

# The Three Components of Your Electric Service

## Generation

The production of electricity. **You can shop for this part of your service based on lowest price, or providing a specific service that you want, such as green/renewable energy.**

## Transmission

The movement of electricity from where it is generated to the point of distribution. **If you decide to PowerSwitch, the new supplier will pay the transmission costs and include them as part of their charges listed on your bill.**

## Distribution

The delivery of electricity from distribution lines to your home or business. **This part doesn't change--it is still provided and maintained by the local power company.**
