by the Acquired System.

2.1.6.1. "Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or a Third-Party System which have a flow metering device at the Connection Points and are identified on Exhibit B attached hereto.

2.1.6.2. "Un-Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or Third-Party System which do not employ a formal wastewater flow metering device and are identified on Exhibit C attached hereto. The Flow values for these interconnection points are based on water consumption data provided to Aqua by the Contributing User or its water provider, multiplied by a factor of 1.5 to account for inflow and infiltration. Un-Metered Flow originating from the Acquired Collection System flowing to the Municipality System will be deducted from the bill to the Municipality System. Un-Metered Flow originating from the Municipality System flowing to the Acquired Collection System will be added to the bill of the Municipality System. Un-Metered Flow between Outside

Users will be added to the bill of the Outside User where the Un-Metered Flow originated, and deducted from the bill of the Outside User who received the Un-Metered Flow. If new Un-Metered Flow interconnections occur, or existing connections are removed, to or from the Municipality System which would alter the interconnection points listed on Exhibit C, Exhibit C shall be amended accordingly. If at some time in the future any of these interconnections become metered by a formal flow metering device, Exhibit B and Exhibit C shall be amended accordingly, and the flows at such points shall be considered actual and included in the regular Metered Flow calculations.

2.1.7. "Governmental Authority." Any federal, state or local government or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations or orders of such organization or authority have the force of Law), or any arbitrator, court or tribunal of competent jurisdiction.

2.1.8. "Industrial Waste Survey." As defined in Section 12.

2.1.9. "Law." Any statute, law, ordinance, regulation, rule, code, order, constitution, common law, judgment, decree or other requirement or rule of law of any Governmental Authority.

2.1.10. "Losses." Losses, damages, liabilities, deficiencies, actions, judgments, interest, awards, penalties, fines, costs or expenses of whatever kind, including reasonable attorneys' fees and the cost of enforcing any right to indemnification under this Agreement.

2.1.11. "Notice Date." The date that Aqua provides written notice to the Municipality that Aqua intends to make a modification, upgrade or expansion to all or any portion of the Acquired System.

2.1.12. "Outside Users." The Contributing Users excluding the City.

2.1.13. "Permit." Any permit, license, franchise, approval, authorization, registration, certificate, variance or similar right obtained, or required to be obtained, from any Governmental Authority.

2.1.14. "Person." An individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

2.1.15. "Prohibited Discharge." Any waste, pollutant, or other substance which is prohibited to be discharged into the Acquired System as set forth in the Aqua Tariff.

2.1.16. "PUC." The Pennsylvania Public Utility Commission.

2.1.17. "Third-Party System." A system for the collection and transportation of wastewater that (a) is owned by a third party, and (b) directly or indirectly transports and conveys wastewater to the Acquired System.

2.2. Terms Defined in Aqua Tariff. Terms used in this Agreement which are defined in the Aqua Tariff and not otherwise defined herein shall have the respective meanings ascribed to such terms in the Aqua Tariff.

3. Effective Date; Term.

3.1. Effective Date. This Agreement shall become effective on the Closing Date (the "Effective Date"). If Aqua's purchase of the Acquired Systems pursuant to the APA does not close and the APA is terminated, this Agreement shall automatically terminate and be null and void and of no force or effect.

3.2. Term. The term of this Agreement shall be a period of three (3) years (the "Term") commencing on the Effective Date.

4. Treatment and Disposal of Wastewater. Subject to the terms of this Agreement, during the Term, Aqua shall accept, treat and dispose of the wastewater that emanates from the Municipality System from the Municipality. The wastewater that emanates from the Municipality System from the Municipality shall be delivered to the Acquired Treatment Plant from the Municipality System to the Acquired Collection System (either directly or indirectly through a Third-Party System). The Municipality covenants and agrees that all wastewater from the Municipality emanating from the Municipality System to the Acquired System shall be in accordance and compliance with all requirements of the Municipality's Ordinances, Aqua Tariff and applicable Laws, as they may be amended from time to time.

5. Prohibited Discharges; Hauled Waste.

5.1. No Prohibited Discharge shall be permitted to be discharged into the Acquired System from the Municipality System,

5.2. No hauled waste shall be permitted to be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, obtained a permit from the DEP permitting the discharge of such waste into the Municipality System (a "Hauled Waste Permit"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Hauled Waste Permit issued to the user.

6. Nondomestic Waste/Industrial Waste. No nondomestic waste or industrial waste shall be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, entered into a written agreement acceptable in form and substance to Aqua related to the pretreatment and discharge of such waste (an "Industrial Waste Agreement"), and (b) such user and waste and the discharge of such waste are

in full compliance with all terms and conditions of the Aqua Tariff and the Industrial Waste Agreement.

7. Operation and Enforcement.

7.1. Flow Calculations. As of the Closing Date and until Aqua installs flow meters to measure the Flow from each Contributing User, Flow for billing purposes shall be calculated based on the existing practice of using water meter read information supplied by the Contributing User or its water provider. After flow meters are installed to measure the Flow from each Contributing User, Flow from the Municipality System shall be determined by combining (i) the Metered Flow and (ii) all remaining Un-Metered Flow. Flow calculations for each quarter shall be communicated to the Municipality within thirty (30) days of the end of each quarter. Daily Flow calculations shall be based on a twenty-four (24) hour period utilizing 7:00 AM as the daily meter reading time.

7.2. Record Keeping/Flow Meter Maintenance. Aqua shall maintain accurate Flow records for Metered Flow based on the Flow meter readings. Aqua shall own, operate, maintain and replace, if necessary, the Flow meters and shall calibrate the Flow meters in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings.

7.3. Calibration and Testing.

7.3.1. Meter equipment and remote readouts shall be tested, calibrated, maintained, and repaired at least annually by Aqua at Aqua's cost. The results of such testing and calibration shall be provided to the Municipality upon request and no later than fourteen (14)) business days from such request. If the Municipality requests additional testing, calibration, maintenance and repair, such expenses associated shall be at the cost of the Municipality.

7.3.2. If the Municipality and Aqua cannot agree as to the inaccuracy of any meter, the Municipality may request that the meter be tested by an independent testing facility mutually agreed to by the Municipality and Aqua and such independent testing facility's determination of accuracy shall be conclusive. All costs related to the testing shall be borne fifty percent (50%) by the Municipality and fifty percent (50%) by Aqua.

7.3.3. If upon any test, the percentage of inaccuracy of any metering equipment is found to be in excess of three percent (3%), the calibration thereof shall be corrected, and any billing shall be adjusted, for a period extending back to the time when such inaccuracy began, if such time is ascertainable. If such time is not ascertainable, then for a period extending back one-half (1/2) of the time elapsed since the most recent date of calibration, but in no event further back than a period of six (6) months where such time is not ascertainable.

7.4. Estimated Meter Readings. Whenever it is necessary to estimate Flow meter readings due to equipment malfunction, failure, power outage, or similar events, Aqua shall notify the Municipality for any period of time such estimated readings were utilized within 72 hours of discovering such event. Any estimated reading shall be calculated using the average monthly Flow for the Flow meter in question, for the previous month, for each day the estimated reading is made. The amount of wastewater conveyed during such period may be estimated (i) by correcting the error if the percentage of the error is ascertainable by calibration tests or mathematical calculation,

or (ii) estimating the quantity of delivery by deliveries during the preceding periods under similar conditions when the meter or meters were registering accurately.

7.5. Storm-water / Groundwater Inflow & Infiltration ("I&I"). The Municipality shall enact, keep in force and enforce appropriate ordinances and/or regulations prohibiting the direct discharge of storm water, surface water runoff and groundwater into the Municipality System, and for the maintenance and repair of sewer lateral vent caps and cleanouts, so as to ensure that the waters or wastes discharged by any party into the Municipality System shall not contain, to the maximum extent possible, storm water, sump pump discharges, roof or surface drainage, or any discharges other than wastewater. Should sources of excessive I&I exist as determined by Aqua or any Governmental Authority having jurisdiction, the Municipality shall in a timely manner use its best efforts to locate and correct these conditions, in accordance with any Government Authority requirements. If the Municipality does not have an ordinance regarding the inspection and repair of sewer laterals in effect on the Effective Date, within one (1) year of the Effective Date, the Municipality shall enact an ordinance regarding the inspection and repair of sewer laterals and be responsible for the management and enforcement of such ordinance.

7.6. Violation of Permit or Law. In the event the Flow or wastewater characteristics from the Municipality System causes a violation of any Law or Permit related to the Acquired System, as may be established by specific, split sampling and independent laboratory and engineering analysis performed by Aqua and the Municipality or DEP, and whereby external fines or penalties may result, the Municipality shall be solely responsible for such fines and penalties, and all costs and expenses incurred by Aqua as a result thereof, including reasonable attorneys' and consultants' fees and expenses. If external fines and penalties are a result of shared violation of Aqua and the Municipality, Aqua and the Municipality shall share the burden of such fines and penalties based upon their proportionate share of the total Flow. If there are external fines and penalties resulting from a shared violation which is attributable to multiple Contributing Users, but the Contributing User or Users who caused the violation cannot be identified, then the obligation to pay the fines and penalties shall be shared by the Contributing Users in proportion to their share of the total Flow. The provision of this Section shall survive the expiration of this Agreement.

8. Metering Devices. Aqua shall pay for all costs and expenses that Aqua incurs related to the installation and maintenance of any metering device (a) at any Connection Point, or (b) used to calculate the Flow emanating from the Municipality System to the Acquired System located elsewhere in the Acquired System, anywhere in the Municipality System or anywhere else, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining any metering device ("Metering Costs").

9. Compliance with Laws. Each Party shall comply with all applicable present and future Laws having jurisdiction over such Party or such Party's Facilities, all present and future Permits applicable to such Party's Facilities and all applicable grant agreements, unless the same are being contested in good faith by appropriate proceedings.

10. Sampling and Monitoring Equipment. Aqua may install, in its sole and absolute discretion and at its sole cost and expense, sampling and monitoring equipment ("Sampling Equipment") at the Connection Points for the purpose of sampling and analyzing the wastewater delivered to the Acquired System and to ensure compliance with the Aqua Tariff. Aqua shall own and operate any Sampling Equipment that it elects to install and shall be responsible, at its sole cost and expense, for designing, installing, operating, maintaining, updating and replacing any Sampling Equipment that it elects to install. Aqua shall collect 24-hour flow proportional composite samples, if feasible, and shall split samples with the Municipality for concurrent independent analysis by the Municipality.

11. Easements and Licenses Regarding Flow Meters and Sampling and Monitoring Agreement. The Municipality hereby grants Aqua an easement over any of its property and a license to access the Municipality System in order to install, access, operate or maintain (a) the Flow meters installed in the Municipality System, and (b) any Sampling Equipment that Aqua elects to install pursuant to Section 10. On the request of Aqua, the Municipality shall execute and deliver to Aqua any agreement or instrument in form and substance reasonably acceptable to Aqua in connection with or related to any such easement or license. Aqua may utilize the Sampling Equipment on a routine basis, in its sole and absolute discretion. The Municipality may request Aqua to conduct a sampling of the wastewater outside of Aqua's normal sampling and testing procedure, at the Municipality's sole expense and the Municipality shall share the results of the sampling with Aqua upon Aqua's request and expense.

12. Industrial Waste Survey. The Municipality shall maintain a current list of users of the Municipality System that generate nondomestic waste or industrial waste in accordance with the following (a "Industrial Waste Survey"):

12.1. The Industrial Waste Survey shall include the facility name and address of all users that generate nondomestic waste or industrial waste whose wastewater passes through the Municipality System to the Acquired System, the nature of each user's business and the name and contact information of a responsible individual to be contacted at each user.

12.2. An updated Industrial Survey shall be provided to Aqua within thirty (30) days of the Effective Date. The list shall include users that have been added as well as those that have been removed or where site operations have changed.

12.3. The Municipality shall provide to Aqua the results of its updated Industrial Waste Survey on or prior to March 31, June 30, September 30, and December 31 of each year during the Term.

13. Rates for Service. In connection with Aqua's collection, conveyance, treatment and disposal of wastewater from the Municipality emanating from the Municipality System, the Municipality shall pay to Aqua a rate based on thousands of gallons of Flow as determined pursuant this Agreement (the "Rate"). For the period commencing on the Effective Date through the first full year, the Rate shall be Three and 66/100 Dollars ($3.66) per thousand gallons. For each of the next two (2) years during the Term following the first full year, the then current Rate shall increase by three percent (3%). The PUC retains ultimate jurisdiction over setting the Rate,

and this Agreement shall be subject to PUC review and approval. To the extent the PUC determines the Rate set forth in this Agreement is unjust or unreasonable, this Agreement shall remain in effect and Aqua's shareholders shall be responsible for the difference between the rate the PUC determines is just and reasonable and the Rate in this Agreement.

14. Invoicing and Payment Terms. During each year during the Term, Aqua shall bill the Municipality quarterly for service through March 31, June 30, September 30 and December 31 in arrears. Any quarterly amount due for any partial quarter during the Term shall be prorated based on the number of days within such quarter that fall within the Term. The Municipality shall pay each quarterly bill to Aqua in full within forty-five (45) days after the date of the bill. Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due.

15. Peak Flow Limitations. The Municipality shall be limited to a peak daily flow of four (4) times its three-year annual average daily flow rate (the "Peak Flow Limitation Amount"). Aqua shall notify the Municipality within 30 days of any exceedance of the Peak Flow Limitation Amount and shall also notify the Municipality in a timely manner of any daily flows that exceed 90% of the Peak Flow Limitation Amount for a period of 3 consecutive days. Should the Municipality exceed the Peak Flow Limitation Amount, the Municipality shall be penalized $1,000.00 for each day in which the flow exceeds the Peak Flow Limitation Amount. The Municipality shall submit payment for each flow exceedance within 60 days of being notified by Aqua of the flow exceedance. In lieu of the Municipality paying the subject penalty payment to Aqua, the Municipality shall be permitted to use this money to address I&I within the Municipality System. If the Municipality elects to make improvements to the Municipality System to address I&I, the Municipality shall (a) notify Aqua in writing within 60 days of receiving notification of the flow exceedance that the Municipality intends to make improvements to the Municipality System, which notice shall include what improvements the Municipality intends to make to the Municipality System, (b) complete such improvements to the Municipality System within two (2) year of the date of its notice to Aqua of its intent to make such improvements (the "Improvement Completion Period"), and (c) within 30 days of the end of the Improvement Completion Period, submit documentation acceptable to Aqua certifying that such improvements have been made. If the Municipality elects to make improvements to the Municipality System, and such improvements are not fully completed within the Improvement Completion Period, within 60 days of the end of the Improvement Completion Period, the Municipality shall pay $5,000 to Aqua. The provisions of this Section 15 shall become effective on the third anniversary of the date on which Aqua commences billing the Municipality solely on flow metering. The intent of this peak daily flow limitation requirement is to encourage the Municipality to make I&I repairs to the Municipality System.

16. Municipality System. During the Term, the Municipality shall, at its sole cost and expense, maintain the Municipality System in good repair and operating condition, and continuously operate the same in accordance with prudent industry practices and standards. Aqua shall have no obligation or liability to repair, maintain, expand or modify any part of the Municipality System and any repair, maintenance, expansion or modification of all or any part of the Municipality System shall be at the sole cost and expense of the Municipality.

17. Indemnification

17.1. Indemnification by the Municipality. The Municipality shall indemnify and defend Aqua, and Aqua's directors, officers, employees, representatives and agents (collectively the "Aqua Indemnified Parties") against, and shall hold the Aqua Indemnified Parties harmless from and against, and shall pay and reimburse the Aqua Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Aqua Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.1.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of the Municipality in connection with the collection or conveyance of any wastewater emanating from the Municipality System except to the extent that any such injury, death or damage is caused by Aqua (including, without limitation, resulting from any breach of this agreement by Aqua);

17.1.2. any claim, litigation, proceeding or action of any kind whatsoever by any Governmental Authority or third party related to (i) any action or inaction of the Municipality with respect to the Municipality System, or (ii) the collection, conveyance, treatment or disposal of any wastewater emanating from the Municipality System except to the extent that any such claim or action is the result of any action or inaction of Aqua; or

17.1.3. any breach by the Municipality of any of its covenants or obligations under this Agreement.

17.2. Indemnification by Aqua. To the extent that the Municipality is not immune under applicable Law, Aqua shall indemnify and defend the Municipality, and the Municipality's elected officials, directors, officers, employees, representatives and agents (collectively the "Municipality Indemnified Parties") against, and shall hold the Municipality Indemnified Parties harmless from and against, and shall pay and reimburse the Municipality Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Municipality Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.2.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of Aqua in connection with the treatment or disposal of any wastewater emanating from the Connection Points of the Municipality System except to the extent that any such injury, death or damage is caused by the Municipality (including, without limitation, resulting from any breach of this Agreement by the Municipality) and/or any third party (including, without limitation, any other Contributing User); or

17.2.2. any breach by Aqua of any of its covenants or obligations under this Agreement.

If any claim is made or action or proceeding filed against the Municipality for which the Municipality could potentially seek indemnification from Aqua pursuant to the provision of this

Section 17.2, the Municipality shall not waive or seek to waive any immunity afforded to it pursuant to applicable Law.

17.3. The provision of this Section 17 shall survive the expiration of this Agreement.

18. Enforcement Obligation. The Municipality shall, at Aqua's request, enforce, promptly and to the fullest extent of its authority and at its sole cost and expense, all standards, criteria, requirements, and thresholds established by any Law (including any ordinances or regulation of the Municipality), Governmental Authority or Permit or the Aqua Tariff (each, a "Wastewater Standard"), against any Person, which violates a Wastewater Standard and which Aqua in good faith has identified as having a wastewater flow which violates a Wastewater Standard.

19. Consent to Sale of Acquired System. Effective as of the Execution Date, the Municipality (a) hereby consents to Aqua's purchase and acquisition of the Acquired System and related assets, (b) hereby waives any and all objections it has or may have in regard to the City's sale and Aqua's acquisition of the Acquired System and related assets, and (c) shall take any and all actions reasonably requested by Aqua and/or the City to effectuate the City's sale and Aqua's acquisition of the Acquired System and related assets, including, without limitation, executing and delivering any consents or other documents or passing any ordinance or resolution. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19.

20. Consent to City Updating of City's Act 537 Plan. The Municipality acknowledges that in connection with the City's sale of the Acquired System to Aqua, the City is required to update the City's Act 537 Plan. On the City completing its updating of its Act 537 Plan, at the request of Aqua or the City, the Municipality shall review the update to the City's Act 537 Plan and, if appropriate, shall pass a resolution in form and substance acceptable to DEP and the City approving the City's updated Act 537 Plan. Review and approval shall not be unreasonably delayed or withheld. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19. The terms of this Section 19 shall be effective as of the Execution Date.

21. Future Plant Expansion. In accordance with DEP Chapter 94 regulations, should the Acquired Treatment Plant be projected to exceed its design capacities within a five year term, Aqua shall send notice of such event to the Municipality; and, within six (6) months of the date of such notice, the City or Aqua and the Municipality shall initiate planning in accordance with Act 537 to evaluate the need for expansion of the treatment facilities.

22. Planning Modules. For any changes within the Municipality (for example, subdivision, land development, system expansion, among others) that requires DEP Sewage Facilities Planning approval, the Municipality will provide the complete and appropriate planning module components to Aqua for review. For any planning modules that do not cause an overload condition, Aqua will review the planning modules in a timely manner for Municipality's use in submission to DEP, and Aqua's approval will not be unreasonably withheld.

23. Miscellaneous.

23.1. Inspection and Audit. Aqua and the Municipality agree to maintain complete and accurate records and accounts concerning their responsibilities under this Agreement. All Parties shall, at all times, have the right to examine and inspect said records and accounts upon thirty (30) days' written notice. If required by law or regulation, Aqua and the Municipality shall make said records and accounts immediately available to federal and state authorities.

23.2. Waiver of Rights. The failure of any party hereto to insist upon strict performance of this Agreement or any of the terms or conditions hereof shall not be construed as a waiver of any of its rights hereunder.

23.3. Modification. This writing constitutes the entire Agreement between the parties and there are no representations or agreements, verbal or written, other than those contained herein. This Agreement may be modified, amended or supplemented by the written agreement of the Parties.

23.4. Necessity of Permits. In the event that a Governmental Authority refuses to issue any material Permit and the Parties have no recourse to appeal and obtain such denied Permit during the Term, and such Permit may be necessary to accomplish the intent and purpose of this Agreement, then the Parties hereto shall be relieved from further compliance with the terms of this Agreement, except for payments for services actually being rendered, until such time when such Permit or Permits shall be issued and then this Agreement shall become fully operative and the Parties hereunder shall be bound by all the terms hereof.

23.5. Severability. Should any one or more of the provisions of this Agreement for any reason be held illegal, invalid or unenforceable, such illegality, invalidity or unenforceability shall not affect any other provision of this Agreement and the remainder of this Agreement shall, in such circumstances, be construed and enforced as if such illegal, invalid or unenforceable provision had not been contained herein.

23.6. Interpretation. For purposes of this Agreement, unless the context otherwise requires, references in this Agreement to (a) Sections are to Sections of this Agreement; (b) exhibits and schedules are to exhibits and schedules attached to this Agreement and (c) an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof. This Agreement shall be construed without regard to any presumption or rule requiring construction or interpretation against the Party drafting an instrument or causing any instrument to be drafted.

23.7. Counterparts. This Agreement may be executed in two (2) or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, e.g., www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof.

23.8. Addresses. Whenever a notice is required to be given in writing by mail, the following addresses shall be used, unless a different address is specifically called for:

Municipality: Borough of Eastvale
Eastvale Municipal Building
512 2nd Avenue Eastvale
Beaver Falls, PA 15010
Attn: Mayor

Aqua: Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010
Attn: President

with required copy to:
Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Ave
Bryn Mawr, PA 19010
Attn: General Counsel

23.9. Termination of Existing Agreements. On the Effective Date, all existing agreements, whether written, oral or implied, between or among the City and the Municipality with respect to the conveyance and/or treatment of wastewater, including, but not limited to the Existing Agreement, shall terminate and be of no further force or effect.

23.10. Choice of Law. This Agreement shall be governed by and construed with the laws of the Commonwealth of Pennsylvania except for those requirements, terms, duties and conditions regulated by federal law, and jurisdiction shall be in the Court of Common Pleas of Beaver County.

23.11. Arbitration. Any controversy, claim or dispute arising out of, or relating to this Agreement, or the breach thereof, may, if agreed by the parties, be settled by arbitration, and judgment upon any award rendered by the arbitrator or arbitrators may be entered in the Court of Common Pleas of Beaver County. Notwithstanding the above, any controversies, claims and disputes that are within the jurisdiction of the PUC shall be resolved before the PUC.

23.12. Force Majeure. Notwithstanding any other provision of this Agreement, no Party hereto shall be responsible for damages to the other for any failure to comply with this Agreement resulting from an act of God or riot, sabotage, public calamity, flood, strike, unforeseeable breakdown of the Acquired Treatment Plant, or other event beyond its reasonable control. The Party having the responsibility for the Facilities so affected, however, shall proceed promptly to remedy the consequences of such event, with costs to be shared, if applicable, to the extent provided elsewhere herein.

23.13. Most Favored Nation. During the Term, Aqua shall not enter into any bulk treatment agreement with any municipality or authority related to the acceptance, treatment, and

disposal of wastewater by the Acquired System (a "Bulk Treatment Agreement") which provides for, or modify any existing Bulk Treatment Agreement to provide for, a bulk treatment rate per thousand gallons that is less than the then current Rate being charged to the Municipality under this Agreement.

23.14. Entire Agreement. This Agreement, together with all schedules and exhibits attached hereto, constitutes the sole and entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such the matter hereof.

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed and their respective corporate seals affixed the day and year first above written.

# WASTEWATER SERVICE AGREEMENT

THIS WASTEWATER SERVICE AGREEMENT (the "Agreement "), is made as of the 21st day of December, 2023 (the "Execution Date"), by and between AQUA PENNSYLVANIA WASTEWATER, INC., a Pennsylvania public utility company ("Aqua") and THE NORTH SEWICKLEY TOWNSHIP SEWER AUTHORITY, a municipal authority (the "Authority"). Aqua and the Authority are each a "Party," and collectively, the "Parties."

## RECITALS

WHEREAS, Aqua and the City of Beaver Falls (the "City") have entered into an Asset Purchase Agreement dated October 20, 2021 (the "APA"), which provides that the City has agreed to sell and convey to Aqua the wastewater collection system that the City owns (the "Acquired Collection System"), the wastewater treatment plant that the City owns (the "Acquired Treatment Plant," and collectively together with the Acquired Collection System, the "Acquired System") and substantially all of the City's assets related to the Acquired System; and

WHEREAS, the Authority owns, maintains and operates a system of gravity sewer mains, force mains, laterals and other necessary infrastructure and means for the collection and conveyance of wastewater emanating from North Sewickley Township (the "Authority System") which is connected to the Acquired System (either directly or indirectly through a third party's collection system) and wastewater emanating from the Authority System is collected and conveyed to and treated and disposed of by the Acquired System; and

WHEREAS, prior to the closing of the transaction contemplated by the APA (the "Closing"), the City is providing for the collection, conveyance, treatment and disposal of the wastewater emanating from the Authority System by the Acquired System; and

WHEREAS, effective as of the date that the Closing occurs (the "Closing Date"), the City and the Authority desire to terminate any and all existing agreements between them regarding the collection, conveyance, treatment and disposal of the wastewater emanating from the Authority System by the Acquired System including, without limitation, that certain Agreement by and between the Authority and the City dated January 9, 2003 (the "Existing Agreement"); and

WHEREAS, effective as of the Closing Date, this Agreement shall govern the collection, conveyance, treatment and disposal of the wastewater emanating from the Authority System by the Acquired System and the charge for such services; and

WHEREAS, operation of the Authority sanitary sewer system is, and shall remain, subject to the sole requirements of the Pennsylvania Department of Environmental Protection ("DEP").

NOW, THEREFORE, in consideration of the mutual covenants contained herein, and intending to be legally bound hereby, the Parties hereto agree as follows:

1. Incorporation of Recitals. The recitals set forth above are hereby incorporated into and made part of this Agreement as though fully set forth herein.

2. Definitions

2.1. Defined Terms. The following terms shall have the following meanings, except as otherwise expressly provided or unless the context otherwise requires. Other terms are defined in the text of this Agreement, and throughout this Agreement, those terms shall have the meanings respectively ascribed to them.

2.1.1. "Authority Meter." The flow meter located at the Bennetts Run pump station and any replacement of such flow meter that the Authority installs.

2.1.2. "Aqua Meter." A flow meter that Aqua installs at a Connection Point.

2.1.3. "Aqua Tariff." Aqua's tariff on file with and approved by the PUC as the same may be amended, supplemented, restated, replaced or revised from time to time.

2.1.4. "Connection Points." The locations at which the Authority System connects to the Acquired Collection System or a Third-Party System as identified on Exhibit A attached hereto.

2.1.5. "Contributing Users." The Authority, Borough of Big Beaver, Borough of Eastvale, City, Township of Patterson, Borough of Patterson Heights, Borough of West Mayfield and Township of White and any other municipality or authority that enters into an agreement with Aqua during the Term related to the collection, conveyance and treatment of such municipality's or authority's wastewater through the Acquired System.

2.1.6. "Effective Date." The Effective Date as defined in Section 3.1.

2.1.7. "Facilities." Facilities means with respect to (a) Aqua, the components of the Acquired System, and (b) the Authority, the components of the Authority System.

2.1.8. "Flow." The quantity or volume of wastewater that emanates from the Authority System and is collected, conveyed, treated and discharged by the Acquired System.

2.1.8.1. "Metered Flow." Any Flow through the Metered Point.

2.1.8.2. "Un-Metered Flow." Any Flow through interconnections of the Authority System and the Acquired Collection System or Third-Party System which do not employ a formal wastewater flow metering device and are identified on Exhibit C attached hereto. The Flow values for these interconnection points are based on water consumption data provided to Aqua by the Contributing User or its water provider, multiplied by a factor of 1.5 to account for inflow and infiltration. Un-Metered Flow originating from the Acquired Collection System flowing to the Authority System will be deducted from the bill to the Authority System. Un-Metered Flow originating from the Authority System flowing to the Acquired Collection System will be added to the bill of the Authority System. Un-Metered Flow between Outside Users will be added to the bill of the Outside User where the Un-Metered Flow originated, and deducted from the bill of the Outside User who received the Un-Metered Flow. If new Un-Metered Flow

interconnections occur, or existing connections are removed, to or from the Authority System which would alter the interconnection points listed on Exhibit C, Exhibit C shall be amended accordingly. If at some time in the future any of these interconnections become metered by a formal flow metering device, Exhibit B and Exhibit C shall be amended accordingly, and the flows at such points shall be considered actual and included in the regular Metered Flow calculations.

2.1.9. "Governmental Authority." Any federal, state or local government or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations or orders of such organization or authority have the force of Law), or any arbitrator, court or tribunal of competent jurisdiction.

2.1.10. "Industrial Waste Survey." As defined in Section 12.

2.1.11. "Law." Any statute, law, ordinance, regulation, rule, code, order, constitution, common law, judgment, decree or other requirement or rule of law of any Governmental Authority.

2.1.12. "Losses." Losses, damages, liabilities, deficiencies, actions, judgments, interest, awards, penalties, fines, costs or expenses of whatever kind, including reasonable attorneys' fees and the cost of enforcing any right to indemnification under this Agreement.

2.1.13. "Metered Point." The Bennetts Run pump station; provided, however, if Aqua elects to install an Aqua Meter, "Metered Point" shall mean the Connection Point at which the Aqua Meter is located. If Aqua elects to install an Aqua Meter, Exhibit B shall be amended to evidence the Connection Point at which the Aqua Meter is installed.

2.1.14. "Notice Date." The date that Aqua provides written notice to the Authority that Aqua intends to make a modification, upgrade or expansion to all or any portion of the Acquired System.

2.1.15. "Outside Users." The Contributing Users excluding the City.

2.1.16. "Permit." Any permit, license, franchise, approval, authorization, registration, certificate, variance or similar right obtained, or required to be obtained, from any Governmental Authority.

2.1.17. "Person." An individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

2.1.18. "Prohibited Discharge." Any waste, pollutant, or other substance which is prohibited to be discharged into the Acquired System as set forth in the Aqua Tariff.

2.1.19. "PUC." The Pennsylvania Public Utility Commission.

2.1.20. "Third-Party System." A system for the collection and transportation of wastewater that (a) is owned by a third party, and (b) directly or indirectly transports and conveys wastewater to the Acquired System.

2.2. Terms Defined in Aqua Tariff. Terms used in this Agreement which are defined in the Aqua Tariff and not otherwise defined herein shall have the respective meanings ascribed to such terms in the Aqua Tariff.

3. Effective Date; Term.

3.1. Effective Date. This Agreement shall become effective on the Closing Date (the "Effective Date"). If Aqua's purchase of the Acquired Systems pursuant to the APA does not close and the APA is terminated, this Agreement shall automatically terminate and be null and void and of no force or effect.

3.2. Term. The term of this Agreement shall be a period of three (3) years (the "Term") commencing on the Effective Date.

4. Treatment and Disposal of Wastewater. Subject to the terms of this Agreement, during the Term, Aqua shall accept, treat and dispose of the wastewater that emanates from the Authority System. The wastewater that emanates from the Authority System shall be delivered to the Acquired Treatment Plant from the Authority System to the Acquired Collection System (either directly or indirectly through a Third-Party System). The Authority covenants and agrees that all wastewater emanating from the Authority System to the Acquired System shall be in accordance and compliance with all requirements of the Aqua Tariff and applicable Laws, as they may be amended from time to time.

5. Prohibited Discharges; Hauled Waste.

5.1. No Prohibited Discharge shall be permitted to be discharged into the Acquired System from the Authority System,

5.2. No hauled waste shall be permitted to be discharged into the Acquired System from the Authority System unless (a) the user discharging such waste has, prior to the discharge of such waste, obtained a permit from the DEP permitting the discharge of such waste into the Authority System (a "Hauled Waste Permit"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Hauled Waste Permit issued to the user.

6. Nondomestic Waste/Industrial Waste. No nondomestic waste or industrial waste shall be discharged into the Acquired System from the Authority System unless (a) the user discharging such waste has, prior to the discharge of such waste, entered into a written agreement acceptable in form and substance to Aqua related to the pretreatment and discharge of such waste (an "Industrial Waste Agreement"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Industrial Waste Agreement.

7. Operation and Enforcement.

7.1. Flow Calculations. As of the Closing Date and until Aqua installs flow meters to measure the Flow from each Contributing User, Flow for billing purposes shall be calculated based on the existing practice of using water meter read information supplied by the Contributing User or its water provider. After flow meters are installed to measure the Flow from each Contributing User, Flow from the Authority System shall be determined by combining (i) the Metered Flow and (ii) all remaining Un-Metered Flow. The presence of the Authority Meter shall be deemed Aqua installing a flow meter in the Authority System for purposes of this Section 7.1. During the period in which an Aqua Meter has not been installed, the Authority shall communicate to Aqua flow calculations from the Authority Meter for each quarter within thirty (30) days of the end of each quarter. If Aqua elects to install an Aqua Meter, after the installation of the Aqua Meter, Aqua shall communicate to the Authority Flow calculations from the Aqua Meter for such quarter within thirty (30) days of the end of each quarter. All daily Flow calculations (whether by Aqua or the Authority) from be based on a twenty-four (24) hour period utilizing 7:00 AM as the daily meter reading time.

7.2. Record Keeping/Flow Meter Maintenance. The Authority shall (a) maintain accurate Flow records for Metered Flow based on the Flow meter readings from the Authority Meter; and (b) own, operate, maintain and replace, if necessary, the Authority Meter and shall calibrate the Authority Meter in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings. If Aqua installs an Aqua Meter, Aqua shall (x) maintain accurate Flow records for Metered Flow based on the Flow meter readings from the Aqua Meter; and (y) own, operate, maintain and replace, if necessary, the Aqua Meter and shall calibrate the Aqua Meter in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings.

7.3. Calibration and Testing.

7.3.1. Meter equipment and remote readouts (a) for an Aqua Meter (if Aqua elects to install an Aqua Meter) shall be tested, calibrated, maintained, and repaired at least annually by Aqua at Aqua's cost, and (b) the Authority Meter shall be tested, calibrated, maintained, and repaired at least annually by the Authority at the Authority's cost. The party responsible for the testing and calibration of a meter (the "Testing Party") shall provide the other party (the "Non-testing Party") with the results of such testing and calibration upon request and no later than fourteen (14) business days from such request. If the Non-testing Party requests additional testing, calibration, maintenance and repair, such expenses associated therewith shall be at the cost of the Non-testing Party.

7.3.2. If the Authority and Aqua cannot agree as to the inaccuracy of any meter, the party that does agree to the accuracy of a meter may request that the meter be tested by an independent testing facility mutually agreed to by the Authority and Aqua and such independent testing facility's determination of accuracy shall be conclusive. All costs related to the testing shall be borne fifty percent (50%) by the Authority and fifty percent (50%) by Aqua.

7.3.3. If upon any test, the percentage of inaccuracy of any metering equipment is found to be in excess of three percent (3%), the calibration thereof shall be corrected, and any billing shall be adjusted, for a period extending back to the time when such inaccuracy began, if

such time is ascertainable. If such time is not ascertainable, then for a period extending back one-half (1/2) of the time elapsed since the most recent date of calibration, but in no event further back than a period of six (6) months where such time is not ascertainable.

7.4. Estimated Meter Readings. Whenever it is necessary to estimate Flow meter readings due to equipment malfunction, failure, power outage, or similar events, Aqua or the Authority, as applicable, shall notify the other for any period of time such estimated readings were utilized within 72 hours of discovering such event. Any estimated reading shall be calculated using the average monthly Flow for the Flow meter in question, for the previous month, for each day the estimated reading is made. The amount of wastewater conveyed during such period may be estimated (i) by correcting the error if the percentage of the error is ascertainable by calibration tests or mathematical calculation, or (ii) estimating the quantity of delivery by deliveries during the preceding periods under similar conditions when the meter or meters were registering accurately.

7.5. Storm-water / Groundwater Inflow & Infiltration ("I&I"). The Authority shall enact, keep in force and enforce appropriate ordinances and/or regulations prohibiting the direct discharge of storm water, surface water runoff and groundwater into the Authority System, and for the maintenance and repair of sewer lateral vent caps and cleanouts, so as to ensure that the waters or wastes discharged by any party into the Authority System shall not contain, to the maximum extent possible, storm water, sump pump discharges, roof or surface drainage, or any discharges other than wastewater. Should sources of excessive I&I exist as determined by Aqua or any Governmental Authority having jurisdiction, the Authority shall in a timely manner use its best efforts to locate and correct these conditions, in accordance with any Government Authority requirements. If the Authority does not have an ordinance regarding the inspection and repair of sewer laterals in effect on the Effective Date, within one (1) year of the Effective Date, the Authority shall enact an ordinance regarding the inspection and repair of sewer laterals and be responsible for the management and enforcement of such ordinance.

7.6. Violation of Permit or Law. In the event the Flow or wastewater characteristics from the Authority System causes a violation of any Law or Permit related to the Acquired System, as may be established by specific, split sampling and independent laboratory and engineering analysis performed by Aqua and the Authority or DEP, and whereby external fines or penalties may result, the Authority shall be solely responsible for such fines and penalties, and all costs and expenses incurred by Aqua as a result thereof, including reasonable attorneys' and consultants' fees and expenses. If external fines and penalties are a result of shared violation of Aqua and the Authority, Aqua and the Authority shall share the burden of such fines and penalties based upon their proportionate share of the total Flow. If there are external fines and penalties resulting from a shared violation which is attributable to multiple Contributing Users, but the Contributing User or Users who caused the violation cannot be identified, then the obligation to pay the fines and penalties shall be shared by the Contributing Users in proportion to their share of the total Flow. The provision of this Section shall survive the expiration of this Agreement.

8. Metering Devices. If Aqua elects to install an Aqua Meter, Aqua shall pay for all costs and expenses that Aqua incurs related to the installation and maintenance of the Aqua Meter, which shall include, without limitation, the cost of the metering device and any other equipment related

or ancillary to such metering device and labor incurred in installing and maintaining any metering device. The Authority shall pay for all costs and expenses that the Authority incurs related to the installation or maintenance of the Authority Meter, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining such metering device.

9. Compliance with Laws. Each Party shall comply with all applicable present and future Laws having jurisdiction over such Party or such Party's Facilities, all present and future Permits applicable to such Party's Facilities and all applicable grant agreements, unless the same are being contested in good faith by appropriate proceedings.

10. Sampling and Monitoring Equipment. Aqua may install, in its sole and absolute discretion and at its sole cost and expense, sampling and monitoring equipment ("Sampling Equipment") at any Connection Point or at the Bennetts Run pump station or at such other location in the Authority System on which Aqua and the Authority may agree for the purpose of sampling and analyzing the wastewater delivered to the Acquired System and to ensure compliance with the Aqua Tariff. Aqua shall own and operate any Sampling Equipment that it elects to install and shall be responsible, at its sole cost and expense, for designing, installing, operating, maintaining, updating and replacing any Sampling Equipment that it elects to install. Aqua shall collect 24-hour flow proportional composite samples, if feasible, and shall split samples with the Authority for concurrent independent analysis by the Authority.

11. Easements and Licenses Regarding Flow Meters and Sampling and Monitoring Agreement. The Authority hereby grants Aqua an easement over any of its property and a license to access the Authority System in order to install, access, operate or maintain (a) any Aqua Meter that Aqua elects to install, and (b) any Sampling Equipment that Aqua elects to install pursuant to Section 10. On the request of Aqua, the Authority shall execute and deliver to Aqua any agreement or instrument in form and substance reasonably acceptable to Aqua in connection with or related to any such easement or license. Aqua may utilize the Sampling Equipment on a routine basis, in its sole and absolute discretion. The Authority may request Aqua to conduct a sampling of the wastewater outside of Aqua's normal sampling and testing procedure, at the Authority's sole expense and the Authority shall share the results of the sampling with Aqua upon Aqua's request and expense.

12. Industrial Waste Survey. The Authority shall maintain a current list of users of the Authority System that generate nondomestic waste or industrial waste in accordance with the following (a "Industrial Waste Survey"):

12.1. The Industrial Waste Survey shall include the facility name and address of all users that generate nondomestic waste or industrial waste whose wastewater passes through the Authority System to the Acquired System, the nature of each user's business and the name and contact information of a responsible individual to be contacted at each user.

12.2. An updated Industrial Survey shall be provided to Aqua within thirty (30) days of the Effective Date. The list shall include users that have been added as well as those that have been removed or where site operations have changed.

12.3. The Authority shall provide to Aqua the results of its updated Industrial Waste Survey on or prior to March 31, June 30, September 30, and December 31 of each year during the Term.

13. Rates for Service. In connection with Aqua's collection, conveyance, treatment and disposal of wastewater emanating from the Authority System, the Authority shall pay to Aqua a rate based on thousands of gallons of Flow as determined pursuant this Agreement (the "Rate"). For the period commencing on the Effective Date through the first full year, the Rate shall be Three and 66/100 Dollars ($3.66) per thousand gallons. For each of the next two (2) years during the Term following the first full year, the then current Rate shall increase by three percent (3%). The PUC retains ultimate jurisdiction over setting the Rate, and this Agreement shall be subject to PUC review and approval. To the extent the PUC determines the Rate set forth in this Agreement is unjust or unreasonable, this Agreement shall remain in effect and Aqua's shareholders shall be responsible for the difference between the rate the PUC determines is just and reasonable and the Rate in this Agreement.

14. Invoicing and Payment Terms. During each year during the Term, Aqua shall bill the Authority quarterly for service through March 31, June 30, September 30 and December 31 in arrears. Any quarterly amount due for any partial quarter during the Term shall be prorated based on the number of days within such quarter that fall within the Term. The Authority shall pay each quarterly bill to Aqua in full within forty-five (45) days after the date of the bill. Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due.

15. Peak Flow Limitations. The Authority shall be limited to a peak daily flow of four (4) times its three-year annual average daily flow rate (the "Peak Flow Limitation Amount"). Aqua shall notify the Authority within 30 days of any exceedance of the Peak Flow Limitation Amount and shall also notify the Authority in a timely manner of any daily flows that exceed 90% of the Peak Flow Limitation Amount for a period of 3 consecutive days. Should the Authority exceed the Peak Flow Limitation Amount, the Authority shall be penalized $1,000.00 for each day in which the flow exceeds the Peak Flow Limitation Amount. The Authority shall submit payment for each flow exceedance within 60 days of being notified by Aqua of the flow exceedance. In lieu of the Authority paying the subject penalty payment to Aqua, the Authority shall be permitted to use this money to address I&I within the Authority System. If the Authority elects to make improvements to the Authority System to address I&I, the Authority shall (a) notify Aqua in writing within 60 days of receiving notification of the flow exceedance that the Authority intends to make improvements to the Authority System, which notice shall include what improvements the Authority intends to make to the Authority System, (b) complete such improvements to the Authority System within two (2) year of the date of its notice to Aqua of its intent to make such improvements (the "Improvement Completion Period"), and (c) within 30 days of the end of the Improvement Completion Period, submit documentation acceptable to Aqua certifying that such improvements have been made. If the Authority elects to make improvements to the Authority System, and such improvements are not fully completed within the Improvement Completion Period, within 60 days of the end of the Improvement Completion Period, the Authority shall pay $5,000 to Aqua. The provisions of this Section 15 shall become effective on the third anniversary

of the date on which Aqua commences billing the Authority solely on flow metering. The intent of this peak daily flow limitation requirement is to encourage the Authority to make I&I repairs to the Authority System. Notwithstanding anything set forth in this section to the contrary, the Authority shall be permitted to transmit Flow of up to 450 gallons per minute from the Authority System to the Acquired System without penalty or surcharge by Aqua.

16. Authority System. During the Term, the Authority shall, at its sole cost and expense, maintain the Authority System in good repair and operating condition, and continuously operate the same in accordance with prudent industry practices and standards. Aqua shall have no obligation or liability to repair, maintain, expand or modify any part of the Authority System and any repair, maintenance, expansion or modification of all or any part of the Authority System shall be at the sole cost and expense of the Authority.

17. Indemnification

17.1. Indemnification by the Authority. The Authority shall indemnify and defend Aqua, and Aqua's directors, officers, employees, representatives and agents (collectively the "Aqua Indemnified Parties") against, and shall hold the Aqua Indemnified Parties harmless from and against, and shall pay and reimburse the Aqua Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Aqua Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.1.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of the Authority in connection with the collection or conveyance of any wastewater emanating from the Authority System except to the extent that any such injury, death or damage is caused by Aqua (including, without limitation, resulting from any breach of this agreement by Aqua);

17.1.2. any claim, litigation, proceeding or action of any kind whatsoever by any Governmental Authority or third party related to (i) any action or inaction of the Authority with respect to the Authority System, or (ii) the collection, conveyance, treatment or disposal of any wastewater emanating from the Authority System except to the extent that any such claim or action is the result of any action or inaction of Aqua; or

17.1.3. any breach by the Authority of any of its covenants or obligations under this Agreement.

17.2. Indemnification by Aqua. To the extent that the Authority is not immune under applicable Law, Aqua shall indemnify and defend the Authority, and the Authority's elected officials, directors, officers, employees, representatives and agents (collectively the "Authority Indemnified Parties") against, and shall hold the Authority Indemnified Parties harmless from and against, and shall pay and reimburse the Authority Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Authority Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.2.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of Aqua in connection with the treatment or disposal of any wastewater emanating from the Connection Points of the Authority System except to the extent that any such injury, death or damage is caused by the Authority (including, without limitation, resulting from any breach of this Agreement by the Authority) and/or any third party (including, without limitation, any other Contributing User); or

17.2.2. any breach by Aqua of any of its covenants or obligations under this Agreement.

If any claim is made or action or proceeding filed against the Authority for which the Authority could potentially seek indemnification from Aqua pursuant to the provision of this Section 17.2, the Authority shall not waive or seek to waive any immunity afforded to it pursuant to applicable Law.

17.3. The provision of this Section 17 shall survive the expiration of this Agreement.

18. Enforcement Obligation. The Authority shall, at Aqua's request, enforce, promptly and to the fullest extent of its authority and at its sole cost and expense, all standards, criteria, requirements, and thresholds established by any Law (including any ordinances or regulation of the Authority), Governmental Authority or Permit or the Aqua Tariff (each, a "Wastewater Standard"), against any Person, which violates a Wastewater Standard and which Aqua in good faith has identified as having a wastewater flow which violates a Wastewater Standard.

19. Consent to Sale of Acquired System. Effective as of the Execution Date, the Authority (a) hereby consents to Aqua's purchase and acquisition of the Acquired System and related assets, (b) hereby waives any and all objections it has or may have in regard to the City's sale and Aqua's acquisition of the Acquired System and related assets, and (c) shall take any and all actions reasonably requested by Aqua and/or the City to effectuate the City's sale and Aqua's acquisition of the Acquired System and related assets, including, without limitation, executing and delivering any consents or other documents or passing any ordinance or resolution. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19.

20. Consent to City Updating of City's Act 537 Plan. The Authority acknowledges that in connection with the City's sale of the Acquired System to Aqua, the City is required to update the City's Act 537 Plan. On the City completing its updating of its Act 537 Plan, at the request of Aqua or the City, the Authority shall review the update to the City's Act 537 Plan and provide comments to the City's updated Act 537 Plan (the "Updated Plan") and, if appropriate, shall pass a resolution approving the Updated Plan and urging the Township of North Sewickley to adopt the Updated Plan. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19. The terms of this Section 19 shall be effective as of the Execution Date.

21. Future Plant Expansion. In accordance with DEP Chapter 94 regulations, should the Acquired Treatment Plant be projected to exceed its design capacities within a five year term, Aqua shall send notice of such event to the Authority; and, within six (6) months of the date of

such notice, the City or Aqua and the Authority shall initiate planning in accordance with Act 537 to evaluate the need for expansion of the treatment facilities.

22. Planning Modules. For any changes within the Authority (for example, subdivision, land development, system expansion, among others) that requires DEP Sewage Facilities Planning approval, the Authority will provide the complete and appropriate planning module components to Aqua for review. For any planning modules that do not cause an overload condition, Aqua will review the planning modules in a timely manner for Authority's use in submission to DEP, and Aqua's approval will not be unreasonably withheld.

23. Miscellaneous.

23.1. Inspection and Audit. Aqua and the Authority agree to maintain complete and accurate records and accounts concerning their responsibilities under this Agreement. All Parties shall, at all times, have the right to examine and inspect said records and accounts upon thirty (30) days' written notice. If required by law or regulation, Aqua and the Authority shall make said records and accounts immediately available to federal and state authorities.

23.2. Waiver of Rights. The failure of any party hereto to insist upon strict performance of this Agreement or any of the terms or conditions hereof shall not be construed as a waiver of any of its rights hereunder.

23.3. Modification. This writing constitutes the entire Agreement between the parties and there are no representations or agreements, verbal or written, other than those contained herein. This Agreement may be modified, amended or supplemented by the written agreement of the Parties.

23.4. Necessity of Permits. In the event that a Governmental Authority refuses to issue any material Permit and the Parties have no recourse to appeal and obtain such denied Permit during the Term, and such Permit may be necessary to accomplish the intent and purpose of this Agreement, then the Parties hereto shall be relieved from further compliance with the terms of this Agreement, except for payments for services actually being rendered, until such time when such Permit or Permits shall be issued and then this Agreement shall become fully operative and the Parties hereunder shall be bound by all the terms hereof.

23.5. Severability. Should any one or more of the provisions of this Agreement for any reason be held illegal, invalid or unenforceable, such illegality, invalidity or unenforceability shall not affect any other provision of this Agreement and the remainder of this Agreement shall, in such circumstances, be construed and enforced as if such illegal, invalid or unenforceable provision had not been contained herein.

23.6. Interpretation. For purposes of this Agreement, unless the context otherwise requires, references in this Agreement to (a) Sections are to Sections of this Agreement; (b) exhibits and schedules are to exhibits and schedules attached to this Agreement and (c) an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof. This Agreement shall be construed without regard to any presumption or rule requiring

construction or interpretation against the Party drafting an instrument or causing any instrument to be drafted.

23.7. Counterparts. This Agreement may be executed in two (2) or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, e.g., www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof.

23.8. Addresses. Whenever a notice is required to be given in writing by mail, the following addresses shall be used, unless a different address is specifically called for:

Authority: The North Sewickley Township Sewer Authority
893 Mercer Road
Beaver Falls, PA 15010
Attn: Lisa Crespo, Operations Manager

Aqua: Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010
Attn: President

with required copy to:
Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Ave
Bryn Mawr, PA 19010
Attn: General Counsel

23.9. Termination of Existing Agreements. On the Effective Date, all existing agreements, whether written, oral or implied, between or among the City and the Authority with respect to the conveyance and/or treatment of wastewater, including, but not limited to the Existing Agreement, shall terminate and be of no further force or effect.

23.10. Choice of Law. This Agreement shall be governed by and construed with the laws of the Commonwealth of Pennsylvania except for those requirements, terms, duties and conditions regulated by federal law, and jurisdiction shall be in the Court of Common Pleas of Beaver County.

23.11. Arbitration. Any controversy, claim or dispute arising out of, or relating to this Agreement, or the breach thereof, may, if agreed by the parties, be settled by arbitration, and judgment upon any award rendered by the arbitrator or arbitrators may be entered in the Court of Common Pleas of Beaver County. Notwithstanding the above, any controversies, claims and disputes that are within the jurisdiction of the PUC shall be resolved before the PUC.

23.12. Force Majeure. Notwithstanding any other provision of this Agreement, no Party hereto shall be responsible for damages to the other for any failure to comply with this Agreement resulting from an act of God or riot, sabotage, public calamity, flood, strike, unforeseeable breakdown of the Acquired Treatment Plant, or other event beyond its reasonable control. The Party having the responsibility for the Facilities so affected, however, shall proceed promptly to remedy the consequences of such event, with costs to be shared, if applicable, to the extent provided elsewhere herein.

23.13. Most Favored Nation. During the Term, Aqua shall not enter into any bulk treatment agreement with any municipality or authority related to the acceptance, treatment, and disposal of wastewater by the Acquired System (a "Bulk Treatment Agreement") which provides for, or modify any existing Bulk Treatment Agreement to provide for, a bulk treatment rate per thousand gallons that is less than the then current Rate being charged to the Authority under this Agreement.

23.14. Entire Agreement. This Agreement, together with all schedules and exhibits attached hereto, constitutes the sole and entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such the matter hereof.

**IN WITNESS WHEREOF**, the Parties hereto have caused these presents to be executed and their respective corporate seals affixed the day and year first above written.

EXECUTION VERSION

# WASTEWATER SERVICE AGREEMENT

THIS WASTEWATER SERVICE AGREEMENT (the "Agreement "), is made as of the 20th day of DECEMBER, 2023 (the "Execution Date"), by and between AQUA PENNSYLVANIA WASTEWATER, INC., a Pennsylvania public utility company ("Aqua") and the BOROUGH OF PATTERSON HEIGHTS, a municipal corporation of the Commonwealth of Pennsylvania (the "Municipality"). Aqua and the Municipality are each a "Party," and collectively, the "Parties."

## RECITALS

WHEREAS, Aqua and the City of Beaver Falls (the "City") have entered into an Asset Purchase Agreement dated October 20, 2021 (the "APA"), which provides that the City has agreed to sell and convey to Aqua the wastewater collection system that the City owns (the "Acquired Collection System"), the wastewater treatment plant that the City owns (the "Acquired Treatment Plant," and collectively together with the Acquired Collection System, the "Acquired System") and substantially all of the City's assets related to the Acquired System; and

WHEREAS, the Municipality owns, maintains and operates a system of gravity sewer mains, force mains, laterals and other necessary infrastructure and means for the collection and conveyance of wastewater emanating from the Municipality (the "Municipality System") which is connected to the Acquired System (either directly or indirectly through a third party's collection system) and wastewater emanating from the Municipality System is collected and conveyed to and treated and disposed of by the Acquired System; and

WHEREAS, prior to the closing of the transaction contemplated by the APA (the "Closing"), the City is providing for the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System; and

WHEREAS, effective as of the date that the Closing occurs (the "Closing Date"), the City and the Municipality desire to terminate any and all existing agreements between them regarding the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System including, without limitation, that certain Agreement dated April 28, 1977 between the City and the Municipality (the "Existing Agreement"); and

WHEREAS, effective as of the Closing Date, this Agreement shall govern the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System and the charge for such services.

WHEREAS, operation of the Municipality sanitary sewer system is, and shall remain, subject to the sole requirements of the Pennsylvania Department of Environmental Protection ("DEP") and Chapter 50 of the Code of the Municipality as may be modified from time to time by the Municipality and that further modification requested by Aqua shall not be unreasonably withheld by Municipality.

NOW, THEREFORE, in consideration of the mutual covenants contained herein, and intending to be legally bound hereby, the Parties hereto agree as follows:

1. Incorporation of Recitals. The recitals set forth above are hereby incorporated into and made part of this Agreement as though fully set forth herein.

2. Definitions

2.1. Defined Terms. The following terms shall have the following meanings, except as otherwise expressly provided or unless the context otherwise requires. Other terms are defined in the text of this Agreement, and throughout this Agreement, those terms shall have the meanings respectively ascribed to them.

2.1.1. "Aqua Tariff." Aqua's tariff on file with and approved by the PUC as the same may be amended, supplemented, restated, replaced or revised from time to time.

2.1.2. "Connection Points." The locations at which the Municipality System connects to the Acquired Collection System or a Third-Party System as identified on Exhibit A attached hereto.

2.1.3. "Contributing Users." The Borough of Big Beaver, Borough of Eastvale, City, North Sewickley Township Sewer Authority, Township of Patterson, Municipality, Borough of West Mayfield and Township of White and any other municipality or authority that enters into an agreement with Aqua during the Term related to the collection, conveyance and treatment of such municipality's or authority's wastewater through the Acquired System.

2.1.4. "Effective Date." The Effective Date as defined in Section 3.1.

2.1.5. "Facilities." Facilities means with respect to (a) Aqua, the components of the Acquired System, and (b) the Municipality, the components of the Municipality System.

2.1.6. "Flow." The quantity or volume of wastewater that emanates from the Municipality System and is collected, conveyed, treated and discharged by the Acquired System.

2.1.6.1. "Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or a Third-Party System which have a flow metering device at the Connection Points and are identified on Exhibit B attached hereto.

2.1.6.2. "Un-Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or Third-Party System which do not employ a formal wastewater flow metering device and are identified on Exhibit C attached hereto. The Flow values for these interconnection points are based on water consumption data provided to Aqua by the Contributing User or its water provider, multiplied by a factor of 1.5 to account for inflow and infiltration. Un-Metered Flow originating from the Acquired Collection System flowing to the Municipality System will be deducted from the bill to the Municipality System. Un-Metered Flow originating from the Municipality System flowing to the Acquired Collection System will be added to the bill of the Municipality System. Un-Metered Flow between Outside Users will be added to the bill of the Outside User where the Un-Metered Flow originated, and

deducted from the bill of the Outside User who received the Un-Metered Flow. If new Un-Metered Flow interconnections occur, or existing connections are removed, to or from the Municipality System which would alter the interconnection points listed on Exhibit C, Exhibit C shall be amended accordingly. If at some time in the future any of these interconnections become metered by a formal flow metering device, Exhibit B and Exhibit C shall be amended accordingly, and the flows at such points shall be considered actual and included in the regular Metered Flow calculations.

2.1.7. "Governmental Authority." Any federal, state or local government or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations or orders of such organization or authority have the force of Law), or any arbitrator, court or tribunal of competent jurisdiction.

2.1.8. "Industrial Waste Survey." As defined in Section 12.

2.1.9. "Law." Any statute, law, ordinance, regulation, rule, code, order, constitution, common law, judgment, decree or other requirement or rule of law of any Governmental Authority.

2.1.10. "Losses." Losses, damages, liabilities, deficiencies, actions, judgments, interest, awards, penalties, fines, costs or expenses of whatever kind, including reasonable attorneys' fees and the cost of enforcing any right to indemnification under this Agreement.

2.1.11. "Notice Date." The date that Aqua provides written notice to the Municipality that Aqua intends to make a modification, upgrade or expansion to all or any portion of the Acquired System.

2.1.12. "Outside Users." The Contributing Users excluding the City.

2.1.13. "Permit." Any permit, license, franchise, approval, authorization, registration, certificate, variance or similar right obtained, or required to be obtained, from any Governmental Authority.

2.1.14. "Person." An individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

2.1.15. "Prohibited Discharge." Any waste, pollutant, or other substance which is prohibited to be discharged into the Acquired System as set forth in the Aqua Tariff.

2.1.16. "PUC." The Pennsylvania Public Utility Commission.

2.1.17. "Third-Party System." A system for the collection and transportation of wastewater that (a) is owned by a third party, and (b) directly or indirectly transports and conveys wastewater to the Acquired System.

2.2. Terms Defined in Aqua Tariff. Terms used in this Agreement which are defined in the Aqua Tariff and not otherwise defined herein shall have the respective meanings ascribed to such terms in the Aqua Tariff.

3. Effective Date; Term.

3.1. Effective Date. This Agreement shall become effective on the Closing Date (the "Effective Date"). If Aqua's purchase of the Acquired Systems pursuant to the APA does not close and the APA is terminated, this Agreement shall automatically terminate and be null and void and of no force or effect.

3.2. Term. The term of this Agreement shall be a period of three (3) years (the "Term") commencing on the Effective Date.

4. Treatment and Disposal of Wastewater. Subject to the terms of this Agreement, during the Term, Aqua shall accept, treat and dispose of the wastewater that emanates from the Municipality System from the Municipality. The wastewater that emanates from the Municipality System from the Municipality shall be delivered to the Acquired Treatment Plant from the Municipality System to the Acquired Collection System (either directly or indirectly through a Third-Party System). The Municipality covenants and agrees that all wastewater from the Municipality emanating from the Municipality System to the Acquired System shall be in accordance and compliance with all requirements of the Municipality's ordinances, Aqua Tariff and applicable Laws, as they may be amended from time to time.

5. Prohibited Discharges; Hauled Waste.

5.1. No Prohibited Discharge shall be permitted to be discharged into the Acquired System from the Municipality System,

5.2. No hauled waste shall be permitted to be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, obtained a permit from the DEP permitting the discharge of such waste into the Municipality System (a "Hauled Waste Permit"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Hauled Waste Permit issued to the user.

6. Nondomestic Waste/Industrial Waste. No nondomestic waste or industrial waste shall be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, entered into a written agreement acceptable in form and substance to Aqua related to the pretreatment and discharge of such waste (an "Industrial Waste Agreement"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Industrial Waste Agreement.

7. Operation and Enforcement.

7.1. Flow Calculations. As of the Closing Date and until Aqua installs flow meters to measure the Flow from each Contributing User, Flow for billing purposes shall be calculated based on the existing practice of using water meter read information supplied by the Contributing User or its water provider. After flow meters are installed to measure the Flow from each Contributing User, Flow from the Municipality System shall be determined by combining (i) the Metered Flow and (ii) all remaining Un-Metered Flow. Flow calculations for each quarter shall be communicated to the Municipality within thirty (30) days of the end of each quarter. Daily Flow calculations shall be based on a twenty-four (24) hour period utilizing 7:00 AM as the daily meter reading time.

7.2. Record Keeping/Flow Meter Maintenance. Aqua shall maintain accurate Flow records for Metered Flow based on the Flow meter readings. Aqua shall own, operate, maintain and replace, if necessary, the Flow meters and shall calibrate the Flow meters in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings.

7.3. Calibration and Testing.

7.3.1. Meter equipment and remote readouts shall be tested, calibrated, maintained, and repaired at least annually by Aqua at Aqua's cost. The results of such testing and calibration shall be provided to the Municipality upon request and no later than fourteen (14) business days from such request. If the Municipality requests additional testing, calibration, maintenance and repair, such expenses associated shall be at the cost of the Municipality.

7.3.2. If the Municipality and Aqua cannot agree as to the inaccuracy of any meter, the Municipality may request that the meter be tested by an independent testing facility mutually agreed to by the Municipality and Aqua and such independent testing facility's determination of accuracy shall be conclusive. All costs related to the testing shall be borne fifty percent (50%) by the Municipality and fifty percent (50%) by Aqua.

7.3.3. If upon any test, the percentage of inaccuracy of any metering equipment is found to be in excess of three percent (3%), the calibration thereof shall be corrected, and any billing shall be adjusted, for a period extending back to the time when such inaccuracy began, if such time is ascertainable. If such time is not ascertainable, then for a period extending back one-half (1/2) of the time elapsed since the most recent date of calibration, but in no event further back than a period of six (6) months where such time is not ascertainable.

7.4. Estimated Meter Readings. Whenever it is necessary to estimate Flow meter readings due to equipment malfunction, failure, power outage, or similar events, Aqua shall notify the Municipality for any period of time such estimated readings were utilized within 72 hours of discovering such event. Any estimated reading shall be calculated using the average monthly Flow for the Flow meter in question, for the previous month, for each day the estimated reading is made. The amount of wastewater conveyed during such period may be estimated (i) by correcting the error if the percentage of the error is ascertainable by calibration tests or mathematical calculation, or (ii) estimating the quantity of delivery by deliveries during the preceding periods under similar conditions when the meter or meters were registering accurately.

7.5. Storm-water / Groundwater Inflow & Infiltration ("I&I"). The Municipality shall enact, keep in force and enforce appropriate ordinances and/or regulations prohibiting the direct discharge of storm water, surface water runoff and groundwater into the Municipality System, and for the maintenance and repair of sewer lateral vent caps and cleanouts, so as to ensure that the waters or wastes discharged by any party into the Municipality System shall not contain, to the maximum extent possible, storm water, sump pump discharges, roof or surface drainage, or any discharges other than wastewater. Should sources of excessive I&I exist as determined by Aqua or any Governmental Authority having jurisdiction, the Municipality shall in a timely manner use its best efforts to locate and correct these conditions, in accordance with any Government Authority requirements. If the Municipality does not have an ordinance regarding the inspection and repair of sewer laterals in effect on the Effective Date, within one (1) year of the Effective Date, the Municipality shall enact an ordinance regarding the inspection and repair of sewer laterals and be responsible for the management and enforcement of such ordinance.

7.6. Violation of Permit or Law. In the event the Flow or wastewater characteristics from the Municipality System causes a violation of any Law or Permit related to the Acquired System, as may be established by specific, split sampling and independent laboratory and engineering analysis performed by Aqua and the Municipality or DEP, and whereby external fines or penalties may result, the Municipality shall be solely responsible for such fines and penalties, and all costs and expenses incurred by Aqua as a result thereof, including reasonable attorneys' and consultants' fees and expenses. If external fines and penalties are a result of shared violation of Aqua and the Municipality, Aqua and the Municipality shall share the burden of such fines and penalties based upon their proportionate share of the total Flow. If there are external fines and penalties resulting from a shared violation which is attributable to multiple Contributing Users, but the Contributing User or Users who caused the violation cannot be identified, then the obligation to pay the fines and penalties shall be shared by the Contributing Users in proportion to their share of the total Flow. The provision of this Section shall survive the expiration of this Agreement.

8. Metering Devices. Aqua shall pay for all costs and expenses that Aqua incurs related to the installation and maintenance of any metering device (a) at any Connection Point, or (b) used to calculate the Flow emanating from the Municipality System to the Acquired System located elsewhere in the Acquired System, anywhere in the Municipality System or anywhere else, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining any metering device ("Metering Costs").

9. Compliance with Laws. Each Party shall comply with all applicable present and future Laws having jurisdiction over such Party or such Party's Facilities, all present and future Permits applicable to such Party's Facilities and all applicable grant agreements, unless the same are being contested in good faith by appropriate proceedings.

10. Sampling and Monitoring Equipment. Aqua may install, in its sole and absolute discretion and at its sole cost and expense, sampling and monitoring equipment ("Sampling Equipment") at the Connection Points for the purpose of sampling and analyzing the wastewater delivered to the Acquired System and to ensure compliance with the Aqua Tariff. Aqua shall own and operate any

Sampling Equipment that it elects to install and shall be responsible, at its sole cost and expense, for designing, installing, operating, maintaining, updating and replacing any Sampling Equipment that it elects to install. Aqua shall collect 24-hour flow proportional composite samples, if feasible, and shall split samples with the Municipality for concurrent independent analysis by the Municipality.

11. Easements and Licenses Regarding Flow Meters and Sampling and Monitoring Agreement. The Municipality hereby grants Aqua an easement over any of its property and a license to access the Municipality System in order to install, access, operate or maintain (a) the Flow meters installed in the Municipality System, and (b) any Sampling Equipment that Aqua elects to install pursuant to Section 10. On the request of Aqua, the Municipality shall execute and deliver to Aqua any agreement or instrument in form and substance reasonably acceptable to Aqua in connection with or related to any such easement or license. Aqua may utilize the Sampling Equipment on a routine basis, in its sole and absolute discretion. The Municipality may request Aqua to conduct a sampling of the wastewater outside of Aqua's normal sampling and testing procedure, at the Municipality's sole expense and the Municipality shall share the results of the sampling with Aqua upon Aqua's request and expense.

12. Industrial Waste Survey. The Municipality shall maintain a current list of users of the Municipality System that generate nondomestic waste or industrial waste in accordance with the following (a "Industrial Waste Survey"):

12.1. The Industrial Waste Survey shall include the facility name and address of all users that generate nondomestic waste or industrial waste whose wastewater passes through the Municipality System to the Acquired System, the nature of each user's business and the name and contact information of a responsible individual to be contacted at each user.

12.2. An updated Industrial Survey shall be provided to Aqua within thirty (30) days of the Effective Date. The list shall include users that have been added as well as those that have been removed or where site operations have changed.

12.3. The Municipality shall provide to Aqua the results of its updated Industrial Waste Survey on or prior to March 31, June 30, September 30, and December 31 of each year during the Term.

13. Rates for Service. In connection with Aqua's collection, conveyance, treatment and disposal of wastewater from the Municipality emanating from the Municipality System, the Municipality shall pay to Aqua a rate based on thousands of gallons of Flow as determined pursuant this Agreement (the "Rate"). For the period commencing on the Effective Date through the first full year, the Rate shall be Three and 66/100 Dollars ($3.66) per thousand gallons. For each of the next two (2) years during the Term following the first full year, the then current Rate shall increase by three percent (3%). The PUC retains ultimate jurisdiction over setting the Rate, and this Agreement shall be subject to PUC review and approval. To the extent the PUC determines the Rate set forth in this Agreement is unjust or unreasonable, this Agreement shall remain in effect and Aqua's shareholders shall be responsible for the difference between the rate the PUC determines is just and reasonable and the Rate in this Agreement.

14. Invoicing and Payment Terms. During each year during the Term, Aqua shall bill the Municipality quarterly for service through March 31, June 30, September 30 and December 31 in arrears. Any quarterly amount due for any partial quarter during the Term shall be prorated based on the number of days within such quarter that fall within the Term. The Municipality shall pay each quarterly bill to Aqua in full within forty-five (45) days after the date of the bill. Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due.

15. Peak Flow Limitations. The Municipality shall be limited to a peak daily flow of four (4) times its three-year annual average daily flow rate (the "Peak Flow Limitation Amount"). Aqua shall notify the Municipality within 30 days of any exceedance of the Peak Flow Limitation Amount and shall also notify the Municipality in a timely manner of any daily flows that exceed 90% of the Peak Flow Limitation Amount for a period of 3 consecutive days. Should the Municipality exceed the Peak Flow Limitation Amount, the Municipality shall be penalized $1,000.00 for each day in which the flow exceeds the Peak Flow Limitation Amount. The Municipality shall submit payment for each flow exceedance within 60 days of being notified by Aqua of the flow exceedance. In lieu of the Municipality paying the subject penalty payment to Aqua, the Municipality shall be permitted to use this money to address I&I within the Municipality System. If the Municipality elects to make improvements to the Municipality System to address I&I, the Municipality shall (a) notify Aqua in writing within 60 days of receiving notification of the flow exceedance that the Municipality intends to make improvements to the Municipality System, which notice shall include what improvements the Municipality intends to make to the Municipality System, (b) complete such improvements to the Municipality System within two (2) year of the date of its notice to Aqua of its intent to make such improvements (the "Improvement Completion Period"), and (c) within 30 days of the end of the Improvement Completion Period, submit documentation acceptable to Aqua certifying that such improvements have been made. If the Municipality elects to make improvements to the Municipality System, and such improvements are not fully completed within the Improvement Completion Period, within 60 days of the end of the Improvement Completion Period, the Municipality shall pay $5,000 to Aqua. The provisions of this Section 15 shall become effective on the third anniversary of the date on which Aqua commences billing the Municipality solely on flow metering. The intent of this peak daily flow limitation requirement is to encourage the Municipality to make I&I repairs to the Municipality System.

16. Municipality System. During the Term, the Municipality shall, at its sole cost and expense, maintain the Municipality System in good repair and operating condition, and continuously operate the same in accordance with prudent industry practices and standards. Aqua shall have no obligation or liability to repair, maintain, expand or modify any part of the Municipality System and any repair, maintenance, expansion or modification of all or any part of the Municipality System shall be at the sole cost and expense of the Municipality.

17. Indemnification

17.1. Indemnification by the Municipality. The Municipality shall indemnify and defend Aqua, and Aqua's directors, officers, employees, representatives and agents (collectively the

"Aqua Indemnified Parties") against, and shall hold the Aqua Indemnified Parties harmless from and against, and shall pay and reimburse the Aqua Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Aqua Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.1.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of the Municipality in connection with the collection or conveyance of any wastewater emanating from the Municipality System except to the extent that any such injury, death or damage is caused by Aqua (including, without limitation, resulting from any breach of this agreement by Aqua);

17.1.2. any claim, litigation, proceeding or action of any kind whatsoever by any Governmental Authority or third party related to (i) any action or inaction of the Municipality with respect to the Municipality System, or (ii) the collection, conveyance, treatment or disposal of any wastewater emanating from the Municipality System except to the extent that any such claim or action is the result of any action or inaction of Aqua; or

17.1.3. any breach by the Municipality of any of its covenants or obligations under this Agreement.

17.2. Indemnification by Aqua. To the extent that the Municipality is not immune under applicable Law, Aqua shall indemnify and defend the Municipality, and the Municipality's elected officials, directors, officers, employees, representatives and agents (collectively the "Municipality Indemnified Parties") against, and shall hold the Municipality Indemnified Parties harmless from and against, and shall pay and reimburse the Municipality Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Municipality Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.2.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of Aqua in connection with the treatment or disposal of any wastewater emanating from the Connection Points of the Municipality System except to the extent that any such injury, death or damage is caused by the Municipality (including, without limitation, resulting from any breach of this Agreement by the Municipality) and/or any third party (including, without limitation, any other Contributing User); or

17.2.2. any breach by Aqua of any of its covenants or obligations under this Agreement.

If any claim is made or action or proceeding filed against the Municipality for which the Municipality could potentially seek indemnification from Aqua pursuant to the provision of this Section 17.2, the Municipality shall not waive or seek to waive any immunity afforded to it pursuant to applicable Law.

17.3. The provision of this Section 17 shall survive the expiration of this Agreement.

18. Enforcement Obligation. The Municipality shall, at Aqua's request, enforce, promptly and to the fullest extent of its authority and at its sole cost and expense, all standards, criteria, requirements, and thresholds established by any Law (including any ordinances or regulation of the Municipality), Governmental Authority or Permit or the Aqua Tariff (each, a "Wastewater Standard"), against any Person, which violates a Wastewater Standard and which Aqua in good faith has identified as having a wastewater flow which violates a Wastewater Standard.

19. Consent to City Updating of City's Act 537 Plan. The Municipality acknowledges that in connection with the City's sale of the Acquired System to Aqua, the City is required to update the City's Act 537 Plan. On the City completing its updating of its Act 537 Plan, at the request of Aqua or the City, the Municipality shall review the update to the City's Act 537 Plan and, if appropriate, shall pass a resolution in form and substance acceptable to DEP and the City approving the City's updated Act 537 Plan. Review and approval shall not be unreasonably delayed or withheld. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19. The terms of this Section 19 shall be effective as of the Execution Date.

20. Future Plant Expansion. In accordance with DEP Chapter 94 regulations, should the Acquired Treatment Plant be projected to exceed its design capacities within a five year term, Aqua shall send notice of such event to the Municipality; and, within six (6) months of the date of such notice, the City or Aqua and the Municipality shall initiate planning in accordance with Act 537 to evaluate the need for expansion of the treatment facilities.

21. Planning Modules. For any changes within the Municipality (for example, subdivision, land development, system expansion, among others) that requires DEP Sewage Facilities Planning approval, the Municipality will provide the complete and appropriate planning module components to Aqua for review. For any planning modules that do not cause an overload condition, Aqua will review the planning modules in a timely manner for Municipality's use in submission to DEP, and Aqua's approval will not be unreasonably withheld.

22. Miscellaneous.

22.1. Inspection and Audit. Aqua and the Municipality agree to maintain complete and accurate records and accounts concerning their responsibilities under this Agreement. All Parties shall, at all times, have the right to examine and inspect said records and accounts upon thirty (30) days' written notice. If required by law or regulation, Aqua and the Municipality shall make said records and accounts immediately available to federal and state authorities.

22.2. Waiver of Rights. The failure of any party hereto to insist upon strict performance of this Agreement or any of the terms or conditions hereof shall not be construed as a waiver of any of its rights hereunder.

22.3. Modification. This writing constitutes the entire Agreement between the parties and there are no representations or agreements, verbal or written, other than those contained herein. This Agreement may be modified, amended or supplemented by the written agreement of the Parties.

22.4. Necessity of Permits. In the event that a Governmental Authority refuses to issue any material Permit and the Parties have no recourse to appeal and obtain such denied Permit during the Term, and such Permit may be necessary to accomplish the intent and purpose of this Agreement, then the Parties hereto shall be relieved from further compliance with the terms of this Agreement, except for payments for services actually being rendered, until such time when such Permit or Permits shall be issued and then this Agreement shall become fully operative and the Parties hereunder shall be bound by all the terms hereof.

22.5. Severability. Should any one or more of the provisions of this Agreement for any reason be held illegal, invalid or unenforceable, such illegality, invalidity or unenforceability shall not affect any other provision of this Agreement and the remainder of this Agreement shall, in such circumstances, be construed and enforced as if such illegal, invalid or unenforceable provision had not been contained herein.

22.6. Interpretation. For purposes of this Agreement, unless the context otherwise requires, references in this Agreement to (a) Sections are to Sections of this Agreement; (b) exhibits and schedules are to exhibits and schedules attached to this Agreement and (c) an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof. This Agreement shall be construed without regard to any presumption or rule requiring construction or interpretation against the Party drafting an instrument or causing any instrument to be drafted.

22.7. Counterparts. This Agreement may be executed in two (2) or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, e.g., www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof.

22.8. Addresses. Whenever a notice is required to be given in writing by mail, the following addresses shall be used, unless a different address is specifically called for:

Municipality: Borough of Patterson Heights
600 7th Avenue
Beaver Falls, PA 15010
Attn: President

Aqua: Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010
Attn: President

with required copy to:
Aqua Pennsylvania Wastewater, Inc.

762 W. Lancaster Ave
Bryn Mawr, PA 19010
Attn: General Counsel

22.9. Termination of Existing Agreements. On the Effective Date, all existing agreements, whether written, oral or implied, between or among the City and the Municipality with respect to the conveyance and/or treatment of wastewater**,** including, but not limited to the Existing Agreement, shall terminate and be of no further force or effect.

22.10. Choice of Law. This Agreement shall be governed by and construed with the laws of the Commonwealth of Pennsylvania except for those requirements, terms, duties and conditions regulated by federal law, and jurisdiction shall be in the Court of Common Pleas of Beaver County.

22.11. Arbitration. Any controversy, claim or dispute arising out of, or relating to this Agreement, or the breach thereof, may, if agreed by the parties, be settled by arbitration, and judgment upon any award rendered by the arbitrator or arbitrators may be entered in the Court of Common Pleas of Beaver County. Notwithstanding the above, any controversies, claims and disputes that are within the jurisdiction of the PUC shall be resolved before the PUC.

22.12. Force Majeure. Notwithstanding any other provision of this Agreement, no Party hereto shall be responsible for damages to the other for any failure to comply with this Agreement resulting from an act of God or riot, sabotage, public calamity, flood, strike, unforeseeable breakdown of the Acquired Treatment Plant, or other event beyond its reasonable control. The Party having the responsibility for the Facilities so affected, however, shall proceed promptly to remedy the consequences of such event, with costs to be shared, if applicable, to the extent provided elsewhere herein.

22.13. Most Favored Nation. During the Term, Aqua shall not enter into any bulk treatment agreement with any municipality or authority related to the acceptance, treatment, and disposal of wastewater by the Acquired System (a "Bulk Treatment Agreement") which provides for, or modify any existing Bulk Treatment Agreement to provide for, a bulk treatment rate per thousand gallons that is less than the then current Rate being charged to the Municipality under this Agreement.

22.14. Entire Agreement. This Agreement, together with all schedules and exhibits attached hereto, constitutes the sole and entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such the matter hereof.

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed and their respective corporate seals affixed the day and year first above written.

EXECUTION VERSION

# WASTEWATER SERVICE AGREEMENT

THIS WASTEWATER SERVICE AGREEMENT (the "Agreement "), is made as of the 6 day of December, 2023 (the "Execution Date"), by and between AQUA PENNSYLVANIA WASTEWATER, INC., a Pennsylvania public utility company ("Aqua") and the TOWNSHIP OF WHITE, a municipal corporation of the Commonwealth of Pennsylvania (the "Municipality"). Aqua and the Municipality are each a "Party," and collectively, the "Parties."

## RECITALS

WHEREAS, Aqua and the City of Beaver Falls (the "City") have entered into an Asset Purchase Agreement dated October 20, 2021 (the "APA"), which provides that the City has agreed to sell and convey to Aqua the wastewater collection system that the City owns (the "Acquired Collection System"), the wastewater treatment plant that the City owns (the "Acquired Treatment Plant," and collectively together with the Acquired Collection System, the "Acquired System") and substantially all of the City's assets related to the Acquired System; and

WHEREAS, the Municipality owns, maintains and operates a system of gravity sewer mains, force mains, laterals and other necessary infrastructure and means for the collection and conveyance of wastewater emanating from the Municipality (the "Municipality System") which is connected to the Acquired System (either directly or indirectly through a third party's collection system) and wastewater emanating from the Municipality System is collected and conveyed to and treated and disposed of by the Acquired System; and

WHEREAS, prior to the closing of the transaction contemplated by the APA (the "Closing"), the City is providing for the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System; and

WHEREAS, effective as of the date that the Closing occurs (the "Closing Date"), the City and the Municipality desire to terminate any and all existing agreements between them regarding the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System including, without limitation, that certain Agreement dated April 28, 1977 between the City and the Municipality (the "Existing Agreement"); and

WHEREAS, effective as of the Closing Date, this Agreement shall govern the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System and the charge for such services.

WHEREAS, operation of the Municipality sanitary sewer system is, and shall remain, subject to the sole requirements of the Pennsylvania Department of Environmental Protection ("DEP") and Municipality's ordinance applicable to the Municipality System as may be modified from time to time by the Municipality and that further modification requested by Aqua shall not be unreasonably withheld by Municipality.

NOW, THEREFORE, in consideration of the mutual covenants contained herein, and intending to be legally bound hereby, the Parties hereto agree as follows:

1. Incorporation of Recitals. The recitals set forth above are hereby incorporated into and made part of this Agreement as though fully set forth herein.

2. Definitions

2.1. Defined Terms. The following terms shall have the following meanings, except as otherwise expressly provided or unless the context otherwise requires. Other terms are defined in the text of this Agreement, and throughout this Agreement, those terms shall have the meanings respectively ascribed to them.

2.1.1. "Aqua Tariff." Aqua's tariff on file with and approved by the PUC as the same may be amended, supplemented, restated, replaced or revised from time to time.

2.1.2. "Connection Points." The locations at which the Municipality System connects to the Acquired Collection System or a Third-Party System as identified on Exhibit A attached hereto.

2.1.3. "Contributing Users." The Borough of Big Beaver, Borough of Eastvale, City, North Sewickley Township Sewer Authority, Township of Patterson, Borough of Patterson Heights, Borough of West Mayfield and Township of White and any other municipality or authority that enters into an agreement with Aqua during the Term related to the collection, conveyance and treatment of such municipality's or authority's wastewater through the Acquired System.

2.1.4. "Effective Date." The Effective Date as defined in Section 3.1.

2.1.5. "Facilities." Facilities means with respect to (a) Aqua, the components of the Acquired System, and (b) the Municipality, the components of the Municipality System.

2.1.6. "Flow." The quantity or volume of wastewater that emanates from the Municipality System and is collected, conveyed, treated and discharged by the Acquired System.

2.1.6.1. "Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or a Third-Party System which have a flow metering device at the Connection Points and are identified on Exhibit B attached hereto.

2.1.6.2. "Un-Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or Third-Party System which do not employ a formal wastewater flow metering device and are identified on Exhibit C attached hereto. The Flow values for these interconnection points are based on water consumption data provided to Aqua by the Contributing User or its water provider, multiplied by a factor of 1.5 to account for inflow and infiltration. Un-Metered Flow originating from the Acquired Collection System flowing to the Municipality System will be deducted from the bill to the Municipality System. Un-Metered Flow originating from the Municipality System flowing to the Acquired Collection System will be added to the bill of the Municipality System. Un-Metered Flow between Outside

Users will be added to the bill of the Outside User where the Un-Metered Flow originated, and deducted from the bill of the Outside User who received the Un-Metered Flow. If new Un-Metered Flow interconnections occur, or existing connections are removed, to or from the Municipality System which would alter the interconnection points listed on Exhibit C, Exhibit C shall be amended accordingly. If at some time in the future any of these interconnections become metered by a formal flow metering device, Exhibit B and Exhibit C shall be amended accordingly, and the flows at such points shall be considered actual and included in the regular Metered Flow calculations.

2.1.7. "Governmental Authority." Any federal, state or local government or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations or orders of such organization or authority have the force of Law), or any arbitrator, court or tribunal of competent jurisdiction.

2.1.8. "Industrial Waste Survey." As defined in Section 12.

2.1.9. "Law." Any statute, law, ordinance, regulation, rule, code, order, constitution, common law, judgment, decree or other requirement or rule of law of any Governmental Authority.

2.1.10. "Losses." Losses, damages, liabilities, deficiencies, actions, judgments, interest, awards, penalties, fines, costs or expenses of whatever kind, including reasonable attorneys' fees and the cost of enforcing any right to indemnification under this Agreement.

2.1.11. "Notice Date." The date that Aqua provides written notice to the Municipality that Aqua intends to make a modification, upgrade or expansion to all or any portion of the Acquired System.

2.1.12. "Outside Users." The Contributing Users excluding the City.

2.1.13. "Permit." Any permit, license, franchise, approval, authorization, registration, certificate, variance or similar right obtained, or required to be obtained, from any Governmental Authority.

2.1.14. "Person." An individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

2.1.15. "Prohibited Discharge." Any waste, pollutant, or other substance which is prohibited to be discharged into the Acquired System as set forth in the Aqua Tariff.

2.1.16. "PUC." The Pennsylvania Public Utility Commission.

2.1.17. "Third-Party System." A system for the collection and transportation of wastewater that (a) is owned by a third party, and (b) directly or indirectly transports and conveys wastewater to the Acquired System.

2.2. Terms Defined in Aqua Tariff. Terms used in this Agreement which are defined in the Aqua Tariff and not otherwise defined herein shall have the respective meanings ascribed to such terms in the Aqua Tariff.

3. Effective Date; Term.

3.1. Effective Date. This Agreement shall become effective on the Closing Date (the "Effective Date"). If Aqua's purchase of the Acquired Systems pursuant to the APA does not close and the APA is terminated, this Agreement shall automatically terminate and be null and void and of no force or effect.

3.2. Term. The term of this Agreement shall be a period of three (3) years (the "Term") commencing on the Effective Date.

4. Treatment and Disposal of Wastewater. Subject to the terms of this Agreement, during the Term, Aqua shall accept, treat and dispose of the wastewater that emanates from the Municipality System from the Municipality. The wastewater that emanates from the Municipality System from the Municipality shall be delivered to the Acquired Treatment Plant from the Municipality System to the Acquired Collection System (either directly or indirectly through a Third-Party System). The Municipality covenants and agrees that all wastewater from the Municipality emanating from the Municipality System to the Acquired System shall be in accordance and compliance with all requirements of the Municipality's Ordinances, Aqua Tariff and applicable Laws, as they may be amended from time to time.

5. Prohibited Discharges; Hauled Waste.

5.1. No Prohibited Discharge shall be permitted to be discharged into the Acquired System from the Municipality System,

5.2. No hauled waste shall be permitted to be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, obtained a permit from the DEP permitting the discharge of such waste into the Municipality System (a "Hauled Waste Permit"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Hauled Waste Permit issued to the user.

6. Nondomestic Waste/Industrial Waste. No nondomestic waste or industrial waste shall be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, entered into a written agreement acceptable in form and substance to Aqua related to the pretreatment and discharge of such waste (an "Industrial Waste Agreement"), and (b) such user and waste and the discharge of such waste are

in full compliance with all terms and conditions of the Aqua Tariff and the Industrial Waste Agreement.

7. Operation and Enforcement.

7.1. Flow Calculations. As of the Closing Date and until Aqua installs flow meters to measure the Flow from each Contributing User, Flow for billing purposes shall be calculated based on the existing practice of using water meter read information supplied by the Contributing User or its water provider. After flow meters are installed to measure the Flow from each Contributing User, Flow from the Municipality System shall be determined by combining (i) the Metered Flow and (ii) all remaining Un-Metered Flow. Flow calculations for each quarter shall be communicated to the Municipality within thirty (30) days of the end of each quarter. Daily Flow calculations shall be based on a twenty-four (24) hour period utilizing 7:00 AM as the daily meter reading time.

7.2. Record Keeping/Flow Meter Maintenance. Aqua shall maintain accurate Flow records for Metered Flow based on the Flow meter readings. Aqua shall own, operate, maintain and replace, if necessary, the Flow meters and shall calibrate the Flow meters in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings.

7.3. Calibration and Testing.

7.3.1. Meter equipment and remote readouts shall be tested, calibrated, maintained, and repaired at least annually by Aqua at Aqua's cost. The results of such testing and calibration shall be provided to the Municipality upon request and no later than fourteen (14) business days from such request. If the Municipality requests additional testing, calibration, maintenance and repair, such expenses associated shall be at the cost of the Municipality.

7.3.2. If the Municipality and Aqua cannot agree as to the inaccuracy of any meter, the Municipality may request that the meter be tested by an independent testing facility mutually agreed to by the Municipality and Aqua and such independent testing facility's determination of accuracy shall be conclusive. All costs related to the testing shall be borne fifty percent (50%) by the Municipality and fifty percent (50%) by Aqua.

7.3.3. If upon any test, the percentage of inaccuracy of any metering equipment is found to be in excess of three percent (3%), the calibration thereof shall be corrected, and any billing shall be adjusted, for a period extending back to the time when such inaccuracy began, if such time is ascertainable. If such time is not ascertainable, then for a period extending back one-half (1/2) of the time elapsed since the most recent date of calibration, but in no event further back than a period of six (6) months where such time is not ascertainable.

7.4. Estimated Meter Readings. Whenever it is necessary to estimate Flow meter readings due to equipment malfunction, failure, power outage, or similar events, Aqua shall notify the Municipality for any period of time such estimated readings were utilized within 72 hours of discovering such event. Any estimated reading shall be calculated using the average monthly Flow for the Flow meter in question, for the previous month, for each day the estimated reading is made. The amount of wastewater conveyed during such period may be estimated (i) by correcting the error if the percentage of the error is ascertainable by calibration tests or mathematical calculation,

or (ii) estimating the quantity of delivery by deliveries during the preceding periods under similar conditions when the meter or meters were registering accurately.

7.5. Storm-water / Groundwater Inflow & Infiltration ("I&I"). The Municipality shall enact, keep in force and enforce appropriate ordinances and/or regulations prohibiting the direct discharge of storm water, surface water runoff and groundwater into the Municipality System, and for the maintenance and repair of sewer lateral vent caps and cleanouts, so as to ensure that the waters or wastes discharged by any party into the Municipality System shall not contain, to the maximum extent possible, storm water, sump pump discharges, roof or surface drainage, or any discharges other than wastewater. Should sources of excessive I&I exist as determined by Aqua or any Governmental Authority having jurisdiction, the Municipality shall in a timely manner use its best efforts to locate and correct these conditions, in accordance with any Government Authority requirements. If the Municipality does not have an ordinance regarding the inspection and repair of sewer laterals in effect on the Effective Date, within one (1) year of the Effective Date, the Municipality shall enact an ordinance regarding the inspection and repair of sewer laterals and be responsible for the management and enforcement of such ordinance.

7.6. Violation of Permit or Law. In the event the Flow or wastewater characteristics from the Municipality System causes a violation of any Law or Permit related to the Acquired System, as may be established by specific, split sampling and independent laboratory and engineering analysis performed by Aqua and the Municipality or DEP, and whereby external fines or penalties may result, the Municipality shall be solely responsible for such fines and penalties, and all costs and expenses incurred by Aqua as a result thereof, including reasonable attorneys' and consultants' fees and expenses. If external fines and penalties are a result of shared violation of Aqua and the Municipality, Aqua and the Municipality shall share the burden of such fines and penalties based upon their proportionate share of the total Flow. If there are external fines and penalties resulting from a shared violation which is attributable to multiple Contributing Users, but the Contributing User or Users who caused the violation cannot be identified, then the obligation to pay the fines and penalties shall be shared by the Contributing Users in proportion to their share of the total Flow. The provision of this Section shall survive the expiration of this Agreement.

8. Metering Devices. Aqua shall pay for all costs and expenses that Aqua incurs related to the installation and maintenance of any metering device (a) at any Connection Point, or (b) used to calculate the Flow emanating from the Municipality System to the Acquired System located elsewhere in the Acquired System, anywhere in the Municipality System or anywhere else, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining any metering device ("Metering Costs").

9. Compliance with Laws. Each Party shall comply with all applicable present and future Laws having jurisdiction over such Party or such Party's Facilities, all present and future Permits applicable to such Party's Facilities and all applicable grant agreements, unless the same are being contested in good faith by appropriate proceedings.

10. Sampling and Monitoring Equipment. Aqua may install, in its sole and absolute discretion and at its sole cost and expense, sampling and monitoring equipment ("Sampling Equipment") at the Connection Points for the purpose of sampling and analyzing the wastewater delivered to the Acquired System and to ensure compliance with the Aqua Tariff. Aqua shall own and operate any Sampling Equipment that it elects to install and shall be responsible, at its sole cost and expense, for designing, installing, operating, maintaining, updating and replacing any Sampling Equipment that it elects to install. Aqua shall collect 24-hour flow proportional composite samples, if feasible, and shall split samples with the Municipality for concurrent independent analysis by the Municipality.

11. Easements and Licenses Regarding Flow Meters and Sampling and Monitoring Agreement. The Municipality hereby grants Aqua an easement over any of its property and a license to access the Municipality System in order to install, access, operate or maintain (a) the Flow meters installed in the Municipality System, and (b) any Sampling Equipment that Aqua elects to install pursuant to Section 10. On the request of Aqua, the Municipality shall execute and deliver to Aqua any agreement or instrument in form and substance reasonably acceptable to Aqua in connection with or related to any such easement or license. Aqua may utilize the Sampling Equipment on a routine basis, in its sole and absolute discretion. The Municipality may request Aqua to conduct a sampling of the wastewater outside of Aqua's normal sampling and testing procedure, at the Municipality's sole expense and the Municipality shall share the results of the sampling with Aqua upon Aqua's request and expense.

12. Industrial Waste Survey. The Municipality shall maintain a current list of users of the Municipality System that generate nondomestic waste or industrial waste in accordance with the following (a "Industrial Waste Survey"):

12.1. The Industrial Waste Survey shall include the facility name and address of all users that generate nondomestic waste or industrial waste whose wastewater passes through the Municipality System to the Acquired System, the nature of each user's business and the name and contact information of a responsible individual to be contacted at each user.

12.2. An updated Industrial Survey shall be provided to Aqua within thirty (30) days of the Effective Date. The list shall include users that have been added as well as those that have been removed or where site operations have changed.

12.3. The Municipality shall provide to Aqua the results of its updated Industrial Waste Survey on or prior to March 31, June 30, September 30, and December 31 of each year during the Term.

13. Rates for Service. In connection with Aqua's collection, conveyance, treatment and disposal of wastewater from the Municipality emanating from the Municipality System, the Municipality shall pay to Aqua a rate based on thousands of gallons of Flow as determined pursuant this Agreement (the "Rate"). For the period commencing on the Effective Date through the first full year, the Rate shall be Three and 66/100 Dollars ($3.66) per thousand gallons. For each of the next two (2) years during the Term following the first full year, the then current Rate shall increase by three percent (3%). The PUC retains ultimate jurisdiction over setting the Rate,

and this Agreement shall be subject to PUC review and approval. To the extent the PUC determines the Rate set forth in this Agreement is unjust or unreasonable, this Agreement shall remain in effect and Aqua's shareholders shall be responsible for the difference between the rate the PUC determines is just and reasonable and the Rate in this Agreement.

14. Invoicing and Payment Terms. During each year during the Term, Aqua shall bill the Municipality quarterly for service through March 31, June 30, September 30 and December 31 in arrears. Any quarterly amount due for any partial quarter during the Term shall be prorated based on the number of days within such quarter that fall within the Term. The Municipality shall pay each quarterly bill to Aqua in full within forty-five (45) days after the date of the bill. Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due.

15. Peak Flow Limitations. The Municipality shall be limited to a peak daily flow of four (4) times its three-year annual average daily flow rate (the "Peak Flow Limitation Amount"). Aqua shall notify the Municipality within 30 days of any exceedance of the Peak Flow Limitation Amount and shall also notify the Municipality in a timely manner of any daily flows that exceed 90% of the Peak Flow Limitation Amount for a period of 3 consecutive days. Should the Municipality exceed the Peak Flow Limitation Amount, the Municipality shall be penalized $1,000.00 for each day in which the flow exceeds the Peak Flow Limitation Amount. The Municipality shall submit payment for each flow exceedance within 60 days of being notified by Aqua of the flow exceedance. In lieu of the Municipality paying the subject penalty payment to Aqua, the Municipality shall be permitted to use this money to address I&I within the Municipality System. If the Municipality elects to make improvements to the Municipality System to address I&I, the Municipality shall (a) notify Aqua in writing within 60 days of receiving notification of the flow exceedance that the Municipality intends to make improvements to the Municipality System, which notice shall include what improvements the Municipality intends to make to the Municipality System, (b) complete such improvements to the Municipality System within two (2) year of the date of its notice to Aqua of its intent to make such improvements (the "Improvement Completion Period"), and (c) within 30 days of the end of the Improvement Completion Period, submit documentation acceptable to Aqua certifying that such improvements have been made. If the Municipality elects to make improvements to the Municipality System, and such improvements are not fully completed within the Improvement Completion Period, within 60 days of the end of the Improvement Completion Period, the Municipality shall pay $5,000 to Aqua. The provisions of this Section 15 shall become effective on the third anniversary of the date on which Aqua commences billing the Municipality solely on flow metering. The intent of this peak daily flow limitation requirement is to encourage the Municipality to make I&I repairs to the Municipality System.

16. Municipality System. During the Term, the Municipality shall, at its sole cost and expense, maintain the Municipality System in good repair and operating condition, and continuously operate the same in accordance with prudent industry practices and standards. Aqua shall have no obligation or liability to repair, maintain, expand or modify any part of the Municipality System and any repair, maintenance, expansion or modification of all or any part of the Municipality System shall be at the sole cost and expense of the Municipality.

17. Indemnification

17.1. Indemnification by the Municipality. The Municipality shall indemnify and defend Aqua, and Aqua's directors, officers, employees, representatives and agents (collectively the "Aqua Indemnified Parties") against, and shall hold the Aqua Indemnified Parties harmless from and against, and shall pay and reimburse the Aqua Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Aqua Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.1.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of the Municipality in connection with the collection or conveyance of any wastewater emanating from the Municipality System except to the extent that any such injury, death or damage is caused by Aqua (including, without limitation, resulting from any breach of this agreement by Aqua);

17.1.2. any claim, litigation, proceeding or action of any kind whatsoever by any Governmental Authority or third party related to (i) any action or inaction of the Municipality with respect to the Municipality System, or (ii) the collection, conveyance, treatment or disposal of any wastewater emanating from the Municipality System except to the extent that any such claim or action is the result of any action or inaction of Aqua; or

17.1.3. any breach by the Municipality of any of its covenants or obligations under this Agreement.

17.2. Indemnification by Aqua. To the extent that the Municipality is not immune under applicable Law, Aqua shall indemnify and defend the Municipality, and the Municipality's elected officials, directors, officers, employees, representatives and agents (collectively the "Municipality Indemnified Parties") against, and shall hold the Municipality Indemnified Parties harmless from and against, and shall pay and reimburse the Municipality Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Municipality Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.2.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of Aqua in connection with the treatment or disposal of any wastewater emanating from the Connection Points of the Municipality System except to the extent that any such injury, death or damage is caused by the Municipality (including, without limitation, resulting from any breach of this Agreement by the Municipality) and/or any third party (including, without limitation, any other Contributing User); or

17.2.2. any breach by Aqua of any of its covenants or obligations under this Agreement.

If any claim is made or action or proceeding filed against the Municipality for which the Municipality could potentially seek indemnification from Aqua pursuant to the provision of this

Section 17.2, the Municipality shall not waive or seek to waive any immunity afforded to it pursuant to applicable Law.

17.3. The provision of this Section 17 shall survive the expiration of this Agreement.

18. Enforcement Obligation. The Municipality shall, at Aqua's request, enforce, promptly and to the fullest extent of its authority and at its sole cost and expense, all standards, criteria, requirements, and thresholds established by any Law (including any ordinances or regulation of the Municipality), Governmental Authority or Permit or the Aqua Tariff (each, a "Wastewater Standard"), against any Person, which violates a Wastewater Standard and which Aqua in good faith has identified as having a wastewater flow which violates a Wastewater Standard.

19. Consent to City Updating of City's Act 537 Plan. The Municipality acknowledges that in connection with the City's sale of the Acquired System to Aqua, the City is required to update the City's Act 537 Plan. On the City completing its updating of its Act 537 Plan, at the request of Aqua or the City, the Municipality shall review the update to the City's Act 537 Plan and, if appropriate, shall pass a resolution in form and substance acceptable to DEP and the City approving the City's updated Act 537 Plan. Review and approval shall not be unreasonably delayed or withheld. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19. The terms of this Section 19 shall be effective as of the Execution Date.

20. Future Plant Expansion. In accordance with DEP Chapter 94 regulations, should the Acquired Treatment Plant be projected to exceed its design capacities within a five year term, Aqua shall send notice of such event to the Municipality; and, within six (6) months of the date of such notice, the City or Aqua and the Municipality shall initiate planning in accordance with Act 537 to evaluate the need for expansion of the treatment facilities.

21. Planning Modules. For any changes within the Municipality (for example, subdivision, land development, system expansion, among others) that requires DEP Sewage Facilities Planning approval, the Municipality will provide the complete and appropriate planning module components to Aqua for review. For any planning modules that do not cause an overload condition, Aqua will review the planning modules in a timely manner for Municipality's use in submission to DEP, and Aqua's approval will not be unreasonably withheld.

22. Miscellaneous.

22.1. Inspection and Audit. Aqua and the Municipality agree to maintain complete and accurate records and accounts concerning their responsibilities under this Agreement. All Parties shall, at all times, have the right to examine and inspect said records and accounts upon thirty (30) days' written notice. If required by law or regulation, Aqua and the Municipality shall make said records and accounts immediately available to federal and state authorities.

22.2. Waiver of Rights. The failure of any party hereto to insist upon strict performance of this Agreement or any of the terms or conditions hereof shall not be construed as a waiver of any of its rights hereunder.

22.3. Modification. This writing constitutes the entire Agreement between the parties and there are no representations or agreements, verbal or written, other than those contained herein. This Agreement may be modified, amended or supplemented by the written agreement of the Parties.

22.4. Necessity of Permits. In the event that a Governmental Authority refuses to issue any material Permit and the Parties have no recourse to appeal and obtain such denied Permit during the Term, and such Permit may be necessary to accomplish the intent and purpose of this Agreement, then the Parties hereto shall be relieved from further compliance with the terms of this Agreement, except for payments for services actually being rendered, until such time when such Permit or Permits shall be issued and then this Agreement shall become fully operative and the Parties hereunder shall be bound by all the terms hereof.

22.5. Severability. Should any one or more of the provisions of this Agreement for any reason be held illegal, invalid or unenforceable, such illegality, invalidity or unenforceability shall not affect any other provision of this Agreement and the remainder of this Agreement shall, in such circumstances, be construed and enforced as if such illegal, invalid or unenforceable provision had not been contained herein.

22.6. Interpretation. For purposes of this Agreement, unless the context otherwise requires, references in this Agreement to (a) Sections are to Sections of this Agreement; (b) exhibits and schedules are to exhibits and schedules attached to this Agreement and (c) an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof. This Agreement shall be construed without regard to any presumption or rule requiring construction or interpretation against the Party drafting an instrument or causing any instrument to be drafted.

22.7. Counterparts. This Agreement may be executed in two (2) or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, e.g., www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof.

22.8. Addresses. Whenever a notice is required to be given in writing by mail, the following addresses shall be used, unless a different address is specifically called for:

Municipality: Township of White
2511 13th Avenue
Beaver Falls, PA 15010
Attn: President

Aqua: Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue

Bryn Mawr, PA 19010
Attn: President

with required copy to:
Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Ave
Bryn Mawr, PA 19010
Attn: General Counsel

22.9. Termination of Existing Agreements. On the Effective Date, all existing agreements, whether written, oral or implied, between or among the City and the Municipality with respect to the conveyance and/or treatment of wastewater**,** including, but not limited to the Existing Agreement, shall terminate and be of no further force or effect.

22.10. Choice of Law. This Agreement shall be governed by and construed with the laws of the Commonwealth of Pennsylvania except for those requirements, terms, duties and conditions regulated by federal law, and jurisdiction shall be in the Court of Common Pleas of Beaver County.

22.11. Arbitration. Any controversy, claim or dispute arising out of, or relating to this Agreement, or the breach thereof, may, if agreed by the parties, be settled by arbitration, and judgment upon any award rendered by the arbitrator or arbitrators may be entered in the Court of Common Pleas of Beaver County. Notwithstanding the above, any controversies, claims and disputes that are within the jurisdiction of the PUC shall be resolved before the PUC.

22.12. Force Majeure. Notwithstanding any other provision of this Agreement, no Party hereto shall be responsible for damages to the other for any failure to comply with this Agreement resulting from an act of God or riot, sabotage, public calamity, flood, strike, unforeseeable breakdown of the Acquired Treatment Plant, or other event beyond its reasonable control. The Party having the responsibility for the Facilities so affected, however, shall proceed promptly to remedy the consequences of such event, with costs to be shared, if applicable, to the extent provided elsewhere herein.

22.13. Most Favored Nation. During the Term, Aqua shall not enter into any bulk treatment agreement with any municipality or authority related to the acceptance, treatment, and disposal of wastewater by the Acquired System (a "Bulk Treatment Agreement") which provides for, or modify any existing Bulk Treatment Agreement to provide for, a bulk treatment rate per thousand gallons that is less than the then current Rate being charged to the Municipality under this Agreement.

22.14. Entire Agreement. This Agreement, together with all schedules and exhibits attached hereto, constitutes the sole and entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such the matter hereof.

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed and their respective corporate seals affixed the day and year first above written.

EXECUTION VERSION

# WASTEWATER SERVICE AGREEMENT

THIS WASTEWATER SERVICE AGREEMENT (the "Agreement "), is made as of the 14th day of December, 2023 (the "Execution Date"), by and between AQUA PENNSYLVANIA WASTEWATER, INC., a Pennsylvania public utility company ("Aqua") and the TOWNSHIP OF PATTERSON, a municipal corporation of the Commonwealth of Pennsylvania (the "Municipality"). Aqua and the Municipality are each a "Party," and collectively, the "Parties."

## RECITALS

WHEREAS, Aqua and the City of Beaver Falls (the "City") have entered into an Asset Purchase Agreement dated October 20, 2021 (the "APA"), which provides that the City has agreed to sell and convey to Aqua the wastewater collection system that the City owns (the "Acquired Collection System"), the wastewater treatment plant that the City owns (the "Acquired Treatment Plant," and collectively together with the Acquired Collection System, the "Acquired System") and substantially all of the City's assets related to the Acquired System; and

WHEREAS, the Municipality owns, maintains and operates a system of gravity sewer mains, force mains, laterals and other necessary infrastructure and means for the collection and conveyance of wastewater emanating from the Municipality (the "Municipality System") which is connected to the Acquired System (either directly or indirectly through a third party's collection system) and wastewater emanating from the Municipality System is collected and conveyed to and treated and disposed of by the Acquired System; and

WHEREAS, prior to the closing of the transaction contemplated by the APA (the "Closing"), the City is providing for the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System; and

WHEREAS, effective as of the date that the Closing occurs (the "Closing Date"), the City and the Municipality desire to terminate any and all existing agreements between them regarding the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System including, without limitation, that certain Agreement dated April 28, 1977 between the City and the Municipality (the "Existing Agreement"); and

WHEREAS, effective as of the Closing Date, this Agreement shall govern the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System and the charge for such services.

WHEREAS, operation of the Municipality sanitary sewer system is, and shall remain, subject to the sole requirements of the Pennsylvania Department of Environmental Protection ("DEP") and Chapter 158 of the Code of the Municipality as may be modified from time to time by the Municipality and that further modification requested by Aqua shall not be unreasonably withheld by Municipality.

NOW, THEREFORE, in consideration of the mutual covenants contained herein, and intending to be legally bound hereby, the Parties hereto agree as follows:

1. Incorporation of Recitals. The recitals set forth above are hereby incorporated into and made part of this Agreement as though fully set forth herein.

2. Definitions

2.1. Defined Terms. The following terms shall have the following meanings, except as otherwise expressly provided or unless the context otherwise requires. Other terms are defined in the text of this Agreement, and throughout this Agreement, those terms shall have the meanings respectively ascribed to them.

2.1.1. "Aqua Tariff." Aqua's tariff on file with and approved by the PUC as the same may be amended, supplemented, restated, replaced or revised from time to time.

2.1.2. "Connection Points." The locations at which the Municipality System connects to the Acquired Collection System or a Third-Party System as identified on Exhibit A attached hereto.

2.1.3. "Contributing Users." The Borough of Big Beaver, Borough of Eastvale, City, North Sewickley Township Sewer Authority, Municipality, Borough of Patterson Heights, Borough of West Mayfield and Township of White and any other municipality or authority that enters into an agreement with Aqua during the Term related to the collection, conveyance and treatment of such municipality's or authority's wastewater through the Acquired System.

2.1.4. "Effective Date." The Effective Date as defined in Section 3.1.

2.1.5. "Facilities." Facilities means with respect to (a) Aqua, the components of the Acquired System, and (b) the Municipality, the components of the Municipality System.

2.1.6. "Flow." The quantity or volume of wastewater that emanates from the Municipality System and is collected, conveyed, treated and discharged by the Acquired System.

2.1.6.1. "Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or a Third-Party System which have a flow metering device at the Connection Points and are identified on Exhibit B attached hereto.

2.1.6.2. "Un-Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or Third-Party System which do not employ a formal wastewater flow metering device and are identified on Exhibit C attached hereto. The Flow values for these interconnection points are based on water consumption data provided to Aqua by the Contributing User or its water provider, multiplied by a factor of 1.5 to account for inflow and infiltration. Un-Metered Flow originating from the Acquired Collection System flowing to the Municipality System will be deducted from the bill to the Municipality System. Un-Metered Flow originating from the Municipality System flowing to the Acquired Collection System will be added to the bill of the Municipality System. Un-Metered Flow between Outside Users will be added to the bill of the Outside User where the Un-Metered Flow originated, and

deducted from the bill of the Outside User who received the Un-Metered Flow. If new Un-Metered Flow interconnections occur, or existing connections are removed, to or from the Municipality System which would alter the interconnection points listed on Exhibit C, Exhibit C shall be amended accordingly. If at some time in the future any of these interconnections become metered by a formal flow metering device, Exhibit B and Exhibit C shall be amended accordingly, and the flows at such points shall be considered actual and included in the regular Metered Flow calculations.

2.1.7. "Governmental Authority." Any federal, state or local government or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations or orders of such organization or authority have the force of Law), or any arbitrator, court or tribunal of competent jurisdiction.

2.1.8. "Industrial Waste Survey." As defined in Section 12.

2.1.9. "Law." Any statute, law, ordinance, regulation, rule, code, order, constitution, common law, judgment, decree or other requirement or rule of law of any Governmental Authority.

2.1.10. "Losses." Losses, damages, liabilities, deficiencies, actions, judgments, interest, awards, penalties, fines, costs or expenses of whatever kind, including reasonable attorneys' fees and the cost of enforcing any right to indemnification under this Agreement.

2.1.11. "Notice Date." The date that Aqua provides written notice to the Municipality that Aqua intends to make a modification, upgrade or expansion to all or any portion of the Acquired System.

2.1.12. "Outside Users." The Contributing Users excluding the City.

2.1.13. "Permit." Any permit, license, franchise, approval, authorization, registration, certificate, variance or similar right obtained, or required to be obtained, from any Governmental Authority.

2.1.14. "Person." An individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

2.1.15. "Prohibited Discharge." Any waste, pollutant, or other substance which is prohibited to be discharged into the Acquired System as set forth in the Aqua Tariff.

2.1.16. "PUC." The Pennsylvania Public Utility Commission.

2.1.17. "Third-Party System." A system for the collection and transportation of wastewater that (a) is owned by a third party, and (b) directly or indirectly transports and conveys wastewater to the Acquired System.

2.2. Terms Defined in Aqua Tariff. Terms used in this Agreement which are defined in the Aqua Tariff and not otherwise defined herein shall have the respective meanings ascribed to such terms in the Aqua Tariff.

3. Effective Date; Term.

3.1. Effective Date. This Agreement shall become effective on the Closing Date (the "Effective Date"). If Aqua's purchase of the Acquired Systems pursuant to the APA does not close and the APA is terminated, this Agreement shall automatically terminate and be null and void and of no force or effect.

3.2. Term. The term of this Agreement shall be a period of three (3) years (the "Term") commencing on the Effective Date.

4. Treatment and Disposal of Wastewater. Subject to the terms of this Agreement, during the Term, Aqua shall accept, treat and dispose of the wastewater that emanates from the Municipality System from the Municipality. The wastewater that emanates from the Municipality System from the Municipality shall be delivered to the Acquired Treatment Plant from the Municipality System to the Acquired Collection System (either directly or indirectly through a Third-Party System). The Municipality covenants and agrees that all wastewater from the Municipality emanating from the Municipality System to the Acquired System shall be in accordance and compliance with all requirements of the Municipality's ordinances, Aqua Tariff and applicable Laws, as they may be amended from time to time.

5. Prohibited Discharges; Hauled Waste.

5.1. No Prohibited Discharge shall be permitted to be discharged into the Acquired System from the Municipality System,

5.2. No hauled waste shall be permitted to be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, obtained a permit from the DEP permitting the discharge of such waste into the Municipality System (a "Hauled Waste Permit"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Hauled Waste Permit issued to the user.

6. Nondomestic Waste/Industrial Waste. No nondomestic waste or industrial waste shall be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, entered into a written agreement acceptable in form and substance to Aqua related to the pretreatment and discharge of such waste (an "Industrial Waste Agreement"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Industrial Waste Agreement.

7. Operation and Enforcement.

7.1. Flow Calculations. As of the Closing Date and until Aqua installs flow meters to measure the Flow from each Contributing User, Flow for billing purposes shall be calculated based on the existing practice of using water meter read information supplied by the Contributing User or its water provider. After flow meters are installed to measure the Flow from each Contributing User, Flow from the Municipality System shall be determined by combining (i) the Metered Flow and (ii) all remaining Un-Metered Flow. Flow calculations for each quarter shall be communicated to the Municipality within thirty (30) days of the end of each quarter. Daily Flow calculations shall be based on a twenty-four (24) hour period utilizing 7:00 AM as the daily meter reading time.

7.2. Record Keeping/Flow Meter Maintenance. Aqua shall maintain accurate Flow records for Metered Flow based on the Flow meter readings. Aqua shall own, operate, maintain and replace, if necessary, the Flow meters and shall calibrate the Flow meters in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings.

7.3. Calibration and Testing.

7.3.1. Meter equipment and remote readouts shall be tested, calibrated, maintained, and repaired at least annually by Aqua at Aqua's cost. The results of such testing and calibration shall be provided to the Municipality upon request and no later than fourteen (14) business days from such request. If the Municipality requests additional testing, calibration, maintenance and repair, such expenses associated shall be at the cost of the Municipality.

7.3.2. If the Municipality and Aqua cannot agree as to the inaccuracy of any meter, the Municipality may request that the meter be tested by an independent testing facility mutually agreed to by the Municipality and Aqua and such independent testing facility's determination of accuracy shall be conclusive. All costs related to the testing shall be borne fifty percent (50%) by the Municipality and fifty percent (50%) by Aqua.

7.3.3. If upon any test, the percentage of inaccuracy of any metering equipment is found to be in excess of three percent (3%), the calibration thereof shall be corrected, and any billing shall be adjusted, for a period extending back to the time when such inaccuracy began, if such time is ascertainable. If such time is not ascertainable, then for a period extending back one-half (1/2) of the time elapsed since the most recent date of calibration, but in no event further back than a period of six (6) months where such time is not ascertainable.

7.4. Estimated Meter Readings. Whenever it is necessary to estimate Flow meter readings due to equipment malfunction, failure, power outage, or similar events, Aqua shall notify the Municipality for any period of time such estimated readings were utilized within 72 hours of discovering such event. Any estimated reading shall be calculated using the average monthly Flow for the Flow meter in question, for the previous month, for each day the estimated reading is made. The amount of wastewater conveyed during such period may be estimated (i) by correcting the error if the percentage of the error is ascertainable by calibration tests or mathematical calculation, or (ii) estimating the quantity of delivery by deliveries during the preceding periods under similar conditions when the meter or meters were registering accurately.

7.5. Storm-water / Groundwater Inflow & Infiltration ("I&I"). The Municipality shall enact, keep in force and enforce appropriate ordinances and/or regulations prohibiting the direct discharge of storm water, surface water runoff and groundwater into the Municipality System, and for the maintenance and repair of sewer lateral vent caps and cleanouts, so as to ensure that the waters or wastes discharged by any party into the Municipality System shall not contain, to the maximum extent possible, storm water, sump pump discharges, roof or surface drainage, or any discharges other than wastewater. Should sources of excessive I&I exist as determined by Aqua or any Governmental Authority having jurisdiction, the Municipality shall in a timely manner use its best efforts to locate and correct these conditions, in accordance with any Government Authority requirements. If the Municipality does not have an ordinance regarding the inspection and repair of sewer laterals in effect on the Effective Date, within one (1) year of the Effective Date, the Municipality shall enact an ordinance regarding the inspection and repair of sewer laterals and be responsible for the management and enforcement of such ordinance.

7.6. Violation of Permit or Law. In the event the Flow or wastewater characteristics from the Municipality System causes a violation of any Law or Permit related to the Acquired System, as may be established by specific, split sampling and independent laboratory and engineering analysis performed by Aqua and the Municipality or DEP, and whereby external fines or penalties may result, the Municipality shall be solely responsible for such fines and penalties, and all costs and expenses incurred by Aqua as a result thereof, including reasonable attorneys' and consultants' fees and expenses. If external fines and penalties are a result of shared violation of Aqua and the Municipality, Aqua and the Municipality shall share the burden of such fines and penalties based upon their proportionate share of the total Flow. If there are external fines and penalties resulting from a shared violation which is attributable to multiple Contributing Users, but the Contributing User or Users who caused the violation cannot be identified, then the obligation to pay the fines and penalties shall be shared by the Contributing Users in proportion to their share of the total Flow. The provision of this Section shall survive the expiration of this Agreement.

8. Metering Devices. Aqua shall pay for all costs and expenses that Aqua incurs related to the installation and maintenance of any metering device (a) at any Connection Point, or (b) used to calculate the Flow emanating from the Municipality System to the Acquired System located elsewhere in the Acquired System, anywhere in the Municipality System or anywhere else, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining any metering device ("Metering Costs").

9. Compliance with Laws. Each Party shall comply with all applicable present and future Laws having jurisdiction over such Party or such Party's Facilities, all present and future Permits applicable to such Party's Facilities and all applicable grant agreements, unless the same are being contested in good faith by appropriate proceedings.

10. Sampling and Monitoring Equipment. Aqua may install, in its sole and absolute discretion and at its sole cost and expense, sampling and monitoring equipment ("Sampling Equipment") at the Connection Points for the purpose of sampling and analyzing the wastewater delivered to the Acquired System and to ensure compliance with the Aqua Tariff. Aqua shall own and operate any

Sampling Equipment that it elects to install and shall be responsible, at its sole cost and expense, for designing, installing, operating, maintaining, updating and replacing any Sampling Equipment that it elects to install. Aqua shall collect 24-hour flow proportional composite samples, if feasible, and shall split samples with the Municipality for concurrent independent analysis by the Municipality.

11. Easements and Licenses Regarding Flow Meters and Sampling and Monitoring Agreement. The Municipality hereby grants Aqua an easement over any of its property and a license to access the Municipality System in order to install, access, operate or maintain (a) the Flow meters installed in the Municipality System, and (b) any Sampling Equipment that Aqua elects to install pursuant to Section 10. On the request of Aqua, the Municipality shall execute and deliver to Aqua any agreement or instrument in form and substance reasonably acceptable to Aqua in connection with or related to any such easement or license. Aqua may utilize the Sampling Equipment on a routine basis, in its sole and absolute discretion. The Municipality may request Aqua to conduct a sampling of the wastewater outside of Aqua's normal sampling and testing procedure, at the Municipality's sole expense and the Municipality shall share the results of the sampling with Aqua upon Aqua's request and expense.

12. Industrial Waste Survey. The Municipality shall maintain a current list of users of the Municipality System that generate nondomestic waste or industrial waste in accordance with the following (a "Industrial Waste Survey"):

12.1. The Industrial Waste Survey shall include the facility name and address of all users that generate nondomestic waste or industrial waste whose wastewater passes through the Municipality System to the Acquired System, the nature of each user's business and the name and contact information of a responsible individual to be contacted at each user.

12.2. An updated Industrial Survey shall be provided to Aqua within thirty (30) days of the Effective Date. The list shall include users that have been added as well as those that have been removed or where site operations have changed.

12.3. The Municipality shall provide to Aqua the results of its updated Industrial Waste Survey on or prior to March 31, June 30, September 30, and December 31 of each year during the Term.

13. Rates for Service. In connection with Aqua's collection, conveyance, treatment and disposal of wastewater from the Municipality emanating from the Municipality System, the Municipality shall pay to Aqua a rate based on thousands of gallons of Flow as determined pursuant this Agreement (the "Rate"). For the period commencing on the Effective Date through the first full year, the Rate shall be Three and 66/100 Dollars ($3.66) per thousand gallons. For each of the next two (2) years during the Term following the first full year, the then current Rate shall increase by three percent (3%). The PUC retains ultimate jurisdiction over setting the Rate, and this Agreement shall be subject to PUC review and approval. To the extent the PUC determines the Rate set forth in this Agreement is unjust or unreasonable, this Agreement shall remain in effect and Aqua's shareholders shall be responsible for the difference between the rate the PUC determines is just and reasonable and the Rate in this Agreement.

14. Invoicing and Payment Terms. During each year during the Term, Aqua shall bill the Municipality quarterly for service through March 31, June 30, September 30 and December 31 in arrears. Any quarterly amount due for any partial quarter during the Term shall be prorated based on the number of days within such quarter that fall within the Term. The Municipality shall pay each quarterly bill to Aqua in full within forty-five (45) days after the date of the bill. Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due.

15. Peak Flow Limitations. The Municipality shall be limited to a peak daily flow of four (4) times its three-year annual average daily flow rate (the "Peak Flow Limitation Amount"). Aqua shall notify the Municipality within 30 days of any exceedance of the Peak Flow Limitation Amount and shall also notify the Municipality in a timely manner of any daily flows that exceed 90% of the Peak Flow Limitation Amount for a period of 3 consecutive days. Should the Municipality exceed the Peak Flow Limitation Amount, the Municipality shall be penalized $1,000.00 for each day in which the flow exceeds the Peak Flow Limitation Amount. The Municipality shall submit payment for each flow exceedance within 60 days of being notified by Aqua of the flow exceedance. In lieu of the Municipality paying the subject penalty payment to Aqua, the Municipality shall be permitted to use this money to address I&I within the Municipality System. If the Municipality elects to make improvements to the Municipality System to address I&I, the Municipality shall (a) notify Aqua in writing within 60 days of receiving notification of the flow exceedance that the Municipality intends to make improvements to the Municipality System, which notice shall include what improvements the Municipality intends to make to the Municipality System, (b) complete such improvements to the Municipality System within two (2) year of the date of its notice to Aqua of its intent to make such improvements (the "Improvement Completion Period"), and (c) within 30 days of the end of the Improvement Completion Period, submit documentation acceptable to Aqua certifying that such improvements have been made. If the Municipality elects to make improvements to the Municipality System, and such improvements are not fully completed within the Improvement Completion Period, within 60 days of the end of the Improvement Completion Period, the Municipality shall pay $5,000 to Aqua. The provisions of this Section 15 shall become effective on the third anniversary of the date on which Aqua commences billing the Municipality solely on flow metering. The intent of this peak daily flow limitation requirement is to encourage the Municipality to make I&I repairs to the Municipality System.

16. Municipality System. During the Term, the Municipality shall, at its sole cost and expense, maintain the Municipality System in good repair and operating condition, and continuously operate the same in accordance with prudent industry practices and standards. Aqua shall have no obligation or liability to repair, maintain, expand or modify any part of the Municipality System and any repair, maintenance, expansion or modification of all or any part of the Municipality System shall be at the sole cost and expense of the Municipality.

17. Indemnification

17.1. Indemnification by the Municipality. The Municipality shall indemnify and defend Aqua, and Aqua's directors, officers, employees, representatives and agents (collectively the

"Aqua Indemnified Parties") against, and shall hold the Aqua Indemnified Parties harmless from and against, and shall pay and reimburse the Aqua Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Aqua Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.1.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of the Municipality in connection with the collection or conveyance of any wastewater emanating from the Municipality System except to the extent that any such injury, death or damage is caused by Aqua (including, without limitation, resulting from any breach of this agreement by Aqua);

17.1.2. any claim, litigation, proceeding or action of any kind whatsoever by any Governmental Authority or third party related to (i) any action or inaction of the Municipality with respect to the Municipality System, or (ii) the collection, conveyance, treatment or disposal of any wastewater emanating from the Municipality System except to the extent that any such claim or action is the result of any action or inaction of Aqua; or

17.1.3. any breach by the Municipality of any of its covenants or obligations under this Agreement.

17.2. Indemnification by Aqua. To the extent that the Municipality is not immune under applicable Law, Aqua shall indemnify and defend the Municipality, and the Municipality's elected officials, directors, officers, employees, representatives and agents (collectively the "Municipality Indemnified Parties") against, and shall hold the Municipality Indemnified Parties harmless from and against, and shall pay and reimburse the Municipality Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Municipality Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.2.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of Aqua in connection with the treatment or disposal of any wastewater emanating from the Connection Points of the Municipality System except to the extent that any such injury, death or damage is caused by the Municipality (including, without limitation, resulting from any breach of this Agreement by the Municipality) and/or any third party (including, without limitation, any other Contributing User); or

17.2.2. any breach by Aqua of any of its covenants or obligations under this Agreement.

If any claim is made or action or proceeding filed against the Municipality for which the Municipality could potentially seek indemnification from Aqua pursuant to the provision of this Section 17.2, the Municipality shall not waive or seek to waive any immunity afforded to it pursuant to applicable Law.

17.3. The provision of this Section 17 shall survive the expiration of this Agreement.

18. Enforcement Obligation. The Municipality shall, at Aqua's request, enforce, promptly and to the fullest extent of its authority and at its sole cost and expense, all standards, criteria, requirements, and thresholds established by any Law (including any ordinances or regulation of the Municipality), Governmental Authority or Permit or the Aqua Tariff (each, a "Wastewater Standard"), against any Person, which violates a Wastewater Standard and which Aqua in good faith has identified as having a wastewater flow which violates a Wastewater Standard.

19. Consent to City Updating of City's Act 537 Plan. The Municipality acknowledges that in connection with the City's sale of the Acquired System to Aqua, the City is required to update the City's Act 537 Plan. On the City completing its updating of its Act 537 Plan, at the request of Aqua or the City, the Municipality shall review the update to the City's Act 537 Plan and, if appropriate, shall pass a resolution in form and substance acceptable to DEP and the City approving the City's updated Act 537 Plan. Review and approval shall not be unreasonably delayed or withheld. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19. The terms of this Section 19 shall be effective as of the Execution Date.

20. Future Plant Expansion. In accordance with DEP Chapter 94 regulations, should the Acquired Treatment Plant be projected to exceed its design capacities within a five year term, Aqua shall send notice of such event to the Municipality; and, within six (6) months of the date of such notice, the City or Aqua and the Municipality shall initiate planning in accordance with Act 537 to evaluate the need for expansion of the treatment facilities.

21. Planning Modules. For any changes within the Municipality (for example, subdivision, land development, system expansion, among others) that requires DEP Sewage Facilities Planning approval, the Municipality will provide the complete and appropriate planning module components to Aqua for review. For any planning modules that do not cause an overload condition, Aqua will review the planning modules in a timely manner for Municipality's use in submission to DEP, and Aqua's approval will not be unreasonably withheld.

22. Miscellaneous.

22.1. Inspection and Audit. Aqua and the Municipality agree to maintain complete and accurate records and accounts concerning their responsibilities under this Agreement. All Parties shall, at all times, have the right to examine and inspect said records and accounts upon thirty (30) days' written notice. If required by law or regulation, Aqua and the Municipality shall make said records and accounts immediately available to federal and state authorities.

22.2. Waiver of Rights. The failure of any party hereto to insist upon strict performance of this Agreement or any of the terms or conditions hereof shall not be construed as a waiver of any of its rights hereunder.

22.3. Modification. This writing constitutes the entire Agreement between the parties and there are no representations or agreements, verbal or written, other than those contained herein. This Agreement may be modified, amended or supplemented by the written agreement of the Parties.

22.4. Necessity of Permits. In the event that a Governmental Authority refuses to issue any material Permit and the Parties have no recourse to appeal and obtain such denied Permit during the Term, and such Permit may be necessary to accomplish the intent and purpose of this Agreement, then the Parties hereto shall be relieved from further compliance with the terms of this Agreement, except for payments for services actually being rendered, until such time when such Permit or Permits shall be issued and then this Agreement shall become fully operative and the Parties hereunder shall be bound by all the terms hereof.

22.5. Severability. Should any one or more of the provisions of this Agreement for any reason be held illegal, invalid or unenforceable, such illegality, invalidity or unenforceability shall not affect any other provision of this Agreement and the remainder of this Agreement shall, in such circumstances, be construed and enforced as if such illegal, invalid or unenforceable provision had not been contained herein.

22.6. Interpretation. For purposes of this Agreement, unless the context otherwise requires, references in this Agreement to (a) Sections are to Sections of this Agreement; (b) exhibits and schedules are to exhibits and schedules attached to this Agreement and (c) an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof. This Agreement shall be construed without regard to any presumption or rule requiring construction or interpretation against the Party drafting an instrument or causing any instrument to be drafted.

22.7. Counterparts. This Agreement may be executed in two (2) or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, e.g., www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof.

22.8. Addresses. Whenever a notice is required to be given in writing by mail, the following addresses shall be used, unless a different address is specifically called for:

Municipality: Township of Patterson
1600 19th Avenue
Beaver Falls, PA 15010
Attn: President

Aqua: Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010
Attn: President

with required copy to:
Aqua Pennsylvania Wastewater, Inc.

762 W. Lancaster Ave
Bryn Mawr, PA 19010
Attn: General Counsel

22.9. Termination of Existing Agreements. On the Effective Date, all existing agreements, whether written, oral or implied, between or among the City and the Municipality with respect to the conveyance and/or treatment of wastewater**,** including, but not limited to the Existing Agreement, shall terminate and be of no further force or effect.

22.10. Choice of Law. This Agreement shall be governed by and construed with the laws of the Commonwealth of Pennsylvania except for those requirements, terms, duties and conditions regulated by federal law, and jurisdiction shall be in the Court of Common Pleas of Beaver County.

22.11. Arbitration. Any controversy, claim or dispute arising out of, or relating to this Agreement, or the breach thereof, may, if agreed by the parties, be settled by arbitration, and judgment upon any award rendered by the arbitrator or arbitrators may be entered in the Court of Common Pleas of Beaver County. Notwithstanding the above, any controversies, claims and disputes that are within the jurisdiction of the PUC shall be resolved before the PUC.

22.12. Force Majeure. Notwithstanding any other provision of this Agreement, no Party hereto shall be responsible for damages to the other for any failure to comply with this Agreement resulting from an act of God or riot, sabotage, public calamity, flood, strike, unforeseeable breakdown of the Acquired Treatment Plant, or other event beyond its reasonable control. The Party having the responsibility for the Facilities so affected, however, shall proceed promptly to remedy the consequences of such event, with costs to be shared, if applicable, to the extent provided elsewhere herein.

22.13. Most Favored Nation. During the Term, Aqua shall not enter into any bulk treatment agreement with any municipality or authority related to the acceptance, treatment, and disposal of wastewater by the Acquired System (a "Bulk Treatment Agreement") which provides for, or modify any existing Bulk Treatment Agreement to provide for, a bulk treatment rate per thousand gallons that is less than the then current Rate being charged to the Municipality under this Agreement.

22.14. Entire Agreement. This Agreement, together with all schedules and exhibits attached hereto, constitutes the sole and entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such the matter hereof.

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed and their respective corporate seals affixed the day and year first above written.

# WASTEWATER SERVICE AGREEMENT

THIS WASTEWATER SERVICE AGREEMENT (the "Agreement "), is made as of the 14th day of December, 2023 (the "Execution Date"), by and between AQUA PENNSYLVANIA WASTEWATER, INC., a Pennsylvania public utility company ("Aqua") and the BOROUGH OF WEST MAYFIELD, a municipal corporation of the Commonwealth of Pennsylvania (the "Municipality"). Aqua and the Municipality are each a "Party," and collectively, the "Parties."

## RECITALS

WHEREAS, Aqua and the City of Beaver Falls (the "City") have entered into an Asset Purchase Agreement dated October 20, 2021 (the "APA"), which provides that the City has agreed to sell and convey to Aqua the wastewater collection system that the City owns (the "Acquired Collection System"), the wastewater treatment plant that the City owns (the "Acquired Treatment Plant," and collectively together with the Acquired Collection System, the "Acquired System") and substantially all of the City's assets related to the Acquired System; and

WHEREAS, the Municipality owns, maintains and operates a system of gravity sewer mains, force mains, laterals and other necessary infrastructure and means for the collection and conveyance of wastewater emanating from the Municipality (the "Municipality System") which is connected to the Acquired System (either directly or indirectly through a third party's collection system) and wastewater emanating from the Municipality System is collected and conveyed to and treated and disposed of by the Acquired System; and

WHEREAS, prior to the closing of the transaction contemplated by the APA (the "Closing"), the City is providing for the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System; and

WHEREAS, effective as of the date that the Closing occurs (the "Closing Date"), the City and the Municipality desire to terminate any and all existing agreements between them regarding the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System including, without limitation, that certain Agreement dated April 28, 1977 between the City and the Municipality; and

WHEREAS, effective as of the Closing Date, this Agreement shall govern the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System and the charge for such services.

WHEREAS, operation of the Municipality sanitary sewer system is, and shall remain, subject to the sole requirements of the Pennsylvania Department of Environmental Protection ("DEP") and Municipality's ordinance applicable to the Municipality System as may be modified from time to time by the Municipality and that further modification requested by Aqua shall not be unreasonably withheld by Municipality.

NOW, THEREFORE, in consideration of the mutual covenants contained herein, and intending to be legally bound hereby, the Parties hereto agree as follows:

1. Incorporation of Recitals. The recitals set forth above are hereby incorporated into and made part of this Agreement as though fully set forth herein.

2. Definitions

2.1. Defined Terms. The following terms shall have the following meanings, except as otherwise expressly provided or unless the context otherwise requires. Other terms are defined in the text of this Agreement, and throughout this Agreement, those terms shall have the meanings respectively ascribed to them.

2.1.1. "Aqua Tariff." Aqua's tariff on file with and approved by the PUC as the same may be amended, supplemented, restated, replaced or revised from time to time.

2.1.2. "Connection Points." The locations at which the Municipality System connects to the Acquired Collection System or a Third-Party System as identified on Exhibit A attached hereto.

2.1.3. "Contributing Users." The Borough of Big Beaver, Borough of Eastvale, City, North Sewickley Township Sewer Authority, Township of Patterson, BOROUGH OF Patterson Heights, Municipality and Township of White and any other municipality or authority that enters into an agreement with Aqua during the Term related to the collection, conveyance and treatment of such municipality's or authority's wastewater through the Acquired System.

2.1.4. "Effective Date." The Effective Date as defined in Section 3.1.

2.1.5. "Facilities." Facilities means with respect to (a) Aqua, the components of the Acquired System, and (b) the Municipality, the components of the Municipality System.

2.1.6. "Flow." The quantity or volume of wastewater that emanates from the Municipality System and is collected, conveyed, treated and discharged by the Acquired System.

2.1.6.1. "Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or a Third-Party System which have a flow metering device at the Connection Points and are identified on Exhibit B attached hereto.

2.1.6.2. "Un-Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or Third-Party System which do not employ a formal wastewater flow metering device and are identified on Exhibit C attached hereto. The Flow values for these interconnection points are based on water consumption data provided to Aqua by the Contributing User or its water provider, multiplied by a factor of 1.5 to account for inflow and infiltration. Un-Metered Flow originating from the Acquired Collection System flowing to the Municipality System will be deducted from the bill to the Municipality System. Un-Metered Flow originating from the Municipality System flowing to the Acquired Collection System will be added to the bill of the Municipality System. Un-Metered Flow between Outside Users will be added to the bill of the Outside User where the Un-Metered Flow originated, and deducted from the bill of the Outside User who received the Un-Metered Flow. If new Un-Metered

Flow interconnections occur, or existing connections are removed, to or from the Municipality System which would alter the interconnection points listed on Exhibit C, Exhibit C shall be amended accordingly. If at some time in the future any of these interconnections become metered by a formal flow metering device, Exhibit B and Exhibit C shall be amended accordingly, and the flows at such points shall be considered actual and included in the regular Metered Flow calculations.

2.1.7. "Governmental Authority." Any federal, state or local government or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations or orders of such organization or authority have the force of Law), or any arbitrator, court or tribunal of competent jurisdiction.

2.1.8. "Industrial Waste Survey." As defined in Section 12.

2.1.9. "Law." Any statute, law, ordinance, regulation, rule, code, order, constitution, common law, judgment, decree or other requirement or rule of law of any Governmental Authority.

2.1.10. "Losses." Losses, damages, liabilities, deficiencies, actions, judgments, interest, awards, penalties, fines, costs or expenses of whatever kind, including reasonable attorneys' fees and the cost of enforcing any right to indemnification under this Agreement.

2.1.11. "Notice Date." The date that Aqua provides written notice to the Municipality that Aqua intends to make a modification, upgrade or expansion to all or any portion of the Acquired System.

2.1.12. "Outside Users." The Contributing Users excluding the City.

2.1.13. "Permit." Any permit, license, franchise, approval, authorization, registration, certificate, variance or similar right obtained, or required to be obtained, from any Governmental Authority.

2.1.14. "Person." An individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

2.1.15. "Prohibited Discharge." Any waste, pollutant, or other substance which is prohibited to be discharged into the Acquired System as set forth in the Aqua Tariff.

2.1.16. "PUC." The Pennsylvania Public Utility Commission.

2.1.17. "Third-Party System." A system for the collection and transportation of wastewater that (a) is owned by a third party, and (b) directly or indirectly transports and conveys wastewater to the Acquired System.

2.2. Terms Defined in Aqua Tariff. Terms used in this Agreement which are defined in the Aqua Tariff and not otherwise defined herein shall have the respective meanings ascribed to such terms in the Aqua Tariff.

3. Effective Date; Term.

3.1. Effective Date. This Agreement shall become effective on the Closing Date (the "Effective Date"). If Aqua's purchase of the Acquired Systems pursuant to the APA does not close and the APA is terminated, this Agreement shall automatically terminate and be null and void and of no force or effect.

3.2. Term. The term of this Agreement shall be a period of three (3) years (the "Term") commencing on the Effective Date.

4. Treatment and Disposal of Wastewater. Subject to the terms of this Agreement, during the Term, Aqua shall accept, treat and dispose of the wastewater that emanates from the Municipality System from the Municipality. The wastewater that emanates from the Municipality System from the Municipality shall be delivered to the Acquired Treatment Plant from the Municipality System to the Acquired Collection System (either directly or indirectly through a Third-Party System). The Municipality covenants and agrees that all wastewater from the Municipality emanating from the Municipality System to the Acquired System shall be in accordance and compliance with all requirements of the Municipality's Ordinances, Aqua Tariff and applicable Laws, as they may be amended from time to time.

5. Prohibited Discharges; Hauled Waste.

5.1. No Prohibited Discharge shall be permitted to be discharged into the Acquired System from the Municipality System,

5.2. No hauled waste shall be permitted to be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, obtained a permit from the DEP permitting the discharge of such waste into the Municipality System (a "Hauled Waste Permit"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Hauled Waste Permit issued to the user.

6. Nondomestic Waste/Industrial Waste. No nondomestic waste or industrial waste shall be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, entered into a written agreement acceptable in form and substance to Aqua related to the pretreatment and discharge of such waste (an "Industrial Waste Agreement"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Industrial Waste Agreement.

7. Operation and Enforcement.

7.1. Flow Calculations. As of the Closing Date and until Aqua installs flow meters to measure the Flow from each Contributing User, Flow for billing purposes shall be calculated based on the existing practice of using water meter read information supplied by the Contributing User or its water provider. After flow meters are installed to measure the Flow from each Contributing User, Flow from the Municipality System shall be determined by combining (i) the Metered Flow and (ii) all remaining Un-Metered Flow. Flow calculations for each quarter shall be communicated to the Municipality within thirty (30) days of the end of each quarter. Daily Flow calculations shall be based on a twenty-four (24) hour period utilizing 7:00 AM as the daily meter reading time.

7.2. Record Keeping/Flow Meter Maintenance. Aqua shall maintain accurate Flow records for Metered Flow based on the Flow meter readings. Aqua shall own, operate, maintain and replace, if necessary, the Flow meters and shall calibrate the Flow meters in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings.

7.3. Calibration and Testing.

7.3.1. Meter equipment and remote readouts shall be tested, calibrated, maintained, and repaired at least annually by Aqua at Aqua's cost. The results of such testing and calibration shall be provided to the Municipality upon request and no later than fourteen (14) business days from such request. If the Municipality requests additional testing, calibration, maintenance and repair, such expenses associated shall be at the cost of the Municipality.

7.3.2. If the Municipality and Aqua cannot agree as to the inaccuracy of any meter, the Municipality may request that the meter be tested by an independent testing facility mutually agreed to by the Municipality and Aqua and such independent testing facility's determination of accuracy shall be conclusive. All costs related to the testing shall be borne fifty percent (50%) by the Municipality and fifty percent (50%) by Aqua.

7.3.3. If upon any test, the percentage of inaccuracy of any metering equipment is found to be in excess of three percent (3%), the calibration thereof shall be corrected, and any billing shall be adjusted, for a period extending back to the time when such inaccuracy began, if such time is ascertainable. If such time is not ascertainable, then for a period extending back one-half (1/2) of the time elapsed since the most recent date of calibration, but in no event further back than a period of six (6) months where such time is not ascertainable.

7.4. Estimated Meter Readings. Whenever it is necessary to estimate Flow meter readings due to equipment malfunction, failure, power outage, or similar events, Aqua shall notify the Municipality for any period of time such estimated readings were utilized within 72 hours of discovering such event. Any estimated reading shall be calculated using the average monthly Flow for the Flow meter in question, for the previous month, for each day the estimated reading is made. The amount of wastewater conveyed during such period may be estimated (i) by correcting the error if the percentage of the error is ascertainable by calibration tests or mathematical calculation, or (ii) estimating the quantity of delivery by deliveries during the preceding periods under similar conditions when the meter or meters were registering accurately.

7.5. Storm-water / Groundwater Inflow & Infiltration ("I&I"). The Municipality shall enact, keep in force and enforce appropriate ordinances and/or regulations prohibiting the direct

discharge of storm water, surface water runoff and groundwater into the Municipality System, and for the maintenance and repair of sewer lateral vent caps and cleanouts, so as to ensure that the waters or wastes discharged by any party into the Municipality System shall not contain, to the maximum extent possible, storm water, sump pump discharges, roof or surface drainage, or any discharges other than wastewater. Should sources of excessive I&I exist as determined by Aqua or any Governmental Authority having jurisdiction, the Municipality shall in a timely manner use its best efforts to locate and correct these conditions, in accordance with any Government Authority requirements. If the Municipality does not have an ordinance regarding the inspection and repair of sewer laterals in effect on the Effective Date, within one (1) year of the Effective Date, the Municipality shall enact an ordinance regarding the inspection and repair of sewer laterals and be responsible for the management and enforcement of such ordinance.

7.6. Violation of Permit or Law. In the event the Flow or wastewater characteristics from the Municipality System causes a violation of any Law or Permit related to the Acquired System, as may be established by specific, split sampling and independent laboratory and engineering analysis performed by Aqua and the Municipality or DEP, and whereby external fines or penalties may result, the Municipality shall be solely responsible for such fines and penalties, and all costs and expenses incurred by Aqua as a result thereof, including reasonable attorneys' and consultants' fees and expenses. If external fines and penalties are a result of shared violation of Aqua and the Municipality, Aqua and the Municipality shall share the burden of such fines and penalties based upon their proportionate share of the total Flow. If there are external fines and penalties resulting from a shared violation which is attributable to multiple Contributing Users, but the Contributing User or Users who caused the violation cannot be identified, then the obligation to pay the fines and penalties shall be shared by the Contributing Users in proportion to their share of the total Flow. The provision of this Section shall survive the expiration of this Agreement.

8. Metering Devices. Aqua shall pay for all costs and expenses that Aqua incurs related to the installation and maintenance of any metering device (a) at any Connection Point, or (b) used to calculate the Flow emanating from the Municipality System to the Acquired System located elsewhere in the Acquired System, anywhere in the Municipality System or anywhere else, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining any metering device ("Metering Costs").

9. Compliance with Laws. Each Party shall comply with all applicable present and future Laws having jurisdiction over such Party or such Party's Facilities, all present and future Permits applicable to such Party's Facilities and all applicable grant agreements, unless the same are being contested in good faith by appropriate proceedings.

10. Sampling and Monitoring Equipment. Aqua may install, in its sole and absolute discretion and at its sole cost and expense, sampling and monitoring equipment ("Sampling Equipment") at the Connection Points for the purpose of sampling and analyzing the wastewater delivered to the Acquired System and to ensure compliance with the Aqua Tariff. Aqua shall own and operate any Sampling Equipment that it elects to install and shall be responsible, at its sole cost and expense, for designing, installing, operating, maintaining, updating and replacing any Sampling Equipment

that it elects to install. Aqua shall collect 24-hour flow proportional composite samples, if feasible, and shall split samples with the Municipality for concurrent independent analysis by the Municipality.

11. Easements and Licenses Regarding Flow Meters and Sampling and Monitoring Agreement. The Municipality hereby grants Aqua an easement over any of its property and a license to access the Municipality System in order to install, access, operate or maintain (a) the Flow meters installed in the Municipality System, and (b) any Sampling Equipment that Aqua elects to install pursuant to Section 10. On the request of Aqua, the Municipality shall execute and deliver to Aqua any agreement or instrument in form and substance reasonably acceptable to Aqua in connection with or related to any such easement or license. Aqua may utilize the Sampling Equipment on a routine basis, in its sole and absolute discretion. The Municipality may request Aqua to conduct a sampling of the wastewater outside of Aqua's normal sampling and testing procedure, at the Municipality's sole expense and the Municipality shall share the results of the sampling with Aqua upon Aqua's request and expense.

12. Industrial Waste Survey. The Municipality shall maintain a current list of users of the Municipality System that generate nondomestic waste or industrial waste in accordance with the following (a "Industrial Waste Survey"):

12.1. The Industrial Waste Survey shall include the facility name and address of all users that generate nondomestic waste or industrial waste whose wastewater passes through the Municipality System to the Acquired System, the nature of each user's business and the name and contact information of a responsible individual to be contacted at each user.

12.2. An updated Industrial Survey shall be provided to Aqua within thirty (30) days of the Effective Date. The list shall include users that have been added as well as those that have been removed or where site operations have changed.

12.3. The Municipality shall provide to Aqua the results of its updated Industrial Waste Survey on or prior to March 31, June 30, September 30, and December 31 of each year during the Term.

13. Rates for Service. In connection with Aqua's collection, conveyance, treatment and disposal of wastewater from the Municipality emanating from the Municipality System, the Municipality shall pay to Aqua a rate based on thousands of gallons of Flow as determined pursuant this Agreement (the "Rate"). For the period commencing on the Effective Date through the first full year, the Rate shall be Three and 66/100 Dollars ($3.66) per thousand gallons. For each of the next two (2) years during the Term following the first full year, the then current Rate shall increase by three percent (3%). The PUC retains ultimate jurisdiction over setting the Rate, and this Agreement shall be subject to PUC review and approval. To the extent the PUC determines the Rate set forth in this Agreement is unjust or unreasonable, this Agreement shall remain in effect and Aqua's shareholders shall be responsible for the difference between the rate the PUC determines is just and reasonable and the Rate in this Agreement.

14. Invoicing and Payment Terms. During each year during the Term, Aqua shall bill the Municipality quarterly for service through March 31, June 30, September 30 and December 31 in arrears. Any quarterly amount due for any partial quarter during the Term shall be prorated based on the number of days within such quarter that fall within the Term. The Municipality shall pay each quarterly bill to Aqua in full within forty-five (45) days after the date of the bill. Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due.

15. Peak Flow Limitations. The Municipality shall be limited to a peak daily flow of four (4) times its three-year annual average daily flow rate (the "Peak Flow Limitation Amount"). Aqua shall notify the Municipality within 30 days of any exceedance of the Peak Flow Limitation Amount and shall also notify the Municipality in a timely manner of any daily flows that exceed 90% of the Peak Flow Limitation Amount for a period of 3 consecutive days. Should the Municipality exceed the Peak Flow Limitation Amount, the Municipality shall be penalized $1,000.00 for each day in which the flow exceeds the Peak Flow Limitation Amount. The Municipality shall submit payment for each flow exceedance within 60 days of being notified by Aqua of the flow exceedance. In lieu of the Municipality paying the subject penalty payment to Aqua, the Municipality shall be permitted to use this money to address I&I within the Municipality System. If the Municipality elects to make improvements to the Municipality System to address I&I, the Municipality shall (a) notify Aqua in writing within 60 days of receiving notification of the flow exceedance that the Municipality intends to make improvements to the Municipality System, which notice shall include what improvements the Municipality intends to make to the Municipality System, (b) complete such improvements to the Municipality System within two (2) year of the date of its notice to Aqua of its intent to make such improvements (the "Improvement Completion Period"), and (c) within 30 days of the end of the Improvement Completion Period, submit documentation acceptable to Aqua certifying that such improvements have been made. If the Municipality elects to make improvements to the Municipality System, and such improvements are not fully completed within the Improvement Completion Period, within 60 days of the end of the Improvement Completion Period, the Municipality shall pay $5,000 to Aqua. The provisions of this Section 15 shall become effective on the third anniversary of the date on which Aqua commences billing the Municipality solely on flow metering. The intent of this peak daily flow limitation requirement is to encourage the Municipality to make I&I repairs to the Municipality System.

16. Municipality System. During the Term, the Municipality shall, at its sole cost and expense, maintain the Municipality System in good repair and operating condition, and continuously operate the same in accordance with prudent industry practices and standards. Aqua shall have no obligation or liability to repair, maintain, expand or modify any part of the Municipality System and any repair, maintenance, expansion or modification of all or any part of the Municipality System shall be at the sole cost and expense of the Municipality.

17. Indemnification

17.1. Indemnification by the Municipality. The Municipality shall indemnify and defend Aqua, and Aqua's directors, officers, employees, representatives and agents (collectively the "Aqua Indemnified Parties") against, and shall hold the Aqua Indemnified Parties harmless from

and against, and shall pay and reimburse the Aqua Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Aqua Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.1.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of the Municipality in connection with the collection or conveyance of any wastewater emanating from the Municipality System except to the extent that any such injury, death or damage is caused by Aqua (including, without limitation, resulting from any breach of this agreement by Aqua);

17.1.2. any claim, litigation, proceeding or action of any kind whatsoever by any Governmental Authority or third party related to (i) any action or inaction of the Municipality with respect to the Municipality System, or (ii) the collection, conveyance, treatment or disposal of any wastewater emanating from the Municipality System except to the extent that any such claim or action is the result of any action or inaction of Aqua; or

17.1.3. any breach by the Municipality of any of its covenants or obligations under this Agreement.

17.2. Indemnification by Aqua. To the extent that the Municipality is not immune under applicable Law, Aqua shall indemnify and defend the Municipality, and the Municipality's elected officials, directors, officers, employees, representatives and agents (collectively the "Municipality Indemnified Parties") against, and shall hold the Municipality Indemnified Parties harmless from and against, and shall pay and reimburse the Municipality Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Municipality Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.2.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of Aqua in connection with the treatment or disposal of any wastewater emanating from the Connection Points of the Municipality System except to the extent that any such injury, death or damage is caused by the Municipality (including, without limitation, resulting from any breach of this Agreement by the Municipality) and/or any third party (including, without limitation, any other Contributing User); or

17.2.2. any breach by Aqua of any of its covenants or obligations under this Agreement.

If any claim is made or action or proceeding filed against the Municipality for which the Municipality could potentially seek indemnification from Aqua pursuant to the provision of this Section 17.2, the Municipality shall not waive or seek to waive any immunity afforded to it pursuant to applicable Law.

17.3. The provision of this Section 17 shall survive the expiration of this Agreement.

18. Enforcement Obligation. The Municipality shall, at Aqua's request, enforce, promptly and to the fullest extent of its authority and at its sole cost and expense, all standards, criteria, requirements, and thresholds established by any Law (including any ordinances or regulation of the Municipality), Governmental Authority or Permit or the Aqua Tariff (each, a "Wastewater Standard"), against any Person, which violates a Wastewater Standard and which Aqua in good faith has identified as having a wastewater flow which violates a Wastewater Standard.

19. Consent to City Updating of City's Act 537 Plan. The Municipality acknowledges that in connection with the City's sale of the Acquired System to Aqua, the City is required to update the City's Act 537 Plan. On the City completing its updating of its Act 537 Plan, at the request of Aqua or the City, the Municipality shall review the update to the City's Act 537 Plan and, if appropriate, shall pass a resolution in form and substance acceptable to DEP and the City approving the City's updated Act 537 Plan. Review and approval shall not be unreasonably delayed or withheld. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19. The terms of this Section 19 shall be effective as of the Execution Date.

20. Future Plant Expansion. In accordance with DEP Chapter 94 regulations, should the Acquired Treatment Plant be projected to exceed its design capacities within a five year term, Aqua shall send notice of such event to the Municipality; and, within six (6) months of the date of such notice, the City or Aqua and the Municipality shall initiate planning in accordance with Act 537 to evaluate the need for expansion of the treatment facilities.

21. Planning Modules. For any changes within the Municipality (for example, subdivision, land development, system expansion, among others) that requires DEP Sewage Facilities Planning approval, the Municipality will provide the complete and appropriate planning module components to Aqua for review. For any planning modules that do not cause an overload condition, Aqua will review the planning modules in a timely manner for Municipality's use in submission to DEP, and Aqua's approval will not be unreasonably withheld.

22. Miscellaneous.

22.1. Inspection and Audit. Aqua and the Municipality agree to maintain complete and accurate records and accounts concerning their responsibilities under this Agreement. All Parties shall, at all times, have the right to examine and inspect said records and accounts upon thirty (30) days' written notice. If required by law or regulation, Aqua and the Municipality shall make said records and accounts immediately available to federal and state authorities.

22.2. Waiver of Rights. The failure of any party hereto to insist upon strict performance of this Agreement or any of the terms or conditions hereof shall not be construed as a waiver of any of its rights hereunder.

22.3. Modification. This writing constitutes the entire Agreement between the parties and there are no representations or agreements, verbal or written, other than those contained herein. This Agreement may be modified, amended or supplemented by the written agreement of the Parties.

22.4. Necessity of Permits. In the event that a Governmental Authority refuses to issue any material Permit and the Parties have no recourse to appeal and obtain such denied Permit during the Term, and such Permit may be necessary to accomplish the intent and purpose of this Agreement, then the Parties hereto shall be relieved from further compliance with the terms of this Agreement, except for payments for services actually being rendered, until such time when such Permit or Permits shall be issued and then this Agreement shall become fully operative and the Parties hereunder shall be bound by all the terms hereof.

22.5. Severability. Should any one or more of the provisions of this Agreement for any reason be held illegal, invalid or unenforceable, such illegality, invalidity or unenforceability shall not affect any other provision of this Agreement and the remainder of this Agreement shall, in such circumstances, be construed and enforced as if such illegal, invalid or unenforceable provision had not been contained herein.

22.6. Interpretation. For purposes of this Agreement, unless the context otherwise requires, references in this Agreement to (a) Sections are to Sections of this Agreement; (b) exhibits and schedules are to exhibits and schedules attached to this Agreement and (c) an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof. This Agreement shall be construed without regard to any presumption or rule requiring construction or interpretation against the Party drafting an instrument or causing any instrument to be drafted.

22.7. Counterparts. This Agreement may be executed in two (2) or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, e.g., www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof.

22.8. Addresses. Whenever a notice is required to be given in writing by mail, the following addresses shall be used, unless a different address is specifically called for:

Municipality: Borough of West Mayfield
4609 W. 8th Avenue
Beaver Falls, PA 15010
Attn: President

Aqua: Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010
Attn: President

with required copy to:
Aqua Pennsylvania Wastewater, Inc.

762 W. Lancaster Ave
Bryn Mawr, PA 19010
Attn: General Counsel

22.9. Termination of Existing Agreements. On the Effective Date, all existing agreements, whether written, oral or implied, between or among the City and the Municipality with respect to the conveyance and/or treatment of wastewater**,** including, but not limited to the Existing Agreement, shall terminate and be of no further force or effect.

22.10. Choice of Law. This Agreement shall be governed by and construed with the laws of the Commonwealth of Pennsylvania except for those requirements, terms, duties and conditions regulated by federal law, and jurisdiction shall be in the Court of Common Pleas of Beaver County.

22.11. Arbitration. Any controversy, claim or dispute arising out of, or relating to this Agreement, or the breach thereof, may, if agreed by the parties, be settled by arbitration, and judgment upon any award rendered by the arbitrator or arbitrators may be entered in the Court of Common Pleas of Beaver County. Notwithstanding the above, any controversies, claims and disputes that are within the jurisdiction of the PUC shall be resolved before the PUC.

22.12. Force Majeure. Notwithstanding any other provision of this Agreement, no Party hereto shall be responsible for damages to the other for any failure to comply with this Agreement resulting from an act of God or riot, sabotage, public calamity, flood, strike, unforeseeable breakdown of the Acquired Treatment Plant, or other event beyond its reasonable control. The Party having the responsibility for the Facilities so affected, however, shall proceed promptly to remedy the consequences of such event, with costs to be shared, if applicable, to the extent provided elsewhere herein.

22.13. Most Favored Nation. During the Term, Aqua shall not enter into any bulk treatment agreement with any municipality or authority related to the acceptance, treatment, and disposal of wastewater by the Acquired System (a "Bulk Treatment Agreement") which provides for, or modify any existing Bulk Treatment Agreement to provide for, a bulk treatment rate per thousand gallons that is less than the then current Rate being charged to the Municipality under this Agreement.

22.14. Entire Agreement. This Agreement, together with all schedules and exhibits attached hereto, constitutes the sole and entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such the matter hereof.

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed and their respective corporate seals affixed the day and year first above written.

October 19, 2021

Honorable Mayor George S Quay III
City of Beaver Falls
715 15th Street
Beaver Falls, PA 15010

RE: **Charitable Contribution**

Dear Mr. Mayor:

Reference is made to that certain Asset Purchase Agreement (the "APA"), dated October 18, 2021, by and between: (i) Aqua Pennsylvania Wastewater, Inc., a Pennsylvania corporation ("Aqua"); and, (ii) the City of Beaver Falls, Pennsylvania (the "City") regarding the acquisition by Aqua of the City's wastewater collection and treatment system (the "Transaction"). Capitalized terms that are used but not otherwise defined herein shall have the meanings ascribed to such terms in the APA.

This letter is intended to memorialize the mutual understanding and agreement between Aqua and the City. In connection with the Transaction, and conditioned upon the Closing of the Transaction, Aqua, or an affiliate of it, agrees to participate in and contribute to certain charitable activities or entities located in and around the City in an amount of at least One Million Two Hundred and Fifty Thousand dollars ($1,250,000) (the "minimum contribution") over a period of eighteen months following the Closing. The City has identified the charitable events or entities attached hereto on Exhibit A as being eligible for Aqua to participate in; however, the City expressly reserves its rights to supplement and/or edit the charitable events or entities listed on Exhibit A. For the sake of clarity, nothing herein shall require Aqua or any of its affiliates to contribute more than the minimum contribution, and the minimum contribution shall only be made to duly qualified charitable entities.

If the foregoing is acceptable, please sign below and return this letter to the undersigned.

Sincerely,

By: Matthew Rhodes
Name: Matthew Rhodes

# WATER USAGE AGREEMENT

THIS AGREEMENT made this _____ day of _____, 20____ by and between the BEAVER FALLS MUNICIPAL AUTHORITY, a body corporate politic, organization under the laws of the Commonwealth of Pennsylvania, having its principal office located at 1425 8th Avenue, Beaver Falls, Pennsylvania 15010, hereinafter called "Authority".

AND

Aqua Pennsylvania Wastewater, Inc. a corporation duly organized and existing under the laws of the Commonwealth of Pennsylvania with its principal office located at 762 W. Lancaster Avenue, Bryn Mawr, Pennsylvania 19010, hereinafter called "Aqua".

WHEREAS, Authority provides public water service to various customers within the City of Beaver Falls, hereinafter "Beaver Falls"; and

WHEREAS, Aqua has acquired the Beaver Falls wastewater collection and treatment system from Beaver Falls ("Aqua-Beaver Falls Transaction"); and

WHEREAS, Aqua and Beaver Falls require meter reading information in order to bill the acquired Beaver Falls wastewater customers at the volumetric rates in Beaver Falls.

WHEREAS, the parties hereto desire to enter into a written agreement concerning the provision of water meter read information and the payment therefore.

NOW WITNESSETH that in consideration of the mutual covenants hereinafter set forth, the parties hereto agree as follows:

1. Authority hereby agrees to provide Aqua with a report of the water usage for its public water service customers who are likewise wastewater customers of Aqua's wastewater system in Beaver Falls on at least a quarterly basis, except for those customers that are billed monthly by the Authority as described in paragraph five (5) herein.

2. The report to be provided by the Authority shall be sent to Aqua in the same month the water bill was issued, and no later than within five (5) days of the report being available.

3. The report to be provided by the Authority shall be in excel format or other electronic format and shall provide Aqua with the actual (or estimated) water usage as read and billed by the Authority. The report shall provide any changes in billing addresses and any separate billing address if the service address is not the same as the billing address. The report shall also provide move-in and move-out dates for customers that have opened or closed an account during the billing period.

4. Upon receipt of the water usage report, Aqua shall pay the Authority the sum of One Dollar ($1.00) per each meter reading (actual or estimate) contained in the report. A bill for

the total cost of the report shall be prepared by the Authority and sent out at least quarterly, or at least monthly in the case of customers that the Authority bills monthly as described in paragraph five (5) herein. Payment for the report shall be made by Aqua to the Authority within 45 days of the receipt of the statement. Should Aqua fail to pay the statement within the payment period, the Authority shall be under no duty or obligation to furnish Aqua with any subsequent reports until the bill is paid and payment in advance is made for any subsequent reports.

5. The Authority hereby reserves its right to bill its water customers on a basis which may be more frequently than quarterly, and may bill certain large volume customers monthly, in which case water usage information as described in paragraph three (3) shall be furnished to Aqua on a basis no more frequently than monthly for those customers billed by the Authority on a monthly basis.

6. This Agreement shall be effective as of the date Aqua and Beaver Falls close on the Aqua-Beaver Falls Transaction and shall remain in effect for four (4) years from the effective date. Agreement shall renew annually thereafter unless one party requests a renegotiation no less than 60-days prior to expiration.

7. This Agreement can be terminated by Aqua upon Aqua giving the Authority at least sixty (60) days written notice of its desire to terminate the Agreement and do without public water meter read reports, or if such Agreement shall be either terminated or suspended pursuant to the provision of paragraph four (4) supra.

8. This Agreement is entered into pursuant to a resolution of the Beaver Falls Municipal Authority Board of Directors duly held on the _____ day of _____, 20_____, and authorizing its Chairman to sign this Agreement on its behalf, the same to be attested by its Secretary.

9. This Agreement is entered into by Aqua, authorizing its President to sign this Agreement on its behalf, and attested to by Aqua's corporate secretary.

# EXHIBIT F18

# SETTLEMENT AGREEMENT

This Settlement Agreement (the "**Agreement**") is dated December 20, 2023, and is by and between Aqua Pennsylvania Wastewater, Inc., a Pennsylvania Public Utility Company ("**Aqua**"); the City of Beaver Falls, a Pennsylvania Municipality ("**Beaver Falls**"); Patterson Township, a Pennsylvania Municipality ("**Patterson Township**"); Patterson Heights Borough, a Pennsylvania Municipality ("**Patterson Heights**"); White Township, a Pennsylvania Municipality ("**White Township**"); and West Mayfield Borough, a Pennsylvania Municipality ("**West Mayfield**").

* * *

Whereas, Beaver Falls owns and operates a sanitary wastewater collection and treatment system (the "**System**").

Whereas, the System includes the wastewater treatment plant located within Beaver Falls (the "**Plant**").

Whereas, the Plant is utilized for wastewater treatment by Beaver Falls and also to treat wastewater from seven outside municipalities, including Patterson Township, Patterson Heights, White Township, and West Mayfield (each, a "**Plaintiff Municipality**," and collectively, the "**Plaintiff Municipalities**").

Whereas, in 2020, Beaver Falls explored options for selling the System and invited public bids for the purchase and continued operation of the System.

Whereas, Aqua is a regulated Pennsylvania utility, and in August 2020, Aqua responded to the request for bids issued by Beaver Falls and submitted a bid for the purchase and continued operation of the System.

Whereas, in September 2021, Beaver Falls accepted Aqua's bid as the winning bid and enacted an ordinance authorizing the execution of an asset purchase agreement between Aqua and Beaver Falls in connection with the sale of the System.

Whereas, on or about September 27, 2022, the Plaintiff Municipalities filed suit against Aqua and Beaver Falls in the Court of Common Pleas of Beaver County, Pennsylvania, at Case No. 11219 of 2022 (the "**Suit**"). The complaint in the Suit alleged, inter alia, that the Plaintiff Municipalities are part owners of the Plant and that Beaver Falls would be unjustly enriched by the sale of the Plant.

Whereas, Aqua and Beaver Falls answered the Plaintiff Municipalities' complaint and denied that the Plaintiff Municipalities were part owners of the Plant and that Beaver Falls would be unjustly enriched by the sale of the Plant.

Whereas, on February 17, 2023, Aqua filed an Application to the Pennsylvania Public Utility Commission (the "**PUC**") for approval of the acquisition of the wastewater system assets of Beaver Falls and, among other things, to begin providing wastewater service to the public in Beaver Falls (the "**Application**").

Whereas, in order to avoid the time and expense of the Suit, and to settle any and all claims, demands, damages, rights, disputes, and causes of action that exist, whether at law or in equity, that were made in the Suit, Beaver Falls, Aqua, and the Plaintiff Municipalities (each a "**Party**" and all collectively the "**Parties**") have now reached a settlement of their dispute.

Now therefore, in consideration of their mutual promises and intending to be legally bound by this Agreement, the Parties agree as follows.

* * *

1. **Recitals**. The foregoing recitals are hereby incorporated into and made a material part of this Agreement, and this Agreement will be interpreted in light of those recitals.

2. **Payments at Closing by Beaver Falls**. Upon the closing of the sale of the System to Aqua (the "**Closing**"), Beaver Falls shall pay to the Plaintiff Municipalities the aggregate amount of $1,500,000 (the "**Beaver Falls Funds**"), with Beaver Falls paying, by way of wire transfer, to the IOLTA Account of Bowers, Fawcett and Hurst, LLC. The Parties agree that these funds received by a Plaintiff Municipality from Beaver Falls are unrestricted and may be spent by the Plaintiff Municipality in its discretion.

3. **Payments at Closing by Aqua**. Upon the Closing:

**(a)** Aqua shall pay to the Plaintiff Municipalities the aggregate amount of $200,000 (the "**Aqua Unrestricted Funds**"), with Aqua paying, by way of wire transfer, to the IOLTA Account of Bowers, Fawcett and Hurst, LLC. The Aqua Unrestricted Funds are unrestricted and a Plaintiff Municipality may spend the portion of the Aqua Unrestricted Funds the Plaintiff Municipality receives in the Plaintiff Municipality's discretion.

**(b)** Aqua shall pay to the Plaintiff Municipalities the aggregate amount of $500,000 (the "**Aqua Restricted Funds**"), with Aqua paying, by way of wire transfer, to the IOLTA Account of Bowers, Fawcett and Hurst, LLC. In a document executed by all Plaintiff Municipalities and delivered to Aqua at least 5 business days prior to the Closing Date, the allocation of the Aqua Restricted Funds will be reported to Aqua. The Aqua Restricted Funds are restricted and a Plaintiff Municipality may only use the portion of the Aqua Restricted Funds the Plaintiff Municipality receives for the maintenance, repair,

or capital improvement of the Plaintiff Municipality's wastewater-collection system and associated facilities. Each Plaintiff Municipality shall provide Aqua a letter by March 30 each year, verified by its municipal manager or public works director, of the use of any of the Aqua Restricted Funds in the preceding calendar year. If no Aqua Restricted Funds are used in the preceding calendar year, the letter shall state that and the amount of Aqua Restricted Funds remaining.

4. **Closing Does not Occur.** If the Closing does not occur, the obligations of Beaver Falls to make the payments to the Plaintiff Municipalities set forth in Paragraph 2 and Aqua to make the payments to the Plaintiff Municipalities set forth in Paragraph 3 shall be null and void.

5. **Post-closing Judicial Action Regarding Application.** If, after the Closing, a court of competent jurisdiction issues a final, non-appealable order denying the Application or otherwise invalidating the sale of the System to Aqua for any reason, within 180 days of Aqua providing to a Plaintiff Municipality written notice of such order and a copy of such order, the Plaintiff Municipality will repay to (a) Beaver Falls, the amount Beaver Falls paid to the Plaintiff Municipality set forth in Paragraph 2, and (b) Aqua, the amount Aqua paid to the Plaintiff Municipality set forth in Paragraph 3.

6. **Stay; Dismissal of the Suit.**

**(a)** The Parties agree upon the execution of this Agreement, the Suit will be stayed, and within 5 days from the execution of this Agreement, the Parties will inform the Court of Common Pleas of Beaver County that a settlement has been reached and the Parties will submit a joint consent order requesting that the Suit be stayed.

**(b)** Within 5 days of the Closing and the making of the payments described in Paragraphs 2 and 3 above, the Parties shall file a joint praecipe with the Court of Common Pleas of Beaver County to settle and discontinue the Suit, with prejudice.

7. **No Admissions of Fact or Law**. The Parties agree and acknowledge that nothing contained in this Agreement constitutes an admission of any fact, the recognition of the application of any legal principle, the acknowledgement of any duty, liability, or breach, or any other violation of any law or legal obligation whatsoever.

8. **Release of Claims by Plaintiff Municipalities**. Each of the Plaintiff Municipalities hereby releases, remises, forgives, and forever discharges Beaver Falls and Aqua and their respective commissioners, managers, clerks, officials, directors, shareholders, officers, representatives, employees, agents, affiliates, parents, subsidiaries, and assigns from any and all claims, demands, damages, rights, disputes, and causes of action that exist, whether at law or in equity, that were made in the Suit, including but not

limited to any and all claims that arise out of or relate to the ownership of the Plant, the sale of the Plant by Beaver Falls, the purchase of the Plant by Aqua, the ability to object to or seek to block the sale of the System, the ability to refuse to consent to the sale of the System, and the right of the Plaintiff Municipalities to receive any proceeds from the sale of the Plant (other than the payments described in Paragraphs 2 and 3 above).

**9. Consent and No Objection to Sale**. Each Plaintiff Municipality (a) hereby consents to Aqua's purchase and acquisition of the System and related assets and shall communicate this affirmative consent to third parties upon request by either Beaver Falls or Aqua, (b) shall not oppose or object to Beaver Fall's sale and Aqua's acquisition of the System and related assets, whether in court, before the PUC or before any other administrative agency or body, (c) shall, within 5 days of the execution of this Agreement, withdraw its protest filed before the PUC regarding Aqua's acquisition of the System, and (d) shall take any and all actions reasonably requested by Aqua and/or the Beaver Falls to effectuate Beaver Fall's sale and Aqua's acquisition of the System and related assets, including, without limitation, executing and delivering any consents or other documents or passing any ordinance or resolution.

**10. Execution of New Wastewater Service Agreements**. On the execution of this Agreement, each Plaintiff Municipality and Aqua will execute a wastewater service agreement in substantially the form attached to this Agreement as Exhibit A.

**11. Advice of Counsel.** By signing this Agreement, the Parties acknowledge that they have been afforded adequate time to seek legal advice and have sought and received legal advice as they deemed appropriate, and that they have entered into and agreed to the terms of this Agreement voluntarily, under no coercion or duress, and of their own free will. By signing this Agreement, the Parties acknowledge that they have read and fully understand the terms and consequences of this Agreement, that approving this instrument has been undertaken in a proper, lawful manner, and that the signatories are properly authorized to act for the entities for which they are acting.

**12. Binding Effect.** This Agreement legally binds the Parties and their respective heirs, successors, and assigns. This paragraph does not address whether rights under this Agreement are in fact assignable or delegable.

**13. Amendment.** Unless otherwise provided in this Agreement, this Agreement may only be amended, modified, or supplemented by a written instrument executed by the Parties that identifies itself as an amendment to this Agreement.

**14. Entire Agreement.** This Agreement represents the entire and complete Agreement between the Parties and supersedes all prior oral or written agreements as to

its subject matter. There are no other written or oral understandings or agreements that change or affect the terms of this Agreement.

**15. Assignment and Delegation.** A Party may not assign its rights or delegate its duties under this Agreement without the prior written consent of the other Parties. All assignments of rights without such consent are prohibited under this section, whether they are voluntary or involuntary, by merger, consolidation, dissolution, operation of law, or any other manner. A purported assignment or delegation that does not comply with this section is void.

**16. Breach; Attorneys' Fees.** In the event of a breach of any of the provisions of this Agreement, an aggrieved Party may pursue all legal or equitable remedies available, including, but not limited to, seeking damages for the breach of this Agreement or seeking enforcement of the provisions of this Agreement in court. In connection with any litigation between the Parties concerning the subject matter of this Agreement, the prevailing Party is entitled to recover its reasonable attorneys' fees and costs, including fees and costs incurred at trial, on appeal, and during post-judgment collection proceedings.

**17. Governing Law.** The laws of the Commonwealth of Pennsylvania, without regard to conflict-of-law provisions, govern all disputes arising out of this Agreement, including torts.

**18. Venue and Jurisdiction.** Any action or proceeding brought under or in connection with this Agreement may only be brought in either the Court of Common Pleas of Beaver County, Pennsylvania, or in the United States District Court for the Western District of Pennsylvania. The Parties hereby consent to jurisdiction over them in those courts.

**19. Waiver.** The failure of a Party to insist upon the strict performance of any of the covenants or conditions of this Agreement or to exercise any option or power granted by this Agreement does not constitute a waiver by that Party of its rights with respect to this Agreement or a consent to any breach or default in performance by any other Party. A waiver of any provision of this Agreement is only binding if it is in writing and is signed by the waiving Party.

**20. Consent.** Except as otherwise provided, if and whenever the consent or approval of a Party is required under the terms of this Agreement, that consent or approval will not be unreasonably withheld or delayed.

**21. Severability.** If the enactment or amendment of a state or federal law or regulation, or a judicial, administrative, or other interpretive ruling from an applicable

court or agency holds or renders any provision of this Agreement illegal or unenforceable, the offending provision will be deleted or modified, as necessary, in order to render this Agreement valid and enforceable. In any event, the balance of this Agreement will be enforced to the fullest extent possible without regard to such unenforceable, void, or invalid provision.

**22. Headings.** The headings in this Agreement are for reference only and will not affect the interpretation of this Agreement.

**23. Counterparts.** This Agreement may be executed simultaneously in multiple counterparts. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, *e.g.*, www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof. All executed counterparts are part of the same Agreement.

(The remainder of this page is intentionally left blank.)

The Parties, intending to be legally bound and intending to settle the claims set forth herein, have read the foregoing and fully understand and agree to the terms and conditions set forth herein. The Parties are signing this Agreement on the date set forth in the introductory clause.

Form of Wastewater Service Agreement

Attached

# WASTEWATER SERVICE AGREEMENT

THIS WASTEWATER SERVICE AGREEMENT (the "Agreement "), is made as of the ____ day of _____, 2023 (the "Execution Date"), by and between AQUA PENNSYLVANIA WASTEWATER, INC., a Pennsylvania public utility company ("Aqua") and [•] (the "Municipality"). Aqua and the Municipality are each a "Party," and collectively, the "Parties."

## RECITALS

WHEREAS, Aqua and the City of Beaver Falls (the "City") have entered into an Asset Purchase Agreement dated October 20, 2021 (the "APA"), which provides that the City has agreed to sell and convey to Aqua the wastewater collection system that the City owns (the "Acquired Collection System"), the wastewater treatment plant that the City owns (the "Acquired Treatment Plant," and collectively together with the Acquired Collection System, the "Acquired System") and substantially all of the City's assets related to the Acquired System; and

WHEREAS, the Municipality owns, maintains and operates a system of gravity sewer mains, force mains, laterals and other necessary infrastructure and means for the collection and conveyance of wastewater emanating from the Municipality (the "Municipality System") which is connected to the Acquired System (either directly or indirectly through a third party's collection system) and wastewater emanating from the Municipality System is collected and conveyed to and treated and disposed of by the Acquired System; and

WHEREAS, prior to the closing of the transaction contemplated by the APA (the "Closing"), the City is providing for the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System; and

WHEREAS, effective as of the date that the Closing occurs (the "Closing Date"), the City and the Municipality desire to terminate any and all existing agreements between them regarding the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System **[including, without limitation, [•] (the "Existing Agreement")]**[1]; and

WHEREAS, effective as of the Closing Date, this Agreement shall govern the collection, conveyance, treatment and disposal of the Municipality's wastewater emanating from the Municipality System by the Acquired System and the charge for such services; and

WHEREAS, operation of the Municipality sanitary sewer system is, and shall remain, subject to the sole requirements of the Pennsylvania Department of Environmental Protection ("DEP") and Municipality's Ordinance **[to be identified]** as may be modified from time to time by the Municipality and that further modification requested by Aqua shall not be unreasonably withheld by Municipality.

---

[1] **Note to Draft:** Bracketed provision would be included for a municipality/authority that has a current written agreement with the City regarding the collection and treatment of wastewater.

NOW, THEREFORE, in consideration of the mutual covenants contained herein, and intending to be legally bound hereby, the Parties hereto agree as follows:

1. Incorporation of Recitals. The recitals set forth above are hereby incorporated into and made part of this Agreement as though fully set forth herein.

2. Definitions

2.1. Defined Terms. The following terms shall have the following meanings, except as otherwise expressly provided or unless the context otherwise requires. Other terms are defined in the text of this Agreement, and throughout this Agreement, those terms shall have the meanings respectively ascribed to them.

2.1.1. "Aqua Tariff." Aqua's tariff on file with and approved by the PUC as the same may be amended, supplemented, restated, replaced or revised from time to time.

2.1.2. "Connection Points." The locations at which the Municipality System connects to the Acquired Collection System or a Third-Party System as identified on Exhibit A attached hereto.

2.1.3. "Contributing Users." The Borough of Big Beaver, Borough of Eastvale, the City, North Sewickley Township Sewer Authority, Township of Patterson, Borough of Patterson Heights, Borough of West Mayfield and Township of White and any other municipality or authority that enters into an agreement with Aqua during the Term related to the collection, conveyance and treatment of such municipality's or authority's wastewater through the Acquired System.

2.1.4. "Effective Date." The Effective Date as defined in Section 3.1.

2.1.5. "Facilities." Facilities means with respect to (a) Aqua, the components of the Acquired System, and (b) the Municipality, the components of the Municipality System.

2.1.6. "Flow." The quantity or volume of wastewater that emanates from the Municipality System and is collected, conveyed, treated and discharged by the Acquired System.

2.1.6.1. "Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or a Third-Party System which have a flow metering device at the Connection Points and are identified on Exhibit B attached hereto.

2.1.6.2. "Un-Metered Flow." Any Flow through interconnections of the Municipality System and the Acquired Collection System or Third-Party System which do not employ a formal wastewater flow metering device and are identified on Exhibit C attached hereto. The Flow values for these interconnection points are based on water consumption data provided to Aqua by the Contributing User or its water provider, multiplied by a factor of 1.5 to account for inflow and infiltration. Un-Metered Flow originating from the Acquired Collection System flowing to the Municipality System will be deducted from the bill to the Municipality System. Un-

Metered Flow originating from the Municipality System flowing to the Acquired Collection System will be added to the bill of the Municipality System. Un-Metered Flow between Outside Users will be added to the bill of the Outside User where the Un-Metered Flow originated, and deducted from the bill of the Outside User who received the Un-Metered Flow. If new Un-Metered Flow interconnections occur, or existing connections are removed, to or from the Municipality System which would alter the interconnection points listed on Exhibit C, Exhibit C shall be amended accordingly. If at some time in the future any of these interconnections become metered by a formal flow metering device, Exhibit B and Exhibit C shall be amended accordingly, and the flows at such points shall be considered actual and included in the regular Metered Flow calculations.

2.1.7. "Governmental Authority." Any federal, state or local government or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations or orders of such organization or authority have the force of Law), or any arbitrator, court or tribunal of competent jurisdiction.

2.1.8. "Industrial Waste Survey." As defined in Section 12.

2.1.9. "Law." Any statute, law, ordinance, regulation, rule, code, order, constitution, common law, judgment, decree or other requirement or rule of law of any Governmental Authority.

2.1.10. "Losses." Losses, damages, liabilities, deficiencies, actions, judgments, interest, awards, penalties, fines, costs or expenses of whatever kind, including reasonable attorneys' fees and the cost of enforcing any right to indemnification under this Agreement.

2.1.11. "Notice Date." The date that Aqua provides written notice to the Municipality that Aqua intends to make a modification, upgrade or expansion to all or any portion of the Acquired System.

2.1.12. "Outside Users." The Contributing Users excluding the City.

2.1.13. "Permit." Any permit, license, franchise, approval, authorization, registration, certificate, variance or similar right obtained, or required to be obtained, from any Governmental Authority.

2.1.14. "Person." An individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

2.1.15. "Prohibited Discharge." Any waste, pollutant, or other substance which is prohibited to be discharged into the Acquired System as set forth in the Aqua Tariff.

2.1.16. "PUC." The Pennsylvania Public Utility Commission.

2.1.17. "Third-Party System." A system for the collection and transportation of wastewater that (a) is owned by a third party, and (b) directly or indirectly transports and conveys wastewater to the Acquired System.

2.2. Terms Defined in Aqua Tariff. Terms used in this Agreement which are defined in the Aqua Tariff and not otherwise defined herein shall have the respective meanings ascribed to such terms in the Aqua Tariff.

3. Effective Date; Term.

3.1. Effective Date. This Agreement shall become effective on the Closing Date (the "Effective Date"). If Aqua's purchase of the Acquired Systems pursuant to the APA does not close and the APA is terminated, this Agreement shall automatically terminate and be null and void and of no force or effect.

3.2. Term. The term of this Agreement shall be a period of three (3) years (the "Term") commencing on the Effective Date.

4. Treatment and Disposal of Wastewater. Subject to the terms of this Agreement, during the Term, Aqua shall accept, treat and dispose of the wastewater that emanates from the Municipality System from the Municipality. The wastewater that emanates from the Municipality System from the Municipality shall be delivered to the Acquired Treatment Plant from the Municipality System to the Acquired Collection System (either directly or indirectly through a Third-Party System). The Municipality covenants and agrees that all wastewater from the Municipality emanating from the Municipality System to the Acquired System shall be in accordance and compliance with all requirements of the Municipality's Ordinances, Aqua Tariff and applicable Laws, as they may be amended from time to time.

5. Prohibited Discharges; Hauled Waste.

5.1. No Prohibited Discharge shall be permitted to be discharged into the Acquired System from the Municipality System,

5.2. No hauled waste shall be permitted to be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, obtained a permit from the DEP permitting the discharge of such waste into the Municipality System (a "Hauled Waste Permit"), and (b) such user and waste and the discharge of such waste are in full compliance with all terms and conditions of the Aqua Tariff and the Hauled Waste Permit issued to the user.

6. Nondomestic Waste/Industrial Waste. No nondomestic waste or industrial waste shall be discharged into the Acquired System from the Municipality System unless (a) the user discharging such waste has, prior to the discharge of such waste, entered into a written agreement acceptable in form and substance to Aqua related to the pretreatment and discharge of such waste (an "Industrial Waste Agreement"), and (b) such user and waste and the discharge of such waste are

in full compliance with all terms and conditions of the Aqua Tariff and the Industrial Waste Agreement.

7. Operation and Enforcement.

7.1. Flow Calculations. As of the Closing Date and until Aqua installs flow meters to measure the Flow from each Contributing User, Flow for billing purposes shall be calculated based on the existing practice of using water meter read information supplied by the Contributing User or its water provider. After flow meters are installed to measure the Flow from each Contributing User, Flow from the Municipality System shall be determined by combining (i) the Metered Flow and (ii) all remaining Un-Metered Flow. Flow calculations for each quarter shall be communicated to the Municipality within thirty (30) days of the end of each quarter. Daily Flow calculations shall be based on a twenty-four (24) hour period utilizing 7:00 AM as the daily meter reading time.

7.2. Record Keeping/Flow Meter Maintenance. Aqua shall maintain accurate Flow records for Metered Flow based on the Flow meter readings. Aqua shall own, operate, maintain and replace, if necessary, the Flow meters and shall calibrate the Flow meters in accordance with this Section 7.2 and acceptable industry standards to ensure accurate readings.

7.3. Calibration and Testing.

7.3.1. Meter equipment and remote readouts shall be tested, calibrated, maintained, and repaired at least annually by Aqua at Aqua's cost. The results of such testing and calibration shall be provided to the Municipality upon request and no later than fourteen (14)) business days from such request. If the Municipality requests additional testing, calibration, maintenance and repair, such expenses associated shall be at the cost of the Municipality.

7.3.2. If the Municipality and Aqua cannot agree as to the inaccuracy of any meter, the Municipality may request that the meter be tested by an independent testing facility mutually agreed to by the Municipality and Aqua and such independent testing facility's determination of accuracy shall be conclusive. All costs related to the testing shall be borne fifty percent (50%) by the Municipality and fifty percent (50%) by Aqua.

7.3.3. If upon any test, the percentage of inaccuracy of any metering equipment is found to be in excess of three percent (3%), the calibration thereof shall be corrected, and any billing shall be adjusted, for a period extending back to the time when such inaccuracy began, if such time is ascertainable. If such time is not ascertainable, then for a period extending back one-half (1/2) of the time elapsed since the most recent date of calibration, but in no event further back than a period of six (6) months where such time is not ascertainable.

7.4. Estimated Meter Readings. Whenever it is necessary to estimate Flow meter readings due to equipment malfunction, failure, power outage, or similar events, Aqua shall notify the Municipality for any period of time such estimated readings were utilized within 72 hours of discovering such event. Any estimated reading shall be calculated using the average monthly Flow for the Flow meter in question, for the previous month, for each day the estimated reading is made. The amount of wastewater conveyed during such period may be estimated (i) by correcting the error if the percentage of the error is ascertainable by calibration tests or mathematical calculation,

or (ii) estimating the quantity of delivery by deliveries during the preceding periods under similar conditions when the meter or meters were registering accurately.

7.5. Storm-water / Groundwater Inflow & Infiltration ("I&I"). The Municipality shall enact, keep in force and enforce appropriate ordinances and/or regulations prohibiting the direct discharge of storm water, surface water runoff and groundwater into the Municipality System, and for the maintenance and repair of sewer lateral vent caps and cleanouts, so as to ensure that the waters or wastes discharged by any party into the Municipality System shall not contain, to the maximum extent possible, storm water, sump pump discharges, roof or surface drainage, or any discharges other than wastewater. Should sources of excessive I&I exist as determined by Aqua or any Governmental Authority having jurisdiction, the Municipality shall in a timely manner use its best efforts to locate and correct these conditions, in accordance with any Government Authority requirements. If the Municipality does not have an ordinance regarding the inspection and repair of sewer laterals in effect on the Effective Date, within one (1) year of the Effective Date, the Municipality shall enact an ordinance regarding the inspection and repair of sewer laterals and be responsible for the management and enforcement of such ordinance.

7.6. Violation of Permit or Law. In the event the Flow or wastewater characteristics from the Municipality System causes a violation of any Law or Permit related to the Acquired System, as may be established by specific, split sampling and independent laboratory and engineering analysis performed by Aqua and the Municipality or DEP, and whereby external fines or penalties may result, the Municipality shall be solely responsible for such fines and penalties, and all costs and expenses incurred by Aqua as a result thereof, including reasonable attorneys' and consultants' fees and expenses. If external fines and penalties are a result of shared violation of Aqua and the Municipality, Aqua and the Municipality shall share the burden of such fines and penalties based upon their proportionate share of the total Flow. If there are external fines and penalties resulting from a shared violation which is attributable to multiple Contributing Users, but the Contributing User or Users who caused the violation cannot be identified, then the obligation to pay the fines and penalties shall be shared by the Contributing Users in proportion to their share of the total Flow. The provision of this Section shall survive the expiration of this Agreement.

8. Metering Devices. Aqua shall pay for all costs and expenses that Aqua incurs related to the installation and maintenance of any metering device (a) at any Connection Point, or (b) used to calculate the Flow emanating from the Municipality System to the Acquired System located elsewhere in the Acquired System, anywhere in the Municipality System or anywhere else, which shall include, without limitation, the cost of the metering device and any other equipment related or ancillary to such metering device and labor incurred in installing and maintaining any metering device ("Metering Costs").

9. Compliance with Laws. Each Party shall comply with all applicable present and future Laws having jurisdiction over such Party or such Party's Facilities, all present and future Permits applicable to such Party's Facilities and all applicable grant agreements, unless the same are being contested in good faith by appropriate proceedings.

10. Sampling and Monitoring Equipment. Aqua may install, in its sole and absolute discretion and at its sole cost and expense, sampling and monitoring equipment ("Sampling Equipment") at the Connection Points for the purpose of sampling and analyzing the wastewater delivered to the Acquired System and to ensure compliance with the Aqua Tariff. Aqua shall own and operate any Sampling Equipment that it elects to install and shall be responsible, at its sole cost and expense, for designing, installing, operating, maintaining, updating and replacing any Sampling Equipment that it elects to install. Aqua shall collect 24-hour flow proportional composite samples, if feasible, and shall split samples with the Municipality for concurrent independent analysis by the Municipality.

11. Easements and Licenses Regarding Flow Meters and Sampling and Monitoring Agreement. The Municipality hereby grants Aqua an easement over any of its property and a license to access the Municipality System in order to install, access, operate or maintain (a) the Flow meters installed in the Municipality System, and (b) any Sampling Equipment that Aqua elects to install pursuant to Section 10. On the request of Aqua, the Municipality shall execute and deliver to Aqua any agreement or instrument in form and substance reasonably acceptable to Aqua in connection with or related to any such easement or license. Aqua may utilize the Sampling Equipment on a routine basis, in its sole and absolute discretion. The Municipality may request Aqua to conduct a sampling of the wastewater outside of Aqua's normal sampling and testing procedure, at the Municipality's sole expense and the Municipality shall share the results of the sampling with Aqua upon Aqua's request and expense.

12. Industrial Waste Survey. The Municipality shall maintain a current list of users of the Municipality System that generate nondomestic waste or industrial waste in accordance with the following (a "Industrial Waste Survey"):

12.1. The Industrial Waste Survey shall include the facility name and address of all users that generate nondomestic waste or industrial waste whose wastewater passes through the Municipality System to the Acquired System, the nature of each user's business and the name and contact information of a responsible individual to be contacted at each user.

12.2. An updated Industrial Survey shall be provided to Aqua within thirty (30) days of the Effective Date. The list shall include users that have been added as well as those that have been removed or where site operations have changed.

12.3. The Municipality shall provide to Aqua the results of its updated Industrial Waste Survey on or prior to March 31, June 30, September 30, and December 31 of each year during the Term.

13. Rates for Service. In connection with Aqua's collection, conveyance, treatment and disposal of wastewater from the Municipality emanating from the Municipality System, the Municipality shall pay to Aqua a rate based on thousands of gallons of Flow as determined pursuant this Agreement (the "Rate"). For the period commencing on the Effective Date through the first full year, the Rate shall be Three and 66/100 Dollars ($3.66) per thousand gallons. For each of the next two (2) years during the Term following the first full year, the then current Rate shall increase by three percent (3%). The PUC retains ultimate jurisdiction over setting the Rate,

and this Agreement shall be subject to PUC review and approval. To the extent the PUC determines the Rate set forth in this Agreement is unjust or unreasonable, this Agreement shall remain in effect and Aqua's shareholders shall be responsible for the difference between the rate the PUC determines is just and reasonable and the Rate in this Agreement.

14. Invoicing and Payment Terms. During each year during the Term, Aqua shall bill the Municipality quarterly for service through March 31, June 30, September 30 and December 31 in arrears. Any quarterly amount due for any partial quarter during the Term shall be prorated based on the number of days within such quarter that fall within the Term. The Municipality shall pay each quarterly bill to Aqua in full within forty-five (45) days after the date of the bill. Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due.

15. Peak Flow Limitations. The Municipality shall be limited to a peak daily flow of four (4) times its three-year annual average daily flow rate (the "Peak Flow Limitation Amount"). Aqua shall notify the Municipality within 30 days of any exceedance of the Peak Flow Limitation Amount and shall also notify the Municipality in a timely manner of any daily flows that exceed 90% of the Peak Flow Limitation Amount for a period of 3 consecutive days. Should the Municipality exceed the Peak Flow Limitation Amount, the Municipality shall be penalized $1,000.00 for each day in which the flow exceeds the Peak Flow Limitation Amount. The Municipality shall submit payment for each flow exceedance within 60 days of being notified by Aqua of the flow exceedance. In lieu of the Municipality paying the subject penalty payment to Aqua, the Municipality shall be permitted to use this money to address I&I within the Municipality System. If the Municipality elects to make improvements to the Municipality System to address I&I, the Municipality shall (a) notify Aqua in writing within 60 days of receiving notification of the flow exceedance that the Municipality intends to make improvements to the Municipality System, which notice shall include what improvements the Municipality intends to make to the Municipality System, (b) complete such improvements to the Municipality System within two (2) year of the date of its notice to Aqua of its intent to make such improvements (the "Improvement Completion Period"), and (c) within 30 days of the end of the Improvement Completion Period, submit documentation acceptable to Aqua certifying that such improvements have been made. If the Municipality elects to make improvements to the Municipality System, and such improvements are not fully completed within the Improvement Completion Period, within 60 days of the end of the Improvement Completion Period, the Municipality shall pay $5,000 to Aqua. The provisions of this Section 15 shall become effective on the third anniversary of the date on which Aqua commences billing the Municipality solely on flow metering. The intent of this peak daily flow limitation requirement is to encourage the Municipality to make I&I repairs to the Municipality System.

16. Municipality System. During the Term, the Municipality shall, at its sole cost and expense, maintain the Municipality System in good repair and operating condition, and continuously operate the same in accordance with prudent industry practices and standards. Aqua shall have no obligation or liability to repair, maintain, expand or modify any part of the Municipality System and any repair, maintenance, expansion or modification of all or any part of the Municipality System shall be at the sole cost and expense of the Municipality.

17. Indemnification

17.1. Indemnification by the Municipality. The Municipality shall indemnify and defend Aqua, and Aqua's directors, officers, employees, representatives and agents (collectively the "Aqua Indemnified Parties") against, and shall hold the Aqua Indemnified Parties harmless from and against, and shall pay and reimburse the Aqua Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Aqua Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.1.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of the Municipality in connection with the collection or conveyance of any wastewater emanating from the Municipality System except to the extent that any such injury, death or damage is caused by Aqua (including, without limitation, resulting from any breach of this agreement by Aqua);

17.1.2. any claim, litigation, proceeding or action of any kind whatsoever by any Governmental Authority or third party related to (i) any action or inaction of the Municipality with respect to the Municipality System, or (ii) the collection, conveyance, treatment or disposal of any wastewater emanating from the Municipality System except to the extent that any such claim or action is the result of any action or inaction of Aqua; or

17.1.3. any breach by the Municipality of any of its covenants or obligations under this Agreement.

17.2. Indemnification by Aqua. To the extent that the Municipality is not immune under applicable Law, Aqua shall indemnify and defend the Municipality, and the Municipality's elected officials, directors, officers, employees, representatives and agents (collectively the "Municipality Indemnified Parties") against, and shall hold the Municipality Indemnified Parties harmless from and against, and shall pay and reimburse the Municipality Indemnified Parties for, any and all Losses incurred or sustained by, or imposed upon, the Municipality Indemnified Parties related to, based upon, arising out of, with respect to or by reason of:

17.2.1. any injury (including death) to any Person or damage to any property related to, based upon, arising out of or by reason of any action or inaction of Aqua in connection with the treatment or disposal of any wastewater emanating from the Connection Points of the Municipality System except to the extent that any such injury, death or damage is caused by the Municipality (including, without limitation, resulting from any breach of this Agreement by the Municipality) and/or any third party (including, without limitation, any other Contributing User); or

17.2.2. any breach by Aqua of any of its covenants or obligations under this Agreement.

If any claim is made or action or proceeding filed against the Municipality for which the Municipality could potentially seek indemnification from Aqua pursuant to the provision of this

Section 17.2, the Municipality shall not waive or seek to waive any immunity afforded to it pursuant to applicable Law.

17.3. The provision of this Section 17 shall survive the expiration of this Agreement.

18. Enforcement Obligation. The Municipality shall, at Aqua's request, enforce, promptly and to the fullest extent of its authority and at its sole cost and expense, all standards, criteria, requirements, and thresholds established by any Law (including any ordinances or regulation of the Municipality), Governmental Authority or Permit or the Aqua Tariff (each, a "Wastewater Standard"), against any Person, which violates a Wastewater Standard and which Aqua in good faith has identified as having a wastewater flow which violates a Wastewater Standard.

19. Consent to City Updating of City's Act 537 Plan. The Municipality acknowledges that in connection with the City's sale of the Acquired System to Aqua, the City is required to update the City's Act 537 Plan. On the City completing its updating of its Act 537 Plan, at the request of Aqua or the City, the Municipality shall review the update to the City's Act 537 Plan and, if appropriate, shall pass a resolution in form and substance acceptable to DEP and the City approving the City's updated Act 537 Plan. Review and approval shall not be unreasonably delayed or withheld. The City is and shall be an intended third-party beneficiary of this Section 19 and shall have the right to enforce directly the terms and conditions of this Section 19. The terms of this Section 19 shall be effective as of the Execution Date.

20. Future Plant Expansion. In accordance with DEP Chapter 94 regulations, should the Acquired Treatment Plant be projected to exceed its design capacities within a five year term, Aqua shall send notice of such event to the Municipality; and, within six (6) months of the date of such notice, the City or Aqua and the Municipality shall initiate planning in accordance with Act 537 to evaluate the need for expansion of the treatment facilities.

21. Planning Modules. For any changes within the Municipality (for example, subdivision, land development, system expansion, among others) that requires DEP Sewage Facilities Planning approval, the Municipality will provide the complete and appropriate planning module components to Aqua for review. For any planning modules that do not cause an overload condition, Aqua will review the planning modules in a timely manner for Municipality's use in submission to DEP, and Aqua's approval will not be unreasonably withheld.

22. Miscellaneous.

22.1. Inspection and Audit. Aqua and the Municipality agree to maintain complete and accurate records and accounts concerning their responsibilities under this Agreement. All Parties shall, at all times, have the right to examine and inspect said records and accounts upon thirty (30) days' written notice. If required by law or regulation, Aqua and the Municipality shall make said records and accounts immediately available to federal and state authorities.

22.2. Waiver of Rights. The failure of any party hereto to insist upon strict performance of this Agreement or any of the terms or conditions hereof shall not be construed as a waiver of any of its rights hereunder.

22.3. Modification. This writing constitutes the entire Agreement between the parties and there are no representations or agreements, verbal or written, other than those contained herein. This Agreement may be modified, amended or supplemented by the written agreement of the Parties.

22.4. Necessity of Permits. In the event that a Governmental Authority refuses to issue any material Permit and the Parties have no recourse to appeal and obtain such denied Permit during the Term, and such Permit may be necessary to accomplish the intent and purpose of this Agreement, then the Parties hereto shall be relieved from further compliance with the terms of this Agreement, except for payments for services actually being rendered, until such time when such Permit or Permits shall be issued and then this Agreement shall become fully operative and the Parties hereunder shall be bound by all the terms hereof.

22.5. Severability. Should any one or more of the provisions of this Agreement for any reason be held illegal, invalid or unenforceable, such illegality, invalidity or unenforceability shall not affect any other provision of this Agreement and the remainder of this Agreement shall, in such circumstances, be construed and enforced as if such illegal, invalid or unenforceable provision had not been contained herein.

22.6. Interpretation. For purposes of this Agreement, unless the context otherwise requires, references in this Agreement to (a) Sections are to Sections of this Agreement; (b) exhibits and schedules are to exhibits and schedules attached to this Agreement and (c) an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof. This Agreement shall be construed without regard to any presumption or rule requiring construction or interpretation against the Party drafting an instrument or causing any instrument to be drafted.

22.7. Counterparts. This Agreement may be executed in two (2) or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Counterparts may be delivered via electronic mail (including pdf or any electronic signature complying with the U.S. federal ESIGN Act of 2000, e.g., www.docusign.com) or other transmission method and any counterpart so delivered shall be deemed to have been duly and validly delivered and be valid and effective for all purposes and binding execution and delivery hereof.

22.8. Addresses. Whenever a notice is required to be given in writing by mail, the following addresses shall be used, unless a different address is specifically called for:

Municipality: [•]

22.9. Termination of Existing Agreements. On the Effective Date, all existing agreements, whether written, oral or implied, between or among the City and the Municipality with respect to the conveyance and/or treatment of wastewater **[, including, but not limited to the Existing Agreement,]**[2] shall terminate and be of no further force or effect.

22.10. Choice of Law. This Agreement shall be governed by and construed with the laws of the Commonwealth of Pennsylvania except for those requirements, terms, duties and conditions regulated by federal law, and jurisdiction shall be in the Court of Common Pleas of Beaver County.

22.11. Arbitration. Any controversy, claim or dispute arising out of, or relating to this Agreement, or the breach thereof, may, if agreed by the parties, be settled by arbitration, and judgment upon any award rendered by the arbitrator or arbitrators may be entered in the Court of Common Pleas of Beaver County. Notwithstanding the above, any controversies, claims and disputes that are within the jurisdiction of the PUC shall be resolved before the PUC.

22.12. Force Majeure. Notwithstanding any other provision of this Agreement, no Party hereto shall be responsible for damages to the other for any failure to comply with this Agreement resulting from an act of God or riot, sabotage, public calamity, flood, strike, unforeseeable breakdown of the Acquired Treatment Plant, or other event beyond its reasonable control. The Party having the responsibility for the Facilities so affected, however, shall proceed promptly to remedy the consequences of such event, with costs to be shared, if applicable, to the extent provided elsewhere herein.

22.13. Most Favored Nation. During the Term, Aqua shall not enter into any bulk treatment agreement with any municipality or authority related to the acceptance, treatment, and disposal of wastewater by the Acquired System (a "Bulk Treatment Agreement") which provides for, or modify any existing Bulk Treatment Agreement to provide for, a bulk treatment rate per thousand gallons that is less than the then current Rate being charged to the Municipality under this Agreement.

22.14. Entire Agreement. This Agreement, together with all schedules and exhibits attached hereto, constitutes the sole and entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such the matter hereof.

---

[2] **NTD:** Bracketed provision would be included for a municipality/authority that has a current written agreement with the City regarding the collection and treatment of wastewater.

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed and their respective corporate seals affixed the day and year first above written.

# NOTICE

THIS TARIFF ESTABLISHES WASTEWATER RATES FOR CUSTOMERS OF THE CITY OF BEAVER FALLS SITUATED WITHIN BEAVER COUNTY, PENNSYLVANIA.

LIST OF CHANGES MADE BY THIS TARIFF

Changes: This tariff makes changes to the reflect the acquisition of the wastewater assets of the City of Beaver Falls located in Beaver County, Pennsylvania. Closing on the acquisition took place on XX/XX/XXXX, with the effective date of ownership occurring at 12:01AM on XX/XX/XXXX. (See page XXX)

This tariff is made pursuant to the Commission's Order adopted at Docket No. A-2022-3033138, which authorizes the issuance of the Certificate of Public Convenience.

| RATE ZONE 14 | | |
| Beaver Falls Division | City of Beaver Falls | Beaver |
| Beaver Falls Division | Eastvale Borough | Beaver |
| Beaver Falls Division | West Mayfield Township | Beaver |

*All Divisions and Subdivisions above are billed on a per EDU basis, with the exception of the Media Division, Plumsock Division, Treasure Lake Division, Village of Valley Forge Division and Beaver Falls Division

## SCHEDULE OF RATES

### RATE ZONE 14 – METERED

The rates under this schedule apply to all customer classes in the territories served subject to Rate Zone 14 rates as noted in the Description of Territories Served section under this tariff unless otherwise specifically identified below.

QUARTERLY SERVICE & CONSUMPTION CHARGES ($)

| | | Gallons per Quarter | Rate Zone 14 Quarterly | |
|---|---|---|---|---|
| RESIDENTIAL | Base | 0 to 3,000 Gallons | $43.64 | |
| | Block 1 | Over 3,000 Gallons | $8.71 | per 1,000 gallons |
| COMMERCIAL | Base | 0 to 3,000 Gallons | $43.64 | |
| | Block 1 | Over 3,000 Gallons | $8.71 | per 1,000 gallons |
| Bulk Rates [1] | | | $4.68 | per 1,000 gallons |
| Bulk Rate Other (Dalton) | | | $4.68 | per 1,000 gallons |

MONTHLY SERVICE & CONSUMPTION CHARGES ($)

| | | | | |
|---|---|---|---|---|
| COMMERCIAL & INDUSTRIAL | Base | 0 to 1,000 Gallons | $14.54 | |
| | Block 1 | Over 1,000 Gallons | $8.71 | per 1,000 gallons |

The DSIC surcharge shall not be applied to bills of wastewater customers in the Beaver Falls division; this will remain effective until an amended Long-Term Infrastructure Improvement Plan (LTIIP) is filed and approved which includes Beaver Falls. Following the approval of an amended LTIIP, the DSIC surcharge shall be applicable to wastewater customers in the Beaver Falls division.

[1] Bulk Rate service is available to municipalities and municipal authorities that provide their own wastewater collection system but obtain conveyance and treatment service from the Beaver Falls division and do not have a wastewater service agreement with Aqua.

RATE ZONE 14 – CONTINUED

Industrial Pretreatment Program-Beaver Falls (IPP-Beaver Falls)

A. Introduction

1. This Section applies to Industrial and Commercial customers served under Rate Zone 14 of this Tariff. All customers subject to this section ("Users") shall comply with the Wastewater Control Regulations and Industrial and Commercial Service Limitations as set forth in Section H and M, respectively, of the Company's Tariff, as amended from time to time, except as such rules and regulations are modified by this Section.

2. The Users shall be responsible for the charges and fees set forth below for the administration of the IPP-Beaver Falls. IPP fees are in addition to any other charges set forth in this Tariff.

3. Specific limitations and prohibitions applicable to Industrial and Commercial Users under this Section are set forth on Aqua's website regarding IPP-Beaver Falls.

4. Users shall be required to enter into a separate pretreatment agreement to govern specific limitations; prohibitions; conditions; duties and responsibilities; and sampling, monitoring and reporting requirements.

B. Charges

1. Industrial Wastewater Discharge Contract Application/Renewal Fee: $300.00

2. Specific Fees to be applied to quarterly flow, if the quarterly average results from samples collected from the discharge exceeds 300 ppm for $BOD_5$ or 275 ppm for TSS:

    a. $BOD_5$ Rate per 1,000 gallons = 0.00834 x $0.25 x ($BOD_5$ Sample – 300)

    b. TSS Rate per 1,000 gallons = 0.00834 x $0.15 x (TSS Sample – 275)

3. Industrial Surcharge Rate: $0.01 per gallon.

**NOTICE OF PROPOSED ACQUISITION AND RATE BASE ADDITION**
Docket No. A-2022-3033138

Dear Customer:

On [DATE], the Pennsylvania Public Utility Commission (PUC) conditionally accepted for filing the application of Aqua Pennsylvania Wastewater, Inc. (Aqua) for approval to acquire the City of Beaver Falls (Beaver Falls) wastewater system assets. Beaver Falls serves approximately 3,200 customers in Beaver County, Pennsylvania. Aqua's application also requests that the PUC authorize an addition of up to $41.25 million to Aqua's rate base pursuant to 66 Pa. C.S. § 1329. A utility's rate base is the value of property used by the utility to provide service to its customers and is one of several components used to establish a utility's customer rates.

Aqua periodically makes applications to the PUC for newly acquired systems which requires Aqua to send these types of notices. This notice is specific to the Beaver Falls acquisition.

Aqua is not requesting a rate increase in this acquisition proceeding. This acquisition will not immediately, but may in the future, affect water and/or wastewater bills of Aqua customers, including the new Beaver Falls wastewater customers. Aqua is not requesting a rate increase as part of the acquisition. Your rates will not change as a result of this transaction until the conclusion of an Aqua rate case where Aqua includes the Beaver Falls system and requests and receives PUC approval to increase its rates. At that time, based on a preliminary analysis of the potential rate impacts, Aqua estimates that the rates of the average customer could increase. The amount of the increase will be determined in Aqua's next base rate case and will be dependent on how the PUC chooses to apportion the increase among Aqua's acquired and existing customers. The tables below present non-binding, estimated incremental rate effects of the proposed rate base addition on Aqua's existing water and wastewater customers:

**Aqua Wastewater Customers**

| Rate Class | Average Usage | Estimated Monthly Increase | Estimated Percentage Increase |
|---|---|---|---|
| Residential | 4,000 gal/month | $2.54 | 3.02% |
| Commercial/Public | 8,330 gal/month | $4.05 | 3.02% |
| Industrial | 1,500 gal/month | $1.38 | 3.02% |

**Aqua Water Customers**

| Rate Class | Average Usage | Estimated Monthly Increase | Estimated Percentage Increase |
|---|---|---|---|
| Residential | 4,000 gal/month | $0.18 | 0.24% |
| Commercial/Public | 33,380 gal/month | $1.06 | 0.24% |
| Industrial | 200,150 gal/month | $5.14 | 0.24% |

The amounts stated above could change and will depend on how the PUC chooses to apportion any increase among the types of service, rate zones, and classes of customers.

## PUC ROLE

The state agency which approves acquisitions and rates for regulated public utilities is the PUC. The PUC will review and investigate the proposed acquisition and requested $41.25 million in additional rate base. After examining the evidence, the PUC may approve, modify or deny the acquisition and may approve or modify the $41.25 million addition to rate base. The PUC will issue a decision on the application on or around [DATE].

## ACTIONS YOU CAN TAKE

You can support or challenge Aqua's request by:

1) Sending a letter to the PUC. You can tell the PUC why you support or object to Aqua's acquisition of Beaver Falls' wastewater system in your letter. This information can be helpful when the PUC investigates the application. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2) Attending or presenting testimony at a PUC Public Input Hearing. You can attend or be a witness at a PUC public input hearing. The PUC holds public input hearings if it opens an investigation into Aqua's transaction and there is enough interest in the case. At these hearings, you can present your views in person to the PUC judge and to company representatives. Testimony under oath becomes part of the application case record. The PUC holds these hearings in the service area of the company. For more information, call the PUC at 1.800.692.7380.

3) Filing a protest or a petition to intervene. If you want to be a party to the case, you must file a protest or a petition to intervene. You then have an opportunity to take part in all the hearings about the proposed acquisition. You can receive copies of all materials distributed by the other parties. Protests and petitions to intervene must be filed in accordance with 52 Pa. Code (relating to public utilities) on or before [DATE]. Filings must be made with the Secretary of the Pennsylvania Public Utility Commission at P.O. Box 3265, Harrisburg, PA 17105-3265, with a copy served on Aqua's counsel at Post & Schell, P.C., Attn: Michael Hassell, 17 North Second Street, 12th Floor, Harrisburg, PA 17101.

The documents filed as part of this application are available for inspection and copying at the Office of the Secretary of the PUC between 8 a.m. and 4:30 p.m., Monday through Friday, on the PUC's website at www.puc.pa.gov and at Aqua's offices at 762 West Lancaster Avenue, Bryn Mawr, PA 19010. The PUC docket number is A-2022-3033138.

**NOTICE OF PROPOSED ACQUISITION AND RATE BASE ADDITION**
Docket No. A-2022-3033138

Dear Customer:

On [DATE], the Pennsylvania Public Utility Commission (PUC) conditionally accepted for filing the application of Aqua Pennsylvania Wastewater, Inc. (Aqua) for approval to acquire the City of Beaver Falls (Beaver Falls) wastewater system assets. We look forward to serving the Beaver Falls community in the future. Beaver Falls serves approximately 3,200 customers in Beaver County, Pennsylvania. Aqua's application also requests that the PUC authorize an addition of up to $41.25 million to Aqua's rate base pursuant to 66 Pa. C.S. § 1329. A utility's rate base is the value of property used by the utility to provide service to its customers and is one of several components used to establish a utility's customer rates.

Aqua is not requesting a rate increase in this acquisition proceeding. This acquisition will not immediately, but may in the future, affect water and/or wastewater bills of Aqua customers, including the new Beaver Falls wastewater customers. Aqua is not requesting a rate increase as part of the acquisition. Your rates will not change as a result of this transaction until the conclusion of an Aqua rate case where Aqua includes the Beaver Falls system and requests and receives PUC approval to increase its rates. At that time, based on a preliminary analysis of the potential rate impacts, Aqua estimates that the rates of the average customer could increase. The amount of the increase will be determined in Aqua's next base rate case and will be dependent on how the PUC chooses to apportion the increase among Aqua's acquired and existing customers. The tables below present non-binding estimated incremental rate effect of the proposed rate base addition on Beaver Falls' wastewater customers, which include estimates with and without cost sharing. Aqua has sought cost sharing in later rate filings for acquired systems and therefore we are providing both scenarios in this notice:

**Beaver Falls Customers rates assuming costs are shared with other Aqua customers**

| Rate Class | Average Usage | Estimated Quarterly Increase | Estimated Percentage Increase |
|---|---|---|---|
| Residential | 9,490 | $112.64 | 112.49% |
| Commercial | 39,870 | $410.35 | 112.49% |
| Industrial (Monthly) | 96,710 | $322.43 | 112.49% |
| Public | 69,260 | $689.35 | 112.49% |
| Bulk Other (Dalton) | 440,530 | $7,499.42 | 112.49% |

**Beaver Falls Customers rates assuming no costs are shared with other Aqua customers**

| Rate Class | Average Usage | Estimated Quarterly Increase | Estimated Percentage Increase |
|---|---|---|---|
| Residential | 9,490 | $165.83 | 165.61% |
| Commercial | 39,870 | $604.13 | 165.61% |
| Industrial | 96,710 | $474.70 | 165.61% |
| Public | 69,260 | $1,028.14 | 165.61% |
| Bulk Other (Dalton) | 440,530 | $11,040.94 | 165.61% |

The amounts stated above could change and will depend on how the PUC chooses to apportion any increase among the types of service, rate zones, and classes of customers. The PUC has allowed some form of cost sharing with existing customers based upon prior cases.

## PUC ROLE

The state agency which approves acquisitions and rates for regulated public utilities is the PUC. The PUC will review and investigate the proposed acquisition and requested $41.25 million in additional rate base. After examining the evidence, the PUC may approve, modify or deny the acquisition and may approve or modify the $41.25 million addition to rate base. The PUC will issue a decision on the application on or around [DATE].

## ACTIONS YOU CAN TAKE

You can support or challenge Aqua's request by:

1) Sending a letter to the PUC. You can tell the PUC why you support or object to Aqua's acquisition of Beaver Falls' wastewater system in your letter. This information can be helpful when the PUC investigates the application. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2) Attending or presenting testimony at a PUC Public Input Hearing. You can attend or be a witness at a PUC public input hearing. The PUC holds public input hearings if it opens an investigation into Aqua's transaction and there is enough interest in the case. At these hearings, you can present your views in person to the PUC judge and to company representatives. Testimony under oath becomes part of the application case record. The PUC holds these hearings in the service area of the company. For more information, call the PUC at 1.800.692.7380.

3) Filing a protest or a petition to intervene. If you want to be a party to the case, you must file a protest or a petition to intervene. You then have an opportunity to take part in all the hearings about the proposed acquisition. You can receive copies of all materials distributed by the other parties. Protests and petitions to intervene must be filed in accordance with 52 Pa. Code (relating to public utilities) on or before [DATE]. Filings must be made with the Secretary of the Pennsylvania Public Utility Commission at P.O. Box 3265, Harrisburg, PA 17105-3265, with a copy served on Aqua's counsel at Post & Schell, P.C., Attn: Michael Hassell, 17 North Second Street, 12th Floor, Harrisburg, PA 17101.

The documents filed as part of this application are available for inspection and copying at the Office of the Secretary of the PUC between 8 a.m. and 4:30 p.m., Monday through Friday, on the PUC's website at www.puc.pa.gov and at Aqua's offices at 762 West Lancaster Avenue, Bryn Mawr, PA 19010. The PUC docket number is A-2022-3033138

# AMENDED
# EXHIBIT I3

**NOTICE OF PROPOSED ACQUISITION AND RATE BASE ADDITION**
Docket No. A-2022-3033138

Dear [Contributing Municipality]:

On [DATE], the Pennsylvania Public Utility Commission (PUC) conditionally accepted for filing the application of Aqua Pennsylvania Wastewater, Inc. (Aqua) for approval to acquire the City of Beaver Falls (Beaver Falls) wastewater system assets. We look forward to serving the Beaver Falls community in the future. Beaver Falls serves approximately 3,200 customers in Beaver County, Pennsylvania. Aqua's application also requests that the PUC authorize an addition of up to $41.25 million to Aqua's rate base pursuant to 66 Pa. C.S. § 1329. A utility's rate base is the value of property used by the utility to provide service to its customers and is one of several components used to establish a utility's customer rates.

Aqua is not requesting a rate increase in this acquisition proceeding. This acquisition will not immediately, but may in the future, affect water and/or wastewater bills of Aqua customers, including the new Beaver Falls wastewater customers. Aqua is not requesting a rate increase as part of the acquisition. Your rates will not change as a result of this transaction until the conclusion of an Aqua rate case where Aqua includes the Beaver Falls system and requests and receives PUC approval to increase its rates. At that time, based on a preliminary analysis of the potential rate impacts, Aqua estimates that the rates of the average customer could increase. The amount of the increase will be determined in Aqua's next base rate case and will be dependent on how the PUC chooses to apportion the increase among Aqua's acquired and existing customers.

Aqua is required to provide a non-binding estimated incremental rate effect of the proposed rate base addition to customers. Aqua's estimates, based on average quarterly usage of 6,354,460 of the Contributing Municipalities[1] to the Beaver Falls system, quarterly rates could increase $49,251.81 per quarter (or 165.61%), assuming no cost sharing with other Aqua customers. If costs are shared with other Aqua customers, the projected rate impact could be $24,625.90 per quarter (or 112.49%).

The amounts stated above could change and will depend on how the PUC chooses to apportion any increase among the types of service, rate zones, and classes of customers. The PUC has allowed some form of cost sharing with existing customers based upon prior cases.

## PUC ROLE

The state agency which approves acquisitions and rates for regulated public utilities is the PUC. The PUC will review and investigate the proposed acquisition and requested $41.25 million in additional rate base. # SUPPLEMENTAL DIRECT TESTIMONY OF WILLIAM C. PACKER

**With Regard To**
**Updates to Appendix A**
**Reasonableness Review Ratio**
**Section 507 and 508**

**March 2024**

**TABLE OF CONTENTS**

I. INTRODUCTION ..... 1
II. UPDATED APPENDIX A ..... 2
III. REASONABLENESS REVIEW RATIO ..... 2
IV. SECTIONS 507 AND 508 ..... 4
V. CONCLUSION ..... 5

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is William C. Packer. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

**Q. Are you the same William C. Packer that has provided direct testimony in this proceeding?**

A. Yes

**Q. What is the purpose of your supplemental direct testimony?**

A. The purpose of my supplemental direct testimony is to update Appendix A to my testimony and withdraw Aqua's request to the Commission to modify the existing agreements between the City of Beaver Falls ("City" or "Beaver Falls") and the Contributing Municipalities due to a settlement of the Civil Action filed by Patterson Township, Patterson Heights Borough, White Township and West Mayfield Borough ("Litigating Municipalities").

**Q. Are you sponsoring any Exhibits with your supplemental direct testimony?**

A. Yes. Attached to my testimony as Appendix A is an updated schedule showing the revenue deficiency and overall impact on customers.

**Q. Except for the below changes, do you agree with your previous direct testimony submitted in this proceeding?**

A. Yes.

## II. UPDATED APPENDIX A

**Q. You previously testified that in *McCloskey*, the Commonwealth Court concluded that the Commission must address rate impact "in a general fashion" when deciding whether there is substantial public benefit. Please address the rate impact of the Proposed Transaction.**

A. The current average bill of a residential customer in Beaver Falls, is approximately $100.13 per quarter. As my calculations in Appendix A show the average bill could increase to approximately $265.96 per quarter or a 165.61% increase, which assumes that one hundred percent of the revenue requirement deficiency is borne by the acquired customers of Beaver Falls. This is due to the intervening increases applied by Beaver Falls since the initial Application was filed with the Commission.

## III. REASONABLENESS REVIEW RATIO

**Q. Are you aware that the Commission has issued a Tentative Supplemental Implementation Order[1] ("TSIO") regarding the implementation of Section 1329 of the Public Utility Code?**

A. Yes.

[1] *Valuation of Acquired Municipal Water & Wastewater System – Act 12 of 2016 Implementation*, Docket No. M-2016-2543193 (Feb. 7, 2024).

**Q. Do you believe the Reasonableness Review Ratio ("RRR") as set forth in the TSIO and what will be determined by the Commission in a final order should apply to this Proposed Transaction?**

A. No. The City issued its request for bids ("RFB") in July 2021. The Asset Purchase Agreement between Aqua and the City was signed n October 2021. Aqua, the City, and the Litigating Municipalities have worked diligently to arrive at a settlement that to allow this transaction to move through the Commission's approval process. The Commission itself has stated:

> The Commission would acknowledge that some transactions may be in the midst of negotiations, and as such, provide due consideration to the timing of the initial RRR release and any initial Section 1329 applications under this proposal. This would particularly be emphasized in the instance where an asset purchase agreement may be completed in close proximity to the issuance of the initial RRR.[2]

The City, Aqua, and the Litigating Municipalities have spent significant time and energy to move this Proposed Transaction forward, and therefore, this Proposed Transaction should be grandfathered.

[2] TISO at 8.

## IV. SECTIONS 507 AND 508

**Q. You previously testified that Aqua has developed a pro-forma agreement to negotiate with the Contributing Municipalities. Has Aqua entered into a new wastewater service agreement with the Contributing Municipalities?**

A. Yes. In Aqua's effort to settle the civil proceeding filed by the Litigating Municipalities, and to ensure that all the Contributing Municipalities have treatment agreements on substantially similar terms, Aqua has developed and negotiated new Wastewater Service Agreements with all of the Contributing Municipalities. I will note as I previously testified, several of the Contributing Municipalities did not have a written agreement prior to Aqua's involvement with the City and the Contributing Municipalities through the proposed transaction.

**Q. You previously testified that Aqua was requesting that to the extent necessary the Commission amend certain provisions of the prior agreements under Section 508 of the Public Utility Code and that those Contributing Municipalities that do not have an existing agreement be charged the Bulk Rate as set forth in Aqua's tariff. Is the Company still requesting this modification?**

A. No. Since new Wastewater Service Agreements have been negotiated and entered into between Aqua and the Contributing Municipalities, no amendment is needed under Section 508 of the Public Utility Code.

## V. CONCLUSION

**Q. Does this conclude your supplemental direct testimony?**

A. Yes it does. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of this proceeding.

**PUBLIC VERSION – CONFIDENTIAL INFORMATION REDACTED**

AQUA PENNSYLVANIA WASTEWATER, INC.
SUPPLEMENTAL DIRECT TESTIMONY OF ZACH MARTIN

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Zach Martin. My business address is 665 South Dock Street, Sharon, PA 16146.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Aqua Pennsylvania, Inc. ("Aqua PA"), as the Western Pennsylvania Area Manager.

**Q. Please provide a brief description of your education and work experience.**

A. I graduated from the Kent State University with an Associate of Science degree in 2009 and then a Bachelor of Business Administration in 2021. I have worked in the water and wastewater industry for nineteen years. I began my career in the utility industry in the spring of 2004 with the City of North Canton, Ohio as a water plant operator where I secured my Class III Water Supply Certification from the Ohio EPA. I moved into a leadership role in early 2009 as the Regional Water Superintendent for Portage County Water Resources where I was responsible for managing plant and distribution employees in the county operations of three water systems. I also served as backup to the wastewater superintendent there for the 13 wastewater treatment plants and 113 lift stations. In 2010, I moved to Aqua Ohio, Inc. as the Production Manager for the Struthers Division. There I was responsible for the operations and maintenance of the large surface water system including the 5 million gallon per day ("MGD") surface water treatment plant and the five

source water lakes and their six dams. In 2013, I was promoted in Aqua PA as the Assistant Division / Production Manager and later a Plant Manager II in 2017, and I held that position through 2021. During those eight years I was responsible for all aspects of production, treatment, and distribution facilities of the eight drinking water systems in Western PA. In 2021, I was promoted to the position of Area Manager II. In total I have worked for the Aqua subsidiaries of Essential Utilities, Inc. ("Essential") (*f/k/a* Aqua America, Inc.) for 13 years. I am responsible for leading a team of employees delivering drinking water to customers and returning treated wastewater back to the environment in nine counties of Western Pennsylvania. I am involved in all aspects of operations including budgeting, planning, employee relations, and process control. I am also involved in the business development functions in my area of operations. I am also a veteran of Operation Iraqi Freedom III and served in the U.S. Army and Ohio Army National Guard.

**Q. Do you hold any professional licenses or certifications?**

A. Yes. I hold three environmental operator certifications in two states. I am a Class-A certified water and Class-A certified wastewater operator in Pennsylvania with 18 subclasses in total. I am also a Class 3 water supply licensed operator in the state of Ohio. I have maintained operational laboratory certifications in both states as well.

**Q. Have you previously testified before the Pennsylvania Public Utility Commission ("PUC" or the "Commission")?**

A. Yes. I previously submitted Direct Testimony in this proceeding, and I have submitted testimony in Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") acquisition of Greenville Sanitary Authority.

**Q. You stated you filed Direct Testimony in this proceeding, what is the purpose of your Supplemental Direct Testimony?**

A. The purpose of my Supplemental Direct Testimony is to supplement my Direct Testimony and provide additional discussion regarding operations of the City of Beaver Falls ("City" or "Beaver Falls") wastewater system ("the System") and to discuss the public benefits of this transaction.

**Q. Are you sponsoring any Exhibits associated with the Company's filing as a part of your Supplemental Direct Testimony?**

A. Yes. I am sponsoring ZM-SUPP Appendix A, which contains CONFIDENTIAL and HIGHLY CONFIDENTIAL portions that have been marked as such.

## II. AQUA OPERATIONS, INTEGRATION OF THE SYSTEM, AND TECHNICAL FITNESS

**Q. In your direct testimony, do you describe the location of Aqua's operations in relation to the System and how Aqua will integrate the System into its operations?**

A. Yes.

**Q. Is there further information that you can provide at this time about how Aqua will integrate the System into its operations?**

A. Yes. As discussed in my Direct Testimony, the operation of the System will be managed from Aqua PA's Western Area office in Sharon, PA. Management, customer service, regulatory compliance, engineering, financial, and ancillary services will be provided seamlessly from there with support from our Southeastern Headquarters office. Aqua plans to offer employment to seven current employees of the City to address the day-to-day operations of the System. The existing employees coupled with the over 30 front line employees and management staff located within 40 miles of Beaver Falls provide significant resiliency and improves operational support for the System. Combining System and Aqua PA employees in conjunction with Aqua PA's "One PA" program creates purposeful knowledge sharing opportunities for employees across all sectors of the Company. In concert with the One PA program, Aqua has for more than a decade, a corporate -wide "One Company Initiative" which solicits knowledge sharing from all areas of Aqua which benefits all employees. By extension, Aqua PA's One PA philosophy and the One Company Initiative benefits customers of both the System, Aqua PA and Aqua by

creating a platform for sharing of best practices, table-top exercises, sharing of standard operating procedures ("SOPs"), sharing of existing or new equipment such as generators, lessons learned that may include new operating techniques or technologies, safety practices and more.

Further, Aqua has significant equipment that can be shared with the System, including for operation (vehicles, excavation, heavy haul), portable generators, common supplies and material storage, and mobile safety systems that can be moved between locations. While physical connection of the collection systems is not anticipated, connection of security and computer systems will occur. Aqua has an integrated Supervisory Control and Data Acquisition ("SCADA") system used to operate and monitor operating systems such as pumps, treatment units and status alarms, such as chlorine gas alarms. Aqua's SCADA system allows our operators to have better insights into the operations of the system at all hours of the day and to be proactively alerted of any issues. Currently, Beaver Falls does not have a full scale SCADA system. Aqua also maintains an integrated security system that allows physical security to be observed in different locations around the state. In the case of the Beaver Falls System, once systems are installed and integrated with Aqua's security system, the physical security alarms will notify operations staff at the Company's water treatment plant in Sharon, PA which is staffed 24/7/365. In addition, security alarms from Aqua PA's Sharon, PA water treatment plant will be shared at Beaver Falls which will alert those operators of possible problems in Sharon, thus providing mutual assistance to both system's customers. This will ensure safety of operations and personnel, as well as nearby residents and the environment.

**Q. In addition to what you have explained in your Direct Testimony, how else will other Aqua PA employees assist in the operation of the System, if needed?**

A. In addition to the information provided in my Direct Testimony, the support of Aqua PA employees, electricians, mechanics, laboratory staff, and instrument technicians, will benefit both the Beaver Fall's employees and customers. Aqua has 12 wastewater operators in the Western PA Area, many holding dual water and wastewater certifications, who may be called upon to assist in the operations of the system. There are also 20 certified water operators in the Western PA Area who are familiar with treatment systems and can follow SOP if needed. These operators are also supported by Aqua PA employees, which will benefit customers through engineering and field service functions as well as electricians, mechanics, laboratory staff, and instrument technicians, which will benefit both the Beaver Fall's employees and customers.

A few examples of operational support that will be provided by Aqua to the Beaver Falls System (which support does not exist today for the System) include:

(1) Environmental Compliance Audits conducted by staff that do not report to the operation management group;

(2) Safety teams that conduct "housekeeping" and safety audits that seek to find and eliminate potential dangers;

(3) A "Near-Miss" program that allows any employee to report an observed safety concern and a process that ensures the issue is resolved timely;

(4) A full-time Aqua PA One-Call management team (Damage Prevention) that ensures the requirements of Act 50 of 2017 are met, and that staff receive regular training;

(5) Mapping updates by an in-house Geographic Information System (GIS) team;

(6) Wastewater process experts that will review the processes for targeted parameters and if needed, assist in resolving any process upset situations;

(7) Emergency response support in the form of "national contracted vendors", fleet operations, and access to the approximately 600 Aqua PA employees who can deploy to the location in support of Western PA operations, all orchestrated through Aqua PA's Emergency Response and Communications process.

It is equally beneficial and important to note that eventually Beaver Falls employees will be called upon to assist in others areas of Western PA operations. In so doing, continued cross-training benefits the Systems as well customers of Beaver Falls and Aqua. This sharing of employees from new acquisitions and existing systems is a mainstay of our southeastern Pennsylvania wastewater operations where we have integrated wastewater employees for Cheltenham, East Norriton and Lower Makefield. This integration ensures operator familiarity with these systems and ensures continuity of operations during normal and emergency operations. This type of planning and integration also ensures that Beaver Falls will not be in the situation it is now – no supervisory personnel or adequate backup personnel.

**Q. Please describe how the Beaver Falls employees will be integrated into and develop their careers at Aqua.**

A. Following acquisition of the Beaver Falls System, Aqua will implement site-specific training, as well as off-site cross training in other Aqua facilities to promote continuous improvement and optimization, and to introduce compliance metrics to shift the plant into high performance operations.

**Q. In your Direct Testimony, you indicated that the System is similar to other systems owned and operated by Aqua. Is that the case?**

A. Yes, it remains the case. However, after further investigation and review of the System, as described below, the System is troubled, distressed and in need of significant investment and operations review.

**Q. Do you believe that Aqua is technically fit to own and operate the system?**

A. Yes.

**Q. Are there any further reasons why Aqua has demonstrated itself to be fit to operate this system after conducting additional investigation and review?**

A. As noted in my direct testimony, Aqua has experience replacing wastewater infrastructure while also navigating strict Pennsylvania Department of Environmental Protection ("DEP") regulations to install chemical treatment systems and optimize the plant for copper removal to benefit an impaired receiving stream as defined by Section 303(d) of the Clean Water Act. The improvements to this watershed were recently recognized by the DEP following stream assessments in 2022 and 2023 which identified material improvements to the stream eco-systems downstream of its outfall. This experience will assist Aqua in addressing the additional issues identified with respect to this system.

**Q. How does Aqua maintain and enforce safety, compliance, and security programs throughout its operations?**

A. Aqua requires a high level of employee training and monitors completion of training requirements. Most safety programs are trained initially and reinforced through annual refresher trainings. Aqua employs internal safety experts, internal compliance experts, and routinely conducts internal audits of operations. Aqua also contracts with external experts to perform random inspections and audits of employee and contractor operations. These cover operations throughout the system, including maintenance and construction activities in immediate contact with the community.

**Q. Can Aqua provide adequate wastewater treatment capacity to meet present and future customer demands?**

A. Yes. Through the existing facilities, coupled with the planned upgrades to the WWTP, which are discussed in the Direct Testimony of Mark Bubel, Sr. (Aqua Statement No. 2), Aqua can provide adequate treatment capacity for present and future customers. Aqua will continue to make improvements to the System, as may be required, to ensure any future customer demands are met.

**Q. Please summarize why you believe Aqua is technically fit to own and operate the System.**

A. My explanation of Aqua's current operations, the System's similarity to other systems operated by Aqua, and operational support that will be provided by Aqua, an experienced

wastewater utility, all support a finding that Aqua is technically fit to own and operate the System, and that ownership of the System by Aqua is in the public interest. In addition to this, I detail below the current areas for improvement needed in the System, as well as the additional process improvements identified that will be remedied by Aqua, and capital improvement needs of the System. Aqua's planned improvements in this regard establish substantial affirmative public benefits. Moreover, these capital and operational improvements have not been addressed by Beaver Falls, nor is Beaver Falls in a position to do so as explained by Mr. Jones (Aqua Statement No. 4-Supp.) in his Supplemental Direct Testimony.

## III. SYSTEM ASSESSMENT & CURRENT OPERATION OF THE BEAVER FALLS SYSTEM

### A. GENERAL SYSTEM ASSESSMENT

**Q. Since Aqua submitted its Direct Testimony, has it further analyzed the System and its current operations?**

A. Yes, it has. Below, I will provide supplemental detail on Aqua's assessment of the system generally and Aqua's identification of specific issues that evidence the System is currently troubled. These issues include hazardous gas problems, safety and security problems, and the lack of an asset management plan or computerized maintenance management system. I also identify how Aqua would address these issues as the owner and operator of the System, and how such ownership and operation will result in significant public benefits.

**Q. Did you visit the facilities?**

A. Yes, multiple times. Specifically, the Company conducted initial due diligence and post-agreement in-depth review to assess the operations, facilities, personnel, standard operating procedures, compliance, safety, and security of the System.

**Q. How old is the original WWTP?**

A. The wastewater treatment plant was built in 1938. While some work has been done over the years, the original WWTP is over 80 years old. The system is troubled, distressed and in significant need of attention.

**Q. Based on your experience in visiting the plant, did you feel safe and would you feel safe allowing Aqua employees to work at the WWTP under the current conditions?**

A. No. I did not feel safe and we would not allow Aqua employees to work at the WWTP under the current conditions. I note that these observations were made over the course of approximately ten visits during various seasons, and most recently in October 2023. I will further expand on this, highlighting the issues I saw while visiting the WWTP.

**Q. Please describe your findings and areas that can be improved by Aqua's ownership of the System.**

A. The System is currently under a Corrective Action Plan ("CAP") under the DEP. Under the City's ownership, significant quantities of raw sewage and/or partially treated wastewater have entered into the receiving Beaver River where fishing and recreation

occurs. The river serves many purposes, including that it discharges into the Ohio River, the largest volume tributary of the Mississippi River, only a few miles South of the outfall. Downstream of the WWTP are several public water systems that serve an estimated 5 million people in the Ohio Valley.

**Q. Can you please further describe why you believe this system is troubled, distressed and in need of attention?**

A. Based on my site visits, discussions with operations personnel, and observation of plant activities, I note the following areas of concern for future safe, adequate, and reliable wastewater utility service for the Beaver Falls System:

- Lack of Licensed Operators, Access to Training, and Redundancy of Operators;
- Limited or Lacking Process Control Testing;
- Laboratory Sample System Management;
- Permit Compliance Issues;
- Lack of Emergency Preparedness Planning;
- Lacking Safety & Security Equipment & Training;
- Hazardous Chemical Storage, Labeling, and Safety;
- Compliance with Federal EPA Risk Management Program regulations for extremely hazardous chemicals;
- WWTP Ventilation Issues creating health and safety risk for employees;
- WWTP physical safety measures;
- WWTP Security deficiencies;

- Inadequate SCADA and operator alarm systems;
- Use of homemade patchwork of physical assets;
- Insufficient emergency/standby power generation; and
- Non-use of Asset Management or Compliance Management Software Systems.

**Q. Can you explain the current staffing of the Beaver Falls WWTP, and any related challenges experienced?**

A. Based on my experience, the team operating the WWTP lacks experience, training, struggles to operate the System and are in danger based on the safety issues that I observed. The System should be operated with a team consisting of 3 maintenance mechanics, 2 licensed operators, a WWTP manager, and an administrative employee. When the Company visited the facility in October 2023 there were a total of four (4) employees. The WWTP superintendent was on medical leave for the past several months and had recently taken a disability retirement and was not expected to return. There was one experienced maintenance foreman, however, the foreman is unfamiliar with wastewater treatment process control, an unlicensed operator with less than one year experience, one mechanic with less than two years' experience, and an administrative employee. The three operator/maintenance staff cover the WWTP seven (7) days a week and are continuously on-call. These employees cover for each other when one may not be available to respond.

City officials shared their difficulty securing labor to work at the WWTP. There are no internal wastewater experts to assist at the City and any assistance would have to come from consultants, which had not been planned for or implemented as of our visit.

Assistance from consultants regarding operations is not budgeted for by the City. The loss of the WWTP manager shows that there is no redundancy, succession or contingency plan should such a vacancy occur. The Company compliments the skeleton staff on the work they are doing with limited experienced labor and resources. However, this clearly indicates that additional expertise is needed to ensure reliable and compliant operations for the long term which is a benefit specific to Aqua's acquisition of this system. The City has been unable to obtain experienced workers to fill the open positions.

**Q. What wastewater treatment process control and treatment operations did you observe at the WWTP?**

A. Process control and SOPs were significantly lacking. Many of the processes were well beyond normal acceptable operating conditions, possibly leading to future violations. For example, the primary clarifiers had floating trash in/on them, and the skimmers were not operating at all. The primary clarifiers were black in color indicating septic conditions. See Appendix A, Section 1.[1] This creates odor issues and more significantly prevents the naturally occurring processes from happening in an efficient manner. While all the tanks were on-line, flow coming out of the tanks was only at 50% of design capacity which suggests something very wrong and a clear operational inefficiency. The extra on-line tankage creates long hydraulic retention times coupled with lower than ideal sludge

[1] Portions of Appendix A to Statement No. 3-Supp contain confidential, non-public information and have been designated as such.

wasting and black, odorous septic conditions. It also creates additional costs because the WWTP is powering more equipment than necessary.

**Q. Please expand on further concerns of process control and treatment operations.**

A. Also of significant concern is that there were no air blowers online to supply aeration and/or mixing to any process tanks. These tanks can contain hydrogen sulfide and other gases that displace oxygen that are very hazardous. Proper aeration and mixing is vital for safety reasons. The trickling filter facility at a wastewater treatment plant consistently moves wastewater and pushes it to the bottom of the facility. Upon review the trickling filter facility had excessive biomass growth reducing its effectiveness. See Appendix A, Section 2.

**Q. Please further expand upon your concerns when visiting the WWTP.**

A. There are floating solids atop the secondary clarification tanks. This accumulation was also on the surface of the chlorine contact tank where disinfection of the process stream should have been occurring. See Appendix A, Section 3. This is not where floating solids should appear. All tanks were extremely turbid (dense, murky) and it was difficult to see more than a couple inches into the water column. This is not a good sign for a tank, especially near final treatment. Most protrusions from the tanks, channels, launderers, and flumes were coated with excessive solids accumulation. Again, not a good sign. Sludge wasting, which is an important tool in the normal operational process, seemed to be limited to periodic and nonspecific volume instances. All of this is an indication of the need to have

a fully staffed system along with a knowledgeable and engaged lead operator, supervision, and qualified backups to the same.

**Q. How would Aqua address the staffing challenges and the concerns regarding the condition of the System identified above?**

A. Aqua maintains a staff of compliance and operations experts that will implement changes upon closing of the transaction to ensure SOPs are in place and followed. We also have robust preventative and corrective maintenance programs with asset and process based minimum standards of service that will be discussed in detail later in this testimony for mechanical and maintenance personnel to adopt. We incentivize operators to secure DEP operating licenses, and support that with continuing education assistance. In addition, our corporate resources and local operations management are skilled at operating wastewater facilities. Also, Aqua has been successful in attracting talent across Pennsylvania for all our systems. We have robust onboarding and training programs for supervisors and operators that encompass all facets of operations from safety to process control. Since Aqua filed its initial application, the City has had vacancies at the WWTP that have not been filled as of the date of this Supplemental Direct Testimony.

**Q. What else would Aqua do to correct the troubled and distressed nature of the Beaver Falls system?**

A. The Beaver Falls system would receive an intensive review by our engineers, process control specialists, and infusion of experienced operators and leadership to establish the

operating protocols and bring the plant back to normal operating conditions quickly. This should occur within 30 days of the start of operations. Process control testing criteria, including adequate laboratory equipment will be provided on-site and operators trained to perform tests and interpret the results, from which process control adjustments can be made with confidence. The Aqua-owned state certified laboratory in Bryn Mawr will support this facility from the start with certified analytical results and a quick turnaround time. Continued observation of the process by both on site personnel and broader Aqua resources would be a constant through operations, allowing independent evaluation of the process to ensure nothing is being missed.

Maintenance activities would immediately improve under our defined asset management program with proactive work orders issued for the plant, equipment, and collections system. Maintenance staff would be supported by outside services and vendors to ensure the specialty elements of maintenance program undertaken correctly. Aqua's workforce development program from recruitment through continued education, supported by management and technology, is a significant benefit to Beaver Falls ensuring plant reliability, environmental compliance, protection of receiving waterways, and elimination of the odors for the plant experienced by the public.

**Q. Please expand upon why treatment and process controls are so important for the community in Beaver Falls and the surrounding communities downstream.**

A. Adequate treatment and timely process control decisions are necessary to ensure adequately treated wastewater safely reaches the discharge of the WWTP, which ultimately

reaches the Beaver River where recreation occurs. The river serves many purposes, including that it discharges into the Ohio River, the largest volume tributary of the Mississippi River, only a few miles South of the outfall. Downstream of the WWTP are several public water systems that serve an estimated 5 million people in the Ohio Valley. The Company has proven its expertise in optimizing treatment in wastewater systems like the Beaver Falls system to protect drinking water sources from diseases such as hepatitis A and cholera, scum discharge, and the Company excels at maintaining optimum oxygen levels and minimized regulated compounds in treated water outfalls which helps protect the environment and our watersheds. The Beaver and Ohio Rivers are home to 159 species of fish alone. Effluent water quality from this system is paramount. While the WWTP is currently compliant with DEP requirements, Aqua has significant concerns that proper process controls and treatment are not in place which can further degrade the WWTP and lead to future violations.

**Q. Does the Beaver Falls staff perform adequate process control testing?**

A. No. The City only performs the bare minimum for sampling and analysis for the WWTP. Aqua will require the additional routine process control testing analysis above the regulatory requirements of the DEP to the discharge permit parameters to include alkalinity, suspended solids, biological oxygen demand ("BOD"), settleable solids, pH, nutrients like ammonia and phosphorus, and dissolved oxygen analysis of the trickling filter effluent. Aqua will also monitor (i) total suspended solids, dissolved oxygen, and sludge age in the process; (ii) total suspended solids in the mixed liquor, and (iii)

microscope analysis of the process bacteria. Aqua will increase the frequency of analysis in the effluent to include chlorine, ammonia, and phosphorus.

The addition and/or increased frequencies of the testing of the above parameters will facilitate optimization of the facility and processes, which will allow operators to make educated decisions and meet the permit effluent requirements. These process enhancements will also drive towards the optimization and cost control of the WWTP, which will directly benefit the environment and the community meeting the principal objectives of the Clean Water Act – fishable, swimmable, and drinkable waterways.

**Q. Does the City employ a laboratory information management system ("LIMS") to track analytical results and compliance with critical standards in its laboratory space?**

A. No, it does not. Physical bench sheets are used with common spreadsheet applications (*e.g.*, excel) for reporting of testing results. These bench sheets are not capable of being audited and lack critical access controls and compliance adherence. This means that any changes to the data are not automatically logged to a unique user, and justification may not be required to submit a change in testing results.

**Q. Please explain how Aqua will address this issue of data tracking and confidence.**

Aqua will implement its LIMS program to ensure that analytical data follows processes and procedures, including quality assurance and quality control standards. Data that is entered into LIMS includes the regulatory and process control data which includes sample

results and plant process key performance indicators. The data will be tracked and is fully auditable as each employee will have individual credentials so that any entries are tied to that specific user with process checks in place so that any changes to results must be authorized and notes provided to explain the change. Internal and external laboratory analysis will be cataloged in the LIMS system.

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[**END HIGHLY CONFIDENTIAL**]

**Q. Are there other examples of general safety issues in the System?**

A. Yes. Throughout the Beaver Falls facility there are multiple safety deficiencies of low to moderate risk. By way of example, most pumping systems are missing guards on the rotating equipment creating unsafe conditions that could cause workers to be pulled into the rotating equipment or hands crushed. There are missing railings or railing components like toe or kick plates to prevent a slip/trip and fall from becoming an immersion into the process tanks. There are numerous locations where employees use temporary ladders to access equipment that circumvent fall protection.

Chemicals were not stored properly at the WWTP. There are no containment devices for the chemical drums. Drums in service were propped up on blocks to permit emptying, but this leaves the heavy drums unstable and teetering in common areas of the

WWTP near floor drains. There is a general lack of labeling throughout the facility and no evidence of the exit signage nor emergency lighting. Multiple fire extinguisher hooks were empty.

There are several roofed structures that are accessible by stairway that do not have any fall protection devices, railings, lighting, or signage to ensure occupant awareness. There are also confined spaces without any signage and no evidence of a program, nor regulatory compliance for the documentation of training and entry. See Appendix A, Section 6.

**Q. How will Aqua address these general safety issues?**

A. These issues will be cataloged and will become a part of Aqua's already robust capital and operational plan to be addressed within Year 1 of Aqua ownership. Our safety teams and operational management will make these items a priority in Year 1 by educating our new employees in the safety requirements of Aqua, investing to correct deficiencies, and provide on-going safety housekeeping, near miss reporting, and safety audits on a regular basis. Safety of our employees, most who are members of the community, is priority so they return safely home. The public benefits of this cannot be measured.

**Q. Is there a system in place at Beaver Falls to document near-misses?**

A. No. Aqua, however, implements a Near Miss program (a.k.a. "Safety Learning Opportunities") where all employees are encouraged to look for and report potential and real unsafe conditions so they can be addressed in a timely manner. This program is key

to both creating a safe working environment and a culture of safety. The employees have little support in the way of safety programing currently, and this program will be beneficial both to them, their families, and the community at large.

[**BEGIN HIGHLY CONFIDENTIAL**]

[redacted]

[redacted]

[**END HIGHLY CONFIDENTIAL**]

**Q. Does the facility have emergency/standby power generation on site?**

A. Yes, however, it is not clear what equipment in the WWTP is supplied with emergency power from backup generators. Only critical pumping systems are supported by the back-up generator and even those systems are not completely supported. There is limited operation of secondary treatment and pumping operations. There is no emergency power supplied to the aeration processes meaning these systems will not operate during a power failure and it is unclear as to the capabilities of that emergency power for supplying the

chemical feed systems and limited process monitoring equipment. These shortfalls mean that while wastewater will continue to enter the WWTP, it will not be fully treated and enter the receiving stream. This will be fully assessed as part of Aqua's ongoing capital improvement processes and addressed through capital projects identified.

## D. ASSET MANAGEMENT

**Q. Does Beaver Falls have an asset management plan or computerized maintenance management system ("CMMS") in place and what is Aqua's plan for post-Closing asset management?**

A. The team at Beaver Falls maintains a basic calendar and spreadsheet to track preventative maintenance needs. Some written records are maintained to track assets over time. Aqua will implement several layered approaches to asset management through financial modules. Aqua will also implement a CMMS system to schedule and automate preventative maintenance schedules for the employees. This system will also capture reactive and corrective maintenance tasks for all aspects of the System. Aqua will work with the Beaver Falls team to fully document existing SOPs and to employ Aqua SOPs where none exist through these work order systems to record tacit knowledge and improve succession planning and operational consistency.

**Q. Are there specific examples of assets and processes that are not operating correctly due to lack of maintenance or expertise? If so, does Aqua have a plan to remedy the situation?**

A. Yes. Aqua personnel witnessed a complete absence of aeration in the WWTP. There is also evidence of incomplete or insufficient maintenance of the trickling filters. The distribution spray arms rotate continuously. The employees noted that it is common practice for them to create their own parts to maintain and patch operations of these large assets for this critical and continuously operating equipment. To avoid this patchwork approach, Aqua would engage manufacturers and experts to ensure that the correct parts are installed, and specialists are utilized to ensure this large rotating equipment is correctly balanced.

**[BEGIN CONFIDENTIAL]**

[redacted]

[redacted]

**[END CONFIDENTIAL]**

**Q. Does Beaver Falls utilize any compliance assurance software?**

A. No. To address this, Aqua will implement its current compliance assurance software. This software system generates compliance-focused work orders for regulated wastewater system processes and functions. Employees will be assigned a combination of daily, weekly, monthly, quarterly, annual, and less frequent work orders to ensure that critical compliance requirements are completed on time and in a manner that is well documented. The system will generate monthly, quarterly, and annual regulatory reports for consistency

of calculations and to Aqua's standards. These systems will support the staff of Beaver Falls in the rapid adaptation to the operational excellence for which Aqua is known.

## IV. CONCLUSION

**Q. Does this conclude your Supplemental Direct Testimony?**

A. Yes, it does. However, I reserve the right to supplement my Supplemental Direct Testimony as additional issues and facts arise during the course of this proceeding.

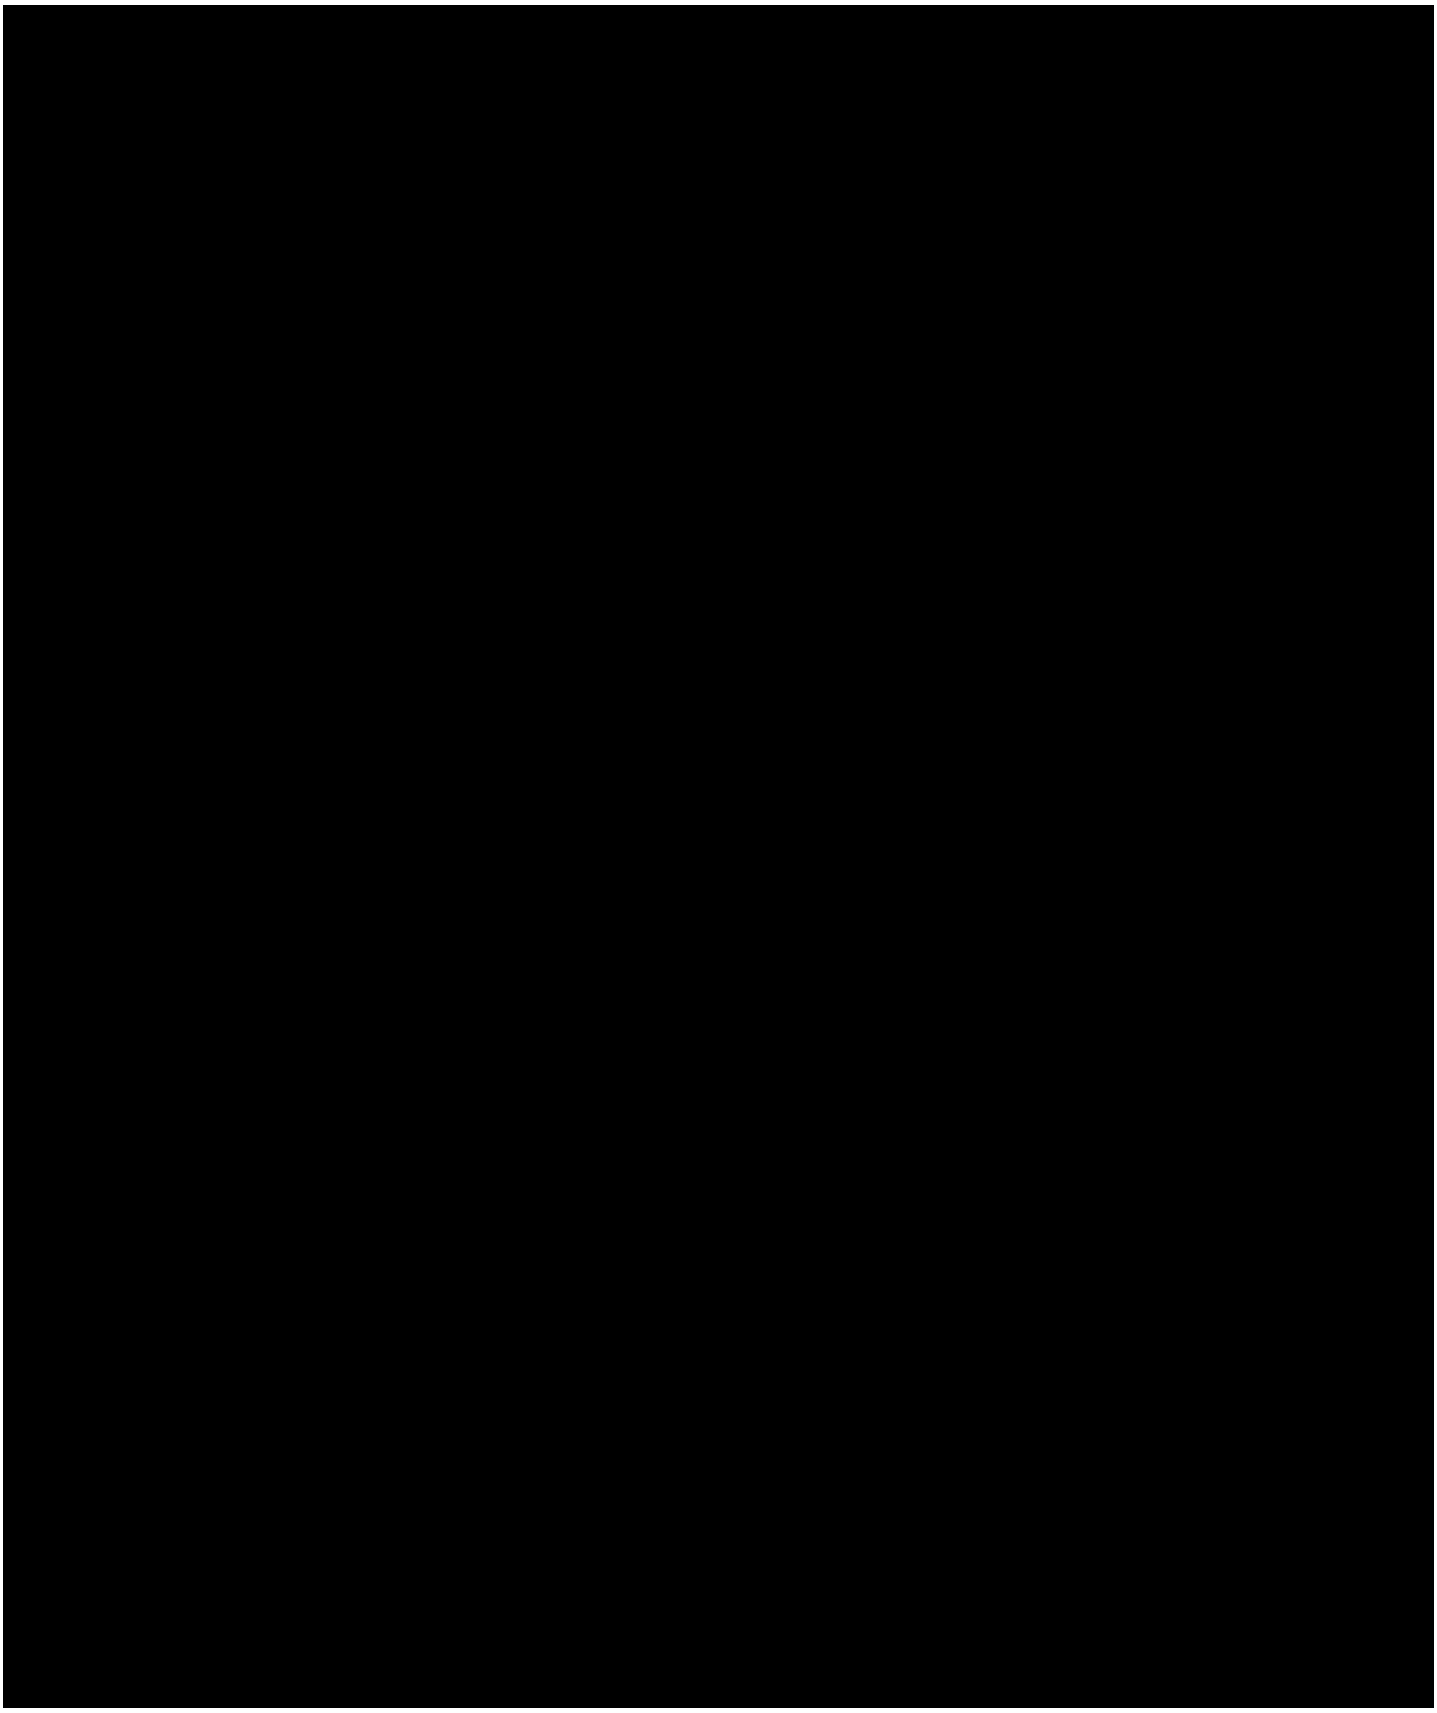
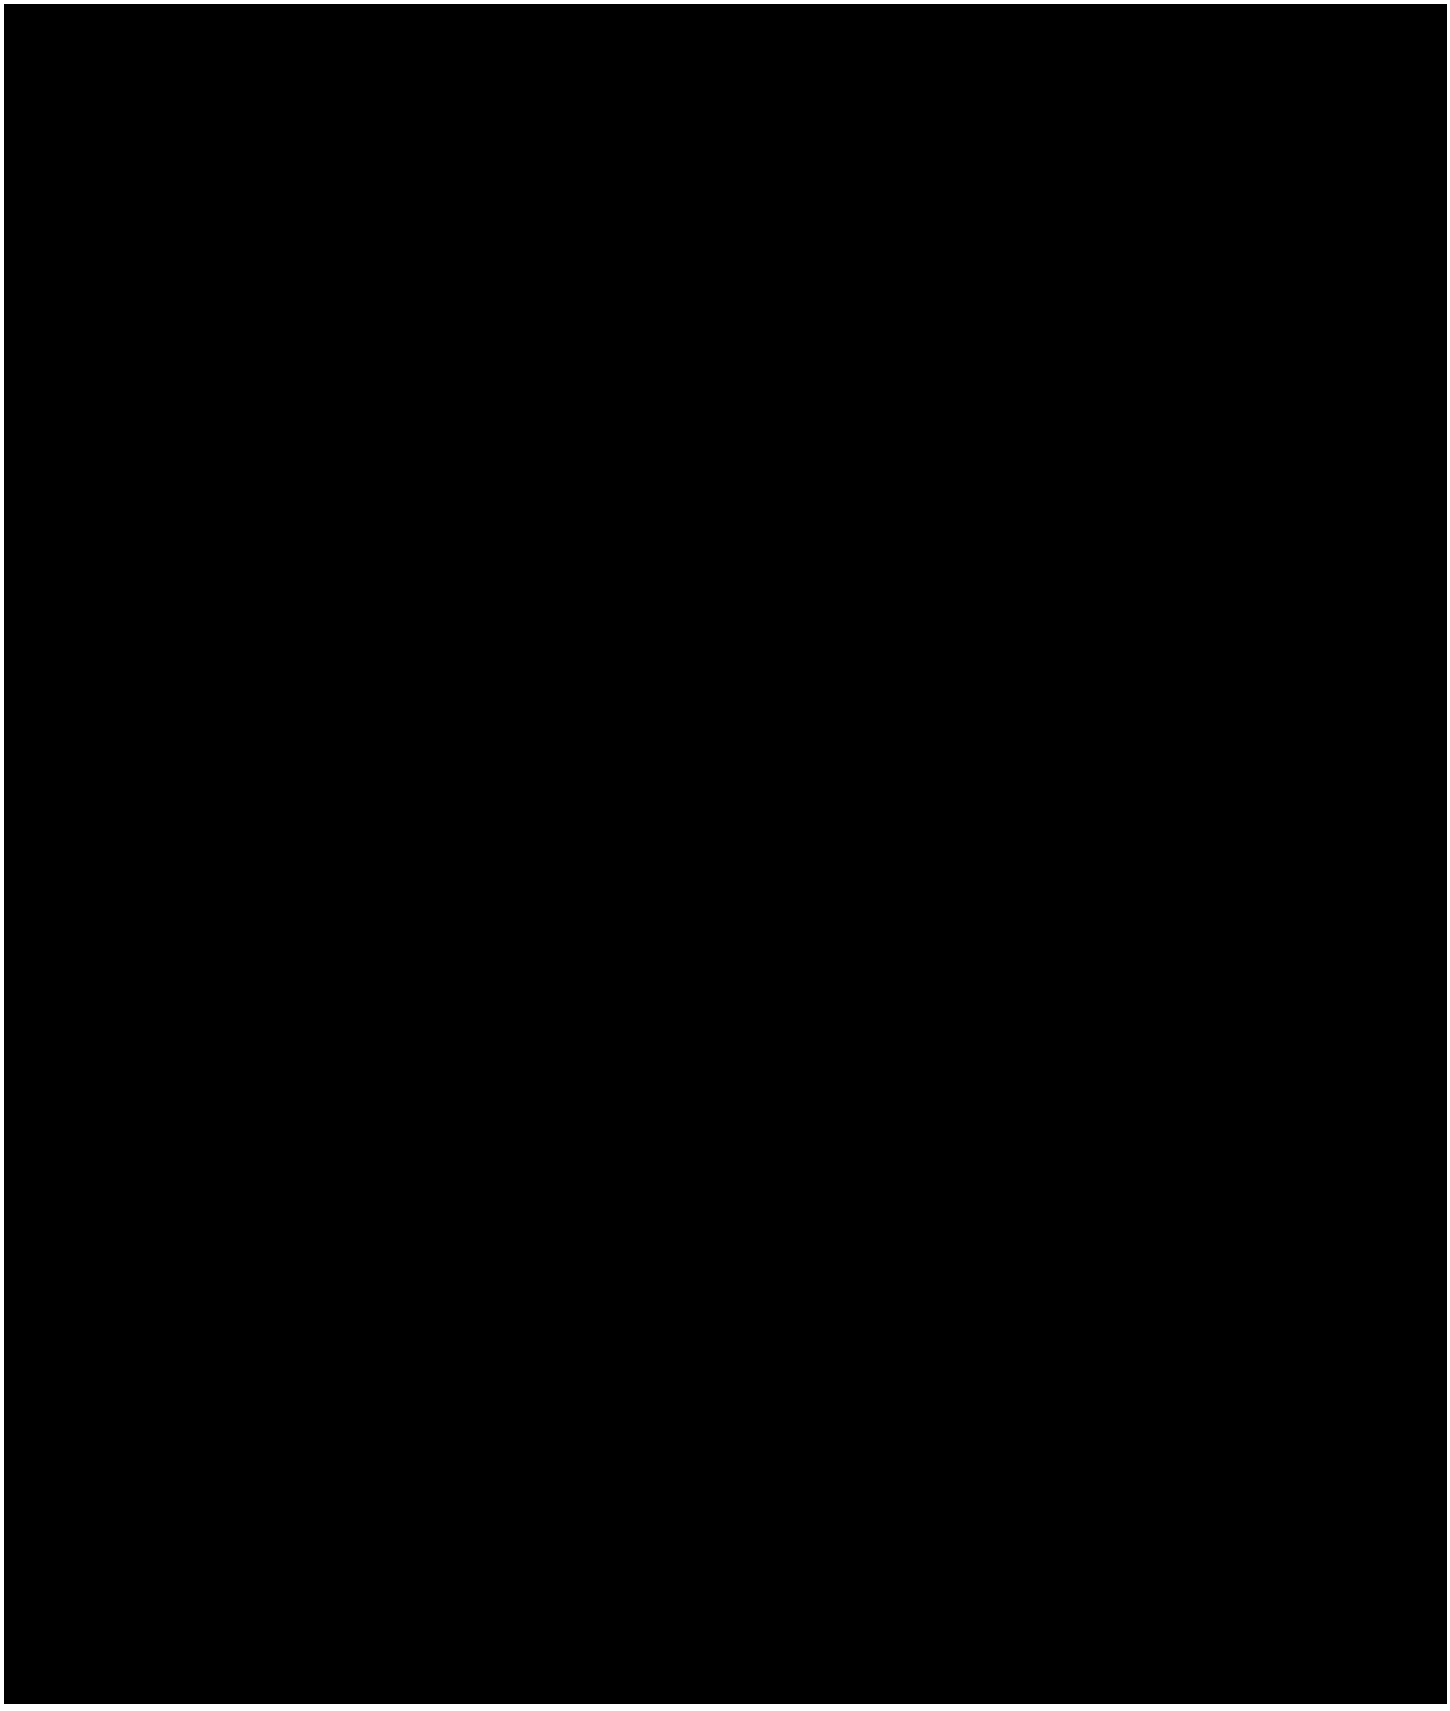
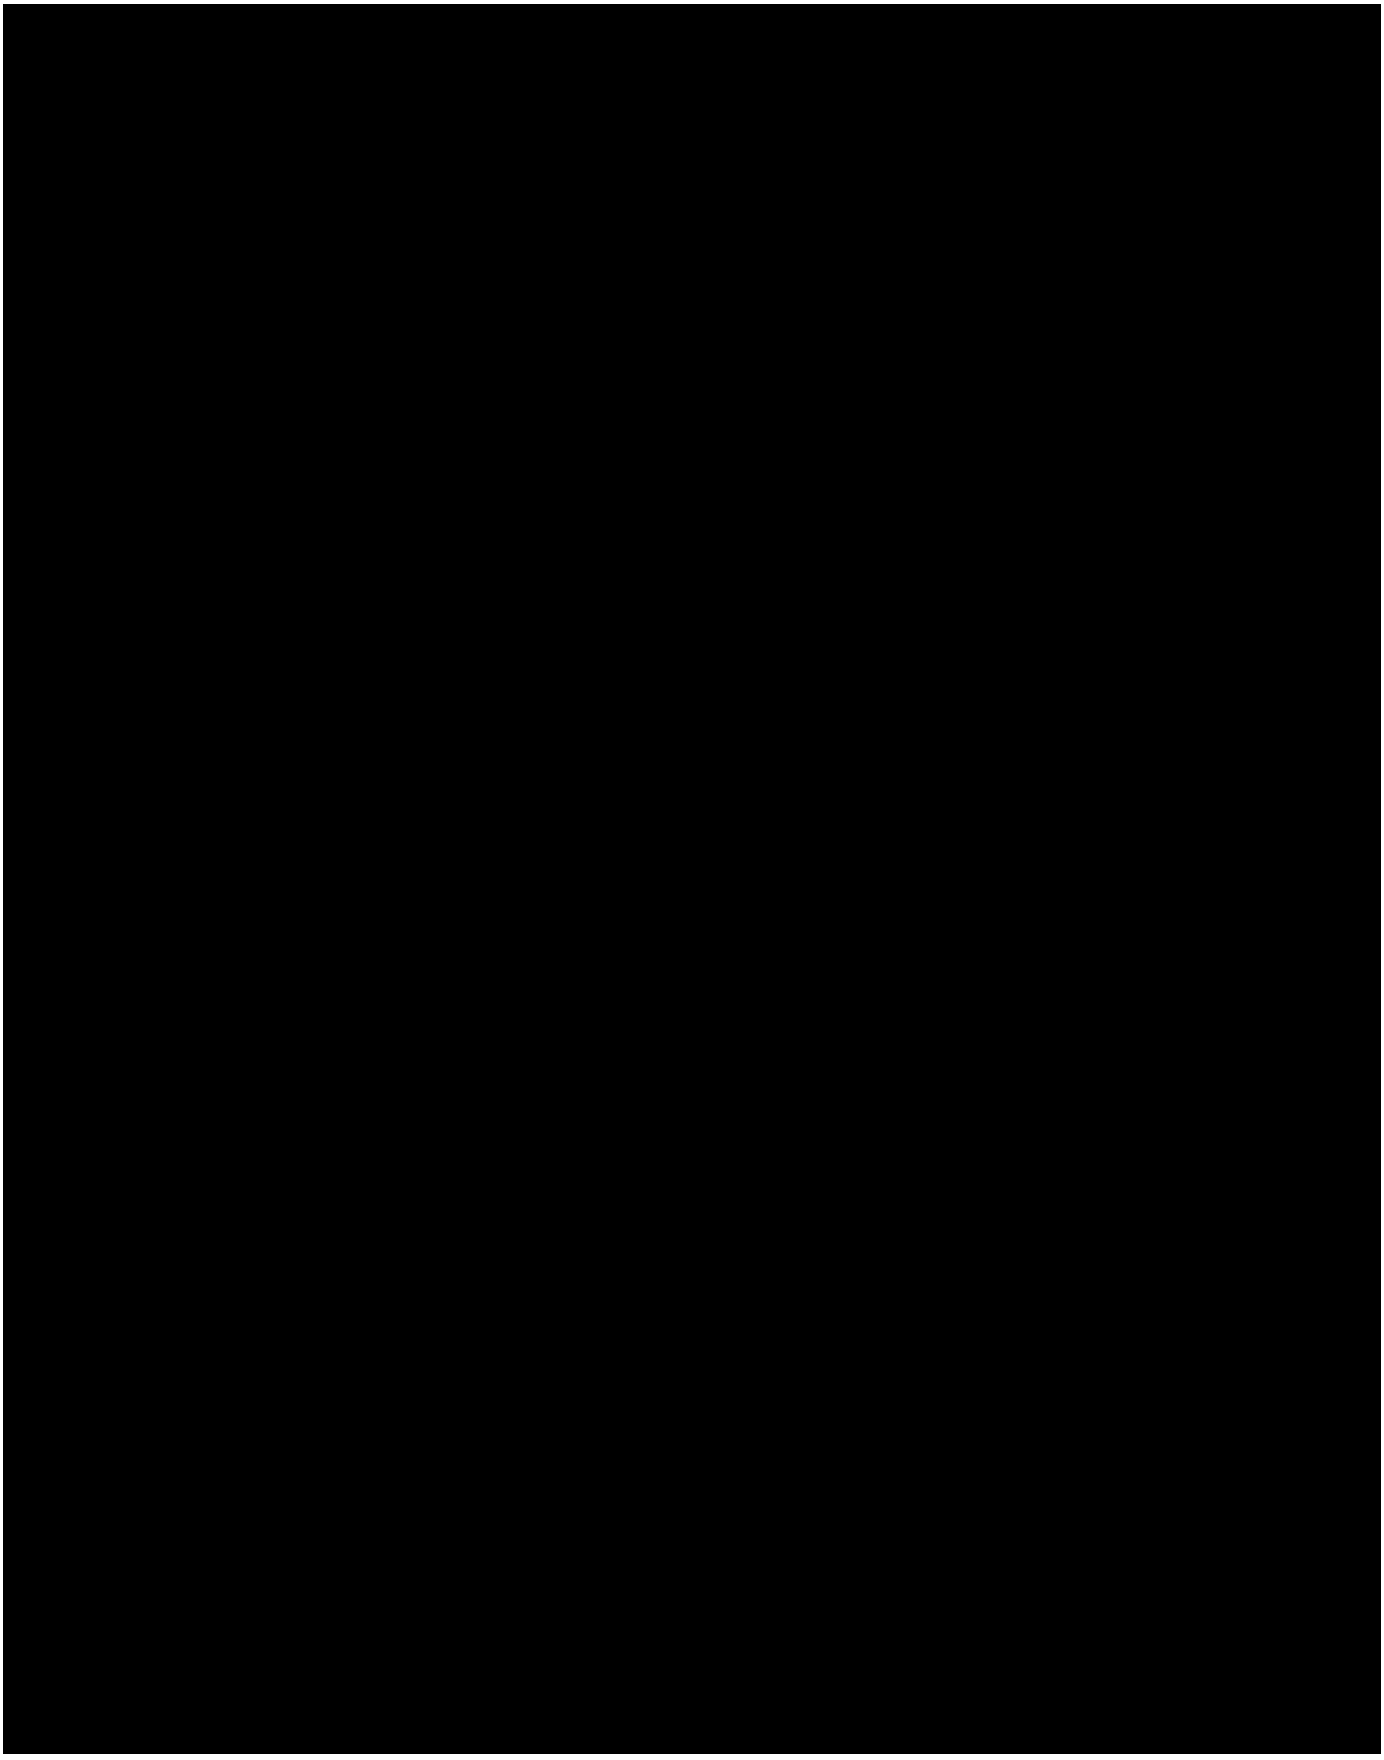
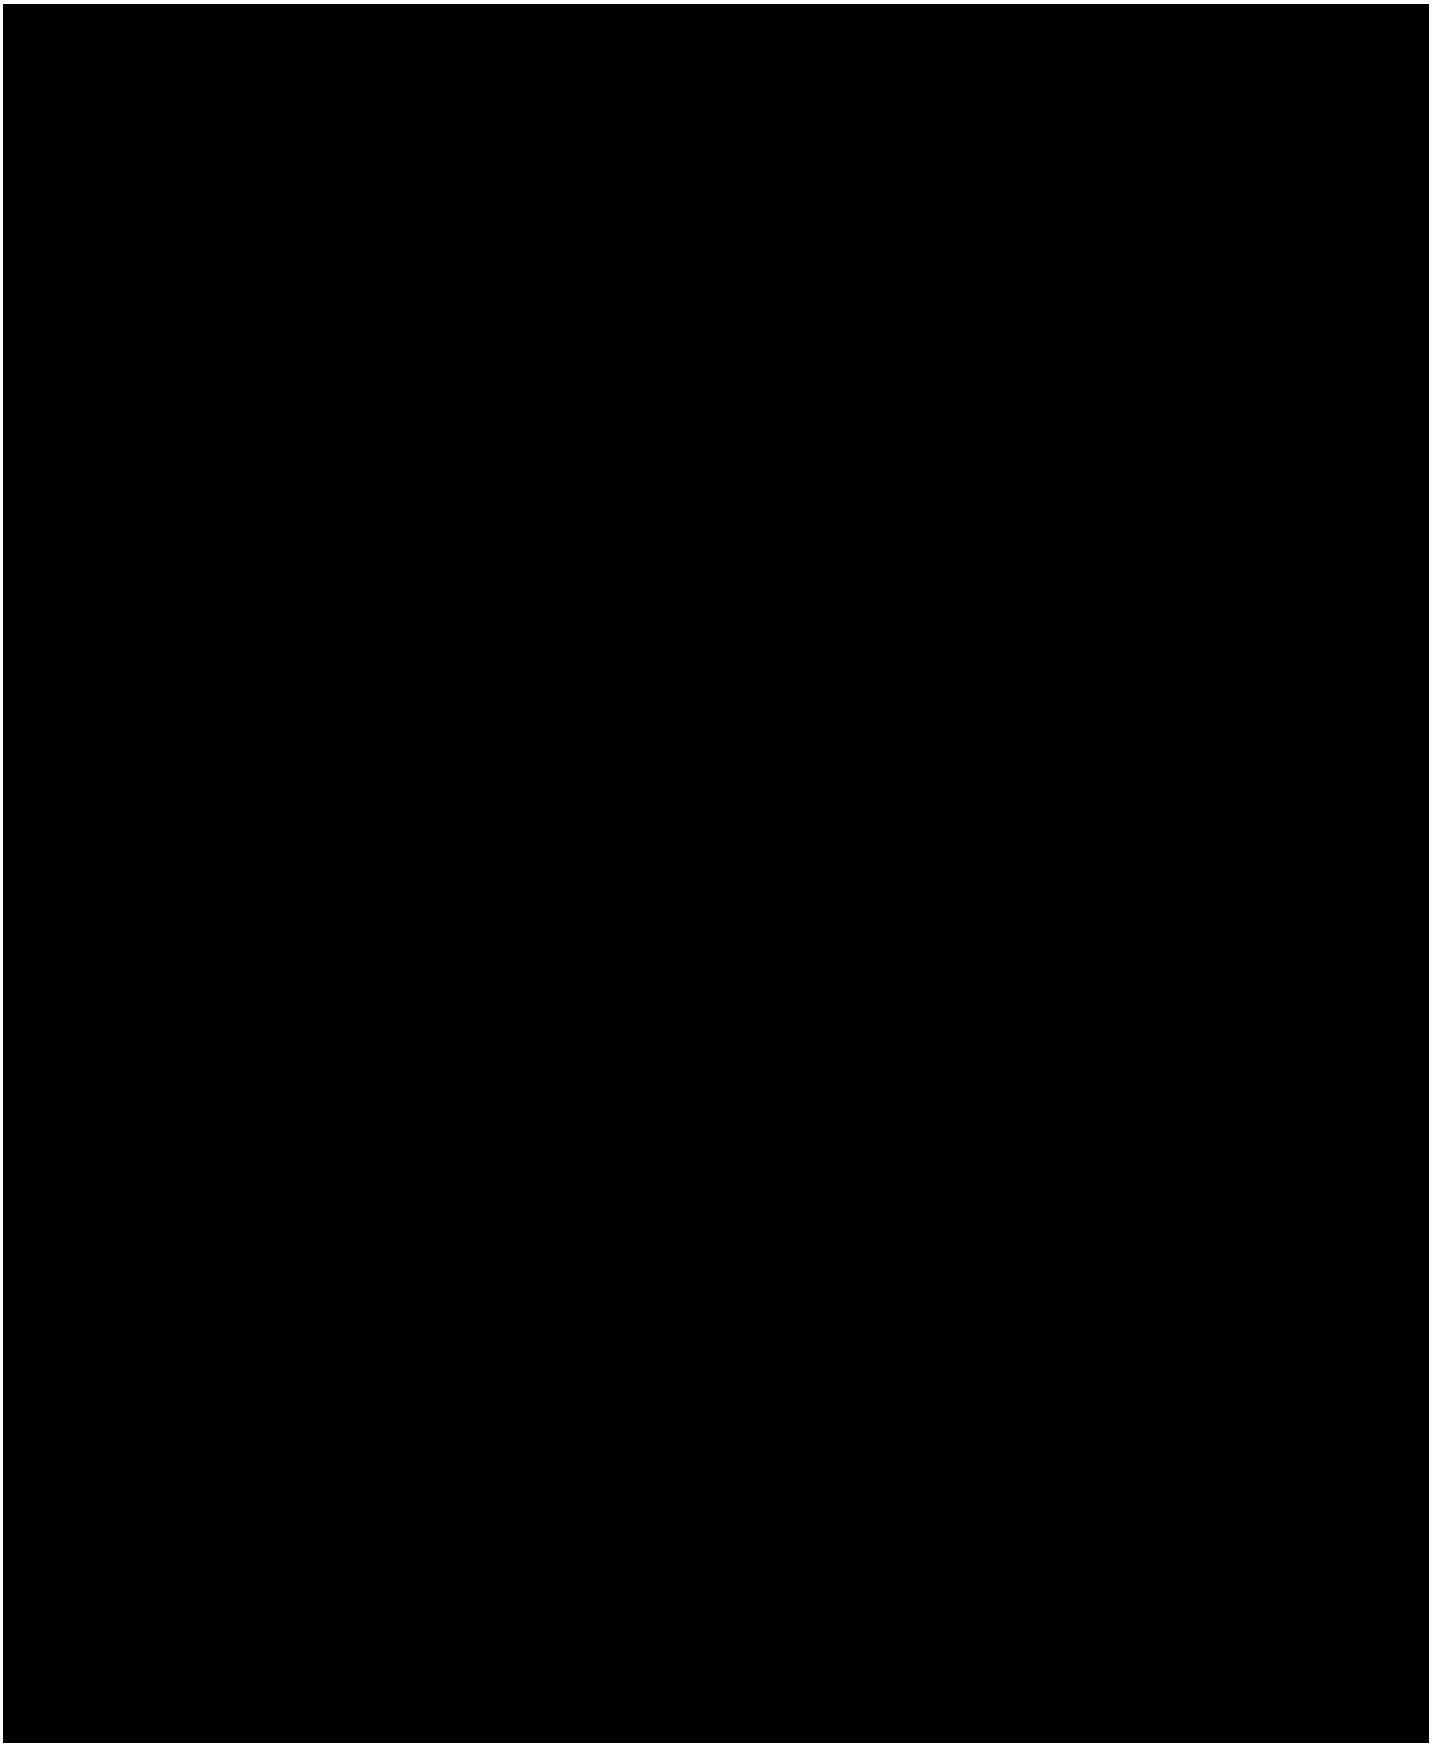
# SECTION 6

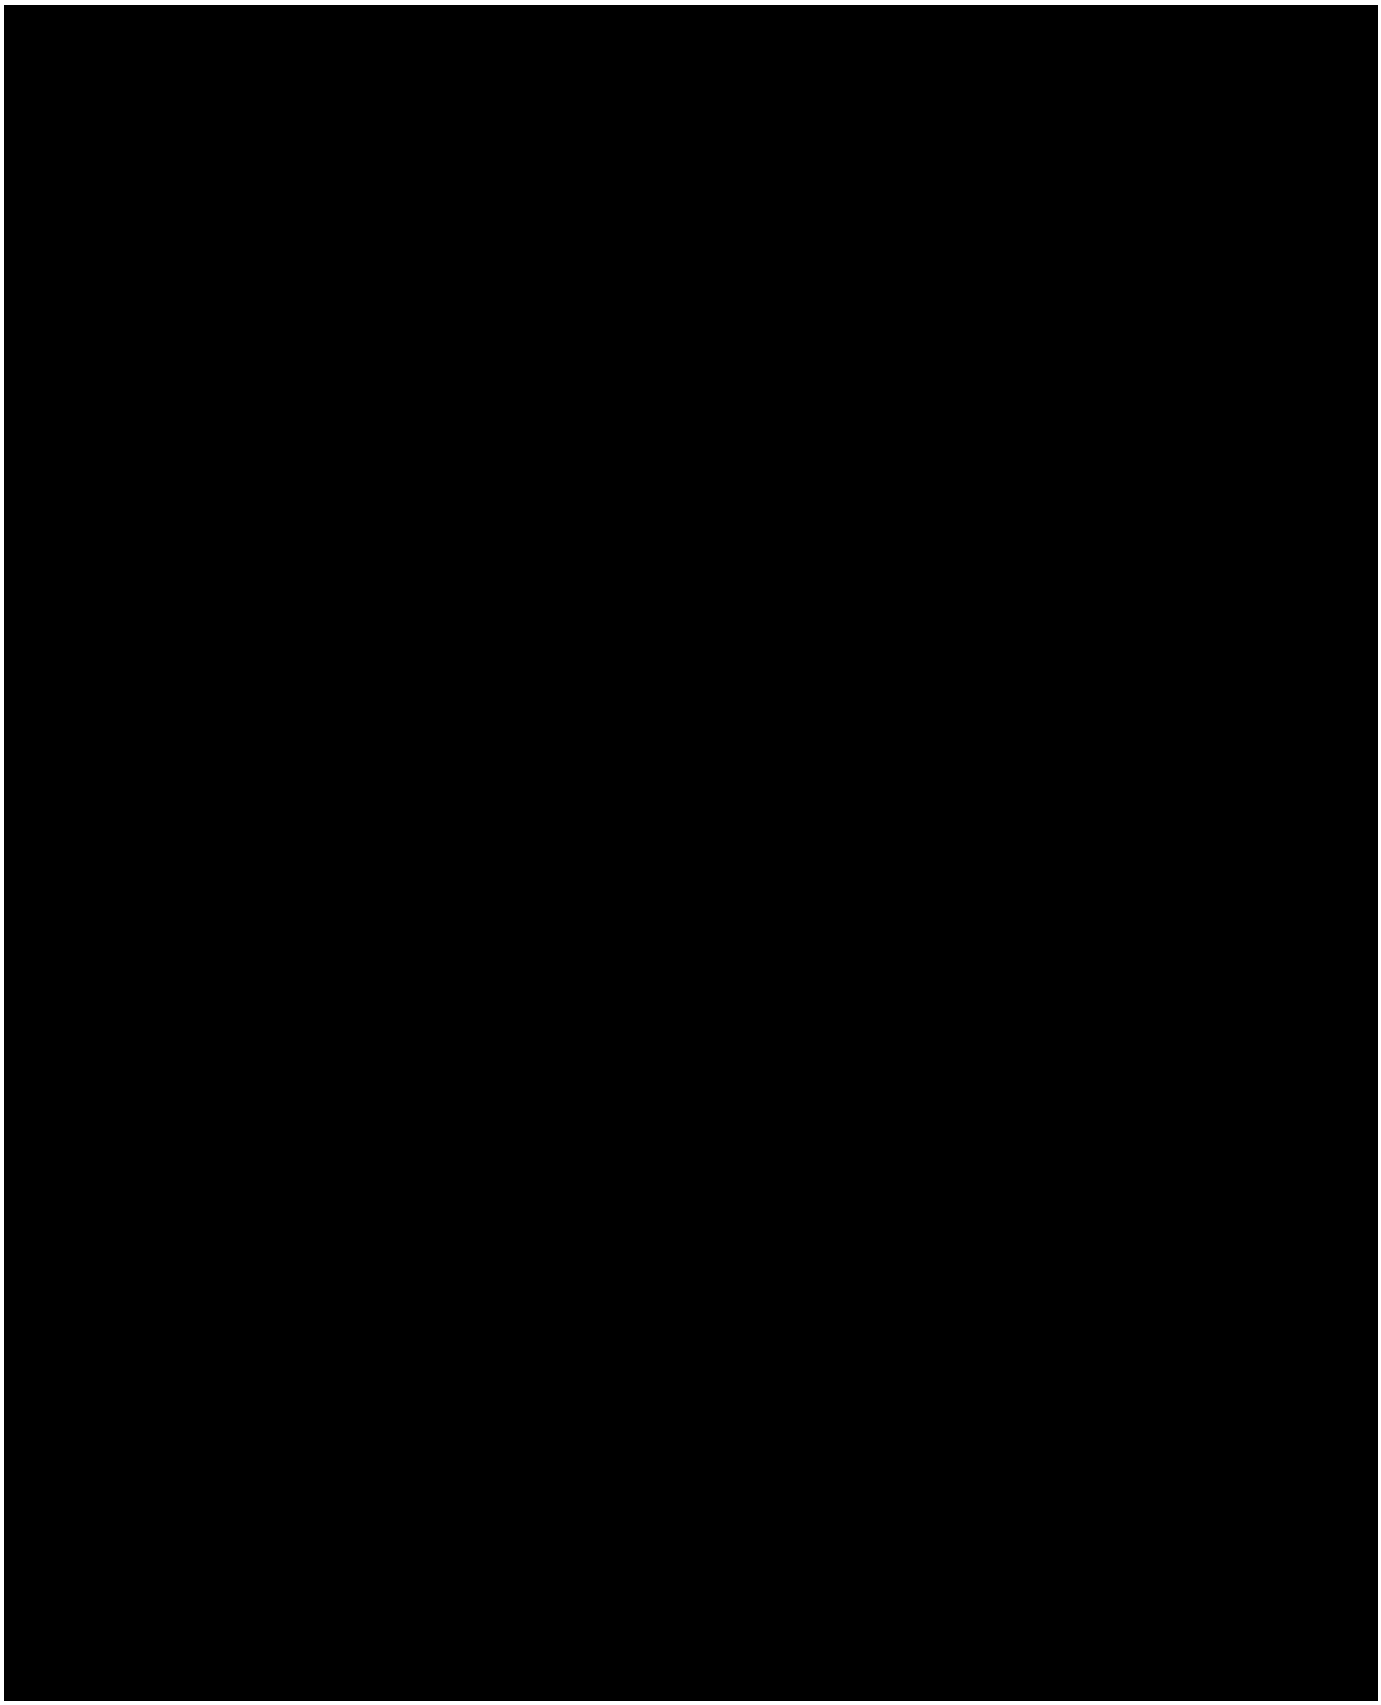
**[BEGIN CONFIDENTIAL]**











**[END CONFIDENTIAL]**

**March 3, 2021 – Grease Skimmer**

**Grease skimmer from North side on concrete floor.**

**Grease skimmer from platform.**

Grease skimmer comments:

- No railing to prevent employee from falling into the process vessel.
    - Step added to platform to reduce the height of the side wall making a fall into the vessel easier
- No E-Stop within reach of exposed moving equipment
    - Exposed chain drive
    - Exposed auger
    - Multiple pinch points unguarded

**March 3, 2021 – Belt Filter Press**

**Belt filter press from North side of room.**

**Belt filter press from North side close.**

**Belt filter press from West side of room.**

**Belt filter press room West wall.**

Belt filter press comments:

- Chemical Storage.
    - Note various chemical drum storage areas without labeling, spill containment, or measuring equipment.
    - Chemical drums not labeled with globally harmonized system (GHS) as required by OSHA.
    - Drum in service is tipped up on end by a stone and left balancing that could easily topple, spill, and cause injury.
    - It was unclear if the chemical drums were compatible with each other should a spill occur without separate containment.
- Platform / working surfaces.
    - Note the pooling/ponding water around the process equipment and electrical cabinets.
    - The platform around the press has a ladder on it that would make it easy to overtop the railing and fall to the concrete floor.
    - The platform is also installed elevating the worker higher than the yellow safety E-stop cable. This cable should be at waist level and easily accessible. If an employee was to get entangled in this moving equipment, the safety cable for the E-stop is at their ankles and out of reach.
    - Notice that the railing only exists on the outside perimeter of the work platform, permitting unobstructed fall potential into the moving equipment.
    - There are no guards on the pinch points of the equipment.
- Building
    - No exit signs
    - No emergency exit lighting
    - No fire extinguishers
    - Inadequate chemical storage signage
    - No signs for personal protective equipment requirements

I. INTRODUCTION ..... 1

II. CURRENT OPERATIONS AND CONDITION OF THE SYSTEM ..... 2

III. BENEFITS OF THE PROPOSED TRANSACTION ..... 3

IV. CONCLUSION ..... 6

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Charles R. Jones, Jr. My business address is 715 15th Street, Beaver Falls, PA 15010.

**Q. In what capacity are you affiliated with the City of Beaver Falls?**

A. I am the appointed City Manager for the City of Beaver Falls (the "City"). My duties as defined by the City's Home Rule Charter are to manage day-to-day operations and oversee administrative functions of all City departments. I report directly to the Mayor of the City and City Council.

**Q. Please provide a brief description of your education and work experience.**

A. I am a United States Air Force Veteran, with extensive training and experience with law enforcement management and operations. I am a graduate of the F.B.I. National Academy and currently serve on several local and regional boards, including my role as an executive board member of our local Chamber of Commerce. I have an Associate's Degree in Criminal Justice and Police Technology. I have an undergraduate degree and graduate degree in leadership and organizational management, and I am a recent recipient of an honorary doctorate degree in leadership from Geneva College.

**Q. Have you testified before the Pennsylvania Public Utility Commission ("Commission") before?**

A. Yes. I previously submitted Direct Testimony in this proceeding.

**Q. Do you hold any professional licenses or certifications related to wastewater?**

A. No. I have no expertise in operating a wastewater system.

**Q. On whose behalf are you testifying in this proceeding?**

A. I am testifying on behalf of the City, and in cooperation and support of Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") application to purchase the City's wastewater collection, conveyance, and treatment system (the "System").

**Q. Please describe the purposes of your supplemental direct testimony and summarize the key points it will address.**

A. The purpose of my testimony is to supplement my Direct Testimony by providing additional discussion regarding current operations of the City's System and discussion of additional public benefits of this transaction.

**Q. Are you sponsoring any Exhibits with your testimony?**

A. No.

## II. CURRENT OPERATIONS AND CONDITION OF THE SYSTEM

**Q. Have you reviewed the Supplemental Direct Testimony of Zach Martin regarding the current operations of the System?**

A. Yes. I was not aware of the serious operational deficiencies and unsafe conditions at the WWTP until I reviewed the Supplemental Direct Testimony of Zach Martin. I am concerned about the current operations of the System and the deterioration of the City's 80

year-old wastewater treatment plant ("WWTP") since Aqua's initial review of the System in 2021. The Plant Manager has been out on medical leave for nearly two years and is unable to work for the City. He is on permanent disability. We have also lost other skilled operators since 2021. We have tried to hire people to fill these open positions for many months but have been unsuccessful.

**Q. Does the City have a plan to address the issues raised in Mr. Martin's Supplemental Direct Testimony?**

A. No, it does not at this time. The City will do its best to alleviate any serious and dangerous conditions but does not have the expertise or the financial resources to support the adequate operations of the System long-term.

**Q. Does the City have a capital plan for the System?**

A. The City does not have a long-term capital plan for the System as a result of the City's financial condition. The City attempts to fix problems with the System as they arise but does not have the ability to do more than that.

## III. BENEFITS OF THE PROPOSED TRANSACTION

**Q. Please describe the benefits of the Proposed Transaction for the City in addition to those provided in your Direct Testimony.**

A. Given the deterioration of the System and the serious deficiencies in the operation of the System since the City has been unable to employ the necessary experts, the City feels the urgent need to sell the System to Aqua to ensure that the System will be operated safely

and its customers will be provided with the excellent service they deserve. In addition the City believes Aqua will provide critical environmental compliance, and protection of the System's receiving waterways which I am very concerned about given the raw sewage seepage into the Beaver River from the System as described in Zach Martin's Supplemental Direct Testimony.

The City has historically experienced significant financial difficulties. Because of the financial condition of the City, the City likely will not be able to keep up with the growing capital needs of the aging System. If the City sells the System to Aqua, the capital needs will be met and the proceeds from the sale of the System will help prevent the City from being named by the Commonwealth Department of Community and Economic Development a distressed community or Act 47 status, which indicates severe financial difficulties and could lead to the City being placed in receivership.

Another benefit of the sale is Aqua's extensive financial assistance to lower income customers struggling to pay their wastewater bills. I understand that rates will increase for the City's customers if Aqua owns and operates the System, however, Aqua took great care explaining their commitment to assist the low income residents which could be a significant portion of the City's residents. As I stated in my Direct Testimony, the median household income based on 2020 data was $35,951. In 2022 the median household income was $39,194.[1] For a household of 4 persons at $39,194 they would be at the 130.65% of the federal poverty income guidelines ("FPIG"), and thus could qualify for Aqua'a low income

[1] See https://data.census.gov/table/ACSST5Y2022.S1903?q=Beaver%20Falls%20city,%20Pennsylvania&t=Income%20and%20Poverty

program.[2] Similarly, households of 2 and 3 persons at the median household income would be at 198.75% and 157.66% of FPIG, respectively, and could qualify for Aqua's low income program.[3] There are approximately 292 4-person families, 433 3-person families, and 696 2-person families in Beaver Falls which represents the vast majority of the population of Beaver Falls.[4]

**Q. Do you believe the System is a troubled system?**

A. Yes. For the reasons set forth in Mr. Martin's Supplemental Direct Testimony and as I explained above regarding the City unable to fill positions at the WWTP, the lack of capital planning, and the deficiencies in the System operations, Beaver Falls does not have the financial, managerial or technical ability to operate the System.

**Q. Do you believe that the Proposed Transaction is in the public interest?**

A. Yes. For the reasons I set forth in my Direct Testimony and above, I believe that the Proposed Transaction provides substantial affirmative public benefits and is in the public interest. I urge the Commission to promptly approve the Proposed Transaction.

## IV. CONCLUSION

**Q. Does this conclude your testimony?**

A. Yes, it does. However, I reserve the right to file additional testimony at a later date as may be necessary or appropriate.

## VERIFICATION

I, William C. Packer, Vice President, Regulatory Accounting and Regional Controller of Aqua Pennsylvania, Inc., hereby state that the facts set forth in the foregoing Updates to the Application of Aqua Pennsylvania Wastewater, Inc., pursuant to Sections 1102, 1329, 507 and 508 of the Public Utility Code, for approvals and an order relating to the acquisition of the wastewater system assets of the City of Beaver Falls are true and correct to the best of my knowledge, information and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

**Re: Application of Aqua Pennsylvania Wastewater, Inc. Pursuant to Sections 507, 508, 1102 and 1329 of the Public Utility Code for Approval of its Acquisition of the Wastewater System Assets of the City of Beaver Falls**
**Docket No. A-2022-3033138**

Dear Secretary Chiavetta:

Enclosed for filing with the Pennsylvania Public Utility Commission ("Commission") in the above-referenced proceeding are the following pieces of additional Direct Testimony in support of the Amended Application of Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") acquisition of all of the assets, properties and rights related to the wastewater collection and treatment system owned by the City of Beaver Falls ("Beaver Falls" or "the City").

- **Exhibit DD** – Aqua Statement No. 7, the Direct Testimony of Dr. Kenya Johns; and
- **Exhibit EE** – Aqua Statement No. 8, the Direct Testimony of Sandra Wilkins (including Appendix A, in PDF and Microsoft Excel format).

The above-captioned Application was initially submitted on February 18, 2023, pursuant to Sections 507, 508, 1102, and 1329 of the Pennsylvania Public Utility Code (the "Code"), 66 Pa.C.S. §§ 507, 508, 1102, 1329. Aqua's Amended Application dated March 28, 2024, was made pursuant to same provisions of the Code.

Copies of this testimony have been served as indicated on the Certificate of Service and in accordance with the Commission's *Final Supplemental Implementation Order* entered February 28, 2019 at Docket No. M-2016-2543193.

Thank you for your attention to this matter. Please do not hesitate to contact the undersigned if you have any questions.

Respectfully submitted,

Michael W. Hassell

VI. CONCLUSION ..... 9

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Dr. Kenya Johns. My business address is 715 15th Street, Beaver Falls, PA 15010.

**Q. In what capacity are you affiliated with the City of Beaver Falls?**

A. I am the Mayor of Beaver Falls (the "City"). I was elected Mayor in November 2021. I report directly to my constituents and work with City Council as a presiding officer to run the City and serve the residents of Beaver Falls. I am the official representative of the City under its Home Rule Charter approved by referendum of the voters on November 2, 2021.

**Q. Please provide a brief description of your education and work experience.**

A. I am a 33-year-old wife and a mother of two, who earned a B.A. in Psychology and Spanish from Slippery Rock University in 2014, a M.A. in Clinical Mental Health Counseling from Geneva College, and a Ph.D. in Clinical Supervision and Education from Duquesne University. In January 2022, I was sworn into the office of Mayor of Beaver Falls, becoming the first Black woman elected as Mayor in the City's 153-year history after unseating incumbent Mayor George Quay, who had held the position since being appointed by City Council in 2012. I often wear many hats in addition to being Mayor, including but not limited to a counselor, professor, author, researcher, advocate, international presenter, and a consultant.

**Q. Have you testified before the Pennsylvania Public Utility Commission ("Commission") before?**

A. No.

**Q. On whose behalf are you testifying in this proceeding?**

A. I am testifying on behalf of the City, and with Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") application to purchase the City's wastewater collection, conveyance, and treatment system (the "System").

**Q. Please describe the purposes of your direct testimony and summarize the key points it will address.**

A. The purpose of my testimony is to supplement the testimony provided by the City Manager, Mr. Charles Jones. I will focus my testimony on why the City of Beaver Falls desperately needs the Commission to approve this transaction, while recognizing the potential rate increases our residents may have to incur, which I am not happy about. I will also discuss the length of the process after the execution of the APA and the impact that it has had on our City and why I believe it is in the best interest of the City for the sale to be approved and Aqua to run the System.

## II. SUPPORT OF SALE OF THE SYSTEM

**Q. Do you support the sale of the System?**

A. Although I was not the Mayor of the City when the Asset Purchase Agreement was negotiated and signed by the City, I believe that it is in the City's best financial interest to sell the System to Aqua.

Beaver Falls is a predominantly low income, minority community. The annual incomes of our residents are significantly lower than the U.S. average and our average unemployment rate has been higher than the state and national rates. Like its residents, the City has been struggling financially.

Before I was elected Mayor, my predecessor and City Council negotiated and approved the sale of the City's System to Aqua to ensure the City was able to cover its ongoing operational expenses and generate sufficient revenue for the future.

The City, which has generally had reasonable and conservative revenue projections and budgets, has relied upon the deposit from Aqua and the likely sale proceeds in our budgets and decision making since 2021. Based upon the assumption that this sale would be approved by the PUC, which was completely reasonable until very recently, we used the $2 million deposit money from Aqua to fill budgetary gaps. We relied upon the anticipated sale proceeds when we negotiated increases in benefits and salaries for the firefighters and police. And we relied upon the anticipated sale proceeds when we made decisions about tax increases and fee increases for our residents during a time when inflation made it difficult if not impossible for our residents to put food on their tables.

At this point, after years of waiting and being drained of money to cover expenses related to the sale of the System, it is simple, if the City does not have the proceeds from

the sale, we will experience severe financial difficulties and likely be unable to provide fundamental services to our citizens even if we raise taxes.

**Q. Please provide why you personally do not believe the City of Beaver Falls should be either managing consultants to operate the wastewater system or directly employing wastewater operators to operate the wastewater system?**

A. First of all, the City does not have the money to hire top notch experienced consultants to come to Beaver Falls and run the System. Secondly, the focus of my administration is on helping people in my community with the fundamentals like safety, jobs, helping keep our small businesses open, healthcare, and staying out of bankruptcy. We do not have the time or money to focus on managing an independent contractor or group of employees in a highly technical and complex area of expertise.

As Mr. Jones already stated in his testimony, the City has struggled to run the System itself. It has very limited resources and we have not had success in recruiting the experienced operators we need to run this highly complex system, especially with the changing and increasing regulatory environment.

**Q. Please provide your objectives for 2025 and beyond and what your administration is focused on.**

A. Our main objective is to stabilize the City's finances so we can provide much needed services to our marginalized community. Paying off our debt of nearly $5.5 million is crucial, but so is investing in vital community resources. This includes youth engagement programs, supporting business development to stop the bleeding of jobs and money from

our City, and providing necessary public safety by acquiring new fire and police vehicles, as well as an ambulance. Additionally, we need to address our aging infrastructure, including roads and streetscapes. Finally, a portion of the proceeds will also be invested to ensure future sustainability of our City.

## III. UNDERSTANDING THE RATE IMPACT

**Q. Can you please provide some context of your understanding about rate impacts in these proceedings?**

A. I understand that rate impacts to customers are a very important issue and I do not take it lightly. Frankly, I don't like the idea of these rate increases at all. But the current wastewater rates in Beaver Falls are extremely low. So, any increase to bring them more in line with other wastewater rates will look like a very high percentage increase. I respectfully request that the Statutory Advocates and Commission focus on more than one data point – the one data point of a percentage increase – to announce their objection to this application. I know this is an important data point. But there is very much more that needs to be reviewed and considered.

**Q. What would you like the Statutory Advocates and Commission to consider other than the rate increase?**

A. While I am aware of the rate increases that will result if the sale is approved and I share the deep concerns many have about the financial burden of our citizens, the Commission and the Statutory Advocates should balance that concern, as I have, with the reality that, without the sale proceeds, the City will likely not be able to provide essential services to

our citizens. Furthermore, we have not been able to run the System as I would have liked. We have not been able to retain the kind of experienced operators that we would need in this highly regulated area. And we do not have the time to run the System when our day is filled with trying to run our ailing City. In addition, I am committed to using the proceeds to help support the needs of our community by having additional funds to help support our families in need.

## IV. LENGTH OF THE PROCESS

**Q. Can you provide your experience in the process of selling the City's wastewater assets?**

A. Although the APA was executed before my tenure, my understanding is the sale was a result of extensive considerations and discussions with City leadership, staff and with the public.

Since the execution of the APA, this has been a long and arduous process taking several years. It has been very difficult and time consuming. Not including the time before my tenure (including the many months of evaluating whether to sell, public meetings, and negotiating the sale), we have had to endure litigation and contentious negotiations with neighboring communities and we have worked hard to stabilize the City's finances but we are at the end of the road on that. While this may be the first time the Commission has heard our story, we have been at this for a very, very long time.

**Q. What has changed since starting the process in terms of the Commission's past decisions?**

A. I understand that the Commission has adopted a Reasonableness Review Ratio ("RRR") regarding the purchase price of a wastewater system as a factor in evaluating these sale transactions. I recognize that the purchase price of $41,250,000.00 that the City agreed upon to sell our System is not within the RRR, however we negotiated that price in good faith and based our decision making for the last several years as I described above on that agreed upon amount. In addition, and very importantly, the amount we agreed to pay the neighboring municipalities to settle the litigation is based upon that purchase price. Fortunately, the Commission included a grandfather clause in its order setting the RRR. I believe the Commission should grandfather Beaver Falls from the RRR based on the circumstances set forth in the testimony and in Aqua's application. It is important for me to state that the City receiving the fair market value for the System of $41.2M was a catalyst for the City to sell the System.

## V. <u>RUNNING THE SYSTEM</u>

**Q. How do you think the service will be better under Aqua?**

A. As Mayor of Beaver Falls, I am acutely aware of the difficult circumstances our City is facing. Our residents are hardworking, but we are a community that has long been under-resourced, and now we find ourselves on the brink of bankruptcy. I have been focused on the immediate and pressing needs of our people – whether it's affordable housing, jobs, safety or healthcare – because these are the issues that impact our daily lives. Because of the above, our System cannot receive the financial investment and the time and attention it

desperately needs for its long-term sustainability. Furthermore, our search to hire staff with the expertise needed to run the System in an efficient and appropriate manner has come up short.

As a well-established public utility, Aqua brings industry-leading expertise and extensive experience in upgrading, operating, and maintaining sewer systems. It also has the financial capacity to fund operational and capital improvements that will directly benefit our customers.

Aqua has a strong track record of environmental stewardship in wastewater system operations. With access to a much broader and deeper range of engineering and operational expertise than the City, Aqua is equipped to address the operational challenges facing our System. Aqua will also enhance customer service for our residents, with extended customer service center hours, additional payment options (including phone and online), and improved customer information and education programs. Importantly, low-income residents will benefit from Aqua's well-established assistance programs to help pay their bills.

Finally, due to Aqua's broader expertise, economies of scale, and financial resources, the proposed transaction will result in (i) upgrades to the plant's facilities, ensuring that wastewater processed by the System meets all environmental requirements and the facility meets all safety requirements; and (ii) strong protections against cyberattacks targeting municipal utilities like ours with less sophisticated technology infrastructure.

**Q. Do you acknowledge that the City could run the System?**

A. I have been advised that we may get pushback that we as a City can simply run and manage the wastewater treatment plant and the collection system ourselves. I suppose we could – if that is all we did in this administration or even if that was our focus. However, as I discussed above, it is our reasoned assessment that we can no longer spend the time and resources on running this System given the dire circumstances of our City. Many do not understand what it is like trying to run a City on the edge of a fiscal cliff with residents who have been marginalized and lack the basics. It is not a matter of just not wanting to run the System …we cannot run the System in an appropriate way and still provide the services to our residents that they need and deserve.

**Q. In summary, do you believe it is in the public interest for the City of Beaver Falls to continue to manage and operate the System?**

A. No. Again, I am not happy about the rate increases our residents will need to sustain if Aqua owns the System, however, I have balanced this with the dire financial situation our City is in and the ability of Aqua to be better operators of the System than the City.

## VI. CONCLUSION

**Q. Does this conclude your testimony?**

A. Yes, it does. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of this proceeding.

I. INTRODUCTION ..... 1

II. FINANCIAL STATUS OF THE CITY ..... 3

III. CONCLUSION ..... 8

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Sandra Wilkins. My business address is 715 15th Street, Beaver Falls, PA 15010.

**Q. In what capacity are you affiliated with the City of Beaver Falls?**

A. I am the Chief Financial Officer of the City of Beaver Falls. I also serve as the certified tax collector in my role as CFO.

**Q. Please provide a brief description of your education and work experience.**

A. Prior to joining the City staff in 2021, I served as the Finance Director for Scott Township for nearly 20 years. My experience before Scott Township included nearly 26 years working in various managerial and financial roles in different size municipal governments. Prior to my work in government, I worked in different accounting positions in the private sector.

I graduated from the Bradford School's accounting program with a 4.0 in all accounting courses. I have continued my education with numerous continuing education courses and training from the Community College of Allegheny County, the Department of Community and Economic Development, the Government Finance Officers Association ("GFOA"), Local Government Academy, Pennsylvania State Association of Township Supervisors ("PSATS") and Federal Emergency Management Agency.

I am an active member of GFOA and the Pennsylvania State Tax Collectors' Association. In the past I was a member of PSATS, the Pennsylvania Boroughs Association and the Society of Human Resource Management.

**Q. Have you testified before the Pennsylvania Public Utility Commission ("PUC or the "Commission") before?**

A. No.

**Q. On whose behalf are you testifying in this proceeding?**

A. I am testifying on behalf of the City, and in cooperation and support of Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") application to purchase the City's wastewater collection, conveyance, and treatment system (the "System").

**Q. Please describe the purposes of your direct testimony and summarize the key points it will address.**

A. The purpose of my testimony is to supplement the testimony provided by the City Manager, Mr. Charles Jones and the testimony provided by the Mayor, Dr. Kenya Johns. I will concentrate my testimony on the City's financial situation and the financial consequences of not approving the sale. Additionally, I will provide a financial analysis demonstrating how the sale is in the best interest of the public.

## II. FINANCIAL STATUS OF THE CITY

**Q. Please discuss how the City is on the verge of bankruptcy, Act 47 status.**

A. I started working for the City after the Asset Purchase Agreement with Aqua (the "APA") was approved by the City. My understanding from the start of my job is that the City is in financial distress and chose to sell the System for a number of reasons but primarily to vastly improve the City's finances on a long-term basis. We were working with the Department of Community and Economic Development as part of the Strategic Management Planning Program.

My job includes preparing our City's budgets. When I started my position, the 2022 annual City budget had already been prepared by the prior Director of Finance and prior accountant and it included the full purchase price of the System. We have continued in this practice to avoid deficits which also included the deposits paid by Aqua as required under the APA. Not only did the City rely on the sale being approved regarding the use of the deposits to balance budgets, prior to my tenure and the Mayor's tenure, the City relied upon the anticipated sale proceeds when it negotiated increases in benefits and salaries for the firefighters and police, as well as when the City made decisions about a tax decrease for our residents.

The 2025 budget which was approved on December 17, 2024 by the City assumes the sale proceeds from Aqua will be received by the City during this fiscal year. The City is facing a very tight budget with only enough money in the bank currently to make payroll through January. The City is counting on incoming tax revenues and other fees, expected in February, to bridge the gap until the Aqua sale proceeds are realized this year.

If the sale of the System is not approved by the PUC the consequences will be severe. The City is projecting a $1.4M deficit in 2025 without the sale proceeds. The City will be unable to make payroll obligations and cover other essential expenses. This shortfall will prevent us from investing in our City's programs, or addressing our aging infrastructure. Additionally, the City would have to raise rates dramatically just to keep the wastewater treatment plant operating at the current level, which I understand to be significantly lacking. Borrowing money will also likely be problematic as we are concerned about the City's ability to make debt payments to bondholders on our outstanding debt, and recognize that the cost to the City of a loan would likely increase because of the negative impact on our bond rating if the sale is not approved.

**Q. Please describe the status of the City's bond rating and the potential impact if the sale is not approved.**

A. S&P Global Ratings had previously given the City a BB+ Bond rating with a positive outlook. See Appendix B attached hereto. It revised its outlook of the City from positive to stable in September, 2023 based upon expected fund deficits due to the delay of the sale of the System. S&P stated that the "stable outlook is based upon the likelihood the sale of the city's wastewater treatment plant, which should occur in the next year, vastly improving the city's finances and liquidity position. The stable outlook is also based upon the recent one-time upfront payment from Aqua, which stabilized the city's liquidity position over the outlook period."

S&P Global suggested in its report that it would likely take negative rating action if the sale of the wastewater treatment plant is not approved. If the City's bond rating is

downgraded it will make it more difficult and costly for the City to obtain the funding it will need to provide essential services to its residents.

**Q. Do you think the City can run the wastewater treatment plant viably based on its current resources?**

A. No. I do not think the City should manage this complex System considering our financial situation, the challenges and risks of running the System, and our inability to retain employees with the expertise to run a System effectively and safely. Our responsibilities are already overwhelming running a City with significant and urgent needs. Additionally, I do not support transferring this service function to a third party contractor where the City is still responsible for the cost, the management, the hiring and firing of the firm, the risk, and the compliance deadlines while still being saddled with the structural deficits we will face if the City does not have the use of the sale proceeds from Aqua.

**Q. Please refer to Appendix A to your testimony. Please provide a high-level overview of this schedule.**

A. This schedule is attempting to show the net financial public benefit to the City and its citizens each year if the sale proceeds are realized. This is an important schedule. We understand that there will likely be wastewater rate increases associated with the sale. However, this schedule shows there are real financial public benefits that need to be considered and weighed, in addition to potential wastewater rate increases. The schedule compared the difference between the annual monetary benefit the public would receive

versus the annual amount the public would have to pay in wastewater rate increases if the sale is approved.

The gross proceeds of $41,250,000 represent the purchase price, from which various costs, such as transaction fees, litigation settlement with municipal customers, debt repayment, and external payments, are deducted to leave net proceeds of $35,300,937 available for public use. Additionally, these proceeds generate interest income and result in savings by eliminating prior debt obligations. In addition to interest income and savings in eliminating debt, other anticipated public benefits include:

* property tax reductions
* new tax revenue from Aqua
* avoided wastewater rate increases that the City otherwise would have to make, and
* employee pay increases.

These financial benefits collectively amount to $4,560,037. While the sale creates a revenue deficiency of $4,198,000 due to increased requirements post-sale, the net public benefit of $362,037 demonstrates that the transaction ultimately provides positive financial value to the public. This needs to be recognized and considered.

**Q. Please walk through this Appendix A in more detail explaining each line and number.**

A. The total gross proceeds from the transaction amount to $41,250,000, representing the revenue paid by Aqua to purchase the System before any deductions. Estimated transaction fees of $1,000,000 cover costs like legal and advisory expenses. Of the total proceeds,

$5,449,063 is allocated to repay general obligation bond debt, while $1,500,000 is designated for outside payments to external entities. Additionally, $2,000,000 in cash will be available for immediate use at closing, leaving net proceeds of $35,300,937 for deposit after deductions.

Annual interest income from the net proceeds is projected at $1,588,542 (4.50% assumed rate), and interest savings of $680,901 are achieved by eliminating general fund debt service obligations. Residents benefited approximately $720,000 further from a property tax reduction that has already been made 3 years prior in anticipation of the sale, equivalent to a 5-mill decrease. About $50,000 in tax revenue is anticipated from Aqua once they take ownership. Avoided rate increases, calculated on a net present value basis over ten years, yield savings of approximately $1,270,593. Lastly, employees were given rate increases in anticipation of the sale that exceed the normal range of increases which is approximated at $250,000. The total of these amounts are $4,560,037 and are referred to as "Proceeds for Public Benefit."

Current annual revenue generated by sewer rates stands at $2,534,808, whereas the revenue requirement once Aqua takes over is $6,732,808, resulting in a revenue deficiency of $4,198,000 or 165.61%. Despite this shortfall, the "Proceeds for Public Benefit" outweigh the impact of the revenue deficiency amount by $362,037, illustrating that the transaction provides a "Net Public Benefit".

**Q. Can you provide any other closing thoughts?**

A. There is a clear, measurable, and substantial public benefit as a result of the sale of the sewer utility assets to Aqua. As I have already explained, the City has significant financial

and managerial pressures that can be ameliorated by the sale. The implications of which, both on the City's financials and the constituents have been carefully considered by the City and its financial advisors. For all of these reasons, I and the City strongly support the sale to Aqua.

## III. CONCLUSION

**Q. Does this conclude your testimony?**

A. Yes, it does. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of this proceeding.

# Beaver Falls, PA Series 2017AB GO Bond Rating Outlook Revised To Stable From Positive On Expected Fund Deficits

TORONTO (S&P Global Ratings) Sept. 20, 2023--S&P Global Ratings revised its outlook to stable from positive and affirmed its 'BB+' rating on Beaver Falls, Pa.'s series 2017A general obligation (GO) notes and 2017B GO bonds.

"The outlook revision reflects the delay of the sale of the bonds to 2024, which resulted in expected general fund deficits in fiscal years 2022 and 2023," said S&P Global Ratings credit analyst Bobby Otter.

The 2017A notes and 2017B bonds are general obligations of the city, secured by its full faith, credit, and taxing power, which benefits from an unlimited ad valorem property tax.

Beaver Falls expected to sell its wastewater treatment plant in 2022 to Aqua (Essential Utilities Inc. is the parent company) for $41.25 million. However, the sale was, and remains, delayed due to surrounding municipalities making a claim on the sale. Officials expect the claims will be resolved shortly, a mediator is reviewing these claims, after which

the Pennsylvania Public Utility Commission will review the sale once again. As a result, the sale is not expected to be finalized until early 2024. Due to the delay in the sale, the city expects to report a $1.5 million deficit in fiscal 2022 and continues to work to reduce expenditures in fiscal 2023. While the fiscal 2022 audit is not yet available, the city's fund balance will likely be negative, and we expect its liquidity position will decline as well. The city received two $1 million non-refundable upfront payments from Aqua in 2021 and 2023, providing sufficient liquidity to ensure the city meets all its debt obligations.

We continue to view the city's finances as structurally imbalanced, as expenditures continue to outpace revenue. While federal funds boosted the city's finances, the decision to reduce property taxes prior to the sale of the plant has created a new budgetary pressure. If the sale is delayed beyond the second half of 2024 or is not approved, we believe the city's finances and liquidity will be pressured further.

Voter approval to change to a home-rule charter city from a third-class city, which went into effect Jan. 1, 2022, provided the city's legal flexibility to raise revenue and reduce expenditures it previously did not have. However, we believe Beaver Falls still has long-term challenges because its practical ability to raise revenue is hampered by a weak tax base and limited capacity to reduce spending. Favorably, the city's pension plans are not a pressure, and it has made strong plan funding progress in recent years. It has a dedicated 0.5% earned income tax for pensions, which has been generating amounts above its annual required contributions.

The one-year stable outlook is based upon the likelihood the sale of the city's wastewater treatment plant, which should occur in the next year, vastly improving the city's finances and liquidity position. The stable outlook is also based upon the recent one-time upfront payment from Aqua, which stabilized the city's liquidity position over the outlook period.

Certain terms used in this report, particularly certain adjectives used to express our view on rating relevant factors, have specific meanings ascribed to them in our criteria, and should therefore be read in conjunction with such criteria. ## Rating Action

S&P Global Ratings revised its outlook to positive from stable on Beaver Falls, Pa.'s series 2017A general obligation (GO) notes and 2017B GO bonds. At the same time, we affirmed our 'BB+' rating on the city's bonds.

The positive outlook reflects the continued improvement in Beaver Falls' liquidity position due to one-time federal stimulus revenue and the potential for a significant increase in the city's reserves and liquidity following the sale of its wastewater treatment plant that is pending approval by the Pennsylvania Public Utility Commission (PUC). We still view the city's general operating performance as structurally imbalanced, which caps the rating.

The 2017A notes and 2017B bonds are GOs of the city, secured by its full faith, credit, and taxing power, which benefits from an unlimited ad valorem property tax.

### Credit overview

Beaver Falls' general fund operations have been structurally imbalanced for several years. We view its 2022 budget as structurally imbalanced as well because it relies on at least $500,000 (6% of the budget) of one-time revenue from the sale of its wastewater treatment plant. The asset purchase agreement with Aqua (an Essential Utilities Co. rated 'A/Stable') has been approved by the city council for $41.25 million and would be financially transformative for the city. Officials report that the sale is expected to close in the fall of 2022, though on a recent earnings call, the chairman and CEO of Essential Utilities estimated approval may happen just after Jan. 1, 2023. If the sale does not take place until after the end of the fiscal year, we expect Beaver Falls will close with another deficit, but the city's cash position is expected to remain healthy due to federal stimulus funding and a $1 million non-refundable upfront payment from Aqua that was received in 2021. Management reports that 2022 will be the first year that it does not have to cash-flow borrow in more than a decade. If the sale is delayed beyond 2023 or is not approved, we believe the city's finances will be pressured.

Another significant change for the city is recent voter approval to change to a home-rule charter city from a third-class city, effective Jan. 1, 2022. The change increased the city's legal flexibility to raise revenue and reduce expenditures; however, we believe it still has long-term challenges because its practical ability to raise revenue is hampered by a weak tax base and limited capacity to reduce spending. Favorably, the city's pension plans are not a pressure, and it has made strong plan funding progress in recent years. It has a dedicated 0.5% earned income tax (EIT) for pensions,

which has been generating amounts above its annual required contributions (ARCs).

The 'BB+' rating reflects our assessment of the city's:

- Weak economy with very low wealth and income metrics, but some access to the Pittsburgh metropolitan statistical area (MSA);
- Vulnerable Financial Management Assessment (FMA), but a very strong institutional framework as a home-rule charter city;
- History of structural imbalance and very weak reserve and liquidity levels, coupled with a limited capacity to reduce expenditures or raise revenues; and
- Very weak debt and contingent liability position relative to its tax base.

### Environmental, social, and governance

We view Beaver Falls' low wealth and income levels as a social risk that could inhibit the city's ability to raise or collect revenue. Its approval by voters to change to a home-rule charter city is a governance opportunity that will increase its legal ability to raise revenue; however, its demographic profile limits its practical ability to do so. We view environmental factors as neutral in our credit analysis.

## Stable Outlook

### Upside scenario

We could raise the rating, potentially by multiple notches, if the city's cash position substantially improves due to the sale of its wastewater treatment plant.

### Return to stable scenario

If the city's liquidity does not improve as expected because the sale of the wastewater treatment plant is not approved and the city does not make the necessary revenue or expenditure adjustments to maintain a stronger cash position, we would likely take negative rating action.

## Credit Opinion

### Very low wealth and income metrics limit practical revenue-raising capabilities

Beaver Falls is in Beaver County about 30 miles northeast of Pittsburgh. Resident incomes are significantly lower than the U.S. average. The Beaver County economy was once dominated by the steel industry, but as the steel mills closed in 1980s and 1990s, the local economy became more reliant on smaller manufacturing and service-oriented industries. As a result, unemployment spiked at 18.2% in April 2020 at the height of the COVID-19 shutdown, and its average annual rate was above 10% in 2020. It has come down to 5.5% as of March 2022 but was still somewhat higher than the state and national rates for the same period. If the U.S. were to enter a recession, we believe it's likely that the Beaver Falls economy will contract at a greater rate than the U.S. (For more information on S&P Global Ratings' view of the U.S. economy, see "U.S. Business Cycle Barometer: Testing The Economy's Resilience," published May 20, 2022, on RatingsDirect.)

The county's property values are also significantly lower than average. Beaver County has not completed a reassessment since the 1980s, but a reassessment is underway and expected to be completed by 2023. The city believes that there may be significant changes for individual resident assessed values (AVs), but it is not anticipating a substantial change in total AV.

The city may see some residual benefits from a $6 billion Shell ethane cracker plant that is under construction about 10 miles to the south. The plant will provide an estimated 600 permanent jobs and numerous business opportunities for local companies. Officials report that they are seeing some growth in the city's downtown, where redevelopment is incentivized through a local economic revitalization tax assistance (LERTA) designation. However, our view of the city's economy is likely to remain weak, given its lower wealth and incomes as well as its greater share of jobs susceptible to economic cycles.

### Vulnerable FMA due to lack of financial policies and a history of structural imbalance

Our overall assessment of management is weak because the city lacks policies in many of the areas we believe are most critical to supporting credit quality and it has a history of structural imbalance without an adequate plan to correct it at this time. Following the city's change to a home-rule charter city, it hired a CFO, a position that had not previously existed. The new CFO is in the process of setting up new financial policies, procedures, and software. The city also continues to work with the state's Strategic Management Planning Program (STMP) to address its fiscal difficulties, and it has received a distressed communities technical assistance grant through the federal government and is working to create a plan to address its structural imbalance.

Currently, the management team's key practices include:

- Reviewing five years of historical trends to project revenue and expenditure for its budget and using outside sources of information;
- Monthly revenue and expenditures reports provided to council;
- Monthly reports on investment holdings and earnings to council;
- Planning to mitigate risks posed by cyber-attacks;
- No formal or informal long-term financial or capital plans; and
- No investment, debt, or reserve policies.

### History of structural imbalance and deficit financing

The city's general fund has been structurally imbalanced for several years. In some years, these deficits have been masked by transfers from its sewer fund or by deficit financings. Its general fund balance increased in 2019 due to a deficit financing, so we have adjusted the city's available fund balance to show what it would have been without that financing.

Beaver Falls' 2022 budget assumes that the sale of its wastewater treatment plant will be approved this fiscal year and the city will net $39.8 million from the sale. It plans to transfer $39.3 million out of the general fund to be divided between a trust fund to generate interest income for the city ($25 million) and various debt and capital expenditures ($14.3 million). The city will use $500,000 (6% of recurring budgeted expenditures) from the sale during fiscal 2022 to

offset increased general fund expenses and lower revenue; therefore, we believe that the 2022 budget is structurally imbalanced. In anticipation of the windfall revenue and as property tax relief for residents, the city lowered its property tax rate by 5 mills, or roughly $300,000. Officials report they plan to keep property taxes at this lower level. Despite the structural imbalance in 2022, we believe the rating could improve due to the windfall revenue given the significant improvement in reserves and liquidity. Over the long term, further upward rating potential would depend on the creation of a plan to eliminate its structural imbalance.

The city's 2021 budget was break-even, but preliminary estimates from management show just over a $1 million surplus due to one-time revenue. Its revenues were $1.6 million better than budget, mostly due to $495,000 of federal American Rescue Plan Act (ARPA) and other state grants as well as a $1 million upfront payment from Aqua related to the asset sale. Expenditures were $585,000 higher than budget due to the spending of grant funds, as well as various higher costs for items like fuel, building repairs, and overtime. As a result, we expect the city's general fund balance to increase considerably for 2021.

We believe the city's 2020 general fund results improved somewhat from prior years. After adjusting out roughly $500,000 of one-time additional contributions to its pension plans above its minimum municipal obligation (MMO), we believe it would have posted a slight surplus. Still, we note that the operating results were likely affected somewhat by $233,000 of federal aid received during 2020. The city's total general fund balance decreased by $430,000, and its unassigned balance fell by $140,000 due to some increases in its non-spendable balances. Overall, if it had not completed its deficit financing in 2019, we believe its general fund balance would still be negative.

The city's largest revenues come from charges for services (36% of 2022 budgeted recurring general fund revenue), property taxes (23%), and other Act 511 taxes (15%). Its ability to raise these revenues was very limited as a third-class city, but as a home-rule charter city, it is no longer subject to state property tax caps. However, practically, it may be difficult to raise property taxes given its lower wealth and incomes.

### Improved liquidity projected due to federal stimulus

In assessing the city's cash position, we removed $600,000 of bond proceeds from its cash figures as we expect them to be spent down, and we also removed $1.7 million in its Joint Sewer Users Fund as these funds are restricted and cannot be used for cash flow. In our view, the city has had strong access to external liquidity. In addition to long-term bonds, it issues tax anticipation notes (TANs) to help with cash flow during the year and reports no difficulty accessing bank loans. Notably, officials tell us that 2022 will be the first year in a long time that it does not need to borrow for cash-flow purposes because the federal stimulus funds have improved its cash position.

We view Beaver Falls' 2019 GO note ($495,898 par outstanding), issued with First National Bank of Pennsylvania, as a contingent liquidity risk because it contains events of default that we consider permissive as well as cross-default provisions. In the event of default, the city is required to pay all unpaid principal and accrued interest on demand by the bank. The amount subject to acceleration is 39% of the city's total governmental cash and 6% of general fund revenue.

### Very high debt burden relative to tax base but moderate relative to budget

In our view, Beaver Falls' debt and contingent liability profile is adequate, because annual debt service costs are moderate and the city benefits from a rapid amortization schedule. However, its overall debt metrics relative to market

value are very high, indicating that overall affordability is weak.

The city historically issued TANs for cash-flow purposes, which it repays during the same fiscal year. It issued $600,000 in TANs in 2021 but will not need to issue them in 2022 due to the liquidity provided by ARPA funds. Management reports that it does not have any additional debt plans, and is working to eliminate one-time revenues from its budgets.

### Pension and other postemployment benefit liability profile

We consider Beaver Falls' pension liabilities large relative to the city's budget, but do not view them as a budgetary pressure given our understanding of recent strong funding progress and the city's dedicated EIT for pension costs. Beaver Falls has not yet adopted Governmental Accounting Standards Board Statement No. 68 reporting requirements; however, we reviewed the plans' Jan. 1, 2021 actuarial reports to inform our understanding of the plans' funding progress. The city does not offer other postemployment benefits.

Beaver Falls participated in the following plans (as of Jan. 1, 2021):

- Police Pension Plan: 92.4% funded, with an unfunded actuarial accrued liability (UAAL) of $958,257;
- Firemen's Pension Plan: 94.0% funded, with an UAAL of $325,628; and
- General Employees' Pension Plan: 111.8% funded, with assets over its actuarial accrued liability of $874,552.

Beaver Falls' pension contributions were $1.66 million (18.7% of total governmental fund expenditures) in 2020, which we consider very high; however, contributions were well above the ARC that would have been a more moderate 8.7% of total governmental fund expenditures. The city has dedicated EIT revenue that has been more than sufficient to cover its required contributions, and that cannot be used for another purpose. As a result, management reports the city contributed an additional $498,000 to the plans above its required amount in 2020, which improved funded levels.

There is an actuarial plan in place to reach full funding for all three plans, and consistent contributions are expected due to the level-dollar amortization basis. As of the Jan. 1, 2021 actuarial valuation, the plans were scheduled to be fully funded within eight and 11 years for the Police and Firemen plans, which is stronger than S&P Global Ratings' guideline of 20 to effectively pay down unfunded liabilities. The General Employees Plan is fully funded. The funds recently lower their interest rate assumption to 6.75% from 7.0%, but this is still higher than our guideline of 6.0%; therefore, we believe there is some risk of cost escalation due to market volatility.

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is William C. Packer. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Essential Utilities, Inc. ("Essential"), as Vice President, Regulatory Accounting and Regional Controller. In this position, I am Controller of Aqua Pennsylvania, Inc. ("Aqua PA") and oversee the financial operations of Aqua New Jersey, Inc. ("Aqua NJ"). Additionally, I oversee rate issues for all subsidiaries of Essential. Aqua PA is the parent company to Aqua Pennsylvania Wastewater, Inc. ("Aqua" or the "Company").

**Q. Are you the same William C. Packer who submitted direct testimony in this proceeding?**

A. Yes. I submitted direct testimony with the Aqua's Application with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on February 17, 2023. I also submitted supplemental direct testimony with Aqua's Amended Application filed with the Commission on March 28, 2024.

**Q. What is the purpose of your rebuttal testimony?**

A. My rebuttal testimony addresses portions of the direct testimony of the Office of Consumer Advocate ("OCA") witness Nicholas A. DeMarco, the Commission's Bureau of

Investigation and Enforcement ("I&E") witnesses Christopher Keller and Ethan H. Cline, and Office of Small Business Advocate ("OSBA") witness Forbes. Specifically, my rebuttal testimony responds to each parties' position with respect to Aqua's proposed acquisition of the wastewater system and assets (the "System") of the City of Beaver Falls ("City" or "Beaver Falls").

**Q. Are you sponsoring any exhibits with your rebuttal testimony?**

A. Yes. I am sponsoring Aqua Exhibit WCP-1R.

**Q. Please briefly summarize the positions of the other parties that you will address in your rebuttal testimony.**

A. The OCA claims that Aqua has not supported the proposed acquisition of the System by providing affirmative public benefits, and recommends that, if the Commission does approve the acquisition, the Commission should adopt certain conditions regarding identification of certain transaction and closing costs, additional notice requirements, restrictions on closing where easements are missing, restrictions on certain costs related to easements and inclusion of Beaver Falls assets in rate base, and cost of service study ("COSS") filings. Mr. DeMarco's discussion and recommendations regarding environmental compliance of the system and tracking of capital costs will be addressed by Mr. Mark J. Bubel, Sr. Mr. DeMarco's discussion of the operational aspects of the system and recommendations concerning updating Aqua's long-term infrastructure improvement plan ("LTIIP") will be addressed by Mr. Zach Martin. Finally, Mr. DeMarco's discussion

regarding low-income customers, welcome letters, and hardship fund contributions will be addressed by Ms. Rita Black.

I&E does not recommend that the Commission deny the Application, but that certain conditions should be included if the Commission approves the Application, including conditions regarding missing easements, LTIIP updates, and filing a COSS. Mr. Zach Martin will address the LTIIP updates. The OSBA claims that the purchase price and ratemaking rate base is not reasonable, and the Commission should deny the Application, but if the Commission approves the Application, the ratemaking rate base should not exceed the RRR.

## II. RESPONSE TO OCA WITNESS DEMARCO

**Q. Please summarize the arguments and positions made by OCA witness DeMarco in his direct testimony.**

A. The key arguments and positions made by Mr. DeMarco are now the standard practice arguments of the OCA as an agency as a whole, developed over multiple Section 1329 Applications filed before the PUC, including a few such applications that have been appealed to the higher courts. If OCA's arguments were accepted, it would mean that any municipal- or government-run entity in the business of providing water or sewer utility service has no choice but to continue to provide this service to their constituents. OCA's arguments, if accepted, ultimately deny municipal systems in the Commonwealth to decide what services they want to provide, should provide, and who they can delegate that right too. In the OCA's view, investor-owned utilities seeking a certificate of public convenience under Sections 1329 and 1102 of the Public Utility Code, 66 Pa.C.S. §§ 1102

and 1329, would never be on a level playing field with the continued operation under government run systems.

Below are the OCA's main arguments as I have understood them:

- Revenue Requirement Deficiency and Rate Impacts are not outweighed by a showing of public benefits. *See, e.g.*, OCA St. No. 1, at pp. 14-24.
- The Beaver Falls System is not troubled and the City is capable of running the System itself, investing future capital, all at a lower cost of service than Aqua due to the Company's for-profit operating costs that are not charged by municipal run systems, such as income taxes, shareholder returns, and depreciation expense of utility assets in service. According to OCA witness DeMarco, the result is that Beaver Falls would incur less costs running the System itself for the same level of investment. *See, e.g.*, OCA St. No. 1, at pp. 4-11.
- Mr. DeMarco addresses claimed shortfalls in the Company's notice of rate impacts and make recommendations. *See, e.g.*, OCA St. No. 1, at pp. 36-37.
- Overall, OCA witness DeMarco recommends that the acquisition be denied as it does not meet the standards for approval, which he asserts are required by the Public Utility Code, and that there are no affirmative public benefits that outweigh the costs as a result of this transaction. OCA St. No. 1, at p. 25.
- Alternatively, if the Commission were to approve the Company's application, Mr. DeMarco recommends certain conditions for approval. OCA St. No. 1, at pp. 31-38.

**Q. What is your opinion of Mr. DeMarco and the OCA's arguments opposing the application?**

A. The arguments of Mr. DeMarco and the OCA, if accepted, would mean that no certificate of public convenience should ever be granted for a sale of a municipal system to an investor-owned utility. If their arguments were applied even on a historical context, I'll submit the Aqua PA wouldn't exist as a utility in its current form. The differences in costs incurred by investor-owned utilities and municipal systems were present in every acquisition previously completed by the Company, most prior to Section 1329's enactment into law. Even when investor-owned utilities were limited to depreciated original cost, less contributed property, and acquiring systems in Pennsylvania under Section 1101 and 1102, some with a Section 1327 acquisition rate base adjustment, the cost-of-service differences the OCA attempts to leverage here as a basis for denial existed in those non-fair market value ("FMV") acquisitions as well.

Moreover, the rate impact of 165.61% that Mr. DeMarco highlights is due to the very low rates that the City is currently charging; the City's average bill is **$33.38 per month ($100.13 per quarter)**. This average bill is significantly lower than tariffed rates for major public utilities in the Commonwealth.

**Q. Did Mr. DeMarco address or acknowledge the impact of the Beaver Falls system as it relates to economies of scale?**

A. Yes. At pages 28-29 of his testimony (OCA St. No. 1), Mr. DeMarco references my testimony concerning economies of scale that can be achieved as a result of this acquisition. However, his response is to assert that adding customers alone does not increase economies

of scale, and to contend that there is no information to show that the proposed transaction would make rates more affordable.

**Q. Did Aqua provide information regarding the economies of scale that can be achieved?**

A. Yes, in addition to specific operating and maintenance expense reductions noted in my direct testimony, I provided a graph (Figure 1) which showed the difference between the customer served and the cost to serve each customer as acquisitions were added as one of Aqua's systems. That graph, which I will update later in this rebuttal testimony demonstrates a declining "cost per customer" as measured by the weighted average revenue requirement for each system since the passage of Section 1329 of the code.

**Q. Please explain the importance of what this graph is showing as it relates to the impact of the acquisition of FMV systems such as Beaver Falls on existing customers rates.**

A. I must emphasize the importance of what graph is showing. Revenue requirement includes all components of cost of service in the utility rate making formula. Rate base, operating expenses, depreciation, income taxes, and lastly pre-tax return. Since 2016, this graph demonstrates that as Aqua has acquired systems under Section 1329, its consolidated revenue requirement per customer **has decreased**. The Company is providing sewer utility service to more customers at a **lower consolidated cost**. This is the very economies of scale showing that Mr. DeMarco claims has not been made. I disagree.

**Q. At pages 11-13 of OCA St. No. 1, Mr. DeMarco identifies the large number of Beaver Falls residential customers who are low income, but argues that only a limited subset**

**of low-income customers would see savings over Beaver Falls current rates. Please comment.**

A. Aqua witness Ms. Rita Black will provide the response regarding the benefits that low-income customers on the Beaver Falls System will receive if this acquisition is approved, as a part of her rebuttal testimony (Aqua Statement No. 9-R).

**Q. At page 14 of OCA St. No. 1, Mr. DeMarco references other pending Aqua Section 1329 acquisitions. Should these be relevant to this proceeding?**

A. No, as their impacts and assumed approval makes doing so speculative and should be given no weight.

**Q. At pages 17 to 20 of OCA St. No. 1, Mr. DeMarco references the Commission's recent Tentative Supplemental Implementation Order ("TSIO")[1] and Final Supplemental Implementation Order ("FSIO")[2] and the Reasonableness Review Ratio ("RRR") set forth in the FSIO. Should the FSIO be applicable to this proceeding?**

A. No. The FSIO specifically notes for transactions where an asset purchase agreement has been executed and where the application has been filed prior to the entry date of the FSIO that the Commission will give due consideration to the facts and circumstances surrounding the transaction, including the dates at which the asset purchase agreement was signed and the application filed.

[1] Valuation of Acquired Municipal Water & Wastewater Systems – Act 12 of 2016 Implementation, Docket No M-2016-2543193, Final Supplemental Implementation Order (Order entered Feb. 7, 2024)
[2] Valuation of Acquired Municipal Water & Wastewater Systems – Act 12 of 2016 Implementation, Docket No M-2016-2543193, Final Supplemental Implementation Order (Order entered Jul. 2, 2024).

Moreover, it appears Mr. DeMarco's calculation result using his depreciated original cost ("DOC") multiplied by the RRR is slightly flawed and should be corrected. The RRR of 1.68x should be multiplied by the average DOC as submitted in the application of the two UVEs. Here, it appears he has only used Scott Madden Inc.'s ("ScottMadden") DOC, and I believe the number he quotes is incorrect. The Scott Madden DOC is $5,003,844.[3] The Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett") DOC is $7,850,867.[4] The correct DOC, using the average of both the ScottMadden and Gannett Fleming UVE witness calculations is $6,427,266 and when multiplied by 1.68x RRR Factor, the result is $10,797,806, versus Mr. DeMarco's table shown on Page 20 of OCA St. No. 1.

**Q. Even if the FSIO were applicable, does the RRR prevent the Commission from approving this application?**

A. No. The FSIO specifically states that the RRR is only to be a guidepost in assessing the reasonableness of the FMV of a transaction. Further, I am advised by counsel that the provisions of Section 1329 do not provide a cap upon the authorized rate base, which is to be the lesser of the purchase price or the average of the FMV appraisals. If the General Assembly intended to set a cap, it certainly could have done so.

**Q. Mr. DeMarco argues, at page 25 of OCA St. No. 1, that in his opinion the benefits of the acquisition do not outweigh the rate effects. Please respond.**

[3] Aqua Application, Exhibit Q, Schedule 1, p. 2 of 25.
[4] Aqua Application, Exhibit R, Exhibit 7, p. 1 of 3.

A. Aqua has offered compelling and substantial evidence in the record and in contrary to Mr. DeMarco's opinion in this regard. There is clearly a substantial betterment in operational capabilities, one that the elected leadership of the City has come to the decision is in the best interest for their constituents. The City no longer wishes to operate and provide this service which is certainly their right. Section 1329 is a vehicle to do so as enacted by the legislature.

While the City's System is at best, hanging on, it is clearly underinvested and needs pro-active investment. It is not as simple as Mr. DeMarco posits as getting a Pennsylvania Infrastructure Investment Authority ("PENNVEST") Loan or Grant. Aqua witness Zach Martin addresses in his testimony the operational challenges facing the system (Aqua Statement Nos. 3, 3 Supp., and 3-R). Finally, Mr. DeMarco's simply glosses over the significant financial benefits that arise from this sale and the resulting substantial benefits that accrue to the City residents (i.e., the customers). Ms. Wilkins offered her calculations in her Direct Testimony, Appendix A. Mr. DeMarco responds that the OCA "does not weigh in on how a municipality spends the money post-acquisition", however, this completely misses the point that the rate deficiency of $4,288,000 by the City's customers is offset by $4,560,037 of benefits that include interest income, long term debt repayment, interest savings, avoided future rate increases, and other tangible benefits.

For example, the Company acquired the sewer utility assets of Limerick Township in 2018 and as a result, Limerick Township garnered nearly $60 million in net proceeds that were invested to produce future investment earnings that were utilized, and are still being utilized to this day. Attached to my direct testimony is Aqua Exhibit WCP-1R, which is an excerpt from Limerick Township's 2023 Annual Financial Statements that speaks to

the benefits still accruing to the residents to this day and provide offsetting benefits of lower to zero tax increases as compared to the expected and resulting rate increases post sale. Notably, Limerick Township posits that absent a sale, the real estate tax rates "would be at a minimum, 30% higher" and that "[t]his does not include costs the Township would be incurring for Township debt, which was eliminated with the sale proceeds, or financing costs for the new municipal building and fire company buildings, and capital projects completed to date with the sewer monies."[5] The very existence of the financial benefits are contrary to the OCA's assertion of lack of benefit, one that needs to be given considerable weight in this proceeding as it goes to the heart of Section 1329 in the first place.

Mr. DeMarco tries to minimize the transaction by making comparisons to assert "overpayment." His comparison of the sale of a public sewer utility to a car sale is completely off base. Here, we are talking about long lived assets, most at the time of acquisition are often 50, 75, 100, or greater years old. A more relevant comparison of purchase price, economic value, and market value would be in real estate. One would understand that the value of real estate in 2025 is vastly greater than the same real estate in say 1930 or 1950. This is simply an attempt to get "820%" into the record to achieve a "shock and awe" effect that in reality, is not credible.

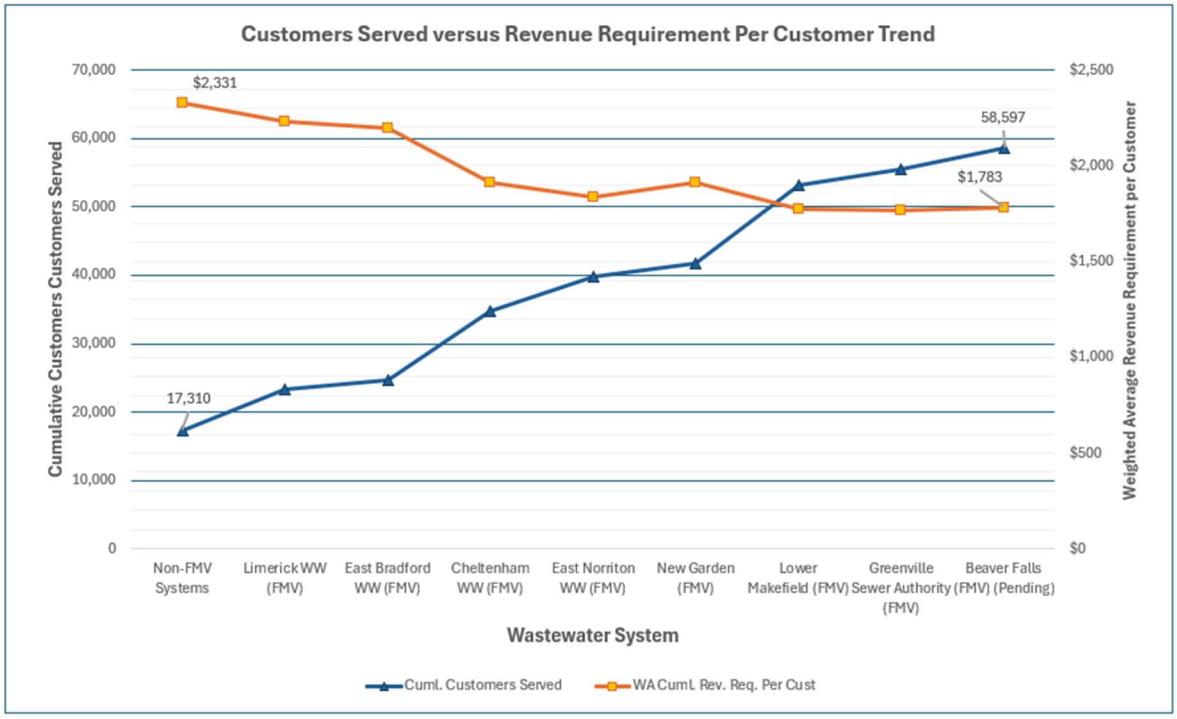
**Q. Mr. DeMarco, at page 29 of OCA St. No. 1, disputes that regionalization/consolidation are an affirmative public benefit. Do you agree?**

A. No. As I noted earlier the importance of revenue requirement per customer and what it demonstrates in terms of economies of scale, I have updated the graph for the most recent

[5] *See* Aqua Exhibit WCP-1R.

acquisitions operated by the Company and including the most recent investments in rate base for both pre-FMV existing customers and those systems which were acquired by using Section 1329. Please see Figure 1R below:

**Figure 1R:**



The above graph (including Beaver Falls) continues to demonstrate growth in customers being provided sewer utility service, while this service is being provided at a lower combined cost of service per customer. This should be given considerable weight by the PUC as it demonstrates the substantial public benefits that would result from Aqua acquisition of the System. Notably, the cost of service per customer prior to any acquisition of a FMV system is approximately 30% greater than the cost today. This is due to a significant amount of investments to upgrade wastewater facilities on our non-FMV systems since 2010. At the same time, completing acquisitions like East Norriton, East

Bradford, Cheltenham, and Lower Makefield added significantly to the Company's customer base at lower cost of service per customer. The end result is a larger, more diversified, wastewater utility that is more capable of balancing cost pressures on rates.

**Q. Mr. DeMarco recommends that Aqua be required to separately track all closing costs by category, and should not be permitted to claim any transaction and closing costs incurred by Beaver Falls in ratemaking rate base (OCA St. No. 1, at pp. 33-34). Please respond.**

A. As a matter of normal business and accounting, the Company tracks all closing costs as a result of any acquisition application and those costs will be claimed as rate base in our next rate filing. All of which would be available to review and any opposition in that next rate case. Consistent with claims made following other acquisitions, Aqua would not be seeking recovery of costs incurred by the selling entity.

**Q. At page 34 of OCA St. No. 1, Mr. DeMarco recommends that Aqua submit a separate COSS for the Beaver Falls system when Aqua files its next base rate. Do you agree?**

A. Yes. Aqua will agree to submit a separate COSS for the System in a similar manner as it has submitted a separate COSS for each system acquired under Section 1329 in its 2021 Base Rate Case proceeding and 2024 Base Rate Case proceeding.

**Q. Does OCA Witness DeMarco make any proposal regarding the rate impact notice to be provided in future Section 1329, 66 Pa.C.S. § 1329, transactions?**

A. Yes. On pages 36-37 of OCA St. No. 1, OCA witness DeMarco recommends that Aqua provide rate impact calculations at 5,000 gallons and 10,000 gallons in addition to the system average for all acquisition proceedings going forward. Then on page 39 Mr. DeMarco recommends that Aqua include the monthly or quarterly estimated volumetric charge along with DSIC impact in notices moving forward. I disagree with this for several reasons.

First, providing rate impact calculations at different levels is not required by Commission regulations (*see* 52 Pa. Code § 53.45). The Company cannot agree to the OCA attempting to re-write Commission regulations that would only apply to Aqua and not to other water or wastewater utilities seeking to acquire municipal systems in the Commonwealth. Moreover, the Commission has clearly discussed the notice of Section 1329 transactions as having an estimated non-binding impact:

> In the Commission's judgment, providing a notice with a complex set of potential rate increase based on a variety of assumptions and scenarios, or even a range of potential outcomes, will not provide any meaningful notice to affected customers. A notice of this sort would be more confusing than informative.[6]

Second, the Commission did not adopt the OCA's proposal to provide differing consumption levels in the Commission's most recent order on the implementation of Section 1329.[7]

Third, this proceeding is not the appropriate proceeding to establish future notice standards. If OCA believes the notice standards should be changed, it should be presented

[6] *See Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193, Final Supplemental Implementation Order, at p. 32 (Order entered February 28, 2019).
[7] *See Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193, Final Supplemental Implementation Order, at pp. 39, 58, 67-72 (Order entered July 2, 2024).

in a separate rulemaking proceeding, where all potentially affected entities will be provided notice and an opportunity to be heard.

Finally in regard to estimating the monthly or quarterly charges, Mr. DeMarco is suggesting that Aqua perform a billing analysis and rate design of what a potential future rate increase would be for a subject system which would not have the benefit of all the inputs that are found in a base rate case. This recommendation should not be adopted by the Commission.

**Q. Does Mr. DeMarco make any recommendations regarding easements in his testimony?**

A. Yes, at page 38 of OCA St. No. 1, Mr. DeMarco recommends that Aqua not be permitted to include the Beaver Falls assets into its rate base until it acquires all outstanding easements. He argues that without this condition, Aqua's ratepayers would be paying for assets that Aqua does not actually own.

**Q. Do you agree with Mr. DeMarco's recommendation?**

A. No. First, if maintenance or repair was needed on an asset where there was not easement, Aqua would notify the property owner that Aqua needs to perform service or repairs on assets on the property and enter into a temporary construction easement as needed until a permanent easement could be obtained from the property owner. On an emergency basis, Aqua would notify the property owner, and enter the property to perform the emergency service.

Second, the Asset Purchase Agreement ("APA") already protects Aqua and its customers in the event an easement was needed. Section 6.05(c) of the APA requires the Seller (Beaver Falls) to obtain all easements to be conveyed to Buyer (Aqua) and for the Seller to pay the costs regarding obtaining the missing easements:

> If . . . Seller determines . . . that there is a Missing Easement, Seller (at its cost and expense) shall take all actions (including the use of its power of condemnation) to obtain any Missing Easements so that the same may be sold, assigned, transferred and conveyed to Buyer at the Closing pursuant to the terms and conditions of this Agreement. The Seller shall pay for all costs and expenses incurred in connection with obtaining each Missing Easement (including any consideration payable to the landowner in connection with condemnation, in lieu of condemnation or otherwise to obtain Missing Easements).

Third, Section 6.05(e) of the APA sets forth a process by which a portion of the purchase price is set aside into an escrow account to be held to ensure that Beaver Falls obtains any missing easements after a closing occurs. This process has been used in several of the Company's acquisition applications, including recent FMV applications that have come before the Commission.

Finally, the Commission has previously ruled that such a condition is unnecessary as Aqua can gain access to address any repair or maintenance needs through temporary and construction easements, the Commission recognized that the provision establishing that the City will be required to pay the costs to obtain the missing easements, and that the APA's provision regarding escrow of a portion of the purchase price makes this condition not required.[8]

[8] *See Application of Aqua Pennsylvania Wastewater, Inc. (Aqua), pursuant to 66 Pa.C.S. §§ 1102 and 1329 for: (1) approval of the acquisition by Aqua of the Greenville Sanitary Authority (GSA); (2) approval of the right of Aqua to begin to offer, render, furnish and supply wastewater service to the public in the Borough of Greenville, Hempfield Township, and West Salem Township, Mercer County, Pennsylvania; and (3) an order approving the acquisition that includes the ratemaking rate base of the GSA's wastewater system assets pursuant to Section 1329(c)(2) of the*

Taken together, the steps Aqua would take to obtain access for needed maintenance or emergencies, the APA provisions that require Seller to obtain missing easements, the APA provisions that place a portion of the purchase price in escrow until the easements are obtained after a closing occurs, the fact that closing has occurred in other transactions where the escrow amount is established, and the fact that the Commission has previously ruled against the OCA on a similar condition,, all highlight that Mr. DeMarco's recommendation is unnecessary.

## III. RESPONSE TO I&E WITNESS KELLER

**Q. Please summarize the arguments and positions made by I&E witness Keller in his direct testimony (I&E St. No. 1).**

A. Mr. Keller covers two areas in his testimony. Specifically, (1) easements and other property rights (I&E St. No. 1, at pp. 4-5), and (2) rate impacts with an example of the difference between the pre-tax return on rate base afforded to regulated utilities, compared to the estimated interest rate of long-term debt that could be secured by a municipality to finance approximately $10.2 million in future capital investments (I&E St. No. 1, at pp. 7-10).

**Q. At pages 4-5 of I&E St. No. 1, Mr. Keller discusses needed leases, easements and rights-of-way, and the 2014 capital lease agreement. Do you have any updates or clarifications with respect to those matters?**

*Public Utility Code. Request for Approval of Contracts, including Assignment of Contracts, between Aqua and the GSA, Pursuant to Section 507 of the Public Utility Code*, Docket No. A-2023-3041695, Opinion and Order at p. 81 (Order Entered Dec. 20, 2024) ("GSA Order").

A. Yes. Regarding the 2014 Capital Lease Agreement, and as discussed in the Amended Application filed on March 28, 2024, Aqua and Beaver Falls engaged in settlement discussions with the Contributing Municipalities following the Complaint that was filed in the Court of Common Pleas of Beaver County. A settlement agreement (*see* New Exhibit F18 to the Amended Application) was reached in which New Wastewater Service Agreements (*see* New Exhibits F9-F15 to the Amended application) were established for the conveyance and treatment of wastewater from the Contributing Municipalities to the Beaver Falls system, and any prior agreement concerning collection, conveyance, treatment and disposal of wastewater to Beaver Falls would be terminated. Additionally, the Capital Lease Agreement's term expired at 11:59 PM on December 31, 2024.

**Q. Mr. Keller further proposes that as a condition to closing, an escrow account should be established in the event there are missing ownership interest documents (I&E St. No. 1, at p. 5). Please comment.**

A. Mr. Keller recommends that the Commission condition the approval of Aqua's Application and that closing should not occur until Beaver Falls has (1) identified all missing easements including rights-of-way and other property rights; (2) taken all necessary actions to obtain the missing easements and other property rights so that they may be conveyed to Aqua at closing; and (3) borne all costs and expenses for obtaining and conveying the missing easements and other property rights so that Aqua's ratepayers are not burdened with those costs. Mr. Keller further states that for circumstances beyond Beaver Falls' control where it is unable to transfer all missing easements including rights-of-way and other property rights before or at the closing of the transaction, Aqua and Beaver Falls may proceed to

close the transaction so long as an escrow account be established of an appropriate amount from the purchase price to obtain post-closing transfers.

The reality of utility service is often that not all property rights are accounted for as of closing on a transaction. While Aqua will require that all missing easements be identified, the acquisition should not be prevented from closing if every missing easement has not been acquired and conveyed at closing. Aqua and Beaver Falls have set up a mechanism in the APA to ensure that those easements are obtained by Beaver Falls and that an escrow fund will be established of a portion of the purchase price to ensure the easements are transferred. Moreover, the Commission has previously ruled that a similar condition was unnecessary.[9] For similar reasons as those I provided in response to OCA witness DeMarco, I&E witness Keller's recommendation should not be adopted.

**Q. Mr. Keller expresses concern that Aqua's ownership of the Beaver Falls system, as a private entity, will cause increased costs in comparison to continued municipal ownership of the system (I&E St. No. 1, at pp. 7-10). Please respond.**

A. As I explained previously in response to OCA Witness DeMarco, differences in costs between municipal and private ownership were present in every acquisition previously completed by the Company, most prior to Section 1329's enactment into law. Standing alone, these differences are not a basis for denying approval of the acquisition of a municipal system by Aqua. Furthermore, Mr. Keller also completely ignores the significant financial proceeds that will be afforded to the residents, who are also customers, within the City. Those proceeds produce financial benefits that ultimately are for the

[9] *See* GSA Order, at p. 81.

customers in the custody of their duly elected officials. The record evidence demonstrates that the revenue deficiency occasioned by the potential acquisition being approved are offset entirely. To have a one sided, impact only argument and basis for denial should be rejected.

## IV. RESPONSE TO I&E WITNESS CLINE

**Q. Please summarize the arguments and positions made by I&E witness Cline in his direct testimony (I&E St. No. 2).**

A. Mr. Cline recommends that the Commission apply three conditions: (1) that Aqua's LTIIP be amended within 90-days of closing to include the System (I&E St. No. 2, at p. 10); (2) that Aqua not include Beaver Falls investments in its DSIC unless it is charged to customers (I&E St. No. 2, at pp. 9-10); and (3) Aqua reflect Beaver Falls as a separate COSS in its next base rate case (I&E St. No. 2, at pp. 10-14).

**Q. Please comment on the recommendation that Aqua amend its LTIIP within 90 days of closing to include Beaver Falls?**

A. Mr. Zach Martin will address the recommendation on the LTIIP in his rebuttal testimony.

**Q. Please respond to Mr. Cline's second recommendation.**

A. I do agree that the Company would not include incremental investments in Beaver Falls in the DSIC until Beaver Falls customers are subject to the DSIC.

**Q. Mr. Cline also recommends that Aqua reflect Beaver Falls as a separate COSS in its next base rate case. Please comment.**

A. Mr. DeMarco makes a similar recommendation. Aqua agrees with this condition as set forth in response to Mr. DeMarco's testimony.

**Q. Do you agree with Mr. Cline's recommendation that the Contributing Municipalities should be separately identified in the Beaver Falls COSS?**

A. I believe this recommendation makes logical sense. However, I would reserve my final opinion until I am able to see the resulting rate design and cost of service analysis that goes into evaluating this change.

## V. RESPONSE TO OSBA WITNESS FORBES

**Q. Please summarize the arguments and positions made by OSBA witness Forbes in her direct testimony (OSBA St. No. 1).**

A. Ms. Forbes recommends that the Commission reject Aqua's proposed acquisition of Beaver Falls, arguing that a ratemaking rate base of $41,250,000 has not been shown to be reasonable (OSBA St. No. 1, at p. 9). Alternatively, Ms. Forbes recommends that the acquisition be approved subject to the condition that the acquisition premium eligible for inclusion rate base be capped at the RRR, which Ms. Forbes asserts should not exceed $8,454,113 (OSBA St. No. 1, at pp. 9-10).

**Q. What is your opinion of Ms. Forbes primary recommendations?**

A. I disagree with Ms. Forbes that the ratemaking rate base proposed in this transaction is not reasonable. The City and the Company complied with the requirements of Section 1329, which provide the manner by which to assess the reasonableness of the purchase price by certified UVEs. Ms. Forbes's testimony in this matter glosses over the fact that Section 1329 of the Public Utility Code, as enacted by the legislature, set out the process and procedure for valuating utility assets that were part of a municipal to investor-owned utility transaction. The whole point of Section 1329 was to provide municipal owners of utility systems the option to sell their system at a FMV that recognizes the true value of their assets. It was understood and clear that acquisitions using Section 1329 would have purchase prices that exceeded the historical benchmark of depreciated original cost when first devoted to public use. OSBA witness Forbes' assertions of incentives of the utility and the seller to "inflate" the purchase price are unfounded. This transaction was negotiated at arms-length. Both the City and the Company take into consideration the financial impacts, including rates, and other factors to arrive at a purchase price that is agreeable to both.

**Q. Ms. Forbes alternatively contends that the Commission should limit the amount included in rate base to the premium that would be computed under the RRR (OSBA St. No. 1, at pp. 9-10). Please comment.**

A. I am advised by counsel that Section 1329 does not authorize the Commission to establish a ratemaking rate base based upon a ratio derived from depreciated original cost. The statute provides for rate base to be set at the lesser of purchase price or the average of two FMV appraisals. Further, as noted in my response to OCA witness DeMarco, Ms. Forbes

similarly is incorrect in her calculation of the RRR as she only used the DOC from the ScottMadden appraisal and did not average the DOC of both the ScottMadden and Gannett appraisals.

**Q. Ms. Forbes asserts, at page 6 of OSBA St. No. 1, that Aqua is incentivized to attain as high an acquisition price as possible. Do you agree?**

A. I do not. The Company and the municipality understand that monetizing their system occasions a corresponding rate increase to customers and constituents. The reality is that the lower the purchase price paid for a system that can meet the needs of the municipality, will at the same time provide greater benefits to the existing Company's customers through consolidation. The increase in rates for the Beaver Falls customers is exacerbated by virtue of their low present rates, which do not yet include the cost of significant required upgrades. As I stated in my direct testimony (Aqua Statement No. 1) the average bill for Beaver Falls customers is approximately $33.38. The current average Aqua wastewater bill for residential customers is approximately $101.35. Moreover, the significant affirmative public benefits that are present in the acquisition outweigh the rate impact. Further, Section 1329 provides that the amount to be included in rate base will be the lesser of the average of FMV appraisals, as computed by two separate UVEs, and purchase price. The UVE valuations place a limit upon the rate base allowance and serve the purpose of incentivizing Aqua to not negotiate an excessive purchase price.

**Q. Ms. Forbes makes reference to the Commission's FSIO and the RRR (OSBA St. No. 1, at pp. 7-8). She further quotes the FSIO stating that, while the FSIO did recognize**

**that some transactions would be grandfathered, the RRR should be applied to this transaction (OSBA St. No. 1, at pp. 8-10). Should the terms of the FSIO be applied to this transaction?**

A. No. As I stated in my supplemental direct testimony (Aqua Statement No. 1 Supp.), the APA between the City and Aqua was signed in October 2021, just under two and a half years before the release of the TSIO. As I further commented, Aqua, Beaver Falls and the Contributing Municipalities worked to establish New Wastewater Service Agreements that would govern conveyance and treatment of wastewater going forward on the same basis as opposed to agreements that were out of date, not followed, or that did not exist. These are the type of "unique facts and circumstances" that the Commission should consider in granting grandfather status to this Application.

**Q. Do you agree with Ms. Forbes' contention that the primary focus in evaluating Section 1329 filings should be protecting customers from excessive financial burdens?**

A. I do not. I am advised by counsel that the Public Utility Code provides that acquisitions are to be approved if the Commission finds that a certificate is necessary or proper for the service, accommodation, convenience or safety of the public. Although rate burdens may be a relevant factor in that assessment, it is by no means the exclusive factor. As explained in the Application, direct testimony, Amended Application and updated direct testimony, and rebuttal testimony, the Beaver Falls System is in poor condition, and the City is in dire financial straits. It simply does not have the resources, financial or physical, to continue to operate and maintain the system. Ms. Forbes, like other witnesses opposing the approval of this acquisition ignores the significant financial benefits that will be afforded to the

residents, who are also customers, within the City. She further does not acknowledge the operational and managerial benefits that will be substantially different than the existing City operations. These benefits will be shared by employees of the Beaver Falls System, existing Aqua customers, and the many people who are concerned about a safe environment in Beaver Falls and downstream. Her testimony does not provide a complete assessment of the evidence. As such, her testimony should be rejected accordingly.

## VI. CONCLUSION

**Q. Does this conclude your rebuttal testimony?**

A. Yes, it does; however, I reserve the right to supplement my rebuttal testimony as additional issues and facts arise during the course of this proceeding.

# Aqua Exhibit WCP-1R

# LIMERICK TOWNSHIP

# FINANCIAL STATEMENTS AND SUPPLEMENTARY INFORMATION

***Year Ended December 31, 2023***

**LIMERICK TOWNSHIP**
MANAGEMENT'S DISCUSSION AND ANALYSIS (UNAUDITED)
YEAR ENDED DECEMBER 31, 2023

Discussion also took place on the expected return to full staffing in several departments which have been understaffed due to attrition and related personnel departures. As stated previously in this report, discussion has been ongoing for several years on the need for higher level support for both the fire and EMS services within the Township. The additional funding that was identified to provide stability to both services was analyzed repeatedly against other funding requests to limit the burden on existing taxpayers.

Based on these guidelines, the following items are highlights of the issues incorporated into the Preliminary Budget presented to the Board for approval at their November 21st meeting.

**Taxes**

The projected assessed value of the Township is anticipated to realize General Fund real estate tax receipts of $3,307,000 which is a slight $10,000 increase from the final 2023 Budget amendment. Act 511 revenues are projected to decrease by $436,000 to $6,790,000. The reduction is mostly due to the continued decline of Real Estate Transfer Taxes from the high mark of 2022 when $1,405,900 was received. Only $500,000 is projected for 2024 based on the ongoing impacts of inflation and high interest rates.

To support the volunteer fire department, an increase of Real Estate Fire Taxes was approved from .421 mils to .721 mils. This is projected to generate an additional $454,000 for fire department operations. To better account for the ongoing costs of fire hydrants, a separate Hydrant Fund was established, and the $160,000 of fire tax revenue used to maintain all township hydrants, which equates to .10 mils, will now be shifted into this new fund.

**Interest Income**

General Fund interest earnings are projected to be $430,200 which is a $161,000 decrease from 2023. This conservation projection is based on economic reports that the Federal Reserve will begin to lower interest rates in 2024 if signs of a recession come to fruition. The General Fund Balance is estimated to be $7,658,155 at the end of 2024.

Capital Reserve Funds interest earnings on the PFM Investments are budgeted at $1,550,000, which could fluctuate based on what transpires with interest rates. The Capital Reserve Fund holds the net proceeds from the 2018 sale of the sewer system and the business strategy of utilizing the investment earnings of these funds, to offset the need for additional taxes, continues to provide benefits. The planned transfer of $1,200,000 of interest earnings into the General Fund represents 26% of the Real Estate tax burden required to balance this fund. As School District and County property taxes continue to rise due to inflation, the Township can turn to these investment earnings, as another source of revenue, to offset rising costs instead of enacting additional taxes. If the sale of the sewer system did not occur, it is safe to assume that Limerick Township real estate taxes would be at a minimum, 30% higher. This does not include costs the Township would be incurring for Township debt, which was eliminated with the sale proceeds, or financing costs which for the new municipal and fire company buildings, and capital projects completed to date with the sewer monies.

**General Fund Deficit and Capital Reserve Transfer**

Discussion ensued on the use of General Fund Reserves to bridge an operating deficit. For 2024, the deficit is projected to be $753,831. This is after a transfer of $1.2 million from the Capital Reserves Fund which, per the approved 2018 Investment Strategy, is interest funding available to offset the need for additional General Fund taxes. The Board was reminded that this transfer of $1.2 million, along with the projected deficit, represents an operational funding shortfall above recurrent revenue stream. The Township's ability to offset 61% of this $1,953,831 shortfall with interest earnings, as opposed to increased taxes, is another example of the benefits of the business strategy behind the sale of the sewer system. The Board was also reminded that when the sale took place in 2018, projections showed that

# REBUTTAL TESTIMONY OF MARK J. BUBEL, SR.

**With Regard To:**
**Environmental Compliance**
**Capital Improvements**

**February 24, 2025**

**TABLE OF CONTENTS**

I. INTRODUCTION ..... 1
II. RESPONSE TO OCA WITNESS DEMARCO ..... 2
III. CONCLUSION ..... 10

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Mark J. Bubel, Sr. My business address is 762 West Lancaster Avenue, Bryn Mawr, PA 19010.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Aqua Pennsylvania, Inc. ("Aqua PA") as Project Engineer III.

**Q. Are you the same Mark J. Bubel, Sr. who submitted direct testimony in this proceeding?**

A. Yes. I submitted direct testimony with Application filed with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on February 17, 2023.

**Q. What is the purpose of your rebuttal testimony?**

A. The purpose of my rebuttal testimony is to respond to the Direct Testimony of Office of Consumer Advocate ("OCA") witness Nicholas DeMarco regarding environmental compliance and capital improvements needed for the City of Beaver Falls ("City" or "Beaver Falls") wastewater system (the "System").

**Q. Are you sponsoring any exhibits with your rebuttal testimony?**

A. Yes. Attached to my rebuttal testimony is Aqua Exhibit MJB-1R (DEP Sewage Inspection Reports) and Aqua Exhibit MJB-2R (Aqua's response to the Commission's Bureau and Investigation and Enforcement's ("I&E") Interrogatory I&E-II-12).

## II. RESPONSE TO OCA WITNESS DEMARCO

**Q. Please summarize the arguments and positions made by OCA witness DeMarco in his direct testimony.**

A. In his direct testimony, Mr. DeMarco summarizes my direct testimony related to past environmental compliance issues, including notices of violation ("NOV") issued by the Pennsylvania Department of Environmental Protection ("DEP") and the Corrective Action Plan ("CAP") that the City is currently operating under. OCA St. No. 1, at pp. 4-5. Mr. DeMarco then concludes that Beaver Falls is not currently out of compliance with any state environmental standard and is effectively managing the CAP with DEP. OCA St. No. 1, at pp. 5-6. Mr. DeMarco further states that outside of ongoing maintenance, the System does not need anything more than a single system improvement to meet compliance. OCA St. No. 1, at pp. 6-7. Finally, Mr. DeMarco makes a recommendation that, if the Commission approves the acquisition of the System by Aqua, Aqua should track and quantify the costs of capital improvements and include them separately in Aqua's next base rate case. OCA St. No. 1, at pp. 33-34.

**Q. Do you agree with Mr. DeMarco's arguments with respect to environmental compliance matters?**

A. No.

**Q. Have there been any more recent NOVs issued by DEP or other environmental issues at the Beaver Falls system since you submitted your direct testimony with the Application?**

A. Yes.

**Q. Please discuss the NOVs and environmental issues.**

A. It appears that DEP generally conducts annual inspections of the City's wastewater treatment plant ("WWTP") more typically in the summertime. DEP prepares an inspection report which summarizes general observations and recommendations, including any National Pollution Discharge Elimination System ("NPDES") Permit non-compliance typically dating back to the previous inspection report. As I noted in my direct testimony, in the last NOV which I discussed, DEP had conducted an inspection in July of 2021 which resulted in the issuance of an NOV for non-compliance with the facility's NPDES effluent discharge permit. This NOV was issued for violation of the total suspended solids ("TSS") limit of the subject permit. Please see Aqua Exhibit MJB-1R for more recent DEP inspection reports.

DEP conducted another inspection in June of 2022 which did not note any NPDES permit monthly discharge monitoring report ("DMR") violations between July 2021 and April 2022, the period covered by the report. There were recommendations in the report including providing information to update DEP's records regarding the Chief Operator, a recommendation to install a skimming system on the chlorine contact tanks ("CCT"), a recommendation to keep written records for influent composite samples including date,

time of sample, as well as the name of the collector, and finally, a recommendation to update the Pollution Prevention and Control ("PPC") Plan, as needed.

In regard to the skimming system in the CCT, although not mandated by DEP for compliance, I submit that capital improvements such as this may likely have a direct correlation to compliance. Although not noted in DEP's report, the reason that the recommendation would be made by DEP would be due to the presence of scum and or floating solids on the CCT. This is an example of what I discuss further below to counter Mr. DeMarco's assertion that there is only one compliance issue which needs to be addressed. The lack of skimming on the CCT is not a direct permit violation, however, it could very easily result in an effluent fecal and or TSS permit violation, both of which the WWTP has had and continues to experience.

DEP conducted a subsequent WWTP inspection on August 10, 2023 which resulted in effluent permit violations in the report. The violations noted within the report include a failure to submit DMR monitoring reports or properly completing reports, a December 2022 TSS violation, a February 2023 TSS violation, a March 2023 TSS violation, and a June 2023 fecal coliform violation. A failure to submit monitoring reports or properly complete monitoring reports was also noted. In addition, the report included certain recommendations. DEP recommended that (1) repairs to the WWTP be continued as needed, (2) to ensure that samples are representative of flow, and (3) that the required (apparently past due) 2022 annual Chapter 94 Report, due March 31, 2023, be submitted as soon as possible.

DEP also conducted a WWTP inspection July 23, 2024 which resulted in the issuance of an NOV which is included in Aqua Exhibit MJB-1R. The inspection report

noted the following violations of the NPDES Permit: effluent TSS violations for October and November of 2023 as well as TSS violations for April and May, 2024, fecal coliform violation for April of 2024, and an effluent pH violation for January 2024. Violations which may occur between July 2024 and the summer of 2025, if any, will likely not be recognized in an inspection report until the summer of 2025 which appears to be the timeframe when DEP performs these plant inspections. It is clear that the facility has deficiencies relative to effluent TSS and fecal coliform which require capital expenditures to correct contrary to Mr. DeMarco's assertion.

I believe it is important to note that the supplemental direct testimony of Aqua witness Zach Martin filed on March 28, 2024, identified many operational concerns which he personally observed at the WWTP on at several times as this transaction has progressed. These concerns include confidential and highly confidential concerns. In addition, Mr. Martin observed the presence of scum and floatable matter on the CCT at the time adding to and corroborating DEP's recommendations as noted above. Both would contribute to NPDES effluent TSS and fecal coliform violations which the City has failed to address to date.

**Q. Do you agree with Mr. DeMarco's statement in his direct testimony that the System only needs one improvement to meet compliance (OCA St. No. 1, at p. 6)?**

A. No. Mr. Demarco is focusing on one highly confidential issue which violates the requirements of the EPA. There are a multitude of significant safety and general facility capital needs which could result in an impact to onsite personnel as well as treatment facility effluent compliance. These items and issues were laid out in my direct testimony

as well as by Mr. Martin is his direct testimony and his supplemental direct testimony. They could quickly result in a non-compliance should a failure occur under continued City ownership with its dire financial condition and before Aqua has the opportunity to address them in Aqua's capital plan.

I had also provided further reasoning and justification in my response to I&E-II-12 attached to my rebuttal testimony as Aqua Exhibit MJB-2R. This included a full audit of electrical and mechanical equipment conditions which were not possible to assess during the due diligence period. Failure of mechanical equipment could quickly lead to a facility violation. In the way of an example, failure of the trickling filter tower recycle pumping system would likely quickly result in a violation of effluent carbonaceous biological oxygen demand ("CBOD") and TSS. This would impart an increased oxygen demand on the receiving stream and the stream biota. It would also impact effluent ammonia-nitrogen as well as total nitrogen, which, although not presently permitted, would negatively impact the receiving stream biota due to ammonia- nitrogen's impact on stream dissolved oxygen decreasing it. In laymen's terms, the impacts could lead to fish kills or potentially algal blooms. Again, although not presently regulated with a numerical limit for these two parameters, the fact that they exist within the current NPDES Permit as monitor and report (ammonia-nitrogen twice per week) illustrates DEP's knowledge of the importance of the effluent parameter to stream health.

As also shown in Aqua Exhibit MJB-2R, work to assess the collection system relative to infiltration and inflow ("I&I") is needed. I note in my direct testimony that the Company's review of the flow and billing data from the City indicates that there is likely I&I present in the system. I also note in my direct testimony that the City experienced a

secondary (WWTP) bypass of 1,035,000 gallons in September 2018 due to high levels of rainfall. This incident was reported to DEP via email included in Exhibit O1 to the Application. The CAP requires the City to continue to address unpermitted discharges which are sanitary sewer overflows ("SSO") as described in my direct testimony. The source of potential SSOs is I&I originating within the City's collection system as well as the collection systems of the Contributing Municipalities over which the City has little control. However, under the New Wastewater Treatment Agreements negotiated by Aqua with the Contributing Municipalities, the Contributing Municipalities are required to address I&I within their systems if Aqua or another governing authority determines that there is excessive I&I in the system, and imposes penalties if peak flow limitations are exceeded.[1] Moreover, through the Settlement Agreement that Aqua negotiated with the City, certain funds that will be paid at closing are restricted to the improvement of the Contributing Municipalities systems.[2]

The City had installed backflow prevention devices in some residents home laterals to address SSOs occurring within their basements. This however did not address the source of the I&I and as such Aqua has included a program to identify the drainage basins within the City which exhibit the highest amount of I&I through flow metering, manhole inspections, closed circuit televising of the sewers targeted and rehabilitation and lining of manholes and sewers is also part of Aqua's capital plan which would also address potential flow by-passing within the treatment plant which is a compliance issue. The City did notify

[1] See Amended Application, Exhibits F9-F15, Sections 7.5 and 15.
[2] See Amended Application, Exhibit F18, Section 3(b).

DEP of the secondary by-passing of flow due to high rain in September of 2018 as I note in my direct testimony.

The explanation in Aqua Exhibit MJB-2R also addressed the Trickling Filter Tower No. 1 which shows signs of aging and cracking. Loss of this biological unit process in this tank would have an immediate impact on compliance, especially in winter, aside from personnel safety should a sudden catastrophic failure of the walls of the tank occur.

Another significant item discussed in Aqua Exhibit MJB-2R was the headworks which is a confined space and has obvious NFPA 820 violation issues. Upgrades are required to address screening and HVAC issues. Electrical upgrades are also required to address electrical and controls. Arc flash studies are required to address operator safety and the risk of arc flash. The conversion of chlorine gas disinfection to liquid sodium hypochlorite is scheduled due to safety concerns of using chlorine gas for operational staff as well as the general public in proximity to the WWTP.

Upgrade to the primary clarifier sludge collector will be made to protect solids from being delivered into the biological treatment process of the trickling filter system, SCADA will be implemented so that operational staff can access the system when not on site to confirm operational conditions and make process changes as needed. Plant personnel presently do not have this capability remotely.

The City conducted a Phase I Environmental Site Assessment ("ESA") which concluded the presence of four (4) Recognized Environmental Conditions ("REC") and two (2) Historical Recognized Environmental Conditions ("HREC"). The subject Phase I ESA recommended a Phase II ESA to characterize the subsurface soil and whether the soil meets or exceeds applicable regulatory criteria. The Phase II ESA will also verify the

presence or absence of hazardous building materials at the site. The Phase II ESA has not been started or completed by the City to the best of Aqua's knowledge due to lack of funds.

**Q. Does the City have a capital plan in place to address these issues?**

A. No. Currently, the City has no actionable plan to address these challenges. Furthermore, it does not appear that they will be able to implement such a plan if the acquisition is not approved given the status of the City's finances, as discussed by Ms. Wilkins in her supplemental direct and rebuttal testimony. Mr. Martin further emphasizes this point in his rebuttal testimony.

**Q. What does Mr. DeMarco recommend in his direct testimony regarding capital improvements for the System if the Commission does approve the acquisition (OCA St. No. 1, at p. 34)?**

A. Mr. DeMarco recommends that Aqua should track and quantify the costs of capital improvements to the Beaver Falls system that Aqua makes post-closing into two categories, and present them in Aqua's next base rate case: (1) necessary capital improvements – defined as bringing the system into: (i) conformity with PUC standards, and (ii) environmental compliance – capital improvements; and (2) the costs associated with integrating the system into Company-wide standards.

**Q. Do you agree with Mr. DeMarco's recommendation regarding capital improvements?**

A. No. It is not necessary to track these costs in the way that Mr. DeMarco is requesting. In no prior acquisition of any water or wastewater system has the PUC required that capital

improvement costs be broken out into the categories that Mr. DeMarco has recommended as it exhibits no discernable benefit or purpose. Further, there is overlap relative to capital expenditures to meet PUC compliance, DEP and EPA regulatory compliance as well as Aqua's standards which focus on safety, compliance, general renewing of aged equipment and facilities, and addressing imminent threat of failure of the same.

## III. CONCLUSION

**Q. Does this conclude your rebuttal testimony?**

Yes, it does; however, I reserve the right to supplement my rebuttal testimony as additional issues and facts arise during the course of this proceeding.

## SEWAGE INSPECTION REPORT

| Permit Number | Inspection Date | Entry Time | Exit Time | Inspection Type | Inspection ID |
|---|---|---|---|---|---|
| PA0026883 | 06/09/2022 | 10:00 | 11:36 | CEI | 3375024 |

| | | | |
|---|---|---|---|
| **Municipality** | Beaver Falls | **County** | Beaver |
| **Facility Name** | CITY OF BEAVER FALLS STP | **Permittee Name** | BEAVER FALLS CITY BEAVER CNTY |
| **24-Hour Emergency Contact Person/Phone** | Joe Durish Jr. / (724) 561-6511 | **Email** | bfstp@outlook.com |
| **Physical Location Address** | LOWER SEVENTH AVE, BEAVER FALLS, PA, 15010 | | |
| **Permit Expiration Date** | 10/31/2023 | **Next Submittal Renewal Due Date** | 05/04/2023 |

**Violations***

No Violations Noted

**Recommendations**

--Ensure Available Operator form is submitted to update the Department's records regarding Chief Operator
--Install skimming system on Chlorine Contact tanks
--Keep written records for Influent composite samples to include date and time of sample collection, along with name of collector
--Update PPC Plan as needed

## SEWAGE INSPECTION REPORT

| Facility Details Section | | | | | |
|---|---|---|---|---|---|
| **Responsible Official** | STEPHEN JOHNSON | | | **Title** | CITY ADMIN |
| **Business Phone** | (724) 843-2808 | | | **Email** | bfwpcp@hotmail.com |
| **Permittee Address** | 715 15TH ST, BEAVER FALLS, PA, 15010-4124 | | | | |
| **Certified Operator** | DURISH JOSEPH M JR | | | **Client ID** | 296046 |
| **Certificates** | A,E-2,4 | **Certification Status** | Active | **Expiration Date** | 12/31/2022 |
| **Is a Copy of the permit(s) on-site?** | | | | | Yes |
| **Has the interviewed operator/person reviewed the facility's permit(s)?** | | | | | Yes |

**Comments**

Inspection conducted for routine monitoring.

Responsible official is now Joe Durish Jr.
Operator in charge is now Brian Petronchak, A/E-2,4; 350258, Exp 9/30/23

**Participants:**
Joe Durish (Maintenance Supervisor), Brian Petronchak (Cheif Operator)

## SEWAGE INSPECTION REPORT

**Mon,Rpts&Rcds: 0472402 - TRTMT PLT**

### Influent Sampling

| | | | |
|---|---|---|---|
| MRR-1 | Is influent monitoring required by the permit? | Yes | |
| MRR-2 | Are influent samples collected? | Yes | |
| MRR-3 | Is the influent sampling location prior to all treatment? | Yes | |
| MRR-4 | Is the influent sampling location prior to all return flows? | Yes | |
| MRR-5 | Are representative influent samples collected? | Yes | |

### Effluent Sampling

| | | | |
|---|---|---|---|
| MRR-6 | Is the effluent sample collected at the location identified in the permit? | Yes | |
| MRR-7 | Where is the effluent sample collection location? | IMP 001 | |
| MRR-8 | Is the effluent sample location after all treatment? | Yes | |
| MRR-9 | Are representative effluent samples collected? | Yes | |

### Sample Collection

| | | | |
|---|---|---|---|
| MRR-10 | Are samples collected as required by the permit? | Yes | |
| MRR-11 | Is proper sampling equipment / containers used during collection? | Yes | |
| MRR-12 | Are the proper type of samples collected in accordance with the permit? | Yes | |
| MRR-13 | Are the samples collected at the frequency in accordance with the permit? | Yes | |
| MRR-14 | Is the proper sample size (minimum aliquot 100 mL) collected? | Yes | |
| MRR-15 | Is proper temperature control provided during collection, storage and shipping? | Yes | |
| MRR-16 | Is the temperature of the sampler or storage refrigerator monitored using an NIST traceable thermometer and recorded? | Yes | |
| MRR-17 | Is the sample storage temperature <=6 °C ? | Yes | |
| MRR-18 | What is the sample storage temperature?<br>**Notes:** New composite sampler on order | 2.7 | |

### On-site Lab Accreditation-by-Rule

| | | | |
|---|---|---|---|
| MRR-19 | Does the facility analyze accredited-by-rule parameters only? | Yes | |
| MRR-20 | Which accredited-by-rule parameters are analyzed by the on-site lab? | Other<br>pH<br>DO<br>TRC | |
| MRR-21 | Is the on-site lab registered? | Yes | |

## SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| MRR-22 | Laboratory Registration ID | 04-01709 | |

**Lab Accreditation**

| | | | |
|---|---|---|---|
| MRR-23 | Does the on-site laboratory analyze permit parameters? | No | |
| MRR-29 | Are permit parameters analyzed by a contract lab? | Yes | |
| MRR-30 | Contract Lab Name, City, Phone | CMA Env Labs | |
| MRR-31 | Contract Laboratory Accreditation ID | 33-00411 | |
| MRR-32 | Is the contract lab accredited for those permit parameters? | Yes | |
| MRR-33 | Have any changes occurred with the accredited-by-rule or the accredited parameters or labs? | No | |

**Analysis**

| | | | |
|---|---|---|---|
| MRR-35 | Are approved test methods (per 40 CFR Part 136 or others) used for permit parameters? | Yes | |
| MRR-36 | Are the methods used sufficiently sensitive for permit parameters? | Not Observed | |
| MRR-37 | Are the samples analyzed within the required holding time? | Yes | |
| MRR-38 | Are laboratory equipment/meters calibrated in accordance with the manufacturers' specifications? | Yes | |
| MRR-39 | Are laboratory meters operated and maintained in accordance with the manufacturers' specifications? | Yes | |
| MRR-40 | Are pH buffers and other reagent standards current? | Yes | |

**Records**

| | | | |
|---|---|---|---|
| MRR-41 | Are sampling, calibration, laboratory results, chain-of-custody and other required records readily available for review and complete? | Yes | |
| MRR-42 | Do the sampling records include collector, date/time, location information? | Yes | |
| MRR-43 | Do the analysis records include the analyst's name, the analysis date and time, the test method used, the quantitation limits, and the results? | Yes | |
| MRR-44 | Are the required facility records retained for a minimum of 3 years? | Yes | |
| MRR-45 | Are the required sludge use and disposal records retained for a minimum of 5 years? | Yes | |
| MRR-46 | Was access provided to information or to facility records upon request? | Yes | |

**Reports**

| | | | |
|---|---|---|---|
| MRR-47 | Identify the month/year of the DMRs and supporting data reviewed. | July 2021-April 2022 | |
| MRR-48 | Are the reviewed DMRs and supplemental reports properly completed? | Yes | |
| MRR-49 | Are the reviewed bench sheets/lab reports consistent with the reported data? | Yes | |
| MRR-50 | Are samples collected more frequently than required in the permit? | No | |
| | | | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| MRR-52 | Are DMRs submitted on time? | Yes | |
| MRR-53 | Are the required supplemental reports submitted? | Yes | |
| MRR-54 | Is the facility using the eDMR system, if required? | Yes | |

## 2 Flow Measurement: 0472402 - TRTMT PLT

### Flow Measurement

| | | | |
|---|---|---|---|
| Q-2 | If influent flows are measured, are they measured before all return lines and after hauled-in waste? | Yes | |
| Q-3 | Is a flume present? | No | |
| Q-6 | Is a weir present? | Yes | |
| Q-7 | Are weirs clean with a visible air space below nappe? | Yes | |
| Q-8 | What is the max flow that can be measured at the primary device (flume or weir)? | 15.415 | |

### Meter & Recorder

| | | | |
|---|---|---|---|
| Q-9 | Does the permit require continuous flow monitoring and recording? | Yes | |
| Q-10 | Does the facility have the required flow monitoring and recording capabilities? | Yes | |
| Q-11 | What type of flow meter is used? | Ultrasonic | |
| Q-12 | What type of flow recorder is used? | Totalizer | |
| Q-13 | Are the meter and recorder operable and operating? | Yes | |
| Q-14 | What is the date of the most recent flow meter calibration? | 1/24/22 | |
| Q-15 | What is the calibration range of the flow meter? | 0-15.92 MGD | |
| Q-16 | What is the flow range of the recorder? | 0-15.92 MGD | |
| Q-17 | What is the current flow meter reading (MGD or gpm)? | 2138 gpm eff | |

### High Flows

| | | | |
|---|---|---|---|
| Q-18 | Does the permit require a High Flow Management Plan? | No | |

## 3 TP Treatment Plant: 0472402 - TRTMT PLT

### Treatment Units

| | | | |
|---|---|---|---|
| TP-1 | Are all treatment units operable? | Yes | |
| TP-2 | Are the treatment units/equipment as described in the WQM permit(s) or in the previous inspection report? | Yes | |

### Stand-by Power

## SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| TP-7 | Is stand-by power provided? | Yes | |
| TP-8 | Type of Stand-by Power | Emergency generator | |
| TP-9 | How often is the stand-by power unit maintained? | Weekly | |
| TP-10 | How often is the stand-by power unit exercised? | Weekly | |
| TP-11 | Is the stand-by power unit exercised under load? | Yes | |
| TP-12 | Is the stand-by power system operable and maintained? | Yes | |

**Alarms**

| | | | |
|---|---|---|---|
| TP-13 | Is an alarm system available? | Yes | |
| TP-14 | Type of Alarm | Other | |
| TP-15 | How often is the alarm system tested? | Twice Yearly | |
| TP-16 | What conditions trigger an alarm? Select all that apply. | Other<br>Power failure<br>High level<br>Pump faults<br>Pump failure<br>Intrusion<br>Leaks | |
| TP-17 | Is the alarm system(s) operable? | Yes | |

**Chemicals**

| | | | |
|---|---|---|---|
| TP-18 | Are chemicals used for treatment or otherwise added to the waste stream? | Yes | |
| TP-19 | Which chemicals are added? | Polymer | |
| TP-20 | What is the purpose of the chemical addition? | Sludge | |
| TP-21 | Where are the chemicals added? | NS4375 | |
| TP-22 | Are chemicals properly handled and stored to prevent a pollution incident? | Yes | |

**Bypasses**

| | | | |
|---|---|---|---|
| TP-23 | Did a treatment plant bypass occur since the last inspection? | No | |

**Planned Changes**

| | | | |
|---|---|---|---|
| TP-35 | Have any changes (new pollutants, different or increased volume or loadings) to the waste stream from industrial or hauled-in wastes occurred since the last inspection? | No | |

**4 O&M: 0472402 - TRTMT PLT**

# SEWAGE INSPECTION REPORT

## O&M

| | | | |
|---|---|---|---|
| OM-1 | Which of the following treatment plant and equipment records are available? | Other | |
| OM-2 | Is a daily operations log on-site? | Yes | |
| OM-3 | Is the daily operations log up to date? | Yes | |
| OM-4 | Which operational conditions/actions are recorded in the log? | Observations Process adjustments Problems or Concerns | |
| OM-5 | Are process control parameters monitored? (Record the monitoring frequency and current results) | Yes | |
| OM-6 | Is an influent/process control supplemental report form completed and submitted with the DMR? | Yes | |
| OM-7 | Does the daily operations log include maintenance and repair records?<br>Notes: Seperate | Yes | |
| OM-10 | Are the PM and repair logs up to date? | Yes | |
| OM-11 | Were major equipment repairs/replacements done since the last inspection?<br>Notes: Rehab on all 3 primary tanks | No | |
| OM-12 | Is a spare parts inventory, either written or electronic, maintained? | Yes | |
| OM-13 | Are spare parts and equipment (pumps, motors) maintained on-site or readily available? | Yes | |

## Solids Management

| | | | |
|---|---|---|---|
| OM-14 | What is the sludge storage capacity? | 460,000 gallons | |
| OM-15 | How much sludge was removed from the facility in the past year? | N/O | |
| OM-16 | How does the facility determine how much sludge to waste? | Obs dig. Supernatant | |
| OM-17 | Is sludge/biosolids production & disposal information submitted on the applicable supplemental report form with the DMR? | Yes | |
| OM-18 | Does the facility test the removed sludge for %TS? | Yes | |
| OM-19 | Who provides sludge hauling/disposal/land application? | Brunner | |
| OM-20 | Where is the sludge disposal/biosolids application location? | Brunner Landfill | |
| OM-21 | How and where are other solid materials, such as collected screenings and grit, disposed? | Brunner Landfill | |
| OM-22 | Has the facility obtained or assured that contracted agents have the necessary permits and approvals for the disposal of solid materials? | Yes | |
| OM-23 | Are solid materials handled and disposed of in compliance with a disposal permit and requirements? | Yes | |
| OM-24 | Is the facility in compliance with all other Part C Special Conditions regarding Solids Management? | Yes | |

## Hauled in Wastes

| | | | |
|---|---|---|---|
| | | | |

## SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| OM-25 | Does the facility accept hauled-in wastes? | Yes | |
| OM-26 | Does the facility accept hauled-in Municipal Wastes? | Yes | |
| OM-27 | Which types of municipal wastes are accepted? | Septage Wastewater sludge Holding tank | |
| OM-28 | Is hauled-in municipal waste information submitted on the applicable supplemental report form with the DMR? | Yes | |
| OM-29 | Are hauled-in Residual Wastes accepted? | Yes | |
| OM-30 | Which types of residual wastes are accepted? | Other Landfill Leachate | |
| OM-31 | Is hauled-in residual waste information submitted on the applicable supplemental report form with the DMR? | Yes | |
| OM-32 | At what flow does the facility stop accepting hauled-in wastes? | N/A | |
| OM-33 | Have the maximum amounts of hauled-in wastes that can be accepted (daily, weekly, etc.) been determined? | Yes | |
| OM-34 | Does the influent sampling location capture all hauled-in waste? | Yes | |
| OM-35 | Is all hauled in waste accounted for in the influent loading? | Yes | |
| OM-36 | Is the facility in compliance with other the Part C Hauled-In Waste Restrictions? | Yes | |

**Stormwater**

| | | | |
|---|---|---|---|
| OM-37 | Does the permit include a special condition or other requirements regarding stormwater management? | Yes | |
| OM-38 | Has a PPC Plan for stormwater discharges been submitted? | Yes | |
| OM-39 | Is the Stormwater PPC Plan available on-site? | Yes | |
| OM-40 | When was the Stormwater PPC Plan last updated? | 8/2020 | |
| OM-41 | Is the facility in compliance with all permit requirements applicable to stormwater outfalls? | Not Observed | |

**Special Conditions**

| | | | |
|---|---|---|---|
| OM-42 | Is the facility subject to industrial pretreatment requirements, or does the permit include a Part C Special Condition regarding Industrial Pretreatment? | No | |
| OM-45 | Does the permit contain a condition regarding whole effluent toxicity (WET) tests? | Yes | |
| OM-46 | Has WET testing been conducted? | Yes | |
| OM-47 | Is the facility in compliance with all other permit requirements applicable to WET testing? | Yes | |
| OM-48 | Are any other special conditions in the permit not covered in this inspection report? | No | |

**5 DP Discharge Point: 001 - OUTFALL 001**

**Outfall**

## SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| DP-1 | Outfall Observations | IMP Ok | |
| DP-2 | Were field measurements taken? | No | |
| DP-4 | Were effluent samples collected for laboratory analysis? | No | |

**Downstream**

| | | | |
|---|---|---|---|
| DP-10 | Is the receiving stream clear of floating or deposited materials, scum, sheen, foam, oil, grease or other substances associated with the discharge? | Yes | |
| DP-11 | Were downstream field measurements taken? | No | |
| DP-13 | Were downstream samples collected for laboratory analysis? | No | |

**Upstream**

| | | | |
|---|---|---|---|
| DP-19 | Was the stream observed upstream from the outfall? | Yes | |
| DP-20 | Were upstream field measurements taken? | No | |
| DP-22 | Were upstream samples collected for laboratory analysis? | No | |

### 7 PS Pump Stations: 0472402 - TRTMT PLT

**Pump Stations**

| | | | |
|---|---|---|---|
| PS-1 | How many pump stations are part of the facility's collection system? | 8 | |
| PS-2 | Are pump station flows recorded? | Yes | |
| PS-3 | How are flows measured? | Metered | |
| PS-4 | What type of flow meter/sensor is in use? | Magnetic | |
| PS-5 | When was the most recent flow meter calibration done? | N/A | |
| PS-7 | Are pump stations monitored with alarms? | Yes | |
| PS-8 | Are the alarms operable? | Not Observed | |
| PS-9 | Are the pump stations equipped with backup auxiliary power? | Yes | |
| PS-10 | Type of Stand-by Power | Emergency generator | |
| PS-11 | Is the stand-by power system operable? | Yes | |
| PS-12 | Is the stand-by power system maintained in accordance with manufacturer's recommendations? | Yes | |
| PS-13 | How often is the stand-by power unit maintained? | Weekly | |
| PS-14 | How often is the stand-by power unit exercised? | Weekly | |
| PS-15 | Is the stand-by power unit exercised under load? | Yes | |

## SEWAGE INSPECTION REPORT

### OpCert: 0472402 - TRTMT PLT

**Operator Certification**

| | | | |
|---|---|---|---|
| OP-1 | Is a properly certified operator employed for the treatment plant? | Yes | |
| OP-2 | Is at least one collection system pump station part of the permitted facility? | Yes | |
| OP-3 | Is an operator with a valid E-4 certificate employed for the operation of the facility's collection system pump station(s)? | Yes | |
| OP-4 | How many properly certified available operators make process control decisions at this facility? | 3 | |
| OP-5 | Is at least one available operator's current certificate displayed at the treatment plant? | Yes | |
| OP-6 | Have the available operators been provided with a copy of the current NPDES/WQM Permits? | Yes | |
| OP-7 | On which days of the week is an available operator at the plant? | Sunday<br>Monday<br>Tuesday<br>Wednesday<br>Thursday<br>Friday<br>Saturday | |
| OP-8 | How many hours are spent at the plant by the available operator(s) each day (weekdays/weekends/holidays)? | 8.5-all | |
| OP-9 | Does the operator notify the owner about violations or conditions that may cause a violation, and needed resources? | Yes | |
| OP-10 | How does the operator notify the owner about known violations or conditions that may cause a violation, and about needed resources? | Email<br>Phone call | |
| OP-11 | Does the owner respond to the operator's notification about needed resources? | Yes | |
| OP-12 | Does the operator act to resolve the condition(s) and/or violation(s)? | Yes | |
| OP-13 | Are non-certified or not properly certified persons expected to perform work that requires process control decisions? | No | |
| OP-19 | If the available operator/operator in charge (OIC) has changed, was a change of operator form submitted to DEP within 10 days? | Not Observed | |

**Circuit Rider**

| | | | |
|---|---|---|---|
| OP-20 | Is the facility operated by a circuit rider? | No | |

### 6 CV Conveyance: 0472402 - TRTMT PLT

**Collection System**

| | | | |
|---|---|---|---|
| CV-1 | Does the permitted entity own, operate & maintain the entire collection system? | No | |
| CV-2 | How many collection systems owned by others contribute to this facility's system? | 8 | |
| CV-3 | Are the contributing collection systems causing problems with this facility or it's collection system? | Not Observed | |
| CV-4 | Is collection system maintenance performed? | Yes | |
| CV-5 | Is maintenance regularly scheduled? | Yes | |

## SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| CV-6 | Is maintenance done as problems occur? | Yes | |
| CV-7 | Which types of maintenance are performed? | Televising etc. | |
| CV-8 | Does the system experience infiltration and/or inflow that causes or could cause O&M problems or interferes with treatment? | Yes | |
| CV-9 | Is an I&I program in place? | Yes | |
| CV-10 | Select the I&I detection work performed since last inspection | Other<br>Downspout/Floor Drain Inspections<br>Televising | |
| CV-11 | Select the I&I removal work performed since last inspection | Other<br>Manhole Repair<br>Pipe Replacement | |

**Sanitary Sewer Overflows**

| | | | |
|---|---|---|---|
| CV-12 | Have any sanitary sewer overflows occurred since the last inspection? | No | |

SEWAGE INSPECTION REPORT

## 3 TP Treatment Plant: 0472402 - TRTMT PLT

### Treatment Units

**TP-1** Are all treatment units operable?

| Treatment Units | Total | On-Line | Inoperable | Comments |
|---|---|---|---|---|
| Grit Removal | 1 | 1 | 0 | |
| Primary Clarifier | 3 | 3 | 0 | |
| Belt Filter Press | 1 | 1 | 0 | |
| Sludge Holding Tank/Lagoon | 1 | 1 | | For Skimmer |
| Aeration Basin | 1 | 1 | 0 | |
| Grease Removal | 1 | 1 | 0 | |
| Other | 1 | 1 | 0 | Sludge Decant Tank |
| Secondary Clarifier | 5 | 5 | 0 | |
| Other | 2 | 2 | 0 | Primary and secondary wet wells |
| Trickling Filter | 2 | 2 | 0 | |
| Chlorine Contact Tank | 2 | 2 | 0 | Gas chlorination |
| Anaerobic Digester | 2 | 2 | 0 | |

## 4 O&M: 0472402 - TRTMT PLT

### O&M

**OM-5** Are process control parameters monitored? (Record the monitoring frequency and current results)

| Parameter / Calculation | Frequency Of Testing | Current Testing Results |
|---|---|---|
| Settleability | 7/week | 10 |
| *Dissolved Oxygen* | 7/week | 6.0 |
| Alkalinity | 7/week | 351 |
| Sludge Blanket | Daily (Visual) | OK |
| pH | Inf 7/week | 7.11 |
| Temperature | Daily | 66.8 |

| **Physical Location Address** | LOWER SEVENTH AVE, BEAVER FALLS, PA, 15010 | | |
| **Permit Expiration Date** | 10/31/2023 | **Next Submittal Annual Report DueDate** | 03/31/2024 |

**Violations*** Violation(s) Noted

1. **25 Pa. Code 92a.41(a)(12):** Failure to submit monitoring reports or properly complete monitoring reports.
   Staff changing, eDMRs will be submitted on time moving forward.
2. **25 Pa. Code 92a.44:** NPDES - Violation of effluent limits in Part A of permit
   Dec '22- TSS violation
   Feb '23- TSS violation
   March '23- TSS violation
   June '23- Fecal coliform violation

## Recommendations

-Continue with repairs to plant as needed.
-Ensure samples are representative of flow.
-Ensure 2022 Chapter 94 Report is submitted as soon as possible

## SEWAGE INSPECTION REPORT

### 1 Mon,Rpts&Rcds: 0472402 - TRTMT PLT

**Influent Sampling**

| | | | |
|---|---|---|---|
| MRR-1 | Is influent monitoring required by the permit? | Yes | |
| MRR-2 | Are influent samples collected? | Yes | |
| MRR-3 | Is the influent sampling location prior to all treatment? | Yes | |
| MRR-4 | Is the influent sampling location prior to all return flows? | Yes | |
| MRR-5 | Are representative influent samples collected?<br>**Notes:** Recommendation- ensure samples are flow proportional as required by permit. | Yes | |

**Effluent Sampling**

| | | | |
|---|---|---|---|
| MRR-6 | Is the effluent sample collected at the location identified in the permit? | Yes | |
| MRR-7 | Where is the effluent sample collection location? | Outfall | |
| MRR-8 | Is the effluent sample location after all treatment? | Yes | |
| MRR-9 | Are representative effluent samples collected? | Yes | |

**Sample Collection**

| | | | |
|---|---|---|---|
| MRR-10 | Are samples collected as required by the permit? | Yes | |
| MRR-11 | Is proper sampling equipment / containers used during collection? | Yes | |
| MRR-12 | Are the proper type of samples collected in accordance with the permit? | Yes | |
| MRR-13 | Are the samples collected at the frequency in accordance with the permit? | Yes | |
| MRR-14 | Is the proper sample size (minimum aliquot 100 mL) collected? | Yes | |
| MRR-15 | Is proper temperature control provided during collection, storage and shipping? | Yes | |
| MRR-16 | Is the temperature of the sampler or storage refrigerator monitored using an NIST traceable thermometer and recorded? | Yes | |
| MRR-17 | Is the sample storage temperature <=6 °C ? | Yes | |
| MRR-18 | What is the sample storage temperature? | 4 C influent, 3 C ef | |

**On-site Lab Accreditation-by-Rule**

| | | | |
|---|---|---|---|
| MRR-19 | Does the facility analyze accredited-by-rule parameters only? | Yes | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| MRR-20 | Which accredited-by-rule parameters are analyzed by the on-site lab? | Other<br>pH<br>DO<br>TRC<br>Temperature | |
| MRR-21 | Is the on-site lab registered? | Yes | |
| MRR-22 | Laboratory Registration ID | 04-01709 | |

Lab Accreditation

| | | | |
|---|---|---|---|
| MRR-23 | Does the on-site laboratory analyze permit parameters? | No | |
| MRR-29 | Are permit parameters analyzed by a contract lab? | Yes | |
| MRR-30 | Contract Lab Name, City, Phone | Campbell<br>Beaver Fall | |
| MRR-31 | Contract Laboratory Accreditation ID | 04-00483 | |
| MRR-32 | Is the contract lab accredited for those permit parameters? | Yes | |
| MRR-33 | Have any changes occurred with the accredited-by-rule or the accredited parameters or labs? | Yes | |
| MRR-34 | Is a lab accreditation form submitted with the DMR when changes have occurred? | Not<br>Observed | |

Analysis

| | | | |
|---|---|---|---|
| MRR-35 | Are approved test methods (per 40 CFR Part 136 or others) used for permit parameters? | Yes | |
| MRR-36 | Are the methods used sufficiently sensitive for permit parameters? | Yes | |
| MRR-37 | Are the samples analyzed within the required holding time? | Yes | |
| MRR-38 | Are laboratory equipment/meters calibrated in accordance with the manufacturers' specifications? | Yes | |
| MRR-39 | Are laboratory meters operated and maintained in accordance with the manufacturers' specifications? | Yes | |
| MRR-40 | Are pH buffers and other reagent standards current? | Yes | |

Records

| | | | |
|---|---|---|---|
| MRR-41 | Are sampling, calibration, laboratory results, chain-of-custody and other required records readily available for review and complete? | Yes | |
| MRR-42 | Do the sampling records include collector, date/time, location information? | Yes | |
| MRR-43 | Do the analysis records include the analyst's name, the analysis date and time, the test method used, the quantitation limits, and the results? | Yes | |
| MRR-44 | Are the required facility records retained for a minimum of 3 years? | Yes | |
| MRR-45 | Are the required sludge use and disposal records retained for a minimum of 5 years? | Yes | |
| MRR-46 | Was access provided to information or to facility records upon request? | Yes | |

COMMONWEALTH OF PENNSYLVANIA
DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF CLEAN WATER

SEWAGE INSPECTION REPORT

## Reports

| | | | |
|---|---|---|---|
| MRR-47 | Identify the month/year of the DMRs and supporting data reviewed. | March 2023 | |
| MRR-48 | Are the reviewed DMRs and supplemental reports properly completed? | Yes | |
| MRR-49 | Are the reviewed bench sheets/lab reports consistent with the reported data? | Yes | |
| MRR-50 | Are samples collected more frequently than required in the permit? | No | |
| MRR-52 | Are DMRs submitted on time? | No | 1 |
| MRR-53 | Are the required supplemental reports submitted? | Yes | |
| MRR-54 | Is the facility using the eDMR system, if required? | Yes | |

## 2 Flow Measurement: 0472402 - TRTMT PLT

### Flow Measurement

| | | | |
|---|---|---|---|
| Q-1 | Where is the flow measured for DMR reporting? | Effluent | |
| Q-2 | If influent flows are measured, are they measured before all return lines and after hauled-in waste? | No | |
| Q-3 | Is a flume present? | Yes | |
| Q-4 | Is the flow uniform across flume channel? | Yes | |
| Q-5 | Is the upstream channel section and the flume free of debris and deposits? | Yes | |
| Q-6 | Is a weir present? | Yes | |
| Q-7 | Are weirs clean with a visible air space below nappe? | Yes | |
| Q-8 | What is the max flow that can be measured at the primary device (flume or weir)? | 15 mgd | |

### Meter & Recorder

| | | | |
|---|---|---|---|
| Q-9 | Does the permit require continuous flow monitoring and recording? | Yes | |
| Q-10 | Does the facility have the required flow monitoring and recording capabilities? | Yes | |
| Q-11 | What type of flow meter is used? | Ultrasonic Magnetic | |
| Q-12 | What type of flow recorder is used? | Totalizer 7-day Chart | |
| Q-13 | Are the meter and recorder operable and operating? | Yes | |
| Q-14 | What is the date of the most recent flow meter calibration? | Jan 30, 2023 | |
| Q-15 | What is the calibration range of the flow meter? | 0-15.92 mgd | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| Q-16 | What is the flow range of the recorder? | 0-15.92 mgd | |
| Q-17 | What is the current flow meter reading (MGD or gpm)? | 1.57 mgd | |

### High Flows

| | | | |
|---|---|---|---|
| Q-18 | Does the permit require a High Flow Management Plan? | No | |

## 3 TP Treatment Plant: 0472402 - TRTMT PLT

### Treatment Units

| | | | |
|---|---|---|---|
| TP-1 | Are all treatment units operable? | Yes | |
| TP-2 | Are the treatment units/equipment as described in the WQM permit(s) or in the previous inspection report? | Yes | |

### Stand-by Power

| | | | |
|---|---|---|---|
| TP-7 | Is stand-by power provided? | Yes | |
| TP-8 | Type of Stand-by Power | Emergency generator | |
| TP-9 | How often is the stand-by power unit maintained? | Weekly+annually | |
| TP-10 | How often is the stand-by power unit exercised? | Weekly | |
| TP-11 | Is the stand-by power unit exercised under load? | Yes | |
| TP-12 | Is the stand-by power system operable and maintained? | Yes | |

### Alarms

| | | | |
|---|---|---|---|
| TP-13 | Is an alarm system available? | Yes | |
| TP-14 | Type of Alarm | SCADA | |
| TP-15 | How often is the alarm system tested? | N/O | |
| TP-16 | What conditions trigger an alarm? Select all that apply. | Power failure<br>High level<br>Pump faults<br>Pump failure<br>Intrusion<br>Leaks | |
| TP-17 | Is the alarm system(s) operable? | Yes | |

### Chemicals

| | | | |
|---|---|---|---|
| TP-18 | Are chemicals used for treatment or otherwise added to the waste stream? | No | |

## SEWAGE INSPECTION REPORT

### Bypasses

| | | | |
|---|---|---|---|
| TP-23 | Did a treatment plant bypass occur since the last inspection? | No | |

### Planned Changes

| | | | |
|---|---|---|---|
| TP-35 | Have any changes (new pollutants, different or increased volume or loadings) to the waste stream from industrial or hauled-in wastes occurred since the last inspection? | No | |

## 4 O&M: 0472402 - TRTMT PLT

### O&M

| | | | |
|---|---|---|---|
| OM-1 | Which of the following treatment plant and equipment records are available? | Other<br>O&M Manual<br>As-built drawings<br>Maintenance schedule<br>Equipment Manuals | |
| OM-2 | Is a daily operations log on-site? | Yes | |
| OM-3 | Is the daily operations log up to date? | Yes | |
| OM-4 | Which operational conditions/actions are recorded in the log? | Not Observed | |
| OM-5 | Are process control parameters monitored? (Record the monitoring frequency and current results) | Yes | |
| OM-6 | Is an influent/process control supplemental report form completed and submitted with the DMR? | Yes | |
| OM-7 | Does the daily operations log include maintenance and repair records? | No | |
| OM-8 | Is a routine preventative maintenance (PM) schedule and log maintained? | Yes | |
| OM-9 | Is a repair log on-site? | Yes | |
| OM-10 | Are the PM and repair logs up to date? | Yes | |
| OM-11 | Were major equipment repairs/replacements done since the last inspection?<br>**Notes:** New secondary flight pump 4/23 | Yes | |
| OM-12 | Is a spare parts inventory, either written or electronic, maintained? | Yes | |
| OM-13 | Are spare parts and equipment (pumps, motors) maintained on-site or readily available? | Yes | |

### Solids Management

| | | | |
|---|---|---|---|
| OM-14 | What is the sludge storage capacity? | 400,060 gals | |
| OM-15 | How much sludge was removed from the facility in the past year? | 357.18 tons | |
| OM-16 | How does the facility determine how much sludge to waste? | Obs. spr natant | |

## SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| OM-17 | Is sludge/biosolids production & disposal information submitted on the applicable supplemental report form with the DMR? | Yes | |
| OM-18 | Does the facility test the removed sludge for %TS? | Yes | |
| OM-19 | Who provides sludge hauling/disposal/land application? | Brunners | |
| OM-20 | Where is the sludge disposal/biosolids application location? | Brunner Landfill | |
| OM-21 | How and where are other solid materials, such as collected screenings and grit, disposed? | Brunners | |
| OM-22 | Has the facility obtained or assured that contracted agents have the necessary permits and approvals for the disposal of solid materials? | Yes | |
| OM-23 | Are solid materials handled and disposed of in compliance with a disposal permit and requirements? | Yes | |
| OM-24 | Is the facility in compliance with all other Part C Special Conditions regarding Solids Management? | Yes | |

### Hauled in Wastes

| | | | |
|---|---|---|---|
| OM-25 | Does the facility accept hauled-in wastes? | Yes | |
| OM-26 | Does the facility accept hauled-in Municipal Wastes? | Yes | |
| OM-27 | Which types of municipal wastes are accepted? | Septage Wastewater sludge Holding tank | |
| OM-28 | Is hauled-in municipal waste information submitted on the applicable supplemental report form with the DMR? | Yes | |
| OM-29 | Are hauled-in Residual Wastes accepted? | Yes | |
| OM-30 | Which types of residual wastes are accepted? | Other Landfill Leachate | |
| OM-31 | Is hauled-in residual waste information submitted on the applicable supplemental report form with the DMR? | Yes | |
| OM-32 | At what flow does the facility stop accepting hauled-in wastes? | N/A | |
| OM-33 | Have the maximum amounts of hauled-in wastes that can be accepted (daily, weekly, etc.) been determined? | No | |
| OM-34 | Does the influent sampling location capture all hauled-in waste? | Yes | |
| OM-35 | Is all hauled in waste accounted for in the influent loading? | Yes | |
| OM-36 | Is the facility in compliance with other the Part C Hauled-In Waste Restrictions? | Yes | |

### Stormwater

| | | | |
|---|---|---|---|
| OM-37 | Does the permit include a special condition or other requirements regarding stormwater management? | Yes | |
| OM-38 | Has a PPC Plan for stormwater discharges been submitted? | Yes | |
| OM-39 | Is the Stormwater PPC Plan available on-site? | Yes | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| OM-40 | When was the Stormwater PPC Plan last updated? | Feb '23 | |
| OM-41 | Is the facility in compliance with all permit requirements applicable to stormwater outfalls? | Yes | |

**Special Conditions**

| | | | |
|---|---|---|---|
| OM-42 | Is the facility subject to industrial pretreatment requirements, or does the permit include a Part C Special Condition regarding Industrial Pretreatment? | No | |
| OM-45 | Does the permit contain a condition regarding whole effluent toxicity (WET) tests? | Yes | |
| OM-46 | Has WET testing been conducted? | Yes | |
| OM-47 | Is the facility in compliance with all other permit requirements applicable to WET testing? | Yes | |
| OM-48 | Are any other special conditions in the permit not covered in this inspection report? | No | |

**DP Discharge Point: 001 - OUTFALL 001**

**Outfall**

| | | | |
|---|---|---|---|
| DP-1 | Outfall Observations | IMP okay | |
| DP-2 | Were field measurements taken? | No | |
| DP-4 | Were effluent samples collected for laboratory analysis? | No | |

**Downstream**

| | | | |
|---|---|---|---|
| DP-10 | Is the receiving stream clear of floating or deposited materials, scum, sheen, foam, oil, grease or other substances associated with the discharge? | Yes | |
| DP-11 | Were downstream field measurements taken? | No | |
| DP-13 | Were downstream samples collected for laboratory analysis? | No | |

**Upstream**

| | | | |
|---|---|---|---|
| DP-19 | Was the stream observed upstream from the outfall? | Yes | |
| DP-20 | Were upstream field measurements taken? | No | |
| DP-22 | Were upstream samples collected for laboratory analysis? | No | |

**CV Conveyance: 0472402 - TRTMT PLT**

**Collection System**

| | | | |
|---|---|---|---|
| CV-1 | Does the permitted entity own, operate & maintain the entire collection system?<br><br>**Notes:** Beaver Falls owns and maintains BF collection system, contributing municipalities own and maintain their collection systems. | Yes | |
| CV-4 | Is collection system maintenance performed? | Yes | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| CV-5 | Is maintenance regularly scheduled? | Yes | |
| CV-6 | Is maintenance done as problems occur? | Yes | |
| CV-7 | Which types of maintenance are performed? | N/A, street dept | |
| CV-8 | Does the system experience infiltration and/or inflow that causes or could cause O&M problems or interferes with treatment? | Yes | |
| CV-9 | Is an I&I program in place?<br>**Notes:** Handled by street dept, contributing systems are handled by respective owners. All contributing systems under CAP at time of inspection. | Not Applicable | |
| CV-10 | Select the I&I detection work performed since last inspection | Smoke Tests<br>Metering<br>Manhole Inspections<br>Downspout/Floor Drain Inspections<br>Televising | |
| CV-11 | Select the I&I removal work performed since last inspection<br>**Notes:** Street dept, contributing systems handle removal work | Not Observed | |

**Sanitary Sewer Overflows**

| | | | |
|---|---|---|---|
| CV-12 | Have any sanitary sewer overflows occurred since the last inspection? | No | |

## 7 PS Pump Stations: 0472402 - TRTMT PLT

**Pump Stations**

| | | | |
|---|---|---|---|
| PS-1 | How many pump stations are part of the facility's collection system?<br>**Notes:** Big Beaver Boro. oversees operation and maintenance for seven of eight pump stations contributing flow to Beaver Falls STP. Beaver Falls maintains Eastvale pump station only. North Sewickley Twp also contributes flow from 5 pump stations. | 13 | |
| PS-2 | Are pump station flows recorded? | Yes | |
| PS-3 | How are flows measured? | Metered | |
| PS-4 | What type of flow meter/sensor is in use? | Ultrasonic | |
| PS-5 | When was the most recent flow meter calibration done? | N/A | |
| PS-6 | How often are the pump stations inspected? | Annually | |
| PS-7 | Are pump stations monitored with alarms? | Yes | |
| PS-8 | Are the alarms operable? | Yes | |
| PS-9 | Are the pump stations equipped with backup auxiliary power? | Yes | |
| PS-10 | Type of Stand-by Power | Emergency generator | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| PS-11 | Is the stand-by power system operable? | Yes | |
| PS-12 | Is the stand-by power system maintained in accordance with manufacturer's recommendations? | Yes | |
| PS-13 | How often is the stand-by power unit maintained? | Weekly | |
| PS-14 | How often is the stand-by power unit exercised? | Weekly | |
| PS-15 | Is the stand-by power unit exercised under load? | Yes | |

## OpCert: 0472402 - TRTMT PLT

### Operator Certification

| | | | |
|---|---|---|---|
| OP-1 | Is a properly certified operator employed for the treatment plant? | Yes | |
| OP-2 | Is at least one collection system pump station part of the permitted facility? | Yes | |
| OP-3 | Is an operator with a valid E-4 certificate employed for the operation of the facility's collection system pump station(s)? | Yes | |
| OP-4 | How many properly certified available operators make process control decisions at this facility? | 1 | |
| OP-5 | Is at least one available operator's current certificate displayed at the treatment plant? | Yes | |
| OP-6 | Have the available operators been provided with a copy of the current NPDES/WQM Permits? | Yes | |
| OP-7 | On which days of the week is an available operator at the plant? | Sunday<br>Monday<br>Tuesday<br>Wednesday<br>Thursday<br>Friday<br>Saturday | |
| OP-8 | How many hours are spent at the plant by the available operator(s) each day (weekdays/weekends/holidays)? | 8 hours a day | |
| OP-9 | Does the operator notify the owner about violations or conditions that may cause a violation, and needed resources? | Yes | |
| OP-10 | How does the operator notify the owner about known violations or conditions that may cause a violation, and about needed resources? | Email | |
| OP-11 | Does the owner respond to the operator's notification about needed resources? | Yes | |
| OP-12 | Does the operator act to resolve the condition(s) and/or violation(s)? | Yes | |
| OP-13 | Are non-certified or not properly certified persons expected to perform work that requires process control decisions? | No | |
| OP-19 | If the available operator/operator in charge (OIC) has changed, was a change of operator form submitted to DEP within 10 days? | Yes | |

### Circuit Rider

| | | | |
|---|---|---|---|
| OP-20 | Is the facility operated by a circuit rider? | No | |

## COMMENT DETAILS

| Comments | Operator Name | Operator Certification Number | Operator Contact Number |
|---|---|---|---|
| Hauled-in municipal wastes and hauled-in residual wastes enter the sanitary system at manhole #129. Composite sampling of influent wastewater is performed at a location downstream of manhole #129 for the wastes. The influent BOD5 characterization for the Beaver Falls STP is representative of the hauled-in municipal wastes and hauled-in residual wastes. | Brian M. Petronchak | s22917 | (724)-513-6748 |

## SUBMISSION INFORMATION

| SUBMITTED BY GREENPORT USER | *Pursuant to the Pennsylvania Electronic Transactions Act - Act 69, effective January 15, 2002, you are about to engage in an electronic transaction with the Commonwealth of Pennsylvania. **NOTICE OF VIOLATION**

City of Beaver Falls
Attn: Brian Petronchak
715 15th Street
Beaver Falls, PA 15010

Re: Beaver Falls STP
NPDES Permit No. PA002688
City of Beaver Falls, Beaver County

Dear Mr. Petronchak:

This is to confirm the results of the Department's inspection conducted July 23, 2024. The attached electronic Inspection Report notes conditions which are violations of your NPDES permit and/or The Clean Streams Law, the Act of June 22, 1937, P.L. 1987, as amended, 35 P.S. Sections 691.1 - 691.1001 (The Clean Streams Law). The report may also note conditions that may contribute to or develop into violations of your NPDES permit and/or The Clean Streams Law and therefore need to be addressed. Any violation of The Clean Streams Law is subject to penalties provided by law.

This Notice of Violation is neither an order nor any other final action of the Department of Environmental Protection (Department). It neither imposes nor waives any enforcement action available to the Department under any of its statutes. If the Department determines that an enforcement action is appropriate, you will be notified of the action.

If you have any questions, please contact me at 412.225.6087.

Sincerely,

Tim Smolar

|---|---|---|---|
| **Responsible Official** | STEPHEN JOHNSON | **Title** | CITY ADMIN |
| **Business Phone** | (724) 843-2808 | **Email** | bfwpcp@hotmail.com |
| **Permittee Address** | 715 15TH ST, BEAVER FALLS, PA, 15010-4124 | | |
| **Certified Operator** | PETRONCHAK BRIAN M | **Client ID** | 350258 |
| **Certificates** | A,E-2,4 | **Certification Status** | Active |
| **Expiration Date** | 09/30/2026 | | |

**Is a Copy of the permit(s) on-site?** Yes

**Has the interviewed operator/person reviewed the facility's permit(s)?** Yes

**Comments**

This inspection was performed for routine monitoring purposes. Representing the facility were Brian Petronchak, Chief Operator and Joe Durish Sr, Chief Mechanic. Representing the Department was Tim Smolar, WQS. Conditions were sunny and in the low 80s.

Inspection consisted of review of records both through eDMR and on site and a physical inspection of the plant.

A violation for effluent exceedances was noted at this time, for monitoring periods 5/1/24-5/31/24 (TSS), 4/1/24-4/30/24 (TSS, fecal coliforms), 1/1/24-1/31/24 (pH), 11/1/23-11/30/23 (TSS) and 10/1/23-10/31/23 (TSS).

**Participants:**
Brian Petronchak (Chief Operator), Joe Durish Sr. (Chief Mechanic)

## SEWAGE INSPECTION REPORT

I Mon,Rpts&Rcds: 0472402 - TRTMT PLT

### Influent Sampling

| | | | |
|---|---|---|---|
| MRR-1 | Is influent monitoring required by the permit? | Yes | |
| MRR-2 | Are influent samples collected? | Yes | |
| MRR-3 | Is the influent sampling location prior to all treatment? | Yes | |
| MRR-4 | Is the influent sampling location prior to all return flows? | Yes | |
| MRR-5 | Are representative influent samples collected? | Yes | |

### Effluent Sampling

| | | | |
|---|---|---|---|
| MRR-6 | Is the effluent sample collected at the location identified in the permit? | Yes | |
| MRR-7 | Where is the effluent sample collection location? | Outfall | |
| MRR-8 | Is the effluent sample location after all treatment? | Yes | |
| MRR-9 | Are representative effluent samples collected? | Yes | |

### Sample Collection

| | | | |
|---|---|---|---|
| MRR-10 | Are samples collected as required by the permit? | Yes | |
| MRR-11 | Is proper sampling equipment / containers used during collection? | Yes | |
| MRR-12 | Are the proper type of samples collected in accordance with the permit? | Yes | |
| MRR-13 | Are the samples collected at the frequency in accordance with the permit? | Yes | |
| MRR-14 | Is the proper sample size (minimum aliquot 100 mL) collected? | Yes | |
| MRR-15 | Is proper temperature control provided during collection, storage and shipping? | Yes | |
| MRR-16 | Is the temperature of the sampler or storage refrigerator monitored using an NIST traceable thermometer and recorded? | Yes | |
| MRR-17 | Is the sample storage temperature <=6 ¿C ? | Yes | |
| MRR-18 | What is the sample storage temperature? | 2C inf, 3C eff | |

### On-site Lab Accreditation-by-Rule

| | | | |
|---|---|---|---|
| MRR-19 | Does the facility analyze accredited-by-rule parameters only? | Yes | |
| MRR-20 | Which accredited-by-rule parameters are analyzed by the on-site lab?<br>**Notes:** Other: Settleable solids | Other<br>pH<br>DO<br>TRC<br>Temperature | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| MRR-21 | Is the on-site lab registered? | Yes | |
| MRR-22 | Laboratory Registration ID | 04-01709 | |

Lab Accreditation

| | | | |
|---|---|---|---|
| MRR-23 | Does the on-site laboratory analyze permit parameters? | No | |
| MRR-29 | Are permit parameters analyzed by a contract lab? | Yes | |
| MRR-30 | Contract Lab Name, City, Phone | Microbac Warrendale | |
| MRR-31 | Contract Laboratory Accreditation ID | 02-00257 | |
| MRR-32 | Is¿the contract lab accredited for those permit parameters? | Yes | |
| MRR-33 | Have any changes occurred with the accredited-by-rule or the accredited parameters or labs? | No | |

Analysis

| | | | |
|---|---|---|---|
| MRR-35 | Are approved test methods (per 40 CFR Part 136 or others) used for permit parameters? | Yes | |
| MRR-36 | Are the methods used sufficiently sensitive for permit parameters? | Yes | |
| MRR-37 | Are the samples analyzed within the required holding time? | Yes | |
| MRR-38 | Are laboratory equipment/meters calibrated in accordance with the manufacturers' specifications? | Yes | |
| MRR-39 | Are laboratory meters operated and maintained in accordance with the manufacturers' specifications? | Yes | |
| MRR-40 | Are pH buffers and other reagent standards current? | Yes | |

Records

| | | | |
|---|---|---|---|
| MRR-41 | Are sampling, calibration, laboratory results, chain-of-custody and other required records readily available for review and complete? | Yes | |
| MRR-42 | Do the sampling records include collector, date/time, location information? | Yes | |
| MRR-43 | Do the analysis records include the analyst's name, the analysis date and time, the test method used, the quantitation limits, and the results? | Yes | |
| MRR-44 | Are the required facility records retained for a minimum of 3 years? | Yes | |
| MRR-45 | Are the required sludge use and disposal records retained for a minimum of¿5 years? | Yes | |
| MRR-46 | Was access provided to information or to facility records upon request? | Yes | |

Reports

| | | | |
|---|---|---|---|
| MRR-47 | Identify the month/year of the DMRs and supporting data reviewed. | March '24 | |
| MRR-48 | Are the reviewed DMRs and supplemental reports properly completed? | Yes | |

## SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| MRR-49 | Are the reviewed bench sheets/lab reports consistent with the reported data? | Yes | |
| MRR-50 | Are samples collected more frequently than required in the permit? | Yes | |
| MRR-51 | Are additional sample results incorporated into the DMR calculations? | Yes | |
| MRR-52 | Are DMRs submitted on time? | Yes | |
| MRR-53 | Are the required supplemental reports submitted? | Yes | |
| MRR-54 | Is the facility using the eDMR system, if required? | Yes | |

### ? Flow Measurement: 0472402 - TRTMT PLT

#### Flow Measurement

| | | | |
|---|---|---|---|
| Q-1 | Where is the flow measured for DMR reporting? | Effluent | |
| Q-2 | If influent flows are measured, are they measured before all return lines and after hauled-in waste?<br>Notes: No measurement taken for influent flow | Not Observed | |
| Q-3 | Is a flume present? | Yes | |
| Q-4 | Is the flow¿uniform across flume channel? | Yes | |
| Q-5 | Is the upstream channel section and the flume free of debris and deposits? | Yes | |
| Q-6 | Is a weir present? | Yes | |
| Q-7 | Are weirs clean with a visible air space below nappe? | Yes | |
| Q-8 | What is the max flow that can be measured at the primary device (flume or weir)? | 15 MGD | |

#### leter & Recorder

| | | | |
|---|---|---|---|
| Q-9 | Does the permit require continuous flow monitoring and recording? | Yes | |
| Q-10 | Does the facility have the required flow monitoring and recording capabilities? | Yes | |
| Q-11 | What type of flow meter is used? | Ultrasonic | |
| Q-12 | What type of flow recorder is used? | Totalizer<br>7-day Chart | |
| Q-13 | Are¿the meter and recorder operable and operating?¿ | Yes | |
| Q-14 | What is the date of the most recent flow meter calibration? | 1/25/2024 | |
| Q-15 | What is the calibration range of the flow meter? | 0-15.29 mgd | |
| Q-16 | What is the flow range of the recorder? | 0-15.29 mgd | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| Q-17 | What is the current flow meter reading (MGD or gpm)? | 11,000 GPM | |

High Flows

| | | | |
|---|---|---|---|
| Q-18 | Does the permit require a High Flow Management Plan? | No | |

TP Treatment Plant: 0472402 - TRTMT PLT

Treatment Units

| | | | |
|---|---|---|---|
| TP-1 | Are all treatment units operable? | Yes | |
| TP-2 | Are the treatment units/equipment as described in the WQM permit(s) or in the previous inspection report? | Yes | |

Stand-by Power

| | | | |
|---|---|---|---|
| TP-7 | Is stand-by power provided? | Yes | |
| TP-8 | Type of Stand-by Power | Emergency generator | |
| TP-9 | How often is the stand-by power unit maintained? | Weekly | |
| TP-10 | How often is the stand-by power unit exercised? | Weekly | |
| TP-11 | Is the stand-by power unit exercised under load? | Yes | |
| TP-12 | Is the stand-by power system operable and maintained? | Yes | |

Alarms

| | | | |
|---|---|---|---|
| TP-13 | Is an alarm system available? | Yes | |
| TP-14 | Type of Alarm | SCADA<br>Power failure<br>High level<br>Pump faults<br>Pump failure | |
| TP-15 | How often is the alarm system tested? | Weekly | |
| TP-16 | What conditions trigger an alarm? Select all that apply.<br>**Notes:** Other: Chlorine, high channel. | Other | |
| TP-17 | Is the alarm system(s) operable? | Yes | |

Chemicals

| | | | |
|---|---|---|---|
| TP-18 | Are chemicals used for treatment or otherwise added to the waste stream? | No | |

Bypasses

| | | | |
|---|---|---|---|
| TP-23 | Did a treatment plant bypass occur since the last inspection? | No | |

## SEWAGE INSPECTION REPORT

### Planned Changes

| | | | |
|---|---|---|---|
| TP-35 | Have any changes (new pollutants, different or increased volume or loadings) to the waste stream from industrial or hauled-in wastes occurred since the last inspection? | No | |

### O&M: 0472402 - TRTMT PLT

#### O&M

| | | | |
|---|---|---|---|
| OM-1 | Which of the following treatment plant and equipment records are available? | O&M Manual<br>As-built drawings<br>Maintenance schedule<br>Equipment Manuals | |
| OM-2 | Is a daily operations log on-site? | Yes | |
| OM-3 | Is the daily operations log up to date? | Yes | |
| OM-4 | Which operational conditions/actions are recorded in the log? | Observations | |
| OM-5 | Are process control parameters monitored? (Record the monitoring frequency and current results) | Yes | |
| OM-6 | Is an influent/process control supplemental report form completed and submitted with the DMR? | Yes | |
| OM-7 | Does the daily operations log include maintenance and repair records? | No | |
| OM-8 | Is a routine preventative maintenance (PM) schedule and log maintained? | Yes | |
| OM-9 | Is a repair log on-site? | Yes | |
| OM-10 | Are the PM and repair logs up to date? | Yes | |
| OM-11 | Were major equipment repairs/replacements done since the last inspection?<br>**Notes:** One primary, one secondary pumps rebuilt. Backup chlorine system chlorinator replaced. | Yes | |
| OM-12 | Is a¿spare parts inventory, either written or electronic, maintained? | No | |
| OM-13 | Are spare parts and equipment (pumps, motors) maintained on-site or readily available? | Yes | |

#### olids Management

| | | | |
|---|---|---|---|
| OM-14 | What is the sludge storage capacity? | 400,060 gals | |
| OM-15 | How much sludge was removed from the facility in the past year? | 204 tons | |
| OM-16 | How does the facility determine how much sludge to waste? | Observation | |
| OM-17 | Is sludge/biosolids production & disposal information submitted on the applicable supplemental report form with the DMR? | Yes | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| OM-18 | Does the facility test the removed sludge for %TS? | Yes | |
| OM-19 | Who provides sludge hauling/disposal/land application? | Brunner | |
| OM-20 | Where is the sludge disposal/biosolids application location? | Brunner landfill | |
| OM-21 | How and where are other solid materials, such as collected screenings and grit, disposed? | Brunner landfill | |
| OM-22 | Has the facility obtained or assured that contracted agents have the necessary permits and approvals for the disposal of solid materials? | Yes | |
| OM-23 | Are solid materials handled and disposed of in compliance with a disposal permit and requirements? | Yes | |
| OM-24 | Is the facility in compliance with all other Part C Special Conditions regarding Solids Management? | Yes | |

Hauled in Wastes

| | | | |
|---|---|---|---|
| OM-25 | Does the facility accept hauled-in wastes? | Yes | |
| OM-26 | Does the facility accept hauled-in Municipal Wastes? | Yes | |
| OM-27 | Which types of municipal wastes are accepted? | Septage Wastewater sludge Holding tank | |
| OM-28 | Is hauled-in municipal waste information submitted on the applicable supplemental report form with the DMR? | Yes | |
| OM-29 | Are hauled-in¿Residual Wastes accepted? | Yes | |
| OM-30 | Which types of residual wastes are accepted? | Landfill Leachate | |
| OM-31 | Is hauled-in residual waste information submitted on the applicable supplemental report form with the DMR? | Yes | |
| OM-32 | At what flow does the facility stop accepting hauled-in wastes? | N/O | |
| OM-33 | Have the maximum amounts of hauled-in wastes that can be accepted (daily, weekly, etc.) been determined? | No | |
| OM-34 | Does the influent sampling location capture all hauled-in waste? | Yes | |
| OM-35 | Is all hauled in waste accounted for in the influent loading? | Yes | |
| OM-36 | Is the facility in compliance with other the Part C Hauled-In Waste Restrictions? | Yes | |

tormwater

| | | | |
|---|---|---|---|
| OM-37 | Does the permit include a special condition or other requirements regarding stormwater management? | Yes | |
| OM-38 | Has a PPC Plan for stormwater discharges been submitted? | Yes | |
| OM-39 | Is the Stormwater PPC Plan available on-site? | Yes | |
| OM-40 | When was the Stormwater PPC Plan last updated? | Jan 2024 | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| OM-41 | Is the facility in compliance with all permit requirements applicable to stormwater outfalls? | Yes | |

Special Conditions

| | | | |
|---|---|---|---|
| OM-42 | Is the facility subject to industrial pretreatment requirements, or does the permit include a Part C Special Condition regarding Industrial Pretreatment? | No | |
| OM-45 | Does the permit contain a condition regarding whole effluent toxicity (WET) tests? | Yes | |
| OM-46 | Has WET testing been conducted? | Yes | |
| OM-47 | Is the facility in compliance with all other permit requirements applicable to WET testing? | Yes | |
| OM-48 | Are any other special conditions in the permit not covered in this inspection report? | No | |

DP Discharge Point: 201 - SW OUTFALL 201

Outfall

| | | | |
|---|---|---|---|
| DP-1 | Outfall Observations | IMP clear | |
| DP-2 | Were field measurements taken? | No | |
| DP-4 | Were effluent samples collected for laboratory analysis? | No | |

Downstream

| | | | |
|---|---|---|---|
| DP-10 | Is the receiving stream clear of floating or deposited materials, scum, sheen, foam, oil, grease or other substances associated with the discharge? | Yes | |
| DP-11 | Were downstream field measurements taken? | No | |
| DP-13 | Were downstream samples collected for laboratory analysis? | No | |

Upstream

| | | | |
|---|---|---|---|
| DP-19 | Was the stream observed upstream from the outfall? | Yes | |
| DP-20 | Were upstream field measurements taken? | No | |
| DP-22 | Were upstream samples collected for laboratory analysis? | No | |

CV Conveyance: 0472402 - TRTMT PLT

Collection System

| | | | |
|---|---|---|---|
| CV-1 | Does the permitted entity own, operate & maintain the entire collection system? | Yes | |
| CV-4 | Is collection system maintenance performed? | Yes | |
| CV-5 | Is maintenance regularly scheduled? | Yes | |

## SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| CV-6 | Is maintenance done as problems occur? | Yes | |
| CV-7 | Which types of maintenance are performed?<br>Notes: Facility shares conveyance maintenance with Beaver Falls Street Department. | TV, smoke, metering | |
| CV-8 | Does the system experience infiltration and/or inflow that causes or could cause O&M problems or interferes with treatment? | Yes | |
| CV-9 | Is an I&I program in place?<br>Notes: Contributing municipalities maintain their own lines, Beaver Falls Street Department is responsible for this portion of conveyance maintenance. | Not Observed | |
| CV-10 | Select the I&I detection work performed¿since last inspection | Metering Manhole Inspections | |
| CV-11 | Select the I&I removal work performed since last inspection<br>Notes: Beaver Falls Street Department responsible for bulk of conveyance maintenance. Facility utilizes metering and performs manhole inspections where their meters are located. | Not Observed | |

### Sanitary Sewer Overflows

| | | | |
|---|---|---|---|
| CV-12 | Have any sanitary sewer overflows occurred since the last inspection? | No | |

### PS Pump Stations: 0472402 - TRTMT PLT

### Pump Stations

| | | | |
|---|---|---|---|
| PS-1 | How many pump stations are part of the facility's collection system?<br>Notes: Beaver Falls STP maintains Eastvale pump station only. Big Beaver Borough and North Sewickley Township own the remaining stations. | 13 | |
| PS-2 | Are pump station flows recorded? | Yes | |
| PS-3 | How are flows measured? | Metered | |
| PS-4 | What type of flow meter/sensor is in use? | Daily Bubbler | |
| PS-5 | When was the most recent flow meter calibration done? | 1/25/24 | |
| PS-6 | How often are the pump stations inspected? | Daily | |
| PS-7 | Are pump stations monitored with alarms? | Yes | |
| PS-8 | Are¿the alarms¿operable? | Yes | |
| PS-9 | Are the pump stations¿equipped with backup auxiliary power? | Yes | |
| PS-10 | Type of Stand-by Power | Emergency generator | |
| PS-11 | Is the stand-by power system operable? | Yes | |
| PS-12 | Is the stand-by power system maintained in accordance with manufacturer's recommendations? | Yes | |
| PS-13 | How often is the stand-by power unit maintained? | Weekly | |

SEWAGE INSPECTION REPORT

| | | | |
|---|---|---|---|
| PS-14 | How often is the stand-by power unit exercised? | Weekly | |
| PS-15 | Is the stand-by power unit exercised under load? | Yes | |

OpCert: 0472402 - TRTMT PLT

Operator Certification

| | | | |
|---|---|---|---|
| OP-1 | Is a properly certified operator employed for the treatment plant? | Yes | |
| OP-2 | Is at least one collection system pump station part of the permitted facility? | Yes | |
| OP-3 | Is an operator with a valid E-4 certificate employed for the operation of the facility's collection system pump station(s)? | Yes | |
| OP-4 | How many properly certified available operators make process control decisions at this facility? | One | |
| OP-5 | Is at least one¿available operator's current¿certificate displayed at the treatment plant? | Yes | |
| OP-6 | Have the available operators been provided with a copy of the current¿NPDES/WQM Permits? | Yes | |
| OP-7 | On which days of the week is an available operator at the plant? | Monday<br>Tuesday<br>Wednesday<br>Thursday<br>Friday | |
| OP-8 | How many hours are spent at the plant by the available operator(s) each day (weekdays/weekends/holidays)? | 8/8/8 | |
| OP-9 | Does the operator notify the owner about violations or conditions that may cause a violation, and needed resources? | Yes | |
| OP-10 | How does the operator notify the owner about known violations or conditions that may cause a violation, and about needed resources? | Verbal<br>Text message<br>Phone call<br>Letter/Report/Memo | |
| OP-11 | Does the owner¿respond to the operator's notification about needed resources? | Yes | |
| OP-12 | Does the operator act to resolve the condition(s) and/or violation(s)? | Yes | |
| OP-13 | Are¿non-certified or not properly certified persons expected to perform work¿that requires process control decisions? | No | |
| OP-19 | If the available operator/operator in charge (OIC) has changed, was a change of operator form submitted to DEP within 10 days? | Not Applicable | |

Circuit Rider

| | | | |
|---|---|---|---|
| OP-20 | Is the facility operated by a circuit rider? | No | |

## SEWAGE INSPECTION REPORT

### TP Treatment Plant: 0472402 - TRTMT PLT

#### Treatment Units

**TP-1** Are all treatment units operable?

| Treatment Units | Total | On-Line | Inoperable | Comments |
|---|---|---|---|---|
| Anaerobic Digester | 2 | 2 | 0 | ---- |
| Chlorine Contact Tank | 2 | 2 | 0 | ---- |
| Primary Clarifier | 3 | 3 | 0 | ---- |
| Secondary Clarifier | 5 | 5 | 0 | ---- |
| Grease Removal | 3 | 3 | 0 | ---- |
| Belt Filter Press | 1 | 1 | 0 | ---- |
| Trickling Filter | 2 | 2 | 0 | ---- |
| Aeration Basin | 1 | 1 | 0 | ---- |

### O&M: 0472402 - TRTMT PLT

#### O&M

**OM-5** Are process control parameters monitored? (Record the monitoring frequency and current results)

| Parameter / Calculation | Frequency Of Testing | Current Testing Results |
|---|---|---|
| Temperature | Daily | 70.5 F |
| Dissolved Oxygen | Daily | 3.83 mg/l |
| pH | Daily | 6.93 su |
| Alkalinity | Daily | 275 mg/l |
| Settleability | Daily | 10 ml/l |

Subject: Your eDMR Report Has Been Received For Permit No. PA0026883
Date: Feb 16, 2024 at 9:27:45 AM
To: brianpetronchak@yahoo.com, jsuasum@gmail.com, brianpetronchak@yahoo.com, bfstp@outlook.com

---

This email is to confirm that the following report was received by DEP through the eDMR system:

**Facility Name**: CITY OF BEAVER FALLS STP
**Permit Number**: PA0026883
**Report Frequency**: Monthly
**Report Type**: DMR
**Reporting Period**: 01/01/2024-01/31/2024
**Report Due Date**: 02/28/2024

**Submitted By**: Brian Petronchak
**Submission Id**: 442388
**Submission Status**: Received
**Submission Type**: Original
To view the details of this report, access the eDMR system through DEP's GreenPort and select the link for View/Revise Submitted.

Respondent: Mark J. Bubel, Sr.
Date: 12/23/2024

**APPLICATION OF AQUA PENNSYLVANIA WASTEWATER, INC.**

**DOCKET NO. A-2022-3033138**

**BUREAU OF INVESTIGATION AND ENFORCEMENT**

**SET II INTERROGATORIES**

---

**I&E-II-12** Reference Aqua Statement No. 2, p. 8:

A. Identify each of the projects that comprise the projected capital improvement cost or investment, by line item and by year, for the total capital improvement cost of $10,200,000 over the next ten years.

B. Explain the underlying basis/need for each of the projects referenced in response to Part A above.

**RESPONSE**

A. Please see Aqua Statement No. 2, Appendix A.

B The Company develops a capital plan to understand the needs of a particular system in connection with any acquisition, and that plan may change after the closing as Aqua gains a better understanding of the system through hands-on operation as well as more of a formal detailed audit of facility equipment. The following is planned which follows the numbering within Aqua Statement No. 2, Appendix A.

1. Safety measures – miscellaneous includes a full audit of the condition of electrical and mechanical equipment conditions which were not possible to fully assess during the due diligence period.
2. Manhole (“MH”) inspections and GIS Base Map Creation includes a physical mapping of manhole locations with GPS to develop an accurate collection system map. An assessment of MH conditions will also be conducted as part of this effort.
3. A temporary metering program will be conducted within the collection system to identify areas within the drainage basins exhibiting significant I&I and will prioritize this work to maximize reduction of I&I. This will have a positive impact on the City of Beaver Falls (“COBF” or the “City”) wastewater treatment plant (“WWTP”) from the perspective of reducing wet weather flow through the primary clarification system, the trickling filter system as well as the final clarification system including disinfection.

4. Aqua will conduct CCTV inspection of main line sewers guided by the results of the temporary flow metering program with the basins exhibiting the highest extraneous flow being targeted first.
5. MH rehabilitation will be conducted based on the results of MH inspections conducted under (2) above with prioritization determined as part of (3) above.
6. Prioritized main rehabilitation and replacement will be conducted with input from (3) and (4) above.
7. Metering of the municipalities will be conducted for the purposes of moving towards a billing system based on flow received from the contributing municipalities. Existing meters are aged and will be replaced with the latest metering technology.
8. Monies have been allocated for connection of new customers including repurposing existing buildings for new uses and / or, conversion of homes to multi-family dwellings.
9. It is known that older sewer laterals can be the source of infiltration and inflow of extraneous water to the collection system and monies have been allocated to address this condition if discovered.
10. Trickling Filter Tower #1 shows signs of aging with cracking on its exterior and replacement of the Trickling Filter has been identified for safety and compliance reasons.
11. The headworks is located below grade and as such is a confined space; it only has one entry / exit. HVAC upgrades are needed to address the required air exchanges in the space to address NFPA 820 issues.
12. Headwork room upgrades are required to address NFPA 820 issues which include addition of an alternate entry / exit as well as electrical concerns to address safety of operational staff when entering the space.
13. The existing headworks screen is aged and needs to be replaced with an updated screen including provision of a screening's conveyor up and out of the confined space to address safety and compliance issues. Screening is important for the protection of downstream mechanical equipment.
14. Electrical upgrades are required to address aged electrical and controls. An Arc Flash study will also be conducted to address operator safety and the risks of arc flash.
15. Conversion of chlorine gas disinfection to liquid sodium hypochlorite is scheduled due to safety concerns of using gas chlorine for operational staff as well as the general public in proximity to the treatment plant.
16. Not used.
17. The mechanical gear drives of the primary clarifier sludge collector are aged and will be replaced given their age and need to maintain this piece of equipment in operation to protect solids from being delivered into the biological treatment process of the trickling filter system. The primaries reduce the organic loading on the downstream treatment process so they are important to maintain in good working order.
18. A formal supervisory control and data acquisition ("SCADA") system will be installed so that operational staff can access the system when not on site to confirm the proper function of the plant and ancillary pumps and mechanical equipment. This will also allow operational staff to make pumping changes. Presently plant staff have no way of knowing whether anything has gone amiss at the plant until the next time they visit the facility.
19. Monies have been allocated for miscellaneous repairs which may be discovered in the original audit noted under (1). Provision of this allocation is based on experience in operating a new system.

20. Not used.
21. Monies allocated for Aqua's new computer system to link to our integrated IT system.
22. Recurring costs for maintaining Aqua's system and software maintenance.
23. Vehicle needed to conduct operations of the system.
24. Vehicle which may be needed to conduct operations of the system.
25. The City conducted a Phase I Environmental Site Assessment ("ESA") which concluded the presence of four (4) Recognized Environmental Conditions ("REC") and two (2) Historical Recognized Environmental Conditions ("HREC"). The subject Phase I ESA recommended a Phase II ESA and monies have been allocated for this purpose. It is important that the Phase II ESA be conducted to characterize the subsurface soil and whether the soil meets or exceeds applicable regulatory criteria. The Phase II ESA will also verify the presence or absence of hazardous building materials at the site.

**TABLE OF CONTENTS**

I. INTRODUCTION ..... 1
II. RESPONSE TO I&E WITNESS CLINE ..... 2
III. RESPONSE TO OCA WITNESS DEMARCO ..... 4
IV. CONCLUSION ..... 23

**HIGHLY CONFIDENTIAL VERSION**

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Zach Martin. My business address is 665 South Dock Street, Sharon, PA 16146.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Aqua Pennsylvania, Inc. ("Aqua PA"), as the Western Pennsylvania Area Manager.

**Q. Are you the same Zach Martin who submitted direct testimony in this proceeding?**

A. Yes. I submitted direct testimony with the Application filed with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on February 18, 2023 (Exhibit W, Aqua Statement No. 3). I also submitted supplemental direct testimony with the Amended Application filed with the Commission on March 28, 2024 (Supplemental Exhibit W, Aqua Statement No. 3 Supp.).

**Q. What is the purpose of your rebuttal testimony?**

A. The purpose of my rebuttal testimony is to respond to the direct testimony submitted by the Commission's Bureau of Investigation and Enforcement ("I&E"), and the Office of Consumer Advocate ("OCA"), specifically: I&E Statement No. 2, the direct testimony of Ethan Cline; and OCA Statement No. 1, the direct testimony of Nicholas DeMarco. My rebuttal testimony addresses these witnesses' claims regarding the operational and

customer service benefits that will result from Aqua Pennsylvania Wastewater, Inc.'s ("Aqua" or the "Company") acquisition of the wastewater system (the "System") of the City of Beaver Falls ("Beaver Falls" or the "City"). In particular, my rebuttal testimony explains that the other parties either fail to address many of the operational issues that the System currently faces, which will be resolved by the acquisition, or argue, without support, that the City will be able to address and overcome these operational challenges in the future. The Commission should not adopt these arguments and, instead, should recognize that the acquisition will result in substantial affirmative public benefits for the customers of Beaver Falls because Aqua will implement substantial improvements to the System's assets and operations over the present day.

**Q. Are you sponsoring any exhibits with your rebuttal testimony?**

A. No.

## II. RESPONSE TO I&E WITNESS CLINE

**Q. Please summarize I&E witness Cline's position in his direct testimony that you wish to address.**

A. In addition to generally describing the System (I&E St. No. 2, at pp. 8-9), I&E witness Cline specifically recommends that Aqua's plan to incorporate the system into its Long-Term Infrastructure Improvement Plan ("LTIIP") and Distribution System Improvement Charge ("DSIC") in the future, after closing of the acquisition is "unreasonable." I&E St. No. 2, at pp. 9-10. Rather than "delay" including the system in the LTIIP and DSIC, I&E

witness Cline recommends that Aqua should file a revised LTIIP to include the System and request to include Beaver Falls in the DSIC within 90 days of closing on the acquisition. I&E St. No. 2, at p. 10.

**Q. Do you have any response to including the System in Aqua's LTIIP within 90 days of closing?**

A. The Company does not agree that this condition is required since Aqua is under no obligation to update its LTIIP within a certain time period following closing, and, moreover, the Commission agreed with Aqua's position regarding this same condition in Aqua's acquisition of the Greenville Sanitary Authority.[1] However, in this particular instance the Company will agree to update its LTIIP after closing on the Beaver Falls System, but would submit this update to occur within 180 days after closing so Aqua can integrate the Beaver Falls assets into Aqua's overall operations.

**Q. Do you have any response to I&E witness Cline's description of the System?**

A. I agree with I&E witness Cline's summary of the current status of the System set forth in Aqua witness Bubel's testimony. I&E St. No. 2, at pp. 8-9. However, I would remind the Commission that the System faces further challenges, in addition to those described by

[1] See *Application of Aqua Pennsylvania Wastewater, Inc. (Aqua), pursuant to 66 Pa.C.S. §§ 1102 and 1329 for: (1) approval of the acquisition by Aqua of the Greenville Sanitary Authority (GSA); (2) approval of the right of Aqua to begin to offer, render, furnish and supply wastewater service to the public in the Borough of Greenville, Hempfield Township, and West Salem Township, Mercer County, Pennsylvania; and (3) an order approving the acquisition that includes the ratemaking rate base of the GSA's wastewater system assets pursuant to Section 1329(c)(2) of the Public Utility Code. Request for Approval of Contracts, including Assignment of Contracts, between Aqua and the GSA, Pursuant to Section 507 of the Public Utility Code*, Docket No. A-2023-3041695, Opinion and Order at pp. 88-89 (Order Entered Dec. 20, 2024) ("GSA Order").

Aqua witness Mr. Bubel. In particular, my supplemental direct testimony provides a comprehensive review of the System and its operations. I&E did not dispute the challenges I highlighted in my supplemental direct testimony. Moreover, as discussed in Mr. Bubel's rebuttal testimony (Aqua Statement No. 2-R), the Beaver Falls System has continued to face environmental compliance issues. Approving Aqua's acquisition of the System will permit these challenges to be addressed.

## III. RESPONSE TO OCA WITNESS DEMARCO

**Q. Does OCA witness DeMarco testify regarding the condition and operations of the Beaver Fall's System?**

A. Yes.

**Q. Please explain.**

A. OCA witness DeMarco summarily describes the environmental issues faced by the System, primarily responding to Aqua witness Bubel's testimony. OCA St. No. 1, at pp. 4-7. Despite acknowledging that the System is currently under a Corrective Action Plan ("CAP") with the Pennsylvania Department of Environmental Protection ("DEP") and that **[BEGIN HIGHLY CONFIDENTIAL]** the City does not have a chlorine gas risk management plan **[END HIGHLY CONFIDENTIAL]**, OCA witness DeMarco testifies that the System is not otherwise out of compliance with United States Environmental Protection Agency ("EPA") or DEP requirements. OCA St. No. 1, at pp. 5-7. He further asserts that the System does not require any immediate improvements to its assets or

operations, claiming that "[i]t is not apparent that any upgrades or improvements are urgent." OCA St. No. 1, at p. 7. OCA witness DeMarco also states that "there is no indication that Beaver Falls is not technically fit to complete any necessary upgrades or improvements." OCA St. No. 1, at pp. 9-10. He further concludes that the System is not "troubled," as recognized under Sections 529 and 1327 of the Public Utility Code, 66 Pa.C.S. §§ 529 and 1327. OCA St. No. 1, at pp. 10-11. I will respond to each of these issues in turn.

**Q. Before specifically responding to OCA witness DeMarco's testimony regarding the condition and operations of the System, do you have any general comments related to Mr. DeMarco's characterization of the System?**

A. Yes. As an initial matter, OCA witness DeMarco essentially ignores my supplemental direct testimony, which provided additional information regarding the conditions and operations of the System. The top three issues impacting this system are the hazardous gas non-compliance, safety and security deficiencies, and a lack of asset management. Without restating my discussion of the challenges facing the System's assets, infrastructure, and operations in the near-, mid- and long-term, it is important for the Commission to recognize that while OCA witness DeMarco attempts to claim the System is not "troubled," his testimony does not address a number of critical facts on the ground that demonstrate emergent needs facing the System.

It appears that Mr. DeMarco's attempt to discount the significant operational challenges the System faces is an attempt to bolster his claim that there is a significant rate

impact associated by the acquisition, which cannot be overcome by the benefits offered by Aqua's ownership. However, as explained in greater detail in the rebuttal testimony of Aqua witness Packer (Aqua Statement No. 1-R), the Commission should reject Mr. DeMarco's framing of the rate impact of a 165.61% increase ignores the fact that the percentage increase is due to the very low rates that the City is currently charging; the City's average bill is **$33.38 per month ($100.13 per quarter)**.

In summary, by taking a holistic review of the system and recognizing the challenges facing the System, the Commission can ensure that the necessary improvements are made to correct the System's safety, security, and operational deficiencies. These improvements will ultimately benefit customers by reducing the need for emergency repairs, improving operational efficiency, and extending the lifespan of the System's assets. This is in addition to the clear benefit to the community of handling extremely hazardous substances in compliance with state and federal regulations.

**Q. Do you agree with OCA witness DeMarco's testimony that the System does not need urgent or immediate improvements?**

A. No.

**Q. Please explain why not.**

A. The Beaver Falls System faces substantial infrastructure and operational challenges without an actionable plan to resolve them. As I explained in my supplemental direct

testimony, there are several key areas of concern and Aqua's has planned improvements to address those concerns, which are summarized here at a high level.

- **System Assessment and Current Operations**: My supplemental testimony provided a detailed assessment of the Beaver Falls wastewater system, identifying significant issues such as hazardous gas problems, safety and security deficiencies, and the lack of an asset management plan.
- **Hazardous Gas Issues**: **[BEGIN HIGHLY CONFIDENTIAL]** My supplemental testimony pointed out noncompliance with EPA regulations regarding chlorine gas storage and the absence of a Risk Management Plan ("RMP"). My supplemental testimony also emphasized the need for proper safety equipment to address potential chlorine gas leaks. **[END HIGHLY CONFIDENTIAL]**
- **Safety and Security Deficiencies**: **[BEGIN HIGHLY CONFIDENTIAL]** Various safety and security issues related to the System are highlighted in my supplemental testimony, including inadequate ventilation, improper handling of raw sewage, and the lack of security measures including no security systems installed at any of the buildings, access points that lack card swipe access, no cameras, and no proper lighting and signage. **[END HIGHLY CONFIDENTIAL]**
- **Asset Management**: Furthermore, my supplemental testimony noted the absence of an asset management plan and computerized maintenance management system ("CMMS") at Beaver Falls.

In contrast to these clear issues, the OCA attempts to downplay these facts by claiming that the system is not "troubled" per Sections 1327 and/or 529 of the Public Utility

Code, 66 Pa.C.S. §§ 529, 1327. I am advised that the Company is not seeking approval of the acquisition pursuant to either of these sections, and nothing in Section 1329 requires a finding that a system be "troubled" for an acquisition under this provision to be approved. However, this should not be taken to mean that I agree with OCA that the Beaver Falls System is not in a troubled state, both operationally and financially. My supplemental direct testimony identified deficiencies and the planned improvements by Aqua, which are largely not addressed by the OCA, and further demonstrate the need for a thorough and holistic review of Aqua's acquisition of the System by the Commission.

**Q. Please explain your response further.**

A. The City does not currently have an actionable plan to address these challenges in place and it does not appear that they will be able to implement such a plan if the acquisition is not approved given the status of the City's finances, as discussed by Ms. Wilkins in her supplemental direct and rebuttal testimony. I should repeat that the City has no capital plan – not a limited capital plan, not a plan for the next three years, nor a plan for the upcoming year. There is no document, memo or strategy to deal with replacing or maintaining wastewater infrastructure it is currently charged with overseeing and operating.

The Commission should recognize that Aqua, on the other hand, has an actionable plan to address the infrastructure and operational challenges facing the City if the acquisition is approved.

The planned capital improvements described in the proceeding, provides a clear path forward to resolve the issues faced by the system. The proposed solutions include:

- **Implementation of a CMMS**: Implementation of this system will help schedule and automate preventative maintenance of the System, which will in turn improve operational consistency. The City's witness Mr. Jones notes in his rebuttal testimony that the System should be operated in a proactive manner, rather than a reactive manner where the City tries to fix problems and, in the meantime, hopes that a crisis does not occur. A CMMS is a proactive tool to ensure facilities are properly maintained and to schedule repairs and replacements before major failures occur. Neither I&E nor OCA has suggested or shown that the City can implement a CMMS if the acquisition is denied.
- **Capital Improvements**: Aqua will implement planned capital improvements to address the identified safety, security, and infrastructure deficiencies faced by the System. Neither I&E nor OCA has suggested or shown that the City can implement these improvements if the acquisition is denied. Moreover, while OCA attempts to assert that these improvements are not required to address "imminent" issues, this assertion fails to acknowledge that the System is facing substantial issues that cannot be addressed without the acquisition.
- **Correction of Hazardous Gas Non-Compliance**: **[BEGIN HIGHLY CONFIDENTIAL]** No party has disputed that the System faces issues related to non-compliance with state and federal hazardous gas regulations. Aqua has shown that it will be able to address these issues, and bring the System into compliance with state and federal regulations to ensure the safety of the entire community of Beaver Falls. **[END HIGHLY CONFIDENTIAL]**

While OCA witness DeMarco attempts to claim these problems are not "urgent" or "imminent," it is important for the Commission to recognize that this claim acknowledges these issues exist and that they are serious. Indeed, in my opinion, the challenges present safety and reliability risks that are not a matter of "if" they will occur, but a matter of "when" they will occur. OCA witness DeMarco seems to recognize this fact.

Moreover, it is important to recognize that, regardless of their characterization, the primary issues facing the System must be resolved quickly due to their significant impact on health and safety. The hazardous gas non-compliance and safety deficiencies pose immediate risks to the entire community of Beaver Falls. It is clear that these issues require urgent attention because, after Aqua completed further site visits and inspections and noted certain issues, the City acted to address some of them. This demonstrates the critical nature of these problems and the need for prompt resolution by Aqua that can provide experienced management and operation of the System.

**Q. Please discuss the mid- and long-term issues that are facing the Beaver Falls System.**

A. Even if the Commission sets aside the near-term issues, there are mid- and long-term challenges facing the system that will impact its safety, reliability, and overall performance. These include:

- **Ongoing Deterioration of Assets**: Without proper asset management and preventative maintenance, the System's infrastructure will continue to deteriorate, leading to more frequent breakdowns and higher repair costs.

- **Sustained Operational Inconsistencies**: The lack of a CMMS will result in continued inefficiencies and inconsistencies in the System's operations, affecting its reliability and performance. These inefficiencies and inconsistencies will continue if the acquisition is not approved.
- **Long-Term Safety and Security Risks**: The absence of adequate safety and security measures will pose ongoing risks to employees and the public, potentially leading to accidents and health hazards. These risks will increase over time if they are left unaddressed, and it is clear that the City will not able to address them if the acquisition is not approved.

Again, as discussed above, it is crucial to approve the acquisition and, along with the planned capital improvements described in the proceeding, provides a clear path forward to resolve the issues faced by the System.

**Q. To be clear, will Aqua resolve the near-, mid- and long-term issues facing the System if Aqua acquires the System?**

A. Yes.

**Q. Why will the resolution of these issues under Aqua ownership provide public benefits?**

A. Resolving the issues under Aqua ownership will provide significant public benefits for both those who work on the System and those who receive service from it.

For those who work on the System, addressing the hazardous gas non-compliance and safety deficiencies will create a safer work environment. Implementing proper safety equipment, ventilation, and security measures will reduce the risk of accidents and health hazards, ensuring that employees can perform their duties without fear of injury or exposure to harmful substances. Additionally, the introduction of a CMMS will streamline operations, making it easier for workers to manage and maintain the System efficiently.

For those who receive service from the System, resolving these issues will enhance the reliability and quality of the wastewater services provided. Addressing the deteriorating assets and implementing preventative maintenance will reduce the frequency of breakdowns and service interruptions, ensuring a more consistent and dependable service. Moreover, correcting the hazardous gas non-compliance will protect the health and safety of the entire community of Beaver Falls, preventing potential environmental and public health crises. A chemical release, spill, or NPDES permit violation on the Beaver River in Western Pennsylvania could potentially impact the local population of approximately 251,747 people in Beaver and Lawrence counties, including communities such as Beaver Falls, New Brighton, and Rochester. The Beaver River flows into the Ohio River, which is a significant waterway that eventually joins the Mississippi River. This means that an incident could have broader implications, affecting communities along the Ohio River and further downstream in the Mississippi River watershed. The Ohio River watershed alone covers parts of 14 states and serves as a crucial water source for millions of people. Additionally, it's important to note that Beaver Falls is located about 14 miles from East Palestine, Ohio, where the recent train derailment occurred. This proximity could raise

concerns about compounded environmental impacts in the region that were recently experienced by the larger community.

**Q. Do you agree with OCA witness DeMarco's testimony that there is no indication that the City is not technically fit to make these improvements to the System?**

A. No. And, for similar reasons, I also disagree with his claim that Aqua's technical fitness does not provide affirmative public benefits related to this transaction. OCA St. No. 1, at pp. 29.

**Q. Please explain why not.**

A. While Mr. DeMarco claims there is no indication that the City is not technically fit to make need improvements to the condition and operations of the System, this testimony ignores both my direct and supplemental direct testimony, as well as the testimonies of the City's witnesses.

The City acknowledges that it is not currently in a position to recruit and retain the skilled employees necessary to operate and maintain the wastewater System effectively. While the City maintains the ability to operate the System, it recognizes the limitations in its capacity to address the near-, mid- and long-term issues facing the System. The City faces significant challenges in onboarding the additional resource types required to address these issues, and faces challenges at onboarding these resources at the scale needed. The City lacks the experience in addressing these issues, which will include difficulties in

training existing employees, accessing materials and equipment, and implementing advanced systems required for efficient operations.

**Q. Why can't the City just hire consultants to perform this work?**

A. Other parties have raised this before. I would say that if it was just as simple as "hire a consultant", the City would not be in this dire situation. Businesses, non-profits, and governmental agencies are not run by just "hiring a consultant" and the intervening parties should not use this "hire a consultant" excuse to buttress their arguments that the City is simply choosing not to do the work required to run and operate a wastewater system. Consulting firms require guidance and input for their deliverables, they required oversight, review and time. "Hiring a consultant" is not the answer for Beaver Falls in my opinion. Technically, could Beaver Falls do this, yes. But that would not be my recommendation if I was running and operating a system. Moreover, even if "hiring a consultant" was a solution, the City's dire financial situation, as described by the City's witnesses, precludes that.

**Q. Are there other reasons why Aqua is in a better position to resolve the issues facing the System than the City?**

A. Aqua has the advantage of an established infrastructure, experienced workforce, and advanced systems that the City currently does not have in place. This includes:

- **Skilled Employees**: Aqua can leverage its existing pool of skilled employees who are already trained and experienced in managing similar systems. This reduces the

time and cost associated with hiring and training new staff, which Aqua already has experience doing both with respect to the types of skills needed and the scale of staffing needed to address the issues facing the System. It also avoids the problem that the City is currently experiencing, where qualified personnel leave or retire. Moreover, Aqua will continue to leverage the City's knowledge of the System by retaining many of the individuals that currently operate the system but providing them with the additional resources and help required to improve the System's safety and reliability.

- **Advanced Systems**: Aqua's implementation of a CMMS and other advanced management systems ensures efficient scheduling and automation of maintenance tasks, leading to improved operational consistency and reduced downtime.
- **Access to Materials and Equipment**: Aqua's established supply chains and procurement processes allow for timely access to necessary materials and equipment, ensuring that maintenance and improvement projects can be carried out without delays.

**Q. Why will Aqua's technical expertise provide public benefits?**

A. It is important to note that onboarding skilled employees, training existing employees, and accessing materials and equipment are not simple tasks, especially when an operator is not already doing so. The City would need to onboard additional resource types and onboard those additional resources at a scale they have not experienced. Aqua, on the other hand, will utilize its existing experience and scalability due to its ongoing operations, making it

more efficient and effective in addressing these challenges. This is evidenced by the fact that the plant manager does not have DEP certification.

For these reasons, OCA witness DeMarco's claims regarding "regionalization" and "consolidation" should also be rejected. OCA St. No. 1, at p. 29. Regionalization under Aqua ownership brings additional benefits. Aqua's regional operations allow for the sharing of resources, expertise, and best practices across multiple systems. This regional approach provides several advantages, such as:

- **Resource Optimization**: By pooling resources across a region, Aqua can optimize the use of skilled employees, equipment, and materials, ensuring that they are deployed where they are needed most.
- **Scalability**: Aqua's regional operations enable it to scale up quickly to address issues, leveraging its existing infrastructure and workforce to respond to challenges efficiently.
- **Consistent Standards**: Regionalization ensures that consistent standards and practices are applied across all systems, leading to improved service quality and reliability.

In this specific case, it is clear that regionalization will further lead to a safer, more reliable, and cost-effective wastewater service for the Beaver Falls community and to the benefit of the customers served by this System.

**Q. Does OCA witness DeMarco testify regarding the customer service issues related to the Beaver Fall's System?**

A. Yes. OCA witness DeMarco argues that Aqua's bill payment systems do not offer any improvements of the City's current wastewater service bill payment systems. OCA St. No. 1, at p. 30.

**Q. Do you agree?**

A. No.

**Q. Please explain.**

A. I would simply note that Mr. DeMarco discounts entirely the benefits that will inure to Beaver Falls customers who have difficulty paying their bills. There are no payment plan options with Beaver Falls. With Aqua's ownership, Beaver Falls customers will have the option to enter into a deferred payment arrangement to help pay off unpaid balances, and for those that meet eligibility requirements, they may participate in Aqua's low-income programs as described in the rebuttal testimony of Rita F. Black (Aqua Statement No. 9-R).

Moreover, Aqua has improved its disruption notifications and mapping system to be real-time and initiated from our field personnel on site, at the disruption. With respect to the field work improvements noted above, when our technicians enter a work order and go "in route", a text notification is sent to the customer providing a notification with the technician's expected arrival time regardless of whether the work order is scheduled or unscheduled.

Aqua has also released a new and improved customer ePortal and Aqua App for mobile devices that provide customers with access to improved customer tools for account maintenance, notifications, viewing meter reads and trending consumption, as well as viewing and paying bills from anywhere in the world. In addition to payment through Aqua App, Aqua customers also have the benefit of expanded bill payment options including auto-payment and pay by text. For customers using an ACH payment method, all of these options are free. In addition to offering bill payment, Aqua's ePortal also provides electronic billing and the ability to view prior bills.

Accordingly, I believe that these customer-driven tools demonstrate that there are numerous functional differences in Aqua's billing and customer service, as compared to what GSA customers have today.

**Q. Does OCA witness DeMarco testify regarding information technology ("IT") and/or cybersecurity issues related to the Beaver Fall's System?**

A. Yes.

**Q. Please explain.**

A. OCA witness DeMarco argues that Aqua's "proposed improvements appear to be designed to make the Beaver Falls system consistent with Aqua's processes." OCA St. No. 1, at p. 31. He further asserts that "[t]hose proposed improvements do not necessarily confer a benefit where the current operator is not aware that there is anything wrong with the way Beaver Falls is currently operating its system" and specifically refers to the City's response

to OCA-III-33. OCA St. No. 1, at p. 31. He further appears to argue that such improvements would only be a benefit if they were necessary to comply with the law. OCA St. No. 1, at p. 31.

**Q. Do you agree with OCA witness DeMarco's assessment of the current state of the System's cybersecurity systems, polices and/or procedures?**

A. No.

**Q. Why not?**

A. As it relates to cyber security, the System currently faces several risks, including **[BEGIN HIGHLY CONFIDENTIAL]** potential vulnerabilities to cyber-attacks that could disrupt operations or compromise sensitive data. OCA witness DeMarco's assessment of the System does not adequately consider these risks and suggests the Commission should leave the System exposed to potential threats. Municipal utilities are often more susceptible to cyber-attacks compared to private utilities due to several factors. Many municipal utilities operate with outdated systems and infrastructure, making them more vulnerable to cyber threats. Additionally, they often have limited budgets and resources for cybersecurity measures, which can result in weaker defenses. In contrast, private utilities typically have more robust financial resources to invest in advanced cybersecurity technologies and personnel. This disparity in resources and infrastructure makes municipal utilities a more attractive target for cyber attackers. We have found evidence of all of these concerns in the system and have accounted for immediate corrections in our capital improvements plan.

Aqua, as a larger and more established utility company, is subject to overlapping regulatory standards and has more robust cyber security measures in place. This includes advanced monitoring systems, regular security audits, and comprehensive incident response plans that the City may not have the resources or expertise to implement. **[END HIGHLY CONFIDENTIAL]**

**Q. Do you agree that Aqua's improvements to the cybersecurity systems, polices and/or procedures are not beneficial to Beaver Fall's customers?**

A. No.

**Q. Why not?**

A. Improvements to cybersecurity under Aqua ownership are highly beneficial to customers for several reasons: **[BEGIN HIGHLY CONFIDENTIAL]**

- **Protection of Sensitive Information**: Aqua's advanced cybersecurity measures ensure that sensitive customer information, such as billing details and personal data, is protected from cyber threats. This reduces the risk of data breaches and identity theft, providing customers with peace of mind.
- **Operational Reliability**: Enhanced cybersecurity helps prevent cyber-attacks that could disrupt the operation of the System. By safeguarding the System against potential threats, Aqua ensures that customers receive consistent and reliable service without interruptions caused by cyber incidents.

- **Compliance with Regulatory Standards**: Aqua, as a larger and more established utility company, is subject to stricter regulatory standards for cybersecurity. This means that Aqua must adhere to comprehensive security protocols and undergo regular security audits, ensuring that the system is protected against evolving cyber threats. The City, on the other hand, may not have the same level of regulatory requirements or resources to implement such robust measures.
- **Rapid Response to Threats**: Aqua's established cybersecurity infrastructure includes advanced monitoring systems and incident response plans. In the event of a cyber-attack, Aqua can quickly detect and respond to the threat, minimizing potential damage and restoring normal operations swiftly. This rapid response capability is crucial in maintaining the safety and reliability of the wastewater service.
- **Cost Savings**: By preventing cyber-attacks and minimizing disruptions, Aqua's cybersecurity improvements can lead to cost savings for customers. Avoiding the financial impact of data breaches, service interruptions, and emergency repairs helps keep operational costs down, which can be reflected in more stable and affordable rates for customers. By securing the infrastructure against cyber threats, utilities can confidently implement modern technologies that improve operational efficiency and sustainability. Here are a few examples:
    - Predictive Analytics and AI: Enhanced cybersecurity allows for the safe use of AI-driven predictive analytics platforms. These platforms collect data to

offer real-time insights into flow rates, chemical concentrations, and equipment performance, optimizing operations and reducing downtime.

- Smart Monitoring Devices: With robust cybersecurity measures in place, utilities can deploy smart wastewater monitoring devices and external pressure sensors. These tools enable real-time monitoring of sewer conditions, facilitating early detection of issues and quick responses to minimize damage.
- Advanced Diagnostic Tools: Secure systems can support the use of advanced diagnostic methods for assessing pump health and other critical components. These tools help identify and address equipment issues early, leading to significant cost and labor savings.
- Internet of Things (IoT): Enhanced cybersecurity ensures the safe integration of IoT technologies, which can automate processes, monitor infrastructure remotely, and provide valuable data for improving system performance.

By protecting against cyber threats, utilities can leverage these advanced tools to enhance the efficiency, reliability, and sustainability of wastewater management systems. Overall, Aqua's technical expertise and advanced cybersecurity measures provide significant public benefits by protecting sensitive information, ensuring operational reliability, complying with regulatory standards, enabling rapid response to threats, and ultimately saving customers money. These improvements contribute to a safer, more secure, and dependable wastewater service for the community. **[END HIGHLY CONFIDENTIAL]**

**Q. Do you have any concluding remarks with respect to OCA witness DeMarco's testimony?**

A. Contrary to OCA witness DeMarco's testimony, authorizing Aqua's acquisition of the System brings several overarching operational and service benefits for the customers. These benefits include, enhanced safety and security, improved operational efficiency, more reliable and consistent service, cost savings, access to additional worker and material resources, and enhance cybersecurity protections. OCA witness DeMarco does not specifically address these benefits and, in some cases, does not deny that Aqua's acquisition of the system would result in these benefits. Therefore, the Commission should take a holistic review of the benefits of the acquisition and ultimately approve it.

## IV. CONCLUSION

**Q. Does this conclude your rebuttal testimony?**

Yes, it does; however, I reserve the right to supplement my rebuttal testimony as additional issues and facts arise during the course of this proceeding.

## TABLE OF CONTENTS

I. INTRODUCTION ..... 1
II. RESPONSE TO I&E WITNESS CLINE ..... 2
III. RESPONSE TO OCA WITNESS DEMARCO ..... 4
IV. CONCLUSION ..... 23

**PUBLIC VERSION - HIGHLY CONFIDENTIAL INFORMATION REDACTED**

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Zach Martin. My business address is 665 South Dock Street, Sharon, PA 16146.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Aqua Pennsylvania, Inc. ("Aqua PA"), as the Western Pennsylvania Area Manager.

**Q. Are you the same Zach Martin who submitted direct testimony in this proceeding?**

A. Yes. I submitted direct testimony with the Application filed with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on February 18, 2023 (Exhibit W, Aqua Statement No. 3). I also submitted supplemental direct testimony with the Amended Application filed with the Commission on March 28, 2024 (Supplemental Exhibit W, Aqua Statement No. 3 Supp.).

**Q. What is the purpose of your rebuttal testimony?**

A. The purpose of my rebuttal testimony is to respond to the direct testimony submitted by the Commission's Bureau of Investigation and Enforcement ("I&E"), and the Office of Consumer Advocate ("OCA"), specifically: I&E Statement No. 2, the direct testimony of Ethan Cline; and OCA Statement No. 1, the direct testimony of Nicholas DeMarco. My rebuttal testimony addresses these witnesses' claims regarding the operational and

customer service benefits that will result from Aqua Pennsylvania Wastewater, Inc.'s ("Aqua" or the "Company") acquisition of the wastewater system (the "System") of the City of Beaver Falls ("Beaver Falls" or the "City"). In particular, my rebuttal testimony explains that the other parties either fail to address many of the operational issues that the System currently faces, which will be resolved by the acquisition, or argue, without support, that the City will be able to address and overcome these operational challenges in the future. The Commission should not adopt these arguments and, instead, should recognize that the acquisition will result in substantial affirmative public benefits for the customers of Beaver Falls because Aqua will implement substantial improvements to the System's assets and operations over the present day.

**Q. Are you sponsoring any exhibits with your rebuttal testimony?**

A. No.

## II. RESPONSE TO I&E WITNESS CLINE

**Q. Please summarize I&E witness Cline's position in his direct testimony that you wish to address.**

A. In addition to generally describing the System (I&E St. No. 2, at pp. 8-9), I&E witness Cline specifically recommends that Aqua's plan to incorporate the system into its Long-Term Infrastructure Improvement Plan ("LTIIP") and Distribution System Improvement Charge ("DSIC") in the future, after closing of the acquisition is "unreasonable." I&E St. No. 2, at pp. 9-10. Rather than "delay" including the system in the LTIIP and DSIC, I&E

witness Cline recommends that Aqua should file a revised LTIIP to include the System and request to include Beaver Falls in the DSIC within 90 days of closing on the acquisition. I&E St. No. 2, at p. 10.

**Q. Do you have any response to including the System in Aqua's LTIIP within 90 days of closing?**

A. The Company does not agree that this condition is required since Aqua is under no obligation to update its LTIIP within a certain time period following closing, and, moreover, the Commission agreed with Aqua's position regarding this same condition in Aqua's acquisition of the Greenville Sanitary Authority.[1] However, in this particular instance the Company will agree to update its LTIIP after closing on the Beaver Falls System, but would submit this update to occur within 180 days after closing so Aqua can integrate the Beaver Falls assets into Aqua's overall operations.

**Q. Do you have any response to I&E witness Cline's description of the System?**

A. I agree with I&E witness Cline's summary of the current status of the System set forth in Aqua witness Bubel's testimony. I&E St. No. 2, at pp. 8-9. However, I would remind the Commission that the System faces further challenges, in addition to those described by

[1] See *Application of Aqua Pennsylvania Wastewater, Inc. (Aqua), pursuant to 66 Pa.C.S. §§ 1102 and 1329 for: (1) approval of the acquisition by Aqua of the Greenville Sanitary Authority (GSA); (2) approval of the right of Aqua to begin to offer, render, furnish and supply wastewater service to the public in the Borough of Greenville, Hempfield Township, and West Salem Township, Mercer County, Pennsylvania; and (3) an order approving the acquisition that includes the ratemaking rate base of the GSA's wastewater system assets pursuant to Section 1329(c)(2) of the Public Utility Code. Request for Approval of Contracts, including Assignment of Contracts, between Aqua and the GSA, Pursuant to Section 507 of the Public Utility Code*, Docket No. A-2023-3041695, Opinion and Order at pp. 88-89 (Order Entered Dec. 20, 2024) ("GSA Order").

Aqua witness Mr. Bubel. In particular, my supplemental direct testimony provides a comprehensive review of the System and its operations. I&E did not dispute the challenges I highlighted in my supplemental direct testimony. Moreover, as discussed in Mr. Bubel's rebuttal testimony (Aqua Statement No. 2-R), the Beaver Falls System has continued to face environmental compliance issues. Approving Aqua's acquisition of the System will permit these challenges to be addressed.

## III. RESPONSE TO OCA WITNESS DEMARCO

**Q. Does OCA witness DeMarco testify regarding the condition and operations of the Beaver Fall's System?**

A. Yes.

**Q. Please explain.**

A. OCA witness DeMarco summarily describes the environmental issues faced by the System, primarily responding to Aqua witness Bubel's testimony. OCA St. No. 1, at pp. 4-7. Despite acknowledging that the System is currently under a Corrective Action Plan ("CAP") with the Pennsylvania Department of Environmental Protection ("DEP") and that **[BEGIN HIGHLY CONFIDENTIAL]** [redacted] **[END HIGHLY CONFIDENTIAL]**, OCA witness DeMarco testifies that the System is not otherwise out of compliance with United States Environmental Protection Agency ("EPA") or DEP requirements. OCA St. No. 1, at pp. 5-7. He further asserts that the System does not require any immediate improvements to its assets or

operations, claiming that "[i]t is not apparent that any upgrades or improvements are urgent." OCA St. No. 1, at p. 7. OCA witness DeMarco also states that "there is no indication that Beaver Falls is not technically fit to complete any necessary upgrades or improvements." OCA St. No. 1, at pp. 9-10. He further concludes that the System is not "troubled," as recognized under Sections 529 and 1327 of the Public Utility Code, 66 Pa.C.S. §§ 529 and 1327. OCA St. No. 1, at pp. 10-11. I will respond to each of these issues in turn.

**Q. Before specifically responding to OCA witness DeMarco's testimony regarding the condition and operations of the System, do you have any general comments related to Mr. DeMarco's characterization of the System?**

A. Yes. As an initial matter, OCA witness DeMarco essentially ignores my supplemental direct testimony, which provided additional information regarding the conditions and operations of the System. The top three issues impacting this system are the hazardous gas non-compliance, safety and security deficiencies, and a lack of asset management. Without restating my discussion of the challenges facing the System's assets, infrastructure, and operations in the near-, mid- and long-term, it is important for the Commission to recognize that while OCA witness DeMarco attempts to claim the System is not "troubled," his testimony does not address a number of critical facts on the ground that demonstrate emergent needs facing the System.

It appears that Mr. DeMarco's attempt to discount the significant operational challenges the System faces is an attempt to bolster his claim that there is a significant rate

impact associated by the acquisition, which cannot be overcome by the benefits offered by Aqua's ownership. However, as explained in greater detail in the rebuttal testimony of Aqua witness Packer (Aqua Statement No. 1-R), the Commission should reject Mr. DeMarco's framing of the rate impact of a 165.61% increase ignores the fact that the percentage increase is due to the very low rates that the City is currently charging; the City's average bill is **$33.38 per month ($100.13 per quarter)**.

In summary, by taking a holistic review of the system and recognizing the challenges facing the System, the Commission can ensure that the necessary improvements are made to correct the System's safety, security, and operational deficiencies. These improvements will ultimately benefit customers by reducing the need for emergency repairs, improving operational efficiency, and extending the lifespan of the System's assets. This is in addition to the clear benefit to the community of handling extremely hazardous substances in compliance with state and federal regulations.

**Q. Do you agree with OCA witness DeMarco's testimony that the System does not need urgent or immediate improvements?**

A. No.

**Q. Please explain why not.**

A. The Beaver Falls System faces substantial infrastructure and operational challenges without an actionable plan to resolve them. As I explained in my supplemental direct

testimony, there are several key areas of concern and Aqua's has planned improvements to address those concerns, which are summarized here at a high level.

- **System Assessment and Current Operations**: My supplemental testimony provided a detailed assessment of the Beaver Falls wastewater system, identifying significant issues such as hazardous gas problems, safety and security deficiencies, and the lack of an asset management plan.
- **Hazardous Gas Issues**: **[BEGIN HIGHLY CONFIDENTIAL]** [redacted] **[END HIGHLY CONFIDENTIAL]**
- **Safety and Security Deficiencies**: **[BEGIN HIGHLY CONFIDENTIAL]** [redacted] **[END HIGHLY CONFIDENTIAL]**
- **Asset Management**: Furthermore, my supplemental testimony noted the absence of an asset management plan and computerized maintenance management system ("CMMS") at Beaver Falls.

In contrast to these clear issues, the OCA attempts to downplay these facts by claiming that the system is not "troubled" per Sections 1327 and/or 529 of the Public Utility

Code, 66 Pa.C.S. §§ 529, 1327. I am advised that the Company is not seeking approval of the acquisition pursuant to either of these sections, and nothing in Section 1329 requires a finding that a system be "troubled" for an acquisition under this provision to be approved. However, this should not be taken to mean that I agree with OCA that the Beaver Falls System is not in a troubled state, both operationally and financially. My supplemental direct testimony identified deficiencies and the planned improvements by Aqua, which are largely not addressed by the OCA, and further demonstrate the need for a thorough and holistic review of Aqua's acquisition of the System by the Commission.

**Q. Please explain your response further.**

A. The City does not currently have an actionable plan to address these challenges in place and it does not appear that they will be able to implement such a plan if the acquisition is not approved given the status of the City's finances, as discussed by Ms. Wilkins in her supplemental direct and rebuttal testimony. I should repeat that the City has no capital plan – not a limited capital plan, not a plan for the next three years, nor a plan for the upcoming year. There is no document, memo or strategy to deal with replacing or maintaining wastewater infrastructure it is currently charged with overseeing and operating.

The Commission should recognize that Aqua, on the other hand, has an actionable plan to address the infrastructure and operational challenges facing the City if the acquisition is approved.

The planned capital improvements described in the proceeding, provides a clear path forward to resolve the issues faced by the system. The proposed solutions include:

- **Implementation of a CMMS**: Implementation of this system will help schedule and automate preventative maintenance of the System, which will in turn improve operational consistency. The City's witness Mr. Jones notes in his rebuttal testimony that the System should be operated in a proactive manner, rather than a reactive manner where the City tries to fix problems and, in the meantime, hopes that a crisis does not occur. A CMMS is a proactive tool to ensure facilities are properly maintained and to schedule repairs and replacements before major failures occur. Neither I&E nor OCA has suggested or shown that the City can implement a CMMS if the acquisition is denied.
- **Capital Improvements**: Aqua will implement planned capital improvements to address the identified safety, security, and infrastructure deficiencies faced by the System. Neither I&E nor OCA has suggested or shown that the City can implement these improvements if the acquisition is denied. Moreover, while OCA attempts to assert that these improvements are not required to address "imminent" issues, this assertion fails to acknowledge that the System is facing substantial issues that cannot be addressed without the acquisition.
- **Correction of Hazardous Gas Non-Compliance**: **[BEGIN HIGHLY CONFIDENTIAL]** [redacted] **[END HIGHLY CONFIDENTIAL]**

While OCA witness DeMarco attempts to claim these problems are not "urgent" or "imminent," it is important for the Commission to recognize that this claim acknowledges these issues exist and that they are serious. Indeed, in my opinion, the challenges present safety and reliability risks that are not a matter of "if" they will occur, but a matter of "when" they will occur. OCA witness DeMarco seems to recognize this fact.

Moreover, it is important to recognize that, regardless of their characterization, the primary issues facing the System must be resolved quickly due to their significant impact on health and safety. The hazardous gas non-compliance and safety deficiencies pose immediate risks to the entire community of Beaver Falls. It is clear that these issues require urgent attention because, after Aqua completed further site visits and inspections and noted certain issues, the City acted to address some of them. This demonstrates the critical nature of these problems and the need for prompt resolution by Aqua that can provide experienced management and operation of the System.

**Q. Please discuss the mid- and long-term issues that are facing the Beaver Falls System.**

A. Even if the Commission sets aside the near-term issues, there are mid- and long-term challenges facing the system that will impact its safety, reliability, and overall performance. These include:

- **Ongoing Deterioration of Assets**: Without proper asset management and preventative maintenance, the System's infrastructure will continue to deteriorate, leading to more frequent breakdowns and higher repair costs.

- **Sustained Operational Inconsistencies**: The lack of a CMMS will result in continued inefficiencies and inconsistencies in the System's operations, affecting its reliability and performance. These inefficiencies and inconsistencies will continue if the acquisition is not approved.
- **Long-Term Safety and Security Risks**: The absence of adequate safety and security measures will pose ongoing risks to employees and the public, potentially leading to accidents and health hazards. These risks will increase over time if they are left unaddressed, and it is clear that the City will not able to address them if the acquisition is not approved.

Again, as discussed above, it is crucial to approve the acquisition and, along with the planned capital improvements described in the proceeding, provides a clear path forward to resolve the issues faced by the System.

**Q. To be clear, will Aqua resolve the near-, mid- and long-term issues facing the System if Aqua acquires the System?**

A. Yes.

**Q. Why will the resolution of these issues under Aqua ownership provide public benefits?**

A. Resolving the issues under Aqua ownership will provide significant public benefits for both those who work on the System and those who receive service from it.

**PUBLIC VERSION - HIGHLY CONFIDENTIAL INFORMATION REDACTED**

For those who work on the System, addressing the hazardous gas non-compliance and safety deficiencies will create a safer work environment. Implementing proper safety equipment, ventilation, and security measures will reduce the risk of accidents and health hazards, ensuring that employees can perform their duties without fear of injury or exposure to harmful substances. Additionally, the introduction of a CMMS will streamline operations, making it easier for workers to manage and maintain the System efficiently.

For those who receive service from the System, resolving these issues will enhance the reliability and quality of the wastewater services provided. Addressing the deteriorating assets and implementing preventative maintenance will reduce the frequency of breakdowns and service interruptions, ensuring a more consistent and dependable service. Moreover, correcting the hazardous gas non-compliance will protect the health and safety of the entire community of Beaver Falls, preventing potential environmental and public health crises. A chemical release, spill, or NPDES permit violation on the Beaver River in Western Pennsylvania could potentially impact the local population of approximately 251,747 people in Beaver and Lawrence counties, including communities such as Beaver Falls, New Brighton, and Rochester. The Beaver River flows into the Ohio River, which is a significant waterway that eventually joins the Mississippi River. This means that an incident could have broader implications, affecting communities along the Ohio River and further downstream in the Mississippi River watershed. The Ohio River watershed alone covers parts of 14 states and serves as a crucial water source for millions of people. Additionally, it's important to note that Beaver Falls is located about 14 miles from East Palestine, Ohio, where the recent train derailment occurred. This proximity could raise

concerns about compounded environmental impacts in the region that were recently experienced by the larger community.

**Q. Do you agree with OCA witness DeMarco's testimony that there is no indication that the City is not technically fit to make these improvements to the System?**

A. No. And, for similar reasons, I also disagree with his claim that Aqua's technical fitness does not provide affirmative public benefits related to this transaction. OCA St. No. 1, at pp. 29.

**Q. Please explain why not.**

A. While Mr. DeMarco claims there is no indication that the City is not technically fit to make need improvements to the condition and operations of the System, this testimony ignores both my direct and supplemental direct testimony, as well as the testimonies of the City's witnesses.

The City acknowledges that it is not currently in a position to recruit and retain the skilled employees necessary to operate and maintain the wastewater System effectively. While the City maintains the ability to operate the System, it recognizes the limitations in its capacity to address the near-, mid- and long-term issues facing the System. The City faces significant challenges in onboarding the additional resource types required to address these issues, and faces challenges at onboarding these resources at the scale needed. The City lacks the experience in addressing these issues, which will include difficulties in

training existing employees, accessing materials and equipment, and implementing advanced systems required for efficient operations.

**Q. Why can't the City just hire consultants to perform this work?**

A. Other parties have raised this before. I would say that if it was just as simple as "hire a consultant", the City would not be in this dire situation. Businesses, non-profits, and governmental agencies are not run by just "hiring a consultant" and the intervening parties should not use this "hire a consultant" excuse to buttress their arguments that the City is simply choosing not to do the work required to run and operate a wastewater system. Consulting firms require guidance and input for their deliverables, they required oversight, review and time. "Hiring a consultant" is not the answer for Beaver Falls in my opinion. Technically, could Beaver Falls do this, yes. But that would not be my recommendation if I was running and operating a system. Moreover, even if "hiring a consultant" was a solution, the City's dire financial situation, as described by the City's witnesses, precludes that.

**Q. Are there other reasons why Aqua is in a better position to resolve the issues facing the System than the City?**

A. Aqua has the advantage of an established infrastructure, experienced workforce, and advanced systems that the City currently does not have in place. This includes:

- **Skilled Employees**: Aqua can leverage its existing pool of skilled employees who are already trained and experienced in managing similar systems. This reduces the

time and cost associated with hiring and training new staff, which Aqua already has experience doing both with respect to the types of skills needed and the scale of staffing needed to address the issues facing the System. It also avoids the problem that the City is currently experiencing, where qualified personnel leave or retire. Moreover, Aqua will continue to leverage the City's knowledge of the System by retaining many of the individuals that currently operate the system but providing them with the additional resources and help required to improve the System's safety and reliability.

- **Advanced Systems**: Aqua's implementation of a CMMS and other advanced management systems ensures efficient scheduling and automation of maintenance tasks, leading to improved operational consistency and reduced downtime.
- **Access to Materials and Equipment**: Aqua's established supply chains and procurement processes allow for timely access to necessary materials and equipment, ensuring that maintenance and improvement projects can be carried out without delays.

**Q. Why will Aqua's technical expertise provide public benefits?**

A. It is important to note that onboarding skilled employees, training existing employees, and accessing materials and equipment are not simple tasks, especially when an operator is not already doing so. The City would need to onboard additional resource types and onboard those additional resources at a scale they have not experienced. Aqua, on the other hand, will utilize its existing experience and scalability due to its ongoing operations, making it

more efficient and effective in addressing these challenges. This is evidenced by the fact that the plant manager does not have DEP certification.

For these reasons, OCA witness DeMarco's claims regarding "regionalization" and "consolidation" should also be rejected. OCA St. No. 1, at p. 29. Regionalization under Aqua ownership brings additional benefits. Aqua's regional operations allow for the sharing of resources, expertise, and best practices across multiple systems. This regional approach provides several advantages, such as:

- **Resource Optimization**: By pooling resources across a region, Aqua can optimize the use of skilled employees, equipment, and materials, ensuring that they are deployed where they are needed most.
- **Scalability**: Aqua's regional operations enable it to scale up quickly to address issues, leveraging its existing infrastructure and workforce to respond to challenges efficiently.
- **Consistent Standards**: Regionalization ensures that consistent standards and practices are applied across all systems, leading to improved service quality and reliability.

In this specific case, it is clear that regionalization will further lead to a safer, more reliable, and cost-effective wastewater service for the Beaver Falls community and to the benefit of the customers served by this System.

**Q. Does OCA witness DeMarco testify regarding the customer service issues related to the Beaver Fall's System?**

A. Yes. OCA witness DeMarco argues that Aqua's bill payment systems do not offer any improvements of the City's current wastewater service bill payment systems. OCA St. No. 1, at p. 30.

**Q. Do you agree?**

A. No.

**Q. Please explain.**

A. I would simply note that Mr. DeMarco discounts entirely the benefits that will inure to Beaver Falls customers who have difficulty paying their bills. There are no payment plan options with Beaver Falls. With Aqua's ownership, Beaver Falls customers will have the option to enter into a deferred payment arrangement to help pay off unpaid balances, and for those that meet eligibility requirements, they may participate in Aqua's low-income programs as described in the rebuttal testimony of Rita F. Black (Aqua Statement No. 9-R).

Moreover, Aqua has improved its disruption notifications and mapping system to be real-time and initiated from our field personnel on site, at the disruption. With respect to the field work improvements noted above, when our technicians enter a work order and go "in route", a text notification is sent to the customer providing a notification with the technician's expected arrival time regardless of whether the work order is scheduled or unscheduled.

Aqua has also released a new and improved customer ePortal and Aqua App for mobile devices that provide customers with access to improved customer tools for account maintenance, notifications, viewing meter reads and trending consumption, as well as viewing and paying bills from anywhere in the world. In addition to payment through Aqua App, Aqua customers also have the benefit of expanded bill payment options including auto-payment and pay by text. For customers using an ACH payment method, all of these options are free. In addition to offering bill payment, Aqua's ePortal also provides electronic billing and the ability to view prior bills.

Accordingly, I believe that these customer-driven tools demonstrate that there are numerous functional differences in Aqua's billing and customer service, as compared to what GSA customers have today.

**Q. Does OCA witness DeMarco testify regarding information technology ("IT") and/or cybersecurity issues related to the Beaver Fall's System?**

A. Yes.

**Q. Please explain.**

A. OCA witness DeMarco argues that Aqua's "proposed improvements appear to be designed to make the Beaver Falls system consistent with Aqua's processes." OCA St. No. 1, at p. 31. He further asserts that "[t]hose proposed improvements do not necessarily confer a benefit where the current operator is not aware that there is anything wrong with the way Beaver Falls is currently operating its system" and specifically refers to the City's response

to OCA-III-33. OCA St. No. 1, at p. 31. He further appears to argue that such improvements would only be a benefit if they were necessary to comply with the law. OCA St. No. 1, at p. 31.

**Q. Do you agree with OCA witness DeMarco's assessment of the current state of the System's cybersecurity systems, polices and/or procedures?**

A. No.

**Q. Why not?**

A. As it relates to cyber security, the System currently faces several risks, including **[BEGIN HIGHLY CONFIDENTIAL]** [redacted]

[redacted] **[END HIGHLY CONFIDENTIAL]**

**Q. Do you agree that Aqua's improvements to the cybersecurity systems, polices and/or procedures are not beneficial to Beaver Fall's customers?**

A. No.

**Q. Why not?**

A. Improvements to cybersecurity under Aqua ownership are highly beneficial to customers for several reasons: **[BEGIN HIGHLY CONFIDENTIAL]**

[redacted]

**PUBLIC VERSION - HIGHLY CONFIDENTIAL INFORMATION REDACTED**

[redacted]

**PUBLIC VERSION - HIGHLY CONFIDENTIAL INFORMATION REDACTED**

[redacted]

[redacted] **[END HIGHLY CONFIDENTIAL]**

**Q. Do you have any concluding remarks with respect to OCA witness DeMarco's testimony?**

A. Contrary to OCA witness DeMarco's testimony, authorizing Aqua's acquisition of the System brings several overarching operational and service benefits for the customers. These benefits include, enhanced safety and security, improved operational efficiency, more reliable and consistent service, cost savings, access to additional worker and material resources, and enhance cybersecurity protections. OCA witness DeMarco does not specifically address these benefits and, in some cases, does not deny that Aqua's acquisition of the system would result in these benefits. Therefore, the Commission should take a holistic review of the benefits of the acquisition and ultimately approve it.

## IV. CONCLUSION

**Q. Does this conclude your rebuttal testimony?**

Yes, it does; however, I reserve the right to supplement my rebuttal testimony as additional issues and facts arise during the course of this proceeding.

**CITY MANAGER**

**CITY OF BEAVER FALLS**

**February 24, 2025**

CITY OF BEAVER FALLS, BEAVER COUNTY
REBUTTAL TESTIMONY OF CHARLES R. JONES, JR.

## TABLE OF CONTENTS

I. INTRODUCTION ..... 1

II. RESPONSE TO MR. DEMARCO ..... 2

III. CONCLUSION ..... 5

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Charles R. Jones, Jr. My business address is 715 15th Street, Beaver Falls, PA 15010.

**Q. In what capacity are you affiliated with the City of Beaver Falls?**

A. I am the appointed City Manager for the City of Beaver Falls ("City" or "Beaver Falls"). My duties as defined by the City's Home Rule Charter are to manage day-to-day operations and oversee administrative functions of all City departments. I report directly to the Mayor of the City and City Council.

**Q. Have you testified before the Pennsylvania Public Utility Commission ("Commission") before?**

A. Yes. I previously submitted Direct Testimony with Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") initial Application on February 17, 2023 and Supplemental Direct Testimony with Aqua's Amended Application on March 28, 2024, in this proceeding.

**Q. On whose behalf are you testifying in this proceeding?**

A. I am testifying on behalf of the City, and in cooperation and support of Aqua's Application to purchase the City's wastewater collection, conveyance, and treatment system (the "System").

**Q. Please describe the purpose of your rebuttal testimony and summarize the key points it will address.**

A. The purpose of my testimony is to respond to the Office of Consumer Advocate ("OCA") Statement No. 1, Direct Testimony of Nicholas A. DeMarco, with regard to (1) whether or not the System is troubled and the City is technically fit to operate the System; and (2) the harm to customers of the City if the System is sold to Aqua versus if the sale is not approved and the City continues to run the System.

## II. RESPONSE TO MR. DEMARCO

**Q. Do you agree with Mr. DeMarco's testimony indicating that the System is not troubled and that Beaver Falls is technically fit to run the System?**

A. I do not. Mr. DeMarco refers to Sections 1327 and 529 of the Public Utility Code to claim that the Beaver Falls system is not troubled. I will not speak to any legal standards under those provisions, although I am advised that Aqua did not file for approval of the Application under those provisions. However, the Supplemental Direct Testimony of Zach Martin explains that there are serious issues with the City's 80 year-old wastewater treatment plant ("WWTP"). I am concerned about the condition of the WWTP and the aging collection system as well as the seepage of raw sewage into the Beaver River from the System as described in Zach Martin's Supplemental Direct Testimony. Just because the Environmental Protection Agency has not issued a violation notice to the City, does not mean that the System is not troubled. In addition to the issues raised by Mr. Martin in his

Direct Testimony and Supplemental Direct Testimony, there are significant operational issues of concern to the City.

Despite working diligently to retain experienced operators that the System requires, the City has been unsuccessful. This lack of expertise combined with the lack of funds and the City's overwhelming burdens to try to provide other basic services to its citizens, many of whom are impoverished, have led to the untenable situation the City is in at this time. Mr. DeMarco views the operation of the System as wholly separate from the City's overall operations and he should not. The City has substantial problems that impede its ability to run the System now, and those problems will continue to grow if an experienced and financially capable entity is prevented from taking over the System. Furthermore, Mr. DeMarco is asking the City to have a reactive system. I do not feel comfortable with that. The City wants to be proactive to ensure that the System is well run rather than attempting to fix problems as they arise and hoping there isn't a crisis - which is where we are now. We urgently need Aqua to take over the System to ensure the health and safety of our customers, now and into the future.

**Q. Do you agree with Mr. DeMarco that the rate impact of the sale to Aqua is more harmful to the customers of Beaver Falls than having the City continue to run the System?**

A. No. The City has historically experienced significant financial difficulties. We are struggling to make payroll and provide basic services to our citizens. We are on the verge of being named by the Commonwealth Department of Community and Economic

Development a distressed community or Act 47 status, which indicates severe financial difficulties and could lead to the City being placed in receivership. The City urgently needs the sale proceeds to even meet the basic needs of our citizens. Quite frankly, our citizens, who are predominantly low income and minorities, deserve better and that is why the City agreed to sell the System to Aqua. Although I am concerned about the impact the rate increases will have on our customers if the System is sold to Aqua, I am more concerned about the fact that the City does not have the necessary finances to provide the kind of fundamental services (not just wastewater) to the community that the citizens deserve and we do not have the time or resources to run the System adequately. And I am confident that Aqua will run the System much better than we have been able to in a safe and efficient manner over the long term while the City uses the funds to stabilize its finances for the long term.

We have spent years working on this sale and have spent tens of thousands of dollars to cover expenses related to the sale of the System. If the sale is not approved and the City does not have the proceeds from the sale and instead has to refund the $2,000,000 deposit to Aqua and pay the remaining expenses related to this transaction, it will be devastating for the City. Even with significant rate and tax increases, the City will likely be unable to provide essential services for our citizens - who are the very same people Mr. DeMarco claims will be harmed if Aqua acquires the System and raises rates. In that situation, where the City would be forced to decide how to spend inadequate resources to address multiple critical problems, needed repairs and improvements to the System identified by Mr. Martin will likely be unaddressed and we cannot guarantee that

the System will be efficiently and safely run. Mr. DeMarco's focus on the wastewater rate hikes on the citizens of Beaver Falls presents a skewed picture of the economic and operational impact of the denial of Aqua's application to purchase the System.

## III. CONCLUSION

**Q. Does this conclude your testimony?**

A. Yes, it does. However, I reserve the right to file additional testimony at a later date as may be necessary or appropriate.

# AQUA STATEMENT NO. 5-R

# REBUTTAL TESTIMONY OF DYLAN W. D'ASCENDIS

**With Regard To:**
**Fair Market Value Appraisal Adjustments**

**February 24, 2025**

**TABLE OF CONTENTS**

I. INTRODUCTION, PURPOSE, AND SUMMARY ..... 1
II. RESPONSE TO OCA WITNESS GARRETT ..... 2
III. RESPONSE TO OSBA WITNESS FORBES ..... 9
IV. CONCLUSION ..... 11

## I. INTRODUCTION, PURPOSE, AND SUMMARY

**Q. Please state your name and business address.**

A. My name is Dylan W. D'Ascendis. My business address is My business address is 1820 Chapel Avenue W., Suite 300, Cherry Hill, NJ 08003.

**Q. By whom are you employed and in what capacity?**

A. I am employed by ScottMadden, Inc. as a Partner.

**Q. Are you the same Dylan W. D'Ascendis who submitted direct testimony in this proceeding?**

A. Yes. I submitted direct testimony with the Application filed with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on February 18, 2023 (Exhibit Y, Aqua Statement No. 5).

**Q. What is the purpose of your rebuttal testimony?**

A. The purpose of my rebuttal testimony is to respond to the direct testimonies of Mr. David J. Garrett, witness for the Pennsylvania Office of Consumer Advocate ("OCA"), and Ms. Rebecca K. Forbes, witness for the Pennsylvania Office of Small Business Advocate ("OSBA"), as it relates to my determination of the Fair Market Value ("FMV") for the City of Beaver Falls' ("Beaver Falls") wastewater system (the "System").

**Q. Please summarize your conclusions.**

A. Mr. Garrett's adjustments to my valuation approaches are unfounded and inconsistent with basic valuation principles. Further, Mr. Garrett's recommendation to equally weight the Cost, Market and Income Approaches ignores the fact that approximately half of Beaver Falls' current and expected revenues are derived from outside the System's asset base. Finally, Mr. Garrett's return on common equity calculation ignores recent guidance from the Commission and, all else equal, substantially increases the indicated value using the Income Approach. Regarding Ms. Forbes' testimony, I will discuss how her reliance on the Reasonableness Review Ratio ("RRR") is misplaced.

## II. RESPONSE TO OCA WITNESS GARRETT

**Q. Please summarize the arguments and positions made by Mr. Garrett in his direct testimony.**

A. Mr. Garrett recommends a FMV of $19,628,354 based on adjustments to my Market and Income Approaches and evenly weighting my three approaches.[1]

**Q. Do you have any concerns with Mr. Garrett's analysis and conclusions?**

A. Yes, I do. I have concerns with Mr. Garrett's consideration of the following: (1) "capital statistics" in favor of "demographic statistics" in his comparable sales method; (2) a capitalized earnings approach instead of a traditional discounted cash flow model approach for his Income Approach; (3) his recommended cost of capital; and (4) equal weightings of each of his valuation approaches.

[1] OCA St. No. 2, at p. 5.

**Q. Do you agree that "capital statistics" are superior to "demographic statistics" as claimed by Mr. Garrett?**

A. No, I do not. When performing a comparable transaction analysis, one must attempt to use metrics that are standardized and available to all transactions. Price per connection is one of the most readily accessible methods of market comparison for water and wastewater transactions. As shown in a recent industry report of water and wastewater transactions, the only multiple shown is the purchase price and number of connections:

**Table 1: Regulatory Research Associates ("RRA") List of Water and Wastewater Transactions[2]**

**Selected pending water/wastewater utility acquisitions over $10M**

| Date announced | Seller/municipality | State | Buyer | Utility type | Transaction value ($M) | Connection count |
|---|---|---|---|---|---|---|
| 06/21/24 | Ansonia | CT | Eversource Energy | Wastewater | 41.0 | 5,600 |
| 01/10/24 | Jefferson Utilities Inc., Cave Road Utilities, Valley Water & Sewer Services Inc., East Jefferson Sewer Services LLC, Shenandoah Junction Public Sewer Services Inc. | WV | American Water | Water/wastewater | 27.0 | 3,885 |
| 12/30/23 | North Versailles | PA | Essential Utilities | Wastewater | 30.0 | 4,400 |
| 11/03/23 | Silver Creek Water Corp. | IN | American Water | Water | 45.0 | 8,000 |

[2] RRA Regulatory Focus, Intro to Water Utilities – Current Trends and Growth Drivers, August 5, 2024.

Similarly, American Water Works Company, Inc. reported the estimated customer connections for its recent transactions in its most recently available investor presentation, with no mention of "financial metrics":

**Table 2: Transaction Overview from American Water Works Company, Inc's. Investor Presentation[3]**

## Closed Acquisitions

AMERICAN WATER

**September 30, 2024**

| STATE | NUMBER OF SYSTEMS | WATER CUSTOMER CONNECTIONS | WASTEWATER CUSTOMER CONNECTIONS | TOTAL CUSTOMER CONNECTIONS |
|---|---|---|---|---|
| New Jersey | 2 | 2,300 | 2,300 | 4,600 |
| Virginia | 2 | 1,400 | 1,400 | 2,800 |
| Illinois | 1 | - | 26,000 | 26,000 |
| Total | 5 | 3,700 | 29,700 | 33,400 |

**Oct. 1 – Oct. 30, 2024**

| STATE | NUMBER OF SYSTEMS | WATER CUSTOMER CONNECTIONS | WASTEWATER CUSTOMER CONNECTIONS | TOTAL CUSTOMER CONNECTIONS |
|---|---|---|---|---|
| Pennsylvania | 1 | - | 15,000 | 15,000 |
| Total | 1 | - | 15,000 | 15,000 |

35

Conversely, as shown in Figure 6 of Mr. Garrett's direct testimony, roughly half of the transactions listed had "capital statistics." As price per connection is more readily available and measured consistently, it is a superior measure to the infrequent and accounting-based "capital statistics" put forth by Mr. Garrett.

[3] American Water Works Company, Inc., 2024 Third Quarter Earnings & 2025 Outlook Conference Call Presentation, October 31, 2024, at 35.

**Q. Is there published literature supporting your position?**

A. Yes, there is. Hayward discusses acceptable multiples for use in the Guideline Merged and Acquired Company ("M&A") method:

> The M&A method uses various benchmarks *e.g.*, number of customers, multiples of book value, purchase price/rate base from "comparable" transactions, capital/EBITDA, sales/EBITDA, and capital/EBIT.[4]

Please note that the first two benchmarks mentioned by Hayward are number of customers and multiples of book value, both of which are used in my Market Approach. Although as will be discussed below, there are issues in relying heavily on measures using book value.

**Q. Do you agree with Mr. Garrett's assertion that the discounted cash flow method only considers financial metrics?[5]**

A. No, I do not. The discounted cash flow method is an Income Approach method which discounts the free cash flows, or operating income less capital expenditures, for a specified period. The free cash flows are directly affected by customers, as operating revenues are received from customers and operating expenses and capital expenditures are incurred to serve customers. As customers drive all aspects of free cash flows for water utilities, I urge the Commission to dismiss Mr. Garrett's assertion.

[4] David L. Hayward, Valuing a Water Utility, Revised and Updated Third Edition, Infinity Publishing, 2017, at 177.
[5] OCA St. No. 2, at pp. 10-11.

**Q. Mr. Garrett claims that investors would consider metrics such as property, plant and equipment ("PP&E"), as they are tangible assets that generate profit, as a valid multiple to consider in a comparable sales analysis.[6] Is a PP&E multiple applicable for Beaver Falls?**

A. No, it is not. As noted earlier, and discussed in my Valuation Report, half of Beaver Falls' current and future flow and revenue come from the Contributing Municipalities. Because of this, their assets would not reflect the value of their operations.

**Q. Please summarize Mr. Garrett's application of the Income Approach?**

A. Mr. Garrett uses the capitalized earnings method for his indicated value for the Income Approach. His capitalized earnings method uses cash-flows for year zero as assumed by Mr. Walker in his Exhibit 13 and then capitalizes that value using his indicated cost of capital and projected Gross Domestic Product ("GDP") growth rate, holding both steady into perpetuity, resulting in an indicated value of $23,354,612 for Beaver Falls.[7]

**Q. Do you have any concerns with Mr. Garrett's Income Approach?**

A. Yes, I do. I disagree with: (1) his use of the capitalized earnings method for utilities; and (2) Mr. Garrett's estimated cost of capital.

[6] OCA St. No. 2, at p. 12.
[7] OCA St. No. 2, at p. 21.

**Q. Why is it incorrect to use the capitalized earnings method for Beaver Falls?**

A. Generally, capitalized earnings models are used when benefits streams (i.e., cash flows) are linear and discounted cash flow models are used when benefit streams are not linear. The National Association of Certified Valuators and Analysts ("NACVA") and the Consultants' Training Institute offer the following guidance as it relates to determining the benefit stream of an entity:

> **Linear vs. non-linear benefit stream**. A linear benefit stream is a stream of future benefits that is expected to remain constant or grow/decline at a constant rate. A non-linear benefit stream is a stream of future benefits that is expected to grow or decline at a variable rate. Historical economic income is used when estimated future benefits are expected to be linear. Projected economic income is used when estimated future benefits are expected to be non-linear (subject to any restrictions based on the purpose of the engagement).
>
> Ultimately, the analyst will use his or her financial analysis, management inquires and economic/industry research to ascertain whether the historical data is the best indication of the future benefit stream or whether projections are required to estimate future benefits.[8]

Due to the varying capital expenditures in the short-to-medium term as shown in my Income Approach, the benefit stream for Beaver Falls is non-linear. Mr. Garrett's choice of using the capitalized earnings method to determine a value for Beaver Falls in his Income Approach leads to an inaccurate value that does not reflect the projected operations of the system.

**Q. Please comment on Mr. Garrett's cost of capital discussion.**

A. While the cost of capital is a required element of the Income Approach, Mr. Garrett's discussion and analysis on this point is inconsequential, as it ignores the Commission's

[8] Consultants' Training Institute, Business Valuations: Fundamentals, Techniques, and Theory, Chapter Four, page 8 (2018).

2024 Final Supplemental Implementation Order, Appendix C, that states that a valuation must:

> Use the Commission's quarterly earnings report for capital structure, cost of debt, cost of equity and weighted average cost of capital. The quarterly earnings report used must be contemporaneous with the production of the valuation.

Contemporaneous with the production of my Report, the Commission's quarterly earnings report indicated an ROE of 9.75%. All else being equal, applying a 9.75% ROE in my Income Approach would increase my indicated result under that approach to $42,632,858. Using Mr. Garrett's recommended cost of capital would further raise the result to $57,819,567.

**Q. Do you agree with Mr. Garrett's equal weighting across all three approaches?**

A. No, I do not. As discussed above, the value of the system as represented by the Cost Approach does not reflect the value of Beaver Falls system as approximately half of its current and future revenues are not derived from its assets. Applying an equal weight to the results of the Cost Approach as advocated by Mr. Garrett would therefore significantly understate the value derived by the system. This is apparent by reviewing the indicated values of my valuation approaches.

## III. RESPONSE TO OSBA WITNESS FORBES

**Q. Please summarize the arguments and positions made by Ms. Forbes in her direct testimony.**

A. Ms. Forbes argues that if the Commission approves the transaction, it should set the amount allowed in rate base at $8,454,113, which she calculates as the net book value multiplied by the Commissions RRR.

**Q. Does the Commission provide guidance as to the use of the RRR?**

A. Yes, it does. The Commission states:

> Regarding the nature of the RRR, we clarify, as PAWC suggests, that the RRR is not intended to redefine the FMV under Section 1329. Additionally, as Aqua suggests, we clarify that the RRR does not impact purchase price. Also, we agree with the OCA that the RRR is not a test of presumptive reasonableness or a determination that an acquisition is in the public interest, but rather one factor among many. Lastly, we agree with the OSBA that the RRR should not be presumed to be the floor for acquisition cost, but rather a benchmark for evaluating it. In sum, it should be understood that the RRR does not replace the Commission's current analysis in Section 1329 proceedings.
>
> Likewise, the RRR is not binding, but is an additional factor and point of reference that the Commission may consider in Section 1329 proceedings. We reiterate that the 2024 FSIO should not be construed to create binding norms. See Chapter 14 Implementation at 12-13. Moreover, in considering the RRR in a particular proceeding, we clarify that we will look to the RRR that was in place at the time the selling utility and acquiring utility executed an APA.[9]

As the Commission states, the RRR should not be used in lieu of the standards for valuing an enterprise.

[9] Valuation of Acquired Municipal Water & Wastewater Systems – Act 12 of 2016 Implementation, Docket No M-2016-354313, Final Supplemental Implementation Order, at p. 106 (Order entered July 2, 2024).

**Q. Has Ms. Forbes presented any FMV calculation?**

A. No, she has not.

**Q. Is Ms. Forbes' calculation to establish the ratemaking rate base correct?**

A. No. While I disagree with Ms. Forbes use of the RRR to set the ratemaking rate base as discussed above, her application of the Commission's order is also incorrect. The Commission stated that it would use the average of the two UVEs' depreciated original cost ("DOC") from their appraisals.[10] The DOC from ScottMadden's appraisal is $5,003,844.[11] The DOC from Gannett Fleming's appraisal is $7,850,687.[12] The average of these two DOCs is $6,427,266 multiplied by the RRR of 1.68 is $10,797,806.

**Q. Does the RRR produce a reasonable indicated value for Beaver Falls?**

A. No, it does not. Ms. Forbes applies the RRR to Beaver Falls' DOC. As I discussed in response to Mr. Garrett, valuation measures derived from Beaver Falls' assets understate the value of the system as it does not reflect the large proportion of revenues derived from outside its jurisdiction.

[10] Valuation of Acquired Municipal Water & Wastewater Systems – Act 12 of 2016 Implementation, Docket No M-2016-354313, Final Supplemental Implementation Order, at p. 106 (Order entered July 2, 2024).
[11] Aqua Application, Exhibit Q, Schedule 1, p. 2 of 25.
[12] Aqua Application, Exhibit R, Exhibit 7, p. 1 of 3.

## IV. CONCLUSION

**Q. Should any or all the arguments made by Mr. Garrett or Ms. Forbes persuade the Commission to lower the approved purchase price below your indicated value of $40,199,347?**

A. No, they should not. My recommended FMV for Beaver Falls accurately reflects its operations, including its significant flow coming from outside its jurisdictional boundaries. Mr. Garnett and Ms. Forbes ignore that fact, which significantly distorts their recommendations in this proceeding.

**Q. Does this conclude your rebuttal testimony?**

A. Yes, it does; however, I reserve the right to supplement my rebuttal testimony as additional issues and facts arise during the course of this proceeding.

# CITY OF BEAVER FALLS
# BEAVER FALLS, PENNSYLVANIA

REBUTTAL TESTIMONY
OF
HAROLD WALKER, III

FAIR MARKET VALUE APPRAISAL

CITY OF BEAVER FALLS
WASTEWATER SYSTEM ASSETS

V. INCOME APPROACH ..... 9

VI. MARKET APPROACH ..... 17

VII. MARKET MULTIPLES METHOD ..... 20

VIII. SELECTED TRANSACTION METHOD ..... 22

IX. RECOMMENDED WEIGHTING ..... 28

X. CONCLUSION ..... 29

## I. INTRODUCTION

**Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

A. My name is Harold Walker, III my business address is 1010 Adams Avenue, Audubon, Pennsylvania.

**Q. ARE YOU THE SAME HAROLD WALKER WHO PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?**

A. Yes.

## II. SCOPE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

A. Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") was engaged by the City of Beaver Falls ("City") to perform a fair market value appraisal ("FMV") of their wastewater system assets ("Wastewater System"). The purpose of my rebuttal testimony is to respond to and comment on the direct testimony submitted by the Office of Consumer Advocate's ("OCA") witness David J. Garrett, OCA Statement No. 2. My rebuttal testimony includes Aqua Exhibit HW-1R.

## III. RESPONSE TO OCA WITNESS GARRETT

**Q. DID MR. GARRETT PERFORM AN APPRAISAL OF THE TOWNSHIP WASTEWATER SYSTEM ASSETS?**

A. No.

**Q. WOULD YOU PLEASE SUMMARIZE MR. GARRETT'S ADJUSTMENTS OF THE GANNETT FLEMING FMV APPRAISAL AND IDENTIFY THE TOPICS THAT YOU WILL ADDRESS IN YOUR REBUTTAL TESTIMONY?**

A. Yes. In his direct testimony, Mr. Garrett proposed a new Cost Approach to valuation. Mr. Garrett also proposed a new Income Approach to valuation. Mr. Garrett proposed adjustments to the Gannett Fleming Market Approach, including the market multiples method and the selected transaction method. All of Mr. Garrett's proposed adjustments/changes are downward, or negative, adjustments to Gannett Fleming's appraisal report. My rebuttal testimony addresses Mr. Garrett's changes and recommended adjustments to Gannett Fleming's appraisal report.

**Q. DO MR. GARRETT'S RECOMMENDATIONS MEET A STANDARD OF VALUE OF FMV?**

A. No. Mr. Garrett's recommendations do not meet a standard of value of FMV and are in direct violation of Section 1329 of the Public Utility Code, 66 Pa. C.S. § 1329.

**Q. HAS MR. GARRETT EVER PERFORMED AN FMV APPRAISAL OF OTHER WASTEWATER SYSTEM ASSETS?**

A. No. (See Aqua Exhibit HW-1R, page 2 for Mr. Garrett's response to the City's Interrogatories, Set I, question 2d.)

**Q. HAS MR. GARRETT EVER VALUED UTILITY PROPERTY?**

A. No. (See Aqua Exhibit HW-1R, page 2 for Mr. Garrett's response to the City's Interrogatories, Set I, question 2c.)

**Q. DID MR. GARRETT INSPECT OR REVIEW THE WASTEWATER SYSTEM?**

A. No. (See Aqua Exhibit HW-1R, page 1 for Mr. Garrett's response to the City's Interrogatories, Set I, question 1.)

**Q. HAS MR. GARRETT EVER INSPECT OR REVIEWED A WASTEWATER SYSTEM?**

A. No. (See Aqua Exhibit HW-1R, page 3 for Mr. Garrett's response to the City's Interrogatories, Set I, question 3.)

**Q. DID YOU INSPECT OR REVIEW CITY OF BEAVER FALLS' WASTEWATER SYSTEM?**

A. Yes, Wastewater engineers from our parent company viewed or observed the Wastewater System's facilities on February 26, 2021, August 20, 2021, and January 28, 2022. We also relied on the engineering assessment of the Wastewater System's facilities report, "City of Beaver Falls, Beaver County, Pennsylvania, Engineers Assessment of Wastewater System Assets" prepared by Gannett Fleming, Inc., the Wastewater System's Chapter 94 reports, the Wastewater System's 537 Plan, the Asset Purchase Agreement ("APA"), and the Wastewater System's asset replacement history, to confirm the condition of the Wastewater System's property and equipment.

## IV. COST APPROACH

**Q. HOW DID MR. GARRETT DETERMINE HIS COST APPROACH RECOMMENDATION?**

A. Mr. Garrett recommends the Cost Approach recommendation prepared by Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") Utility Valuation Expert ("UVE") Dylan W. D'Ascendis of ScottMadden, Inc. ("ScottMadden")

**Q. DOES MR. GARRETT RECOMMEND ADJUSTING YOUR COST APPROACH RECOMMENDATION?**

A. Yes, on page 19 of Mr. Garrett's direct testimony, he states his "proposed adjustment of $21.5 million to Mr. Walker's cost approach valuation is simply the difference between his and Mr. D'Ascendis's cost approach valuations."

**Q. HAVE YOU REVIEWED THE SOURCE OF MR. GARRETT'S COST APPROACH RECOMMENDATION?**

A. Yes.

**Q. PLEASE EXPLAIN HOW MR. GARRETT'S COST APPROACH RECOMMENDATION REFLECTS A DIFFERENT VALUATION METHOD THAN HE HAS RECOMMENDED IN THE PAST.**

A. Mr. Garrett's Cost Approach recommendation reflects an age/life ratio ("ALR") method to determine the balance of accumulated depreciation that is subtracted from the reproduction cost new ("RPCN") value of the fixed assets (i.e., property, plant, and equipment) in order to produce the reproduction cost new less depreciation ("RPCNLD") value. The RPCNLD method is ultimately used as the basis of Mr. Garrett's Cost Approach recommendation. Mr. Garrett's new ALR method is the simplest method of calculating accumulated depreciation based on the age/life ratio reflecting the assumed useful life of the asset. The underlying assumption in this method is that physical deterioration of an asset occurs at a constant average annual rate, **something that is generally not true for utility property**.

However, Mr. Garrett has been involved in several Section 1329 proceedings as a witness for the OCA[1], and he has also submitted testimony before the Pennsylvania Public Utility Commission ("PUC" or the "Commission") regarding depreciation.[2] In these

[1] *See*: East Norriton Township (Docket No. A-2019-3009052), East Whiteland Municipal Authority (Docket No. A-2021-3026132), Borough of Shenandoah (Docket No. A-2022-3034143), Royersford Borough Authority (Docket No. A-2020-3019634), and Willistown Township (Docket No. A-2021-3027268).

[2] *See*: Duquesne Light Company (Docket No. R-2024-3046523), FirstEnergy Pennsylvania Electric Company (Docket No. R-2024-3047068), and Veolia Water Pennsylvania, Inc. (Docket Nos. R-2024-3045192 and R-2024-3045193).

testimonies Mr. Garrett determined the balance of accumulated depreciation, and hence ultimately the value of the asset, using a survivor curves method.

The survivor curves method accrued depreciation calculation is based on recognized methods using estimated survivor characteristics and the straight-line depreciation method. The survivor curves method is recognized by most public utility commissions, including the Commission, in determining value of property devoted to public service for rate making purposes. The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized "survivor curves" known as the Iowa type curves. The average service life procedure is used to apply the methods of depreciation to group properties for which a survivor curve is used to recognize the existence of life dispersion. The accrued depreciation ratio from a survivor curve is a concept that is used to estimate the consumed service capacity of plant at a point in time. The survivor curve is used to find the applicable accrued depreciation factors of the assets to result in the total accumulated depreciation and hence ultimately the value of the asset (e.g., RPCNLD).

**Q. DO SURVIVOR CURVES PROVIDE A SUPERIOR INDICATION OF THE CURRENT VALUE OF THE UNDERLYING ASSETS?**

A. Yes. The determination of depreciation expense for utility assets is a complex process. Utility assets are classified or grouped in accordance with the National Association of Regulatory Utility Commissioners' ("NARUC") uniform system of accounts. This system of accounts defines the capital accounts to be used and the type of assets to be included in each account. This process results in homogeneous assets being grouped into

respective accounts based on the function and nature of the assets. For example, mains are accounted for in one account, pumps in another account, structures in another, etc.

Despite the fact that homogeneous assets are grouped into separate accounts, the life span of each asset comprising an account is dispersed over a wide range. "Generalized survivor curves are used to describe the dispersion of lives over time."[3] Survivor curves are assigned based on statistical analysis of the dispersion of retirements experienced by the property populating each account. "The results of the statistical analyses are similar to those obtained by an actuary analyzing the mortality of human beings."[4]

Depreciation studies required by regulators determine changes in probable average service lives of the assets comprising each account by comparing the depreciation reserve (balance of accumulated depreciation) calculated from the survivor curves to the account's book reserve. Differences between these two reserves are remedied through changes to authorized service lives which, over time, moves the account's book reserve to being closer to the reserve calculated from the survivor curves. The reason regulators move the book reserve towards the reserve calculated from the survivor curves is to produce the outcome where the assets' economic life match their service life. Since survivor curves best depict average service lives and provide a more accurate balance of accumulated depreciation, their use provides the best measure to determine the current value of the underlying assets.

It appears that Mr. Garrett may have switched from using his previously preferred survivor curve method of determining the total accumulated depreciation to the ALR method because doing so effectively shortened the remaining service lives of assets,

[3] Stout, William M. "A Comparison of Component and Group Depreciation for Large Homogeneous Groups of Network Assets." Presentation to the Accounting Standards Executive Committee of the American Institute of Certified Public Accountants, August 28, 2002. https://www.sec.gov/comments/4-600/4600-97.pdf
[4] Id.

increased the balance of accumulated depreciation, and ultimately reduced the value of Wastewater System assets.

**Q. CAN YOU GIVE AN EXAMPLE OF HOW THE SURVIVOR CURVES METHOD IS A SUPERIOR METHOD TO THE AGE/LIFE RATIO METHOD FOR DETERMINING THE CURRENT VALUE OF THE UNDERLYING ASSETS?**

A. Yes. Both accounts 363 (Services to Customers) and 382 (Outfall Sewer) are shown to have no value ($0) under the age/life ratio method.[5] However the assets which comprise both accounts 363 (Services to Customers) and 382 (Outfall Sewer) currently provide service, are essential in the provision of service, and are used to generate revenues. Therefore, the assets which comprise both accounts 363 (Services to Customers) and 382 (Outfall Sewer) have value and are essential parts of the Wastewater System and should have value under FMV. Accounts 363 (Services to Customers) and 382 (Outfall Sewer) have a combined value of $2.1 million under the survivor curves method used in our Cost Approach.[6]

**Q. HAS THE COMMISSION ACCEPTED MR. GARRETT'S PROPOSED COST APPROACH IN LIEU OF GANNETT FLEMING'S COST APPROACH IN PRIOR SECTION 1329 PROCEEDINGS?**

A. No. The Commission has previously rejected the use of Mr. Garrett's proposed Cost Approach as the basis of FMV in prior decisions:

> Mr. Garrett proposed the use of shorter service lives for five separate accounts. **We note that Mr. Garrett chose the shortest service lives available** – whether based on the *Indiana Study*, the AUS appraisal or the Gannett Fleming appraisal for each of his five recommended adjustments to the Gannett Fleming Cost Approach. Mr. Garrett selected the *Indiana Study* values for Accounts 360.10 and 361.10 but for the other accounts he

[5] *See* Application, Exhibit Q, Schedule 1, pp. 1 and 2 of the ScottMadden Valuation Report.
[6] *See* Application, Exhibit R, Exhibit 9, p. 1 of the Gannett Fleming Appraisal.

> chose whatever value was lowest. Mr. Garrett recommended using longer service lives for Account No. 354.30 and Account No. 354.40 in the *Indiana Study* than the values he recommended here for the Township system assets. Instead, he used values from the AUS appraisal for these two accounts. Aqua St. 4-R at 8-9. We must agree with Aqua that **Mr. Garrett's approach is unreasonable** here. If Mr. Garrett believed the *Indiana Study* results to be appropriate for use for EWT's assets, it would be more reasonable to expect him to use the values from the study for all five accounts in question. Accordingly, we are not persuaded to accept the OCA's recommendations to adjust (downward) the service lives in the Gannett Fleming Cost Approach.[7]

**Q. MR. GARRETT RELIES UPON THE SCOTTMADDEN COST APPROACH. DOES THE SCOTTMADDEN VALUATION REPORT STATE THEIR COST APPROACH IS A GOOD MEASURE OF THE WASTEWATER SYSTEM'S FMV?**

A. No. ScottMadden states:

> As stated above, the value derived from the Cost Approach is based solely on the underlying assets of the Subject Interest, which means it does not take into account the expected cash flows of these assets. For Beaver Falls, this difference is significant. Since Beaver Falls does not own assets of the Joint Sewer Users but derives approximately half of its historical and expected revenues from them, **the Cost Approach significantly understates Beaver Falls' fair market value**.[8]
>
> In **ScottMadden's opinion**, the Income and Market Approaches should each receive 45% weight and **the Cost Approach 10% weight**. The reason for this is **the Cost Approach does not accurately represent Beaver Falls' value** as it cannot reflect the revenues from the Joint Sewer Users. In this instance, the value of Beaver Falls is not only reflected in its physical assets, but its flow volumes with the Joint Sewer Users. The indicated result based on the Cost Approach would remain the same regardless of whether Beaver Falls' assets continue to serve the Joint Sewer Users or not. **In lieu of valuing Beaver Falls' contracts with the Joint Sewer Users as intangible assets, ScottMadden has simply assigned less weight to the results of the Cost Approach**.[9]

[9] *See* Application, Exhibit Q, ScottMadden Valuation Report, pp. 6-7. (Emphasis added).

## V. INCOME APPROACH

**Q. ON PAGES 19 TO 39 OF MR. GARRETT'S DIRECT TESTIMONY, HE EXPLAINS HIS INCOME APPROACH. WOULD YOU PLEASE SUMMARIZE MR. GARRETT'S ADJUSTMENTS TO THE GANNETT FLEMING INCOME APPROACH AND IDENTIFY THE TOPICS THAT YOU WILL ADDRESS IN YOUR REBUTTAL TESTIMONY?**

A. Yes. Mr. Garrett's adjustments to the Gannett Fleming Income Approach to valuation include using a different model and different cash flows to value. He also disagrees with the discount rates used in the model and presents what he believes is a more appropriate discount rate.

**Q. DO MR. GARRETT'S RECOMMENDED ADJUSTMENTS TO THE INCOME APPROACH MEET A STANDARD OF VALUE OF FMV?**

A. No. For the reasons discussed later in my rebuttal testimony, Mr. Garrett's recommendations do not meet a standard of value of FMV and are in direct violation of Section 1329 of the Code.

**Q. WHAT MODEL OR METHOD IS MR. GARRETT'S INCOME APPROACH TO VALUATION RECOMMENDATION BASED ON?**

A. On page 21 of his direct testimony, Mr. Garrett explained that he applied a capitalization of earning or cash flow method model. The capitalization of earning method converts a single base economic income number to a value by dividing it by a capitalization rate. As explained on page 33 of Gannett Fleming's appraisal, "[t]he capitalization of earnings is best suited when the future earnings, or cash flow, can be predicted. The implicit assumption in the capitalization of earning method is that the cash flow is a perpetuity, and

the capitalization rate is a constant." Mr. Garrett's recommended model is shown on OCA Exhibit DJG-4.

Conversely, the Income Approach to valuation used in Gannett Fleming's appraisal is based on the discounted cash flow ("DCF") method which values the potential for profit in an investment and reflects future events. Gannett Fleming used the DCF method to be consistent with the required standard of value of FMV.[10] FMV is defined as "the price, expressed in terms of cash equivalents, at which property would change hands between a **hypothetical** willing and able **buyer** and a **hypothetical** willing and able **seller**, acting at arm's length in an open and unrestricted market, when neither is under compulsion to buy or sell and when both have reasonable knowledge of the relevant facts."[11] The DCF method "is based on the principle of anticipation – i.e., value is created by the anticipation of future benefits. DCF analysis reflects investment criteria and requires the appraiser to make rational and supportable assumptions."[12]

The capitalization of earnings method used by Mr. Garrett uses the income or cash flow producing capabilities for a **single year, reflecting current ownership and operations**, as shown on OCA Exhibits DJG-4 and DJG-5. Although Mr. Garrett states, on page 21 of his direct testimony, that the single cash flow that he utilized is from the Gannett Fleming appraisal, he fails to disclose that the single cash flow was not used in the Income Approach to valuation used in Gannett Fleming's appraisal. Specifically, the Income Approach to valuation used in Gannett Fleming's appraisal is based on **projected**

[10] Pratt, Shannon P. "Defining Standards of Value." Valuation 34, no. 2, June 1989. http://www.appraisers.org/docs/default-source/college-of-fellows-articles/defining-standards-of-value.pdf.
[11] National Association of Certified Valuators and Analysts, s.v. "Fair Market Value," *The International Glossary of Business Valuation Terms*. (Emphasis added).
[12] Appraisal Standards Board, "First Exposure Draft of proposed new Advisory Opinions and Advisory Opinion Revisions in conjunction with the 2016-17 edition of the Uniform Standards of Professional Appraisal Practice" p. 6.

cash flows beginning in 2022 and thereafter, while Mr. Garrett relied on information for the year 2021. Therefore, the Income Approach to valuation used in Gannett Fleming's appraisal did not use the single year's cash flow utilized by Mr. Garrett.

Page 36 of Gannett Fleming's appraisal states, "[a]s noted previously, the Wastewater System's financial statements and their rates did not include taxes nor a fair rate of return. Accordingly, on Exhibits 13 through 16, we adjusted the Wastewater System's post-2020 financial information for pro forma expenses and returns to be reflective of a MUNI or IOU ownership." I do not believe it is appropriate, nor reasonable, to use a single year cash flow as recommended by Mr. Garrett in his Income Approach to valuation.

**Q. YOU PREVIOUSLY STATED THAT THE INCOME APPROACH TO VALUATION USED IN THE GANNETT FLEMING APPRAISAL IS BASED ON THE DCF METHOD. HAS THE COMMISSION EXPRESSED MISGIVINGS OR CONCERNS REGARDING THE USEFULNESS OF APPLYING GANNETT FLEMING'S INCOME APPROACH TO VALUATION UTILIZING THE DCF METHOD IN A 1329 PROCEEDING IN WHICH GANNETT FLEMING HAS BEEN INVOLVED?**

A. No. Gannett Fleming has applied the DCF method as its Income Approach to valuation as part of its fair market value appraisal in 19 Section 1329 FMV proceedings that have been reviewed by the Commission. In fact, the Commission has not adjusted Gannett Fleming's DCF method recommendation in any prior proceeding. Conversely, the Commission has never accepted the recommended use of the capitalization of earnings method recommended by Mr. Garrett in a Section 1329 FMV proceeding.

**Q. ON OCA EXHIBIT DJG-5 OF MR. GARRETT'S DIRECT TESTIMONY, HE SHOWS THE DEVELOPMENT OF HIS SINGLE YEAR'S "FREE CASH FLOW FROM OPERATIONS" USED IN HIS RECOMMENDED CAPITALIZATION OF EARNINGS METHOD MODEL. WHAT CONCERNS DO YOU HAVE WITH MR. GARRETT'S DETERMINATION OF "FREE CASH FLOW FROM OPERATIONS" FOR VALUING THE WASTEWATER SYSTEM?**

A. I have several concerns. I discuss my concerns and/or observations referencing information shown on Exhibit DJG-5 below reference the information shown on OCA Exhibit DJG-5. First, the revenues ($3,025,415) and the EBIT ($532,936) amounts reflect current ownership, current rates, and current operations, none of which reflect the anticipation of future benefits of a hypothetical buyer's ownership. Second, the revenues and earnings before interest and taxes ("EBIT") used in the exhibit do not include income taxes nor a fair rate of return. Third, the depreciation expense ($154,351) is based on the original cost of the assets, not a current value of the assets.[13] Fourth, the subtraction of income taxes ($153,965) is not consistent with Mr. Garrett's current ownership approach, as the City is a non-income tax paying entity (i.e., municipality). Finally, the EBIT ($532,936) amount used by Mr. Garrett is equivalent to a before income tax overall rate of return of only 1.2% to 1.6% on the value of net plant, based on Gannett Fleming's Cost Approach ($32,994,154) or Gannett Fleming's Fair Market Value ($44,292,000), and is clearly below the zone of reasonable returns for public utility assets.

[13] For example, Exhibit 1 from Aqua Exhibit R, shows the net original cost of the City's property, plant equipment was recorded as being $6,026,108 on their financial statements for 2020 while their value is shown to be $32,994,154 in Gannett Fleming's Cost Approach, and $44,292,000 in Gannett Fleming's Fair Market Value.

Therefore, I believe Mr. Garrett's "Annual Cash Flow" of $378,971, shown on OCA Exhibit DJG-4 and developed on OCA Exhibit DJG-5, is unreasonable, is not appropriate to use to determine the value of the Wastewater System and should not be adopted by the Commission.

**Q. HAS THE COMMISSION EXPRESSED MANY OF THE SAME CONCERNS YOU JUST DISCUSSED REGARDING MR. GARRETT'S CAPITALIZATION OF EARNINGS METHOD?**

A. Yes. The Commission has expressed many of the same concerns I just discussed regarding Mr. Garrett's capitalization of earnings method in a prior decision:

> We must agree with Aqua that the OCA did not establish that its proposed adjustments to the Gannett Fleming and AUS Income Approach results, based on Mr. Garrett's use of a single year cash flow utilizing an average of the Township's 2018 through 2020 financials, are appropriate in this proceeding. We agree with Aqua's reasoning that the OCA's formulation of the income from operations and the resultant value erroneously assumes that revenues and expenses as reported in EWT's financials will be the operating results of the buyer. As the ownership and operation migrates to the buyer, Aqua in this case, several changes will occur; namely there will be a new rate base determined by the Commission based on their findings in this Application and the buyer, Aqua, will be allowed to earn a Commission authorized return on rate base. Operating expense, including taxes, will be incorporated along with the allowed return on rate base in determining the ongoing EWT revenue requirement. Mr. Garrett's model does not factor in these changes to the Township's operations as a rate-regulated wastewater utility.[14]

**Q. IS MR. GARRETT'S RECOMMENDED USE OF THE ORIGINAL COST PLANT VALUE AS THE BASIS FOR HIS INCOME APPROACH A REASONABLE APPROACH?**

[14] *Application of Aqua Pennsylvania Wastewater, Inc. – East Whiteland Township*, Docket No. A-2021-3026132, Opinion and Order entered July 29, 2022, p. 71.

A. No. The circularity of this recommendation defeats or eliminates the need to appraise plant assets since the indicated value of net cost of the plant assets is simply the net original cost of the plant assets under Mr. Garrett's recommendation. If this was the appropriate or correct method to value assets, then an original cost less depreciation analysis would be the only method needed to value assets. However, the value of the investment in plant and equipment for the City's wastewater system assets is being determined in these proceedings based upon a standard of value of FMV, not a standard of value of original cost.[15]

The Commission has previously rejected the use of original cost as the basis of FMV in prior decisions:

> We note that the original cost study, which is reviewed to determine the reasonableness of a utility's acquisition adjustment claim in a future base rate proceeding, consistent with Section 1327(a) of the Code, 66 Pa. C.S. § 1327(a), and the Commission's policy statement at 52 Pa. Code § 69.721, regarding acquisitions of viable water and wastewater systems, is not applicable in a Section 1329 proceeding.[16]
>
> Historically, regulated utilities under the Commission's jurisdiction have predominantly followed a standard and practice of using depreciated original cost value (with various adjustments) as the rate base in which they may recover their capital investment and earn a rate of return on the unrecouped asset value or rate base. However, Section 1329 establishes fair market value, not original cost, as the ratemaking rate base for municipal transactions. Under Section 1329, it is fair value, ratemaking rate base that, ultimately, will be used for ratemaking purposes, rather than being constrained by depreciated original cost value. As indicated by Aqua, "[t]he OCA's proposed adjustments to the Income Approach are also contrary to the language in McCloskey where the Commonwealth Court clearly stated that 'Section 1329 allows a private utility to acquire a government utility's assets at its fair market value rather than at the original

[15] Pratt, Shannon P. "Defining Standards of Value." Valuation 34, no. 2, June 1989. http://www.appraisers.org/docs/default-source/college-of-fellows-articles/defining-standards-of-value.pdf .

[16] *Application of Aqua Pennsylvania Wastewater, Inc. – Limerick Township*, Docket No. A-2017-2605434, Opinion and Order entered November 8, 2017, p. 30.

cost of assets minus the accumulated depreciation and then add that amount to rate base.'" Aqua R.B. at 6 (citing McCloskey, 195 A.3d at 1055).[17]

**Q. IS MR. GARRETT'S DISCOUNT RATE SHOWN ON OCA EXHIBIT DJG-4 OF HIS DIRECT TESTIMONY AN APPROPRIATE DISCOUNT RATE TO USE FOR FAIR MARKET VALUATION PURPOSES?**

A. No. Mr. Garrett's 5.48% discount rate (cost of capital) shown on OCA Exhibit DJG-4 and developed on OCA Exhibit DJG-6 is not appropriate and is not determined in accordance with accepted valuation practice for five reasons. First, Mr. Garrett developed his 5.48% discount rate based on methods used by witnesses who provide testimony before the Commission concerning fair rate of return on original cost rate base; whereas discount rates used in the Income Approach to valuation under a standard of value of FMV are not calculated in this manner (as discussed above). Second, Mr. Garrett's capitalization of earnings method (OCA Exhibit DJG-4) incorporates actual revenues and EBIT reflecting current ownership, current rates, and current operations as a municipality. Accordingly, Mr. Garrett's discount rate should similarly be based on a municipality's discount rate, not an investor-owned discount rate, so that the cash flows and discount rates are coordinated. This mixing and matching by Mr. Garrett is inappropriate and inconsistent.

Third, Mr. Garrett used book capitalization ratios (i.e., 47% debt and 53% equity ratios) calculated from a balance sheet. Book capitalization ratios are only used in rate proceedings, whereas the use of market value capitalization ratios at the valuation date (i.e., December 31, 2021) are in accordance with accepted valuation practice and used for fair

[17] *Application of Aqua Pennsylvania Wastewater, Inc. – Lower Makefield Township*, Docket No. A-2021-3024267, Opinion and Order entered January 13, 2022, p. 69.

market valuation purposes.[18] For a municipality, the appropriate capitalization ratio is always 100% debt because debt is the only major source of capital available to finance an acquisition. Although a municipality likely carries equity on its books (balance sheet), all existing equity is already invested in other assets and, therefore, cannot be used to finance an acquisition.[19]

Fourth, Mr. Garrett used an embedded cost of debt of 4.0% or the historical cost of all debt issuances outstanding (OCA Exhibit DJG-7) of his comparison companies. An embedded cost of debt is only used in rate proceedings, whereas the use of the marginal cost of debt at the valuation date (*i.e.*, December 31, 2021) is in accordance with accepted valuation practice and used for FMV purposes.[20] For a municipality, the appropriate debt cost rate is the current municipal revenue bond rate at the valuation date.

Fifth, Mr. Garrett's equity cost rate was not determined at the valuation date (i.e., December 31, 2021) in accordance with accepted valuation practice and used for FMV purposes. Rather, Mr. Garrett's equity cost rate was calculated over a period from November 26, 2024, to January 10, 2025 (OCA Exhibits DJG-8 and DJG-10), which does not comport with the requirements of 66 Pa. C.S. § 1329 nor comply with the Uniform Standards of Professional Appraisal Practice. A FMV appraisal is determined on a stated

[18] Both the American Society of Appraisers, ASA Business Valuation Standards, 2009, and the National Association of Certified Valuation Analysts, Professional Standards, 2007, use the same definition: "Weighted Average Cost of Capital (WACC). The cost of capital (discount rate) determined by the weighted average, at market values, of the cost of all financing sources in the business enterprise's capital structure."

[19] For example, when a municipal or government entity, such as the Commonwealth of Pennsylvania, finances construction of a road or bridge, it only considers the marginal debt cost despite having "equity" reflected on its books (balance sheet).

[20] For example, see http://www.investinganswers.com/financial-dictionary/financial-statement-analysis/weighted-average-cost-capital-wacc-2905. *Also see* http://www.wallstreetmojo.com/weighted-average-cost-capital-wacc/ , or http://accountingexplained.com/misc/corporate-finance/wacc .

valuation date, not for a period of time. Gannett Fleming's stated valuation date was December 31, 2021.

Therefore, based on the aforesaid, I believe Mr. Garrett's 5.48% discount rate (cost of capital) shown on OCA Exhibit DJG-4 and developed on OCA Exhibit DJG-6 is unreasonable, not appropriate to use to determine the value of the Wastewater System and should not be adopted by the Commission.

## VI. MARKET APPROACH

**Q. ON PAGES 6 TO 16 OF MR. GARRETT'S DIRECT TESTIMONY, HE EXPLAINS HIS ADJUSTMENTS TO THE MARKET APPROACH. PLEASE DESCRIBE GANNETT FLEMING'S MARKET APPROACH.**

A. Gannet Fleming's Market Approach is explained on pages 41 to 51 of the appraisal.[21] The Market Approach is defined as, "a general way of determining a value indication of a business, business ownership interest, security or intangible asset by using one or more methods that compare the subject to similar businesses, business ownership interests, securities or intangible assets that have been sold."[22] There are two methods of doing the Market Approach to valuation: the market multiples method; and the selected transaction method. First, Gannett Fleming determined the value of the Wastewater System's 3,259 domestic customers using the market multiples method and the selected transaction method. Second, Gannett Fleming determined the value of the Wastewater System's 3,760 ultimate wholesale customers using the selected transaction method. Finally, Gannett Fleming added the value of the Wastewater System's 3,259 domestic customers to the

[21] *See* Application, Exhibit R, Gannett Fleming Appraisal.
[22] American Society of Appraisers, *ASA Business Valuation Standards*, 2022, BVS-V Market Approach to Business Valuation, p. 12.

value of the Wastewater System's 3,760 ultimate wholesale customers in reaching our Market Approach conclusion.

**Q. DID MR. GARRETT FOLLOW A SIMILAR PROCEDURE TO ADJUST GANNETT FLEMING'S MARKET APPROACH?**

A. No.

**Q. PLEASE EXPLAIN THE DIFFERENCES BETWEEN MR. GARRETT'S MARKET APPROACH AND GANNETT FLEMING'S MARKET APPROACH.**

A. First, Mr. Garrett did not use the market multiple method in reaching his Market Approach recommendation. He discusses the market multiple method on pages 12 to 16, but he did not use its results, while Gannett Fleming determined the value of the Wastewater System's 3,259 domestic customers using the market multiples method and the selected transaction method.[23] Second, Mr. Garrett used different transactions in his application of the selected transaction method than were used by Gannett Fleming. Gannett Fleming relied primarily on the integrated systems (excluding wholesale) transactions[24], while Mr. Garrett used the collection/distribution assets selected transactions, the integrated systems (excluding wholesale) transactions, and the integrated systems with wholesale transactions.

Third, Mr. Garrett only used *ex-ante* data, taken from page 2 of Exhibit 18 of the Gannett Fleming appraisal, in his application of the selected transaction method, while Gannett Fleming used both *ex-ante* data and *ex-post* data (pages 2 and 3 of Exhibit 18).[25] The Commission agreed with Gannett Fleming's use of both *ex-ante* and *ex-post* data in

[23] *See* Application, Exhibit R, Gannett Fleming Appraisal, pp. 44 and 48.
[24] *See* page 1 of Exhibit 18 from the Application, Exhibit R, Gannett Fleming Appraisal.
[25] *See* Application, Exhibit R, Gannett Fleming Appraisal, p. 47.

the selected transaction method in its decision in East Whiteland[26] and rejected Mr. Garrett's proposed adjustments. Gannett Fleming used *ex-ante* data supplemented by *ex-post* data in those instances where limited ex-ante data existed, whereas Mr. Garrett relied exclusively on *ex-anti* data. In this case, the *ex-ante* data for the Asset Items only exists for 50% of the transactions used by Mr. Garrett, which is why Gannett Fleming used both *ex-ante* and *ex-post* data.

Fourth, Mr. Garrett used <u>averages</u> of the values suggested by Capital Items and Demographics Items in his application of the selected transaction method, while Gannett Fleming used the <u>midpoint and medians</u> of the values suggested by Asset Items and Demographics Items.[27] Averages are typically not used in appraisals. Appraisal practitioners use almost exclusively measures of central tendency such as medians and midpoints.

Fifth, Mr. Garrett gave 60% weight to the values suggested by Capital Items and 40% weight to his Demographics Items in his application of the selected transaction method, while Gannett Fleming gave 25% weight to the values suggested by Asset Items and 75% weight to the Demographics Items.[28] Sixth, **Mr. Garrett only calculated the value of the Wastewater System's 3,259 domestic customers** in his application of the selected transaction method which is the basis for his Market Approach conclusion, while Gannett Fleming separately determined the value of the Wastewater System's 3,259

[26] *Application of Aqua Pennsylvania Wastewater, Inc. – East Whiteland Township*, Docket No. A-2021-3026132, Opinion and Order entered July 29, 2022, pp. 78-80.
[27] *See* page 1 of Exhibit 18 from the Application, Exhibit R, Gannett Fleming Appraisal.
[28] *See* pages 6-7, 31-33, 44 and 52 of the Application, Exhibit R, Gannett Fleming Appraisal, which explain our concerns regarding the values suggested by the Asset Items (i.e., original cost new ("OCN") and original cost new less depreciation ("OCNLD")). Also see page 24 of this testimony for a summary of the concerns.

domestic customers and then separately determined the value of the Wastewater System's 3,760 ultimate wholesale customers in reaching our Market Approach conclusion.[29]

It should be noted that Mr. Garrett only mentioned the first two differences listed above in his Direct Testimony. The other four differences listed above were made without mention or justification by Mr. Garrett.

**Q. DO MR. GARRETT'S RECOMMENDED ADJUSTMENTS TO THE MARKET APPROACH MEET A STANDARD OF VALUE OF FMV?**

A. No. For the reasons discussed previously in my rebuttal testimony, Mr. Garrett's recommendations are unreasonable, do not meet a standard of value of FMV and are in direct violation of Section 1329 of the Public Utility Code. Further, Mr. Garrett's Market Approach recommendation does not include the value of the Wastewater System's 3,760 ultimate wholesale customers. Therefore, Mr. Garrett's Market Approach recommendation cannot be relied upon in these proceedings.

## VII. MARKET MULTIPLES METHOD

**Q. ON PAGE 13 OF MR. GARRETT'S DIRECT TESTIMONY, HE STATES, "THE ADJUSTMENTS MR. WALKER MAKES TO HIS RESULTS UNDER THE MARKET MULTIPLES METHOD ARE BASED IN PART ON HIS CONCLUSORY AND UNSUPPORTED ASSUMPTIONS THAT THE BEAVER FALLS SYSTEM IS RISKIER THAN THE PROXY GROUP SIMPLY BECAUSE OF ITS RELATIVELY SMALL SIZE." IS MR. GARRETT'S ASSERTION TRUE?**

[29] *See* Application, Exhibit R, Gannett Fleming Appraisal, pp. 50-51.

A. No. The size of the Wastewater System is only one of several reasons that the Wastewater System is riskier than the proxy group.[30] The downward adjustment (i.e., lower value) of the financial multiples applicable to the Wastewater System under the market multiple method is based on the evidence found, and consistent with the application of the market multiple method:

> Several valuation ratios may be selected for application to the subject company. These ratios may **require adjustment for differences in qualitative and quantitative factors between the guideline public companies and the subject**. . . .
>
> **Adjustment may be necessary to the ratios or values for factors relating to the subject interest** that may not have been considered earlier in the appraisal, such as: . . .
>
> **Size**, depth of management, **diversification of markets**, products and services, and **relative growth and risk**.[31]

On page 15 of Mr. Garrett's direct testimony he concludes, "[f]or all of these reasons, Mr. Walker's claims that the Beaver Falls system is risker than the proxy group and should thus somehow receive an upward adjustment in valuation, is unwarranted and should be rejected." However, what Mr. Garrett fails to understand is by **downward adjusting the financial multiples applicable to the Wastewater System** under the market multiple method due to risk differences, **the Gannett Fleming appraisal lowered the appraised value of the Wastewater System assets**. Accordingly, Mr. Garrett's statement on page 15 is misleading at its core.

[30] *See* Application, Exhibit R, Gannett Fleming Appraisal, pp. 9, 16, and 18-22. The Wastewater System is riskier than the proxy group due to its: low population growth projection; low employment growth projection; rates have not considered a fair rate of return nor taxes; older plant; small size; low capital investment; low revenue and earnings before interest, taxes, depreciation and amortization ("EBITDA") growth; and low profit margins.

[31] American Society of Appraisers, *ASA Business Valuation Standards*, 2022, SBVS-1 Guideline Public Company Method, p. 34. (Emphasis added). The guideline public company method is a different name for the market multiples method.

**Q. ON PAGES 15 AND 16 OF MR. GARRETT'S DIRECT TESTIMONY, HE QUESTIONS THE REASONABLENESS OF THE WEIGHTINGS APPLIED TO THE INDICATIONS OF VALUE FOUND IN THE MARKET MULTIPLES METHOD. ARE THE WEIGHTINGS GANNETT FLEMING APPLIED TO THE INDICATIONS OF VALUE FOUND IN THE MARKET MULTIPLES METHOD REASONABLE?**

A. Yes. Gannet Fleming explained our concerns regarding the values suggested by the Capital Items on pages 6-7, 31-33, 44 and 52 of its appraisal.[32] Using different weightings is consistent with the evidence found, and consistent with the application of the market multiple method,

> One or more indications of value may result from the use of the Guideline Public Company Method. The **appraiser must consider the relative importance or weight accorded to each of the indications of value** used in arriving at the opinion or conclusion of value.[33]

## VIII. SELECTED TRANSACTION METHOD

**Q. EARLIER YOU SAID MR. GARRETT USED DIFFERENT TRANSACTIONS IN HIS APPLICATION OF THE SELECTED TRANSACTION METHOD THAN WERE USED BY GANNETT FLEMING. PLEASE EXPLAIN THE DIFFERENCES IN THE TRANSACTIONS USED.**

A. The Wastewater System serves both 3,259 domestic and 3,760 ultimate wholesale customers. The Wastewater System's provides 3,259 domestic customers both collection and treatment service and 3,760 ultimate wholesale customers treatment service.

[32] *See* Application, Exhibit R, Gannett Fleming Appraisal. Also see page 24 of this testimony for a summary of the concerns.

[33] American Society of Appraisers, *ASA Business Valuation Standards*, 2022, SBVS-1 Guideline Public Company Method, p. 34. (Emphasis added). The guideline public company method is a different name for the market multiples method.

Accordingly, the system which provides the Wastewater System's 3,259 domestic customers is referred to as an integrated system, excluding wholesale. Therefore, Gannett Fleming's selection transaction method primarily used the Integrated, Excluding Wholesale Selected Transactions companies to determine the value of the Wastewater System's 3,259 domestic customers.[34] Mr. Garrett used all of the selected transactions, which included the collection/distribution selected transactions, the integrated systems (excluding wholesale) transactions, and the integrated systems with wholesale transactions. Since Mr. Garrett used an average of his selected transactions, his recommendation gave 60% weight to collection/distribution selected transactions, 30% weight to the integrated systems (excluding wholesale) transactions, and 10% weight to the integrated systems with wholesale transactions. Accordingly, Mr. Garrett's selected transactions recommendation, and Market Approach conclusion, is based primarily on transactions of entities that did not provide wastewater treatment (i.e., collection/distribution selected transactions).

**Q. ON PAGE 7 OF MR. GARRETT'S DIRECT TESTIMONY, HE STATES, "WITHOUT A RATIONAL EXPLANATION, MR. WALKER SIMPLY APPLIES A 75% WEIGHTING TO THE HIGHER DEMOGRAPHIC STATISTICS, AND ONLY A 25% WEIGHTING TO THE CAPITAL STATISTICS. MR. WALKER'S APPLICATION OF THESE WEIGHTINGS IS ARBITRARY AND LACKS ANY**

[34] Gannett Fleming first determined the value of the Wastewater System's 3,259 domestic customers using the market multiples method and the selected transaction method. Then Gannett Fleming determined the value of the Wastewater System's 3,760 ultimate wholesale customers using the selected transaction method. At that point, Gannett Fleming added the value of the Wastewater System's 3,259 domestic customers to the value of the Wastewater System's 3,760 ultimate wholesale customers in reaching their Market Approach conclusion for the Wastewater System's 7,019 customers (3,259 + 3,760 = 7,019).

**MEANINGFUL SUPPORT, AS FURTHER DISCUSSED BELOW." IS MR. GARRETT'S ASSERTION TRUE?**

A. No. First, Gannett Fleming documented what the results would be if equal weighting was given to the Asset Items and Demographics Items on page 44 (market multiples method) and on page 48 (selected transaction method) of our appraisal.[35] Second, Gannett Fleming explained our concerns regarding using the Asset Items on pages 6-7, 31-33, 44 and 52 of our appraisal.[36] Our concerns include: plant accounts with 84-year old assets which reflect little to no retirements (pages 6-7); measures of the Wastewater System's OCN, OCNLD, RCN and replacement cost new less depreciation ("RCNLD") on a per customer basis being below norm (pages 31-33); measures of the Wastewater System's OCN, OCNLD on a per customer basis being below norm (page 44); and Asset Items not accounting for the intangible value of ultimate wholesale customers because the Asset Items have the same value regardless of whether or not treatment service is provided to the 3,760 ultimate wholesale customers (page 52). To remedy our concerns regarding the Asset Items we simply gave the Asset Items less weight (i.e., 25%) in reaching our conclusion. Our weighting given Asset Items and Demographic Items reflects our concerns regarding the Asset Items, and are consistent with the application of the selected transaction method:

> The computation of the valuation ratios, which may be derived by relating prices in guideline transactions **to the appropriate underlying** financial, **operating, or physical data** of the respective companies (or interests) involved in the transactions . . .
>
> One or more indications of value may result from the use of the Guideline Transactions Method. The **appraiser must consider the relative**

[35] *See* Application, Exhibit R, Gannett Fleming Appraisal.
[36] *See* Application, Exhibit R, Gannett Fleming Appraisal.

**importance or weight accorded to each of the indications of value used in arriving at the opinion or conclusion of value**.[37]

**Q. ON PAGE 8 OF MR. GARRETT'S DIRECT TESTIMONY, HE STATES, "IF ALL OF THESE TRANSACTIONS ARE CONSIDERED, AND AN EQUAL WEIGHTING IS APPLIED TO EACH TRANSACTION WITHOUT ANY UPWARDLY BIASED DECISIONS OR ASSUMPTIONS, THE INDICATED VALUATION USING MR. WALKER'S OWN TRANSACTIONS AND METRICS IS SIGNIFICANTLY LESS THAN HIS ULTIMATE PROPOSED VALUATION UNDER THE MARKET APPROACH." IS MR. GARRETT'S ASSERTION TRUE?**

A. No. If we followed Mr. Garrett's recommendation of using all the transactions in reaching our conclusion, our conclusion would have been based primarily on transactions of the entities that did not provide wastewater treatment (i.e., collection/distribution selected transactions) since the collection/distribution selected transactions represent 60% of all transactions used by Mr. Garrett. However, since our initial application of the selection transaction method was intended to determine the value of the Wastewater System's 3,259 domestic customers which receive both collection and treatment service, we primarily used the Integrated, Excluding Wholesale Selected Transactions companies to determine the value of the Wastewater System's 3,259 domestic customers. Our selection of the Integrated, Excluding Wholesale Selected Transactions companies to determine the value of the Wastewater System's 3,259 domestic customers is based on its purpose, and consistent with the application of the selected transaction method:

[37] American Society of Appraisers, *ASA Business Valuation Standards*, 2022, SBVS-2 Guideline Transactions Method, p. 36. (Emphasis added). The guideline transaction method is a different name for the selected transactions method.

> When using the Guideline Transactions Method, a thorough, **objective search for transactions of interests in companies similar to the company being valued is required** to establish the credibility of the valuation analysis.[38]

**Q. ON PAGE 11 OF MR. GARRETT'S DIRECT TESTIMONY, HE SUGGESTS, "INSTEAD OF USING THE NEGOTIATED PURCHASE PRICE FOR THE RATIO CALCULATION OF EACH METRIC, THE COMMISSION-APPROVED RATE BASE COULD HAVE BEEN USED INSTEAD." IS MR. GARRETT'S SUGGESTION REASONABLE?**

A. No. Mr. Garrett's suggestion of substituting the purchase price paid with the fair market value rate base approved by the Commission was recommended by OCA in both Cheltenham[39] and in East Whiteland[40] and it was rejected by the Commission. As recognized by the Commission in Cheltenham, the correct purchase price for Limerick of $75 million should be used in the selected transaction method in lieu of the Commission-determined ratemaking rate base value, because $75 million was the amount bid and paid by the buyer. A Commission-determined ratemaking rate base value for an entity does not change the price bid and paid by a buyer.

The purchase prices used in the selected transaction method are based on the purchase price determined by buyer and seller, not the Commission-determined ratemaking rate base value. The valuation approach is the Market Approach based on market values, not the "PUC ratemaking rate base value approach." There is no authoritative source, nor

[38] American Society of Appraisers, *ASA Business Valuation Standards*, 2022, SBVS-2 Guideline Transactions Method, p. 35. (Emphasis added). The guideline transaction method is a different name for the selected transactions method.
[39] *Application of Aqua Pennsylvania Wastewater, Inc. – Cheltenham Township*, Docket No. A-2019-3008491, Opinion and Order entered November 5, 2019, pp. 60-61.
[40] *Application of Aqua Pennsylvania Wastewater, Inc. – East Whiteland Township*, Docket No. A-2021-3026132, Opinion and Order entered July 29, 2022, pp. 81-83.

Commission precedent, which supports use of Commission-determined ratemaking rate base value in the Market Approach.

**Q. ON PAGE 11 OF MR. GARRETT'S DIRECT TESTIMONY, HE CLAIMS, "ARGUABLY, CAPITAL STATISTICS ARE MORE DIRECTLY LINKED TO INDICATED VALUATIONS THAN STATISTICS SUCH AS POPULATION AND CUSTOMERS. IN FACT, VALUATION METHODS SUCH AS THE DISCOUNTED CASH FLOW ("DCF") METHOD (DISCUSSED LATER IN MY TESTIMONY) ONLY CONSIDER FINANCIAL METRICS, AND DO NOT ACCOUNT FOR ANY DEMOGRAPHIC METRICS." IS MR. GARRETT'S CLAIM TRUE?**

A. No. Mr. Garrett's direct testimony only discusses the DCF method in the context of the cost of capital. The DCF method, in the context of the cost of capital, is also used primarily in rate proceedings. The variables used in the DCF method, in the context of the cost of capital, are growth of earnings or dividends per share, dividends per share and stock price. Accordingly, there no "capital statistics" reflected in the DCF method, in the context of the cost of capital.

Similarly, if Mr. Garrett's direct testimony is referring to the Income Approach as the "DCF," then his argument is just as faulty since Mr. Garrett's Income Approach (OCA Exhibit DJG-5) only involves revenues, EBIT, income taxes, depreciation expense, and capital expenditures. Accordingly, there are no "capital statistics" reflected in the DCF method, in the context of the Income Approach. Accordingly, Mr. Garrett's direct testimony does not support the notion that "capital statistics are more directly linked to indicated valuations than statistics such as population and customers."

## IX. RECOMMENDED WEIGHTING

**Q. ON PAGE 39 OF MR. GARRETT'S DIRECT TESTIMONY, HE STATES, "THE UVES' DECISION TO USE A SIGNIFICANTLY LOWER WEIGHTING FOR THE LOWEST OF THEIR THREE INDICATED VALUATIONS APPEARS TO BE A DECISION THAT IS INFLUENCED BY BIAS, RATHER THAN ONE THAT IS DESIGNED TO PRODUCE THE FAIREST OVERALL VALUATION." IS MR. GARRETT'S ASSERTION TRUE?**

A. No. First, Mr. Garrett and I were involved in the Borough of Shenandoah (Docket No. A-2022-3034143) Section 1329 proceeding. As such, Mr. Garrett should be aware that Gannett Fleming applied identical weightings in that proceeding to the three approaches to valuation in arriving at our estimate of the FMV conclusion as we recommend for the Wastewater System. However, in the Borough of Shenandoah Section 1329 proceeding, the Cost Approach produced the highest indication of value yet was given the least weighting (25%).

Second, Gannett Fleming explained our concerns regarding using the Cost Approach throughout our appraisal[41] and we summarize them on page 24 of this testimony. To remedy our concerns regarding the Cost Approach we simply gave the Cost Approach less weight (i.e., 25%) in reaching our conclusion. Our weighing given the Cost Approach reflects our concerns regarding the Cost Approach, and are consistent with the application of conclusion of value;

> The selection of and **reliance on appropriate methods and procedures depends on the judgment of the appraiser and not on any prescribed formula**. . .

[41] *See* Application, Exhibit R, Gannett Fleming Appraisal. Also see page 24 of this testimony for a summary of the concerns.

> The appraiser must **use informed judgment when determining the relative weight to be accorded to indications of value reached** . . .[42]

**Q. WOULD YOU RECOMMEND USING THE WEIGHTINGS MR. GARRETT APPLIED TO HIS RESULT OF THE VALUATION APPROACHES SHOWN?**

A. No. Mr. Garrett did not conduct an appraisal. Mr. Garrett recommended substantial changes to each valuation approach. Mr. Garrett does not justify the weightings he applied to the valuation approaches shown. An appraisal is an opinion of FMV and is not a "mechanical" process. When information changes, opinions, weightings, methodologies, and techniques change as well.

By attempting to analyze and adjust Gannett Fleming's appraisal, Mr. Garrett is doing no more than selectively choosing the parts of the appraisal that are to his liking (i.e., lowest value available) while jettisoning those parts that are not. Depending on the quantity and quality of the results, weights applied under FMV differ, but Mr. Garrett did not do this.

## X. CONCLUSION

**Q. IS THERE ANYTHING PRESENTED IN MR. GARRETT'S DIRECT TESTIMONY THAT WOULD RESULT IN YOU ALTERING YOUR FMV APPRAISAL OF THE WASTEWATER SYSTEM'S ASSETS?**

A. No, there was nothing presented in Mr. Garrett's direct testimony which would result in our changing our FMV appraisal of the Wastewater System.

[42] American Society of Appraisers, *ASA Business Valuation Standards*, 2022, BVS-VI Reaching a Conclusion of Value, p. 14. (Emphasis added).

**Q. DOES THAT CONCLUDE YOUR REBUTTAL TESTIMONY?**

A. Yes, it does. However, I reserve the right to supplement my testimony as additional issues arise during this proceeding.

**OF**

**SANDRA WILKINS**

**CHIEF FINANCIAL OFFICER OF BEAVER FALLS**

**CITY OF BEAVER FALLS**

**February 24, 2025**

CITY OF BEAVER FALLS, BEAVER COUNTY
REBUTTAL TESTIMONY OF SANDRA WILKINS, CFO

**TABLE OF CONTENTS**

I. INTRODUCTION ..... 1

II. ABILITY OF THE CITY TO AFFORD TO RUN THE SYSTEM ..... 2

III. CONCLUSION ..... 4

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Sandra Wilkins. My business address is 715 15th Street, Beaver Falls, PA 15010.

**Q. In what capacity are you affiliated with the City of Beaver Falls?**

A. I am the Chief Financial Officer ("CFO") of the City of Beaver Falls ("City" or "Beaver Falls"). I also serve as the certified tax collector in my role as CFO.

**Q. Have you submitted any other testimony in this proceeding?**

A. Yes. I submitted Direct Testimony in this proceeding with Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") updated Application on December 23, 2024.

.

**Q. On whose behalf are you testifying in this proceeding?**

A. I am testifying on behalf of the City, and in cooperation and support of Aqua Pennsylvania Wastewater, Inc.'s ("Aqua") application to purchase the City's wastewater collection, conveyance, and treatment system (the "System").

**Q. Please describe the purpose of your rebuttal testimony.**

A. The purpose of my testimony is to respond to the testimony provided by the Office of Consumer Advocate ("OCA") Statement No. 1, Direct Testimony of Nicholas A. DeMarco with regard to the ability of the City to afford to run the System in an adequate manner.

## II. ABILITY OF THE CITY TO AFFORD TO RUN THE SYSTEM

**Q. Mr. DeMarco argues that the City can afford to run the System citing that it has completed projects without funding from grants and loans and implying it can continue to do so (OCA St. No. 1 at 8). Is this accurate?**

A. No. There has not been any significant work done on the System in years. The City does not have money to do any capital projects at this time nor does it anticipate having any money to do any projects in the future without a dramatic and unforeseen change in the finances of the City. In the past, the City financed capital projects for the System through the use of bond proceeds. Those bonds are still outstanding and the City is barely able to make the debt payments on those bonds. The City is operating on a month-to-month basis financially and owes money to many vendors. If this sale is not approved and the City does not receive the sale proceeds, even if the City raises rates significantly, it will be unable to pay all of its bills, let alone take on new capital projects for the System. As I already testified, the City had to use the $2,000,000 deposit monies from Aqua as provided under the APA to balance our budget. Without those monies we would not have been able to even make payroll.

**Q. Mr. DeMarco implies that the City can adequately operate the System if it raises rates and uses Pennsylvania Infrastructure Investment Authority ("PENNVEST") grants and loans. Is that accurate?**

A. No. The City is financially distressed and has other dire problems it is contending with in addition to the operation of the System. The City's ability to operate the System should not be viewed in a vacuum. City management is so consumed with the basics that we do

not even know how to begin to obtain PENNVEST financing. The City would have to hire a financial advisor to assist with the applications and the City has no money to do that. Furthermore, obtaining a PENNVEST grant would only be a band-aid on a much bigger problem, which is that the City does not have the financial resources to address its many problems and continue to properly operate its wastewater system for the customers in the City and surrounding communities that rely upon it. A PENNVEST loan would be another band-aid, but those debt payments would have to be passed onto the customers through rate increases much higher than the 3% we have budgeted for. The annual 3% increases were never intended to cover new debt or capital improvements. Mr. DeMarco spends much of his testimony objecting to the rate increases our customers would have to pay if Aqua owns the System, but suggests incurring debt which would cause rate increases that could be avoided if Aqua ran the System. As I stated in my direct testimony, the overall financial analysis of the impact on the City and thus the City's customers as described in Exhibit A to my direct testimony shows that there is a net public financial benefit if the System is sold to Aqua.

**Q. Do you have any other feedback to Mr. DeMarco's testimony?**

A. Mr. DeMarco's testimony fails to address the City's long-standing financial difficulties, which are a critical reason behind the City agreeing to sell the System. He also overlooks the significant managerial challenges that accompany these financial pressures. These challenges can be ameliorated if the City receives the proceeds from the sale and if Aqua takes over the operations of the System.

Additionally, Mr. DeMarco does not acknowledge the severe financial consequences the City will face if the sale is not approved. The City will be required to repay the $2,000,000 deposit to Aqua and will be burdened with hundreds of thousands of dollars in professional fees and expenses. Even if the City is able to obtain PENNVEST financing and drastically increase rates to cover all of those costs and to maintain the System at its current (unacceptable) level, the City still won't have the necessary funds to provide essential services to our residents or meet payroll. Furthermore, raising rates doesn't solve the problem of not being able to find expert operators to efficiently and safely run the System, nor will it provide those of us working hard to manage the City with the time or expertise required to run the System properly. Our citizens deserve a well-managed, safe wastewater system, which increased rates and PENNVEST loans and grants alone cannot deliver.

## III. CONCLUSION

**Q. Does this conclude your rebuttal testimony?**

A. Yes, it does. However, I reserve the right to supplement my rebuttal testimony as additional issues and facts arise during the course of this proceeding.

# AQUA STATEMENT NO. 9-R

# REBUTTAL TESTIMONY OF RITA F. BLACK

**With Regard To:**
**Low-Income Programs**

**February 24, 2025**

**TABLE OF CONTENTS**

I. INTRODUCTION ..... 1
II. RESPONSE TO OCA WITNESS DEMARCO ..... 2
III. CONCLUSION ..... 7

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Rita F. Black, and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Essential Utilities, Inc. ("Essential") as the Director of Community Assistance Programs. In this role, I lead assistance programs for Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua" or the "Company"), and Peoples Natural Gas Company LLC ("Peoples"), as well as the regulated utilities of Essential operating in other states.

**Q. Have you previously provided testimony in this proceeding?**

A. No.

**Q. What is the purpose of your rebuttal testimony?**

A. I would like to respond to the direct Ttestimony of Mr. Nicholas A. DeMarco, on behalf of the Office of Consumer Advocate ("OCA"). Specifically, I will respond to OCA witness DeMarco's testimony regarding Aqua's low-income assistance programs and the benefits that would be afford to the customers of the City of Beaver Falls ("City" or "Beaver Falls") if the Pennsylvania Public Utility Commission ("Commission") approves Aqua's contemplated acquisition of the wastewater system of the City (the "System").

**Q. Are you sponsoring any exhibits with your rebuttal testimony?**

A. Yes. Attached to my Rebuttal Testimony is Aqua Exhibit RFB-1R.

## II. RESPONSE TO OCA WITNESS DEMARCO

**Q. Does OCA witness DeMarco testify regarding the benefits of Aqua's low-income programs to Beaver Falls customers?**

A. Yes, he does. In his direct testimony, Mr. DeMarco responded to the supplemental direct testimony of City Manager, Charles R. Jones, Jr. regarding the benefit of Aqua's low-income program to Beaver Falls customers. Mr. DeMarco also provided a table of calculated savings for various income levels.[1]

**Q. Do you have a response to OCA witness DeMarco's testimony on this topic?**

A. Yes. The information used by Mr. DeMarco regarding Aqua's current discount structure for the income-based Customer Assistance Program ("CAP") has recently changed. As a part of its 2024 Base Rate Case,[2] Aqua received approval to enhance its CAP discounts to further delineate its benefit tiers in order to provide greater benefits to those with the lowest income as delineated by tiers of income by Federal Poverty Level ("FPL").[3] And, the new discounts are applicable to the full usage bill, rather than the first 2,000 gallons. The discounts are as follows:

[1] DeMarco, Page 12, beginning on line 6.
[2] *See* Docket Nos. R-2024-3047822 and R-2024—3047823.
[3] *See Pa. PUC et. al. v. Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc.*, Docket Nos. R-2024-3047822 and R-2024-3047823 (Order entered Feb. 7, 2025) (approving Joint Petition for Settlement and, in particular, paragraphs 61-68 of the same).

| | **Wastewater** | **Wastewater** |
|---|---|---|
| | **Fixed Charge** | **Volumetric** |
| **Tier 1 (0 - 50% FPL)** | 85% | 85% |
| **Tier 2 (51 - 100% FPL)** | 75% | 75% |
| **Tier 3 (101 - 150% FPL)** | 65% | 50% |
| **Tier 4 (151 - 200% FPL)** | 50% | 25% |

With these enhanced discounts in place, Mr. DeMarco's Table Two should be revised as such:

| **Utility** | **Without Discount** | **0-50% FPL** | **51-100% FPL** | **101-150% FPL** | **151-200% FPL** |
|---|---|---|---|---|---|
| Aqua | $103.37 | $15.51 | $25.84 | $44.27 | $65.18 |
| Beaver Falls Current | $41.00 | $41.00 | $41.00 | $41.00 | $41.00 |
| Beaver Falls Projected 2025 | $55.00 | $55.00 | $55.00 | $55.00 | $55.00 |
| Beaver Falls Projected 2026-32 | $60.00 | $60.00 | $60.00 | $60.00 | $60.00 |
| Beaver Falls Projected 2033-34 | $63.00 | $63.00 | $63.00 | $63.00 | $63.00 |

As reflected in the table, customers below 100% FPL will be paying much less under Aqua's CAP than they pay under the current rates of Beaver Falls. Further, those customers with incomes between 101 and 150% will pay less under Aqua than Beaver Falls' future projected rates.

**Q. Are there other benefits to low-income households beyond monthly discounts, as those discounts have been updated as a part of the 2024 Base Rate Case?**

A. Yes. I would like to note that Aqua's bill discounts for low-income customers are not the only support provided to this population. In addition to bill discounts, Aqua also offers its Aqua Aid hardship fund to customers with incomes at or below 200% of the FPL. The hardship fund provides an important safety net to income-eligible households that find themselves in arrears due to difficult financial circumstances or perhaps a higher wastewater bill due to a water leak in their home. Income limits for participation in Aqua Aid are also 200% of the FPL. To my knowledge, the City does not have such a hardship fund for its customers.

Additionally, if an income-eligible Beaver Falls customer does not enroll in Aqua's CAP soon after becoming an Aqua customer, but later finds they have fallen behind on bills and need support, they can enroll in CAP at any time. When a customer enrolls, any balance owed at the time of enrollment is frozen. Customers earn a $40 credit towards that frozen balance each time they pay their monthly bill, allowing them to eliminate the debt through arrearage forgiveness over time. This further improves affordability for low-income households and provides a benefit to those households in Beaver Falls that they do not have today.

Aqua also can provide conservation kits to low-income households that are interested in reducing their water usage, which ultimately benefits their wastewater bills as well. These kits include items such as low flow shower heads, faucet aerators and dye tabs which can be helpful in identifying common minor household leaks.

**Q. Does OCA witness DeMarco advance any recommendations related to Aqua's low-income programs as a condition for approval of Aqua's acquisition of the System?**

A. Yes.

**Q. Please describe his recommendations regarding outreach to customers about Aqua's low-income programs.**

A. Mr. DeMarco correctly notes that unless Beaver Falls customers are aware about and enroll in the Aqua's low-income programs, they will not benefit.[4] He recommends that within 30 days after closing Aqua should be required to provide a letter to acquired customers about Aqua's low-income programs which would include eligibility requirements, a description of benefits and information on how to apply. He further recommends including this information within bills to Beaver Falls customers within 90 days of closing.

**Q. Do you agree with Mr. DeMarco's recommendations?**

A. Yes, I agree with these recommendations. Direct outreach to acquired system customer bases is an important component of any outreach plan as increasing awareness is the first step to encouraging participation.

[4] OCA St. No. 1, at 31.

**Q. Please describe OCA witness DeMarco's recommendation on tracking low-income eligible customers.**

A. Mr. DeMarco recommends that Aqua should report the number of eligible customers from the Beaver Falls service area who are enrolled in Aqua's CAP, and that the report should be provided to parties every six months until the conclusion of Aqua's next base rate case.

**Q. Do you agree with Mr. DeMarco's recommendation?**

A. This is a reasonable reporting recommendation. I would also note that Aqua has an advisory group, the Aqua Assistance Collaborative ("AAC"), of which OCA, Pennsylvania Utility Law Project ("PULP") and the Commission's Bureaus of Consumer Service and Communications are part. These participation reports should be included in the agenda for the next quarterly meeting of the AAC following the 90 day bill insert after closing is sent to discuss any trends or outreach opportunities for Beaver Falls' customers in particular that could be beneficial to pursue. This effort would not only focus on eligible Beaver Falls household enrollment, which is an important goal, but would also provide an opportunity as a case-study in outreach methods for Aqua's customers, to determine which approaches may be most beneficial.

**Q. Please describe OCA witness DeMarco's recommendation concerning contributions to Aqua's hardship fund.**

A. Mr. DeMarco recommends that if the Commission approves the transaction, it should be conditioned on Aqua making a contribution of $100,000 per year for the next five years after closing. He states that these contributions should not be recovered in rates and all

unspent funds at the end of the program year shall be rolled over and added to the budget for the hardship grant program in the following year(s).

**Q. Do you agree with Mr. DeMarco's recommendation.**

A. Ensuring adequate funding of the hardship fund is important and I understand the recommendation to increase the annual contribution in consideration of the Beaver Falls customers joining Aqua. While applications to Aqua Aid have increased with the Company's recent relaunch of the program under its new name, grant levels are within the margins of current funding levels. I believe a more appropriate increase to funding would be $30,000 per year for three years, starting where year 1 contribution amount will be within 60 days following closing. I do agree that any unused funds from this amount at the end of the program year should be rolled over an added to the budget of the hardship grant program in the following year(s). I also think monitoring funding levels is important to the sustainability of Aqua Aid and would support an annual review and discussion opportunity through the AAC, which would allow parties to provide input into future funding levels to ensure they are keeping pace with need.

## III. CONCLUSION

**Q. Does this conclude your rebuttal testimony?**

Yes, it does; however, I reserve the right to supplement my rebuttal testimony as additional issues and facts arise during the course of this proceeding.

V. CONCLUSION ..... 8

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is William C. Packer. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

**Q. Have you previously submitted testimony in this proceeding?**

A. Yes. I submitted direct testimony with the Aqua Pennsylvania Wastewater, Inc.'s ("Aqua or the "Company") Application with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on February 17, 2023. I also submitted supplemental direct testimony with Aqua's Amended Application filed with the Commission on March 28, 2024. In addition, I submitted rebuttal testimony on behalf of Aqua on February 24, 2025.

**Q. What is the purpose of your rejoinder testimony?**

A. My rejoinder testimony addresses portions of the surrebuttal testimonies of the Office of Consumer Advocate ("OCA") witness Nicholas A. DeMarco, the Commission's Bureau of Investigation and Enforcement ("I&E") witness Ethan H. Cline, and Office of Small Business Advocate ("OSBA") witness Rebecca K. Forbes, with respect to the proposed acquisition of the wastewater assets (the "System") of the City of Beaver Falls ("City" or "Beaver Falls") by Aqua. Much of the other parties' surrebuttal testimony repeats or restates arguments raised in their direct testimony, and the Company's rebuttal testimony fully responded to those arguments. My silence on a topic should not be understood to mean I am agreeing with the surrebuttal testimony of other witnesses.

**Q. Are you sponsoring any exhibits with your rejoinder testimony?**

A. No.

## II. RESPONSE TO SURREBUTTAL TESTIMONY OF OCA WITNESS DEMARCO

**Q. Mr. DeMarco continues to emphasize the resulting rate impacts to Beaver Falls' customers and to Aqua's existing customers if the acquisition is approved.[1] Please comment.**

A. Rate impacts are one component of the transaction. The potential impacts are known to all parties in this Application, and the customers of the City of Beaver Falls ("City" or "Beaver Falls") have been noticed accordingly. While emphasizing the potential rate impacts, Mr. DeMarco's testimony does not address all of the facts and circumstances presented as evidence in this proceeding. Notably, Mr. DeMarco's assessment of the evidence does not recognize the significant financial offsets that will be afforded to the City customers post sale, whether directly or indirectly. The bottom line is that their community is in a better fiscal position with a sale than without. That better fiscal position will enable the City's leadership to use those proceeds to the benefit of all tax-paying residents of the City. Furthermore, the Commission has all of the necessary authority to deal with any rate impacts being shifted to existing customers of the Company, or keep those impacts at the System alone. Clearly, as the Commission has done with prior systems that the Company has brought before it during base rate proceedings, the Commission will be able to look at the separate cost of service study ("COSS") that will be prepared for the System and make

[1] OCA St. No. 1SR, at pp. 3, 9-10.

informed decisions about the costs and rates to be charged, weighed against any benefits. These financial benefits, in addition to the operational and managerial betterments provided by Aqua, support this acquisition being found to provide substantial affirmative benefits. Moreover, the service provided by Aqua differs in a substantial and beneficial way from the service currently being provided by the City. In addition, as explained by other witnesses for the Company and the City, the System is in need of repairs and improvements, and the City's difficult financial situation will not allow it to address those needs. All told, Mr. DeMarco's limited rate impact analysis falls short of assessing whether affirmative public benefits will be achieved, and should be rejected.

**Q. Mr. DeMarco challenges your characterization of OCA's position regarding Section 1329 acquisitions and asserts that his direct testimony only addressed the specific transaction presented in this case.[2] Would you like to respond?**

A. The OCA's primary presentation of evidence on the rate impacts of the acquisition is completely one sided. The differences in the cost of service between an investor-owned utility versus a municipal enterprise are well known. Those cost differences exist whether a transaction is consummated under Section 1329 or a standard Section 1102 proceeding. While it is easy to suggest that the Company and City should or could negotiate a different deal, as Mr. DeMarco does in his surrebuttal testimony, the City chose to pursue selling the System at a competitive fair market value ("FMV") according to the law. Such is their fiduciary responsibility to their constituents. The reality is that this transaction has no

[2] OCA St. No. 1SR, at pp. 4-5.

tenable alternative to a Section 1329 transaction, for both the buyer and seller. Both have complied with the regulations and supported the purchase price, rate base, and substantial affirmative public benefits with evidence for the Commission to review and approve the transaction.

## III. RESPONSE TO SURREBUTTAL TESTIMONY OF I&E WITNESS CLINE

**Q. I&E witness Cline continues to assert that the separate COSS to be submitted in the first Aqua base rate case following an acquisition of the Beaver Falls System should show the Contributing Municipalities as a separate rate class.[3] Please respond.**

A. The Company agrees that the COSS that Aqua will present in the first base rate case that includes the Beaver Falls System would show the Contributing Municipalities as a separate rate class. My response to Mr. Cline in my rebuttal testimony was to indicate that while Aqua will present the Contributing Municipalities as a separate rate class in the COSS, the Company may propose something different than what the COSS indicates.

## IV. RESPONSE TO SURREBUTTAL TESTIMONY OF OSBA WITNESS FORBES

**Q. OSBA witness Forbes continues to argue that the Commission should either reject the proposed acquisition, or cap the ratemaking rate base, based upon the application of the Reasonableness Review Ratio ("RRR").[4] Please respond.**

A. Ms. Forbes' recommendation does not consider the financial, engineering, and operational benefits that come from this transaction which was discussed in Aqua's direct,

[3] I&E St. No. 2-SR, at pp. 3-4.
[4] OSBA St. No. 1-SR, at p. 2.

supplemental direct, and rebuttal testimony. I am also advised that Ms. Forbes' recommendation also violates the Public Utility Code. Ms. Forbes did not present an appraisal in this transaction, nor did she present any recommended adjustments to the appraisals. Ms. Forbes' recommendation is contrary to Section 1329 in that the ratemaking rate base per Section 1329(c)(2) "shall be the lesser of the purchase price negotiated by the acquiring public utility or entity and selling utility or the fair market value of the selling utility." The FMV of the System as set forth in Section 1329(g) is the "average of the two utility valuation expert appraisals conducted under subsection (a)(2)." Therefore, Ms. Forbes' recommended ratemaking rate base does not comply with the requirements of Section 1329.

**Q. Do you agree with Ms. Forbes' characterization of the purchase price in this transaction as an "excessive premium" because it exceeds her RRR calculation?[5]**

A. No. The Company disagrees with Ms. Forbes characterization of an "excessive premium." The purpose of FMV was to allow municipal entities to receive a fair value for their assets. This will undoubtedly create differences between the depreciated original cost ("DOC") amount and the FMV. The RRR guideline is a guide for the Commission in assessing transactions, however, as I have described previously in my rebuttal testimony, there are several factors that the Commission should consider in determining whether to apply the RRR to this transaction as discussed in its Final Supplemental Implementation Order.

[5] OSBA St. No. 1-SR, at pp. 2-3.

**Q. Please respond to Ms. Forbes' assertion that rejecting the proposed transaction "may ultimately leave these customers in a better position than if they were burdened with such a premium."[6]**

A. Ms. Forbes' unsupported assertion fails to even consider the substantial operational and financial concerns facing Beaver Falls and its residents. Ms. Forbes also fails to acknowledge or consider the financial public benefits that will accrue to the residents of Beaver Falls through this transaction described in the direct testimony of Sandra Wilkins through interest income from the proceeds, repayment of existing debt, and property tax reduction, among others. As described in the rebuttal testimonies of Sandra Wilkins and Charles Jones, Jr., the City is in serious financial distress and is struggling to ensure basic services are available. Ms. Forbes makes no mention of the impact that if this transaction is rejected, the detriments that will befall the City. Finally, in addition to the financial benefits that will come from this transaction, Ms. Forbes makes no mention of the operational deficiencies that are present in the System as described by Aqua witness Zach Martin in his direct, supplemental direct, and rebuttal testimonies.

**Q. Ms. Forbes asserts that Aqua has presented two different DOC calculations, which she views as "problematic."[7] Please respond.**

A. First, it is incorrect to claim that Aqua has presented two DOC calculations. Consistent with the provisions of Section 1329, Aqua and the City separately presented FMV calculations that each relied, in part, on separately determined cost calculations. Second,

[6] OSBA St. No. 1-SR, at p. 4.
[7] OSBA St. No. 1-SR, at pp. 4-5.

there is nothing surprising about the fact that these two independent UVE calculations derived different cost values. It is important to recognize that municipally-owned systems are not subject to the Uniform Systems of Account that govern public utility accounting of assets and accrued depreciation. Often, municipalities do not retain original cost records, nor do they engage the services of professionals to determine service lives and annual depreciation accruals. As a result, it is quite common that original cost and depreciation estimates will need to be recreated from available documentation, estimated plant ages and estimates of depreciation that should have been accrued. There are multiple accepted methods to derive those estimates.

**Q. Ms. Forbes recomputes a ratemaking rate base amount of approximately $10.8 million by applying the RRR multiple to the average of the two UVEs DOC results.[8] Do you agree that this should be the ratemaking rate base amount?**

A. I do not. For reasons I explained in my rebuttal testimony, this is not how the FMV of a system is determined as provided in Section 1329. I am advised by counsel that Section 1329(a)(3) specifically directs that: "Each utility valuation expert shall determine fair market value in compliance with the Uniform Standards of Professional Appraisal Practice employing the cost, market and income approaches." Ms. Forbes offers no market or income calculations to determine FMV. Ms. Forbes offers no adjustments to the appraisals or any reasoning specific adjustments as described in my rejoinder testimony, above. Moreover, even though Ms. Forbes recognizes the correct calculation in applying the RRR

[8] OSBA St. No. 1-SR, at p. 5.

multiple **as described by the PUC in its Final Supplemental Implementation Order**, Ms. Forbes continues to recommend that the ratemaking rate base should be limited to $8,454,113.[9] Not only does Ms. Forbes' recommendation not comply with Section 1329, but her recommendation also continues to misapply how the PUC has said the RRR multiple should be calculated.

## V. CONCLUSION

**Q. Does this conclude your rejoinder testimony?**

A. Yes, it does.

AQUA PENNSYLVANIA WASTEWATER, INC.
REBUTTAL TESTIMONY OF ZACH MARTIN

## I. INTRODUCTION

**Q. Please state your name and business address.**

A. My name is Zach Martin. My business address is 665 South Dock Street, Sharon, PA 16146.

**Q. Have you previously submitted testimony in this proceeding?**

A. Yes. I submitted direct testimony with the Aqua Pennsylvania Wastewater, Inc.'s ("Aqua" or the "Company") Application with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on February 17, 2023 (Exhibit W, Aqua Statement No. 3). I also submitted supplemental direct testimony with Aqua's Amended Application filed with the Commission on March 28, 2024 (Supplemental Exhibit W, Aqua Statement No. 3). In addition, I also submitted rebuttal testimony on behalf of Aqua on February 24, 2025 (Aqua Statement No. 3-R).

**Q. What is the purpose of your rejoinder testimony?**

A. The purpose of my rejoinder testimony is to respond to the surrebuttal testimony of the Office of Consumer Advocate ("OCA"), with respect to the current condition and operation of the wastewater assets (the "System") of the City of Beaver Falls ("City" or "Beaver Falls") and how Aqua's acquisition of the system will improve the condition and operation of the System.

**Q. Are you sponsoring any exhibits with your rejoinder testimony?**

A. No.

**Q. Please briefly summarize the positions of the other parties that you will address in your rejoinder testimony.**

A. I will respond to OCA Statement No. 1SR, the surrebuttal testimony of OCA witness Nicholas A. DeMarco. Despite being provided with clear evidence regarding the deteriorated and deteriorating conditions and operation of the System, which will worsen if the acquisition is not approved, OCA witness DeMarco continues to argue that there are not affirmative benefits to Aqua's acquisition of the System.

As an initial matter, however, I want to make clear that the scope of my rejoinder testimony is limited to responding to new issues or arguments raised by the other parties in their surrebuttal testimony. Much of the other parties' surrebuttal testimony repeats or restates the same arguments they raised in their direct testimony, and the Company's rebuttal testimony fully responded to those arguments. So, unless explicitly stated otherwise, my silence on a topic should not be understood to mean I am agreeing with the surrebuttal testimony of other witnesses.

## II. <u>RESPONSE TO SURREBUTTAL TESTIMONY OF OCA WITNESS DEMARCO</u>

**Q. Did OCA witness DeMarco address the condition and operations of the System as a part of his surrebuttal testimony?**

A. Yes.

**Q. Please summarize the arguments and positions made by OCA witness DeMarco in his surrebuttal testimony that you believe warrant an additional response.**

A. OCA witness DeMarco states that while the City's and Aqua's witnesses "seem to lean towards concluding that the system is 'troubled'…neither witness outright claims that the system is troubled." OCA St. 1SR, at p. 6. Mr. DeMarco then attempts to point to the Gannett Flemming Engineering Report, submitted as Exhibit D to the Application, to attempt to assert it demonstrates only one asset is in poor to fair condition. OCA St. 1SR, at pp. 6-7. He then insinuates that if the System is in poor condition, as the evidence presented in Aqua's supplemental direct and rebuttal testimony demonstrates, the utility valuation experts ("UVEs") should have made a downward adjustment to the valuation of the System or the proposed ratemaking rate base." OCA St. 1SR, at p. 7. OCA witness DeMarco then acknowledges the System's current operations "are not perfect" and that the City "does not do everything at the same level or to the same extent as…Aqua," but continues to dispute that Aqua's proposals to improve the System do not meet the legal standard required of the transaction. OCA St. 1SR, at p. 7. Finally, he continues attempt to diminish the benefits of Aqua's proposed cybersecurity improvements. OCA St. 1SR, at p. 8.

**Q. Do you agree with OCA witness DeMarco that the System is not troubled?**

A. No.

**Q. Please explain.**

A. OCA witness DeMarco is trying to draw a distinction between a "troubled" system and a system that faces significant and undisputed challenges and risks. He appears to believe that a wastewater system can only benefit from improvements made by an acquiring utility if it is "troubled" as this term is used in the context of an acquisition pursuant to 66 Pa.C.S. §§ 529 and/or 1327. OCA St. 1, at pp. 10-11; *see also* OCA St. 1SR, at p. 6. I am advised by counsel that Aqua is not acquiring this System pursuant to either of those statutory provisions and, therefore, whether the System is "troubled" under those provisions does not matter.

What does matter is that there are a number of specific conditions that either currently present, or will in the mid- to long-term present, significant risks to the safety and reliability of the service provided on the System. What does matter is that OCA witness DeMarco has not addressed, let alone rebutted, any of the specific System conditions that currently present risks to its operations and, if left unaddressed, will increase risks to the System's operations and the public in the future. What does matter is that the City has clearly indicated it cannot and will not be able to address these issues if the acquisition is not approved. And, what does matter is that Aqua has a clear, proactive plan to reduce or remove these risks if the acquisition is approved, which improve the safety and reliability of the service provided by the System.

Mr. DeMarco similarly does not take into consideration that the City has explained that they do not have the expertise or resources to address the deficiencies within the system. I disagree strongly with the testimony of Mr. DeMarco that the lack of "troubled"

status limits the severity of the needs of the System. While Mr. DeMarco challenges the costs of the acquisition and proactive plan that Aqua has submitted, he fails to quantify the costs that will be incurred by the customers if this acquisition is denied, and the System continues to fall into "troubled" status. I believe there is zero public benefit to the denial of the acquisition, and that such denial would have negative impacts for customers in the City and the Contributing Municipalities, both related to cost and safety, reliability and quality of service.

**Q. Why is it not appropriate to simply rely upon the Gannett Flemming Engineering Report, as OCA witness DeMarco suggests, to conclude the System does not face significant challenges?**

A. I have supplied testimony to document the continued disrepair of the System with specific equipment failures, deterioration of facilities, and continued operational shortfalls that continue to remain unaddressed. Mr. DeMarco's opinions, which ignore these conditions, are dangerous with respect to the operation of utilities as such opinions suggest that entire systems should be allowed to fall into complete and total disrepair before he would support an acquisition. Such reactive management and operation will actually require a significant capital investment in a short period of time to remedy the issues. What Mr. DeMarco should consider is that Aqua's testimony makes clear that the Company is prepared to start addressing this growing list of issues now, while they are still manageable. Such proactive management and operation will be more cost effective than waiting until the adverse conditions become more severe.

Early, proactive intervention allows for preventive maintenance, which can extend the System's lifespan, improve efficiency, and reduce long-term operational costs. By investing in improvements now, we can prevent minor problems from escalating into major failures that would require significantly more resources to fix. Moreover, addressing these deficiencies promptly mitigates the risk of catastrophic failures, which could lead to service interruptions, regulatory penalties, and higher costs for emergency repairs. Acting now minimizes these risks and ensures the continued safety and reliability of the System.

Timely, proactive improvements will also enhance service quality and reliability for customers, leading to higher satisfaction and potentially lower costs in the long run. This proactive approach aligns with industry best practices and expert recommendations, further supporting the case for early intervention.

**Q. What do you take from OCA witness DeMarco's statement that the System is "not perfect" and "does not do everything at the same level or to the same extent as…Aqua"?**

A. Again, OCA witness DeMarco appears to acknowledge the challenges faced by the System. While he attempts to downplay their significance, he recognizes that they exist. Furthermore, by stating that the City "does not do everything at the same level or to the same extent as…Aqua" OCA witness DeMarco appears to acknowledge that improvements to the System's condition and operations will occur under Aqua's ownership. Mr. DeMarco states that Aqua witnesses "highlight 'deficiencies' and label the system as 'reactive' if a smaller system like Beaver Falls does not do everything at the

same level or to the same extent as a large company like Aqua." Mr. DeMarco though is ignoring the fact that the reason Aqua labeled the System as 'reactive' is because it is exactly that. The City did not have a proactive capital plan to review and address the problems within the System, or plan for major capital repairs and replacements that would need to occur in the future. This is further supported by the rebuttal testimony of the City itself which indicated that the City only addresses issues within the System as the arise.

**Q. Do you agree with observations made by Mr. DeMarco that improvements to the System's condition and operations will occur under Aqua's ownership?**

A. Yes, and quickly. I feel strongly that this is a significant and positive benefit to all customers of the System, the City, and the surrounding communities that this System services.

**Q. Do you have any further response to OCA witness DeMarco's claims regarding the cybersecurity improvements that would occur under Aqua ownership?**

A. I stand by my supplemental direct and rebuttal testimony on the importance of the improvements to cybersecurity that Aqua will make in this system. **[BEGIN HIGHLY CONFIDENTIAL]** [redacted] **[END HIGHLY CONFIDENTIAL]**

However, I note that OCA witness DeMarco attempts to frame this issue as merely a decision by the city "not to avail itself of available tools." OCA St. No. 1SR, at p. 8. This comment is troubling. Mr. DeMarco misunderstands that the City cannot avail itself of these tools because, as explained in its rebuttal testimony, it lacks the resources (financial and otherwise) to do so. The City simply does not have the expertise or funding to implement the necessary cybersecurity measures to protect the system and customers of the system effectively. By contrast, Aqua has a clear and proactive plan to enhance the cybersecurity of the system, leveraging its resources and expertise to address these vulnerabilities. This will significantly reduce the risk of cyberattacks and improve the overall safety and reliability of the service provided to the public.

## III. CONCLUSION

**Q. Does this conclude your rejoinder testimony?**

A. Yes, it does.

# AQUA STATEMENT NO. 5-RJ

# REJOINDER TESTIMONY OF DYLAN W. D'ASCENDIS

**With Regard To:**
**Fair Market Value Appraisal Adjustments**

**March 7, 2025**

**TABLE OF CONTENTS**

I. INTRODUCTION, PURPOSE, AND SUMMARY ..... 1
II. CONCLUSION..... 3

## I. INTRODUCTION, PURPOSE, AND SUMMARY

**Q. Please state your name and business address.**

A. My name is Dylan W. D'Ascendis. My business address is My business address is 1820 Chapel Avenue W., Suite 300, Cherry Hill, NJ 08003.

**Q. By whom are you employed and in what capacity?**

A. I am employed by ScottMadden, Inc. as a Partner.

**Q. Are you the same Dylan W. D'Ascendis who submitted direct and rebuttal testimony in this proceeding?**

A. Yes. I submitted direct testimony with the Application filed with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on February 18, 2023 (Exhibit Y, Aqua Statement No. 5) and rebuttal testimony on February 24, 2025 (Aqua Statement No. 5-R).

**Q. What is the purpose of your rejoinder testimony?**

A. The purpose of my rejoinder testimony is to respond to substantive statements in the surrebuttal testimonies of Mr. David J. Garrett, witness for the Pennsylvania Office of Consumer Advocate ("OCA"), and Ms. Rebecca K. Forbes, witness for the Pennsylvania Office of Small Business Advocate ("OSBA"), as it relates to my determination of the Fair Market Value ("FMV") for the City of Beaver Falls' ("Beaver Falls") wastewater system (the "System"). I will only address statements that are new relative to Mr. Garrett's and Ms. Forbes' surrebuttal testimonies.

**Q. Please summarize your conclusions.**

A. In their surrebuttal testimonies, Mr. Garrett and Ms. Forbes do not provide any new evidence or support for their adjustments to my indicated value for Beaver Falls, nor do they respond to my critiques of their analysis. Most notably, neither Mr. Garrett nor Ms. Forbes refute the fact that approximately half of Beaver Falls' current and expected revenues are derived from outside the System's asset base and therefore, the indicated value of Beaver Falls using the Cost Approach would be significantly understated. Given the above, my rebuttal testimony stands as written.

**Q. Mr. Garrett claims that he has not seen an instance where an appraiser used an unequal weighting to the three valuation approaches that did not result in a higher overall valuation than had equal weightings been applied.[1] Please respond.**

A. In Docket No. A-2019-3015713 regarding the FMV of the Delaware County Regional Water Quality Control Authority ("DELCORA"), I applied unequal weightings to my three valuation methodologies which resulted in a lower implied value than if I weighted each approach equally as shown on Table 1, below:[2]

[1] OCA St. No. 2SR, at p. 4.
[2] Docket No. A-2019-3015713, Exhibit Y, Direct Testimony of Dylan W. D'Ascendis, at p. 13.

**Table 1: Conclusion of Value – DELCORA in Docket No. A-2019-3015713**[3]

| Valuation Approach | Indicated Value | Weight | Weighted Value |
|---|---|---|---|
| Cost | $292,413,993 | 45% | $131,586,297 |
| Market | $613,520,480 | 5% | $30,676,024 |
| Income | $291,863,370 | 50% | $145,931,685 |
| **Indicated Value** | | **100%** | **$308,194,006** |

If I applied equal weights to each approach, my indicated value for DELCORA would have been $399,265,648. Mr. Garrett's insinuation that the relative weighting of valuation methods only serves to increase the indicated value, is misplaced.

## II. CONCLUSION

**Q. Does this conclude your rejoinder testimony?**

A. Yes, it does.

## I. INTRODUCTION

**Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

A. My name is Harold Walker, III my business address is 1010 Adams Avenue, Audubon, Pennsylvania.

**Q. ARE YOU THE SAME HAROLD WALKER WHO PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?**

A. Yes.

## II. SCOPE OF TESTIMONY

**Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?**

A. Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") was engaged by the City of Beaver Falls ("City") to perform a fair market value appraisal ("FMV") of their wastewater system assets ("Wastewater System"). The purpose of my rejoinder testimony is to respond to and comment on the surrebuttal testimony submitted by the Office of Consumer Advocate's ("OCA") witness David J. Garrett, OCA Statement 2SR.

## III. RESPONSE TO OCA WITNESS GARRETT

**Q. WOULD YOU PLEASE IDENTIFY THE TOPICS THAT YOU WILL ADDRESS IN YOUR REJOINDER TESTIMONY?**

A. Yes. In his surrebuttal testimony, Mr. Garrett responds and comments on his adjustments to our Income Approach to valuation, his adjustments to our selected transaction method (Market Approach to valuation), and the weightings he applied to each valuation approach. My rejoinder testimony addresses Mr. Garrett's responses and comments that have not been addressed previously.

## IV. INCOME APPROACH

**Q. DO YOU HAVE ANY COMMENTS REGARDING PAGE 9 OF MR. GARRETT'S SURREBUTTAL TESTIMONY, WHERE HE DISCUSSES "A CONSTANT GROWTH DCF MODEL" IN HIS INCOME APPROACH ADJUSTMENT?**

A. Yes. Mr. Garrett is conflating two areas of finance that share similar names but relate to different subject matters. Mr. Garrett discusses a "constant growth DCF Model" which involves the cost of capital from a rate proceeding.[1] The cost of capital is a small part of Mr. Garrett's capitalization of earnings method used in his Income Approach adjustment. On page 9 of Mr. Garrett's surrebuttal testimony, he references a "DCF Model" (lines 14 - 21) which is the capitalization of earnings method used in his Income Approach. By doing so, he commingles "constant growth DCF Model" from a rate proceeding and a "DCF Model" (i.e., capitalization of earnings method) used in his Income Approach adjustment. The former relates to the cost of capital from a rate proceeding and the latter relates to FMV, two distinct areas of finance.

**Q. DO YOU HAVE ANY COMMENTS REGARDING PAGES 10 TO 12 OF MR. GARRETT'S SURREBUTTAL TESTIMONY, WHERE HE RESPONDS TO CRITICISMS REGARDING HIS ESTIMATED DISCOUNT RATE?**

A. Yes. The discount rate used in the Income Approach to valuation under a standard of value of FMV is not calculated in the manner used by Mr. Garrett because the discount rate used in the Income Approach to valuation is the **market rate as of the valuation date**.[2]

[1] The variables used in the constant growth DCF Model, in the context of the cost of capital, are growth of earnings or dividends per share, dividends per share and stock price.

2 National Association of Certified Valuators and Analysts, s.v. "Valuation Date" and "Weighted Average Cost of Capital (WACC)," *The International Glossary of Business Valuation Terms*

Further, Mr. Garrett's discount rate should be reflective of the municipality, rather than a hypothetical buyer, because the cash flow used by Mr. Garrett reflects current ownership, current rates, and current operations as a municipality.

## V. SELECTED TRANSACTION METHOD

**Q. ON PAGE 7 OF MR. GARRETT'S SURREBUTTAL TESTIMONY, HE STATES, "MR. WALKER DOES NOT PROVIDE ANY EVIDENCE AS TO WHY IT WOULD BE UNREASONABLE TO USE THE AVERAGE RATHER THAN MEDIAN CALCULATION FOR THE SELECTED TRANSACTION METHOD." IS MR. GARRETT'S CLAIM TRUE?**

A. No. Although averages are typically not used in appraisals, the real defect in Mr. Garrett's approach is what Mr. Garrett averaged, and what his average represents. Even though Mr. Garrett claims that he gave equal weight[3] to Capital Items and Demographics Items, his "average" is the result of giving 60% weight to Capital Items and 40% weight to Demographics Items based on his approach.[4] Further, since Mr. Garrett's Capital Items only includes 30 observations and his Demographics Items includes 40 observations, his "average" is the byproduct of 2% weight given to each Capital Item observation and only 1% weight given to each Demographics Item observation.[5] Accordingly, Mr. Garrett's "average" does not represent "equal weighting," but rather is heavily skewed with a preponderance of weight given Capital Items (i.e., a 2-to-1 distortion).

[3] OCA Statement No. 2SR, at pp. 6 and 8.
[4] *See* OCA Exhibit DJG-3; had Mr. Garrett given equal weighting to Capital Items and Demographics Items, his average would have been $25.4 million, and if he gave 25% weight to Capital Items and 75% weight to Demographics Items his average would have been $28.7 million.
[5] *See* OCA Exhibit DJG-3; had Mr. Garrett given equal weighting to each Capital Item and Demographics Item observation, his average would have been $26.4 million.

Additionally, since Mr. Garrett used an average of 20 selected transactions, his recommendation gave 60% weight to collection/distribution selected transactions, 30% weight to the integrated systems (excluding wholesale) transactions, and 10% weight to the integrated systems with wholesale transactions. Accordingly, Mr. Garrett's "average" is based primarily on transactions of entities that **did not provide wastewater treatment** (i.e., collection/distribution selected transactions) while the Wastewater System is an integrated system with wholesale service.[6]

The fatal flaw in Mr. Garrett's selected transaction method is **he did not account for the value of the Wastewater System's seven wholesale municipal customers that represent approximately 3,760 equivalent dwelling units ("EDU")** since Mr. Garrett's selected transaction method only included 3,259 domestic customers. Therefore, any debate regarding the merit, or lack thereof, of Mr. Garrett's "average" is moot because **he did not account for the value of 54% of the people served via wholesale service to the seven municipal customers**.[7] Consequently, Mr. Garrett's selected transaction method recommendation cannot be relied upon in these proceedings because Mr. Garrett's selected transaction method recommendation does not include the value of the Wastewater System's 3,760 ultimate wholesale customers.[8]

[6] *See* OCA Exhibit DJG-3; had Mr. Garrett given equal weighting to Capital Items and Demographics Items for just the integrated systems (excluding wholesale) transactions, his average would have been $30.1 million, if he gave 25% weight to Capital Items and 75% weight to Demographics Items his average would have been $30.1 million, and had he given equal weighting to each Capital Item and Demographics Item observation, his average would have been $37.1 million.

[7] The Wastewater System serves 7,019 ultimate customers, comprised of both 3,259 domestic and seven municipal customers that represent approximately 3,760 EDUs. Therefore, Mr. Garrett did not account for the value of 54% of the Wastewater System's customers (3,760 ÷ 7,019 = 54%).

[8] The Wastewater System provides 3,259 domestic customers both collection and treatment service and conveyance and treatment service to seven municipal customers representing 3,760 EDUs.

## VI. RECOMMENDED WEIGHTING

**Q. ON PAGE 4 OF MR. GARRETT'S SURREBUTTAL TESTIMONY, HE STATES, "I CANNOT RECALL A CASE IN WHICH AN APPRAISER APPLIED AN UNEQUAL WEIGHTING TO THE THREE VALUATION APPROACHES THAT DID NOT RESULT IN A HIGHER OVERALL VALUATION THAN HAD EQUAL WEIGHTINGS BEEN APPLIED. THIS PATTERN CONTINUES IN THIS CASE." IS MR. GARRETT'S ASSERTION TRUE?**

A. No. Mr. Garrett and I were involved in the Borough of Shenandoah (Docket No. A-2022-3034143) Section 1329 proceeding. Gannett Fleming **applied identical weightings** in the Borough of Shenandoah (Docket No. A-2022-3034143) Section 1329 proceeding in arriving at our estimate of the FMV conclusion as we have recommended for the Beaver Falls Wastewater System.[9] In the Borough of Shenandoah Section 1329 proceeding, **the Cost Approach produced the highest indication of value** yet was given the least weight of 25%.

Accordingly, Mr. Garrett's accusation of "bias," which he espouses on page 5 of his surrebuttal testimony (lines 1-3), is based on his faulty recollection and not facts. Our weighing given the Cost Approach reflects our concerns regarding the Cost Approach, and are consistent with the application of conclusion of value:

> The selection of and **reliance on appropriate methods and procedures depends on the judgment of the appraiser and not on any prescribed formula**. . .

[9] Gannett Fleming's FMV conclusion reflected a 25.0% weight for the Cost Approach, 37.5% weight for the Income Approach and 37.5% weight for the Market Approach in both the Borough of Shenandoah Section 1329 proceeding and the current proceeding.

> The appraiser must **use informed judgment when determining the relative weight to be accorded to indications of value reached** . . .[10]

## VII. CONCLUSION

**Q. IS THERE ANYTHING PRESENTED IN MR. GARRETT'S SURREBUTTAL TESTIMONY THAT WOULD RESULT IN YOU ALTERING YOUR FMV APPRAISAL OF THE WASTEWATER SYSTEM'S ASSETS?**

A. No, there was nothing presented in Mr. Garrett's surrebuttal testimony which would result in our changing our FMV appraisal of the Wastewater System.

**Q. DOES THAT CONCLUDE YOUR REJOINDER TESTIMONY?**

A. Yes, it does.
