

Philadelphia Gas Works’ Response to the 2017 PAPUC Winter Reliability Data Request

The following is Philadelphia Gas Works’ response to the 2017 Pennsylvania Public Utility Commission’s Winter Reliability Data Request. The text of the Commission’s Data Request is below. It is followed by PGW’s response in the next section.

1. Winter Readiness

Provide a summary of your company’s winter preventative maintenance program(s) which directly facilitate safe and reliable service over the heating season. Provide a description of any potential best practices including any new leak detection programs.

2. Employee Safety/Readiness

Provide a description of any procedures and/or training protocols your company uses to ensure personnel are adequately prepared and staffed for the heating season.

3. Communications Outreach

Provide a summary of the communications procedures your company has in place to effectively manage potential crisis events during the heating season. Include a description of outreach activities and any exercises done with local and regional emergency management organizations to coordinate emergency response procedures.

4. Gas Supply and Planning

Describe the methods and protocols your company uses to ensure reliable gas delivery at least cost during the heating season. Include how your company plans to manage peak demand days, capacity planning, interstate supply coordination, storage, curtailment, and weather forecasting. Include a description of any best practices.

5. Natural Gas Demand from Electric Generators

Provide your company's view on any potential concerns about fuel availability over the winter heating season given the increased demand for natural gas as an electric generation fuel source and possible increased use of firm gas transportation service. Include any new protocols or plans your company may have in place to manage this new dynamic.

PGW'S RESPONSE:

1. Winter Readiness

PGW submits the following summary of its winter preventive maintenance programs in response to the 2017 PUC Winter Reliability Data Request. The programs summarized directly facilitate safe and reliable service during the heating season.

- The PGW Gas Processing Department's Preventative Maintenance Program ("PMP") uses a Work Management System to insure that all process heaters, boilers, vaporizers, valves, safeties and auxiliary systems are inspected, calibrated and tested before being put into service for winter operations at PGW's LNG gas plants. Using the PMP, PGW manages resources to assure that they will provide safe reliable service during the winter months.
- The Gas Processing Department maintains an Emergency Snow Plan. The Gas Emergency Snow Plan coordinates decision making and personnel for the Richmond and Passyunk LNG plants under the direction of a Snow Emergency Coordinator. Its purpose is to minimize the effects of a heavy snowfall on plant operations.
- The Gas Processing Department conducts readiness testing on the vaporizers at the Richmond and Passyunk LNG plants in preparation for winter operations.
- The Winter Load Operating Group ("WLOG") meets periodically throughout the year to review design hour load requirements for the high pressure distribution system. The WLOG reviews plans for various operating scenarios including maximum load or

PHILADELPHIA GAS WORKS

800 West Montgomery Avenue • Philadelphia, PA 19122

system failure scenarios. The WLOG makes contingency plans to meet customer load requirement for the various system failure scenarios. The WLOG also reviews and discusses any changes made during the year to the distribution system

- With respect to winter weather and forecasting, PGW receives a 5 week forecast that is updated weekly and a 7 day forecast that is updated 3 times daily.
- PGW's Winter Manpower Management is a five phase Emergency Response and Manpower Allocation program which directs allocation of resources and crew assignments to maximize the efficient use of all of these resources to meet the 24-hour, 7 day a week distribution system demands.
- PGW has a robust, in-house, fully staffed damage prevention program that continues its operation through the winter.
- PGW has an industry best practices leak survey program in place that is supplemented by additional survey programs during the winter months (See attached Distribution Department Bulletin #127). Starting on December 1st and continuing through March 31st of each year, PGW performs a general winter patrol by conducting an Optical Methane Detection ("OMD") mobile survey of all areas in which there is a high concentration of cast iron main. PGW also performs a prudent winter Frost Patrol by surveying the 600 blocks ranked by the Main Replacement and Prioritization ("MRP") model every two weeks. Additionally, all 12" cast iron mains operating at 10-35 psig throughout the city undergo a leak survey by OMD once every two months during the winter period.
- PGW's Fleet Operations Department activates its protocol for installing snow chains/cables on specified emergency response and other vehicles once snow is predicted to accumulate to four or more inches.
- PGW's Fleet Operations Department has a mandatory winter detail schedule for PGW's Fleet mechanics that goes into effect December 5rd through March 31st,

which provides for coverage 24/7 to support all PGW departments that use PGW vehicles.

2. Employee Safety/Readiness

Below is a brief description of procedures and training that PGW uses to ensure that personnel are adequately prepared and the enterprise is adequately staffed for the heating season.

- **Field Personnel Safety** - Prior to the heating season PGW conducts all-day annual training and safety schools focusing on worker and public safety policies and procedures.
- **Emergency Dispatch** - PGW has a five phase Emergency Response and Manpower Allocation program which assures proper allocation of resources, staff and work crews to meet the 24-hour, 7 day a week distribution system demands.
- **Gas Processing Department Personnel Training** – Personnel are trained initially upon hire and given re-fresher training annually for PGW safety protocols. There also is training throughout the year to comply with CFR 192 and 193.
- **Customer Service Representative (“CSR”) Refresher Training** –PGW’s Customer Affairs Department conducts the following initial and annual refresher training for its frontline staff who operate the PGW Call Center:
 - **Emergency Training** - This annual refresher training reviews the proper procedure for managing leak and emergency calls and how and when to issue a trouble order to Field Operations.
 - **Customer Responsibility Program (“CRP”)** - This training entails staff being refreshed on when and how to enroll a customer into PGW’s low income

program, the Customer Responsibility Program. CRP provides customers with a consistent, discounted bill each month to help them better afford their bills and keep gas service on.

- **High Bill Refresher Training**- To prepare for the heating season, CSRs are refreshed on how to properly review usage patterns and explain customer billing.
- **Payment Arrangement Refresher Training**- This annual training refreshes CSRs on how to determine the most appropriate restoration and payment arrangement terms for customers.

3. Communications Outreach

Following is a summary of the communications procedures that PGW has in place to effectively manage potential crisis events during the heating season. It includes a description of outreach activities and any exercises done with local and regional emergency management organizations to coordinate emergency response procedures.

- **In the event of an emergency** - PGW makes communication a priority and activates its Crisis Communications plan, which includes:
 - Notifying key personnel that a potential crisis is in effect, assigning short-term tasks and setting up an initial briefing session;
 - Assigning trained personnel to gather and share relevant information with employees, customers and additional audiences via the appropriate internal and external communications channels;

PHILADELPHIA GAS WORKS

800 West Montgomery Avenue • Philadelphia, PA 19122

- Working collaboratively and effectively through PGW's Corporate Communications & Public Affairs and Field Operations Departments via well-defined roles and responsibilities to identify available and needed resources, and utilize same;
 - Assigning personnel to communicate the variety of communication options through which internal and external audiences can gather information from PGW, share information with PGW and report their concerns to PGW;
 - Monitoring the coordination and content of all communications activities with internal and external audiences by the communications team;
 - Sharing information with audiences on how PGW is responding to the potential crisis, as warranted;
 - Utilizing relationships with local officials, community groups and other entities to share information at the community level;
 - Postponing planned communications activities to ensure our communications channels are devoted to the potential crisis and available to audiences.
- **Additional Emergency Communications** - communications staff is available 24-hours a day to respond to media inquiries. Each state legislator and city council member in our distribution area receives regular personal correspondence along with email follow-up in the event of an emergency. The company's Public Affairs Team meets with elected officials and attends community events throughout the city to share outreach messages on a routine basis.
 - **Customer Communications** - Every PGW customer receives our monthly informational bill newsletter *The Good Gas News* which shares important safety information and contact numbers. *The Good Gas News* is posted on the company

PHILADELPHIA GAS WORKS

800 West Montgomery Avenue • Philadelphia, PA 19122

website www.pgworks.com each month. Our website also features gas leak safety information, weatherization tools and instructions on how to contact PGW in the event of an emergency. The home page of the website can also post important customer messages, when necessary.

- **Philadelphia Resident Emergency Communications** - In the event of an emergency, PGW makes communication a priority by offering a variety of communication options to customers and Philadelphia residents. Customers can contact the Customer Call Center and the automated Interactive Voice Response phone system to report an odor or suspicion of a gas leak 24 hours a day, 7 days a week.
- **Employee Communications** - PGW uses a computer based notification system which allows PGW to contact all employees quickly and efficiently with a consistent message. This notification system can contact employees at home, work, by text message, cell phone or through email.
- **First Responder Communications** - PGW works with and communicates closely with the Philadelphia Fire Department on training and response procedures surrounding the response to water main breaks, Carbon Monoxide, Fire and Foreign Odor reports.
- **Emergency Management Outreach and Exercise Activities** - PGW assists the Philadelphia Office of Emergency Management (OEM) with both their Excessive Heat and Severe Winter Weather response plans, and is coordinating with OEM on evacuation planning. PGW has a representative working with the City of Philadelphia Critical Infrastructure Working Group. This representative also Co-Chairs the Southeastern Pennsylvania Tasks Force Infrastructure Working Group. PGW attends the Delaware Valley Intelligence Center's ("DVIC") briefings and receives real time updates from the DVIC as needed. PGW works closely with and participated in exercises with the Department of Homeland Security Protective Services division on several major events.

- **PUC’s Cold Weather Survey** – In October, PGW began conducting its annual Cold Weather Survey. The annual Cold Weather Survey consists of PGW surveying all of its residential customers who were terminated during the year and the service is still off. As part of the survey, PGW makes four attempts (one in person) to provide terminated customers with information on how they can restore service. PGW also surveys how the customer plans on heating their home during the winter season. The survey results are then submitted to the Commission by no later than December 15th. A resurvey is also conducted in January.
- **LIHEAP and CRISIS Outreach** - Each year PGW conducts various forms of outreach to customers who may qualify to receive LIHEAP and/or CRISIS grants. PGW also has staff available in our district offices to provide customers with assistance with completing their LIHEAP applications.

4. Gas Supply and Planning

Below is a description of methods and protocols that PGW uses to ensure reliable natural gas delivery at least cost during the heating season. Descriptions of methods to manage peak demand days, capacity planning and interstate supply coordination, storage, curtailment and weather forecasting are included.

- **Peak Design Day Evaluation** - PGW models project customer gas requirements for a design (coldest) hour, design day and design winter. These gas requirements form the basis for capacity commitments for pipeline supply, storage, and transportation contracting.
- **System Supply Requirement Review** - PGW’s supply portfolio is split into three distinct categories. First, the Company enters into winter-only supply contracts. These winter-only supply arrangements provide gas supply that fills approximately thirty-seven percent (37%) of PGW's daily firm transportation entitlements. Second, an additional twenty-seven percent (27%) of PGW's gas supply portfolio is

PHILADELPHIA GAS WORKS

800 West Montgomery Avenue • Philadelphia, PA 19122

purchased on a one hundred percent gas daily pricing basis that allows for daily volumetric changes. Third the company utilizes one unbundled pipeline storage service along with five bundled storages and our LNG facilities, as an additional source of supply.

- ***Interstate Supply and Capacity Arrangements*** - Spectra Energy and Williams pipelines represent the only interstate pipeline facilities with physical connections to the PGW service territory. These supply contracts also recognize pipeline receipt and delivery rights. By sourcing supply in this manner, PGW not only ensures security of supply from the pipelines, but also can take advantage of varying basis differentiated pricing in the market.
- ***Utility and Contract Storage Inventory Delivery Plans*** - PGW utilizes bundled storage and LNG to meet operational requirements and to accomplish other cost saving initiatives.
- ***Emergency Curtailment Plans*** - PGW utilizes a three phase Emergency Curtailment Plan, first Contractual Load Shedding, next Voluntary Usage Reductions and last Mandatory Usage Reductions.
- ***Weather and Forecasting*** - PGW receives a 5 week forecast that is updated weekly and a 7 day forecast that is updated 3 times daily.

5. Natural Gas Demand from Electric Generators

Following is PGW's response to the PUC question on Natural Gas Demand from Electric Generators.

Currently within the Philadelphia Gas Work service territory there is one electric generation facility that generates electricity for sale that uses natural gas as its fuel source. This facility nominates purchases and transports gas to the city gate using its

PHILADELPHIA GAS WORKS

800 West Montgomery Avenue • Philadelphia, PA 19122

own contracts. PGW takes the gas at the city gate and transports this gas to the electric generation facility on PGW's gas distribution system. This customer's natural gas nominations and purchases are independent of the PGW contracts for natural gas purchases for its other customers and will have no effect on PGW's fuel availability or PGW's ability to deliver gas to our firm customers even under design conditions.
