GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction lists, which are selected from Buy rated stocks on the respective region's Investment lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) have been suspended pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the

securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. Valuation Method and Risk Statement

Our valuation methodology for the group is price to earnings based.

North American utilities: We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

IPPs: We identify the following risks for the sector: Demand for new renewable installations has historically been volatile around changes in state and federal policy, and we expect this volatility to continue. In addition, margins for product manufacturers can be impacted by swings in raw materials pricing and the overall level of energy prices.

Environmental Services: We identify the following risks for the sector: Housing remains a key driver of incremental municipal solid waste volume growth, and a slowdown in new housing starts could put downward pressure on sales growth. In addition, pricing tends to follow GDP growth, and a slowdown in economic growth could lower ability to raise pricing driving potential contraction in margins. For more industrial-exposed names, swings in commodity prices can impact the overall level of waste-generating activity, contributing to earnings volatility.

Quantitative Research Review

UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. The views for this month can be found below. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research Team on the email above.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 26 May 2023 12:22 PM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. Energy: Electric Utilities

Midweek Thoughts — EXC, CNP, D, CEG, PEG, FE

Sangita Jain, CFA / (917) 368-2354 / sangita.jain@key.com
Michael Pelletier / (917) 368-2306 / michael.pelletier@key.com

This week, the IL Staff files testimony in ComEd's multiyear electric rate case; CNP's Vectren agrees to sell the IN-based Energy Systems Group subsidiary for $157M; D commences hydrogen blending pilot in OH; CEG sets a record with 38% hydrogen blend at an AL gas-fired generation plant; the NJ Senate confirms two BPU commissioners; and SPP discusses its 2023 Summer Seasonal Assessment.

Industry News and News from Companies in Our Coverage

EXC — Staff testimony filed in ComEd's IL electric MYRP; ROE and equity considerations are in line with those for the AEE MYRP:

- **Staff recommends a $1,039M revenue increase, premised on a flat 50% equity ratio through the multiyear rate period and an 8.9% ROE:** In line with Staff's recommendation in the AEE MYRP, Staff recommended an ROE of 8.91% to be updated annually through the MYRP process. The 8.9% is derived using the FRP formula (580 bps plus the 2022 U.S. Treasury bond yield of 3.11%). Staff also refers to the annual true-up mechanism in the new rate structure as a means for timely and certain cost recovery, further reducing the risk of regulatory lag. The main drivers of the lower revenue requirement compared to EXC's request can be attributed to the lower ROE, equity ratio, projected plant additions, and adjustments to O&M regarding the pension asset funding cost.
- **ComEd requested a $1,499M revenue increase over 2024-2027, based on a 10.5% ROE and 50.58% equity in RY1** (Docket: 23-0055), increasing marginally to 10.65% in RY4. EXC's equity ratio also includes annual step-ups to 50.81%, 51.03%, and 51.19% for RY2, 3, and 4, respectively. The ROE step-ups are intended to hedge against elevated inflation and interest rates. EXC requests a phase-in of new rates by deferring 35% of the 2024 base rate increase, or $316M, for later recovery.
- **What's next:** EXC will file rebuttal testimony by June 27. A proposed order is due on October 23, and December 20 is the ICC's deadline to issue a decision. We expect the rate case to be fully litigated given that it is the first MYRP filed since the passage of the CEJA, which changed the rate-making structure in IL from the annual formula rate plans.

CNP — CNP agrees to sell IN-based Energy Systems Group for $157M: CNP announced that Vectren will sell Energy Systems Group to ESG Holdings Group, a subsidiary of Oaktree Capital Management, for $157M, including debt, and CNP is expected to net $110M post-tax and other adjustments. The transaction is expected to close in 3Q23. The business provides energy performance contracting and sustainable infrastructure services, such as renewables, distributed generation, and CHP projects.

D — D commences hydrogen blending pilot in OH: D commenced a hydrogen pilot blending project at its OH gas utility. D will first blend hydrogen into a closed-loop natural gas distribution system at a training center, before blending hydrogen into a small distribution system serving residential and commercial customers. The pilot will help D OH meet its goal of preparing its entire network for hydrogen blending by 2030. The pilot is among several proposed by gas utilities that are initial attempts to blend low-carbon hydrogen at high concentrations (up to 20% of the pipeline volumes) in the domestic distribution systems serving customers. D previously conducted similar in-house tests in UT, testing up to 5% hydrogen blends into Delta, UT's natural gas pipeline network.

CEG — CEG successfully tests a 38% hydrogen blend in the natural gas stream: CEG blended up to 38% hydrogen with natural gas at the 753 MW Hillabee Generation Station. The hydrogen blend nearly doubled the previous blending record. CEG only made minor modifications to the plant. According to EPA data, the 38% blend rate would reduce Hillabee's carbon emissions by ~270,000 MT. CEG collaborated with Siemens Energy and EPRI on the project.

PEG, EXC, FE — NJ Senate confirms BPU commissioners: The NJ Senate confirmed Governor Murphy's appointment of Christine Guhl Sadovy (D) and Marian Abdou (R) to replace former Commissioners Robert Gordon and Dianne Solomon, who were serving beyond their designated terms. Ms. Sadovy and Ms. Abdou will serve terms that expire in March 2029 and October 2024, respectively. Current Commissioner Mary-Anna Holden (R) is also serving past her designated term, which expired in 2021. NJ BPU is made up of five commissioners that serve staggered, six-year terms. The primary proceedings we are tracking in NJ include EXC's ACE electric rate case and FE's JCP&L electric rate case. PEG is scheduled to make a GRC filing by year-end. We are also following the State's Offshore Wind solicitation and allocations for the onshore infrastructure for offshore wind power.

SPP 2023 Summer Seasonal Assessment: SPP's assessment did not raise any reliability concerns, and the RTO expects to have enough generating capacity to meet regional demand for electricity through summer 2023. The assessment anticipated normal conditions across the region and shows a 99.5% probability that the RTO will have sufficient resources available to serve region-wide load during peak hours throughout the summer. Even in the scenario where peak electricity use exceeds forecasts by as much as 5%, SPP still would have a 95% chance to maintain resource sufficiency. In extreme scenarios, SPP has a set of tools, systems, and procedures, including importing energy from neighboring systems or tapping reserves. 2023 appears to be shaping up with most RTOs reporting better preparedness as we approach summer (we wrote about summer assessments from several other system operators here).

Better-Than-Expected Initial Recommendation in ComEd MYRP - Reiterate Outperform

Bottom Line:

Overall, we see the Illinois Commerce Commission Staff recommendation in ComEd's multi-year rate plan (MYRP) as an upside surprise as investors we believe were bracing for a less favorable initial position after the staff's testimony in Ameren Corp's (AEE, $82.71, Outperform) MYRP on May 12. **We reiterate our Outperform rating on EXC and would continue to be buyers of the stock at a 3-4% discount to its utility peers. Our target price moves to $44 as we MTM our peer group multiples for 2025 used in our SOTP valuation framework.**

Key Points

What Happened? On 5/23, the ICC Staff filed its initial position in ComEd's (~1/3 of our forecast rate base – Exhibit 2) inaugural multi-year rate plan under the framework outlined in the 2021 CEJA legislation. Positively, the Staff's initial position was significantly more favorable than its initial position in the Ameren Illinois Electric MYRP (Docket # D-23-0082) on both the recommended revenue requirement at ~70% on average of the company's ask and ~98% of ComEd's requested rate base through 2027 (Exhibit 1). **Regarding the $946mm difference in 2027 estimated rate base, we see the delta representing ~$0.05/share to EXC EPS before any offsets assuming no material change in our current share count in 2025 and a 9.7-9.8% ROE.**

The Staff's position on ROE was consistent with its recommendation in the Ameren Illinois MYRP on May 12 with the continued application of a formulaic ROE used in the state's previous formula rate plan framework which resulted in a recommendation of a 8.91% ROE. Using this same formula and today's updated 12-month average U.S. treasury yield, we calculate an implied ROE of closer to 9.7-9.8%. Although Staff estimated that the ROE for the Utility Proxy Group would suggest ~10% ROE, in its testimony Staff argued for the application of a lower ROE as it believes the MYRP rate-making framework reduces the risk and uncertainty to ComEd vs. its peers. **In terms of sensitivity we see every 50 bps change in the ROE representing ~ $0.04-0.05/share or ~1.7% of our 2024 and 2025 EPS estimates on average.**

On the equity ratio, Staff's position was largely in line with the CEJA's 50% safe-harbor floor and only slightly below the 50.58% that ComEd had requested in its filing.

What is Next? Evidentiary hearings are scheduled for late August and an order by the end of the year.

Our Thesis

We see EXC's multiple re-rating post spin as a gradual 12-18-month process driven by the company executing against its capital and regulatory plans. We believe the company's low-risk T&D business profile, strong and visible fundamental growth outlook, and supportive regulatory environment position the company well to drive multiple expansion.

Scenarios

Valuation

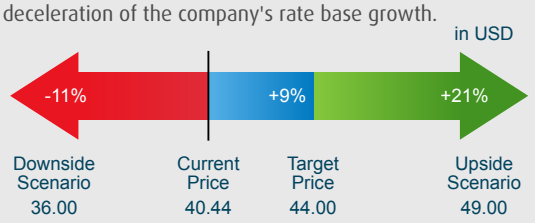
We value EXC on a sum-of-the-parts valuation. Our framework begins with the relevant sector average P/E multiple using 2025E EPS as a base, which we then adjust (premium, discount, or no change) to reflect the relative fundamentals for each segment.

Upside Scenario $49.00

Our upside scenario reflects continued multiple expansion associated with the execution of the company's current ComEd MYRP which should crystalize the company's premium and above-average earnings and dividend growth profile.

Downside Scenario $36.00

Our downside scenario reflects a tightening monetary policy, suboptimal regulatory outcomes that lead to a deceleration of the company's rate base growth.



Key Catalysts

We see EXC management now in execution mode post its separation from Constellation Energy. With nearly 75% of the company's revenues decoupled from volumes and 100% of its capital covered through alternative recovery mechanisms, we see EXC achieving our target price over the next 12-18-months as management executes against its capital and regulatory plans.

Company Description

Exelon is the largest utility by customer count with over 10mm electric and natural gas customers spread across its six-state footprint. It is the fourth largest utility by rate base with one of the lowest business risk and ESG-friendly profiles given the company's pure T&D asset mix with electric distribution and transmission representing over 88% of rate base.

Better-Than-Expected Initial Recommendation in ComEd MYRP

Bottom Line: Overall, we see the Illinois Commerce Commission Staff recommendation in ComEd's multi-year rate plan (MYRP) as an upside surprise as investors we believe were bracing for a less favorable initial position after the staff's testimony in the Ameren Corp's (AEE, $82.71, Outperform) MYRP on May 12. Although we currently do not anticipate a settlement in the proceeding given it is the first filing under the non-formulaic framework outlined in the 2021 CEJA legislation, we view the datapoint as a positive for EXC shares as Staff's initial position represents just under 70% of the company's revenue requirement, nearly 98% of rate base and an equity layer in line with the CEJA's 50% safe-harbor level.

We reiterate our Outperform rating on EXC and would continue to be buyers of the stock at a 3-4% discount to its utility peers and relative to our 6.7% implied EPS CAGR through 2025. Our 2023-2025 estimates remain unchanged at $2,36, $2.50, and $2.72, respectively, but we are lowering our target price to $44 as we MTM our peer group multiples for 2025 used in our SOTP valuation framework.

What Happened? On 5/23, the ICC Staff filed its initial position in ComEd's (~1/3 of our forecast rate base – Exhibit 2) inaugural multi-year rate plan under the framework outlined in the 2021 CEJA legislation. Positively, the Staff's initial position was significantly more favorable than its initial position in the Ameren Illinois Electric MYRP (Docket # D-23-0082) on both the recommended revenue requirement at ~70% on average of the company's ask and ~98% of ComEd's requested rate base through 2027 (Exhibit 1). **Regarding the $946mm difference in 2027 estimated rate base, we see the delta representing ~$0.05/share to EXC EPS before any offsets assuming no material change in our current share count in 2025 and a 9.7-9.8% ROE.**

The Staff's position on ROE was consistent with its recommendation in the Ameren Illinois MYRP on May 12 with the continued application of a formulaic ROE (12-month average 30-year U.S. Treasury yield + 580 bps) used in the state's previous formula rate plan framework which resulted in a recommendation of a 8.91% ROE. Using this same formula and today's updated 12-month average U.S. treasury yield we calculate an implied ROE of closer to 9.7-9.8%. Moreover, as a corollary this recommendation was not only well below the Staff's recommendation in the four pending gas cases in the state (Exhibit 1), but the Staff was also on the record highlighting in the Ameren IL MYRP the use of a CAPM or DCF-based calculation would result in a 10.02% ROE. Although Staff estimated that the ROE for the Utility Proxy Group would suggest ~10% ROE, in its testimony Staff argued for the application of a lower ROE as it believes the MYRP rate-making framework reduces the risk and uncertainty to ComEd vs. its peers as well as reduces regulatory lag. **In terms of sensitivity, we see every 50 bps change in the ROE representing ~$0.04-0.05/share or ~1.7% of our 2024 and 2025 EPS estimates on average.**

On the equity ratio, Staff's position was also consistent with the 50% it recommended in the Ameren IL MYRP, in line with the CEJA's 50% safe-harbor floor and only slightly below the 50.58% that ComEd had requested in its filing.

What is Next? Evidentiary hearings are scheduled for late August and an order by the end of the year.

Company Specific Disclosures

Disclosure 9B: BMO Capital Markets makes a market in Exelon and Ameren Corporation in United States.

Methodology and Risks to Target Price/Valuation for Ameren Corporation (AEE-NYSE)

Methodology: Our target price is based on a sum-of-the-parts methodology. Our framework begins with the relevant sector average P/E multiple using 2025E EPS as a base which we then adjust (premium, discount, or no change) to reflect the relative fundamentals of that segment.

Risks: AEE's regulated profile exposes the company to business risk including but not limited to: federal and state regulatory risk, federal and state political risk, environmental policy, interest rate risk, access to capital markets, construction risk, changes in customer demand trends,

changes in customer affordability, extreme weather, natural disaster, and equipment failure. Ameren Illinois formula rates also directly expose 20% of the company's consolidated rate base to fluctuations in the 30-year Treasury yield.

Methodology and Risks to Target Price/Valuation for Exelon (EXC-NSDQ)

Methodology: We value EXC using our sum-of-the-parts valuation analysis to derive our target price. Our valuation takes into account the quality of EXC's assets relative to its peers and the company's regulated business rate base growth and funding sources.

Risks: Adverse outcomes in the company's inaugural MYRP filing in IL, DE electric rate case and 2025 PECO electric GRC. Despite having nearly a 1% cushion over its 12% downgrade threshold, the ability to meet its stated credit metrics given adverse impacts from severe storms, fuel deferrals and other unforeseen expenses.

Additional Matters

This report is directed only at entities or persons in jurisdictions or countries where access to and use of the information is not contrary to local laws or regulations. Its contents have not been reviewed by any regulatory authority. BMO Capital Markets does not represent that this report may be lawfully distributed or that any financial products may be lawfully offered or dealt with, in compliance with regulatory requirements in other jurisdictions, or pursuant to an exemption available thereunder.

To Australian residents: BMO Capital Markets Limited and Bank of Montreal are exempt from the requirement to hold an Australian financial services licence under the Corporations Act in respect of financial services they provide to wholesale investors (as defined in the Corporations Act). BMO Capital Markets Limited is regulated by the UK Financial Conduct Authority under UK laws, and Bank of Montreal in Hong Kong is regulated by the Hong Kong Monetary Authority and the Securities and Futures Commission, which differ from Australia laws. This document is only intended for wholesale clients (as defined in the Corporations Act 2001), Eligible Counterparties or Professional Clients (as defined in Annex II to MiFID II) and Professional Investors (as defined in the Securities and Futures Ordinance and the Securities and Futures (Professional Investor) Rules under the Securities and Futures Ordinance of Hong Kong).

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Colin Hamilton, Alexander Pearce or Raj Ray:

This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and distributed by BMO Capital Markets Limited or Bank of Montreal Europe Plc and is subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom and the Central Bank of Ireland (CBI) in Ireland. FCA and CBI regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer.

BMO Capital Markets

Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore each of BMO Capital Markets Limited and Bank of Montreal Europe Plc will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To E.U. Residents: In an E.U. Member State this document is issued and distributed by Bank of Montreal Europe plc which is authorised and regulated in Ireland and operates in the E.U. on a passported basis. This document is only intended for Eligible Counterparties or Professional Clients, as defined in Annex II to "Markets in Financial Instruments Directive" 2014/65/EU ("MiFID II").

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

To Hong Kong Residents: In Hong Kong, this report is published and distributed by Bank of Montreal. Bank of Montreal (incorporated in Canada with limited liability) is an authorized institution under the Banking Ordinance and a registered institution with the Securities and Futures Commission (CE No. AAK809) to carry on Type 1 (dealing in securities) and Type 4 (advising in securities) regulated activities under the Securities and Futures Ordinance (Cap 571 of the Laws of Hong Kong). This report has not been reviewed or approved by any regulatory authority in Hong Kong. Accordingly this report must not be issued, circulated or distributed in Hong Kong other than (a) to professional investors as defined in the Securities and Futures Ordinance and the Securities and Futures (Professional Investor) Rules under the Securities and Futures Ordinance of Hong Kong, or (b) in circumstances which do not result in or constitute an offer to the public in Hong Kong.

What Happened?

This morning, the Illinois Commerce Commission Staff filed testimony in ComEd's multi-year rate case filing. The Staff position calls for a cumulative revenue increase of $1,039mm over the four years '24-'27 vs. the company's request of $1,501mm. This is premised on a ROE of 8.91% and 50% equity ratio vs. the company's request of 10.50% and 50.58% equity ratio. The Staff position calls for a rate base in 2027 of $17,803mm which is $998mm or 5.3% below the company's request. See page two for a table showing a full comparison. We view the Staff position as a reasonable starting point in the rate proceeding given the proposal of two thirds of the revenue increase requested and likely a strong case for a ROE at least modestly higher than the 8.91%. This rate proceeding is an important part of the EXC story, as a constructive outcome would provide investors with visibility around ComEd's earnings power through 2027 and substantiate Exelon's 6-8% annual EPS growth through 2026.

Return on Equity Bias is Higher

The Staff took a similar position on equity ratio and ROE as in the Ameren electric multi-year rate case (see our note here). The 8.91% reflects the formulaic approach utilized under the prior regulatory framework, which uses the average of the 30 year treasury bond yield plus 580bps. The 3.11% 30 year yield underpinning the ROE is an average from 2022 and a mark to market on the current yield would support a 9.74% ROE. The Staff also noted a traditional approach to ROE calculation using a proxy group would support a 9.82% ROE. We believe these factors could support a higher result in the final decision. The company will also have the opportunity to provide additional support for the prudence and cost-effectiveness of some of the capital expenditures Staff proposes to have disallowed.

What's Next?

The company will provide rebuttal testimony on 6/27. A proposed order from an Administrative Law Judge is due 10/23 and a final order is due by 12/20.

Valuation:

We maintain our Buy rating and $48 target price.

Company Description

Exelon owns six regulated utility subsidiaries: Atlantic City Electric, BGE, ComEd, Delmarva Power, PECO and the Pepco Subsidiaries, which deliver electricity and natural gas to about 10m customers in Delaware, Washington DC, Illinois, Maryland, New Jersey, and Pennsylvania.

Valuation Method and Risk Statement

Our valuation methodology for the group is price to earnings based. The adjustments applied fall into 5 categories. These are as follows: 1) Group Valuation Bias: Flowing from our valuation work comparing Baa corporate yields to group dividend yields and RU price to earnings ratios to those for the S&P 500, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 5% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 5% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 5%, second quartile 2%, third quartile -2% and fourth quartile -5%; 5) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% diversified or foreign earnings), we perform a sum-of-parts analysis applying business/region appropriate valuations to those diversified businesses; 6) One-off Adjustments: In special situations, we value risk on an issue specific basis. Common areas where we apply such an adjustment include: ESG advantage, large project construction risk, legal risk, and announced M&A completion risk.

We maintain our Price Target of $48 premised on a 9% premium to the group multiple or 18.9x our $2.54/share earnings forecast for 2024. Our 9% net premium is derived from a 5% premium for the overall regulated utility group, premised upon the current undervaluation versus the Baa corporate bond, a 5% discount for a 3rd quartile regulatory ranking overall, a 4% premium for 1st quartile earnings growth and a 5% premium for energy transition.

Specific risks for Exelon include regulatory risks at the utilities, weather, and interest rates.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

AGA Day 1 Flash Recap (see our note HERE)

AGA Day 2 Flash Recap (see our note HERE)

Guggenheim's 2023 AGA Investor Question Bank (see our note HERE)

EXC – Initial testimony begins to flow in ComEd MYP docket ahead of more to come

TX – Texas utility bills progress through legislature; DCRF on third reading

PNW – Sierra Club and other intervenors file request for ALJ to further modify procedural schedule in APS rate case

ETR – ETR-NO makes legal challenge to City Council penalty regulations

EVRG – Persimmon Creek sale completed

D/Nuclear – SW municipality advances work on SMR siting

EXC – Initial testimony begins to flow in ComEd MYP docket ahead of more to come

- Select intervenor testimony has begun to drop in the ComEd MYP docket following yesterday's deadline, with the CTA, a union, and Walmart each docketing comments.
- Walmart [NYSE: WMT] is calling for a 9.14% ROE, similar to its efforts with AEE.
- Docket HERE.

Guggenheim takeaway: *We are closely following the filings and expect additional key testimony to actually be docketed (e.g., Staff) later this morning - stay tuned.*

TX – Texas utility bills progress through legislature; DCRF on third reading

- TX Senate bill SB 1015 related to bi-annual DCRF review at the PUCT has advanced to third reading.
- The committee report was supportive of aligning the DCRF and TCOS frameworks and does not see any change in authority resulting from the bill.
- The bill aligns DCRF reviews to twice in one year, similar to the TCOS process already in place.

Guggenheim takeaway:*FYI. SB1015 seems to be one of the less contested bills in front of the TX legislature as it does not change any agency authorities or introduce any new concepts in ratemaking. The DCRF cadence could help offset some of the regulatory lag for TX utilities (CNP, SRE, ETR, AEP). SRE and CNP mgmt both confirmed that the impact would result in a reduction of regulatory lag and would improve earnings timing vs. current financial plans.*

PNW – Sierra Club and other intervenors file request for ALJ to further modify procedural schedule in APS rate case

- As per the filed request: "…*In order to match the sequence set forth in the December 2 Procedural Order, and in order to give parties the opportunity to submit discovery requests after receiving and reviewing APS' Rejoinder, the Joint Parties request that the ALJ modify the procedural schedule so that the last day to serve discovery requests is August 7, 2023, the next business day after APS' Rejoinder is due. The Joint Parties additionally request that the final public comment session be moved to the first day of hearings, on August 10, 2023, to give the public adequate time to review and respond to APS' Rejoinder and for ease of administration.*" – filing
- **Recall that the procedural schedule was recently modified as below by the ALJ at Staff's request:**
- **Staff/intervenor testimony: June 5th** vs. prior date of May 22nd
- **Rate design-specific testimony from Staff/intervenors:** June 15th vs. June 5th, prior
- **APS rebuttal testimony:** July 12th vs. June 28th before
- **Staff/intervenor surrebuttal testimony:** July 26th vs. July 18th previous
- **APS rejoinder testimony:** Aug. 4th vs. July 26th
- **Prehearing conference:** now scheduled for Aug. 7th vs. July 27th, previously.
- **Hearings:** now begins on Aug. 10th (Aug. 2-4 & 7th's initial hearing dates are canceled) and will proceed through Sept. 15th (vs. Sept. 6th, previously)
- Docket E-01345A-22-0144

Guggenheim takeaway: *Filed Monday, May 22nd, we are flagging this potential change for your calendar.* ***In our view, having public comment sessions the same day as the first day of hearings could set a negative tone for the rest of the day's proceedings as has been observed in the past.*** *However, we continue to look to Staff's testimony (now June 5th instead of May 22nd) to set the initial tone of the case from the ACC-side.*

ETR – ETR-NO makes legal challenge to City Council penalty regulations

- ETR-NO is challenging New Orleans City Council regulations that could apply retroactively to the $1M penalty the Council imposed and was later overturned by the courts.
- ETR-NO argues that new regulations cannot be used to apply retroactive penalties.
- More in media here.

Guggenheim takeaway:*FYI.*

EVRG – Persimmon Creek sale completed

- "Scout Clean Energy (Scout), a Colorado based renewable energy developer-owner-operator, and its joint venture partner Elawan Energy, a global operator in the renewable energy industry, today announced they have completed the sale of the 199-megawatt (MW) Persimmon Creek Wind Farm (Persimmon) in western Oklahoma to Evergy, Inc. … Persimmon achieved commercial operation in 2018 with 80 General Electric turbines across 17,000 acres in Dewey, Ellis and Woodward counties in Oklahoma. The renewable energy generated from Persimmon will serve customers in Evergy's service area." – release [NYSE: BEP]
- More HERE.

Guggenheim takeaway: *Flagged for your awareness. As a reminder, where this asset will sit within the organization remains slightly TBD, with the asset most recently proposed in the KS case as a resource for those customers. While that case is in its early innings (it will be included in the true up), the project could also potentially wind up as merchant at the parent, in our view.*

D/Nuclear – SW municipality advances work on SMR siting

- The LENOWISCO planning district in the far SW of Virginia has reportedly released a Site Feasibility Study for the potential location of a reactor in the region.
- More HERE.

Guggenheim takeaway: *SMRs remain a potential LT pathway under DEV's latest IRP, with Governor Youngkin in particular part of a cohort in the state pushing the technology.*

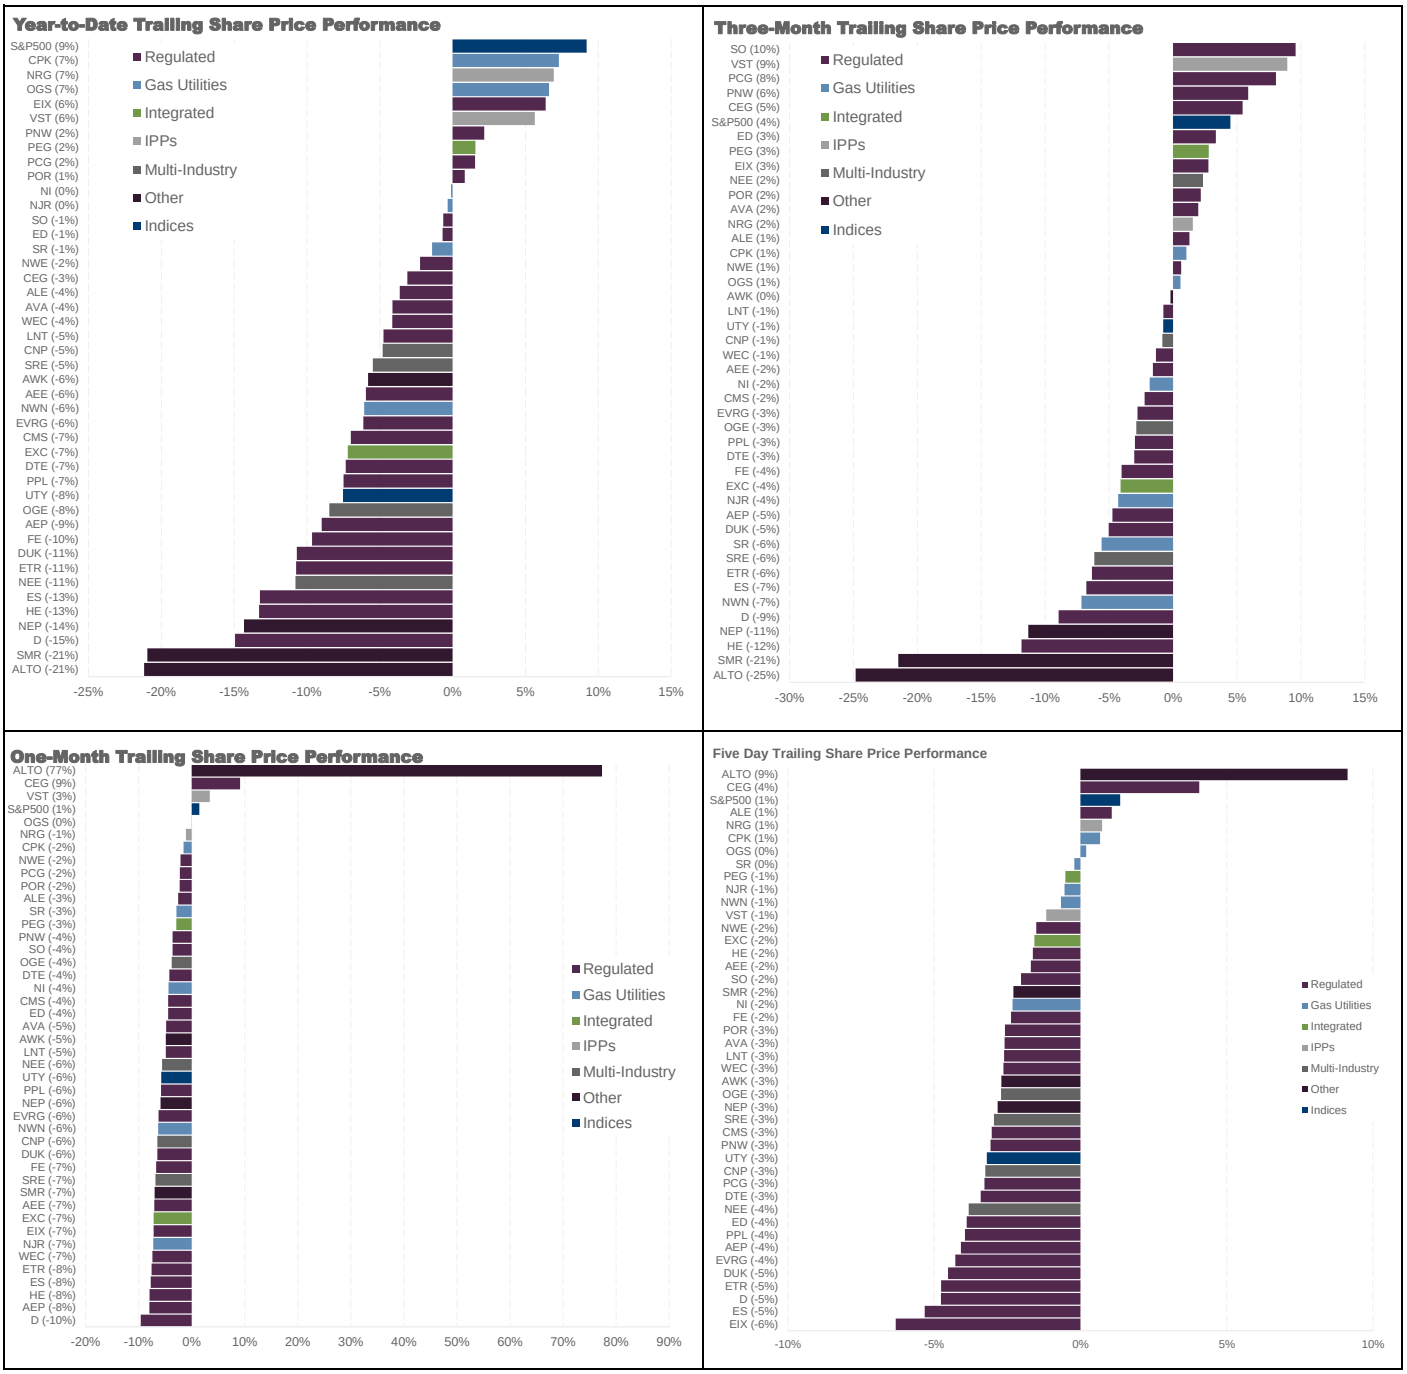
Share Price Performance (Year-to-Date, Three-Month, One-Month, & Five-Day Trailing)



(1) Regulated utilities deliver power to end-use customers via regulated transmission & distribution (T&D) infrastructure; vertically integrated utilities with regulated or mostly contracted generation are also included.

(2) Local Gas Distribution Companies (LDCs), as well as diversified utilities with a business mix largely comprised of gas infrastructure and related activities (i.e., LDC franchises, interstate pipelines, and/or other gas midstream activities).

(3) Integrated utilities own and operate regulated T&D franchises, as well as un-regulated power generation with commodity exposure.

(4) IPPs operate merchant (i.e., un-regulated, non-utility) power plants that compete to sell power in wholesale markets or through retail marketing businesses.

This week, we are tracking proceedings in CMS's MI gas rate case, EXC's IL multiyear electric rate case, AVA's electric rate case in AK, and the PUCT meeting with reference to the ETR TX electric rate case. In other news, EXC's PEPCO files a multiyear rate plan in MD; XEL's SPS files a multi-party settlement in the NM electric rate case; NEE's FPL files with the FL PSC to further reduce fuel cost true-up recovery; EPA proposes new rules to expand the 2015 CCR rule to inactive sites; MISO completes its 2023-2024 Planning Resource Auction; AGR's NECEC transmission project receives clearance to resume construction; CAISO approves the 2022-2023 transmission plan; a U.S. district judge upholds the biological opinion and EIS for Vineyard Wind 1; the VA governor signs another offshore wind bill into law; and NERC releases the 2023 Summer Reliability Assessment.

Regulatory Calendar

CMS — Evidentiary hearings in CMS's MI gas rate case begin on May 22: The Staff recommended a $91M revenue increase, premised on a 9.7% ROE, 50.5% equity, and a $10.2B rate base. This compares to CMS's filing requesting a $212M revenue increase, premised on a 10.25% ROE, 51.5% equity, and a $10.3B rate base. The lower cost of gas sold and ROE drove most of the difference between the Staff's recommendation and CMS's request. CMS is seeking new rates to become effective on October 1.

EXC — Staff and intervenor testimony in ComEd's IL multiyear electric rate case is due on May 22: ComEd filed the first multiyear rate plan in IL (Docket: 23-0055), seeking a cumulative $1,780M rate increase over the period of 2024-2027. The request is premised on a 10.5% ROE and 50.5% equity layer in RY1, with a 5 bps annual step-up in the ROE to 10.65% ROE in RY4. EXC's equity ratio also includes annual step-ups to 50.74%, 50.96%, and 51.12% for RY2, 3, and 4, respectively. The ROE step-ups are intended as a hedge against elevated inflation and interest rates. EXC is requesting a phase-in of new rates by deferring 35% of the 2024 base rate increase, with that amount being recovered in 2026. A proposed order is due on October 23, and December 20 is the ICC's deadline to issue a decision. As a reminder, a recently filed Staff position in AEE's rate case in IL appeared fairly restrictive, with the sub-9% ROE recommendation; as such, we will be watching EXC's rate case closely as well.

AVA — Rebuttal testimony in AVA's AK electric rate case is due on May 24: The Office of the Attorney General filed testimony recommending a $0.3M revenue increase premised on a 10% ROE, 60.7% equity, and a $129M rate base. This compares to AVA's $3.2M revenue increase request premised on a 13.45% ROE, 60.7% equity, and a $131M rate base. The lower ROE and reduced income tax provision are the main drivers of the difference. AVA placed interim rates of $1.6M into effect on September 1, subject to a refund. An RCA decision is expected by October 19.

ETR — PUCT Meeting on May 25 could yield a final ruling on the ETR TX settlement: The PUCT could issue a final ruling on the settlement and outstanding Issues No. 68 and 69 at the Open Meeting. ETR filed a settlement in the TX electric GRC, agreeing to a $54M net revenue increase ($252M base rate increase offset by $198M of riders), premised on a 9.57% ROE and 51.21% equity. The riders associated with transmission cost (TCRF), generation cost (GCRR), and distribution cost (DCRF) will reset to zero. The settlement resolves all issues except Issue Nos. 68 and 69 related to transportation electrification and charging infrastructure, respectively. The settlement compares to Staff's recommendation for a $77M revenue increase based on a 9.45% ROE and ETR's request for a $131M revenue increase based on a 10.8% ROE (10.5% ROE + a 30 bps performance added) and a 51.21% equity layer. Signing parties include PUCT Staff and the Office of the Public Utility Counsel; no intervening parties opposed the settlement. The PUCT has a jurisdictional deadline to issue a decision by June 29. New rates will be retroactive to December 3, 2022.

Recent Developments for Companies Under Our Coverage

From our midweek: The NM Supreme Court issues a decision denying the joint motion to dismiss the pending appeal of the PRC's denial of the proposed merger and remand the case to the PRC; the CA ALJ issues a PD to allow EIX to establish a self-insurance program for wildfire liability costs for 2023/2024; the ALJ issues a PD in the SERI UPSA complaint; the MT governor signs bill with new environmental review rules into law; ES files standard service rate for supply costs with the CT PURA; ES and Orsted announce the installation of the onshore export cable system at South Fork; and several grid operators release summer outlooks.

For analyst certification and important disclosures, please refer to the Disclosure Appendix.

EXC — PEPCO files multiyear rate plan in MD: PEPCO filed an electric multiyear rate plan in MD (Docket: 9702) seeking a cumulative net increase of $214M, premised on a 10.5% ROE and 50.5% equity. PEPCO requested a net $74M revenue increase in RY1, followed by $60M each in 2025 and 2026, and a $20M revenue increase in April 2027-December 2027, allowing the next MYRP to become effective at the beginning of 2028 and staggering the schedules for multiyear plan filings. Like the BG&E filings, EXC proposes smoothing the rates over three years by accelerating the amortization of ADIT benefits. The request includes a performance incentive mechanism with three performance metrics related to the state's policy goals and grid reliability. An MD PSC decision is expected by March 11, 2024, followed by rates becoming effective in April 2024. In the first MYRP in MD, PEPCO received a cumulative $52M electric rate increase, premised on a 9.55% ROE and a 50.5% equity.

XEL — Multi-party settlement filed in SPS's NM electric rate case: XEL filed a settlement for a $33M revenue increase, premised on a 9.5% ROE and 54.7% equity. The settlement also agrees to approve the amended 2028, previously 2032, abandonment date of Tolk Generation Station. Staff and nine other parties agreed to the settlement, while two parties opposed the settlement. The settlement compares to Staff's $37M revenue increase recommendation and XEL's request for a net revenue increase of $76M, premised on a 10.75% ROE, 54.7% equity layer, and a test year ending June 30, 2024. Hearings are set to begin in 2Q23, and an NMPRC decision is expected in 4Q23.

NEE — FPL makes another filing to reduce the fuel cost true-up recovery with the FL PSC: FPL filed a mid-course correction to reduce its 2023 fuel purchased power cost recovery clause (FCR) by an incremental $256M to reflect declining natural gas prices. The $256M is in addition to ~$1.4B in refunds to customers associated with lower fuel costs that were previously filed. The latest correction reflects NYMEX natural gas prices of $2.80/MMBtu as of May 1, 2023, and compares to the $3.22/MMBtu when FPL conducted its last analysis on February 1. FPL requests the PSC to address the update at the next Commissioner meeting on June 13, providing ample time for new rates to become effective on July 1.

AGR — Construction allowed to resume on NECEC transmission project after no appeals filed: The ME Department of Environmental Protection lifted the suspension order for the 145-mile New England Clean Energy Connect transmission project, allowing construction to resume for the first time since 2021, and since the court granted NECEC a win against the last-minute referendum. The DEP Commissioner issued a letter after no appeals were filed to the ME Business and Consumer Court's vote in favor of AGR's constitutional right to resume the development of the $1.4B NECEC project. The court found AGR had completed enough construction at the time of the referendum-led suspension to have a vested right to continue work on the project. AGR may need to revisit the contract terms to maintain project economics and also evaluate the August 2025 COD. At the end of 2022, AGR capitalized $585M of costs associated with the project. NECEC is a 1.2 GW transmission project connecting hydropower from Quebec to New England customers. AGR will need to file a written letter five days prior to resuming construction operations. The Company expects to file a project timeline in the next few weeks. See a history of the proceedings here and here.

AGR — Judge upholds biological opinion and EIS for Vineyard Wind 1: A U.S. district judge issued an order rejecting a lawsuit against the 806 MW Vineyard Wind 1 offshore wind project. The judge upheld that BOEM and the National Marine Fisheries Service (NMFS) complied with the Endangered Species Act and the National Environmental Policy Act when approving the project and did not violate any federal laws in issuing the 2021 biological opinion or the final EIS for the project. Vineyard Wind 1 is on schedule to produce power in late 2023 and a COD in 2024. AGR will oversee the O&M of the facility. The project is a 50/50 partnership between AGR and Copenhagen Infrastructure Partners.

D — VA governor signs bill relating to the development of offshore wind capacity and cost recovery into law: The VA governor signed SB 1441 into law. The bill was written to require the VA SCC to consider the economic development benefits of offshore wind projects when considering the cost recovery of the projects. The bill accelerates the deadline for offshore wind development of 5.2 GW to 2032 from 2034. Ratepayer responsibility will be in proportion to the share of the utility's ownership in the project and the costs will be deemed reasonable up to 1.4x the comparable cost, of a conventional simple cycle CT generating facility. The governor previously signed SB 1477, which authorizes VEPCO to establish an offshore wind affiliate allowing it to secure a non-controlling financing partner for the 2.6 GW CVOW project. Both bills will go into effect on July 1.

EIX, SRE — CAISO approves 45 transmission projects for ~$7.3B: The plan (2022-2023 10-Year Transmission Plan) was approved and is a significant step up from last year's plan for 23 projects and $3B. The projects are divided between 24 projects for grid reliability and 21 "policy-driven" projects. The respective costs are $1.8B and $5.5B. The transmission plan is based on CA's projections for 40 GW of new resources over the next 10 years. It is designed to serve the state's clean energy goals and increase in electrification. The projects have eight- to 10-year lead times, consistent with CAISO's 20-year transmission outlook. ~$2B of the projects are in EIX's geographic area, and ~$3.6B are in SRE's area. The utilities will be able to compete for more projects under FERC Order 1000. The initial draft plan included 46 transmission projects for ~$9.3B, but additional analysis is being conducted on one of the transmission upgrades.

EPA proposes new rules to expand the 2015 CCR rule to apply to inactive sites: The EPA has proposed new rules to expand the management of disposal of coal combustion residuals (CCR) to include inactive coal ash ponds, landfills, and other fill sites at inactive power plant sites. As part of the new rules, the utilities must monitor groundwater waste at inactive facilities and clean

Sophie Karp (917) 368-2361 / sophie.karp@key.com

up any contamination detected. The rules propose an expansion to the 2015 CCR rule that issued national minimum standards for existing and new CCR landfills and CCR surface impoundments at active facilities. The final rule at the time did not establish requirements for inactive facilities. In August 2018, the U.S. Court of Appeals for the D.C. Circuit vacated the exemption for inactive surface impoundments at inactive facilities and remanded the case to the EPA for further action. The EPA expects the proposal to affect about 280 coal ash ponds and landfills. Comments on the proposal are due by July 17, and a final rule is expected in June 2024.

MISO 2023-2024 Planning Resource Auction indicates sufficient generation capacity: MISO's 2023-2024 seasonal planning resource auction (starting June 1) showed sufficient generation to meet planning reserve margin requirements and local clearing requirements across the entire MISO region, including the north and central regions, which rely on imports. The clearing prices are $10/MWd in the summer, followed by $15/MWd and $2/MWd in the fall and winter, respectively. Clearing prices in the spring are $10/MWd. The clearing prices are identical across all the subregions and zones, except for zone 9 (LA and TX) in the fall and winter. The auction prices for Zone 9 are $59/MWd and $19/MWd for the fall and winter, respectively. The results compare to the 1.3 GW shortfall in the Northern MISO region in the 2022-2023 planning year, which drove clearing prices in MISO Zones 1-7 to $236.66/MWd (see our write-up here). This is the first auction with a seasonal resource adequacy construct, allowing resources available for only part of the year to still participate in the auction. Reduced load forecasts and delayed generation retirements helped MISO to meet its capacity requirements for this period. MISO is the largest RTO by geography, covering 15 U.S. states and Manitoba.

NERC releases the 2023 Summer Reliability Assessment: NERC's Summer Reliability Assessment (June-September) says that the U.S. is in a better place y/y from a resource perspective with all of the U.S. showing adequate resources for normal summer peak load conditions. However, much of the U.S. (including MISO, ISO-NE, SPP, ERCOT, SERC, and the Western Interconnect) could face shortfalls during extreme weather (NOAA is projecting above-normal temperatures for much of the U.S.). The SPP, MISO, and ERCOT have all increased reliance on renewable resources, and wind generation will be instrumental during peak demand. Drought conditions in the West have eased following higher precipitation and thus higher snowpack indicating better hydro conditions. Similar to past years, the West could still face rolling power outages during wide-area heat events, limiting the number of interregional transfers. Normal or below-normal fire risk is projected for much of the U.S. West.

Catalyst to Watch This Week: Staff Testimony in EXC and PNW Rate Cases

On Monday, the Staff of the Illinois Commerce Commission will file testimony in the multi-year rate case filing for Exelon's ComEd subsidiary. We expect the recommendation may mirror the Ameren Staff position, which reflected a 8.9% ROE and 50% equity ratio. Also on Monday, the Arizona Corporation Commission will file testimony in PNW's Arizona Public Service rate case. This is a critical rate proceeding for PNW following a very difficult rate case outcome in late 2021. The company is seeking a 13.6% revenue increase and a key change to the Renewable Energy Adjustor Charge to allow recovery of APS owned renewable resources.

Price Target Change

We are updating our WEC target price to $99 from $104 to reflect lower market multiples (20x P/E vs. 21x P/E on our unchanged 2024E estimate of $4.94). Our 22% premium we ascribe for WEC vs. the peer group average also remains unchanged.

The Analyst Conviction Index (ACI)

The ACI = (# of buy ratings - # of sell ratings)/Total # of ratings. We show the sorted ACIs for our regulated utility, power, and water coverage stocks in (Figure 10) below. The graph also shows absolute number of buy, hold, and sell ratings by company. We also track the change in the ACI over the last 12 weeks (Figure 11) to try to gauge where the sell-side consensus view is shifting.

Valuation Method and Risk Statement

Our valuation methodology for the group is price to earnings based.

North American utilities: We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

IPPs: We identify the following risks for the sector: Demand for new renewable installations has historically been volatile around changes in state and federal policy, and we expect this volatility to continue. In addition, margins for product manufacturers can be impacted by swings in raw materials pricing and the overall level of energy prices.

Environmental Services: We identify the following risks for the sector: Housing remains a key driver of incremental municipal solid waste volume growth, and a slowdown in new housing starts could put downward pressure on sales growth. In addition, pricing tends to follow GDP growth, and a slowdown in economic growth could lower ability to raise pricing driving potential contraction in margins. For more industrial-exposed names, swings in commodity prices can impact the overall level of waste-generating activity, contributing to earnings volatility.

We value WEC at a 22% premium to the RU average P/E multiple. The premium reflects our group valuation bias (5% premium), as well as WEC's 3rd quartile EPS growth (2% discount) and 1st quartile regulatory ranking (10% premium), an earnings consistency premium (4% premium), and a lower risk path to the clean energy transition (5% premium).

Quantitative Research Review

UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. The views for this month can be found below. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research Team on the email above.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 19 May 2023 04:55 PM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

The Disclaimer relevant to Global Wealth Management clients follows the Global Disclaimer.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of UBS Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Guggenheim's 2023 AGA Investor Question Bank (see our note HERE)

EXC NDR: Post-AEE Selloff Gets Interesting as the Pathway to a Boring Story Runs Through Illinois (see our note HERE)

D/M&A – Indicative bids received in LDC auction process

TX – Texas utility bills progress through legislature

PCG – CPUC approves proposed PG&E settlement related to the Zogg fire

PCG – PG&E starts vehicle to everything electrification work with BMW

PCG – PCG CEO responds to San Francisco Mayor's concern on outages

AEP – W.Va. delegate resigns seat to take position with American Electric Power

SRE – Comments filed in support of public hearings on Port Arthur Phase II Expansion at FERC

Nuclear – Micro fast reactor firm Oklo selects sites for two plants in Ohio

ERCOT – CCGT seeking to switch from MEM to ERCOT may require IS

LNT – IPL files for reconsideration on aspects of the DAS I and II advanced ratemaking approvals

D/M&A – Indicative bids received in LDC auction process

- A "mix of strategic and financial investors" bid by the 5/11 deadline for "all or part" of D's NC/OH/UT LDCs, according to PeakLoad.

Guggenheim takeaway: *This is a procedural data point that should not be a surprise given all of the visibility around the strategic process to date. As we noted following the last call (HERE), the trade press has provided data points (e.g., HERE, HERE) that management has been marking to market different asset options for some time now, providing external assurance, in our view, that many of these processes will be mature in time for the third quarter analyst day. Could we be in a situation where Dominion emerges post strategic review with no "gas" exposure through the sale of their LDCs? Possibly… Could Dominion essentially emerge as a regulated electric utility located in VA? Possibly…*

TX – Texas utility bills progress through legislature

- TX SB 1076 passed at the House with passage recorded at the Senate and signed.
- The bill addresses timelines for CPCN approvals on transmission projects.
- TX Senate bill SB 1015 related to bi-annual DCRF review at the PUCT has been put on the general state calendar.
- The committee report is supportive of aligning the DCRF and TCOS frameworks and does not see any change in authority resulting from the bill.
- The bill aligns DCRF reviews to twice in one year, similar to the TCOS process already in place.
- TX HB 2555 has passed at the Senate.
- The bill focuses on transmission and distribution resiliency plans for utilities

Guggenheim takeaway:*FYI. SB1015 seems to be one of the less contested bills in front of the TX legislature as it does not change any agency authorities or introduce any new concepts in ratemaking. The DCRF cadence could help offset some of the regulatory lag for TX utilities (CNP, SRE, ETR, AEP). Texas legislative session starting to pick up as we are watching multiple utility related bills, including on the electric side, where there is a capital structure bill proposed (HB 3042).*

PCG – CPUC approves proposed PG&E settlement related to the Zogg fire

- The CPUC approved the $150M Zogg fire settlement during their last commission meeting.
- The order on the settlement was recently modified to remove language around the severity of PG&E actions and instead listed the severity as a disputed fact.
- The Zogg fire impacted 204 structures and PG&E has taken a ~$350M charge.
- Media coverage remains critical of PG&E and the CPUC.
- Media coverage here.

Guggenheim takeaway: *FYI. The language changes are largely optics and not a fundamental change to PG&E's outcome with the CPUC. Penalties remain in place and the liabilities from the fire are below the $1B insurance limit.*

PCG – PG&E starts vehicle to everything electrification work with BMW

- PG&E announced the initial testing of V2X, vehicle to everything technology with BMW (BMW.DE).
- The initial programs will test various peak load offset uses including as backup generators.
- PR here.

Guggenheim takeaway: *FYI. PG&E continues to advance EV use case analysis and implementation. In aggregate, this helps drive EV adoption to an inflection point, increases sales volume and helps offset customer wallet impacts for energy and transportation.*

PCG – PCG CEO responds to San Francisco Mayor's concern on outages

- PCG CEO Patti Poppe responded to a letter from San Francisco Mayors office around outage impacts and response.
- The PCG response detailed outage response procedures and restoration timelines.
- Media coverage here.

Guggenheim takeaway: *FYI. Constructive discourse through media channels for PCG as San Francisco has been vocal about municipalization of utility assets.*

AEP – W.Va. delegate resigns seat to take position with American Electric Power

- A Republican member of the West Virginia House is resigning her seat in order to take a position at AEP.
- Delegate Erikka Storch wrote in a letter to House Speaker Roger Hanshaw that she would be resigning effective May 19th, according to news outlets.
- Media coverage HERE and HERE.

Guggenheim takeaway: *Delegate Storch has accepted the position of external affairs manager at Appalachian Electric Power, where her duties will include serving as a legislative and media liaison for the utility.*

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 12-Jun-2023 12:24 PM.

SRE – Comments filed in support of public hearings on Port Arthur Phase II Expansion at FERC

- Multiple stakeholders filed comments strongly supporting more public hearings in the Port Arthur Phase II FERC permitting proceeding.
- FERC has been working on supplemental environmental assessments for PA phase 2.
- FERC Docket: CP20-55

Guggenheim takeaway:*FYI. Update on FERC process as SRE pursues further LNG expansions. There is strong local pushback on environmental impacts, but SRE has been focused on lowering environmental impacts through electrification and CCS opportunities (relative to other LNG developers). While the plans for FID on PA development are largely completed, the expansion project is still in the earlier stage of development. The co-location for the expansion project could provide an opportunity to accelerate development timelines.*

Nuclear – Micro fast reactor firm Oklo selects sites for two plants in Ohio

- "Oklo Inc. and the Southern Ohio Diversification Initiative (SODI) have signed an agreement to deploy two commercial Oklo power plants in Southern Ohio. Oklo's commercial power plants will provide up to 30 MW of clean electric power, and over 50 MW of clean heating, with opportunities to expand. " - release
- More HERE

Guggenheim takeaway: *Nuclear data point for your awareness – Oklo [PRIVATE] is one of the more advanced non-LWR fast-reactor designs in the US, with an ongoing licensing process before the NRC.*

ERCOT – CCGT seeking to switch from MEM to ERCOT may require IS

- The ~540MW CCGT on the Texas-Mexico border had been seeking to reconfigure its output to serve the ERCOT market this summer, according to PeakLoad, before receiving an interconnection request.

Guggenheim takeaway: *Minor FYI – the interconnection request may take time, removing a potential source of dispatchable capacity as the ISO heads into the peak season.*

LNT – IPL files for reconsideration on aspects of the DAS I and II advanced ratemaking approvals

- "Based on the foregoing and as further explained below, IPL respectfully requests, pursuant to Iowa Code § 476.12 and 199 IAC section 7.27, the Board's reconsideration of its denial of the Cost of Equity Ratemaking Principle, Cost Cap Ratemaking Principle, Environmental Attributes Ratemaking Principle, and Matching Principle." - filing
- More HERE.

Guggenheim takeaway: *Flagged for your awareness as IPL continues to argue for its proposed 11.4% ROE – as a reminder, under advanced ratemaking, a project can earn a fixed ROE for its life. The balance of the original ask (200MW + BESS) remains in the legal process.*

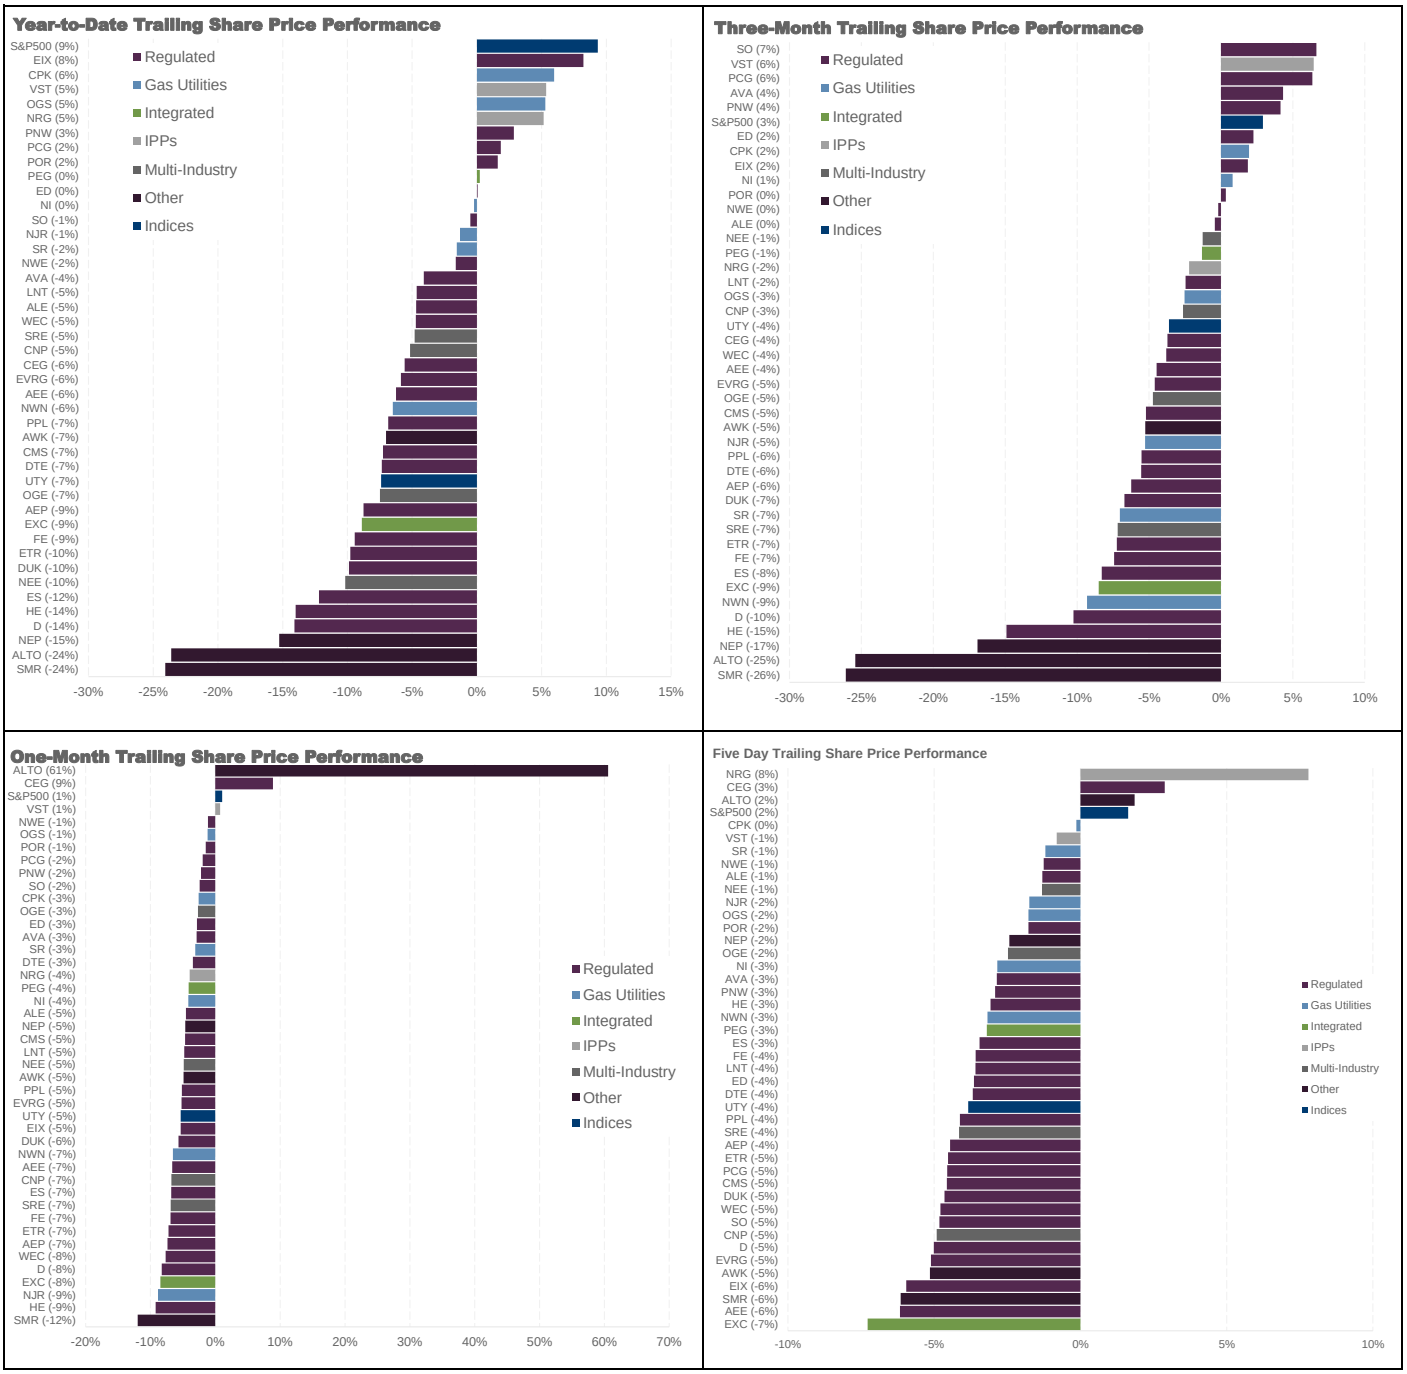
Share Price Performance (Year-to-Date, Three-Month, One-Month, & Five-Day Trailing)



(1) Regulated utilities deliver power to end-use customers via regulated transmission & distribution (T&D) infrastructure; vertically integrated utilities with regulated or mostly contracted generation are also included.

(2) Local Gas Distribution Companies (LDCs), as well as diversified utilities with a business mix largely comprised of gas infrastructure and related activities (i.e., LDC franchises, interstate pipelines, and/or other gas midstream activities).

(3) Integrated utilities own and operate regulated T&D franchises, as well as un-regulated power generation with commodity exposure.

(4) IPPs operate merchant (i.e., un-regulated, non-utility) power plants that compete to sell power in wholesale markets or through retail marketing businesses.

EXC NDR: Post-AEE Selloff Gets Interesting as the Pathway to a Boring Story Runs Through Illinois

Key Message: Exelon's pathway to becoming a boring 6-8% growth story has reached a critical juncture, with the pending ICC process a key determinate of ComEd's earnings power through 2027 and the regulatory climate in IL. While ICC Staff's testimony in AEE's own MYP injected additional uncertainty into the process, our latest meetings with management provided useful color on how their respective cases may move forward from that floor – while we expect AEE management's official and initial takes on the latest Illinois staff/intervenor filings at the upcoming AGA conference, our EXC NDR was fresh off their peer's intervenor testimony so well-timed meetings as EXC is approximately 2 weeks behind AEE from a procedural standpoint. With much of the balance of the portfolio in its own regulatory processes, we subscribe to EXC management's ongoing narrative that EXC's story is on the precipice of becoming much simpler for investors. Despite the company's attractive attributes shares continue to trade at a ~6% discount to the slower-growing group, a dislocation we believe may become increasingly unjustified if the latest IL data points on a floor prove to be just that – a floor. We continue to seek a re-entry point as the IL process matures and the balance of the story solidifies, especially given current valuation levels – shares are likely already pricing in a draconian outcome in IL. To that end, the valuation is becoming interesting to us given the selloff, with any testimony more constructive than AEE's potentially yielding a relief rally. That said, we remain on the sidelines for now given the somewhat binary nature of the event.

We hosted EXC's C-Suite (CEO, CFO, IR) for a dense multi-day NDR across New York. Key focus areas included: **1)** messaging and high-level thoughts on the business now that CEO Butler and CFO Jones are several months into their respective roles, **2)** key thoughts on the multi-year rate plan (MYP/MYRP) process at ComEd in IL, with our meetings drawing heavily on the recent initial testimony from Staff in AEE's MYP (see our note HERE), including management's thoughts on a) differentiating factors vs. other cases, b) procedural flags, and c) additional thoughts on ComEd's approach to capital planning, **3)** updated thoughts on the ComEd franchise agreement, **4)** a roundup of the ongoing work across the eastern utilities, and **5)** thoughts on the credit profile and M&A. **As a reminder, initial testimony from Staff is due for ComEd on Monday May 22 while many investors are attending the AGA conference in FL.**

It's all (almost) about Illinois. While EXC management refrained from discussing specific nuances of AEE's staff/intervenor testimony, they did provide some incremental color on how to think about the process as we await ComEd's own intervenor testimony on Monday the 22nd. **On ROE,** management noted that the proposal to use a formula rate was not supported by the legislative process behind MYPs, including the lack of language around truing up for treasury changes, with the 8.9 in AEE's case an unreasonable floor, albeit one market to a 30Y Treasury average below current marks. **On the equity ratio,** ComEd filed for a ~50.5% layer, growing to ~51%, marking a much tighter bid-ask to Staff's recommended 50% as compared to AEE's ask. **On the capital component,** management refrained from drawing comparison to AEE, while at the same time emphasizing that there was no placeholder spend – everything is accounted for down to the project level and tied back to the performance and policy goals laid out in CEJA, with IT spend ~10% of the plan. OPEB also sits outside of rate base, with management seeking a WACC return (earning debt).

Tightening up the platform and building for the long term... Management's messaging focuses on 7% growth and cost controls across the fully regulated T&D platform. With almost half a year under their belts, alongside a successful 4Q roll/update (the first since the genco spin), we and investors were keen to understand how the CEO and CFO's thoughts were evolving on the messaging and long-term strategy. To that end, the team noted that they are focused on three key facets of business improvement in the near term: **1)** a cultural transformation, with a focus on earnings precision, **2)** cost structure improvements (more below), and **3)** leadership building for the long term. These were framed within the context

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 12-Jun-2023 12:24 PM.

of the company's history of M&A and the previous presence of the genco, with the present situation providing an opportunity to further sharpen the platform's focus. This extends to the 6-8% growth guidance, with management acknowledging investor views that a T&D utility should be straightforward and boring with minimal volatility – hence the focus on locking in the several MYP filings underway this year and setting a margin of safety within the plan.

What should you read into the cost comments? Management's discussion of cost controls came within the context of the "what will you do differently" conversation, with the prospects for savings to come in the normal course of the business improvement process – not a single "big bang" or annual cost play. The team emphasized that the absence of the genco has allowed for more simplification and efficient corporate structuring, with a dedicated team exploring the latter. Improvements harvested over the coming years were generally framed as cushion-building (e.g., PECO weather); however, the plan as it stands today is not dependent on specific outcomes/thresholds.

ILLINOIS

The bulk of our NDR conversations understandably gravitated around the ComEd MYP case process and the most recent marker provided by ICC Staff's initial testimony in AEE's MYP last week – see our note HERE. In that case Staff recommended 1) the continuation of the FRP's formula rate, alongside 2) a 50% equity layer and 3) notable pushback on the capital side. We unpack each of these items in greater detail below, with the ROE and capital items generally outweighing the capitalization recommendation for EXC given its bid-ask was tighter (~50.5% escalating towards 51.2% over the plan). **Importantly, investors asked if management saw any reason why ComEd should receive different ROE or equity components to AEE, to which they responded no.**

Beginning with the ROE, management framed the AEE outcome in our meetings as Staff setting bounds for the ICC, with the proposed formula ROE of ~8.9% contrasted against the electric proxy group's 10.07%. The balance of intervenor testimony on ROEs largely fell within those two poles (even the AG was higher than the 8.9%), with management pointing to the 8.9% as an unreasonable floor, in their view. Investors in our meetings expressed surprise over the Staff's proposal of the formula, **with management acknowledging the departure from expectations and noting that there isn't even language in the enabling legislation to provide for ROE reconciliations during MYPs as treasuries move.** While re-marking the formula to current yields on the 30-year would boost allowed returns, **investors in our meetings were generally displeased with the unexpected reintroduction of direct interest rate risk via the formula.** In management's view the point of the 2021 legislative process was to move away from the formula, with investors pointing out that the backdrop sets up an unusual situation where policy-backed spend (electric T&D) is earning a lower return than more carbon intensive systems (gas LDCs). **What about the prospects for performance incentives to the ROE?** There are no assumptions around the 32bps of potential incentives in management's current plan/guidance, with the team emphasizing that it does not think those should be directly or indirectly considered in the ROE-setting process (something we have intermittently heard of in other jurisdictions).

Management strikes a confident tone on its grid plan as investors try to draw lines to Staff plant adjustments in the AEE testimony. While multiple investors across our meeting tried to correlate adjustments in the AEE case to potential ComEd outcomes, **EXC management was largely deferential to the forthcoming testimony while offering additional thoughts on ComEd's own grid plan**. Specifically, the team noted that the grid plan that underpins their filing was built around the performance requirements and policies laid out in CEJA, supported by 15 meetings with 1,000+ attendees. While the team at ComEd has received a lot of discovery requests in the process, **management noted that there is no placeholder capex in the plan – everything proposed has an investment tracking tag associated with its inclusion.** Investors also noted in our meetings some potential

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 12-Jun-2023 12:24 PM.

compositional differences (IT/OPEB), with management acknowledging that some differences may makes direct comparisons slightly challenging.

What's next? Management emphasized in our meetings repeatedly that these are the early stages of a long process, and in our view, the team has been clear for some time now regarding their expectations for a fully litigated case. After the initial testimony, which is due 5/22 (Monday), rebuttals will follow on 6/27 ahead of hearings starting 8/21. In the event ComEd were to receive the unfavorable 8.9% and formula, management would have the option after the 4 years of the MYP to revert back to traditional ratemaking (with forward test year); however, we note that is a far-removed consideration at this point. In response to investor questions on the ICC, management noted that the new (old) chair, **Doug Scott, is a former legislator and was involved in the CEJA process, making him intimately familiar with the goals of the legislation** and how the ICC can best effectuate its implementation.

WHAT ABOUT THE FRANCHISE AGREEMENT?

The contours of the prior agreement remain in stasis after Mayor Lightfoot left office earlier this month, with the inauguration of Mayor Johnson expected to restart dialogue in the coming weeks. In management's view the boundaries of the prior deal are likely to remain familiar (e.g., the ~$100M in support); however, the **new mayor may wish to adjust some of the proposed programs in his own way**, and the process may take some time. Management remained confident overall, in our view, citing a favorable reception from the city council and ongoing linkages between ComEd leadership and some of the mayor's local engagement efforts.

MANAGEMENT CONTINUES TO LOOK PAST PRIOR LEGAL ISSUES AS DPA COMES TO A CLOSE

While the ongoing trial of former EXC executives continues to generate some noise in the Chicago region, management reiterated in our meetings that the company continues to move on from ComEd's prior challenges with an eye towards a clean slate in 2024. Specifically, the DPA formally ends in July, with the remaining lawsuits (derivate and consumer fraud) targeted for conclusion or dismissal in the coming months. An SEC investigation on controls remains ongoing. While some investors asked if this could potentially bleed into the regulatory arena, the company noted that it was an active participant in the policy processes that led up to the passage of CEJA and the implementation of the grid plans and performance metrics.

EASTERN UTILITIES ROUNDUP

While the bulk of our jurisdictional conversations were devoted to Illinois, management also provided a useful roundup of the various eastern utilities, including several nascent MYP filings. Beginning with PECO, management noted that the current 3-year case cadence is working well, and while the team continually evaluates whether to potentially pursue some of the

advanced ratemaking options available under legislation that is now several years old (decoupling, PBRs, etc.), it has yet to actually pursue any of the mechanisms. In conjunction with this management praised the team at PECO PA for their work in the past decade on improving the regulatory and political relationships in the state. To the south and east, management has now filed 4 cases (ACE, BGE, Pepco DC, Pepco MD), alongside the ongoing DPL DE case (filed 12/22). The most recent of these was in MD, which was filed on the first day of our NDR (5/16). The MD utility in that case is seeking a ~$214M total rate increase, supported by a 10.5% ROE (50.5% layer) on a ~$3.048B rate base in 2027. The ask is Pepco MD's second MYP and features a ~$70M flowback of remaining tax cut-associated reg liabilities. Importantly, the team also noted that it continues to explore the potential to settle MYPs where possible, with the establishment of a track record and Staff familiarity in MD providing a potential window for dialogue, as compared to the first round of MYPs.

CREDIT AND M&A

With guidance from the IRS on repairs still outstanding, management continues to talk around its 13-14% long term FFO/CFO to Debt target, with an eye towards gradual improvements over time. Management reiterated its expectations for guidance on repairs by the end of the year, **with some potential for slippage into 1Q24**. Importantly, the plan and key guidance details continue to have some variability within the 13-14% range, with investors in our meetings repeatedly asking on the profiles of improvement over time. To that end **management noted that it will still pursue the remaining $425M of equity in the current plan even if they get repairs, with the credit cushion expected to gradually build in the coming years on the back of the MYPs across the footprint.** For example, the ComEd FRP true up will flow in 2024/25, with the MYPs themselves providing a much tighter spend-collect cycle vs. prior constructs. **These regulatory credit tailwinds will also be augmented by the aforementioned cost controls**, and while management did not indicate that investors should expect chunky reveals, there will be some steady savings over time. Finally, we note that the team was also asked for its refreshed thoughts on M&A given the company's successful track record and prior management's openness to discussing, with the team indicating that it isn't on the short-term horizon – they are focused on the strong organic growth and improving the balance sheet. This mindset extended to question of divestments, with management emphasizing that the gas LDCs are very integrated with their electric counterparts (e.g., there would be dissynergies at BGE). The team was also asked about ACE, a perennial question given its smaller size within the portfolio, with the answer emphasizing the value-add of the jurisdiction (consistent with longstanding messaging).

VALUATION & RISKS

EXC- NEUTRAL - $45.00

VALUATION

Our valuation is based on our 2025E EPS of $2.74. We use our 17x regulated utility multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years. To this 17x multiple, we continue to apply a 1-turn premium to each of EXC's subsidiaries for favorable recovery mechanisms (riders, MYPs) and underlying growth/ incremental investment opportunities, except for ComEd. This blended 17.7x multiple, applied to our 2025E EPS and discounted back 1 year equals our $45 PT. There is 17.8% upside to our PT from current levels, but we maintain our NEUTRAL rating based on the pending outcome of the ongoing IL case process.

RISKS

EXC comprises regulated distribution and transmission assets, which face traditional risk factors and upside drivers inherent with all utilities, including: (1) positive/negative rate case outcomes above/below our expectations, (2) higher/lower capex outlooks, and (3) interest rate changes above/below what we account for in our regression model.

Executive Investment Summary

Exelon Corporation reported robust earnings for the first quarter of 2023, with revenue exceeding expectations by $18.55 million to reach $5.56 billion. Exelon is committed to the development of renewable energy sources and has made the commitment to achieve net-zero emissions of greenhouse gases from all its activities by the year 2030. The company intends to make capital investments totaling $31.3 billion between the years 2023 and 2026, which will support a projected rate base growth of 7.9% between the years 2022 and 2026.

The Smart Energy Network project, which will replace 568,000 standard electric metres with smart metres by mid-2024, shows ACE's dedication to modernising and enhancing its infrastructure. Recent rate cases and multi-year plans for Exelon's regulated utilities are extremely important to the ability for the company to increase its revenue, and the company's low-risk characteristics contribute to a high credit profile. Exelon was able to execute approximately 80 percent of its required debt financing for 2023 during the first quarter of 2023, greatly lowering interest rate volatility.

Looking ahead, Exelon's strategic investments in clean energy sources, modernized infrastructure and continued focus on clean energy and net-zero greenhouse gas emissions is expected to increase its appeal among environmentally conscious investors. Additionally, the company's ongoing capital investments and rate case filings offer a solid foundation for revenue growth amid evolving industry trends. All things considered, our rating for the stock of Exelon Corporation is "Hold."

Earnings Insights & Expectations

Exelon Corporation (EXC) is a Fortune 100 energy company headquartered in Chicago, Illinois. The company operates through its six subsidiaries, including four regulated utilities and two merchant power generators.

Exelon Corporation (EXC) announced its Q1 2023 earnings with revenue actuals of $5.56 billion, surpassing estimates by $18.55 million. The company reported normalized EPS actuals of $0.70, outperforming expectations by $0.04. Also, its GAAP EPS actuals of $0.67 exceeded expectations by $0.02. The company aims to maintain a dividend payout ratio of around 60%.

Rate Case Developments : Exelon's regulated utilities are required to file rate cases from time to time to adjust their customer rates to recover their costs and earn a reasonable return on their investments. Recently, ACE, BGE, Pepco DC, and ComEd, all regulated utilities subsidiaries of Exelon, have filed rate cases or multi-year plans. These filings are significant for Exelon's earnings growth and shareholder returns as customer rates are a major revenue source for regulated utilities, and any changes to these rates can affect the company's financial performance.

The next quarter expectations are set at normalized EPS estimates of $0.47, GAAP EPS estimates of $0.44, and revenue estimates of $4.51B.

Discovering Growth Drivers

Exelon Corporation (EXC) is a utility holding company that operates through its subsidiaries in the energy sector.

- **Focus on Clean Energy**

EXC has been focused on clean energy, which has been contributing significantly to its growth. The company is actively transitioning to clean energy sources, including nuclear, wind, solar, and hydroelectric power. The focus on clean energy is driven by increasing demand for environmentally friendly and sustainable energy sources.

How IIJA Funding Will Boost Clean Energy and Transportation Projects

Exelon is seeking nearly $700 million in funding under the Infrastructure Investment and Jobs Act (IIJA) for projects such as a community innovation centre, battery-backed community microgrids, smart metres, and enhancing grid resilience in underserved communities. The IIJA is a $1.2 trillion bipartisan infrastructure measure that was signed into law on November 15, 2022 by President Biden. The measure includes approximately $550 billion in new federal investments in a variety of sectors, including roads, bridges, water, and broadband, among others. Clean energy and transport will receive nearly $700 million in proposed funding for ten projects across the country as one of the IIJA's main areas of focus. The proposed projects of Exelon aim to accelerate the transition to a low-carbon economy, improve grid resilience and dependability, generate jobs and economic opportunities, and enhance air quality and public health. In addition to partnering with over 100 community-based organisations and over 25 universities and educational institutions to advance workforce development and other clean energy-related programmes and initiatives, it is anticipated that the projects will generate more than 7,800 potential jobs in the communities they serve. Additionally, the projects will assist the United States in achieving its climate objectives by reducing greenhouse gas emissions and increasing the proportion of renewable energy sources in the energy mix. The IIJA funding for clean energy and transportation initiatives presents Exelon with a significant opportunity to demonstrate its leadership and innovation in the clean energy industry.

- **Net-Zero Greenhouse Gas Emissions**

  Exelon announced a new objective to accomplish net-zero greenhouse gas emissions across all of its operations by 2030, expanding on its previous pledge to eliminate all carbon emissions from its electricity generation by 2050. In addition, the company pledged to reduce its methane emissions from its natural gas distribution system by fifty percent by 2030, relative to a 2015 baseline. The net-zero emissions objective of Exelon encompasses both direct emissions from its own sources (Scope 1) and indirect emissions from purchased electricity (Scope 2). The company intends to achieve its objective through a combination of measures, such as retiring or selling its remaining fossil fuel assets, increasing its investments in renewable energy sources and technologies, enhancing its energy efficiency programmes and practises, purchasing carbon offsets or credits, and advocating for federal and state policies that encourage the development and deployment of clean energy. The net-zero objective of Exelon aligns with the Paris Agreement's aim of limiting global warming to well below 2°C above pre-industrial temperatures. The objective also reflects Exelon's dedication to environmental sustainability and social responsibility, as well as its recognition of the threats and opportunities posed by climate change to its business and stakeholders.

- **Low-risk Attributes Support a Strong Credit Profile**

  EXC generates revenue from both regulated and non-regulated businesses. The diversification of revenue streams helps to mitigate the impact of regulatory changes and market fluctuations. The company's diverse portfolio includes energy generation and distribution, natural gas distribution, and energy services.

  Exelon executed ~80% of its 2023 debt financing needs in the first quarter of 2023, which substantially mitigated interest rate volatility over the balance of the year. This was an important achievement for Exelon’s financial performance and credit ratings, as it reduced its exposure to rising interest rates that could increase its borrowing costs and lower its earnings. By issuing long-term debt at attractive rates in the first quarter of 2023, Exelon locked in favorable financing terms and extended its debt maturity profile.

  Exelon is the largest T&D utility in the country, serving more than 10 million customers across five states and the District of Columbia. Exelon also benefits from operating in geographically diverse areas that offer growth opportunities and supportive regulatory frameworks. The company has ~100% of its rate base growth covered by alternative recovery mechanisms that allow for timely adjustment of rates based on changes in costs or investments. The company also has ~73% of its revenues decoupled from volumetric risk, which reduces its exposure to weather fluctuations or demand shocks. Exelon expects to issue the remaining $425M of equity by 2025 as part of a balanced funding strategy that preserves its financial flexibility and supports its growth objectives.

- **Capital investments**

EXC is making significant capital investments in its infrastructure to improve operational efficiency and reliability. The investments are focused on upgrading existing facilities and constructing new ones. The company's capital investment plan allows it to maintain a competitive edge and position itself for growth. The company is planning to invest $31.3B of capital from 2023-2026 for the benefit of our customers, supporting projected rate base growth of 7.9% from 2022-2026

ACE's Smart Energy Network

By mid-2024, the Smart Energy Network will replace 568,000 traditional electric metres with smart metres. Smart metres provide real-time energy usage and power quality data to ACE and consumers. The Smart Energy Network also upgrades ACE's distribution system with advanced technologies like distribution automation (DA), which can detect and isolate faults and restore service automatically, and communication networks, which can exchange data and remotely control grid devices. The Smart Energy Network will help ACE and its customers by:

- Improved network dependability with faster and more efficient power restoration for client homes and businesses during climate change-induced extreme weather occurrences. The Smart Energy Network will help ACE increase dependability over the next five years.
- Upgraded technology improves energy usage reading and invoicing, practically eliminating estimated billing. Customers can use online portals and mobile apps to track and manage their energy usage and receive more accurate and timely invoices.
- Better bill-management tools and online capabilities that let clients see their daily and hourly energy usage trends to save money and utilise energy more efficiently. Dynamic pricing programmes will offer lower rates during off-peak hours or incentives for reducing consumption during peak hours.
- To meet climate targets, easier integration of solar, battery storage, and mobility technology. The Smart Energy Network will allow rooftop solar panels and electric vehicles (EVs) to be connected and optimised by ACE. The Smart Energy Network will help ACE comply with state renewable energy policies and decrease its carbon footprint.

The Smart Energy Network will cost ACE $193M over three years, one of its greatest construction investments. Workforce development candidates will be trained and certified in smart metre installation and maintenance for 30 jobs. The project's 52% diverse contracting spend illustrates ACE's commitment to diversity, equity, and inclusion in its business practises. It is critical to ensure customer acceptance and education, cybersecurity and data protection, and timely and adequate cost recovery from regulators to construct the Smart Energy Network. The initiative shows ACE's creativity and leadership in the clean energy transition.

Our Commentary :

- In terms of the cash flows, we expect the company to generate around $5557 million in operating cash flows in 2023. Capex is expected to follow similar trend corresponding to previous years considering the nature of business the company operates in. This translated to $1559.7 million free cash outflow in 2023, $1504.9 million in 2024 and $1484.8 million by 2025.

A Closer Look at DCF: Our Assumptions and Methodology

- The standard capital asset pricing model (CAPM) was used for the discounted cash flow valuation.

KEY DCF ASSUMPTIONS

WACC	5.35%
COD	3.59%
COE	7.12%
MARKET RATE	6.00%
RISK FREE RATE	3.45%
BETA	0.611
PERPETUAL GROWTH RATE (G)	6.94%
TERMINAL VALUE *	1,00,460.55
TAX RATE	15%

* In USD Millions

Our Methodology :

In determining the value of the company, several assumptions were made. Based on the S&P 500 returns for the past five years, we assumed equity market risk premium at 6% . The risk-free rate was set at the 10-year Treasury Constant Maturity Rate of the United States, which was at 3.45%. The company's stock is slightly more volatile than the overall market and had a beta of 0.611. This beta was used to determine the cost of equity (CoE) at 7.12%, which was deemed reasonable for the company. Based on the company's long-term debt and interest payments, we arrived at the cost of debt (CoD) of 3.59%. After considering the CoE, CoD, and an average tax rate of 15%, we calculated the Weighted Average Cost of Capital (WACC) for the stock to be 5.35%.

Terminal Value Calculation

While valuing a company using the discounted cash flow (DCF) method, the terminal value is a super important piece of the puzzle. It basically represents the biggest chunk of the projected value of the company. To figure out the terminal value, there are different approaches like using the perpetual growth rate method or the multiples method. In this case, they decided to calculate the terminal value by multiplying the expected revenue for 2025 by the EV/Sales ratio.

Key Risks Considerations:

It is important to highlight the key risks associated with an investment in EXC as well as the inherent risks associated with the financial projections and price forecasts presented in this report.

Regulatory Risks: The energy industry is extensively regulated, and changes in regulations, permit requirements, and compliance costs could cause Exelon Corporation to incur higher operating costs, lower revenues, and legal liabilities.

Variations in Energy Prices: Due to Exelon Corporation's reliance on nuclear power, natural gas, and other energy inputs to generate electricity, fluctuations in energy prices can have a significant impact on its financial performance.

Environmental Regulations: Exelon Corporation confronts a variety of environmental challenges, including the potential for increased air and water pollution and more stringent regulations regarding carbon dioxide, mercury, and other pollutants.

Operational Risks: The company faces significant operational risks, such as natural disasters, equipment failures, and other events that could result in production interruptions, equipment damage, or the loss of essential personnel.

Competition in the Energy Industry: Exelon Corporation faces significant competition from other companies in the energy industry, which could lead to a decline in market share, revenue, and profitability.

Capital Market Uncertainties: The financial performance of Exelon Corporation is also susceptible to market risks, such as fluctuations in interest rates, credit market conditions, and equity markets.

As public awareness of the environmental impact of conventional forms of energy production grows, Exelon Corporation may encounter increasing pressure to invest in renewable energy sources. Failure to satisfy these requirements may result in reputational damage and a decline in market share.

Cybersecurity Risks: Exelon Corporation stores sensitive consumer and proprietary information that is susceptible to cyber attacks, such as hacking, malware, and phishing. Any such violation could result in substantial financial loss and reputational injury.

Labour Relations: Work stoppages and other labor-related issues could disrupt Exelon Corporation's operations, which could have a negative impact on the company's financial performance.

Natural Disasters: Natural disasters, such as hurricanes, floods, and wildfires, could have a significant impact on the company's operations. This may lead to production interruptions, equipment damage, and increased operating expenses.

Regarding our price forecast, we would like to clarify that the valuation of EXC in this report is specific to the date of the analysis, namely May 15, 2023.

We must emphasize that the projected valuation and share price of EXC are contingent on the achievement of revenue growth, free cash flows, and other underlying assumptions. Our analysis is incapable of providing assurance that these financial projections will be realised.

There is a possibility that the company's actual results will differ from its projected results due to unforeseen events and circumstances, such as the actualization of the threats described in the preceding paragraph. Lastly, we would like to clarify that we had no interaction with the company's management, and they did not remark on the attainability or reasonableness of the underlying assumptions for the financial forecasts. Please refer to our detailed disclosures at the end for additional information.

Regulatory Calendar
ES — The CT Superior Court's decision in ES's appeal of the Aquarion Water rate case is due on May 15: ES filed an appeal with the CT Superior Court against the PURA's decision in the Aquarion water rate case. In its order, the CT PURA authorized a $2M revenue decrease, premised on an 8.7% ROE and 50.35% equity, which compared to ES's three-year rate case filing, requesting a ~$27.5M rate increase in RY1, ~$13.6M in RY2, and ~$8.8M in RY3. ES's request was based on a 10.35% ROE, 53.06% equity, $1.05B RB, and a 2021 test year. A temporary stay on implementing the new rates is in place while the case is under review.

EXC — Staff and intervenor testimony in ComEd's IL multi-year electric rate case is due on May 18: ComEd filed the first multiyear rate plan in IL (Docket: 23-0055), seeking a cumulative $1,780M rate increase over the period of 2024-2027. The request is premised on a 10.5% ROE and 50.5% equity layer in RY1, with a 5 bps annual step-up in the ROE before reaching a 10.65% ROE in RY4. EXC's equity ratio also includes annual step-ups to 50.74%, 50.96%, and 51.12% for RY 2, 3, and 4, respectively. EXC is requesting a phase-in of new rates by deferring 35% of the 2024 base rate increase, with that amount being recovered in 2026. The step-ups are intended as a hedge against elevated inflation and interest rates. A proposed order is due on October 23, and December 20 is the ICC's deadline to issue a decision.

FERC — FERC's Open Meeting is scheduled for May 18: A copy of the Sunshine Notice is included here.

SO — Rebuttal testimony in SO's Virginia natural gas rate case is due on May 19: VA SCC Staff proposed a $24M revenue increase, premised on a 9.5% ROE and 47.05% equity and the AG's Office recommended a $31M revenue increase. This compares to SO's $69M revenue increase request, premised on a 10.35% ROE and 53.2% equity. The request includes the recovery of $4M through the Steps to Advance VA Energy program rider, the recovery of $445M of infrastructure investments from 2020-2022, and an incremental $100M of investments expected in 2023. Interim rates of $69M went into effect on January 1. Hearings are scheduled to begin June 12, likely followed by an SCC decision in 3Q23.

Recent Developments for Companies Under Our Coverage
From our midweek: The IL Staff files testimony in WEC's IL gas rate cases; AVA files a partial settlement on Cost of Capital parameters in its OR gas rate case; XEL requests to add 250 MW of incremental solar at the 460 MW Sherco plant; DEF commences operations for 150 MW of solar generation; the EIA releases its May Short-Term Energy Outlook; and the EIA Forecast calls for a 72% increase in CA hydropower generation, U.S. hydropower down y/y.

AEE — Staff testimony in the IL multi-year electric rate case points appears restrictive at first glance:

- **Staff recommends a flat 50% equity ratio through the multi-year rate period and an 8.9% ROE:** Staff recommends an ROE of 8.914% to be updated annually through the MYRP process. The rationale cited for the low recommended ROE is that the utility carries less risk under a multi-year rate plan than under traditional rate making. The 8.9% is derived using the FRP formula (580 bps plus the 2022 U.S. Treasury bond yield of 3.114%). Staff also refers to the annual true-up mechanism in the new rate structure as a means for timely and certain cost recovery, further reducing the risk of regulatory lag. With the lower ROE, equity ratio, adjustments to O&M, and projected plant additions being the primary drivers, Staff recommends a $21M cumulative rate decrease.
- **AEE requested a $449M rate increase over 2024-2027, based on 10.5% ROE** and an equity ratio that increased marginally from 53.99% in RY1 to 54.03% in RY4.
- **We view the staff testimony as fairly restrictive** and is likely the reason for AEE (-1.3%) and EXC (-0.9%) stocks underperforming the UTY (+0.4%) on Friday. The proceedings are still underway with the possibility of a constructive final outcome, and we will be tracking (evidentiary hearings are scheduled to begin on August 7, and an ICC ruling is due in December. New rates will go into effect on January 1, 2024). In the meantime, Staff and intervenor testimony in EXC's ComEd MYRP is scheduled for this week on May 18 and will be closely watched for any additional color.

EIX — SCE makes a GRC filing and raises the long-term EPS CAGR to 6-8% from 5-7%: EIX filed a GRC application with the CPUC requesting a $1.9B rate increase over 2024 levels in the 2025 test year, and based on a $38B-$43B capital plan for 2023-2028 (vs. a $27B-$30B plan for 2021-2025). EIX provided long-term rate base CAGR of 6-8%.

- **Where does EIX plan to spend the capex dollars?** As was highlighted on the recent earnings call, as the wildfire-related claims have stabilized, and EIX sees tangible benefits from the extensive wildfire mitigation-related investments, the focus has shifted to investments for a dual strategy of wildfire mitigation and grid upgrades to support increased electrification—especially transportation electrification. The covered conductor program is expected to start winding down after 2024, and undergrounding is expected to pick up the pace, keeping the total wildfire mitigation capex at a steady $1.3B-$1.5B range annually through 2028. Total capex allocation over the stated 2023-2028 period is estimated at 18% of the $38B-$43B. Infrastructure replacement will be a bulk of the capex (~29%), while facilitation of load growth and new service connections will make up 14% of the capex (load growth between 2023-2035 is expected to be 10x the annual rate of load growth since 2021, led by the electrification trends in CA). The capex also includes a substantial allocation for inspections and maintenance.
- **EIX is requesting a $1.9B revenue increase in the base year, 2025:** SCE is seeking a $1.9B rate increase in 2025, followed by an incremental $373M in 2026, $476.5M in 2027 and $514.5M in 2028. Cost of capital proceedings are conducted separately in CA and thus are not a part of the GRC.
- **Rate Base CAGR:** EIX provided a 6-8% rate base CAGR through 2028.

NWE — NWE makes an IRP filing in MT, highlighting the need for natural gas capacity and battery storage to serve near-term needs:

- **The Basics:** The 2023 IRP covers 20 years from 2023-2042 and assumes 0.3% load growth in the summer and 0.4% in the winter. According to NWE, the Pacific Northwest is facing tight supply conditions that will be further intensified by projected coal retirements. NWE is also short capacity, requiring it to rely on imports during peak demand, further highlighting the importance of completing the 175 MW Yellowstone County Natural Gas Generating Station in 2024 and adding 222 MW of Colstrip generation in 2026.
- **The Modeling Scenarios:** NWE assumes that the YCGS is completed and runs multiple scenarios for the long-term plan for Colstrip. The base case assumes the incremental 222 MW of Colstrip in 2026, other scenarios assume retiring Colstrip in 2030 and 2035. All scenarios outside the base case include the addition of pumped hydro. The Company runs two scenarios each for 2030 and 2035. For the 2030 Colstrip retirement, it provides a case for natural gas as a replacement and one for wind and battery storage

Sophie Karp (917) 368-2361 / sophie.karp@key.com

as a replacement. In the 2035 scenarios, it provides a scenario for natural gas as the replacement generation with the alternative being 320 MW of SMR capacity. The modeling shows that a combination of energy storage and natural gas capacity is the most suitable to meet the near-term capacity deficit, while the wind would be better suited in the 2030s.

- **What is next?** Assuming the base-case scenario, NWE will likely issue an RFP in mid-2024 for resources while exploring securing resources through the opportunity resources path, which is faster and includes the recent acquisition of the incremental share in Colstrip. NWE will evaluate the potential benefits of joining a day-ahead market, if one is developed, in addition to its current participation in the Western Resource Adequacy Program and Western Energy Imbalance Market.

Figure 2 - 2023 IRP Core Assumptions

ETR — ETR files settlement in TX electric rate case: ETR filed a settlement in its TX electric GRC, agreeing to a $54M net revenue increase ($252M base rate increase offset by $198M of riders), premised on a 9.57% ROE and 51.21% equity. The riders associated with transmission cost (TCRF), generation cost (GCRR), and distribution cost (DCRF) will reset to zero. The settlement resolves all issues except Issue Nos. 68 and 69 related to transportation electrification and charging infrastructure, respectively. The settlement compares to Staff's recommendation for a $77M revenue increase based on a 9.45% ROE and ETR's request for a $131M revenue increase based on a 10.8% ROE (10.5% ROE + a 30 bps performance added) and a 51.21% equity layer. Signing parties include PUCT Staff and the Office of the Public Utility Counsel, no intervening parties opposed the settlement. The PUCT has a jurisdictional deadline to issue a decision by June 29. The PUCT could issue a final ruling at the May 25 Open Meeting. New rates will be retroactive to December 3, 2022.

CNP, SRE — TX Senate still working on iterations to incentivize gas-fired power plant buildout: The TX Senate passed SB 2627 to provide 20-year, zero coupon loans to companies building gas-fired power plants (for units >100 MW and the loan not exceeding 75% of the cost of the facility). The House will hold a hearing on the bill this week. The bill replaces SB 6, which aimed to direct state funds to build as much as 10 GW of dispatchable generation to serve as peaker plants. SB 6 met with opposition in the House over concerns that it would alter TX's energy-only market. The sponsor of SB 2627 contends that the new iteration will create in-market incentives for private industry to build more generation capacity in TX. The bill also plans to pay bonuses to companies that complete construction and connect new power to the state by 2026. The difference between the two bills is that under the new setup, the power plants would compete in a de-regulated market vs. serving exclusively as emergency backup generation under SB 6. It is still not clear if such a strategy will result in any new fossil generation buildout and if they would be competitive against wind and solar resources. TX legislative session ends on May 29.

FE — MD PSC closes investigation into the impact on Potomac Edison ratepayers from the OH HB6-related scandal: The MD PSC found insufficient evidence that Potomac Edison customers were harmed by the OH scandal and, as a result, closed the investigation. The PSC also did not believe it was the proper authority to conduct the investigation that the MD Office of People's Counsel sought. The PSC conducted the investigation following a petition filed by the OPC. The PSC noted that any impact on Potomac Edison's ratepayers will be addressed in a rate case proceeding (Docket: 9695), where intervenors, including the OPC, can request discovery into the effects of the OH scandal on Potomac Edison ratepayers.

The Wolfe Byte

The ICC Staff recommendation in AEE's multiyear rate plan appears negative for EXC, as Staff seeks large disallowances and continuation of formulaic ROEs. We think the stock is pricing in a bad outcome but not appreciating IL policy tailwinds/ rate certainty. Keep Outperform.

Stock pricing in bad outcome in ComEd rate case. After reasonable recommendations by ICC Staff in gas utility cases a week ago (e.g., 9.9% ROEs), they called for large disallowances in AEE electric's multiyear plan rate case and an 8.91% ROE tied formulaically to 30Y UST yield (avg in CY22 + 580bp); that would be ~9.5% using current yields. The disallowances represented 2/3 of AEE's requested rate base growth 2024-27. Plus, Staff wanted OPEB disallowed; for more see our AEE **note**. EXC lagged the UTY by 130bp and now trades at a 1x discount to peers on 2025E. We think the stock reflects disallowance of the majority of ComEd's $3.3B RB growth and pension/OPEB but gives little credit to 4-yr rate plans with annual cost true-ups and potential ROE incentives. ComEd distrn is ~25-30% of EXC's RB.

State policies portend better outcomes than Staff rec. The ICC will have 3 new comms (5 total), with incoming Chair Scott joining next month. He was ICC chair last decade and energy advisor to IL Gov Pritzker during its CEJA efforts in 2021. Stakeholders engaged last year and prior to the MYP filings on CEJA requirements. We are hesitant to assume the ICC adopts Staff's recs. We think the ICC will balance affordability with the necessary investment to meet the IL's electrification targets.

Every $200M disallowed RB = $0.01. Based on Staff's rec in AEE, the disallowances were widespread. But we flag two that may arise in Staff's 5/22 testimony: Staff wants all IT projects and OPEB disallowed for AEE. If Staff seeks the same for ComEd, plus exclusion of ~$800M pension from RB, then disallowances vs ComEd's RB requests could be well north of $1B. If all RB growth and pension/OPEB are removed, our 2025E would be $0.09 lower; see p. 3 for more.

Key dates. Staff rec in ComEd case 5/22. ALJ proposed orders in gas cases (9/22-23), in AEE's MYP 10/20 and ComEd's 10/23. Final ICC decisions are expected by early Dec for gas and by 12/20 for both AEE and ComEd's MYPs.

Investment Conclusion

We believe EXC is a low-risk utility stock. It is a mostly electric T&D utility with no coal, constructive regulation in most of its jurisdictions, flexible B/S, and LT EPS growth of 6-8%, driven by ~8% rate base growth. We think the stock hit last year on IRA and nonlinear EPS growth was overdone. We think the messaging and conviction on its LT outlook will be well-received. And we see the stock over time trading in line with the low-risk, high-quality utilities. This year, focus will be on a first multiyear rate case in IL, as well as a second multiyear filing in MD and reconciliations of the first MD/BGE multiyear case. Those are expected to add more certainty to an otherwise low-risk utility story.

Valuation

Our $47PT is based on a half-turn premium to our utility group P/E of 16.5x 2025E.

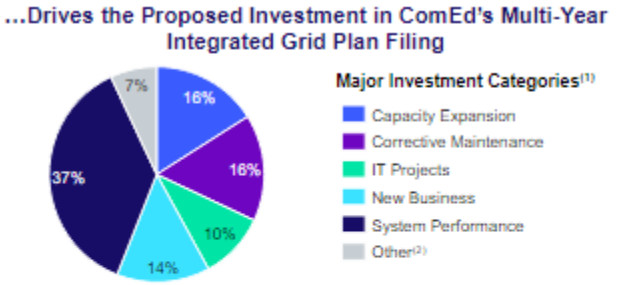
More on read-through from ICC Staff rec in AEE MYP case

Background. ComEd requested 2024 avg RB of $15.5B growing $1-1.2B/yr to an avg of $18.8B in 2027, with drivers from system performance investments, capacity expansion, new business to IT projects; see below.

- Rate increase:
  - 2024: $877M (30% increase) over present rates; but ComEd requested deferral of $307M to later years, so net increase to present rates would be $570M (20%)
  - 2025: $175M
  - 2026: $217M
  - 2027: $203M
- Rate Base (Avg adjusted):
  - 2024: $15.5B
  - 2025: $16.5B
  - 2026: $17.6B
  - 2027: $18.8B



ComEd Multi-Year Plan Case Detail (2024 – 2027)	
Proposed Common Equity Ratio	50.58% - 51.19%
Proposed Return on Equity	10.50% - 10.65%
Expected Final Order	No later than December 20, 2023
Proposed Revenue Requirement Adjustment	35% of 2024 accrued revenue requirement collected in 2026

Potential project disallowances. Staff's recommended widespread disallowances for AEE. But Staff notably wants all of AEE's IT projects disallowed, reducing RB by $245M in 2027 for AEE. As shown above, ComEd's IT projects were 10% of planned investment in its rate filing. With $3.3B of RB growth targeted 2024-27, Staff's recommended IT disallowances for ComEd could be even higher than the $245M in AEE's case.

Pension/OPEB. Staff's rec in AEE case also has read-through to ComEd's pension and OPEB, which are $715M/$170M in ComEd's 2024 RB and $835M/$160M in 2027. Under the 2012 FRP law, ComEd earned a debt return on pension and a full return on OPEB (Ameren also earned a return on OPEB). In three rate cases preceding FRP (2005, 2007 and 2010), ComEd was allowed to include pension in RB. The ICC has disallowed OPEB for gas utilities, including in 2021. Given the recent precedent, we wonder whether EXC's growth target assumed a return on ~$900M-$1B pension/OPEB in rate base.

The punchline is Staff's recommended disallowances for ComEd could be well north of $1B by 2027.

ROE. We were surprised by Staff's recommendation to preserve the ROE formula (30Y UST yield + 580bp) from the 2012 FRP law, which sunsets at YE23. We are of two minds on this one. Rates over the last decade have been low

Please help us protect your advantage...
DO NOT FORWARD

until the past 12 months or so. Current 30Y UST yields (~3.7%) would put allowed ROEs in the mid 9s, which we view as decent. But a return to low rates could again result in the IL electric utilities earning the lowest ROEs in the country. Under FRP, IL utilities were the only ones with direct ties to rising rates, with the exception of the CA utilities (the tie is lagged by about a year and interest rate moves must exceed certain thresholds to be triggered). We think in this environment, a direct tie to LT rates would be viewed by investors as net positive.

EXC 2025 EPS sensitivities. The following are key sensitivities, as we await the 5/22 Staff rec for ComEd: Every $200M of disallowed rate base is $0.01. ComEd requested 10.5-10.65% ROE; every 50bp ROE is $0.04. EXC requested 51% equity ratio; every 100bp equity ratio is $0.02. But we believe EXC budgets to 50% equity, and given the 50% safe harbor in CEJA, we therefore see little earnings risk from the equity ratio.

Relative stock performance and Comps

As shown in Exhibit 1, EXC has been in a trading range relative to peers, and last Friday's IL Staff rec caused the notable step down. EXC trades at more than a full-turn discount to regulated peers on 2025E; see Exhibit 2.

Company Description

Chicago-based EXC is a large T&D (wires-only) regulated utility company, providing mostly electric service to roughly 10 million customers in the Mid-Atlantic and northern IL. It has no coal or other generation. ComEd serves northern IL and is EXC's largest utility sub, representing ~40% of rate base. Pepco serves DC, DE, MD and southern NJ and represents 25% of rate base. PECO, which serves southeastern PA, and BGE, which serves Baltimore, each represent nearly 20% of rate base. A little over 90% of EXC's total rate base is electric, with the rest gas LDC.

Investment Thesis

We believe EXC is a low-risk utility stock with above average EPS growth. It is a mostly electric T&D utility with no coal, constructive regulation in most of its jurisdictions, flexible B/S, and LT EPS growth of 6-8%.

Valuation

Our $47 PT is based on a half-turn premium to our utility group average P/E of 16.5x 2025E. Risks are less capex, lower returns, less cash or more equity needs, and unfavorable regulatory outcomes.

Industry Update — May 14, 2023

Utilities

Utility and Infrastructure Daily

Comments on AEE, EXC & EIX

Our Call

Quick thoughts from Wells Fargo Securities, LLC Utility & Infrastructure Team:

Utilities

AEE (Overweight/Kalton). Shares of AEE fell 1.3% (vs. the S&P Utes up ~50 bps) on 5/12 in response to disappointing ICC Staff testimony in the company's pending IL MYRP filing. While there is a long way to go in the process, we estimate that adoption of the Staff's position would result in an $0.08-0.10, or ~2%, risk to our 24E & 25E EPS and a $0.15-0.20, or ~3%, risk to our 26E & 27E EPS. The testimony is also a negative read-through for EXC (ComEd's MYRP filing is pending). Comments/thoughts:

(1) Key staff recommendations include a low 8.91% ROE, a 50% equity ratio and a 2% rate base CAGR. This compares with AEE's request for a 10.5% ROE, ~54% equity ratios and a 7% rate base CAGR. The recommended ROE starkly contrasts with the (very) recent Staff recommendation of 9.9% in the Ameren Illinois Natural Gas, while the 50% equity ratio is consistent.

(2) As it relates to the ROE, the Staff contends that the MYRP framework substantially reduces risk vs. traditional ratemaking frameworks.

(3) Our EPS outlook reflects Ameren Illinois Electric Distribution earnings power premised on a 9.5% ROE, a 50% equity ratio and rate base equal to guidance. The Electric Distribution business represents ~20% of AEE's EPS power.

(4) While the Staff testimony is concerning, it is our experience that rate filings related to the implementation of new frameworks are often "noisy". We also wonder if the Staff's initial testimony is somewhat influenced by the low likelihood of settlement in this case.

(5) We expect AEE's rebuttal testimony (due 6/14) to strongly disagree with Staff. We think there is a strong case to be made that the duration of the 4-yr MYRP argues for a premium ROE vs. Staff's position. Staff seeks to employ the same framework as in the prior FRP (avg. 30-Yr Treasury yield + 580 bps) but without annual resets.

On capex/rate base, we would be surprised if the final outcome is based on the Staff testimony. That said, AEE will likely need to improve their case for the need.

EIX (Equal Weight/Kalton). On 5/12, SCE filed the initial '25 GRC application premised on $43B of capex during '23-28 with a range case of $38B (mgmt. judgment of likely spend). The capex of $38-43B supports a rate base CAGR of 6-8% (off of '23) excluding several upside opportunities (special programs, add'l transmission). The projected bill impact is +10% in '25 and +3% annually through '28. Our take: robust capex (~$1B+ vs. our model in '26/'27) / affordability will be key CPUC consideration.

ICC – Illinois Commerce Corporation

MYRP – Multi-Year Rate Plan

SCE – Southern California Edison

Ameren Corp. (AEE/Overweight/$23B market cap.) 5/12/23 closing price: $87.72

Edison International (EIX/Equal Weight/$28.2B market cap.) 5/12/23 closing price: $73.68

Exelon Corp. (EXC/Equal Weight/$41.5B market cap.) 5/12/23 closing price: $41.75

Investment Thesis, Valuation and Risks

Ameren Corporation (AEE)

Investment Thesis

Our Overweight thesis reflects AEE's strong 5-yr annual EPS growth prospects of 7% (vs. 6% for peers), long runway of capital investment opportunities (including electric transmission projects in MISO) and management's strong financial track record.

Target Price Valuation for AEE: $101.00

Our $101/sh price target is based on (1) a P/E analysis ($99/sh) (75%)—apply a 10-15% premium to the '23 Regulated Electric median of 18.5-19.0X on our 24E EPS of $4.70 and (2) a three-stage dividend discount analysis ($108/sh) (25%), which employs a 6.75% discount rate.

Risks to Our Price Target and Rating for AEE

Risks include the potential failure to achieve earned returns near the utilities' allowed ROEs, regulatory-related risks and the risk that upside capex opportunities do not materialize as expected.

Edison International (EIX)

Investment Thesis

Our Equal Weight rating reflects the fact that shares trade near our PV estimate of $72.50/sh. We are attracted to EIX's long runway of capital investment opportunities and recognize that positive strides have been made related to mitigating wildfire efforts (improved firefighting techniques, grid investments, proactive shut offs) that appear to be reducing the probability of utility-caused catastrophic wildfire events. However, those positives are counterbalanced by ongoing wildfire risk.

Target Price Valuation for EIX: $75.00

Our $75/sh price target is derived by applying a 5-10% discount to the '24 Mid/Large Cap Regulated Electric P/E median of 16.5-17.0X on our 24E EPS. We ascribe a 5-10% discount given unique CA-related risks (inverse condemnation, regulatory) and interest rate exposure. We then factor in a probability-weighted present value wildfire liability estimate of ~$8/sh to arrive at a total PV estimate of $72.50/sh. Our $75/sh forward price target incorporates a 7% required return (including the dividend).

Risks to Our Price Target and Rating for EIX

Key upside risks include positive regulatory developments while downside risks include wildfire liabilities in excess of what is embedded in our estimate plus regulatory related risks (adverse outcomes).

Exelon Corporation (EXC)

Investment Thesis

Our Equal Weight rating reflects our view that the current share price adequately reflects EXC's risk/reward proposition. Positive attributes including a healthy projected EPS CAGR (7%) and wires-centric asset mix are balanced by modest balance sheet concerns and our view that the company's regulatory jurisdictions are average to below average.

Target Price Valuation for EXC: $45.00

Our $45/sh price target is based on a P/E multiple analysis. We apply a P/E of 17.5-18.0X to our 24E EPS of $2.50. Our multiple represents a 0-5% discount to the '23 Regulated Electric peer group median of 18.0-18.5X as we balance positive features (strong 7% EPS CAGR and predominantly electric wires strategy) with our perception that EXC's regulatory jurisdictions are average to below average. We apply the '23 median to our 24E EPS due to the forward-looking nature of our price target.

Risks to Our Price Target and Rating for EXC

Risks to our thesis include favorable/unfavorable regulatory developments (upside/downside) and greater-than-expected ESG appetite for a wires-centric company (upside).

Important Disclosure for U.S. Clients

This report was prepared by Wells Fargo Securities Global Research Department ("WFS Research") personnel associated with Wells Fargo Securities, LLC ("Wells Fargo Securities").

WFS Research may, from time to time, provide clients with short-term trading views in its research reports regarding subject companies on which Wells Fargo Securities currently has equity research coverage. A short-term trading view offers a view on how the market price of a subject company's common equity may trend in absolute terms during the 30 days following the date of the short-term trading view. A short-term trading view on a subject company's common equity does not impact our fundamental investment rating or price target for that company, which reflect our view of how the subject company's common equity may perform over a one-year period. A short-term trading view may reach a different conclusion than the firm's fundamental investment rating and price target for a subject company and, therefore, short-term trading views could result in short-term price movements that are contrary to our fundamental investment rating and price target. Short-term trading views are not ratings and the firm does not intend, nor undertakes any obligation, to maintain, update or close out short-term trading views. Short-term trading views may not be suitable for all investors and have not been tailored to individual investor circumstances and objectives, and investors should make their own independent decisions regarding any short-term trading views discussed in WFS Research reports.

Catalyst to Watch This Week: ES Offshore Wind Sale Announcement

ES could announce the sale of its unregulated offshore wind acreage and development projects. The company has an equity acreage ownership of 175,000 acres in the joint venture with Orsted and 50% ownership of 3 development projects: South Fork, Revolution and Sunrise. Our base scenario assumes a $1.5 billion in gross proceeds for the acreage and $2.2 billion for the projects. "Discounted for Offshore Wind Announcement"

The Analyst Conviction Index (ACI)

The ACI = (# of buy ratings - # of sell ratings)/Total # of ratings. We show the sorted ACIs for our regulated utility, power, and water coverage stocks in (Figure 12) below. The graph also shows absolute number of buy, hold, and sell ratings by company. We also track the change in the ACI over the last 12 weeks (Figure 13) to try to gauge where the sell-side consensus view is shifting.

Valuation Method and Risk Statement

North America Utilities: Our valuation methodology for the group is price to earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Group Valuation Bias: Flowing from our valuation work comparing Baa corporate yields to group dividend yields and RU price to earnings ratios to those for the S&P 500, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%; 4) Clean Energy Transition: A potential 5% premium for a risk adjusted clean energy transition growth opportunity; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/Meet, we include +4%; 6) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% of unregulated earnings), we perform a sum-ofthe-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue-specific basis. Common areas where we apply such an adjustment include: large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.
Water Utilities: Our valuation methodology for the group is price-to-earnings based. Our methodology includes: 1) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; and 2) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%. North American utilities: We identify the following risk factors for the sector overall: rising
interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events. IPPs: We identify the following risks for the sector: Power prices, fuel prices, capacity prices, supply and demand for electricity, extreme weather, economic conditions, and cost of
financing and collateral hedging.
Water Utilities: We identify the following risks: rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 12 May 2023 01:48 AM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other

areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Catalyst to Watch This Week: Staff Position in Peoples Gas Rate Case in Illinois

On Monday, May 8th , the Illinois Commerce Commission Staff is due to issue its recommendation in WEC's Peoples Gas subsidiary's natural gas rate case. This is the first rate case for Peoples since 2015 and also serves as an important barometer for the regulatory backdrop in IL currently, as all the major electric and gas companies have rate cases pending. WEC is seeking a 13% rate increase premised on a rate base of $4.78bn, 54% equity ratio and 9.9% ROE. Earlier this week, SO's NICOR gas company in IL received a staff recommendation in its rate case which was a 9.89% ROE vs. 10.35% ask, $256mm revenue increase vs. $321mm ask and a 50% equity ratio vs. 54.52% ask. We see these staff recommendations as read-throughs for the EXC and AEE electric cases that will get their staff positions later this month.

Estimate revisions

In our Alternative Energy coverage we revise our 2023 revenue estimates for FTCI to reflect a slower shipment ramp relative to our prior forecast. We now expect lower backlog conversion in 2023 as FTCI & its customers continue to be impacted by UFLPA related headwinds. Our 2023E revenue estimate is now $255mn from $401mn previously. Our 2023/24/25E adj. EPS estimates remain unchanged at ($0.04)/0.31/0.37 given low margin flow through and a reduction in sales and marketing expense. Our $4 PT remains unchanged.

The Analyst Conviction Index (ACI)

The ACI = (# of buy ratings - # of sell ratings)/Total # of ratings. We show the sorted ACIs for our regulated utility, power, and water coverage stocks in (Figure 14) below. The graph also shows absolute number of buy, hold, and sell ratings by company. We also track the change in the ACI over the last 12 weeks (Figure 15) to try to gauge where the sell-side consensus view is shifting.

Valuation Method and Risk Statement

North America Utilities: Our valuation methodology for the group is price to earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Group Valuation Bias: Flowing from our valuation work comparing Baa corporate yields to group dividend yields and RU price to earnings ratios to those for the S&P 500, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%; 4) Clean Energy Transition: A potential 5% premium for a risk adjusted clean energy transition growth opportunity; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/Meet, we include +4%; 6) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% of unregulated earnings), we perform a sum-of-the-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue-specific basis. Common areas where we apply such an adjustment include: large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.
Water Utilities: Our valuation methodology for the group is price-to-earnings based. Our methodology includes: 1) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; and 2) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%. North American utilities: We identify the following risk factors for the sector overall: rising
interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events. IPPs: We identify the following risks for the sector: Power prices, fuel prices, capacity prices, supply and demand for electricity, extreme weather, economic conditions, and cost of
financing and collateral hedging.
Water Utilities: We identify the following risks: rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 05 May 2023 04:08 AM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

- Generators remain in favor of PJM's proposal to delay the forthcoming auction in June, while state representatives and COUs are against further delays.
- More HERE.

Guggenheim takeaway: This procedural back and forth has been unfolding in the docket for some time now – in our view, the Commission will likely strike a middle ground closer to the IMM's proposal, with a delay coupled to firmer timelines.

FE – FirstEnergy reevaluating use of West Penn's Greensburg office with focus on real estate optimization

- More than two-thirds of West Penn Power Co.'s employees at its Greensburg HQ likely will be reassigned to other offices in the utility's service area in the next few years as the company reevaluates its use of the building, according to a company spokeswoman yesterday.
- More HERE

Guggenheim takeaway: Minor FYI regarding real estate optimization.

ERCOT – Summer SARA report points to ongoing constraints

- The ISO's latest seasonal assessment points to potential shortages in generation under high peak load/extreme unplanned outages/low wind scenarios.
- " ERCOT and thermal generation owners are closely monitoring the potential impacts of the U.S. Environmental Protection Agency's March 15th approval of its "Good Neighbor Plan" for reducing cross-state emissions of ozone-forming nitrogen oxides (NOx). Several generation owners in the ERCOT region indicated the potential that certain generators may face operational constraints in complying with the Program's provisions as soon as July 2023." - ERCOT
- More HERE

Guggenheim takeaway: The SARA report is intended to serve as final scenario test before each season's peak, and while the exact variables depicted in the analysis may or may not come to pass, it still paints a challenging picture for resource adequacy in the state at a time when lawmakers are considering more draconian action. We also continue to closely monitor the NOX rules from the EPA, with could impact larger emitters like VST's Martin Lake and NRG's WA Parish.

AWK – MO PSC approves settlement

- "On May 3, 2023, the MoPSC issued an order (the "Order") approving the March 3, 2023 joint "black box" settlement of the general rate case filed by Missouri American Water, a wholly owned subsidiary of American Water Works Company, Inc. (the "Company"). The Order approves a $44.3 million annualized increase in water and wastewater revenues, excluding $50.7 million in previously approved infrastructure surcharges. The new water and wastewater rates are expected to be effective by May 31, 2023." - AWK

Guggenheim takeaway: Minor heads up on the settlement approval.

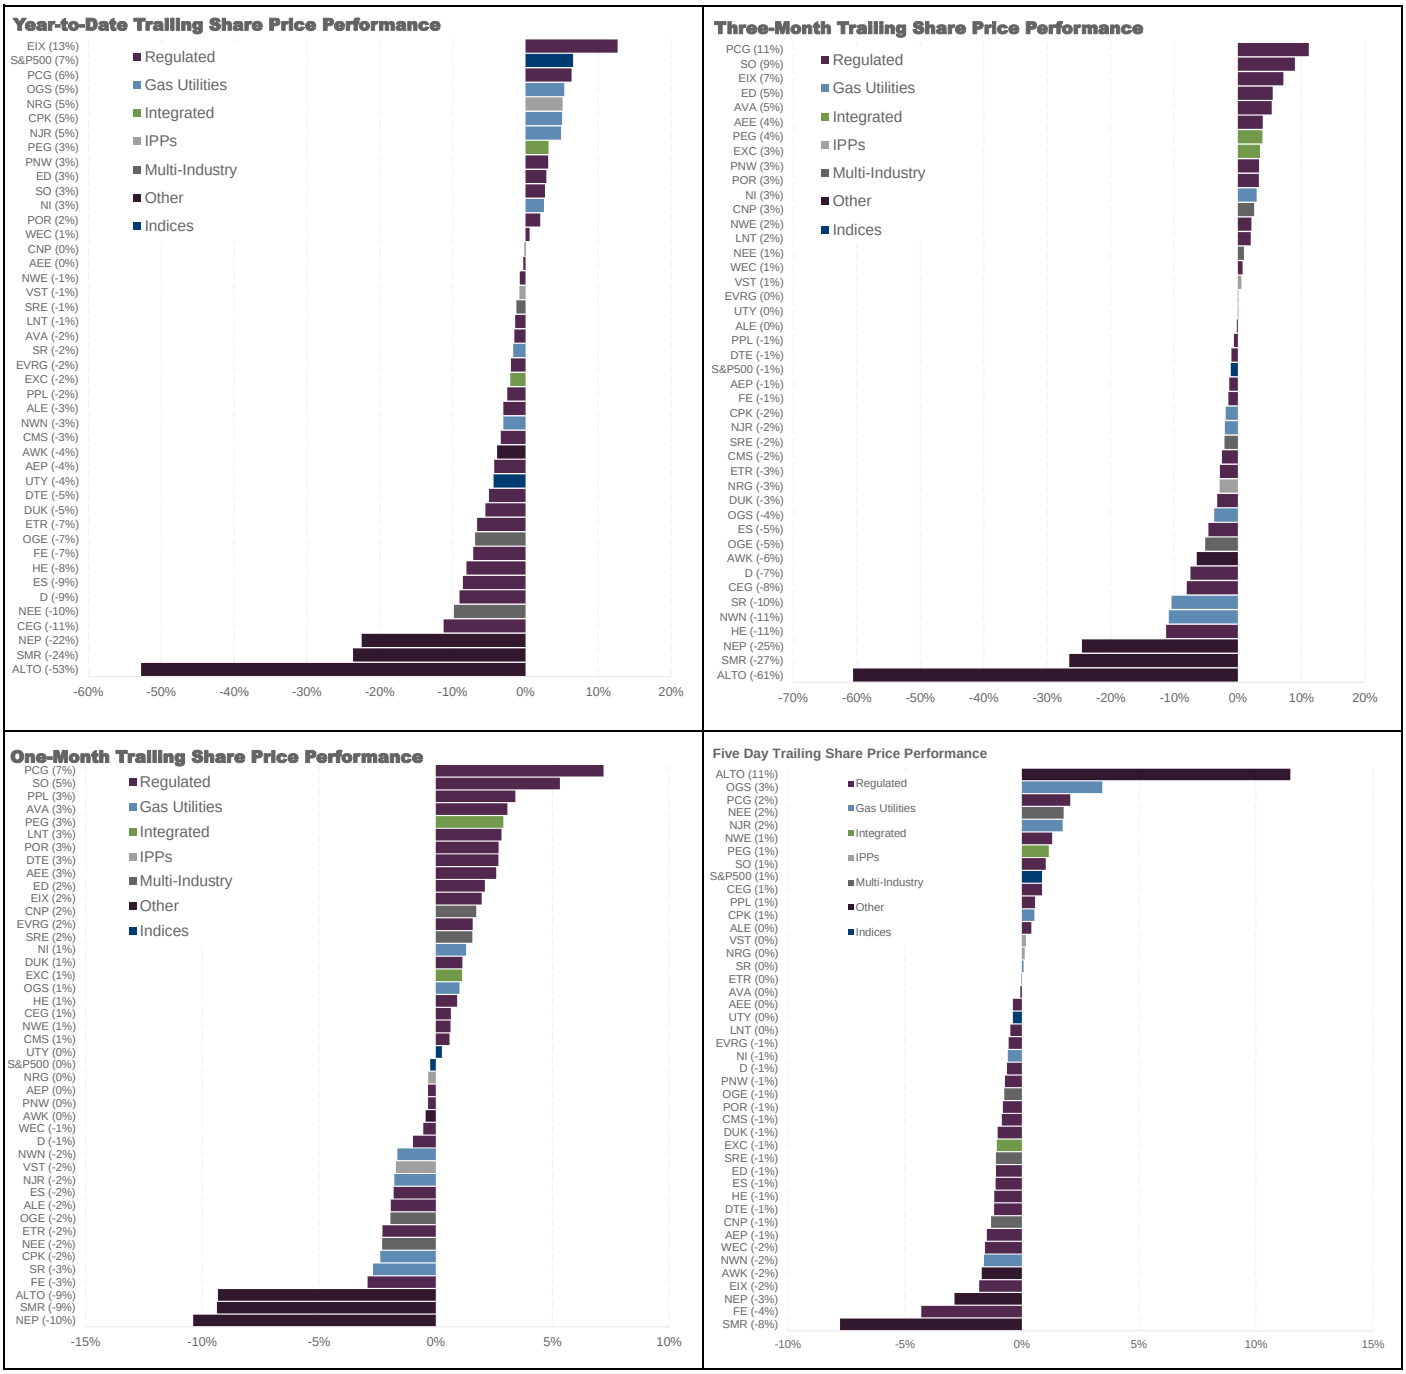
Share Price Performance (Year-to-Date, Three-Month, One-Month, & Five-Day Trailing)



(1) Regulated utilities deliver power to end-use customers via regulated transmission & distribution (T&D) infrastructure; vertically integrated utilities with regulated or mostly contracted generation are also included.

(2) Local Gas Distribution Companies (LDCs), as well as diversified utilities with a business mix largely comprised of gas infrastructure and related activities (i.e., LDC franchises, interstate pipelines, and/or other gas midstream activities).

(3) Integrated utilities own and operate regulated T&D franchises, as well as un-regulated power generation with commodity exposure.

(4) IPPs operate merchant (i.e., un-regulated, non-utility) power plants that compete to sell power in wholesale markets or through retail marketing businesses.

Regulatory Calendar

EXC — Rebuttal testimony in EXC's MD electric and natural gas rate cases is due on July 31: MD PSC Staff recommended electric and gas revenue increases of $193M and $232, respectively over a three-year term. The increases are premised on a 9.45% ROE and 52% equity. This compares to BG&E's (Docket: C-9692), seeking a cumulative net $314M electric and a $290M gas rate increase over 2024-2026, premised on 10.4% ROE and 52% equity. The difference is largely due to the lower ROE proposed by Staff.

EXC proposes smoothing the rates over three years by accelerating the amortization of ADIT benefits. A MD PSC decision is expected by year-end, with new rates becoming effective in early 2024.

OTTR — Initial comments in OTTR's supplemental IRP are due on July 31: OTTR made the supplemental IRP filing to incorporate the MISO seasonal resource adequacy construct, the IRA, MN's Clean Energy Law, OTTR's load forecast changes, and the expected capacity deficits in the MISO region. In its five-year plan, OTTR requested onsite LNG fuel storage at Astoria Station in 2026, adding 200 MW of solar in the 2027-2028 timeframe, taking the initial steps to support 200 MW of wind generation in the 2029 timeframe, and repowering most of its existing wind facilities in 2024/2025. The repowerings will be the equivalent of adding 40 MW of wind generation. A MN PUC hearing is expected toward the end of 2023, and the ND PSC will file comments by this fall. The SD PUC does not have formal IRP requirements or proceedings.

AVA — Comments in AVA's electric and gas IRPs are due on August 1: AVA filed its 2023 electric IRP with the ID and WA utility commissions and its 2023 natural gas IRP with the ID, OR, and WA utility commissions. AVA's gas filing includes preferred resource portfolio strategies for all three states that rely heavily on procuring natural gas and energy efficiency. In its electric filing, AVA aims to balance its strategy between the ID and WA as ID focuses on reliability and the lowest cost resources. In contrast, WA focuses on energy policy and the Clean Energy Transformation Act (CETA). AVA is required to file IRPs every two years.

D — Rebuttal testimony in D's SC natural gas rate case is due on August 1: Staff recommended a $5M revenue increase, premised on a 9.37% ROE and 51.97% equity. This compares to DESC's request for a $19M revenue increase, premised on a 10.38% ROE, 54.78% equity, and a $1.1B rate base as of September 20, 2022. Staff and D's recommendation includes $14M for gas costs from eliminating the Net Interruptible Revenue Credit, while Staff and D calculated ($9M) and $5M for non-fuel revenue, respectively. D requested new rates to become effective in October 2023.

AVA — Hearings on the settlement in AVA's ID rate case begin on August 2: Staff presented testimony supporting the multi-party settlement in the ID gas and electric rate cases stating that it provides a reasonable balance between AVA's ability to earn a reasonable return on its investments while offering affordable customer rates. Staff also believes that the settlement will provide rate stability in that AVA will not seek a rate increase prior to September 1, 2025. As part of the settlement in the two-year electric and gas rate cases, electric revenue increases by $22M in RY1 and by $4M in RY2, and natural gas revenue increases by $1M and ~ $0M, respectively, both based on a 9.4% ROE and 50% equity. This compares to AVA's request for $37.5M and $13.2M electric rate increases in RY1 and RY2, respectively, and gas rate increases of $2.8M and $0.1M, respectively, based on a 10.25% ROE and 50% equity. If approved, new rates would go into effect on September 1, 2023.

ETR — PUCT meeting on August 3 could yield a final ruling on the ETR TX settlement: The PUCT could issue a final order on the settlement and outstanding Issues Nos. 68 and 69 at the Open Meeting. ETR filed a settlement in the TX electric GRC, agreeing to a $54M net revenue increase ($252M base rate increase offset by $198M of riders), premised on a 9.57% ROE and 51.21% equity. The riders associated with transmission cost (TCRF), generation cost (GCRR), and distribution cost (DCRF) will reset to zero. The settlement resolves all issues except Issue Nos. 68 and 69 related to transportation electrification and charging infrastructure, respectively. Signing parties include PUCT Staff and the Office of the Public Utility Counsel; no intervening parties opposed the settlement. The PUCT has a jurisdictional deadline to issue a decision by August 3. New rates will be retroactive to December 3, 2022.

SO — Rebuttal testimony in GP's VCM 28 is due on August 3: In testimony, Staff noted that it expects total Vogtle project costs of $21.25B-$21.55B, slightly above GP's $21.0B estimate. The staff assumes a July-August 2023 COD for Unit 3 and a 2Q24 COD for Unit 4. SO has delayed Unit 3 until July 2023 due to a degraded hydrogen seal that was identified during startup testing. Staff noted that it's unlikely that Unit 4 will achieve COD by year-end 2023, and 1Q24 is a reasonable estimate. GP's VCM 28 pertains to July-December 2022. GP has presented $461M in capex for review only. The Commission will wait until Vogtle Units 3 and 4 are complete before determining the reasonableness and prudence of the cost overruns and their attribution to ratepayers. SO has an agreement since the VCM 24 that it would not seek approval of costs exceeding the $7.3B previously deemed reasonable by the Commission until the prudence review is complete. In VCM 28, GP's cost forecast is ~$10.2B, slightly up from the $10B estimate in VCM 27. The remaining capex to complete the project is ~$0.8B, including GP's share of project contingency.

DUK — Rebuttal testimony in DEC's NC electric rate case is due on August 4: Staff (Docket: E-7 Sub-1276) recommended a cumulative $398M ($113M in RY1, $153M in RY2, and $133M in RY3) revenue increase, premised on a 9.35% ROE and 52% equity. This compares to DUK's $833M ($511M in RY1, $172M in RY2, and $150M in RY3) request, premised on a 10.4% ROE and 53% equity. DUK filed supplemental testimony to reflect updated data, exhibiting a $991M revenue deficiency, but did not amend its rate request. The difference between Staff's recommendation and DUK's request can largely be attributed to the base case for the test period ending December 31, 2021, where Staff recommended an $11M increase compared to DUK's $372M revenue increase. Aside from this, other factors causing the variance in revenue deficiency include a lower ROE and cap structure (34% of the difference), while depreciation expenses and accumulated depreciation comprise 46% of the difference. Staff's adjustments exclude the accelerated depreciation of several plants (Cliffside Unit 5, Marshall Units 1 and 2), which have not been retired yet. Staff notes that DUK may place the remaining net book value into a regulatory asset or seek securitization when the plant is physically retired. Other adjustments include those to COVID deferral, inflation, and incentive expenses for short-term and long-term plans. For RY1-RY3, Staff recommended $387M

Sophie Karp (917) 368-2361 / sophie.karp@key.com

compared to DUK's $462M request. Evidentiary hearings will commence on August 21. DUK is asking for approved RY1 rates to be effective no later than January 1, 2024.

XEL — Intervenor testimony in XEL's TX electric rate case is due on August 4: XEL seeks a revenue increase of $158M, premised on a 10.65% ROE and 54.6% equity. The main drivers of the rate increase are investments to support the clean energy transition and the higher ROE request than presently authorized. XEL is also seeking to accelerate the depreciation of the Tolk coal facility to retire the plant in 2028 vs. 2034 previously. A PUCT decision is expected in 1Q24.

Recent Developments for Companies Under Our Coverage

From our midweek: Parties reach a settlement in CMS's MI gas rate case; the MI PSC approves the settlement in DTE's IRP; FERC approves the sale of Pleasants coal plant, and transmission reform is back in focus with a final rule from FERC on generator interconnection queue reform possible at tomorrow's Open Meeting.

EXC — Staff files rebuttal testimony in EXC's IL electric rate case:

- **Revenue:** Staff maintained its recommendation mostly unchanged in rebuttal testimony, making a modest increase to the revenue requirement from $1,039M in direct testimony to $1,076M in the rebuttal over 2024-2027. EXC's rebuttal testimony included a $1,550M revenue request over 2024-2027.
- **ROE and Equity Layer:** Similar to the rebuttal testimony offered in AEE's MYRP, Staff maintained its view on deriving the ROE using the FRP formula (30-year treasuries at 3.114% + 580 bps) and reiterated the 8.91% ROE proposal to be adjusted annually during the MYRP and also defended the 50% equity layer. EXC requested a 10.65% ROE and argued that Staff's recommended 8.9% ROE using the FRP is no longer applicable since the IL Energy Infrastructure Modernization Act is now superseded by the CEJA, which requires that the ROE be determined under current commission law. Staff calculated ROE midpoints of 9.23% and 10.87% in its analysis using the traditional DCF and CAPM methods, respectively, but decided to with the FRP formula.
- **Rate phase-in:** Staff recommends the disallowance of the rate phase-in plan, but if the ICC adopts a phase-in plan, it should adopt EXC's proposed 35% deferral of the 2024 revenue increase to be collected in 2026.
- **Upcoming calendar:** A proposed order is due on October 23, and December 20 is the ICC's deadline to issue a decision.

AVA — AVA reaches full settlement in OR gas rate case: Staff notified the OR PUC that parties reached a settlement resolving all outstanding issues. The settlement and supporting testimony will be filed by August 18. Parties had previously reached a partial settlement resolving all costs of capital components, agreeing to a 9.5% ROE and 50% equity. The partial settlement resulted in a $1.6M revenue reduction vs. AVA's $11M revenue request, premised on a 10.25% ROE and 50% equity. A PUC final order is expected in December, and AVA requests rates to go into effect in 2024.

PNW — Staff files rebuttal testimony in APS's electric rate case: Staff filed rebuttal testimony reducing its revenue recommendation to $282M, down from the $313M net revenue increase in the original testimony. Staff's recommendation is premised on a slightly higher ROE of 9.68%, up 8 bps from its original testimony, while maintaining the 51.93% equity layer. This compares to APS's rebuttal testimony for a $383M net revenue increase, down from $460M in its original request and including a reduction in the FVI request from 1% to 0.5% while maintaining the 10.25% ROE and 51.93% equity layer. APS agrees to reduce by 50% the cost of certain incentive

Sophie Karp (917) 368-2361 / sophie.karp@key.com

programs, for the purpose of this specific filing. Staff's and PNW's total revenue increase includes $110M for test year adjustor revenue transfers and $221M Day-One PSA. Staff does not include the $16M REAC adjustment in its calculation. PNW is requesting rates to go into effect on December 1, 2023. Hearings in the case commence on August 10.

AEP — Staff files testimony in APCo's VA triennial review: According to Staff's calculations, APCo earned a 5.49% ROE during the 2020-2022 period. Staff recommends a $155M revenue increase, premised on a 9.4% ROE. Staff recommended a $25M increase for vegetation management compared to APCo's $48M ask. Overall, Staff's recommendation compares to the OAG's recommendation of a $69M revenue increase and APCo's request for a $213M revenue increase, premised on a 10.6% ROE. APCo calculates a 5.39% ROE during 2020-2022 and below the dead band of 8.5-9.9%. At the end of 4Q22, APCo deferred $38M related to previously incurred costs assuming it would earn below the 9.2% authorized ROE. Rebuttal testimony is due on August 11 and an SCC decision is due by November 30.

POR — Staff files initial comments in the POR's OR Clean Energy Plan and IRP:

- Staff's initial comments provide insight into some of the low-regret actions or opportunities, challenges, and vulnerabilities that need to be addressed. Specifically, Staff finds that a flexible approach toward acquiring energy and capacity resources, including EE and demand response resources, will serve as low regrets near-term actions. Staff sees the transmission constraints, reliance on emerging technologies, and near-term resource availability as the key challenges. The key vulnerabilities include GHG emissions modeling, transmission needs, and POR's analysis of community-based renewable energy. Staff is unable to draw any conclusions on the impact of Colstrip due to the lack of analysis. In total, Staff makes 29 recommendations for POR to address in its reply comments. These include adopting a scoring metric for the pace of GHG reductions, redesigning the Preferred Portfolio without assuming 800 MW of additional transmission, providing an accounting of banked RECs that can be used for customer benefits, and a detailed assessment of its small-scale renewable resource compliance strategy including how it plans to meet the compliance obligations and projected shortfalls.
- POR's CEP includes a set of near-term actions to achieve the targets outlined in HB 2021. The Preferred Portfolio emphasizes solar and wind resources, with ~3.5GW expected to be online by 2030. POR will meet the capacity needs through an annual RFP for up to 520 MW of non-emitting resources through 2028. POR also plans to add 632 MW of storage, energy efficiency (248 MW), and distributed resources (136 MW). POR will study the addition of community-based renewable energy to reach 155 MW by 2030. This is POR's first CEP/IRP filing since HB 2021 became law. The PUC has six months to acknowledge the CEP and determine if it is consistent with the new law (POR filed the plan on March 31, 2023).

FERC issues a final rule adopting reforms to generator interconnection procedures: The final rule (RM22-14-000) addresses interconnection queue backlogs aimed at easing the backlog of clean energy and storage resources seeking to interconnect to the U.S. power grid. The new rule will take effect 60 days after publication in the Federal Register.

- **What are the key highlights of the rule (Order 2023)?**
  - **Implement a First Ready, First Served Cluster Study process:** The rule will reduce the number of speculative interconnection requests by implementing a first-ready, first-served cluster study process in which the transmission providers will conduct large studies that include multiple generating facilities rather than individual studies for each facility. This method is intended to improve efficiency by performing larger studies and provide more certainty to customers regarding timing and the magnitude of cost upgrades, with increased financial commitments to enter the queue, it will discourage speculative requests and by the same token, result in fewer withdrawals.
  - **Allocation of Cluster Study and Upgrade Costs:** The rule allows each transmission provider to propose the study cost allocation of cluster studies, within limits, and to allocate the network upgrade costs based on a proportional impact method.
  - **Increased Financial Commitments and Readiness Requirements:** The final rule adopts the NOPE proposal to require deposits associated with interconnection requests that vary with the size of the generation facility and range from $35K for a 20 MW request to $250K for anything over 200 MW, with the deposit collected upfront at the time of submitting an interconnection request.
  - **More stringent site control evidence to enter a queue:** Site control must be demonstrated through the right to develop a generation facility of size or leasehold interest or an option to purchase a leasehold. There is also language to prevent multiple interconnection customers from leasing the same site to remain in the queue.
  - **Firm deadlines and penalties if transmission providers do not complete studies on time:** The penalties can range from $1K per day of delay to $2.5K per business day depending on the type of delay and the final rule eliminates the previously proposed reasonable efforts standard. There is language to extend the study period, add a grace period, and even appeal the penalty.
  - **Allow more than one resource to co-locate** on a shared site behind a single point of interconnection and share a single interconnection request to encourage hybrid resources.

- **Why was the rule needed?** With the impending generation transitions and growth of renewable generation, which are often smaller and more distributed than the traditional large fossil generation that the country has, there is consensus that the existing generator interconnection procedures are insufficient to handle the interconnection request in a timely and efficient way. At the end of 2022,

there were more than 10K interconnection requests hoping to connect over 2 GW of generation and storage. This queue is the largest on record, more than 4x (in GW) of the interconnection queues in 2010 and a 40% increase y/y. According to a Berkley National Lab report, the lengthening of the interconnection queues has led to a sharp increase in the average cost to interconnect, with the cost of broader network upgrades driving most of the rise. We have written on the topic in detail here.

- **What is not covered in this rule?** The rule does not take into account generator retirement and replacement processes, the introduction of project prioritization to allocate scarce interconnection access, changes to network upgrade requirements, forging coordination between generator interconnection and transmission planning, or identifying interconnection to improve interregional planning.
- **What is needed next in transmission reform?** Aside from actions proposed by the DOE and Congress, FERC has a NOPR on cost allocation, which we believe will be critical in unlocking transmission reform. We wrote last week about the topic here and the related docket is RM21-17.

SO — SO prepares fuel load for Vogtle Unit 4: SO received the 103(g) finding from the NRC for Vogtle Unit 4 confirming that the unit has been constructed and will be operated in compliance with the COLA and NRC regulations. Operators can now make final preparations for fuel load in Unit 4, startup testing, to bring the unit online. Once SO commences fuel load, it can seek a prudence review for all costs exceeding $7.3B. SO projects total costs of ~$10.6B. The prudence review is expected to take six months. Unit 4 is expected to enter service in 4Q23/1Q24.

AEP, FE — WV governor reappoints commissioner: WV Governor Justice reappointed Renee Larrick for another six-year term at the WV PSC, extending her tenure to 2029, subject to Senate confirmation. Commissioner Larrick serves on the three-member PSC with Chair Charlotte Lane and Commissioner Bill Raney. The Commission may not have more than two commissioners from the same party. We are watching AEP's APCo and Wheeling Power rate cases and FE's Mon Power and Potomac Edison Co combined electric rate cases.

Earnings Recap

POR — POR reported 2Q results below consensus, but maintained its 2023 guidance as the second half represents easier comps and fewer impacts from the below-average hydro year. The Company continues progressing through its general rate case with some issues settled and ongoing discussions scheduled. Discussions on power costs and Faraday recovery will be worth monitoring. Please read our full report here.

EIX — EIX reported a better-than-expected quarter and reiterated 2023 EPS guidance of $4.55-$4.85 and a 2025 outlook of $5.50-$5.90. As expected, management provided a longer-dated EPS growth forecast of 5-7% off 2025 levels and extending through 2028. The 5-7% growth is underpinned by a 6-8% rate base growth based on the $38B-$43B capex through 2028. There appear to be avenues to further extend the growth runway through CAISO-approved transmission spending as well as additional electrification opportunities not in the current plan. The TKM mudslide cost recovery filing of $2B is expected to be filed in August, and the total that EIX plans to seek recovery for remains at $6B plus interest and legal costs. Wildfire mitigation efforts appear to be yielding results, although the CA fire season seems to be delayed this year. The GRC filing is the next catalyst as proceedings pick up pace. Please read our full report here.

AEP — AEP posted largely in-line 2Q results and maintained its 2023 guidance and the 6-7% long-term EPS growth rate. The Company continues to make headway on its portfolio rationalization — the sale of its unregulated renewables business is in the final stretch and AEP has identified additional non-core assets that it intends to monetize among its transmission portfolio. All in all, these asset rationalizations should help AEP to get back into the desired FFO/ debt range of 14-15% (which includes some cushion over the downgrade threshold) and help offset equity needs. Please read our full report here.

XEL — XEL posted results below consensus as the electric margin was impacted by the MN rate case outcome. The miss was in line with our expectations as we were cautious and highlighted XEL as a name to watch in our 2Q23 preview, given the NT noise. Notably, XEL reaffirmed its 2023 guidance as it seeks additional cost-cutting initiatives and maintained its long-term growth rate with a bias toward the upper end. After a challenging 1H23, we continue to like XEL as a core holding and believe XEL will be able to execute its long-term plan. Please read our full report here.

AGR — AGR missed 2Q expectations as networks dragged results lower on higher O&M and timing of uncollectibles. Implementation of new rate plans in ME and NY should improve network results in 2H, but an unimpressive PD in CT is a disappointment. Offshore wind renegotiations continue, the NM Supreme Court hearing in the PNM case is scheduled for September 12, and NECEC progress appears encouraging as AGR addresses updated costs and project timing following the favorable Court decision to move forward with the project. Please read our full report here.

CMS — CMS reported 2Q results ahead of consensus estimates, fueled by a one-time financing gain and ongoing cost management that offset milder-than-normal weather. CMS's regulatory environment remains constructive with a recent settlement in its gas rate case, as the Company shifts its attention toward its electric rate case and the undergrounding pilot program. Overall, we believe that CMS remains on track to deliver on the 6-8% EPS growth trajectory. Please read our full report here.

Sophie Karp
(917) 368-2361 / sophie.karp@key.com

DTE — DTE reported 2Q adjusted EPS of $0.99, higher than our estimates and consensus as cost management helped to offset the impact of milder weather. The IRP has reached a constructive conclusion, and we believe that the electric rate case is leaning toward a settlement as well, with an October timing likely. Strong economic activity in DTE's service territory (partly linked to the IRA), increasing electrification, and a strong case for increased and accelerated resilience spending put the Company in a comfortable position to maintain the longer-term 6-8% growth rate, despite the short-term headwinds from milder than normal weather. Please read our full report here.

CNP — CNP reported an in line quarter and reiterated all the guidance metrics including the 2023 outlook of $1.48-$1.50; and 6-8% long-term growth plan. A constructive legislative session in TX provides CNP with several positives to reduce regulatory lag including the ability to file two DCRFs per year and a resiliency spending rider. The Company raised 2023 capex by $400M to $4B and remains optimistic on additional opportunities beyond the current $43.6B plan through 2030. A Houston Electric rate case is expected to be filed in 1Q24 and we would expect more discussion on financing needs through next year as CNP fulfills its goal of a 14-15% FFO/ Debt while still seeing a robust capex spending environment. Management reiterated plans for no equity in the near term. Please read our full report here.

NEE — NEE reported an above-consensus quarter and NEER earnings beat despite a three-decade low in wind resources in 2Q. The outlook for 6-8% EPS growth was reiterated with a bias to the top end. NEER continues to benefit from the IRA, especially as the regulatory overhangs from AD/CVD and UFLPA start to ease. Management offered comments on the solar supply chain, which indicates a softening solar component pricing and should be a meaningful support toward building NEER's backlog especially as interest rates stabilize. Please read our full report here.

NWE — NWE posted 2Q23 results below consensus estimates as the Company continues to face pressure from O&M and inflation, further exacerbated by headwinds in volumes during the quarter. We maintain our thesis on NWE, as we believe the Company offers a unique opportunity for long-term rate base growth as it looks to shore up its capacity shortage, and we expect investors to look past the results and focus on the near-term catalysts. We expect a final order on the MT GRC in the next few weeks, followed by full-year guidance and likely a new long-term growth rate. Please read our full report here.

Catalyst to Watch This Week: Entergy Texas Rate Case

On August 3rd, we expect the Public Utilities Commission of Texas to vote on the Entergy Texas rate case settlement. The company is seeking a net $54mm base rate increase premised on a 9.57% ROE, 51.21% equity ratio and $4.4bn rate base. The settlement addresses all revenue requirement issues in the case, but does not resolve two issues related to the company-proposed electric vehicle charging infrastructure program and riders.

The Analyst Conviction Index (ACI)

The ACI = (# of buy ratings - # of sell ratings)/Total # of ratings. We show the sorted ACIs for our regulated utility, power, and water coverage stocks in (Figure 10) below. The graph also shows absolute number of buy, hold, and sell ratings by company. We also track the change in the ACI over the last 12 weeks (Figure 11) to try to gauge where the sell-side consensus view is shifting.

Valuation Method and Risk Statement

North America Utilities: Our valuation methodology for the group is price to earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Group Valuation Bias: Flowing from our valuation work comparing Baa corporate yields to group dividend yields and RU price to earnings ratios to those for the S&P 500, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 9%, second quartile 3%, third quartile -3% and fourth quartile -9%; 4) Clean Energy Transition: A potential 5% premium for a risk adjusted clean energy transition growth opportunity; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/Meet, we include +4%; and a discount of -4% for those in the bottom quartile, 6) a lower relative pricing power discount of 3%, 7) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% of unregulated earnings), we perform a sum-of- the-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue specific basis. Common areas where we apply such an adjustment include: large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.
IPPs: We identify the following risks for the sector: Demand for new renewable installations has historically been volatile around changes in state and federal policy, and we expect this volatility to continue. In addition, margins for product manufacturers can be impacted by swings in raw materials pricing and the overall level of energy prices.

Environmental Services: We identify the following risks for the sector: Housing remains a key driver of incremental municipal solid waste volume growth, and a slowdown in new housing starts could put downward pressure on sales growth. In addition, pricing tends to follow GDP growth, and a slowdown in economic growth could lower ability to raise pricing driving potential contraction in margins. For more industrial-exposed names, swings in commodity prices can impact the overall level of waste-generating activity, contributing to earnings volatility.

Required Disclosures

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates, including Credit Suisse AG and its subsidiaries, branches and affiliates are referred to herein as "UBS".

For information on the ways in which UBS manages conflicts and maintains independence of its UBS Global Research product; historical performance information; certain additional disclosures concerning UBS Global Research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. Unless otherwise indicated, information and data in this report are based on company disclosures including but not limited to annual, interim, quarterly reports and other company announcements. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 28 July 2023 12:08 PM GMT. UBS has designated certain UBS Global Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

IL Staff Recommendation Largely Unchanged

What Happened?

Today, the Illinois Commerce Commission Staff rebuttal testimony in the ComEd multi-year rate plan case was posted. Overall, the Staff position was largely unchanged from the initial testimony filed in May. The Staff increased the cumulative revenue increase from '24-'27 to $1,076mm from $1,039mm, an increase of $37mm, although EXC increased its ask from its initial position by $49mm in its rebuttal testimony. The percentage of the revenue recommended vs. EXC's ask remains 69%. The rate base recommendation in 2027 declined by $122mm, which reflects EXC reducing its rate base ask by $85mm. Staff's recommendation on the ROE remains unchanged at 8.91%, which is consistent with how Staff has treated AEE's electric case.

What's Our Take?

While not much changed in the updated Staff filing, we view the overall position in the case as balanced and puts EXC in a positon to achieve a reasonable outcome that's supportive of our view on earnings. We continue to believe that the final ROE is likely to improve relative to the Staff position. While the point estimate is 8.91%, Staff submitted testimony that supported a range of ROE from the 8.91% level to close to 10.0%. See our note from Staff's initial testimony back in May here. We believe ComEd is unlikely to reach a settlement in the case given it's the first time through under the new regulatory framework in Illinois. We believe the ICC would like to set the precedent with a fully litigated outcome.

What's Next?

ComEd will file rebuttal testimony on August 14th. Evidentiary hearings will be held August 21st and 22nd. An Administrative Law Judge proposed order is due on October 23rd. A final order is expected by December 20th. EXC reports Q2 earnings on August 2nd.

Company Description

Exelon owns six regulated utility subsidiaries: Atlantic City Electric, BGE, ComEd, Delmarva Power, PECO and the Pepco Subsidiaries, which deliver electricity and natural gas to about 10m customers in Delaware, Washington DC, Illinois, Maryland, New Jersey, and Pennsylvania.

Valuation Method and Risk Statement

Our valuation methodology for the group is price to earnings based. The adjustments applied fall into 5 categories. These are as follows: 1) Group Valuation Bias: Flowing from our valuation work comparing Baa corporate yields to group dividend yields and RU price to earnings ratios to those for the S&P 500, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 5% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 5% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 5%, second quartile 2%, third quartile -2% and fourth quartile -5%; 5) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% diversified or foreign earnings), we perform a sum-of-parts analysis applying business/region appropriate valuations to those diversified businesses; 6) One-off Adjustments: In special situations, we value risk on an issue specific basis. Common areas where we apply such an adjustment include: ESG advantage, large project construction risk, legal risk, and announced M&A completion risk.

We maintain our Price Target of $47 premised on a 6% premium to the group multiple or 17.0x our $2.77/share earnings forecast for 2025. Our 6% net premium is derived from a 5% premium for the overall regulated utility group, premised upon the current undervaluation versus the Baa corporate bond, a 3% discount for a 3rd quartile regulatory ranking overall, a 2% premium for 2nd quartile earnings growth, a 5% premium for energy transition, and 3% discount for lower pricing power.

Specific risks for Exelon include regulatory risks at the utilities, weather, and interest rates.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

- 2028-2032 capex run rate of $13B/yr reiterated

D/M&A – Additional details on potential SCANA stake sale emerge

- PeakLoad reported that Dominion took indicative bids for a stake in DESC (up to 49%), with bidders including financials such as KKR, Blackstone, Brookfield, GIC [NYSE: KKR, NYSE: BAM, NYSE: BX]

Guggenheim takeaway: *Another key procedural data point on the credit process (LDC bids due 7/31 – see our note HERE). As we have noted repeatedly, the trade press has provided frequent data points (e.g., HERE) that management has been marking to market different asset options for some time now, providing external assurance, in our view, that many of these processes will be mature in time for the third quarter analyst day. Could we be in a situation where Dominion emerges post strategic review with no "gas" exposure through the sale of their LDCs? Possibly… Could Dominion essentially emerge as a regulated electric utility located in VA? Possibly… See our most recent post-Cove sale thoughts HEREfor more,*

DTE – MPSC approves DTE IRP settlement resolving all issues

- The MPSC approved the DTE IRP settlement, resolving all issues in the case.
- DTE has reached a settlement with MI stakeholders (AG, MPSC Staff, environmental/ labor groups, etc.) on its IRP.
- The settlement targets an 85% carbon emissions reduction in 9 years, 90% by 2040, and net zero by 2050.
- 15GW of renewables by 2042, 780MW of storage by 2042.
- Belle River and Monroe coal retirements by 2032, Belle River to be re-fired as a gas capacity resource.
- More HERE.

Guggenheim takeaway: *The approval finalizes the proceeding and settled outcome. The timing generally aligns with what management laid out on our NDR last month (see our note HERE). As a reminder, management recently highlighted to us that 7-8 years of the IRP are almost rate neutral and LT customers see a net benefit for rates, so the transition is well financed by customers without rate increases. DTE has not leaned on financial compensation mechanism for PPAs or FCM (another contested issue) because DTE was able to build most of their own RFPs for VRP.*

EXC/IL – Rebuttal testimony begins to land in MYP docket

- Multiple stakeholders, including the City, the CTA, environmental groups (CEJA/others), and C&I customers have filed their rebuttal testimony in the ongoing case.
- More HERE.

Guggenheim takeaway: *Flagged for your awareness – as a reminder, later filings can trickle through in the morning after the deadline. The rebuttals come ahead of ComEd's own surrebuttal on 8/14 and briefs in September.*

DUK – Order rescheduling hearing date

- Expert witness testimony in DEC's NC rate case has been rescheduled for August 28, 2023 vs. August 21, 2023 previously.
- Docket E-7 Sub 1276

Guggenheim takeaway: *For your calendar.*

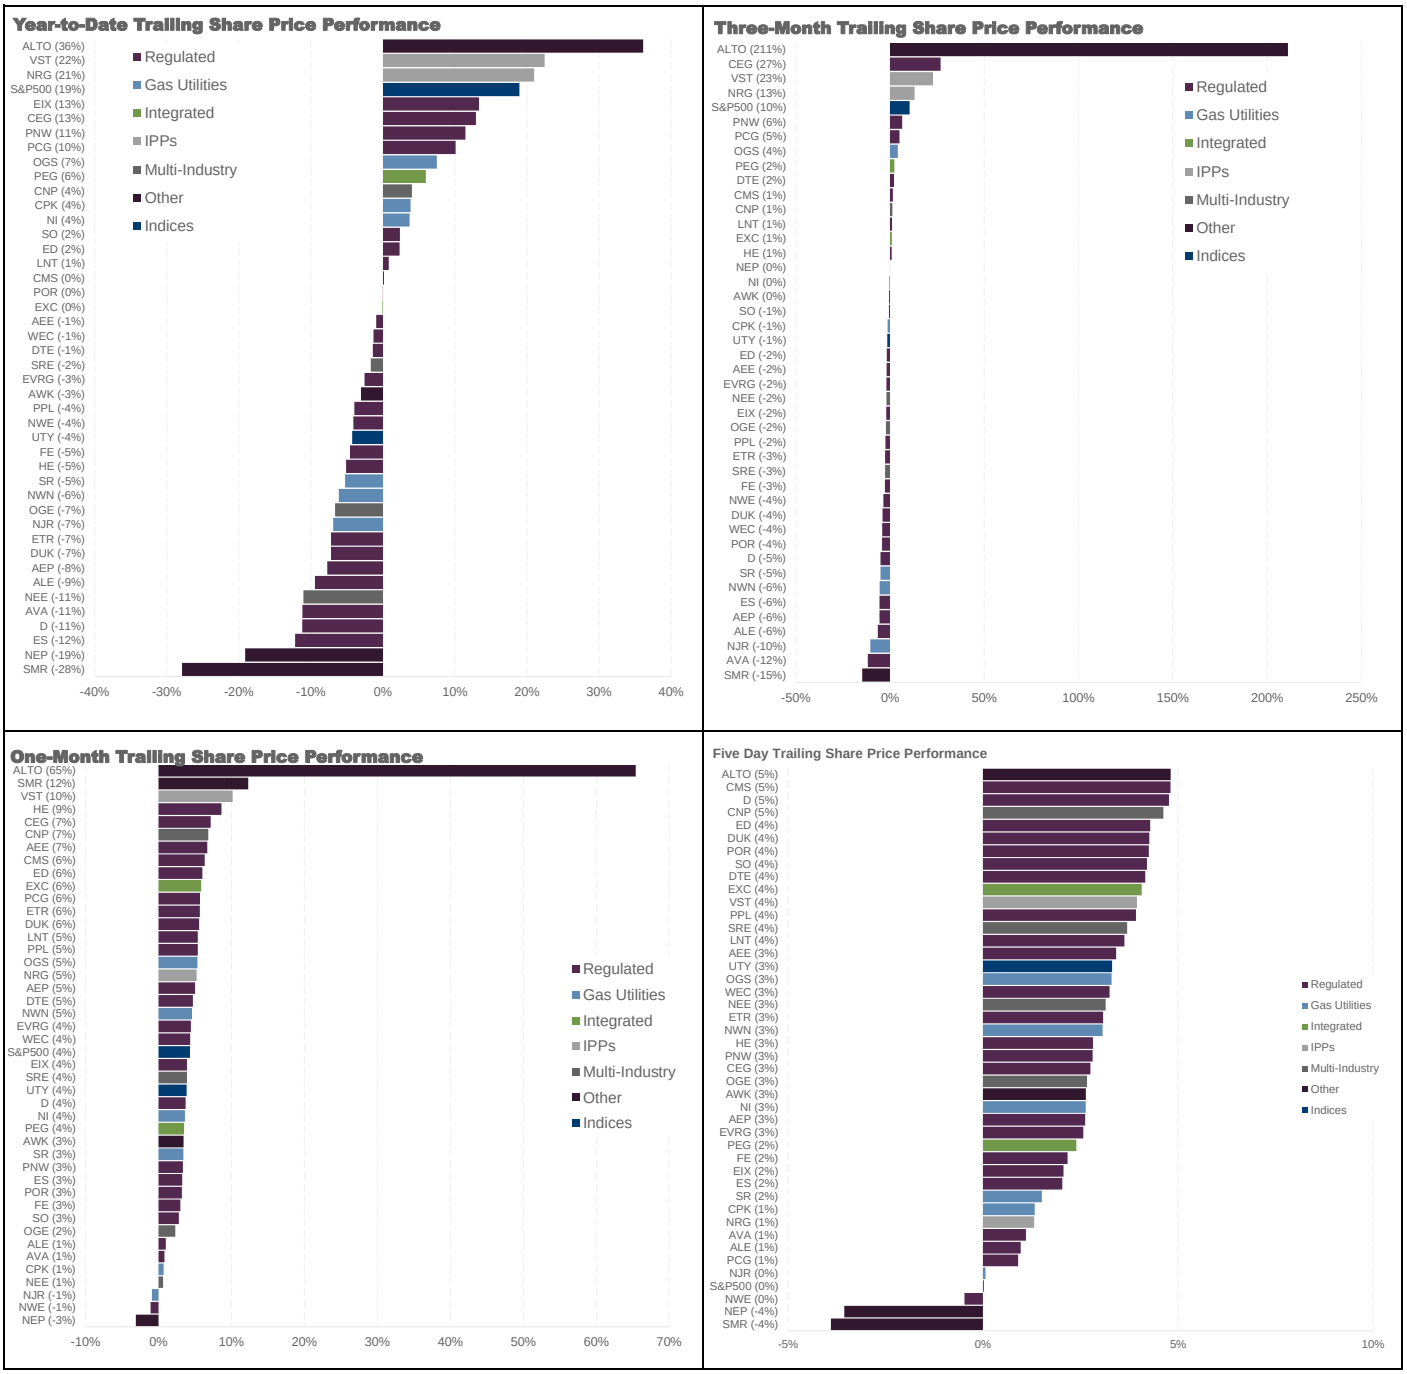
Share Price Performance (Year-to-Date, Three-Month, One-Month, & Five-Day Trailing)



(1) Regulated utilities deliver power to end-use customers via regulated transmission & distribution (T&D) infrastructure; vertically integrated utilities with regulated or mostly contracted generation are also included.

(2) Local Gas Distribution Companies (LDCs), as well as diversified utilities with a business mix largely comprised of gas infrastructure and related activities (i.e., LDC franchises, interstate pipelines, and/or other gas midstream activities).

(3) Integrated utilities own and operate regulated T&D franchises, as well as un-regulated power generation with commodity exposure.

(4) IPPs operate merchant (i.e., un-regulated, non-utility) power plants that compete to sell power in wholesale markets or through retail marketing businesses.

2Q earnings begin with NWE, NEE, AGR, CNP, CMS, AEP, DTE, XEL, EIX, and POR scheduled to report this week. This week, we are tracking proceedings in AEE's IL gas rate case, EXC's IL electric rate case, AVA's ID rate case, POR's OR IRP, FERC's Open Meeting, and AEP's VA triennial review. In other news, CT PURA issues another restrictive PD, this time for the AGR UIL rate case; NC Staff files testimony in DEC's multiyear rate case; the ALJ issues a PD on the settlement in AEP's OK electric rate case; the NY PSC authorizes ED's CECONY electric and gas rate case settlement; a federal dudge denies an injunction against WA building electrification mandates; and Vogtle Unit 4 completes the ITAAC process and awaits the 103(g) finding.

Upcoming Earnings Report

2Q earnings begin: NWE, NEE, AGR, CNP, CMS, AEP, DTE, XEL, EIX, and **POR** are scheduled to report this week (see calendar below). Our recently published preview, In Limbo, includes our thesis, expectations, and estimates for our coverage.

Regulatory Calendar

AEE — Evidentiary hearings in AEE's IL gas rate case begin on July 25: AEE provided an updated request for a $72M rate increase, compared to its initial request for a $160M (net $84M) revenue increase, and maintained the 54% equity layer (vs. Staff's 50%) but lowered the requested ROE to 10.3%, from 10.7%, closer to the Staff's proposal of 9.89%. AEE also agreed to adjust the 2024 charitable contributions and adopted the AG's HDD adjustment, resulting in an increase to present revenues. Staff recommended a $52M revenue increase. AEE's rate request includes the recovery of $77M of annual revenues that would be recovered under the QIP rider, which Staff proposes to be reviewed in the annual QIP reconciliation. AEE expects an ICC ruling within the 11-month statutory timeframe or by November 29, with rates going into effect on January 1, 2024.

EXC — Intervenor rebuttal testimony in EXC's IL electric rate case is due on July 26: ComEd's rebuttal testimony included a $1,550M revenue request over 2024-2027 (Docket: 23-0055), compared to Staff's recommendation for a $1,039M revenue increase and EXC's initial request for a $1,501M revenue increase. ComEd requested a 10.65% ROE and argues that Staff's recommended 8.9% ROE using 580 bps over the 2022 U.S. Treasury Bond yield of 3.114% is no longer applicable since that option existed only under the IL Energy Infrastructure Modernization Act. As a reminder, the act expired at the end of 2022, and the provisions of the CEJA require that the ROE be determined under current commission law. Staff calculated ROE midpoints of 9.23% and 10.87% in

its analysis using the traditional DCF and CAPM methods, respectively. A proposed order is due on October 23, and December 20 is the ICC's deadline to issue a decision.

AVA — Rebuttal testimony on the settlement in AVA's ID rate case is due on July 26: Staff presented testimony supporting the multi-party settlement in the ID gas and electric rate cases stating that it provides a reasonable balance between AVA's ability to earn a reasonable return on its investments while offering affordable customer rates. Staff also believes that the settlement will provide rate stability in that AVA will not seek a rate increase prior to September 1, 2025. As part of the settlement in the two-year electric and gas rate cases, electric revenue increases by $22M in RY1 and by $4M in RY2, and natural gas revenue increases by $1M and ~ $0M, respectively, both based on a 9.4% ROE and 50% equity. This compares to AVA's request for $37.5M and $13.2M electric rate increases in RY1 and RY2, respectively, and gas rate increases of $2.8M and $0.1M, respectively, based on a 10.25% ROE and 50% equity. If approved, new rates would go into effect on September 1, 2023.

POR — Intervenor comments in POR's OR Clean Energy Plan and IRP are due on July 27: POR's CEP includes a set of near-term actions to achieve the targets outlined in HB 2021. The Preferred Portfolio emphasizes solar and wind resources, with ~3.5GW expected to be online by 2030. POR will meet the capacity needs through an annual RFP for up to 520 MW of non-emitting resources through 2028. POR also plans to add 632 MW of storage, energy efficiency (248 MW), and distributed resources (136 MW). POR will study the addition of community-based renewable energy to reach 155 MW by 2030. This is POR's first CEP/IRP filing since HB 2021 became law. The PUC has six months to acknowledge the CEP and determine if it is consistent with the new law.

FERC — FERC's Open Meeting is scheduled for July 27: A copy of the Sunshine Notice is included here.

AEP — Staff testimony in APCo's VA triennial review is due on July 28: APCO filed its triennial earnings review for the 2020-2022 period in VA. According to APCo's calculations, the Company earned a 5.39% ROE during the timeframe and below the dead band of 8.5-9.9%. The Company seeks a $213M rate increase, premised on a 10.6% ROE. The main drivers of the increase include increased O&M expenses for vegetation management, an increase in the ROE from 9.2% to 10.6%, an increase in depreciation rates, and the deferred recovery of storm cost expenses. At the end of 4Q22, APCo deferred $38M related to previously incurred costs assuming it would earn below the 9.2% authorized ROE. An SCC decision is due by November 30. In its 2017-2019 triennial review, the Commission initially concluded that no rate change was required as APCo had earned 9.48% for the period, within the 8.72-10.12% ROE band prescribed by VA state law. AEP appealed the decision to the Supreme Court in March 2021 and eventually received approval for a $28M rate increase.

Recent Developments for Companies Under Our Coverage

From our midweek: The IL Staff files rebuttal testimony in WEC's IL gas rate cases; the MN PUC issues a final order in XEL's electric rate case; AGR reaches an agreement with MA utilities to terminate Commonwealth Wind PPAs; the ALJ suspends the briefing schedule in Track 4 proceedings of SCE's GRC; Omnis signs a purchase agreement with ETEM for the Pleasants coal plant; VEPCO signs a PPA for 300 MW of solar resources in VA; and AL Power issues an RFP for dispatchable resources.

AGR — CT PURA issues another restrictive PD, this time in AGR's UIL rate filing: CT PURA issued a PD last Friday in the UIL rate case, which we view as quite restrictive and unlikely to improve the sentiment around the regulatory environment in the state (especially as it follows a similar outcome in the ES Aquarion water case and the passage of SB 7). We provide some key parameters included in the PD below.

- PURA approved a rate increase of less than $2M and premised on an 8.8% ROE with a further 52 bps cut to address performance and management issues, bringing the effective ROE to 8.28% and a 50% equity layer. UIL had requested a $131M rate increase over three years with a 10.2% ROE, 52% equity.
- The ROE penalties include a 2 bps cut for not submitting a proper cost of service study, a 5 bps reduction to incentivize the Company to find ratepayer savings on the transmission adjustment clause, a 5 bps cut while UIL addresses deficiencies in storm response, a 20 bps cut to incentivize management to proceed efficiently in completing the remediation of the English Station, and a 20 bps cut to incentivize improved customer service performance. Many of the ROE cuts will remain in place for at least two years.
- PURA also rejected the AGR's application for a three-year rate plan citing errors in the Company's cost of service study as one of several reasons for the rejection. Other reasons include the pending PBR docket where multiyear rate plans are a topic of reevaluation and thus PURA believes a multiyear rate plan approval would be premature. Thus it approves only a one-year schedule effective September 1, 2023.
- Aside from the lower ROE, PURA adjusted downward the plant-in-service, zeroed the storm reserve/deferral request, pension cost recovery, and COVID deferral, among other reductions, bringing the down the authorized plant-in-service to $2.3B from a requested forward-looking plant in service of $2.5B. COVID deferrals of $6.5M will be allowed to be amortized outside the rate base.

AEP — ALJ issues PD on settlement in PSO's OK electric rate case: The ALJ recommended approval of the settlement with modifications. Specifically, the ALJ recommends modifying the ROE and equity layer to 9.3% ROE and 50% equity, respectively, compared to the agreed-upon 9.5% ROE and 54.62% equity. These adjustments lower the revenue requirement by ~$23M. The ALJ also recommended removing Rock Falls Wind Facility from the rate base since the facility was not used and useful within the six-

Sophie Karp (917) 368-2361 / sophie.karp@key.com

month post-test year period, lowering revenue by $22M. The PD agreed with the settlement to update the fuel adjustment clause rider semiannually and that the Grid Enhancement and Reliability Rider (GEAR) be approved for a three-year term through 2026 with a $6M annual revenue requirement. The PD recommends approving the Green Energy Choice and SPP Transmission Cost tariffs. According to our calculations, the ALJ recommends a $110M revenue deficiency, largely in line with the customer counter-proposal for a $105M gross revenue increase and materially lower than the $155M (net $50M) revenue increase agreed to in the multiparty settlement. AEP's original filing included a request for a $294M ($173M net) revenue increase based on 10.4%/54.6%. An OK Commission order is expected in 2Q23.

DUK — Staff files testimony in DEC's NC electric rate case: Staff (Docket: E-7 Sub-1276) recommended a cumulative $398M ($113M in RY1, $153M in RY2, and $133M in RY3) revenue increase, premised on a 9.35% ROE and 52% equity layer. This compares to DUK's $833M ($511M in RY1, $172M in RY2, and $150M in RY3) request, premised on a 10.4% ROE and 53% equity. DUK also recently filed supplemental testimony to reflect updated data, exhibiting a $991M revenue deficiency, although DUK did not amend its rate request. The difference between Staff's recommendation and DUK's request can largely be attributed to the base case for the test period ending December 31, 2021, where Staff recommended an $11M increase compared to DUK's $372M revenue increase. Several factors drive this variance, including a lower ROE and cap structure (34%), while depreciation expenses and plant and accumulated depreciation comprise 46% of the difference. Staff's adjustments exclude the accelerated depreciation of several plants (Cliffside Unit 5, Marshall Units 1 and 2), which have not been retired yet. Staff notes that DUK may place the remaining net book value into a regulatory asset or seek securitization when the plant is physically retired. Other adjustments include COVID deferral, inflation, and incentive expenses for short-term and long-term plans. For RY1-RY3, Staff recommended $387M compared to DUK's $462M request. DUK will file rebuttal testimony on August 4, and evidentiary hearings will commence on August 21. DUK is asking for approved RY1 rates to be effective no later than January 1, 2024.

ED — NY PSC authorizes ED's CECONY electric and gas rate increases: The NY PSC issued a final order adopting the settlement in ED's electric and gas rate cases. The order authorizes a $457.5M levelized annual revenue increase for electric and a $187.2M levelized annual revenue increase for gas for 2023-2025. The PSC also authorized a 9.25% ROE and 48% equity layer. The total levelized revenue increases are $1.4B and $562M for electric and gas, respectively. Additionally, the settlement includes an earnings sharing mechanism and seven earning adjustment mechanisms to incentivize ED further. The EAMs are measured annually and include the EV Make Ready program and programs for demand response, smart building electrification, and several others. As a reminder, ED initially sought rate increases of $1,038M and $402M for its electric and gas utilities, respectively, beginning on January 1, 2023, and included illustrative rate increases for 2024 and 2025 (electric: $744M and $615M, respectively; gas: $205M and $176M, respectively).

AVA — Federal judge denies injunction against WA building electrification mandates: A U.S. district judge has rejected a request from gas utilities, homebuilders, and other stakeholders to halt the implementation of electric space and water heating requirements in new construction in WA. The plaintiffs sought a preliminary injunction, claiming the requirements were causing harm to their businesses. The judge, however, called their claims speculative and without standing. The WA State Building Code Council (SBCC) argued that the judicial intervention was premature after the SBCC previously passed two motions delaying the implementation of requiring heat pumps in residential and commercial building codes. Those motions were in response to the U.S. Court of Appeals for the Ninth Circuit ruling that a federal Energy Policy and Conservation Act (EPCA) regulates EE and the use of consumer products, and the ban placed by the city of Berkeley on the use of natural gas violates the federal statute. The motions include delaying implementation by 120 days and making the new rule not go into effect until November 2023, previously July 2023. The other motion supports starting rulemaking actions designed to ensure the new codes follow the Ninth Circuit Courting ruling in CA. The SBCC previously issued codes that

required heat pumps in the commercial code and residential building code, making all residential and commercial buildings rely on electric power for the primary space and water heating. WA was the first state to approve an electrification mandate into its statewide energy code, which aligns with state law and requires the council to adopt energy codes that reduce annual net energy consumption in buildings by 70% from 2006 levels by 2031.

SO — Vogtle Unit 4 takes a big step toward fuel load: SO completed all ITAACs and submitted the completion letter with the NRC. The Company awaits receipt of the 103(g) finding from the NRC, which confirms that the unit has been constructed and will be operated in compliance with the Combined License and NRC regulations. After receiving the 103(g), the next step will be for the operators to make final preparations for fuel load in Unit 4, startup testing, and then bring the unit online. The ITAAC completion was ahead of SO's October forecast but aligns with the 4Q23 benchmark milestone forecast, which would commence fuel load this month. Unit 4 is expected to enter service in 4Q23/1Q24.

Catalyst to Watch This Week: Staff Rebuttal Testimony in ComEd Rate Case and PG&E Innovation Summit

On Wednesday the 26th, the Illinois Commerce Commission will file its rebuttal testimony in EXC's ComEd multi-year rate plan case. We see this as a potential positive catalyst where Staff may improve upon the revenue and rate base recommendation from their initial testimony in May (see note here). Ameren saw an improved recommendation in their Illinois electric rate case late last week (see note here). Constructive resolution of the Illinois case for EXC is a key driver for our Buy rating and we think the stock remains attractive at its current 0.5x discount valuation.

PG&E will host its Innovation Summit 2023 on Tuesday the 25th starting at 8 AM PST. The day will include live or virtual sessions on a comprehensive list of topics including integrated grid planning, supply and load management, electric vehicles, gas, wildfire and undergrounding. Patti Poppe, CEO of PG&E, and Jason Glickman Executive Vice President, Planning and Strategy, PG&E will host. We expect updates on the company's wildfire A&I, California load growth and input from relevant industry leaders including Elon Musk, CEO of Tesla in a discussion with Patti Poppe.

The Analyst Conviction Index (ACI)

The ACI = (# of buy ratings - # of sell ratings)/Total # of ratings. We show the sorted ACIs for our regulated utility, power, and water coverage stocks in (Figure 12) below. The graph also shows absolute number of buy, hold, and sell ratings by company. We also track the change in the ACI over the last 12 weeks (Figure 13) to try to gauge where the sell-side consensus view is shifting.

Valuation Method and Risk Statement

Our valuation methodology for the group is price to earnings based.

North America Utilities: Our valuation methodology for the group is price-to-earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Reflects sustainable 5% premium on a relative yield basis to corporate bonds; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 9%, second quartile 3%, third quartile -3% and fourth quartile -9%; 4) Clean Energy Growth Premium: A 5% premium for companies that have a unique decarbonization growth opportunity on a risk adjusted basis; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/Meet, we include +4%; 6) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% diversified or foreign earnings), we perform a sumof-the-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue-specific basis. Common areas where we apply such an adjustment include: ESG advantage, large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

Water Utilities: Our valuation methodology for the group is price-to-earnings based. Our methodology includes: 1) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; and 2) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 9%, second quartile 3%, third quartile -3% and fourth quartile -9%. North American utilities: We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.
IPPs: We identify the following risks for the sector: Power prices, fuel prices, capacity prices, supply and demand for electricity, extreme weather, economic conditions, and cost of financing and collateral hedging.

Environmental Services: We identify the following risks for the sector: Housing remains a key driver of incremental municipal solid waste volume growth, and a slowdown in new housing starts could put downward pressure on sales growth. In addition, pricing tends to follow GDP growth, and a slowdown in economic growth could lower ability to raise pricing driving potential contraction in margins. For more industrial-exposed names, swings in commodity prices can impact the overall level of waste-generating activity, contributing to earnings volatility.

Quantitative Research Review

UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. The views for this month can be found below. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research Team on the email above.

Required Disclosures

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates, including Credit Suisse AG and its subsidiaries, branches and affiliates are referred to herein as "UBS".

For information on the ways in which UBS manages conflicts and maintains independence of its UBS Global Research product; historical performance information; certain additional disclosures concerning UBS Global Research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. Unless otherwise indicated, information and data in this report are based on company disclosures including but not limited to annual, interim, quarterly reports and other company announcements. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 21 July 2023 01:26 AM GMT. UBS has designated certain UBS Global Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS Global Research manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS Global Research recommendations, please visit https://www.ubs.com/disclosures.

UBS Global Research will initiate, update and cease coverage solely at the discretion of UBS Global Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by UBS Global Research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

We update estimates across our Utilities coverage ahead of 2Q2023 results. Given the fairly mild weather to start the year that has impacted many utilities within our coverage, we expect managements confidence in their ability to meet full year earnings guidance to be in focus around results, including what levers around O&M or otherwise are available to pull to bridge the gap with guidance.

We are constructive on Buy rated NEE into the quarter, where we are above consensus estimates, and believe that recent underperformance creates an attractive entry point on the stock with the potential for positive updates on the development backlog on the call. On the other side, we see the most downside risk to consensus estimates for Neutral rated DUK and D into results. We highlight our recent views on the stocks and the quarters across our coverage within.

Where we see the most upside to consensus around 2Q23 results. We are 2% above FactSet consensus EPS for Buy rated NEE. On results, we expect the surplus amortization reserve to offset any mild weather during the quarter at FPL. Outside of results, we expect tracking the NEER development backlog to be in focus, along with any updates on the FPL campaign finance violation allegations. We remain constructive on NEE as we see limited near-term rate case risk with its current plan setting rates through 2025 and do not believe the best in class earnings growth outlook (9% 5-year CAGR GSe) is priced into valuation following underperformance. With the stock being the worst performer within our coverage over the last month, we see an attractive entry point with potential positive catalysts around the backlog growth at NEER and potential resolution on the FPL allegations.

Where we see the most downside to consensus around 2Q23 results. We are 10% below FactSet consensus EPS for both D and DUK. D revised its 2Q23 EPS guidance lower at the end of June to $0.44-$0.50, on both weak weather and unexpected outages at its Millstone nuclear power plant. Consensus remains above this range at $0.52, and we believe it is largely due to a few estimates in FactSet consensus remaining stale as they have not been updated post the June revision. We believe D's commentary on mild weather will affect DUK as well as they operate in regions that are close to each other. On top of mild weather, we expect higher

interest expense to be a large headwind for 2Q23 for DUK, and it remains in question if DUK can manage costs down as much as expected by management for the year.

NextEra Energy (NEE, Buy)

Our most recent views

NEE remains the most exposed to renewables growth within our coverage, and its Florida based utility is best in class, in our view owing to constructive regulatory exposure, focus on cost management, and execution. We believe consistent execution, and moving past the campaign finance allegations as well as the Florida Supreme Court review of its latest rate case outcome will prove to be the tailwinds to help the stock break out of the range it has been trading at recently. We do not believe the growth outlook at NEE, with a 5-year EPS CAGR of 9% on our numbers relative to our coverage at 6% on average, is appreciated in current valuation following underperformance. We believe investors are focused on gaining confidence in the newer management team's ability to communicate and execute, the elimination of noise around Florida, and execution at NEER as potential positive catalysts for shares.

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 30-Oct-2023 04:32 PM.

Quarterly outlook

Our 2Q23E EPS remains unchanged at $0.83 as compared to FactSet consensus at $0.81. We reflect the ~$2.5bn of incremental debt at FPL issued during the quarter in our model which slightly reduces our full year estimates. Overall, we expect a strong quarter for NEE, as it has consistently hit its yearly guidance. Summer weather in Florida often provides enough load growth for NEE to replenish its surplus amortization reserve, so we do not expect NEE to suffer from the mild weather that some other utilities face. Outside of results, we expect investors to be focused on (a) updates on addition to the renewables backlog at the NEER segment, (b) commentary on cost management, (c) updates on the Supreme Court review/FPL campaign finance violation allegations, and (d) commentary around renewables project returns.

Valuation & Key Risks

We are Buy rated on NEE. We value NEE with a SOTP, applying a 5x premium to its Florida based utility given its strong regulatory jurisdiction. We apply a 15x EV/EBITDA multiple to its NEER segment, given its scale advantage and again consistent execution over the years. Our 12-month target price of $89, reduces by a dollar (from $90 earlier) as we adjust for incremental debt at FPL, implies a 24% total return vs the average of 14% for our coverage group. Our 2023-2025 EPS estimates move from $3.18/$3.48/$3.89 to $3.16/$3.44/$3.85. Key risks for NEE include the 1) a more negative regulatory landscape, 2) investor concerns surrounding the FPL campaign finance allegations reported by NPR which may lead to penalties, 3) not achieving the goals laid out in NEER's renewable development plan, 4) slowdown in Florida's population growth and 5) cost management.

American Electric Power (AEP, Buy)

Our most recent views

AEP remains the leader in transmission, and we view its transmission exposure, as well

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 30-Oct-2023 04:32 PM.

as its plans to replace its coal generation fleet with renewables as positives. We believe there will be a $93bn shortfall in transmission spending to support the buildout of renewables through 2027 at the current run rate, and with AEP currently allocating ~40% of its capital spend to transmission, it is positioned to benefit from this shortfall. While AEP faces a regulatory lag now, we believe management's focus on this will lead to improvements in the regulatory mechanisms at its Vertically Integrated Utilities. We believe that AEP's recent success in getting approval for nearly 1GW of renewables at SWEPCO in Louisiana and Arkansas is a sign of positive momentum on the regulatory front.

Quarterly outlook

We reduce our 2Q23E EPS to $1.18 (from $1.30 earlier) which is below FactSet consensus at $1.22. We adjust for milder weather and higher interest expense ($79mn increase YOY) in this quarter. For the full year, we revise O&M ($55mn decrease) in 2H23 as we expect AEP to deliver on its guidance and anticipate reversal of slower weather in 1H23. We additionally adjust our model to reflect AEP's SWEPCO segment owning 100% of the 999 MWs of renewables that was recently approved by the Louisiana Commission. Outside of results, we expect investors to be focused on (a) how close AEP comes to earning authorized, especially at its KY utility especially following the termination of its sale, (b) updates on the regulatory front and (c) the latest on any renewable RFPs.

Valuation & Key Risks

We are Buy rated on AEP and our 12-month, SOTP based price target goes up to $100 in this update (was $98). We value AEP with a SOTP to account for its transmission holdco segment along with its regulated utilities. We apply a 16x multiple to its VIU and T&D segments, accounting for the potential renewable growth at VIU as well as the regulatory lag that both segments face. For the Transco segment we apply a 19x multiple to account for the strong RoEs and material investment into the segment. Our 2023-2025 estimates move from $5.21/$5.70/$6.06 to $5.21/$5.71/$6.14. Key risks include 1) Lower than expected ownership of renewable RFPs; 2) Financing needs; 3) Failure to make progress on closing the ROE gap at the VIU utilities, and 4) cost management.

Southern Company (SO, Buy)

Our most recent views

We continue to view SO as well positioned to rerate to its historical premium as the Vogtle expansion is brought online. Given SO's attractive regulatory jurisdictions and path to a strong balance sheet post Vogtle, we believe investor focus will be able to shift from project execution back towards the base business and organic investment opportunities. We expect Vogtle Unit 3 to come online in July, and Unit 4 in 1Q2024. SO traded at roughly a 2x premium to its peers pre-Vogtle, and we expect it to return to a similar level going forward to account for above average earnings growth, attractive regulatory exposure, and balance sheet strength post Vogtle. Its largest segment, Georgia Power, recently locked in a multi-year rate case which removes most of SO's regulatory risk in the near term.

Quarterly outlook

We revise our 2Q23 EPS estimate to $0.77, from $0.90 earlier, which is in line with FactSet consensus at $0.76. On the quarter, we now expect higher D&A expenses overall and at Georgia Power, and we account for anticipated reduction in usage/rates relative to the prior year which was impacted by commodity volatility. That said, our full year estimates are broadly unchanged given we expect the company to flex O&M costs in the back half of the year to maintain the 2023 earning trajectory. Outside of results, we anticipate investors will be focused on (a) management commentary regarding Vogtle's Unit 3 especially after recent delays, (b) update on the prudency filing, (c) progress on the path to Unit 4 fuel load, and (d) management confidence in ability to meet full year earnings guidance.

Valuation & Key Risks

We are Buy rated on SO. We value SO with a P/E multiple of 18x (unchanged) on 2025

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 30-Oct-2023 04:32 PM.

EPS, a 2x premium to our baseline multiple. Our target price of $80 implies a total return of 18% vs the average for our coverage group of 14%. Our 2023-2025 EPS estimates move from $3.53/$4.05/$4.45 to $3.53/$4.04/$4.46 to reflect quarterly updates and tweaks to costs in the back half. Key risks include: 1) execution risk around Vogtle, 2) balance sheet strength and 3) slower than anticipated rate base/earnings growth.

Exelon (EXC, Sell)

Our most recent views

Our more negative relative view on EXC is based on (1) concerns around EXC's rate case activity as we see potential challenges given high requested ROEs, (2) less thematic exposure outside of grid reliability, which in our view will drive less upside opportunity around rate base and earnings growth going forward, and (3) less attractive valuation with the stock trading at a slight premium to peers on our 2025 numbers versus a discount of about 1x since the Ex-Gen spin. With that said, we view the current balance sheet position as constructive with ample cushion relative to credit agency downgrade thresholds.

Quarterly outlook

We reduce our 2Q23 EPS estimates to $0.43 from $0.45 previously, which compares to FactSet consensus at $0.46. We revise our estimates to account for milder weather at PECO and debt issued during the quarter, which was less ratable than initially modeled. Outside of results, we expect investors to be most interested in (a) regulatory updates especially at ComEd and BGE, (b) management commentary on credit metrics and (c) updates on incremental capital spending opportunities.

Valuation & Key Risks

We are Sell rated on EXC. We apply an unchanged 15x P/E multiple (vs our baseline

multiple of 16x) to our 2025 EPS estimate to derive a 12-month $39 PT, reflecting a -3% total return versus 14% for our coverage. Our 2023-2025 EPS estimates move from $2.38/$2.49/$2.61 to $2.36/$2.47/$2.59 to reflect updated debt/interest costs. Key risks for EXC include: 1) favorable rate case outcomes, 2) cost control and ability to smooth earnings, 3) a robust balance sheet that appeals to investors seeking safety in the event of a recession, and 4) incremental capex opportunities.

Xcel Energy (XEL, Buy)

Our most recent views

We remain constructive on XEL as we see attractive leverage to the generation transition story from coal to renewables that is underway, attractive exposure to the transmission build out opportunity, rate case activity that could result in improved earnings going forward, and valuation with the stock trading only at a 0.5x premium to our coverage on our 2025 numbers versus its 5-year average premium of closer to 2x. We note there exists upside to current capital expenditure plans not in our estimates around both renewables RFPs outstanding and transmission build out opportunities. We remain Buy rated and expect 22% total return v/s 14% total return to our coverage.

Quarterly outlook

We reduce our 2Q23 EPS estimate to $0.58 (from $0.60 earlier) which is below FactSet consensus at $0.63. We expect XEL to deliver a slightly down quarter YOY as we expect a rise in D&A expenses ($42mn higher YOY), interest expenses ($16mn higher) and flat O&M costs. We also note that the recent rate case activity at Minnesota and South Dakota are reflected in our estimates and were in line with our expectations. Outside of results, we expect investors to be focused on (a) commentary on recent regulatory outcomes as well as pending rate cases, (b) outlook on guidance for the full year, and (c) capital expenditure plan updates.

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 30-Oct-2023 04:32 PM.

Valuation & Key Risks

We are Buy rated on XEL. Our 12-month, P/E based price target is $75. In our valuation, we apply a 19x (unchanged) multiple on 2025 earnings, representing a 3x premium to our baseline multiple to account for attractive leverage to renewables and transmission, as well as above average growth versus peer and a strong track record of execution. Our 2023-2025 EPS estimates move from $3.40/$3.70/$3.94 to $3.40/$3.69/$3.94. Key risks to our positive view include 1) negative rate case outcomes, 2) slower than expected renewable transition, 3) failure to close gap between earned vs authorized ROE, and 4) cost management.

Sempra Energy (SRE, Buy)

Our most recent views

We view SRE positively, with its LNG projects providing consistent cash flows to fund its regulated utilities, and its Texas exposure a positive due to the strong population growth rates and robust opportunity set around transmission and distribution build out. We see a number of potential catalysts for the stock over the next ~6 months, with an FID at Cameron LNG Phase 2 in the second half of this year, and a capital spending raise at SRE's Texas utility Oncor after the board meets in October. On top of these two positive catalysts, any progress on Port Arthur Phase 2 would be a positive this year for SRE, including around commercial interest updates at the project. Both of SRE's California utilities are in a rate case, and a decision is expected in 1Q2024, but we expect a relatively constructive outcome given the recent CPUC decision.

Quarterly outlook

We revise our 2Q23 EPS estimate to $1.75, from $2.01 previously, which compares to FactSet consensus at $1.83. On the quarter, we expect a moderate increase in interest costs and O&M, which reduce our estimates. That said, we see upside potential around growth in Texas in particular to the extent there is another capital spending raise at

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 30-Oct-2023 04:32 PM.

Oncor following the Board meeting in October. Outside of results, we expect investors to be focused on (a) LNG project updates especially related to the Cameron LNG facility and Port Arthur Phase 2 progress, (b) the latest on capital spending plans especially at Oncor, and (c) regulatory updates at the California utilities.

Valuation & Key Risks

We are Buy rated on Sempra. We value SRE with a SOTP, applying a 1x discount to the California utilities and a 1x premium to the Texas utilities. We value the SIP segment with an unchanged 11x EV/EBITDA multiple, and apply a probability of completion for the LNG projects that are in flight. Our target price of $176 (was $178) implies a total return of 24% vs an average of 14% for our coverage group. Our latest TP reflects our updated views on increasing interests costs and O&M going forward for SRE. Our 2023-2025 EPS estimates move from $9.40/$9.71/$10.32 to $9.08/$9.43/$10.18. Key risks for SRE include (1) delays with the LNG projects, (2) Texas customer growth slowing or the regulatory environment becoming less favorable in Texas, and (3) unfavorable rate case outcomes at the California utilities or challenging regulatory constructs.

Duke Energy (DUK, Neutral)

Our most recent views

We are Neutral rated on DUK. While we have a constructive view on the longer-term shift of the portfolio from coal to renewables, we expect the inflection there to be longer dated, and we continue to view the balance sheet as less advantaged. We also see less differentiation in our estimates versus consensus in addition to average upside opportunity to our price target. We continue to view DUK as a strong electric and gas utility outside of this, with its North Carolina utilities in a rate case that could significantly reduce regulatory lag. We believe this regulatory improvement is already priced in to the current valuation, and see limited differentiated upside to the current

price.

Quarterly outlook

Our 2Q23 estimates remain unchanged at $0.99 as compared to FactSet consensus at $1.10. On the quarter, we expect weather and interest expense to be the largest headwinds on a year over year basis. We do, however, adjust for the recent announcement of dividend at DUK of $1.025 per share, which came in slightly below our expectations from a growth perspective. Outside of results, we expect investors to be focused on (a) DUK's cost management plans as it expects to reduce O&M expense by $300mn in 2023, (b) weather trends in the South East, following Dominion Energy's (D, Neutral) downwards EPS guidance revision on weather and nuclear outages, (c) commentary on equity needs and (d) regulatory updates.

Valuation & Key Risks

We are Neutral rated on DUK. We value DUK using a P/E methodology, applying a half turn discount to our baseline multiple of 16x. We view this slight discount as warranted due to DUK's constrained balance sheet and less differentiated regulatory jurisdictions, in our view. Our current target price of $99 implies a total return of 12%, vs the average of 14% for our coverage group. Key risks for DUK include 1) rate case outcomes, 2) cost management and 3) poor load growth or weather.

Dominion Energy (D, Neutral)

Our most recent views

While we see relative valuation screening more attractive, we remain Neutral rated on Dominion given the pending business review, with a fulsome update on the financial and strategic outlook at the company expected at the analyst day in 3Q. We believe the recent announced sale of its remaining interest in Cove Point LNG is a first step towards D's stated goal of improving the credit profile/balance sheet. However, we note a high

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 30-Oct-2023 04:32 PM.

degree of uncertainty remains around what D's business will look like going forward, and await further clarity on the business review to determine the path for D to make progress on its FFO/Debt levels relative to its downgrade threshold of 14% (per Moody's).

Quarterly outlook

Our 2Q23 EPS estimate remains unchanged at $0.47 as compared to FactSet consensus at $0.52. On the quarter, we recently updated our estimates following revised guidance range from Dominion from $0.58-$0.68 to $0.44-$0.50. The company expects reduction in earnings from historically mild weather and unplanned outages at Millstone modestly offset by lower costs. Apart from results, we expect investors to be on the lookout for (a) updates on the business review, (b) commentary on the sale of Cove Point and valuation, (c) management guidance for 3Q23, and (d) regulatory updates at Virginia and South Carolina.

Valuation & Key Risks

We are Neutral rated on Dominion Energy and our 12-month price target of $55 is based on a SOTP. We apply 15.0x P/E to DEV, 15.0x to DESC, 16.0x to gas LDCs, and 9.0x EV/EBITDA to contracted assets. We broadly apply a 1x discount to our baseline multiple of 16x to account for the uncertainty around the ongoing business review. Our 2023-2025 EPS estimates move from $3.71/$3.72/$3.82 to $3.71/$3.67/$3.79 to account for minor changes in rate base. Key downside/upside risks: outcome of the business review, regulatory outlook and project execution.

Public Service Enterprise Group (PEG, Neutral)

Our most recent views

We are Neutral rated on PEG. While we recognize the attractiveness of the improved business mix at PEG with 90%/10% of earnings coming from regulated/unregulated

Provided for the exclusive use of Daniel Whitehead at Exelon Corp on 30-Oct-2023 04:32 PM.

businesses, upside opportunities around nuclear earnings, and capital spending on grid investments, but we see near-term headwinds around interest and pension expenses as well as less differentiation on consensus estimates and less compelling valuation, with the stock trading in line with our coverage average P/E on our 2025 numbers.

Quarterly outlook

Our 2Q23 EPS estimate remains unchanged at $0.61 as compared to FactSet consensus at $0.64. We expect pension and interest to be the largest drivers year over year from an earnings perspective, though we expect growth in customers and grid/transmission investments to offset some of the higher expenses. Apart from results, we expect investors to be on the lookout for (a) updates on pension expenses and the potential for a pension lift out this year, (b) any updates around nuclear PTC or hydrogen tax credit expectations, and (c) regulatory updates including the expected distribution rate case filing later this year.

Valuation & Key Risks

We are Neutral rated on PEG and our 12-month price target is $64 (unchanged). We value PEG with a SOTP, applying a 16x P/E multiple on PSE&G 2025 earnings, which is in line with our baseline multiple for the sector. We apply a 9x EV/EBITDA multiple on the Power & Other segment as the nuclear PTC will help derisk the cash flow at the segment going forward. We see 4% total return versus an average of 14% for our coverage. Our 2023-2025 EPS estimates move from $3.43/$3.59/$4.06 to $3.44/$3.60/$4.06 as we model slight growth in customer numbers. Key risks for PEG include 1) uncertainty around pension expense lift out and implementation around a long term solution, 2) 2023 distribution rate case uncertainty 3) power price volatility in the near term that could impact collateral postings around 2023/2024 hedges; 4) option value in nuclear exposure, which limits downside risks and provides stability; and 5) upside to capital spending plans.

Consolidated Edison (ED, Sell)

Our most recent views

We continue to see less thematic exposure outside of investments in grid reliability which we believe provides limited upside capital expenditure opportunities. In addition, customer affordability and medium-long term policy risk in New York continue to see us incrementally cautious on ED. We see limited upside to ED going forward, given its jurisdiction restricts utilities from owning generation like wind and solar, and its location has limited transmission opportunities. ED is in the midst of a rate case at its largest segments, CECONY Electric and Gas, and expects a decision by the New York Public Service Commission by the end of July. The current proposal is a ROE/equity layer at 9.25%/48% vs. 10%/50% originally proposed. We believe that the outcome of this rate case as well as the recent sale of its Clean Energy Business are priced in at the current valuation, and ED has limited catalysts for growth in the near term.

Quarterly outlook

We adjust our 2Q2023 EPS to $0.61 for the quarter, remaining slightly below FactSet consensus at $0.66. We adjust O&M expense, Taxes Other than Income Taxes, and Other Income for the quarter. Our FY2023 EPS estimate moves to $4.80 as we adjust expenses for the full year, remaining slightly below ED's guidance midpoint and FactSet consensus both at $4.85. Given our view that ED has limited catalysts ahead, we expect investors will largely be focused on ED's execution in a difficult cost environment. Outside of results, the few items that we expect investors to be focused on (a) updates on the CECONY rate case timeline, (b) ED's progress on paying down its HoldCo debt, (c) management commentary on cost management.

Valuation & Key Risks

We are Sell rated on ED. We derive our unchanged $88 12-month price target using a 16x P/E multiple (in line with our baseline multiple of 16x) on our 2025 EPS estimates, reflecting a -1% total return versus 14% for our coverage. Our 2023-2025 EPS estimates move from $4.77/$5.19/$5.48 to $4.80/$5.19/$5.48. Key risks for ED include: 1) favorable rate case outcomes, 2) premium valuation persisting, 3) superior execution.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction lists, which are selected from Buy rated stocks on the respective region's Investment lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Energy: Electric Utilities

Heads Up — The Week Ahead in Utilities: AGR, WEC, FE, SO, XEL, DTE, DUK, POR, NEE, EXC, ES, SRE, AVA, ETR, AEP, D, DUK, Atlantic Hurricane Season

Sophie Karp / (917) 368-2361 / sophie.karp@key.com
Sangita Jain, CFA / (917) 368-2354 / sangita.jain@key.com
Michael Pelletier / (917) 368-2306 / michael.pelletier@key.com

This week, we are tracking proceedings in AGR's NY rates cases in NY, WEC's IL gas rate cases, FE's MD electric rate case, SO's IL gas rate case, XEL's MN electric case, DTE's MI electric GRC, DUK's DEC NC rate case, and POR's OR electric rate case. In other news, DE PSC approves EXC's request for interim rates; Staff offers testimony in support of the multi-party settlement in AVA's ID rate cases; PNW files rebuttal testimony in the AZ APS electric rate case, reducing the revenue request; intervenors file testimony in AEP's VA triennial; Staff files rebuttal testimony in AEE's IL electric MYRP, bringing the proposed revenue increase and rate base higher; NEE signs an agreement with Sysco to help it reduce Scope 1 and Scope 2 emissions; MA House passes bill to create a path for NECEC cost renegotiation; SB 7 becomes law in CT and PURA Chair Gillett is reappointed; SRE may seek an extension of the export authorization from the DOE for Cameron LNG expansion; FERC orders initiation of hearings in a Grand Gulf docket as ETR/SERI reach an impasse in settlement negotiations with state PSCs; OH governor vetoes economic development proposal within the state budget that would have supported utility infrastructure investments; FERC reverses course to reject SPP's regional transmission cost allocation pathway; BPA launches a transmission expansion plan to support energy transition in the Northwest; U.S. District Court of Appeals for DC District remands FERC ruling on SEEM; and CSU updates and upgrades the 2023 Atlantic Hurricane season forecast while flagging higher uncertainty due to El Niño.

Regulatory Calendar

AGR — Hearings in AGR's NYSEG and RGE rate cases begin on July 17: AGR, NY PSC Staff, and several intervenors reached a three-year settlement, agreeing to a cumulative $769M revenue increase for NYSEG and RGE and premised on a 9.2% ROE and 48% equity. If approved, new rates will be retroactive to May 1, 2023. If approved, NYSEG electric and gas rates will increase by 17.1% and 5.6% annually and RGE electric and gas rates will increase by 11.0% and 10.2%, respectively.

WEC — Rebuttal testimony in the Peoples Gas and North Shore Gas rate cases is due on July 17: In rebuttal testimony, WEC maintained the ROE (9.9%) and equity layer (54%), while making modest changes to revenue requirements to ~$404M (from $407M) and ~$17M (from $19M) for Peoples Gas and North Shore Gas, respectively, which compares to Staff's recommendation of $357M (net $145M) and $16M. The difference between the gross and net revenue requests for PGL includes the amount currently recovered through the QIP rider, which PGL now seeks to roll into base rates. Evidentiary hearings for both cases are scheduled to begin on August 10, and an ICC decision is expected in 4Q23. New rates are expected to go into effect on January 1, 2024.

FE — Hearings in FE's MD electric rate case begin on July 18: The MD PSC Staff recommended a net $19M revenue increase, premised on a 9.5% ROE and 53.53% equity, compared to Potomac Edison Co.'s request for a net $46M increase (excludes $5M collected through the electric distribution investment surcharge), premised on a 10.6% ROE and 53.53% equity. FE seeks to extend EDIS for another four years, with which Staff concurred, although it proposed maintaining a 70/30 split to determine the allocation factor (FE proposed a 50/50 split). Lower ROE, lower depreciation expenses, and lower incentive compensation drive the difference between the two positions. Intervenor OPC recommended a net $14M revenue increase, using a 9.0% ROE/45% equity. FE's filing is a single-year rate plan even though the legislature recently allowed MYRP filings. An MD PSC final decision is expected in 4Q23.

SO — Hearings on SO's Northern IL gas rate case begin on July 18: IL ICC Staff's revised testimony reflects a $254M revenue deficiency, premised on a 9.89% ROE, 50% equity, and a 2024 year-end test year (vs. $256M previously). Staff's rebuttal includes the $32M disallowance of QIP investments from the rate base after the IL ICC issued an order disallowing the amounts from the 2019 QIP plant additions reconciliation (Docket: 20-0330). Nicor Gas's rebuttal included a $320M revenue increase, premised on a 10.35% ROE and 54.5% equity. The lower ROE and equity layer and Staff's recommendation to remove certain incentive compensation drive the difference. An ICC decision is due by November 28.

XEL — A MN PUC final order in XEL's MN electric rate case is expected on July 18: The MN PUC is expected to issue a final order after deliberating on the case in early June and proposing a $306M revenue increase over three years and a 9.25% ROE. Read our takeaways here.

DTE — Hearings in DTE's MI electric rate case begin on July 19: Staff recommended a $383M revenue increase, premised on a 9.8% ROE and 50% equity. This compares to DTE's request for a net $619M revenue increase, premised on a 10.25% ROE and 50% equity. The main drivers of the difference are the lower ROE and Staff's disallowance of O&M costs, including IT and incentive compensation. New rates are expected to go into effect on December 10.

DUK — Staff and intervenor testimony in DEC's NC electric rate case is due on July 19: DEC (Docket: E-7 Sub-1276) updated its request to a $962M net rate increase over three years ($596M in RY1, $181M in RY2, and $185M in RY3) and based on a 10.4% ROE/53% equity layer, vs. the original request for $823M. Recovery of historical and forecasted capital investments is driving the requested revenue increase. DUK will file updated testimony on July 18, followed by Staff and intervenor testimony on July 19. DUK is asking for approved RY1 rates to be effective no later than January 1, 2024.

POR — Intervenor comments in POR's OR Clean Energy Plan and IRP are due on July 20: POR's CEP includes a set of near-term actions to achieve the targets outlined in HB 2021. The Preferred Portfolio emphasizes solar and wind resources, with ~3.5GW expected to be online by 2030. POR will meet the capacity needs through an annual RFP for up to 520 MW of non-emitting resources through 2028. POR also plans to add 632 MW of storage, energy efficiency (248 MW), and distributed resources (136 MW). POR will study the addition of community-based renewable energy to reach 155 MW by 2030. This is POR's first CEP/IRP filing since HB 2021 became law. The PUC has six months to acknowledge the CEP and determine if it is consistent with the new law.

POR — Rebuttal testimony in POR's OR electric rate case is due on July 21: Parties have reached a partial settlement (details pending). In direct testimony, Staff proposed a $206M revenue increase, premised on a 9.0% ROE/50% equity compared to POR's ask for a $338M revenue increase, premised on a 9.8% ROE/50% equity. POR and Staff include net variable power costs of $107M and $99M, respectively. The lower ROE (-$35M) and differences in the rate base calculation (-$22M) drive the difference. Staff proposed using an average test year, while POR requested a 2023 year-end test year. POR has historically used the monthly averages method. Evidentiary hearings are expected to begin on September 26. New rates will go into effect on January 1, 2024.

Recent Developments for Companies Under Our Coverage

From our midweek: D announced the sale of the remaining 50% interest in Cove Point LNG to Berkshire Hathaway for $3.5B; DTE and associated parties file a constructive, broad-based settlement in the pending MI IRP; several insurance companies file suit against XEL over losses incurred from the 2021 Marshall Fire in Boulder, CO; the MI PSC is investigating CMS over malfunctioning gas meters; Staff files testimony in D's SC natural gas rate case; and the EIA's STEO shows that growth in solar generation and lower natural gas prices are helping to reduce coal-fired generation and overall power demand in 2023 will be ~2% lower than in 2022 on a warmer than normal winter and a milder start to summer.

EXC — DE PSC approves EXC's request for interim rates: Delmarva Power received PSC approval to implement an interim rate increase of $56M as requested and effective July 15. The interim rates are in line with those requested in the 2022 electric GRC and include the transfer of ~$14M currently recovered through the Distribution System Improvement Charge (DSIC). The request is based on a 10.5% ROE and 55.5% equity. The primary driver for the rate increase is the recovery of $290M of investment in the distribution system. EXC is proposing adjustments, including leveraging a pro forma capital structure, utilizing an O&M inflation adjustment, and applying year-end treatment to the rate base.

AVA — Staff offers testimony in support of the multi-party settlement in the ID GRCs: Staff presented testimony supporting the multi-party settlement in the ID gas and electric rate cases stating that it provides a reasonable balance between AVA's ability to earn a reasonable return on its investments while offering affordable customer rates. Staff also believes that the settlement will provide rate stability in that AVA will not seek a rate increase prior to September 1, 2025. As part of the settlement in the two-year electric and gas rate cases, electric revenue increases by $22M in RY1 and by $4M in RY2, and natural gas revenue increases by $1M and ~ $0M, respectively, both based on a 9.4% ROE and 50% equity. This compares to AVA's request for $37.5M and $13.2M electric rate increases in RY1 and RY2, respectively, and gas rate increases of $2.8M and $0.1M, respectively, based on a 10.25% ROE and 50% equity. If approved, new rates would go into effect on September 1, 2023.

PNW — PNW files rebuttal testimony in APS's electric rate case in AZ: APS filed rebuttal testimony reducing its revenue requirement request to $383M, from $460M in its original request and including a reduction in the FVI request from 1% to 0.5% while maintaining the 10.25% ROE, and 51.93% equity layer. Staff previously recommended a $313M net revenue increase, premised on a 9.6% ROE and 51.93% equity. APS is agreeing for the purpose of this case to reduce by 50% the cost of certain incentive programs. Staff's and PNW's total revenue increase includes $108M for test year adjustor revenue transfers and $204M Day-One PSA and REAC. PNW is requesting rates to go into effect on December 1, 2023. Hearings in the case commence on August 10.

Sophie Karp (917) 368-2361 / sophie.karp@key.com

AEP — Intervenors file testimony in APCo's triennial review in VA: We reviewed testimony offered by the Office of the AG in the APCo triennial. OAG is recommending that AEP retain the current authorized ROE of 9.2%—vs. its ask of 10.6% and recommends a reduction in the overall ROR from 7.63% to 6.94% to account for the lower ROE. OAG adopts AEP's proposed capital structure of 49.02% equity. While AEP sought a $213M rate increase, the OAG is proposing a $69M increase. Among the changes proposed by the OAG are reducing the increase in vegetation management expense by ~$42M, removing the O&M storm costs for prospective rate making (~$23M), and another ~$20M of adjustments in other expenses. These recommendations, combined with the lower ROE, account for the lower proposed revenue deficiency. According to APCo's calculations, the Company earned a 5.39% ROE during the prior period, below the allowed band of 8.5-9.9%. An SCC decision is due by November 30.

AEE — Staff files rebuttal testimony in AEE's IL multiyear electric rate plan: Staff's rebuttal testimony bridges the gap between revenue deficiency as calculated by AEE in its rebuttal and the Staff's original testimony, primarily on account of a higher rate base. Staff maintains its view on deriving the ROE using a formula from the FRP (30 year + 580 bps) and reiterated the 8.914% to be adjusted annually during the MYRP and also defended the 50% equity layer. Staff recommends against adopting a rate phase-in plan since any rates deferred earlier become a cost later, creating a zero-sum situation. If the Commission does decide to go with a phase-in plan, then Staff recommends the plan proposed by AEE, which recommends a 14.6% revenue increase in 2024, 14.8% in 2024, and 8.8% in 2026. Below, we provide the updated revenue and rate base assumptions provided in the Staff testimony. Evidentiary hearings begin on August 7, and a PD is expected on October 20.

NEE — NEER signs an agreement with foodservice distributor Sysco to help it reduce Scope 1 and Scope 2 emissions: NEE announced that it is collaborating with Sysco to develop a plan to reduce the foodservice distributor's Scope 1 and Scope 2 emissions by 27.5% by 2030. NEER will help in this regard by sourcing renewable power for Sysco's global operations. Under the agreement, NEER will help to develop solutions including large-scale renewable projects, on-site renewable generation, reliability infrastructure, and energy management services.

AGR — MA House includes language in legislation to allow AGR to renegotiate the cost of the NECEC project: A provision in the spending bill approved by the MA House could allow for a renegotiation of the cost of the NECEC transmission project between AGR and MA utilities. The bill still needs to be passed by the Senate. The original contract was to be funded by MA ratepayers, and it is unclear how the change in costs will be shared. In our recent meetings with management, we discussed the sequencing of cost inflation renegotiations and the timing of construction restart.

AGR, ES — SB 7 becomes law, PURA Chair Gillett is reappointed: Governor Lamont (D-CT) signed SB 7 into law as was expected and reappointed PURA Chair Gillett for a two-year term beginning on July 1. Selection of the PURA chair was a key feature of SB 7 in that the position would be filled by the governor from among the serving commissioners, once every two years. Under the previous law, the chair was elected by fellow commissioners and served a one-year term. While the new law maintains the PURA as a five-member body, there are and have been only three commissioners for a long time. Subsequent to the passage of SB 7, a budget bill was passed that included some constructive modifications overriding the provisions contained in SB 7—including that all commissioners must vote on all proceedings before PURA vs. the original SB 7 provision where the chair could delegate dockets to commissioners for unilateral decision-making. Other features of the bill include precluding utilities from recovering in rates the costs associated with appealing PURA contested proceedings, starting in 2024, nor can they recover membership dues or contributions to industry associations. The four-year interval between rate reviews is unchanged from the prior.

SRE — SRE may seek an extension of the export authorization from the DOE for the Cameron LNG expansion: SRE is contemplating seeking DOE approval for an extension of the export authorization for a proposed expansion of the Cameron LNG expansion. SRE is building a 6.75 MTPA expansion with a May 2026 deadline to start exports under the current authorization. A recent DOE policy change means that it will no longer consider extension applications unless an applicant can show that it has physically commenced construction and that it faces extenuating circumstances preventing a timely completion. SRE believes that work to advance the expansion is sufficient to secure the extension, although it will ultimately depend on when an FID can be made on the project. SRE currently has an HOA to develop the project with Total, Mitsui, Mitsubishi, and Nippon Yusen, many of which were also partners with SRE on the original Cameron LNG project. The change in DOE policy is intended to increase transparency in the LNG market, which is suffering from an overhang of authorized export volumes.

ETR — Parties reach an impasse in settlement negotiations for a SERI docket: In FERC docket EL 21-56-00 regarding complaints alleging historical and ongoing mismanagement of the Grand Gulf nuclear power station, the Settlement Judge issued a status report saying parties have reached an impasse in the current negotiations and settlement procedures have been terminated. FERC has now authorized the initiation of hearings before an initial decision is issued. The settlement negotiations were between LA PSC, AR PSC, CCNO LA, and SERI. MS PSC has previously entered a global settlement on SERI-related matters. A hearing will be convened prior to May 1, 2024, and an initial decision will be due by September 25.

AEP, FE — OH governor vetoes economic development proposal within the state budget: If approved, the proposal would have allowed utilities to make infrastructure investments for economic development sites even when the sites did not have any finalized buyers. Under the provision, utilities could either tap into a ~$1B fund or add a customer surcharge to fund the gas and electric infrastructure. Those costs would need to be approved by PUCO, but development plans falling through would not entail refunds. AEP was in support of the proposal as a way of having infrastructure ready to attract prospective industry. Two other provisions were removed from the budget before getting to the governor's desk—one for a provision for surcharges on gas bills for infrastructure builds and another for a surcharge to defray investments in infrastructure to handle additional load from EV charging stations.

AEP, XEL — FERC reverses course to reject SPP's regional transmission cost allocation pathway: In an earlier decision, FERC approved an SPP proposal that would establish a waiver so that transmission costs in a pricing zone with large amounts of generation such as wind that served customers outside the area would be allocated regionally instead of the zone paying two-thirds of the cost under the grid operator's "Highway/Byway" cost allocation framework for transmission projects. The SPP proposal was intended to be fair to zones where wind generation far exceeded the demand in the area where customers would still have to pay 67% for the transmission needed for the wind power even though the power was consumed elsewhere. Utilities including AEP, XEL, and others argued against the FERC decision, as did four states in that it placed too much discretion on SPP to make the cost allocation. FERC reversed the earlier decision by a unanimous vote.

POR, AVA — BPA commits to a $2B plan to expand transmission to support the energy transition in the Pacific Northwest: Bonneville Power Authority announced that it is investing $2B in transmission infrastructure to support growing electricity demand in the Pacific Northwest and to help regional utilities to meet their clean energy targets. The BPA's projects include upgrades at six east-to-west lines to supply population centers in and around the Portland and Puget Sound regions and smaller projects near Portland and Seattle. The projects are planned for completion between 2025 and 2032 and will add at least 6 GW of capacity to BPA's network. The announcement was received positively by POR as it faces a multiyear period of demand growth including a 3.9% annualized growth from industrial customers, up from 3.5% previously, and increases the forecast power needed by the system. OR and WA have 100% clean power laws, with OR targeting 2040 and WA 2045.

D, DUK, SO — U.S. District Court of Appeals for DC District remands FERC ruling on SEEM: The court remanded FERC's approval of SEEM (Southeast Energy Exchange Market) back faulting FERC's acceptance of the market design. The court ruled that FERC must explain how SEEM complies with open-access transmission principles by excluding entities outside the market footprint. By accepting the SEEM design, the court ruled that FEC violated Order 888, which calls for open access transmission principles, while the approval meant that the program would be limited to participants with a power source or sink in the SEEM's footprint. SEEM, which launched in November 2022, facilitates the trading of energy through an automated platform in sub-hourly increments, using available transmission on members' transmission systems. SEIA, NRDC, and other petitioners argued that the program would limit energy trades by excluding non-SEEM members.

Colorado State University updates and upgrades the 2023 Atlantic Hurricane season forecast: In the third forecast for the year, CSU is now calling for an above-average Atlantic basin hurricane season in 2023, although uncertainty with the outlook is higher than normal. The group is forecasting 18 named storms vs. a prior 30-year average of 14.4 and nine hurricanes vs. a 7.2 average. Both the number of named storms and hurricanes is up from CSU's original April forecast. NOAA ~17 named storms and six hurricanes. CSU also raised the probability of a Category 3-5 landfall along the continental U.S. coast to 50% from 44%, compared with a long-term average of 43%. The researchers point out the higher uncertainty with the forecast given conflicting signals between the warmer than normal Atlantic waters and an expected strong El Niño for the peak hurricane months. El Niño tends to create wind patterns that can tear storms apart as they form but the counterweight of the abnormally warm Atlantic waters makes predictions that much trickier.

Catalyst to Watch This Week: PPL Kentucky Intervenor Testimony Due on CPCN July 14

The testimony will help establish filer positions. PPL's proposal includes $2.1 billion of capital investment to transition from coal to other sources of generation. In the absence of plan approval federal EPA rules would require investment of $0.5 billion to $1.5 billion in coal and additional amounts in transmission and distribution. Our 7% EPS growth forecast for PPL assumes a reallocation of investment but not the CPCN as proposed. "Removing KY Clean Energy Transition from Our Forecast" The proposal includes construction of 2x621 MW combined cycle gas plants, acquisition or construction of 240 MW of utility scale solar, a 125 MW, 4-hour battery storage and other investments including demand side management and energy efficiency. The proposal includes planned coal retirements of 712 MW through 2028 and accelerated retirements of the Mill Creek 2 (297 MW) in 2027 and the Ghent 2 (486 MW) in 2028 plants. Passage of SB 4 reinforced reliability and customer impacts from retirements and the testimony will follow-up on those concepts. The company and intervenors could enter settlement discussions and the final outcome is 11/6.

The Analyst Conviction Index (ACI)

The ACI = (# of buy ratings - # of sell ratings)/Total # of ratings. We show the sorted ACIs for our regulated utility, power, and water coverage stocks in (Figure 10) below. The graph also shows absolute number of buy, hold, and sell ratings by company. We also track the change in the ACI over the last 12 weeks (Figure 11) to try to gauge where the sell-side consensus view is shifting.

Valuation Method and Risk Statement

North America Utilities: Our valuation methodology for the group is price-to-earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Reflects sustainable 5% premium on a relative yield basis to corporate bonds; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%; 4) Clean Energy Growth Premium: A 5% premium for companies that have a unique decarbonization growth opportunity on a risk adjusted basis; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/Meet, we include +4%; 6) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% diversified or foreign earnings), we perform a sum-of-the-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue-specific basis. Common areas where we apply such an adjustment include: ESG advantage, large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

Water Utilities: Our valuation methodology for the group is price-to-earnings based. Our methodology includes: 1) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; and 2) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 9%, second quartile 3%, third quartile -3% and fourth quartile -9%. North American utilities: We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events. IPPs: We identify the following risks for the sector: Power prices, fuel prices, capacity prices, supply and demand for electricity, extreme weather, economic conditions, and cost of financing and collateral hedging.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

If you receive UBS Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via UBS Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via UBS Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive UBS Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the UBS Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the UBS Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS Global Research manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS Global Research recommendations, please visit https://www.ubs.com/disclosures.

UBS Global Research will initiate, update and cease coverage solely at the discretion of UBS Global Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by UBS Global Research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Regulatory Calendar

CMS — Reply briefs in CMS's MI gas rate case are due on July 10: In initial briefs, CMS filed for a $175M revenue increase, maintaining a 10.25% ROE and 51.5% equity. Staff's brief recommended a $91M revenue increase, premised on a 9.7% ROE, and 50.5% equity. The lower ROE and operating expenses drive most of the difference between Staff and CMS's briefs. The AG recommended a $53M revenue increase, premised on a 9.8% ROE and 50% equity. In addition to the lower ROR, the difference between the AG and the CMS brief is the AG's reduction of $450M in capex and the reduction of $550M from the rate base. A PFD is due on August 16, and new rates could become effective on October 1.

XEL — Hearings on XEL's CO electric rate case begin on July 10: XEL, Staff, and others reached a settlement for a revenue increase of $95M, premised on a 9.3% ROE, 55.69% equity, and a 2022 historical test year. The settlement includes an alternative revenue increase of $47M if the PUC accepts depreciation expense deferrals associated with certain coal-generating assets. The parties also agreed to early termination of the revenue decoupling pilot and no ESM. The settlement compares to XEL's initial request for a $312M revenue increase (net $262M), premised on a 10.25% ROE, 55.7% equity, and a 2023 forecast test year. A PUC decision is expected in 3Q, with rates going into effect on September 7, 2023.

D — Intervenor testimony in D's SC natural gas rate case is due on July 11: DESC filed a natural gas rate case with the SC PSC, seeking a $19M revenue increase, premised on a 10.38% ROE, 54.78% equity, and $1.1B rate base as of September 20, 2022. The increase includes $14M for gas costs from eliminating the Net Interruptible Revenue Credit and $5M for non-fuel revenue. D seeks to recover $105M of capital investments made since 2022 and for new rates to become effective in October 2023.

PNW — Rebuttal testimony in PNW's AZ electric GRC is due on July 12: Staff recommended a $313M net revenue increase, premised on a 9.6% ROE and 51.93% equity. This compares to PNW's request for a $460M net revenue increase premised on a 10.25% ROE and 51.93% equity layer. Staff's and PNW's total revenue increase include $108M for test year adjustor revenue transfers and $204M Day-One PSA and Renewable Energy adjustment charges. The delta between Staff and PNW is driven by the lower ROE, lower incentive compensation expenses, and Staff's removal of $148M of post-test year generation projects from the rate base. Staff recommended removing nine projects that will not enter service by June 30, 2023. PNW plans to update its request to exclude six of the projects from its rate base but include it in the pro forma rate base. PNW requested to use a test year ending June 30, 2022, and actual post-test year plant additions through June 30, 2023. The Company is requesting rates to go into effect on December 1, 2023.

AVA — Testimony on the settlement in AVA's ID rate case is due on July 12: AVA, ID PUC Staff, and others previously reached a settlement in the two-year electric and gas rate cases, which includes electric revenue increases of $22M and $4M in RY1 and RY2, respectively, and natural gas revenue increases of $1M and ~$0M, respectively, both based on a 9.4% ROE and 50% equity. This compares to AVA's request for $37.5M and $13.2M electric rate increases in RY1 and RY2, respectively, and gas rate increases of $2.8M and $0.1M, respectively, premised on a 10.25% ROE and 50% equity ratio. If approved, new rates would go into effect on September 1, 2023.

AEE — Intervenor rebuttal in AEE's IL electric rate case is due on July 13: AEE filed rebuttal testimony, for a $450M rate increase over 2024-2027 and maintained its original stance on a 10.5% ROE and ~54% equity ratio. This compares to AEE's initial request for a $449M rate increase and Staff's recommendation for a $249M revenue increase over the four years. Evidentiary hearings begin on August 7, and an ICC ruling is due in December. New rates will go into effect on January 1, 2024.

EXC — Intervenor testimony in EXC's DC electric rate case is due on July 13: EXC's PEPCO filed a three-year electric rate case with the DC PSC seeking a cumulative $191M revenue increase ($116M in RY1, $37M in RY2, and $37M in RY3). New rates would go into effect on February 15, 2024, with the step-ups effective January 1 of 2025 and 2026, respectively. The rate increase request is premised on a 10.5% ROE and 50.5% equity layer.

AEP — Intervenor testimony in APCo's VA triennial review is due on July 14: APCO filed a triennial earnings review for the 2020-2022 period in VA. According to APCo's calculations, the Company earned a 5.39% ROE during the period, below the allowed band of 8.5-9.9%. The Company seeks a $213M rate increase, premised on a 10.6% ROE. The main drivers of the increase include increased O&M expenses for vegetation management, an increase in the ROE from 9.2% to 10.6%, an increase in depreciation rates, and the deferred recovery of storm cost expenses. At the end of 4Q22, APCo deferred $38M related to previously incurred costs assuming it would earn below the 9.2% authorized ROE. An SCC decision is due by November 30.

DTE — A PD in DTE's MI IRP is expected on July 14: Previously, Staff supported the conversion of the Belle River Units 1 and 2 (~1.3 GW) to a natural gas peaker in 2025 and 2026, respectively, and supported retiring Monroe Units 3 and 4 in 2028 (1.5 GW) while recommending that DTE wait until the next IRP to commit to a retirement date for Monroe Units 1 and 2 (~1.5 GW). Staff recommended that DTE analyze several Monroe Units 1 and 2 retirement dates. DTE's IRP is designed to retire coal sooner than previously planned while supplementing with adequate dispatchable resources. As a replacement for the retiring coal units, DTE will deploy 5.4 GW of renewable generation and 760 MW of battery storage by 2032. It will be crucial to increase battery storage and peaker plants in line with the growth in renewable generation to maintain reliability. The plan considers the provisions of the IRA. MI utilities typically file IRPs every five years, but Staff recommended another filing in three years to provide enough time to complete the next IRP and implement findings from its analysis. See our detailed note on the IRP here.

DUK — A PSC decision in DUK's KY electric rate case is due on July 14: In post-hearing briefs, DUK updated its revenue increase request to $69M (from $75M), premised on a 10.35% ROE and 52.15% equity layer. The KY Office of the AG recommended a $31M revenue increase premised on a 9.55% ROE and 50% equity. The main differences include the OAG's recommendation to maintain depreciation expenses to reflect a 2041 retirement date for the 600 MW East Bend coal plant, while DUK proposed accelerating depreciation rates for East Bend to align with the change in the expected life of the plant from 2041 to 2035. DUK has not committed to an earlier retirement date, nor filed a CPCN for resources to replace the plant before 2041. The OAG's recommendation also excludes transferring $54M into the rate base for the Environmental Surcharge Mechanism. New rates are expected to become effective in 3Q23.

EIX — Opening briefs in Track 4 of SCE's GRC are due on July 14: SCE is requesting authorization of $8.6B in revenue for 2024, an increase of $972M over the 2023 estimated revenue requirement of $7.7B for the 2023 attrition year. Track 4 proceedings are intended to provide a bridge-year funding mechanism for 2024 between the Company's three-year 2021 GRC and the upcoming four-year 2025 GRC cycle. A significant portion of Track 4 proposed revenue requirement is in relation to projects previously approved by the CPUC. A PD is expected in 4Q23.

Recent Developments for Companies Under Our Coverage

From our midweek: DUK reaches an agreement to sell its distributed energy assets; D makes a series of regulatory filings as the newly passed legislation takes effect; KY Power files an electric rate case; the VA SCC Hearing Examiner issues support for the Virginia Natural Gas rate case settlement; CMS files an undergrounding pilot program; the CA PUC approves $4.3B budget for energy efficiency portfolios; the MI governor appoints new commissioner, reappoints chair; and Midwest utilities are completing restorations after storms forced ~500K customer outages.

AVA — Staff files testimony in AVA's OR gas rate case: Staff recommended a $4M revenue increase compared to AVA's updated request for $9M. AVA initially requested an $11M revenue increase, premised on a 10.25% ROE and 50% equity layer, but a partial settlement resolving all costs of capital components resulted in a $1.6M reduction. AVA, PUC Staff, and the Alliance of Western Energy Consumers agreed to a 9.5% ROE and 50% equity layer. Other drivers of the difference between Staff's recommendation and AVA's request include Staff's use of monthly averages to calculate the rate base and removing costs for AVA's meter testing program. The Sierra Club and OR CUB did not join the settlement, although CUB does not formally oppose the settlement given the modest agreed-upon ROE increase. A PUC final order is expected in December, and AVA requests rates to go into effect in 2024.

POR — POR reaches partial settlement in OR electric rate case: POR filed a settlement status update notifying the PUC that parties have reached a partial stipulation on certain issues. The settlement has yet to be filed. In direct testimony, Staff proposed a $206M revenue increase, premised on a 9.0% ROE and 50% equity layer, compared to POR's ask for a $338M revenue increase, premised on a 9.8% ROE and 50% equity layer. POR and Staff's recommendations include net variable power costs of $107M and

$99M, respectively. Rebuttal testimony is due July 21, and evidentiary hearings begin on September 26. New rates go into effect on January 1, 2024.

PNM (NC) — NM Supreme Court upholds NM PRC decision denying PNM an early exit from Four Corners: The NM Supreme Court issued a decision to uphold the PRC's denial of PNM's application to abandon, sell, and securitize its 200 MW interest (13%) in the 1.54 GW Four Corners Power Plant. PNM had filed to securitize $300M in unrecovered investments and energy transition costs and to sell its interest to Navajo Transitional Energy at the end of 2024. PNM is evaluating its next steps, including filing a new application after the identification of sufficient replacement resources. The PRC previously rejected PNW's proposal in a 5-0 vote, prompting the appeal to the Supreme Court. PNM's current ownership and coal supply agreement expires in 2031.

ETR — Parties file briefs to ALJ's PD in SERI UPSA complaint: Parties filed briefs to the ALJ's initial decision in the Unit Power Sales Agreement complaint (Docket: EL20-72). The ALJ, in its decision, determined that SERI should have excluded multiple identified categories of accumulated deferred income taxes from the rate base when calculating UPSA bills and that SERI's formula rate should include a negative $36.4M cash working capital allowance going forward. The ALJ decision also found that SERI treated sale-leaseback transaction costs correctly. Based on ETR's calculations, if adopted by FERC, ETR would need to issue a refund of $115M plus $135M of interest. The LA PSC, AR PSC, MS PSC, and NOCC filed the UPSA complaint in September 2020; evidentiary hearings were held in 3Q22/4Q22; and ETR reached a settlement with the AR PSC, LA PSC, and NOCC to resolve seven of the 26 issues in the docket, resulting in a black-box refund of $18M. FERC does not have a statutory timeline to issue its decision, and a final order may take 12 months or longer.

- **SERI:** SERI raised 15 exceptions and five related policy considerations that should be reversed. The exceptions and policy considerations primarily relate to placing the burden of proof for formula-rate inputs on utilities, the length of time the complaint goes back to, the treatment of ADIT in rate base, changes for accounting for income taxes, and the proposed negative cash working capital allowance for utilities. SERI noted that a utility has never received a negative cash working capital allowance, and if the decision was adopted, the amount of interest SERI would be required to pay would exceed the actual refunds and set an unfavorable precedent for future utility investment given the lack of any statute of limitations.
- **Trial Staff:** The Trial Staff largely agreed with the PD except on five issues, where it believes the ALJ was incorrect in its findings regarding SERI's rate base additions for timing differences associated with incentive compensation and medical claim expenses, as well as the use of federal tax deductions for state income taxes accrued and NOL carryforwards. The Trial Staff also disagrees with the decision related to paying AMT liability in the UPSA rate base and setting a negative cash WC allowance.
- **CCNO:** The CCNO addressed the findings related to SERI's cash management policies and the Company's imprudent practice of maintaining money pool deposit balances more than required to inflate its cost of capital artificially. The CCNO believes a remedy should be determined to correct harmed ratepayers, which would not be considered as retroactive ratemaking since the costs were imprudent.
- **AR PSC:** The AR PSC raised exceptions for two specific issues related to a revenue credit to reduce UPSA rates and the rejection of a retained earnings adjustment. The AR PSC believes a revenue credit should be implemented to reduce rates by earnings in excess funds under the Money Pool agreement and that an earnings-sharing mechanism should be created to determine refunds and allow ratepayers to see the benefit.

XEL — MN PUC approves XEL request to deploy battery project at Sherco coal-fired plant: The MN PUC approved XEL's proposal to deploy a 10 MW/1,000 MWh multi-day storage system near the 2,238 MW Sherco coal-fired plant. XEL will deploy Form Energy's iron-air, long-duration battery storage systems. Construction is expected to begin in 2024 and be completed by 2025. XEL plans to shut down all of its coal resources in MN by 2030 and build a 710 MW solar facility at the Sherco site and a 140-mile transmission line to connect renewable energy resources in southwestern MN to the existing grid at the Sherco facility.

EIX — SCE enters a settlement with the DOJ for 2016 fire damages: According to a Bloomberg article, SCE and two other companies have paid $22M to settle claims and resolve the costs of fighting the 2016 Rey Fire in Los Padres National Forest. According to the Forest Service, the fire began in August 2016 when a tree fell on SCE power lines, causing electrical equipment to malfunction and leading to an energized conductor falling to the ground. The companies entered into the settlement without admitting guilt.

SRE — SDG&E commences commercial operations of 171 MW of battery storage: SDG&E commenced commercial operations at the 131 MW CED West Side Canal and 40 MW Fallbrook battery storage projects in CA. The projects entered service in June and May, respectively. SDG&E's energy storage portfolio is currently ~220 MW, with a plan to reach ~345 MW of capacity by the end of 2024. The storage projects promote grid reliability and help CA to achieve the 100% clean energy target.

PNW — APS issues an all-source RFP for 1 GW of resources: APS issued an all-source RFP for 1GW of resources, including 700 MW of renewables, to serve residential and commercial customers. The projects proposed must be in service between 2026-2028. The RFP aligns with the Company's clean energy goals, as highlighted in the 2020 IRP where PNW plans to provide 100% carbon-free electricity by 2050, 65% by 2030, and end coal-fired generation by 2031. PNW has also identified the need for additional flexible summer capacity resources to meet reliability requirements. A bidder conference is set for July 26, with contracts expected to be executed in 4Q23/1Q24.

Catalyst to Watch This Week: DTE Integrated Resource Plan ALJ Decision

By Friday, July 14 a Michigan Public Service Commission ALJ will issue a draft decision on the company's integrated resource. Approval of the plan would add $0.27/share to our EPS forecast by 2027 and increase EPS growth to 7% from 6% from 2023-27. The key elements of DTE's proposal are: 1) conversion of the Belle River plant to gas from coal (2025-26); 2) addition of 800 MW of renewables by 2027; and 3) retirement acceleration of 2 units of the Monroe coal plant to 2028 from 2040.

The Analyst Conviction Index (ACI)

The ACI = (# of buy ratings - # of sell ratings)/Total # of ratings. We show the sorted ACIs for our regulated utility, power, and water coverage stocks in (Figure 11) below. The graph also shows absolute number of buy, hold, and sell ratings by company. We also track the change in the ACI over the last 12 weeks (Figure 12) to try to gauge where the sell-side consensus view is shifting.

Valuation Method and Risk Statement

North America Utilities: Our valuation methodology for the group is price-to-earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Reflects sustainable 5% premium on a relative yield basis to corporate bonds; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%; 4) Clean Energy Growth Premium: A 5% premium for companies that have a unique decarbonization growth opportunity on a risk adjusted basis; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/Meet, we include +4%; 6) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% diversified or foreign earnings), we perform a sumof-the-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue-specific basis. Common areas where we apply such an adjustment include: ESG advantage, large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.
