- a. Line of credit at each bank.
- b. Average daily balances of notes to each bank, by name of bank.
- c. Interest rate charged on each bank note (Prime rate, formula rate, or other).
- d. Purpose of each bank note (for example, construction, fuel storage, working capital, debt retirement).
- e. Prospective future need for this type of financing.

Response:

- a. UGI Utilities, Inc. (the "Parent") has a five-year \$350 million revolving credit facility ("RCF") with a consortium of banks. The RCF matures in June 2024. Please see Attachment III-B-3 for the commitment from each bank.
- b. The RCF is predominantly used to meet working capital needs and is more heavily utilized in the fall and winter months when inventory and receivable balances peak. The borrowings from each bank are pro rata as per their respective commitments. The average daily borrowing under the Parent's RCF was \$179,633,880 for fiscal year 2020.
- c. The interest rates for the majority of borrowings under the Parent's RCF are under the LIBOR + Applicable Margin formula. The Applicable Margin is based on public credit ratings as specified on Attachment III-B-3. The Parent has two public debt ratings (Moody's, Fitch). When there is a split rating, the highest rating applies unless such ratings differ by two or more levels. If ratings differ by two or more levels, the applicable level will be deemed to be one level below the higher of such levels. Based on current ratings of the Parent, the applicable margin is 0.875%.

and Billing Analyses for Changed Rates  
Delivered on February 8, 2021

IV-C-1

Request:

The annual revenue effect of any proposed change to any rate must be supported by a billing analysis. This may consist of the use of bill frequency distributions or individual customer billing records for the most recent annual periods available. All billing determinants should be displayed. The blocking and corresponding prices of the existing rate and the proposed rate should be applied to the determinants to derive the base rate revenues under both present and proposed rates. The derived base rate revenues should form the basis for measuring the annual base rate effect of the rates in question for the test periods.

Response:

Please see Attachment IV-C-1 for the calculation of the revenue effect of the rate change on the various rate classes.

UGI Electric 2021 Base Rate Case  
Responses to Section 53.53 - IV-D - Monthly Billing  
Effect Charts and Data  
Delivered on February 8, 2021

---

IV-D-1

Request:

The effects of the proposed rates on monthly billing conditions should be provided as follows:

1. Residential Bill Comparisons

For each rate applicable to residential service provide a chart or tabulation which shows the dollar and percentage effect of the proposed base rate on monthly bills ranging from the use of zero kWh to 5,000 kWh at appropriate intervals.

2. General Bill Comparisons

For each rate that requires both a billing demand (kW) and kWh's as the billing determinants, provide a tabulation or graphical comparison showing the percentage effect of the proposed base rate on monthly bills using several representative demand (kW) levels, the monthly kWh for each demand selected to be in load factor increments of 10% starting at 0% and ending at 100% (730H) or by hours' use increments that covers approximately 95% of the bills.

Response:

Please see Attachment IV-D-1.

UGI Electric 2021 Base Rate Case  
Responses to Section 53.53 - IV-E - Cost of Service Study,  
Allocations to Each Tariff Rate Schedule  
Delivered on February 8, 2021

---

IV-E-1

Request:

Provide a cost study which allocates the total cost of service to each proposed tariff rate schedule. Tariff rates schedules may be combined for this purpose provided that they are of a similar supply or end use nature. A statement describing which rates were combined and the reasons therefor should be submitted.

The rates of return for each tariff rate schedule as defined above should be determined at both the present and proposed rate levels. Base rate revenues should be used for this purpose unless there are good and sufficient reasons to include revenues derived from other sources. Should the latter be the case, an explanation of other revenue sources included and reasons therefor should accompany the cost allocation study.

The methods selected for use in allocating costs to rate classes should include cost analyses based on:

- a. Peak responsibility.
- b. Average and excess, on a non-coincident demand basis.
- c. Company preferred method if different from the above-referenced methods, with rationale behind the selection.

This study should include a statement of the source and age of the load data used in the determination of demand responsibilities, a description of any special studies used to prepare the cost study, and the most recent overall system line loss study. The cost data used in the allocation study may be based on the test year.

Response:

Please see UGI Electric Book IX, Exhibit D – Cost of Service Study and the Direct Testimony of John D. Taylor, UGI Electric Statement No. 6. Also, for further clarification of rate classes, please see the Direct Testimony of Sherry A. Epler, UGI Electric Statement No. 8.

IV-E-2

Request:

Provide comparisons in either graphical or tabular form showing cost, as defined in the cost of service study, and proposed base rate revenues and usage for all residential and demand/energy rate schedules. Demand shall be for representative loads for each demand/energy rate schedule.

Response:

V-B-1

Request:

Provide a comparison of calculated depreciation accruals versus book accruals by function and by account if available.

Response:

The comparison of the calculated depreciation accruals versus book accruals by function and by account are presented on the following pages as Attachment V-B-1. Attachment V-B-1 presents the comparison of the calculated depreciation accruals versus book accruals by function and by account as of September 30, 2021 and September 30, 2022, respectively.

The book accruals for the future test year period were determined using the calculated annual accrual rates as of September 30, 2020 and the average annual plant balances for the future test year period. The calculated annual accrual rates as of September 30, 2021, and average monthly plant balances are the bases for book accruals during the period October 1, 2021 through September 30, 2022.
