ComEd cancelled its existing energy efficiency rate rider effective June 2, 2017. On August 1, 2017, ComEd filed with the ICC a reconciliation of revenues and costs incurred through the cancellation date. On August 30, 2017, the ICC approved ComEd's request, filed on August 1, 2017, to issue an $80 million credit on retail customers' bills in October 2017 for the majority of the over-recoveries with any final adjustment applicable to the over-recoveries to be billed or credited in the future. As of September 30, 2017, ComEd's over-recoveries associated with its former energy efficiency rate rider were $33 million.

Initial Energy Efficiency Formula Rate Filing

On August 15, 2017, the ICC approved ComEd's new initial energy efficiency formula rate filed with the ICC on June 9, 2017 pursuant to FEJA. The filing establishes the formula under which energy efficiency rates will be calculated going forward and the revenue requirement used to set the initial rates for the period October 1, 2017 through December 31, 2017. The initial revenue requirement is based on projected costs and projected PJM capacity revenues for the period from June 1, 2017 through December 31, 2017, and projected year-end 2017 energy efficiency regulatory asset balances (less any related deferred income taxes). ComEd requested an initial decrease in revenue requirement of $7 million reflecting higher projected PJM capacity revenues compared to projected energy efficiency costs and provides for a weighted average debt and equity return of 6.47% inclusive of an allowed ROE of 8.40%, reflecting the average rate on 30-year treasury notes plus 580 basis points. The annual reconciliation for 2017 will be included in ComEd's 2018 energy efficiency formula rate filing and reflected in customer rates beginning January 2019. The approved energy efficiency formula rate also provides for revenue decoupling to effectively offset the favorable or unfavorable impacts to ComEd's energy efficiency formula rate revenues associated with variations in delivery volumes associated with above or below normal weather, numbers of customers or usage per customer.

As of September 30, 2017, Exelon and ComEd recorded a regulatory asset of $78 million under the energy efficiency formula, reflecting $83 million of deferred energy efficiency costs partially offset by $5 million of over recoveries for the initial energy efficiency formula rate reconciliation.

2017 Energy Efficiency Formula Rate Filing

On September 11, 2017, the ICC approved ComEd's annual energy efficiency formula rate filed with the ICC on June 30, 2017 pursuant to FEJA. The filing establishes the revenue requirement used to set rates that will take effect in January 2018. The revenue requirement for 2018 is based on projected 2018 energy efficiency costs and PJM capacity revenues, and year-end 2018 energy efficiency regulatory asset balances (less any related deferred income taxes). In its 2017 filing ComEd requested a total increase to the revenue requirement of $12 million and provides for a weighted average debt and equity return of 6.47% inclusive of an allowed ROE of 8.40%, reflecting the average rate on 30-year treasury notes plus 580 basis points. The annual reconciliation for 2018 will be included in ComEd's 2019 energy efficiency formula rate filing, and reflected in customer rates beginning January 2020.

Renewable Portfolio Standard

Existing Illinois law requires ComEd to purchase each year an increasing percentage of renewable energy resources for the customers for which it supplies electricity. This obligation is satisfied through the procurement of RECs. FEJA revises the Illinois RPS to require ComEd to procure RECs for all retail customers by June 2019, regardless of the customers' electricity supplier, and provides support for low-income rooftop and community solar programs, which will be funded by the existing Renewable Energy Resources Fund and ongoing RPS collections. FEJA also requires ComEd to use RPS collections to fund utility job training and workforce development programs in the amounts of $10 million in each of the years 2017, 2021, and 2025. ComEd recorded a $10 million and $20 million current and noncurrent liability, respectively, as of September 30, 2017 associated with this obligation. ComEd will recover all costs associated with purchasing RECs and funding utility job training and workforce development programs through a new RPS rate rider that provides for a reconciliation and true-up to actual costs, with any difference between revenues and expenses to be credited to or collected from ComEd's retail customers in subsequent periods with interest. The first reconciliation and true-up for RECs will occur in 2021 and cover revenues and costs for the four year period beginning June 1, 2017 through May 31, 2021. Subsequently, the RPS rate rider will provide for an annual reconciliation and true-up. ComEd began billing its retail customers under its new RPS rate rider on June 1, 2017 and recorded a related regulatory liability of $7 million as of September 30, 2017. ComEd also recorded a regulatory liability of $38 million for alternative compliance payments received from RES to purchase RECs on behalf of the RES in the future.

As of September 30, 2017, ComEd had received $45 million of over-recovered RPS costs and alternative compliance payments from RES, which are deposited into a separate interest bearing bank account pursuant to FEJA and are classified as Restricted cash on Exelon's and ComEd's Balance Sheets.

Customer Rate Increase Limitations

FEJA includes provisions intended to limit the average impact on ComEd customer rates for recovery of costs incurred under FEJA as follows: (1) for a typical ComEd residential customer, the average impact must be less than $0.25 cents per month, (2) for nonresidential customers with a peak demand less than 10 MW, the average annual impact must be less than 1.3% of the average amount paid per kWh for electric service by Illinois commercial retail customers during 2015, and (3) for nonresidential customers with a peak demand greater than 10 MW, the average annual impact must be less than 1.3% of the average amount paid per kWh for electric service by Illinois industrial retail customers during 2015.

On June 30, 2017, ComEd submitted a 10-year projection to the ICC of customer rate impacts for residential customers and nonresidential customers with a peak demand less than 10 MW. Such projections indicate that customer rate impacts will not exceed the limitations set by FEJA discussed below. Thereafter, beginning in 2018, ComEd must submit a report to the ICC for residential customers and nonresidential customers with a peak demand less than 10 MW by February 15th and June 30th of each year, respectively. For nonresidential customers with a peak demand greater than 10 MW, ComEd must submit a report to the

ICC by May 1 of each year if a rate reduction will be necessary in the following year. For residential customers, the reports will include the actual costs incurred under FEJA during the preceding year and a rolling 10-year customer rate impact projection. The reports for nonresidential customers with a peak demand less than 10 MW will also include the actual costs incurred under FEJA during the preceding year, as well as the average annual rate increase from January 1, 2017 through the end of the preceding year and the average annual rate increase projected for the remainder of the 10-year period.

If the projected residential customer or nonresidential customer with a peak demand less than 10 MW rate increase exceeds the limitations during the first four years, ComEd is required to decrease costs associated with FEJA investments, including reductions to ZEC contract quantities. If the projected residential customer or nonresidential customer with a peak demand less than 10 MW rate increase exceeds the limitations during the last six years, ComEd is required to demonstrate how it will reduce FEJA investments to ensure compliance. If the actual residential customer or nonresidential customer with a peak demand less than 10 MW rate increase exceeds the limitations for any one year, ComEd is required to submit a corrective action plan to decrease future year costs to reduce customer rates to ensure future compliance. If the actual residential customer or nonresidential customer rate exceeds the limitations for two consecutive years, ComEd can offer to credit customers for amounts billed in excess of the limitations or ComEd can terminate FEJA investments. If ComEd chooses to terminate FEJA investments, the ICC shall order termination of ZEC contracts and further initiate proceedings to reduce energy efficiency savings goals and terminate support for low-income rooftop and community solar programs. ComEd is allowed to fully recover all costs incurred as of and up to the date of the programs’ termination.

For the energy efficiency formula, ComEd records a regulatory asset or liability and corresponding increase or decrease to Operating revenues for any differences between the revenue requirement in effect and ComEd’s best estimate of the revenue requirement expected to be approved by the ICC for that year’s reconciliation. For the other rate riders established under FEJA, ComEd records a regulatory asset or liability for any differences between revenues and incurred expenses.

Renewable Energy Resources (Exelon and ComEd). In accordance with legislation in effect on December 31, 2016, the IPA’s Procurement Plans include the procurement of cost-effective renewable energy resources in amounts that equal or exceed a minimum target percentage of the total electricity that each electric utility supplies to its eligible retail customers. The June 1, 2016 target renewable energy resources obligation for the utilities was at least 11.5%. This obligation increases by at least 1.5% each year thereafter to an ultimate target of at least 25% by June 1, 2025. All goals are subject to rate impact criteria set forth by Illinois legislation. As of September 30, 2017, ComEd had purchased renewable energy resources or equivalents, such as RECs, in accordance with the IPA Procurement Plan. ComEd currently retires all RECs upon transfer and acceptance. ComEd is permitted to recover procurement costs of RECs from retail customers without mark-up through rates.

In accordance with FEJA that took effect on June 1, 2017, beginning with the plan or plans to be implemented in the 2017 delivery year, the IPA shall develop a long term renewable resources procurement plan (LT Plan). The RPS target percentages for the overall service territory have not changed through June 1, 2025 although FEJA extended the 25% RPS target to delivery years after 2025. Currently, each RES and each utility is responsible for the renewable resource obligation of the customers it supplies power for. Over time, this will change and the utility will procure renewable resources based on the retail load of substantially all customers in its service territory. For the delivery year beginning June 1, 2017, the LT Plan shall include cost effective renewable energy resources procured by the utility for the retail load the utility supplies and for 50% of the retail customer load supplied by Retail Electric Suppliers in the utility service territory on February 28, 2017. Utility procurement for RES supplied retail customer load will increase to 75% June 1, 2018 and to 100% beginning June 1, 2019.

Pennsylvania Regulatory Matters

Pennsylvania Procurement Proceedings (Exelon and PECO). Through PECO’s PAPUC approved DSP Programs, PECO procures electric supply for its default electric customers through PAPUC approved competitive procurements.

On March 17, 2016, PECO filed its fourth DSP Program with the PAPUC proposing a 24-month term from June 1, 2017 through May 31, 2019, in compliance with electric generation procurement guidelines set forth in Act 129. On December 8, 2016, the PAPUC approved the fourth DSP Program for the modified 48-month term and deferred CAP Shopping to another proceeding. Office of Consumer Advocate and Low Income Advocates subsequently filed a Petition for Reconsideration and Clarification related to CAP Shopping. On March 16, 2017, the PAPUC granted reconsideration and consolidated the proceeding with the DSP II docket, which includes the pending CAP Shopping plan that would allow low-income CAP customers to purchase their generation supply from EGSs. PAPUC referred the consolidated proceedings to the Office of Administrative Law Judge for hearing and decision.

Pennsylvania Act 11 of 2012 (Exelon and PECO). In February 2012, Act 11 was signed into law, which provided the PAPUC authority to approve the implementation of a distribution system improvement charge (DSIC) in rates designed to recover capital project costs incurred to repair, improve or replace utilities' aging electric and natural gas distribution systems in Pennsylvania. Prior to recovering costs pursuant to a DSIC, the PAPUC's implementation order requires a utility to have a Long Term Infrastructure Improvement Plan (LTIIP) approved by the Commission, which outlines how the utility is planning to increase its investment for repairing, improving or replacing aging infrastructure. The PAPUC approved PECO's petition for its proposed electric DSIC and LTIIP on October 22, 2015 for spending of $275 million over a 5 year period through 2020. The PAPUC approved PECO's petition for its proposed modified gas LTIIP on June 14, 2017 for spending of $762 million over a 10 year period through 2022.

Maryland Regulatory Matters

2017 Maryland Electric Distribution Rates (Exelon, PHI and Pepco). On March 24, 2017, Pepco filed an application with the MDPSC to increase its annual electric distribution base rates by $69 million, which was updated to $67 million on August 24, 2017, reflecting a requested ROE of 10.1%. The application included a request for an income tax adjustment to reflect full normalization of removal costs associated with pre-1981 property, which accounted for $18 million of the requested increase. On October 20, 2017, the MDPSC approved an increase in Pepco electric distribution rates of $34 million, reflecting a ROE of 9.5%. On October 27, 2017, the MDPSC issued an errata order revising the approved increase in Pepco electric distribution rates to $32 million. The errata order corrected a number of computational errors in the original order but did not alter any of the findings. The new rates became effective for services rendered on or after October 20, 2017. In its decision, the MDPSC denied Pepco's request regarding the income tax adjustment without prejudice to Pepco filing another similar proposal with additional information. Requests for rehearing are due November 20, 2017.

2017 Maryland Electric Distribution Rates (Exelon, PHI and DPL). On July 14, 2017, DPL filed an application with the MDPSC to increase its annual electric distribution base rates by $27 million, which was updated to $22 million on September 28, 2017, reflecting a requested ROE of 10.1%. DPL expects a decision in the matter in the first quarter of 2018, but cannot predict how much of the requested increase the MDPSC will approve.

2016 Maryland Electric Distribution Rates (Exelon, PHI and DPL). On February 15, 2017, the MDPSC approved an increase in DPL electric distribution rates of $38 million reflecting a ROE of 9.6%. The new rates became effective for services rendered on or after February 15, 2017. The MDPSC also denied DPL's request to continue its Grid Resiliency Program, through which DPL proposed to invest $5 million a year for two years to improve priority feeders and install single-phase reclosing fuse technology. The final order did not result in the recognition of any incremental regulatory assets or liabilities.

Cash Working Capital Order (Exelon and BGE). On November 17, 2016, the MDPSC rendered a decision in the proceeding to review BGE's request to recover its cash working capital (CWC) requirement for its Provider of Last Resort service, also known as Standard Offer Service (SOS), as well as other components that make up the Administrative Charge, the mechanism that enables BGE to recover all of its SOS-related costs. The Administrative Charge is now comprised of five components: CWC, uncollectibles, incremental costs, return, and an administrative adjustment, which is an adder to the utility's SOS rate to act as a proxy for retail suppliers' costs. The Commission accepted BGE's positions on recovery of CWC and pass-through recovery of BGE's actual uncollectibles and incremental costs. The order also grants BGE a return on the SOS. The Commission ruled that the level of the administrative adjustment will be determined in BGE's next rate case. On December 16, 2016, MDPSC Staff requested clarification concerning the amount of return on the SOS awarded to BGE and on December 19, 2016, the residential consumer advocate sought rehearing of the return awarded. On January 24, 2017, the MDPSC issued an order denying the MDPSC Staff request for clarification and the residential consumer advocate request for rehearing. On February 22, 2017, the residential consumer advocate filed an appeal of the MDPSC's orders with the Circuit Court for Baltimore City. The residential consumer advocate filed its Memorandum on Appeal on June 5, 2017 and subsequent Reply Memoranda were filed by BGE and the MDPSC on July 7, 2017 and July 12, 2017, respectively. On August 7, 2017, following oral argument by the parties, a decision was issued from the Circuit Court affirming the decision of the MDPSC. On September 5, 2017, the residential consumer advocate filed an appeal of the Circuit Court's decision to the Maryland Court of Special Appeals. BGE cannot predict the outcome of this appeal.

Smart Meter and Smart Grid Investments (Exelon and BGE). In August 2010, the MDPSC approved a comprehensive smart grid initiative for BGE that included the planned installation of 2 million residential and commercial electric and natural gas smart meters at an expected total cost of $480 million of which $200 million was funded by SGIG. The MDPSC’s approval ordered BGE to defer the associated incremental costs, depreciation and amortization, and an appropriate return, in a regulatory asset until such time as a cost-effective advanced metering system is implemented. As of September 30, 2017 and December 31, 2016, the balance of BGE’s regulatory asset was $219 million and $230 million, respectively, representing incremental program deployment costs. The current quarter balance of $219 million consists of three major components, including $133 million of unamortized incremental deployment costs of the AMI program, $54 million of unamortized costs of the non-AMI meters replaced under the program, and $32 million related to post-test year incremental program deployment costs incurred prior to approval became effective June 2016. The balance as of September 30, 2017 reflects the impact of the cost disallowances and adjustments in BGE’s 2015 electric and natural gas distribution rate case. The incremental deployment costs for the AMI program and the non-AMI meter components of the regulatory asset are being recovered through rates and amortized to expense over a 10 year period, while the post-test year incremental program deployment costs have not yet been approved for recovery by the MDPSC. A return on the regulatory asset is currently included in rates, except for the $54 million portion representing the unamortized cost of the retired non-AMI meters and a $32 million portion related to post-test year incremental program deployment costs.

As a combined result of the MDPSC orders in BGE's 2015 electric and natural gas distribution rate case, BGE recorded a $52 million charge in June 2016 to Operating and maintenance expense in Exelon's and BGE's Consolidated Statements of Operations and Comprehensive Income reducing certain regulatory assets and other long-lived assets and reclassified $56 million of non-AMI plant costs from Property, plant and equipment, net to Regulatory assets on Exelon's and BGE's Consolidated Balance Sheets. For further information, see Note 3 - Regulatory Matters of the Exelon 2016 Form 10-K.

Delaware Regulatory Matters

2017 Electric and Natural Gas Distribution Rates (Exelon, PHI and DPL). On August 17, 2017, DPL filed applications with the DPSC to increase its annual electric and natural gas distribution base rates by $24 million, which was updated to $31 million on October 18, 2017, and $13 million, respectively, reflecting a requested ROE of 10.1%. DPL expects a decision in the electric proceeding and the gas proceeding in the third quarter of 2018, but cannot predict how much of the requested rate increases the DPSC will approve. While the DPSC is not required to issue a decision on the application within a specified period of time, Delaware law allows DPL to put into effect $2.5 million of the rate increase two months after filing the application and the entire requested rate increase seven months after filing, subject to a cap and a refund obligation based on the final DPSC order. On October 24, 2017, the Staff of the DPSC and the Public Advocate filed a joint motion to dismiss DPL's electric distribution base rate application without prejudice to refiling, arguing that the amount of the requested increase to $31 million required additional time to review and additional public notice. The DPSC is expected to decide at its meeting on November 9, 2017. DPL cannot predict the outcome of this matter.

2016 Electric and Natural Gas Distribution Rates (Exelon, PHI and DPL). On May 17, 2016, DPL filed applications with the DPSC to increase its annual electric and natural gas distribution base rates by $63 million, which was updated to $60 million on March 8, 2017, and $22 million, respectively, reflecting a requested ROE of 10.6%. Delaware law allowed DPL to put into effect $2.5 million of each of the rate increases effective July 16, 2016. On December 17, 2016, the DPSC approved an additional $30 million in electric distribution rates and an additional $10 million in natural gas distribution rates effective December 17, 2016, subject to refund based on the final DPSC orders.

On March 8, 2017, DPL entered into a settlement agreement with the Division of the Public Advocate, Delaware Electric Users Group and the DPSC Staff in its electric distribution rate proceeding, which provides for an increase in DPL annual electric distribution base rates of $31.5 million reflecting a ROE of 9.7% compared to the $32 million increase previously put into effect. On May 23, 2017, the DPSC issued an order approving the settlement agreement, with the new rates effective June 1, 2017. Pursuant to the settlement agreement, no refund of the interim rates put into effect on July 16, 2016 and December 17, 2016 (as discussed above) is required.

On April 6, 2017, DPL entered into a settlement agreement with the Division of the Public Advocate and the DPSC Staff in its natural gas distribution rate proceeding, which provides for an increase in DPL annual natural gas distribution base rates of $4.9 million reflecting a ROE of 9.7%. The settlement agreement also provides that DPL will refund amounts collected under the temporary rates effective July 16, 2016 and December 17, 2016 (as discussed above) in excess of the $4.9 million, and that the new rates will be effective within thirty days of DPSC approval of the settlement agreement. On June 6, 2017, the DPSC issued an order approving the settlement agreement, with the new rates effective July 1, 2017. Pursuant to the settlement agreement, a rate refund plus interest of approximately $5 million was issued to customers beginning in August 2017 for which a regulatory liability has been recorded as of September 30, 2017. This is a one-time refund and was included on customer bills from mid-August through mid-September.

District of Columbia Regulatory Matters

2016 Electric Distribution Rates (Exelon, PHI and Pepco). On June 30, 2016, Pepco filed an application with the DCPSC to increase its annual electric distribution base rates by $86 million, which was updated to $77 million on February 1, 2017, reflecting a requested ROE of 10.6%.

On July 25, 2017, the DCPSC approved an increase in Pepco electric distribution base rates of $37 million reflecting a ROE of 9.5%. The new rates became effective for services rendered on or after August 15, 2017. In its decision, the DCPSC ordered that the $26 million customer rate credit created as a result of the Exelon and PHI merger will be provided primarily to residential customers and some small commercial customers to offset the impact of this increase until that amount has been exhausted, which is expected to take approximately two years. Additionally, the Commission is holding approximately $6 million to $7 million of the customer rate credit for use toward a possible new class of customers for certain senior citizens and disabled persons. The DCPSC also held that Pepco's bill stabilization adjustment, which decouples distribution revenues from utility customers from the amount of electricity delivered, will continue to be in place and that no refund of previously collected funds is required. Several parties filed requests that the DCPSC reconsider the order on various issues, and on October 6, 2017, the Commission issued an order denying each of the requests.

District of Columbia Power Line Undergrounding Initiative (Exelon, PHI and Pepco). The District of Columbia government enacted on an emergency basis (effective May 17, 2017) and thereafter on a permanent basis (effective July 11, 2017) legislation to amend the Electric Company Infrastructure Improvement Financing Act of 2014 (as amended) (the Infrastructure Improvement Financing Act) to authorize the District of Columbia Power Line Undergrounding (DC PLUG) initiative, a projected six year, $500 million project to place underground some of the District of Columbia's most outage-prone power lines with $250 million of the project costs funded by Pepco and $250 million funded by the District of Columbia.

The $250 million of project costs funded by Pepco will be recovered through a volumetric surcharge on the electric bill of substantially all of Pepco's customers in the District of Columbia. Pepco will earn a return on these project costs.

The $250 million of project costs funded by the District of Columbia will come from two sources. Project costs of $187.5 million will be funded through a charge assessed on Pepco by the District of Columbia; Pepco will recover this charge from customers through a volumetric distribution rider. The remaining costs up to $62.5 million are to be funded by the existing capital projects program of the District Department of Transportation (DDOT). Ownership and responsibility for the operation and maintenance of all the assets funded by the District of Columbia will be transferred to Pepco for a nominal amount upon completion. Pepco will not recover or earn a return on the cost of the assets transferred to it by the District of Columbia.

In accordance with the Infrastructure Improvement Financing Act, Pepco filed an application for approval of the first two-year portion of the DC PLUG initiative (the First Biennial Plan) on July 3, 2017. After the initial application, Pepco will be required to make two updated applications, one every two years until the project is completed. Pepco anticipates that the DCPSC will issue an order approving the First Biennial Plan in early November 2017. Upon the issuance of a DCPSC order approving the First Biennial Plan, Pepco will become obligated to pay $187.5 million to the District of Columbia over the six year project term, at which time it will record an obligation and offsetting regulatory asset.

New Jersey Regulatory Matters

New Jersey Consolidated Tax Adjustment (Exelon, PHI and ACE). The Consolidated Tax Adjustment (CTA) is a New Jersey ratemaking policy that requires utilities that are part of a consolidated tax group to share with customers the tax benefits that came from losses at unregulated affiliates through a reduction in rate base. In 2013, the NJBPU opened a generic proceeding to review the policy. In 2014, the NJBPU issued a decision which retained the CTA, but in a highly modified format that significantly reduced the impact of the CTA to ACE. On September 18, 2017, the Appellate Division of the Superior Court of New Jersey reversed the NJBPU's decision in adopting the revised CTA policy and held that NJBPU's actions related to the CTA constituted a rulemaking that should have been undertaken pursuant to the requirements of the Administrative Procedures Act. The Court did not address the merits of the CTA methodology itself. No party filed an appeal of the Court's decision, and the NJBPU is expected to conduct further proceedings. If the NJBPU were to apply the CTA in its unmodified form, it could have a material prospective impact to ACE through a reduction in rate base in future rate cases.

2017 Electric Distribution Rates (Exelon, PHI and ACE). On March 30, 2017, ACE filed an application with the NJBPU to increase its annual electric distribution rates by $70 million (before New Jersey sales and use tax), which was updated to $73 million on July 14, 2017, reflecting a requested ROE of 10.1%. The application also requests approval of a rate surcharge mechanism called the “System Renewal Recovery Charge,” which would permit more timely recovery of certain costs associated with reliability and system renewal-related capital investments.

On September 8, 2017, ACE entered into a settlement agreement with the NJBPU staff, the New Jersey Division of Rate Counsel and Wal-Mart Stores, Inc. in its electric distribution rate proceeding, which provides for an increase

Table of Contents

in ACE annual electric distribution base rates of $43 million (before New Jersey sales and use tax) reflecting a ROE of 9.6%. In addition, pursuant to the settlement agreement, ACE agreed to withdraw its request for approval of a System Renewal Recovery Charge without prejudice to its right to refile. On September 22, 2017, the NJBPU issued an order approving the settlement agreement, with the new rates effective on October 1, 2017.

2016 Electric Distribution Rates (Exelon, PHI and ACE). On August 24, 2016, the NJBPU issued an order approving a stipulation of settlement among ACE, the New Jersey Division of Rate Counsel, NJBPU Staff and Unimin Corporation, which, among other things, provided that a determination on ACE's grid resiliency program, PowerAhead, would be separated into a phase II of the rate proceeding and decided at a later date. PowerAhead includes capital investments to enhance the resiliency of the system through improvements focused on improving the distribution system's ability to withstand major storm events. A stipulation of settlement with respect to the PowerAhead program (the PowerAhead Stipulation) was approved by the NJBPU on May 31, 2017. As adopted, the PowerAhead program includes an approved investment level of $79 million to be recovered through the cost recovery mechanism described in the PowerAhead Stipulation. The NJBPU order adopting the PowerAhead Stipulation was effective on June 10, 2017.

Update and Reconciliation of Certain Under-Recovered Balances (Exelon, PHI and ACE). On February 1, 2017, ACE submitted its 2017 annual petition with the NJBPU seeking to reconcile and update (i) charges related to the recovery of above-market costs associated with ACE's long-term power purchase contracts with the non-utility generators and (ii) costs related to surcharges for the New Jersey Societal Benefit Program (a statewide public interest program that is intended to benefit low income customers and address other public policy goals) and ACE's uncollectible accounts. As filed, the net impact of adjusting the charges as proposed would have been an overall annual rate decrease of approximately $29 million (revised to approximately $32 million in April 2017, based upon an update for actuals through March 2017), including New Jersey sales and use tax. On May 31, 2017, the NJBPU approved a stipulation of settlement entered into by the parties providing for an overall annual rate decrease of approximately $32 million, effective June 1, 2017. The rate decrease was placed into effect provisionally, subject to a review by NJBPU and the Division of Rate Counsel of the final underlying costs for reasonableness and prudence. This rate decrease will have no effect on ACE's operating income, since these revenues provide for recovery of deferred costs under an approved deferral mechanism. The matter is pending at the NJBPU.

New York Regulatory Matters

New York Clean Energy Standard (Exelon and Generation). On August 1, 2016, the New York Public Service Commission (NYPSC) issued an order establishing the New York CES, a component of which is the Tier 3 ZEC program targeted at preserving the environmental attributes of zero-emissions nuclear-powered generating facilities that meet the criteria demonstrating public necessity as determined by the NYPSC. The New York State Energy Research and Development Authority (NYSERDA) will centrally procure the ZECs from eligible plants through a 12-year contract, to be administered in six two-year tranches, extending from April 1, 2017 through March 31, 2029. ZEC payments will be made to the eligible resources based upon the number of MWh produced, subject to specified caps and minimum performance requirements. The price to be paid for the ZECs under each tranche will be administratively determined using a formula based on the social cost of carbon as determined in 2016 by the federal government, subject to pricing adjustments designed to lower the ZEC price based on increase in underlying energy and capacity prices. The ZEC price for the first tranche has been set at $17.48 per MWh of production. Following the first tranche, the price will be updated bi-annually. Each Load Serving Entity (LSE) shall be required to purchase an amount of ZECs equivalent to its load ratio share of the total electric energy in the New York Control Area. Cost recovery from ratepayers shall be incorporated into the commodity charges on customer bills.

The NYPSC initially identified three plants eligible for the ZEC program: the FitzPatrick, Ginna, and Nine Mile Point nuclear facilities. As issued, the order also provided that the duration of the program beyond the first tranche was conditional upon a buyer purchasing the FitzPatrick facility and taking title prior to September 1, 2018. On November 18, 2016, the required contracts with NYSERDA were executed for Ginna and Nine Mile Point, in addition to Entergy's execution of the required contract for the FitzPatrick facility. On March 31, 2017, Generation closed on the acquisition of FitzPatrick. Generation is currently recognizing revenue for the sale of New York ZECs in the month following generation when the ZECs are transferred to NYSERDA. For the three and nine months ended September 30, 2017, Generation has recognized $118 million and $191 million of ZEC revenue.

Several parties filed with the NYPSC requests for rehearing or reconsideration of the New York CES. Generation and CENG also filed a request for clarification, or in the alternative limited rehearing, that the condition limiting the duration of the program beyond the first tranche be limited to the eligibility of the FitzPatrick plant only and have no

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

bearing on Ginna or Nine Mile Point's eligibility for the full 12-year duration. On December 15, 2016, the NYPSC approved Generation's and CENG's petition to clarify this condition and denied all petitions for rehearing of the New York CES. Parties had until mid-April to appeal to New York State court the denials of the requests for rehearing. A Petition seeking to invalidate the ZEC program was filed in New York State court by certain environmental groups and other parties on November 30, 2016, and amended on January 13, 2017, arguing that the NYPSC did not have authority to establish the program and that it violated certain technical provisions of the State Administrative Procedures Act (SAPA) when adopting the ZEC program. On February 15, 2017, Generation and CENG filed a motion to dismiss the state court action. The NYPSC also filed a motion to dismiss the state court action. On March 24, 2017, the plaintiffs filed a memorandum of law opposing the motions to dismiss, and Generation and CENG filed a reply brief on April 28, 2017. Oral argument was held on June 19, 2017. The motions to dismiss are pending.

On October 19, 2016, a coalition of fossil generation companies filed a complaint in federal district court against the NYPSC alleging that the ZEC program violates certain provisions of the U.S. Constitution; specifically that the ZEC program interferes with FERC's jurisdiction over wholesale rates and that it discriminates against out of state competitors. On December 9, 2016, Generation and CENG filed a motion to intervene in the case and to dismiss the lawsuit. The State also filed a motion to dismiss. Oral argument was held on March 29, 2017. On July 25, 2017, the court granted both motions to dismiss. On August 24, 2017, plaintiffs appealed the decision to the Second Circuit. Plaintiffs-Appellants' initial brief was filed on October 13, 2017. The state's and Exelon's briefs are due on November 17, 2017. Reply briefs are due on December 1, 2017.

Other legal challenges remain possible, the outcomes of which remain uncertain. See Note 7 - Early Nuclear Plant Retirements for additional information relative to Ginna and Nine Mile Point. See Note 4 - Mergers, Acquisitions and Dispositions for additional information on Generation's acquisition of FitzPatrick.

Ginna Nuclear Power Plant Reliability Support Services Agreement (Exelon and Generation). In November 2014, in response to a petition filed by Ginna Nuclear Power Plant (Ginna) regarding the possible retirement of Ginna, the NYPSC directed Ginna and Rochester Gas & Electric Company (RG&E) to negotiate a Reliability Support Services Agreement (RSSA) to support the continued operation of Ginna to maintain the reliability of the RG&E transmission grid for a specified period of time. During 2015 and 2016, Ginna and RG&E made filings with the NYPSC and FERC for their approval of the proposed RSSA. Although the RSSA was still subject to regulatory approvals, on April 1, 2015, Ginna began delivering the power and capacity from the Ginna plant into the ISO-NY consistent with the technical provisions of the RSSA.

On March 22, 2016, Ginna submitted a compliance filing with FERC with revisions to the RSSA requested by FERC. On April 8, 2016, FERC accepted the compliance filing and on April 20, 2016, the NYPSC accepted the revised RSSA with a term expiring on March 31, 2017. In April 2016, Generation began recognizing revenue based on the final approved pricing contained in the RSSA and also recognized a one-time revenue adjustment of approximately $101 million representing the net cumulative previously unrecognized amount of revenue retroactive from the April 1, 2015 effective date through March 31, 2016. A 49.99% portion of the one-time adjustment was removed from Generation's results of operations as a result of the noncontrolling interests in CENG.

The RSSA required Ginna to continue operating through the RSSA term. On September 30, 2016, Ginna filed the required notice with the NYPSC of its intent to continue operating beyond the March 31, 2017 expiry of the RSSA, conditioned upon successful execution of an agreement between Ginna and NYSERDA for the sale of ZECs under the New York CES. As stated previously, on November 18, 2016 the required contract with NYSERDA was executed by Generation and CENG for Ginna. Upon the expiry of the RSSA on March 31, 2017, Ginna was required to make refund payments of $20 million to RG&E related to capital expenditures. Ginna paid RG&E the $20 million in June 2017. Additionally, the provisions of the RSSA provided for a one-time payment of $12 million to be paid from RG&E to Ginna at the end of the contract. This $12 million was recognized in revenue as of March 31, 2017. RG&E paid the $12 million to Ginna in May 2017. Subject to prevailing over any administrative or legal challenges, it is expected the New York CES will allow Ginna to continue to operate through the end of its current operating license in 2029. See Note 7-Early Nuclear Plant Retirements for further information regarding the impacts of a decision to early retire one or more nuclear plants.

Table of Contents

Federal Regulatory Matters

Transmission Formula Rate (Exelon, ComEd, BGE, Pepco, DPL and ACE). The following total increases/(decreases) were included in ComEd's, BGE's, Pepco's, DPL's and ACE's 2017 annual electric transmission formula rate filings:

	2017				
Annual Transmission Filings[(a)]	**ComEd**	**BGE**	**Pepco**	**DPL**	**ACE**
Initial revenue requirement increase	$ 44	$ 31	$ 5	$ 6	$ 20
Annual reconciliation (decrease) increase	(33)	3	15	8	22
Dedicated facilities decrease[(b)]	—	(8)	—	—	—
Total revenue requirement increase	$ 11	$ 26	$ 20	$ 14	$ 42
Allowed return on rate base[(c)]	8.43%	7.47%	7.92%	7.16%	8.02%
Allowed ROE[(d)]	11.50%	10.50%	10.50%	10.50%	10.50%

(a) All rates are effective June 2017, subject to review by the FERC and other parties, which is due by fourth quarter 2017.

(b) BGE's transmission revenues include a FERC approved dedicated facilities charge to recover the costs of providing transmission service to specifically designated load by BGE.

(c) Represents the weighted average debt and equity return on transmission rate bases.

(d) As part of the FERC-approved settlement of ComEd's 2007 transmission rate case, the rate of return on common equity is 11.50% and the common equity component of the ratio used to calculate the weighted average debt and equity return for the transmission formula rate is currently capped at 55%. As part of the FERC-approved settlement of the ROE complaint against BGE, Pepco, DPL and ACE, the rate of return on common equity is 10.50%, inclusive of a 50 basis point incentive adder for being a member of a regional transmission organization.

For additional information regarding transmission formula rate filings see Note 3 — Regulatory Matters of the Exelon 2016 Form 10-K.

Transmission Formula Rate (Exelon and PECO). On May 1, 2017, PECO filed a request with FERC seeking approval to update its transmission rates and change the manner in which PECO's transmission rate is determined from a fixed rate to a formula rate. The formula rate would be updated annually to ensure that under this rate customers pay the actual costs of providing transmission services. The formula rate filing includes a requested increase of $22 million to PECO's annual transmission revenues and a requested rate of return on common equity of 11%, inclusive of a 50 basis point adder for being a member of a regional transmission organization. PECO requested that the new transmission rate be effective as of July 2017. On June 27, 2017, FERC issued an Order accepting the filing and suspending the proposed rates until December 1, 2017, subject to refund, and set the matter for hearing and settlement judge procedures. PECO cannot predict the final outcome of the settlement or hearing proceedings, or the transmission formula FERC may approve.

PJM Transmission Rate Design and Operating Agreements (Exelon, Generation, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE). PJM Transmission Rate Design specifies the rates for transmission service charged to customers within PJM. Currently, ComEd, PECO, BGE, Pepco, DPL and ACE incur costs based on the existing rate design, which charges customers based on the cost of the existing transmission facilities within their load zone and the cost of new transmission facilities based on those who benefit from those facilities. In April 2007, FERC issued an order concluding that PJM's current rate design for existing facilities is just and reasonable and should not be changed. In the same order, FERC held that the costs of new facilities 500 kV and above should be socialized across the entire PJM footprint and that the costs of new facilities less than 500 kV should be allocated to the customers of the new facilities who caused the need for those facilities. A number of parties appealed to the U.S. Court of Appeals for the Seventh Circuit for review of the decision.

In August 2009, the court issued its decision affirming the FERC's order with regard to the existing facilities, but remanded to FERC the issue of the cost allocation associated with the new facilities 500 kV and above (Cost Allocation Issue) for further consideration by the FERC. On remand, FERC reaffirmed its earlier decision to socialize the costs of new facilities 500 kV and above. A number of parties filed appeals of these orders. In June 2014, the court again remanded the Cost Allocation Issue to FERC. On December 18, 2014, FERC issued an order setting an evidentiary hearing and settlement proceeding regarding the Cost Allocation Issue. On June 15, 2016, a number of parties, including

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

Exelon and the Utility Registrants, filed a proposed Settlement with FERC. If the Settlement is approved, 50% of the costs of the 500 kV and above facilities approved by the PJM Board on or before February 1, 2013 will be socialized across PJM and 50% will be allocated according to a formula that calculates the flows on the transmission facilities. Each state that is a party in this proceeding either signed, or did not oppose, the settlement. The Settlement is opposed by a number of merchant transmission owners and New York load-serving entities. The Settlement includes provisions for monthly credits or charges that are expected to be mostly refunded or recovered through customer rates over a 10-year period based on negotiated numbers for charges prior to January 1, 2016.

Exelon expects that the Settlement will not have a material impact on the results of operations, cash flows and financial position of Generation, ComEd, PECO, BGE, Pepco, DPL or ACE. The Settlement is subject to approval by FERC.

DOE Notice of Proposed Rulemaking (Exelon and Generation). On August 23, 2017, the DOE released its report on the reliability of the electric grid. One aspect of the wide-ranging report is the DOE's recognition that the electricity markets do not currently value the resiliency provided by baseload generation, such as nuclear plants. On September, 28, 2017, the DOE issued a Notice of Proposed Rulemaking (NOPR) that would entitle certain eligible resilient generating units (i.e., those located in organized markets, with a 90-day supply of fuel on site, not already subject to state cost of service regulation and satisfying certain other requirements) to recover fully allocated costs and earn a fair return on equity on their investment. The DOE issued the NOPR under an infrequently-used section of the DOE Organization Act under which the FERC has exclusive jurisdiction to consider and take any final action related to NOPRs proposed by the DOE. The DOE NOPR recommended that the FERC take comments for 45 days after publication in the Federal Register and issue a final order 60 days after such publication. On October 2, 2017, the FERC issued a notice inviting comments regarding the DOE NOPR within 21 days and established a new docket wherein the FERC will consider the matter. On October 23, 2017, Exelon filed comments with the FERC, supporting the goals of the NOPR and urging the agency to take swift action to protect customers from power supply interruptions and ensure resiliency in a way that appropriately balances the value and cost to customers. Exelon cannot predict the final outcome of the proceeding or its potential impact, if any, on Exelon or Generation.

Complaints at FERC Seeking to Mitigate Illinois and New York Programs Providing ZECs (Exelon and Generation). PJM and NYISO capacity markets include a Minimum Offer Price Rule (MOPR) that is intended to preclude buyers from exercising buyer market power. If a resource is subjected to a MOPR, its offer is adjusted to remove the revenues it receives through a federal, state or other government-provided financial support program - resulting in a higher offer that may not clear the capacity market. Currently, the MOPRs in PJM and NYISO apply only to certain new resources. Exelon has generally opposed policies that require subsidies or give preferential treatment to generation providers or technologies that do not provide superior reliability or environmental benefits, or that would threaten the reliability and value of the integrated electricity grid. Thus, Exelon has supported a MOPR as a means of minimizing the detrimental impact certain subsidized resources could have on capacity markets (such as the New Jersey (LCAPP) and Maryland (CfD) programs). However, in Exelon's view, MOPRs should not be applied to resources that receive compensation for providing superior reliability or environmental benefits.

On January 9, 2017, the Electric Power Supply Association (EPSA) filed two requests with FERC: one seeking to amend a prior complaint against PJM and another seeking expedited action on a pending NYISO compliance filing in an existing proceeding. Both filings allege that the relevant MOPR should be expanded to also apply to existing resources receiving ZEC compensation under the New York CES and Illinois ZES programs. The EPSA parties have filed motions to expedite both proceedings. Exelon has filed protests at FERC in response to each filing, arguing generally that ZEC payments provide compensation for an environmental attribute that is distinct from the energy and capacity sold in the FERC-jurisdictional markets, and therefore, are no different than other renewable support programs like the PTC and RPS that have generally not been subject to a MOPR. However, if successful, for Generation’s facilities in NYISO and PJM expected to receive ZEC compensation (Quad Cities, Ginna, Nine Mile Point and FitzPatrick), an expanded MOPR could require exclusion of ZEC compensation when bidding into future capacity auctions such that these facilities would have an increased risk of not clearing in those auctions and thus no longer receiving capacity revenues during the respective ZEC programs. Any such mitigation of these generating resources could have a material effect on Exelon’s and Generation’s future cash flows and results of operations. On August 30, 2017, EPSA filed motions to lodge the district court decisions dismissing the complaints and urging FERC to act expeditiously on its requests to expand the MOPR. On September 14, 2017, Exelon filed a response in each docket noting that it does not oppose the motions to lodge but arguing that the requests to expedite a decision on the requests to expand the MOPR have no merit. The timing of FERC’s decision with respect to both proceedings is currently unknown and the outcome of these matters is currently uncertain.

Operating License Renewals (Exelon and Generation). On August 29, 2012, Generation submitted a hydroelectric license application to FERC for a 46-year license for the Conowingo Hydroelectric Project (Conowingo). In connection with Generation's efforts to obtain a water quality certification pursuant to Section 401 of the Clean Water Act with Maryland Department of the Environment (MDE) for Conowingo, Generation continues to work with MDE and other stakeholders to resolve water quality licensing issues, including: (1) water quality, (2) fish habitat, and (3) sediment. In addition, Generation continues to work with MDE and other Federal and Maryland state agencies to conduct and fund an additional sediment and nutrient monitoring study.

On April 21, 2016, Exelon and Interior executed a Settlement Agreement resolving all fish passage issues between the parties. The financial impact of the Settlement Agreement is estimated to be $3 million to $7 million per year, on average, over the 46-year life of the new license, including both capital and operating costs. The actual timing and amount of these costs are not currently fixed and may vary significantly from year to year throughout the life of the new license. Resolution of the remaining issues relating to Conowingo involving various stakeholders may have a material effect on Exelon's and Generation's results of operations and financial position through an increase in capital expenditures and operating costs. As of September 30, 2017, $30 million of direct costs associated with Conowingo licensing efforts have been capitalized. See Note 3 - Regulatory Matters of the Exelon 2016 Form 10-K for additional information on Generation's operating license renewal efforts.

Regulatory Assets and Liabilities (Exelon, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE)

Exelon, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE each prepare their consolidated financial statements in accordance with the authoritative guidance for accounting for certain types of regulation. Under this guidance, regulatory assets represent incurred costs that have been deferred because of their probable future recovery from customers through regulated rates. Regulatory liabilities represent the excess recovery of costs or accrued credits that have been deferred because it is probable such amounts will be returned to customers through future regulated rates or represent billings in advance of expenditures for approved regulatory programs.

As a result of applying the acquisition method of accounting and pushing it down to the consolidated financial statements of PHI, certain regulatory assets and liabilities were established at Exelon and PHI to offset the impacts of fair valuing the acquired assets and liabilities assumed which are subject to regulatory recovery. In total, Exelon and PHI recorded a net $2.4 billion regulatory asset reflecting adjustments recorded as a result of the acquisition method of accounting. See Note 4 — Mergers, Acquisitions and Dispositions for additional information.

(a) As of September 30, 2017 and December 31, 2016, the pension and other postretirement benefits regulatory asset at Exelon includes regulatory assets of $969 million and $995 million, respectively, as a result of the PHI Merger related to unrecognized costs that are probable of regulatory recovery. The regulatory assets are amortized over periods from 3 to 15 years, depending on the underlying component. Pepco, DPL and ACE are currently recovering these costs through base rates. Pepco, DPL and ACE are not earning a return on the recovery of these costs in base rates.

(b) As of September 30, 2017, includes transmission-related income tax regulatory assets that require FERC approval separate from the transmission formula rate of $73 million, $42 million, $34 million, $23 million and $21 million for ComEd, BGE, Pepco, DPL and ACE, respectively. As of December 31, 2016, includes transmission-related regulatory assets that require FERC approval separate from the transmission formula rate of $22 million, $38 million, $31 million, $20 million and $19 million for ComEd, BGE, Pepco, DPL and ACE, respectively. On December 13, 2016, BGE filed with FERC to begin recovering these existing and any similar future regulatory assets through its transmission formula rate. On May 9, 2017, FERC accepted BGE’s filing and made effective BGE's proposed modifications to its transmission formula rate, subject to refund and further Commission order. ComEd, Pepco, DPL, and ACE are expected to make similar filings with FERC and other parties in subsequent periods.

(c) As of September 30, 2017, ComEd's regulatory asset of $256 million was comprised of $200 million for the 2015 - 2017 annual reconciliations and $56 million related to significant one-time events including $11 million of deferred storm costs, $7 million of Constellation and PHI merger and integration related costs, $6 million of emerald ash borer costs, and $32 million of smart meter related costs. As of December 31, 2016, ComEd's regulatory asset of $188 million was comprised of $134 million for the 2015 and 2016 annual reconciliations and $54 million related to significant one-time events, including $20 million of deferred storm costs and $11 million of Constellation and PHI merger and integration related costs, and $23 million of smart meter related costs. See Note 4— Mergers, Acquisitions and Dispositions of the Exelon 2016 Form 10-K for further information.

(d) As of September 30, 2017, ComEd's regulatory liability of $54 million included $22 million related to over-recovered energy costs and $32 million associated with revenues received for renewable energy requirements. As of December 31, 2016, ComEd's regulatory asset of $23 million included $15 million associated with transmission costs recoverable through its FERC approved formula rate and $8 million of Constellation merger and integration costs to be recovered upon FERC approval. As of December 31, 2016, ComEd's regulatory liability of $60 million included $30 million related to over-recovered energy costs and $30 million associated with revenues received for renewable energy requirements.

(e) As of September 30, 2017, PECO's regulatory liability of $68 million included $34 million related to over-recovered costs under the DSP program, $21 million related to the over-recovered natural gas costs under the PGC and $13 million related to over-recovered non-bypassable transmission service charges. As of December 31, 2016, PECO's regulatory liability of $56 million included $34 million related to over-recovered costs under the DSP program, $10 million related to over-recovered non-bypassable transmission service charges, $8 million related to the over-recovered natural gas costs under the PGC and $4 million related to the over-recovered electric transmission costs.

(f) As of September 30, 2017, BGE's regulatory asset of $26 million included $5 million related to under-recovered electric energy costs, $14 million related to under-recovered natural gas costs, $3 million of costs associated with transmission costs recoverable through its FERC approved formula rate and $4 million of abandonment costs to be recovered upon FERC approval. As of December 31, 2016, BGE's regulatory asset of $38 million included $4 million of costs associated with transmission costs recoverable through its FERC approved formula rate, $28 million related to under-recovered electric energy costs, $3 million of abandonment costs to be recovered upon FERC approval, and $3 million of under-recovered natural gas costs.

(g) As of September 30, 2017, Pepco's regulatory asset of $6 million included $3 million of transmission costs recoverable through its FERC approved formula rate and $3 million of under-recovered electric energy costs. As of September 30, 2017, Pepco's regulatory liability of $3 million related to over-recovered electric energy costs. As of December 31, 2016, Pepco's regulatory asset of $6 million related to under-recovered electric energy costs. As of December 31, 2016, Pepco's regulatory liability of $8 million included $5 million of over-recovered transmission costs and $3 million of over-recovered electric energy costs.

(h) As of September 30, 2017, DPL's regulatory asset of $9 million included $4 million of transmission costs recoverable through its FERC approved formula rate and $5 million related to under-recovered electric energy costs. As of September 30, 2017, DPL's regulatory liability of $9 million related to over-recovered electric energy costs. As of December 31, 2016, DPL's regulatory asset of $5 million included $1 million of transmission costs recoverable through its FERC approved formula rate and $4 million of under-recovered electric energy costs. As of December 31, 2016, DPL's regulatory liability of $5 million included $2 million of over-recovered electric energy costs and $3 million of over-recovered transmission costs.

(i) As of September 30, 2017, ACE's regulatory asset of $21 million included $11 million of transmission costs recoverable through its FERC approved formula rate and $10 million of under-recovered electric energy costs. As of September 30, 2017, ACE's regulatory liability of $5 million related to over-recovered electric energy costs. As of December 31, 2016, ACE's regulatory asset of $17 million included $6 million of transmission costs recoverable through its FERC approved formula rate and $11 million of under-recovered electric energy costs. As of December 31, 2016, ACE's regulatory liability of $5 million included $4 million of over-recovered transmission costs and $1 million of over-recovered electric energy costs.

(j) As of September 30, 2017 and December 31, 2016, BGE's regulatory asset of $7 million and $10 million, respectively, included $5 million and $6 million, respectively, of previously incurred PHI acquisition costs as authorized by the June 2016 rate case order.

(k) As of September 30, 2017, Pepco's regulatory asset of $20 million represents previously incurred PHI acquisition costs, including $11 million authorized for recovery in Maryland and $9 million expected to be recovered in the District of Columbia service territory. As of December 31, 2016, Pepco's regulatory asset of $11 million represents previously incurred PHI acquisition costs authorized for recovery in Maryland.

(l) As of September 30, 2017, DPL's regulatory asset of $11 million represents previously incurred PHI acquisition costs, including $4 million authorized for recovery in Maryland, $5 million authorized for recovery in Delaware electric rates, and $2 million expected to be recovered in electric and gas rates in the Delaware service territory. As of December 31, 2016, DPL's regulatory asset of $4 million represents previously incurred PHI acquisition costs expected to be recovered in the Maryland service territory.

(m) As of September 30, 2017, ACE's regulatory asset of $9 million represents previously incurred PHI acquisition costs expected to be recovered in the New Jersey service territory.

(n) Represents the electric and natural gas distribution costs recoverable from customers under BGE's decoupling mechanism. As of September 30, 2017, BGE had a regulatory asset of $24 million related to under-recovered electric revenue decoupling and $10 million related to under-recovered natural gas revenue decoupling. As of December 31, 2016, BGE had a regulatory asset of $2 million related to under-recovered natural gas revenue decoupling and $1 million related to under-recovered electric revenue decoupling.

Capitalized Ratemaking Amounts Not Recognized (Exelon, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE)

The following table illustrates our authorized amounts capitalized for ratemaking purposes related to earnings on shareholders' investment that are not recognized for financial reporting purposes on our Consolidated Balance Sheets. These amounts will be recognized as revenues in our Consolidated Statements of Operations and Comprehensive Income in the periods they are billable to our customers.

	Exelon	ComEd[a]	PECO	BGE[b]	PHI	Pepco[c]	DPL[c]	ACE
September 30, 2017	$ 71	$ 7	$ —	$ 54	$ 10	$ 6	$ 4	$ —

	Exelon	ComEd[a]	PECO	BGE[b]	PHI	Pepco[c]	DPL[c]	ACE
December 31, 2016	$ 72	$ 5	$ —	$ 57	$ 10	$ 6	$ 4	$ —

(a) Reflects ComEd's unrecognized equity returns earned for ratemaking purposes on its under-recovered distribution services costs regulatory assets.

(b) BGE's authorized amounts capitalized for ratemaking purposes primarily relate to earnings on shareholders' investment on its AMI Programs.

(c) Pepco's and DPL's authorized amounts capitalized for ratemaking purposes relate to earnings on shareholders' investment on their respective AMI Programs and Energy Efficiency and Demand Response Programs. The earnings on energy efficiency are on Pepco DC and DPL DE programs only.

Table of Contents

Purchase of Receivables Programs (Exelon, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE)

ComEd, PECO, BGE, Pepco, DPL and ACE are required, under separate legislation and regulations in Illinois, Pennsylvania, Maryland, District of Columbia and New Jersey, to purchase certain receivables from retail electric and natural gas suppliers that participate in the utilities' consolidated billing. ComEd, BGE, Pepco and DPL purchase receivables at a discount to recover primarily uncollectible accounts expense from the suppliers. PECO is required to purchase receivables at face value and is permitted to recover uncollectible accounts expense, including those from Third Party Suppliers, from customers through distribution rates. ACE purchases receivables at face value. ACE recovers all uncollectible accounts expense, including those from Third Party Suppliers, through the Societal Benefits Charge (SBC) rider, which includes uncollectible accounts expense as a component. The SBC is filed annually with the NJBPU. Exelon, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE do not record unbilled commodity receivables under the POR programs. Purchased billed receivables are classified in Other accounts receivable, net on Exelon's, ComEd's, PECO's, BGE's, PHI's, Pepco's, DPL's and ACE's Consolidated Balance Sheets. The following tables provide information about the purchased receivables of those companies as of September 30, 2017 and December 31, 2016.

					Successor			
As of September 30, 2017	**Exelon**	**ComEd**	**PECO**	**BGE**	**PHI**	**Pepco**	**DPL**	**ACE**
Purchased receivables	$ 312	$ 89	$ 68	$ 55	$ 100	$ 66	$ 10	$ 24
Allowance for uncollectible accounts[a]	(33)	(13)	(5)	(4)	(11)	(6)	(1)	(4)
Purchased receivables, net	$ 279	$ 76	$ 63	$ 51	$ 89	$ 60	$ 9	$ 20

					Successor			
As of December 31, 2016	**Exelon**	**ComEd**	**PECO**	**BGE**	**PHI**	**Pepco**	**DPL**	**ACE**
Purchased receivables	$ 313	$ 87	$ 72	$ 59	$ 95	$ 63	$ 10	$ 22
Allowance for uncollectible accounts[a]	(37)	(14)	(6)	(4)	(13)	(7)	(2)	(4)
Purchased receivables, net	$ 276	$ 73	$ 66	$ 55	$ 82	$ 56	$ 8	$ 18

(a) For ComEd, BGE, Pepco and DPL, reflects the incremental allowance for uncollectible accounts recorded, which is in addition to the purchase discount. For ComEd, the incremental uncollectible accounts expense is recovered through its Purchase of Receivables with Consolidated Billing tariff.

6. Impairment of Long-Lived Assets (Exelon and Generation)

Long-Lived Assets (Exelon and Generation)

Generation evaluates long-lived assets for recoverability whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. EGTP's operating cash flows have been negatively impacted by certain market conditions and the seasonality of its cash flows. On May 2, 2017, EGTP entered into a consent agreement with its lenders to initiate an orderly sales process to sell the assets of its wholly owned subsidiaries, the proceeds from which will first be used to pay the administrative costs of the sale, the normal and ordinary costs of operating the plants and repayment of the secured debt of EGTP. As a result, as of June 30, 2017, and September 30, 2017, certain of EGTP's assets and liabilities were classified as held for sale at their respective fair values less costs to sell and included in the other current assets and other current liabilities balances on Exelon's and Generation's Consolidated Balance Sheets. As of June 30, 2017, the fair value analysis was based on an income approach using significant unobservable inputs (Level 3) including revenue and generation forecasts, projected capital and maintenance expenditures and discount rates. As a result of this analysis, in the second quarter 2017, Exelon and Generation recorded a pre-tax impairment charge of $418 million within Operating and maintenance expense on their Consolidated Statements of Operations and Comprehensive Income. In the third quarter 2017, Exelon and Generation recorded an additional pre-tax impairment charge of $40 million within Operating and maintenance expense on their Consolidated Statements of Operations and Comprehensive Income to reflect an indicated decline in fair value based on new information obtained in the quarter through the orderly sales process. See Note 4 - Mergers, Acquisitions and Dispositions and Note 11 - Debt and Credit Agreements, for further information.

During the first quarter of 2016, significant changes in Generation’s intended use of the Upstream oil and gas assets, developments with nonrecourse debt held by its upstream subsidiary CEU Holdings, LLC (as described in Note

14 - Debt and Credit Agreements of the Exelon 2016 Form 10-K) and continued declines in both production volumes and commodity prices suggested that the carrying value may be impaired. Generation concluded that the estimated undiscounted future cash flows and fair value of its Upstream properties were less than their carrying values. As a result, a pre-tax impairment charge of $119 million was recorded in March 2016 within Operating and maintenance expense in Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income. On June 16, 2016, Generation initiated the sales process of its Upstream business by executing a forbearance agreement with the lenders of the nonrecourse debt. An additional pre-tax impairment charge of $15 million was recorded in September 2016 within Operating and maintenance expense in Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income due to further declines in fair value. In December 2016, Generation sold substantially all of the Upstream Assets. See Note 4 - Mergers, Acquisitions and Dispositions of the Exelon 2016 Form 10-K for further information.

In the second quarter of 2016, updates to the Company's long-term view of energy and capacity prices suggested that the carrying value of a group of merchant wind assets, located in West Texas, may be impaired. Upon review, the estimated undiscounted future cash flows and fair value of the group were less than their carrying value. The fair value analysis was based on the income approach using significant unobservable inputs (Level 3) including revenue and generation forecasts, projected capital and maintenance expenditures and discount rates. As a result of the fair value analysis, long-lived assets held and used with a carrying amount of approximately $60 million were written down to their fair value of $24 million and a pre-tax impairment charge of $36 million was recorded during the second quarter in Operating and maintenance expense in Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income.

Also in the second quarter of 2016, updates to the Company's long-term view, as described above, in conjunction with the previous decision to early retire the Clinton and Quad Cities nuclear facilities in Illinois suggested that the carrying value of our Midwest asset group may be impaired. Generation completed a comprehensive review of the estimated undiscounted future cash flows of the Midwest asset group and no impairment charge was required.

Like-Kind Exchange Transaction (Exelon)

In June 2000, UII, LLC (formerly Unicom Investments, Inc.) (UII), a wholly owned subsidiary of Exelon Corporation, entered into transactions pursuant to which UII invested in coal-fired generating station leases (Headleases) with the Municipal Electric Authority of Georgia (MEAG). The generating stations were leased back to MEAG as part of the transactions (Leases).

On March 31, 2016, UII and MEAG finalized an agreement to terminate the MEAG Headleases, the MEAG Leases, and other related agreements prior to their expiration dates. As a result of the lease termination, UII received an early termination payment of $360 million from MEAG and wrote-off the $356 million net investment in the MEAG Headleases and the Leases. The transaction resulted in a pre-tax gain of $4 million which is reflected in Operating and maintenance expense in Exelon's Consolidated Statements of Operations and Comprehensive Income. See Note 12—Income Taxes for additional information.

7. Early Nuclear Plant Retirements (Exelon and Generation)

Exelon and Generation continue to evaluate the current and expected economic value of each of Generation's nuclear plants. Factors that will continue to affect the economic value of Generation's nuclear plants include, but are not limited to: market power prices, results of capacity auctions, potential legislative and regulatory solutions to ensure nuclear plants are fairly compensated for their carbon-free emissions, and the impact of potential rules from the EPA requiring reduction of carbon and other emissions and the efforts of states to implement those final rules. The precise timing of an early retirement date for any nuclear plant, and the resulting financial statement impacts, may be affected by a number of factors, including the status of potential regulatory or legislative solutions, results of any transmission system reliability study assessments, the nature of any co-owner requirements and stipulations, and decommissioning trust fund requirements, among other factors. However, the earliest retirement date for any plant would usually be the first year in which the unit does not have capacity or other obligations, where applicable, and just prior to its next scheduled nuclear refueling outage.

In 2015 and 2016, Generation identified the Clinton, Quad Cities, Ginna, Nine Mile Point, and Three Mile Island (TMI) nuclear plants as having the greatest risk of early retirement based on economic valuation and other factors. PSEG has also recently made public similar financial challenges facing its New Jersey nuclear plants including Salem, of which Generation owns a 42.59% ownership interest. As previously disclosed, Exelon and Generation have committed to cease operation of the Oyster Creek nuclear plant by the end of 2019.

The TMI nuclear plant did not clear in the May 2017 PJM capacity auction for the 2020-2021 planning year and will not receive capacity revenue for that period, the third consecutive year that TMI failed to clear the PJM base residual capacity auction. The plant is currently committed to operate through May 2019.

Based on these capacity auction results, prolonged periods of low wholesale power prices, and the absence of federal or state policies that place a value on nuclear energy for its ability to produce electricity without air pollution, Exelon announced that Generation will permanently cease generation operations at TMI on or about September 30, 2019. The current NRC license for TMI expires in 2034. Generation is proceeding with the market and regulatory notifications that must be made to shut down the plant, including filing of a deactivation notice with PJM on May 30, 2017 and notification to the NRC on June 20, 2017. PJM has subsequently notified Generation that it has not identified any reliability issues and has approved the deactivation of TMI as proposed.

In 2017, as a result of the plant retirement decision of TMI, Exelon and Generation recognized one-time charges in Operating and maintenance expense of $76 million related to materials and supplies inventory reserve adjustments, employee-related costs and construction work-in-progress (CWIP) impairments, among other items. In addition to these one-time charges, there will be ongoing annual incremental non-cash charges to earnings stemming from shortening the expected economic useful life of TMI primarily related to accelerated depreciation of plant assets (including any ARC), accelerated amortization of nuclear fuel, and additional ARO accretion expense associated with the changes in decommissioning timing and cost assumptions. During the three and nine months ended September 30, 2017, both Exelon's and Generation's results include an incremental $112 million and $149 million, respectively, of pre-tax expense for these items. Please refer to Note 13 — Nuclear Decommissioning for additional detail on changes to the nuclear decommissioning ARO balances resulting from the early retirement of TMI.

Income statement expense (pre-tax)	**Q3 2017**	**YTD 2017**
Depreciation and amortization		
Accelerated depreciation[a]	$ 106	$ 141
Accelerated nuclear fuel amortization	6	8
Total	$ 112	$ 149

(a) Reflects incremental accelerated depreciation of plant assets, including any ARC.

Based on insufficient capacity auction results and the lack of progress on Illinois energy legislation, on June 2, 2016, Generation announced a decision to shut down the Clinton and Quad Cities nuclear plants on June 1, 2017 and June 1, 2018, respectively. With the passage of the Illinois ZES on December 7, 2016, and subject to prevailing over any related administrative or legal challenges, Generation reversed this decision and revised the expected economic useful lives for both facilities; 2027 for Clinton and 2032 for Quad Cities. Refer to Note 5 - Regulatory Matters for additional discussion on the Illinois ZES.

Exelon's and Generation's 2016 results included a net incremental $714 million of total pre-tax expense associated with the initial early retirement decision for Clinton and Quad Cities, as summarized in the table below.

Income statement expense (pre-tax)	**Q2 2016**	**Q3 2016**	**Q4 2016**	**YTD 2016**

Depreciation and amortization				
Accelerated depreciation[a]	$ 115	$ 344	$ 253	$ 712
Accelerated Nuclear Fuel amortization	9	28	23	60
Operating and maintenance				
One time charges[b]	141	5	(120)	26
ARO accretion, net of contractual offset[c]	—	2	—	2
Contractual offset for ARC depreciation[c]	(14)	(41)	(31)	(86)
Total	$ 251	$ 338	$ 125	$ 714

(a) Reflects incremental accelerated depreciation of plant assets, including any ARC, for the period June 2, 2016, through December 6, 2016.

(b) Primarily includes materials and supplies inventory reserve adjustments, employee related costs and CWIP impairments.

(c) For Quad Cities based on the regulatory agreement with the Illinois Commerce Commission, decommissioning-related activities are offset within Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income. The offset results in an equal adjustment to the noncurrent payables to ComEd at Generation and an adjustment to the regulatory liabilities at ComEd. Likewise, ComEd has recorded an equal noncurrent affiliate receivable from Generation and corresponding regulatory liability.

In New York, the Ginna, Nine Mile Point, and Generation's recently acquired FitzPatrick nuclear plant also faced significant economic challenges and risk of retirement before the end of each unit's respective operating license period (2029 for Ginna and Nine Mile Point Unit 1, 2046 for Nine Mile Point Unit 2, and 2034 for FitzPatrick). On August 1, 2016, the NYPSC issued an order adopting the New York CES that, subject to prevailing over any administrative or legal challenges, would allow Ginna, Nine Mile Point, and FitzPatrick to continue to operate at least through the life of the program (March 31, 2029). The assumed useful life for depreciation purposes for each facility is through the end of their current operating licenses. Ginna most recently operated under an RSSA which expired March 31, 2017 and has filed the required notice with the NYPSC of its intent to continue operating beyond the expiry of the RSSA. Refer to Note 4 - Mergers, Acquisitions and Dispositions for additional information on Generation's acquisition of FitzPatrick and Note 5 - Regulatory Matters for additional discussion on the Ginna RSSA and the New York CES.

Assuming the successful implementation of the Illinois ZES and the New York CES and the continued effectiveness of these programs, Generation and CENG, through its ownership of Ginna and Nine Mile Point, no longer consider Clinton, Quad Cities, Ginna or Nine Mile Point to be at heightened risk for early retirement. However, to the extent either the Illinois ZES or the New York CES programs do not operate as expected over their full terms, each of these plants (and now including the newly acquired FitzPatrick) could again be at heightened risk for early retirement, which could have a material impact on Exelon's and Generation's future results of operations, cash flows and financial position.

8. Intangible Assets (Exelon and PHI)

In the third quarter of 2015, PHI entered into a sponsorship agreement with the District of Columbia for future sponsorship rights associated with public property within the District of Columbia and paid the District of Columbia $25 million. The specific sponsorship rights were to be determined over time through future negotiations. As of September 30, 2017, PHI has recorded the sponsorship agreement as a finite-lived intangible asset with a $25 million carrying amount. Because no specific sponsorship agreements have yet been entered into with the District of Columbia, amortization of the finite-lived intangible asset has yet to commence. In the third quarter of 2017, PHI continued discussions with the District of Columbia regarding the nature and timing of available sponsorship opportunities, and based on these ongoing discussions, will continue to evaluate any potential impact on the valuation of the sponsorship intangible asset.

9. Fair Value of Financial Assets and Liabilities (All Registrants)

Fair Value of Financial Liabilities Recorded at the Carrying Amount

The following tables present the carrying amounts and fair values of the Registrants' short-term liabilities, long-term debt, SNF obligation, and trust preferred securities (long-term debt to financing trusts or junior subordinated debentures) as of September 30, 2017 and December 31, 2016:

Exelon

	September 30, 2017				
		Fair Value			
	Carrying Amount	Level 1	Level 2	Level 3	Total
Short-term liabilities	$ 710	$ —	$ 710	$ —	$ 710
Long-term debt (including amounts due within one year)[(a)]	34,865	—	34,686	1,949	36,635
Long-term debt to financing trusts[(b)]	389	—	—	423	423
SNF obligation	1,142	—	857	—	857

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

	December 31, 2016				
		Fair Value			
	Carrying Amount	Level 1	Level 2	Level 3	Total
Short-term liabilities	$ 1,267	$ —	$ 1,267	$ —	$ 1,267

(a) Includes unamortized debt issuance costs which are not fair valued of $196 million, $51 million, $53 million, $17 million, $17 million, $6 million, $32 million, $11 million, and $5 million for Exelon, Generation, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE, respectively, as of September 30, 2017. Includes unamortized debt issuance costs which are not fair valued of $200 million, $64 million, $46 million, $15 million, $15 million, $2 million, $30 million, $11 million, and $6 million for Exelon, Generation, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE, respectively, as of December 31, 2016.

(b) Includes unamortized debt issuance costs which are not fair valued of $1 million and $1 million for Exelon and ComEd, respectively, as of September 30, 2017. Includes unamortized debt issuance costs which are not fair valued of $7 million, $1 million, and $6 million for Exelon, ComEd and BGE, respectively, as of December 31, 2016.

Short-Term Liabilities. The short-term liabilities included in the tables above are comprised of dividends payable (included in other current liabilities) (Level 1) and short-term borrowings (Level 2). The Registrants' carrying amounts of the short-term liabilities are representative of fair value because of the short-term nature of these instruments.

Long-Term Debt. The fair value amounts of Exelon's taxable debt securities (Level 2) and private placement taxable debt securities (Level 3) are determined by a valuation model that is based on a conventional discounted cash flow methodology and utilizes assumptions of current market pricing curves. In order to incorporate the credit risk of the Registrants into the discount rates, Exelon obtains pricing (i.e., U.S. Treasury rate plus credit spread) based on trades of existing Exelon debt securities as well as debt securities of other issuers in the utility sector with similar credit ratings in both the primary and secondary market, across the Registrants' debt maturity spectrum. The credit spreads of various tenors obtained from this information are added to the appropriate benchmark U.S. Treasury rates in order to determine the current market yields for the various tenors. The yields are then converted into discount rates of various tenors that are used for discounting the respective cash flows of the same tenor for each bond or note. Due to low trading volume of private placement debt, qualitative factors such as market conditions, low volume of investors and investor demand, this debt is classified as Level 3. The fair value of Exelon's equity units (Level 1) are valued based on publicly traded securities issued by Exelon.

The fair value of Generation's and Pepco's non-government-backed fixed rate nonrecourse debt (Level 3) is based on market and quoted prices for its own and other nonrecourse debt with similar risk profiles. Given the low trading volume in the nonrecourse debt market, the price quotes used to determine fair value will reflect certain qualitative factors, such as market conditions, investor demand, new developments that might significantly impact the project cash flows or off-taker credit, and other circumstances related to the project (e.g., political and regulatory environment). The fair value of Generation's government-backed fixed rate project financing debt (Level 3) is largely based on a discounted cash flow methodology that is similar to the taxable debt securities methodology described above. Due to the lack of market trading data on similar debt, the discount rates are derived based on the original loan interest rate spread to the applicable Treasury rate as well as a current market curve derived from government-backed securities. Variable rate financing debt resets on a monthly or quarterly basis and the carrying value approximates fair value (Level 2). When trading data is available on variable rate financing debt, the fair value is based on market and quoted prices for its own and other nonrecourse debt with similar risk profiles (Level 2). Generation, Pepco, DPL and ACE also have tax-exempt debt (Level 2). Due to low trading volume in this market, qualitative factors, such as market conditions, investor demand, and circumstances related to the issuer (e.g., conduit issuer political and regulatory environment), may be incorporated into the credit spreads that are used to obtain the fair value as described above. Variable rate tax-exempt debt (Level 2) resets on a regular basis and the carrying value approximates fair value.

SNF Obligation. The carrying amount of Generation's SNF obligation (Level 2) is derived from a contract with the DOE to provide for disposal of SNF from Generation's nuclear generating stations. When determining the fair value of the obligation, the future carrying amount of the SNF obligation is calculated by compounding the current book value of the SNF obligation at the 13-week Treasury rate. The compounded obligation amount is discounted back to present value using Generation's discount rate, which is calculated using the same methodology as described above for the taxable debt securities, and an estimated maturity date of 2030. The carrying amount also includes $112 million as of September 30, 2017 for the one-time fee obligation associated with closing of the FitzPatrick acquisition on March 31, 2017. The fair value was determined using a similar methodology, however the New York Power Authority's (NYPA) discount rate is used in place of Generation's given the contractual right to reimbursement from NYPA for the obligation; see Note 4 - Mergers, Acquisitions and Dispositions for additional information on Generation's acquisition of FitzPatrick.

Long-Term Debt to Financing Trusts. Exelon's long-term debt to financing trusts is valued based on publicly traded securities issued by the financing trusts. Due to low trading volume of these securities, qualitative factors, such as market conditions, investor demand, and circumstances related to each issue, this debt is classified as Level 3.

Recurring Fair Value Measurements

Exelon records the fair value of assets and liabilities in accordance with the hierarchy established by the authoritative guidance for fair value measurements. The hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three levels as follows:

- Level 1 — quoted prices (unadjusted) in active markets for identical assets or liabilities that the Registrants have the ability to liquidate as of the reporting date.
- Level 2 — inputs other than quoted prices included within Level 1 that are directly observable for the asset or liability or indirectly observable through corroboration with observable market data.
- Level 3 — unobservable inputs, such as internally developed pricing models or third-party valuations for the asset or liability due to little or no market activity for the asset or liability.

Transfers in and out of levels are recognized as of the end of the reporting period when the transfer occurred. Given derivatives categorized within Level 1 are valued using exchange-based quoted prices within observable periods, transfers between Level 2 and Level 1 were not material. Additionally, there were no material transfers between Level 1 and Level 2 during the nine months ended September 30, 2017 for cash equivalents, nuclear decommissioning trust fund investments, pledged assets for Zion Station decommissioning, Rabbi trust investments, and deferred compensation obligations. For derivative contracts, transfers into Level 2 from Level 3 generally occur when the contract tenor becomes more observable and due to changes in market liquidity or assumptions for certain commodity contracts.

Table of Contents

Generation and Exelon

In accordance with the applicable guidance on fair value measurement, certain investments that are measured at fair value using the NAV per share as a practical expedient are no longer classified within the fair value hierarchy and are included under "Not subject to leveling" in the table below.

The following tables present assets and liabilities measured and recorded at fair value on Exelon's and Generation's Consolidated Balance Sheets on a recurring basis and their level within the fair value hierarchy as of September 30, 2017 and December 31, 2016:

(a) Generation excludes cash of $282 million and $252 million at September 30, 2017 and December 31, 2016 and restricted cash of $184 million and $157 million at September 30, 2017 and December 31, 2016. Exelon excludes cash of $382 million and $360 million at September 30, 2017 and December 31, 2016 and restricted cash of $219 million and $180 million at September 30, 2017 and December 31, 2016 and includes long-term restricted cash of $22 million and $25 million at September 30, 2017 and December 31, 2016, which is reported in other deferred debits on the balance sheet.

(b) Includes $75 million and $29 million of cash received from outstanding repurchase agreements at September 30, 2017 and December 31, 2016, respectively, and is offset by an obligation to repay upon settlement of the agreement as discussed in (d) below.

(c) Includes derivative instruments of less than $1 million and $(2) million, which have a total notional amount of $885 million and $933 million at September 30, 2017 and December 31, 2016, respectively. The notional principal amounts for these instruments provide one measure of the transaction volume outstanding as of the fiscal years ended and do not represent the amount of the company's exposure to credit or market loss.

(d) Excludes net liabilities of $52 million and $31 million at September 30, 2017 and December 31, 2016, respectively. These items consist of receivables related to pending securities sales, interest and dividend receivables, repurchase agreement obligations, and payables related to pending securities purchases. The repurchase agreements are generally short-term in nature with durations generally of 30 days or less.

(e) Excludes net assets of less than $1 million at September 30, 2017 and December 31, 2016. These items consist of receivables related to pending securities sales, interest and dividend receivables, and payables related to pending securities purchases.

(f) Collateral posted/(received) from counterparties totaled $59 million, $215 million and $141 million allocated to Level 1, Level 2 and Level 3 mark-to-market derivatives, respectively, as of September 30, 2017. Collateral posted/(received) from counterparties, net of collateral paid to counterparties, totaled $71 million, $197 million and $61 million allocated to Level 1, Level 2 and Level 3 mark-to-market derivatives, respectively, as of December 31, 2016.

(g) Of the collateral posted/(received), $27 million represents variation margin on the exchanges as of September 30, 2017. Of the collateral posted/(received), $(158) million represents variation margin on the exchanges as of December 31, 2016.

(a) Other, net activity consists of realized and unrealized gains (losses) included in income for the NDT funds held by Generation, accrued interest on a convertible promissory note at Generation and the life insurance contracts held by PHI and Pepco.

Valuation Techniques Used to Determine Fair Value

The following describes the valuation techniques used to measure the fair value of the assets and liabilities shown in the tables above.

Cash Equivalents (Exelon, Generation, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE). The Registrants' cash equivalents include investments with original maturities of three months or less when purchased. The cash equivalents shown in the fair value tables are comprised of investments in mutual and money market funds. The fair values of the shares of these funds are based on observable market prices and, therefore, have been categorized in Level 1 in the fair value hierarchy.

Preferred Stock Derivative (PHI). In connection with entering into the PHI Merger Agreement, PHI entered into a Subscription Agreement with Exelon dated April 29, 2014, pursuant to which PHI issued to Exelon shares of Preferred stock. The Preferred stock contained embedded features requiring separate accounting consideration to reflect the potential value to PHI that any issued and outstanding Preferred stock could be called and redeemed at a nominal par value upon a termination of the merger agreement under certain circumstances due to the failure to obtain required regulatory approvals. The embedded call and redemption features on the shares of the Preferred stock in the event of such a termination were separately accounted for as derivatives. These Preferred stock derivatives were valued quarterly using quantitative and qualitative factors, including management's assessment of the likelihood of a Regulatory Termination and therefore, were categorized in Level 3 in the fair value hierarchy. As a result of the PHI Merger, the PHI Preferred stock derivative was reduced to zero as of March 23, 2016. The write-off was charged to Other, net on the PHI Consolidated Statement of Operations and Comprehensive Income.

Nuclear Decommissioning Trust Fund Investments and Pledged Assets for Zion Station Decommissioning (Exelon and Generation). The trust fund investments have been established to satisfy Generation's and CENG's nuclear decommissioning obligations as required by the NRC. The NDT funds hold debt and equity securities directly and indirectly through commingled funds and mutual funds, which are included in Equities and Fixed Income. Generation's and CENG's NDT fund investments policies outline investment guidelines for the trusts and limit the trust funds' exposures to investments in highly illiquid markets and other alternative investments. Investments with maturities of three months or less when purchased, including certain short-term fixed income securities are considered cash equivalents and included in the recurring fair value measurements hierarchy as Level 1 or Level 2.

With respect to individually held equity securities, the trustees obtain prices from pricing services, whose prices are generally obtained from direct feeds from market exchanges, which Generation is able to independently corroborate. The fair values of equity securities held directly by the trust funds which are based on quoted prices in active markets are categorized in Level 1. Certain equity securities have been categorized as Level 2 because they are based on evaluated prices that reflect observable market information, such as actual trade information or similar securities. Equity securities held individually are primarily traded on the New York Stock Exchange and NASDAQ-Global Select Market, which contain only actively traded securities due to the volume trading requirements imposed by these exchanges.

For fixed income securities, multiple prices from pricing services are obtained whenever possible, which enables cross-provider validations in addition to checks for unusual daily movements. A primary price source is identified based on asset type, class or issue for each security. With respect to individually held fixed income securities, the trustees monitor prices supplied by pricing services and may use a supplemental price source or change the primary price source of a given security if the portfolio managers challenge an assigned price and the trustees determine that another price source is considered to be preferable. Generation has obtained an understanding of how these prices are derived, including the nature and observability of the inputs used in deriving such prices. Additionally, Generation selectively corroborates the fair values of securities by comparison to other market-based price sources. U.S. Treasury securities are categorized as Level 1 because they trade in a highly liquid and transparent market. The fair values of fixed income securities, excluding U.S. Treasury securities, are based on evaluated prices that reflect observable market information, such as actual trade information or similar securities, adjusted for observable differences and are categorized in Level 2. The fair values of private placement fixed income securities, which are included in Corporate debt, are determined using a third party valuation that contains significant unobservable inputs and are categorized in Level 3.

Equity and fixed income commingled funds and mutual funds are maintained by investment companies and hold certain investments in accordance with a stated set of fund objectives such as holding short-term fixed income securities or tracking the performance of certain equity indices by purchasing equity securities to replicate the capitalization and characteristics of the indices. The values of some of these funds are publicly quoted. For mutual funds which are publicly quoted, the funds are valued based on quoted prices in active markets and have been categorized as Level 1. For commingled funds and mutual funds, which are not publicly quoted, the funds are valued using NAV as a practical expedient for fair value, which is primarily derived from the quoted prices in active markets on the underlying securities, and are not classified within the fair value hierarchy. These investments typically can be redeemed monthly with 30 or less days of notice and without further restrictions.

Derivative instruments consisting primarily of futures and interest rate swaps to manage risk are recorded at fair value. Over the counter derivatives are valued daily based on quoted prices in active markets and trade in open markets, and have been categorized as Level 1. Derivative instruments other than over the counter derivatives are valued based on external price data of comparable securities and have been categorized as Level 2.

Middle market lending are investments in loans or managed funds which lend to private companies. Generation elected the fair value option for its investments in certain limited partnerships that invest in middle market lending managed funds. The fair value of these loans is determined using a combination of valuation models including cost models, market models and income models. Investments in loans are categorized as Level 3 because the fair value of these securities is based largely on inputs that are unobservable and utilize complex valuation models. Managed funds are valued using NAV or its equivalent as a practical expedient, and therefore, are not classified within the fair value hierarchy. Investments in middle market lending typically cannot be redeemed until maturity of the term loan.

Private equity and real estate investments include those in limited partnerships that invest in operating companies and real estate holding companies that are not publicly traded on a stock exchange, such as, leveraged buyouts, growth capital, venture capital, distressed investments, investments in natural resources, and direct investments in pools of real estate properties. The fair value of private equity and real estate investments is determined using NAV or its equivalent as a practical expedient, and therefore, are not classified within the fair value hierarchy. These investments typically cannot be redeemed and are generally liquidated over a period of 8 to 10 years from the initial investment date. Private equity and real estate valuations are reported by the fund manager and are based on the valuation of the underlying investments, which include inputs such as cost, operating results, discounted future cash flows, market based comparable data, and independent appraisals from sources with professional qualifications. These valuation inputs are unobservable.

As of September 30, 2017, Generation has outstanding commitments to invest in fixed income, middle market lending, private equity and real estate investments of approximately $75 million, $285 million, $240 million, and $95 million, respectively. These commitments will be funded by Generation’s existing nuclear decommissioning trust funds.

Concentrations of Credit Risk. Generation evaluated its NDT portfolios for the existence of significant concentrations of credit risk as of September 30, 2017. Types of concentrations that were evaluated include, but are not limited to, investment concentrations in a single entity, type of industry, foreign country, and individual fund. As of September 30, 2017, there were no significant concentrations (generally defined as greater than 10 percent) of risk in Generation’s NDT assets.

See Note 13 — Nuclear Decommissioning for further discussion on the NDT fund investments.

Rabbi Trust Investments (Exelon, Generation, PECO, BGE, PHI, Pepco, DPL and ACE). The Rabbi trusts were established to hold assets related to deferred compensation plans existing for certain active and retired members of Exelon’s executive management and directors. The Rabbi trusts assets are included in investments in the Registrants’ Consolidated Balance Sheets and consist primarily of money market funds, mutual funds, fixed income securities and life insurance policies. The mutual funds are maintained by investment companies and hold certain investments in accordance with a stated set of fund objectives, which are consistent with Exelon's overall investment strategy. Money market funds and mutual funds are publicly quoted and have been categorized as Level 1 given the clear observability of the prices. The fair values of fixed income securities are based on evaluated prices that reflect observable market information, such as actual trade information or similar securities, adjusted for observable differences and are categorized in Level 2. The life insurance policies are valued using the cash surrender value of the policies, net of loans against those policies, which is provided by a third-party. Certain life insurance policies, which consist primarily of mutual funds that are priced based on observable market data, have been categorized as Level 2 because the life insurance policies can be liquidated at the reporting date for the value of the underlying assets. Life insurance policies that are valued using unobservable inputs have been categorized as Level 3.

Mark-to-Market Derivatives (Exelon, Generation, ComEd, PHI and DPL). Derivative contracts are traded in both exchange-based and non-exchange-based markets. Exchange-based derivatives that are valued using unadjusted quoted prices in active markets are categorized in Level 1 in the fair value hierarchy. Certain derivatives' pricing is verified using indicative price quotations available through brokers or over-the-counter, on-line exchanges and are categorized in Level 2. These price quotations reflect the average of the bid-ask, mid-point prices and are obtained from sources that the Registrants believe provide the most liquid market for the commodity. The price quotations are reviewed and corroborated to ensure the prices are observable and representative of an orderly transaction between market participants. This includes consideration of actual transaction volumes, market delivery points, bid-ask spreads and contract duration. The remainder of derivative contracts are valued using the Black model, an industry standard option valuation model. The Black model takes into account inputs such as contract terms, including maturity, and market parameters, including assumptions of the future prices of energy, interest rates, volatility, credit worthiness and credit spread. For derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs are generally observable. Such instruments are categorized in Level 2. The Registrants' derivatives are predominantly at liquid trading points. For derivatives that trade in less liquid markets with limited pricing information model inputs generally would include both observable and unobservable inputs. These valuations may include an estimated basis adjustment from an illiquid trading point to a liquid trading point for which active price quotations are available. Such instruments are categorized in Level 3.

Exelon may utilize fixed-to-floating interest rate swaps, which are typically designated as fair value hedges, as a means to achieve its targeted level of variable-rate debt as a percent of total debt. In addition, the Registrants may utilize interest rate derivatives to lock in interest rate levels in anticipation of future financings. These interest rate derivatives are typically designated as cash flow hedges. Exelon determines the current fair value by calculating the net present value of expected payments and receipts under the swap agreement, based on and discounted by the market's expectation of future interest rates. Additional inputs to the net present value calculation may include the contract terms, counterparty credit risk and other market parameters. As these inputs are based on observable data and valuations of similar instruments, the interest rate swaps are categorized in Level 2 in the fair value hierarchy. See Note 10 - Derivative Financial Instruments for further discussion on mark-to-market derivatives.

Deferred Compensation Obligations (Exelon, Generation, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE). The Registrants' deferred compensation plans allow participants to defer certain cash compensation into a notional investment account. The Registrants include such plans in other current and noncurrent liabilities in their Consolidated Balance Sheets. The value of the Registrants' deferred compensation obligations is based on the market value of the participants' notional investment accounts. The underlying notional investments are comprised primarily of equities, mutual funds, commingled funds, and fixed income securities which are based on directly and indirectly observable market prices. Since the deferred compensation obligations themselves are not exchanged in an active market, they are categorized as Level 2 in the fair value hierarchy.

The value of certain employment agreement obligations (which are included with the Deferred Compensation Obligation in the tables above) are based on a known and certain stream of payments to be made over time and are categorized as Level 2 within the fair value hierarchy.

Additional Information Regarding Level 3 Fair Value Measurements (Exelon, Generation, ComEd, PHI, Pepco, DPL and ACE)

Mark-to-Market Derivatives (Exelon, Generation and ComEd). For valuations that include both observable and unobservable inputs, if the unobservable input is determined to be significant to the overall inputs, the entire valuation is categorized in Level 3. This includes derivatives valued using indicative price quotations whose contract tenure extends into unobservable periods. In instances where observable data is unavailable, consideration is given to the assumptions that market participants would use in valuing the asset or liability. This includes assumptions about market risks such as liquidity, volatility and contract duration. Such instruments are categorized in Level 3 as the model inputs generally are not observable. Exelon's RMC approves risk management policies and objectives for risk assessment, control and valuation, counterparty credit approval, and the monitoring and reporting of risk exposures. The RMC is chaired by the chief executive officer and includes the chief risk officer, chief strategy officer, chief executive officer of Exelon Utilities, chief commercial officer, chief financial officer and chief executive officer of Constellation. The RMC reports to the Finance and Risk Committee of the Exelon Board of Directors on the scope of the risk management activities. Forward price curves for the power market utilized by the front office to manage the portfolio, are reviewed and verified by the middle office, and used for financial reporting by the back office. The Registrants consider credit and nonperformance risk in the valuation of derivative contracts categorized in Level 2 and 3, including both historical and current market data in its assessment of credit and nonperformance risk by counterparty. Due to master netting agreements and collateral posting requirements, the impacts of credit and nonperformance risk were not material to the financial statements.

Disclosed below is detail surrounding the Registrants' significant Level 3 valuations. The calculated fair value includes marketability discounts for margining provisions and other attributes. Generation's Level 3 balance generally consists of forward sales and purchases of power and natural gas and certain transmission congestion contracts. Generation utilizes various inputs and factors including market data and assumptions that market participants would use in pricing assets or liabilities as well as assumptions about the risks inherent in the inputs to the valuation technique. The inputs and factors include forward commodity prices, commodity price volatility, contractual volumes, delivery location, interest rates, credit quality of counterparties and credit enhancements.

For commodity derivatives, the primary input to the valuation models is the forward commodity price curve for each instrument. Forward commodity price curves are derived by risk management for liquid locations and by the traders and portfolio managers for illiquid locations. All locations are reviewed and verified by risk management considering published exchange transaction prices, executed bilateral transactions, broker quotes, and other observable or public data sources. The relevant forward commodity curve used to value each of the derivatives depends on a number of factors, including commodity type, delivery location, and delivery period. Price volatility varies by commodity and location. When appropriate, Generation discounts future cash flows using risk free interest rates with adjustments to reflect the credit quality of each counterparty for assets and Generation's own credit quality for liabilities. The level of observability of a forward commodity price varies generally due to the delivery location and delivery period. Certain delivery locations including PJM West Hub (for power) and Henry Hub (for natural gas) are more liquid and prices are observable for up to three years in the future. The observability period of volatility is generally shorter than the underlying power curve used in option valuations. The forward curve for a less liquid location is estimated by using the forward curve from the liquid location and applying a spread to represent the cost to transport the commodity to the delivery location. This spread does not typically represent a majority of the instrument's market price. As a result, the change in fair value is closely tied to liquid market movements and not a change in the applied spread. The change in fair value associated with a change in the spread is generally immaterial. An average spread calculated across all Level 3 power and gas delivery locations is approximately $2.93 and $0.41 for power and natural gas, respectively. Many of the commodity derivatives are short-term in nature and thus a majority of the fair value may be based on observable inputs even though the contract as a whole must be classified as Level 3.

On December 17, 2010, ComEd entered into several 20-year floating to fixed energy swap contracts with unaffiliated suppliers for the procurement of long-term renewable energy and associated RECs. See Note 10 —Derivative Financial Instruments for more information. The fair value of these swaps has been designated as a Level 3 valuation due to the long tenure of the positions and internal modeling assumptions. The modeling assumptions include using natural gas heat rates to project long term forward power curves adjusted by a renewable factor that incorporates time of day and seasonality factors to reflect accurate renewable energy pricing. In addition, marketability reserves are applied to the positions based on the tenor and supplier risk.

Table of Contents

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

The table below discloses the significant inputs to the forward curve used to value these positions.

Type of trade	Fair Value at September 30, 2017	Valuation Technique	Unobservable Input	Range
Mark-to-market derivatives — Economic Hedges (Exelon and Generation)[(a)(b)]	$ 439	Discounted Cash Flow	Forward power price	$7 - $124
			Forward gas price	$1.84 - $9.43
		Option Model	Volatility percentage	9% - 114%
Mark-to-market derivatives — Proprietary trading (Exelon and Generation)[(a)(b)]	$ 15	Discounted Cash Flow	Forward power price	$12 - $69
Mark-to-market derivatives (Exelon and ComEd)	$ (277)	Discounted Cash Flow	Forward heat rate[(c)]	9x - 10x
			Marketability reserve	3% - 8%
			Renewable factor	88% - 125%

(a) The valuation techniques, unobservable inputs and ranges are the same for the asset and liability positions.
(b) The fair values do not include cash collateral posted on level three positions of $141 million as of September 30, 2017.
(c) Quoted forward natural gas rates are utilized to project the forward power curve for the delivery of energy at specified future dates. The natural gas curve is extrapolated beyond its observable period to the end of the contract's delivery.

Type of trade	Fair Value at December 31, 2016	Valuation Technique	Unobservable Input	Range
Mark-to-market derivatives — Economic Hedges (Exelon and Generation)[(a)(b)]	$ 435	Discounted Cash Flow	Forward power price	$11 - $130
			Forward gas price	$1.72 - $9.20
		Option Model	Volatility percentage	8% - 173%
Mark-to-market derivatives — Proprietary trading (Exelon and Generation)[(a)(b)]	$ (3)	Discounted Cash Flow	Forward power price	$19 - $79
Mark-to-market derivatives (Exelon and ComEd)	$ (258)	Discounted Cash Flow	Forward heat rate[(c)]	8x - 9x
			Marketability reserve	3% - 8%
			Renewable factor	89% - 121%

(a) The valuation techniques, unobservable inputs and ranges are the same for the asset and liability positions.
(b) The fair values do not include cash collateral posted on level three positions of $61 million as of December 31, 2016.
(c) Quoted forward natural gas rates are utilized to project the forward power curve for the delivery of energy at specified future dates. The natural gas curve is extrapolated beyond its observable period to the end of the contract's delivery.

The inputs listed above would have a direct impact on the fair values of the above instruments if they were adjusted. The significant unobservable inputs used in the fair value measurement of Generation's commodity derivatives are forward commodity prices and for options is price volatility. Increases (decreases) in the forward commodity price in isolation would result in significantly higher (lower) fair values for long positions (contracts that give Generation the obligation or option to purchase a commodity), with offsetting impacts to short positions (contracts that give Generation the obligation or right to sell a commodity). Increases (decreases) in volatility would increase (decrease) the value for the holder of the option (writer of the option). Generally, a change in the estimate of forward commodity prices is unrelated to a change in the estimate of volatility of prices. An increase to the reserves listed above would decrease the fair value of the positions. An increase to the heat rate or renewable factors would increase the fair value accordingly. Generally, interrelationships exist between market prices of natural gas and power. As such, an increase in natural gas pricing would potentially have a similar impact on forward power markets.

Nuclear Decommissioning Trust Fund Investments and Pledged Assets for Zion Station Decommissioning (Exelon and Generation). For middle market lending and certain corporate debt securities investments, the fair value is determined using a combination of valuation models including cost models, market models and income models. The valuation estimates are based on discounting the forecasted cash flows, market-based comparable data, credit and liquidity factors, as well as other factors that may impact value. Significant judgment is required in the application of discounts or premiums applied for factors such as size, marketability, credit risk and relative performance.

Because Generation relies on third-party fund managers to develop the quantitative unobservable inputs without adjustment for the valuations of its Level 3 investments, quantitative information about significant unobservable inputs used in valuing these investments is not reasonably available to Generation. This includes information regarding the sensitivity of the fair values to changes in the unobservable inputs. Generation gains an understanding of the fund managers' inputs and assumptions used in preparing the valuations. Generation performed procedures to assess the reasonableness of the valuations.

Rabbi Trust Investments - Life insurance contracts (Exelon, PHI, Pepco, DPL and ACE). For life insurance policies categorized as Level 3, the fair value is determined based on the cash surrender value of the policy, which contains unobservable inputs and assumptions. Because Exelon relies on its third-party insurance provider to develop the inputs without adjustment for the valuations of its Level 3 investments, quantitative information about significant unobservable inputs used in valuing these investments is not reasonably available to Exelon. Exelon gains an understanding of the types of inputs and assumptions used in preparing the valuations and performs procedures to assess the reasonableness of the valuations.

10. Derivative Financial Instruments (All Registrants)

The Registrants use derivative instruments to manage commodity price risk, foreign currency exchange risk and interest rate risk related to ongoing business operations.

Commodity Price Risk (All Registrants)

To the extent the amount of energy Generation produces differs from the amount of energy it has contracted to sell, Exelon and Generation are exposed to market fluctuations in the prices of electricity, fossil fuels, and other commodities. Each of the Registrants employ established policies and procedures to manage their risks associated with market fluctuations in commodity prices by entering into physical and financial derivative contracts, including swaps, futures, forwards, options, and short-term and long-term commitments to purchase and sell energy and energy-related products. The Registrants believe these instruments, which are classified as either economic hedges or non-derivatives, mitigate exposure to fluctuations in commodity prices.

Derivative accounting guidance requires that derivative instruments be recognized as either assets or liabilities at fair value, with changes in fair value of the derivative recognized in earnings each period. Other accounting treatments are available through special election and designation, provided they meet specific, restrictive criteria both at the time of designation and on an ongoing basis. These alternative permissible accounting treatments include normal purchase normal sale (NPNS), cash flow hedge, and fair value hedge. For Generation, all derivative economic hedges related to commodities are recorded at fair value through earnings for the consolidated company, referred to as economic hedges in the following tables. The Registrants have applied the NPNS scope exception to certain derivative contracts for the forward sale of generation, power procurement agreements, and natural gas supply agreements. Generation has also entered into bilateral long-term contractual obligations for sales of energy to load-serving entities, including electric utilities, municipalities, electric cooperatives, and retail load aggregators, as well as contractual obligations to deliver energy to market participants who primarily focus on the resale of energy products for delivery. These non-derivative contracts are accounted for primarily under the accrual method of accounting. Additionally, Generation is exposed to certain market risks through its proprietary trading activities. The proprietary trading activities are a complement to Generation’s energy marketing portfolio but represent a small portion of Generation’s overall energy marketing activities.

Economic Hedging. The Registrants are exposed to commodity price risk primarily relating to changes in the market price of electricity, fossil fuels, and other commodities associated with price movements resulting from changes in supply and demand, fuel costs, market liquidity, weather conditions, governmental regulatory and environmental policies, and other factors. Within Exelon, Generation has the most exposure to commodity price risk. As such, Generation uses a variety of derivative and non-derivative instruments to manage the commodity price risk of its electric generation facilities, including power and gas sales, fuel and energy purchases, natural gas transportation and pipeline capacity agreements, and other energy-related products marketed and purchased. In order to manage these risks, Generation may enter into fixed-price derivative or non-derivative contracts to hedge the variability in future cash flows from forecasted sales of energy and gas and purchases of fuel and energy. The objectives for entering into such hedges include fixing the price for a portion of anticipated future electricity sales at a level that provides an acceptable return on electric generation operations, fixing the price of a portion of anticipated fuel purchases for the operation of power plants, and fixing the price for a portion of anticipated energy purchases to supply load-serving customers. The portion of forecasted transactions hedged may vary based upon management's policies and hedging objectives, the market, weather conditions, operational and other factors. Generation is also exposed to differences between the locational settlement prices of certain economic hedges and the hedged generating units. This price difference is actively managed through other instruments which include derivative congestion products, whose changes in fair value are recognized in earnings each period, and auction revenue rights, which are accounted for on an accrual basis.

In general, increases and decreases in forward market prices have a positive and negative impact, respectively, on Generation's owned and contracted generation positions that have not been hedged. Generation hedges commodity price risk on a ratable basis over three-year periods. As of September 30, 2017, the percentage of expected generation hedged is 98%-101%, 79%-82%, and 45%-48% for 2017, 2018, and 2019, respectively. The percentage of expected generation hedged is the amount of equivalent sales divided by the expected generation. Expected generation is the volume of energy that best represents our commodity position in energy markets from owned or contracted generating facilities based upon a simulated dispatch model that makes assumptions regarding future market conditions, which are calibrated to market quotes for power, fuel, load following products, and options. Equivalent sales represent all hedging products, which include economic hedges and certain non-derivative contracts including Generation's sales to ComEd, PECO, BGE, Pepco, DPL, and ACE to serve their retail load.

On December 17, 2010, ComEd entered into several 20-year floating-to-fixed energy swap contracts with unaffiliated suppliers for the procurement of long-term renewable energy and associated RECs. Delivery under the contracts began in June 2012. These contracts are designed to lock in a portion of the long-term commodity price risk resulting from the renewable energy resource procurement requirements in the Illinois Settlement Legislation. ComEd has not elected hedge accounting for these derivative financial instruments. ComEd records the fair value of the swap contracts on its balance sheet. Because ComEd receives full cost recovery for energy procurement and related costs from retail customers, the change in fair value each period is recorded by ComEd as a regulatory asset or liability. See Note 3 — Regulatory Matters of the Exelon 2016 Form 10-K for additional information.

PECO has contracts to procure electric supply that were executed through the competitive procurement process outlined in its PAPUC-approved DSP Programs, which are further discussed in Note 5 — Regulatory Matters. Based on Pennsylvania legislation and the DSP Programs permitting PECO to recover its electric supply procurement costs from retail customers with no mark-up, PECO's price risk related to electric supply procurement is limited. PECO locked in fixed prices for a significant portion of its commodity price risk through full requirements contracts. PECO has certain full requirements contracts that are considered derivatives and qualify for the NPNS scope exception under current derivative authoritative guidance.

PECO's natural gas procurement policy is designed to achieve a reasonable balance of long-term and short-term gas purchases under different pricing approaches in order to achieve system supply reliability at the least cost. PECO's reliability strategy is two-fold. First, PECO must assure that there is sufficient transportation capacity to satisfy delivery requirements. Second, PECO must ensure that a firm source of supply exists to utilize the capacity resources. All of PECO's natural gas supply and asset management agreements that are derivatives either qualify for the NPNS scope exception and have been designated as such, or have no mark-to-market balances because the derivatives are index priced. Additionally, in accordance with the 2016 PAPUC PGC settlement and to reduce the exposure of PECO and its customers to natural gas price volatility, PECO has continued its program to purchase natural gas for both winter and summer supplies using a layered approach of locking-in prices ahead of each season with long-term gas purchase agreements (those with primary terms of at least twelve months). Under the terms of the 2016 PGC settlement, PECO is required to lock in (i.e., economically hedge) the price of a minimum volume of its long-term gas commodity purchases. PECO's gas-hedging program is designed to cover about 20% of planned natural gas purchases in support of projected firm sales. The hedging program for natural gas procurement has no direct impact on PECO's financial position or results of operations as natural gas costs are fully recovered from customers under the PGC.

BGE has contracts to procure SOS electric supply that are executed through a competitive procurement process approved by the MDPSC. The SOS rates charged recover BGE's wholesale power supply costs and include an administrative fee. BGE's price risk related to electric supply procurement is limited. BGE locks in fixed prices for all of its SOS requirements through full requirements contracts. Certain of BGE's full requirements contracts, which are considered derivatives, qualify for the NPNS scope exception under current derivative authoritative guidance. Other BGE full requirements contracts are not derivatives.

BGE provides natural gas to its customers under a MBR mechanism approved by the MDPSC. Under this mechanism, BGE's actual cost of gas is compared to a market index (a measure of the market price of gas in a given period). The difference between BGE's actual cost and the market index is shared equally between shareholders and customers. BGE must also secure fixed price contracts for at least 10%, but not more than 20%, of forecasted system supply requirements for flowing (i.e., non-storage) gas for the November through March period. These fixed-price contracts are not subject to sharing under the MBR mechanism. BGE also ensures it has sufficient pipeline transportation capacity to meet customer requirements. All of BGE's natural gas supply and asset management agreements qualify for the NPNS scope exception and result in physical delivery.

Pepco has contracts to procure SOS electric supply that are executed through a competitive procurement process approved by the MDPSC and DCPSC. The SOS rates charged recover Pepco's wholesale power supply costs and include an administrative fee. The administrative fee includes an incremental cost component and a shareholder return component for residential and commercial rate classes. Pepco's price risk related to electric supply procurement is limited. Pepco locks in fixed prices for all of its SOS requirements through full requirements contracts. Certain of Pepco's full requirements contracts, which are considered derivatives, qualify for the NPNS scope exception under current derivative authoritative guidance. Other Pepco full requirements contracts are not derivatives.

DPL has contracts to procure SOS electric supply that are executed through a competitive procurement process approved by the MDPSC and the DPSC. The SOS rates charged recover DPL's wholesale power supply costs. In Delaware, DPL is also entitled to recover a Reasonable Allowance for Retail Margin (RARM). The RARM includes a fixed annual margin of approximately $2.75 million, plus an incremental cost component and a cash working capital allowance. In Maryland, DPL charges an administrative fee intended to allow it to recover its administrative costs. DPL locks in fixed prices for all of its SOS requirements through full requirements contracts. DPL's price risk related to electric supply procurement is limited. Certain of DPL's full requirements contracts, which are considered derivatives, qualify for the NPNS scope exception under current derivative authoritative guidance. Other DPL full requirements contracts are not derivatives.

DPL provides natural gas to its customers under an Annual GCR mechanism approved by the DPSC. Under this mechanism, DPL's Annual GCR Filing establishes a future GCR for firm bundled sales customers by using a forecast of demand and commodity costs. The actual costs are trued up versus the forecast on a monthly basis and any shortfall or excess is carried forward as a recovery balance in the next GCR filing. The demand portion of the GCR is based upon DPL's firm transportation and storage contracts. DPL has firm deliverability of swing and seasonal storage; a liquefied natural gas facility and firm transportation capacity to meet customer demand and provide a reserve margin. The commodity portion of the GCR includes a commission approved hedging program which is intended to reduce gas commodity price volatility while limiting the firm natural gas customers' exposure to adverse changes in the market price of natural gas. The hedge program requires that DPL hedge, on a non-discretionary basis, an amount equal to fifty percent (50%) of estimated purchase requirements for each month, including estimated monthly purchases for storage injections. The fifty percent (50%) hedge monthly target is achieved by hedging 1/12th of the 50% target each month beginning 12-months prior to the month in which the physical gas is to be purchased. Currently, DPL uses only exchange traded futures for its gas hedging program, which are considered derivatives, however, it retains the capability to employ other physical and financial hedges if needed. DPL has not elected hedge accounting for these derivative financial instruments. Because of the DPSC-approved fuel adjustment clause for DPL’s derivatives, the change in fair value of the derivatives each period, in addition to all premiums paid and other transaction costs incurred as part of the Gas Hedging Program, are fully recoverable and are recorded by DPL as regulatory assets or liabilities. DPL’s physical gas purchases are currently all daily, monthly or intra-month transactions. From time to time, DPL will enter into seasonal purchase or sale arrangements, however, there are none currently in the portfolio. Certain of DPL’s full requirements contracts, which are considered derivatives, qualify for the NPNS scope exception under current derivative authoritative guidance. Other DPL full requirements contracts are not derivatives.

ACE has contracts to procure BGS electric supply that are executed through a competitive procurement process approved by the NJBPU. The BGS rates charged recover ACE’s wholesale power supply costs. ACE does not make any profit or incur any loss on the supply component of the BGS it supplies to customers. ACE's price risk related to electric supply procurement is limited. ACE locks in fixed prices for all of its BGS requirements through full requirements contracts. Certain of ACE's full requirements contracts, which are considered derivatives, qualify for the NPNS scope exception under current derivative authoritative guidance. Other ACE full requirements contracts are not derivatives.

Proprietary Trading. Generation also enters into certain energy-related derivatives for proprietary trading purposes. Proprietary trading includes all contracts entered into with the intent of benefiting from shifts or changes in market prices as opposed to those entered into with the intent of hedging or managing risk. Proprietary trading activities are subject to limits established by Exelon's RMC. The proprietary trading activities, which included settled physical sales volumes of 2,601 GWhs and 6,763 GWhs for the three and nine months ended September 30, 2017, respectively, and 1,506 GWhs and 4,015 GWhs and for the three and nine months September 30, 2016, respectively, are a complement to Generation's energy marketing portfolio but represent a small portion of Generation's revenue from energy marketing activities. ComEd, PECO, BGE, PHI, Pepco, DPL and ACE do not enter into derivatives for proprietary trading purposes.

Interest Rate and Foreign Exchange Risk (All Registrants)

The Registrants use a combination of fixed-rate and variable-rate debt to manage interest rate exposure. The Registrants utilize fixed-to-floating interest rate swaps, which are typically designated as fair value hedges, as a means to manage their interest rate exposure. In addition, the Registrants may utilize interest rate derivatives to lock in rate levels in anticipation of future financings, which are typically designated as cash flow hedges. These strategies are employed to manage interest rate risks. At September 30, 2017, Exelon had $800 million of notional amounts of fixed-to-floating hedges outstanding, and Exelon and Generation had $491 million of notional amounts of floating-to-fixed hedges outstanding. To manage foreign exchange rate exposure associated with international energy purchases in currencies other than U.S. dollars, Generation utilizes foreign currency derivatives, which are typically designated as economic hedges. Below is a summary of the interest rate and foreign exchange hedge balances as of September 30, 2017:

	Generation					Exelon Corporate	Exelon
Description	**Derivatives Designated as Hedging Instruments**	**Economic Hedges**	**Proprietary Trading(a)**	**Collateral and Netting(b)**	**Subtotal**	**Derivatives Designated as Hedging Instruments**	**Total**
Mark-to-market derivative assets (current assets)	$ —	$ 15	$ —	$ (10)	$ 5	$ —	$ 5
Mark-to-market derivative assets (noncurrent assets)	—	1	—	(1)	—	10	10
Total mark-to-market derivative assets	—	16	—	(11)	5	10	15
Mark-to-market derivative liabilities (current liabilities)	—	(17)	—	9	(8)	—	(8)
Mark-to-market derivative liabilities (noncurrent liabilities)	—	(2)	—	1	(1)	—	(1)
Total mark-to-market derivative liabilities	—	(19)	—	10	(9)	—	(9)
Total mark-to-market derivative net assets (liabilities)	$ —	$ (3)	$ —	$ (1)	$ (4)	$ 10	$ 6

(a) Generation enters into interest rate derivative contracts to economically hedge risk associated with the interest rate component of commodity positions. The characterization of the interest rate derivative contracts between the proprietary trading activity in the above table is driven by the corresponding characterization of the underlying commodity position that gives rise to the interest rate exposure. Generation does not utilize proprietary trading interest rate derivatives with the objective of benefiting from shifts or changes in market interest rates.

(b) Exelon and Generation net all available amounts allowed under the derivative accounting guidance on the balance sheet. These amounts include unrealized derivative transactions with the same counterparty under legally enforceable master netting agreements and cash collateral. In some cases, Exelon and Generation may have other offsetting counterparty exposures subject to a master netting or similar agreement, such as accrued interest, transactions that do not qualify as derivatives, letters of credit and other forms of non-cash collateral. These are not reflected in the table above.

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

The following table provides a summary of the interest rate and foreign exchange hedge balances recorded by the Registrants as of December 31, 2016:

	Generation					Exelon Corporate	Exelon
Description	**Derivatives Designated as Hedging Instruments**	**Economic Hedges**	**Proprietary Trading[a]**	**Collateral and Netting[b]**	**Subtotal**	**Derivatives Designated as Hedging Instruments**	**Total**
Mark-to-market derivative assets (current assets)	$ —	$ 17	$ 4	$ (13)	$ 8	$ —	$ 8
Mark-to-market derivative assets (noncurrent assets)	—	11	1	(8)	4	16	20
Total mark-to-market derivative assets	—	28	5	(21)	12	16	28
Mark-to-market derivative liabilities (current liabilities)	(7)	(13)	(2)	14	(8)	—	(8)
Mark-to-market derivative liabilities (noncurrent liabilities)	(3)	(8)	(2)	9	(4)	—	(4)
Total mark-to-market derivative liabilities	(10)	(21)	(4)	23	(12)	—	(12)
Total mark-to-market derivative net assets (liabilities)	$ (10)	$ 7	$ 1	$ 2	$ —	$ 16	$ 16

(a) Generation enters into interest rate derivative contracts to economically hedge risk associated with the interest rate component of commodity positions. The characterization of the interest rate derivative contracts between the proprietary trading activity in the above table is driven by the corresponding characterization of the underlying commodity position that gives rise to the interest rate exposure. Generation does not utilize proprietary trading interest rate derivatives with the objective of benefiting from shifts or changes in market interest rates.

(b) Exelon and Generation net all available amounts allowed under the derivative accounting guidance on the balance sheet. These amounts include unrealized derivative transactions with the same counterparty under legally enforceable master netting agreements and cash collateral. In some cases, Exelon and Generation may have other offsetting counterparty exposures subject to a master netting or similar agreement, such as accrued interest, transactions that do not qualify as derivatives, letters of credit and other forms of non-cash collateral. These are not reflected in the table above.

Fair Value Hedges. For derivative instruments that are designated and qualify as fair value hedges, the gain or loss on the derivative as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in current earnings. Exelon includes the gain or loss on the hedged items and the offsetting loss or gain on the related interest rate swaps in interest expense as follows:

		Three Months Ended September 30,			
	Income Statement Location	**2017**	**2016**	**2017**	**2016**
		Gain (loss) on Swaps		**Gain (loss) on Borrowings**	
Exelon	Interest expense	$ (2)	$ (8)	$ 6	$ 14

		Nine Months Ended September 30,			
	Income Statement Location	**2017**	**2016**	**2017**	**2016**
		Gain (loss) on Swaps		**Gain (loss) on Borrowings**	
Exelon	Interest expense	$ (6)	$ 15	$ 17	$ (3)

At September 30, 2017, Exelon had total outstanding fixed-to-floating fair value hedges related to interest rate swaps of $800 million, with a derivative asset of $10 million. At December 31, 2016, Exelon had total outstanding fixed-to-floating fair value hedges related to interest rate swaps of $800 million, with a derivative asset of $16 million. During the three and nine months ended September 30, 2017 and 2016, the impact on the results of operations as a result of ineffectiveness from fair value hedges was a $4 million gain, a $11 million gain, a $6 million gain, and a $12 million gain, respectively.

Cash Flow Hedges. During the first and second quarter of 2016, Exelon entered into $600 million and $100 million of floating-to-fixed forward starting interest rate swaps, respectively, to manage a portion of the interest rate exposure associated with an anticipated debt issuance. The swaps were designated as cash flow hedges. Exelon terminated the swaps during the second quarter of 2016 upon issuance of the debt. Exelon recognized a loss of $3 million related to the swaps and $3 million of AOCI will be amortized into Other, net in Exelon’s Consolidated Statement of Operations and Comprehensive Income over the term of the debt. See Note 11 — Debt and Credit Agreements of the Combined Notes to Consolidated Financial Statements for additional information.

During the first quarter of 2016, Exelon entered into a $100 million floating-to-fixed forward starting interest rate swaps to manage a portion of the interest rate exposure associated with an anticipated debt issuance. The swap was designated as a cash flow hedge. Exelon terminated the swap during the first quarter of 2016 upon issuance of the debt. Exelon did not recognize a gain or loss as a result of the termination of the swap and an immaterial amount of AOCI will be amortized into Other, net in Exelon's Consolidated Statement of Operations and Comprehensive Income over the term of the debt.

During the first quarter of 2014, EGR, a subsidiary of Generation, entered into floating-to-fixed interest rate swaps to manage a portion of its interest rate exposure in connection with its long-term borrowings. The swaps were de-designated as cash flow hedges and, during the second quarter of 2017, upon termination of the debt, Generation terminated the swaps. The total notional amount of the swaps was $164 million. No gain or loss was recognized as a result of the termination of the swaps. See Note 11 — Debt and Credit Agreements for additional information.

During the three and nine months ended September 30, 2017 and 2016, the impact on the results of operations as a result of ineffectiveness from cash flow hedges in continuing designated hedge relationships was immaterial.

Economic Hedges. During the third quarter of 2014, EGTP, a subsidiary of Generation, entered into a floating-to-fixed interest rate swap to manage a portion of its interest rate exposure in connection with the long-term borrowing. See Note 14 —Debt and Credit Agreements of the Exelon 2016 Form 10-K for additional information regarding the financing. The swaps have a notional amount of $491 million as of September 30, 2017 and expire in 2019. The swap was designated as a cash flow hedge in the fourth quarter of 2014. During the first quarter of 2017, the swap was de-designated. At September 30, 2017, the subsidiary had a $6 million derivative liability related to the swap. During the three and nine months ended September 30, 2017, a gain of $2 million and a loss of $2 million related to the swap, respectively, were recorded to Interest expense.

During the third quarter of 2011, Sacramento PV Energy, a subsidiary of Generation entered into floating-to-fixed interest rate swaps to manage a portion of its interest rate exposure in connection with the long-term borrowings. See Note 14 — Debt and Credit Agreements of the Exelon 2016 Form 10-K for additional information regarding the financing. During the first quarter of 2016, upon the termination of debt, Generation terminated the swaps. The total notional amount of the swaps was $25 million. No gain or loss was recognized as a result of the termination of the swaps.

During the third quarter of 2012, Constellation Solar Horizons, a subsidiary of Generation, entered into a floating-to-fixed interest rate swap to manage a portion of its interest rate exposure in connection with the long-term borrowings. See Note 14 — Debt and Credit Agreements of the Exelon 2016 Form 10-K for additional information regarding the financing. During the first quarter of 2016, upon the termination of debt, Generation terminated the swap. The total notional amount of the swap was $24 million. No gain or loss was recognized as a result of the termination of the swap.

At September 30, 2017, Generation had immaterial notional amounts of interest rate derivative contracts to economically hedge risk associated with the interest rate component of commodity positions and $111 million in notional amounts of foreign currency exchange rate swaps that are marked-to-market to manage the exposure associated with international purchases of commodities in currencies other than U.S. dollars.

Fair Value Measurement and Accounting for the Offsetting of Amounts Related to Certain Contracts (Exelon, Generation, ComEd, PECO, BGE, PHI and DPL)

Fair value accounting guidance and disclosures about offsetting assets and liabilities requires the fair value of derivative instruments to be shown in the Notes to the Consolidated Financial Statements on a gross basis, even when the derivative instruments are subject to legally enforceable master netting agreements and qualify for net presentation in the Consolidated Balance Sheet. A master netting agreement is an agreement between two counterparties that may have derivative and non-derivative contracts with each other providing for the net settlement of all referencing contracts via one payment stream, which takes place as the contracts deliver, when collateral is requested or in the event of default. Generation’s use of cash collateral is generally unrestricted, unless Generation is downgraded below investment grade (i.e., to BB+ or Ba1). In the table below, Generation’s energy related economic hedges and proprietary trading derivatives are shown gross. The impact of the netting of fair value balances with the same counterparty that are subject to legally enforceable master netting agreements, as well as netting of cash collateral, including margin on exchange positions, is aggregated in the collateral and netting column. As of September 30, 2017 and December 31, 2016, $3

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

million and $8 million of cash collateral held, respectively, was not offset against derivative positions because such collateral was not associated with any energy-related derivatives, were associated with accrual positions, or as of the balance sheet date there were no positions to offset. Excluded from the tables below are economic hedges that qualify for the NPNS scope exception and other non-derivative contracts that are accounted for under the accrual method of accounting.

ComEd's use of cash collateral is generally unrestricted unless ComEd is downgraded below investment grade (i.e., to BB+ or Ba1).

Cash collateral held by PECO and BGE must be deposited in a non affiliate major U.S. commercial bank or foreign bank with a U.S. branch office that meet certain qualifications.

In the table below, DPL's economic hedges are shown gross. The impact of the netting of fair value balances with the same counterparty that are subject to legally enforceable master netting agreements, as well as netting of cash collateral, including margin on exchange positions, is aggregated in the collateral and netting column.

The following table provides a summary of the derivative fair value balances recorded by the Registrants as of September 30, 2017:

									Successor	
	Generation				**ComEd**	**DPL**			**PHI**	**Exelon**
Derivatives	**Economic Hedges**	**Proprietary Trading**	**Collateral and Netting**[(a) (e)]	**Subtotal**[(b)]	**Economic Hedges**[(c)]	**Economic Hedges**[(d)]	**Collateral and Netting**[(a)]	**Subtotal**	**Subtotal**	**Total Derivatives**
Mark-to-market derivative assets (current assets)	$ 2,608	$ 55	$ (1,969)	$ 694	$ —	$ —	$ —	$ —	$ —	$ 694
Mark-to-market derivative assets (noncurrent assets)	1,583	30	(1,197)	416	—	—	—	—	—	416
Total mark-to-market derivative assets	4,191	85	(3,166)	1,110	—	—	—	—	—	1,110
Mark-to-market derivative liabilities (current liabilities)	(2,334)	(46)	2,230	(150)	(20)	—	—	—	—	(170)
Mark-to-market derivative liabilities (noncurrent liabilities)	(1,476)	(27)	1,351	(152)	(257)	—	—	—	—	(409)
Total mark-to-market derivative liabilities	(3,810)	(73)	3,581	(302)	(277)	—	—	—	—	(579)
Total mark-to-market derivative net assets (liabilities)	$ 381	$ 12	$ 415	$ 808	$ (277)	$ —	$ —	$ —	$ —	$ 531

(a)

Exelon, Generation, PHI and DPL net all available amounts allowed under the derivative accounting guidance on the balance sheet. These amounts include unrealized derivative transactions with the same counterparty under legally enforceable master netting agreements and cash collateral. In some cases Exelon and Generation may have other offsetting exposures, subject to a master netting or similar agreement, such as trade receivables and payables, transactions that do not qualify as derivatives, letters of credit and other forms of non-cash collateral. These are not reflected in the table above.

(b) Current and noncurrent assets are shown net of collateral of $123 million and $61 million, respectively, and current and noncurrent liabilities are shown net of collateral of $138 million and $93 million, respectively. The total cash collateral posted, net of cash collateral received and offset against mark-to-market assets and liabilities was $415 million at September 30, 2017.

(c) Includes current and noncurrent liabilities relating to floating-to-fixed energy swap contracts with unaffiliated suppliers.

(d) Represents natural gas futures purchased by DPL as part of a natural gas hedging program approved by the DPSC.

(e) Of the collateral posted/(received), $27 million represents variation margin on the exchanges.

Cash Flow Hedges (Exelon and Generation). The tables below provide the activity of OCI related to cash flow hedges for the nine months ended September 30, 2017 and 2016, containing information about the changes in the fair value of cash flow hedges and the reclassification from Accumulated OCI into results of operations. The amounts reclassified from OCI, when combined with the impacts of the hedged transactions, result in the ultimate recognition of net revenues or expenses at the contractual price.

		Total Cash Flow Hedge OCI Activity, Net of Income Tax	
		Generation	**Exelon**
Three Months Ended September 30, 2017	**Income Statement Location**	**Total Cash Flow Hedges**	**Total Cash Flow Hedges**
Accumulated OCI derivative loss at June 30, 2017		$ (14)	$ (12)

Economic Hedges (Exelon and Generation). These instruments represent hedges that economically mitigate exposure to fluctuations in commodity prices and include financial options, futures, swaps, physical forward sales and purchases, but for which the fair value or cash flow hedge elections were not made. Additionally, Generation enters into interest rate derivative contracts and foreign exchange currency swaps ("treasury") to manage the exposure related to the interest rate component of commodity positions and international purchases of commodities in currencies other than U.S. Dollars. For the three and nine months ended September 30, 2017 and 2016, the following net pre-tax mark-to-market gains (losses) of certain purchase and sale contracts were reported in Operating revenues or Purchased power and fuel expense, or Interest expense at Exelon and Generation in the Consolidated Statements of Operations and Comprehensive Income and are included in “Net fair value changes related to derivatives” in Exelon’s and Generation’s Consolidated Statements of Cash Flows. In the tables below, “Change in fair value” represents the change in fair value of the derivative contracts held at the reporting date. The “Reclassification to realized” generally represents the recognized change in fair value that was reclassified from unrealized to realized when the transaction to which the derivative relates occurs.

	Generation			Exelon
Three Months Ended September 30, 2017	**Operating Revenues**	**Purchased Power and Fuel**	**Total**	**Total**
Change in fair value of commodity positions	$ 132	$ 45	$ 177	$ 177

Proprietary Trading Activities (Exelon and Generation). For the three and nine months ended September 30, 2017 and 2016, Exelon and Generation recognized the following net unrealized mark-to-market gains (losses), net realized mark-to-market gains (losses) and total net mark-to-market gains (losses) before income taxes relating to mark-to-market activity on commodity derivative instruments entered into for proprietary trading purposes and interest rate and foreign exchange derivative contracts to hedge risk associated with the interest rate and foreign exchange components of underlying commodity positions. Gains and losses associated with proprietary trading are reported as operating revenues in Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income and are included in "Net fair value changes related to derivatives" in Exelon's and Generation's Consolidated Statements of Cash Flows. In the tables below, "Change in fair value" represents the change in fair value of the derivative contracts held at the reporting date. The "Reclassification to realized" represents the recognized change in fair value that was reclassified to realized due to settlement of the derivative during the period.

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2017	**2016**	**2017**	**2016**
Change in fair value of commodity positions	$ 11	$ 4	$ 17	$ 18

Total net mark-to-market gains (losses)	$ 5	$ (1)	$ 3	$ 1

Credit Risk (All Registrants)

The Registrants would be exposed to credit-related losses in the event of non-performance by counterparties that enter into derivative instruments. The credit exposure of derivative contracts, before collateral, is represented by the fair value of contracts at the reporting date. For energy-related derivative instruments, Generation enters into enabling agreements that allow for payment netting with its counterparties, which reduces Generation's exposure to counterparty risk by providing for the offset of amounts payable to the counterparty against amounts receivable from the counterparty. Typically, each enabling agreement is for a specific commodity and so, with respect to each individual counterparty, netting is limited to transactions involving that specific commodity product, except where master netting agreements exist with a counterparty that allow for cross product netting. In addition to payment netting language in the enabling agreement, Generation's credit department establishes credit limits, margining thresholds and collateral requirements for each counterparty, which are defined in the derivative contracts. Counterparty credit limits are based on an internal credit review process that considers a variety of factors, including the results of a scoring model, leverage, liquidity, profitability, credit ratings by credit rating agencies and risk management capabilities. To the extent that a counterparty's margining thresholds are exceeded, the counterparty is required to post collateral with Generation as specified in each enabling agreement. Generation's credit department monitors current and forward credit exposure to counterparties and their affiliates, both on an individual and an aggregate basis.

The following tables provide information on Generation's credit exposure for all derivative instruments, NPNS and applicable payables and receivables, net of collateral and instruments that are subject to master netting agreements, as of September 30, 2017. The tables further delineate that exposure by credit rating of the counterparties and provide guidance on the concentration of credit risk to individual counterparties. The figures in the tables below exclude credit risk exposure from individual retail counterparties, Nuclear fuel procurement contracts and exposure through RTOs, ISOs, NYMEX, ICE, NASDAQ, NGX and Nodal commodity exchanges. Additionally, the figures in the tables below exclude exposures with affiliates, including net receivables with ComEd, PECO, BGE, Pepco, DPL and ACE of $18 million, $22 million, $22 million, $34 million, $12 million, and $7 million as of September 30, 2017, respectively.

Rating as of September 30, 2017	Total Exposure Before Credit Collateral	Credit Collateral[(a)]	Net Exposure	Number of Counterparties Greater than 10% of Net Exposure	Net Exposure of Counterparties Greater than 10% of Net Exposure
Investment grade	$ 828	$ 9	$ 819	1	$ 278
Non-investment grade	44	4	40

Internally rated — investment grade	316	—	316		
Internally rated — non-investment grade	100	18	82		
Total	$ 1,288	$ 31	$ 1,257	1	$ 278

Net Credit Exposure by Type of Counterparty	As of September 30, 2017
Financial institutions	$ 48
Investor-owned utilities, marketers, power producers	538
Energy cooperatives and municipalities	525
Other	146
Total	$ 1,257

(a) As of September 30, 2017, credit collateral held from counterparties where Generation had credit exposure included $19 million of cash and $12 million of letters of credit. The credit collateral does not include non-liquid collateral.

ComEd's power procurement contracts provide suppliers with a certain amount of unsecured credit. The credit position is based on daily, updated forward market prices compared to the benchmark prices. The benchmark prices are the forward prices of energy projected through the contract term and are set at the point of supplier bid submittals. If the forward market price of energy exceeds the benchmark price on a given day, the suppliers are required to post collateral for the secured credit portion after adjusting for any unpaid deliveries and unsecured credit allowed under the contract. The unsecured credit used by the suppliers represents ComEd's net credit exposure. As of September 30, 2017, ComEd's net credit exposure to suppliers was less than $1 million.

ComEd is permitted to recover its costs of procuring energy through the Illinois Settlement Legislation. ComEd's counterparty credit risk is mitigated by its ability to recover realized energy costs through customer rates. See Note 3 — Regulatory Matters of the Exelon 2016 Form 10-K for additional information.

PECO’s supplier master agreements that govern the terms of its electric supply procurement contracts, which define a supplier’s performance assurance requirements, allow a supplier to meet its credit requirements with a certain amount of unsecured credit. The amount of unsecured credit is determined based on the supplier’s lowest credit rating from the major credit rating agencies and the supplier’s tangible net worth. The credit position is based on the initial market price, which is the forward price of energy on the day a transaction is executed, compared to the current forward price curve for energy. To the extent that the forward price curve for energy exceeds the initial market price, the supplier is required to post collateral to the extent the credit exposure is greater than the supplier’s unsecured credit limit. The unsecured credit used by the suppliers represents PECO’s net credit exposure. As of September 30, 2017, PECO had no material net credit exposure to suppliers.

PECO is permitted to recover its costs of procuring electric supply through its PAPUC-approved DSP Program. PECO’s counterparty credit risk is mitigated by its ability to recover realized energy costs through customer rates. See Note 5 — Regulatory Matters for additional information.

PECO's natural gas procurement plan is reviewed and approved annually on a prospective basis by the PAPUC. PECO's counterparty credit risk under its natural gas supply and asset management agreements is mitigated by its ability to recover its natural gas costs through the PGC, which allows PECO to adjust rates quarterly to reflect realized natural gas prices. PECO does not obtain collateral from suppliers under its natural gas supply and asset management agreements. As of September 30, 2017, PECO had no material credit exposure under its natural gas supply and asset management agreements with investment grade suppliers.

BGE is permitted to recover its costs of procuring energy through the MDPSC-approved procurement tariffs. BGE's counterparty credit risk is mitigated by its ability to recover realized energy costs through customer rates. See Note 3 — Regulatory Matters of the Exelon 2016 Form 10-K for additional information.

BGE's full requirement wholesale electric power agreements that govern the terms of its electric supply procurement contracts, which define a supplier's performance assurance requirements, allow a supplier, or its guarantor, to meet its credit requirements with a certain amount of unsecured credit. The amount of unsecured credit is determined based on the supplier's lowest credit rating from the major credit rating agencies and the supplier's tangible net worth, subject to an unsecured credit cap. The credit position is based on the initial market price, which is the forward price of energy on the day a transaction is executed, compared to the current forward price curve for energy. To the extent that the forward price curve for energy exceeds the initial market price, the supplier is required to post collateral to the extent the credit exposure is greater than the supplier's unsecured credit limit. The unsecured credit used by the suppliers represents BGE's net credit exposure. The seller's credit exposure is calculated each business day. As of September 30, 2017, BGE had no net credit exposure to suppliers.

BGE's regulated gas business is exposed to market-price risk. This market-price risk is mitigated by BGE's recovery of its costs to procure natural gas through a gas cost adjustment clause approved by the MDPSC. BGE does make off-system sales after BGE has satisfied its customers' demands, which are not covered by the gas cost adjustment clause. At September 30, 2017, BGE had credit exposure of less than $1 million related to off-system sales which is mitigated by parental guarantees, letters of credit or right to offset clauses within other contracts with those third-party suppliers.

Pepco's, DPL's and ACE's power procurement contracts provide suppliers with a certain amount of unsecured credit. The amount of unsecured credit is determined based on the supplier's lowest credit rating from the major credit rating agencies and the supplier's tangible net worth. The credit position is based on the initial market price, which is the forward price of energy on the day a transaction is executed, compared to the current forward price curve for energy. To the extent that the forward price curve for energy exceeds the initial market price, the supplier is required to post collateral to the extent the credit exposure is greater than the supplier's unsecured credit limit. The unsecured credit used by the suppliers represents Pepco's, DPL's and ACE's net credit exposure. As of September 30, 2017, Pepco's, DPL's and ACE's net credit exposures to suppliers were immaterial.

Pepco is permitted to recover its costs of procuring energy through the MDPSC-approved and DCPSC-approved procurement tariffs. DPL is permitted to recover its costs of procuring energy through the MDPSC-approved and DPSC-approved procurement tariffs. ACE is permitted to recover its costs of procuring energy through the NJBPU-approved procurement tariffs. Pepco's, DPL's and ACE's counterparty credit risks are mitigated by their ability to recover realized energy costs through customer rates. See Note 3 — Regulatory Matters of the Exelon 2016 Form 10-K for additional information.

DPL's natural gas procurement plan is reviewed and approved annually on a prospective basis by the DPSC. DPL's counterparty credit risk under its natural gas supply and asset management agreements is mitigated by its ability to recover its natural gas costs through the GCR, which allows DPL to adjust rates annually to reflect realized natural gas prices. To the extent that the fair value of the transactions in a net loss position exceeds the unsecured credit threshold, then collateral is required to be posted in an amount equal to the amount by which the unsecured credit threshold is exceeded. Exchange-traded contracts are required to be fully collateralized without regard to the credit rating of the holder. As of September 30, 2017, DPL had no credit exposure under its natural gas supply and asset management agreements with investment grade suppliers.

Collateral and Contingent-Related Features (All Registrants)

As part of the normal course of business, Generation routinely enters into physical or financially settled contracts for the purchase and sale of electric capacity, energy, fuels, emissions allowances and other energy-related products. Certain of Generation’s derivative instruments contain provisions that require Generation to post collateral. Generation also enters into commodity transactions on exchanges (i.e., NYMEX, ICE). The exchanges act as the counterparty to each trade. Transactions on the exchanges must adhere to comprehensive collateral and margining requirements. This collateral may be posted in the form of cash or credit support with thresholds contingent upon Generation's credit rating from each of the major credit rating agencies. The collateral and credit support requirements vary by contract and by counterparty. These credit-risk-related contingent features stipulate that if Generation were to be downgraded or lose its investment grade credit rating (based on its senior unsecured debt rating), it would be required to provide additional collateral. This incremental collateral requirement allows for the offsetting of derivative instruments that are assets with the same counterparty, where the contractual right of offset exists under applicable master netting agreements. In the absence of expressly agreed-to provisions that specify the collateral that must be provided, collateral requested will be a function of the facts and circumstances of the situation at the time of the demand. In this case, Generation believes an amount of several months of future payments (i.e., capacity payments) rather than a calculation of fair value is the best estimate for the contingent collateral obligation, which has been factored into the disclosure below.

The aggregate fair value of all derivative instruments with credit-risk-related contingent features in a liability position that are not fully collateralized (excluding transactions on the exchanges that are fully collateralized) is detailed in the table below:

Credit-Risk Related Contingent Feature	September 30, 2017	December 31, 2016
Gross fair value of derivative contracts containing this feature[(a)]	$ (916)	$ (960)
Offsetting fair value of in-the-money contracts under master netting arrangements[(b)]	638	627
Net fair value of derivative contracts containing this feature[(c)]	$ (278)	$ (333)

(a) Amount represents the gross fair value of out-of-the-money derivative contracts containing credit-risk related contingent features ignoring the effects of master netting agreements.

(b) Amount represents the offsetting fair value of in-the-money derivative contracts under legally enforceable master netting agreements with the same counterparty, which reduces the amount of any liability for which a Registrant could potentially be required to post collateral.

(c) Amount represents the net fair value of out-of-the-money derivative contracts containing credit-risk related contingent features after considering the mitigating effects of offsetting positions under master netting arrangements and reflects the actual net liability upon which any potential contingent collateral obligations would be based.

Generation had cash collateral posted of $460 million and letters of credit posted of $255 million and cash collateral held of $49 million and letters of credit held of $29 million as of September 30, 2017 for external counterparties with derivative positions. Generation had cash collateral posted of $347 million and letters of credit posted of $284 million and cash collateral held of $24 million and letters of credit held of $28 million at December 31, 2016 for external counterparties with derivative positions. In the event of a credit downgrade below investment grade (i.e., to BB+ by S&P or Ba1 by Moody's), Generation would have been required to post additional collateral of $1.8 billion and $1.9 billion as of September 30, 2017 and December 31, 2016, respectively. These amounts represent the potential additional collateral required after giving consideration to offsetting derivative and non-derivative positions under master netting agreements.

Generation's and Exelon's interest rate swaps contain provisions that, in the event of a merger, if Generation's debt ratings were to materially weaken, it would be in violation of these provisions, resulting in the ability of the counterparty to terminate the agreement prior to maturity. Collateralization would not be required under any circumstance. Termination of the agreement could result in a settlement payment by Exelon or the counterparty on any interest rate swap in a net liability position. The settlement amount would be equal to the fair value of the swap on the termination date. As of September 30, 2017, Generation's swaps were in a liability position with a fair value of $4 million and Exelon's swaps were in an asset position, with a fair value of $6 million.

See Note 26 — Segment Information of the Exelon 2016 Form 10-K for further information regarding the letters of credit supporting the cash collateral.

Generation entered into supply forward contracts with certain utilities, including PECO and BGE, with one-sided collateral postings only from Generation. If market prices fall below the benchmark price levels in these contracts, the utilities are not required to post collateral. However, when market prices rise above the benchmark price levels, counterparty suppliers, including Generation, are required to post collateral once certain unsecured credit limits are exceeded. Under the terms of ComEd’s standard block energy contracts, collateral postings are one-sided from suppliers, including Generation, should exposures between market prices and benchmark prices exceed established unsecured credit limits outlined in the contracts. As of September 30, 2017, ComEd held approximately $10 million in collateral from suppliers in association with energy procurement contracts. Under the terms of ComEd’s annual renewable energy contracts, collateral postings are required to cover a fixed value for RECs only. In addition, under the terms of ComEd’s long-term renewable energy contracts, collateral postings are required from suppliers for both RECs and energy. The REC portion is a fixed value and the energy portion is one-sided from suppliers should the forward market prices exceed contract prices. As of September 30, 2017, ComEd held approximately $21 million in the form of cash and letters of credit as margin for both the annual and long-term REC obligations. If ComEd lost its investment grade credit rating as of September 30, 2017, it would have been required to post approximately $3 million of collateral to its counterparties. See Note 3 — Regulatory Matters of the Exelon 2016 Form 10-K for additional information.

PECO’s natural gas procurement contracts contain provisions that could require PECO to post collateral. This collateral may be posted in the form of cash or credit support with thresholds contingent upon PECO’s credit rating from the major credit rating agencies. The collateral and credit support requirements vary by contract and by counterparty. As of September 30, 2017, PECO was not required to post collateral for any of these agreements. If PECO lost its investment grade credit rating as of September 30, 2017, PECO could have been required to post approximately $20 million of collateral to its counterparties.

PECO’s supplier master agreements that govern the terms of its DSP Program contracts do not contain provisions that would require PECO to post collateral.

BGE’s full requirements wholesale power agreements that govern the terms of its electric supply procurement contracts do not contain provisions that would require BGE to post collateral.

BGE’s natural gas procurement contracts contain provisions that could require BGE to post collateral. This collateral may be posted in the form of cash or credit support with thresholds contingent upon BGE’s credit rating from the major credit rating agencies. The collateral and credit support requirements vary by contract and by counterparty. As of September 30, 2017, BGE was not required to post collateral for any of these agreements. If BGE lost its investment grade credit rating as of September 30, 2017, BGE could have been required to post approximately $28 million of collateral to its counterparties.

Pepco’s full requirements wholesale power agreements that govern the terms of its electric supply procurement contracts do not contain provisions that would require Pepco to post collateral.

DPL’s full requirements wholesale power agreements that govern the terms of its electric supply procurement contracts do not contain provisions that would require DPL to post collateral.

DPL’s natural gas procurement contracts contain provisions that could require DPL to post collateral. To the extent that the fair value of the natural gas derivative transaction in a net loss position exceeds the unsecured credit threshold, then collateral is required to be posted in an amount equal to the amount by which the unsecured credit threshold is exceeded. The DPL obligations are standalone, without the guaranty of PHI. If DPL lost its investment grade credit rating as of September 30, 2017, DPL could have been required to post an additional amount of approximately $9 million of collateral to its natural gas counterparties.

ACE’s full requirements wholesale power agreements that govern the terms of its electric supply procurement contracts do not contain provisions that would require ACE to post collateral.

11. Debt and Credit Agreements (All Registrants)

Short-Term Borrowings

Exelon, Pepco, DPL and ACE meet their short-term liquidity requirements primarily through the issuance of commercial paper and short-term notes. ComEd and BGE meet their short-term liquidity requirements primarily through the issuance of commercial paper. Generation and PECO meet their short-term liquidity requirements primarily through the issuance of commercial paper and borrowings from the Exelon intercompany money pool. PHI meets its short-term liquidity requirement primarily through the issuance of short-term notes and the Exelon intercompany money pool.

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

Commercial Paper

The Registrants had the following amounts of commercial paper borrowings outstanding as of September 30, 2017 and December 31, 2016:

Commercial Paper Borrowings	September 30, 2017	December 31, 2016
Exelon	$ 118	$ 688
Generation	—	620
BGE	—	45
PHI	118	23
Pepco	—	23
DPL	54	—
ACE	65	—

Short-Term Loan Agreements

On January 13, 2016, PHI entered into a $500 million term loan agreement, which was amended on March 28, 2016. The net proceeds of the loan were used to repay PHI's outstanding commercial paper, and for general corporate purposes. Pursuant to the loan agreement, as amended, loans made thereunder bear interest at a variable rate equal to LIBOR plus 1%, and all indebtedness thereunder is unsecured. On March 23, 2017, the aggregate principal amount of all loans, together with any accrued but unpaid interest due under the loan agreement was fully repaid and the loan terminated. On March 23, 2017, Exelon Corporate entered into a similar type term loan for $500 million which expires on March 22, 2018. Pursuant to the loan agreement, loans made thereunder bear interest at a variable rate equal to LIBOR plus 1% and all indebtedness thereunder is unsecured. The loan agreement is reflected in Exelon's Consolidated Balance Sheet within Short-Term borrowings.

Credit Agreements

On January 9, 2017, the credit agreement for Generation's $75 million bilateral credit facility was amended and restated to increase the facility size to $100 million and extend the maturity to January 2019. This facility will solely be used by Generation to issue letters of credit.

On May 26, 2016, Exelon Corporate, Generation, ComEd, PECO and BGE entered into amendments to each of their respective syndicated revolving credit facilities, which extended the maturity of each of the facilities to May 26, 2021. Exelon Corporate also increased the size of its facility from $500 million to $600 million. On May 26, 2016, PHI, Pepco, DPL and ACE entered into an amendment to their Second Amended and Restated Credit Agreement dated as of August 1, 2011, which (i) extended the maturity date of the facility to May 26, 2021, (ii) removed PHI as a borrower under the facility, (iii) decreased the size of the facility from $1.5 billion to $900 million and (iv) converted its financial covenant from a debt to capitalization leverage ratio to an interest coverage ratio. On May 26, 2017, each of the Registrants' respective syndicated revolving credit facilities had their maturity dates extended to May 26, 2022.

Long-Term Debt

Issuance of Long-Term Debt

During the nine months ended September 30, 2017, the following long-term debt was issued:

Company	Type	Interest Rate	Maturity	Amount	Use of Proceeds
Exelon	Junior Subordinated Notes[(a)]	3.50%	June 1, 2022	$ 1,150	Refinance Exelon's Junior Subordinated Notes issued in June 2014.
Generation	Albany Green Energy Project Financing	LIBOR + 1.25%	November 17, 2017	$ 14	Albany Green Energy biomass generation development.
Generation	Energy Efficiency Project Financing	3.90%	February 1, 2018	$ 17	Funding to install energy conservation measures for the Naval Station Great Lakes project.
Generation	Energy Efficiency Project Financing	2.61%	September 30, 2018	$ 10	Funding to install energy conservation measures for the Pensacola project.
Generation	Energy Efficiency Project Financing	3.53%	April 1, 2019	$ 8	Funding to install energy conservation measures for the State Department project.
Generation	Energy Efficiency Project Financing	3.72%	May 1, 2018	$ 4	Funding to install energy conservation measures for the Smithsonian Zoo project.
Generation	Senior Notes	2.95%	January 15, 2020	$ 250	Repay outstanding commercial paper obligations and for general corporate purposes.
Generation	Senior Notes	3.40%	March 15, 2022	$ 500	Repay outstanding commercial paper obligations and for general corporate purposes.
Generation	ExGen Texas Power Nonrecourse Debt	LIBOR + 4.75%	September 18, 2021	$ 6	Funding for general corporate purposes.
ComEd	First Mortgage Bonds, Series 122	2.95%	August 15, 2027	$ 350	Refinance maturing first mortgage bonds, to repay a portion of ComEd's outstanding commercial paper obligations and for general corporate purposes.
ComEd	First Mortgage Bonds, Series 123	3.75%	August 15, 2047	$ 650	Refinance maturing first mortgage bonds, to repay a portion of ComEd's outstanding commercial paper obligations and for general corporate purposes.
PECO	First and Refunding Mortgage Bonds	3.70%	September 15, 2047	$ 325	General corporate purposes.
BGE	Notes	3.75%	August 15, 2047	$ 300	Redeem $250 million in principal amount of the 6.20% Deferrable Interest Subordinated Debentures due October 15, 2043 issued by BGE's affiliate BGE Capital Trust II, repay commercial paper obligations and for general corporate purposes.
Pepco	Energy Efficiency Project Financing	3.30%	December 15, 2017	$ 2	Funding to install energy conservation measures for the DOE Germantown project.
Pepco	First Mortgage Bonds	4.15%	March 15, 2043	$ 200	Funding to repay outstanding commercial paper and for general corporate purposes.

(a) See the Junior Subordinated Notes discussion below for further information.

EGTP Nonrecourse Debt

In September 2014, EGTP, an indirect subsidiary of Exelon and Generation, issued $675 million aggregate principal amount of a nonrecourse senior secured term loan. The net proceeds were distributed to Generation for general business purposes. The loan is scheduled to mature on September 18, 2021. The term loan bears interest at a variable rate equal to LIBOR plus 4.75%, subject to a 1% LIBOR floor with interest payable quarterly. As of September 30, 2017, $660 million was outstanding. As part of the agreement, a revolving credit facility was established for the amount of $20 million available through, and scheduled to mature on September 18, 2019. In addition to the financing, EGTP entered into various interest rate swaps with an initial notional amount of approximately $505 million at an interest rate of 2.34% to hedge a portion of the interest rate exposure in connection with this financing, as required by the debt covenants. See Note 10 — Derivative Financial Instruments for additional information regarding interest rate swaps.

On May 2, 2017, EGTP entered into a consent agreement with its lenders, which resulted in the outstanding debt balance being classified as Long-term debt due within one year on Exelon's and Generation's Consolidated Balance Sheets. See Note 4 - Mergers, Acquisitions and Dispositions and Note 6 - Impairment of Long-Lived Assets for more information.

Junior Subordinated Notes

In June 2014, Exelon issued $1.15 billion of junior subordinated notes in the form of 23 million equity units at a stated amount of $50.00 per unit. Each equity unit represented an undivided beneficial ownership interest in Exelon's $1.15 billion of 2.50% junior subordinated notes due in 2024 ("2024 notes") and a forward equity purchase contract. As contemplated in the June 2014 equity unit structure, in April 2017, Exelon completed the remarketing of the 2024 notes into $1.15 billion of 3.497% junior subordinated notes due in 2022 ("Remarketing"). Exelon conducted the Remarketing on behalf of the holders of equity units and did not directly receive any proceeds therefrom. Instead, the former holders of the 2024 notes used debt remarketing proceeds towards settling the forward equity purchase contract with Exelon on June 1, 2017. Exelon issued approximately 33 million shares of common stock from treasury stock and received $1.15 billion upon settlement of the forward equity purchase contract. When reissuing treasury stock Exelon uses the average price paid to repurchase shares to calculate a gain or loss on issuance and records gains or losses directly to retained earnings. A loss on reissuance of treasury shares of $1.05 billion was recorded to retained earnings as of September 30, 2017. See Note 17 - Earnings Per Share and Equity for further information on the issuance of common stock.

Albany Green Energy Project

During the third quarter of 2017, upon completion of AGE, Generation retired $228 million of its LIBOR + 1.25% outstanding debt balance, which included $6 million of accumulated interest. Pursuant to the financing terms entered into by AGE in the second quarter of 2015, the entire financing balance plus accumulated interest was due upon substantial completion, but no later than November 17, 2017. See Note 3 - Variable Interest Entities for more details regarding AGE.

BGE Redemption of Trust Preferred Securities

On August 28, 2017, BGE redeemed all of the outstanding shares of BGE Capital Trust II 6.20% Preferred Securities ("Securities"), pursuant to the optional redemption provisions of the Indenture under which the Securities were issued. The redemption price per share was $25.19, which equaled the stated value per share plus accrued and unpaid dividends to, but excluding, the redemption date. No dividends on the Securities redeemed were accrued on or after the redemption date, nor did any interest accrue on amounts held to pay the redemption price.

(a) See Like-Kind Exchange within the Other Income Tax Matters section below for further details.

(b) DPL and ACE recognized a loss before income taxes for the nine months ended September 30, 2016, and PHI recognized a loss before income taxes for the period of March 24, 2016, through September 30, 2016. As a result, positive percentages represent an income tax benefit for the periods presented.

(c) Includes a remeasurement of uncertain state income tax positions for Pepco and DPL.

Accounting for Uncertainty in Income Taxes

The Registrants have the following unrecognized tax benefits as of September 30, 2017 and December 31, 2016:

					Successor			
Exelon	Generation	ComEd	PECO	BGE	PHI	Pepco	DPL	ACE

September 30, 2017	$ 738	$ 468	$ 2	$ —	$ 120	$ 120	$ 59	$ 21	$ 8

						Successor			
	Exelon	**Generation**	**ComEd**	**PECO**	**BGE**	**PHI**	**Pepco**	**DPL**	**ACE**
December 31, 2016	$ 916	$ 490	$ (12)	$ —	$ 120	$ 172	$ 80	$ 37	$ 22

Exelon established a liability for an uncertain tax position associated with the tax deductibility of certain merger commitments incurred by Exelon in connection with the acquisitions of Constellation in 2012 and PHI in 2016. In the first quarter 2017, as a part of its examination of Exelon's return, the IRS National Office issued guidance concurring with Exelon's position that the merger commitments were deductible. As a result, Exelon, Generation, PHI, Pepco, DPL, and ACE decreased their liability for unrecognized tax benefits by $146 million, $19 million, $59 million, $21 million, $16 million, and $22 million, respectively, as of September 30, 2017, resulting in a benefit to Income taxes on Exelon's, Generation's, PHI's, Pepco's, DPL's and ACE's Consolidated Statements of Operations and Comprehensive Income and corresponding decreases in their effective tax rates.

Exelon reduced the liability related to the uncertain tax position associated with the like-kind exchange in the second quarter of 2017. Please see the Other Income Tax Matters section below for additional details related to the like-kind exchange adjustments made in the second quarter of 2017.

Reasonably possible the total amount of unrecognized tax benefits could significantly increase or decrease within 12 months after the reporting date

Like-Kind Exchange

As of September 30, 2017, Exelon and ComEd have approximately $39 million and $2 million, respectively, of unrecognized federal and state income tax benefits that could significantly decrease within the 12 months after the reporting date due to a final resolution of the like-kind exchange litigation described below. The recognition of these unrecognized tax benefits would decrease Exelon and ComEd's effective tax rate.

Settlement of Income Tax Positions

As of September 30, 2017, Exelon, Generation, BGE, PHI, Pepco, DPL, and ACE have approximately $676 million, $469 million, $120 million, $88 million, $59 million, $21 million, and $8 million of unrecognized federal and state tax benefits that could significantly decrease within the 12 months after the reporting date as a result of completing audits, potential settlements, and the outcomes of pending court cases. Of the above unrecognized tax benefits, Exelon and Generation have $462 million that, if recognized, would decrease the effective tax rate. The unrecognized tax benefits related to BGE, DPL, ACE, and a portion of Pepco, if recognized, may be included in future regulated base rates and that portion would have no impact to the effective tax rate.

Other Income Tax Matters

Like-Kind Exchange (Exelon and ComEd)

Exelon, through its ComEd subsidiary, took a position on its 1999 income tax return to defer approximately $1.2 billion of tax gain on the sale of ComEd's fossil generating assets. The gain was deferred by reinvesting a portion of the proceeds from the sale in qualifying replacement property under the like-kind exchange provisions of the IRC. The like-kind exchange replacement property purchased by Exelon included interests in three municipal-owned electric generation facilities which were properly leased back to the municipalities.

The IRS disagreed with this position and asserted that the entire gain of approximately $1.2 billion was taxable in 1999. Exelon was unable to reach agreement with the IRS regarding the dispute over the like-kind exchange position. The IRS asserted that the Exelon purchase and leaseback transaction was substantially similar to a leasing transaction, known as a SILO, which the IRS does not respect as the acquisition of an ownership interest in property. A SILO is a “listed transaction” that the IRS has identified as a potentially abusive tax shelter under guidance issued in 2005. Accordingly, the IRS asserted that the sale of the fossil plants followed by the purchase and leaseback of the municipal owned generation facilities did not qualify as a like-kind exchange and the gain on the sale is fully subject to tax. The IRS also asserted a penalty of approximately $90 million for a substantial understatement of tax.

On September 30, 2013, the IRS issued a notice of deficiency to Exelon for the like-kind exchange position. Exelon filed a petition on December 13, 2013 to initiate litigation in the United States Tax Court (Tax Court) and the trial took place in August of 2015. Exelon was not required to remit any part of the asserted tax or penalty in order to litigate the issue.

On September 19, 2016, the Tax Court rejected Exelon’s position in the case and ruled that Exelon was not entitled to defer gain on the transaction. In addition, contrary to Exelon’s evaluation that the penalty was unwarranted, the Tax Court ruled that Exelon is liable for the penalty and interest due on the asserted penalty. In June of 2017, the IRS finalized its computation of tax, penalties and interest owed by Exelon pursuant to the Tax Court’s decision. In September of 2017, Exelon appealed this decision to the U.S. Court of Appeals for the Seventh Circuit.

Table of Contents

In the first quarter of 2013, Exelon concluded that it was no longer more likely than not that the like-kind exchange position would be sustained and recorded charges to earnings representing the amount of interest expense (after-tax) and incremental state income tax expense that would be payable in the event Exelon is unsuccessful in litigation. Exelon agreed to hold ComEd harmless from any unfavorable impacts on ComEd's equity of the after-tax interest and penalty amounts.

Prior to the Tax Court's decision, however, Exelon did not believe it was likely a penalty would be assessed based on applicable case law and the facts of the transaction. As a result, no charge had been recorded for the penalty or for after-tax interest on the penalty. While it has strong arguments on appeal with respect to both the merits and the penalty, Exelon has determined that, pursuant to accounting standards, it is no longer more likely than not to avoid ultimate imposition of the penalty. As a result, in the third quarter of 2016, Exelon and ComEd recorded a charge to earnings of approximately $106 million and $86 million, respectively, of penalty and approximately $94 million and $64 million, respectively, of after-tax interest. Exelon and ComEd recorded the penalty and pre-tax interest due on the asserted penalty to Other, net and Interest expense, net, respectively, on their Consolidated Statements of Operations. Consistent with Exelon's agreement to continue to hold ComEd harmless from any unfavorable impact on its equity from the like-kind exchange position, ComEd recorded on its Consolidated Balance Sheets as of September 30, 2016, an additional $150 million receivable and non-cash equity contributions from Exelon.

As a result of the IRS's finalization of its computation in the second quarter 2017, Exelon recorded a benefit to earnings of approximately $26 million, consisting of an income tax benefit of $50 million and a reduction of penalties of $2 million, partially offset by after-tax interest expense of $26 million, while ComEd recorded a charge to earnings of approximately $23 million, consisting of income tax expense of $15 million and after-tax interest expense of $8 million.

In the second quarter of 2017, Exelon amended its agreement with ComEd to also hold ComEd harmless for the unfavorable impacts on its equity from the additional income tax amounts owed by ComEd as a result of the IRS's finalization of its computation related to the like-kind exchange position. Accordingly, in the second quarter of 2017, ComEd recorded an additional receivable and non-cash equity contribution from Exelon for the total $23 million. As of June 30, 2017, ComEd had a total receivable from Exelon pursuant to the hold harmless agreement of $369 million, which was included in Current Receivables from Affiliates on ComEd's Consolidated Balance Sheet.

Exelon expects to pay the tax, penalties and interest of approximately $1.3 billion related to the like-kind exchange, including $300 million attributable to ComEd, in the fourth quarter of 2017. While Exelon will receive a tax benefit of approximately $350 million associated with the deduction for the interest, Exelon currently has a net operating loss carryforward and thus does not expect to realize the cash benefit until 2018. After taking into account these interest deduction tax benefits, the total estimated net cash outflow for the like-kind exchange is approximately $950 million, of which approximately $300 million is attributable to ComEd after giving consideration to Exelon's agreement to hold ComEd harmless from any unfavorable impacts on ComEd's equity from the like-kind exchange position. Following a final appellate decision, which is expected in 2018, Exelon expects to receive approximately $60 million related to final interest computations.

Of the above amounts payable, Exelon deposited with the IRS $1.25 billion in October of 2016. Any remaining amounts due to the IRS will be paid by Exelon in the fourth quarter of 2017. Exelon funded the $1.25 billion deposit with a combination of cash on hand and short-term borrowings. The deposit is reflected as a current asset and the related liabilities for the tax, penalty, and interest are included on Exelon's balance sheet as current obligations. In the third quarter of 2017, the $300 million payable discussed above attributable to ComEd, net of ComEd's receivable pursuant to the hold harmless agreement, was settled with Exelon. No recovery will be sought from ComEd customers for any interest, penalty, or additional income tax payment amounts resulting from the like-kind exchange tax position.

As previously disclosed, in the first quarter of 2014, Exelon entered into an agreement to terminate its investment in one of the three municipal-owned electric generation properties in exchange for a net early termination amount of $335 million. In the first quarter of 2016, Exelon terminated its interests in the remaining two municipal-owned electric generation properties in exchange for $360 million.

Long-Term Marginal State Income Tax Rate (Exelon, Generation, ComEd, PHI and Pepco)

Exelon, Generation and PHI periodically review events that may significantly impact how income is apportioned among the states and, therefore, the calculation of their respective deferred state income taxes. Events that may require Exelon, Generation and PHI to update their long-term state tax apportionment include significant changes in tax law and/or significant operational changes. Exelon's, PHI's and Pepco's long-term marginal state income tax rate were revised in the first quarter of 2017 as a result of a statutory rate change in Washington, D.C. As a result, Exelon, PHI and Pepco recorded a one-time decrease to Deferred income tax liability of $28 million, $8 million, and $8 million, respectively, on their Consolidated Balance Sheets. Because income taxes are recovered through customer rates, Exelon, PHI and Pepco recorded a corresponding regulatory liability of $8 million, in the Consolidated Balance Sheets. In addition, Exelon recorded a decrease to Income tax expense of $20 million, net of federal taxes, in the Consolidated Statements of Operations and Comprehensive Income for the three months ended March 31, 2017.

In the third quarter of 2017, Exelon reviewed and updated its marginal state income tax rates based on 2016 state apportionment rates. In addition, Exelon, Generation and ComEd recorded the impacts of Illinois' statutory rate change, which increased the total corporate income tax rate from 7.75% to 9.5% effective July 1, 2017. As a result of the rate changes, in the third quarter of 2017, Exelon, Generation and ComEd recorded a one-time increase to Deferred income taxes of approximately $250 million, $20 million and $270 million, respectively, on their Consolidated Balance Sheets. Because income taxes are recovered through customer rates, each of Exelon and ComEd recorded a corresponding regulatory asset of $272 million. Further, Exelon recorded a decrease to Income tax expense of approximately $20 million and Generation recorded an increase to Income tax expense of approximately $ 20 million (each net of federal taxes) in their Consolidated Statements of Operations and Comprehensive Income for the three and nine months ended September 30, 2017. The Illinois statutory rate increase is not expected to have a material ongoing impact to Exelon's, Generation's or ComEd's future results of operations.

13. Nuclear Decommissioning (Exelon and Generation)

Nuclear Decommissioning Asset Retirement Obligations

Generation has a legal obligation to decommission its nuclear power plants following the expiration of their operating licenses. To estimate its decommissioning obligation related to its nuclear generating stations for financial accounting and reporting purposes, Generation uses a probability-weighted, discounted cash flow model which, on a unit-by-unit basis, considers multiple outcome scenarios that include significant estimates and assumptions, and are based on decommissioning cost studies, cost escalation rates, probabilistic cash flow models and discount rates. Generation updates its ARO annually, unless circumstances warrant more frequent updates, based on its review of updated cost studies and its annual evaluation of cost escalation factors and probabilities assigned to various scenarios.

The following table provides a rollforward of the nuclear decommissioning ARO reflected on Exelon's and Generation's Consolidated Balance Sheets from December 31, 2016 to September 30, 2017:

Nuclear decommissioning ARO at December 31, 2016[a]	$	8,734
Acquisition of FitzPatrick		444
Accretion expense		342
Net decrease due to changes in, and timing of, estimated cash flows		(148)
Costs incurred to decommission retired plants		(6)
Nuclear decommissioning ARO at September 30, 2017[a]	$	9,366

(a) Includes $12 million and $10 million for the current portion of the ARO at September 30, 2017 and December 31, 2016, respectively, which is included in Other current liabilities on Exelon's and Generation's Consolidated Balance Sheets.

During the nine months ended September 30, 2017, Generation’s nuclear ARO increased by approximately $632 million. The increase primarily reflects the net impacts of the acquisition of FitzPatrick, the announced early retirement of TMI, year-to-date accretion of the ARO liability due to the passage of time and ARO updates completed during 2017 to reflect changes in amounts and timing of estimated decommissioning cash flows.

In the first quarter of 2017, a preliminary estimate of $417 million was recorded for the fair value of FitzPatrick’s ARO. In the third quarter of 2017, an adjustment was recorded to increase the FitzPatrick ARO valuation by $27 million to $444 million to reflect updated cost estimate inputs from a third-party engineering firm. For additional details on the acquisition of FitzPatrick, see Note 4 - Mergers, Acquisitions and Dispositions.

The net $148 million decrease due to changes in, and timing of, estimated cash flows was driven by multiple adjustments throughout the period, some with offsetting impacts. These adjustments include a $180 million decrease for refinements in estimated fleet wide labor costs expected to be incurred for certain on-site personnel during decommissioning as well as decreases resulting from updates to the cost studies of Clinton and Quad Cities. These decreases were partially offset by a $138 million increase in TMI's ARO liability associated with the May 30, 2017 announcement to early retire the unit on September 30, 2019. The increase in the ARO liability for TMI incorporates the early shutdown date, increases the probabilities of longer term decommissioning scenarios, and reflects an increase in the estimated costs to decommission based on an updated decommissioning cost study. Refer to Note 7 - Early Nuclear Plant Retirements for additional information regarding the announced early retirement of TMI.

Nuclear Decommissioning Trust Fund Investments

NDT funds have been established for each generation station unit to satisfy Generation's nuclear decommissioning obligations. Generally, NDT funds established for a particular unit may not be used to fund the decommissioning obligations of any other unit.

The NDT funds associated with Generation's nuclear units have been funded with amounts collected from the previous owners and their respective utility customers. PECO is authorized to collect funds, in revenues, for decommissioning the former PECO nuclear plants through regulated rates, and these collections are scheduled through the operating lives of the former PECO plants. The amounts collected from PECO customers are remitted to Generation and deposited into the NDT funds for the unit for which funds are collected. Every five years, PECO files a rate adjustment with the PAPUC that reflects PECO's calculations of the estimated amount needed to decommission each of the former PECO units based on updated fund balances and estimated decommissioning costs. The rate adjustment is used to determine the amount collectible from PECO customers. On March 31, 2017, PECO filed its Nuclear Decommissioning Cost Adjustment (NDCA) with the PAPUC proposing an annual recovery from customers of approximately $4 million. This amount reflects a decrease from the current approved annual collection of approximately $24 million primarily due to the removal of the collections for Limerick Units 1 and 2 as a result of the NRC approving the extension of the operating licenses for an additional 20 years. On August 8, 2017, the PAPUC approved the filing and the new rates will be effective January 1, 2018. See Note 16 - Asset Retirement Obligations of Exelon's 2016 Form 10-K, for information regarding the amount collected from PECO ratepayers for decommissioning costs.

Exelon and Generation had NDT fund investments totaling $12,966 million and $11,061 million at September 30, 2017 and December 31, 2016, respectively. The increase is primarily driven by improved market performance and the acquisition of FitzPatrick.

The following table provides unrealized gains on NDT funds for the three and nine months ended September 30, 2017 and 2016:

	Exelon and Generation		Exelon and Generation	
	Three Months Ended September 30,		Nine Months Ended September 30,	
	2017	2016	2017	2016
Net unrealized gains on decommissioning trust funds — Regulatory Agreement Units[a]	$ 44	$ 155	$ 253	$ 286
Net unrealized gains on decommissioning trust funds — Non-Regulatory Agreement Units[b][c]	111	116	347	216

(a) Net unrealized gains related to Generation's NDT funds associated with Regulatory Agreement Units are included in Regulatory liabilities on Exelon's Consolidated Balance Sheets and Noncurrent payables to affiliates on Generation's Consolidated Balance Sheets.

(b) Excludes $4 million and $5 million of net unrealized losses related to the Zion Station pledged assets for the three months ended September 30, 2017 and 2016 respectively. Excludes $5 million and $2 million of net unrealized losses related to the Zion Station pledged assets for the nine months ended September 30, 2017 and 2016, respectively. Net unrealized losses related to Zion Station pledged assets are included in Other current liabilities and Payable for Zion Station decommissioning on Exelon's and Generation's Consolidated Balance Sheets in 2017 and 2016, respectively.

(c) Net unrealized gains related to Generation's NDT funds with Non-Regulatory Agreement Units are included within Other, net in Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income.

Interest and dividends on NDT fund investments are recognized when earned and are included in Other, net in Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income. Interest and dividends earned on the NDT fund investments for the Regulatory Agreement Units are eliminated within Other, net in Exelon's and Generation's Consolidated Statement of Operations and Comprehensive Income.

Table of Contents

Refer to Note 3 — Regulatory Matters and Note 27 — Related Party Transactions of the Exelon 2016 Form 10-K for information regarding regulatory liabilities at ComEd and PECO and intercompany balances between Generation, ComEd and PECO reflecting the obligation to refund to customers any decommissioning-related assets in excess of the related decommissioning obligations.

Zion Station Decommissioning

On September 1, 2010, Generation completed an Asset Sale Agreement (ASA) with EnergySolutions Inc. and its wholly owned subsidiaries, EnergySolutions, LLC (EnergySolutions) and ZionSolutions, under which ZionSolutions has assumed responsibility for completing certain decommissioning activities at Zion Station, which is located in Zion, Illinois and ceased operation in 1998. See Note 16 — Asset Retirement Obligations of the Exelon 2016 Form 10-K for information regarding the specific treatment of assets, including NDT funds, and decommissioning liabilities transferred in the transaction.

ZionSolutions is subject to certain restrictions on its ability to request reimbursements from the Zion Station NDT funds as defined within the ASA. Therefore, the transfer of the Zion Station assets did not qualify for asset sale accounting treatment and, as a result, the related NDT funds were reclassified to Pledged assets for Zion Station decommissioning within Generation’s and Exelon’s Consolidated Balance Sheets and will continue to be measured in the same manner as prior to the completion of the transaction. Additionally, the transferred ARO for decommissioning was replaced with a Payable for Zion Station decommissioning in Generation’s and Exelon’s Consolidated Balance Sheets. Changes in the value of the Zion Station NDT assets, net of applicable taxes, are recorded as a change in the payable to ZionSolutions. At no point will the payable to ZionSolutions exceed the project budget of the costs remaining to decommission Zion Station. Generation has retained its obligation for the SNF. Following ZionSolutions’ completion of its contractual obligations and transfer of the NRC license to Generation, Generation will store the SNF at Zion Station until it is transferred to the DOE for ultimate disposal, and will complete all remaining decommissioning activities associated with the SNF dry storage facility. Generation has a liability of approximately $112 million which is included within the nuclear decommissioning ARO at September 30, 2017. Generation also has retained NDT assets to fund its obligation to maintain the SNF at Zion Station until transfer to the DOE and to complete all remaining decommissioning activities for the SNF storage facility. Any shortage of funds necessary to maintain the SNF and decommission the SNF storage facility is ultimately required to be funded by Generation. Any Zion Station NDT funds remaining after the completion of all decommissioning activities will be returned to ComEd customers in accordance with the applicable orders. The following table provides the pledged assets and payables to ZionSolutions, and withdrawals by ZionSolutions at September 30, 2017 and December 31, 2016:

	Exelon and Generation	
	September 30, 2017	**December 31, 2016**
Carrying value of Zion Station pledged assets	$ 57	$ 113
Payable to Zion Solutions[(a)]	53	104
Current portion of payable to Zion Solutions[(b)]	53	90
Cumulative withdrawals by Zion Solutions to pay decommissioning costs [(c)]	928	878

(a) Excludes a liability recorded within Exelon’s and Generation’s Consolidated Balance Sheets related to the tax obligation on the unrealized activity associated with the Zion Station NDT funds. The NDT funds will be utilized to satisfy the tax obligations as gains and losses are realized.

(b) Included in Other current liabilities within Exelon’s and Generation’s Consolidated Balance Sheets.

(c) Includes project expenses to decommission Zion Station and estimated tax payments on Zion Station NDT fund earnings.

NRC Minimum Funding Requirements

NRC regulations require that licensees of nuclear generating facilities demonstrate reasonable assurance that funds will be available in specified minimum amounts to decommission the facility at the end of its life.

Generation filed its biennial decommissioning funding status report with the NRC on March 30, 2017 for all units except for Zion Station which is included in a separate report to the NRC submitted by ZionSolutions (see Zion Station Decommissioning above). The status report demonstrated adequate decommissioning funding assurance for all units except for Peach Bottom Unit 1. As a former PECO plant, financial assurance for decommissioning Peach Bottom Unit 1 is provided by the NDT fund in addition to collections from PECO ratepayers. As discussed under Nuclear Decommissioning Trust Fund Investments above, the amount collected from PECO ratepayers has been adjusted in the March 31, 2017 filing to the PAPUC which was approved on August 8, 2017 and will be effective January 1, 2018.

Generation will file its next decommissioning funding status report with the NRC by March 31, 2018 for shutdown reactors and reactors within five years of shutdown. This report will reflect the status of decommissioning funding assurance as of December 31, 2017 and will include the impact of the announced early retirement of TMI. A shortfall could necessitate that Exelon post a parental guarantee for Generation's share of the funding assurance. However, the amount of any required guarantee will ultimately depend on the decommissioning approach adopted at TMI, the associated level of costs, and the decommissioning trust fund investment performance going forward.

14. Retirement Benefits (All Registrants)

Exelon sponsors defined benefit pension plans and other postretirement benefit plans for essentially all employees. Effective March 23, 2016, Exelon became the sponsor of all of PHI's defined benefit pension and other postretirement benefit plans, and assumed PHI's benefit plan obligations and related assets. As a result, PHI's benefit plan net obligation and related regulatory assets were transferred to Exelon.

During the first quarter of 2017, in connection with the acquisition of Fitzpatrick, Exelon established a new qualified pension plan and a new OPEB plan, and recorded a provisional obligation for Fitzpatrick employees based on information available at the merger date of $38 million and $11 million, respectively. As permitted by business combinations accounting guidance, during the third quarter of 2017, Exelon updated those obligations based on a final valuation for Fitzpatrick employees as of the merger date of March 31, 2017. The updated obligations for pension and OPEB were $16 million and $17 million, respectively. Refer to Note 4 - Mergers, Acquisitions and Dispositions for additional discussion of the acquisition of FitzPatrick.

Defined Benefit Pension and Other Postretirement Benefits

During the first quarter of 2017, Exelon received an updated valuation of its pension and other postretirement benefit obligations to reflect actual census data as of January 1, 2017. This valuation resulted in an increase to the pension obligation of $92 million and an increase to the other postretirement benefit obligation of $57 million. Additionally, accumulated other comprehensive loss increased by approximately $59 million (after tax), regulatory assets increased by approximately $57 million and regulatory liabilities increased by approximately $4 million.

The majority of the 2017 pension benefit cost for Exelon-sponsored plans is calculated using an expected long-term rate of return on plan assets of 7.00% and a discount rate of 4.04%. The majority of the 2017 other postretirement benefit cost is calculated using an expected long-term rate of return on plan assets of 6.58% for funded plans and a discount rate of 4.04%.

A portion of the net periodic benefit cost for all plans is capitalized within the Consolidated Balance Sheets. The following tables present the components of Exelon's net periodic benefit costs, prior to capitalization, for the three and nine months ended September 30, 2017 and 2016 and PHI's net periodic benefit costs, prior to capitalization, for the predecessor period of January 1, 2016 to March 23, 2016.

	Pension Benefits Three Months Ended September 30,		Other Postretirement Benefits Three Months Ended September 30,	
	2017[(a)]	2016[(b)]	2017[(a)]	2016[(b)]
Components of net periodic benefit cost:				
Service cost	$ 98	$ 92	$ 26	$ 27

Interest cost	211	215	45	47
Expected return on assets	(300)	(293)	(39)	(42)
Amortization of:				
Prior service (benefit) cost	(1)	3	(47)	(48)
Actuarial loss	152	142	15	18
Settlement charges	1	—	—	—
Net periodic benefit cost	$ 161	$ 159	$ —	$ 2

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

	Pension Benefits Nine Months Ended September 30,		Other Postretirement Benefits Nine Months Ended September 30,	
	2017[(a)]	2016[(b)]	2017[(a)]	2016[(b)]
Components of net periodic benefit cost:				
Service cost	$ 290	$ 262	$ 79	$ 80
Interest cost	632	616	136	138
Expected return on assets	(898)	(847)	(121)	(121)

	Successor				*Predecessor*
Pension and Other Postretirement Benefit Costs	**Three Months Ended September 30, 2017**	**Three Months Ended September 30, 2016**	**Nine Months Ended September 30, 2017**	**March 24, 2016 to September 30, 2016**	**January 1, 2016 to March 23, 2016**
PHI	$ 24	$ 28	$ 72	$ 58	$ 23

(a) FitzPatrick net benefit costs are included for the period after acquisition.

(b) These amounts primarily represent amounts billed to Exelon's subsidiaries through intercompany allocations. These amounts are not included in the Generation, ComEd, PECO, BGE, PHI, Pepco, DPL or ACE amounts above.

(c) Pepco's, DPL's, ACE's and PHISCO's pension and postretirement benefit costs for the nine months ended September 30, 2016 include $7 million, $4 million, $3 million and $9 million, respectively, of costs incurred prior to the closing of Exelon's merger with PHI on March 23, 2016.

(d) These amounts represent amounts billed to Pepco, DPL, and ACE through intercompany allocations. These amounts are not included in Pepco, DPL, or ACE amounts above.

Defined Contribution Savings Plans

The Registrants participate in various 401(k) defined contribution savings plans that are sponsored by Exelon. The plans are qualified under applicable sections of the IRC and allow employees to contribute a portion of their pre-tax and/or after-tax income in accordance with specified guidelines. All Registrants match a percentage of the employee contributions up to certain limits. The following table presents the matching contributions to the savings plans during the three and nine months ended September 30, 2017 and 2016 and PHI's for the predecessor and successor periods of January 1, 2016 to March 23, 2016 and March 24, 2016 to September 30, 2016, respectively.

	Three Months Ended September 30,		**Nine Months Ended September 30,**	
Savings Plan Matching Contributions	**2017**	**2016**	**2017**	**2016**
Exelon	$ 34	$ 51	$ 97	$ 107
Generation	14	31	42	56
ComEd	9	10	24	23

ACE	—	—	1	1
PHISCO[b][c]	1	2	4	5

	Successor				*Predecessor*
Savings Plan Matching Contributions	**Three Months Ended September 30, 2017**	**Three Months Ended September 30, 2016**	**Nine Months Ended September 30, 2017**	**March 24, 2016 to September 30, 2016**	**January 1, 2016 to March 23, 2016**
PHI	$ 3	$ 3	$ 10	$ 7	$ 3

(a) These amounts primarily represent amounts billed to Exelon's subsidiaries through intercompany allocations. These amounts are not included in the Generation, ComEd, PECO, BGE, PHI, Pepco, DPL or ACE amounts above.

(b) Pepco's, DPL's and PHISCO's matching contributions for the nine months ended September 30, 2016 include $1 million, $1 million, and $1 million, respectively, of costs incurred prior to the closing of Exelon's merger with PHI on March 23, 2016, which is not included in Exelon's matching contributions for the nine months ended September 30, 2016.

(c) These amounts represent amounts billed to Pepco, DPL, and ACE through intercompany allocations. These amounts are not included in Pepco, DPL, or ACE amounts above.

15. Severance (All Registrants)

The Registrants have an ongoing severance plan under which, in general, the longer an employee worked prior to termination the greater the amount of severance benefits. The Registrants record a liability and expense or regulatory asset for severance once terminations are probable of occurrence and the related severance benefits can be reasonably estimated. For severance benefits that are incremental to its ongoing severance plan (“one-time termination benefits”), the Registrants measure the obligation and record the expense at fair value at the communication date if there are no future service requirements, or, if future service is required to receive the termination benefit, ratably over the required service period.

Ongoing Severance Plans

The Registrants provide severance and health and welfare benefits under Exelon's ongoing severance benefit plans to terminated employees in the normal course of business. These benefits are accrued for when the benefits are considered probable and can be reasonably estimated.

For the three and nine months ended September 30, 2017 and 2016, Exelon, Generation, ComEd, PHI, Pepco, DPL, and ACE recorded the following severance costs associated with these ongoing severance benefits within Operating and maintenance expense in their Consolidated Statements of Operations and Comprehensive Income.

				Successor			
	Exelon	**Generation**[(a)]	**ComEd**[(a)]	**PHI**	**Pepco**[(a)]	**DPL**[(a)]	**ACE**[(a)]
Three Months Ended							
September 30, 2017	$ 1	$ —	$ —	$ 1	$ 1	$ —	$ —
September 30, 2016	8	7	—	1	—	—	—
Nine Months Ended							
September 30, 2017	$ 10	$ 4	$ 2	$ 4	$ 2	$ 1	$ 1
September 30, 2016	12	10	1	1	—	—	—

(a) The amounts above for Generation include $2 million for amounts billed by BSC through intercompany allocations for the nine months ended September 30, 2017 and $1 million and $2 million for the three and nine months ended September 30, 2016, respectively. The amounts above for ComEd include $1 million for amounts billed by BSC through intercompany allocations for the three and nine months ended September 30, 2016. The amounts above for PHI include less than $1 million and $1 million billed by BSC through intercompany allocations for the three and nine months ended September 30, 2017, respectively, and $1 million for the three and nine months ended September 30, 2016. Amounts billed by PHISCO to Pepco were $1 million and $2 million for the three and nine months ended September 30, 2017, respectively. Amounts billed by PHISCO to DPL and ACE were $1 million, each, for the nine months ended September 30, 2017. Pepco, DPL and ACE did not have any ongoing severance plans for the three and nine months ended September 30, 2016.

Cost Management Program-Related Severance

In August 2015, Exelon announced a cost management program focused on cost savings at BSC and Generation, including the elimination of approximately 500 positions. These actions are in response to the continuing economic challenges confronting all parts of Exelon's business and industry, necessitating continued focus on cost management through enhanced efficiency and productivity. Exelon expects that approximately 250 corporate support positions in BSC and approximately 250 positions located throughout Generation will be eliminated.

For the three and nine months ended September 30, 2017 and 2016, the Registrants recorded the following severance costs related to the cost management program within Operating and maintenance expense in their Consolidated Statements of Operations and Comprehensive Income, pursuant to the authoritative guidance for ongoing severance plans:

	Exelon	**Generation**	**ComEd**	**PECO**	**BGE**
Three Months Ended					

September 30, 2017[a]	$ 7	$ 7	$ —	$ —	$ —
September 30, 2016[b]	1	1	—	—	—
Nine Months Ended					
September 30, 2017[a]	$ 6	$ 6	$ —	$ —	$ —
September 30, 2016[b]	18	13	3	1	1

(a) Amounts billed by BSC through intercompany allocations for the nine months ended September 30, 2017 were immaterial.

(b) The amounts above for Generation, ComEd, PECO and BGE include $7 million, $3 million, $1 million and $1 million, respectively, for amounts billed by BSC through intercompany allocations for the nine months ended September 30, 2016.

Early Plant Retirement-Related Severance (Exelon and Generation)

As a result of the Three Mile Island plant retirement decision, Exelon and Generation will incur certain employee-related costs, including severance benefit costs. Severance costs will be provided to management employees that are eligible under Exelon's severance policy, to the extent that those employees are not redeployed to other locations. In June 2017, Exelon and Generation recognized severance costs of $17 million related to expected management employee severances resulting from the plant retirements within Operating and maintenance expense in their Consolidated Statements of Operation and Comprehensive Income. Approximately half of the employees at this location fall under a collective bargaining union agreement and are not eligible for severance benefits under an existing plan. The union and Exelon will negotiate terms of any severance benefits. If severance benefits are successfully negotiated, the amounts will be accrued as a one-time employee termination benefit once the established plan is communicated to employees. The final amount of the severance cost will ultimately depend on the specific employees severed. See Note 7 - Early Nuclear Plant Retirements for additional information regarding the announced early retirement of TMI.

Severance Costs Related to the PHI Merger

Upon closing the PHI Merger, Exelon recorded a severance accrual for the anticipated employee position reductions as a result of the post-merger integration. Cash payments under the plan began in May 2016 and will continue through 2020.

For the three and nine months ended September 30, 2017 and the three months ended September 30, 2016, the PHI Merger severance costs were immaterial. For the nine months ended September 30, 2016, the Registrants recorded the following severance costs associated with the identified job reductions within Operating and maintenance expense in their Consolidated Statements of Operations and Comprehensive Income, pursuant to the authoritative guidance for ongoing severance plans:

						Successor			
	Exelon	**Generation**	**ComEd**	**PECO**	**BGE**	**PHI**	**Pepco**	**DPL**	**ACE**
Nine Months Ended September 30, 2016									
Severance costs[(a)]	$ 55	$ 9	$ 2	$ 1	$ 1	$ 42	$ 20	$ 12	$ 10

(a) The amounts above for Generation, ComEd, PECO, BGE, Pepco, DPL and ACE include $8 million, $2 million, $1 million, $1 million, $19 million, $11 million and $10 million, respectively, for amounts billed by BSC and/or PHISCO through intercompany allocations for the nine months ended September 30, 2016.

PHI, Pepco, DPL and ACE record regulatory assets for merger related integration costs which include a portion of the severance costs in the table above related to the PHI Merger. These regulatory assets are either currently being recovered in rates or are deemed probable of recovery in future rates. See Note 5 - Regulatory Matters for further information.

Severance Liability

Amounts included in the table below represent the severance liability recorded for the severance plans above for employees of each Registrant and exclude amounts included at Exelon and billed through intercompany allocations:

Successor

Severance Liability	**Exelon**	**Generation**	**ComEd**	**PECO**	**BGE**	**PHI**	**Pepco**	**DPL**	**ACE**
Balance at December 31, 2016	$ 88	$ 36	$ 3	$ —	$ —	$ 29	$ —	$ —	$ —

17. Earnings Per Share and Equity (Exelon)

Earnings per Share

Diluted earnings per share is calculated by dividing Net income attributable to common shareholders by the weighted average number of shares of common stock outstanding, including shares to be issued upon exercise of stock options, performance share awards and restricted stock outstanding under Exelon's LTIPs considered to be common stock equivalents. The following table sets forth the components of basic and diluted earnings per share and shows the effect of these stock options, performance share awards and restricted stock on the weighted average number of shares outstanding used in calculating diluted earnings per share:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2017	2016	2017	2016
Exelon				
Net income attributable to common shareholders	$ 824	$ 490	$ 1,899	$ 930
Weighted average common shares outstanding — basic	962	925	941	924
Assumed exercise and/or distributions of stock-based awards	3	2	2	2
Weighted average common shares outstanding — diluted	965	927	943	926

The number of stock options not included in the calculation of diluted common shares outstanding due to their antidilutive effect was approximately 7 million and 9 million for the three and nine months ended September 30, 2017, respectively, and 11 million and 12 million for the three and nine months ended September 30, 2016, respectively. There were no equity units related to the PHI Merger not included in the calculation of diluted common shares outstanding due to their antidilutive effect for the three and nine months ended September 30, 2017. The number of equity units related to the PHI Merger not included in the calculation of diluted common shares outstanding due to their antidilutive effect was less than 1 million for the three and nine months ended September 30, 2016. Refer to Note 20 — Shareholders' Equity of the Exelon 2016 Form 10-K for further information regarding the equity units.

On June 1, 2017, Exelon settled the forward purchase contract, which was a component of the June 2014 equity units, through the issuance of approximately 33 million shares of Exelon common stock from treasury stock. The issuance of shares on June 1, 2017, triggered full dilution in the EPS calculation, which prior to settlement were included in the calculation of diluted EPS using the treasury stock method.

Prior to the June 2017 issuance Exelon had approximately 35 million shares of treasury stock with a cost of $2.3 billion. After issuance, Exelon has approximately 2 million shares of Treasury stock remaining, at a historical cost of $123 million. In 2008, Exelon management decided to defer indefinitely any share repurchases.

18. Commitments and Contingencies (All Registrants)

The following is an update to the current status of commitments and contingencies set forth in Note 24 of the Exelon 2016 Form 10-K . See Note 4 - Mergers, Acquisitions and Dispositions for further discussion on the PHI Merger commitments.

Commitments

Constellation Merger Commitments (Exelon and Generation)

In February 2012, the MDPSC issued an Order approving the Exelon and Constellation merger. As part of the MDPSC Order, Exelon agreed to provide a package of benefits to BGE customers, the City of Baltimore and the State of Maryland, resulting in an estimated direct investment in the State of Maryland of approximately $1 billion.

The direct investment includes the construction of a new 21-story headquarters building in Baltimore for Generation's competitive energy business that was substantially complete in November 2016 and is now occupied by approximately 1,500 Exelon employees. Generation's investment includes leasehold improvements that are not expected to exceed $110 million. In addition, Generation entered into a 20 year operating lease as the primary lessee of the building. Refer to Note 24 - Commitments and Contingencies of the Combined Notes to the Consolidated Financial Statements in the Exelon 2016 Form 10-K for additional information regarding Generation's future minimum lease payments.

The direct investment commitment also includes $450 million to $500 million relating to Exelon and Generation's development or assistance in the development of 285-300 MWs of new generation in Maryland, which is expected to be completed within a period of 10 years. The MDPSC order contemplates various options for complying with the new generation development commitments, including building or acquiring generating assets, making subsidy or compliance payments, or in circumstances in which the generation build is delayed or certain specified provisions are elected, making liquidated damages payments. Exelon and Generation have incurred $457 million towards satisfying the commitment for new generation development in the state of Maryland, with approximately 220 MW of the new generation commencing with commercial operations to date and an additional 10 MW commitment satisfied through a liquidated damages payment made in the fourth quarter of 2016. Additionally, during the fourth quarter of 2016, given continued declines in projected energy and capacity prices, Generation terminated rights to certain development projects originally intended to meet its remaining 55 MW commitment amount. The commitment will now most likely be satisfied via payment of liquidated damages or execution of a third party PPA, rather than by Generation constructing renewable generating assets. As a result, Exelon and Generation recorded a pre-tax $50 million loss contingency in Operating and maintenance expense in Exelon’s and Generation’s Consolidated Statements of Operations and Comprehensive Income for the year ended December 31, 2016.

Equity Investment Commitments (Exelon and Generation)

As part of Generation’s recent investments in technology development, Generation enters into equity purchase agreements that include commitments to invest additional equity through incremental payments to fund the anticipated needs of the planned operations of the associated companies. As of September 30, 2017, Generation’s estimated commitments relating to its equity purchase agreements, including the in-kind services contributions, is anticipated to be as follows:

	Total
2017 (remainder of year)	$ 12
2018	6
2019	3
Total	$ 21

Commercial Commitments (All Registrants)

The Registrants’ commercial commitments as of September 30, 2017, representing commitments potentially triggered by future events were as follows:

						Successor			
	Exelon	**Generation**	**ComEd**	**PECO**	**BGE**	**PHI**	**Pepco**	**DPL**	**ACE**
Letters of credit (non-debt)[(a)]	$ 1,276	$ 1,193	$ 14	$ 22	$ 2	$ 1	$ 1	$ —	$ —
Surety bonds[(b)]	1,206	1,079	20	40	11	21	13	4	4
Financing trust guarantees	378	—	200	178	—	—	—	—	—
Guaranteed lease residual values[(c)]	19	—	—	—	—	19	6	7	5
Total commercial commitments	$ 2,879	$ 2,272	$ 234	$ 240	$ 13	$ 41	$ 20	$ 11	$ 9

(a) Letters of credit (non-debt) - Exelon and certain subsidiaries maintain non-debt letters of credit to provide credit support for certain transactions as requested by third parties.

(b) Surety bonds—Guarantees issued related to contract and commercial agreements, excluding bid bonds.

(c) Represents the maximum potential obligation in the event that the fair value of certain leased equipment and fleet vehicles is zero at the end of the maximum lease term. The maximum lease term associated with these assets ranges from 3 to 8 years. The maximum potential obligation at the end of the minimum lease term would be $49 million, $14 million of which is a guarantee by Pepco, $19 million by DPL and $13 million by ACE. The minimum lease term associated with these assets ranges from 1 to 4 years. Historically, payments under the guarantees have not been made and PHI believes the likelihood of payments being required under the guarantees is remote.

Nuclear Insurance (Exelon and Generation)

Generation is subject to liability, property damage and other risks associated with major incidents at any of its nuclear stations, including the CENG nuclear stations. Generation has mitigated its financial exposure to these risks through insurance and other industry risk-sharing provisions.

The Price-Anderson Act was enacted to ensure the availability of funds for public liability claims arising from an incident at any of the U.S. licensed nuclear facilities and also to limit the liability of nuclear reactor owners for such claims from any single incident. As of September 30, 2017, the current liability limit per incident is $13.4 billion and is subject to change to account for the effects of inflation and changes in the number of licensed reactors at least once every five years with the last adjustment effective September 10, 2013. In accordance with the Price-Anderson Act, Generation maintains financial protection at levels equal to the amount of liability insurance available from private sources through the purchase of private nuclear energy liability insurance for public liability claims that could arise in the event of an incident. Effective January 1, 2017, the required amount of nuclear energy liability insurance purchased is $450 million for each operating site. Claims exceeding that amount are covered through mandatory participation in a financial protection pool, as required by the Price Anderson-Act, which provides the additional $13.0 billion per incident in funds available for public liability claims. Participation in this secondary financial protection pool requires the operator of each reactor to fund its proportionate share of costs for any single incident that exceeds the primary layer of financial protection. Exelon’s share of this secondary layer would be approximately $2.8 billion, including CENG’s related liability, however any amounts payable under this secondary layer would be capped at $420 million per year.

In addition, the U.S. Congress could impose revenue-raising measures on the nuclear industry to pay public liability claims exceeding the $13.4 billion limit for a single incident.

As part of the execution of the NOSA on April 1, 2014, Generation executed an Indemnity Agreement pursuant to which Generation agreed to indemnify EDF and its affiliates against third-party claims that may arise from any future nuclear incident (as defined in the Price-Anderson Act) in connection with the CENG nuclear plants or their operations. Exelon guarantees Generation's obligations under this indemnity. See Note 5 — Investment in Constellation Energy Nuclear Group, LLC of the Exelon 2016 Form 10-K for additional information on Generation's operations relating to CENG.

Generation is required each year to report to the NRC the current levels and sources of property insurance that demonstrates Generation possesses sufficient financial resources to stabilize and decontaminate a reactor and reactor station site in the event of an accident. The property insurance maintained for each facility is currently provided through insurance policies purchased from NEIL, an industry mutual insurance company of which Generation is a member.

Premiums paid to NEIL by its members are also subject to a potential assessment for adverse loss experience in the form of a retrospective premium obligation. NEIL has never assessed this retrospective premium since its formation in 1973, and Generation cannot predict the level of future assessments if any. The current maximum aggregate annual retrospective premium obligation for Generation is approximately $360 million. NEIL requires its members to maintain an investment grade credit rating or to ensure collectability of their annual retrospective premium obligation by providing a financial guarantee, letter of credit, deposit premium, or some other means of assurance.

NEIL provides "all risk" property damage, decontamination and premature decommissioning insurance for each station for losses resulting from damage to its nuclear plants, either due to accidents or acts of terrorism. If the decision is made to decommission the facility, a portion of the insurance proceeds will be allocated to a fund, which Generation is required by the NRC to maintain, to provide for decommissioning the facility. In the event of an insured loss, Generation is unable to predict the timing of the availability of insurance proceeds to Generation and the amount of such proceeds that would be available. In the event that one or more acts of terrorism cause accidental property damage within a twelve-month period from the first accidental property damage under one or more policies for all insured plants, the maximum recovery by Exelon will be an aggregate of $3.2 billion plus such additional amounts as the insurer may recover for all such losses from reinsurance, indemnity and any other source, applicable to such losses.

For its insured losses, Generation is self-insured to the extent that losses are within the policy deductible or exceed the amount of insurance maintained. Uninsured losses and other expenses, to the extent not recoverable from insurers or the nuclear industry, could also be borne by Generation. Any such losses could have a material adverse effect on Exelon's and Generation's financial condition, results of operations and liquidity.

Environmental Issues (All Registrants)

General. The Registrants' operations have in the past, and may in the future, require substantial expenditures in order to comply with environmental laws. Additionally, under Federal and state environmental laws, the Registrants are generally liable for the costs of remediating environmental contamination of property now or formerly owned by them and of property contaminated by hazardous substances generated by them. The Registrants own or lease a number of real estate parcels, including parcels on which their operations or the operations of others may have resulted in contamination by substances that are considered hazardous under environmental laws. In addition, the Registrants are currently involved in a number of proceedings relating to sites where hazardous substances have been deposited and may be subject to additional proceedings in the future.

ComEd, PECO, BGE and DPL have identified sites where former MGP activities have or may have resulted in actual site contamination. For almost all of these sites, there are additional PRPs that may share responsibility for the ultimate remediation of each location.

- ComEd has identified 42 sites, 19 of which the remediation has been completed and approved by the Illinois EPA or the U.S. EPA and 23 that are currently under some degree of active study and/or remediation. ComEd expects the majority of the remediation at these sites to continue through at least 2022.

- PECO has identified 26 sites, 17 of which have been remediated in accordance with applicable PA DEP regulatory requirements. The remaining 9 sites are currently under some degree of active study and/or remediation. PECO expects the majority of the remediation at these sites to continue through at least 2022.

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

- BGE has identified 13 former gas manufacturing or purification sites that it currently owns or owned at one time through a predecessor's acquisition. Two of the gas manufacturing sites require some level of remediation and ongoing monitoring under the direction of the MDE. The required costs at these two sites are not considered material. In May 2017, BGE completed the additional work requested by MDE. All the sample testing produced results that were below the cleanup action level established by MDE and no further investigation is required. For more information, see the discussion of the Riverside site below.

- DPL has identified 3 sites, 2 of which remediation has been completed and approved by the MDE or the Delaware Department of Natural Resources and Environmental Control. The remaining site is under study and the required cost at the site is not considered material.

ComEd, pursuant to an ICC order, and PECO, pursuant to settlements of natural gas distribution rate cases with the PAPUC, are currently recovering environmental remediation costs of former MGP facility sites through customer rates. ComEd and PECO have recorded regulatory assets for the recovery of these costs. See Note 5 — Regulatory Matters for additional information regarding the associated regulatory assets. BGE is authorized to recover, and is currently recovering, environmental costs for the remediation of the former MGP facility sites from customers; however, while BGE does not have a rider for MGP clean-up costs, BGE has historically received recovery of actual clean-up costs in distribution rates. DPL has historically received recovery of actual clean-up costs in distribution rates.

As of September 30, 2017 and December 31, 2016, the Registrants had accrued the following undiscounted amounts for environmental liabilities in Other current liabilities and Other deferred credits and other liabilities within their respective Consolidated Balance Sheets:

September 30, 2017	**Total Environmental Investigation and Remediation Reserve**	**Portion of Total Related to MGP Investigation and Remediation**
Exelon	$ 429	$ 327
Generation	76	—
ComEd	294	293
PECO	33	32
BGE	3	2
PHI (Successor)	23	—
Pepco	21	—
DPL	1	—
ACE	1	—

December 31, 2016	**Total Environmental Investigation and Remediation Reserve**	**Portion of Total Related to MGP Investigation and Remediation**
Exelon	$ 429	$ 325
Generation	72	—
ComEd	292	291
PECO	33	31
BGE	2	2

PHI (Successor)	30	1
Pepco	27	—
DPL	2	1
ACE	1	—

The historical nature of the MGP sites and the fact that many of the sites have been buried and built over, impacts the ability to determine a precise estimate of the ultimate costs prior to initial sampling and determination of the exact scope and method of remedial activity. Management determines its best estimate of remediation costs using all available information at the time of each study, including probabilistic and deterministic modeling for ComEd and PECO, and the remediation standards currently required by the applicable state environmental agency. Prior to completion of any significant clean up, each site remediation plan is approved by the appropriate state environmental agency.

During the third quarter of 2017, ComEd, PECO, BGE and PHI completed an annual study of their future estimated MGP remediation requirements. The study resulted in a $13 million and $2 million increase to environmental liabilities and related regulatory assets for ComEd and PECO, respectively, and no change at BGE and PHI.

The Registrants cannot reasonably estimate whether they will incur other significant liabilities for additional investigation and remediation costs at these or additional sites identified by the Registrants, environmental agencies or others, or whether such costs will be recoverable from third parties, including customers.

Water Quality

Benning Road Site NPDES Permit Limit Exceedances. Pepco holds an NPDES permit issued by EPA with a July 19, 2009 effective date, which authorizes discharges from the Benning Road service facility. The 2009 permit for the first time imposed numerical limits on the allowable concentration of certain metals in storm water discharged from the site into the Anacostia River. The permit contemplated that Pepco would meet these limits over time through the use of best management practices (BMPs). The BMPs were effective in reducing metal concentrations in storm water discharges, but were not sufficient to meet all of the numerical limits for all metals.

The 2009 permit remains in effect pending EPA’s action on the Pepco renewal application, including resolution of the stormwater compliance issues. On October 30, 2015, EPA filed a Clean Water Act civil enforcement action against Pepco in federal district court, and in March 2016 the court granted a motion by the Anacostia Riverkeeper to intervene in this case as a plaintiff along with EPA. Since 2009 Pepco has installed runoff mitigation measures and implemented new operating procedures to comply with regulations. In January 2017, the parties agreed to a settlement in the form of a Consent Decree whereby Pepco will pay a civil penalty in the amount of $1.6 million, continue the BMPs to manage stormwater, construct a new stormwater treatment system, and make certain other capital improvements to the stormwater management system. On May 19, 2017, the Consent Decree was entered with the Court and became final. The Civil Penalty assessed under the Consent Decree of $1.6 million was paid on June 5, 2017 and other requirements of the Decree are now being implemented.

Solid and Hazardous Waste

Cotter Corporation. The EPA has advised Cotter Corporation (Cotter), a former ComEd subsidiary, that it is potentially liable in connection with radiological contamination at a site known as the West Lake Landfill in Missouri. In 2000, ComEd sold Cotter to an unaffiliated third-party. As part of the sale, ComEd agreed to indemnify Cotter for any liability arising in connection with the West Lake Landfill. In connection with Exelon’s 2001 corporate restructuring, this responsibility to indemnify Cotter was transferred to Generation. On May 29, 2008, the EPA issued a Record of Decision approving the remediation option submitted by Cotter and the two other PRPs that required additional landfill cover. By letter dated January 11, 2010, the EPA requested that the PRPs perform a supplemental feasibility study for a remediation alternative that would involve complete excavation of the radiological contamination. On September 30, 2011, the PRPs submitted the supplemental feasibility study to the EPA for review. Since June 2012, the EPA has requested that the PRPs perform a series of additional analyses and groundwater and soil sampling as part of the supplemental feasibility study. This further analysis has focused on a partial excavation remedial option. The PRPs have provided a draft Remedial Investigation and Feasibility Study (RI/FS) report to the EPA for its review and comment. The final RI/FS will form the basis of EPA’s selection of a remedy from among the alternatives of a landfill cover, and partial or complete excavation. The EPA has advised the PRPs that the EPA announcement of the proposed remedy will take place in the first quarter of 2018. Thereafter, the EPA will select a final remedy and seek to enter into a Consent Decree with the PRPs to effectuate the remedy. Recent investigation has identified a number of other parties who may be PRPs and could be liable to contribute to the final remedy. Further investigation is on going.

The estimated cost of the landfill cover remedy (taking into account the current EPA technical requirements incorporated in the third quarter 2017) is approximately $110 million, including escalation, which will be allocated among all PRPs. Generation has accrued what it believes to be an adequate amount to cover its anticipated share of a landfill cover, which is included in the table above. Generation believes that a partial excavation remedy is reasonably possible, and the partial excavation costs, inclusive of a landfill cover, could range from approximately $225 million to $650 million; such costs would likely be shared by the final group of identified PRPs. Generation believes the likelihood that the EPA would require a complete excavation remedy is remote. The cost of a partial or complete excavation could have a material, unfavorable impact on Generation’s and Exelon’s future results of operations and cash flows.

During December 2015, the EPA took two actions related to the West Lake Landfill designed to abate what it termed as imminent and dangerous conditions at the landfill. The first involved installation by the PRPs of a non-combustible surface cover to protect against surface fires in areas where radiological materials are believed to have been disposed. Generation has accrued what it believes to be an adequate amount to cover its anticipated liability for this interim action. The second action involved EPA's public statement that it will require the PRPs to construct a barrier wall in an adjacent landfill to prevent a subsurface fire from spreading to those areas of the West Lake Landfill where radiological materials are believed to have been disposed. At this time, EPA has not provided sufficient details related to the basis for and the requirements and design of a barrier wall to enable Generation to determine the likelihood such a remedy will ultimately be implemented, assess the degree to which Generation may have liability as a potentially responsible party, or develop a reasonable estimate of the potential incremental costs. It is reasonably possible, however, that resolution of this matter could have a material, unfavorable impact on Generation's and Exelon's future results of operations and cash flows. Finally, one of the other PRPs, the landfill owner and operator of the adjacent landfill, has indicated that it will be making a contribution claim against Cotter for costs that it has incurred to prevent the subsurface fire from spreading to those areas of the West Lake Landfill where radiological materials are believed to have been disposed. At this time, Generation and Exelon do not possess sufficient information to assess this claim and are therefore unable to determine the impact on their future results of operations and cash flows.

On February 2, 2016, the U.S. Senate passed a bill to transfer remediation authority over the West Lake Landfill from the EPA to the U.S. Army Corps of Engineers, under the Formerly Utilized Sites Remedial Action Program (FUSRAP). The legislation was not passed in the U.S. House of Representatives, and would therefore require reintroduction in the Senate for consideration in the current session of Congress. Should such proposed legislation ultimately become law, it would be subject to annual funding appropriations in the U.S. Budget. Remediation under FUSRAP would not alter the liability of the PRPs, but would likely delay the determination of a final remedy and its implementation.

On August 8, 2011, Cotter was notified by the DOJ that Cotter is considered a PRP with respect to the government's clean-up costs for contamination attributable to low level radioactive residues at a former storage and reprocessing facility named Latty Avenue near St. Louis, Missouri. The Latty Avenue site is included in ComEd's indemnification responsibilities discussed above as part of the sale of Cotter. The radioactive residues had been generated initially in connection with the processing of uranium ores as part of the U.S. government's Manhattan Project. Cotter purchased the residues in 1969 for initial processing at the Latty Avenue facility for the subsequent extraction of uranium and metals. In 1976, the NRC found that the Latty Avenue site had radiation levels exceeding NRC criteria for decontamination of land areas. Latty Avenue was investigated and remediated by the United States Army Corps of Engineers pursuant to funding under the FUSRAP. The DOJ has not yet formally advised the PRPs of the amount that it is seeking, but it is believed to be approximately $90 million. The DOJ and the PRPs agreed to toll the statute of limitations until August 2018 so that settlement discussions could proceed. Based on Generation's preliminary review, it appears probable that Generation has liability to Cotter under the indemnification agreement and has established an appropriate accrual for this liability, which is included in the table above.

Commencing in February 2012, a number of lawsuits have been filed in the U.S. District Court for the Eastern District of Missouri. Among the defendants were Exelon, Generation and ComEd, all of which were subsequently dismissed from the case, as well as Cotter, which remains a defendant. The suits allege that individuals living in the North St. Louis area developed some form of cancer or other serious illness due to Cotter's negligent or reckless conduct in processing, transporting, storing, handling and/or disposing of radioactive materials. Plaintiffs are asserting public liability claims under the Price-Anderson Act. Their state law claims for negligence, strict liability, emotional distress, and medical monitoring have been dismissed. The complaints do not contain specific damage claims. In the event of a finding of liability against Cotter, it is reasonably possible that Exelon would be financially responsible due to its indemnification responsibilities of Cotter described above. The court has dismissed a number of lawsuits, and is expected to dismiss additional lawsuits based on a recent ruling. Pre-trial motions and discovery are proceeding in the remaining cases and a pre-trial scheduling order has been filed with the court. At this stage of the litigation, Generation and ComEd cannot estimate a range of loss, if any.

68th Street Dump. In 1999, the EPA proposed to add the 68th Street Dump in Baltimore, Maryland to the Superfund National Priorities List, and notified BGE and 19 others that they are PRPs at the site. In connection with BGE’s 2000 corporate restructuring the responsibility for this liability was transferred to Constellation and as a result of the 2012 Exelon and CEG merger is now Generation’s responsibility. In March 2004, the PRPs formed the 68th Street Coalition and entered into consent order negotiations with the U.S. EPA to investigate clean-up options for the site under the Superfund Alternative Sites Program. In May 2006, a settlement among the U.S. EPA and the PRPs

Table of Contents

with respect to investigation of the site became effective. The settlement requires the PRPs, over the course of several years, to identify contamination at the site and recommend clean-up options. The PRPs submitted their investigation of the range of clean-up options in the first quarter of 2011. On September 30, 2013, EPA issued the Record of Decision identifying its preferred remedial alternative for the site. The estimated cost for the alternative chosen by EPA is consistent with the PRPs estimated range of costs noted above. In July, 2017 the PRPs and EPA finalized the terms of a Consent Decree which has been executed by the Parties and lodged with the U.S. District Court. After publication in the Federal Register there will be a 30-day public comment period after which it is anticipated it will be approved by the Court without any significant change in the costs for cleanup, Generation has elected to be a non-performing cash-out party and following payment of the allocated cost for its share of the clean-up. Generation will have no remaining liability at the site, except for unknown conditions that could manifest themselves after the settlement. The cash-out payment is included in the table above and is immaterial to the Generation and Exelon financial statements.

Rossville Ash Site. The Rossville Ash Site is a 32-acre property located in Rosedale, Baltimore County, Maryland, which was used for the placement of fly ash from 1983-2007. The property is owned by Constellation Power Source Generation, LLC (CPSG), a wholly owned subsidiary of Generation. In 2008, CPSG investigated and remediated the property by entering it into the Maryland Voluntary Cleanup Program (VCP) to address any historic environmental concerns and ready the site for appropriate future redevelopment. The site was accepted into the program in 2010 and is currently going through the process to remediate the site and receive closure from MDE. Exelon currently estimates the cost to close the site to be approximately $1 million which has been fully reserved and included in the table above as of September 30, 2017.

Sauer Dump. On May 30, 2012, BGE was notified by the U.S. EPA that it is considered a PRP at the Sauer Dump Superfund site in Dundalk, Maryland. The U.S. EPA offered BGE and three other PRPs the opportunity to conduct an environmental investigation and present cleanup recommendations at the site. In addition, the U.S. EPA is seeking recovery from the PRPs for past cleanup and investigation costs at the site. On March 11, 2013, BGE and three other PRPs signed an Administrative Settlement Agreement and Order on Consent with the U.S. EPA which requires the PRPs to conduct a remedial investigation and feasibility study at the site to determine what, if any, are the appropriate and recommended cleanup activities for the site. Although the ultimate outcome of this proceeding is uncertain based on the information complied to date, BGE has developed an estimate of the range of the probable liability; such costs would be shared by the 4 identified PRPs. BGE has accrued an appropriate reserve for its share of the estimated liabilities that is included it in the table above. It is possible, however, that final resolution of this matter could have a material, unfavorable impact on BGE’s future results of operations and cash flows.

Riverside. In 2013, the MDE, at the request of EPA, conducted a site inspection and limited environmental sampling of certain portions of the 170 acre Riverside property owned by BGE. The site consists of several different parcels with different current and historical uses. The sampling included soil and groundwater samples for a number of potential environmental contaminants. The sampling confirmed the existence of contaminants consistent with the known historical uses of the various portions of the site. In March 2014, the MDE requested that BGE conduct an investigation which included a site-wide investigation of soils, sediment, groundwater, and surface water to complement the MDE sampling. The field investigation was completed in January 2015, and a final report was provided to MDE in June 2015. In November 2015, MDE provided BGE with its comments and recommendations on the report which require BGE to conduct further investigation and sampling at the site to better delineate the nature and extent of historic contamination, including off-site sediment and soil sampling. MDE did not request any interim remediation at this time and in May 2017 BGE completed the additional work requested by MDE. All the offsite sample testing produced results that were below the cleanup action level established by MDE and no further investigation is required. MDE has provided BGE with the required clean-up levels for the on-site contamination and BGE is moving forward with the necessary remediation as directed by MDE. BGE has established what it believes is an appropriate reserve based upon the information available to date, and this amount is included in the table above. As the remediation proceeds, it is possible that additional reserves could be established, in amounts that could be material to BGE.

BGE is authorized to recover, and is currently recovering, environmental costs for the remediation of the former MGP facility sites from customers; however, while BGE does not have a rider for MGP clean-up costs, BGE has historically received recovery of actual clean-up costs in distribution rates. Additionally, legislation was passed during the 2017 Maryland General Assembly session that should further support BGE's recovery of its clean-up costs.

Benning Road Site. In September 2010, PHI received a letter from EPA identifying the Benning Road site as one of six land-based sites potentially contributing to contamination of the lower Anacostia River. A portion of the site was formerly the location of a Pepco Energy Services electric generating facility. That generating facility was deactivated in June 2012 and plant structure demolition was completed in July 2015. The remaining portion of the site consists of a Pepco transmission and distribution service center that remains in operation. In December 2011, the U.S. District Court for the District of Columbia approved a consent decree entered into by Pepco and Pepco Energy Services with the DOEE, which requires Pepco and Pepco Energy Services to conduct a Remediation Investigation (RI)/ Feasibility Study (FS) for the Benning Road site and an approximately 10 to 15 acre portion of the adjacent Anacostia River. The RI/FS will form the basis for the remedial actions for the Benning Road site and for the Anacostia River sediment associated with the site. The consent decree does not obligate Pepco or Pepco Energy Services to pay for or perform any remediation work, but it is anticipated that DOEE will look to Pepco and Pepco Energy Services to assume responsibility for cleanup of any conditions in the river that are determined to be attributable to past activities at the Benning Road site. Pursuant to Exelon’s March 23, 2016 acquisition of PHI, Pepco Energy Services was transferred to Generation. On July 1, 2017, Pepco Energy Services was merged into Constellation New Energy, a subsidiary of Generation.

The initial RI field work began in January 2013 and was completed in December 2014. In April 2015, Pepco and Pepco Energy Services submitted a draft RI Report to DOEE. After review, DOEE determined that additional field investigation and data analysis was required to complete the RI process (much of which was beyond the scope of the original DOEE-approved RI work plan). In the meantime, Pepco and Pepco Energy Services revised the draft RI Report to address DOEE’s comments and DOEE released the draft RI Report for public review in February 2016. Once the additional RI work has been completed, Pepco and Generation will issue a draft “final” RI report for review and comment by DOEE and the public. Pepco and Generation will then proceed to develop an FS to evaluate possible remedial alternatives for submission to DOEE. The Court has established a schedule for completion of the RI and FS, and approval by the DOEE, by June 2018.

Upon DOEE’s approval of the final RI and FS Reports, Pepco and Generation will have satisfied their obligations under the consent decree. At that point, DOEE will prepare a Proposed Plan regarding further response actions. After considering public comment on the Proposed Plan, DOEE will issue a Record of Decision identifying any further response actions determined to be necessary.

PHI, Pepco and Generation have determined that a loss associated with this matter for PHI, Pepco and Generation is probable and an estimated liability for this issue has been accrued, which is included in the table above. As the remedial investigation proceeds and potential remedies are identified, it is possible that additional accruals could be established in amounts that could be material to PHI and Pepco. The ultimate resolution of this matter is currently not expected to have any significant financial impact on Generation.

Anacostia River Tidal Reach. Contemporaneous with the Benning RI/FS being performed by Pepco and Generation, DOEE and certain federal agencies have been conducting a separate RI/FS focused on the entire tidal reach of the Anacostia River extending from just north of the Maryland-D.C. boundary line to the confluence of the Anacostia and Potomac Rivers. In March 2016, DOEE released a draft of the river-wide RI Report for public review and comment. The river-wide RI incorporated the results of the river sampling performed by Pepco and Pepco Energy Services as part of the Benning RI/FS, as well as similar sampling efforts conducted by owners of other sites adjacent to this segment of the river and supplemental river sampling conducted by DOEE’s contractor. DOEE asked Pepco, along with parties responsible for other sites along the river, to participate in a “Consultative Working Group” to provide input into the process for future remedial actions addressing the entire tidal reach of the river and to ensure proper coordination with the other river cleanup efforts currently underway, including cleanup of the river segment adjacent to the Benning Road site resulting from the Benning Road RI/FS. Pepco responded that it will participate in the Consultative Working Group but its participation is not an acceptance of any financial responsibility beyond the work that will be performed at the Benning Road site described above. DOEE has advised the Consultative Working Group that the federal and DOEE authorities are conducting phase 2 of a remedial investigation and that a feasibility study of potential remedies is expected to be completed in December 2017. A proposed remedy for the clean-up of sediments in this section of the river is expected to be released for public comment in February 2018 and the DOEE has targeted June 2018 as the date for remedy selection. The Consultative Working Group and the other possible PRPs have provided input into the proposed clean-up process and schedule. At this time, it is not possible to predict the extent of Pepco's participation in the river-wide RI/FS process, and Pepco cannot estimate the reasonably possible range of loss for response costs beyond those associated with the Benning RI/FS component of the river-wide initiative. It is possible, however, that resolution of this matter could have a material, unfavorable impact on Exelon's and Pepco's future results of operations and cash flows.

Conectiv Energy Wholesale Power Generation Sites. In July 2010, PHI sold the wholesale power generation business of Conectiv Energy Holdings, Inc. and substantially all of its subsidiaries (Conectiv Energy) to Calpine Corporation (Calpine). Under New Jersey's Industrial Site Recovery Act (ISRA), the transfer of ownership to Calpine triggered an obligation on the part of Conectiv Energy to remediate any environmental contamination at each of the nine Conectiv Energy generating facility sites located in New Jersey. Under the terms of the sale, Calpine assumed responsibility for performing the ISRA-required remediation and for the payment of all related ISRA compliance costs up to $10 million. Predecessor PHI was obligated to indemnify Calpine for any ISRA compliance remediation costs in excess of $10 million. According to PHI's estimates, the costs of ISRA-required remediation activities at the 9 generating facility sites are in the range of approximately $7 million to $18 million, and predecessor PHI established an appropriate accrual for its share of the estimated clean-up costs. Pursuant to Exelon's March 2016 acquisition of PHI, the Conectiv Energy legal entity was transferred to Generation and the accrual for Predecessor PHI's share of the estimated clean- up costs was also transferred to Generation and is included in the table above as a liability of Generation. The responsibility to indemnify Calpine is shared by PHI and Generation. The ultimate resolution of this matter is currently not expected to have a material financial impact on PHI and Generation.

Rock Creek Mineral Oil Release. In late August 2015, a Pepco underground transmission line in the District of Columbia suffered a breach, resulting in the release of non-toxic mineral oil surrounding the transmission line into the surrounding soil, and a small amount reached Rock Creek through a storm drain. Pepco notified regulatory authorities, and Pepco and its spill response contractors placed booms in Rock Creek, blocked the storm drain to prevent the release of mineral oil into the creek and commenced remediation of soil around the transmission line and the Rock Creek shoreline. Pepco estimates that approximately 6,100 gallons of mineral oil were released and that its remediation efforts recovered approximately 80% of the amount released. Pepco's remediation efforts are ongoing under the direction of the DOEE, including the requirements of a February 29, 2016 compliance order which requires Pepco to prepare a full incident investigation report and prepare a removal action work plan to remove all impacted soils in the vicinity of the storm drain outfall, and in collaboration with the National Park Service, the Smithsonian Institution/National Zoo and EPA. Pepco's investigation presently indicates that the damage to Pepco's facilities occurred prior to the release of mineral oil when third-party excavators struck the Pepco underground transmission line while installing cable for another utility.

PHI and Pepco have reached a settlement with a third party who contributed to the loss. Exelon, PHI and Pepco do not believe that the balance of the remediation costs to resolve this matter will have a material adverse effect on their respective financial condition, results of operations or cash flows.

Brandywine Fly Ash Disposal Site. In February 2013, Pepco received a letter from the MDE requesting that Pepco investigate the extent of waste on a Pepco right-of-way that traverses the Brandywine fly ash disposal site in Brandywine, Prince George's County, Maryland, owned by NRG Energy, Inc. (as successor to GenOn MD Ash Management, LLC) (NRG). In July 2013, while reserving its rights and related defenses under a 2000 agreement covering the sale of this site, Pepco indicated its willingness to investigate the extent of, and propose an appropriate closure plan to address, ash on the right-of-way. Pepco submitted a schedule for development of a closure plan to MDE on September 30, 2013 and, by letter dated October 18, 2013, MDE approved the schedule.

Exelon, PHI and Pepco have determined that a loss associated with this matter is probable and have estimated that the costs for implementation of a closure plan and cap on the site are in the range of approximately $3 million to $6 million, for which an appropriate reserve has been established and is included in the table above. Exelon, PHI and Pepco believe that the costs incurred in this matter will be recoverable from NRG under the 2000 sale agreement.

Litigation and Regulatory Matters

Asbestos Personal Injury Claims (Exelon, Generation, ComEd, PECO and BGE)

***Exelon, Generation and PECO*.** Generation maintains a reserve for claims associated with asbestos-related personal injury actions in certain facilities that are currently owned by Generation or were previously owned by ComEd and PECO. The reserve is recorded on an undiscounted basis and excludes the estimated legal costs associated with handling these matters, which could be material.

At September 30, 2017 and December 31, 2016, Generation had reserved approximately $80 million and $83 million, respectively, in total for asbestos-related bodily injury claims. As of September 30, 2017, approximately $22 million of this amount related to 227 open claims presented to Generation, while the remaining $58 million of the reserve is for estimated future asbestos-related bodily injury claims anticipated to arise through 2050, based on actuarial assumptions and analyses, which are updated on an annual basis. On a quarterly basis, Generation monitors actual experience against the number of forecasted claims to be received and expected claim payments and evaluates whether an adjustment to the reserve is necessary.

On November 22, 2013, the Supreme Court of Pennsylvania held that the Pennsylvania Workers Compensation Act does not apply to an employee's disability or death resulting from occupational disease, such as diseases related to asbestos exposure, which manifests more than 300 weeks after the employee's last employment-based exposure, and that therefore the exclusivity provision of the Act does not preclude such employee from suing his or her employer in court. The Supreme Court's ruling reverses previous rulings by the Pennsylvania Superior Court precluding current and former employees from suing their employers in court, despite the fact that the same employee was not eligible for workers compensation benefits for diseases that manifest more than 300 weeks after the employee's last employment-based exposure to asbestos. Since the Pennsylvania Supreme Court's ruling in November 2013, Exelon, Generation, and PECO have experienced an increase in asbestos-related personal injury claims brought by former PECO employees, all of which have been reserved for on a claim by claim basis. Those additional claims are taken into account in projecting estimates of future asbestos-related bodily injury claims.

On November 4, 2015, the Illinois Supreme Court found that the provisions of the Illinois' Workers' Compensation Act and the Workers' Occupational Diseases Act barred an employee from bringing a direct civil action against an employer for latent diseases, including asbestos-related diseases that fall outside the 25-year limit of the statute of repose. The Illinois Supreme Court's ruling reversed previous rulings by the Illinois Court of Appeals, which initially ruled that the Illinois Worker's Compensation law should not apply in cases where the diagnosis of an asbestos related disease occurred after the 25-year maximum time period for filing a Worker's Compensation claim. Since the Illinois Supreme Court's ruling in November 2015, Exelon, Generation, and ComEd have not experienced a significant increase in asbestos-related personal injury claims brought by former ComEd employees.

There is a reasonable possibility that Exelon may have additional exposure to estimated future asbestos-related bodily injury claims in excess of the amount accrued and the increases could have a material adverse effect on Exelon's, Generation's, ComEd's, PECO and BGE's future results of operations and cash flows.

BGE. Since 1993, BGE and certain Constellation (now Generation) subsidiaries have been involved in several actions concerning asbestos. The actions are based upon the theory of "premises liability," alleging that BGE and Generation knew of and exposed individuals to an asbestos hazard. In addition to BGE and Generation, numerous other parties are defendants in these cases.

To date, most asbestos claims which have been resolved relating to BGE and certain Constellation subsidiaries have been dismissed or resolved without any payment and a small minority of these cases has been resolved for amounts that were not material to BGE or Generation's financial results. Presently, there are an immaterial number of asbestos cases pending against BGE and certain Constellation subsidiaries.

Continuous Power Interruption (Exelon and ComEd)

Section 16-125 of the Illinois Public Utilities Act provides that in the event an electric utility, such as ComEd, experiences a continuous power interruption of four hours or more that affects (in ComEd's case) more than 30,000 customers, the utility may be liable for actual damages suffered by customers as a result of the interruption and may be responsible for reimbursement of local governmental emergency and contingency expenses incurred in connection with the interruption. Recovery of consequential damages is barred. The affected utility may seek from the ICC a waiver of these liabilities when the utility can show that the cause of the interruption was unpreventable damage due to weather events or conditions, customer tampering, or certain other causes enumerated in the law. As of September 30, 2017 and December 31, 2016, ComEd did not have any material liabilities recorded for these storm events.

Baltimore City Franchise Taxes (Exelon and BGE)

The City of Baltimore claims that BGE has maintained electric facilities in the City's public right-of-ways for over one hundred years without the proper franchise rights from the City. BGE has reviewed the City's claim and believes that it lacks merit. BGE has not recorded an accrual for payment of franchise fees for past periods as a range of loss, if any, cannot be reasonably estimated at this time. Franchise fees assessed in future periods may be material to BGE's results of operations and cash flows.

Table of Contents

Conduit Lease with City of Baltimore (Exelon and BGE)

On September 23, 2015, the Baltimore City Board of Estimates approved an increase in annual rental fees for access to the Baltimore City underground conduit system effective November 1, 2015, from $12 million to $42 million, subject to an annual increase thereafter based on the Consumer Price Index. BGE subsequently entered into litigation with the City regarding the amount of and basis for establishing the conduit fee. On November 30, 2016, the Baltimore City Board of Estimates approved a settlement agreement entered into between BGE and the City to resolve the disputes and pending litigation related to BGE's use of and payment for the underground conduit system. As a result of the settlement, the parties have entered into a six-year lease that reduces the annual expense to $25 million in the first three years and caps the annual expense in the last three years to not more than $29 million. BGE recorded a credit to Operating and maintenance expense in the fourth quarter of 2016 of approximately $28 million for the reversal of the previously higher fees accrued in the current year as well as the settlement of prior year disputed fee true-up amounts.

Deere Wind Energy Assets (Exelon and Generation)

In 2013, Deere & Company ("Deere") filed a lawsuit against Generation in the Delaware Superior Court relating to Generation's acquisition of the Deere wind energy assets. Under the purchase agreement, Deere was entitled to receive earn-out payments if certain specific wind projects already under development in Michigan met certain development and construction milestones following the sale. In the complaint, Deere seeks to recover a $14 million earn-out payment associated with one such project, which was never completed. Generation has filed counterclaims against Deere for breach of contract, with a right of recoupment and set off. On June 2, 2016, the Delaware Superior Court entered summary judgment in favor of Deere. On January 17, 2017, Generation filed an appeal of the Superior Court's summary judgment decision with the Supreme Court of Delaware. Generation has accrued an amount to cover its potential liability.

City of Everett Tax Increment Financing Agreement (Exelon)

The City of Everett has filed a petition with the Massachusetts Economic Assistance Coordinating Council (EACC) to revoke the 1999 tax increment financing agreement (TIF Agreement) relating to Mystic 8 & 9 on the grounds that the total investment in Mystic 8 & 9 materially deviates from the investment set forth in the TIF Agreement. The EACC has appointed a three-member panel to conduct an administrative hearing on the City's petition. Generation has reviewed the City's claim and believes that it lacks merit. Generation has not recorded an accrual for payment resulting from such a revocation because the range of loss, if any, cannot be reasonably estimated at this time. Property taxes assessed in future periods could be material to Generation's results of operations and cash flows.

General (All Registrants)

The Registrants are involved in various other litigation matters that are being defended and handled in the ordinary course of business. The assessment of whether a loss is probable or a reasonable possibility, and whether the loss or a range of loss is estimable, often involves a series of complex judgments about future events. The Registrants maintain accruals for such losses that are probable of being incurred and subject to reasonable estimation. Management is sometimes unable to estimate an amount or range of reasonably possible loss, particularly where (1) the damages sought are indeterminate, (2) the proceedings are in the early stages, or (3) the matters involve novel or unsettled legal theories. In such cases, there is considerable uncertainty regarding the timing or ultimate resolution of such matters, including a possible eventual loss.

Income Taxes (Exelon, Generation, ComEd, PECO and BGE)

See Note 12 — Income Taxes for information regarding the Registrants' income tax refund claims and certain tax positions, including the 1999 sale of fossil generating assets.

19. Supplemental Financial Information (All Registrants)

Supplemental Statement of Operations Information

The following tables provide additional information about the Registrants' Consolidated Statements of Operations and Comprehensive Income for the three and nine months ended September 30, 2017 and 2016.

(b) Includes the elimination of NDT fund activity for the Regulatory Agreement Units, including the elimination of net income taxes related to all NDT fund activity for those units. See Note 16 — Asset Retirement Obligations of the Exelon 2016 Form 10-K for additional information regarding the accounting for nuclear decommissioning.
(c) See Note 12 - Income Taxes for discussion of the penalty related to the Tax Court's decision on Exelon's like-kind exchange tax position.

The following utility taxes are included in revenues and expenses for the three and nine months ended September 30, 2017 and 2016. Generation's utility tax expense represents gross receipts tax related to its retail operations, and the utility registrants' utility tax expense represents municipal and state utility taxes and gross receipts taxes related to their operating revenues. The offsetting collection of utility taxes from customers is recorded in revenues on the Registrants' Consolidated Statements of Operations and Comprehensive Income.

(a) Includes the elimination of NDT fund activity for the Regulatory Agreement Units, including the elimination of operating revenues, ARO accretion, ARC amortization, investment income and income taxes related to all NDT fund activity for these units. See Note 16 - Asset Retirement Obligations of the Exelon 2016 Form 10-K for additional information regarding the accounting for nuclear decommissioning.

(b) Includes option premiums reclassified to realized at the settlement of the underlying contracts and recorded in Operating revenues.

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

(c) Reflects the change in distribution rates pursuant to EIMA and FEJA, which allows for the recovery of distribution costs by a utility through a pre-established performance-based formula rate tariff. Beginning June 1, 2017, also reflects the change in energy efficiency rates pursuant to FEJA, which allows for the recovery of energy efficiency costs by a utility through a pre-established performance-based formula rate tariff. See Note 5 — Regulatory Matters for more information.
(d) See Note 4 — Mergers, Acquisitions and Dispositions for additional information related to the merger with PHI.
(e) Excludes $5 million of forgiveness of Accounts receivable related to merger commitments recorded in connection with the PHI Merger, the balance is included within Provision for uncollectible accounts.
(f) Immediately following closing of the PHI Merger, the net assets associated with PHI's unregulated business interests were distributed by PHI to Exelon. Exelon contributed a portion of such net assets to Generation.
(g) See Note 12— Income Taxes for discussion of the like-kind exchange tax position.

Supplemental Balance Sheet Information

The following tables provide additional information about assets and liabilities of the Registrants as of September 30, 2017 and December 31, 2016.

						Successor			
September 30, 2017	**Exelon**	**Generation**	**ComEd**	**PECO**	**BGE**	**PHI**	**Pepco**	**DPL**	**ACE**
Property, plant and equipment:									
Accumulated depreciation and amortization	$ 20,591 (a)	$ 11,193 (a)	$ 4,191	$ 3,366	$ 3,351	$ 448	$ 3,171	$ 1,231	$ 1,060
Accounts receivable:									
Allowance for uncollectible accounts	$ 339	$ 111	$ 72	$ 57	$ 25	$ 74	$ 29	$ 17	$ 28

						Successor			
December 31, 2016	**Exelon**	**Generation**	**ComEd**	**PECO**	**BGE**	**PHI**	**Pepco**	**DPL**	**ACE**
Property, plant and equipment:									
Accumulated depreciation and amortization	$ 19,169 (b)	$ 10,562 (b)	$ 3,937	$ 3,253	$ 3,254	$ 195	$ 3,050	$ 1,175	$ 1,016
Accounts receivable:									
Allowance for uncollectible accounts	$ 334	$ 91	$ 70	$ 61	$ 32	$ 80	$ 29	$ 24	$ 27

(a) Includes accumulated amortization of nuclear fuel in the reactor core of $3,303 million.
(b) Includes accumulated amortization of nuclear fuel in the reactor core of $3,186 million.

PECO Installment Plan Receivables (Exelon and PECO)

PECO enters into payment agreements with certain delinquent customers, primarily residential, seeking to restore their service, as required by the PAPUC. Customers with past due balances that meet certain income criteria are provided the option to enter into an installment payment plan, some of which have terms greater than one year, to repay past due balances in addition to paying for their ongoing service on a current basis. The receivable balance for these payment agreement receivables is recorded in accounts receivable for the current portion and other deferred debits and other assets for the noncurrent portion. The net receivable balance for installment plans with terms greater than one year was $11 million and $9 million as of September 30, 2017 and December 31, 2016, respectively. The allowance for uncollectible accounts reserve methodology and assessment of the credit quality of the installment plan receivables are consistent with the customer accounts receivable methodology discussed in Note 1 — Significant Accounting Policies of the Exelon 2016 Form 10-K. The allowance for uncollectible accounts balance associated with these receivables at September 30, 2017 of $12 million consists of $3 million and $9 million for medium risk and high risk segments, respectively. The allowance for uncollectible accounts balance at December 31, 2016 of $13 million consists of $1 million, $3 million and $9 million for low risk, medium risk and high risk segments, respectively. The balance of the payment agreement is billed to the customer in equal monthly installments over the term of the agreement. Installment receivables outstanding as of September 30, 2017 and December 31, 2016 include balances not yet presented on the customer bill, accounts currently billed and an immaterial amount of past due receivables. When a customer defaults on its payment agreement, the terms of which are defined by plan type, the entire balance of the agreement becomes due and the balance is reclassified to current customer accounts receivable and reserved for in accordance with the methodology discussed in Note 1 — Significant Accounting Policies of the Exelon 2016 Form 10-K.

20. Segment Information (All Registrants)

Operating segments for each of the Registrants are determined based on information used by the chief operating decision maker(s) (CODM) in deciding how to evaluate performance and allocate resources at each of the Registrants.

In the first quarter of 2016, following the consummation of the PHI Merger, three new reportable segments were added: Pepco, DPL and ACE. As a result, Exelon has twelve reportable segments, which include ComEd, PECO, BGE, PHI's three reportable segments consisting of Pepco, DPL, and ACE, and Generation's six reportable segments consisting of the Mid-Atlantic, Midwest, New England, New York, ERCOT and all other power regions referred to collectively as "Other Power Regions", which includes activities in the South, West and Canada. ComEd, PECO, BGE, Pepco, DPL and ACE each represent a single reportable segment, and as such, no separate segment information is provided for these Registrants. Exelon, ComEd, PECO, BGE, Pepco, DPL and ACE's CODMs evaluate the performance of and allocate resources to ComEd, PECO, BGE, Pepco, DPL and ACE based on net income and return on equity.

Effective with the consummation of the PHI Merger, PHI's reportable segments have changed based on the information used by the CODM to evaluate performance and allocate resources. PHI's reportable segments consist of Pepco, DPL and ACE. PHI's Predecessor periods' segment information has been recast to conform to the current presentation. The reclassification of the segment information did not impact PHI's reported consolidated revenues or net income. PHI's CODM evaluates the performance of and allocates resources to Pepco, DPL and ACE based on net income and return on equity.

The basis for Generation's reportable segments is the integrated management of its electricity business that is located in different geographic regions, and largely representative of the footprints of ISO/RTO and/or NERC regions, which utilize multiple supply sources to provide electricity through various distribution channels (wholesale and retail). Generation's hedging strategies and risk metrics are also aligned to these same geographic regions. Descriptions of each of Generation's six reportable segments are as follows:

- Mid-Atlantic represents operations in the eastern half of PJM, which includes New Jersey, Maryland, Virginia, West Virginia, Delaware, the District of Columbia and parts of Pennsylvania and North Carolina.
- Midwest represents operations in the western half of PJM, which includes portions of Illinois, Pennsylvania, Indiana, Ohio, Michigan, Kentucky and Tennessee, and the United States footprint of MISO, excluding MISO's Southern Region, which covers all or most of North Dakota, South Dakota, Nebraska, Minnesota, Iowa, Wisconsin, the remaining parts of Illinois, Indiana, Michigan and Ohio not covered by PJM, and parts of Montana, Missouri and Kentucky.
- New England represents the operations within ISO-NE covering the states of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.
- New York represents operations within ISO-NY, which covers the state of New York in its entirety.
- ERCOT represents operations within Electric Reliability Council of Texas, covering most of the state of Texas.

- Other Power Regions:

  - South represents operations in the FRCC, MISO’s Southern Region, and the remaining portions of the SERC not included within MISO or PJM, which includes all or most of Florida, Arkansas, Louisiana, Mississippi, Alabama, Georgia, Tennessee, North Carolina, South Carolina and parts of Missouri, Kentucky and Texas. Generation’s South region also includes operations in the SPP, covering Kansas, Oklahoma, most of Nebraska and parts of New Mexico, Texas, Louisiana, Missouri, Mississippi and Arkansas.

  - West represents operations in the WECC, which includes California ISO, and covers the states of California, Oregon, Washington, Arizona, Nevada, Utah, Idaho, Colorado and parts of New Mexico, Wyoming and South Dakota.

  - Canada represents operations across the entire country of Canada and includes AESO, OIESO and the Canadian portion of MISO.

The CODMs for Exelon and Generation evaluate the performance of Generation’s electric business activities and allocate resources based on revenues net of purchased power and fuel expense (RNF). Generation believes that RNF is a useful measurement of operational performance. RNF is not a presentation defined under GAAP and may not be comparable to other companies’ presentations or deemed more useful than the GAAP information provided elsewhere in this report. Generation's operating revenues include all sales to third parties and affiliated sales to the Utility Registrants. Purchased power costs include all costs associated with the procurement and supply of electricity including capacity, energy and ancillary services. Fuel expense includes the fuel costs for Generation's owned generation and fuel costs associated with tolling agreements. The results of Generation's other business activities are not regularly reviewed by the CODM and are therefore not classified as operating segments or included in the regional reportable segment amounts. These activities include natural gas, as well as other miscellaneous business activities that are not significant to Generation's overall operating revenues or results of operations. Further, Generation's unrealized mark-to-market gains and losses on economic hedging activities and its amortization of certain intangible assets and liabilities relating to commodity contracts recorded at fair value from mergers and acquisitions are also excluded from the regional reportable segment amounts. Exelon and Generation do not use a measure of total assets in making decisions regarding allocating resources to or assessing the performance of these reportable segments.

An analysis and reconciliation of the Registrants' reportable segment information to the respective information in the consolidated financial statements for the three and nine months ended September 30, 2017 and 2016 is as follows:

Three Months Ended September 30, 2017 and 2016

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(Dollars in millions, except per share data, unless otherwise noted)

(a) Generation includes the six reportable segments shown below: Mid-Atlantic, Midwest, New England, New York, ERCOT and Other Power Regions. Intersegment revenues for Generation for the three months ended September 30, 2017 include revenue from sales to PECO of $31 million, sales to BGE of $98 million, sales to Pepco of $57 million, sales to DPL of $47 million, and sales to ACE of $7 million in the Mid-Atlantic region, and sales to ComEd of $54 million in the Midwest region. For the three months ended September 30, 2016, intersegment revenues for Generation include revenue from sales to PECO of $91 million, sales to BGE of $183 million, sales to Pepco of $128 million, sales to DPL of $63 million, and sales to ACE of $15 million in the Mid-Atlantic region, and sales to ComEd of $20 million in the Midwest region.

(b) Amounts included represent activity for PHI's successor period, three months ended September 30, 2017 and 2016. PHI includes the three reportable segments: Pepco, DPL and ACE.

(c) Other primarily includes Exelon's corporate operations, shared service entities and other financing and investment activities.

(d) Includes gross utility tax receipts from customers. The offsetting remittance of utility taxes to the governing bodies is recorded in expenses on the Registrants' Consolidated Statements of Operations and Comprehensive Income. See Note 19 — Supplemental Financial Information for total utility taxes for the three months ended September 30, 2017 and 2016.

(e) Intersegment revenues exclude sales to unconsolidated affiliates. The intersegment profit associated with Generation's sale of certain products and services by and between Exelon's segments is not eliminated in consolidation due to the recognition of intersegment profit in accordance with regulatory accounting guidance. For Exelon, these amounts are included in Operating revenues in the Consolidated Statements of Operations and Comprehensive Income.

Successor PHI:

(Dollars in millions, except per share data, unless otherwise noted)

(a) Generation includes the six reportable segments shown below: Mid-Atlantic, Midwest, New England, New York, ERCOT and Other Power Regions. Intersegment revenues for Generation for the nine months ended September 30, 2017 include revenue from sales to PECO of $111 million, sales to BGE of $330 million, sales to Pepco of $209 million, sales to DPL of $138 million, and sales to ACE of $23 million in the Mid-Atlantic region, and sales to ComEd of $77 million in the Midwest region. For the nine months ended September 30, 2016, intersegment revenues for Generation include revenue from sales to PECO of $234 million and sales to BGE of $489 million in the Mid-Atlantic region, and sales to ComEd of $38 million in the Midwest region. For the Successor period of March 24, 2016 to September 30, 2016, intersegment revenues for Generation include revenue from sales to Pepco of $223 million, sales to DPL of $109 million, and sales to ACE of $28 million in the Mid-Atlantic region.

(b) Amounts included represent activity for PHI's successor period, nine months ended September 30, 2017 and March 24, 2016 through September 30, 2016. PHI includes the three reportable segments: Pepco, DPL and ACE. See tables below for PHI's predecessor period, including Pepco, DPL and ACE, for January 1, 2016 to March 23, 2016.

(c) Other primarily includes Exelon's corporate operations, shared service entities and other financing and investment activities.

(d) Includes gross utility tax receipts from customers. The offsetting remittance of utility taxes to the governing bodies is recorded in expenses on the Registrants' Consolidated Statements of Operations and Comprehensive Income. See Note 19 — Supplemental Financial Information for total utility taxes for the nine months ended September 30, 2017 and 2016.

(e) Intersegment revenues exclude sales to unconsolidated affiliates. The intersegment profit associated with Generation's sale of certain products and services by and between Exelon's segments is not eliminated in consolidation due to the recognition of intersegment profit in accordance with regulatory accounting guidance. For Exelon, these amounts are included in Operating revenues in the Consolidated Statements of Operations and Comprehensive Income.

Successor and Predecessor PHI:

Total Generation Revenues net of purchased power and fuel expense	$ 6,526	$ —	$ 6,526	$ 6,754	$ —	$ 6,754

(a) Includes purchases and sales from/to third parties and affiliated sales to the Utility Registrants.

(b) Other represents activities not allocated to a region. See text above for a description of included activities. Includes a $41 million and $15 million decrease to RNF for the amortization of intangible assets and liabilities related to commodity contracts for the nine months ended September 30, 2017 and 2016, respectively, unrealized mark-to-market losses of $161 million and $113 million for the nine months ended September 30, 2017 and 2016, respectively, accelerated nuclear fuel amortization associated with announced early plant retirements as discussed in Note 7 - Early Nuclear Plant Retirements of the Combined Notes to Consolidated Financial Statements of $8 million and $38 million decrease to revenue net of purchased power and fuel expense for the nine months ended September 30, 2017 and 2016, respectively, and the elimination of intersegment revenue net of purchased power and fuel expense.

Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations

(Dollars in millions except per share data, unless otherwise noted)

Exelon

Executive Overview

Exelon, a utility services holding company, operates through the following principal subsidiaries:

- *Generation,* whose integrated business consists of the generation, physical delivery and marketing of power across multiple geographical regions through its customer-facing business, Constellation, which sells electricity and natural gas to both wholesale and retail customers. Generation also sells renewable energy and other energy-related products and services.

- *ComEd,* whose business consists of the purchase and regulated retail sale of electricity and the provision of electricity transmission and distribution services in northern Illinois, including the City of Chicago.

- *PECO,* whose business consists of the purchase and regulated retail sale of electricity and the provision of electricity distribution and transmission services in southeastern Pennsylvania, including the City of Philadelphia, and the purchase and regulated retail sale of natural gas and the provision of natural gas distribution services in the Pennsylvania counties surrounding the City of Philadelphia.

- *BGE,* whose business consists of the purchase and regulated retail sale of electricity and natural gas and the provision of electricity distribution and transmission and natural gas distribution services in central Maryland, including the City of Baltimore.

- *Pepco,* whose business consists of the purchase and regulated retail sale of electricity and the provision of electricity distribution and transmission in the District of Columbia and major portions of Prince George’s County and Montgomery County in Maryland.

- *DPL,* whose business consists of the purchase and regulated retail sale of electricity and the provision of electricity distribution and transmission services in portions of Maryland and Delaware, and the purchase and regulated retail sale of natural gas and the provision of natural gas distribution services in northern Delaware.

- *ACE,* whose business consists of the purchase and regulated retail sale of electricity and the provision of electricity transmission and distribution services in southern New Jersey.

Pepco, DPL and ACE are operating companies of PHI, which is a utility services holding company and a wholly owned subsidiary of Exelon.

Exelon has twelve reportable segments consisting of Generation’s six reportable segments (Mid-Atlantic, Midwest, New England, New York, ERCOT and Other Power Regions in Generation), ComEd, PECO, BGE and PHI’s three utility reportable segments (Pepco, DPL and ACE). See Note 20 - Segment Information of the

Combined Notes to Consolidated Financial Statements for additional information regarding Exelon's reportable segments.

Through its business services subsidiary BSC, Exelon provides its operating subsidiaries with a variety of support services at cost. The costs of these services are directly charged or allocated to the applicable operating segments. Additionally, the results of Exelon's corporate operations include costs for corporate governance and interest costs and income from various investment and financing activities.

PHI Service Company, a wholly owned subsidiary of PHI, provides a variety of support services at cost, including legal, accounting, engineering, distribution and transmission planning, asset management, system operations, and power procurement, to PHI and its operating subsidiaries. These services are directly charged or allocated pursuant to service agreements among PHI Service Company and the participating operating subsidiaries.

Exelon's consolidated financial information includes the results of its eight separate operating subsidiary registrants, Generation, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE, which, along with Exelon, are collectively referred to as the Registrants. The following combined Management's Discussion and Analysis of Financial Condition and Results of Operations is separately filed by Exelon, Generation, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE. However, none of the Registrants makes any representation as to information related solely to any of the other Registrants.

Financial Results of Operations

GAAP Results of Operations

The following tables set forth Exelon's GAAP consolidated results of operations for the three and nine months ended September 30, 2017 compared to the same period in 2016. The 2016 amounts include the operations of PHI, Pepco, DPL and ACE from March 24, 2016 through September 30, 2016. All amounts presented below are before the impact of income taxes, except as noted.

	Three Months Ended September 30,								
	2017							**2016**	**Favorable (Unfavorable) Variance**
	Generation	**ComEd**	**PECO**	**BGE**	**PHI**	**Other**	**Exelon**	**Exelon** [(b)]	
Operating revenues	$ 4,751	$1,571	$ 715	$ 738	$1,310	$(316)	$ 8,769	$ 9,002	$ (233)

(a) The Registrants evaluate operating performance using the measure of revenues net of purchased power and fuel expense. The Registrants believe that revenues net of purchased power and fuel expense is a useful measurement because it provides information that can be used to evaluate their operational performance. Revenues net of purchased power and fuel expense is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

(b) As a result of the PHI Merger, Exelon includes the consolidated results of PHI, Pepco, DPL and ACE from July 1, 2016 through September 30, 2016.

Table of Contents

	Nine Months Ended September 30,								
	2017							2016	Favorable (Unfavorable) Variance
	Generation	ComEd	PECO	BGE	PHI	Other	Exelon	Exelon[b]

Net income	491	447	327	231	359	56	1,911	956	955
Net income attributable to noncontrolling interests and preference stock dividends	12	—	—	—	—	—	12	26	14
Net income attributable to common shareholders	$ 479	$ 447	$ 327	$ 231	$ 359	$ 56	$ 1,899	$ 930	$ 969

(a) The Registrants evaluate operating performance using the measure of revenues net of purchased power and fuel expense. The Registrants believe that revenues net of purchased power and fuel expense is a useful measurement because it provides information that can be used to evaluate their operational performance. Revenues net of purchased power and fuel expense is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

(b) As a result of the PHI Merger, Exelon includes the consolidated results of PHI, Pepco, DPL and ACE from March 24, 2016 through September 30, 2016.

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. Exelon's Net income attributable to common shareholders was $824 million for the three months ended September 30, 2017 as compared to $490 million for the three months ended September 30, 2016, and diluted earnings per average common share were $0.85 for the three months ended September 30, 2017 as compared to $0.53 for the three months ended September 30, 2016.

Revenue net of purchased power and fuel expense, which is a non-GAAP measure discussed below, decreased by $21 million for the three months ended September 30, 2017 as compared to the same period in 2016. The quarter-over-quarter decrease in Revenue net of purchased power and fuel expense was primarily due to the following unfavorable factors:

- Decrease of $36 million at PECO primarily due to unfavorable weathers conditions;

- Decrease of $15 million at Generation due to mark-to-market gains of $73 million in 2017 compared to $88 million in 2016; and

- Decrease of $11 million at Generation due to the unfavorable impacts of lower load volumes delivered due to mild weather and lower realized energy prices related to Exelon’s ratable hedging strategy, partially offset by the impact of the New York CES, increased capacity prices, increased nuclear volumes primarily as a result of the acquisition of FitzPatrick and decreased nuclear outage days, and the addition of two combined-cycle gas turbines in Texas.

The quarter-over-quarter decrease in Revenue net of purchase power and fuel expense was partially offset by the following favorable factors:

- Increase of $26 million at PHI primarily due to increased distribution revenue as a result of rate increases; and

- Increase of $17 million at BGE primarily due to increased transmission revenue as a result of rate increases.

Operating and maintenance expense decreased by $38 million for the three months ended September 30, 2017 as compared to the same period in 2016 primarily due to the following favorable factors:

- Decrease of $32 million at Exelon due to the net recovery of $2 million of merger-related costs in 2017 compared to merger-related costs of $30 million in 2016; and

- Decrease of $31 million at ComEd primarily due to the change to defer and recover over time energy efficiency costs pursuant to the Illinois Future Energy Jobs Act.

The quarter-over-quarter decrease in Operating and maintenance expense was partially offset by an increase of $38 million at Generation primarily due to the announcement of the early retirement of Generation’s TMI nuclear facility in 2017 compared to the previous decision to early retire Generation’s Clinton and Quad Cities nuclear facilities in 2016 and higher asset impairment charges, partially offset by decreased nuclear refueling outage costs and labor, contracting and materials expense.

Depreciation and amortization expense decreased by $193 million primarily due to lower accelerated depreciation and amortization as a result of the 2017 decision to early retire the TMI nuclear facility compared to the previous decision in 2016 to early retire the Clinton and Quad Cities nuclear facilities, partially offset by increased depreciation expense as a result of ongoing capital expenditures across all operating companies for the three months ended September 30, 2017 as compared to the same period in 2016.

Taxes other than income increased by $7 million primarily due to increased property taxes as a result of the addition of FitzPatrick at Generation for the three months ended September 30, 2017 as compared to the same period in 2016.

Gain on sales of assets remained relatively consistent for the three months ended September 30, 2017 as compared to the same period in 2016.

Bargain purchase gain increased by $7 million due to a measurement period adjustment to the bargain purchase gain for the FitzPatrick acquisition for the three months ended September 30, 2017 as compared to the same period in 2016.

Interest expense, net decreased by $130 million primarily due to additional interest recorded in the third quarter 2016 related to Exelon’s like-kind exchange tax position, partially offset by the the impact of project in-service dates on the capitalization of interest and higher outstanding debt at Generation for the three months ended September 30, 2017 as compared to the same period in 2016.

Other, net increased by $117 million primarily due to the penalty recorded in the third quarter of 2016 related to Exelon’s like-kind exchange tax position and higher net realized gains on NDT funds at Generation for the three months ended September 30, 2017 as compared to the same period in 2016.

Exelon’s effective income tax rates for the three months ended September 30, 2017 and 2016 were 34.1% and 39.0%, respectively. See Note 12 — Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. Exelon’s Net income attributable to common shareholders was $1,899 million for the nine months ended September 30, 2017 as compared to $930 million for the nine months ended September 30, 2016, and diluted earnings per average common share were $2.01 for the nine months ended September 30, 2017 as compared to $1.00 for the nine months ended September 30, 2016.

Revenue net of purchased power and fuel expense, which is a non-GAAP measure discussed below, increased by $598 million for the nine months ended September 30, 2017 as compared to the same period in 2016. The year-over-year increase in Revenue net of purchased power and fuel expense was primarily due to the following favorable factors:

- Increase of $96 million at ComEd primarily due to higher electric distribution and transmission formula rate revenues resulting from increased capital investment and higher allowed electric distribution ROE, partially offset by the impact of favorable weather conditions in 2016;
- Increase of $83 million at BGE primarily due to the impacts of the electric and natural gas distribution rate increases issued by the MDPSC in June 2016 and July 2016 and an increase in transmission formula rate revenues; and
- Increase of $711 million in Revenue net of purchased power and fuel due to the inclusion of PHI's results for the nine months ended September 30, 2017 compared to the period March 24, 2016 to September 30, 2016, as well as distribution rate increases effective in 2016 and 2017.

The year-over-year increase in Revenue net of purchased power and fuel expense was partially offset by the following unfavorable factors:

- Decrease of $180 million at Generation primarily due to the conclusion of the Ginna Reliability Support Services Agreement, the impact of declining natural gas prices on Generation's natural gas portfolio, the impacts of lower load volumes delivered due to mild weather and lower realized energy prices related to Exelon's ratable hedging strategy, partially offset by the impact of the New York CES, increased nuclear volumes primarily as a result of the acquisition of FitzPatrick, the addition of two combined-cycle gas turbines in Texas and the absence of oil inventory write downs in 2017.
- Decrease of $62 million at PECO primarily due to unfavorable weather conditions; and
- Decrease of $48 million at Generation due to mark-to-market losses of $161 million in 2017 compared to $113 million in 2016.

Operating and maintenance expense increased by $55 million for the nine months ended September 30, 2017 as compared to the same period in 2016 primarily due to the following unfavorable factors:

- Increase of $288 million at Generation due to higher asset impairment charges;
- Increase of $88 million at Generation due to increased nuclear outage costs;
- Increase in Generation's labor, contracting and materials costs of $74 million primarily due to the acquisition of FitzPatrick beginning on March 31, 2017; and
- Increase of $253 million at PHI due to the inclusion of PHI's results for the nine months ended September 30, 2017 compared to the period March 24, 2016 to September 30, 2016.

The year-over-year increase in Operating and maintenance expense was partially offset by the following favorable factors:

- Decrease of $589 million at Exelon due to merger commitment and other merger-related costs of $63 million in 2017 compared to $652 million in 2016; and
- Decrease of $56 million at BGE primarily due to certain disallowances contained in the June and July 2016 rate orders.

Depreciation and amortization expense decreased by $7 million primarily due to lower accelerated depreciation and amortization expense as a result of the 2017 decision to early retire the TMI nuclear facility compared to the previous decision in 2016 to early retire the Clinton and Quad Cities nuclear facilities, partially offset by increased depreciation expense as a result of ongoing capital expenditures across all operating companies and the inclusion of PHI’s results for the nine months ended September 30, 2017 compared to the period March 24, 2016 to September 30, 2016.

Table of Contents

Taxes other than income increased by $145 million primarily due to increased property taxes as a result of the addition of FitzPatrick, increased gross receipts tax expense and increased sales and use tax expense at Generation, as well as the inclusion of PHI's results for the nine months ended September 30, 2017 compared to the period March 24, 2016 to September 30, 2016.

Gain on sales of assets decreased by $37 million primarily due to Generation's gain associated with the sale of the New Boston generating site in 2016.

Bargain purchase gain increased by $233 million due to the gain associated with Generation's acquisition of FitzPatrick in 2017.

Interest expense, net increased by $15 million primarily due to additional interest recorded in the second quarter 2017 related to Exelon's like-kind exchange tax position, higher outstanding debt and the inclusion of PHI's results for the nine months ended September 30, 2017 compared to the period March 24, 2016 to September 30, 2016, partially offset by additional interest recorded in the third quarter 2016 related to Exelon's like-kind exchange tax position.

Other, net increased by $348 million primarily due to higher net unrealized and realized gains on NDT funds at Generation for the nine months ended September 30, 2017 as compared to the same period in 2016 and the penalty recorded in 2016 related to Exelon's like-kind exchange tax position.

Exelon's effective income tax rates for the nine months ended September 30, 2017 and 2016 were 23.5% and 39.1%, respectively. See Note 12 — Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

For further detail regarding the financial results for the three and nine months ended September 30, 2017, including explanation of the non-GAAP measure Revenue net of purchased power and fuel expense, see the discussions of Results of Operations by Segment below.

Adjusted (non-GAAP) Operating Earnings

Exelon's adjusted (non-GAAP) operating earnings for the three months ended September 30, 2017 were $821 million, or $0.85 per diluted share, compared with adjusted (non-GAAP) operating earnings of $841 million, or $0.91 per diluted share for the same period in 2016. Exelon's adjusted (non-GAAP) operating earnings for the nine months ended September 30, 2017 were $1,935 million, or $2.05 per diluted share, compared with adjusted (non-GAAP) operating earnings of $2,078 million, or $2.24 per diluted share for the same period in 2016. In addition to net income, Exelon evaluates its operating performance using the measure of adjusted (non-GAAP) operating earnings because management believes it represents earnings directly related to the ongoing operations of the business. Adjusted (non-GAAP) operating earnings exclude certain costs, expenses, gains and losses and other specified items. This information is intended to enhance an investor's overall understanding of period-over-period operating results and provide an indication of Exelon's baseline operating performance excluding items that are considered by management to be not directly related to the ongoing operations of the business. In addition, this information is among the primary indicators management uses as a basis for evaluating performance, allocating resources, setting incentive compensation targets and planning and forecasting of future periods. Adjusted (non-GAAP) operating earnings is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

The following tables provide a reconciliation between net income attributable to common shareholders as determined in accordance with GAAP and adjusted (non-GAAP) operating earnings for the three and nine months ended September 30, 2017 as compared to the same period in 2016.

	Three Months Ended September 30,			
	2017		2016	
(All amounts in millions after tax)		Earnings per Diluted Share		Earnings per Diluted Share
Net Income Attributable to Common Shareholders	$ 824	$ 0.85	$ 490	$ 0.53

Adjusted (non-GAAP) Operating Earnings	$ 1,935	$ 2.05	$ 2,078	$ 2.24

Note:
Unless otherwise noted, the income tax impact of each reconciling item between GAAP Net Income and Adjusted (non-GAAP) Operating Earnings is based on the marginal statutory federal and state income tax rates for each Registrant, taking into account whether the income or expense item is taxable or deductible, respectively, in whole or in part. For all items except the unrealized gains and losses related to NDT fund investments, the marginal statutory income tax rates ranged from 39.0 percent to 41.0 percent. Under IRS regulations, NDT fund investment returns are taxed at differing rates for investments in qualified vs. non-qualified funds. The tax rates applied to unrealized gains and losses related to NDT Fund investments were 43.2 percent and 46.2 percent for the three and nine months ended September 30, 2017, respectively, and 52.6 percent and 52.5 percent for the three and nine months ended September 30, 2016, respectively.

(a) Reflects the impact of net gains and losses on Generation’s economic hedging activities. See Note 10 - Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional detail related to Generation’s hedging activities.
(b) Reflects the impact of net unrealized gains on Generation’s NDT fund investments for Non-Regulatory Agreement Units. See Note 13 - Nuclear Decommissioning of the Combined Notes to Consolidated Financial Statements for additional detail related to Generation’s NDT fund investments.
(c) Reflects the non-cash amortization of intangible assets, net, primarily related to commodity contracts recorded at fair value related to the ConEdison Solutions and FitzPatrick acquisitions in 2017, and in 2016, the Integrys and ConEdison Solutions acquisitions.
(d) Reflects certain costs incurred for the PHI acquisition in 2017 and 2016 and Generation’s FitzPatrick acquisition in 2017, including professional fees, employee-related expenses and integration activities. See Note 4 - Mergers, Acquisitions and Dispositions of the Combined Notes to Consolidated Financial Statements for additional detail related to merger and acquisition costs.
(e) Represents a decrease in reserves for uncertain tax positions related to the deductibility of certain merger commitments associated with the 2012 CEG and 2016 PHI acquisitions in 2017, and costs and adjustments incurred as part of the settlement orders approving the PHI acquisition in 2017 and 2016. See Note 4 - Mergers, Acquisitions and Dispositions of the Combined Notes to Consolidated Financial Statements for additional detail related to PHI Merger commitments.
(f)

Primarily reflects impairments as a result of the ExGenTexas Power, LLC assets held for sale in 2017 and impairments of Upstream assets and certain wind projects at Generation in 2016.

(g) Primarily reflects accelerated depreciation and amortization expenses, increases to materials and supplies inventory reserves, charges for severance reserves and construction work in progress impairments associated with Generation’s previous decision to early retire the Clinton and Quad Cities nuclear facilities in 2016, partially offset in 2016 by a gain associated with Generation’s sale of the New Boston generating site and Generation’s decision to early retire the Three Mile Island nuclear facility in 2017.

(h) Reflects severance and reorganization costs related to a cost management program.

Table of Contents

(i) Represents adjustments to income tax, penalties and interest expenses in 2017 as a result of the finalization of the IRS tax computation related to Exelon's like-kind exchange tax position, and in 2016, the recognition of a penalty and associated interest expense in 2016 as a result of a tax court decision on Exelon's like-kind exchange tax position.
(j) Reflects a non-cash benefit pursuant to the annual update of the Generation nuclear decommissioning obligation related to the nonregulatory units.
(k) Represents the excess of the fair value of assets and liabilities acquired over the purchase price for the FitzPatrick acquisition.
(l) Reflects the non-cash impact of the remeasurement of state deferred income taxes, primarily as a result of changes in forecasted apportionment related to the PHI acquisition in 2016, and in 2017, changes in the Illinois and District of Columbia statutory tax rates and changes in forecasted apportionment.
(m) Represents elimination from Generation's results of the noncontrolling interest related to certain exclusion items, primarily related to the impact of unrealized gains and losses on NDT fund investments at CENG.
(n) Reflects benefits related to the favorable settlement in 2017 of certain income tax positions related to PHI's unregulated business interests that were transferred to Generation.

Merger, Integration and Acquisition Costs

As a result of the PHI Merger that was completed on March 23, 2016, the Registrants have incurred costs associated with evaluating, structuring and executing the PHI Merger transaction itself, and will continue to incur cost associated with meeting the various commitments set forth by regulators and agreed-upon with other interested parties as part of the merger approval process, and integrating the former PHI businesses into Exelon. In addition, as a result of the acquisition of the FitzPatrick nuclear generating station on March 31, 2017, Exelon and Generation incurred costs associated with evaluating, structuring, and executing the transaction and integrating FitzPatrick into Exelon.

For the three and nine months ended September 30, 2017 and 2016, expense has been recognized for the PHI Merger and Generation's FitzPatrick acquisition as follows:

	Pre-tax Expense								
	Three Months Ended September 30, 2017								
Merger, Integration and Acquisition Costs:	**Exelon(a)**	**Generation(a)**	**ComEd**	**PECO**	**BGE**	**PHI(a)(b)**	**Pepco(a)(c)**	**DPL(a)**	**ACE(a)(d)**

Total	$ 62	$ 71	$ 1	$ 3	$ 3	$ (17)	$ (6)	$ (6)	$ (6)

Table of Contents

	Pre-tax Expense								
	Nine Months Ended September 30, 2016								
Merger, Integration and Acquisition Costs:	**Exelon(a)**	**Generation(a)**	**ComEd(i)**	**PECO**	**BGE(j)**	**PHI(a)(b)**	**Pepco(a)(c)**	**DPL(a)(h)**	**ACE(a)**
Transaction(e)	$ 36	$ —	$ —	$ —	$ —	$ —	$ —	$ —	$ —
Employee-Related(g)	74	10	1	1	1	61	29	17	14
Other(f)	16	21	(8)	3	(3)	2	(3)	1	3
Total	$ 126	$ 31	$ (7)	$ 4	$ (2)	$ 63	$ 26	$ 18	$ 17

(a) For Exelon, Generation, PHI, Pepco, DPL, and ACE, includes the operations of the acquired businesses beginning on March 24, 2016.

(b) For the three and nine months ended September 30, 2017, includes the reversal of previously incurred acquisition, integration and financing costs of $16 million and $24 million, respectively, incurred at PHI that have been deferred and recorded as a regulatory asset for anticipated recovery. For the Successor period March 24, 2016 to September 30, 2016, includes the reversal of previously incurred acquisition, integration and financing costs of $13 million incurred at PHI that have been deferred and recorded as a regulatory asset for anticipated recovery. See Note 5—Regulatory Matters for more information.

(c) For the three and nine months ended September 30, 2017, includes the reversal of previously incurred acquisition, integration and financing costs of $8 million incurred at Pepco that have been deferred and recorded as a regulatory asset for anticipated recovery. For the nine months ended September 30, 2016, includes the reversal of previously incurred acquisition, integration and financing costs of $10 million incurred at Pepco that have been deferred and recorded as a regulatory asset for anticipated recovery. See Note 5—Regulatory Matters for more information.

(d) For the three and nine months ended September 30, 2017, includes the reversal of previously incurred acquisition, integration and financing costs of $8 million incurred at ACE that have been deferred and recorded as a regulatory asset for anticipated recovery. See Note 5—Regulatory Matters for more information.

(e) External, third party costs paid to advisors, consultants, lawyers and other experts to integrate PHI processes and systems into Exelon, to assist in the due diligence and regulatory approval processes and in the closing of transactions.

(f) Costs to integrate PHI processes and systems into Exelon. For the three and nine months ended September 30, 2017, also includes costs to integrate FitzPatrick processes and systems into Exelon.

(g) Costs primarily for employee severance, pension and OPEB expense and retention bonuses.

(h) For the nine months ended September 30, 2017, includes the reversal of previously incurred acquisition, integration and financing costs of $8 million incurred at DPL that have been deferred and recorded as a regulatory asset for anticipated recovery. For the nine months ended September 30, 2016, includes the reversal of previously incurred acquisition, integration and financing costs of $3 million incurred at DPL that have been deferred and recorded as a regulatory asset for anticipated recovery. See Note 5—Regulatory Matters for more information.

(i) For the nine months ended September 30, 2016, includes the reversal of previously incurred acquisition, integration and financing costs of $8 million, incurred at ComEd that have been deferred and recorded as a regulatory asset for anticipated recovery. See Note 5—Regulatory Matters for more information.

(j) For the nine months ended September 30, 2016, includes the reversal of previously incurred acquisition, integration and financing costs of $6 million incurred at BGE that have been deferred and recorded as a regulatory asset for anticipated recovery. See Note 5—Regulatory Matters for more information.

As of September 30, 2017, Exelon expects to incur total PHI acquisition and integration related costs of approximately $700 million, excluding merger commitments. Of this amount, including costs incurred from 2014 through September 30, 2017, Exelon and PHI have incurred approximately $675 million.

Significant 2017 Transactions and Developments

Early Retirement of Three Mile Island Facility

On May 30, 2017, Generation announced it will permanently cease generation operations at Three Mile Island Generating Station (TMI) on or about September 30, 2019. The TMI nuclear plant did not clear in the May 2017 PJM capacity auction for the 2020-2021 planning year and will not receive capacity revenue for that period, the third consecutive year that TMI failed to clear the PJM base residual capacity auction. The plant is currently committed to operate through May 2019. In 2017, as a result of the plant retirement decision of TMI, Exelon and Generation recognized one-time charges in Operating and maintenance expense of $76 million related to materials and supplies inventory reserve adjustments, employee-related costs and construction work-in-progress (CWIP) impairments, among other items. In addition to these one-time charges, there will be ongoing annual incremental non-cash charges to earnings stemming from shortening the expected economic useful life of TMI primarily related to accelerated depreciation of plant assets (including any asset retirement costs (ARC)), accelerated amortization of nuclear fuel, and additional asset retirement obligation (ARO) accretion expense associated with the changes in decommissioning timing and cost assumptions. During the three and nine months ended September 30, 2017, both Exelon’s and Generation’s results include an incremental $112 million and $149 million, respectively, of pre-tax expense for these items.

The following table summarizes the estimated annual amount and timing of expected incremental non-cash expense items through 2019.

Income statement expense (pre-tax)	September 30, 2017	Projected[(a)] 2017	Projected[(a)] 2018	Projected[(a)] 2019
Depreciation and Amortization				
Accelerated depreciation[(b)]	$ 141	$ 250	$ 430	$ 325
Accelerated nuclear fuel amortization	8	10	20	5
Total	$ 149	$ 260	$ 450	$ 330

(a) Actual results may differ based on incremental future capital additions, actual units of production for nuclear fuel amortization, future revised ARO assumptions, etc.

(b) Reflects incremental accelerated depreciation of plant assets, including any ARC.

EGTP Consent Agreement

In September 2014, EGTP, an indirect subsidiary of Exelon and Generation, issued $675 million aggregate principal amount of a nonrecourse senior secured term loan. EGTP's operating cash flows have been negatively impacted by certain market conditions and the seasonality of its cash flows. On May 2, 2017, EGTP entered into a consent agreement with its lenders to permit EGTP to draw on its revolving credit facility and initiate an orderly sales process to sell the assets of its wholly owned subsidiaries, the proceeds from which will first be used to pay the administrative costs of the sale, the normal and ordinary costs of operating the plants and repayment of the secured debt of EGTP, including the revolving credit facility. As a result, in the second quarter 2017, Exelon and Generation classified certain EGTP assets and liabilities on Exelon's and Generation's Consolidated Balance Sheets as held for sale at their respective fair values less costs to sell and included in the other current assets and other current liabilities balances on Exelon's and Generation's Consolidated Balance Sheets. For the three and nine months ended September 30, 2017, a $40 million and $458 million pre-tax impairment loss was recorded within Operating and maintenance expense on Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income. See Note 4 - Mergers, Acquisitions and Dispositions, Note 6 - Impairment of Long-Lived Assets and Note 11 - Debt and Credit Agreements for more information for additional information regarding EGTP and the associated nonrecourse debt.

Acquisition of James A. FitzPatrick Nuclear Generating Station

On March 31, 2017, Generation acquired the 838 MW single-unit James A. FitzPatrick (FitzPatrick) nuclear generating station for a total purchase price of $289 million. In accounting for the acquisition as a business combination, Exelon and Generation recorded an after-tax bargain purchase gain of $233 million which is included within Exelon's and Generation's Consolidated Statements of Operations and Comprehensive Income. See Note 4 - Mergers, Acquisitions and Dispositions of the Combined Notes to the Consolidated Financial Statements for additional information regarding the Generation's acquisition of FitzPatrick and related costs.

Illinois Future Energy Jobs Act

On December 7, 2016, FEJA was signed into law by the Governor of Illinois. FEJA was effective June 1, 2017, and includes, among other provisions, (1) a Zero Emission Standard (ZES) providing compensation for certain nuclear-powered generating facilities, (2) an extension of and certain adjustments to ComEd's electric distribution formula rate, (3) new cumulative persisting annual energy efficiency MWh savings goals for

ComEd, (4) revisions to the Illinois RPS requirements, (5) provisions for adjustments to or termination of FEJA programs if the average impact on ComEd's customer rates exceeds specified limits, (6) revisions to the existing net metering statute and (7) support for low income rooftop and community solar programs. FEJA establishes new or adjusts existing rate recovery mechanisms for ComEd to recover costs associated with the new or expanded energy efficiency and RPS requirements. Regulatory or legal challenges over the validity of FEJA are possible. See Note 5 - Regulatory Matters of the Combined Notes to the Consolidated Financial Statements for additional information regarding FEJA. See Note 7 - Early Nuclear Plant Retirements of the Combined Notes to the Consolidated Financial Statements for additional information regarding the economic challenges facing Generation's Clinton and Quad Cities nuclear plants and the expected benefits of the ZES.

Dismissal of Litigation Challenging ZEC Programs

On July 14, 2017, the U.S. District Court for the Northern District of Illinois dismissed two lawsuits challenging the ZEC program contained in FEJA. On July 17, 2017, the plaintiffs appealed the court's decisions to the U.S. Court of Appeals for the Seventh Circuit. Plaintiffs-Appellants initial brief was filed on August 28, 2017 and the state's and Exelon's briefs were filed on October 27, 2017. Reply briefs are due on December 12, 2017.

Additionally, on July 25, 2017, the U.S. District Court for the Southern District of New York dismissed a lawsuit challenging the ZEC program contained in the New York CES. On August 24, 2017, the plaintiffs appealed the decision to the Second Circuit. Plaintiffs-Appellants' initial brief was filed on October 13 and the state's and Exelon's briefs are due on November 17, 2017. Reply briefs are due on December 1, 2017.

These court decisions uphold the ZEC programs which support Illinois's and New York's efforts to advance clean energy and preserve affordable and reliable energy resources for customers. See Note 5 - Regulatory Matters of the Combined Notes to the Consolidated Financial Statements for additional information regarding FEJA and the New York CES.

Merger Commitment Unrecognized Tax Benefits

Exelon established a liability for an uncertain tax position associated with the tax deductibility of certain merger commitments incurred by Exelon in connection with the acquisitions of Constellation in 2012 and PHI in 2016. In the first quarter 2017, as a part of its examination of Exelon's return, the IRS National Office issued guidance concurring with Exelon's position that the merger commitments were deductible. As a result, Exelon, Generation, PHI, Pepco, DPL, and ACE decreased their liability for unrecognized tax benefits by $146 million, $19 million, $59 million, $21 million, $16 million, and $22 million, respectively, as of September 30, 2017, resulting in a benefit to Income taxes on Exelon's, Generation's, PHI's, Pepco's, DPL's and ACE's Consolidated Statements of Operations and Comprehensive Income and corresponding decreases in their effective tax rates.

Combined-Cycle Gas Turbine Projects

In June 2017, Generation commenced commercial operations of two new combined-cycle gas turbines (CCGTs) at the Colorado Bend and Wolf Hollow Generating Stations in Texas. The two new CCGTs have added nearly 2,200 MWs of capacity to Generation's fleet, enhancing Generation's strategy to match generation to customer load. Generation invested approximately $1.5 billion over the past three years to complete the new plant construction, which utilizes new General Electric technology to make them among the cleanest, most efficient CCGTs in the nation.

Utility Rates and Rate Proceedings

The Utility Registrants file rate cases with their regulatory commissions seeking increases or decreases to their electric transmission and distribution, and gas distribution rates to recover their costs and earn a fair return on their investments. The outcomes of these regulatory proceedings impact the Utility Registrants' current and future results of operations, cash flows and financial position.

The following tables show the Utility Registrants' completed and pending distribution rate case proceedings in 2017.

Completed Distribution Rate Case Proceedings

Company	**Jurisdiction**	**Approved Revenue Requirement Increase (in millions)**	**Approved Return on Equity**	**Completion Date**	**Rate Effective Date**
DPL	Maryland (Electric)	$ 38	9.6%	February 15, 2017	February 15, 2017
DPL	Delaware (Electric)	$ 31.5	9.7%	May 23, 2017	June 1, 2017
DPL	Delaware (Natural Gas)	$ 4.9	9.7%	June 6, 2017	July 1, 2017
Pepco	District of Columbia (Electric)	$ 37	9.5%	July 25, 2017	August 15, 2017
ACE	New Jersey (Electric)	$ 43	9.6%	September 22, 2017	October 1, 2017
Pepco	Maryland (Electric)	$ 32	9.5%	October 27, 2017	October 20, 2017

Pending Distribution Rate Case Proceedings

Company	**Jurisdiction**	**Requested Revenue Requirement Increase (in millions)**	**Requested Return on Equity**	**Filing Date**	**Expected Completion Timing**
ComEd	Illinois (Electric)(a)	$ 96 (b)	8.4% (c)	April 13, 2017	Fourth quarter 2017
DPL	Maryland (Electric)	$ 22	10.1%	July 14, 2017 (Updated on September 28, 2017)	First quarter 2018
DPL	Delaware (Electric)	$ 31	10.1%	August 17, 2017 (Updated on October 18, 2017)	Third quarter 2018
DPL	Delaware (Natural Gas)	$ 13	10.1%	August 17, 2017	Third quarter 2018

(a) Pursuant to EIMA, ComEd's electric distribution rates are established through a performance-based formula through which ComEd is required to file an annual update on or before May 1, with resulting rates effective in January of the following year. ComEd's annual electric distribution formula rate update is based on prior year actual costs and current year projected capital additions (initial year revenue requirement). The update also reconciles any differences between the revenue requirement in effect for the prior year and actual costs incurred for the year (annual reconciliation).

(b) Reflects an increase of $78 million for the initial revenue requirement for 2017 and an increase of $18 million related to the annual reconciliation.

(c) ComEd's allowed ROE under its electric distribution formula rate is the annual average rate on 30-year treasury notes plus 580 basis points and is subject to reduction if ComEd does not deliver certain reliability and customer service benefits. The initial revenue requirement for 2017 reflects an allowed ROE of 8.40%, while the annual reconciliation reflects an allowed ROE of 8.34%, which is inclusive of a 6 basis point performance penalty.

Transmission Formula Rates

The following total increases/(decreases) were included in ComEd's, BGE's, Pepco's, DPL's and ACE's 2017 annual electric transmission formula rate filings:

	2017				
Annual Transmission Filings[(a)]	**ComEd**	**BGE**	**Pepco**	**DPL**	**ACE**
Initial revenue requirement increase	$ 44	$ 31	$ 5	$ 6	$ 20
Annual reconciliation (decrease) increase	(33)	3	15	8	22
Dedicated facilities decrease[(b)]	—	(8)	—	—	—
Total revenue requirement increase	$ 11	$ 26	$ 20	$ 14	$ 42
Allowed return on rate base[(c)]	8.43%	7.47%	7.92%	7.16%	8.02%
Allowed ROE[(d)]	11.50%	10.50%	10.50%	10.50%	10.50%

(a) All rates are effective June 2017, subject to review by the FERC and other parties, which is due by fourth quarter 2017.

(b) BGE's transmission revenues include a FERC approved dedicated facilities charge to recover the costs of providing transmission service to specifically designated load by BGE.

(c) Represents the weighted average debt and equity return on transmission rate bases.

(d) As part of the FERC-approved settlement of ComEd's 2007 transmission rate case, the rate of return on common equity is 11.50% and the common equity component of the ratio used to calculate the weighted average debt and equity return for the transmission formula rate is currently capped at 55%. As part of the FERC-approved settlement of the ROE complaint against BGE, Pepco, DPL and ACE, the rate of return on common equity is 10.50%, inclusive of a 50 basis point incentive adder for being a member of a regional transmission organization.

PECO Transmission Formula Rate

On May 1, 2017, PECO filed a request with FERC seeking approval to update its transmission rates and change the manner in which PECO's transmission rate is determined from a fixed rate to a formula rate. The formula rate would be updated annually to ensure that under this rate customers pay the actual costs of providing transmission services. The formula rate filing includes a requested increase of $22 million to PECO's annual transmission revenues and a requested rate of return on common equity of 11%, inclusive of a 50 basis point adder for being a member of a regional transmission organization. PECO requested that the new transmission rate be effective as of July 2017. On June 27, 2017, FERC issued an Order accepting the filing and suspending the proposed rates until December 1, 2017, subject to refund, and set the matter for hearing and settlement judge procedures. PECO cannot predict the final outcome of the settlement or hearing proceedings, or the transmission formula FERC may approve.

See Note 5 - Regulatory Matters of the Combined Notes to Consolidated Financial Statements for further details on these regulatory proceedings.

Westinghouse Electric Company LLC Bankruptcy

On March 29, 2017, Westinghouse Electric Company LLC (Westinghouse) and its affiliated debtors filed petitions for relief under Chapter 11 of the Bankruptcy Code in the U.S. Bankruptcy Court for the Southern District of New York. In the petitions and supporting documents, Westinghouse makes clear that its requests for relief center on one business area that is losing money — the construction of nuclear power plants in Georgia and South Carolina. Through the bankruptcy, Westinghouse seeks to reorganize around its profitable core business, which includes nuclear fuel fabrication and related services and other services provided to existing nuclear power plants in the U.S. and around the world. For these reasons, at this time, Generation does not anticipate disruption to the Westinghouse fuel fabrication contracts for Braidwood, Byron, or Ginna or other existing contracts for Generation’s nuclear power plants. Generation is monitoring the bankruptcy proceeding to ensure that its rights are protected.

ExGen Renewables Holdings, LLC Transaction

On July 6, 2017, ExGen Renewables Holdings, LLC, a wholly owned subsidiary of Generation, completed the sale of a 49% interest of ExGen Renewables Partners, LLC, a newly formed owner and operator of approximately 1,296 megawatts of Generation’s operating wind and solar electric generating facilities. ExGen Renewables Holdings will be the managing member of ExGen Renewables Partners, LLC, and have day-to-day control and management over its renewable generation portfolio. The closing of the transaction was subject to certain regulatory approvals, including the Federal Energy Regulatory Commission (FERC) and the Public Utility Commission of Texas (PUCT) which were received during the second quarter of 2017. The sale price was $400 million plus immaterial working capital and other customary post-closing adjustments. The net proceeds, after approximately $100 million of income taxes, will be used to pay down debt and for general corporate purposes. Generation will continue to consolidate ExGen Renewables Partners, LLC and will record a noncontrolling interest on its Consolidated Balance Sheet for the investor's initial equity share as well as earnings attributable to the noncontrolling interest in the Consolidated Statements of Operations and Comprehensive Income each period going forward.

Hurricanes Harvey, Irma and Maria Impacts

Although Exelon subsidiaries provided substantial assistance to recovery efforts following Hurricanes Harvey and Irma, Hurricanes Harvey, Irma and Maria are not expected to have a material impact on the Registrants' businesses or financial results given the limited operations in the areas affected by the storms.

Exelon's Strategy and Outlook for 2017 and Beyond

Exelon's value proposition and competitive advantage come from its scope and its core strengths of operational excellence and financial discipline. Exelon leverages its integrated business model to create value. Exelon's regulated and competitive businesses feature a mix of attributes that, when combined, offer shareholders and customers a unique value proposition:

- Exelon's utilities provide a foundation for steadily growing earnings, which translates to a stable currency in our stock.
- Generation's competitive businesses provide free cash flow to invest primarily in the utilities and in long-term, contracted assets and to reduce debt.

Exelon believes its strategy provides a platform for optimal success in an energy industry experiencing fundamental and sweeping change.

Exelon's utility strategy is to improve reliability and operations and enhance the customer experience, while ensuring ratemaking mechanisms provide the utilities fair financial returns. The Exelon utilities only invest in rate base where it provides a benefit to customers and the community by improving reliability and the service experience or otherwise meeting customer needs. The Exelon utilities make these investments at the lowest reasonable cost to customers. Exelon seeks to leverage its scale and expertise across the utilities platform through enhanced standardization and sharing of resources and best practices to achieve improved operational and financial results. Additionally, the Utility Registrants anticipate making significant future investments in smart meter technology, transmission projects, gas infrastructure, and electric system improvement projects, providing greater reliability and improved service for our customers and a stable return for the company.

Generation's competitive businesses create value for customers by providing innovative energy solutions and reliable, clean and affordable energy. Generation's electricity generation strategy is to pursue opportunities that provide stable revenues and generation to load matching to reduce earnings volatility. Generation leverages its energy generation portfolio to deliver energy to both wholesale and retail customers. Generation's customer-facing activities foster development and delivery of other innovative energy-related products and services for its customers. Generation operates in well-developed energy markets and employs an integrated hedging strategy to manage commodity price volatility. Its generation fleet, including its nuclear plants which consistently operate at high capacity factors, also provide geographic and supply source diversity. These factors help Generation mitigate the current challenging conditions in competitive energy markets.

Exelon’s financial priorities are to maintain investment grade credit metrics at each of the Registrants, to maintain optimal capital structure and to return value to Exelon’s shareholders with an attractive dividend throughout the energy commodity market cycle and through stable earnings growth. Exelon’s Board of Directors has approved a dividend policy providing a raise of 2.5% each year for three years, beginning with the June 2016 dividend.

Various market, financial, regulatory, legislative and operational factors could affect the Registrants’ success in pursuing their strategies. Exelon continues to assess infrastructure, operational, commercial, policy, and legal solutions to these issues. One key issue is ensuring the ability to properly value nuclear generation assets in the market, solutions to which Exelon is actively pursuing in a variety of jurisdictions and venues. See ITEM 1A. RISK FACTORS of the Exelon 2016 Form 10-K for additional information regarding market and financial factors.

Continually optimizing the cost structure is a key component of Exelon's financial strategy. In a cost management program initiated late in 2015, the company committed to reducing operation and maintenance expenses and capital costs by approximately $350 million and $50 million, respectively, of which approximately 35% of run-rate savings was achieved by the end of 2016. Approximately 60% of run-rate savings are expected to be achieved by the end of 2017 and fully realized in 2018. At least 75% of the savings are expected to be related to Generation, with the remaining amount related to the Utility Registrants.

In November 2017, Exelon announced the elimination of approximately $250 million of annual ongoing costs, primarily at Generation, by 2020. This announcement is a result of Exelon's continuous focus on improving its cost profile through enhanced efficiency and productivity. These cost reductions result in a cost profile that better aligns with current market conditions. The targeted cost savings are incremental to the expected savings from previous cost management initiatives.

Growth Opportunities

Management continually evaluates growth opportunities aligned with Exelon's businesses, assets and markets, leveraging Exelon's expertise in those areas and offering sustainable returns.

Regulated Energy Businesses. The PHI merger provides an opportunity to accelerate Exelon's regulated growth to provide stable cash flows, earnings accretion, and dividend support. Additionally, the Utility Registrants anticipate investing approximately $25 billion over the next five years in electric and natural gas infrastructure improvements and modernization projects, including smart meter and smart grid initiatives, storm hardening, advanced reliability technologies, and transmission projects, which is projected to result in an increase to current rate base of approximately $9 billion by the end of 2021. The Utility Registrants invest in rate base where beneficial to customers and the community by increasing reliability and the service experience or otherwise meeting customer needs. These investments are made at the lowest reasonable cost to customers.

See Note 5—Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information on the Smart Meter and Smart Grid Initiatives and infrastructure development and enhancement programs.

Competitive Energy Businesses. Generation continually assesses the optimal structure and composition of its generation assets as well as explores wholesale and retail opportunities within the power and gas sectors. Generation's long-term growth strategy is to ensure appropriate valuation of its generation assets, in part through public policy efforts, identify and capitalize on opportunities that provide generation to load matching as a means to provide stable earnings, and identify emerging technologies where strategic investments provide the option for significant future growth or influence in market development. As of September 30, 2017, Generation has currently approved plans to invest a total of approximately $300 million through 2018 to complete new plant construction currently in progress.

Liquidity Considerations

Each of the Registrants annually evaluates its financing plan, dividend practices and credit line sizing, focusing on maintaining its investment grade ratings while meeting its cash needs to fund capital requirements, retire debt, pay dividends, fund pension and OPEB obligations and invest in new and existing ventures. A broad spectrum of financing alternatives beyond the core financing options can be used to meet its needs and fund growth including monetizing assets in the portfolio via project financing, asset sales, and the use of other financing structures (e.g., joint ventures, minority partners, etc.). The Registrants expect cash flows to be sufficient to meet operating expenses, financing costs and capital expenditure requirements.

Exelon, Generation, ComEd, PECO, BGE, Pepco, DPL and ACE have unsecured syndicated revolving credit facilities with aggregate bank commitments of $0.6 billion, $5.3 billion, $1 billion, $0.6 billion, $0.6 billion, $0.3 billion, $0.3 billion and $0.3 billion, respectively. Generation also has bilateral credit facilities with aggregate maximum availability of $0.5 billion. See Liquidity and Capital Resources - Credit Matters - Exelon Credit Facilities below.

For further detail regarding the Registrants’ liquidity for the nine months ended September 30, 2017, see Liquidity and Capital Resources discussion below.

Project Financing

Generation utilizes individual project financings as a means to finance the construction of various generating asset projects. Project financing is based upon a nonrecourse financial structure, in which project debt and equity used to finance the project are paid back from the cash generated by the newly constructed asset once operational. Borrowings under these agreements are secured by the assets and equity of each respective project. The lenders do not have recourse against Exelon or Generation in the event of a default. If a specific project financing entity does not maintain compliance with its specific debt financing covenants, there could be a requirement to accelerate repayment of the associated debt or other project-related borrowings earlier than the stated maturity dates. In these instances, if such repayment was not satisfied, or restructured, the lenders or security holders would generally have rights to foreclose against the project-specific assets and related collateral. The potential requirement to satisfy its associated debt or other borrowings earlier than otherwise anticipated could lead to impairments due to a higher likelihood of disposing of the respective project-specific assets significantly before the end of their useful lives. See Note 6 Impairment of Long-Lived Assets and Note 11 - Debt and Credit Agreements of the Combined Notes to the Consolidated Financial Statements for additional information on nonrecourse debt.

Other Key Business Drivers and Management Strategies

Power Markets

Price of Fuels

The use of new technologies to recover natural gas from shale deposits is increasing natural gas supply and reserves, which places downward pressure on natural gas prices and, therefore, on wholesale and retail power prices, which results in a reduction in Exelon’s revenues. Forward natural gas prices have declined significantly over the last several years; in part reflecting an increase in supply due to strong natural gas production (due to shale gas development).

Capacity Market Changes in PJM

In the wake of the January 2014 Polar Vortex that blanketed much of the Eastern and Midwestern United States, it became clear that while a major outage event was narrowly avoided, resources in PJM were not providing the level of reliability expected by customers. As a result, on December 12, 2014, PJM filed at FERC a proposal to make significant changes to its current capacity market construct, the Reliability Pricing Model (RPM). PJM’s proposed changes generally sought to improve resource performance and reliability largely by limiting the excuses for non-performance and by increasing the penalties for performance failures. The proposal permits suppliers to include in capacity market offers additional costs and risk so they can meet these higher performance requirements. While offers are expected to put upward pressure on capacity clearing prices, operational improvements made as a result of PJM’s proposal are expected to improve reliability, to reduce energy production costs as a result of more efficient operations and to reduce the need for out of market energy payments to suppliers. Generation participated actively in PJM’s stakeholder process through which PJM developed the proposal and also actively participated in the FERC proceeding including filing comments. On June 9, 2015, FERC approved PJM’s filing largely as proposed by PJM, including transitional auction rules for delivery years 2016/2017 through 2017/2018. As a result of this and several related orders, PJM hosted its 2018/2019 Base Residual Auction (results posted on August 21, 2015) and its transitional auction for delivery year 2016/2017 (results posted on August 31, 2015) and its transitional auction for delivery years 2017/2018 (results posted on September 9, 2015). On May 10, 2016, FERC largely denied rehearing, and a number of parties appealed to the U.S. Court of Appeals for the DC Circuit for review of the decision. On June 20, 2017, the DC Circuit denied all the appeals.

MISO Capacity Market Results

On April 14, 2015, the Midcontinent Independent System Operator (MISO) released the results of its capacity auction covering the June 2015 through May 2016 delivery year. As a result of the auction, capacity prices for the zone 4 region in downstate Illinois increased to $150 per MW per day beginning in June 2015, an increase from the prior pricing of $16.75 per MW per day that was in effect from June 2014 to May 2015. Generation had an offer that was selected in the auction. However, due to Generation’s ratable hedging strategy, the results of the capacity auction have not had a material impact on Exelon’s and Generation’s consolidated results of operations and cash flows.

Additionally, in late May and June 2015, separate complaints were filed at the FERC by each of the State of Illinois, the Southwest Electric Cooperative, Public Citizens, Inc., and the Illinois Industrial Energy Consumers challenging the results of this MISO capacity auction for the 2015/2016 delivery in MISO delivery zone 4. The complaints allege generally that 1) the results of the capacity auction for zone 4 are not just and reasonable, 2) the results should be suspended, set for hearing and replaced with a new just and reasonable rate, 3) a refund date should be established and that 4) certain alleged behavior by one of the market participants other than Exelon or Generation, be investigated.

On October 1, 2015, FERC announced that it was conducting a non-public investigation (that does not involve Exelon or Generation) into whether market manipulation or other potential violations occurred related to the auction. On December 31, 2015, FERC issued a decision that certain of the rules governing the establishment of capacity prices in downstate Illinois are “not just and reasonable” on a prospective basis. FERC ordered that certain rules be changed prior to the April 2016 auction which set capacity prices for the 2016/2017 planning year. In response to this order, MISO filed certain rule changes with FERC. On March 18, 2016, FERC largely denied rehearing of its December 31, 2015 order. FERC continues to conduct its non-public investigation to determine if the April 2015 auction results were manipulated and, if so, whether refunds are appropriate. FERC did establish May 28, 2015, the day the first complaint was filed, as the date from which refunds (if ordered) would be calculated, and it also made clear that the findings in the December 31, 2015 order do not prejudge the investigation or related proceedings. Generation cannot predict the impact the FERC order may ultimately have on future auction results, capacity pricing or decisions related to the potential early retirement of the Clinton nuclear plant, however, such impacts could be material to Generation’s future results of operations and cash flows. See Note 7 - Early Nuclear Plant Retirements of the Combined Notes to the Consolidated Financial Statements for additional information on the impacts of the MISO announcement.

Subsidized Generation

The rate of expansion of subsidized generation, in the markets in which Generation’s output is sold can negatively impact wholesale power prices, and in turn, Generation’s results of operations.

Various states have attempted to implement or propose legislation, regulations or other policies to subsidize new generation development which may result in artificially depressed wholesale energy and capacity prices. For example, the New Jersey legislature enacted into law in January 2011, the Long Term Capacity Pilot Program Act (LCAPP). LCAPP provides eligible generators with 15-year fixed contracts for the sale of capacity in the PJM capacity market. Under LCAPP, the local utilities in New Jersey are required to pay (or receive) the difference between the price eligible generators receive in the capacity market and the price guaranteed under the 15-year contract. New Jersey ultimately selected three proposals to participate in LCAPP and build new generation in the state. In addition, on April 12, 2012, the MDPSC issued an order directing the Maryland electric utilities to enter into a 20-year contract for differences (CfD) with CPV Maryland, LLC (CPV), under which CPV was required to construct an approximately 700 MW combined cycle gas turbine in Waldorf, Maryland. The CfD mandated that utilities (including BGE, Pepco and DPL) pay (or receive) the difference between CPV’s contract price and the revenues it receives for capacity and energy from clearing the unit in the PJM capacity market.

Exelon and others challenged the constitutionality and other aspects of the New Jersey legislation in federal court. The actions taken by the MDPSC were also challenged in federal court in an action to which Exelon was not a party. The federal trial courts in both the New Jersey and Maryland actions effectively invalidated the actions taken by the New Jersey legislature and the MDPSC, respectively. Each of those decisions was upheld by the U.S. Court of Appeals for the Third Circuit and the U.S. Court of Appeals for the Fourth Circuit, respectively. On April 19, 2016, the U.S. Supreme Court affirmed the decision of the U.S. Court of Appeals for the Fourth Circuit, and subsequently denied certiorari with respect to the appeal from the U.S.

Court of Appeals for the Third Circuit, leaving in place that Court’s decision. The matter is now considered closed.

As required under their contracts, generator developers who were selected in the New Jersey and Maryland programs (including CPV) offered and cleared in PJM’s capacity market auctions. To the extent that the state-required customer subsidies are included under their respective contracts, Exelon believes that these projects may have artificially suppressed capacity prices in PJM in these auctions and may continue to do so in future auctions to the detriment of Exelon. While the court decisions are positive developments, continuation of these state efforts, if successful and unabated by an effective minimum offer price rule (MOPR) for future capacity auctions, could continue to result in artificially depressed wholesale capacity and/or energy prices. Other states could seek to establish programs, which could substantially impact Exelon’s position and could have a significant effect on Exelon’s financial results of operations, financial position and cash flows.

One such state is Ohio, where state-regulated utility companies FirstEnergy Ohio (FE) and AEP Ohio (AEP) initiated actions at the Public Utilities Commission of Ohio (PUCO) to obtain approval for Riders that would effectively allow these two companies to pass through to all customers in their service territories the differences between their costs and market revenues on PPAs entered into between the utility and its merchant generation affiliate for what was collectively more than 6,000 MW of primarily coal-fired generation. Thus, the Riders were similar to the CfDs described above (except that the PPA Riders in Ohio would apply to existing generation facilities whereas the CfDs applied to new generation facilities). While FERC orders on April 27, 2016 largely alleviated the concerns related to the Riders by holding that the PPAs ran afoul of affiliate restrictions on FE and AEP, we continue to closely monitor developments in Ohio.

In addition, Exelon continues to monitor developments in Maryland, New Jersey, and other states and participates in stakeholder and other processes to ensure that similar state subsidies are not developed. Exelon remains active in advocating for competitive markets, while opposing policies that require taxpayers and/ or consumers to subsidize or give preferential treatment to generation providers or technologies that do not provide superior reliability or environmental benefits, or that would threaten the reliability and value of the integrated electricity grid.

Complaints at FERC Seeking to Mitigate Illinois and New York Programs Providing ZECs

PJM and NYISO capacity markets include a Minimum Offer Price Rule (MOPR) that is intended to preclude buyers from exercising buyer market power. If a resource is subjected to a MOPR, its offer is adjusted to remove the revenues it receives through a federal, state or other government-provided financial support program - resulting in a higher offer that may not clear the capacity market. Currently, the MOPRs in PJM and NYISO apply only to certain new resources. Exelon has generally opposed policies that require subsidies or give preferential treatment to generation providers or technologies that do not provide superior reliability or environmental benefits, or that would threaten the reliability and value of the integrated electricity grid. Thus, Exelon has supported a MOPR as a means of minimizing the detrimental impact certain subsidized resources could have on capacity markets (such as the New Jersey (LCAPP) and Maryland (CfD) programs). However, in Exelon’s view, MOPRs should not be applied to resources that receive compensation for providing superior reliability or environmental benefits.

On January 9, 2017, the Electric Power Supply Association (EPSA) filed two requests with FERC: one seeking to amend a prior complaint against PJM and another seeking expedited action on a pending NYISO compliance filing in an existing proceeding. Both filings allege that the relevant MOPR should be expanded to also apply to existing resources receiving ZEC compensation under the New York CES and Illinois ZES programs. The EPSA parties have filed motion to expedite both proceedings. Exelon has filed protests at FERC in response to each filing, arguing generally that ZEC payments provide compensation for an environmental attribute that is distinct from the energy and capacity sold in the FERC-jurisdictional markets, and therefore, are no different than other renewable support programs like the PTC and RPS that have generally not been subject to a MOPR. However, if successful, for Generation’s facilities in NYISO and PJM expected to receive ZEC compensation (Quad Cities, Ginna, Nine Mile Point and FitzPatrick), an expanded MOPR could require exclusion of ZEC compensation when bidding into future capacity auctions such that these facilities would have an increased risk of not clearing in those auctions and thus no longer receiving capacity revenues during the respective ZEC programs. Any such mitigation of these generating resources could have a material effect on Exelon’s and Generation’s future cash flows and results of operations. On August 30, 2017, EPSA filed motions to lodge the district court decisions dismissing the complaints and urging FERC to act expeditiously on its requests to expand the MOPR. On September 14, 2017, Exelon filed a response in each docket noting that it does not oppose the motions to lodge but arguing that the requests to expedite a decision on the requests to expand the MOPR have no merit. The timing of FERC’s decision with respect to both proceedings is currently unknown and the outcome of these matters is currently uncertain.

DOE Notice of Proposed Rulemaking

On August 23, 2017, the DOE released its report on the reliability of the electric grid. One aspect of the wide-ranging report is the DOE's recognition that the electricity markets do not currently value the resiliency provided by baseload generation, such as nuclear plants. On September, 28, 2017, the DOE issued a Notice of Proposed Rulemaking (NOPR) that would entitle certain eligible resilient generating units (i.e., those located in organized markets, with a 90-day supply of fuel on site, not already subject to state cost of service regulation and satisfying certain other requirements) to recover fully allocated costs and earn a fair return on equity on their investment. On October 2, 2017, the FERC issued a notice inviting comments regarding the DOE NOPR within 21 days and established a new docket wherein the FERC will consider the matter. On October 23, 2017, Exelon filed comments with the FERC, supporting the goals of the NOPR and urging the agency to take swift action to protect customers from power supply interruptions and ensure resiliency in a way that appropriately balances the value and cost to customers. Exelon cannot predict the final outcome of the proceeding or its potential impact, if any, on Exelon or Generation.

Energy Demand

Modest economic growth partially offset by energy efficiency initiatives is resulting in flat to declining load growth in electricity for the utilities. There is a decrease in projected load for electricity for ComEd, PECO, BGE, and ACE, and an essentially flat projected load for electricity for DPL. ComEd, PECO, BGE, Pepco, DPL, and ACE are projecting load volumes to decrease by (1.2)%, (0.4)%, (2.9)%, (2.3)%, (0.4)%, and (3.5)% respectively, in 2017 compared to 2016.

Retail Competition

Generation's retail operations compete for customers in a competitive environment, which affect the margins that Generation can earn and the volumes that it is able to serve. The market experienced high price volatility in the first quarter of 2014 which contributed to bankruptcies and consolidations within the industry during the year. However, forward natural gas and power prices are expected to remain low and thus we expect retail competitors to stay aggressive in their pursuit of market share, and that wholesale generators (including Generation) will continue to use their retail operations to hedge generation output.

Strategic Policy Alignment

As part of its strategic business planning process, Exelon routinely reviews its hedging policy, dividend policy, operating and capital costs, capital spending plans, strength of its balance sheet and credit metrics, and sufficiency of its liquidity position, by performing various stress tests with differing variables, such as commodity price movements, increases in margin-related transactions, changes in hedging practices, and the impacts of hypothetical credit downgrades.

Exelon's board of directors declared first quarter 2017 dividends of $0.3275 per share on Exelon's common stock. The first quarter 2017 dividend was paid on March 10, 2017. The dividend increased from fourth quarter 2016 amount to reflect the Board's decision to raise Exelon's dividend 2.5% each year for the next three years, beginning with the June 2016 dividend.

Exelon's Board of Directors declared the second quarter 2017 dividends of $0.3275 per share each on Exelon's common stock. The second quarter 2017 dividend was paid on June 9, 2017.

Exelon's Board of Directors declared the third quarter 2017 dividends of $0.3275 per share each on Exelon's common stock. The third quarter 2017 dividend was paid on September 8, 2017.

Exelon's Board of Directors declared the fourth quarter 2017 dividends of $0.3275 per share each on Exelon's common stock. The fourth quarter 2017 dividend is payable on December 8, 2017.

All future quarterly dividends require approval by Exelon's Board of Directors.

Hedging Strategy

Exelon’s policy to hedge commodity risk on a ratable basis over three-year periods is intended to reduce the financial impact of market price volatility. Generation is exposed to commodity price risk associated with the unhedged portion of its electricity portfolio. Generation enters into non-derivative and derivative contracts, including financially-settled swaps, futures contracts and swap options, and physical options and physical forward contracts, all with credit-approved counterparties, to hedge this anticipated exposure. Generation has hedges in place that significantly mitigate this risk for 2017 and 2018. However, Generation is exposed to relatively greater commodity price risk in the subsequent years with respect to which a larger portion of its electricity portfolio is currently unhedged. As of September 30, 2017, the percentage of expected generation hedged is 98%-101%, 79%-82% and 45%-48% for 2017, 2018, and 2019 respectively. The percentage of expected generation hedged is the amount of equivalent sales divided by the expected generation. Expected generation is the volume of energy that best represents our commodity position in energy markets from owned or contracted generating facilities based upon a simulated dispatch model that makes assumptions regarding future market conditions, which are calibrated to market quotes for power, fuel, load following products, and options. Equivalent sales represent all hedging products, such as wholesale and retail sales of power, options and swaps. Generation has been and will continue to be proactive in using hedging strategies to mitigate commodity price risk in subsequent years as well.

Generation procures oil and natural gas through long-term and short-term contracts and spot-market purchases. Nuclear fuel is obtained predominantly through long-term uranium concentrate supply contracts, contracted conversion services, contracted enrichment services, or a combination thereof, and contracted fuel fabrication services. The supply markets for uranium concentrates and certain nuclear fuel services, coal, oil and natural gas are subject to price fluctuations and availability restrictions. Supply market conditions may make Generation's procurement contracts subject to credit risk related to the potential non-performance of counterparties to deliver the contracted commodity or service at the contracted prices. Approximately 60% of Generation's uranium concentrate requirements from 2017 through 2021 are supplied by three producers. In the event of non-performance by these or other suppliers, Generation believes that replacement uranium concentrate can be obtained, although at prices that may be unfavorable when compared to the prices under the current supply agreements. Non-performance by these counterparties could have a material adverse impact on Exelon's and Generation's results of operations, cash flows and financial position.

The Utility Registrants mitigate commodity price risk through regulatory mechanisms that allow them to recover procurement costs from retail customers.

Tax Matters

Potential Corporate Tax Reform

President Trump and Congressional Republicans have stated that one of their top priorities is enactment of comprehensive tax reform. On September 27, 2017, the Trump Administration and Republican Congressional leaders issued a unified framework which outlines their goals for comprehensive tax reform. Specifically, the framework proposes a reduction in the corporate tax rate from the current 35% to 20%, immediate expensing of new investments in depreciable assets for at least five years, elimination of the domestic production activities deduction and partial limitation of the deduction for interest. It is uncertain whether, to what extent, or when any changes in federal tax policies will be enacted or the transition time frame for such changes. The Utility Registrants' regulators may impose rate reductions to provide the benefit of any reduction in income tax expense to customers as well as to refund the "excess" deferred income taxes previously collected through rates. The amount and timing of any such rate changes would be subject to the discretion of the rate regulator in each specific jurisdiction. For these reasons, the Registrants cannot predict the impact any potential changes may have on their future results of operations, cash flows or financial position, and such changes could be material.

Environmental Legislative and Regulatory Developments

Exelon was actively involved in the Obama Administration's development and implementation of environmental regulations for the electric industry, in pursuit of its business strategy to provide reliable, clean, affordable and innovative energy products. These efforts have most frequently involved air, water and waste controls for fossil-fueled electric generating units, as set forth in the discussion below. These regulations have had a disproportionate adverse impact on coal-fired power plants, requiring significant expenditures of capital and variable operating and maintenance expense, and have resulted in the retirement of older, marginal facilities. Due to its low emission generation portfolio, Generation has not been significantly affected by these regulations, representing a competitive advantage relative to electric generators that are more reliant on fossil-fuel plants.

Through the issuance of a series of Executive Orders (EO), President Trump has initiated review of a number of EPA and other regulations issued during the Obama Administration, with the expectation that the Administration will seek repeal or significant revision of these rules. Under these EOs, each executive agency is required to evaluate existing regulations and make recommendations regarding repeal, replacement, or modification. The Administration's actions are intended to result in less stringent compliance requirements under air, water, and waste regulations. The exact nature, extent, and timing of the regulatory changes are unknown, as well as the ultimate impact on Exelon's and its subsidiaries results of operations and cash flows.

In particular, the Administration has targeted existing EPA regulations for repeal, including notably the Clean Power Plan, as well as revoking many Executive Orders, reports, and guidance issued by the Obama Administration on the topic of climate change or the regulation of greenhouse gases. The Executive Order also disbanded the Interagency Working Group that developed the social cost of carbon used in rulemakings, and withdrew all technical support documents supporting the calculation. Other regulations that have been specifically identified for review are the Clean Water Act rule relating to jurisdictional waters of the U.S., the Steam Electric Effluent Guidelines relating to waste water discharges from coal-fired power plants, and the 2015 National Ambient Air Quality Standard (NAAQS) for ozone. The review of final rules could extend over several years as formal notice and comment rulemaking process proceeds.

Air Quality

Mercury and Air Toxics Standard Rule (MATS). On December 16, 2011, the EPA signed a final rule to reduce emissions of toxic air pollutants from power plants and signed revisions to the NSPS for electric generating units. The final rule, known as MATS, requires coal-fired electric generation plants to achieve high removal rates of mercury, acid gases and other metals, and to make capital investments in pollution control equipment and incur higher operating expenses. The initial compliance deadline to meet the new standards was April 16, 2015; however, facilities may have been granted an additional one or two year extension in limited cases. Numerous entities challenged MATS in the D.C. Circuit Court, and Exelon intervened in support of the rule. In April 2014, the D.C. Circuit Court issued an opinion upholding MATS in its entirety. On appeal, the U.S. Supreme Court decided in June 2015 that the EPA unreasonably refused to consider costs in determining whether it is appropriate and necessary to regulate hazardous air pollutants emitted by electric utilities. The U.S. Supreme Court, however, did not vacate the rule; rather, it was remanded to the D.C. Circuit Court to take further action consistent with the U.S. Supreme Court's opinion on this single issue. On April 27, 2017, the D.C. Circuit granted EPA's motion to hold the litigation in abeyance, pending EPA's review of the MATS rule pursuant to President Trump's EO discussed above. Following EPA's review and determination of its course of action for the MATS rule, the parties will have 30 days to file motions on future proceedings. Notwithstanding the Court's order to hold the litigation in abeyance, the MATS rule remains in effect. Exelon will continue to participate in the remanded proceedings before the D.C. Circuit Court as an intervenor in support of the rule.

Clean Power Plan. On April 28, 2017, the D.C. Circuit Court issued orders in separate litigation related to the EPA's actions under the Clean Power Plan (CPP) to amend Clean Air Act Section 111(d) regulation of existing fossil-fired electric generating units and Section 111(b) regulation of new fossil-fired electric generating units. In both cases, the Court has determined to hold the litigation in abeyance pending a determination whether the rule should be remanded to the EPA. On October 10, 2017, EPA issued a proposed rule to repeal the CPP in its entirety, based on a proposed change in the Agency's legal interpretation of Clean Air Act Section 111(d) regarding actions that the Agency can consider when establishing the Best System of Emission Reduction ("BSER") for existing power plants. Under the proposed interpretation, the Agency exceeded its authority under the Clean Air Act by regulating beyond individual sources of GHG emissions. The EPA has also indicated its intent to issue an advance notice of proposed rulemaking to solicit information on systems of emission reduction that are in accord with the Agency's proposed revised legal interpretation; namely, only by regulating emission reductions that can be implemented at and to individual sources.

2015 Ozone National Ambient Air Quality Standards (NAAQS). On April 11, 2017, the D.C. Circuit ordered that the consolidated 2015 ozone NAAQS litigation be held in abeyance pending EPA's further review of the 2015 Rule. EPA did not meet the October 1, 2017 deadline to promulgate initial designations for areas in attainment or non-attainment of the standard. A number of states and environmental organizations have notified the EPA of their intent to file suit to compel EPA to issue the designations.

Water Quality

Section 316(b) of the Clean Water Act requires that cooling water intake structures at electric power plants reflect the best technology available to minimize adverse environmental impacts, and is implemented through state-level NPDES permit programs. All of Generation's power generation facilities with cooling water systems are subject to the regulations. Facilities without closed-cycle recirculating systems (e.g., cooling towers) are potentially most affected by changes to the existing regulations. Those facilities are Calvert Cliffs, Clinton, Dresden, Eddystone, Fairless Hills, FitzPatrick, Ginna, Gould Street, Handley, Mountain Creek, Mystic 7, Nine Mile Point Unit 1, Oyster Creek, Peach Bottom, Quad Cities, Riverside and Salem. See ITEM 1. —BUSINESS, "Water Quality" of the Exelon 2016 Form 10-K for further discussion.

Solid and Hazardous Waste

In October 2015, the first federal regulation for the disposal of coal combustion residuals (CCR) from power plants became effective. The rule classifies CCR as non-hazardous waste under RCRA. Under the regulation, CCR will continue to be regulated by most states subject to coordination with the federal regulations. Generation has previously recorded accruals consistent with state regulation for its owned coal ash sites, and as such, the regulation is not expected to impact Exelon's and Generation's financial results. Generation does not have sufficient information to reasonably assess the potential likelihood or magnitude of any remediation requirements that may be asserted under the new federal regulations for coal ash disposal sites formerly owned by Generation. For these reasons, Generation is unable to predict whether and to what extent it may ultimately be held responsible for remediation and other costs relating to formerly owned coal ash disposal sites under the new regulations.

See Note 18—Commitments and Contingencies of the Combined Notes to Consolidated Financial Statements for further detail related to environmental matters, including the impact of environmental regulation.

Other Legislative and Regulatory Developments

NRC Task Force on Fukushima Daiichi Accident (Exelon and Generation).

In July 2011, an NRC Task Force formed in the aftermath of the March 11, 2011, 9.0 magnitude earthquake and ensuing tsunami, that seriously damaged the nuclear units at the Fukushima Daiichi Nuclear Power Station, issued a report of its review of the accident, including tiered recommendations for future regulatory action by the NRC to be taken in the near and longer term. The Task Force's report concluded that nuclear reactors in the United States are operating safely and do not present an imminent risk to public health and safety. The NRC and its staff have issued orders and implementation guidance for commercial reactor licensees operating in the United States. Generation has assessed the impacts of the Tier 1 orders and information requests and will continue monitoring the additional recommendations under review by the NRC staff, both from an operational and a financial impact standpoint. Generation's current assessments are specific to the Tier 1 recommendations. In May 2017, the NRC finalized its decision that no actions are required with respect to the Tier 2 and Tier 3 recommendations. Generation will continue to engage in nuclear industry assessments and actions and obtain stakeholder input.

Employees

In January 2017, an election was held at BGE which resulted in union representation for approximately 1,400 employees. BGE and IBEW Local 410 have begun negotiations for an initial agreement which could result in some modifications to wages, hours and other terms and conditions of employment. No agreement has been finalized to date and management cannot predict the outcome of such negotiations. In April 2017, Exelon Nuclear Security successfully ratified its CBA with the SPFPA Local 238 at Quad Cities to an extension of three years. In June 2017, Exelon Nuclear Security successfully ratified its CBA with the UGSOA Local 12 at Limerick to an extension of three years.

Critical Accounting Policies and Estimates

Management of each of the Registrants makes a number of significant estimates, assumptions and judgments in the preparation of its financial statements. See ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS — CRITICAL ACCOUNTING

POLICIES AND ESTIMATES in Exelon’s, Generation’s, ComEd’s, PECO’s, BGE’s, PHI’s, Pepco’s, DPL’s and ACE’s combined 2016 Form 10-K for a discussion of the estimates and judgments necessary in the Registrants’ accounting for AROs, goodwill, purchase accounting, unamortized energy assets and liabilities, asset impairments, depreciable lives of property, plant and equipment, defined benefit pension and other postretirement benefits, regulatory accounting, derivative instruments, taxation, contingencies, revenue recognition, and allowance for uncollectible accounts. At September 30, 2017, the Registrants’ critical accounting policies and estimates had not changed significantly from December 31, 2016.

Results of Operations By Registrant

Net Income (Loss) Attributable to Common Shareholders by Registrant

	Three Months Ended September 30,		Favorable (Unfavorable) Variance	Nine Months Ended September 30,		Favorable (Unfavorable) Variance
	2017	2016		2017	2016[(a)]	
Exelon	$ 824	$ 490	$ 334	$ 1,899	$ 930	$ 969
Generation	305	236	69	479	538	(59)

Net income attributable to membership interest	$ 305	$ 236	$ 69	$ 479	$ 538	$ (59)

(a) Generation evaluates its operating performance using the measure of revenue net of purchased power and fuel expense. Generation believes that revenue net of purchased power and fuel expense is a useful measurement because it provides information that can be used to evaluate its operational performance. Revenue net of purchased power and fuel expense is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

Net Income Attributable to Membership Interest

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. Generation's Net income attributable to membership interest for the three months ended September 30, 2017 increased compared to the same period in 2016, primarily due to lower Depreciation and amortization expenses, a Bargain purchase gain in 2017, and higher other income, partially offset by lower Revenue net of purchased power and fuel expense, higher Operating and maintenance expenses, and higher interest expense. The decrease in Depreciation and amortization is primarily due to lower accelerated depreciation and amortization as a result of the 2017 decision to early retire the TMI nuclear facility compared to the previous decision in 2016 to early retire Clinton and Quad Cities nuclear facilities. The Bargain purchase gain is primarily due to a measurement period adjustment for the FitzPatrick Acquisition. The increase in other income is primarily due to higher realized NDT fund gains. The decrease in Revenue net of purchased power and fuel expense primarily relates to the impacts of lower load volumes delivered due to mild weather and lower realized energy prices related to Exelon’s ratable hedging strategy, partially offset by the impact of the New York CES, the acquisition of the FitzPatrick nuclear facility, a decrease in nuclear outage days, increased capacity prices, and the addition of the two combined-cycle gas turbines in Texas. The increase in Operating and maintenance is primarily due to the impairment of ExGen Texas Power in 2017. The increase in interest expense is primarily due to the impact of project in-service dates on the capitalization of interest and higher outstanding debt.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. Generation's Net income attributable to membership interest for the nine months ended September 30, 2017 decreased compared to the same period in 2016, primarily due to lower Revenue net of purchased power and fuel expense, higher Operating and maintenance expenses, higher taxes other than income, and higher interest expense, partially offset by lower Depreciation and amortization, a bargain purchase gain in 2017, and higher other income. The decrease in Revenue net of purchased power and fuel expense primarily relates to the conclusion of the Ginna Reliability Support Services Agreement, the impact of declining natural gas prices on Generation's natural gas portfolio, the impacts of lower load volumes due to mild weather and lower realized energy prices related to Exelon's ratable hedging strategy, partially offset by the impact of the New York CES, the acquisition of the FitzPatrick nuclear facility, increased capacity prices, the addition of two combined-cycle gas turbines in Texas, the absence of oil inventory write downs in 2017, and decreased fuel prices. The increase in operating and maintenance expenses primarily relates to the impairment of EGTP assets held for sale compared to the impairment of upstream assets and certain wind projects in 2016, an increase in the number of nuclear outage days in 2017 and increased salaries, wages and contracting costs related to the acquisition of the FitzPatrick nuclear facility. The increase in taxes other than income relates to increased sales and use tax, increased gross receipts tax, and increased property taxes due to the FitzPatrick Acquisition. The increase in interest expense is primarily due to the impact of project in-service dates on the capitalization of interest and higher outstanding debt. The decrease in Depreciation and amortization is primarily due to lower accelerated depreciation and amortization as a result of the 2017 decision to early retire the TMI nuclear facility compared to the previous decision in 2016 to early retire Clinton and Quad Cities nuclear facilities. The bargain purchase gain is the result of the FitzPatrick acquisition in Q1 2017. The increase in other income is primarily due to increased unrealized gains on NDT funds in 2017 compared to 2016.

Revenues Net of Purchased Power and Fuel Expense

The basis for Generation's reportable segments is the integrated management of its electricity business that is located in different geographic regions, and largely representative of the footprints of ISO/RTO and/or NERC regions, which utilize multiple supply sources to provide electricity through various distribution channels (wholesale and retail). Generation's hedging strategies and risk metrics are also aligned with these same geographic regions. Descriptions of each of Generation's six reportable segments are as follows:

- Mid-Atlantic represents operations in the eastern half of PJM, which includes New Jersey, Maryland, Virginia, West Virginia, Delaware, the District of Columbia and parts of Pennsylvania and North Carolina.

- Midwest represents operations in the western half of PJM, which includes portions of Illinois, Pennsylvania, Indiana, Ohio, Michigan, Kentucky and Tennessee, and the United States footprint of MISO, excluding MISO's Southern Region, which covers all or most of North Dakota, South Dakota, Nebraska, Minnesota, Iowa, Wisconsin, the remaining parts of Illinois, Indiana, Michigan and Ohio not covered by PJM, and parts of Montana, Missouri and Kentucky.

- New England represents the operations within ISO-NE covering the states of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.

- New York represents operations within ISO-NY, which covers the state of New York in its entirety.

- ERCOT represents operations within Electric Reliability Council of Texas, covering most of the state of Texas.

- Other Power Regions:
    - South represents operations in the FRCC, MISO's Southern Region, and the remaining portions of the SERC not included within MISO or PJM, which includes all or most of Florida, Arkansas, Louisiana, Mississippi, Alabama, Georgia, Tennessee, North Carolina, South Carolina and parts of Missouri, Kentucky and Texas. Generation's South region also includes operations in the SPP, covering Kansas, Oklahoma, most of Nebraska and parts of New Mexico, Texas, Louisiana, Missouri, Mississippi and Arkansas.
    - West represents operations in the WECC, which includes California ISO, and covers the states of California, Oregon, Washington, Arizona, Nevada, Utah, Idaho, Colorado, and parts of New Mexico, Wyoming and South Dakota.
    - Canada represents operations across the entire country of Canada and includes AESO, OIESO and the Canadian portion of MISO.

The following business activities are not allocated to a region, and are reported under Other: natural gas, as well as other miscellaneous business activities that are not significant to Generation’s overall operating revenues or results of operations. Further, the following activities are not allocated to a region, and are reported in Other: amortization of certain intangible assets relating to commodity contracts recorded at fair value from mergers and acquisitions; accelerated nuclear fuel amortization associated with nuclear decommissioning; and other miscellaneous revenues.

Generation evaluates the operating performance of its electric business activities using the measure of Revenue net of purchased power and fuel expense, which is a non-GAAP measurement. Generation’s operating revenues include all sales to third parties and affiliated sales to the Utility Registrants. Purchased power costs include all costs associated with the procurement and supply of electricity including capacity, energy and ancillary services. Fuel expense includes the fuel costs for owned generation and fuel costs associated with tolling agreements.

For the three and nine months ended September 30, 2017 and 2016, Generation’s Revenue net of purchased power and fuel expense by region were as follows:

	Three Months Ended September 30,				**Nine Months Ended September 30,**			
	2017	**2016**	**Variance**	**% Change**	**2017**	**2016**	**Variance**	**% Change**
Mid-Atlantic[a]	$ 855	$ 887	$ (32)	(3.6)%	$2,411	$2,556	$ (145)	(5.7)%

Other[c]	164	163	1	0.6 %	566	647	(81)	(12.5)%
Total revenue net of purchased power and fuel expense	$2,420	$2,446	$ (26)	(1.1)%	$6,526	$6,754	$ (228)	(3.4)%

(a) Results of transactions with PECO and BGE are included in the Mid-Atlantic region. Results of transactions with Pepco, DPL, and ACE are included in the Mid-Atlantic region beginning on March 24, 2016, the day after the PHI merger was completed.

(b) Results of transactions with ComEd are included in the Midwest region.

(c) Other represents activities not allocated to a region. See text above for a description of included activities. Includes amortization of intangible assets related to commodity contracts recorded at fair value of a $19 million and $22 million decrease to revenue net of purchased power and fuel expense for the three months ended September 30, 2017 and 2016, respectively, and accelerated nuclear fuel amortization associated with announced early plant retirements as discussed in Note 7 - Early Nuclear Plant Retirements of the Combined Notes to the Consolidated Financial Statements of $6 million and $28 million decrease to revenue net of purchased power and fuel expense for the three months ended September 30, 2017 and 2016, respectively. Also includes amortization of intangible assets related to commodity contracts recorded at fair value of a $41 million and $15 million decrease to revenue net of purchased power and fuel expense for the nine months ended September 30, 2017 and 2016, respectively, and accelerated nuclear fuel amortization associated with announced early plant retirements as discussed in Note 7 - Early Nuclear Plant Retirements of the Combined Notes to the Consolidated Financial Statements of $8 million and $38 million decrease to revenue net of purchased power and fuel expense for the nine months ended September 30, 2017 and 2016, respectively.

(d) Includes the ownership of the FitzPatrick nuclear facility from March 31, 2017.

Generation’s supply sources by region are summarized below:

	Three Months Ended September 30,				Nine Months Ended September 30,			
Supply source (GWhs)	**2017**	**2016**	**Variance**	**% Change**	**2017**	**2016**	**Variance**	**% Change**

(a) Includes the proportionate share of output where Generation has an undivided ownership interest in jointly-owned generating plants and includes the total output of plants that are fully consolidated (e.g. CENG).

(b) Excludes physical proprietary trading volumes of 2,601 GWhs and 1,506 GWhs for the three months ended September 30, 2017 and 2016, respectively, and 6,763 GWhs and 4,015 GWhs for the nine months ended September 30, 2017 and 2016.

(c) Includes affiliate sales to PECO and BGE in the Mid-Atlantic region and affiliate sales to ComEd in the Midwest region. As a result of the PHI Merger, includes affiliate sales to Pepco, DPL and ACE in the Mid-Atlantic region beginning on March 24, 2016.

(d) Includes the ownership of the FitzPatrick nuclear facility from March 31, 2017.

Mid-Atlantic

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The $32 million decrease in Revenue net of purchased power and fuel expense in the Mid-Atlantic primarily reflects lower load volumes and lower realized energy prices, partially offset by decreased nuclear outage days and increased capacity prices.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The $145 million decrease in Revenue net of purchased power and fuel expense in the Mid-Atlantic primarily reflects lower load volumes, lower realized energy prices and decreased capacity prices, partially offset by the absence of oil inventory write-downs in 2017 and decreased nuclear outage days.

Midwest

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The $84 million decrease in Revenue net of purchased power and fuel expense in the Midwest primarily reflects lower realized energy prices, partially offset by increased capacity prices and decreased nuclear fuel prices.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The $89 million decrease in Revenue net of purchased power and fuel expense in the Midwest primarily reflects lower realized energy prices and increased nuclear outage days, partially offset by decreased fuel prices.

New England

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The $15 million decrease in Revenue net of purchased power and fuel expense in New England primarily reflects lower realized energy prices, partially offset by increased capacity prices.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The $53 million increase in Revenue net of purchased power and fuel expense in New England was driven by increased capacity prices, partially offset by lower realized energy prices.

New York

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The $102 million increase in Revenue net of purchased power and fuel expense in New York was primarily due to the impact of the New York CES and the acquisition of FitzPatrick, partially offset by the conclusion of the Ginna Reliability Support Service Agreement and lower realized energy prices.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The $86 million increase in Revenue net of purchased power and fuel expense in New York was primarily due to impact of the New York CES and the acquisition of FitzPatrick, partially offset by the conclusion of the Ginna Reliability Support Service Agreement and lower realized energy prices.

ERCOT

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The $25 million increase in Revenue net of purchased power and fuel expense in ERCOT was primarily due to the addition of two combined-cycle gas turbines in Texas.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The $27 million increase in Revenue net of purchased power and fuel expense in ERCOT was primarily due to the addition of two combined-cycle gas turbines in Texas, partially offset by lower realized energy prices.

Other Power Regions

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The $9 million decrease in Revenue net of purchased power and fuel expense in Other Power Regions was primarily due to lower realized energy prices.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The $33 million decrease in Revenue net of purchased power and fuel expense in Other Power Regions was primarily due to lower realized energy prices.

Proprietary Trading

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The $1 million increase in Revenue net of purchased power and fuel expense in Proprietary Trading was primarily due to congestion activity.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The $2 million increase in Revenue net of purchased power and fuel expense in Proprietary Trading was primarily due to congestion activity.

Mark-to-market

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. Mark-to-market gains on economic hedging activities were $73 million for the three months ended September 30, 2017 compared to gains of $88 million for the three months ended September 30, 2016. See Notes 9 — Fair Value of Financial Assets and Liabilities and 10 — Derivative Financial Instruments of the Combined Notes to the Consolidated Financial Statements for information on gains and losses associated with mark-to-market derivatives.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. Mark-to-market losses on economic hedging activities were $161 million for the nine months ended September 30, 2017 compared to losses of $113 million for the nine months ended September 30, 2016. See Notes 9 — Fair Value of Financial Assets and Liabilities and 10 — Derivative Financial Instruments of the Combined Notes to the Consolidated Financial Statements for information on gains and losses associated with mark-to-market derivatives.

Other

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The $1 million increase in Revenue net of purchased power and fuel expense in Other was due to the decline in revenues related to the distributed generation business, offset by lower accelerated nuclear fuel amortization associated with announced early plant retirements as discussed in Note 7 - Early Nuclear Plant Retirements of the Combined Notes to the Consolidated Financial Statements.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The $81 million decrease in other revenue net of purchased power and fuel was primarily due to the impacts of declining natural gas prices on Generation’s natural gas portfolio and amortization of energy contracts recorded at fair value associated with prior acquisitions, partially offset by revenue related to the inclusion of Pepco Energy Services results in 2017 and lower accelerated nuclear fuel amortization associated with announced early plant retirements as discussed in Note 7 - Early Nuclear Plant Retirements of the Combined Notes to the Consolidated Financial Statements.

Nuclear Fleet Capacity Factor

The following table presents nuclear fleet operating data for the three and nine months ended September 30, 2017 as compared to the same period in 2016, for the Generation-operated plants. The nuclear fleet capacity factor presented in the table is defined as the ratio of the actual output of a plant over a period of time to its output if the plant had operated at full average annual mean capacity for that time period. Generation considers capacity factor to be a useful measure to analyze the nuclear fleet performance between periods. Generation has included the analysis below as a complement to the financial information provided in accordance with GAAP. However, these measures are not a presentation defined under GAAP and may not be comparable to other companies' presentations or be more useful than the GAAP information provided elsewhere in this report.

	Three Months Ended September 30,		**Nine Months Ended September 30,**	
	2017	**2016**	**2017**	**2016**
Nuclear fleet capacity factor[a]	96.1%	96.3%	93.7%	94.8%
Refueling outage days[a]	13	17	233	174
Non-refueling outage days[a]	15	—	35	31

(a) Excludes Salem, which is operated by PSEG Nuclear, LLC. Reflects ownership percentage of stations operated by Exelon. Includes the ownership of the FitzPatrick nuclear facility from March 31, 2017.

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. The nuclear fleet capacity factor decreased primarily due to more non-refueling outage days and was partially offset by fewer refueling outage days, excluding Salem outages, during the three months ended September 30, 2017 compared to the same period in 2016.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. The nuclear fleet capacity factor decreased primarily due to more refueling and non-refueling outage days, excluding Salem outages, during the nine months ended September 30, 2017 compared to the same period in 2016.

Operating and Maintenance

The changes in Operating and maintenance expense for the three and nine months ended September 30, 2017 as compared to the same period in 2016, consisted of the following:

	Three Months Ended September 30,	Nine Months Ended September 30,
	Increase (Decrease)[(a)]	Increase (Decrease)[(a)]
Labor, other benefits, contracting, materials[(b)]	$ (8)	$ 74
Nuclear refueling outage costs, including the co-owned Salem plants [(c)]	(12)	88
Corporate allocations	19	29
Merger and integration costs[(d)]	(4)	36
Merger commitments	—	(3)
Plant retirements and divestitures[(e)]	41	(15)
Cost management program	5	(7)
ARO update	(3)	(4)
Long-lived asset impairments[(f)]	25	288
Pension and non-pension postretirement benefits expense	3	4
Allowance for uncollectible accounts	12	35
Accretion expense[(g)]	10	27
Other	(50)	(14)
Increase in operating and maintenance expense	$ 38	$ 538

(a) The 2017 financial results include Generation's acquisition of the FitzPatrick nuclear generating station from March 31, 2017.

(b) Reflects increased salaries, wages and contracting costs primarily related to the acquisition of the FitzPatrick nuclear facility beginning on March 31, 2017.

(c) Primarily reflects a decrease in the number of nuclear outage days for the three months ended September 30, 2017 compared to 2016 and an increase in the number of nuclear outage days for the nine months ended September 30, 2017 compared to the same period in 2016.

(d) Reflects certain costs associated with mergers and acquisitions, including, if and when applicable, professional fees, employee-related expenses and integration activities related to the PHI and FitzPatrick acquisitions.

(e) Represents the announcement of the early retirement of Generation's TMI nuclear facility in 2017 compared to the previous decision to early retire Generation's Clinton and Quad Cities nuclear facilities in 2016.

(f) Primarily reflects charges to earnings related to impairments as a result of the EGTP assets held for sale in 2017 and impairment of Upstream assets and certain wind projects in 2016.

(g) Reflects the impact of increased accretion expenses primarily due to the acquisition of FitzPatrick on March 31, 2017.

Depreciation and Amortization

Depreciation and amortization expense for the three and nine months ended September 30, 2017 compared to the three and nine months ended September 30, 2016 decreased primarily due to lower accelerated depreciation and amortization as a result of the 2017 decision to early retire the TMI nuclear facility compared to the previous decision in 2016 to early retire the Clinton and Quad Cities nuclear facilities.

Taxes Other Than Income

Taxes other than income taxes, which can vary period to period, include non-income municipal and state utility taxes, real estate taxes and payroll taxes. Taxes other than income for the three and nine months ended September 30, 2017 compared to the three and nine months ended September 30, 2016 increased primarily due to increased property taxes as a result of the addition of FitzPatrick, increased gross receipts tax expense, and increased sales and use tax expense.

(Loss) gain on Sales of Assets

Loss on sales of assets for the three months ended September 30, 2017 compared to the three months ended September 30, 2016 remained relatively stable. Gain on sales of assets for the nine months ended September 30, 2017 compared to the nine months ended September 30, 2016 decreased primarily due to the gain associated with Generation's sale of the New Boston generating site in 2016.

Bargain Purchase Gain

Bargain purchase gain for the three and nine months ended September 30, 2017 compared to the three and nine months ended September 30, 2016 increased as a result of the gain associated with the FitzPatrick acquisition. Refer to Note 4 — Mergers, Acquisitions and Dispositions of the Combined Notes to the Consolidated Financial Statements for additional information.

Interest Expense, net

Interest expense, net for the three and nine months ended September 30, 2017 compared to the three and nine months ended September 30, 2016 increased primarily due to the impact of project in-service dates on the capitalization of interest and higher outstanding debt.

Other, Net

Other, net for the three and nine months ended September 30, 2017 compared to the three and nine months ended September 30, 2016 increased primarily due to the change in the realized and unrealized gains and losses related to NDT funds of Non-Regulatory Agreement Units as described in the table below. Other, net also reflects $37 million and $39 million for the three months ended September 30, 2017 and 2016, respectively, and $129 million and $84 million for the nine months ended September 30, 2017 and 2016, respectively, related to the contractual elimination of income tax expense (benefit) associated with the NDT funds of the Regulatory Agreement Units. Refer to Note 13 — Nuclear Decommissioning of the Combined Notes to the Consolidated Financial Statements for additional information regarding NDT funds.

The following table provides unrealized and realized gains and losses on the NDT funds of the Non-Regulatory Agreement Units recognized in Other, net for the three and nine months ended September 30, 2017 and 2016:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2017	**2016**	**2017**	**2016**
Net unrealized gains on decommissioning trust funds	$ 111	$ 116	$ 347	$ 216
Net realized gains on sale of decommissioning trust funds	33	12	82	26

Equity in Losses of Unconsolidated Affiliates

Equity in losses of unconsolidated affiliates for the three and nine months ended September 30, 2017 compared to the three and nine ended September 30, 2016 remained relatively stable.

Effective Income Tax Rate

Generation’s effective income tax rate was 40.3% and 38.4% for the three months ended September 30, 2017 and 2016, respectively. Generation’s effective income tax rate was 28.8% and 33.9% for the nine months ended September 30, 2017 and 2016, respectively. See Note 12 — Income Taxes of the Combined Notes to the Consolidated Financial Statements for further discussion of the change in the effective income tax rate.

Results of Operations — ComEd

	Three Months Ended September 30,		Favorable (Unfavorable) Variance	Nine Months Ended September 30,		Favorable (Unfavorable) Variance
	2017	2016		2017	2016	
Operating revenues	$ 1,571	$1,497	$ 74	$ 4,227	$ 4,031	$ 196
Purchased power expense	529	454	(75)	1,241	1,141	(100)
Revenues net of purchased power expense[(a)(b)]	1,042	1,043	(1)	2,986	2,890	96
Other operating expenses						
Operating and maintenance	346	377	31	1,096	1,113	17
Depreciation and amortization	212	196	(16)	631	574	(57)
Taxes other than income	80	82	2	223	222	(1)
Total other operating expenses	638	655	17	1,950	1,909	(41)
Gain on sales of assets	—	1	(1)	—	6	(6)
Operating income	404	389	15	1,036	987	49
Other income and (deductions)						
Interest expense, net	(89)	(197)	108	(275)	(374)	99
Other, net	5	(80)	85	14	(72)	86
Total other income and (deductions)	(84)	(277)	193	(261)	(446)	185
Income before income taxes	320	112	208	775	541	234
Income taxes	131	75	(56)	328	244	(84)
Net income	$ 189	$ 37	$ 152	$ 447	$ 297	$ 150

(a) ComEd evaluates its operating performance using the measure of Revenue net of purchased power expense. ComEd believes that Revenue net of purchased power expense is a useful measurement because it provides information that can be used to evaluate its operational performance. In general, ComEd only earns margin based on the delivery and transmission of electricity. ComEd has included its discussion of Revenue net of purchased power expense below as a complement to the financial information provided in accordance with GAAP. However, Revenue net of purchased power expense is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

(b) For regulatory recovery mechanisms, including ComEd's electric distribution and transmission formula rates, and riders, revenues increase and decrease i) as fully recoverable costs fluctuate (with no impact on net earnings), and ii) pursuant to changes in rate base, capital structure and ROE (which impact net earnings).

Net Income

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. ComEd's Net income for the three months ended September 30, 2017 was higher than the same period in 2016, primarily due to the recognition of the penalty and the after-tax interest due on the asserted penalty related to the Tax Court's decision on Exelon's like-kind exchange tax position in the third quarter of 2016 and increased electric distribution and transmission formula rate earnings (reflecting the impacts of increased capital investment and higher allowed electric distribution ROE). The higher Net income was partially offset by the impact of weather conditions in the third quarter of 2016. See Revenue Decoupling discussion below for additional information on the impact of weather.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. ComEd's Net income for the nine months ended September 30, 2017 was higher than the same period in 2016, primarily due to the recognition of the penalty and the after-tax interest due on the asserted penalty related to the Tax Court's decision on Exelon's like-kind exchange tax position in the third quarter of 2016 and increased electric distribution and transmission formula rate earnings (reflecting the impacts of increased capital investment and higher allowed electric distribution ROE). The higher Net income was partially offset by additional tax and interest recorded in the second quarter of 2017 relating to Exelon’s like-kind exchange tax position and the impact of weather conditions in the second and third quarters of 2016. See Revenue Decoupling discussion below for additional information on the impact of weather.

Revenues Net of Purchased Power Expense

There are certain drivers of Operating revenues that are fully offset by their impact on Purchased power expense, such as commodity, REC, and ZEC procurement costs and participation in customer choice programs. ComEd is permitted to recover electricity, REC, and ZEC procurement costs from retail customers without mark-up. Therefore, these costs have no significant impact on Revenue net of purchased power expense. See Note 3 — Regulatory Matters of the Exelon 2016 Form 10-K for additional information on ComEd’s electricity procurement process.

All ComEd customers have the choice to purchase electricity from a competitive electric generation supplier. Customer choice programs do not impact ComEd’s volume of deliveries, but do affect ComEd’s Operating revenues related to supplied energy, which is fully offset in Purchased power expense. Therefore, customer choice programs have no impact on Revenue net of purchased power expense.

Retail deliveries purchased from competitive electric generation suppliers (as a percentage of kWh sales) for the three and nine months ended September 30, 2017 and 2016, consisted of the following:

	Three Months Ended September 30,		**Nine Months Ended September 30,**	
	2017	**2016**	**2017**	**2016**
Electric	68%	70%	70%	72%

Retail customers purchasing electric generation from competitive electric generation suppliers at September 30, 2017 and 2016 consisted of the following:

	September 30, 2017		**September 30, 2016**	
	Number of customers	**% of total retail customers**	**Number of customers**	**% of total retail customers**
Electric	1,360,800	34%	1,526,900	39%

The changes in ComEd’s Revenue net of purchased power expense for the three and nine months ended September 30, 2017, compared to the same period in 2016 consisted of the following:

	Three Months Ended September 30, 2017	**Nine Months Ended September 30, 2017**
	Increase (Decrease)	**Increase (Decrease)**
Weather[(a)]	$ (34)	$ (37)
Volume[(a)]	(5)	(11)
Electric distribution revenue	59	119
Transmission revenue	11	45
Energy efficiency revenue[(b)]	5	6
Regulatory required programs[(b)]	(39)	(24)
Uncollectible accounts recovery, net	(3)	(5)
Pricing and customer mix[(a)]	—	(1)
Other	5	4

Total increase (decrease)	$ (1)	$ 96

(a) These changes only reflect the 2016 impacts of weather, volume, and pricing and customer mix. As further described below, pursuant to the revenue decoupling provision in FEJA, ComEd began recording an adjustment to revenue in the first quarter of 2017 to eliminate the favorable or unfavorable impacts associated with variations in delivery volumes associated with above or below normal weather, number of customers or usage per customer.

(b) Beginning on June 1, 2017, ComEd is deferring energy efficiency costs as a regulatory asset that will be recovered through the energy efficiency formula rate over the weighted average useful life of the related energy efficiency measures.

Revenue Decoupling. The demand for electricity is affected by weather conditions. Very warm weather in summer months and very cold weather in other months are referred to as "favorable weather conditions" because these weather conditions result in increased customer usage. Conversely, mild weather reduces demand.

Under EIMA, ComEd’s electric distribution formula rate provided for an adjustment to future billings if its earned ROE fell outside a 50 bps collar of its allowed ROE, which partially eliminated the impacts of weather and load on ComEd’s revenue. As allowed under FEJA, ComEd will revise its electric distribution formula rate to eliminate the ROE collar beginning with the reconciliation filed in 2018 for the 2017 calendar year. Elimination of the ROE collar effectively offsets the favorable or unfavorable impacts to Operating revenues associated with variations in delivery volumes associated with above or below normal weather, numbers of customers or usage per customer. ComEd began recognizing the impacts of this change beginning in the first quarter of 2017. During the three and nine months ended September 30, 2017, ComEd recorded a decrease to Electric distribution revenues of approximately $15 million and an increase to Electric distribution revenues of approximately $21 million, respectively, to eliminate weather and load impacts.

Heating and cooling degree days are quantitative indices that reflect the demand for energy needed to heat or cool a home or business. Normal weather is determined based on historical average heating and cooling degree days for a 30-year period in ComEd’s service territory with cooling degree days generally having a more significant impact to ComEd, particularly during the summer months. The changes in heating and cooling degree days in ComEd’s service territory for the three and nine months ended September 30, 2017 and 2016, consisted of the following:

Heating and Cooling Degree-Days				% Change	
Three Months Ended September 30,	**2017**	**2016**	**Normal**	**2017 vs. 2016**	**2017 vs. Normal**
Heating Degree-Days	42	23	97	82.6 %	(56.7)%
Cooling Degree-Days	699	840	641	(16.8)%	9.0 %
Nine Months Ended September 30,					
Heating Degree-Days	3,269	3,678	3,972	(11.1)%	(17.7)%
Cooling Degree-Days	962	1,130	882	(14.9)%	9.1 %

Electric Distribution Revenue. EIMA provides for a performance-based formula rate, which requires an annual reconciliation of the revenue requirement in effect to the actual costs that the ICC determines are prudently and reasonably incurred in a given year. Under EIMA, electric distribution revenue varies from year to year based upon fluctuations in the underlying costs, investments being recovered, and allowed ROE. ComEd’s allowed ROE is the annual average rate on 30-year treasury notes plus 580 basis points. In addition, ComEd’s allowed ROE is subject to reduction if ComEd does not deliver the reliability and customer service benefits to which it has committed over the ten-year life of the investment program. Electric distribution revenue increased during the three and nine months ended September 30, 2017, primarily due to increased capital investment, increased Depreciation expense, and higher allowed ROE due to an increase in treasury rates as compared to the same period in 2016 and due to revenue decoupling impacts (as described above) during the nine months ended September 30, 2017. See Depreciation and amortization expense discussions below, and Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Transmission Revenue. Under a FERC-approved formula, transmission revenue varies from year to year based upon fluctuations in the underlying costs, capital investments being recovered and the highest daily peak load, which is updated annually in January based on the prior calendar year. Generally, increases/decreases in the highest daily peak load will result in higher/lower transmission revenue. For the three and nine months ended September 30, 2017, ComEd recorded increased transmission revenue due to increased capital investment, higher Depreciation expense and increased highest daily peak load as compared to the same period in 2016. See Operating and maintenance expense below and Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Energy Efficiency Revenue. Beginning June 1, 2017, FEJA provides for a performance-based formula rate, which requires an annual reconciliation of the revenue requirement in effect to the actual costs that the ICC determines are prudently and reasonably incurred in a given year. Under FEJA, energy efficiency revenue varies from year to year based upon fluctuations in the underlying costs, investments being recovered, and allowed ROE. ComEd’s allowed ROE is the annual average rate on 30-year treasury notes plus 580 basis points. Beginning January 1, 2018, ComEd’s allowed ROE is subject to a maximum downward or upward adjustment of 200 basis points if ComEd’s cumulative persisting annual MWh savings falls short of or exceeds specified percentage benchmarks of its annual incremental savings goal. See Depreciation and amortization expense discussions below, and Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Regulatory Required Programs. This represents the change in Operating revenues collected under approved rate riders to recover costs incurred for regulatory programs such as ComEd's purchased power administrative costs and energy efficiency and demand response through June 1, 2017 pursuant to FEJA. The riders are designed to provide full and current cost recovery. An equal and offsetting amount has been included in Operating and maintenance expense. See Operating and maintenance expense discussion below for additional information on included programs.

Uncollectible Accounts Recovery, Net. Uncollectible accounts recovery, net represents recoveries under ComEd's uncollectible accounts tariff. See Operating and maintenance expense discussion below for additional information on this tariff.

Other. Other revenue, which can vary period to period, includes rental revenue, revenue related to late payment charges, assistance provided to other utilities through mutual assistance programs, recoveries of environmental costs associated with MGP sites, and recoveries of energy procurement costs.

Operating and Maintenance Expense

	Three Months Ended September 30,		Increase (Decrease)	Nine Months Ended September 30,		Increase (Decrease)
	2017	2016		2017	2016	
Operating and maintenance expense — baseline	$ 344	$ 336	$ 8	$ 1,000	$ 993	$ 7
Operating and maintenance expense — regulatory required programs[(a)]	2	41	$ (39)	96	120	(24)
Total operating and maintenance expense	$ 346	$ 377	$ (31)	$ 1,096	$ 1,113	$ (17)

(a) Operating and maintenance expense for regulatory required programs are costs for various legislative and/or regulatory programs that are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues.

The increase in Operating and maintenance expense for the three and nine months ended September 30, 2017 compared to the same period in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Baseline		
Labor, other benefits, contracting and materials	$ (5)	$ (11)
Pension and non-pension postretirement benefits expense	1	2
Storm-related costs	1	1
Uncollectible accounts expense — provision[(a)]	(4)	(8)
Uncollectible accounts expense — recovery, net[(a)]	1	3
BSC costs[(b)]	21	35
Other	(7)	(15)

	8	7
Regulatory required programs		
Energy efficiency and demand response programs[c]	(39)	(24)
Decrease in operating and maintenance expense	$ (31)	$ (17)

(a) ComEd is allowed to recover from or refund to customers the difference between the utility's annual uncollectible accounts expense and the amounts collected in rates annually through a rider mechanism. During the three and nine months ended September 30, 2017, ComEd recorded a net decrease in Operating and maintenance expense related to uncollectible accounts due to the timing of regulatory cost recovery. An equal and offsetting decrease has been recognized in Operating revenues for the period presented.

(b) For the three and nine months ended September 30, 2017, includes the $8 million write-off of a regulatory asset related to Constellation merger and integration costs for which recovery is no longer expected.

(c) Beginning on June 1, 2017, ComEd is deferring energy efficiency costs as a regulatory asset that will be recovered through the energy efficiency formula rate over the weighted average useful life of the related energy efficiency measures.

Depreciation and Amortization Expense

The increase in Depreciation and amortization expense during the three and nine months ended September 30, 2017, compared to the same period in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Depreciation expense[(a)]	$ 14	$ 47
Regulatory asset amortization[(b)]	1	2
Other	1	8
Total increase	$ 16	$ 57

(a) Primarily reflects ongoing capital expenditures for the three and nine months ended September 30, 2017.
(b) Beginning in June 2017, includes amortization of ComEd's energy efficiency formula rate regulatory asset.

Taxes Other Than Income

Taxes other than income, which can vary year to year, include municipal and state utility taxes, real estate taxes and payroll taxes. Taxes other than income taxes remained relatively consistent for the three and nine months ended September 30, 2017, compared to the same period in 2016.

Gain on Sales of Assets

The decrease in Gain on sales of assets during the nine months ended September 30, 2017, compared to the same period in 2016, is primarily due to the sale of land during March 2016.

Interest Expense, Net

The changes in interest expense, net, for the three and nine months ended September 30, 2017, compared to the same period in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Interest expense related to uncertain tax positions[(a)]	$ (110)	$ (103)
Interest expense on debt (including financing trusts)	(1)	3
Other	3	1
Decrease in interest expense, net	$ (108)	$ (99)

(a) Primarily reflects the recognition of the after-tax interest due on the asserted penalty related to the Tax Court's decision on Exelon's like-kind exchange tax position in the third quarter of 2016, partially offset by additional interest recorded in the second quarter of 2017 related to Exelon's like-kind exchange tax position.

Other, Net

Other, net, decreased during the three and nine months ended September 30, 2017, compared to the same period in 2016 primarily due to the recognition of the penalty related to the Tax Court's decision on Exelon's like-kind exchange tax position in the third quarter of 2016.

Effective Income Tax Rate

ComEd's effective income tax rate was 40.9% and 67.0% for the three months ended September 30, 2017 and 2016, respectively. ComEd's effective income tax rate was 42.3% and 45.1% for the nine months ended September 30, 2017 and 2016, respectively. The decreases in the effective income tax rates for the three and nine months ended September 30, 2017 as compared to the same period in 2016 are primarily due to a non-deductible penalty incurred in 2016. See Note 12 — Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

ComEd Electric Operating Statistics and Revenue Detail

Retail Deliveries to Customers (in GWhs)	Three Months Ended September 30, 2017	Three Months Ended September 30, 2016	% Change	Weather-Normal % Change	Nine Months Ended September 30, 2017	Nine Months Ended September 30, 2016	% Change	Weather-Normal % Change

(a) Reflects delivery revenue and volume from customers purchasing electricity directly from ComEd and customers purchasing electricity from a competitive electric generation supplier, as all customers are assessed delivery charges. For customers purchasing electricity from ComEd, revenue also reflects the cost of energy and transmission.

(b) Other revenue primarily includes transmission revenue from PJM. Other revenue also includes rental revenue, revenue related to late payment charges, revenue from other utilities for mutual assistance programs and recoveries of remediation costs associated with MGP sites.

(c) Includes operating revenues from affiliates totaling $3 million and $4 million for the three and nine months ended September 30, 2017 and 2016, and $12 million and $12 million for the nine months ended September 30, 2017 and 2016, respectively.

(a) PECO evaluates its operating performance using the measures of revenue net of purchased power expense for electric sales and revenue net of fuel expense for gas sales. PECO believes revenue net of purchased power expense and revenue net of fuel expense are useful measurements of its performance because they provide information that can be used to evaluate its net revenue from operations. PECO has included the analysis below as a complement to the financial information provided in accordance with GAAP. However, revenue net of purchased power expense and revenue net of fuel expense figures are not presentations defined under GAAP and may not be comparable to other companies' presentations or more useful than the GAAP information provided elsewhere in this report.

Net Income

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. PECO's Net income decreased from the same period in 2016, primarily due to lower Revenues net of purchased power and fuel from unfavorable weather conditions in PECO's service territory.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. PECO's Net income decreased from the same period in 2016, primarily due to lower Revenues net of purchased power and fuel from unfavorable weather conditions in PECO's service territory.

Revenues Net of Purchased Power and Fuel Expense

Electric and natural gas revenue and purchased power and fuel expense are affected by fluctuations in commodity procurement costs. PECO's electric supply and natural gas cost rates charged to customers are subject to adjustments at least quarterly that are designed to recover or refund the difference between the actual cost of electric supply and natural gas and the amount included in rates in accordance with the PAPUC's GSA and PGC, respectively. Therefore, fluctuations in electric supply and natural gas procurement costs have no impact on electric and natural gas revenue net of purchased power and fuel expense.

Electric and natural gas revenue and purchased power and fuel expense are also affected by fluctuations in participation in the Customer Choice Program. All PECO customers have the choice to purchase electricity and natural gas from competitive electric generation and natural gas suppliers, respectively. The customers' choice of suppliers does not impact the volume of deliveries, but affects revenue collected from customers related to supplied energy and natural gas service. Customer choice program activity has no impact on electric and natural gas revenue net of purchased power and fuel expense.

Retail deliveries purchased from competitive electric generation and natural gas suppliers (as a percentage of kWh and mmcf sales, respectively) for the three and nine months ended September 30, 2017 and 2016, consisted of the following:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2017	2016	2017	2016
Electric	70%	69%	71%	70%
Natural Gas	29%	31%	26%	26%

Retail customers purchasing electric generation and natural gas from competitive electric generation and natural gas suppliers at September 30, 2017 and 2016 consisted of the following:

	September 30, 2017		September 30, 2016	
	Number of customers	% of total retail customers	Number of customers	% of total retail customers
Electric	570,500	35%	581,600	36%
Natural Gas	82,600	16%	81,300	16%

The changes in PECO's Operating revenues net of purchased power and fuel expense for the three and nine months ended September 30, 2017 compared to the same period in 2016 consisted of the following:

	Three Months Ended September 30, 2017			Nine Months Ended September 30, 2017		
	Increase (Decrease)			Increase (Decrease)		
	Electric	Natural Gas	Total	Electric	Natural Gas	Total
Weather	$ (48)	$ —	$ (48)	$ (45)	$ (3)	$ (48)
Volume	—	1	1	(12)	4	(8)
Pricing	9	—	9	13	—	13
Regulatory required programs	(6)	—	(6)	(29)	—	(29)
Other	7	1	8	10	—	10
Total decrease	$ (38)	$ 2	$ (36)	$ (63)	$ 1	$ (62)

Weather. The demand for electricity and natural gas is affected by weather conditions. With respect to the electric business, very warm weather in summer months and, with respect to the electric and natural gas businesses, very cold weather in winter months are referred to as "favorable weather conditions" because these weather conditions result in increased deliveries of electricity and natural gas. Conversely, mild weather reduces demand. During the three months ended September 30, 2017 compared to the same period in 2016, Operating revenue net of purchased power decreased due to unfavorable summer weather conditions. Operating revenue net of fuel expense was relatively consistent. During the nine months ended September 30, 2017 compared to the same period in 2016, Operating revenue net of purchased power and fuel expense decreased due to unfavorable weather conditions.

Heating and cooling degree days are quantitative indices that reflect the demand for energy needed to heat or cool a home or business. Normal weather is determined based on historical average heating and cooling degree days for a 30-year period in PECO's service territory. The changes in heating and cooling degree days in PECO's service territory for the three and nine months ended September 30, 2017 compared to the same periods in 2016 and normal weather consisted of the following:

Heating and Cooling Degree-Days				% Change	
Three Months Ended September 30,	2017	2016	Normal	2017 vs. 2016	2017 vs. Normal
Heating Degree-Days	14	10	35	40.0 %	(60.0)%
Cooling Degree-Days	989	1,288	923	(23.2)%	7.2 %
Nine Months Ended September 30,					
Heating Degree-Days	2,437	2,616	2,974	(6.8)%	(18.1)%
Cooling Degree-Days	1,404	1,684	1,271	(16.6)%	10.5 %

Volume. Operating revenue net of purchased power and fuel related to delivery volume, exclusive of the effects of weather, remained relatively consistent for the three months ended September 30, 2017 compared to the same period in 2016. The decrease in Operating revenue net of purchased power related to delivery volume, exclusive of the effects of weather, for the nine months ended September 30, 2017 compared to the same period in 2016, primarily reflects the impacts of energy efficiency initiatives on customer usage partially offset by moderate economic and customer growth, as well as a shift in the volume profile across classes from residential and small commercial and industrial to large commercial and industrial. Operating revenue net of fuel expense for the nine months ended September 30, 2017 compared to the same period in 2016 increased due to strong customer growth and moderate economic growth.

Pricing. Operating revenues net of purchased power as a result of pricing for the three and nine months ended September 30, 2017 compared to the same period in 2016 increased primarily due to higher overall effective rates due to decreased usage across the major customer classes. Operating revenues net of fuel expense for the three and nine months ended September 30, 2017 compared to the same period in 2016 remained relatively consistent.

Regulatory Required Programs. This represents the change in Operating revenue collected under approved riders to recover costs incurred for regulatory programs such as energy efficiency and the GSA. The riders are designed to provide full and current cost recovery as well as a return. The costs of these programs are included in Operating and maintenance expense, Depreciation and amortization expense and Income taxes. Refer to the Operating and maintenance expense discussion below for additional information on included programs.

Other. Other revenue, which can vary period to period, primarily includes wholesale transmission revenue, rental revenue, revenue related to late payment charges and assistance provided to other utilities through mutual assistance programs.

Operating and Maintenance Expense

	Three Months Ended September 30,	Increase (Decrease)	Nine Months Ended September 30,	Increase (Decrease)

	2017	2016		2017	2016	
Operating and maintenance expense — baseline	$ 183	$ 185	$ (2)	$ 552	$ 545	$ 7
Operating and maintenance expense — regulatory required programs[a]	14	14	—	43	59	(16)
Total operating and maintenance expense	$ 197	$ 199	$ (2)	$ 595	$ 604	$ (9)

(a) Operating and maintenance expenses for regulatory required programs are costs for various legislative and/or regulatory programs that are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues.

The changes in Operating and maintenance expense for the three and nine months ended September 30, 2017 compared to the same period in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Baseline		
Labor, other benefits, contracting and materials	$ 7	$ 14
Storm-related costs	(3)	(7)
Pension and non-pension postretirement benefits expense	(1)	(2)
PHI merger and integration costs	1	1
BSC costs	5	6
Uncollectible accounts expense	(6)	(6)
Other	(5)	1
	(2)	7
Regulatory Required Programs		
Energy efficiency	1	(15)
Other	(1)	(1)
	—	(16)
Total decrease	$ (2)	$ (9)

Depreciation and Amortization Expense

The changes in Depreciation and amortization expense for the three and nine months ended September 30, 2017 compared to the same period in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Depreciation and amortization expense	$ 5	$ 13
Regulatory asset amortization	—	(1)
Total increase	$ 5	$ 12

Taxes Other Than Income

Taxes other than income, which can vary period to period, include municipal and state utility taxes, real estate taxes and payroll taxes. Taxes other than income decreased for the three and nine months ended September 30, 2017 compared to the same period in 2016 due to a decrease in gross receipts tax driven by a decrease in electric revenue.

Interest Expense, Net

Interest expense, net for the three and nine months ended September 30, 2017 remained consistent compared to the same period in 2016.

Other, Net

Other, net for the three and nine months ended September 30, 2017 remained consistent compared to the same period in 2016.

Effective Income Tax Rate

PECO's effective income tax rate was 20.0% and 30.7% for the three months ended September 30, 2017 and 2016, respectively, and 20.4% and 25.9% for the nine months ended September 30, 2017 and 2016, respectively. See

Note 12 — Income Taxes of the Combined Notes to the Consolidated Financial Statements for further discussion of the change in effective income tax rate.

(a) BGE evaluates its operating performance using the measures of revenue net of purchased power expense for electric sales and revenue net of fuel expense for gas sales. BGE believes revenues net of purchased power and fuel expense are useful measurements of its performance because they provide information that can be used to evaluate its net revenue from operations. BGE has included the analysis below as a complement to the financial information provided in accordance with GAAP. However, revenues net of purchased power and fuel expense figures are not a presentation defined under GAAP and may not be comparable to other companies' presentations or more useful than the GAAP information provided elsewhere in this report.

Net Income Attributable to Common Shareholder

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. BGE's Net income attributable to common shareholder for the three months ended September 30, 2017 was higher than the same period in 2016, primarily due to an increase in Revenues net of purchased power and fuel expense, predominantly as a result of an increase in transmission formula rate revenues. This item was partially offset by an increase in Depreciation and amortization expense primarily related to the impacts of increased capital investment.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. BGE's Net income attributable to common shareholder for the nine months ended September 30, 2017 was higher than the same period in 2016, primarily due to an increase in Revenues net of purchased power and fuel expense and lower Operating and maintenance expense. The increase in Revenues net of purchased power and fuel expense was primarily due to the impacts of the electric and natural gas distribution rate orders issued by the MDPSC in June 2016 and July 2016 and an increase in transmission formula rate revenues. The lower Operating and maintenance expense was primarily due to the absence of cost disallowances resulting from the

2016 distribution rate orders issued by the MDPSC and decreased storm costs in 2017. These items were partially offset by higher income tax expense primarily resulting from a cumulative adjustment to reduce tax expense in 2016 for transmission-related regulatory assets and an increase in Depreciation and amortization expense primarily related to the initiation of cost recovery of the AMI programs under the distribution rate orders and the impacts of increased capital investment.

Revenues Net of Purchased Power and Fuel Expense

There are certain drivers to Operating revenues that are offset by their impact on Purchased power and fuel expense, such as commodity procurement costs and programs allowing customers to select a competitive electric or natural gas supplier. Operating revenues and Purchased power and fuel expense are affected by fluctuations in commodity procurement costs. BGE's electric and natural gas rates charged to customers are subject to periodic adjustments that are designed to recover or refund the difference between the actual cost of purchased electric power and purchased natural gas and the amount included in rates in accordance with the MDPSC's market-based SOS and gas commodity programs, respectively.

Electric and natural gas revenue and purchased power and fuel expense are also affected by fluctuations in the number of customers electing to use a competitive electric generation or natural gas supplier. All BGE customers have the choice to purchase electricity and natural gas from competitive electric generation and natural gas suppliers, respectively. The customers' choice of suppliers does not impact the volume of deliveries, but does affect revenue collected from customers related to supplied energy and natural gas.

Retail deliveries purchased from competitive electric generation and natural gas suppliers (as a percentage of kWh and mmcf sales, respectively) for the three and nine months ended September 30, 2017 and 2016 consisted of the following:

	Three Months Ended September 30,		**Nine Months Ended September 30,**	
	2017	**2016**	**2017**	**2016**
Electric	60%	58%	60%	59%
Natural Gas	74%	80%	57%	59%

The number of retail customers purchasing electric generation and natural gas from competitive electric generation and natural gas suppliers at September 30, 2017 and 2016 consisted of the following:

	September 30, 2017		**September 30, 2016**	
	Number of Customers	**% of total retail customers**	**Number of customers**	**% of total retail customers**
Electric	339,300	27%	334,100	26%
Natural Gas	148,600	22%	150,000	23%

The changes in BGE's Operating revenues net of purchased power and fuel expense for the three and nine months ended September 30, 2017, compared to the same period in 2016, consisted of the following:

	Three Months Ended September 30, 2017			**Nine Months Ended September 30, 2017**		
	Increase (Decrease)			**Increase (Decrease)**		
	Electric	**Gas**	**Total**	**Electric**	**Gas**	**Total**
Distribution rate increase	$ —	$ —	$ —	$ 21	$ 29	$ 50
Regulatory required programs	2	—	2	11	1	12
Transmission revenue	7	—	7	10	—	10
Other, net	4	4	8	5	6	11

Total increase	$ 13	$ 4	$ 17	$ 47	$ 36	$ 83

Distribution Rate Increase. The increase in distribution revenues for the nine months ended September 30, 2017, compared to the same period in 2016, was primarily due to the impact of the electric and natural gas distribution rates charged to customers that became effective in June 2016 in accordance with the electric and natural gas distribution rate orders issued by the MDPSC in June 2016 and July 2016. See Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Revenue Decoupling. The demand for electricity and natural gas is affected by weather and usage conditions. The MDPSC allows BGE to record a monthly adjustment to its electric and natural gas distribution revenue from all residential customers, commercial electric customers, the majority of large industrial electric customers, and all firm service natural gas customers to eliminate the effect of abnormal weather and usage patterns per customer on BGE's electric and natural gas distribution volumes, thereby recovering a specified dollar amount of distribution revenue per customer, by customer class, regardless of fluctuations in actual consumption levels. This allows BGE to recognize revenue at MDPSC-approved distribution charges per customer, regardless of what BGE's actual distribution volumes were for a billing period. Therefore, while this revenue is affected by customer growth (i.e., increase in the number of customers), it will not be affected by actual weather or usage conditions (i.e., changes in consumption per customer). BGE bills or credits customers in subsequent months for the difference between approved revenue levels under revenue decoupling and actual customer billings.

Heating and cooling degree days are quantitative indices that reflect the demand for energy needed to heat or cool a home or business. Normal weather is determined based on historical average heating and cooling degree days for a 30-year period in BGE's service territory. The changes in heating and cooling degree days in BGE's service territory for the three and nine months ended September 30, 2017 compared to the same period in 2016 consisted of the following:

Heating and Cooling Degree-Days				**% Change**	
Three Months Ended September 30,	**2017**	**2016**	**Normal**	**2017 vs. 2016**	**2017 vs. Normal**
Heating Degree-Days	64	24	78	166.7 %	(17.9)%
Cooling Degree-Days	595	747	596	(20.3)%	(0.2)%
Nine Months Ended September 30,					
Heating Degree-Days	2,524	2,878	2,992	(12.3)%	(15.6)%
Cooling Degree-Days	877	966	850	(9.2)%	3.2 %

Regulatory Required Programs. Revenue from regulatory required programs are billings for the costs of various legislative and/or regulatory programs that are recoverable from customers on a full and current basis. These programs are designed to provide full cost recovery, as well as a return in certain instances. The costs of these programs are included in Operating and maintenance expense, Depreciation and amortization expense and Taxes other than income in BGE's Consolidated Statements of Operations and Comprehensive Income.

Transmission Revenue. Under a FERC approved formula, transmission revenue varies from year to year based upon fluctuations in the underlying costs, capital investments being recovered and other billing determinants. The increase in transmission revenue for the three and nine months ended September 30, 2017, compared to the same period in 2016, was primarily due to increases in capital investment and operating and maintenance expense recoveries. See Operating and Maintenance Expense below and Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Other, Net. Other net revenue, which can vary from period to period, primarily includes late payment fees and other miscellaneous revenue such as service application fees and assistance provided to other utilities through BGE's mutual assistance program.

Operating and Maintenance Expense

	Three Months Ended September 30,		Increase (Decrease)	Nine Months Ended September 30,		Increase (Decrease)
	2017	2016		2017	2016	
Operating and maintenance expense — baseline	$ 167	$ 170	$ (3)	$ 499	$ 561	$ (62)
Operating and maintenance expense — regulatory required programs[(a)]	8	8	—	33	27	6
Total operating and maintenance expense	$ 175	$ 178	$ (3)	$ 532	$ 588	$ (56)

(a) Operating and maintenance expense for regulatory required programs are costs for various legislative and/or regulatory programs that are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues.

The changes in Operating and maintenance expense for the three and nine months ended September 30, 2017 compared to the same period in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	**Increase (Decrease)**
Baseline		
Impairment on long-lived assets and losses on regulatory assets [(a)]	$ 1	$ (50)
City of Baltimore conduit fees	(4)	(12)
Storm-related costs	3	(11)
Uncollectible accounts expense	(8)	(8)
BSC costs	8	10
Other	(3)	9
	(3)	(62)
Regulatory Required Programs		
Other	$ —	$ 6
	—	6
Total decrease	$ (3)	$ (56)

(a) See Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Depreciation and Amortization

The changes in Depreciation and amortization expense for the three and nine months ended September 30, 2017 compared to the same period in 2016 consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	**Increase (Decrease)**
Depreciation expense[(a)]	$ 5	$ 10
Regulatory asset amortization[(b)]	1	25
Regulatory required programs[(c)]	2	6
Total increase	$ 8	$ 41

(a) Depreciation expense increased due to ongoing capital expenditures.

(b) Regulatory asset amortization increased for the three and nine months ended September 30, 2017 compared to the same period in 2016 primarily due to an increase in regulatory asset amortization related to energy efficiency programs and the initiation of cost recovery of the AMI programs under the final electric and natural gas distribution rate case order issued by the MDPSC in June 2016 and increased depreciation from AMI program capital expenditures. See Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

(c) Depreciation and amortization expenses for regulatory required programs are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues.

Taxes Other Than Income

Taxes other than income, which can vary period to period, include municipal and state utility taxes, real estate taxes and payroll taxes. Taxes other than income for the three and nine months ended September 30, 2017 compared to the same period in 2016 remained relatively consistent.

Interest Expense, Net

Interest expense, net for the three and nine months ended September 30, 2017, compared to the same period in 2016 remained relatively consistent.

Effective Income Tax Rate

BGE’s effective income tax rate was 39.2% and 39.1% for the three months ended September 30, 2017 and 2016, respectively. BGE’s effective income tax rate was 39.5% and 36.3% for the nine months ended September 30, 2017 and 2016, respectively. See Note 12 — Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

Total retail	571	657	(13.1)%	1,664	1,779	(6.5)%
Other revenue[b][c]	87	78	11.5 %	231	219	5.5 %
Total electric revenue	$ 658	$ 735	(10.5)%	$ 1,895	$ 1,998	(5.2)%

(a) Reflects delivery volumes and revenue from customers purchasing electricity directly from BGE and customers purchasing electricity from a competitive electric generation supplier as all customers are assessed distribution charges. For customers purchasing electricity from BGE, revenue also reflects the cost of energy and transmission.

(b) Other revenue primarily includes wholesale transmission revenue and late payment charges.

(c) Includes operating revenues from affiliates totaling $1 million for both the three months ended September 30, 2017 and 2016 and $5 million for both the nine months ended September 30, 2017 and 2016.

BGE Natural Gas Operating Statistics and Revenue Detail

Total natural gas revenues[(c)]	$ 80	$ 77	3.9 %	$ 468	$ 423	10.6%

(a) Reflects delivery volumes and revenue from customers purchasing natural gas directly from BGE and customers purchasing natural gas from a competitive natural gas supplier as all customers are assessed distribution charges. For customers purchasing natural gas from BGE, revenue also reflects the cost of natural gas.

(b) Transportation and other natural gas revenue includes off-system revenue of 68 mmcfs ($1 million) and 1,311 mmcfs ($4 million) for the three months ended September 30, 2017 and 2016, respectively, and 2,463 mmcfs ($15 million) and 4,078 mmcfs ($14 million) for the nine months ended September 30, 2017 and 2016, respectively.

(c) Includes operating revenues from affiliates totaling $2 million and $6 million for the three months ended September 30, 2017 and 2016, respectively, and $7 million and $11 million for the nine months ended September 30, 2017 and 2016, respectively.

Results of Operations — PHI

PHI’s results of operations include the results of its three reportable segments, Pepco, DPL and ACE for all periods presented below. For "Predecessor" reporting periods, PHI’s results of operations also include the results of PES and PCI. See Note 20 - Segment Information of the Combined Notes to Consolidated Financial Statements for additional information regarding PHI’s reportable segments. All material intercompany accounts and transactions have been eliminated in consolidation. A separate specific discussion of the results of operations for Pepco, DPL and ACE is presented elsewhere in this report.

As a result of the PHI Merger, the following consolidated financial results present two separate reporting periods for 2016. The "Predecessor" reporting period represents PHI’s results of operations for the period from January 1, 2016 to March 23, 2016. The "Successor" reporting periods represent PHI’s results of operations for the three and nine months ended September 30, 2017, the three months ended September 30, 2016 and for the period from March 24, 2016 to September 30, 2016. All amounts presented below are before the impact of income taxes, except as noted.

	Successor			*Successor*		*Predecessor*
	Three Months Ended September 30,		**Favorable (Unfavorable) Variance**	**Nine Months Ended September 30,**	**March 24 to September 30,**	**January 1 to March 23,**

Net income (loss)	$ 153	$ 166	$ (13)	$ 359	$ (91)	$ 19

(a) PHI evaluates its operating performance using the measure of revenue net of purchased power and fuel expense for electric and natural gas sales. PHI believes revenue net of purchased power and fuel expense is a useful measurement because it provides information that can be used to evaluate its operational performance. PHI has included the analysis below as a complement to the financial information provided in accordance with GAAP. However, Revenue net of purchased power and fuel expense is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

Successor Period Three Months Ended September 30, 2017 Compared to Successor Period Three Months Ended September 30, 2016

Net Income

PHI's Net income for the Successor period of three months ended September 30, 2017 was $153 million compared to $166 million for the Successor period of three months ended September 30, 2016. The decrease in Net income reflects the September 2016 pre-tax recording of a $50 million reallocation of merger-related commitments from Pepco, DPL and ACE to Exelon, which resulted in more commitments becoming obligations of Exelon. The increase in Operating and maintenance expense is partially offset by the impact of increases in electric distribution and natural gas rates within Revenue net of purchased power expense (Pepco electric distribution rates effective November 2016 in Maryland, Pepco electric distribution rates effective August 2017 in the District of Columbia, DPL electric distribution rates effective February 2017 in Maryland, DPL electric distribution and natural gas rates effective July 2016 and December 2016 in Delaware, and ACE electric distribution rates effective August 2016 in New Jersey).

Operating Revenue Net of Purchased Power and Fuel Expense

Operating revenue net of purchased power and fuel expense, which is a non-GAAP measure discussed above, increased by $26 million for the three months ended September 30, 2017 as compared to the three months ended September 30, 2016. The increase is primarily attributable to the following factors:

- Increase of $17 million at DPL primarily related to the impact of the new electric distribution and natural gas rates charged to Delaware customers that became effective in July 2016 and December 2016 and the impact of new electric distribution rates charged to Maryland customers that became effective in February 2017;

- Increase of $14 million at Pepco primarily related to the impact of the new electric distribution rates charged to customers in Maryland that became effective in November 2016 and and the impact of new electric distribution rates charged to customers in the District of Columbia effective August 2017; and

- Decrease of $6 million at ACE primarily related to lower average customer usage and unfavorable weather related sales, partially offset by the impact of the new electric distribution base rate charged to customers that became effective in August 2016.

Operating and Maintenance Expense

Operating and maintenance expense increased by $25 million for the three months ended September 30, 2017 as compared to the three months ended September 30, 2016. The increase is attributable to the following factors:

- Increase of $24 million at DPL due primarily to a merger commitment reallocation from DPL to Exelon that decreased Operating and maintenance expense in 2016;

- Increase of $5 million at ACE primarily due to a merger commitment reallocation from ACE to Exelon that decreased Operating and maintenance expense in 2016, partially offset by the deferral of merger-related costs to a regulatory asset; and

- Decrease of $6 million at Pepco primarily due to the deferral of merger-related, rate case, and customer billing system costs to a regulatory asset, partially offset by a merger commitment reallocation from Pepco to Exelon that decreased Operating and maintenance expense in 2016.

Depreciation and Amortization Expense

Depreciation and amortization expense decreased by $3 million primarily due to lower amortization expense at ACE resulting from lower revenue due to rate decreases effective October 2016 for the ACE

Transition Bond Charge and ACE Market Transition Charge Tax, partially offset by higher depreciation as a result of higher Maryland depreciation rates at Pepco effective November 2016 and at DPL effective February 2017 and due to ongoing capital expenditures at Pepco, DPL, and ACE.

Taxes Other Than Income

Taxes other than income decreased by $2 million primarily due to lower utility taxes that are collected and passed through by Pepco, partially offset by higher property taxes at Pepco.

Interest Expense, Net

Interest expense decreased by $2 million primarily due to the redemption of long-term debt in December 2016 and lower short-term debt interest rates.

Other, Net

Other, net decreased by $6 million primarily due to the September 2016 reversal of contributions in aid of construction tax gross-up reserves due to the determination that there is no legal obligation to refund customers per contract terms.

Effective Income Tax Rate

PHI's effective income tax rate was 35.2% and 29.1% for the three months ended September 30, 2017 and 2016, respectively. See Note 12 - Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

Successor Period Nine Months Ended September 30, 2017

PHI's Net income for the Successor period of nine months ended September 30, 2017 was $359 million. There were no significant changes in the underlying trends affecting PHI's operations during the Successor period of nine months ended September 30, 2017 except for the impact of increases in electric distribution and natural gas rates within Revenue net of purchased power expense (Pepco electric distribution rates effective November 2016 in Maryland, Pepco electric distribution rates effective August 2017 in the District of Columbia, DPL electric distribution rates effective February 2017 in Maryland, DPL electric distribution and natural gas rates effective July 2016 and December 2016 in Delaware, and ACE electric distribution rates effective August 2016 in New Jersey). The deferral of merger-related, rate case, and customer billing system costs to a regulatory asset and lower uncollectible accounts expense contributed to lower Operating and maintenance expense. Income taxes were lower due to unrecognized tax benefits of $59 million for uncertain tax positions related to the deductibility of certain merger commitments in the first quarter of 2017.

PHI's effective income tax rate for the Successor period of nine months ended September 30, 2017 was 23.3%. See Note 12 - Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

Successor Period March 24, 2016 to September 30, 2016

PHI's Net loss for the Successor period from March 24, 2016 to September 30, 2016 was $91 million*.* There were no significant changes in the underlying trends affecting PHI's results of operations during the Successor period of March 24, 2016 to September 30, 2016 except for the pre-tax recording of $375 million of non-recurring merger-related costs within Operating and maintenance expense.

PHI's effective income tax rate for the Successor period of March 24, 2016 to September 30, 2016 was 9.0%. See Note 12 - Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

Predecessor Period January 1, 2016 to March 23, 2016

PHI's Net income for the Predecessor period of January 1, 2016 to March 23, 2016 was $19 million*.* There were no significant changes in the underlying trends affecting PHI's results of operations during the Predecessor period of January 1, 2016 to March 23, 2016 except for the pre-tax recording of $29 million of non-recurring merger-related costs within Operating and maintenance expense and $18 million of preferred stock derivative expense within Other, net.

PHI’s effective income tax rate for the Predecessor period of January 1, 2016 to March 23, 2016 was 47.2%. See Note 12 - Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

(a) Pepco evaluates its operating performance using the measure of revenue net of purchased power expense for electric sales. Pepco believes revenue net of purchased power expense is a useful measurement because it provides information that can be used to evaluate its operational performance. Pepco has included the analysis below as a complement to the financial information provided in accordance with GAAP. However, Revenue net of purchased power expense is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

Net Income

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. Pepco's Net income for the three months ended September 30, 2017, was higher than the same period in 2016, primarily due to an increase in Revenue net of purchased power expense resulting from higher electric distribution revenues as a result of the distribution rate increase approved by the MDPSC effective November 2016 and the distribution rate increase approved by the DCPSC effective August 2017.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. Pepco's Net income for the nine months ended September 30, 2017, was higher than the same period in 2016, primarily due to an increase in Revenue net of purchased power expense resulting from higher electric distribution revenues as a result of the distribution rate increase approved by the MDPSC effective November 2016 and the distribution rate increase approved by the DCPSC effective August 2017, lower Operating and maintenance expense due to merger-related costs recognized in March 2016, and a decrease in income tax reserves in the first quarter of 2017 for uncertain tax positions related to the deductibility of certain merger commitments, partially offset by higher depreciation expense due to increased depreciation rates in Maryland effective November 2016.

Operating Revenue Net of Purchased Power Expense

Operating revenues include revenue from the distribution and supply of electricity to Pepco’s customers within its service territories at regulated rates. Operating revenues also include transmission service revenue that Pepco receives as a transmission owner from PJM at rates regulated by FERC. Transmission rates are updated annually based on a FERC-approved formula methodology.

Electric revenues and purchased power expense are also affected by fluctuations in participation in the Customer Choice Program. All Pepco customers have the choice to purchase electricity from competitive electric generation suppliers. The customers' choice of supplier does not impact the volume of deliveries, but affects revenue collected from customers related to supplied energy service.

Retail deliveries purchased from competitive electric generation suppliers (as a percentage of kWh sales) for the three and nine months ended September 30, 2017, compared to the same periods in 2016, consisted of the following:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2017	2016	2017	2016
Electric	65%	63%	66%	65%

Retail customers purchasing electric generation from competitive electric generation suppliers at September 30, 2017 and 2016 consisted of the following:

	September 30, 2017		September 30, 2016	
	Number of customers	% of total retail customers	Number of customers	% of total retail customers
Electric	179,106	21%	175,960	21%

Retail deliveries purchased from competitive electric generation suppliers represented 72% and 73% of Pepco's retail kWh sales to the District of Columbia customers and 60% and 60% of Pepco's retail kWh sales to Maryland customers for the three and nine months ended September 30, 2017, respectively and 71% and 72% of Pepco's retail kWh sales to the District of Columbia customers and 58% and 59% of Pepco's retail kWh sales to Maryland customers for the three and nine months ended September 30, 2016, respectively.

Operating revenues include transmission enhancement credits that Pepco receives as a transmission owner from PJM in consideration for approved regional transmission expansion plan expenditures.

Operating revenues also include work and services performed on behalf of customers, including other utilities, which is generally not subject to price regulation. Work and services includes mutual assistance to other utilities, highway relocation, rentals of pole attachments, late payment fees and collection fees.

Purchased power expense consists of the cost of electricity purchased by Pepco to fulfill its default electricity supply obligation and, as such, is recoverable from customers in accordance with the terms of public service commission orders.

The changes in Pepco's operating revenues net of purchased power expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016 consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Volume	$ 5	$ 13
Distribution rate increase	17	45

Regulatory required programs	(6)	(11)
Transmission revenues	3	9
Other	(5)	(17)
Total increase	$ 14	$ 39

Volume. The increase in operating revenue net of purchased power and fuel expense related to delivery volume, exclusive of the effects of weather, for the three and nine months ended September 30, 2017 compared to the same periods in 2016, primarily reflects the impact of customer growth.

Distribution Rate Increase. The increase in electric operating revenues net of purchased power expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016 was primarily due to the impact of higher electric distribution rates charged to customers in Maryland that became effective in November 2016 and higher electric distribution rates charged to customers in the District of Columbia that became effective August 2017. See Note 5—Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Revenue Decoupling. Pepco's results historically have been seasonal, generally producing higher revenue and income in the warmest and coldest periods of the year. For retail customers of Pepco in Maryland and in the District of Columbia, revenues are not affected by unseasonably warmer or colder weather because a bill stabilization adjustment (BSA) for retail customers was implemented that provides for a fixed distribution charge per customer. The BSA has the effect of decoupling the distribution revenue recognized in a reporting period from the amount of power delivered during the period. As a result, the only factors that will cause distribution revenue from customers in Maryland and the District of Columbia to fluctuate from period to period are changes in the number of customers and changes in the approved distribution charge per customer. Changes in customer usage (due to weather conditions, energy prices, energy efficiency programs or other reasons) from period to period have no impact on reported distribution revenue for customers to whom the BSA applies.

In accounting for the BSA in Maryland and the District of Columbia, a Revenue Decoupling Adjustment is recorded representing either (i) a positive adjustment equal to the amount by which revenue from Maryland and the District of Columbia retail distribution sales falls short of the revenue that Pepco is entitled to earn based on the approved distribution charge per customer or (ii) a negative adjustment equal to the amount by which revenue from such distribution sales exceeds the revenue that Pepco is entitled to earn based on the approved distribution charge per customer.

Heating and cooling degree days are quantitative indices that reflect the demand for energy needed to heat or cool a home or business. Normal weather is determined based on historical average heating and cooling degree days for a 20-year period in Pepco's service territory. The changes in heating and cooling degree days in Pepco's service territory for the three and nine months ended September 30, 2017 compared to the same periods in 2016 and normal weather consisted of the following:

				% Change	
	2017	**2016**	**Normal**	**2017 vs. 2016**	**2017 vs. Normal**
Three Months Ended September 30,					
Heating Degree-Days	8	1	19	700.0 %	(57.9)%
Cooling Degree-Days	1,130	1,418	1,133	(20.3)%	(0.3)%
Nine Months Ended September 30,					
Heating Degree-Days	1,963	2,408	2,477	(18.5)%	(20.8)%
Cooling Degree-Days	1,679	1,872	1,611	(10.3)%	4.2 %

Regulatory Required Programs. This represents the change in operating revenues collected under approved riders to recover costs incurred for regulatory programs such as energy efficiency programs. The riders are designed to provide full and current cost recovery as well as a return. The costs of these programs are included in Operating and maintenance expense, Depreciation and amortization expense and Taxes other than income in Pepco's Consolidated Statements of Operations and Comprehensive Income. Refer to the Operating and maintenance expense and Depreciation and amortization expense discussion below for additional information on included programs.

Transmission Revenues. Under a FERC-approved formula, transmission revenue varies from year to year based upon fluctuations in the underlying costs, capital investments being recovered and other billing adjustments. The increase in revenue net of purchased power expense for the three months ended September 30, 2017 compared to the same period in 2016 is a result of higher rates effective June 1, 2017 related to increases in transmission plant investment and operating expenses. The increase in revenue net of purchased power expense for the nine months ended September 30, 2017 compared to the same period in 2016 is a result of higher rates effective June 1, 2017 and June 1, 2016 related to increases in transmission plant investment and operating expenses, partially offset by lower revenue related to the MAPP abandonment recovery period that ended in March 2016.

Other. The decrease in other operating revenue net of purchased power and fuel expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016 is primarily due to lower pass-through revenue (which is substantially offset in Taxes other than income) primarily the result of lower sales that resulted in a decrease in utility taxes that are collected by Pepco on behalf of the jurisdiction.

Operating and Maintenance Expense

	Three Months Ended September 30,		Increase (Decrease)	Nine Months Ended September 30,		Increase (Decrease)
	2017	**2016**		**2017**	**2016**	
Operating and maintenance expense - baseline	$ 100	$ 106	$ (6)	$ 331	$ 500	$ (169)
Operating and maintenance expense - regulatory required programs[(a)]	3	3	—	5	8	(3)
Total operating and maintenance expense	$ 103	$ 109	$ (6)	$ 336	$ 508	$ (172)

(a) Operating and maintenance expenses for regulatory required programs are costs for various legislative and/or regulatory programs that are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues.

The changes in Operating and maintenance expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	**Increase (Decrease)**
Baseline		
Labor, other benefits, contracting and materials	$ 2	$ 14
Storm-related costs	(1)	—
Remeasurement of AMI-related regulatory asset[(a)]	(4)	(11)
Uncollectible accounts expense	1	(1)
Deferral of merger-related costs to regulatory asset	(8)	(1)
Deferral of rate case and customer billing system costs	(6)	(6)
BSC and PHISCO allocations[(b)]	1	(22)
Merger commitments[(c)]	13	(132)
Other	(4)	(10)
	(6)	(169)
Regulatory required programs		
Purchased power administrative costs	—	(3)
Total decrease	$ (6)	$ (172)

(a) Related to a remeasurement of a regulatory asset for legacy meters recognized in 2016.
(b) Primarily related to merger severance and compensation costs recognized in 2016.
(c) Primarily related to merger-related commitments for customer rate credits and charitable contributions recognized in 2016.

Depreciation and Amortization Expense

The changes in Depreciation and amortization expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Depreciation expense[(a)]	$ 9	$ 25
Regulatory asset amortization	3	4
Regulatory required programs[(b)]	(6)	(8)
Total increase	$ 6	$ 21

(a) Depreciation expense increased due to higher depreciation rates in Maryland effective November 2016 and due to ongoing capital expenditures.

(b) Depreciation and amortization expenses for regulatory required programs are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues and Operating and maintenance expense.

Taxes Other Than Income

Taxes other than income for the three and nine months ended September 30, 2017 compared to the same periods in 2016, decreased due to a decrease in the utility taxes that are collected and passed through by Pepco (which is substantially offset in Operating revenues), partially offset by higher property taxes.

Gain on sales of assets

Gain on sales of assets for the nine months ended September 30, 2017 compared to the same period in 2016 decreased due to a second quarter 2016 gain recorded from the sale of land.

Interest Expense, Net

Interest expense, net for the three months ended September 30, 2017 compared to the same period in 2016, remained relatively constant.

Interest expense, net for the nine months ended September 30, 2017 compared to the same period in 2016 decreased primarily due to the recording of interest expense for an uncertain tax position in the first quarter of 2016 and an increase in capitalized AFUDC interest.

Other, Net

Other, net for the three and nine months ended September 30, 2017 compared to the same periods in 2016 decreased primarily due to the September 2016 reversal of contributions in aid of construction tax gross-up reserves due to the determination that there is no legal obligation to refund customers per contract terms.

Effective Income Tax Rate

Pepco's effective income tax rate was 30.4% and 30.7% for the three months ended September 30, 2017 and 2016, respectively. Pepco's effective income tax rate was 23.3% and 63.0% for the nine months ended September 30, 2017 and 2016, respectively. In the first quarter of 2017, Pepco decreased its liability for unrecognized tax benefits by $21 million resulting in a benefit to Income taxes and a corresponding decrease in its effective tax rate. See Note 12 — Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the change in effective income tax rates.

Pepco Electric Operating Statistics and Revenue Detail

Retail Deliveries to Customers (in GWhs)	Three Months Ended September 30, 2017	Three Months Ended September 30, 2016	% Change	Weather - Normal % Change	Nine Months Ended September 30, 2017	Nine Months Ended September 30, 2016	% Change	Weather - Normal % Change

Total electric revenue[(c)]	$ 604	$ 635	(4.9)%	$ 1,649	$ 1,695	(2.7)%

(a) Reflects delivery volumes and revenues from customers purchasing electricity directly from Pepco and customers purchasing electricity from a competitive electric generation supplier as all customers are assessed distribution charges. For customers purchasing electricity from Pepco, revenue also reflects the cost of energy and transmission.

(b) Other revenue includes transmission revenue from PJM and wholesale electric revenues.

(c) Includes operating revenues from affiliates totaling $1 million for the three months ended September 30, 2017 and 2016 and $4 million and $3 million for the nine months ended September 30, 2017 and 2016, respectively.

Results of Operations - DPL

(a) DPL evaluates its operating performance using the measure of revenue net of purchased power expense for electric sales and revenue net of fuel expense for natural gas sales. DPL believes revenue net of purchased power expense and revenue net of fuel expense are useful measurements because they provide information that can be used to evaluate its operational performance. DPL has included the analysis below as a complement to the financial information provided in accordance with GAAP. However, Revenue net of purchased power expense and Revenue net of fuel expense is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

Net Income (Loss)

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. DPL's Net income for the three months ended September 30, 2017, was lower than the same period in 2016 as a result of the merger commitment reallocation from DPL to Exelon that decreased Operating and maintenance expense in 2016, partially offset by an increase in Revenue net of purchased power and fuel expense primarily resulting from higher electric distribution and natural gas revenues as a result of the distribution rate increases approved by the DPSC effective July 2016 and December 2016 and by the MDPSC effective February 2017.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. DPL's Net income (loss) for the nine months ended September 30, 2017, was higher than the same period in 2016 as a result of an increase in Revenue net of purchased power and fuel expense primarily resulting from higher electric distribution and natural gas revenues as a result of the distribution rate increases approved by the DPSC effective July 2016 and December 2016 and by the MDPSC effective February 2017, lower Operating and maintenance expense due to merger-related costs recognized in March 2016, lower uncollectible accounts expense, and the deferral of merger-related costs to a regulatory asset in 2017, and a decrease in income tax reserves in the first quarter of 2017 for uncertain tax positions related to the deductibility of certain merger commitments.

Revenues Net of Purchased Power and Fuel Expense

Operating revenues include revenue from the distribution and supply of electricity to DPL’s customers within its service territories at regulated rates. Operating revenues also include transmission service revenue that DPL receives as a transmission owner from PJM at rates regulated by FERC. Transmission rates are updated annually based on a FERC-approved formula methodology.

Electric and natural gas revenues and purchased power and fuel expense are also affected by fluctuations in participation in the Customer Choice Program. All DPL customers have the choice to purchase electricity and natural gas from competitive electric generation and natural gas suppliers, respectively. The customers' choice of suppliers does not impact the volume of deliveries, but affects revenue collected from customers related to supplied energy and natural gas service.

Retail deliveries purchased from competitive electric generation and natural gas suppliers (as a percentage of kWh and mmcf sales, respectively) for the three and nine months ended September 30, 2017 and 2016, consisted of the following:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2017	2016	2017	2016
Electric	51%	49%	52%	51%
Natural Gas	53%	51%	35%	32%

Retail customers purchasing electric generation and natural gas from competitive electric generation and natural gas suppliers at September 30, 2017 and 2016 consisted of the following:

	September 30, 2017		September 30, 2016	
	Number of customers	% of total retail customers	Number of customers	% of total retail customers
Electric	78,426	15.0%	79,501	15.4%
Natural Gas	155	0.1%	157	0.1%

Retail deliveries purchased from competitive electric generation suppliers represented 53% and 54% of DPL's retail kWh sales to Delaware customers and 48% and 48% of DPL's retail kWh sales to Maryland customers for the three and nine months ended September 30, 2017, respectively and 51% and 53% of DPL's retail kWh sales to Delaware customers and 47% and 47% of DPL's retail kWh sales to Maryland customers for the three and nine months ended September 30, 2016, respectively.

Operating revenues include transmission enhancement credits that DPL receives as a transmission owner from PJM in consideration for approved regional transmission expansion plan expenditures.

Operating revenues also include work and services performed on behalf of customers, including other utilities, which is generally not subject to price regulation. Work and services includes mutual assistance to other utilities, highway relocation, rentals of pole attachments, late payment fees and collection fees.

Natural gas operating revenue includes sources that are subject to price regulation (Regulated Gas Revenue) and those that generally are not subject to price regulation (Other Gas Revenue). Regulated gas revenue includes the revenue DPL receives from on-system natural gas delivered sales and the transportation of natural gas for customers within its service territory at regulated rates. Other gas revenue consists of off-system natural gas sales and the short-term release of interstate pipeline transportation and storage capacity not needed to serve customers. Off-system sales are made possible when low demand for natural gas by regulated customers creates excess pipeline capacity.

Purchased power expense consists of the cost of electricity purchased by DPL to fulfill its default electricity supply obligation and, as such, is recoverable from customers in accordance with the terms of public service commission orders. Purchased fuel expense consists of the cost of gas purchased by DPL to fulfill its obligation to regulated gas customers and, as such, is recoverable from customers in accordance with the terms of public service commission orders. It also includes the cost of gas purchased for off-system sales.

The changes in DPL's operating revenues net of purchased power and fuel expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016 consisted of the following:

	Three Months Ended September 30, 2017			Nine Months Ended September 30, 2017		
	Increase (Decrease)			Increase (Decrease)		
	Electric	Gas	Total	Electric	Gas	Total
Weather	$ (6)	$ 1	$ (5)	$ (9)	$ (13)	$ (22)
Volume	2	(1)	1	3	10	13
Pricing - distribution revenues	17	—	17	49	2	51
Regulatory required programs	(3)	—	(3)	(2)	—	(2)
Transmission revenues	5	—	5	4	—	4
Other	3	(1)	2	5	(3)	2
Total increase (decrease)	$ 18	$ (1)	$ 17	$ 50	$ (4)	$ 46

Revenue Decoupling. DPL's results historically have been seasonal, generally producing higher revenue and income in the warmest and coldest periods of the year. For retail customers of DPL in Maryland, revenues are not affected by unseasonably warmer or colder weather because a bill stabilization adjustment (BSA) for retail customers was implemented that provides for a fixed distribution charge per customer. The BSA has the effect of decoupling the distribution revenue recognized in a reporting period from the amount of power delivered during the period. As a result, the only factors that will cause distribution revenue from customers in Maryland to fluctuate from period to period are changes in the number of customers and changes in the approved distribution charge per customer. A modified fixed variable rate design, which would provide for a charge not tied to a customer's volumetric consumption of electricity or natural gas, has been proposed for DPL electricity and natural gas customers in Delaware. Changes in customer usage (due to weather conditions, energy prices, energy efficiency programs or other reasons) from period to period have no impact on reported distribution revenue for customers to whom the BSA applies.

In accounting for the BSA in Maryland, a Revenue Decoupling Adjustment is recorded representing either (i) a positive adjustment equal to the amount by which revenue from Maryland retail distribution sales falls short of the revenue that DPL is entitled to earn based on the approved distribution charge per customer or (ii) a negative adjustment equal to the amount by which revenue from such distribution sales exceeds the revenue that DPL is entitled to earn based on the approved distribution charge per customer.

Weather. The demand for electricity and natural gas in areas not subject to the BSA is affected by weather conditions. With respect to the electric business, very warm weather in summer months and, with respect to the electric and natural gas businesses, very cold weather in winter months are referred to as "favorable weather conditions" because these weather conditions result in increased deliveries of electricity and natural gas. Conversely, mild weather reduces demand. During the three and nine months ended September 30, 2017 compared to the same periods in 2016, operating revenue net of purchased power and fuel expense was lower due to the impact of unfavorable weather conditions in DPL's service territory.

Heating and cooling degree days are quantitative indices that reflect the demand for energy needed to heat or cool a home or business. Normal weather is determined based on historical average heating and cooling degree days for a 20-year period in DPL's electric service territory and a 30-year period in DPL's natural gas service territory. The changes in heating and cooling degree days in DPL's service territory for the three and nine months ended September 30, 2017 compared to the same periods in 2016 and normal weather consisted of the following:

Electric Service Territory				**% Change**	
Three Months Ended September 30,	**2017**	**2016**	**Normal**	**2017 vs. 2016**	**2017 vs. Normal**
Heating Degree-Days	24	14	33	71.4 %	(27.3)%
Cooling Degree-Days	867	1,103	856	(21.4)%	1.3 %
Nine Months Ended September 30,					
Heating Degree-Days	2,384	2,812	2,933	(15.2)%	(18.7)%
Cooling Degree-Days	1,228	1,410	1,184	(12.9)%	3.7 %

Natural Gas Service Territory				**% Change**	
Three Months Ended September 30,	**2017**	**2016**	**Normal**	**2017 vs. 2016**	**2017 vs. Normal**
Heating Degree-Days	28	20	42	40.0 %	(33.3)%
Nine Months Ended September 30,					
Heating Degree-Days	2,431	2,913	3,062	(16.5)%	(20.6)%

Volume. The increase in operating revenue net of purchased power and fuel expense related to delivery volume, exclusive of the effects of weather, for the three and nine months ended September 30, 2017 compared to the same periods in 2016, primarily reflects the impact of increased natural gas average customer usage and customer growth.

Pricing—Distribution Revenues. The increase in electric operating revenues net of purchased power expense as a result of pricing for the three and nine months ended September 30, 2017 compared to the same periods in 2016 was primarily due to the impact of higher electric distribution and natural gas rates charged to Delaware customers that became effective in July and December 2016 and the impact of higher electric distribution rates charged to Maryland customers that became effective in February 2017. See Note 5—Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Regulatory Required Programs. This represents the change in operating revenues collected under approved riders to recover costs incurred for regulatory programs such as energy efficiency programs. The riders are designed to provide full and current cost recovery as well as a return. The costs of these programs are included in Operating and maintenance expense, Depreciation and amortization expense and Taxes other than income in DPL’s Consolidated Statements of Operations and Comprehensive Income. Refer to the Operating and maintenance expense and Depreciation and amortization expense discussion below for additional information on included programs.

Transmission Revenues. Under a FERC-approved formula, transmission revenue varies from year to year based upon fluctuations in the underlying costs, capital investments being recovered and other billing adjustments. The increase in revenue net of purchased power expense for the three months ended September 30, 2017 compared to the same period in 2016 is a result of higher rates effective June 1, 2017 related to increases in transmission plant investment and operating expenses. The increase in revenue net of purchased power expense for the nine months ended September 30, 2017 compared to the same period in 2016 is a result of higher rates effective June 1, 2017 and June 1, 2016 related to increases in transmission plant investment and operating expenses, partially offset by lower revenue related to the MAPP abandonment recovery period that ended in March 2016.

Other. Other revenue, which can vary period to period, includes rental revenue, revenue related to late payment charges, assistance provided to other utilities through mutual assistance programs, and recoveries of other taxes.

Operating and Maintenance Expense

	Three Months Ended September 30,		Increase (Decrease)	Nine Months Ended September 30,		Increase (Decrease)
	2017	2016		2017	2016	
Operating and maintenance expense - baseline	$ 76	$ 50	$ 26	$ 221	$ 328	$ (107)
Operating and maintenance expense - regulatory required programs[(a)]	3	5	(2)	6	10	(4)
Total operating and maintenance expense	$ 79	$ 55	$ 24	$ 227	$ 338	$ (111)

(a) Operating and maintenance expenses for regulatory required programs are costs for various legislative and/or regulatory programs that are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues.

The changes in Operating and maintenance expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016, consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Baseline		
Labor, other benefits, contracting and materials	$ 3	$ 3
Storm-related costs	(2)	4
Uncollectible accounts expense	(2)	(7)
Remeasurement of AMI-related regulatory asset[(a)]	(1)	(2)
Deferral of merger-related costs to regulatory asset	—	(6)
BSC and PHISCO allocations[(b)]	(1)	(15)
Merger commitments[(c)]	27	(79)
Other	2	(5)
	26	(107)
Regulatory required programs		
Purchased power administrative costs	(2)	(4)
Total increase (decrease)	$ 24	$ (111)

(a) Related to a remeasurement of a regulatory asset for legacy meters recognized in 2016.
(b) Primarily related to merger severance and compensation costs recognized in 2016.
(c) Primarily related to merger-related commitments for customer rate credits and charitable contributions recognized in 2016.

Depreciation and Amortization Expense

The changes in Depreciation and amortization expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016 consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Depreciation expense[(a)]	$ 3	$ 9
Regulatory asset amortization	—	(2)
Regulatory required programs[(b)]	(2)	(3)
Total increase	$ 1	$ 4

(a) Depreciation expense increased due to higher depreciation rates in Maryland effective February 2017 and due to ongoing capital expenditures.

(b) Depreciation and amortization expenses for regulatory required programs are recoverable from customers on a full and current basis through approved regulated rates. A partially offsetting amount has been reflected in Operating revenues and Operating and maintenance expense.

Taxes Other Than Income

Taxes other than income for the three and nine months ended September 30, 2017 compared to the same periods in 2016 remained relatively constant.

Interest Expense, Net

Interest expense, net for the three and nine months ended September 30, 2017 compared to the same periods in 2016 remained relatively constant.

Other, Net

Other, net for the three and nine months ended September 30, 2017 compared to the same periods in 2016 remained relatively constant.

Effective Income Tax Rate

DPL’s effective income tax rate was 38.0% and 30.2% for the three months ended September 30, 2017 and 2016, respectively. DPL’s effective income tax rate was 28.7% and 900.0% for the nine months ended September 30, 2017 and 2016, respectively. In the first quarter of 2017, DPL decreased its liability for unrecognized tax benefits by $16 million resulting in a benefit to Income taxes and a corresponding decrease in its effective tax rate. See Note 12 - Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

(a) ACE evaluates its operating performance using the measure of revenue net of purchased power expense for electric sales. ACE believes Revenue net of purchased power expense is a useful measurement of its performance because it provides information that can be used to evaluate its operational performance. ACE has included the analysis below as a complement to the financial information provided in accordance with GAAP. However, Revenue net of purchased power expense is not a presentation defined under GAAP and may not be comparable to other companies' presentations or deemed more useful than the GAAP information provided elsewhere in this report.

Net Income (Loss)

Three Months Ended September 30, 2017 Compared to Three Months Ended September 30, 2016. ACE's Net income for the three months ended September 30, 2017, was lower than the same period in 2016, primarily due to a decrease in Revenue net of purchased power expense resulting from lower distribution revenues due to lower average customer usage and unfavorable weather related sales, partially offset by the impact of distribution rate increases approved by the NJBPU effective August 2016.

Nine Months Ended September 30, 2017 Compared to Nine Months Ended September 30, 2016. ACE's Net income (loss) for the nine months ended September 30, 2017, was higher than the same period in 2016, primarily due to an increase in Revenue net of purchased power expense resulting from higher electric distribution revenues as a result of a distribution rate increase approved by the NJBPU effective August 2016, lower Operating and maintenance expense mostly due to merger-related costs recognized in March 2016 and a decrease in income tax reserves in the first quarter 2017 for uncertain tax positions related to the deductibility of certain merger commitments.

Revenues Net of Purchased Power Expense

Operating revenues include revenue from the distribution and supply of electricity to ACE’s customers within its service territories at regulated rates. Operating revenues also include transmission service revenue that ACE receives as a transmission owner from PJM at rates regulated by FERC. Transmission rates are updated annually based on a FERC-approved formula methodology.

Electric revenues and purchased power expense are also affected by fluctuations in participation in the Customer Choice Program. All ACE customers have the choice to purchase electricity from competitive electric generation suppliers. The customer’s choice of supplier does not impact the volume of deliveries, but affects revenue collected from customers related to supplied energy service.

Table of Contents

Retail deliveries purchased from competitive electric generation suppliers (as a percentage of kWh sales) for the three and nine months ended September 30, 2017, compared to the same periods in 2016, consisted of the following:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2017	2016	2017	2016
Electric	44%	44%	48%	46%

Retail customers purchasing electric generation from competitive electric generation suppliers at September 30, 2017 and 2016 consisted of the following:

	September 30, 2017		September 30, 2016	
	Number of customers	% of total retail customers	Number of customers	% of total retail customers
Electric	91,219	17%	96,837	18%

Operating revenues include revenue from Transition Bond Charges that ACE receives, and pays to ACE Funding, to fund the principal and interest payments on Transition Bonds, revenue from the resale in the PJM wholesale markets for energy and capacity purchased under contacts with unaffiliated NUGs, and revenue from transmission enhancement credits.

Operating revenues also include work and services performed on behalf of customers, including other utilities, which is generally not subject to price regulation. Work and services includes mutual assistance to other utilities, highway relocation, rentals of pole attachments, late payment fees and collection fees.

Purchased power expense consists of the cost of electricity purchased by ACE to fulfill its default electricity supply obligation and, as such, is recoverable from customers in accordance with the terms of public service commission orders.

The changes in ACE's operating revenue net of purchased power expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016 consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Weather	$ (5)	$ (7)
Volume	(12)	(15)
Pricing - distribution revenues	16	36
Regulatory required programs	(9)	(19)
Transmission revenues	4	17
Other	—	(1)
Total (decrease) increase	$ (6)	$ 11

Weather. The demand for electricity is affected by weather conditions. With respect to the electric business, very warm weather in summer months and very cold weather in winter months are referred to as "favorable weather conditions" because these weather conditions result in increased deliveries of electricity. Conversely, mild weather reduces demand. During the three and nine months ended September 30, 2017 compared to the same periods in 2016, operating revenue net of purchased power and fuel expense was lower due to the impact of unfavorable weather conditions in ACE's service territory.

For retail customers of ACE, distribution revenues are not decoupled from the distribution of electricity by ACE, and thus are subject to variability due to changes in customer consumption. Therefore, changes in customer usage (due to weather conditions, energy prices, energy savings programs or other reasons) from period to period have a direct impact on reported distribution revenue for customers in ACE's service territory.

Heating and cooling degree days are quantitative indices that reflect the demand for energy needed to heat or cool a home or business. Normal weather is determined based on historical average heating and cooling degree days for a 20-year period in ACE's service territory. The changes in heating and cooling degree days in ACE's service territory for the three and nine months ended September 30, 2017 compared to the same periods in 2016 consisted of the following:

				% Change	
	2017	2016	Normal	2017 vs. 2016	2017 vs. Normal
Three Months Ended September 30,					
Heating Degree-Days	23	17	42	35.3 %	(45.2)%
Cooling Degree-Days	830	1,006	806	(17.5)%	3.0 %
Nine Months Ended September 30,					
Heating Degree-Days	2,608	2,938	3,103	(11.2)%	(16.0)%
Cooling Degree-Days	1,153	1,267	1,092	(9.0)%	5.6 %

Volume. During the three months ended September 30, 2017, compared to the same period in 2016, the decrease in operating revenue net of purchased power expense related to delivery volume, exclusive of the effects of weather, is primarily due to lower average customer usage. During the nine months ended September 30, 2017 compared to the same period in 2016, primarily reflects lower average customer usage, partially offset by the impact of customer growth.

Pricing—Distribution Revenues. The increase in operating revenue net of purchased power expense for the three and nine months ended September 30, 2017, compared to the same periods in 2016, was primarily due to the impact of higher electric distribution base rates charged to customers that became effective in August 2016. See Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements for additional information.

Regulatory Required Programs. This represents the change in operating revenues collected under approved riders to recover costs incurred for regulatory programs such as energy efficiency programs. The riders are designed to provide full and current cost recovery as well as a return. The costs of these programs are included in Operating and maintenance expense, Depreciation and amortization expense and Taxes other than income in ACE's Consolidated Statements of Operations and Comprehensive Income. Refer to the Operating and maintenance expense and Depreciation and amortization expense discussion below for additional information on included programs.

Transmission Revenues. Under a FERC-approved formula, transmission revenue varies from year to year based upon fluctuations in the underlying costs, capital investments being recovered and other billing adjustments. The increase in revenue net of purchased power expense for the three months ended September 30, 2017 compared to the same period in 2016 is a result of higher rates effective June 1, 2017 and related to increases in transmission plant investment and operating expenses. The increase in revenue net of purchased power expense for the nine months ended September 30, 2017 compared to the same period in 2016 is a result of higher rates effective June 1, 2017 and June 1, 2016 related to increases in transmission plant investment and operating expenses.

Operating and Maintenance Expense

	Three Months Ended September 30,		Increase (Decrease)	Nine Months Ended September 30,		Increase (Decrease)
	2017	2016		2017	2016	
Operating and maintenance expense - baseline	$ 71	$ 66	$ 5	$ 222	$ 343	$ (121)
Operating and maintenance expense - regulatory required programs[(a)]	1	1	—	3	3	—
Total operating and maintenance expense	$ 72	$ 67	$ 5	$ 225	$ 346	$ (121)

(a) Operating and maintenance expenses for regulatory required programs are costs for various legislative and/or regulatory programs that are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues.

The changes in Operating and maintenance expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016 consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Baseline		
Labor, other benefits, contracting and materials	$ 3	$ 6
Storm-related costs	(3)	(2)
BSC and PHISCO allocations[(a)]	—	(11)
Deferral of merger-related costs to regulatory asset	(9)	(9)
Merger commitments[(b)]	10	(111)
Other	4	6
Total increase (decrease)	$ 5	$ (121)

(a) Primarily related to merger severance and compensation costs recognized in 2016.
(b) Primarily related to merger-related commitments for customer rate credits and charitable contributions recognized in 2016.

Depreciation and Amortization Expense

The changes in Depreciation and amortization expense for the three and nine months ended September 30, 2017 compared to the same periods in 2016 consisted of the following:

	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2017
	Increase (Decrease)	Increase (Decrease)
Depreciation expense[(a)]	$ 1	$ 4
Regulatory asset amortization	—	(2)
Regulatory required programs[(b)]	(9)	(19)
Total decrease	$ (8)	$ (17)

(a) Depreciation expense increased due to ongoing capital expenditures.
(b) Regulatory required programs decreased for the three and nine months ended September 30, 2017 compared to the same periods in 2016 as a result of lower revenue due to rate decreases effective October 2016 for the ACE Transition Bond Charge and Market Transition Charge Tax. Depreciation and amortization expenses for regulatory required programs are recoverable from customers on a full and current basis through approved regulated rates. An equal and offsetting amount has been reflected in Operating revenues and Operating and maintenance expense.

Taxes Other Than Income

Taxes other than income for the three and nine months ended September 30, 2017 compared to the same periods in 2016, remained relatively constant.

Gain on sales of assets

Gain on sales of assets for the three and nine months ended September 30, 2017 compared to the same periods in 2016 remained relatively constant.

Interest Expense, Net

Interest expense, net for the three and nine months ended September 30, 2017 compared to the same periods in 2016 remained relatively constant.

Other, Net

Other, net for the three and nine months ended September 30, 2017 compared to the same periods in 2016, remained relatively constant.

Effective Income Tax Rate

ACE’s effective income tax rate was 36.9% and 32.9% for the three months ended September 30, 2017 and 2016, respectively. ACE’s effective income tax rate was 13.5% and 13.8% for the nine months ended September 30, 2017 and 2016, respectively. In the first quarter of 2017, ACE decreased its liability for unrecognized tax benefits by $22 million resulting in a benefit to Income taxes and a corresponding decrease in its effective tax rate. See Note 12 - Income Taxes of the Combined Notes to Consolidated Financial Statements for additional information regarding the components of the effective income tax rates.

(a) Reflects delivery volumes and revenues from customers purchasing electricity directly from ACE and customers purchasing electricity from a competitive electric generation supplier as all customers are assessed distribution charges. For customers purchasing electricity from ACE, revenue also reflects the cost of energy and transmission.

(b) Other revenue includes transmission revenue from PJM and wholesale electric revenues.

(c) Includes operating revenues from affiliates totaling $0 million and $1 million for the three months ended September 30, 2017 and 2016, respectively, and $2 million and $3 million for the nine months ended September 30, 2017 and 2016, respectively.

Table of Contents

Liquidity and Capital Resources

Exelon activity presented below includes the activity of PHI, Pepco, DPL and ACE, from the PHI Merger effective date of March 24, 2016 through September 30, 2017. Exelon prior year activity is unadjusted for the effects of the PHI Merger. Due to the application of push-down accounting to the PHI entity, PHI's activity is presented in two separate reporting periods, the legacy PHI activity through March 23, 2016 (Predecessor), and PHI activity for the remainder of the period after the PHI merger date (Successor). For each of Pepco, DPL and ACE the activity presented below include its activity for the nine months ended September 30, 2017 and 2016. All results included throughout the liquidity and capital resources section are presented on a GAAP basis.

The Registrants' operating and capital expenditures requirements are provided by internally generated cash flows from operations as well as funds from external sources in the capital markets and through bank borrowings. The Registrants' businesses are capital intensive and require considerable capital resources. Each Registrant's access to external financing on reasonable terms depends on its credit ratings and current overall capital market business conditions, including that of the utility industry in general. If these conditions deteriorate to the extent that the Registrants no longer have access to the capital markets at reasonable terms, the Registrants have access to unsecured revolving credit facilities with aggregate bank commitments of $9 billion. In addition, Generation has $525 million in bilateral facilities with banks which have various expirations between December 2017 and January 2019. The Registrants utilize their credit facilities to support their commercial paper programs, provide for other short-term borrowings and to issue letters of credit. See the "Credit Matters" section below for further discussion. The Registrants expect cash flows to be sufficient to meet operating expenses, financing costs and capital expenditure requirements.

The Registrants primarily use their capital resources, including cash, to fund capital requirements, including construction expenditures, retire debt, pay dividends, fund pension and other postretirement benefit obligations and invest in new and existing ventures. The Registrants spend a significant amount of cash on capital improvements and construction projects that have a long-term return on investment. Additionally, ComEd, PECO, BGE, Pepco, DPL and ACE operate in rate-regulated environments in which the amount of new investment recovery may be delayed or limited and where such recovery takes place over an extended period of time. See Note 11 — Debt and Credit Agreements of the Combined Notes to Consolidated Financial Statements for further discussion of the Registrants' debt and credit agreements.

NRC Minimum Funding Requirements

NRC regulations require that licensees of nuclear generating facilities demonstrate reasonable assurance that sufficient funds will be available in certain minimum amounts to decommission the facility. These NRC minimum funding levels are based upon the assumption that decommissioning activities will commence after the end of the current licensed life of each unit. If a unit fails the NRC minimum funding test, then the plant's owners or parent companies would be required to take steps, such as providing financial guarantees through letters of credit or parent company guarantees or making additional cash contributions to the NDT fund to ensure sufficient funds are available. See Note 13 - Nuclear Decommissioning of the Combined Notes to Consolidated Financial Statements for additional information on the NRC minimum funding requirements.

If a nuclear plant were to early retire there is a risk that it will no longer meet the NRC minimum funding requirements due to the earlier commencement of decommissioning activities and a shorter time period over which the NDT fund investments could appreciate in value. A shortfall could require Exelon to post parental guarantees for Generation's share of the obligations. However, the amount of any required guarantees will ultimately depend on the decommissioning approach adopted at each site, the associated level of costs, and the decommissioning trust fund investment performance going forward. Within two years after shutting down a plant, Generation must submit a post-shutdown decommissioning activities report (PSDAR) to the NRC that includes the planned option for decommissioning the site. As discussed in Note 13 — Nuclear Decommissioning of the Combined Notes to Consolidated Financial Statements, Generation filed its biennial decommissioning funding status report with the NRC on March 31, 2017 and demonstrated adequate funding assurance for all nuclear units currently operating. As of September 30, 2017, across the four alternative decommissioning approaches available, Generation estimates a parental guarantee of up to $115 million from Exelon could be required for TMI, dependent upon the ultimate decommissioning approach selected. TMI passes the NRC minimum funding test based on the unit’s 2019 retirement date under the decommissioning approach currently considered to be the most likely. For Oyster Creek, none of the alternative decommissioning approaches available would require Exelon to post a parental guarantee.

Upon issuance of any required financial guarantees, each site would be able to utilize the respective NDT funds for radiological decommissioning costs, which represent the majority of the total expected decommissioning costs.

Table of Contents

However, the NRC must approve an additional exemption in order for the plant's owner(s) to utilize the NDT fund to pay for non-radiological decommissioning costs (i.e., spent fuel management and site restoration costs). If a unit does not receive this exemption, the costs would be borne by the owner(s). While the ultimate amounts may vary greatly and could be reduced by alternate decommissioning scenarios and/or reimbursement of certain costs under the United States Department of Energy reimbursement agreements or future litigation, across the four alternative decommissioning approaches available, if TMI or Oyster Creek were to fail to obtain the exemption, Generation estimates it could incur spent fuel management and site restoration costs over the next ten years of up to $190 million and $150 million net of taxes, respectively, dependent upon the ultimate decommissioning approach selected. Under the decommissioning approach currently considered the most likely for each unit, Generation estimates it could incur spent fuel management and site restoration costs over the next ten years of up to $170 million and $130 million net of taxes, respectively, if TMI or Oyster Creek were to fail to obtain the exemption.

Junior Subordinated Notes

In June 2014, Exelon issued $1.15 billion of junior subordinated notes in the form of 23 million equity units at a stated amount of $50.00 per unit. Each equity unit represented an undivided beneficial ownership interest in Exelon's $1.15 billion of 2.50% junior subordinated notes due in 2024 ("2024 notes") and a forward equity purchase contract. As contemplated in the June 2014 equity unit structure, in April 2017, Exelon completed the remarketing of the 2024 notes into $1.15 billion of 3.497% junior subordinated notes due in 2022 ("Remarketing"). Exelon conducted the Remarketing on behalf of the holders of equity units and did not directly receive any proceeds therefrom. Instead, the former holders of the 2024 notes used debt remarketing proceeds towards settling the forward equity purchase contract with Exelon on June 1, 2017. Exelon issued approximately 33 million shares of common stock from treasury stock and received $1.15 billion upon settlement of the forward equity purchase contract. When reissuing treasury stock Exelon uses the average price paid to repurchase shares to calculate a gain or loss on issuance and records gains or losses directly to retained earnings. A loss on reissuance of treasury shares of $1.05 billion was recorded to retained earnings as of September 30, 2017. See Note 17 - Earnings Per Share and Equity of the Combined Notes to Consolidated Financial Statements for further information on the issuance of common stock.

Cash Flows from Operating Activities

General

Generation's cash flows from operating activities primarily result from the sale of electric energy and energy-related products and services to customers. Generation's future cash flows from operating activities may be affected by future demand for and market prices of energy and its ability to continue to produce and supply power at competitive costs as well as to obtain collections from customers.

The Utility Registrants' cash flows from operating activities primarily result from the transmission and distribution of electricity and, in the case of PECO, BGE, and DPL, gas distribution services. The Utility Registrants' distribution services are provided to an established and diverse base of retail customers. The Utility Registrants' future cash flows may be affected by the economy, weather conditions, future legislative initiatives, future regulatory proceedings with respect to their rates or operations, competitive suppliers, and their ability to achieve operating cost reductions.

See Notes 3 — Regulatory Matters and 24 — Commitments and Contingencies of the Combined Notes to Consolidated Financial Statements of the Exelon 2016 Form 10-K for further discussion of regulatory and legal proceedings and proposed legislation.

The following table provides a summary of the major items affecting Exelon's cash flows from operations for the nine months ended September 30, 2017 and 2016:

	Nine Months Ended September 30,		
	2017	**2016[c]**	**Variance**
Net income	$ 1,911	$ 956	$ 955
Add (subtract):			
Non-cash operating activities[a]	5,011	5,946	(935)
Pension and non-pension postretirement benefit contributions	(344)	(283)	(61)
Income taxes	167	527	(360)
Changes in working capital and other noncurrent assets and liabilities[b]	(1,003)	(516)	(487)
Option premiums received (paid), net	35	(24)	59
Collateral (posted) received, net	(100)	757	(857)
Net cash flows provided by operations	$ 5,677	$ 7,363	$ (1,686)

(a) Represents, when applicable, depreciation, amortization and accretion, net fair value changes related to derivatives, deferred income taxes, provision for uncollectible accounts, pension and other postretirement benefit expense, equity in earnings and losses of unconsolidated affiliates and investments, decommissioning-related items, stock compensation expense, impairment of long-lived assets, PHI merger commitment and severance charges, and other non-cash charges. See Note 19 - Supplemental Financial Information of the Combined Notes to Consolidated Financial Statements for further detail on non-cash operating activity.

(b) Changes in working capital and other noncurrent assets and liabilities exclude the changes in commercial paper, income taxes and the current portion of long-term debt.

(c) Includes PHI Consolidated activity from March 24, 2016 to September 30, 2016.

Pension and Other Postretirement Benefits

Management considers various factors when making pension funding decisions, including actuarially determined minimum contribution requirements under ERISA, contributions required to avoid benefit restrictions and at-risk status as defined by the Pension Protection Act of 2006, management of the pension obligation and regulatory implications.

On October 3, 2017, the US Department of Treasury and IRS released final regulations updating the mortality tables to be used for defined benefit pension plan funding, as well as the valuation of lump sum and other accelerated distribution options, effective for plan years beginning in 2018. The new mortality tables reflect improved projected life expectancy as compared to the existing table, which is generally expected to increase minimum pension funding requirements, Pension Benefit Guaranty Corporation premiums and the value of lump sum distributions. The IRS will permit plan sponsors the option of using existing mortality tables for determining minimum funding requirements for 2018. The one-year delay does not apply for use of the mortality tables to determine the present value of lump sum distributions. Exelon is still evaluating any potential impacts of the new mortality tables.

OPEB funding generally follows accounting cost; however, Exelon's management has historically considered several factors in determining the level of contributions to its funded other postretirement benefit plans, including liabilities management, levels of benefit claims paid and regulatory implications (amounts deemed prudent to meet regulator expectations and best assure continued recovery).

To the extent interest rates decline significantly or the pension plans do not earn the expected asset return rates, annual pension contribution requirements in future years could increase. Additionally, expected contributions could change if Exelon changes its pension or OPEB funding strategy.

Tax Matters

The Registrants' future cash flows from operating activities may be affected by the following tax matters:

- Exelon appealed the Tax Court's like-kind exchange decision in the third quarter of 2017 and expects that a payment of approximately $1.3 billion related to the like-kind exchange will be due, including $300 million attributable to ComEd, in the fourth quarter of 2017. While Exelon will receive a tax benefit of approximately $350 million associated with the deduction for the interest, Exelon currently has a net operating loss carryforward and thus does not expect to realize the cash benefit until 2018. After taking into account these interest deduction tax benefits, the total estimated net cash outflow for the like-kind exchange is approximately $950 million, of which approximately $300 million is attributable to ComEd after giving consideration to Exelon's agreement to hold ComEd harmless from any unfavorable impacts on ComEd's equity from the like-kind exchange position.

Of the above amounts payable, Exelon deposited with the IRS $1.25 billion in October of 2016. In the third quarter of 2017, the $300 million payable discussed above attributable to ComEd, net of ComEd's receivable pursuant to the hold harmless agreement, was settled with Exelon. Any remaining amounts due to the IRS will be paid by Exelon in the fourth quarter of 2017. Exelon funded the $1.25 billion deposit with a combination of cash on hand and short-term borrowings. See Note 12 - Income Taxes for further discussion of the like-kind exchange tax position.

- State and local governments continue to face increasing financial challenges, which may increase the risk of additional income tax, property taxes and other taxes or the imposition, extension or permanence of temporary tax increases. On July 6, 2017, Illinois enacted Senate Bill 9, which permanently increased Illinois' total corporate income tax rate from 7.75% to 9.50% effective July 1, 2017. The rate increase is not expected to have a material ongoing impact to Exelon's, Generation's or ComEd's future cash taxes. See Note 12 - Income Taxes for further discussion of the Illinois tax rate change.

Cash flows from operations for the nine months ended September 30, 2017 and 2016 by Registrant were as follows:

	Nine Months Ended September 30,	
	2017	**2016**
Exelon	$ 5,677	$ 7,363
Generation	2,270	3,723
ComEd	1,120	1,749
PECO	603	582
BGE	704	660
Pepco	348	504
DPL	292	267
ACE	158	315

	Successor		*Predecessor*
	Nine Months Ended September 30, 2017	**March 24, 2016 to September 30, 2016**	**January 1, 2016 to March 23, 2016**
PHI	$ 797	$ 546	$ 264

Changes in the Registrants' cash flows from operations were generally consistent with changes in each Registrant's respective results of operations, as adjusted by changes in working capital in the normal course of business, except as discussed below. In addition, significant operating cash flow impacts for the Registrants for the nine months ended September 30, 2017 and 2016 were as follows:

Generation

- Depending upon whether Generation is in a net mark-to-market liability or asset position, collateral may be required to be posted with or collected from its counterparties. In addition, the collateral posting and collection requirements differ depending on whether the transactions are on an exchange or in the OTC markets. During the nine months ended September 30, 2017 and 2016, Generation had net (payments)/collections of counterparty cash collateral of $(77) million and $759 million, respectively, primarily due to market conditions that resulted in changes to Generation's net mark-to-market position.

- During the nine months ended September 30, 2017 and 2016, Generation had net (payments) collections of approximately $(35) million and $24 million, respectively, related to purchases and sales of options. The level of option activity in a given period may vary due to several factors, including changes in market conditions as well as changes in hedging strategy.

ComEd

- During nine months ended September 30, 2017 and 2016, ComEd posted approximately $24 million and $2 million of cash collateral with PJM, respectively. ComEd's collateral posted with PJM has increased year over year primarily due to an increase in ComEd's RPM credit requirements and peak market activity with PJM. As of September 30, 2017 and 2016, ComEd had approximately $47 million and $33 million cash collateral posted with PJM, respectively.

For further discussion regarding changes in non-cash operating activities, please refer to Note 19 - Supplemental Financial Information of the Combined Notes to the Financial Statements.

Cash Flows from Investing Activities

Cash flows used in investing activities for the nine months ended September 30, 2017 and 2016 by Registrant were as follows:

	Nine Months Ended September 30, 2017	Nine Months Ended September 30, 2016
Exelon	$ (5,810)	$ (13,219)
Generation	(1,903)	(3,278)
ComEd	(1,731)	(1,919)
PECO	(457)	(438)
BGE	(586)	(614)
Pepco	(439)	(435)
DPL	(293)	(254)
ACE	(241)	(227)

	Successor		*Predecessor*
	Nine Months Ended September 30, 2017	March 24, 2016 to September 30, 2016	January 1, 2016 to March 23, 2016
PHI	$ (991)	$ (631)	$ (343)

Significant investing cash flow impacts for the Registrants for nine months ended September 30, 2017 and 2016 were as follows:

Exelon

- During the nine months ended September 30, 2017, Exelon had expenditures of $23 million and $178 million relating to the acquisitions of ConEdison Solutions and the FitzPatrick facility, respectively. During the nine months ended September 30, 2016, Exelon had expenditures of $6.6 billion relating to the acquisition of PHI.
- During the nine months ended September 30, 2016, Exelon had proceeds of $360 million as a result of early termination of direct financing leases.

Generation

- During the nine months ended September 30, 2017, Exelon had expenditures of $23 million and $178 million relating to the acquisitions of ConEdison Solutions and the FitzPatrick facility, respectively.

Capital Expenditure Spending

Generation

Generation has entered into several agreements to acquire equity interests in privately held and development stage entities which develop energy-related technologies. The agreements contain a series of scheduled investment commitments, including in-kind service contributions. There are anticipated expenditures remaining through 2019 to fund anticipated planned capital and operating needs of the associated companies. See Note 24 — Commitments and Contingencies of the Combined Notes to Consolidated Financial Statements of the Exelon 2016 Form 10-K for further details of Generation's equity interests.

Capital expenditures by Registrant for the nine months ended September 30, 2017 and 2016 and projected amounts for the full year 2017 are as follows:

	Projected Full Year 2017[a]	Nine Months Ended September 30,	
		2017	2016
Exelon[b]	$ 8,075	$ 5,556	$ 6,368
Generation	2,450	1,654	2,651
ComEd[c]	2,200	1,698	1,950
PECO	775	537	448
BGE	925	615	611
Pepco	625	439	392
DPL	425	294	260
ACE	300	242	227

	Projected Full Year 2017 [a]	*Successor*		*Predecessor*
		Nine Months Ended September 30, 2017	March 24, 2016 to September 30, 2016	January 1, 2016 to March 23, 2016
PHI[d]	$ 1,375	$ 995	$ 624	$ 273

(a) Total projected capital expenditures do not include adjustments for non-cash activity.
(b) Includes corporate operations, BSC, and PHISCO rounded to the nearest $25 million.
(c) The 2017 projections include approximately $274 million of expected incremental spending pursuant to EIMA, ComEd has committed to invest approximately $2.6 billion over a ten year period, through 2022, to modernize and storm-harden its distribution system and to implement smart grid technology.
(d) Includes PHISCO rounded to the nearest $25 million.

Projected capital expenditures and other investments are subject to periodic review and revision to reflect changes in economic conditions and other factors.

Approximately 37% and 21% of the projected 2017 capital expenditures at Generation are for the acquisition of nuclear fuel and growth (primarily new plant construction and distributed generation), respectively, with the remaining amounts reflecting additions and upgrades to existing facilities (including material condition improvements during nuclear refueling outages). Generation anticipates that they will fund capital expenditures with internally generated funds and borrowings.

ComEd, PECO, BGE, Pepco, DPL and ACE

Approximately 93% of the projected 2017 capital expenditures at ComEd and 100% of the projected of the projected 2017 capital expenditures at PECO, BGE, Pepco, DPL, and ACE are for continuing projects to maintain and improve operations, including enhancing reliability and adding capacity to the transmission and distribution systems such as ComEd's reliability related investments required under EIMA, and the Utility Registrants' construction commitments under PJM's RTEP. In addition to the capital expenditure for continuing projects, ComEd's total expenditures include smart grid/smart meter technology required under EIMA.

The Utility Registrants as transmission owners are subject to NERC compliance requirements. NERC provides guidance to transmission owners regarding assessments of transmission lines. The results of these assessments could require the Utility Registrants to incur incremental capital or operating and maintenance expenditures to ensure their transmission lines meet NERC standards. In 2010, NERC provided guidance to transmission owners that recommended the Utility Registrants perform assessments of their transmission lines. ComEd, PECO and BGE submitted their final bi-annual reports to NERC in January 2014. ComEd, PECO and BGE will be incurring incremental capital expenditures associated with this guidance following the completion of the assessments. Specific projects and expenditures are identified as the assessments are completed. ComEd’s, PECO’s and BGE’s forecasted 2017 capital expenditures above reflect capital spending for remediation to be completed through 2018. Pepco, DPL and ACE have substantially completed their assessments and thus do not expect significant capital expenditures related to this guidance in 2017.

The Utility Registrants anticipate that they will fund their capital expenditures with a combination of internally generated funds and borrowings and additional capital contributions from parent, including ComEd's capital expenditures associated with EIMA as further discussed in Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements.

Cash Flows from Financing Activities

Cash flows provided by (used in) financing activities for the nine months ended September 30, 2017 and 2016 by Registrant were as follows:

	Nine Months Ended September 30,	
	2017	**2016**
Exelon	$ 701	$ 1,251
Generation	(297)	(501)
ComEd	812	147
PECO	121	77
BGE	(112)	286
Pepco	199	28
DPL	(42)	(14)
ACE	(13)	74

	Successor		*Predecessor*
	Nine Months Ended September 30, 2017	**March 24, 2016 to September 30, 2016**	**January 1, 2016 to March 23, 2016**
PHI	$ 161	$ 65	$ 372

Debt

See Note 11 — Debt and Credit Agreements of the Combined Notes to Consolidated Financial Statements for further details of the Registrants' debt issuances.

Dividends

Cash dividend payments and distributions during the nine months ended September 30, 2017 and 2016 by Registrant were as follows:

	Nine Months Ended September 30,	
	2017	**2016**
Exelon	$ 921	$ 873
Generation	494	167
ComEd	316	275
PECO	216	208

BGE[a]	148	142
Pepco	133	92
DPL	82	39
ACE	53	24

	Successor		*Predecessor*
	Nine Months Ended September 30, 2017	**March 24, 2016 to September 30, 2016**	**January 1, 2016 to March 23, 2016**
PHI	$ 267	$ 174	$ —

(a) Includes dividends paid on BGE's preference stock in 2016.

Quarterly dividends declared by the Exelon Board of Directors during the nine months ended September 30, 2017 and for the fourth quarter of 2017 were as follows:

Period	Declaration Date	Shareholder of Record Date	Dividend Payable Date	Cash per Share[a]
First Quarter 2017	January 31, 2017	February 15, 2017	March 10, 2017	$ 0.3275
Second Quarter 2017	April 25, 2017	May 15, 2017	June 9, 2017	$ 0.3275
Third Quarter 2017	July 25, 2017	August 15, 2017	September 8, 2017	$ 0.3275
Fourth Quarter 2017	September 25, 2017	November 15, 2017	December 8, 2017	$ 0.3275

(a) Exelon's Board of Directors approved a revised dividend policy. The approved policy will raise the dividend 2.5% each year for the next three years, beginning with the June 2016 dividend and subject to Board approval.

Short-Term Borrowings

Short-term borrowings incurred (repaid) during the nine months ended September 30, 2017 and 2016 by Registrant were as follows:

	Nine Months Ended September 30, 2017	Nine Months Ended September 30, 2016
Exelon	$ (559)	$ (1,271)
Generation	(609)	43
ComEd	—	(284)
BGE	(45)	(210)
Pepco	(23)	(64)
DPL	54	(88)
ACE	65	(5)

	Successor		*Predecessor*
	Nine Months Ended September 30, 2017	March 24, 2016 to September 30, 2016	January 1, 2016 to March 23, 2016
PHI	$ (404)	$ (820)	$ 379

Contributions from Parent/Member

Contributions received from Parent/Member for the nine months ended September 30, 2017 and 2016 by Registrant were as follows:

	Nine Months Ended September 30,	
	2017	**2016**
Generation	$ 102	$ 142
ComEd [(a)(b)]	567	188
PECO [(b)]	16	18
BGE [(b)]	77	28
Pepco [(c)]	161	187
DPL [(c)]	—	113
ACE [(c)]	—	139

	Successor		*Predecessor*
	Nine Months Ended September 30, 2017	**March 24, 2016 to September 30, 2016**	**January 1, 2016 to March 23, 2016**
PHI [(b)]	$ 758	$ 1,088	$ —

(a) Additional contributions from parent or external debt financing may be required as a result of increased capital investment in infrastructure improvements and modernization pursuant to EIMA and transmission upgrades.
(b) Contribution paid by Exelon.
(c) Contribution paid by PHI.

Other

For the nine months ended September 30, 2017, other financing activities primarily consist of debt issuance costs. See Note 11 — Debt and Credit Agreements of the Combined Notes to the Consolidated Financial Statements for further details of the Registrants' debt issuances.

Credit Matters

The Registrants fund liquidity needs for capital investment, working capital, energy hedging and other financial commitments through cash flows from continuing operations, public debt offerings, commercial paper markets and large, diversified credit facilities. The credit facilities include $9.5 billion in aggregate total commitments of which $8.3 billion was available as of September 30, 2017, and of which no financial institution has more than 7% of the aggregate commitments for the Registrants. The Registrants had access to the commercial paper market during the third quarter of 2017 to fund their short-term liquidity needs, when necessary. The Registrants routinely review the sufficiency of their liquidity position, including appropriate sizing of credit facility commitments, by performing various stress test scenarios, such as commodity price movements, increases in margin-related transactions, changes in hedging levels and the impacts of hypothetical credit downgrades. The Registrants have continued to closely monitor events in the financial markets and the financial institutions associated with the credit facilities, including monitoring credit ratings and outlooks, credit default swap levels, capital raising and merger activity. See PART I. ITEM 1A. RISK FACTORS of the Exelon 2016 Form 10-K for further information regarding the effects of uncertainty in the capital and credit markets.

The Registrants believe their cash flow from operating activities, access to credit markets and their credit facilities provide sufficient liquidity. If Generation lost its investment grade credit rating as of September 30, 2017, it would have been required to provide incremental collateral of $1.8 billion to meet collateral obligations for derivatives, non-derivatives, normal purchase normal sales contracts and applicable payables and receivables, net of the contractual right of offset under master netting agreements, which is well within its current available credit facility capacities of $4.6 billion.

The following table presents the incremental collateral that each Utility Registrant would have been required to provide in the event each Utility Registrant lost its investment grade credit rating at September 30, 2017 and available credit facility capacity prior to any incremental collateral at September 30, 2017:

	PJM Credit Policy Collateral	Other Incremental Collateral Required [(a)]	Available Credit Facility Capacity Prior to Any Incremental Collateral
ComEd	$ 18	$ —	$ 998
PECO	3	20	599
BGE	3	28	600
Pepco	4	—	300
DPL	1	9	300
ACE	—	—	300

(a) Represents incremental collateral related to natural gas procurement contracts.

Exelon Credit Facilities

Exelon, Pepco, DPL and ACE meet their short-term liquidity requirements primarily through the issuance of commercial paper and short-term notes. ComEd and BGE meet their short-term liquidity requirements primarily through the issuance of commercial paper. Generation and PECO meet their short-term liquidity requirements primarily through the issuance of commercial paper and borrowings from the Exelon intercompany money pool. PHI meets its short-term liquidity requirements primarily through the issuance of short-term notes and the Exelon intercompany money pool. The Registrants may use their respective credit facilities for general corporate purposes, including meeting short-term funding requirements and the issuance of letters of credit.

The following table reflects the Registrants' commercial paper programs supported by the revolving credit agreements and bilateral credit agreements at September 30, 2017:

Commercial Paper Programs

Commercial Paper Issuer	Maximum Program Size [(a)(b)]	Outstanding Commercial Paper at September 30, 2017	Average Interest Rate on Commercial Paper Borrowings for the Nine Months Ended September 30, 2017
Exelon Corporate	$ 600	$ —	1.16%
Generation	5,300	—	1.20%
ComEd	1,000	—	1.24%
PECO	600	—	1.13%
BGE	600	—	1.15%
Pepco	500	—	1.04%
DPL	500	54	1.40%
ACE	350	65	1.36%

(a) Excludes $525 million bilateral credit facilities that do not back Generation's commercial paper program.

(b) Excludes additional credit facility agreements for Generation, ComEd, PECO, BGE, Pepco, DPL and ACE with aggregate commitments of $49 million, $34 million, $34 million, $5 million, $2 million, $2 million and $2 million, respectively, arranged with minority and community banks located primarily within utilities' service territories. These facilities expire on October 12, 2018. These facilities are solely utilized to issue letters of credit. As of September 30, 2017, letters of credit issued under these agreements for Generation, ComEd, PECO and BGE totaled $5 million, $12 million, $21 million and $2 million, respectively.

In order to maintain their respective commercial paper programs in the amounts indicated above, each Registrant must have credit facilities in place, at least equal to the amount of its commercial paper program. While the amount of its commercial paper outstanding does not reduce available capacity under a Registrant's credit facility, a Registrant does not issue commercial paper in an aggregate amount exceeding the then available capacity under its credit facility. At September 30, 2017, the Registrants had the following aggregate bank commitments, credit facility borrowings and available capacity under their respective credit facilities:

Credit Agreements

					Available Capacity at September 30, 2017	
Borrower	**Facility Type**	**Aggregate Bank Commitment**[a][b][c]	**Facility Draws**	**Outstanding Letters of Credit**	**Actual**	**To Support Additional Commercial Paper**[b][d]
Exelon Corporate	Syndicated Revolver	$ 600	$ —	$ 45	$ 555	$ 555
Generation[e]	Syndicated Revolver	5,300	—	887	4,413	4,413
Generation	Bilaterals	525	70	235	220	—
ComEd	Syndicated Revolver	1,000	—	2	998	998
PECO	Syndicated Revolver	600	—	1	599	599
BGE	Syndicated Revolver	600	—	—	600	600
Pepco	Syndicated Revolver	300	—	—	300	300
DPL	Syndicated Revolver	300	—	—	300	246
ACE	Syndicated Revolver	300	—	—	300	235

(a) Excludes $128 million of credit facility agreements arranged at minority and community banks at Generation, ComEd, PECO, BGE, Pepco, DPL and ACE. These facilities expire on October 12, 2018. These facilities are solely utilized to issue letters of credit. As of September 30, 2017, letters of credit issued under these agreements for Generation, ComEd, PECO and BGE totaled $5 million, $12 million, $21 million and $2 million, respectively.

(b) Pepco, DPL and ACE's revolving credit facility is subject to available borrowing capacity. The borrowing capacity may be increased or decreased during the term of the facility, except that (i) the sum of the borrowing capacity must equal the total amount of the facility, and (ii) the aggregate amount of credit used at any given time by each of Pepco, DPL or ACE may not exceed $900 million or the maximum amount of short-term debt the company is permitted to have outstanding by its regulatory authorities. The total number of the borrowing reallocations may not exceed eight per year during the term of the facility

(c) Excludes nonrecourse debt letters of credit, see Note 14 — Debt and Credit Agreements in the Exelon 2016 Form 10-K for further information on Continental Wind nonrecourse debt.

(d) Excludes $525 million bilateral credit facilities that do not back Generation's commercial paper program.

(e) Excludes ExGen Texas Power Financing's $20 million of borrowed debt on its revolving credit facility.

As of September 30, 2017, there was $70 million of borrowings under Generation's bilateral credit facilities.

Borrowings under Exelon Corporate's, Generation's, ComEd's, PECO's, BGE's, Pepco's, DPL's, and ACE's revolving credit agreements bear interest at a rate based upon either the prime rate or a LIBOR-based rate, plus an adder based upon the particular Registrant's credit rating. The adders for the prime based borrowings and LIBOR-based borrowings are presented in the following table:

	Exelon	**Generation**	**ComEd**	**PECO**	**BGE**	**Pepco**	**DPL**	**ACE**
Prime based borrowings	27.5	27.5	7.5	0.0	0.0	7.5	7.5	7.5
LIBOR-based borrowings	127.5	127.5	107.5	90.0	100.0	107.5	107.5	107.5

The maximum adders for prime rate borrowings and LIBOR-based rate borrowings are 90 basis points and 165 basis points, respectively. The credit agreements also require the borrower to pay a facility fee based upon the aggregate commitments. The fee varies depending upon the respective credit ratings of the borrower.

Each revolving credit agreement for Exelon, Generation, ComEd, PECO, BGE, Pepco, DPL and ACE requires the affected borrower to maintain a minimum cash from operations to interest expense ratio for the twelve-month period ended on the last day of any quarter. The following table summarizes the minimum thresholds reflected in the credit agreements for the nine months ended September 30, 2017:

	Exelon	Generation	ComEd	PECO	BGE	Pepco	DPL	ACE
Credit agreement threshold	2.50 to 1	3.00 to 1	2.00 to 1	2.00 to 1	2.00 to 1	2.00 to 1	2.00 to 1	2.00 to 1

At September 30, 2017, the interest coverage ratios at Exelon, Generation, ComEd, PECO, BGE, Pepco, DPL and ACE were as follows:

	Exelon	Generation	ComEd	PECO	BGE	Pepco	DPL	ACE
Interest coverage ratio	6.27	9.02	10.83	8.26	10.66	6.83	8.78	6.03

An event of default under Exelon, Generation, ComEd, PECO or BGE's indebtedness will not constitute an event of default under any of the others' credit facilities, except that a bankruptcy or other event of default in the payment of principal, premium or indebtedness in principal amount in excess of $100 million in the aggregate by Generation will constitute an event of default under the Exelon Corporate credit facility. An event of default under Pepco, DPL or ACE's indebtedness will not constitute an event of default under any of the others' credit facilities, except that a bankruptcy or other event of default in the payment of principal, premium or indebtedness in principal amount in excess of $50 million in the aggregate will constitute an event of default under the credit facility.

The absence of a material adverse change in Exelon's or PHI's business, property, results of operations or financial condition is not a condition to the availability of credit under the credit agreement. The credit agreement does not include any rating triggers.

Security Ratings

The Registrants' access to the capital markets, including the commercial paper market, and their respective financing costs in those markets, may depend on the securities ratings of the entity that is accessing the capital markets.

The Registrants' borrowings are not subject to default or prepayment as a result of a downgrading of securities, although such a downgrading of a Registrant's securities could increase fees and interest charges under that Registrant's credit agreements.

As part of the normal course of business, the Registrants enter into contracts that contain express provisions or otherwise permit the Registrants and their counterparties to demand adequate assurance of future performance when there are reasonable grounds for doing so. In accordance with the contracts and applicable contracts law, if the Registrants are downgraded by a credit rating agency, it is possible that a counterparty would attempt to rely on such a downgrade as a basis for making a demand for adequate assurance of future performance, which could include the posting of collateral. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information on collateral provisions.

Intercompany Money Pool

To provide an additional short-term borrowing option that will generally be more favorable to the borrowing participants than the cost of external financing, both Exelon and PHI operate intercompany money pools. Maximum amounts contributed to and borrowed from the money pool by participant and the net contribution or borrowing as of September 30, 2017, are presented in the following table:

Exelon Intercompany Money Pool	**During the Three Months Ended September 30, 2017**		**As of September 30, 2017**
Contributed (borrowed)	**Maximum Contributed**	**Maximum Borrowed**	**Contributed (Borrowed)**
Exelon Corporate	$ 579	n/a	$ 280
Generation	—	(417)	(146)
PECO	97	(10)	57
BSC	—	(369)	(245)
PHI Corporate [(a)]	n/a	(33)	(1)
PCI [(a)]	54	—	54

(a) As a result of the merger, PHI Corporate and PCI began to participate in the Exelon Intercompany Money Pool effective March 24, 2016.

PHI Intercompany Money Pool	**During the Three Months Ended September 30, 2017**		**As of September 30, 2017**
Contributed (borrowed)	**Maximum Contributed**	**Maximum Borrowed**	**Contributed (Borrowed)**
PHI Corporate	$ 51	$ (1)	$ —
PHISCO	24	(25)	—

Investments in Nuclear Decommissioning Trust Funds

Exelon, Generation and CENG maintain trust funds, as required by the NRC, to fund certain costs of decommissioning nuclear plants. The mix of securities in the trust funds is designed to provide returns to be used to fund decommissioning and to offset inflationary increases in decommissioning costs. Generation actively monitors the investment performance of the trust funds and periodically reviews asset allocations in accordance with Generation’s NDT fund investment policy. Generation’s and CENG’s investment policies establish limits on the concentration of holdings in any one company and also in any one industry. See Note 13 —Nuclear Decommissioning of the Combined Notes to Consolidated Financial Statements for further information regarding the trust funds, the NRC’s minimum funding requirements and related liquidity ramifications.

Shelf Registration Statements

Exelon, Generation, ComEd, PECO, BGE, Pepco, DPL and ACE have a currently effective combined shelf registration statement unlimited in amount, filed with the SEC, that will expire in August 2019. The ability of each Registrant to sell securities off the shelf registration statement or to access the private placement markets will depend on a number of factors at the time of the proposed sale, including other required regulatory approvals, as applicable, the current financial condition of the Registrant, its securities ratings and market conditions.

Regulatory Authorizations

Generation, ComEd, PECO, BGE, Pepco, DPL and ACE are required to obtain short-term and long-term financing authority from Federal and State Commissions as follows:

	Short-term Financing Authority[a][b]			Long-term Financing Authority[c]		
	Commission	Expiration Date	Amount (in millions)	Commission	Expiration Date	Amount (in millions)
ComEd[d]	FERC	December 31, 2017	$ 2,500	ICC	2019	$ 1,383
PECO	FERC	December 31, 2017	1,500	PAPUC	December 31, 2018	1,275
BGE	FERC	December 31, 2017	700	MDPSC	N/A	700
Pepco	FERC	June 30, 2018	500	MDPSC / DCPSC	September 25, 2017	—
DPL	FERC	June 30, 2018	500	MDPSC / DPSC	December 31, 2017	125
ACE	NJPU	January 1, 2018	350	NJBPU	December 31, 2017	300

(a) Generation currently has blanket financing authority it received from FERC in connection with its market-based rate authority.

(b) On October 31, 2017, ComEd, PECO, BGE, Pepco and DPL filed applications with FERC for renewal of their short-term financing authority through December 31, 2019. ComEd, PECO, BGE, Pepco and DPL expect approval of the applications before the end of the year.

(c) Pepco, DPL, and ACE, are currently in the process renewing their long-term financing authority with their respective commissions and expect approvals before the end of the year.

(d) ComEd had $1,140 million available in long-term debt refinancing authority and $243 million available in new money long term debt financing authority from the ICC as of September 30, 2017 and has an expiration date of June 1, 2019 and March 1, 2019, respectively.

Contractual Obligations and Off-Balance Sheet Arrangements

Contractual obligations represent cash obligations that are considered to be firm commitments and commercial commitments triggered by future events. See Note 24 — Commitments and Contingencies of the Combined Notes to Consolidated Financial Statements in the Exelon 2016 Form 10-K.

Generation, ComEd, PECO, BGE, Pepco, DPL and ACE have obligations related to contracts for the purchase of power and fuel supplies, and ComEd and PECO have obligations related to their financing trusts. The power and fuel purchase contracts and the financing trusts have been considered for consolidation in the Registrants' respective financial statements pursuant to the authoritative guidance for VIEs. See Note 1 — Basis of Presentation of the Combined Notes to Consolidated Financial Statements for further information.

For an in-depth discussion of the Registrants' contractual obligations and off-balance sheet arrangements, see "Management's Discussion and Analysis of Financial Condition and Results of Operations — Contractual Obligations and Off-Balance Sheet Arrangements" in the Exelon 2016 Form 10-K and "Management's Discussion and Analysis of Financial Condition and Results of Operations - Contractual Obligations and Commercial Commitments."

Item 3. Quantitative and Qualitative Disclosures about Market Risk

The Registrants are exposed to market risks associated with adverse changes in commodity prices, counterparty credit, interest rates and equity prices. Exelon's RMC approves risk management policies and objectives for risk assessment, control and valuation, counterparty credit approval, and the monitoring and reporting of risk exposures. The RMC is chaired by the chief executive officer and includes the chief risk officer, chief strategy officer, chief executive officer of Exelon Utilities, chief commercial officer, chief financial officer and chief executive officer of Constellation. The RMC reports to the Finance and Risk Committee of the Exelon

Board of Directors on the scope of the risk management activities. The following discussion serves as an update to ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK of Exelon’s 2016 Annual Report on Form 10-K incorporated herein by reference.

Commodity Price Risk (All Registrants)

Commodity price risk is associated with price movements resulting from changes in supply and demand, fuel costs, market liquidity, weather conditions, governmental regulatory and environmental policies and other factors. To the extent the amount of energy Exelon generates differs from the amount of energy it has contracted to sell, Exelon has price risk from commodity price movements. Exelon seeks to mitigate its commodity price risk through the sale and purchase of electricity, fossil fuel and other commodities.

Generation

Normal Operations and Hedging Activities. Electricity available from Generation’s owned or contracted generation supply in excess of Generation’s obligations to customers, including portions of the Utility Registrants’ retail load, is sold into the wholesale markets. To reduce price risk caused by market fluctuations, Generation enters into non-derivative contracts as well as derivative contracts, including forwards, futures, swaps and options, with approved counterparties to hedge anticipated exposures. Generation believes these instruments represent economic hedges that mitigate exposure to fluctuations in commodity prices. Generation expects the settlement of the majority of its economic hedges will occur during 2017 through 2019.

In general, increases and decreases in forward market prices have a positive and negative impact, respectively, on Generation’s owned and contracted generation positions which have not been hedged. Exelon’s hedging program involves the hedging of commodity risk for Exelon’s expected generation, typically on a ratable basis over a three-year period. As of September 30, 2017, the percentage of expected generation hedged is 98%-101%, 79%-82% and 45%-48% for 2017, 2018 and 2019, respectively. The percentage of expected generation hedged is the amount of equivalent sales divided by the expected generation. Expected generation is the volume of energy that best represents our commodity position in energy markets from owned or contracted generating facilities based upon a simulated dispatch model that makes assumptions regarding future market conditions, which are calibrated to market quotes for power, fuel, load following products and options. Equivalent sales represent all hedging products, which include economic hedges and certain non-derivative contracts including Generation’s sales to the Utility Registrants to serve their retail load.

A portion of Generation’s hedging strategy may be accomplished with fuel products based on assumed correlations between power and fuel prices, which routinely change in the market. Market price risk exposure is the risk of a change in the value of unhedged positions. The forecasted market price risk exposure for Generation’s entire non-proprietary trading portfolio associated with a $5 reduction in the annual average around-the-clock energy price based on September 30, 2017 market conditions and hedged position would be an increase in pre-tax net income of approximately $10 million for 2017 and decreases of approximately $170 million and $500 million, respectively, for 2018 and 2019. Power price sensitivities are derived by adjusting power price assumptions while keeping all other price inputs constant. Generation expects to actively manage its portfolio to mitigate market price risk exposure for its unhedged position. Actual results could differ depending on the specific timing of, and markets affected by, price changes, as well as future changes in Generation’s portfolio.

Proprietary Trading Activities. Generation also enters into certain energy-related derivatives for proprietary trading purposes. Proprietary trading includes all contracts entered into with the intent of benefiting from shifts or changes in market prices as opposed to those entered into with the intent of hedging or managing risk. Proprietary trading activities are subject to limits established by Exelon’s RMC. The proprietary trading portfolio is subject to a risk management policy that includes stringent risk management limits, including volume, stop loss and Value-at-Risk (VaR) limits to manage exposure to market risk. Additionally, the Exelon risk management group and Exelon’s RMC monitor the financial risks of the proprietary trading activities. The proprietary trading activities, which included physical volumes of 2,601 GWhs and 6,763 GWhs for the three and nine months ended September 30, 2017, respectively, and 1,506 GWhs and 4,015 GWhs and for the three and nine months September 30, 2016, respectively, are a complement to Generation’s energy marketing portfolio, but represent a small portion of Generation’s overall revenue from energy marketing activities. Proprietary trading portfolio activity for the nine months ended September 30, 2017 resulted in $11 million of pre-tax gains due to net mark-to-market gains of $3 million and realized gains of $8 million. Generation uses a 95% confidence interval, assuming standard normal distribution, one day holding period and a one-tailed statistical measure in calculating its VaR. The daily VaR on proprietary trading activity averaged $0.1 million of exposure during the quarter. Generation has not segregated proprietary trading activity within the following discussion because of the relative size of the proprietary trading portfolio in comparison to Generation’s total

Revenue net of purchase power and fuel expense for the nine months ended September 30, 2017 of $6,526 million.

Fuel Procurement. Generation procures natural gas through long-term and short-term contracts and spot-market purchases. Nuclear fuel assemblies are obtained predominantly through long-term uranium concentrate supply contracts, contracted conversion services, contracted enrichment services, or a combination thereof, and contracted fuel fabrication services. The supply markets for uranium concentrates and certain nuclear fuel services are subject to price fluctuations and availability restrictions. Supply market conditions may make Generation's procurement contracts subject to credit risk related to the potential non-performance of counterparties to deliver the contracted commodity or service at the contracted prices. Approximately 60% of Generation's uranium concentrate requirements from 2017 through 2021 are supplied by three producers. In the event of non-performance by these or other suppliers, Generation believes that replacement uranium concentrates can be obtained, although at prices that may be unfavorable when compared to the prices under the current supply agreements. Non-performance by these counterparties could have a material adverse impact on Exelon's and Generation's results of operations, cash flows and financial positions.

ComEd

ComEd entered into 20-year contracts for renewable energy and RECs beginning in June 2012. ComEd is permitted to recover its renewable energy and REC costs from retail customers with no mark-up. The annual commitments represent the maximum settlements with suppliers for renewable energy and RECs under the existing contract terms. Pursuant to the ICC's Order on December 19, 2012, ComEd's commitments under the existing long-term contracts were reduced for the June 2013 through May 2014 procurement period. In addition, the ICC's December 18, 2013 Order approved the reduction of ComEd's commitments under those contracts for the June 2014 through May 2015 procurement period, and the amount of the reduction was approved by the ICC in March 2014. See Note 5 — Regulatory Matters and Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information regarding energy procurement and derivatives. ComEd does not enter into derivatives for speculative or proprietary trading purposes.

PECO

PECO has contracts to procure electric supply that were executed through the competitive procurement process outlined in its PAPUC-approved DSP Programs, which are further discussed in Note 5 — Regulatory Matters of the Combined Notes to Consolidated Financial Statements. PECO has certain full requirements contracts which are considered derivatives and qualify for the normal purchases and normal sales scope exception under current derivative authoritative guidance, and as a result are accounted for on an accrual basis of accounting. Under the DSP Programs, PECO is permitted to recover its electric supply procurement costs from retail customers with no mark-up.

PECO has also entered into derivative natural gas contracts, which either qualify for the normal purchases and normal sales exception or have no mark-to-market balances because the derivatives are index priced, to hedge its long-term price risk in the natural gas market. PECO's hedging program for natural gas procurement has no direct impact on its financial position or results of operations as natural gas costs are fully recovered from customers under the PGC.

PECO does not enter into derivatives for speculative or proprietary trading purposes. For additional information on these contracts, see Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements.

BGE

BGE procures electric supply for default service customers through full requirements contracts pursuant to BGE's MDPSC-approved SOS program. BGE's full requirements contracts that are considered derivatives qualify for the normal purchases and normal sales scope exception under current derivative authoritative guidance, and as a result, are accounted for on an accrual basis of accounting. Under the SOS program, BGE is permitted to recover its electricity procurement costs from retail customers, plus an administrative fee which includes a shareholder return component and an incremental cost component.

BGE has also entered into natural gas contracts, which qualify for the normal purchases and normal sales scope exception, to hedge its price risk in the natural gas market. The hedging program for natural gas procurement has no direct impact on BGE's financial position. However, under BGE's market-based rates incentive mechanism, BGE's actual cost of gas is compared to a market index (a measure of the market price of gas in a given period). The difference between BGE's actual cost and the market index is shared equally between shareholders and customers.

BGE does not enter into derivatives for speculative or proprietary trading purposes. For additional information on these contracts, see Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements.

Pepco

Pepco has contracts to procure SOS electric supply that are executed through a competitive procurement process approved by the MDPSC and DCPSC. The SOS rates charged recover Pepco's wholesale power supply costs and include an administrative fee. The administrative fee includes an incremental cost component and a shareholder return component for residential and commercial rate classes. Pepco's price risk related to electric supply procurement is limited. Pepco locks in fixed prices for all of its SOS requirements through full requirements contracts. Certain of Pepco's full requirements contracts, which are considered derivatives, qualify for the NPNS scope exception under current derivative authoritative guidance. Other Pepco full requirements contracts are not derivatives.

Pepco does not enter into derivatives for speculative or proprietary trading purposes. For additional information on these contracts, see Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements.

DPL

DPL has contracts to procure SOS electric supply that are executed through a competitive procurement process approved by the MDPSC and the DPSC. The SOS rates charged recover DPL's wholesale power supply costs. In Delaware, DPL is also entitled to recover a Reasonable Allowance for Retail Margin (RARM). The RARM includes a fixed annual margin of approximately $2.75 million, plus an incremental cost component and a cash working capital allowance. In Maryland, DPL charges an administrative fee intended to allow it to recover its administrative costs. DPL locks in fixed prices for all of its SOS requirements through full requirements contracts. DPL's price risk related to electric supply procurement is limited. Certain of DPL's full requirements contracts, which are considered derivatives, qualify for the NPNS scope exception under current derivative authoritative guidance. Other DPL full requirements contracts are not derivatives.

DPL provides natural gas to its customers under a GCR mechanism approved by the DPSC. The demand portion of the GCR is based upon DPL's firm transportation and storage contracts. DPL has firm deliverability of swing and seasonal storage; a liquefied natural gas facility and firm transportation capacity to meet customer demand and provide a reserve margin. The commodity portion of the GCR includes a commission approved hedging program which is intended to reduce gas commodity price volatility while limiting the firm natural gas customers' exposure to adverse changes in the market price of natural gas.

DPL does not enter into derivatives for speculative or proprietary trading purposes. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information regarding energy procurement and derivatives.

ACE

ACE has contracts to procure BGS electric supply that are executed through a competitive procurement process approved by the NJBPU. The BGS rates charged recover ACE's wholesale power supply costs. ACE does not make any profit or incur any loss on the supply component of the BGS it supplies to customers. ACE's price risk related to electric supply procurement is limited. ACE locks in fixed prices for all of its BGS requirements through full requirements contracts. ACE's full requirements contracts, which are considered derivatives, qualify for the NPNS scope exception under current derivative authoritative guidance. Other ACE full requirements contracts are not derivatives.

ACE does not enter into derivatives for speculative or proprietary trading purposes. For additional information on these contracts, see Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements.

Trading and Non-Trading Marketing Activities. The following detailed presentation of Exelon's, Generation's, ComEd's, PHI's and DPL's trading and non-trading marketing activities is included to address the recommended disclosures by the energy industry's Committee of Chief Risk Officers (CCRO).

Table of Contents

The following table provides detail on changes in Exelon's, Generation's, ComEd's, PHI's and DPL's commodity mark-to-market net asset or liability balance sheet position from December 31, 2016 to September 30, 2017. It indicates the drivers behind changes in the balance sheet amounts. This table incorporates the mark-to-market activities that are immediately recorded in earnings. This table excludes all normal purchase and normal sales contracts and does not segregate proprietary trading activity. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information on the balance sheet classification of the mark-to-market energy contract net assets (liabilities) recorded as of September 30, 2017 and December 31, 2016.

	Exelon	Generation	ComEd	PHI	DPL
Total mark-to-market energy contract net assets (liabilities) at December 31, 2016[(a)]	$ 719	$ 977	$ (258)	$ —	$ —
Total change in fair value during 2017 of contracts recorded in results of operations	(13)	(13)	—	—	—
Reclassification to realized of contracts recorded in results of operations	(138)	(138)	—	—	—
Contracts received at acquisition date	—	—	—	—	—
Changes in fair value — recorded through regulatory assets and liabilities[(b)]	(21)	—	(19)	(2)	(2)
Changes in allocated collateral	88	86	—	2	2
Changes in net option premium paid/(received)	(35)	(35)	—	—	—
Option premium amortization	(15)	(15)	—	—	—
Upfront payments and amortizations[(c)]	(54)	(54)	—	—	—
Total mark-to-market energy contract net assets (liabilities) at September 30, 2017[(a)]	$ 531	$ 808	$ (277)	$ —	$ —

(a) Amounts are shown net of collateral paid to and received from counterparties.

(b) For ComEd and DPL, the changes in fair value are recorded as a change in regulatory assets or liabilities. As of September 30, 2017, ComEd recorded a regulatory liability of $277 million related to its mark-to-market derivative liabilities with Generation and unaffiliated suppliers. For the nine months ended September 30, 2017, ComEd also recorded $32 million of decreases in fair value and an increase for realized losses due to settlements of $13 million recorded in purchased power expense associated with floating-to-fixed energy swap contracts with unaffiliated suppliers.

(c) Includes derivative contracts acquired or sold by Generation through upfront payments or receipts of cash, excluding option premiums, and the associated amortization.

Fair Values. The following tables present maturity and source of fair value for Exelon, Generation and ComEd mark-to-market commodity contract net assets (liabilities). The tables provide two fundamental pieces of information. First, the tables provide the source of fair value used in determining the carrying amount of the Registrants' total mark-to-market net assets (liabilities), net of allocated collateral. Second, the tables show the maturity, by year, of the Registrants' commodity contract net assets (liabilities), net of allocated collateral, giving an indication of when these mark-to-market amounts will settle and either generate or require cash. See Note 9 — Fair Value of Financial Assets and Liabilities of the Combined Notes to Consolidated Financial Statements for additional information regarding fair value measurements and the fair value hierarchy.

Exelon

	Maturities Within 2017	2018	2019	2020	2021	2022 and Beyond	Total Fair Value
Normal Operations, Commodity derivative contracts[(a)(b)]:							
Actively quoted prices (Level 1)	$ 27	$ 1	$ (29)	$ (13)	$ 2	$ (2)	$ (14)
Prices provided by external sources (Level 2)	112	109	7	(6)	5	—	227
Prices based on model or other valuation methods (Level 3)[(c)]	47	339	111	18	(32)	(165)	318
Total	$ 186	$ 449	$ 89	$ (1)	$ (25)	$ (167)	$ 531

(a) Mark-to-market gains and losses on other economic hedge and trading derivative contracts that are recorded in results of operations.
(b) Amounts are shown net of collateral paid to and received from counterparties (and offset against mark-to-market assets and liabilities) of $415 million at September 30, 2017.
(c) Includes ComEd's net liabilities associated with the floating-to-fixed energy swap contracts with unaffiliated suppliers.

Generation

	Maturities Within 2017	2018	2019	2020	2021	2022 and Beyond	Total Fair Value
Normal Operations, Commodity derivative contracts[(a)(b)]:							
Actively quoted prices (Level 1)	$ 27	$ 1	$ (29)	$ (13)	$ 2	$ (2)	$ (14)
Prices provided by external sources (Level 2)	112	109	7	(6)	5	—	227
Prices based on model or other valuation methods (Level 3)	53	360	133	40	(11)	20	595
Total	$ 192	$ 470	$ 111	$ 21	$ (4)	$ 18	$ 808

(a) Mark-to-market gains and losses on other economic hedge and trading derivative contracts that are recorded in the results of operations.
(b) Amounts are shown net of collateral paid to and received from counterparties (and offset against mark-to-market assets and liabilities) of $415 million at September 30, 2017.

ComEd

	Maturities Within 2017	2018	2019	2020	2021	2022 and Beyond	Total Fair Value
Commodity derivative contracts[(a)]:							
Prices based on model or other valuation methods (Level 3)	$ (6)	$ (21)	$ (22)	$ (22)	$ (21)	$ (185)	$ (277)

(a) Represents ComEd's net liabilities associated with the floating-to-fixed energy swap contracts with unaffiliated suppliers.

Credit Risk, Collateral and Contingent Related Features (All Registrants)

The Registrants would be exposed to credit-related losses in the event of non-performance by counterparties that enter into derivative instruments. The credit exposure of derivative contracts, before collateral, is represented by the fair value of contracts at the reporting date. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for a detailed discussion of credit risk, collateral and contingent related features.

Generation

The following tables provide information on Generation's credit exposure for all derivative instruments, normal purchase normal sales agreements, and applicable payables and receivables, net of collateral and instruments that are subject to master netting agreements, as of September 30, 2017. The tables further delineate that exposure by credit rating of the counterparties and provide guidance on the concentration of credit risk to individual counterparties and an indication of the duration of a company's credit risk by credit rating of the counterparties. The figures in the tables below exclude credit risk exposure from individual retail customers, uranium procurement contracts, and exposure through RTOs, ISOs, NYMEX, ICE, NASDAQ, NGX and Nodal commodity exchanges, which are discussed below. Additionally, the figures in the tables below exclude exposures with affiliates, including net receivables with ComEd, PECO, BGE, Pepco, DPL and ACE of \$18 million, \$22 million, \$22 million, \$34 million, \$12 million, and \$7 million as of September 30, 2017, respectively.

Rating as of September 30, 2017	Total Exposure Before Credit Collateral	Credit Collateral[a]	Net Exposure	Number of Counterparties Greater than 10% of Net Exposure	Net Exposure of Counterparties Greater than 10% of Net Exposure
Investment grade	$ 828	$ 9	$ 819	1	$ 278
Non-investment grade	44	4	40		
No external ratings					
Internally rated — investment grade	316	—	316		
Internally rated — non-investment grade	100	18	82		
Total	$ 1,288	$ 31	$ 1,257	1	$ 278

	Maturity of Credit Risk Exposure			
Rating as of September 30, 2017	Less than 2 Years	2-5 Years	Exposure Greater than 5 Years	Total Exposure Before Credit Collateral
Investment grade	$ 682	$ 139	$ 7	$ 828

Net Credit Exposure by Type of Counterparty	As of September 30, 2017
Financial institutions	$ 48
Investor-owned utilities, marketers, power producers	538
Energy cooperatives and municipalities	525
Other	146
Total	$ 1,257

(a) As of September 30, 2017, credit collateral held from counterparties where Generation had credit exposure included $19 million of cash and $12 million of letters of credit.

ComEd, PECO, BGE, PHI, Pepco, DPL and ACE

There have been no significant changes or additions to ComEd's, PECO's, BGE's, PHI's, Pepco's, DPL's or ACE's exposures to credit risk that are described in ITEM 1A. RISK FACTORS of Exelon's 2016 Annual Report on Form 10-K.

See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for information regarding credit exposure to suppliers.

Collateral (All Registrants)

Generation

As part of the normal course of business, Generation routinely enters into physical or financial contracts for the sale and purchase of electricity, natural gas and other commodities. These contracts either contain express provisions or otherwise permit Generation and its counterparties to demand adequate assurance of future performance when there are reasonable grounds for doing so. In accordance with the contracts and applicable law, if Generation is downgraded by a credit rating agency, especially if such downgrade is to a level below investment grade, it is possible that a counterparty would attempt to rely on such a downgrade as a basis for making a demand for adequate assurance of future performance. Depending on Generation’s net position with a counterparty, the demand could be for the posting of collateral. In the absence of expressly agreed-to provisions that specify the collateral that must be provided, collateral requested will be a function of the facts and circumstances of the situation at the time of the demand. In this case, Generation believes an amount of several months of future payments (i.e., capacity payments) rather than a calculation of fair value is the best estimate for the contingent collateral obligation, which has been factored into the disclosure below. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for information regarding collateral requirements.

Generation transacts output through bilateral contracts. The bilateral contracts are subject to credit risk, which relates to the ability of counterparties to meet their contractual payment obligations. Any failure to collect these payments from counterparties could have a material impact on Exelon’s and Generation’s results of operations, cash flows and financial position. As market prices rise above or fall below contracted price levels, Generation is required to post collateral with purchasers; as market prices fall below contracted price levels, counterparties are required to post collateral with Generation. In order to post collateral, Generation depends on access to bank credit facilities, which serve as liquidity sources to fund collateral requirements. See Liquidity and Capital Resources — Credit Matters — Exelon Credit Facilities for additional information.

As of September 30, 2017, Generation had cash collateral of $460 million posted and cash collateral held of $49 million for external counterparties with derivative positions, of which $415 million amount in net cash collateral deposits and $1 million amount in net cash collateral receipts were offset against energy derivative and interest rate and foreign exchange derivative related to underlying energy contracts, respectively. As of September 30, 2017, $3 million of cash collateral held was not offset against net derivative positions because it was not associated with energy-related derivatives or as of the balance sheet date there were no positions to offset. See Note 18 — Commitments and Contingencies of the Combined Notes to Consolidated Financial Statements for information regarding the letters of credit supporting the cash collateral.

ComEd

As of September 30, 2017, ComEd held $10 million in collateral from suppliers in association with energy procurement contracts and held approximately $21 million in the form of cash and letters of credit for both annual and long-term renewable energy contracts. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements in this report and Note 3 — Regulatory Matters of the 2016 Exelon Form 10-K for additional information.

PECO

As of September 30, 2017, PECO was not required to post collateral under its energy and natural gas procurement contracts. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information.

BGE

BGE is not required to post collateral under its electric supply contracts nor was it holding collateral under its electric supply procurement contracts as of September 30, 2017. As of September 30, 2017, BGE was not required to post collateral under its natural gas procurement contracts but was holding an immaterial amount of collateral under its natural gas procurement contracts. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information.

Pepco

Pepco is not required to post collateral under its energy procurement contracts. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information.

DPL

DPL is not required to post collateral under its energy procurement contracts. As of September 30, 2017, DPL was not required to post collateral under its natural gas procurement contracts. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information.

ACE

ACE is not required to post collateral under its energy procurement contracts. See Note 10 — Derivative Financial Instruments of the Combined Notes to Consolidated Financial Statements for additional information.

RTOs and ISOs (All Registrants)

Generation, ComEd, PECO, BGE, Pepco, DPL and ACE participate in all, or some, of the established wholesale spot energy markets that are administered by PJM, ISO-NE, ISO-NY, CAISO, MISO, SPP, AESO, OIESO and ERCOT. In these areas, power is traded through bilateral agreements between buyers and sellers and on the spot energy markets that are administered by the RTOs or ISOs, as applicable. In areas where there are no spot energy markets, electricity is purchased and sold solely through bilateral agreements. For sales into the spot energy markets administered by an RTO or ISO, the RTO or ISO maintains financial assurance policies that are established and enforced by those administrators. The credit policies of the RTOs and ISOs may, under certain circumstances, require that losses arising from the default of one member on spot energy market transactions be shared by the remaining participants. Non-performance or non-payment by a major counterparty could result in a material adverse impact on the Registrants’ results of operations, cash flows and financial positions.

Exchange Traded Transactions (Exelon, Generation, PHI and DPL)

Generation enters into commodity transactions on NYMEX, ICE, NASDAQ, NGX and the Nodal exchange ("the Exchanges"). DPL enters into commodity transactions on ICE. The Exchange clearinghouses act as the counterparty to each trade. Transactions on the Exchanges must adhere to comprehensive collateral and margining requirements. As a result, transactions on the Exchanges are significantly collateralized and have limited counterparty credit risk.

Interest Rate and Foreign Exchange Risk (All Registrants)

The Registrants use a combination of fixed-rate and variable-rate debt to manage interest rate exposure. The Registrants may also utilize fixed-to-floating interest rate swaps, which are typically designated as fair value hedges, as a means to manage their interest rate exposure. In addition, the Registrants may utilize interest rate derivatives to lock in rate levels in anticipation of future financings, which are typically designated as cash flow hedges. These strategies are employed to manage interest rate risks. At September 30, 2017, Exelon had $800 million of notional amounts of fixed-to-floating hedges outstanding and Exelon and Generation had $491 million of notional amounts of floating-to-fixed hedges outstanding. Assuming the interest rate hedges are 100% effective, a hypothetical 50 bps increase in the interest rates associated with unhedged variable-rate debt (excluding Commercial Paper) and fixed-to-floating swaps would result in approximately a $4 million decrease in Exelon Consolidated pre-tax income for the nine months ended September 30, 2017. To manage foreign exchange rate exposure associated with international energy purchases in currencies other than U.S. dollars, Generation utilizes foreign currency derivatives, which are typically designated as economic hedges.

Equity Price Risk (Exelon and Generation)

Generation maintains trust funds, as required by the NRC, to fund certain costs of decommissioning its nuclear plants. As of September 30, 2017, Generation's decommissioning trust funds are reflected at fair value on its Consolidated Balance Sheets. The mix of securities in the trust funds is designed to provide returns to be used to fund decommissioning and to compensate Generation for inflationary increases in decommissioning costs; however, the equity securities in the trust funds are exposed to price fluctuations in equity markets, and the value of fixed-rate, fixed-income securities are exposed to changes in interest rates. Generation actively monitors the investment performance of the trust funds and periodically reviews asset allocation in accordance with Generation's NDT fund investment policy.

A hypothetical 10% increase in interest rates and decrease in equity prices would result in a $626 million reduction in the fair value of the trust assets. This calculation holds all other variables constant and assumes only the discussed changes in interest rates and equity prices. See ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS for further discussion of equity price risk as a result of the current capital and credit market conditions.

Item 4. Controls and Procedures

During the third quarter of 2017, each of Exelon's, Generation's, ComEd's, PECO's, BGE's, PHI's, Pepco's, DPL's and ACE's management, including its principal executive officer and principal financial officer, evaluated its disclosure controls and procedures related to the recording, processing, summarizing and reporting of information in its periodic reports that it files with the SEC. These disclosure controls and procedures have been designed by all Registrants to ensure that (a) material information relating to that Registrant, including its consolidated subsidiaries, is accumulated and made known to Exelon's management, including its principal executive officer and principal financial officer, by other employees of that Registrant and its subsidiaries as appropriate to allow timely decisions regarding required disclosure, and (b) this information is recorded, processed, summarized, evaluated and reported, as applicable, within the time periods specified in the SEC's rules and forms. Due to the inherent limitations of control systems, not all misstatements may be detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Additionally, controls could be circumvented by the individual acts of some persons or by collusion of two or more people.

Accordingly, as of September 30, 2017, the principal executive officer and principal financial officer of each of Exelon, Generation, ComEd, PECO, BGE, PHI, Pepco, DPL and ACE concluded that such Registrant's disclosure controls and procedures were effective to accomplish its objectives. All Registrants continually strive to improve their disclosure controls and procedures to enhance the quality of its financial reporting and to maintain dynamic systems that change as conditions warrant. There have been no changes in internal control over financial reporting that occurred during the third quarter of 2017 that have materially affected, or are reasonably likely to materially affect, any of Exelon's, Generation's, ComEd's, PECO's, BGE's, PHI's, Pepco's, DPL's and ACE's internal control over financial reporting.

PART II — OTHER INFORMATION

Item 1. Legal Proceedings

The Registrants are parties to various lawsuits and regulatory proceedings in the ordinary course of their respective businesses. For information regarding material lawsuits and proceedings, see (a) ITEM 3. LEGAL PROCEEDINGS of Exelon’s 2016 Form 10-K and (b) Notes 5 — Regulatory Matters and 18 — Commitments and Contingencies of the Combined Notes to Consolidated Financial Statements in PART I, ITEM 1. FINANCIAL STATEMENTS of this Report. Such descriptions are incorporated herein by these references.

Item 1A. Risk Factors

Risks Related to Exelon

At September 30, 2017, the Registrants’ risk factors were consistent with the risk factors described in the Registrants’ combined 2016 Form 10-K in ITEM 1A. RISK FACTORS.

Item 4. Mine Safety Disclosures

All Registrants

Not applicable to the Registrants.

Item 6. Exhibits

Certain of the following exhibits are incorporated herein by reference under Rule 12b-32 of the Securities and Exchange Act of 1934, as amended. Certain other instruments which would otherwise be required to be listed below have not been so listed because such instruments do not authorize securities in an amount which exceeds 10% of the total assets of the applicable registrant and its subsidiaries on a consolidated basis and the relevant registrant agrees to furnish a copy of any such instrument to the Commission upon request.

Exhibit No.	Description
4.1	Supplemental Indenture dated as of August 9, 2017, from ComEd to BNY Mellon Trust Company of Illinois, as trustee, and D. G. Donovan, as co-trustee (File No. 001-01839, Form 8-K dated August 23, 2017, Exhibit 4.1)
4.2	BGE Form of 3.750% notes due 2047 (File No. 001-01910, Form 8-K dated August 24, 2017, Exhibit 4.1)
4.3	One Hundred and Fourteenth Supplemental Indenture dated as of September 1, 2017, from PECO to U.S. Bank National Association, as trustee (File No. 000-16844, Form 8-K dated September 18, 2017, Exhibit 4.1)

FitchRatings

Fitch Revises EXC and Exgen Rating Outlook to Negative; Comed Upgraded

Fitch Ratings-New York-07 February 2014: Fitch Ratings has taken a number of actions with respect to the ratings and Rating Outlooks of Exelon Corp. (EXC) and its subsidiaries. The ratings actions include the following:

--Affirmed the 'BBB+' Issuer Default Ratings (IDR) and instrument ratings of Exelon Corp. (EXC) and Exelon Generation Co., LLC (Exgen) and revised the Rating Outlook for each entity to Negative from Stable.

--Upgraded the IDR of Commonwealth Edison Co. (Comed) to 'BBB' from 'BBB-' and revised the Rating Outlook to Stable from Positive. Comed's instrument ratings were also upgraded one-notch.

--Affirmed the 'BBB' IDR and instrument ratings of Baltimore Gas and Electric Co. (BGE) and revised the Rating Outlook to Positive from Stable.

--Affirmed the 'BBB+' IDR and instrument ratings of PECO Energy Co. (PECO) with a Stable Rating Outlook.

The Negative Rating Outlooks for EXC and Exgen primarily reflect the continued down trend in gross margin and credit protection measures due to the on-going weakness in forward power and natural gas prices, soft power demand and aggressive competition in the retail supply business. Exgen remains the largest contributor to EXC's cash flow and as such the Negative Ratings Outlook for EXC mirrors that of its non-regulated subsidiary. The revised Rating Outlook also considers that credit protection measures, although declining remain solidly within the investment grade category.

The upgrade of Comed reflects the improvement in credit metrics due in large measure to tariff increases over the past several years and the greater predictability of earnings and cash flow due to the implementation of a formula rate plan (FRP) in Illinois.

Similarly, the Positive Rating Outlook for BGE results from higher rates and improving credit measures.

The rating and Stable Rating Outlook for PECO are consistent with the company's strong credit profile.

Key Rating Drivers

Exelon Corp.

Competitive Generation Business: Low power prices, weak demand and aggressive competitive pricing behavior have adversely affected wholesale and retail margins and are expected by Fitch to persist for several more years keeping pressure on credit quality measures.

Utility Earnings Contribution: The consolidated ratings also consider the contributions of EXC's three regulated utilities, which account for about 50% of consolidated earnings and cash flow. The utilities have sound and/or improving credit profiles, limited commodity price risk and a relatively predictable earnings stream, balancing the more volatile earnings and cash flow of the commodity sensitive merchant business.

Prudent Financial Management: Management has taken a number of steps over the past 15-months to reduce financial commitments and solidify credit quality in the face of persistently low power prices that are pressuring wholesale and retail profit margins. The credit supportive actions include substantial reductions in merchant capex and the common stock dividend. Consequently, financial metrics are expected by Fitch to remain solidly within the investment grade category. In February 2013, EXC reduced its common stock dividend by 40%, saving nearly $750 million annually. The dividend reduction followed a $2.3 billion reduction in merchant capex that have subsequently been further reduced.

Financial Position: The combined reductions of the common stock dividend and capex have solidified EXC's financial position. Fitch estimates EXC's adjusted ratio of funds from operations (FFO)/interest to be in excess of 6.0x over the next several years and FFO/debt to approximate 30%.

Liquidity: Liquidity is ample and debt maturities should be manageable. On a consolidated basis committed credit facilities aggregate $8.4 billion, and extend to 2018.

Rating Sensitivity

Positive
Other than an unexpected change in business strategy (i.e. additional sources of regulated earnings and cash flow), positive rating action at the parent is unlikely at the present rating level.

Negative
Lack of rate support for utility infrastructure investments or changes in the commodity cost recovery provisions in Illinois, Pennsylvania or Baltimore.

More aggressive growth strategy that increased business risk and/or leverage.

Increase in risk appetite as evidenced by change in hedging strategy at Exgen.

Exelon Generation Company, LLC
Operating environment: The operating environment for Exgen's competitive generation business is expected to remain challenging with sluggish demand and low natural gas and power prices likely to persist for several years with a downtrend in gross margin. Favorably, Exgen is expected to be free cash flow (FCF) positive due to reduced capex and dividend requirements, easing the pressure on cash flow and credit quality measures during a low point in the commodity cycle.

Competitive Position: Exgen's largely nuclear-fueled generating fleet is positioned low on the dispatch curve and likely to be dispatched under any price scenario. The nuclear fleet is also well positioned to benefit from any uplift in power prices from higher environmental costs or plant retirements and requires limited environmental remediation expenditures. Nonetheless, several nuclear plants operating in regions without a capacity market are at risk for closure.

Expense Reductions: Exgen entered into a service agreement to operate the Constellation Energy Nuclear Group (CENG) nuclear fleet that is expected by management to generate annual savings of roughly $50 million - $70 million annually (Exgen's share is 50%) with a $20 million cost to achieve. NRC approval is required. CENG is a joint venture with Electricite de France. The transaction is expected to close late in 2014 Q1 or early Q2.

Financial Position: Exgen's financial position has weakened in recent years, but remains solidly within the investment grade category. Fitch expects expense and debt reductions to offset on-going declines in gross margin and stabilize credit metrics at or near current levels. Fitch estimates Exgen's adjusted ratio of EBITDA/interest to range between 5.5x and 6.0x and debt/EBITDA at about 2.5x - 2.75x. Cash flow measures are expected to be stronger with FFO/debt to be in excess of 40% and FFO/interest to exceed 7.0x.

Debt Reduction: Since the dividend reduction Exgen has retired $950 million of recourse debt with cash including $450 million of callable junior subordinated debt at par in June 2013 and $500 million of maturing senior debt in January 2014. Additional debt retirements are anticipated in 2015.

Revised Growth Plan: Planned capital expenditures were reduced $2.3 billion and now aggregate $6.8 billion over the 2014-2016 time frame. The reductions were primarily investments in unidentified renewable projects and cancelling planned nuclear uprates at the LaSalle and Limerick units, totaling nearly 600 MW to beyond 2019. Over the three-year period through 2016, growth capex is now about $775 million for nuclear uprates and wind and solar projects, including the build-out of the Antelope Valley Solar Ranch (AVSR). Exgen will also be investing approximately $350 million to construct generation in Maryland required as part of the Constellation merger approval. Fitch believes other investments are likely, but will be limited to contracted renewables or possibly distressed merchant assets in regions that have a well-functioning capacity market and/or a tight reserve position.

Rating Sensitivity

Positive:
There are no developments that are likely to lead to a positive rating action.

However, ratings could be maintained if there is clear evidence of a sustainable improvement in power prices and/or capacity revenue.

Negative:
A further decline in gas and power prices;
An unexpected reversion to a more aggressive growth strategy.

Commonwealth Edison Co.
Strong Credit Metrics: Higher rates effective Jan. 1, 2014 and the FRP plan that allows for annual rate adjustments should allow Commonwealth Edison Co. (Comed) to sustain its currently sound financial position over the next few years. Fitch estimates EBITDA/interest will average about 5.0x, FFO/interest 4.5x, FFO/debt 18% - 20% and debt/EBITDA about 3.75x over the next several years. Each measure is strong for the current rating.

Regulatory Predictability: The FRP implemented in October 2011 provides increased regulatory predictability in Illinois. The FRP recognizes forward looking capital additions and includes a true-up mechanism reducing, albeit not eliminating, rate lag.

Constructive Rate Decision: In December 2013, the Illinois Commerce Commission approved a $341 million increase in distribution rates or approximately 97% of the company's rate request.

Commodity Price Exposure: Ratings and credit quality benefit from the absence of commodity price exposure, which limits cash flow volatility and reduces business risk.

Rising Capex: Capital expenditures are forecasted to rise to approximately $5.7 billion over the three-year period 2014-2016, compared to $3.7 billion in the prior three-year period. The higher outlays are primarily driven by the Illinois Energy Infrastructure Modernization Act (EIMA), which requires Comed to invest an incremental $1.3 billion on electric system upgrades over five years and an additional $1.3 billion for smart grid deployment over 10 years. The legislation provides for recovery through the FRP filings. The capex forecast also reflects an increase in transmission expenditures, which are subject to credit supportive Federal Energy Regulatory Commission (FERC) regulatory policies.

Like-Kind-Exchange: Comed's exposure to the IRS's disallowance of the tax benefits associated with a like-kind-exchange is a credit concern, however, the issue is not likely to be resolved for several years and was not factored into the rating decision. As of Sept. 30, 2013, Comed's potential tax and interest that could become payable, excluding penalties, is $305 million.

Rating Sensitivity

Positive:
A continuation of constructive outcomes in FRP filings;

Ability to reduce leverage below 3.5x.

Negative:
Lack of rate support for infrastructure investments or changes in the commodity cost recovery provisions.

PECO Energy Co.
Strong Credit Profile: Historical and projected credit measures are strong and well in excess of Fitch's target ratios for the current rating category and the companies' peer group of 'BBB+' distribution utilities. Over the next few years, Fitch estimates EBITDA/interest and FFO/interest will average about 7.0x and 6.0x, respectively and FFO/debt and debt/EBITDA about 20% and 3.0x. The strong performance reflects expectations of timely rate recovery and moderate debt financing.

Alternative Regulatory Model: Fitch considers the regulatory legislation enacted in Pennsylvania in February 2012 (HB 1294) to be supportive of credit quality.

Manageable Capital Spending: PECO expects to invest approximately $1.6 billion over the next three years, moderately higher than the $1.4 billion expended in the prior three-years. The expenditures equate to about 2.2x depreciation and amortization, which approximates the industry in average.

Low business Risk: Ratings and credit quality benefit from the absence of commodity price exposure and the associated cash flow volatility.

Rating Sensitivity

PECO Energy Company

Positive:
Sustaining current financial condition could lead to a positive rating action.

Negative:
Not likely given the head room in current ratings.

Baltimore Gas and Electric Company
Credit Metrics: BGE's financial position improved significantly in 2013 largely due to electric and gas rate increases implemented in February 2013, the first increases since December 2010 and the expiration of a $112 million rate credit. Subsequent electric and gas rate increases implemented in December 2013 are expected to drive further improvement in 2014 and beyond. Fitch estimates EBITDA/interest and FFO/interest to exceed 6.0x and FFO/debt and debt/EBITDA of about 25% and 2.5x, respectively.

Dividend Restrictions: BGE is precluded from paying dividends to parent Exelon Corp. (Exelon) through 2014

Regulatory Recovery Mechanisms: Rate adjustment mechanisms outside of base rate cases tend to stabilize BGE's on-going cash flow. These include decoupling for both residential and commercial gas and electricity sales and purchased gas and purchased power recovery mechanisms. In addition, investments in energy efficiency are subject to a tracking mechanism.

Ring-fencing: BGE's funding and Treasury practices result in moderate ring fencing of the utility from its parent Exelon Corp. and affiliates. These include maintaining separate books and records and separate credit facilities and commercial paper programs and allocating parent expenses according to a Cost Allocation Manual that is filed annually with the Maryland Public Service Commission (MPSC). Also, BGE does not participate in the corporate money pool. Furthermore, BGE's financings do not contain any provisions that could result in cross defaults between BGE and Exelon.

Rating Sensitivity

Positive:

A constructive outcome in expected 2014 rate filing.

Negative:
Lack of rate support for infrastructure investments or changes in the commodity cost recovery provisions.

Fitch has affirmed the following ratings with a Negative Outlook:

Exelon Corp.
--Issuer Default Rating (IDR) 'BBB+';
--Senior unsecured debt 'BBB+';
--Commercial paper 'F2';
--Short-term IDR 'F2'.

Exelon Generation Co., LLC
--Issuer Default Rating (IDR) 'BBB+';
--Senior unsecured debt 'BBB+';
--Commercial paper 'F2';
--Short-term IDR 'F2'.

Fitch has affirmed the following ratings with a Positive Outlook:

Baltimore Gas and Electric Company
--Issuer Default Rating (IDR) 'BBB;
--First mortgage bonds 'A-';
--Senior unsecured debt 'BBB+';

Exelon Corporation

Diversified Utility and Merchant Power Company

Summary Rating Rationale

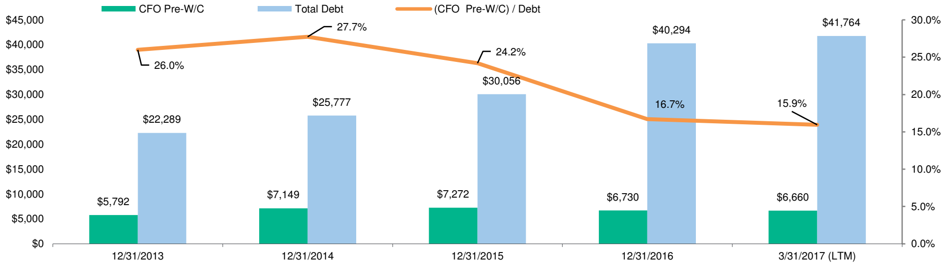
Exelon Corporation's (Exelon) Baa2 senior unsecured rating reflects its size, regional diversity, and adequate financial profile. Exelon's credit strength comes from its roughly $32 billion in regulated rate base, consisting of regulated transmission and distribution (T&D) utilities diversified across Illinois, Maryland, Pennsylvania, New Jersey, Delaware and the District of Columbia.

Exelon's rating is principally constrained by its higher-risk unregulated utility and merchant power subsidiary, Exelon Generation Company, LLC (ExGen: Baa2 stable). ExGen owns a large fleet of unregulated nuclear generation facilities and a retail energy trading and marketing business. These unregulated businesses are vastly more volatile compared to their regulated T&D businesses.

Moreover, nuclear generation faces a sustained period of challenging conditions because of the competition from low natural gas prices due to shale gas development. As a diversified power company, Exelon is well capitalized, has adequate liquidity reserves, and is expected to generate a ratio of cash flow from operations (CFO) to debt of around 20%. Retained cash flow (RCF) to debt is expected to remain in the mid-to-high teen's range.

Exhibit 1

Ratio of CFO pre-WC to Debt Historical Trend



Source: Moody's Investors Service

Credit Strengths

- Large and growing rate base
- Adequate financial profile
- Strong nuclear operator
- Adequate liquidity reserves

Credit Challenges

- Stiff competition from cheap natural gas
- High risk associated with unregulated generation and retail business
- High leverage at the holding company

Rating Outlook

Exelon's stable rating outlook primarily reflects the stability and predictability of its large T&D utility businesses. Exelon is well positioned to generate a ratio of CFO pre-working capital (CFO pre-WC) to debt of around 18% - 20%, an important threshold for maintaining a stable rating outlook, given the weak business fundamentals at ExGen.

Factors that Could Lead to an Upgrade

- A material shift in its corporate finance policies, including a significant reduction of parent holding company debt and the sustained production of a ratio of CFO pre-WC to debt in the mid-20% range
- A material de-risking across the corporate family, specifically with respect to ExGen's large, merchant nuclear reactor fleet or its large commodity trading and marketing business.

Factors that Could Lead to a Downgrade

- If Exelon's financial performance deteriorated for a sustained period of time, where the ratio of CFO pre-WC to debt fell to the mid-teen's range on a sustained basis.
- A material increase in the business risk profile, especially if it is associated with additional businesses within ExGen.

Key Indicators

Exhibit 2

	3/31/2017(L)	12/31/2016	12/31/2015	12/31/2014	12/31/2013

Detailed Rating Considerations

Large, diversified regulated utility portfolio is foundation to credit profile

Exelon's suite of regulated utilities provides a strong foundation to its consolidated credit profile. Baltimore Gas and Electric Company (BGE: A3 stable), Commonwealth Edison Company (ComEd: Baa1 positive), PECO Energy Company (PECO: A2 stable), Potomac Electric Power Company (Pepco: Baa1 stable), Delmarva Power & Light Company (DPL Baa1 stable), and Atlantic City Electric Company (ACE: Baa2 stable) are all low risk T&D systems that are experiencing improving regulatory environments. We see Exelon's regulated utility business growing in strategic importance across the Exelon corporate family.

Subsidy for nuclear generation is a credit positive

In late 2016, New York and Illinois approved subsidy programs that will support some of Exelon's struggling nuclear plants that might otherwise shut down. If these subsidy programs survive legal challenges from non-nuclear generators, we estimate that the company will likely receive over $500 million a year of additional revenue on a run rate basis and a $200 million improvement to its after-tax cash flows compared to retiring these units. Based on a $12.5 billion Moody's adjusted debt balance, $200 million of additional after-tax cash flow would bolster ExGen's CFO to debt by about 160 basis points.

ExGen could receive additional cash support if other states such as New Jersey and Pennsylvania adopt similar subsidy programs. However, it is highly uncertain at this point if New Jersey and Pennsylvania would adopt such programs because the legislative or the regulatory process required can be long and difficult, especially when the risk of plant closure is not imminent. With that said, in May of 2017 Exelon announced its plans to prematurely retire its Three Mile Island nuclear generation facility by 30 September 2019. In that announcement, Exelon cited a lack of energy policies that appropriately value the benefit of generation assets that do not produce carbon emissions. Lawmakers in Pennsylvania have created a committee that is focused on the long term value of nuclear energy in the state, however no legislation has been proposed at this time.

Parent holding company debt constrains rating due to structural subordination notching considerations

Exelon's decision to finance a large portion of the Pepco Holdings, LLC. (PHI: Baa2 stable) acquisition with parent holding company debt is a credit negative, because it adds complexity to the capital structure. Prior to the PHI merger, Exelon was reducing its parent holding company debt, mostly by transferring or refinancing holding company debt to ExGen. More recently, Exelon has exhibited a willingness to use parent holding company leverage to help ExGen, a credit negative for both Exelon and its regulated T&D utilities.

Prospectively, we see roughly $20 billion of debt across Exelon's T&D utilities, $13 billion at ExGen and roughly $8 billion at the parent holding company. With the utilities producing roughly $4.5 billion in CFO, the ratio of utility CFO to utility debt should hover above the 20% range. This level generally translates to a low-A rating for low risk T&D utilities in supportive regulatory jurisdictions. This would imply an approximate 2-notch rating differential from Exelon's current Baa2 consolidated parent rating and the average implied rating across its T&D utilities.

Maintaining a strong financial profile will be key to credit

Maintaining a ratio of CFO pre-WC to debt in the 18%-20% range will position Exelon well in their current rating category. Over the next few years we anticipate that cash flows from Exelon's utility subsidiaries will increase and that ExGen will maintain CFO in line with the year end 2016 results. Over the last twelve month (LTM) period ending 31 March 2017, the utility subsidiaries produced approximately $4.75 billion of CFO pre-WC, while ExGen contributed approximately $3.3 billion. Exelon's ratio of CFO pre-WC to debt over the LTM period ending 31 March 2017 was 15.9%. However, if a one-time deposit of $1.25 billion to the IRS was added back, Exelon would have recorded a ratio of CFO pre-WC to debt of approximately 18.9%.

Liquidity Analysis

Exelon has an adequate liquidity profile, with approximately $609 million of cash and short term investments on hand as of 31 March 2017. Exelon also has liquidity arrangements totaling $9.5 billion, including $5.8 billion at ExGen. Exelon's regulated utilities have access to $3.1 billion of liquidity, including: $600 million at PECO, $600 million at BGE, $1 billion at ComEd, and $300 million each at Pepco, DPL, and ACE. All of the facilities expire in May 2021.

Exelon's core syndicated credit facilities are used primarily to provide liquidity support and for the issuance of letters of credit. While the credit agreements do not contain any rating triggers that would affect borrowing access to the commitments and do not require material adverse change (MAC) representation for borrowings or the issuance of LOCs, there is a financial covenant for each borrowing entity - all of whom are currently compliant.

Over the LTM period ending 31 March 2017, Exelon generated approximately $8.2 billion of CFO, spent about $8.5 billion in capital expenditures and paid $1.2 billion in dividends resulting in negative free cash flow of approximately $1.5 billion. Due to the high level of planned capital expenditures, we expect Exelon to have between $500 million and $1.0 billion of negative free cash flow after dividends over the next 12 - 18 months. We expect the company will finance the shortfall with a balanced mix of debt and equity and will maintain their current capital structure.

As of the last reporting period 31 March 2017, in the event that ExGen were downgraded below investment grade, ExGen could be required to post additional collateral of $1.8 billion.

As of 31 March 2017, Exelon and its subsidiaries had about $1.4 billion of commercial paper outstanding, including about $204 million at the parent under its $600 million credit facility limit. The next long term debt maturities in Exelon's corporate family include $425 million of ComEd first mortgage bonds due in September 2017 and $700 million of ExGen senior unsecured notes due in October 2017.

Profile

Exelon Corporation is a large diversified US holding company that owns six regulated transmission and distribution utilities and a large unregulated power company.

Exelon Corporation

Diversified Utility and Merchant Power Company

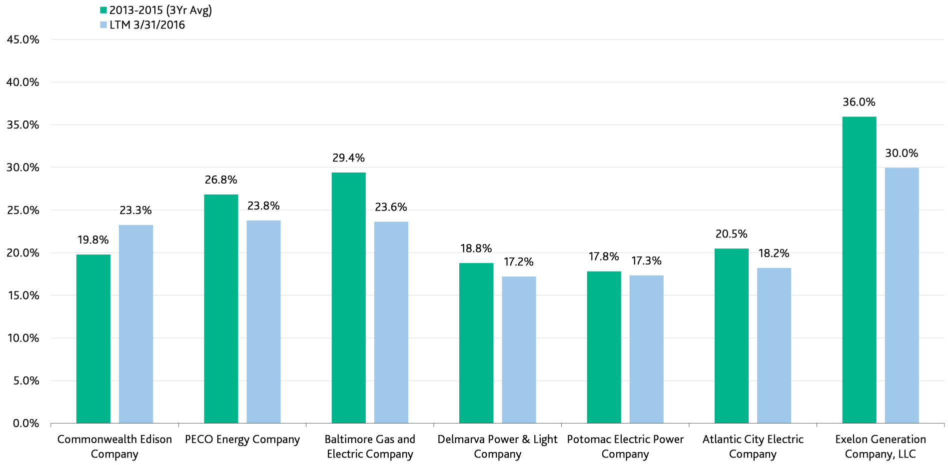
Summary Rating Rationale

Exelon Corporation's (Exelon) Baa2 senior unsecured rating reflects its size, regional diversity, and strong financial profile. Exelon's credit strength comes from its roughly $30 billion in regulated rate base. The rate base consists of regulated transmission and distribution (T&D) utilities and is diversified across Illinois, Maryland, Pennsylvania, New Jersey, Delaware and the District of Columbia.

Exelon's rating is principally constrained by its higher-risk unregulated utility and merchant power subsidiary, Exelon Generation Company LLC (ExGen: Baa2 stable). ExGen owns a large fleet of unregulated nuclear generation facilities and a retail energy trading and marketing business. These unregulated businesses are more volatile than regulated T&D businesses because they are exposed to commodity prices, such as natural gas and electricity; in markets which face a sustained period of challenging conditions. As a diversified power company, Exelon is well capitalized, has adequate liquidity reserves, and is expected to generate a ratio of cash flow from operations (CFO) to debt around 20%. Retained cash flow to debt is expected to remain in the mid-to-high teen's range.

Exhibit 1

CFO Pre-W/C to debt for Exelon's subsidiaries



Source: Moody's Investors Service

Credit Strengths

» Large and growing rate base, thanks to constructive regulatory environments

» Financial profile remains strong, supported by stability of regulated T&D utility cash flows

» Strong nuclear operator

» Adequate liquidity reserves

Credit Challenges

» Maintaining supportive and constructive regulatory relationships is key to credit profile

» Retail trading and marketing business is high risk

» Holding company leverage is high

» ExGen's aging nuclear fleet and early retirements

Rating Outlook

Exelon's stable rating outlook primarily reflects the stability and predictability of its large T&D utility businesses, its adequate liquidity profile and a conservatively capitalized unregulated generation business. Exelon is well positioned to generate a ratio of cash flow to debt of around 18% - 20% - an important threshold for maintaining a stable rating outlook, given the weak business fundamentals at ExGen. The stable outlook incorporates a view that ExGen's nuclear reactors will continue to operate in a safe and efficient manner, with roughly 90% capacity factors. We also think that the reactors will operate for the life of their existing, authorized NRC operating licenses and that Exelon's utilities will continue to receive constructive and timely regulatory recovery mechanisms.

Factors that Could Lead to an Upgrade

» A material shift in its corporate finance policies, including the elimination of parent holding company debt and the sustained production of a ratio of CFO to debt in the mid-20% range

» A material de-risking across the corporate family, specifically with respect to ExGen's large, merchant nuclear reactor fleet or its large commodity trading and marketing business

» Regulatory or legislative intervention into existing wholesale power markets, such as where the intervention is designed to re-regulate the nuclear reactor fleet's revenue model or other mechanisms that improve unregulated cash flow stability

Factors that Could Lead to a Downgrade

» If Exelon's financial performance deteriorated for a sustained period of time, where the ratio of CFO to debt fell to the low-teen's range

» Material shifts in shareholder rewards programs, resulting in higher leverage or an unsustainable dividend payout ratio or more aggressive use of parent holding company debt, where the ratio of parent holding company debt to total consolidated debt (excluding ExGen) increases to the high-20% range

» A material increase in the consolidated business risk profile, especially if it is associated with additional businesses within ExGen

» The emergence of a highly contentious regulatory environment in either Maryland or Illinois

» Other event-like risks include: a major physical or cyber-related operating challenge with one or several of ExGen's nuclear reactors; attempts at market intervention pressured ExGen's margins or profitability, or where the financial profile was negatively impacted;

material changes in ExGen's retail market trading and marketing volatility, especially if sizeable, unexpected swings in liquidity demands resulted

Detailed Rating Considerations

Large, diversified regulated utility portfolio is foundation to credit profile

Exelon's suite of regulated utilities provides a strong foundation to its consolidated credit profile. BGE, CWE, PECO, Pepco, DPL and ACE are all low risk T&D systems which receive supportive and constructive regulatory treatment in their jurisdictions. We see Exelon's regulated utility business growing in strategic importance across the Exelon corporate family.

Parent holding company debt constrains rating due to structural subordination notching considerations

Exelon's decision to finance a large portion of the PHI acquisition with parent holding company debt is a credit negative, because it adds complexity to the capital structure. Prior to the PHI merger, Exelon was reducing its parent holding company debt, mostly by transferring or refinancing holding company debt to ExGen. More recently, Exelon is exhibiting a willingness to use parent holding company leverage to help ExGen, a credit negative for both Exelon and its regulated T&D utilities.

Prospectively, we see roughly $20 billion of debt across Exelon's T&D utilities, $12 billion at ExGen and roughly $8 billion at the parent holding company. With the utilities producing roughly $4 billion in CFO, the ratio of utility CFO to utility debt should hover near the 20% range. This level generally translates to a low-A rating for low risk T&D utilities in supportive regulatory jurisdictions. This would imply an approximately 2-notch rating differential from Exelon's current Baa2 consolidated parent rating and the average implied rating across its T&D utilities.

As a comparative illustration, Exelon's ratio of CFO to debt would fall to the 15% range if we included the $8 billion in holding company debt with the $20 billion of utility debt (and only looked to the utility's $4 billion in CFO). The 15% range is more characteristic of a Baa2 rating for low risk T&D utilities, but our example excludes any affects from ExGen. In a downside scenario, Exelon's ratio of CFO to debt would fall to the 10% range if we include ExGen's $12 billion of debt, but only look to the utility's $4 billion in CFO.

The ratio of holding company debt to total consolidated debt is almost 30% if we exclude ExGen's debt from the denominator. But the ratio would fall to about 20% if we added ExGen's debt in the denominator. A ratio of holding company debt to total consolidated debt in the 20-25% range (or below) is typically associated with only a 1-notch rating differential for structural subordination.

Early retirement of nuclear reactors is credit negative

The recent announcements to retire unprofitable nuclear reactor facilities in Illinois, including the 1,069-megawatt Clinton facility in DeWitt County is credit negative because Exelon will forgo the opportunity costs of margins through 2026, when the reactors operating license is scheduled to expire, and the early retirement will likely trigger additional costs associated with decommissioning. Additionally, the early retirement raises the risk of a more contentious relationship between Exelon and local stakeholders because Clinton is a material employer and tax payer in that region of southern Illinois.

Another Illinois reactor, the 1,403-megawatt Quad Cities facility, is a multi-unit reactor that is 25%-owned by Berkshire Hathaway Energy Company (A3 stable). Although Quad Cities is in Illinois, the plant is in the PJM Interconnection region, not the Midwest Independent Transmission System (MISO) where Clinton is located. The PJM and MISO are regional transmission organizations (RTO) which manage the supply and demand of electric loads. Both RTO's compensate generators with payments to keep their generation supplies ready to be called on, if needed, known as capacity payments. From a credit perspective, shutting down Quad Cities is credit negative because the opportunity costs of giving up the operating license, which runs until 2032 for both of Quad Cities reactors, is high.

EDF put option viewed as a liquidity event

ExGen is exposed to Electricitie de France's (EDF: A2 negative) because EDF has an option to “put” its interests in Constellation Energy Nuclear Group, LLC (CENG) back to ExGen anytime between now and 30 June 2022. This leaves EDF with plenty of time to evaluate its various options, including how new New York State subsidy revenues might impact the valuation of the fleet. Importantly, we think the relationship between both EXC and EDF is healthy and professional, and we do not see any contentiousness in the relationship at this time.

CENG includes minority ownership interests in roughly 4,000 MW's of nuclear generation capacity, including Ginna and Nine Mile Point in New York and Calvert Cliffs in Maryland.

From a liquidity perspective, we assume the value of the put (to EDF from EXC) might be somewhere in a range between $250 million and $2.0 billion. Our illustrative values capture a wide disparity of outcomes on purpose. In our opinion, the put is not a material credit event, but instead represents a demand on liquidity. Because Exelon is aware of the existence of the put option, and management is presumably in discussions with EDF about how best to value the option, we do not think EDF exercising the option will be a surprise to Exelon.

From a credit perspective, we see the EDF put as a known risk factor, and incorporate a view that ExGen has ample liquidity resources and has prepared for the possibility that the put is exercised. We also incorporate a view that high put valuations will benefit ExGen's remaining fleet. Any signs of improving market conditions, in terms of the EPA's Clean Power Plan or higher sustained PJM capacity prices, will increase the value of the put option in favor of EDF.

Maintaining a strong financial profile will be key to credit

Maintaining a ratio of CFO to debt near the 18% - 20% range will keep Exelon well positioned within its rating category. This means Exelon will generate CFO of roughly $7.0 to $8.0 billion. Assuming the T&D utilities generate roughly $4.0 billion in CFO, ExGen will need to contribute the remaining $3.0 to $4.0 billion.

Liquidity Analysis

As of March 31, 2016, Exelon's liquidity arrangements totaled $9.9 billion. Approximately $6.3 billion supports its unregulated business platform, including $5.8 billion at ExGen. The regulated businesses have access to $3.7 billion of liquidity, including: $600 million at PECO, $600 million at BGE, $1 billion at CWE and $750 million at PH LLC and $250 million each at Pepco, DPL and ACE. Most facilities expire in 2019, but the PH LLC, Pepco, DPL and ACE facilities expire in August 2018. There is also another $500 million at Exelon designated for ExGen expiring in 2019.

At March 31, ExGen had about $1.2 billion in letters of credit and $1.4 billion in commercial paper outstanding, leaving availability of about $3.1 billion for the unregulated business. As of December 31, 2015, these draws amounted to only $1.5 billion.

Exelon's core syndicated credit facilities are used primarily to provide liquidity support and for the issuance of letters of credit. While the credit agreements do not contain any rating triggers that would affect borrowing access to the commitments and do not require material adverse change (MAC) representation for borrowings or the issuance of LOCs, there is a financial covenant for each borrowing entity - all of whom were compliant.

At CWE, commercial paper outstanding totaled $643 million and there were $2 million in letters of credit outstanding, leaving approximately $355 million of availability under its credit facility. In comparison, as of December 31, 2015, CWE's commercial paper outstanding totaled $294 million (with $2 million in letters of credit outstanding).

At BGE, there was $150 million in commercial paper and no letters of credit outstanding, leaving $450 million of availability under its credit facility. Again, by way comparison, as of December 31, 2015, BGE had $210 million in commercial paper (and no letters of credit) outstanding.

At PECO, there were $1 million in letters of credit issued and no outstanding commercial paper borrowings, whereas on December 31, 2015, PECO had no letters of credit outstanding and $1 million in outstanding commercial paper borrowings.

At PH LLC, there were $1 million in letters of credit and $442 million in outstanding commercial paper borrowings, leaving $307 million of availability under its credit facility. At DPL, there were no letters of credit and $75 million in outstanding commercial paper borrowings, leaving $175 million of availability under its credit facility. At both Pepco and ACE there were no letters of credit and no commercial paper borrowings outstanding, leaving $250 million of availability under each credit facility.

As of the last reporting period (March 31, 2016), in the event that ExGen were downgraded below investment grade, ExGen could be required to post additional collateral of $1.9 billion. If PECO, BGE or CWE were downgraded to below investment grade, they would have been required to post $22 million $28 million, and $17 million, respectively, of additional collateral.

Back on December 31, 2015, ExGen below investment grade collateral posting requirement was $2.0 billion.

On January 9, 2013, the US Court of Appeals reached a decision for the government in a lawsuit involving Consolidated Edison`s (ConEd's) participation in a lease-in, lease-out (LILO) transaction that the IRS also has characterized as a tax shelter, and disallowed ConEd's deductions stemming from its participation in this investment. CWE deferred the $1.2 billion of gain on the 1999 sale of its fossil generating facilities by acquiring like-kind property via a purchase leaseback transaction. The IRS has asserted that the Exelon purchase leaseback transaction is substantially similar to a leasing transaction known as a sale-in, lease-out transaction (SILO). Exelon believes that its like-kind exchange transaction is not the same as or substantially similar to a SILO.

In the first quarter of 2013, Exelon recorded a non-cash charge to earnings of approximately $265 million, which represents the full amount of interest expense (after-tax) and incremental state tax expense in the event that Exelon is unsuccessful in its litigation efforts. Approximately $170 million of the amount was recorded at CWE.

Exelon expects to hold CWE harmless from any unfavorable impacts of the after-tax interest amounts on CWE's equity. In the event of a fully successful IRS challenge to Exelon's like-kind exchange position, the potential tax and after-tax interest, exclusive of penalties, that could become payable as of March 31, 2016 may be as much as $760 million, of which approximately $275 million would be attributable to CWE and the remainder to Exelon.

Structural Considerations

Separating Exelon's debt between its parent holding company, its utilities and ExGen is a component to our credit assessment. In light of Exelon's revised corporate finance policies, we are incorporating a view that looks to Exelon's parent holding company debt as a source of financing for its regulated utilities, but not its unregulated ExGen. However, Exelon might use parent holding company debt to also finance ExGen. This could impact the relationship between the Exelon the parent and its unregulated subsidiary, ExGen, but could also impact its regulated T&D utility subsidiaries.

Profile

Exelon Corporation (Exelon: Baa2 stable) is a large diversified US holding company that owns six regulated transmission and distribution utilities and a large unregulated power company.

Rating Action: Moody's Affirms Exelon and Pepco Holdings; changes Pepco Holdings' rating outlook to developing from stable

Global Credit Research - 31 Aug 2015

Approximately $37 billion of debt and debt securities affected

New York, August 31, 2015 -- Moody's Investors Service today affirmed the ratings for Exelon Corporation (Exelon) and Pepco Holdings Inc. (PHI), including PHI's Prime-3 commercial paper rating. In addition, Moody's changed the rating outlook for PHI to Developing from Stable and changed the rating outlook for Commonwealth Edison Company to Positive from Stable.

RATINGS RATIONALE

Ratings affirmed include the Baa2 senior unsecured rating for Exelon, Exelon Generation Company LLC (ExGen) and Atlantic City Electric Company (ACE); the Baa1 unsecured rating for Commonwealth Edison Company (CWE), Delmarva Power & Light Company (DPL) and Potomac Electric Power Company (Pepco); the A3 rating for Baltimore Gas & Electric (BGE); and the A2 rating for PECO Energy Company (PECO). Moody's also affirmed the Prime-1 commercial paper rating for PECO, the Prime-2 commercial paper rating for Exelon, ExGen, CWE, BGE, ACE, DPL and Pepco. The rating outlooks for Exelon, ACE, BGE, DPL, PECO and Pepco remain stable.

"The rejection of the Exelon/Pepco merger application is credit negative for both companies," said Jim Hempstead, Associate Managing Director "because the outcome was a surprise, not because the regulators denied the merger application."

Nevertheless, we think Exelon and PHI will continue to pursue the merger, and will ask the DC PSC for reconsideration of the transaction which was originally announced in April 2014. For now, we are ascribing a 50% - 50% probability that the transaction is ultimately completed. We observe other utility change in control proceedings taking between 18-24 months to complete.

For Exelon, the rejection is credit negative because PHI would have brought an incremental $8.0 billion in regulated rate base to its existing $20.0 billion, and would have tipped the consolidated scale to where roughly 60% of the business (in terms of assets, debt and EBITDA) was related to lower-risk regulated transmission and distribution (T&D) utilities. PHI was looking at Exelon's bigger size and greater access to resources to help execute and finance an elevated capital investment program across all its jurisdictions.

PHI's Baa3 rating reflects the company's low business risk profile, anchored by a portfolio of regulated T&D utilities. The credit profile of these utilities aggregate at the Baa1-category, thanks to their roughly $8 billion in regulated rate base. The Baa3 rating also reflects the reduction to prior unregulated business activities, a credit positive, and the shareholder dividend being financed by debt (issued at the parent holding company), a material credit negative.

PHI's rating outlook was changed to Developing from stable to reflect the equal likelihood for both positive and negative credit implications associated with the next steps of the merger proceeding. If the acquisition of PHI by Exelon appears to be heading to a successful completion, the likelihood of positive rating actions for PHI will rise. Similarly, if the acquisition appears to be heading for a permanent termination, the likelihood of negative rating actions for PHI will rise.

"A merger termination is worse for PHI than Exelon, and a termination will pressure PHI's Baa3 rating because PHI will face a series of painful decisions, including deferred capital investment plans, right-sizing its common dividend and securing continued access to external liquidity sources." Hempstead added.

PHI's Baa3 rating could be upgraded if the proposed acquisition by Exelon is ultimately successful, primarily reflecting its role as an intermediate subsidiary holding company of Exelon. As a result, we'd expect that PHI wouldn't be used as a financing vehicle anymore, and its $700 million of existing parent holding debt would decline to less than $200 million by 2018.

Exelon's Baa2 senior unsecured rating and stable outlook reflect its stable and predictable regulated utility businesses. The Baa2 reflects our expectation that Exelon's T&D utilities (BGE, CWE and PECO) generate a ratio of cash flow from operations (CFO: adjusted for changes in working capital) to debt in the low-20% range, which is consistent with low risk T&D utilities in the A-ratings category.

Exelon's Baa2 rating is constrained by its more risky subsidiary, Exelon Generation Company LLC (ExGen: Baa2 stable), which owns a large fleet of unregulated nuclear generation assets and a retail energy marketing business. These unregulated businesses are less predictable, because they are largely driven by volatile commodity prices, such as natural gas and electricity. Still, we expect ExGen to generate approximately $3.5 billion in CFO, which compares favorably to its roughly $10-$12 billion in debt. If the PHI merger is terminated, Exelon's business mix would stay skewed to the unregulated ExGen, and Exelon would remain under the Global Unregulated Utilities and Power Companies rating methodology.

Exelon's rating could be upgraded if the ratio of CFO to debt were to rise above 20% for a sustained period of time, or if Exelon exited its more risky businesses at ExGen. Exelon's rating could be downgraded if the financial performance declined, where the ratio of CFO to debt fell to the mid-teen's range for a sustained period of time, or if the level of parent holding company debt were to increase (to above the 25% range or higher) or if there were any material shifts in shareholder reward programs. A shift in strategic focus could also trigger a rating downgrade, especially where the shift resulted in a material increase in the consolidated business risk profile, presumably somewhat more toward the unregulated business segment within ExGen.

Ratings could be pressured if the regulated utilities were faced with a highly contentious regulatory environment, a scenario we view as having a low probability at this time, or if ExGen faced a major operating challenge with several of its reactors at the same time.

The positive rating outlook for CWE reflects the improved regulatory environment in Illinois, which we are beginning to see as sustained, especially as that relates to the formulaic rate-making structures. CWE's financial profile should remain steady, and the utility is expected to produce a ratio of CFO to debt in the high-teen's range (18% - 19% range). For the twelve months ended June 30, 2015, CWE produced a ratio of approximately 20%. CWE's rating could be upgraded over the next 12 to 18 months if its steady financial performance and supportive regulatory framework remains intact.

The principal methodology used in rating Exelon Corporation and Exelon Generation Company, LLC was Unregulated Utilities and Unregulated Power Companies published in October 2014. The principal methodology used in rating Atlantic City Electric Company, Baltimore Gas and Electric Company, BGE Capital Trust II, ComEd Financing III, Commonwealth Edison Company, Constellation Energy Group, Inc., Delmarva Power & Light Company, Exelon Capital Trust I, Exelon Capital Trust II, Exelon Capital Trust III, Peco Energy Capital Trust III, PECO Energy Capital Trust IV, PECO Energy Company, Pepco Holdings, Inc. and Potomac Electric Power Company was Regulated Electric and Gas Utilities published in December 2013. Please see the Credit Policy page on www.moodys.com for a copy of these methodologies.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this rating action, and whose ratings may change as a result of this rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

The following information supplements Disclosure 10 ("Information Relating to Conflicts of Interest as required by Paragraph (a)(1)(ii)(J) of SEC Rule 17g-7") in the regulatory disclosures made at the ratings tab on the issuer/entity page on www.moodys.com for each credit rating as indicated:

Moody's also was paid for services other than determining a credit rating in the most recently ended fiscal year by the person that paid Moody's to determine the following credit ratings: 10277594, 10286740, 35394567, 806758856, 808385255, 823964159, 824081051, 824553183, 824553184, 824553185, 824553186, 824553187 assigned to Exelon Corporation and 10345402, 35394666, 820554020, 821154511, 821154512, 822264218, 822264220, 823172368, 823172369, 823964164, 824081058, 824280070 assigned to Exelon Generation Company, LLC.

Moody's was not paid for services other than determining a credit rating in the most recently ended fiscal year by the person that paid Moody's to determine the following credit ratings: 10037826, 10089499, 10090771, 10096867, 10119766, 35000573, 806659534, 809874478, 809874499, 823043029, 823205506, 823364872, 823460818, 823964184, 824081053 assigned to Baltimore Gas and Electric Company; 806724704 assigned to BGE Capital Trust II; 10378512 assigned to ComEd Financing III; 10038172, 10197341, 10371086, 35001045, 809241147, 809295265, 809730182, 809964548, 820121571, 820336487, 820517050, 820737892, 820843780, 822177982, 822703357, 822703363, 823228242, 823544392, 823743749, 823743754, 823964172, 824043474, 824217817, 824373765 assigned to Commonwealth Edison Company; 10328859, 822385740 assigned to Constellation Energy Group, Inc.; 806758867 assigned to Exelon Capital Trust I; 806758869 assigned to Exelon Capital Trust II; 806758871 assigned to Exelon Capital Trust III; 10186070 assigned to Peco Energy Capital Trust III; 806603432, 806648039 assigned to PECO Energy Capital Trust IV; 10039513, 10057120, 10057121, 10057122, 10057123, 35002481, 807510527, 809806892, 820111314, 820218276, 820810608, 823219314, 823578116, 823578118, 823964177, 824081056, 824116903 assigned to PECO Energy Company; 10037777, 10042852, 10042853, 10042854, 10042855, 10042856, 10042857, 35000539, 806809269, 807501920, 820642468, 822505677, 823570225, 824081240 assigned to Atlantic City Electric Company; 10038300, 10151577, 10151579, 10151733, 10151734, 10151735, 10152019, 10152020, 10180357, 35001177, 823175871, 823570224, 823642019, 824473377 assigned to Delmarva Power & Light Company; 10334782, 10344317, 35395270, 820295163, 822256634 assigned to Pepco Holdings, Inc. and 35002522, 807460436, 808375623, 820145656, 820642449, 821424931, 823130030, 823349572, 823648822, 823839874, 824383429 assigned to Potomac Electric Power Company.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

INVESTORS SERVICE

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY’S IN ANY FORM OR MANNER WHATSOEVER.

Moody’s Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody’s Corporation (“MCO”), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody’s Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody’s Investors Service, Inc. for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS’s ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading “Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy.”

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY’S affiliate, Moody’s Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody’s Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to “wholesale clients” within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY’S that you are, or are accessing the document as a representative of, a “wholesale client” and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to “retail clients” within the meaning of section 761G of the Corporations Act 2001. MOODY’S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be reckless and inappropriate for retail investors to use MOODY’S credit ratings or publications when making an investment decision. If in doubt you should contact your financial or other professional adviser.

Additional terms for Japan only: Moody's Japan K.K. (“MJKK”) is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody’s Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody’s SF Japan K.K. (“MSFJ”) is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization (“NRSRO”). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Opinion

Rating Drivers

PHI acquisition denied by DC regulators, a credit negative because the decision was so unexpected

Lost increase in regulated rate base keeps higher risk profile in place, and demands a stronger financial profile to support volatility

Willingness to increase financial risk with heavy reliance on parent holding company debt is credit negative, and will constrain rating due to structural subordination notching considerations

ExGen performing well in a challenging market environment, thanks to its large, diversified nuclear generating fleet

Leverage will rise with the EDF put option and Like-Kind Exchange proceeding, creating a modest liquidity event, not a material credit event

Maintaining a strong suite of financial ratios will be key to credit profile

Corporate Profile

Exelon Corporation (Exelon: Baa2 stable) is a large US holding company that owns three regulated transmission and distribution utilities and a large unregulated power company. It's three regulated transmission and distribution (T&D) utilities include: PECO Energy Company (PECO: A2 stable), Baltimore Gas and Electric Company (BGE: A3 stable) and Commonwealth Edison Company (CWE: Baa1 stable). PECO is regulated by the Pennsylvania Public Utility Commission (PAPUC), BGE is regulated by the Maryland Public Service Commission (MPSC) and CWE is regulated by the Illinois Commerce Commission (ICC). All three utilities are also regulated by the Federal Energy Regulatory Commission (FERC).

Exelon also owns Exelon Generation Company, LLC (ExGen: Baa2 stable), one of the largest competitive electric generation companies globally as measured by owned and controlled megawatts (MW),with net capacity of approximately 32 GW's. ExGen is regulated by the Federal Energy Regulatory Commission (FERC) and by the Nuclear Regulatory Commission (NRC).

Recent Events

On 25 August 2015, the Public Service Commission of the District of Columbia (DC PSC) rejected the merger application between Exelon and Pepco Holdings, Inc. (PHI: Baa3 stable). The denial is credit negative for Exelon, because PHI helps shift Exelon's consolidated mix of regulated and unregulated business activities to approximately 60% regulated from roughly 50% today and diversifies its jurisdictional exposure to include New Jersey, Delaware and the District of Columbia. We viewed PHI's $8 billion additional regulated rate base to Exelon's $20 billion as a credit positive for the corporate family, but now we assign a 50%-50% probability that the transaction will eventually close.

SUMMARY RATING RATIONALE

Exelon's Baa2 senior unsecured rating reflects its stable and predictable regulated utility business, which could be benefitted by the addition of the PHI acquisition. But a termination of the PHI transaction, by itself, does not hurt the credit profile of Exelon. Exelon's Baa2 rating reflects its own T&D utility business, which includes BGE, CWE and PECO. Combined, these utilities produce roughly $11 billion in revenue and $3.0 billion in cash flow from operations (CFO: adjusted for changes in working capital), and good diversity across regions. Exelon's Baa2 rating is constrained by its more risky subsidiary, Exelon Generation Company LLC (ExGen: Baa2 stable), which owns a large fleet of unregulated nuclear generation assets and a retail energy marketing business. These unregulated businesses are volatile, because they are largely driven by volatile commodity prices, such as natural gas and electricity. Exelon generates a ratio of consolidated CFO to debt around 20% and a retained cash flow (CFO less common dividends) to debt around xx%.

DETAILED RATING CONSIDERATIONS

DC PSC decision is credit negative because it was a surprise, not because it was rejected

The DC PSC's denial of the merger agreement is credit negative for Exelon because the decision was unexpected. We incorporate a view that managing regulatory relationships is a core competency for Exelon, and PHI. If the merger is completed, we think PHI is benefitted by Exelon's larger size and greater resources, and financial relief from financing its shareholder dividends would be viewed positively. Exelon benefits from the $8 billion of incremental rate base, and a bigger regulated utility asset platform to squeeze operating efficiencies. For now, we still expect improved regulatory relationship across all of PHI's jurisdictions, including DC, Maryland, DE and NJ. Although many of the improved recovery mechanisms in Maryland, New Jersey, Delaware and the District of Columbia were first implemented prior to the merger, Exelon's larger asset platform is expected to help facilitate the execution of the various reliability improvement programs.

Willingness to increase financial risk with heavy reliance on parent holding company debt is credit negative, and will constrain rating due to structural subordination notching considerations

Exelon's decision to finance a large portion of PHI with parent holding company debt was viewed as a credit negative, because it adds complexity to the capital structure. Prior to the merger, Exelon was reducing its parent holding company debt, mostly by transferring or refinancing holding company debt at ExGen. Having a parent holding company with little to no debt is credit positive because it increases financial flexibility. The PHI acquisition included some financing of PHI's equity with parent holding company debt, plus, PHI was bringing its own existing holding company debt.

Large, diversified regulated utility portfolio is credit positive

We see Exelon's suite of regulated utilities producing approximately $3.5 billion in cash flow from operations (CFO, adjusted for changes in working capital), which represents approximately 25% - 30% of annual regulated revenues. We see this relationship between revenues and CFO staying in the mod-20% range over the next few years, but increasing over the near term given the broad suite of recovery mechanisms. With debt slowly rising to approximately $20 billion from $18.5 billion today, Exelon's regulated utilities should produce a ratio of CFO to debt around 20%. We see this ratio supporting an A3 rating category across the regulated business, which is 2 notches higher than Exelon's Baa2 rating. Exelon's suite of big T&D systems cover the general regions of Washington DC, Baltimore, Philadelphia and Chicago, and create a strong foundation to the consolidated credit profile.

ExGen performing well thanks to nuclear fleet

ExGen's CFO is more volatile than the regulated utilities. For example, CFO fell to $1.8 billion in 2014 from $3.9 billion in 2013, largely due to a negative working capital use associated with its hedging program. This volatility is a material credit negative, in part because we see an extended period of low natural gas prices. Low natural gas prices usually keep a lid on power prices, which limit's ExGen's CFO production.

Despite the challenging market fundamentals, we see incremental transparency in forward power prices with respect to capacity payments in the Pennsylvania-New Jersey-Maryland (PJM) market. Given the most recent PJM capacity price auction, we estimate close to $1.0 billion in annual capacity payments. By themselves, over the next few years, ExGen's capacity payments alone will represent about 7% - 10% of ExGen's debt. That said, the improved capacity prices were both directly and indirectly impacted by recent rule changes and amendments implemented by the PJM. These rules can change again, so longer-term capacity prices remain uncertain.

In addition to low natural gas prices and an improving capacity market, we also see higher power prices over the next few years due to the EPA's recently announced Clean Power Plan (CPP). In general, the CPP is favorable to nuclear powered electric generation, because nuclear generation does not produce any material carbon dioxide emissions.

EDF put option is a liquidity event for now

We see the debt at ExGen rising, in part due to its exposure to Electricity de France (EDF: A1 negative). EDF holds an option to "put" its interests in EGNF back to ExGen staring on 1 January 2016 and ending on 31 December 2022. EGNF includes minority ownership interests in xxx MW's of nuclear generation capacity, including Ginna, Fitzpatrick and Nine Mile Point in New York and Calvert Cliffs in Maryland. From a liquidity perspective, we think the value could range between $250 million and $2.0 billion, which, by itself, is not a material credit event. From a credit perspective, we see the EDF put as a known risk factor, and incorporate a view that ExGen has ample resources and has prepared for the possibility it might be absorbing the partnership. We also incorporate a view that EDF has ample long term liquidity resources, which makes the option more valuable (to EDF) due to the duration of the exercise period. Improving market conditions, in terms of the EPA's CPP and higher PJM capacity prices, will increase the value of the put option in favor of EDF.

Maintaining a strong suite of financial ratios will be key to credit profile

Over the past two years (2014 and 2013), Exelon generated a ratio of funds from operations to debt of approximately 25%. This is down materially from the 40% ratio generated in 2010 and 2011 and the 30% ratio generated in 2012. During this period Exelon acquired Constellation Energy, and its debt increased from the $17 billion range (in 2010 - 2011) to today's mid-$20 billion range. We think the probability of Exelon generating consolidated ratios of cash flow to debt in the 40% range is remote, largely due to our expectation that a sustained period of low natural gas prices will keep a lid on power prices for at least the next few years. We also see little evidence that load volumes will materially rise, despite any economic development activity, due to a more prolific deployment of energy efficiency programs in the greater mid-west and Mid-Atlantic regions. Still, on a long term run-rate, we see Exelon generating a ratio of cash flow to debt near the 20% range for a sustained period of time. Assuming Exelon's shareholder dividend policy remains in place, the ratio of retained cash flow to debt should stay near the xx% range.

Liquidity

As of June 30, 2015, Exelon's liquidity arrangements totaled $8.5 billion. Approximately $6.3 billion supports its unregulated business platform, including $500 million at Exelon and nearly $5.8 billion at ExGen, while the regulated businesses have access to $2.2 billion of liquidity -- $600 million at PECO, $600million at BGE and $1 billion at CWE. The Exelon, PECO, BG&E and most of the ExGen facilities expire in May 2019. The CWE facility expires March 2019.

At June 30, Exelon and ExGen had about $1.5 billion in letters of credit and no commercial paper outstanding, leaving availability of $4.8 billion for the unregulated business. At CWE, commercial paper outstanding totaled $503 million and there were $2 million in letters of credit outstanding, leaving approximately $495 million of availability under its credit facility. At BGE, there was no commercial paper or letters of credit outstanding, respectively, leaving $600 million of availability under its credit facility. At PECO, there were no letters of credit outstanding and $1 million in outstanding commercial paper borrowings, leaving $599 million of availability under its credit facility.

The core syndicated credit facilities are used primarily to provide liquidity support and for the issuance of letters of credit. While the credit agreements do not contain any rating triggers that would affect borrowing access to the commitments and do not require material adverse change (MAC) representation for borrowings or the issuance of LOCs, there is a financial covenant for each entity; all of which were compliant and year-end.

As of the last reporting period (June 30, 2015), in the event that ExGen were downgraded below investment grade, ExGen could be required to post additional collateral of $2.2 billion. If PECO, BGE or CWE were downgraded to below investment grade, they would have been required to post $20 million $35 million, and $8 million, respectively, of additional collateral.

On January 9, 2013, the US Court of Appeals reached a decision for the government in a lawsuit involving Consolidated Edison`s (ConEd's) participation in a lease-in, lease-out (LILO) transaction that the IRS also has characterized as a tax shelter, and disallowed ConEd's deductions stemming from its participation in this investment. CWE deferred the $1.2 billion of gain on the 1999 sale of its fossil generating facilities by acquiring like-kind property via a purchase leaseback transaction. The IRS has asserted that the Exelon purchase leaseback transaction is substantially similar to a leasing transaction known as a sale-in, lease-out transaction (SILO). Exelon believes that its like-kind exchange transaction is not the same as or substantially similar to a SILO.

In light of the ConEd decision and Exelon's current determination that a settlement is unlikely, Exelon recorded in the first quarter of 2013 a non-cash charge to earnings of approximately $265 million, which represents the full amount of interest expense (after-tax) and incremental state tax expense in the event that Exelon is unsuccessful in its litigation efforts. Approximately $170 million of the amount was recorded at CWE.

Exelon expects to hold CWE harmless from any unfavorable impacts of the after-tax interest amounts on CWE's equity. In the event of a fully successful IRS challenge to Exelon's like-kind exchange position, the potential tax and after-tax interest, exclusive of penalties, that could become payable as of December 31, 2014 may be as much as $810 million, of which approximately $310 million would be attributable to CWE and the remainder to Exelon.

Separating the utilities' and holdco debt from the ExGen operation is a component to our credit assessment given Exelon's revised corporate finance policies, and we expect to refine our analysis as additional facts regarding the use of holding company debt are provided.

Rating Outlook

The stable rating outlook for Exelon considers the stability and predictability of its large T&D utility businesses, an adequate liquidity profile and conservatively levered unregulated generation business. We think Exelon is poised to generate consolidated cash flows in the $6.0 - $7.0 billion range, which results in a ratio of cash flow to debt around 20% - an important threshold for maintaining a stable rating outlook. The stable outlook incorporates a view that ExGen's nuclear reactors will continue to operate to their authorized NRC operating license expirations and that the regulated utilities will continue to received

What Could Change the Rating - Up

A rating upgrade at Exelon would require another material shift in corporate finance policies, where the ratio of cash flow to debt were to rise to the high 20% range; where the percentage of parent holding company debt fell below the 10% range and where the unregulated business in relation to the consolidated enterprise declined to the 20% range for a sustained period of time. Ratings could also be upgraded if the company exited its more risky businesses at ExGen, given the A3 / Baa1 positioning of its T&D utilities and little holding company debt (today).

What Could Change the Rating - Down

The rating could be downgraded if Exelon's financial performance declined, where the ratio of cash flow to debt fell below the 20% range on a sustained basis, or if there were material shifts in the corporate finance policies, especially with respect to the utilization of parent holding company debt (where the ratio of holding company debt to total consolidated debt approached the 20% - 25% range) or if there were any material shifts in shareholder reward programs. A shift in strategic focus could also trigger a rating downgrade, especially where the shift resulted in a material increase in the consolidated business risk profile, presumably associated a business within ExGen. Ratings could be also be pressured if the regulated utilities were faced with a highly contentious regulatory environment, a scenario we view as having a low probability at this time; if ExGen faced a major operating challenge with several of its reactors at the same time; if there were unfavorably market intervention where ExGen's margins were negatively impacted, or if there were sizeable, unexpected swings in liquidity demands.

Other Considerations

If the acquisition of PHI is completed, we would likely move Exelon into our Global Regulated Electric and Gas Utilities rating methodology (published in December 2013) and out from the Unregulated Utilities and Power Companies rating methodology (published in November 2014). Absent the PHI transaction, we would likely keep Exelon under the Unregulated Utilities and Power Company rating methodology, but for analytical purposes, will continue to view Exelon under both methodologies, given the strategic focus on regulated assets.

Announcement: Moody's confirms Exelon's and Exelon Generation's ratings; outlook negative

Global Credit Research - 08 Nov 2012

Approximately $9.3 billion of Debt Securities and Bank Credit Facilities Affected

New York, November 08, 2012 -- Moody's Investors Service has confirmed the ratings of Exelon Corporation (Exelon: Baa2 senior unsecured), including its Prime-2 commercial paper rating, and confirmed the long-term ratings of primary subsidiary, Exelon Generation Company, LLC (ExGen: Baa1 senior unsecured). Moody's also affirmed ExGen's short-term rating for commercial paper at Prime-2. Today's rating action concludes the review for possible downgrade at Exelon and ExGen, which was initiated on June 11th. Exelon and ExGen's rating outlook is negative.

RATINGS RATIONALE

The rating confirmation reflects last week's announcement by management to defer $2.3 billion in growth capital expenditures thereby enhancing free cash flow generation from 2012 through 2015. The rating confirmation further acknowledges statements by management during the company's third quarter earnings call that revisiting its dividend policy would be among the range of options for management and the board to consider in preserving its investment-grade rating should power prices not recover in the next six months as completely or as rapidly as Exelon's fundamental views suggest. To that end, the rating confirmation acknowledges these and other public statements concerning the company's firm commitment to maintain an investment-grade rating at all registrants within the Exelon family.

While weak market fundamentals are negatively affecting the entire unregulated power space, Exelon remains unique relative to its diversified peers, given its high reliance on the unregulated power business for earnings and cash flow growth. Exelon is also unique in terms of its scale and the size of its nuclear fleet. Although up-rate investments at several nuclear plants remain unchanged, free cash flow will be enhanced by the deferral of $1.025 billion of capital investment for extended power nuclear up-rates at LaSalle and at Limerick until 2017 and by the removal of an additional $1.25 billion for new renewable projects. That said, we anticipate Exelon and ExGen's key credit metrics will decline from recent historical levels during the next two years due to expiring hedges and current market prices. Based on the current market, we estimate that even with the scaled back capital spending program, ExGen's cash flow (CFO-pre W/C) to debt will be in the low-mid 30% range over the next few years while its retained cash flow to debt will average around 15%, with very modest free cash flow generation, which together represent credit metrics more reflective of a mid-Baa rated unregulated power company. However, the nature of Exelon's fleet means that it would benefit from any uptick in power pricing.

The reduction in capital expenditures will enhance ExGen's ability to meet other funding requirements, which includes providing the lion's share of the parent $1.8 billion dividend. This is particularly the case over the next several years when capital investments at regulated subsidiary Commonwealth Edison Company (ComEd: Baa2 senior unsecured) are expected to be elevated and dividend payments are prohibited from regulated subsidiary Baltimore Gas & Electric Company (BG&E: Baa1 senior unsecured) through 2014. In that vein, a decision by Exelon to modify its dividend policy would further benefit ExGen, and in particular ExGen's free cash flow metric.

The rating confirmation acknowledges the expected decline in Exelon's liquidity arrangements owing to the Exelon-Constellation Energy Group, Inc. merger this past March. Beginning in 2013, Exelon's liquidity arrangements supporting its unregulated power business will equal $6.1 billion, a decline of $4.2 billion from the $10.3 billion level that existed immediately following merger close. This decline, while substantial on a notional basis, is largely reflective of the reduced collateral requirements that occurs when a company that is long on generation is combined with one that has a large retail network. At October 24, 2012, there was $4.2 billion of availability under the $6.1 billion in Exelon and ExGen facilities, after giving effect to $1.9 billion of ExGen letters of credit issued. At October 24th, Exelon and ExGen had no commercial paper outstanding. The $6.1 billion of credit facilities that supports Exelon's unregulated power business expires in August 2017. The legacy CEG $1.5 billion credit facility, which was assumed by Exelon at merger close and was unutilized at

October 24th, will expire at year-end 2012.

The negative rating outlook for Exelon and ExGen factors in the expected decline in certain key credit metrics that we anticipate occurring over the intermediate-term due to sustained weak market fundamentals even with the decline in growth capital spending. The negative outlook also acknowledges, that, despite the low-cost fleet, we believe ExGen would need to experience some increase in power prices above current market forwards in order to generate metrics consistent with their current rating category. The negative rating outlook further considers the sizeable dividend requirements at ExGen along with the parent's reliance on a large unregulated platform which can add to cash flow volatility.

In light of the negative rating outlook, the ratings at Exelon and ExGen's are not likely to be upgraded in the near-term. The rating outlook could, however, stabilize if the company continues to take actions that we believe are supportive of sustained long-term credit quality, particularly as it relates to capital allocation decisions.

The rating could be downgraded if future capital allocation decisions result in higher than anticipated negative free cash being financed with incremental indebtedness. Specifically, management has stated their intention to examine future dividend policy in light of ongoing power prices, so if power price expectations remain subdued and dividend policy is not reevaluated, or if the modification is only modest despite relatively sustained weaknesses, ExGen's ratings are likely to be downgraded. To that end, the rating could be downgraded if initiatives being pursued by management to improve cash flow and strengthen the balance sheet prove to be less effective during this down cycle resulting in sustained weakness in ExGen's metrics, including cash flow to debt below 30%, retained cash flow to debt below 15%, or free cash flow that is negative or negligible.

Headquartered in Chicago, IL, Exelon is the holding company for non-regulated subsidiary, ExGen and for regulated subsidiaries, ComEd, PECO, and BG&E. At 09/30/2012, Exelon had total assets of $78.4 billion.

The principal methodology used in this rating was Unregulated Utilities and Power Companies published in August 2009. Please see the Credit Policy page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

The Global Scale Credit Ratings on this press release that are issued by one of Moody's affiliates outside the EU are endorsed by Moody's Investors Service Ltd., One Canada Square, Canary Wharf, London E 14 5FA, UK, in accordance with Art.4 paragraph 3 of the Regulation (EC) No 1060/2009 on Credit Rating Agencies. Further information on the EU endorsement status and on the Moody's office that has issued a particular Credit Rating is available on www.moodys.com.

For ratings issued on a program, series or category/class of debt, this announcement provides relevant regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides relevant regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides relevant regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

Moody's considers the quality of information available on the rated entity, obligation or credit satisfactory for the purposes of issuing a rating.

Moody's adopts all necessary measures so that the information it uses in assigning a rating is of sufficient quality and from sources Moody's considers to be reliable including, when appropriate, independent third-party sources. However, Moody's is not an auditor and cannot in every instance independently verify or validate information received in the rating process.

Please see Moody's Rating Symbols and Definitions on the Rating Process page on www.moodys.com for further information on the meaning of each rating category and the definition of default and recovery.

Please see ratings tab on the issuer/entity page on www.moodys.com for the last rating action and the rating history. The date on which some ratings were first released goes back to a time before Moody's ratings were fully digitized and accurate data may not be available. Consequently, Moody's provides a date that it believes is the most reliable and accurate based on the information that is available to it. Please see the ratings disclosure page on our website www.moodys.com for further information.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Rating Action: Moody's places ratings of most US regulated utilities on review for upgrade

Global Credit Research - 08 Nov 2013

Approximately $400 billion of debt affected

New York, November 08, 2013 -- Moody's Investors Service placed the ratings of most regulated utilities and utility holding companies in the United States on review for upgrade, affecting approximately $400 billion of debt. These companies have been placed on review because Moody's has adopted a generally more favorable view of the relative credit supportiveness of the US regulatory environment, as detailed in our September 23, 2013 Request for Comment: "Proposed Refinements to the Regulated Utilities Rating Methodology and our Evolving View of US Utility Regulation."

RATINGS RATIONALE

"Our placement of these issuers on review considers improving regulatory trends in the US, including better cost recovery provisions, reduced regulatory lag, and generally fair and open relationships between utilities and regulators, " said Moody's Managing Director Larry Hess. We believe that many US regulatory jurisdictions have become more credit supportive of utilities over time and that our assessment of the regulatory environment that has been incorporated into ratings may now be overly conservative.

The US utility sector's low number of defaults, high recovery levels, and generally strong financial metrics from a global perspective provide additional corroboration for our view that ratings should generally be higher.

We expect that most upgrades will be limited to one notch, and that the reviews of the affected companies will be completed within approximately 90 days. Although we anticipate that most of the utilities placed under review will be upgraded, there may be selected instances where ratings will not be upgraded following the completion of our review.

We note that several regulated utilities and utility holding companies were not placed on review due to issuer specific circumstances that would preclude an upgrade at this time. These exclusions include utilities that are engaged in substantial construction programs for new generation or other large capital projects, currently have a Negative Outlook or are under potential downward rating pressure, are characterized by material concentration or event risk, face market or regulatory risks specific to their particular jurisdictions, or are part of a corporate family that has significant non-utility operations.

The following companies were placed on review for upgrade:

AEP Texas Central Company

AEP Texas North Company

AGL Capital Corporation

The principal methodology used in these ratings was Regulated Electric and Gas Utilities published in August 2009. Please see the Credit Policy page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this rating action, and whose ratings may change as a result of this rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

The below contact information is provided for information purposes only. Please see the ratings tab of the issuer page at www.moodys.com, for each of the ratings covered, Moody's disclosures on the lead analyst and the Moody's legal entity that has issued the ratings.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

MOODY'S
INVESTORS SERVICE

CREDIT RATINGS ISSUED BY MOODY'S INVESTORS SERVICE, INC. AND ITS RATINGS AFFILIATES (“MIS”) ARE MOODY’S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES, AND MOODY’S PUBLICATIONS MAY INCLUDE MOODY’S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES. MOODY’S DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL, FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS AND MOODY’S OPINIONS INCLUDED IN MOODY’S PUBLICATIONS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. MOODY’S PUBLICATIONS MAY ALSO INCLUDE QUANTITATIVE MODEL-BASED ESTIMATES OF CREDIT RISK AND RELATED OPINIONS OR COMMENTARY PUBLISHED BY MOODY’S ANALYTICS, INC. CREDIT RATINGS AND MOODY’S PUBLICATIONS DO NOT CONSTITUTE OR PROVIDE

INVESTMENT OR FINANCIAL ADVICE, AND CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT AND DO NOT PROVIDE RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. NEITHER CREDIT RATINGS NOR MOODY'S PUBLICATIONS COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MOODY'S ISSUES ITS CREDIT RATINGS AND PUBLISHES MOODY'S PUBLICATIONS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL, WITH DUE CARE, MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

MOODY'S CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY RETAIL INVESTORS AND IT WOULD BE RECKLESS AND INAPPROPRIATE FOR RETAIL INVESTORS TO USE MOODY'S CREDIT RATINGS OR MOODY'S PUBLICATIONS WHEN MAKING AN INVESTMENT DECISION. IF IN DOUBT YOU SHOULD CONTACT YOUR FINANCIAL OR OTHER PROFESSIONAL ADVISER.

ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY LAW, INCLUDING BUT NOT LIMITED TO, COPYRIGHT LAW, AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT MOODY'S PRIOR WRITTEN CONSENT.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate

Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be reckless and inappropriate for retail investors to use MOODY'S credit ratings or publications when making an investment decision. If in doubt you should contact your financial or other professional adviser.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Table Of Contents

Summary:

S&PCORRECT: Exelon Corp.

*(**Editor's Note:** In the original version of this summary analysis published on Feb. 14, 2013, information regarding the credit facilities was misstated. A corrected version follows.)*

Credit Rating:	BBB/Stable/A-2

Rationale

Standard & Poor's Ratings Services' rating on diversified energy company Exelon Corp. reflects its consolidated business risk profile, which we view as "strong." Exelon's business risk profile reflects the higher-risk operations of unregulated supply affiliate Exelon Generation Co. LLC (ExGen), which has increased in size to subsume Constellation Energy's unregulated business. Exelon's business risk also reflects the excellent business risk profiles of regulated delivery businesses Commonwealth Edison Co. (ComEd), PECO Energy (PECO), and Baltimore Gas & Electric Co. (BGE), which have generally predictable transmission and distribution cash flows. Because of ring-fencing, we will continue to deconsolidate BGE and analyze it as an equity investment, counting only distributions to the parent as primary contributions to the parent's credit quality and financial profile.

As of Sept. 30, 2012, Exelon had about $18.2 billion of on-balance-sheet debt. We also impute about $4.4 billion of off-balance-sheet debt on the books for computing financial ratios, pertaining mostly to unfunded pension and other postemployment benefit obligations and power-purchase agreements.

Post-merger, Exelon is the nation's second-largest regulated distributor of electricity and gas, with 5.4 million customers in Illinois and Pennsylvania and 1.2 million customers in Maryland. Exelon also distributes natural gas to 490,000 customers in the Philadelphia metropolitan area through PECO and 650,000 customers in Maryland. ExGen engages in unregulated energy generation, wholesale power marketing, and energy delivery. The company has long-term exposure to market risk and meaningful exposure to nuclear plants (19,000 megawatts [MW] across 23 units). The company has about 35,000 MW and 465 billion cubic feet (bcf) (2012 estimates) of natural gas business.

Exelon gets a larger proportion of earnings from its regulated and retail operations. Through retail and wholesale channels, ExGen now provides about 170 terawatt-hours, or about 5%, of total U.S. power demand. We expect that retail markets (where customers can shop for electricity providers) in Pennsylvania, Ohio, Michigan, and Arizona to grow at about 10% in the commercial and industrial class and at about 15% in the residential class between 2011 and 2014. The plants arewell positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. The combination provides ExGen regional diversification of the generation fleet and a customer-facing load business, as generation and load positions are now better balanced across multiple regions. In most locations, ExGen will have adequate intermediate and peaking capacity within the portfolio for managing load shaping (matching resources with energy needs) risks. However, the company will still need to buy and sell length in the market to manage portfolio needs, in our opinion. Moreover, ExGen has a significant open position in the Midwest (exposed to merchant market), and a somewhat tight position in Texas and New England, where it has some risk of finding itself short when loads are high, in our opinion.

ExGen's cash flow is sensitive to commodity prices as almost 92% of its premerger generation is nuclear, all of which sliding natural gas prices are impairing. ExGen's unregulated operations accounted for about 65% of the consolidated enterprise by cash flow and capital spending in 2012. Given that base-load generation is price-taking we expect ExGen's adjusted funds from operations (FFO) to debt to remain volatile relative to its peers. For instance, all else remaining equal, we estimate gross margins in 2014 will be lower by about $400 million for every $5 per megawatt--hour (MWh) (round-the-clock) decline in power prices, about $250 million for every $1 per million cubic feet (mcf) decline in gas prices, and about $90 million for every $1 per MWh decline in retail margins.

As a result, ExGen's contribution to the overall Exelon cash flow declines to about 55% under our base case, because of the decline in unregulated cash flow when commodity prices fall. However, despite the lower power prices, we view the business risk profile of parent Exelon as strong. We expect financial measures to decline through 2014. However, the corporate credit ratings reflect our expectation that 2014-2015 will be the trough years. Based on the present forward curve, cash flow measures are adequate for the rated level in that year, especially after parent Exelon announced significantly reduced dividend payouts and ExGen deferred/eliminated some planned capital spending. However, despite the improvement in free operating cash flow , as a result of the decline in future gross margins, we view Exelon's cash flow adequacy ratio as having "significant" financial risk..

We view ExGen's ratable hedging strategy favorably, as it ensures that a high percentage of the company's near-term generation is locked in. Hedging not only protects unregulated generation cash flows from steep price declines, it also provides the company time to adjust its cost structure or its capital structure, should prices remain depressed. However, hedging activities insulate, but do not isolate, power merchants from commodity price effects. Current hedges show the significant value of Exelon's hedging program. Even though these hedges insulate ExGen, perversely, they also show the sensitivity of ExGen's margins to the prospect of a continued shale gas production onslaught. The decline in mark-to-market value through 2014 shows the limit to which Exelon can hedge--a price-taking fleet can hedge, but only at the prices the market will bear. Also, the merchant generation margins at ExGen will face a decline as high-priced hedges expire, evident in the drop in wholesale hedged gross margins. Still, the forward prices do show a contango as reflected in the increase in ExGen's open EBITDA from higher natural gas forwards. In addition, although retail competition has increased, and ExGen has lowered its growth estimates, we believe retail contributions can mitigate the wholesale decline, given the potential for cost savings, volumes gained from the Constellation merger, and acquisitions (StarTex and MX Energy Holdings).

Because of the decline in commodity prices, we expect ExGen's FFO to debt to tumble to about 27.5% in 2014 from more than 40% in 2011. Although ExGen's cash flows are relatively more volatile compared with peers because of the larger base-load generation, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must decline and stay below $3 per mcf before its FFO to debt falls below 20%.

We still view Exelon's internal funding as "aggressive." However, we view Exelon's decision to lower its dividends as bolstering credit quality. Dividend payout is now in line with peers (at about 55% to 60%) .However, Exelon's capital spending requirements remain significant between 2013 and 2015, at about $15.6 billion. Although utility capital spending tends to be funded in rate base, unregulated generation will have to fund its own capital requirements and recover them in market prices. Importantly, because of announced cuts, consolidated cash flow from operations will largely cover capital spending and dividends, resulting in modest external financing needs. Still, incrementally lower gas prices would hurt ExGen's debt protection measures more than the level of new debt financing, or operating and maintenance cost increases in ExGen's forecast through 2015.

Under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect FFO to total debt of the company to decline to about 25% in 2012 and then to hover at 23% to 24.5% through 2015. We expect free operating cash flow to debt to remain positive even in 2013 and 2014 when we expect financial measures to trough. Importantly, we expect to see the negative discretionary cash flow (after dividends) to improve meaningfully. Similarly, we expect debt to EBITDA to be at about 4.0x. This ratio is still consistent with Standard & Poor's 'BBB' rating guideposts for a financial risk profile we assess as "significant," especially since a meaningful amount of capital spending is discretionary (ExGen has lowered capital spending estimates in 2014 by more than $2.3 billion since July 2012 estimates).

Liquidity

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views the liquidity across the Exelon group of companies as "strong," in light of the debt maturities we expect and available credit facilities. We estimate that sources of cash will exceed the companies' uses by about 2x during the next 12 to 24 months. We expect sources over uses for Exelon and ExGen to remain positive even if EBITDA declines by 50%. In addition, because of Exelon's solid relationships with banks and high conversion of FFO to discretionary cash flow, we believe the company can absorb low-probability, high-impact shocks.

Exelon has sufficient alternative sources of liquidity to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen on its forward hedges. The next large maturities are in 2015 for Exelon and 2014 for ExGen.

As of Jan. 30, 2013, Exelon, ExGen, ComEd, PECO, and BGE had credit facilities of $500 million, $5.6 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire between December 2015 and August 2017. Availability under these facilities was $498 million for Exelon; $3.95 billion for ExGen; and $1 billion, $599 million, and $600 million for ComEd, PECO, and BGE, respectively. Commercial paper outstanding was $1.7 billion and the aggregate availability was $6.6 billion.

Outlook

The outlook on the ratings is stable. That said, we believe that higher natural gas production from shale gas plays and a delay in environmental rules related to plant retirements can significantly hurt the company's financial performance. We believe these headwinds have increased and Exelon faces a potential earnings decline in 2014. Should the prevailing commodity environment persist, the company may have to address its declining earnings profile by reducing capital spending. We expect Exelon and ExGen to maintain consolidated FFO to debt in the 22% to 23% and

25% to 27% ranges, respectively, in 2014 to maintain current ratings. A positive outlook--currently not under consideration--can result if natural gas prices stabilize and power prices respond favorably to coal-plant retirements, resulting in an improvement in consolidated FFO to debt levels of more than 27%.

RatingsDirect®

Summary:

PECO Energy Co.

Primary Credit Analyst:
Ana M Olaya-Rotonti, New York (1) 212-438-8668; ana_olaya-rotonti@standardandpoors.com

Secondary Contact:
Aneesh Prabhu, CFA, FRM, New York (1) 212-438-1285; aneesh_prabhu@standardandpoors.com

Table Of Contents

Summary:

PECO Energy Co.

Corporate Credit Rating	BBB/Stable/A-2

Profile Assessments

BUSINESS RISK	**EXCELLENT**

FINANCIAL RISK	**SIGNIFICANT**

Rationale

Business Risk: Excellent

- Monopolistic, rate-regulated utility transmission and distribution businesses that provide an essential service
- Lower risk transmission and distribution businesses which produce relatively stable cash flows
- Credit supportive regulatory environment
- Adjustment clause for project specific distribution system improvements, expected to further support financial measures
- Ratings on PECO Energy Co. are constrained by parent, Exelon Corp.'s consolidated credit quality

Financial Risk: Significant

- Reflects Exelon Corp.'s consolidated financial measures
- Aggressive financial policy
- Significant capital spending, which at the utility level is expected to be funded in rate base
- High sensitivity to commodity prices at the unregulated operations

Outlook: Stable

The stable outlook reflects Standard & Poor's Ratings Services' baseline forecast that PECO's funds from operations (FFO) to debt will consistently exceed 15% over the next three years and Exelon's consolidated FFO to debt will equal about 22% to 25% over the next three years.

Downside scenario

Because our corporate credit rating on PECO is limited to the lower of its stand-alone credit quality or our corporate credit ratings on its parent, we could lower our rating on PECO if stand-alone FFO to debt were consistently less than 15% or Exelon's consolidated financial measures weakened so that FFO to debt were consistently less than 22% and Exelon were downgraded. This could occur if commodity prices remained weak and economic growth were minimal.

Upside scenario

Because our corporate credit rating on PECO is limited to the lower of its stand-alone credit quality or our corporate credit rating on its parent, for us to raise our rating on PECO, we would first have to upgrade Exelon, and PECO's stand-alone credit quality would have to reflect the higher rating. Although we view an upgrade as less likely, this could occur if Exelon's consolidated FFO to debt were consistently greater than 27%.

Standard & Poor's Base-Case Scenario

Assumptions

- High capital spending requirements between 2013 and 2014
- Low EBITDA growth in 2013 and 2014
- Deferred taxes providing some benefit through the forecast period

Key Metrics

	2012A	2013E	2014E
FFO to debt	27.8%	23-28%	23-28%
Total debt/Total capital	46.7%	46-48%	46-48%
Total debt/EBITDA	3.1x	3.0-3.4x	3.0-3.4x

A—Actual. E—Estimate.

Business Risk: Excellent

PECO's business risk profile is "excellent" under our criteria, reflecting monopolistic, rate-regulated utility transmission and distribution businesses that provide an essential service. PECO serves about 1.6 million electric customers and 497,000 natural gas customers in southeastern Pennsylvania, including Philadelphia. The Pennsylvania Public Utility Commission regulates the company's electric and gas distribution rates, and the Federal Energy Regulatory Commission (FERC) regulates transmission rates. Generally, we view the distribution and transmission businesses as lower risk than the generation businesses often included in many fully integrated electric utilities.

Under our U.S. Utility Regulatory Assessments we view Pennsylvania as "credit supportive", reflecting the overall constructive regulation during PECO's transition to full competitive rates. In addition, we view the recent passage of Pennsylvania Act 11, which authorizes the use of projected test years in rate cases and permits the use of an automatic adjustment clause for project specific distribution system improvements, as supportive of credit quality.

Financial Risk: Significant

Our assessment of PECO's financial risk profile reflects the consolidated financial risk profile of parent, Exelon, which we assess as "significant".

Under our base-case scenario for Exelon, we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts.

We expect consolidated funds from operations (FFO) to total debt to equal about 23%-25% through 2015. Operating cash flow to debt will remain positive even in 2013 and 2014, when we expect financial measures to trough. We view Exelon's decision to lower its dividends as bolstering credit quality and its dividend payout is now in line with peers (at about 55% to 60%). We also expect to see the negative discretionary cash flow (after dividends) to improve meaningfully. However, Exelon's capital spending requirements remain significant between 2013 and 2015, at about $15.6 billion.

In addition, we expect debt to EBITDA to be about 4x. This ratio is still consistent with Standard & Poor's 'BBB' rating guideposts for a financial risk profile we assess as significant, especially since a meaningful amount of capital spending is discretionary.

Liquidity: Strong

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views the liquidity across the Exelon group of companies as "strong," in light of the debt maturities we expect and available credit facilities. We estimate that sources of cash will exceed the companies' uses by about 2x during the next 12 months. We expect sources over uses to remain positive even if EBITDA decreases by 50%. In addition, because of Exelon's solid relationships with banks and high conversion of FFO to discretionary cash flow, we believe the company can absorb low-probability, high-impact shocks. Maturities over the next 12 months are manageable.

As of Jan. 30, 2013, Exelon, Exelon Generation Co. LLC (ExGen), Commonwealth Edison Co. (ComEd), PECO, and Baltimore Gas & Electric Co. (BGE) had credit facilities of $500 million, $5.6 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire between December 2015 and August 2017. Availability under these facilities was $498 million for Exelon; $3.95 billion for ExGen; and $1 billion, $599 million, and $600 million for ComEd, PECO, and BGE, respectively. Aggregate credit facility availability was about $6.6 billion. Commercial paper outstanding was $1.7 billion.

Principal Liquidity Sources	**Principal Liquidity Uses**
• Aggregate credit facility availability of about $6.6 billion • We expect FFO to equal about $5.4 billion in 2013	• Dividends of about $1.2 billion in 2013 • Capital expenditures of about $5.4 billion in 2013

Recovery Analysis

- We assign recovery ratings to first mortgage bonds (FMBs) issued by U.S. utilities, which can result in issue ratings being notched above a utility's corporate credit rating (CCR) depending on the rating category and the extent of the collateral coverage.

- The FMBs issued by U.S. utilities are a form of "secured utility bond" (SUB) that qualify for a recovery rating as defined in our criteria.

- The recovery methodology is supported by the ample historical record of 100% recovery for secured bondholders in utility bankruptcies in the U.S. and our view that the factors that enhanced those recoveries (limited size of the creditor class and the durable value of utility rate-based assets during and after a reorganization given the essential service provided and the high replacement cost) will persist in the future.

- Under our SUB criteria, we calculate a ratio of our estimate of the value of the collateral pledged to bondholders relative to the amount of FMBs outstanding. FMB ratings can exceed a utility's CCR by up to one notch in the 'A' category, two notches in the 'BBB' category, and three notches in speculative-grade categories depending on the calculated ratio.

- PECO's FMBs benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating two notches above the CCR.

Satisfactory	A-	BBB+	BBB	BB+	BB-	B+
Fair	--	BBB-	BB+	BB	BB-	B
Weak	--	--	BB	BB-	B+	B-
Vulnerable	--	--	--	B+	B	B- or below

Note: These rating outcomes are shown for guidance purposes only. The ratings indicated in each cell of the matrix are the midpoints of the likely rating possibilities. There can be small positives and negatives that would lead to an outcome of one notch higher or lower than the typical matrix outcome. Moreover, there will be exceptions that go beyond a one-notch divergence. For example, the matrix does not address the lowest rungs of the credit spectrum (i.e., the 'CCC' category and lower). Other rating outcomes that are more than one notch off the matrix may occur for companies that have liquidity that we judge as "less than adequate" or "weak" under our criteria, or companies with "satisfactory" or better business risk profiles that have extreme debt burdens due to leveraged buyouts or other reasons. For government-related entities (GREs), the indicated rating would apply to the standalone credit profile, before giving any credit for potential government support.

Exelon Corp.'s $1.15 Billion Junior Subordinated Notes Rated 'BBB-'

Primary Credit Analyst:
Aneesh Prabhu, CFA, FRM, New York (1) 212-438-1285; aneesh.prabhu@spglobal.com

Secondary Contact:
Michael T Ferguson, CFA, CPA, New York (1) 212-438-7670; michael.ferguson@spglobal.com

NEW YORK (S&P Global Ratings) March 29, 2017--S&P Global Ratings said today it assigned its 'BBB-' issue-level rating to Exelon Corp.'s $1.15 billion junior subordinated notes due 2022.

Exelon issued these notes as part of the Pepco Holding Inc. (PHI) acquisition. The company has sent notice to the holders that it has elected the early remarketing period as an option.

Exelon will not directly receive any proceeds from the remarketing. The proceeds will be used to purchase a portfolio of treasury securities maturing on or about May 31, 2017. Exelon expects that a portion of the funds generated upon maturity of the portfolio will be used to settle the purchase contracts on June 1, 2017. Exelon currently intends to use the proceeds from the settlement of the purchase contracts for general corporate purposes. To the extent it does not use such proceeds immediately, it may temporarily invest them in short-term, interest-bearing obligations.

The original bond was a 10-year note with a mandatory remarketing after three years. The ultimate maturity date will be changing to June 1, 2022 from June 1, 2024. The rate will likely change too, based on pricing results. A major change is that interest will no longer be deferrable after the remarketing (100% debt treatment) and inclusion of a one-month par call, which is market standard for a five-year note.

The 'BBB' corporate credit rating on Exelon Corp. is based on our assessment of a strong business risk profile and significant financial risk profile. The outlook is stable. For the corporate credit rating rationale, see the research update on Exelon Corp., published on July 26, 2016.

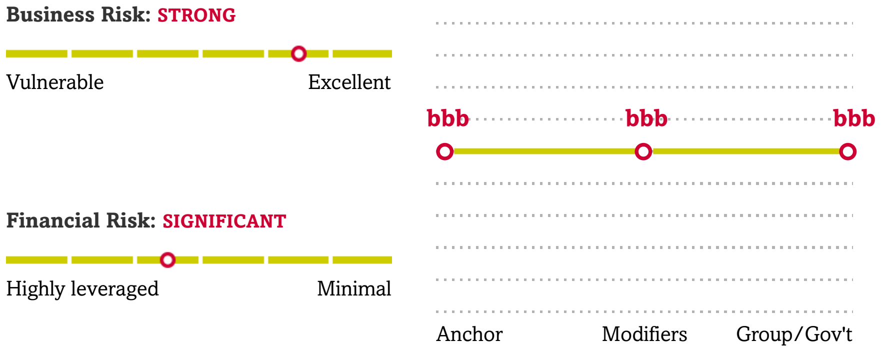
Table Of Contents

Summary:

Exelon Corp.



CORPORATE CREDIT RATING

BBB/Stable/A-2

Rationale

Business Risk: Strong

- Lower risk rate-regulated utility operations at diversified energy company Exelon Corp. currently represent nearly 60% of consolidated EBITDA, on the closing of the Pepco Holdings LLC (PH LLC) acquisition.
- Low-cost base-load generation has a strong operating track record, though it remains subject to considerable energy margin variability, driven by commodity prices, demand, and weather patterns; this has recently created some weakness in the merchant end of the business.
- Large natural gas production volumes have collapsed gas and power prices, carrying significant downside potential for a generation portfolio that is largely nuclear (more than 60% of total generation).
- A mild summer in 2015, declining market heat rates, and gas regional pricing differentials have weakened the economics of the company's generation plants in the next 24 months despite a stronger fundamental long-term outlook.
- Capacity prices could continue to languish because of lackluster electric demand, growing energy efficiency, and increased penetration of demand response initiatives. However, this could reverse in coming auctions as capacity performance schemes proliferate.
- Exelon still operates a large number of nuclear plants; this puts the company in a good position as carbon regulation and capacity performance incentives loom.

Financial Risk: Significant

- The backward-dated EBITDA profile persists, although the curve is not as steep as it is for certain competitors, owing to a proactive hedging strategy and participation in robust capacity markets.
- As usual, cash flow on the generation side is significantly hedged during the next two years, plus hedges are regularly added; 2018 is hedged to around 30%.
- The company's liquidity position remains strong, especially because it can defer capital spending needs, which are comparatively low because Exelon's plants are more modern.
- Dividend policy is in line with industry norms, and continues to be supported by a steady stream of dividends from utility subsidiaries, which has increased with its most recent transaction.
- Although capital spending needs have been substantial in the past, we expect that they'll be more in line with industry norms because this company is already well suited for upcoming carbon regulations.

Outlook: Stable

The rating outlook on Exelon Corp. is stable. However, Standard & Poor's believes that higher-than-expected natural gas production from shale production regions and a delay in environmental rules related to plant retirements could weaken the company's financial performance during the next few years. If commodity prices weaken even more, the company might have to address a decline in its earnings profile with commensurate reductions in capital spending and debt. We expect the consolidated pro forma company to maintain adjusted funds from operations (FFO) to debt of about 23% to 25% and debt to EBITDA to increase to about an adjusted 3.2x to 3.4x, including the effects of the recent Pepco acquisition.

Downside scenario

Negative ratings momentum could occur due to a decline in commodity prices that would affect ExGen's and, as a result, Exelon's cash flows. We could lower the company's ratings post-acquisition if the adjusted consolidated FFO to debt ratios were to consistently decline below 18%.

Upside scenario

We could consider an upgrade if the company's reported adjusted consolidated FFO to debt levels stronger than about 25% and debt to EBITDA below about 3.4x. We think this is unlikely before the end of 2016.

Standard & Poor's Base-Case Scenario

Assumptions

- Henry Hub gas prices are $2.50 per million Btu in 2016 and $2.75 in 2017; PJM West hub power prices are between $30 and $35 per megawatt hour (MWh) in 2016; Northern Illinois hub hovers around $30 per MWh through 2017.
- Nuclear capacity factors are consistently at about 93%-94% through 2017.
- Growth rates at the utilities are consistent with management's assumptions.
- Dividend policy remains in line with industry standards.
- Only current hedges are assumed.
- Spark spreads remain depressed in Texas, with an average of about $6 per MWh during 2016, but rebound somewhat afterward.
- Total ExGen generation of about 190 gigawatts per hour in 2016, ticking up only modestly in subsequent years.

Key Metrics

	2016E	2017E
FFO/debt (%)	23%-25%	23%-26%
Debt/EBITDA (x)	3.1-3.3	3.1-3.3
EBITDA interest coverage (x)	5.2-5.5	5.2-5.6

FFO--Funds from operations. E--Estimate. Note: Our metrics include the impacts of the recently approved Pepco Holdings acquisition.

Business Risk: Strong

Standard & Poor's current rating on Exelon reflects our view of the company's consolidated business risk profile, which we view as strong, combining the higher-risk operations of unregulated supply affiliate ExGen with the excellent business risk profiles of its rate-regulated transmission and distribution utilities Commonwealth Edison Co. (ComEd), PECO Energy Co., PEPCO Holdings, Inc.and Baltimore Gas & Electric Co. (BGE), Atlantic City Electric Co., Delmarva Power & Light Co., and Potomac Electric Power Co. (Pepco). Because of ring-fencing, we deconsolidate BGE's financial profile from Exelon and analyze it solely as an equity investment, incorporating the utility's distributions to the parent as BGE's only contributions to the parent's credit quality and financial profile.

As of Dec. 31, 2015, Exelon had about $26.2 billion of adjusted debt, after considering the effects of operating leases, deconsolidation, power purchase agreements, and cash netting, as well as a recent debt issuance aimed at funding the Pepco Holdings acquisition.

Regulated utilities now contribute about 50% of Exelon's consolidated current cash flow. PECO's business risk profile is excellent under our criteria, reflecting monopolistic, rate-regulated utility transmission and distribution operations. PECO serves more than 1.6 million electric customers and 500,000 natural gas customers in southeastern Pennsylvania, including Philadelphia. Similarly, ComEd's business risk profile is excellent, reflecting the same monopolistic, rate-regulated utility transmission and distribution operational profile. ComEd serves more than 3.9 million customers in northern Illinois, including Chicago. BGE serves more than 1.3 million electric and 650,000 gas customers in Central Maryland, including Baltimore. The regulatory framework under which BGE operates can be challenging and unpredictable, but has been improving somewhat. PEPCO operates across several jurisdictions, including New Jersey, Delaware, Maryland, and District of Columbia, totaling more than 1.9 million customers.

ExGen's unregulated operations now constitute about 50% of the consolidated enterprise in terms of cash flow and capital spending during 2016 upon the closing of the Pepco acquisition. ExGen generates a significant portion of earnings from its retail operations. Through retail and wholesale channels, ExGen provided about 195 terrawatt-hours of load in 2015, or nearly 5% of total U.S. power demand, and enjoys significant regional diversity, participating in the PJM Interconnection in the Mid-Atlantic, New England, and Texas markets. The company's generation units are well positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. In most locations, ExGen has adequate intermediate and peaking capacity for managing load-shaping risks. However, we believe the company will still need to buy and sell generation in the market to manage its portfolio needs, which exposes it to considerable commodity risk. Moreover, ExGen has a significant open position in the Midwest to merchant markets, and a somewhat tighter position in Texas and New England, where it has some risk of finding itself short when loads and power prices are high.

ExGen's cash flow is sensitive to commodity prices because roughly 70% of the business's generation, including purchased power, is nuclear; unlike gas-fired assets, which have a lower cost structure if gas prices drag power prices down, its nuclear plants face winnowing margins based on lower market heat rates, especially if capacity prices are low. Given that base-load generation is price-taking by nature, we expect ExGen's adjusted FFO to debt to remain volatile relative to its peers. For instance, we estimate gross margins in 2017 will be lower by about about $100 million for every $5 per MWh ('round-the-clock) decline in power prices, and about $380 million for every $1 per million Btu decline in 2017 natural gas prices. Near-term figures are not quite as volatile due to more thorough hedging and better visibility into pricing.

The issuer's hedges have effectively softened the aforementioned cash flow volatility; this was particularly apparent during otherwise weak market conditions in 2014 and 2015. Even though these hedges insulate ExGen, they continue to show the sensitivity of ExGen's margins to the prospect of continued shale gas production. The merchant generation margins at ExGen could face a decline as high-priced hedges expire, which is evident in the drop in wholesale hedged gross margins. Still, forward prices do show a modest contango (future prices are above expected future spot prices), as reflected in the increase in ExGen's open EBITDA from higher natural gas forward prices compared with year-end 2015.

ExGen's contribution to Exelon's cash flow has declined somewhat under our projected base case because of the decline in unregulated cash flow when commodity prices fall, as well as due to the renewed focus on regulated activities. However, despite lower power prices, we view the business risk profile of Exelon as strong. We expect financial measures to remain about flat during 2016. However, the corporate credit ratings reflect our expectation that 2016 will be a trough year, and that measures could improve in 2017 and 2018, with the business profile being fortified by the PHI acquisition. Based on the present forward-price curve, cash flow measures are adequate for the rated level in these years, even considering the recently announced dividend increase. Still, despite the improvement in free operating cash flow resulting from the decline in future gross margins, we view Exelon's consolidated cash flow adequacy ratio as having a significant financial risk.

Financial Risk: Significant

Exelon's dividend payout is currently in line with its peers at about 50%. However, capital spending requirements remain significant in 2016, with regulated utility spending at the three incumbent utilities reaching $3.95 billion and as much as $1.4 billion at Pepco; this should continue in subsequent years. Although utility capital spending tends to be funded through rate base additions, unregulated generation must recover the funding of its own capital requirements through capacity market prices (and energy margins, in Texas); these should eclipse $3 billion in 2016.

Under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect Exelon's consolidated FFO to total debt to hover around 23% to 26% through 2017. We expect to see negative discretionary cash flow (i.e., net of dividends) improve meaningfully. The FFO to total debt ratio is consistent with Standard & Poor's 'BBB' rating guideposts for a significant financial risk profile, especially since a meaningful amount of capital spending is discretionary.

At ExGen, we expect free operating cash flow to debt to remain positive even in 2016 and 2017 when we expect financial measures to trough due to lower gas prices. Because of the lower commodity prices, we expect ExGen's FFO-to-debt ratio to remain about 32% in 2016. Although the company's cash flows are relatively more volatile than those of its peers because of the larger base-load generation and significant fixed costs, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must consistently stay below the current assumed level of $2.50 per million Btu before its consolidated FFO to debt falls below 20%.

We expect free operating cash flow to debt to remain mostly positive throughout 2016-2018. Debt to EBITDA should increase to about 3.5x in 2016 before declining somewhat. These ratios are appropriate for Standard & Poor's 'BBB' guideposts for a significant financial risk profile. Nevertheless, we believe there are risks that cash flow may end up less than expected because merger synergies take longer to accrue, power prices trend lower due to higher natural gas production from shale plays, or because there is a delay in retiring coal plants owing to the Mercury and Air Toxics Standards remand of June 2015.

Because we give credit for nuclear fuel amortization in adjusted FFO, we expect subsidiary ExGen to remain operating cash flow positive (after capital spending that includes nuclear fuel costs). Through the forecast period, ExGen remains cash flow positive after accounting for capital spending.

Moreover, the utilities' dividends can fund a significant portion of the external dividend (we estimate that utility dividends can provide as much as 85% or 90% of external dividend in 2016-2018). Assuming Exelon's utility target of 70% payout ratios, the utility contributions would be able to cover the entire external dividend. However, we expect ExGen to continue to contribute to the external dividend, though less than the majority, as it did before the dividend cut.

Liquidity: Strong

The short-term rating on Exelon and affiliates is 'A-2'. We view liquidity across the Exelon group of companies as strong in light of the debt maturity schedule and available credit facilities. Exelon has sufficient alternative liquidity sources to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen as it settles its forward hedges.

As of Dec. 31, 2015, Exelon, ExGen, ComEd, PECO, and BGE had revolving credit facilities of $500 million, $5.3 billion, $1 billion, $600 million, and $600 million, respectively. These facilities generally expire in 2019. The facilities were largely available at that time, except for $503 million of commercial paper outstanding at ComEd and BGE, as well as certain letters of credit outstanding.

Principal Liquidity Sources	Principal Liquidity Uses
• FFO exceeding $6 billion in 2016. • Credit facility availability of about $6 billion. • Cash on hand of about $6 billion on Dec. 31, 2015, much of which has been used to fund the closing of the PHI acquisition. • Nonseasonal working capital inflows of about $400 million.	• Dividend payments of almost $1.1 billion annually. • Capital spending and maintenance and environmental costs of over $6 billion during the next 12 months. • Debt maturities of $1.6 billion over the next 12 months. • PHI acquisition costs.

Other Credit Considerations

We assess all modifiers as neutral, resulting in no change to the anchor score.

Group Influence

The group credit profile of Exelon is 'bbb'. As the parent company with one relatively small insulated subsidiary (BGE), Exelon's issuer credit rating is the same as its group credit profile. Senior unsecured debt at Exelon is notched down to 'BBB-' because of structural subordination to priority obligations at the operating subsidiaries.

Table Of Contents

Summary:

Exelon Corp.

Corporate Credit Rating	BBB/Stable/A-2

Profile Assessments

BUSINESS RISK	STRONG

FINANCIAL RISK	SIGNIFICANT

Initial Analytical Outcome ("Anchor") And Rating Result

Our 'BBB' long-term corporate credit rating on Exelon Corp. stems from:

- Our anchor of 'bbb', based on our "strong" business risk and "significant" financial risk profile assessments of the company.

Rationale

Business Risk: Strong	Financial Risk: Significant
• 35% rate-regulated utility operations • Low-cost base-load generation • Strong operating track record • Although base-load units are positioned to capture upward energy price movements, and gas assets are well positioned to capture expansion in market heat rates, declining natural gas prices and regional pricing differentials have further weakened the economics of the company's generation plants • Large expected production volumes from the Marcellus and Utica shale gas areas and changing prices at the TETCO pricing hub is a significant downside for a portfolio of plants that is largely nuclear (83% of total generation) • Capacity prices have languished because of lackluster demand, growing energy efficiency, and demand response • Exposure to nuclear generation	• Backwardated EBITDA profile and potential for a significant decline in cash flow • A significantly hedged cash flow profile through 2015, and forward power curves that inched up in the first quarter of 2014. • Positive operating cash flow • Strong liquidity position

Outlook: Stable

The outlook on the ratings is stable. That said, Standard & Poor's Ratings Services believes that higher natural gas production from shale natural gas plays and a delay in environmental rules related to plant retirements can significantly hurt the company's financial performance. We believe these headwinds have increased and Exelon faces a potential earnings decline from 2014. Should the commodity pricing environment weaken, the company may have to address its declining earnings profile by reducing capital spending and debt. We expect Exelon and Exelon Generation Co. LLC (ExGen) to maintain consolidated funds from operations (FFO) to debt of at least 23% and 27%, respectively, to maintain current ratings.

Downside scenario

We could lower the ratings if adjusted FFO to debt is consistently lower than 22%. This could happen if Exelon sees increasing competition in its markets in Pennsylvania and Illinois, which would threaten customer retention in its retail business. Gross margins could also come under pressure by a further decline in power prices brought about by declining natural gas prices, or lower market heat rates due to increasing energy efficiency.

Upside scenario

A positive outlook--currently not under consideration--can result if natural gas prices stabilize and power prices respond favorably to coal-plant retirements, resulting in an improvement in consolidated FFO to debt levels of more than 28% on a sustained basis. This could stem from an improved economy and higher electricity prices, as well as a robust increase in the rate base of Exelon's regulated utility subsidiaries.

Standard & Poor's Base-Case Scenario

Assumptions

- Henry Hub gas price between $4.00 and $4.15 through 2016; PJM West hub power prices between $35 per megawatt-hour (MWh) and $37 per MWh in 2016; Northern Illinois hub $30.00 per MWh in 2014 and $31.00 per MWh by 2016
- Pensions/other post-employment benefits (OPEB), based on a Dec. 31, 2013 actuarial valuation by Towers (a third-party firm)
- Nuclear capacity factors of between 93.3% and 93.7% through 2017 (each 1% decline results in a $45 million hit to EBITDA)
- Growth rate at utilities consistent with management's assumptions

Key Metrics

	2013E	2014E	2015E
FFO/debt (%)	25-28	26-28	27-28
Debt/EBITDA (x)	4.6-4.7	4.0-4.2	3.8-3.6

E--Estimate.

Business Risk: Strong

Standard & Poor's rating on diversified energy company Exelon reflects its consolidated business risk profile, which we view as "strong." Exelon's business risk profile reflects the higher-risk operations of unregulated supply affiliate ExGen. Exelon's business risk also reflects the excellent business risk profiles of regulated delivery businesses Commonwealth Edison Co. (ComEd), PECO Energy Co., and Baltimore Gas & Electric Co. (BGE), which have generally predictable transmission and distribution cash flows. Because of ring-fencing, we will continue to deconsolidate BGE and analyze it as an equity investment, counting only distributions to the parent as primary contributions to the parent's credit quality and financial profile.

As of Dec. 31, 2013, Exelon (excluding BGE) had about $16.8 billion of on-balance-sheet debt, including nonrecourse debt. We also impute a significant amount of debt to Exelon, as much as $4 billion (excluding BGE imputed debt), which consists mostly of about $2.1 billion related to pensions and OPEB, about $460 million related to operating leases, and about $1.4 billion related to power purchase agreements. This is offset by about $1.2 billion of off-balance-sheet credit for nonrecourse project financing.

We expect the regulated utilities contribute about 35% of total cash flow. PECO's business risk profile is "excellent" under our criteria, reflecting monopolistic, rate-regulated utility transmission and distribution businesses that provide an essential service. PECO serves about 1.6 million electric customers and 497,000 natural gas customers in southeastern Pennsylvania, including Philadelphia. The Pennsylvania Public Utility Commission regulates the company's electric and gas distribution rates, and the Federal Energy Regulatory Commission (FERC) regulates transmission rates. Similarly, ComEdś business risk profile is "excellent", reflecting monopolistic, rate-regulated utility transmission and distribution businesses that provide an essential service. ComEd serves about 3.8 million customers in northern Illinois, including the city of Chicago. The company's distribution rates are regulated by the Illinois Commerce Commission (ICC) and the transmission rates, which equal about 23% of the company's rate base, are regulated by the FERC. Generally, we view the distribution and transmission businesses as lower risk than the generation businesses often included in many fully integrated electric utilities.

Exelon gets a larger portion of earnings from its retail operations. Through retail and wholesale channels, ExGen now provides about 150 to 165 terawatt-hours, or about 4.75% to 5%, of total U.S. power demand. The company's generation units are well positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. Exelon's 2012 combination with Constellation Energy Group Inc. provides it with regional diversification of its generating plants and a customer-facing load business because generation and load positions are now better balanced across multiple regions. In most locations, ExGen will have adequate intermediate and peaking capacity within the portfolio for managing load-shaping (matching resources with energy needs) risks. However, the company will still need to buy and sell generation in the market to manage portfolio needs, in our opinion. Moreover, ExGen has a significant open position in the Midwest (exposure to merchant markets), and a somewhat tight position in Texas and New England, where it has some risk of finding itself short when loads are high, in our opinion.

ExGen's cash flow is sensitive to commodity prices because almost 82% of its generation is nuclear, all of which low natural gas prices are impairing. ExGen's unregulated operations accounted for about 65% of the consolidated enterprise by cash flow and capital spending in 2013. Given that base-load generation is price-taking, we expect ExGen's adjusted FFO to debt to remain volatile relative to its peers. For instance, all else remaining equal, we estimate gross margins in 2016 will be lower by about $690 million for every $5 per MWh (round-the-clock) decline in power prices, about $480 million for every $1 per million cubic feet (mcf) decline in natural gas prices, and about $115 million for every $1 per MWh decline in retail margins.

As a result, ExGen's contribution to the overall Exelon cash flow declines to about 60% under our projected base case, because of the decline in unregulated cash flow when commodity prices fall. However, despite the lower power prices, we view the business risk profile of parent Exelon as strong. We expect financial measures to decline through 2015. However, the corporate credit ratings reflect our expectation that 2014 and 2015 will be the trough years. Based on the present forward price curve, cash flow measures are adequate for the rated level in that year, especially after parent Exelon announced significantly reduced dividend payouts and ExGen deferred or eliminated some planned capital spending. Still, despite the improvement in free operating cash flow, as a result of the decline in future gross margins, we view Exelon's cash flow adequacy ratio as having "significant" financial risk.

We view ExGen's ratable hedging strategy favorably because it ensures that a high percentage of the company's near-term generation is locked in. Hedging not only protects unregulated generation cash flows from steep price declines, it also provides the company time to adjust its cost structure or its capital structure if prices remain depressed. However, hedging activities insulate, but do not isolate, power merchants from commodity price effects. Current hedges show the significant value of Exelon's hedging program. Even though these hedges insulate ExGen, perversely, they also show the sensitivity of ExGen's margins to the prospect of a continued shale gas production onslaught. The decline in mark-to-market value through 2014 shows the limit to which Exelon can hedge-- price-taking plants can hedge, but only at the prices the market will bear. Also, the merchant generation margins at ExGen will face a decline as high-priced hedges expire, which is evident in the drop in wholesale hedged gross margins. Still, the forward prices do show a contango as reflected in the increase in ExGen's open EBITDA from higher natural gas forward prices. In addition, although retail competition has increased, and ExGen has lowered its growth estimates, we believe retail contributions can mitigate the wholesale decline, given the potential for cost savings, volumes gained from the Constellation merger, and acquisitions.

Financial Risk: Significant

Because of the decline in commodity prices, we expect ExGen's FFO to debt to range around 35% in 2014. Although ExGen's cash flows are relatively more volatile compared with peers because of the larger base-load generation, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must decline and stay below $2.75 per mcf before its FFO to debt falls below 20%.

We still view Exelon's internal funding as aggressive, but view Exelon's decision to lower its dividends as bolstering credit quality. Dividend payout is now in line with peers (at about 55% to 60%). However, Exelon's capital spending requirements remain significant between 2014 and 2016, at about $9 billion for the regulated companies and about $6.8 billion at unregulated ExGen. Although utility capital spending tends to be funded in rate base, unregulated generation will have to fund its own capital requirements and recover them in market prices. Importantly, because of announced cuts, consolidated cash flow from operations will largely cover capital spending and dividends, resulting in modest external financing needs. Still, incrementally lower gas prices would hurt ExGen's debt protection measures more than the level of new debt financing, or operating and maintenance cost increases in ExGen's forecast through 2015.

Under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect Exelon's FFO to total debt to decline to hover around 27% to 29% through 2015. At ExGen, we expect free operating cash flow to debt to remain positive even in 2014 and 2015 when we expect financial measures to trough. Importantly, we expect to see the negative discretionary cash flow (after dividends) to improve meaningfully. Similarly, we expect debt to EBITDA to decline to about 4.2x in 2014. These ratios are consistent with Standard & Poor's 'BBB' rating guideposts for a financial risk profile we assess as "significant," especially since a meaningful amount of capital spending is discretionary (ExGen has lowered capital spending estimates in 2014 by more than $2.3 billion since July 2012 estimates).

Liquidity: Strong

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views the liquidity across the Exelon group of companies as "strong," in light of the debt maturities we expect and available credit facilities. We estimate that sources of cash will exceed the companies' uses by about 2x during the next 12 to 24 months. We expect sources over uses for Exelon and ExGen to remain positive even if EBITDA declines by 50%. In addition, because of Exelon's solid relationships with banks and high conversion of FFO to discretionary cash flow, we believe the company can absorb low-probability, high-impact shocks.

Exelon has sufficient alternative sources of liquidity to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen on its forward hedges. The next large maturities are in 2015 for Exelon ($800 million) and 2014 for ExGen ($561 million) and ComEd ($617 million).

As of Dec 31, 2013, Exelon, ExGen, ComEd, PECO, and BGE had credit facilities of $500 million, $5.3 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire in August 2018. Exgen has an additional $400 million bilateral through January 2015. The facilities were largely fully available as of Dec. 31, 2013, except for $184 million and $135 million of commercial paper outstanding at ComEd and BGE, respectively. .

Principal Liquidity Sources	Principal Liquidity Uses
• Assumed FFO of about $5.75 billion to $6 billion • Revolving credit facility availability	• Working capital • Dividend payments of about $1 billion annually • Capital spending and maintenance and environmental costs of about $5 billion to $5.5 billion annually through 2015

Exelon Corp.'s Senior Unsecured Notes Rated 'BBB-'

Primary Credit Analyst:
Michael T Ferguson, CFA, CPA, New York (1) 212-438-7670;
michael.ferguson@standardandpoors.com

Secondary Contact:
Aneesh Prabhu, CFA, FRM, New York (1) 212-438-1285; aneesh.prabhu@standardandpoors.com

NEW YORK (Standard & Poor's) April 6, 2016--Standard & Poor's Ratings Services said today it assigned its 'BBB-' issue-level rating to Exelon Corp.'s $1.8 billion of senior unsecured note issues. The corporate credit rating of 'BBB' is unchanged. The lower rating for the unsecured notes stems from structural subordination; the note maturities range from 2021 through 2046.

Exelon intends to use note proceeds to fund its acquisition of utility holding company PEPCO Holdings Inc., which operates in New Jersey, Maryland, Delaware, and Washington, D.C. The acquisition recently passed its final significant hurdle, the approval of DC Public Service Commission. The debt issuance does not materially change our forecast, as we had anticipated that this combination of debt and equity would be used to finance the acquisition. With this acquisition, more than half of Exelon's cash flows will come from regulated activities.

For the corporate credit rating on Exelon, see the summary analysis published April 1, 2016.

Research Update:

Exelon Corp. And PEPCO Holdings Ratings Are Affirmed On Acquisition Announcement

(**Editor's Note:** This research update, originally published April 30, 2014, is being republished to correct an error in our published assumptions.)

Overview

- Chicago-based diversified energy company Exelon Corp. will acquire PEPCO Holdings Inc. (PHI) in an all-cash transaction.
- We have affirmed our 'BBB' corporate credit ratings on Exelon Corp. and its subsidiaries Commonwealth Edison Co., PECO Energy Co., and Exelon Generation Co. LLC. Our outlook on the ratings remains stable.
- We have affirmed the 'BBB+' ratings on PHI and its transmission and distribution (T&D) utility subsidiaries. We have also affirmed our ratings on subsidiary Baltimore Gas & Electric Co. at 'A-'.
- On a successful close, we will use our medial volatility tables to assess the pro forma company's financial measures because of the meaningful increase in regulated cash flows. Before the announced acquisition, we had used our standard volatility tables because of the preponderance of unregulated cash flows.

(Watch the related CreditMatters TV segment titled, "Exelon’s Bid For PEPCO Poses Credit Quality Implications," dated May 12, 2014.)

Rating Action

On April 30, 2014, Standard & Poor's Ratings Services affirmed its 'BBB' corporate credit rating on Chicago-based diversified energy company Exelon Corp. At the same time, we affirmed our corporate credit ratings on Exelon's utility subsidiaries, Commonwealth Edison Co. (ComEd) and PECO Energy Co., and its unregulated supply company, Exelon Generation Co. LLC (ExGen). Our ratings outlook on the Exelon group of companies is stable. At the same time, we have affirmed our ratings on Baltimore Gas & Electric Co. (BGE). Our outlook on BGE's rating is stable.

At the same time, Standard & Poor's affirmed its 'BBB+' issuer credit ratings on PEPCO Holdings Inc. (PHI) and its transmission and distribution (T&D) utility subsidiaries Atlantic City Electric Co. (ACE), Delmarva Power & Light Co. (DPL), and Potomac Electric Power Co.

Rationale

Our rating affirmations follow Exelon's announcement that it has made a firm offer to acquire the common stock of Pepco Holdings Inc. (PHI) in cash for $27.25 per share, representing a 33% premium to PHI's closing price as of March 31, 2014. This equates to a market capitalization of about $6.9 billion and with the assumption of PHI's debt of $5.6 billion, it represents a total enterprise value of about $12.5 billion. The transaction will require the approval of the Federal Energy Regulatory Commission, the Dept. of Justice, and the regulatory commissions of Maryland, New Jersey, Washington D.C., Delaware and Virginia.

We note that we often place our ratings of the acquiring company on CreditWatch with negative implications to reflect unanticipated developments and the uncertainty inherent with regulatory reviews. In this case as well, we see the potential for concessions to ratepayers, though we cannot define their scale or nature at this time. However, we have affirmed the ratings and stable outlook on Exelon because we believe there is a high likelihood that we will assign the combined company a 'BBB' corporate credit rating when we assess the final plan. We also base our outlook affirmation on the company's demonstrated willingness to walk away from acquisitions when concessions imperiled the ratings of the merged entity.

The affirmations on PHI and its subsidiaries reflect our expectation that Exelon will structure the transaction in a manner that provides credit insulation for the subsidiaries sufficient to support ratings above the group credit profile (GCP) of Exelon. The eventual structure will be subject to legal review to determine adequacy of insulation.

(For a detailed summary of the stand-alone operations of Exelon Corp, see our summary analysis dated April 3, 2014),

Business Risk

- The pro forma company will increase regulated base to nearly 50% of cash flows and diversify cash flows across more jurisdictions.
- The acquisition positions Exelon to retain a balanced earnings mix between its regulated and unregulated businesses as power prices recover.
- The acquisition requires a number of regulatory approvals.
- Exelon's base-load generation is low-cost and has a strong operating track record.
- Large expected production volumes from the Marcellus and Utica shale gas areas and changing prices at the TETCO pricing hub present a significant downside for Exelon's large nuclear capacity (83% of total generation).
- Capacity prices have languished because of lackluster demand, growing energy efficiency, and demand response.
- Nuclear generation exposure is substantial.

Financial Risk

- Financial measures of the pro forma company will weaken materially compared with the stand-alone Exelon. However, we will assess the pro forma company using our medial volatility benchmarks because of the significant increase in regulated cash flows in the consolidated mix.
- Backwardated EBITDA profile persists in unregulated generation.
- The cash flow profile is significantly hedged through 2015, and forward power curves inched up in the first quarter of 2014.
- Exelon's current strong liquidity position is adequate to support the acquisition as it finalizes final liquidity plans for the pro forma company.

Our base assumptions are:

- We expect Exelon to finance the acquisition with 50% debt. The balance will be funded by common equity, mandatory converts, and unregulated asset sales.
- All regulatory approvals are received by June 2015.
- We have assumed $1 billion (net of taxes) of gross proceeds from asset sales used for funding the acquisition. We think the assets being considered for sale can net a value in excess of this amount.
- Mandatory converts are given 100% equity credit as per our criteria.
- We have assumed merger synergies that build up to a gross run rate of about $135 million annually by 2018 (net $250 million over first 5-years), plus rebates/concessions of about $100 million for ratepayers.
- PHI will be ring-fenced in a manner that meets our ring-fencing criteria. This is important to our consideration of any ratings separation between PHI and Exelon.
- Henry Hub gas prices are between $4.15 and $4.25 through 2016; PJM West hub power prices between $35 per megawatt-hour (MWh) and $37 per MWh in 2016; Northern Illinois hub $30 per MWh in 2014 and $31 per MWh by 2016.
- Nuclear capacity factors of between 93.3% and 93.7% through 2017 (each 1% fleet decline results in a $45 million hit to EBITDA)
- Growth rate at utilities are consistent with management's assumptions
- Pensions/other post-employment benefits (OPEB), are based on a Dec. 31, 2013 actuarial valuation by Towers (a third-party firm)

Exelon's strategy with its proposed acquisition of PHI is premised on a combination of benefits:

- Diversifies cash flows by increasing regulated base.
- Positions Exelon to retain a balanced earnings mix between its regulated and unregulated businesses as power prices recover.

From a credit perspective, we view the transaction favorably. Not only is Exelon investing incremental cash flow into lower risk investments, the acquisition diversifies the regulated base by adding additional jurisdictions. Also, the geographic overlap creates opportunities to realize cost savings through better customer reliability.

Specifically, the combination is likely to drive the following benefits:

- Increase regulated business contributions to an average of 55% and 53% based on EBITDA and adjusted FFO basis, respectively, to pro forma earnings over 2015 to 2017 (and about 45%, respectively, if BGE and PHI are treated as ring-fenced equity investments). Nonutility debt and capital spending will decline to an average of 30% and 35%, respectively. We note that Exelon's current business mix is 60% to 62% unregulated.
- Partially financing the acquisition with unregulated asset sales supports the shift in business mix by redeploying unregulated capital into regulated growth.
- The combination will create a large Mid-Atlantic utility franchise with a rate base of nearly $32 billion by 2016, of which $6 billion will be transmission-related.
- However, on a successful closing, adjusted FFO to debt ratios will decline materially.

Our ratings affirmation factors in the following considerations:

- Because of the meaningful increase in regulated cash flow that now constitute about 50% of overall cash flow, we will employ the medial volatility table in our credit assessment (we currently use the standard volatility table, which has more rigorous financial ratio hurdles).
- Exelon will still compare unfavorably with its peers because it will have a higher percentage of merchant power-based cash flows relative to other diversified utility peers and will also rely on upstream dividends from ring-fenced utilities.
- Despite the thrust toward regulated activities, Exelon's credit profile will continue to be influenced by its unregulated supply business because of the relative "high beta" of its cash flows to natural gas prices.
- Adjusted FFO to debt ratios would decline meaningfully due to the new acquisition debt. In our analysis, we forecast FFO to debt in the 21.0% to 24% area over the 2015-2017 time frame. However, these ratios still map to the "significant" financial risk category on the medial volatility tables.
- We view favorably the fact that estimated utility cash flows will be able to support dividends and ExGen is not expected to have external financing needs through 2017 (although current Exelon Corp. level debt could be refinanced at the ExGen level when it matures).

Because of the price-taking nature of its generation plants, unregulated affiliate ExGen's is substantially influenced by natural gas pricing, which still determines electricity pricing in most U.S. regions. Given uncertain unregulated markets, Exelon's focus has shifted into growing the regulated businesses. In June 2013, Exelon cancelled the LaSalle and Limerick nuclear extended power uprates and instead shifted capital into growth and maintenance capital at the utilities. In November 2013, the company announced plans to invest $15 billion in the regulated platform over five years. These investments now constitute about 55% of the overall capital in the five-year plan.

We view Exelon's business strategy as an important determinant of the company's current "strong" business risk profile. In recent years, Exelon has implemented a strategy of internal growth through reinvesting in existing businesses and investing in new technologies. There is also a bias toward longer-term contracted businesses. Management's business strategy appears to be three-pronged: cost and productivity enhancements that include strategies like divestments and asset retirements; enlarging alternative energy investments through renewables development projects (mostly wind and solar); and in the medium term, investing in new technologies such as the smart grid. While the utilities primarily focus on growing rate base and earning a reasonable return, they are also playing a role in competitive markets by investing extensively in transmission-related infrastructure. Exelon has indicated that its core strategy does not preclude acquisitions, especially in those that could offset the business risk profile of its wholesale generation business and reduce the company's exposure to natural gas.

Under our base case, the consolidated ratio of adjusted FFO to total debt falls to about 21% in 2015, then improves to about 24% by 2016. Importantly, free operating cash flow to debt remains mostly positive throughout the 2015-2017 period, although discretionary cash flow (after dividends) becomes meaningfully negative in 2015. Debt to EBITDA increases to 3.6x in 2015. These ratios are appropriate for Standard & Poor's 'BBB' guideposts for a "significant" financial risk profile on the medial volatility table. That said, we believe there are risks that cash flow may eventually end up less than expected because merger synergies/savings take longer to accrue, power prices trend lower than expected due to higher natural gas production from shale plays, or because coal plant retirements are delayed.

Also, because we give credit for nuclear fuel amortization in adjusted FFO, we expect subsidiary ExGen to remain operating cash flow positive (i.e., after capital expenditures that include nuclear fuel costs). Through the forecast period, ExGen remains cash flow positive after accounting for capital expenditures.

Moreover, on a stand-alone basis, the utilities' dividends can fund a significant portion of the external dividend (we estimate that utility dividends provide between 80%-90% of external dividend in 2015-2017). On a pro forma basis, assuming Exelon's utility target of 70% payout ratios, the utility contributions would be able to cover the entire external dividend. However, we expect ExGen to continue to contribute to the external dividend, but the company will no longer support the majority as it did before the dividend cut.

Liquidity

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views liquidity across the Exelon group of companies as "strong" in light of the debt maturities we expect and available credit facilities. Exelon has sufficient alternative sources of liquidity to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen on its forward hedges. The next large maturity is in 2015 for Exelon ($800 mill.).

As of Dec 31, 2013, Exelon, ExGen, ComEd, PECO, and BGE had revolving credit facilities of $500 million, $5.3 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire in August 2018 (except comEd, which expires in March 2019). ExGen has an additional $400 million bilateral through January 2015. The facilities were largely available as of Dec. 31, 2013, except for $184 million and $135 million of commercial paper outstanding at ComEd and BGE, respectively.

Exelon has a $7.2 billion bridge facility to provide flexibility for timing of permanent financing related to the acquisition of PHI. We expect 50% of the acquisition funds to be financed by debt and expect this financing to be at the Exelon Corp level. We also expect Exelon to maintain balanced funding across the maturity spectrum (i.e., three to 30-year tenors). Further, we expect the equity component to be funded through a mix of common equity and mandatory units, and through $1 billion in unregulated asset sales.

There are no change-of-control provisions in PHI's or its subsidiaries public debt. We have assumed that change-in-control provisions in the bank facilities of PHI are resolved without issues by closing (either through waivers or refinancing). Eventually, management expects to be able to reduce or resize PHI's liquidity and support through Exelon Corp.'s facility.

Principal Liquidity Sources

- Assumed 2014 FFO of about $5.75 billion to $6 billion
- Available revolving credit facility
- $7.2 billion acquisition bridge loan that will be replaced by permanent financing.

Principal Liquidity Uses

- $6.9 billion of cash payment for acquiring all of PHI's shares..
- Working capital
- Dividend payments of about $1 billion annually
- Capital spending and maintenance and environmental costs of about $5 billion to $5.5 billion, annually through 2015

Outlook

Because regulatory processes in merger approvals can take time, we provide below outlooks for the ratings, both on a stand-alone and on a pro forma company basis.

The outlook on the ratings is stable. That said, Standard & Poor's believes that higher natural gas production from shale natural gas plays and a delay in environmental rules related to plant retirements can significantly hurt the company's financial performance. We believe these headwinds have increased and

Exelon faces a potential earnings decline from 2014. Should the commodity pricing environment weaken, the company may have to address its declining earnings profile with a commensurate reduction in capital spending and debt. On a stand-alone basis, we expect Exelon and ExGen to maintain consolidated funds from operations (FFO) to debt of at least 23% and 27%, respectively, to maintain current ratings. If the merger successfully closes, we expect the pro forma company to maintain adjusted FFO to debt in a band of about 21% to 23% and debt to EBITDA at around 3.4x to 3.5x.

Downside scenario

On a stand-alone basis, we could lower Exelon's ratings if adjusted FFO to debt declines below 22%. This could happen if Exelon has increasing competition in its markets in Pennsylvania and Illinois, which would threaten customer retention in its retail business. Gross margins could also come under pressure by a further decline in power prices brought about by declining natural gas prices, or lower market heat rates due to increasing energy efficiency.

Downside for the pro forma company could arise not only from a decline in commodity prices that could affect Exelon's cash flows, but also from a prolonged regulatory approval process that eventually results in substantially higher rebates and concessions to consummate the deal. We could lower the pro forma company's ratings if its adjusted FFO to debt ratios decline below 18% to 19%.

Upside scenario

An upgrade for Exelon stand-alone--currently not under consideration--could result if natural gas prices stabilize and power prices respond favorably to coal plant retirements, resulting in an improvement in consolidated FFO to debt levels of more than 28% on a sustained basis. This could stem from an improved economy and higher electricity prices, as well as from a robust increase in the rate base of Exelon's regulated utility subsidiaries. The pro forma company would need adjusted FFO to debt levels over 24% and debt to EBITDA below 3.2x to be considered for an upgrade. We think this is possible but unlikely before 2016.

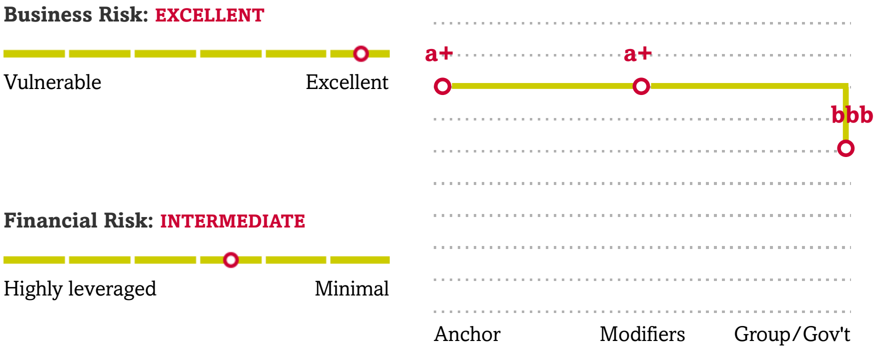
Table Of Contents

Summary:

PECO Energy Co.



CORPORATE CREDIT RATING

BBB/Stable/A-2

Rationale

Business Risk: Excellent	Financial Risk: Intermediate
• Operations under a generally constructive regulatory framework and effective handling of regulatory risk • Low operating risk electric and gas transmission and distribution operations • Large customer base with no geographic diversity	• Robust credit protection measures support an "intermediate" financial risk profile • Planned capital spending remains high leading to negative discretionary cash flow

Anchor Determination

Based on our "excellent" business risk and "intermediate" financial risk profile assessments, there are two potential anchor outcomes ('a+' or 'a'). Our choice of an 'a+' anchor reflects our view that the business risk profile of PECO Energy Co. is at the upper end of the "excellent" category, accounting for the company's large service territory, constructive regulatory environment, and effective handling of regulatory risk.

Outlook: Stable

The rating outlook on PECO Energy reflects our rating outlook on its parent, Exelon Corp. The outlook on Exelon accounts for the company's plans to merge with PEPCO Holdings Inc. The outlook on the ratings is stable. However, Standard & Poor's believes that higher natural gas production from shale natural gas plays and a delay in environmental rules related to plant retirements can significantly hurt the company's financial performance. We believe these headwinds have increased and Exelon faces a potential earnings decline from 2014. Should the commodity pricing environment weaken, the company might have to address its declining earnings profile with a commensurate reduction in capital spending and debt. On a stand-alone basis, we expect Exelon and Exelon Generation Co. LLC (ExGen) to maintain consolidated funds from operations (FFO) to debt of at least 23% and 27%, respectively, to maintain current ratings. If the merger successfully closes, we expect the pro forma company to maintain adjusted FFO to debt in a band of about 21% to 23% and debt to EBITDA of about 3.4x to 3.5x.

Downside scenario

On a stand-alone basis, we could lower Exelon's ratings if adjusted FFO to debt declines below 22%. This could happen if Exelon has increasing competition in its Pennsylvania and Illinois markets, which would threaten customer retention in its retail business. Gross margins could also come under pressure by a further decline in power prices brought about by declining natural gas prices, or lower market heat rates due to increasing energy efficiency.

Downside for the pro forma company could arise not only from a decline in commodity prices that could affect Exelon's cash flows, but also from a prolonged regulatory approval process that eventually results in substantially higher rebates and concessions to consummate the deal. We could lower the pro forma company's ratings if its adjusted FFO-to-debt ratios decline below 18% to 19%.

Upside scenario

An upgrade for Exelon's stand-alone ratings--currently not under consideration--could result if natural gas prices stabilize and power prices respond favorably to coal plant retirements, resulting in an improvement in consolidated FFO-to-debt levels of more than 28% on a sustained basis. This could stem from an improved economy and higher electricity prices, as well as from a robust increase in the rate base of Exelon's regulated utility subsidiaries. For Standard & Poor's to consider an upgrade, the pro forma company would need adjusted FFO-to-debt levels over 24% and debt to EBITDA below 3.2x. We think this is possible but unlikely before 2016.

Standard & Poor's Base-Case Scenario

Assumptions	Key Metrics
- Gross margins grow in the low-single digits - Capital spending of $600 million to $625 million annually	Under our base case scenario, we expect that PECO Energy's financial risk profile will remain consistently toward the upper end of the "intermediate" category.

Business Risk: Excellent

We assess PECO Energy's business risk profile as "excellent", accounting for regulated electric and gas transmission and distribution operations, which have low operating risk and benefit from a generally constructive regulatory framework. PECO Energy benefits from the utilization of projected test years in rate cases and an automatic adjustment clause for project-specific distribution system improvements. About 34% of PECO Energy's electric customers representing 68% of 2013 sales have elected to shop for electricity with alternative suppliers, while only 13% of gas customers representing 19% of sales have elected to shop. Nevertheless, PECO Energy's electric and gas operations have no commodity exposure and the company is not affected by fuel cost over- and under-recoveries.

Financial Risk: Intermediate

We view PECO Energy's financial risk profile as being in the "intermediate" category using the low volatility financial ratio benchmarks, reflecting our base case scenario that the company will maintain credit protection measures that remain consistently at the upper end of the category. For the year ended Dec. 31, 2013, FFO to debt was 26.9% and debt to EBITDA was 2.7x, although we expect both measures to weaken somewhat over time, while still supporting an "intermediate" financial risk profile assessment.

Liquidity: Strong

We view PECO Energy's liquidity on a consolidated basis with that of parent Exelon Corp., given PECO Energy's group status as a core subsidiary.

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views liquidity across the Exelon group of companies as "strong" in light of the debt maturities we expect and available credit facilities. Exelon has sufficient alternative liquidity sources to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen on its forward hedges. The next large maturity is in 2015 for Exelon ($800 million).

As of Dec 31, 2013, Exelon, ExGen, Commonwealth Edison Co. (ComEd), PECO Energy Co., and Baltimore Gas & Electric Co. (BG&E) had revolving credit facilities of $500 million, $5.3 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire in August 2018 (except ComEd, which expires in March 2019). ExGen has an additional $400 million bilateral through January 2015. The facilities were largely available as of Dec. 31, 2013, except for $184 million and $135 million of commercial paper outstanding at ComEd and BGE, respectively.

Exelon has a $7.2 billion bridge facility to provide flexibility for timing of permanent financing related to the acquisition of PHI. We expect 50% of the acquisition funds to be financed by debt and expect this financing to be at the Exelon Corp. level. We also expect Exelon to maintain balanced funding across the maturity spectrum (i.e., three to 30-year tenors). Furthermore, we expect the equity component to be funded through a mix of common equity and mandatory units, and through $1 billion in unregulated asset sales.

There are no change-of-control provisions in PHI's or its subsidiaries' public debt. We have assumed that change-in-control provisions in the bank facilities of PHI are resolved without issues by closing (either through waivers or refinancing). Eventually, management expects to be able to reduce or resize PHI's liquidity and support through Exelon Corp.'s facility.

Principal Liquidity Sources	Principal Liquidity Uses
• Assumed 2014 FFO of about $5.75 billion to $6 billion • Available revolving credit facility • $7.2 billion acquisition bridge loan that will be replaced by permanent financing	• Cash payment of $6.9 billion for acquiring all of PHI's shares. • Working capital • Dividend payments of about $1 billion annually • Capital spending and maintenance and environmental costs of about $5 billion to $5.5 billion, annually through 2015

Other Modifiers

Our assessment of the modifiers does not affect the anchor score.

Group Influence

Under our group rating methodology, we consider PECO Energy to be a core subsidiary of Exelon reflecting our view that PECO Energy is highly unlikely to be sold and has a strong long-term commitment from senior management. There are no meaningful insulation measures in place that protect PECO Energy from its parent and therefore, we align the issuer credit rating on PECO Energy with that of parent Exelon at 'BBB'.

Recovery Analysis

- We assign recovery ratings to first-mortgage bonds (FMBs) issued by U.S. utilities, which can result in issue ratings being notched above a corporate credit rating on a utility depending on the rating category and the extent of the collateral coverage. The FMBs issued by U.S. utilities are a form of "secured utility bond" (SUB) that qualify for a recovery rating as defined in our criteria (see "Collateral Coverage and Issue Notching Rules for ‘1+’ and ‘1’ Recovery Ratings on Senior Bonds Secured by Utility Real Property", published Feb. 14, 2013).
- The recovery methodology is supported by the ample historical record of 100% recovery for secured bondholders in utility bankruptcies in the U.S. and our view that the factors that enhanced those recoveries (limited size of the creditor class and the durable value of utility rate-based assets during and after a reorganization given the essential service provided and the high replacement cost) will persist in the future.
- Under our SUB criteria, we calculate a ratio of our estimate of the value of the collateral pledged to bondholders relative to the amount of FMBs outstanding. FMB ratings can exceed a corporate credit rating on a utility by up to one notch in the 'A' category, two notches in the 'BBB' category, and three notches in speculative-grade categories depending on the calculated ratio.
- FMBs at PECO Energy benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating two notches above the corporate credit rating.

Secondary Contact:
Aneesh Prabhu, CFA, FRM, New York (1) 212-438-1285; aneesh.prabhu@standardandpoors.com

NEW YORK (Standard & Poor's) June 10, 2015--Standard & Poor's Ratings Services said today it assigned its 'BBB-' issue-level rating to Exelon Corp.'s $4.2 billion of senior unsecured note issues. The corporate credit rating of 'BBB' is unchanged. The lower rating for the unsecured notes stems from structural subordination; the note maturities range from 2017 through 2045.

Exelon intends to use note proceeds to fund its upcoming acquisition of utility holding company PEPCO Holdings Inc., which operates in New Jersey, Maryland, Delaware, and Washington, D.C., as well as to fund the refinancing of upcoming maturities and for general corporate purposes. The acquisition still faces certain hurdles before it can be officially consummated, but we believe it will be finalized during 2015.

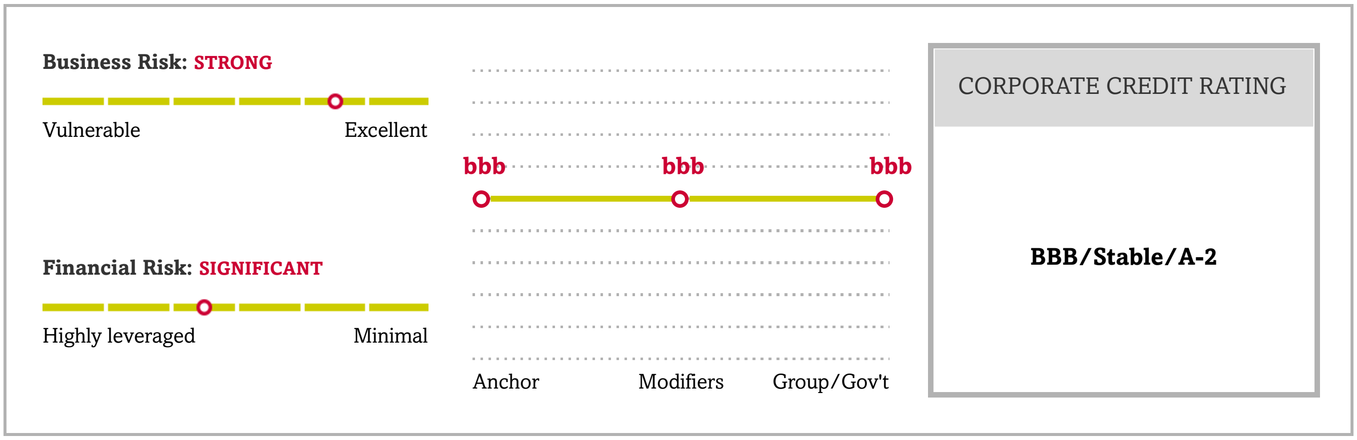
Table Of Contents

Summary:

Exelon Corp.

*(**Editor's Note:** This summary analysis, originally published Sept. 22, 2014, is being republished to correct an error in our published assumptions. Subsequently, we revised the financial metrics for the year ended Dec. 31, 2014, in the Key Metrics table.)*



Rationale

Business Risk: Strong

- Lower risk rate-regulated utility operations currently represent about 50% of consolidated business, but would increase somewhat with the closing of the proposed PEPCO Holdings Inc. acquisition.
- Low-cost base-load generation has a strong operating track record, though it remains subject to energy margin variability.
- Large production volumes from the Marcellus and Utica shale gas regions and changing prices at the TETCO pricing hub carry significant downside potential for a generation portfolio that is largely nuclear (83% of total generation).
- A mild summer, declining market heat rates and gas basis differentials have weakened the economics of the company's generation plants despite an improving power outlook through much of 2014.
- Capacity prices could continue to languish because of lackluster electric demand, growing energy efficiency, and increased penetration of demand response initiatives.
- Exelon still operates a large nuclear fleet; though there have been operational issues with certain units in the past, this positions the company well as carbon regulation and capacity performance incentives loom.

Financial Risk: Significant

- The backward-dated EBITDA profile persists, although the curve is not as steep as it is for certain competitors.
- Cash flow is significantly hedged through 2015 and 2016 increasingly as hedges are regularly added; even 2017 is hedged in excess of 30%.
- The company's liquidity position remains strong, especially since it has the ability to defer capital spending needs.
- Dividend policy is relatively somewhat aggressive, but this is supported by a steady stream of dividends from utility subsidiaries.

Because regulatory processes in merger approvals can take time, we provide outlooks for the ratings on both a stand-alone and pro forma basis.

The rating outlook on Exelon Corp. is stable. However, Standard & Poor's believes that higher-than-expected natural gas production from shale production regions and a delay in environmental rules related to plant retirements could significantly weaken the company's financial performance. Should the commodity pricing environment weaken even more, the company might have to address a decline in its earnings profile with a commensurate reduction in capital spending and debt. Without the Pepco Holdings Inc. (PHI) acquisition, we expect Exelon and Exelon Generation Co. LLC, respectively, to maintain consolidated funds from operations (FFO) to debt of at least 22% and 27%, respectively, which are the minimum levels to maintain current ratings. If the PHI transaction closes, we expect the pro forma company to maintain adjusted FFO to debt within a band of about 21% to 23% and debt to EBITDA to increase to about 3.4x to 3.5x on an adjusted basis.

Downside scenario

We could lower our ratings on Exelon in the absence of the PHI acquisition if adjusted FFO to debt declined below 22% for the consolidated enterprise. This could happen if Exelon were to face increasing competition in its markets in Pennsylvania and Illinois, which would threaten customer retention in its crucial retail business. Gross margins could also come under pressure if power prices decline further because of declining natural gas prices or lower market heat rates caused by a secular drop in demand related to increasing energy efficiency.

Negative ratings momentum for the company post-acquisition could occur due to a decline in commodity prices that would affect Exelon's cash flows, as well as from a prolonged regulatory approval process that eventually resulted in substantially higher rebates and concessions required to consummate the transaction. We could lower the company's ratings post-acquisition if the adjusted FFO to debt ratios declined below 18% consistently.

Upside scenario

An upgrade for Exelon pre-acquisition, which we presently consider unlikely, could occur if natural gas prices stabilized, or if power prices responded favorably to coal plant retirements, resulting in an improvement in consolidated FFO to debt levels of exceeded 28% on a sustained basis. This could stem from an improved economy in the region and higher electricity prices, as well as from a robust increase in the rate base of Exelon's regulated utility subsidiaries. We could consider an upgrade on the company post-acquisition if adjusted FFO to debt levels were stronger than 24% and debt to EBITDA was below 3.2x; however, we think this is unlikely before 2016, and may depend on a more exhaustive hedging profile beyond that period.

Standard & Poor's Base-Case Scenario

Assumptions

- All regulatory approvals for the PHI acquisition are received by June 2015.
- The purchase is funded by cash earned from approximately $1 billion of asset sales completed in 2014.
- Mandatory converts are given 100% equity credit per our criteria.
- We have assumed merger synergies that build up to a gross run rate of about $135 million annually by 2018 (net $250 million over the initial five years), plus rebates and concessions of about $100 million for ratepayers.
- PHI will be ring-fenced in a manner that meets our criteria. This is important to our consideration of any ratings separation between PHI and Exelon.

Assumptions for Exelon's current stand-alone operations include the following:

- Henry Hub gas prices are between $3.50 per mmbtu and $3.75 per mmbtu through 2016; PJM West hub power prices range between $32 and $36 per megawatt per hour (MWh) in 2016; and Northern Illinois hub hover around $31 per MWh through 2016.
- Nuclear capacity factors perform consistently about 94% through 2017 (each 1% fleet decline results in a $45 million hit to EBITDA).
- Growth rates at the utilities are consistent with management's assumptions.
- Dividend policy remains in line with industry standards.
- Only current hedges are assumed.
- ERCOT spark spreads remain depressed, at about $6.25 per MWh during 2015, but rebound somewhat afterwards.
- Total ExGen generation of about 190 gigawatts per hour in 2015, ticking up only modestly in subsequent years.

Key Metrics

	2014A	2015E	2016E

Debt/EBITDA (x)	3.1x	3.0x-3.4x	3.0x-3.4x
EBITDA Interest Coverage (x)	5.1x	5.0x-5.5x	5.2x-5.7x

A--Actual. FFO--Funds from operations. E--Estimate.

Note: We will list only our expectations for Exelon Corp.'s stand-alone operations until the merger closes.

Business Risk: Strong

Standard & Poor's current rating on diversified energy company Exelon reflects our view of the company's consolidated business risk profile, which we view as "strong," combining the higher-risk operations of unregulated supply affiliate ExGen with the "excellent" business risk profiles of its rate-regulated transmission and distribution utilities Commonwealth Edison Co. (ComEd), PECO Energy Co., and Baltimore Gas & Electric Co. (BGE). Because of ring-fencing, we deconsolidate BGE's financial profile from Exelon and analyze it solely as an equity investment, incorporating the utility's distributions to the parent as BGE's only contributions to the parent's credit quality and financial profile.

As of Dec. 31, 2014, Exelon had about $21.8 billion of reported on-balance-sheet debt, including nonrecourse debt. We also impute a significant amount of debt onto Exelon's balance sheet. This consists mostly of about $3.3 billion related to pensions and other postemployment benefits, about $240 million to accrued interest, and about $1.4 billion to power purchase agreements.

Regulated utilities currently contribute about 50% of Exelon's consolidated current cash flow. PECO's business risk profile is "excellent" under our criteria, reflecting monopolistic, rate-regulated utility transmission and distribution operations. PECO serves about 1.6 million electric customers and 506,000 natural gas customers in southeastern Pennsylvania, including Philadelphia. The Pennsylvania Public Utility Commission regulates the company's electric and gas distribution rates, and the Federal Energy Regulatory Commission (FERC) regulates transmission rates. Similarly, ComEd's business risk profile is "excellent," reflecting the same monopolistic, rate-regulated utility transmission and distribution operational profile. ComEd serves about 3.8 million customers in northern Illinois, including the city of Chicago. The company's distribution rates are regulated by the Illinois Commerce Commission (ICC), while transmission rates, which comprise nearly a quarter of the company's rate base, are regulated by the FERC. BGE serves about 1.2 million electric and 650,000 gas customers in Central Maryland, including the City of Baltimore. The regulatory framework under which BGE operates can be challenging and unpredictable but has been improving somewhat. The company's electric distribution business operates under a revenue decoupling framework that eliminates per customer usage variability and provides revenue stability, but places the burden on BG&E to effectively manage costs in order to preserve net margins. It is regulated by the Maryland Public Service Commission.

We expect ExGen's unregulated operations to constitute nearly 50% of the consolidated enterprise in terms of cash flow and capital spending during 2015. ExGen generates a significant portion of earnings from its retail operations. Through retail and wholesale channels, ExGen now provides about 150 to 165 terawatt-hours, or nearly 5% of total U.S. power demand, and enjoys regional diversity. The company's generation units are well positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. In most locations, ExGen has adequate intermediate and peaking capacity for managing load-shaping (matching resources with energy needs) risks. However, we believe the company will still need to buy and sell generation in the market to manage its portfolio needs, which exposes it to considerable commodity risk. Moreover, ExGen has a significant open position in the Midwest to merchant markets, and a somewhat tighter position in Texas and New England, where it has some risk of finding itself short when loads are high and when power prices are relatively high, in our opinion.

ExGen's cash flow is rather sensitive to commodity prices because roughly 83% of the business's generation is nuclear; unlike gas-fired assets, which have a lower cost structure if gas prices drag power prices down, a nuclear fleet faces winnowing margins based on lower market heat rates. Given that base-load generation is price-taking by nature, we expect ExGen's adjusted FFO to debt to remain volatile relative to peers. For instance, with all else being equal, we estimate gross margins in 2017 will be lower by about about $300 million for every $5 per MWh (round-the-clock) decline in power prices, about $650 million for every $1 per MMBTU decline in natural gas prices. Nearer term figures are not quite as volatile due to more thorough hedging and better visibility into pricing.

We view ExGen's ratable hedging strategy favorably because it ensures that a high percentage of the company's near-term generation remains locked-in. Hedging not only protects unregulated generation cash flows from steep price declines, but also provides the company time to adjust its cost structure or its capital structure if prices remain depressed. For instance, as forward prices and market heat rates rose throughout 2014, Exelon hedged aggressively and reduced its commodity exposure by moving its hedging from the lower end to the higher end of its ratable hedging targets for 2015 and 2016, and even 2017 to a lesser extent.

Current hedges demonstrate the significant value of Exelon's hedging program. Even though these hedges insulate ExGen, they also show the sensitivity of ExGen's margins to the prospect of a continued shale gas production onslaught. The decline in mark-to-market value through 2014 demonstrates the limit to which Exelon can hedge -- price-taking plants can hedge, but only at the prices the market will bear. Also, the merchant generation margins at ExGen could face a decline as high-priced hedges expire, which is evident in the drop in wholesale hedged gross margins. Still, forward prices do show a modest contango (i.e., future prices are above expected future spot prices) as reflected in the increase in ExGen's open EBITDA from higher natural gas forward prices compared with year-end 2013. In addition, although retail competition has increased, and ExGen has lowered its growth estimates, we believe retail contributions can mitigate the wholesale decline, given the potential for cost savings, volumes gained from the Constellation merger, and acquisitions.

Excluding the PHI merger, ExGen's contribution to Exelon's cash flow declines somewhat under our projected base case because of the decline in unregulated cash flow when commodity prices fall. However, despite lower power prices, we view the business risk profile of Exelon Corp. as "strong." We expect financial measures to remain flat or to decline modestly during 2015. However, the corporate credit ratings reflect our expectation that 2014 and 2015 will be the trough years, and that metrics could improve in 2016 or 2017. Based on the present forward-price curve, cash flow measures are adequate for the rated level in these years, especially after parent Exelon announced significantly reduced dividend payouts and ExGen deferred or eliminated some planned capital spending. Still, despite the improvement in free operating cash flow resulting from the decline in future gross margins, we view Exelon's cash flow adequacy ratio as having "significant" financial risk.

We view Exelon's management strategy as an important determinant of the company's current "strong" business risk assessment. In recent years, Exelon has implemented a strategy of internal growth through reinvesting in existing businesses and investing in new technologies. There is also a bias toward longer-term contracted businesses. Management's business strategy appears to have positioned it well to take advantage of certain long-term, secular trends, such as environmental regulation and the push for capacity performance, which are likely to influence unregulated power markets in coming years. While the utilities primarily focus on growing rate base and earning a reasonable return, they are also playing a role in competitive markets by investing extensively in transmission-related infrastructure. Given uncertain unregulated markets, management's focus has shifted into growing the regulated businesses.

Financial Risk: Significant

Exelon's dividend payout is currently in line with peers (about 55% to 60%). However, capital spending requirements remain significant between 2015 and 2016 at about $3.5 billion, collectively, for the regulated companies and almost $4 billion for ExGen. Although utility capital spending tends to be funded through rate base additions, unregulated generation must recover the funding of its own capital requirements through capacity market prices (and energy margins, in Texas). Importantly, because of announced cuts, consolidated cash flow from operations will largely cover capital spending and dividends, resulting in only modest external financing needs. Still, incrementally lower gas prices would hurt ExGen's debt protection measures more than increases in debt financing or in operating and maintenance costs, through 2015.

On a stand-alone basis, under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect Exelon's consolidated FFO to total debt to hover around 25% to 28% through 2015. Importantly, we expect to see negative discretionary cash flow (i.e., net of dividends) improve meaningfully. The FFO to total debt ratio is consistent with Standard & Poor's 'BBB' rating guideposts for a financial risk profile we assess as "significant," especially since a meaningful amount of capital spending is discretionary.

At ExGen, we expect free operating cash flow to debt to remain positive even in 2015 when we expect financial measures to trough. Because of the decline in commodity prices, we expect ExGen's FFO-to-debt ratio to remain about 33% in 2015. Although the company's cash flows are relatively more volatile compared with peers because of the larger base-load generation, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must decline and stay below $2.75 per Mcf before its FFO to debt falls below 20%, a level well below the current price of about $3.50.

If the PHI acquisition is successful, under our base case we expect the consolidated ratio of adjusted FFO to total debt to fall to about 21% in 2015, then improve to about 24% by 2016. Importantly, we expect free operating cash flow to debt to remain mostly positive throughout 2015-2017, although discretionary cash flow becomes meaningfully negative in 2015. Debt to EBITDA increases to 3.6x in 2015. These ratios are appropriate for Standard & Poor's 'BBB' guideposts for a "significant" financial risk profile on the medial volatility table. Nevertheless, we believe there are risks that cash flow may eventually end up less than expected because merger synergies and/or savings take longer to accrue, power prices trend lower than expected due to higher natural gas production from shale plays, or because there is a delay in retiring coal plants.

Also, because we give credit for nuclear fuel amortization in adjusted FFO, we expect subsidiary ExGen to remain operating cash flow positive (i.e., after capital spending that includes nuclear fuel costs). Through the forecast period, ExGen remains cash flow positive after accounting for capital spending.

Moreover, on a stand-alone basis, the utilities' dividends can fund a significant portion of the external dividend (we estimate that utility dividends can provide between 80% and 90% of external dividend in 2015-2017). Post-acquisition, assuming Exelon's utility target of 70% payout ratios, the utility contributions would be able to cover the entire external dividend. However, we expect ExGen to continue to contribute to the external dividend, though less than the majority as it did before the dividend cut.

Liquidity: Strong

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views liquidity across the Exelon group of companies as "strong" in light of the debt maturity schedule and available credit facilities. Exelon has sufficient alternative liquidity sources to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen as it settles its forward hedges.

As of Dec. 31, 2014, Exelon, ExGen, ComEd, PECO, and BGE had revolving credit facilities of $500 million, $5.8 billion, $1 billion, $600 million, and $600 million, respectively. These facilities largely expire in 2019. The facilities were largely available as of Dec. 31, 2014, except for $304 million and $120 million of commercial paper outstanding at ComEd and BGE, respectively, as well as certain letters of credit outstanding.

Exelon has a $3.2 billion bridge facility in place to provide flexibility for the timing of permanent financing related to the PHI acquisition. There are no change-of-control provisions in PHI's or its subsidiaries' public debt. We have assumed that change-of-control provisions in the bank facilities of PHI are resolved by closing (either through waivers or refinancing). Eventually, management expects to be able to reduce or resize PHI's liquidity and support the company through Exelon's facility.

Principal Liquidity Sources	Principal Liquidity Uses
• Funds from operations of $4.8 billion in 2015. • Credit facility availability of about $7.9 billion. • Acquisition bridge loan for $3.2 billion that will be replaced by permanent financing. • Cash on Hand of about $1.8 billion.	• Cash payment of $6.9 billion for acquiring all of PHI's shares. • Working capital needs of $129 million. • Dividend payments of over $1 billion annually. • Capital spending and maintenance and environmental costs of $5 billion to $5.5 billion during the next 12 months • Debt maturities of $1.7 billion.

Debt maturities ($mm) as of Dec. 31, 2014

- 2015: 1,739
- 2016: 1,269
- 2017: 2,400

- 2018: 1,415
- 2019: 982

Other Modifiers

We assess all modifiers as neutral, resulting in no change to the anchor score.

Group Influence

The group credit profile (GCP) of Exelon is 'bbb'. As the parent company with one relatively small insulated subsidiary (BGE), Exelon's issuer credit rating is the same as its GCP. Senior unsecured debt at Exelon Corp. is notched down to 'BBB-' because of structural subordination to priority obligations at the operating subsidiaries.

Exelon Corp. And Subsidiaries Ratings Affirmed; Liquidity And M&G Scores On Some Subsidiaries Revised

Overview

- We have completed our review of Exelon Corp. and its subsidiaries and are affirming our issuer credit ratings and all other ratings on Exelon's regulated subsidiaries, including our 'BBB' long-term corporate credit rating on Exelon.
- At the same time, we are revising our stand-alone credit profile (SACP) on Baltimore Gas & Electric Co. (BGE) to 'a' from 'a-', reflecting improved financial performance that we expect will be in line with the lower end of the intermediate financial risk profile category.
- At the same time, we are revising our liquidity assessment for BGE, Commonwealth Edison Co. and PECO Energy Co. to adequate from strong.
- In addition, we are revising our management and governance assessment for newly acquired PEPCO Holdings Inc. and its three subsidiaries, Atlantic City Electric Co., Delmarva Light & Power Co., and Potomac Electric Power Co., to strong from satisfactory because these subsidiaries are now part of Exelon, a company that we assess as having a strong management and governance modifier.
- The rating outlook is stable, based on the stable rating outlook on parent Exelon Corp.

Rating Action

On July 25, 2016, S&P Global Ratings affirmed its ratings on Exelon Corp., including the 'BBB' long-term corporate credit rating, and its regulated subsidiaries. The subsidiaries are Baltimore Gas & Electric Co. (BGE), Commonwealth Edison Co., PECO Energy Co., and PEPCO Holdings Inc. (and PEPCO's three operating subsidiaries Atlantic City Electric Co., Delmarva Power & Light Co., and Potomac Electric Power Co.). The outlook remains stable.

At the same time, we revised the the stand-alone credit profile (SACP) on BGE to 'a' from 'a-'. We also revised our assessment of liquidity for PECO Energy Co., BGE, and Commonwealth Edison to adequate from strong, and revised our assessment for management and governance to strong from satisfactory for recently acquired PEPCO Holdings Inc. and its three operating subsidiaries.

Rationale

The rating affirmations are based on the view that each of these subsidiaries is a core subsidiary to the parent. For Commonwealth Edison and PECO there are no insulation provisions in place and therefore, the issuer credit rating (ICR) on each entity is in line with that of the parent. For BGE we afford two notches of insulation between the company and Exelon (BBB/Stable/A-2), which in combination with an 'a' SACP on BGE leads to an 'A-' ICR for the company. For PEPCO Holdings and its subsidiaries we recognize one notch of insulation, which in combination with a 'bbb+' SACP on the company leads to an ICR for each of PEPCO Holdings and its subsidiaries of 'BBB+'. Therefore our ICRs for these entities are as follows:

- Commonwealth Edison Co.: 'BBB' (no insulation)
- PECO Energy Co. (PECO): 'BBB' (no insulation)
- Baltimore Gas & Electric Co. (BGE): 'A-' (two notches of insulation)
- PEPCO Holdings Inc.: 'BBB+' (one notch of insulation)
- Potomac Electric Power Co.: 'BBB+' (one notch of insulation)
- Delmarva Power & Light Co. (DPL): 'BBB+' (one notch of insulation)
- Atlantic City Electric Co. (ACE): 'BBB+' (one notch of insulation)

We revised the SACP on BGE to 'a' from 'a-' based on the improvement in financial performance in recent years and our expectation that it will continue to be robust, with credit metrics in the 25%-27% range through 2018 and about 23%-25% thereafter. However, our ratings on BGE remain the same because we currently recognize two notches of insulation between BGE and Exelon, which caps the ICR of BGE at 'A-'.

Our revised assessment of liquidity for BGE, Commonwealth Edison, and PECO to adequate from strong reflects our view that Exelon will manage these subsidiaries' liquidity in a way that will ensure at least adequate liquidity. We expect sources of cash to exceed uses of cash by 1.1x or more, facilitated by ongoing interactions with the group, cash injections from the parent as needed, manageable debt maturities, undrawn revolving credit facilities at the subsidiaries, and capital expenditures that can be deferred in times of stress. The revised liquidity assessment for these three subsidiaries does not affect our ratings on the subsidiaries.

Finally, we revised our assessment of management and governance (M&G) on PEPCO Holdings Inc., Atlantic City Electric Co., Delmarva Power & Light Co., and Potomac Electric Power Co. to strong from satisfactory to reflect the ownership by Exelon, whose management and governance assessment is strong. We adjust the M&G scores of core subsidiaries to be in line with the ultimate parent because we view the parent as having ultimate control over the subsidiary's financial policy and managerial decision-making.

Liquidity

We assess Exelon's subsidiaries' liquidity as adequate, reflecting direct support already committed from the parent and the influence of ongoing interactions with the group, including the provision of various corporate services and the availability of centralized liquidity resources on an as-needed basis. We expect liquidity sources to exceed uses by 1.1x or more, the minimum threshold for regulated utilities under our criteria, and that the company will also meet our other requirements for such a designation. The subsidiaries' liquidity benefits from stable cash flow generation, various revolving credit facilities at BGE, Commonwealth Edison, PECO Energy, and PEPCO Holdings, sufficient liquidity provided by the parent to meet ongoing needs, and manageable debt maturities over the next few years.

Outlook

We base the stable rating outlook on these subsidiaries on the stable rating outlook on parent Exelon. However, we believe that higher-than-expected natural gas production from shale production regions and a delay in environmental rules related to plant retirements could weaken the company's financial performance during the next few years. If commodity prices weaken further, Exelon might have to address a decline in its earnings profile with commensurate reductions in capital spending and debt. We expect the consolidated pro forma company to maintain adjusted funds from operations (FFO) to debt of about 18%-21% and debt to EBITDA to increase to about an adjusted 3.8x-4.0x, including the effects of the recent Pepco acquisition; we anticipate these would improve somewhat beyond 2016 and 2017.

Downside scenario

Negative ratings momentum could occur due to a decline in commodity prices that would affect another of Exelon's subsidiaries--Exelon Generation Co. LLC--and, as a result, Exelon's cash flows. We could lower the ratings on Exelon if the adjusted consolidated FFO to debt ratios were to decline below 16% and remain at that level.

Upside scenario

We could consider an upgrade if the company's adjusted consolidated FFO to debt levels exceeded about 24% and debt to EBITDA declined to below about 3.5x. We think this is unlikely before the end of 2016, but could occur in the following year if power prices improve or rate case outcomes are better than expected.

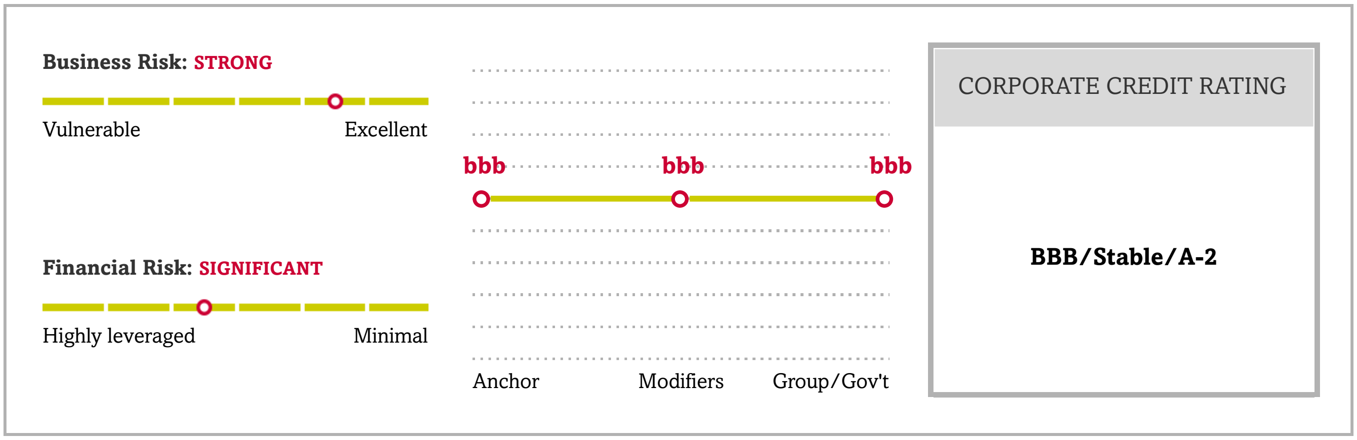
Reconciliation

Related Criteria And Research

Exelon Corp.



Rationale

Business Risk

- Lower risk rate-regulated utility operations at diversified energy company Exelon Corp. now represent nearly 60% of consolidated EBITDA, upon the closing of the Pepco Holdings LLC (PH LLC) acquisition.
- Low-cost base-load generation has a strong operating track record, though it remains subject to considerable energy margin variability, driven by commodity prices, demand, and weather patterns; this has recently created some weakness in the merchant end of the business.
- Large natural gas production volumes have collapsed gas and power prices, carrying significant downside potential for a generation portfolio that is largely nuclear (more than 60% of total generation by nameplate capacity).
- Several consecutive mild summers, declining market heat rates, and gas regional pricing differentials have weakened the expected economics of the company's generation plants over the next 24 months despite a stronger fundamental long-term outlook.
- Capacity prices could continue to languish because of lackluster electric demand, growing energy efficiency, and increased penetration of demand response initiatives in key markets. However, this could to a limited degree reverse in coming auctions as capacity performance schemes proliferate.
- Exelon still operates a large number of nuclear plants; this puts the company in a good position as carbon regulation and capacity performance incentives loom.

Financial Risk

- The backward-dated EBITDA profile persists, although the curve is not as steep as it is for certain competitors, owing to a proactive hedging strategy and participation in robust capacity markets.
- As usual, cash flow on the generation side is significantly hedged during the next two years, plus hedges are regularly added; 2018 is now hedged to around 40%, despite ongoing weakness in forward power pricing.
- The company's liquidity position remains strong, especially because it can defer capital spending needs, which are comparatively low because Exelon's plants are more modern.
- Dividend policy is in line with industry norms, and continues to be supported by a steady stream of dividends from utility subsidiaries, which has increased with its most recent transaction.
- Although capital spending needs have been substantial at certain periods in the past, we expect that they'll be more in line with industry norms because this company is already well-suited for upcoming environmental regulations.

Outlook

The rating outlook on Exelon Corp. is stable. However, we believe that higher-than-expected natural gas production from shale production regions and a delay in environmental rules related to plant retirements could weaken the company's financial performance during the next few years. If commodity prices weaken even more, the company might have to address a decline in its earnings profile with commensurate reductions in capital spending and debt. We expect the consolidated pro forma company to maintain adjusted funds from operations (FFO) to debt of about 19% to 21% and debt to EBITDA to increase to about an adjusted 3.8x to 4.0x, including the effects of the recent PH LLC acquisition.

Downside scenario

Negative ratings momentum could occur due to a decline in commodity prices that would affect subsidiary Exelon Generation Co. LLC's (ExGen) and, as a result, Exelon's cash flows. We could lower the company's ratings if the adjusted consolidated FFO to debt ratios were to consistently decline below 16%.

Upside scenario

We could consider an upgrade if the company's reported adjusted consolidated FFO to debt levels stronger than about 24% and consolidated debt to EBITDA below about 3.5x. We think this is unlikely before the end of 2016, but could come about as a result of improved power prices in key markets that buoy nuclear assets, which have been struggling; this would be prompted by higher gas prices or improved demand.

S&P Global Ratings Base-Case Scenario

Assumptions

Assumptions for Exelon's current stand-alone operations:

- Henry Hub gas prices are $2.50 per million Btu (mmBtu) in 2016 and $2.75/mmBtu in 2017; PJM Interconnection West hub power prices are between $29 and $35 per megawatt hour (MWh) in 2016; Northern Illinois hub hovers around $30/MWh through 2017.
- Nuclear capacity factors are consistently at about 93%-94% through 2017.
- Quad Cities and Clinton Nuclear facilities close as expected during the next few years; we do not yet include the benefits of a possible acquisition of the FitzPatrick asset.
- Dividend policy remains in line with industry standards.
- Only current hedges are assumed.
- Spark spreads remain depressed in Texas, with an average of about $6/MWh during 2016 and 2017
- Total ExGen generation of about 195 gigawatts per hour in 2016, ticking up only modestly in subsequent years.

Key Metrics

	2016E	2017E
FFO/debt (%)	18-21	20-22
Debt/EBITDA (x)	4-4.1	3.9-4.1
EBITDA interest coverage (x)	5.6-6	5.9-6.3

FFO--Funds from operations. E--Estimate. Note: Our metrics include the impacts of the recently approved Pepco Holdings acquisition.

Company Description

Our current rating on Exelon reflects our view of the company's consolidated business risk profile as strong, combining the higher-risk operations of unregulated supply affiliate ExGen with the excellent business risk profiles of its rate-regulated transmission and distribution utilities Commonwealth Edison Co. (ComEd), PECO Energy Co., Baltimore Gas & Electric Co. (BGE), Atlantic City Electric Co., Delmarva Power & Light Co., and Potomac Electric Power Co. (Pepco). Because of ring-fencing, we deconsolidate BGE's financial profile from Exelon and analyze it solely as an equity investment, incorporating the utility's distributions to the parent as BGE's only contributions to the parent's credit quality and financial profile. However, we consolidate Pepco and its subsidiaries, though we afford one notch of separation based on some delinking measures.

Business Risk

Our current rating on diversified energy company Exelon reflects the company's consolidated business risk profile, which we view as strong, combining the higher-risk operations of unregulated supply affiliate ExGen with the excellent business risk profiles of its rate-regulated transmission and distribution utilities. Because of ring-fencing, we deconsolidate BGE's financial profile from Exelon and analyze it solely as an equity investment, incorporating the utility's distributions to the parent as BGE's only contributions to the parent's credit quality and financial profile. However, we consolidate PEPCO and its subsidiaries, though we afford one notch of separation based on some delinking measures.

As of March 31, 2016, Exelon had about $38 billion of adjusted debt, after considering the effects of operating leases, deconsolidation, power purchase agreements, and cash netting, as well as a recent debt issuance aimed at funding the PH LLC acquisition.

Given the relative stability of the cash flows and business in general, we net the majority of the cash on the balance sheet against this debt tally.

Regulated utilities now contribute more than 50% of Exelon's consolidated current cash flow. PECO's business risk profile is excellent under our criteria, reflecting monopolistic, rate-regulated utility transmission and distribution operations. PECO serves more than 1.6 million electric customers and 500,000 natural gas customers in southeastern Pennsylvania, including Philadelphia. Similarly, ComEd's business risk profile is excellent, reflecting the same monopolistic, rate-regulated utility transmission and distribution operational profile. ComEd serves more than 3.9 million customers in northern Illinois, including Chicago. BGE serves more than 1.3 million electric and 650,000 gas customers in Central Maryland, including Baltimore. The regulatory framework under which BGE operates can be challenging and unpredictable, but has been improving somewhat. Pepco operates across several jurisdictions, including New Jersey, Delaware, Maryland, and the District of Columbia, totaling more than 1.9 million customers.

ExGen's unregulated operations now constitute less than 50% of the consolidated enterprise in terms of cash flow and capital spending during 2016 upon closing of the PH LLC acquisition (as well as weakness in cash flows from some nuclear assets). ExGen generates a significant portion of earnings from its retail operations. Through retail and wholesale channels, ExGen now provides nearly 195 terawatt-hours, or nearly 5% of total U.S. power demand, and enjoys significant regional diversity, participating in the PJM Interconnection in the Mid-Atlantic, New England, and Texas markets; we expect a similar figure in 2016, though this could be offset beyond 2018 with nuclear retirements. The company's generation units are well-positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. In most locations, ExGen has adequate intermediate and peaking capacity for managing load-shaping risks. However, we believe the company will still need to buy and sell generation in the market to manage its portfolio needs, which exposes it to considerable commodity risk. Moreover, ExGen has a significant open position in the Midwest to merchant markets, and a somewhat tighter position in Texas and New England, where it has some risk of finding itself short when loads and power prices are high.

ExGen's cash flow is sensitive to commodity prices because more than 70% of the business's generation, including purchased power, is nuclear; unlike gas-fired assets, which have a lower cost structure if gas prices drag power prices down, its nuclear plants face winnowing margins based on lower market heat rates, especially if capacity prices are low. Given that base-load generation is price-taking by nature, we expect ExGen's adjusted FFO to debt to remain volatile relative to its peers. For instance, we estimate gross margins in 2017 will be lower by more than $100 million for every $5 per MWh (round-the-clock) decline in power prices, and about $300 million for every $1 per million Btu decline in 2017 natural gas prices. Near-term figures are not quite as volatile due to more thorough hedging and better visibility into pricing.

While the utility businesses continue to demonstrate considerable stability in cash flows and effective management of regulatory relationships, a number of factors continue to confront ExGen. First, the very low gas price environment has called into question the viability of certain of ExGen's nuclear generating assets. Should these low gas prices continue to drive low power prices unabated, we'd expect the issuer to consider the closure of these plants. We acknowledge that, if passed, the currently proposed Next Generation Energy Plan in Illinois could partially mitigate this challenge.

Contrarily, looming developments in the PJM Interconnection may benefit ExGen. We expect the next Base Residual Auction (2020-21), slated for May 2017, to contain both incentives and penalties around capacity performance, to a greater degree than previous auctions have (the base performance option will likely have been removed). While single-asset issuers could be particularly exposed, we believe a well-diversified, nuclear-intensive participant like ExGen would be well-suited to capture higher capacity prices. And, as carbon regulations may unfold during the early 2020s, ExGen's comparatively clean fleet of plants will likely benefit from mass coal plant closures in the Midwest and Mid-Atlantic.

We view ExGen's ratable hedging strategy favorably because it ensures that a high percentage of the company's near-term generation remains locked in. Hedging not only protects unregulated generation cash flows from steep price declines, but also provides the company time to adjust its cost structure or its capital structure if prices remain depressed. For instance, as forward prices rose through 2014, Exelon hedged aggressively and reduced its commodity exposure by moving its hedging from the lower end to the higher end of its ratable hedging targets for 2015 and 2016; we note that this could be more challenging in the future with lower forward power pricing, and forward looking hedging proportions are somewhat lower than previous years as of the end of the first quarter of 2016.

The issuer's hedges have effectively softened the aforementioned cash flow volatility; this was particularly apparent during otherwise weak market conditions in 2014 and 2015. Even though these hedges insulate ExGen, they continue to show the sensitivity of ExGen's margins to the prospect of continued shale gas production. The merchant generation margins at ExGen could face a decline as high-priced hedges expire, which is evident in the drop in wholesale hedged gross margins. Still, forward prices do show a modest contango (future prices are above expected future spot prices), as reflected in the increase in ExGen's open EBITDA from higher natural gas forward prices compared with mid-year 2015.

ExGen's contribution to Exelon's cash flow has declined somewhat under our projected base case because of the decline in unregulated cash flow when commodity prices fall, as well as due to the renewed focus on regulated activities; we anticipate this will continue going forward. However, despite lower power prices, we view the business risk profile of Exelon as strong. We expect financial measures to remain flat or to decline modestly during 2015. However, the corporate credit ratings reflect our expectation that 2016 will be trough years for power pricing, with the business profile being fortified by the PH LLC acquisition. Based on the present forward-price curve, cash flow measures are adequate for the rated level in these years, especially after Exelon announced significantly reduced dividend payouts in 2013 and ExGen deferred or eliminated some planned capital spending. Still, despite the improvement in free operating cash flow resulting from the decline in future gross margins, we view Exelon's cash flow adequacy ratio as having significant financial risk.

Additionally, the role of nuclear assets in the portfolio promises to change over time. Exelon has already announced the closure of the Quad Cities and Clinton nuclear assets in coming years, and we anticipate that Exelon could face decisions of about the closure of certain less efficient remnant assets during the next few years. However, simultaneously, we note that Exelon has also began discussions with Entergy surrounding the transfer of the FitzPatrick asset in New York, in light of a recent proposal by New York's regulatory authorities that would effectively subsidize upstate nuclear assets. Nonetheless, we maintain that assets in both Illinois and New York will have significant value if and when the Clean Power Plan is reinstated; we believe it would be quite difficult for both states to meet reduction targets if they were required to replace this efficient baseload generation.

Finally, we expect that recent developments in PJM, Exelon's predominant market, should support the credit quality of the generation business. The evolution towards a capacity performance construct would generally help support higher prices. The risk associated with this stems from performance--penalties for not being able to run during critical hours could be draconian, and, for single asset generators or small portfolios, this could be an existential risk. However, for broad, higher performing portfolios like the one Exelon boasts, the risk can be diversified.

We view Exelon's management strategy as an important determinant of the company's current strong business risk assessment. In recent years, Exelon has implemented a strategy of internal growth through reinvesting in existing businesses and investing in new technologies. There is also a bias toward longer-term contracted businesses. Management's business strategy appears to be three-pronged: cost and productivity enhancements that include strategies like divestments and asset retirements; enlarging alternative energy investments through renewables development projects (mostly wind and solar); and investing in new technologies such as the smart grid. While the utilities primarily focus on growing rate base and earning a reasonable return, they are also playing a role in competitive markets by investing extensively in transmission-related infrastructure. Given uncertain unregulated markets, management's focus has shifted into growing the regulated businesses, most recently with the upcoming PH LLC acquisition.

S&P Base Case Operating Scenario

- The merchant generation units continue to operate well, the nuclear units in particular
- Exelon maintains its hedging strategy for its merchant generation units, which serves to guard against lower power prices
- The company continues to effectively manage regulatory risk in all its jurisdictions, ensuring timely recovery of investment

Cash flow from operations/debt (%)	25.0	21.2	23.9	10.8
Free operating cash flow/debt (%)	(1.3)	3.1	(10.2)	(1.8)
Discretionary cash flow/debt (%)	(5.9)	(0.8)	(16.7)	(4.7)

Financial Risk

Exelon's dividend payout is currently in line with industry norms. However, capital spending requirements remain significant in 2016, with regulated utility spending at the three incumbent utilities reaching $3.95 billion and as much as $1.4 billion at PH LLC; this should continue in subsequent years. Although utility capital spending tends to be funded through rate base additions and tracker mechanisms, unregulated generation must recover the funding of its own capital requirements through capacity market prices (and energy margins, in Texas); these should eclipse $3 billion in 2016.

Under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect Exelon's consolidated FFO to total debt to hover at around 21% through 2017. We expect to see negative discretionary cash flow (i.e., net of dividends) improve meaningfully. The FFO to total debt ratio is consistent with our 'BBB' rating guideposts for a significant financial risk profile, especially since a meaningful amount of capital spending is discretionary.

At ExGen, we expect free operating cash flow to debt to remain positive even in 2016 and 2017 when we expect financial measures to trough due to lower gas prices. Because of the lower commodity prices, we expect ExGen's FFO-to-debt ratio to remain about 32% in 2016. Although the company's cash flows are relatively more volatile than those of its peers because of the larger proportion of base-load generation and significant fixed costs, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must consistently stay below the current assumed level of $2.50 per million Btu before its consolidated FFO to debt falls below 20%.

We expect free operating cash flow to debt to remain mostly positive throughout 2016-2018. Debt to EBITDA should increase to about 3.8x in 2016 on the heels of the Pepco acquisition before declining somewhat. These ratios are well within the 'BBB' guideposts for a significant financial risk profile, as we now apply the medial volatility table as a result of a greater presence of utility cash flows. Nevertheless, we believe there are risks that cash flow may end up less than expected because merger synergies take longer to accrue, power prices trend lower due to higher natural gas production from shale plays, or due to potential delays in implementing environmental rules, which would generally favor Exelon.

Because we give credit for nuclear fuel amortization in adjusted FFO, we expect subsidiary ExGen to remain operating cash flow positive (after capital spending that includes nuclear fuel costs). Through the forecast period, ExGen remains cash flow positive after accounting for capital spending.

Moreover, the utilities' dividends can fund a significant portion of the external dividends (we estimate that utility dividends can provide as much as 85% of external dividend in 2016-2018). Assuming Exelon's utility target of 70% payout ratios, the utility contributions would be able to cover the entire external dividend. However, we expect ExGen to continue to contribute to the external dividend, though less than the majority, as it did before the dividend cut.

N.M. - Not Meaningful.

Liquidity

The short-term rating on Exelon and affiliates is 'A-2'. We view liquidity across the Exelon group of companies as strong in light of the debt maturity schedule and available credit facilities. Exelon has sufficient alternative liquidity sources to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen as it settles its forward hedges.

As of March 31, 2016, Exelon, ExGen, ComEd, PECO, and BGE had revolving credit facilities of $500 million, $5.3 billion, $1 billion, $600 million, and $600 million, respectively. These facilities generally expire in 2019. The facilities were largely available at that time, except for $1.2 billion of commercial paper and certain letters of credit outstanding at various entities.

Principal Liquidity Sources	Principal Liquidity Uses
• FFO exceeding $7 billion in 2016. • Credit facility availability of about $7.7 billion. • Cash on hand of about $1 billion on March 31, 2016.	• Dividend payments of almost $1.1 billion annually. • Capital spending and maintenance and environmental costs of over $6 billion during the next 12 months. • Debt maturities of $1.9 billion over the next 12 months. • Nonseasonal working capital inflows of about $325 million.

Covenant Analysis

As of March 31, 2016, Exelon and each of its subsidiaries, including the newly acquired Pepco assets, were comfortably in compliance with the financial covenants of their credit facilities. We expect that this will continue during the next 18 months.

Other Modifiers

Modifiers do not change the anchor.

- Financial policy: Given the public ownership structure of Exelon as well as its track record of financial discipline, we assess this as 'neutral'; we do not expect that financial decisions would contribute to a meaningful worse forecast.
- Capital structure: We assess this as 'neutral'; the maturity schedule, taken as a whole, is manageable for a company of this size and we do not expect that Exelon would face acute refinancing risk in the near term.
- Management and Governance: We assess this as 'strong'; we consider the management team at Exelon to be very effective in its stewardship of its operating assets and in growing the company in a manner that is supportive of credit quality, while accurately messaging its strategies to all interested stakeholders.

Group Influence

The group credit profile (GCP) of Exelon is 'bbb'. As the parent company with two insulated subsidiaries (BGE and Pepco), Exelon's issuer credit rating is the same as its GCP. Senior unsecured debt at Exelon is notched down to 'BBB-' because of structural subordination to priority obligations at the operating subsidiaries. Each of the subsidiaries that we rate is considered to be core to Exelon Corp. and is given the same issuer rating, though certain issuances of secured debt are rated higher.

Research Update:

Exelon Corp. 'BBB' Ratings Affirmed, Outlook Stable; Industry Risk And Liquidity Assessments Revised

Overview

- We expect Exelon Corp. to post relatively higher growth at the company's lower-risk utility businesses. At the same time, Exelon has experienced a modest weakening in its short-term liquidity position, primarily reflecting lower cash balances.
- We are revising our assessment of Exelon's consolidated industry risk to low from intermediate. We are revising our assessment of the company's liquidity to adequate from strong.
- At the same time, we are affirming our ratings on Exelon, including our 'BBB' issuer credit rating. The outlook is stable.
- The stable outlook continues to reflect our expectations that consolidated financial measures will consistently reflect the middle of the range for Exelon's financial risk profile. Specifically, we expect funds from operations (FFO) to debt of 17%-21%.

Rating Action

On July 26, 2017, S&P Global Ratings affirmed its ratings on Exelon Corp., including its 'BBB' issuer credit rating and 'BBB-' rating on Exelon's senior unsecured debt. The outlook is stable.

Rationale

Our reassessment of Exelon's industry risk to low from intermediate reflects our expectation that the lower-risk utility business that we currently assess at about 60% of consolidated Exelon will gradually grow to about 70%. This primarily reflects continued utility capital spending within the company's regulated jurisdictions.

Our reassessment of Exelon's short-term liquidly position to adequate from strong incorporates lower cash balances, a robust capital spending program of about $8 billion in 2017, and long-term debt maturities of about $2 billion within the next 12 months. While these factors modestly weaken Exelon's liquidity, it does not directly affect our rating on Exelon.

Our 'BBB' issuer credit rating on Exelon is based on our assessment of Exelon's strong business risk profile and significant financial risk profile.

Exelon's business risk profile reflects our projection that the company's lower-risk, rate-regulated utility businesses will account for about 60% of the consolidated company and the higher-risk merchant business will account for about 40%. Furthermore, we expect the utility business to trend toward 70% of the consolidated company over the next five years from regulated rate base growth and rate increases. The merchant business will continue to be constrained by weak power prices and challenging capacity prices with limited upside. Only partially offsetting the weakness are zero emission credits that increase the prices paid for power from Exelon Generation's (ExGen) nuclear plants in Illinois and New York. Legal challenges to the credits were recently dismissed, and the idea could gain traction in other ExGen jurisdictions.

We assess Exelon's financial measures against less-stringent metric benchmarks compared to a typical industrial company, reflecting the company's majority lower-risk, rate-regulated utility business and the company's effective management of regulatory risk. Under our base-case scenario of continued rate case increases for all of Exelon's regulated utilities, continued weak power prices that is only partially offset by the zero emission credits, and robust capital spending in 2017 of more than $8 billion, we expect financial measures that are consistent with the middle of the range for the significant financial risk credit profile. Specifically, we expect FFO to debt of about 17%-21%.

Under our group rating methodology, we view Exelon as the parent of a group whose members include the merchant business Exelon Generation Co. LLC and utilities Commonwealth Edison Co., Peco Energy Co., Baltimore Gas & Electric Co., PEPCO Holdings Inc., Potomac Electric Power Co., Delmarva Power & Light Co., and Atlantic City Electric Co. We assess all of the subsidiaries as core businesses of Exelon because they are highly unlikely to be sold, possess a strong long-term commitment from the parent's management, are successful, are significant contributors to the group, and are closely linked to the parent's name and reputation. Exelon's group credit profile is 'bbb', leading to an issuer credit rating of 'BBB'.

Liquidity

We our revising liquidity assessment on Exelon to adequate from strong. This reflects our view that its liquidity is sufficient to cover its needs over the next 12 months even if consolidated EBITDA declines by 10%. We expect the company's liquidity sources over the next 12 months to exceed its uses by 1.1x or more, which is the minimum threshold for an adequate designation under our criteria. The assessment also reflects the company's prudent risk management, sound relationships with banks, and a satisfactory standing in credit markets.

Principal liquidity sources:
- Consolidated credit facility availability of about $7.5 billion;
- FFO of about $7 billion; and
- Minimal cash assumed of about $500 million.

Principal liquidity uses:
- Consolidated debt maturities of about $2 billion;

- Consolidated capital spending of about $8 billion; and
- Consolidated dividend payments of $1.2 billion.

Outlook

The stable outlook reflects our expectations that despite a continued weak commodity environment, the company will solidify its financial measures through the continued implementation of zero emission credits, growth of its lower-risk, rate-regulated utilities, and a modest reduction in capital spending. We expect that the company will maintain its consolidated financial measures consistent with the middle of the range for the significant financial risk profile category. Specifically, we expect FFO to debt of 17%-21%.

Downside scenario

We could lower the rating if the company's financial measures declined to the lower end of the range for the significant financial risk profile category, reflecting FFO to debt consistently below 16%. This could occur if sustained weaker commodity prices further pressured the merchant business or the company's effective management of regulated risk weakens.

Upside scenario

We could upgrade the company if the company's financial measures consistently reflect the higher end of the significant financial risk profile and its business risk profile continues to modestly improve, as expected. Specifically, this would reflect FFO to debt that is consistently greater than 21%, the relative size of the regulated utilities trends towards 70% of the consolidated company, and the merchant business continues its success in implementing zero emission credits.

Group credit profile: bbb

Issue Rating

We rate the senior unsecured debt at Exelon one notch lower than the issuer credit rating because of structural subordination. This results from priority obligations exceeding 20% of assets.

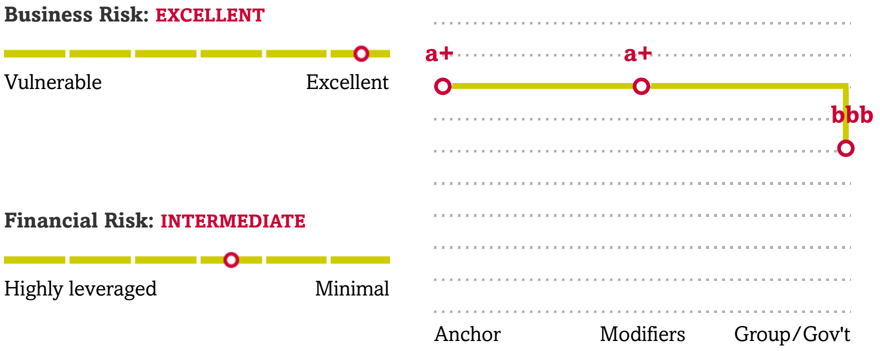
Gabe Grosberg, New York (1) 212-438-6043; gabe.grosberg@standardandpoors.com

Table Of Contents

Summary:

PECO Energy Co.



CORPORATE CREDIT RATING

BBB/Stable/A-2

Rationale

Business Risk: Excellent	Financial Risk: Intermediate
• Operations under a historically generally constructive regulatory framework along with effective handling of regulatory risk • Low operating risk electric and gas transmission and distribution operations • Large customer base with mostly residential customers but no geographic diversity	• Robust credit protection measures support an "intermediate" financial risk profile • Planned capital spending remains elevated leading to negative discretionary cash flow

Anchor Determination

Based on our "excellent" business risk and "intermediate" financial risk profile assessments, there are two potential anchor outcomes ('a+' or 'a'). Our choice of an 'a+' anchor reflects our view that the business risk profile of PECO Energy Co. is at the upper end of the "excellent" category, accounting for the company's large service territory, consistently constructive regulatory environment, and effective handling of regulatory risk through time.

Outlook: Stable

The rating outlook on PECO Energy reflects our rating outlook on its parent, Exelon Corp. In our analysis, we have incorporated our assessment of Exelon's plans to merge with PEPCO Holdings Inc. (PHI). The outlook on the ratings is stable. However, Standard & Poor's believes that higher natural gas production from shale natural gas plays and a delay in environmental rules related to plant retirements can significantly hurt the company's financial performance. We believe these headwinds have increased and Exelon faces a potential earnings decline from 2014. Should the commodity pricing environment weaken, the company might have to address its declining earnings profile with a commensurate reduction in capital spending and debt. On a stand-alone basis, we expect Exelon and Exelon Generation Co. LLC (ExGen) to maintain consolidated funds from operations (FFO) to debt of at least 23% and 27%, respectively, to maintain current ratings. If the merger successfully closes, we expect the pro forma company to maintain adjusted FFO to debt in a band of about 21% to 23% and debt to EBITDA of about 3.4x to 3.5x.

Downside scenario

On a stand-alone basis, we could lower Exelon's ratings if adjusted FFO to debt declines below 22%. This could happen if Exelon has increasing competition in its Pennsylvania and Illinois markets, which would threaten customer retention in its retail business. Gross margins could also come under pressure by a further decline in power prices brought about by declining natural gas prices, or lower market heat rates due to increasing energy efficiency.

A negative situation could arise for the pro forma company not only from a decline in commodity prices that could affect Exelon's cash flows, but also from a prolonged regulatory approval process that eventually results in substantially higher rebates and concessions to consummate the deal. We could lower the ratings on the pro forma company if its adjusted FFO-to-debt ratios decline below 18% to 19%.

Upside scenario

An upgrade for Exelon's stand-alone rating--currently not under consideration--could result if natural gas prices stabilize and power prices respond favorably to coal plant retirements, resulting in an improvement in consolidated FFO-to-debt levels of more than 28% on a sustained basis. This could stem from an improved economy and higher electricity prices, as well as from a robust increase in the rate base of Exelon's regulated utility subsidiaries. For Standard & Poor's to consider an upgrade, the pro forma company would need adjusted FFO-to-debt levels over 24% and debt to EBITDA below 3.2x. We think this is possible but unlikely before 2016.

Standard & Poor's Base-Case Scenario

Assumptions	Key Metrics
• Gross margins grow in the low-single digits • Capital spending of $500 million to $600 million annually	Under our base case scenario, we expect that PECO Energy's financial risk profile will remain consistently toward the upper end of the "intermediate" category.

Business Risk: Excellent

We assess PECO Energy's business risk profile as "excellent", accounting for regulated electric and gas transmission and distribution operations, which have low operating risk and benefit from a generally constructive regulatory framework. PECO Energy's historically effective handling of regulatory risk has contributed to stable returns and cash flow generation. With respect to ratemaking, the company benefits from the utilization of projected test years and an automatic adjustment clause for project-specific distribution system improvements.

About 34% of PECO Energy's electric customers representing 68% of 2013 sales have elected to shop for electricity with alternative suppliers, while only 13% of gas customers representing 19% of sales have elected to shop. Nevertheless, PECO Energy's electric and gas operations have no commodity exposure and the company is not affected by fuel cost over- and under-recoveries.

Financial Risk: Intermediate

We view PECO Energy's financial risk profile as being in the "intermediate" category using the low volatility financial ratio benchmarks, reflecting our base case scenario that the company will maintain credit protection measures that remain consistently at the upper end of the category. For the year ended Dec. 31, 2013, FFO to debt was 26.9% and debt to EBITDA was 2.7x, although we expect both measures to weaken somewhat over time, while still supporting an "intermediate" financial risk profile assessment.

Liquidity: Strong

We view PECO Energy's liquidity on a consolidated basis with that of parent Exelon Corp., given PECO Energy's group status as a core subsidiary.

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views liquidity across the Exelon group of companies as "strong" in light of the debt maturities we expect and available credit facilities. Exelon has sufficient alternative liquidity sources to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen on its forward hedges. The next large maturity is in 2015 for Exelon ($800 million).

As of Dec. 31, 2013, Exelon, ExGen, Commonwealth Edison Co. (ComEd), PECO Energy Co., and Baltimore Gas &

Electric Co. (BG&E) had revolving credit facilities of $500 million, $5.3 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire in August 2018 (except ComEd, which expires in March 2019). ExGen has an additional $400 million bilateral through January 2015. The facilities were largely available as of Dec. 31, 2013, except for $184 million and $135 million of commercial paper outstanding at ComEd and BG&E, respectively.

Exelon has a $7.2 billion bridge facility to provide flexibility for timing of permanent financing related to the acquisition of PHI. We expect 50% of the acquisition funds to be financed by debt and expect this financing to be at the Exelon Corp. level. We also expect Exelon to maintain balanced funding across the maturity spectrum (i.e., three- to 30-year tenors). Furthermore, we expect the equity component to be funded through a mix of common equity and mandatory units, and through $1 billion in unregulated asset sales.

There are no change-of-control provisions in PHI's or its subsidiaries' public debt. We have assumed that change-in-control provisions in the bank facilities of PHI are resolved without issues by closing (either through waivers or refinancing). Eventually, management expects to be able to reduce or resize PHI's liquidity and support through Exelon Corp.'s facility.

Principal Liquidity Sources	Principal Liquidity Uses
• Assumed 2014 FFO of about $5.75 billion to $6 billion • Available revolving credit facility • Acquisition bridge loan for $7.2 billion that will be replaced by permanent financing	• Cash payment of $6.9 billion for acquiring all of PHI's shares. • Working capital • Dividend payments of about $1 billion annually • Capital spending and maintenance and environmental costs of about $5 billion to $5.5 billion, annually through 2015

Other Modifiers

Our assessment of the modifiers does not affect the anchor score.

Group Influence

Under our group rating methodology, we consider PECO Energy to be a core subsidiary of Exelon Corp., reflecting our view that PECO Energy is highly unlikely to be sold and has a strong long-term commitment from senior management. There are no meaningful insulation measures in place that protect PECO Energy from its parent and therefore, we align the issuer credit rating on PECO Energy with that of parent Exelon at 'BBB'.

Recovery Analysis

- We assign recovery ratings to first-mortgage bonds (FMBs) issued by U.S. utilities, which can result in issue ratings being notched above a corporate credit rating on a utility depending on the rating category and the extent of the collateral coverage. The FMBs issued by U.S. utilities are a form of "secured utility bond" (SUB) that qualify for a recovery rating as defined in our criteria (see "Collateral Coverage and Issue Notching Rules for ‘1+’ and ‘1’ Recovery Ratings on Senior Bonds Secured by Utility Real Property", published Feb. 14, 2013).
- The recovery methodology is supported by the ample historical record of 100% recovery for secured bondholders in utility bankruptcies in the U.S. and our view that the factors that enhanced those recoveries (limited size of the creditor class and the durable value of utility rate-based assets during and after a reorganization given the essential service provided and the high replacement cost) will persist in the future.
- Under our SUB criteria, we calculate a ratio of our estimate of the value of the collateral pledged to bondholders relative to the amount of FMBs outstanding. FMB ratings can exceed a corporate credit rating on a utility by up to one notch in the 'A' category, two notches in the 'BBB' category, and three notches in speculative-grade categories depending on the calculated ratio.
- FMBs at PECO Energy benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating two notches above the corporate credit rating.

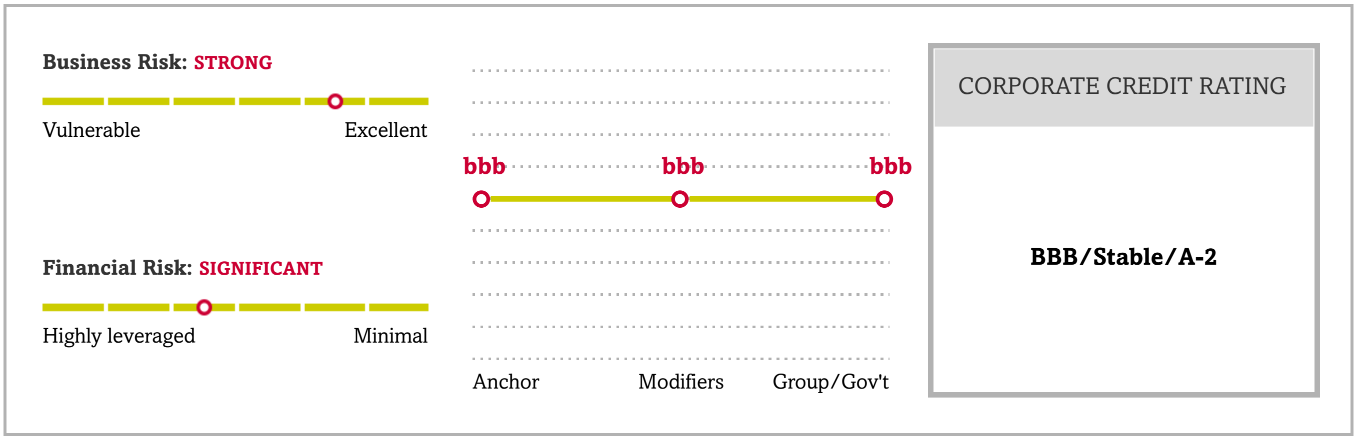
Table Of Contents

Summary:

Exelon Corp.

*(**Editor's Note:** This summary analysis, originally published Sept. 22, 2014, is being republished to correct an error in our published assumptions. Subsequently, we revised the financial metrics for the year ended Dec. 31, 2014, in the Key Metrics table.)*



Rationale

Business Risk: Strong

- Lower risk rate-regulated utility operations at diversified energy company Exelon Corp. currently represent nearly 50% of consolidated business, but will increase somewhat with the expected closing of the proposed PEPCO Holdings Inc. (PHI) acquisition.
- Low-cost base-load generation has a strong operating track record, though it remains subject to considerable energy margin variability, driven by commodity prices, demand, and weather patterns.
- Large natural gas production volumes have collapsed gas and power prices, carrying significant downside potential for a generation portfolio that is largely nuclear (more than 80% of total generation).
- A mild summer, declining market heat rates, and gas regional pricing differentials have weakened the economics of the company's generation plants in the next 18 months despite a stronger fundamental outlook long-term.
- Capacity prices could continue to languish because of lackluster electric demand, growing energy efficiency, and increased penetration of demand response initiatives. However, this could reverse in coming auctions as capacity performance schemes proliferate.
- Exelon still operates a large nuclear fleet; this puts the company in a good position as carbon regulation and capacity performance incentives loom.

Financial Risk: Significant

- The backward-dated EBITDA profile persists, although the curve is not as steep as it is for certain competitors, owing to a proactive hedging strategy and participation in robust capacity markets.
- Cash flow is significantly hedged through 2015 and 2016, increasingly as hedges are regularly added; 2017 is hedged to nearly 46%.
- The company's liquidity position remains strong, especially since it can defer capital spending needs.
- Dividend policy is relatively aggressive, but this is supported by a steady stream of dividends from utility subsidiaries.
- While capital spending needs have been substantial in the past, we expect that they'll be more in line with industry norms, as this company is already well-suited for upcoming carbon regulations.

Outlook: Stable

The rating outlook on Exelon Corp. is stable. However, Standard & Poor's believes that higher-than-expected natural gas production from shale production regions and a delay in environmental rules related to plant retirements could weaken the company's financial performance during the next few years. Should the commodity pricing environment weaken even more, the company might have to address a decline in its earnings profile with commensurate reductions in capital spending and debt. If the PHI transaction closes, we expect the consolidated pro forma company to maintain adjusted funds from operations (FFO) to debt within a band of about 22% to 24% and debt to EBITDA to increase to about an adjusted 3.2x to 3.4x.

Downside scenario

We could lower Exelon's ratings in the absence of the PHI acquisition if Exelon's adjusted consolidated FFO to debt declined below 22%. This could happen if ExGen faces increasing competition in its retail markets, which would threaten customer retention in its retail business. Gross margins could also come under pressure if power prices continue to decline because of weak natural gas prices or lower market heat rates.

Negative ratings momentum post-acquisition could occur due to a decline in commodity prices that would affect ExGen's and, as a result, Exelon's cash flows. We could lower the company's ratings post-acquisition if the adjusted consolidated FFO to debt ratios were to decline below 18% consistently.

Upside scenario

An upgrade for Exelon pre-acquisition--which we presently consider unlikely--could occur if natural gas prices stabilized, or if power prices responded favorably to coal plant retirements, resulting in an improvement in consolidated FFO to debt levels that exceed 28% on a sustained basis. This could stem from an improved regional economy and higher electricity prices, as well as from a robust increase in the rate base of Exelon's regulated utility subsidiaries.

We could consider an upgrade if the company, post-acquisition, reported adjusted consolidated FFO to debt levels stronger than about 25% and debt to EBITDA below about 3.4x. We think this is unlikely before 2016.

Standard & Poor's Base-Case Scenario

Assumptions

- Henry Hub gas prices are between $2.75 per million Btu in 2015 and $3.25 in 2016; PJM West hub power prices are between $30 and $35 per megawatt hour (MWh) in 2016; Northern Illinois hub hovers around $30 per MWh through 2016.
- Nuclear capacity factors are consistently at about 94% through 2017.
- Growth rates at the utilities are consistent with management's assumptions.
- Dividend policy remains in line with industry standards.
- Only current hedges are assumed.
- Spark spreads remain depressed in Texas, with an average of about $6 per MWh during 2015, but rebound somewhat afterward.
- Total ExGen generation of about 190 gigawatts per hour in 2015, ticking up only modestly in subsequent years.

Key Metrics

	2015E	2016E
FFO/debt (%)	25-28	23-26
Debt/EBITDA (x)	2.8-3.0	3.0-3.4
EBITDA interest coverage (x)	5.0-5.6	5.2-5.6

FFO--Funds from operations. E--Estimate.

Note: We will list only our expectations for Exelon Corp.'s stand-alone operations until the merger closes.

Business Risk: Strong

Standard & Poor's current rating on Exelon reflects our view of the company's consolidated business risk profile, which we view as "strong", combining the higher-risk operations of unregulated supply affiliate ExGen with the "excellent" business risk profiles of its rate-regulated transmission and distribution utilities Commonwealth Edison Co. (ComEd), PECO Energy Co., and Baltimore Gas & Electric Co. (BGE). Because of ring-fencing, we deconsolidate BGE's financial profile from Exelon and analyze it solely as an equity investment, incorporating the utility's distributions to the parent as BGE's only contributions to the parent's credit quality and financial profile.

As of June 30, 2015, Exelon had about $27.6 billion of adjusted debt, after considering the effects of operating leases, deconsolidation, power purchase agreements, and cash netting, as well as a recent debt issuance.

Regulated utilities now contribute almost 50% of Exelon's consolidated current cash flow, and the figure would grow with the PHI acquisition. PECO's business risk profile is "excellent" under our criteria, reflecting monopolistic, rate-regulated utility transmission and distribution operations. PECO serves over 1.6 million electric customers and 500,000 natural gas customers in southeastern Pennsylvania, including Philadelphia. Similarly, ComEd's business risk profile is "excellent", reflecting the same monopolistic, rate-regulated utility transmission and distribution operational profile. ComEd serves more than 3.8 million customers in northern Illinois, including Chicago. BGE serves more than 1.2 million electric and 650,000 gas customers in Central Maryland, including Baltimore. The regulatory framework under which BGE operates can be challenging and unpredictable, but has been improving somewhat.

We expect ExGen's unregulated operations to constitute about 50% of the consolidated enterprise in terms of cash flow and capital spending during 2015, though this figure varies considerably from year to year with power pricing and will decline with the PHI acquisition. ExGen generates a significant portion of earnings from its retail operations. Through retail and wholesale channels, ExGen now provides about 150 to 165 terawatt hours, or nearly 5% of total U.S. power demand, and enjoys significant regional diversity, participating in the PJM Interconnection in the Mid-Atlantic region, New England, and Texas markets. The company's generation units are well-positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. In most locations, ExGen has adequate intermediate and peaking capacity for managing load-shaping risks. However, we believe the company will still need to buy and sell generation in the market to manage its portfolio needs, which exposes it to considerable commodity risk. Moreover, ExGen has a significant open position in the Midwest to merchant markets, and a somewhat tighter position in Texas and New England, where it has some risk of finding itself short when loads and power prices are high.

ExGen's cash flow is sensitive to commodity prices because roughly 83% of the business's generation is nuclear; unlike gas-fired assets, which have a lower cost structure if gas prices drag power prices down, its nuclear plants face winnowing margins based on lower market heat rates, especially if capacity prices are low. Given that base-load generation is price-taking by nature, we expect ExGen's adjusted FFO to debt to remain volatile relative to its peers. For instance, we estimate gross margins in 2017 will be lower by about about $150 million for every $5 per MWh (round-the-clock) decline in power prices, and about $400 million for every $1 per million Btu decline in 2017 natural gas prices. Near-term figures are not quite as volatile due to more thorough hedging and better visibility into pricing.

The issuer's hedges have effectively softened the aforementioned cash flow volatility; this was particularly apparent during otherwise weak market conditions in 2014. Even though these hedges insulate ExGen, they continue to show the sensitivity of ExGen's margins to the prospect of continued shale gas production. The merchant generation margins at ExGen could face a decline as high-priced hedges expire, which is evident in the drop in wholesale hedged gross margins. Still, forward prices do show a modest contango (future prices are above expected future spot prices), as reflected in the increase in ExGen's open EBITDA from higher natural gas forward prices compared with year-end 2014.

ExGen's contribution to Exelon's cash flow has declined somewhat under our projected base case because of the decline in unregulated cash flow when commodity prices fall, as well as due to the renewed focus on regulated activities. However, despite lower power prices, we view the business risk profile of Exelon as "strong". We expect financial measures to remain flat or to decline modestly during 2015. However, the corporate credit ratings reflect our expectation that 2015 will be a trough year, and that metrics could improve in 2016 or 2017, with the business profile being fortified by the PHI acquisition. Based on the present forward-price curve, cash flow measures are adequate for the rated level in these years, especially after parent Exelon announced significantly reduced dividend payouts and ExGen deferred or eliminated some planned capital spending. Still, despite the improvement in free operating cash flow resulting from the decline in future gross margins, we view Exelon's cash flow adequacy ratio as having "significant" financial risk.

Financial Risk: Significant

Exelon's dividend payout is currently in line with its peers at around 50%. However, capital spending requirements remain significant between 2015 and 2016 at about $3.5 billion, collectively, for the regulated companies (excluding PHI) and almost $3.4 billion for ExGen. Although utility capital spending tends to be funded through rate base additions, unregulated generation must recover the funding of its own capital requirements through capacity market prices (and energy margins, in Texas).

On a stand-alone basis, under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect Exelon's consolidated FFO to total debt to hover around 25% to 28% through 2015. We expect to see negative discretionary cash flow (i.e., net of dividends) improve meaningfully. The FFO to total debt ratio is consistent with Standard & Poor's 'BBB' rating guideposts for a "significant" financial risk profile, especially since a meaningful amount of capital spending is discretionary.

At ExGen, we expect free operating cash flow to debt to remain positive even in 2015 and 2016 when we expect financial measures to trough due to lower gas prices. Because of the lower commodity prices, we expect ExGen's FFO-to-debt ratio to remain about 34% in 2015. Although the company's cash flows are relatively more volatile than those of its peers because of the larger base-load generation, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must consistently stay below the current assumed level of $2.75 per million Btu before its FFO to debt falls below 20%.

Pro forma for the PHI acquisition, we would expect the consolidated ratio of adjusted FFO to total debt to fall to about 23% for 2015, then improve to about 26% by 2016 on the heels of improved power prices. We expect free operating cash flow to debt to remain mostly positive throughout 2015-2017, although discretionary cash flow becomes meaningfully negative in 2015. Debt to EBITDA should increase to around 3.5x in 2015 before declining somewhat. These ratios are appropriate for Standard & Poor's 'BBB' guideposts for a "significant" financial risk profile. Nevertheless, we believe there are risks that cash flow may end up less than expected because merger synergies take longer to accrue, power prices trend lower due to higher natural gas production from shale plays, or because there is a delay in retiring coal plants owing to the Mercury and Air Toxics Standards remand of June 2015.

Because we give credit for nuclear fuel amortization in adjusted FFO, we expect subsidiary ExGen to remain operating cash flow positive (after capital spending that includes nuclear fuel costs). Through the forecast period, ExGen remains cash flow positive after accounting for capital spending.

Moreover, on a stand-alone basis, the utilities' dividends can fund a significant portion of the external dividend (we estimate that utility dividends can provide as much as 90% of external dividend in 2015-2017). Post-acquisition, assuming Exelon's utility target of 70% payout ratios, the utility contributions would be able to cover the entire external dividend. However, we expect ExGen to continue to contribute to the external dividend, though less than the majority, as it did before the dividend cut.

Liquidity: Strong

The short-term rating on Exelon and affiliates is 'A-2'. We view liquidity across the Exelon group of companies as "strong" in light of the debt maturity schedule and available credit facilities. Exelon has sufficient alternative liquidity sources to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen as it settles its forward hedges.

As of June 30, 2015, Exelon, ExGen, ComEd, PECO, and BGE had revolving credit facilities of $500 million, $5.8 billion, $1 billion, $600 million, and $600 million, respectively. These facilities generally expire in 2019. The facilities were largely available at that time, except for $503 million of commercial paper outstanding at ComEd, as well as certain letters of credit outstanding.

While the current liquidity profile excludes PHI, there is currently financing in place to fund the acquisition, and pro forma for the transaction, the consolidated enterprise's liquidity would remain "strong".

Principal Liquidity Sources	Principal Liquidity Uses
• FFO of nearly $6 billion in 2015. • Credit facility availability of about $6 billion. • Cash on hand of about $6 billion, much of which is to fund the PHI acquisition. • Nonseasonal working capital inflows of about $400 million.	• Dividend payments of almost $1.1 billion annually. • Capital spending and maintenance and environmental costs of over $6 billion during the next 12 months. • Debt maturities of $2.2 billion. • PHI acquisition costs.

Other Credit Considerations

We assess all modifiers as neutral, resulting in no change to the anchor score.

Group Influence

The group credit profile of Exelon is 'bbb'. As the parent company with one relatively small insulated subsidiary (BGE), Exelon's issuer credit rating is the same as its group credit profile. Senior unsecured debt at Exelon is notched down to 'BBB-' because of structural subordination to priority obligations at the operating subsidiaries.

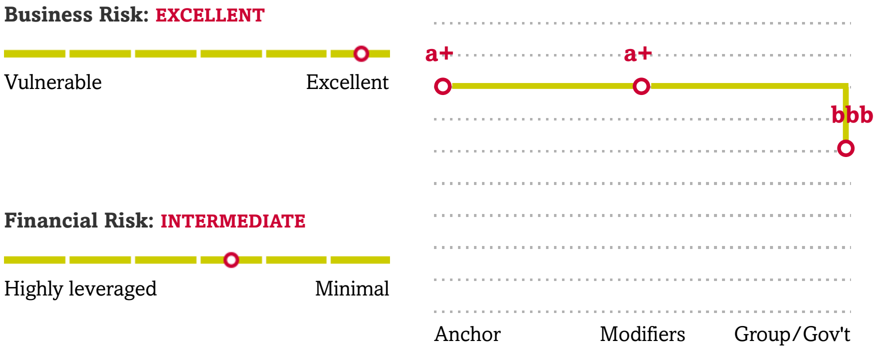
Table Of Contents

Summary:

PECO Energy Co.



CORPORATE CREDIT RATING

BBB/Stable/A-2

Rationale

Business Risk: Excellent	Financial Risk: Intermediate
• Operations under a generally constructive regulatory framework along with effective management of regulatory risk; • Low operating-risk, rate-regulated electric and gas transmission and distribution operations support "excellent" business risk profile; and • Large customer base with modest growth.	• Core financial measures that are consistent with the "intermediate" financial risk profile category; and • Robust planned capital spending leads to negative discretionary cash flow.

Outlook: Stable

The rating outlook on PECO Energy Co. (PECO) reflects our rating outlook on its parent, Exelon Corp. (Exelon), because we view the company as a core subsidiary of Exelon. The rating outlook on Exelon is stable. However, Standard & Poor's Ratings Services believes that higher-than-expected natural gas production from shale production regions and a delay in environmental rules related to plant retirements could weaken the company's financial performance during the next few years. Should the commodity pricing environment weaken even more, the company might have to address a decline in its earnings profile with commensurate reductions in capital spending and debt. Exelon and Pepco Holdings Inc. (PHI) announced a plan to combine the two companies in April 2014. If the PHI transaction closes, we expect the consolidated pro forma company to maintain adjusted funds from operations (FFO) to debt within a band of about 22% to 24% and debt to EBITDA to increase to about an adjusted 3.2x to 3.4x.

Downside scenario

We could lower Exelon's ratings in the absence of the PHI acquisition if Exelon's adjusted consolidated FFO to debt declined below 22%. This could happen if ExGen Generation Co. LLC faces increasing competition in its retail markets, which would threaten customer retention in its retail business. Gross margins could also come under pressure if power prices continue to decline because of weak natural gas prices or lower market heat rates.

We could consider a negative rating action post-PHI-acquisition if commodity prices were to decline, affecting ExGen's and, as a result, Exelon's cash flows. We could lower the company's ratings post-acquisition if the adjusted consolidated FFO-to-debt ratios were to decline below 18% consistently.

Upside scenario

An upgrade for Exelon pre-acquisition--which we presently consider unlikely--could occur if natural gas prices stabilized, or if power prices responded favorably to coal plant retirements, resulting in an improvement in consolidated FFO to debt levels that exceed 28% on a sustained basis. This could stem from an improved regional economy and higher electricity prices, as well as from a robust increase in the rate base of Exelon's regulated utility subsidiaries.

We could consider an upgrade if the company, post-acquisition, reported adjusted consolidated FFO to debt levels stronger than about 25% and debt to EBITDA below about 3.4x. We think this is unlikely before 2016.

Standard & Poor's Base-Case Scenario

Assumptions

- Gross margins benefit primarily from rate case filings and marginal load growth; and
- Capital spending of about $500 million - $550 million annually.

Key Metrics

	2014A	2015E	2016E
FFO/debt (%)	21.9	20 - 21	22 - 23
Debt/EBITDA (x)	3.5	3.5 – 4.0	3.5 – 4.0

A--Actual. E--Estimate. FFO--Funds from operations.

Business Risk: Excellent

We assess PECO's business risk profile as "excellent" accounting for the company's operations under Pennsylvania's generally constructive regulatory framework, which in conjunction with effective management of regulatory risk has enabled the company to consistently earn at or close to its authorized returns. PECO's customer base is large with over two million customers, but demonstrates only marginal volume growth and the service territory lacks geographic diversity.

PECO recovers approved infrastructure investments in a timely manner through a distribution system improvement charge (DSIC) mechanism and has no exposure to commodity prices. We expect infrastructure investments to continue over the next several years contributing to an increase in the company's rate base.

Financial Risk: Intermediate

We assess PECO's financial risk profile as "intermediate" using the low volatility financial ratio benchmarks, accounting for the company's low operating risk business model and the company's effective management of regulatory risk. Under our base case scenario, we project that PECO's core credit ratios will remain at the upper end of the "intermediate" range, with FFO/debt ranging from 20% to 22% and debt/EBITDA ranging from 3.5x – 4x.

The combination of "excellent" business and "intermediate" financial risk profiles leads to a split anchor of 'a+/a'. We select the 'a+' anchor because we view PECO's business risk profile as being at the upper end of the category relative to comparably rated peers based on efficient regulatory risk management and a large customer base.

Liquidity: Strong

We assess PECO's liquidity on a consolidated basis with that of parent Exelon Corp., given the company's group status as a "core" subsidiary of Exelon.

The short-term rating on Exelon and its affiliates is 'A-2', based on the companies' issuer credit rating and the assessment of liquidity as "strong."

We view liquidity across the Exelon group of companies as "strong" in light of the debt maturity schedule and available credit facilities. Exelon has sufficient alternative liquidity sources to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen as it settles its forward hedges.

As of June 30, 2015, Exelon, ExGen, Commonwealth Edison Co., PECO, and Baltimore Gas & Electric Co. had revolving credit facilities of $500 million, $5.8 billion, $1 billion, $600 million, and $600 million, respectively. These facilities generally expire in 2019. The facilities were largely available at that time, except for $503 million of commercial paper outstanding at Commonwealth Edison, as well as certain letters of credit outstanding.

While the current liquidity profile excludes PHI, there is currently financing in place to fund the acquisition, and pro forma for the transaction, the consolidated enterprise's liquidity would remain "strong."

Principal Liquidity Sources	Principal Liquidity Uses
• FFO of nearly $6 billion in 2015. • Credit facility availability of about $6 billion. • Cash on hand of about $6 billion, much of which is to fund the PHI acquisition. • Nonseasonal working capital inflows of about $400 million.	• Dividend payments of almost $1.1 billion annually. • Capital spending and maintenance and environmental costs of over $6 billion during the next 12 months. • Debt maturities of $2.2 billion. • PHI acquisition costs.

Other Credit Considerations

Our assessment of modifiers results in no changes to the anchor score.

Group Influence

PECO is subject to our group rating methodology criteria. We assess PECO as a "core" subsidiary of parent Exelon Corp. because it is highly unlikely to be sold, is integral to the group's overall strategy, possesses significant management commitment, is a significant contributor to the group, and is closely linked to the parent's reputation. Moreover, there are no meaningful insulation measures in place that protect PECO from its parent. As a result, the issuer credit rating on PECO is 'BBB', in line with Exelon's group credit profile of 'bbb'.

Recovery Analysis

We assign recovery ratings to first-mortgage bonds (FMB) issued by U.S. utilities, which can result in issue ratings being notched above a utility's corporate credit rating depending on the rating category and the extent of the collateral coverage. The FMBs issued by U.S. utilities are a form of "secured utility bond" (SUB) that qualify for a recovery rating as defined in our criteria (see "Collateral Coverage And Issue Notching Rules for ‘1+’ And ‘1’ Recovery Ratings On Senior Bonds Secured by Utility Real Property," published Feb. 14, 2013).

The recovery methodology is supported by the ample historical record of 100% recovery for secured bondholders in utility bankruptcies in the U.S. and our view that the factors that enhanced those recoveries (limited size of the creditor class and the durable value of utility rate-based assets during and after a reorganization given the essential service provided and the high replacement cost) will persist in the future.

Under our SUB criteria, we calculate a ratio of our estimate of the value of the collateral pledged to bondholders relative to the amount of FMBs outstanding. FMB ratings can exceed a utility's corporate credit rating by up to one notch in the 'A' category, two notches in the 'BBB' category, and three notches in speculative-grade categories, depending on the calculated ratio.

PECO's FMBs benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating two notches above the issuer credit rating.

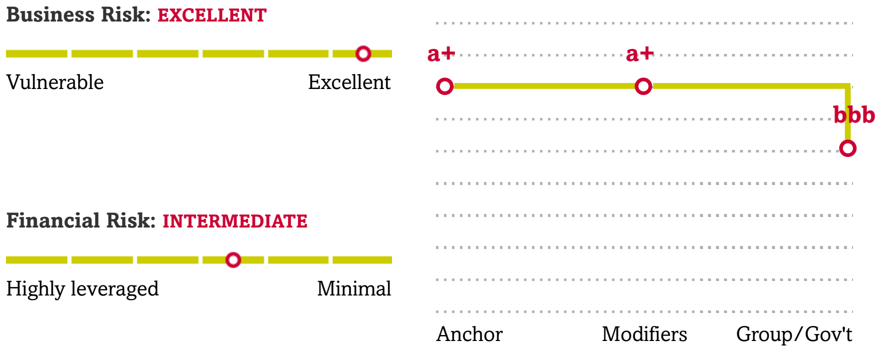
Table Of Contents

Summary:

PECO Energy Co.



CORPORATE CREDIT RATING

BBB/Stable/A-2

Rationale

Business Risk: Excellent	Financial Risk: Intermediate
• Operations under a generally constructive regulatory framework along with effective management of regulatory risk. • Low operating-risk, rate-regulated electric and gas transmission and distribution operations support an assessment of an excellent business risk profile. • Large customer base with modest growth.	• Core financial measures that are consistent with the intermediate financial risk profile category. • Robust planned capital spending leads to negative discretionary cash flow.

Outlook: Stable

The rating outlook on PECO Energy Co. (PECO) reflects our rating outlook on its parent, Exelon Corp. (Exelon), because we view the company as a core subsidiary of Exelon. The rating outlook on Exelon is stable. However, we believe that higher-than-expected natural gas production from shale production regions and a delay in environmental rules related to plant retirements could weaken the company's financial performance during the next few years. If commodity prices weaken even more, the company might have to address a decline in its earnings profile with commensurate reductions in capital spending and debt. We expect the consolidated pro forma company to maintain adjusted funds from operations (FFO) to debt of about 19%-21% and debt to EBITDA to increase to about an adjusted 3.8x-4.0x, including the effects of the recent PH LLC acquisition.

Downside scenario

Negative ratings momentum could occur due to a decline in commodity prices that would affect subsidiary Exelon Generation Co. LLC's (ExGen) and, as a result, Exelon's cash flows. We could lower our ratings on the company if the adjusted consolidated FFO to debt ratios were to consistently decline below 16%.

Upside scenario

We could consider an upgrade if the company's reported adjusted consolidated FFO to debt is stronger than about 24% and consolidated debt to EBITDA is below about 3.5x. We think this is unlikely before the end of 2016, but could come about as a result of improved power prices in key markets that buoy nuclear assets, which have been struggling; this would be prompted by higher gas prices or improved demand.

Our Base-Case Scenario

Assumptions

- Gross margins benefit primarily from rate case filings and marginal load growth; and
- Capital spending of about $600 million-$800 million annually.

Key Metrics

	2015A	2016E	2017E
FFO/debt (%)	26.1	21-23	20-22
Debt/EBITDA (x)	3.1	3.0–3.5	3.5–4.0

A--Actual. E--Estimate. FFO--Funds from operations.

Business Risk: Excellent

We assess PECO's business risk profile as excellent, reflecting the company's operations under Pennsylvania's generally constructive regulatory framework, which in conjunction with effective management of regulatory risk has enabled the company to consistently earn at or close to its authorized returns. PECO's customer base is large with over 2 million customers across both its electric and gas operations, but demonstrates only marginal volume growth and the service territory lacks geographic diversity.

In 2015, PECO filed an electric rate case based on a fully forecasted test year that resulted in a rate increase of $127 million, with rates effective in 2016. The Pennsylvania Public Utility Commission (PAPUC) also approved PECO's proposal for its electric long-term spending plan, which includes programs to address storm hardening and aging infrastructure. Therefore, we expect infrastructure investments to continue over the next several years, and contribute to an increase in the company's rate base. PECO recovers approved infrastructure investments in a timely manner through a distribution system improvement charge (DSIC) mechanism and has no exposure to commodity prices.

Financial Risk: Intermediate

We assess PECO's financial risk profile as intermediate using the low volatility financial ratio benchmarks, accounting for the company's low operating risk business model and effective management of regulatory risk. Under our base-case scenario, we project that PECO's core credit ratios will remain at the upper end of the intermediate range, with FFO to debt ranging from 20%-23% and debt to EBITDA ranging from 3.0x-4.0x.

The combination of an excellent business and an intermediate financial risk profile leads to an 'a+' stand-alone credit profile (SACP) because we view PECO's business risk profile as being at the upper end of the category relative to comparably rated peers based on efficient regulatory risk management and a large customer base.

Liquidity: Adequate

We assess PECO's liquidity as adequate, reflecting the direct support already committed from and the influence of ongoing interactions with the group, including the provision of various corporate services, along with the availability of centralized liquidity resources, on an as-needed basis. We expect liquidity sources to exceed uses by 1.1x or more, the minimum threshold for regulated utilities under our criteria, and that the company will also meet our other requirements for such a designation. PECO's liquidity benefits from stable cash flow generation, a $600 million revolving credit facility, sufficient liquidity provided by the parent to meet ongoing needs, as necessary, and manageable debt maturities over the next few years.

Other Credit Considerations

Our assessment of modifiers results in no changes to the anchor score.

Group Influence

PECO is subject to our group rating methodology criteria. We assess PECO as a core subsidiary of parent Exelon Corp. because it is highly unlikely to be sold, is integral to the group's overall strategy, possesses significant management commitment, is a significant contributor to the group, and is closely linked to the parent's reputation. Moreover, there are no meaningful insulation measures in place that protect PECO from its parent. As a result, the issuer credit rating on PECO is 'BBB', in line with Exelon's group credit profile of 'bbb'.

Table Of Contents

Summary:

PECO Energy Co.

Credit Rating:	BBB/Stable/A-2

Rationale

Standard & Poor's Ratings Services' ratings on PECO Energy Co. reflect the consolidated credit profile of parent Exelon Corp. Chicago-based Exelon's other considerable subsidiaries include regulated Commonwealth Edison Co. (ComEd) and Baltimore Gas & Electric Co. (BGE) and unregulated Exelon Generation Co. LLC (ExGen). In general, our ratings on PECO are limited to the lower of our rating on Exelon's consolidated credit quality or PECO's stand-alone credit quality. The ratings also reflect PECO's "excellent" business risk profile and Exelon's "significant" financial risk profile under our criteria.

Our assessment of PECO's business risk profile as excellent takes into account its monopolistic, rate-regulated utility transmission and distribution businesses that provide an essential service. PECO serves about 1.6 million electricity customers and 494,000 natural gas customers in Philadelphia and the surrounding area. The company's rate base consists of electric distribution (65%), gas distribution (23%), and electric transmission (12%). The Pennsylvania Public Utility Commission regulates the company's electric and gas distribution rates, and the Federal Energy Regulatory Commission (FERC) regulates transmission rates. Additionally, we view the distribution and transmission businesses as lower risk than the generation businesses often included in many fully integrated electric utilities.

We assess the Pennsylvania regulatory environment as credit supportive, reflecting the overall constructive regulation during PECO's transition to full-competitive rates. Additionally, we view the Pennsylvania General Assembly's recent passage of House Bill 1294, which authorizes the use of projected test years in rate cases and permits the use of automatic adjustment clause for project specific distribution system improvements, as supportive of credit quality.

The significant financial risk profile reflects Exelon's consolidated financial measures under our base-case scenario that for 2013-2015 funds from operations (FFO) to debt will approximate 22% to 24%. Key assumptions under our base case include lower gas prices and market heat rates that result in power prices that are about 10% lower than the current forward contracts. For the 12 months ended June 2012 adjusted FFO to debt decreased to 28.9% from 34.25% at year-end 2011, and adjusted debt to EBITDA and adjusted debt to total capital weakened to 4.5x and 52.7%, respectively, compared with 2.9x and 55.7% at year-end 2011.

We expect that Exelon's historically positive discretionary cash flow will turn negative primarily reflecting high capital spending of about $18.5 billion for 2012–2014 and annual dividends about $18.5 billion. We expect that Exelon will meet these cash shortfalls in a manner that is at least credit-neutral. As such under our base-case scenario we expect total debt to total capital to be about 57% and debt to EBITDA to approximate 4.0x.

Liquidity

Our short-term rating on Exelon and PECO is 'A-2'. We view Exelon's consolidated liquidity as strong and Exelon can more than cover its cash needs for the next two years, even if FFO declines.

Our liquidity assessment is based on the following factors and assumptions:

- We expect Exelon's consolidated liquidity sources (including cash, FFO, and credit facility availability) to exceed its uses by about 1.8x over the next 12 months.
- Debt maturities are material with about $1 billion maturing in 2013 and approximately $1.5 billion maturing in 2014.
- Even if EBITDA declines by 30%, we believe net sources will be well in excess of liquidity requirements.
- The company can absorb high-impact, low-probability events with limited need for refinancing, has the flexibility to lower capital spending, has sound bank relationships and solid standing in the credit markets, and has generally prudent risk management.

In our analysis, we assumed liquidity sources of about $12.5 billion over the next 12 months. We estimate the company will use about $7 billion over the same period for capital spending, debt maturities, working capital needs, and shareholder dividends.

As of July 27, 2012, Exelon, ExGen, ComEd, PECO, and BGE had credit facilities of $2.84 billion, $5.6 billion, $1.0 billion, $0.6 billion, and $0.6 billion, respectively. Availability under these facilities was $2,319 million and $3,807 million for Exelon and ExGen, respectively, and $999 million, $599 million, and $564 million for ComEd, PECO, and BGE, respectively. Excluding commercial paper outstanding, the aggregate availability was $7.86 billion.

PECO's $600 million revolving credit facility that expires in August 2017 has a financial covenant requiring that PECO must maintain cash from operations to interest expense of at least 2x. As of June 30, 2012, PECO had adequate cushion with respect to this financial covenant.

Recovery analysis

We assign recovery ratings to first-mortgage bonds (FMBs) issued by investment-grade U.S. utilities, which can result in issue ratings that are notched above a corporate credit rating on a utility depending on the category and the extent of the collateral coverage. We base the investment-grade FMB recovery methodology on the ample historical record of nearly 100% recovery for secured bondholders in utility bankruptcies and on our view that the factors that supported those recoveries (limited size of the creditor class, and the durable value of utility rate-based assets during and after a reorganization, given the essential service provided and the high replacement cost) will persist. Under our notching criteria, when assigning issue ratings to utility FMBs, we consider the limitations of FMB issuance under the utility's indenture relative to the value of the collateral pledged to bondholders, management's stated intentions on future FMB issuance, as well as the regulatory limitations on bond issuance. FMB ratings can exceed a corporate credit rating on a utility by up to one notch in the 'A' category, two notches in the 'BBB' category, and three notches in speculative-grade categories.

PECO's FMBs benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of 1.7x supports a recovery rating of '1+' and an issue rating two notches above the corporate credit rating.

Outlook

The stable outlook reflects Standard & Poor's baseline forecast that Exelon's consolidated FFO to debt will approximate 22% to 24% over the next three years. We could lower our rating on PECO if Exelon's consolidated financial measures weaken so that FFO to debt is consistently below 22%. This could occur if electricity prices remain weak and economic growth is minimal. Because our corporate credit rating on PECO is limited to the lower of its stand-alone credit quality or our corporate credit rating on its parent, for us to raise our rating on PECO, we would first have to upgrade Exelon, and PECO's stand-alone credit quality would have to reflect the higher rating. Although we view a ratings upgrade as less likely, this could occur if Exelon's consolidated FFO to debt is consistently greater than 27%.

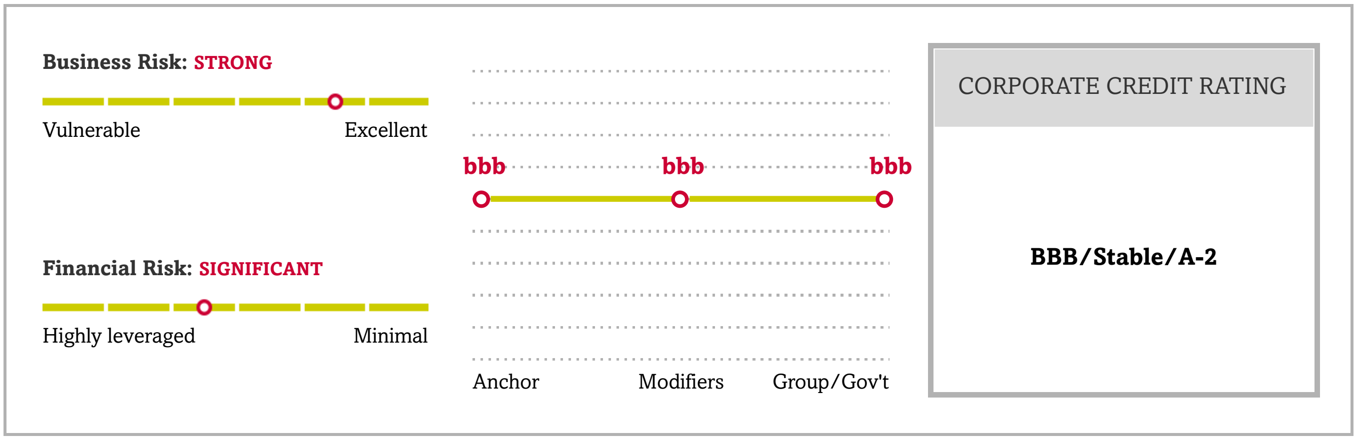
Table Of Contents

Table Of Contents (cont.)

Exelon Corp.

*(**Editor's Note:** This full analysis, originally published Sept. 22, 2014, is being republished to correct an error in our published assumptions.)*



Rationale

Business Risk

- Rate-regulated utility operations currently represent 35% of consolidated business, but increase to about 45% with the closing of the proposed PEPCO Holdings Inc. (PHI) acquisition
- Low-cost base-load generation has a strong operating track record
- Large production volumes from the Marcellus and Utica shale gas regions and changing prices at the TETCO pricing hub carry significant downside potential for a generation portfolio that is largely nuclear (83% of total generation)
- A mild summer, declining market heat rates and gas basis differentials have weakened the economics of the company's generation plants despite an improving power outlook through the first half of 2014
- Capacity prices have languished because of lackluster electric demand, growing energy efficiency, and increased penetration of demand response initiatives

Financial Risk

- The backward-dated EBITDA profile persists, although the curve is not as steep
- Cash flow is significantly hedged through 2015 and 2016 increasingly as hedges are regularly added
- The company's liquidity position is strong

Outlook

Because regulatory processes in merger approvals can take time, we provide outlooks for the ratings on both a stand-alone and pro forma basis.

The rating outlook on Exelon Corp. is stable. However, Standard & Poor's believes that higher natural gas production from shale production regions and a delay in environmental rules related to plant retirements can significantly weaken the company's financial performance. Should the commodity pricing environment weaken even more, the company might have to address a decline in its earnings profile with a commensurate reduction in capital spending and debt. Without the PHI acquisition, we expect Exelon and Exelon Generation Co. LLC to maintain consolidated funds from operations (FFO) to debt of at least 23% and 27%, respectively, which are the minimum levels to maintain current ratings. If the PHI transaction closes, we expect the pro forma company to maintain adjusted FFO to debt within a band of about 21% to 23% and debt to EBITDA of about 3.4x to 3.5x.

Downside scenario

We could lower our ratings on Exelon in the absence of the Pepco Holdings Inc. (PHI) acquisition if adjusted FFO to debt declined below 22%. This could happen if Exelon faced increasing competition in its markets in Pennsylvania and Illinois, which would threaten customer retention in its retail business. Gross margins could also come under pressure if power prices decline further because of declining natural gas prices or lower market heat rates caused by a secular drop in demand related to increasing energy efficiency.

Negative ratings momentum for the company post-acquisition could occur due to a decline in commodity prices that would affect Exelon's cash flows, as well as from a prolonged regulatory approval process that eventually resulted in substantially higher rebates and concessions that were required to consummate the deal. We could lower the company's ratings post-acquisition if the adjusted FFO to debt ratios declined below 18% to 19%.

Upside scenario

An upgrade for Exelon pre-acquisition, which we do not consider likely, could occur if natural gas prices stabilized and power prices responded favorably to coal plant retirements, resulting in an improvement in consolidated FFO to debt levels of more than 28% on a sustained basis. This could stem from an improved economy and higher electricity prices, as well as from a robust increase in the rate base of Exelon's regulated utility subsidiaries. We could consider an upgrade on the company post-acquisition if adjusted FFO to debt levels were stronger than 24% and debt to EBITDA was below 3.2x; however, we think this is unlikely before 2016.

Standard & Poor's Base-Case Scenario

Assumptions

- All regulatory approvals are received by June 2015.
- Gross proceeds of $1 billion (net of taxes) from asset sales are used to fund the acquisition.
- Mandatory converts are given 100% equity credit per our criteria.
- We have assumed merger synergies that build up to a gross run rate of about $135 million annually by 2018 (net $250 million over the initial five years), plus rebates/concessions of about $100 million for ratepayers.
- PHI will be ring-fenced in a manner that meets our criteria. This is important to our consideration of any ratings separation between PHI and Exelon.

Assumptions for Exelon's current stand-alone operations include the following:

- Henry Hub gas prices range between $4.15 per megawatt-hour (MWh) and $4.25 per MWh through 2016; PJM West hub power prices range between $35 per MWh and $37 per MWh in 2016; and Northern Illinois hub hover between $30 per MWh in 2014 and $31 per MWh by 2016.
- Nuclear capacity factors perform consistently between 93.3% and 93.7% through 2017 (each 1% fleet decline results in a $45 million hit to EBITDA).

- Growth rates at the utilities are consistent with management's assumptions.
- Pensions/other post-employment benefits (OPEB) are based on a Dec. 31, 2013, actuarial valuation by Towers (a third-party firm).

Key Metrics

	2014E	2015E	2016E
FFO/debt (%)	27-28	25-28	25-28
Debt/EBITDA (x)	4.6-4.7	4.0-4.2	4.0-4.2

E--Estimate. Note: We will list only our expectations for Exelon's stand-alone operations until the merger closes.

Company Description

Chicago-based Exelon Corp. is the nation's second-largest regulated distributor of electricity and gas, with 3.8 million customers in Illinois, 1.6 million customers in Pennsylvania, and 1.2 million customers in Maryland. Exelon also distributes natural gas to 497,000 customers in the Philadelphia metropolitan area through PECO Energy Co. and 655,000 customers in Maryland. Exelon Generation Co. LLC engages in unregulated energy generation, wholesale power marketing, and energy delivery. The company has long-term exposure to market risk and meaningful exposure to nuclear plants (19 gigawatts [GW] across 23 units). The company has about 35 GW of generating capacity and 415 billion cubic feet (bcf) of natural gas business. Exelon is publicly owned and there are no external support considerations.

In April 2014, Exelon announced that it had made a firm cash offer to acquire PHI's common stock. The offer represents a market capitalization of about $6.9 billion and with the assumption of PHI's $5.6 billion of debt equals a total enterprise value of about $12.5 billion. The transaction requires the approval of the Federal Energy Regulatory Commission (FERC), the Dept. of Justice, and the regulatory commissions of Maryland, New Jersey, Washington D.C., Delaware, and Virginia.

Mergers in the utility industry typically face regulatory uncertainty with respect to ultimate approvals, their timing, and the conditions attached to them. We see the potential for concessions to ratepayers in Exelon's case, though we cannot define their scale or nature at this time. However, we believe there is a high likelihood that we will assign the combined company a 'BBB' corporate credit rating when we assess the final plan. We are also maintaining the stable rating outlook based on the company's demonstrated willingness to walk away from acquisitions when concessions imperiled the ratings on the merged entity.

Exelon's strategy with its proposed PHI acquisition is premised on a combination of benefits. The acquisition would diversify cash flows by increasing the company's regulated base and positioning Exelon to retain a greater balance between the company's regulated and the more volatile unregulated businesses. From a credit perspective, we view the transaction favorably; not only is Exelon investing incremental cash flow into lower-risk investments, but the acquisition diversifies the regulated base by adding jurisdictions. Also, the geographic overlap creates opportunities to realize cost savings through efficiency enhancement.

As part of its acquisition financing, in the first half of 2014, Exelon issued 57.5 million shares structured as a forward contract. As a result, there are no current proceeds or dilution. The forward contract aligns with the expected timing of the merger close, and settlement is at Exelon's option anytime between now and the end of the contract. The expected net proceeds will depend on when the company settles the forward contract, but should be about $1.8 billion. Exelon has also issued $1.15 billion of mandatory units, which effectively convert to equity in June 2017 (via a debt remarketing and equity purchase agreement).

Business Risk

Standard & Poor's current rating on diversified energy company Exelon reflects the company's consolidated business risk profile, which we view as "strong," combining the higher-risk operations of unregulated supply affiliate ExGen with the "excellent" business risk profiles of its rate-regulated transmission and ddistribution utilities Commonwealth Edison Co. (ComEd), PECO Energy Co., and Baltimore Gas & Electric Co. (BGE). Because of ring-fencing, we deconsolidate BGE's financial profile from Exelon and analyze it solely as an equity investment, incorporating the utility's distributions to the parent as BGE's only contributions to the parent's credit quality and financial profile.

As of June 30, 2014, Exelon (excluding BGE) had about $18.7 billion of on-balance-sheet debt, including nonrecourse debt. We also impute a significant amount of debt onto Exelon's balance sheet -- as much as $4 billion (excluding BGE imputed debt) -- which consists mostly of about $2.1 billion related to pensions and OPEB, about $460 million to operating leases, and about $1.4 billion to power purchase agreements. This is offset by about $1.6 billion of off-balance-sheet credit for nonrecourse project financing.

Regulated utilities contribute about 35% to 40% of Exelon's consolidated current cash flow. PECO's business risk profile is "excellent" under our criteria, reflecting monopolistic, rate-regulated utility transmission and distribution operations. PECO serves about 1.6 million electric customers and 497,000 natural gas customers in southeastern Pennsylvania, including Philadelphia. The Pennsylvania Public Utility Commission regulates the company's electric and gas distribution rates, and the FERC regulates transmission rates. Similarly, ComEd's business risk profile is "excellent," reflecting the same monopolistic, rate-regulated utility transmission and distribution operational profile. ComEd serves about 3.8 million customers in northern Illinois, including the city of Chicago. The company's distribution rates are regulated by the Illinois Commerce Commission (ICC), while transmission rates, which comprise about 23% of the company's rate base, are regulated by the FERC.

We expect ExGen's unregulated operations to constitute about 60% of the consolidated enterprise in terms of cash flow and capital spending in 2014. ExGen generates a significant portion of earnings from its retail operations. Through retail and wholesale channels, ExGen now provides about 150 to 165 terawatt-hours, or about 4.75% to 5% of total U.S. power demand. The company's generation units are well positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. Exelon's 2012 combination with Constellation Energy Group Inc. provides regional diversification of generating capacity and a better balance between generation and load positions across multiple regions. In most locations, ExGen has adequate intermediate and peaking capacity for managing load-shaping (matching resources with energy needs) risks. However, we believe the company still needs to buy and sell generation in the market to manage its portfolio needs, which exposes it to commodity risk. Moreover, ExGen has a significant open position in the Midwest to merchant markets, and a somewhat tight position in Texas and New England, where it has some risk of finding itself short when loads are high, in our opinion.

ExGen's cash flow is sensitive to commodity prices because almost 82% of the business's generation is nuclear, all of which is affected by low natural gas prices. Given that base-load generation is price-taking by nature, we expect ExGen's adjusted FFO to debt to remain volatile relative to peers. For instance, all else being equal, we estimate gross margins in 2016 will be lower by about $500 million for every $5 per MWh (round-the-clock) decline in power prices, about $370 million for every $1 per million cubic feet (Mcf) decline in natural gas prices, and about $100 million for every $1 per MWh decline in retail margins.

We view ExGen's ratable hedging strategy favorably because it ensures that a high percentage of the company's near-term generation remains locked in. Hedging not only protects unregulated generation cash flows from steep price declines, but also provides the company time to adjust its cost structure or its capital structure if prices remain depressed. For instance, as forward prices rose in the first half 2014, Exelon hedged aggressively and reduced its commodity exposure by moving its hedging from the lower end to the higher end of its ratable hedging targets for 2015 and 2016.

However, hedging activities insulate, but do not isolate, power merchants from commodity price effects. Current hedges show the significant value of Exelon's hedging program. Even though these hedges insulate ExGen, they also, perversely, show the sensitivity of ExGen's margins to the prospect of a continued shale gas production onslaught. The decline in mark-to-market value through 2014 demonstrates the limit to which Exelon can hedge-- price-taking plants can hedge, but only at the prices the market will bear. Also, the merchant generation margins at ExGen will face a decline as high-priced hedges expire, which is evident in the drop in wholesale hedged gross margins. Still, forward prices do show a contango (i.e., future prices are above expected future spot prices) as reflected in the increase in ExGen's open EBITDA from higher natural gas forward prices compared with year-end 2013. In addition, although retail competition has increased, and ExGen has lowered its growth estimates, we believe retail contributions can mitigate the wholesale decline, given the potential for cost savings, volumes gained from the Constellation merger, and acquisitions.

Excluding the PHI merger, ExGen's contribution to Exelon's cash flow declines to about 60% under our projected base case because of the decline in unregulated cash flow when commodity prices fall. However, despite lower power prices, we view the business risk profile of Exelon as "strong." We expect financial measures to remain flat or to decline through 2015. However, the corporate credit ratings reflect our expectation that 2014 and 2015 will be the trough years. Based on the present forward-price curve, cash flow measures are adequate for the rated level in these years, especially after parent Exelon announced significantly reduced dividend payouts and ExGen deferred or eliminated some planned capital spending. Still, despite the improvement in free operating cash flow resulting from the decline in future gross margins, we view Exelon's cash flow adequacy ratio as having "significant" financial risk.

We view Exelon's management strategy as an important determinant of the company's current "strong" business risk assessment. In recent years, Exelon has implemented a strategy of internal growth through reinvesting in existing businesses and investing in new technologies. There is also a bias toward longer-term contracted businesses. Management's business strategy appears to be three-pronged: cost and productivity enhancements that include strategies like divestments and asset retirements; enlarging alternative energy investments through renewables development projects (mostly wind and solar); and in the next few years investing in new technologies such as the smart grid. While the utilities primarily focus on growing rate base and earning a reasonable return, they are also playing a role in competitive markets by investing extensively in transmission-related infrastructure. Given uncertain unregulated markets, management's focus has shifted into growing the regulated businesses. In June 2013, Exelon cancelled the LaSalle and Limerick nuclear extended power uprates and instead shifted capital into growth and maintenance capital at the utilities. In November 2013, the company announced plans to invest $15 billion in the regulated platform over five years. These investments now constitute about 55% of the overall capital in the five-year plan.

S&P Base Case Operating Scenario

- The merchant generation units continue to operate well, in particular, the nuclear units
- Exelon maintains its hedging strategy for its merchant generation units
- The company continues to effectively manage regulatory risk in all its jurisdictions, ensuring timely recovery of investment

Financial Risk

Exelon's dividend payout is now in line with peers (about 55% to 60%). However, capital spending requirements remain significant between 2014 and 2016 at about $9 billion for the regulated companies and about $6.8 billion for ExGen. Although utility capital spending tends to be funded in rate base, unregulated generation will have to recover the funding of its own capital requirements through market prices. Importantly, because of announced cuts, consolidated cash flow from operations will largely cover capital spending and dividends, resulting in only modest external financing needs. Still, incrementally lower gas prices would hurt ExGen's debt protection measures more than increases in debt financing or in operating and maintenance costs, through 2015.

On a stand-alone basis, under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect Exelon's FFO to total debt to hover around 27% to 29% through 2015. Importantly, we expect to see negative discretionary cash flow (i.e., net of dividends) improve meaningfully. The FFO to total debt ratio is consistent with Standard & Poor's 'BBB' rating guideposts for a financial risk profile we assess as "significant," especially since a meaningful amount of capital spending is discretionary (ExGen has lowered capital spending estimates in 2014 by more than $2.3 billion since its July 2012 estimates).

At ExGen, we expect free operating cash flow to debt to remain positive even in 2014 and 2015 when we expect financial measures to trough. Because of the decline in commodity prices, we expect ExGen's FFO-to-debt ratio to hover around 35% in 2014. Although the company's cash flows are relatively more volatile compared with peers because of the larger base-load generation, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must decline and stay below $2.75 per Mcf before its FFO to debt falls below 20%, a level well below the current price of about $4.00.

If the PHI acquisition is successful, under our base case we expect the consolidated ratio of adjusted FFO to total debt to fall to about 21% in 2015, then improve to about 24% by 2016. Importantly, we expect free operating cash flow to debt to remain mostly positive throughout 2015-2017, although discretionary cash flow becomes meaningfully negative in 2015. Debt to EBITDA increases to 3.6x in 2015. These ratios are appropriate for Standard & Poor's 'BBB' guideposts for a "significant" financial risk profile on the medial volatility table. Nevertheless, we believe there are risks that cash flow may eventually end up less than expected because merger synergies and/or savings take longer to accrue, power prices trend lower than expected due to higher natural gas production from shale plays, or because there is a delay in retiring coal plants.

Also, because we give credit for nuclear fuel amortization in adjusted FFO, we expect subsidiary ExGen to remain operating cash flow positive (i.e., after capital spending that includes nuclear fuel costs). Through the forecast period, ExGen remains cash flow positive after accounting for capital spending.

Moreover, on a stand-alone basis, the utilities' dividends can fund a significant portion of the external dividend (we estimate that utility dividends provide between 80% and 90% of external dividend in 2015-2017). Post-acquisition, assuming Exelon's utility target of 70% payout ratios, the utility contributions would be able to cover the entire external dividend. However, we expect ExGen to continue to contribute to the external dividend, though less than the majority as it did before the dividend cut.

Liquidity

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views liquidity across the Exelon group of companies as "strong" in light of the debt maturity schedule and available credit facilities. Exelon has sufficient alternative liquidity sources to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen on its forward hedges. The next large maturity is in 2015 for Exelon ($800 million).

As of June 30, 2014, Exelon, ExGen, ComEd, PECO, and BGE had revolving credit facilities of $500 million, $5.3 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire in August 2018 (ComEd's expires in March 2019). ExGen has an additional $500 million in bilateral lines that mature in Oct. 2014 and January 2015. The facilities were largely available as of June 30, 2014, except for $498 million and $70 million of commercial paper outstanding at ComEd and BGE, respectively.

Exelon has a $7.2 billion bridge facility to provide flexibility for the timing of permanent financing related to the PHI acquisition. There are no change-of-control provisions in PHI's or its subsidiaries' public debt. We have assumed that change-of-control provisions in the bank facilities of PHI are resolved by closing (either through waivers or refinancing). Eventually, management expects to be able to reduce or resize PHI's liquidity and support the company through Exelon's facility.

Principal Liquidity Sources

- 2014 FFO of $5.75 billion to $6 billion
- Available revolving credit facility of about $6.3 billion
- $7.2 billion acquisition bridge loan that will be replaced by permanent financing.

Principal Liquidity Uses

- $6.9 billion of cash payment for acquiring all of PHI's shares.
- Working capital
- Dividend payments of about $1 billion annually
- Capital spending and maintenance and environmental costs of $5 billion to $5.5 billion annually through 2015

Debt maturities ($mm)

- 2014: 1,424
- 2015: 1,611
- 2016: 1,342

- 2017: 1,391

Covenant Analysis

As of June 30, 2014, Exelon and its subsidiaries were comfortably in compliance with the financial covenants of their credit facilities.

Other Modifiers

We assess all modifiers as neutral, resulting in no change to the anchor score.

Group Influence

The group credit profile (GCP) of Exelon is 'bbb'. As the parent company with one relatively small insulated subsidiary (BGE), Exelon's issuer credit rating is the same as its GCP. Senior unsecured debt at Exelon Corp. is notched down to 'BBB-' because of structural subordination to priority obligations at the operating subsidiaries.

FitchRatings

Fitch Affirms Exelon Corp's and Subsidiaries Ratings

Fitch Ratings-New York-08 February 2013: Fitch Ratings has affirmed the Issuer Default Ratings (IDR) and instrument ratings of Exelon Corp. (EXC) and each of its existing operating subsidiaries, including Exelon Generation Company (Exgen), Commonwealth Edison Company (Comed), PECO Energy Company (PECO) and Baltimore Gas and Electric Co. (BG&E). The Rating Outlook for Comed has been revised to Positive from Stable. The Rating Outlook for all other entities remains Stable.

The ratings of EXC and Exgen reflect recent steps taken by management to solidify their credit quality and ratings in the face of a persistently low power price environment that is pressuring wholesale and retail profit margins. The positive actions include substantial reductions in both capex and the common stock dividend. Consequently, credit protection measures are expected by Fitch to remain strong during a low point in the commodity cycle and compare favorably to Fitch's target ratios and their respective peer groups.

The EXC and Exgen ratings also reflect ample liquidity, and a competitive nuclear fleet that is low on the dispatch curve and stands to benefit from new and existing environmental regulations that impose additional costs on coal plants. The consolidated rating also benefits from the earnings contribution of three regulated utilities, which account for about 50% of earnings and cash flow.

KEY RATING DRIVERS

EXC and Exgen

Dividend Reduction: EXC's dividend was reduced 40%, saving approximately $700 million annually. Fitch expects Exgen will be the primary beneficiary of the dividend reduction and to apply a significant portion of the savings to debt reduction. The new dividend takes effect in the second quarter of 2013.

Reduced Capex: In November 2012, management lowered Exgen's capex budget by $2.3 billion over the five year period 2013 - 2017. The capex reduction includes approximately $1.025 billion from the deferral of planned nuclear uprates and $1.25 billion from eliminating unidentified wind and solar investments. The reductions meaningfully reduced pressure on credit quality measures.

Financial Position: The combined reductions of the common stock dividend and capex have strengthened the financial positions of both EXC and Exgen. Cash flow measures are particularly strong. Fitch estimates EXC's adjusted ratio of FFO/interest to be in excess of 6.0x over the next several years and FFO/debt approximately 30%. Fitch estimates Exgen's adjusted ratio of FFO/interest to be in excess of 7.0x over the next several years and FFO/debt in excess of 40%.

Liquidity: Liquidity is ample and debt maturities should be manageable. On a consolidated basis committed credit facilities aggregate $8.4 billion, including $5.7 billion at Exgen and $500 million at EXC, and extend to 2017. Moreover, Fitch expects Exgen to be free cash flow positive over the next several years.

Low Commodity Price Environment: Low power prices, weak demand and aggressive competitive pricing behavior have adversely affected Exgen's wholesale and retail margins and are expected by Fitch to persist for several more years. It does appear however, that we are in the low point of the commodity cycle with limited downside risk. Moreover, the lower dividend and spending plan have positioned both EXC and Exgen to withstand further stresses.

Comed

Credit Metrics: Over the next several years, Fitch expects Comed to sustain the improvement in credit metrics achieved in 2012, largely due to a rate increase implemented Jan. 1, 2013 and a new regulatory paradigm in Illinois that allows for annual rate adjustments to earn a return on new investments and recover changes in the cost of service. Fitch estimates the ratio of EBITDA/interest will average about 5.0x and FFO/interest about 4.5x over the next several years. Over the same period FFO/debt is expected by Fitch to average about 18% and Debt/EBITDA about 3.9x.

Regulatory Environment: Illinois implemented a formula based rate plan (FRP) in October 2011 that fundamentally changed regulation of electric delivery service in Illinois. While the FRP remains less favorable than initially expected by Fitch, it does provide for annual rate adjustments, recognizes planned capital additions and includes a true-up mechanism that combine to reduce, albeit not eliminate, rate lag. The primary negatives are a relatively low formula based return on equity (ROE) and reliance on an average, rather than year-end rate base, which reduces the revenue requirement.

FRP Appeal: Following its initial FRP decision, Comed filed an appeal with the Illinois Commerce Commission (ICC) and in October 2012 the ICC reversed its position on the treatment of the Comed's pension asset. The reversal restored about $135 million of revenue in 2012. The ICC maintained its position on the use of an average, rather than year-end, rate base and capital. Following the rehearing order, Comed filed an appeal in state court regarding the use of an average rate base and the interest rate used to calculate the carrying cost on reconciliation adjusted balances.

Recent Comed Rate Case: On Dec. 19, 2012, the ICC issued an order in Comed's second FRP filing. The decision was more constructive than the previous order, but continues to rely on an average rate base and capital structure. The ICC granted Comed a $72.6 million rate increase compared to $74.2 million supported by the company. The allowed ROE was 9.71% based on the pre-established formula (3.91% Treasury yield plus 580 basis points), compared to 10.05% in the prior case. Prospectively, Comed will file an annual FRP each May with new rates effective the following January. Since Treasury rates are unlikely to fall there is limited downside on the ROE.

Rising Capex: Capital expenditures are forecasted to rise to approximately $4.3 billion over the three-year period 2013-2015, compared to $3.3 billion in the prior three-year period. The higher outlays are primarily driven by the Illinois Energy Infrastructure Modernization Act (EIMA), which requires Comed to invest an incremental $1.3 billion on electric system upgrades over five years and an additional $1.3 billion for smart grid deployment over 10 years. The legislation provides for recovery through the FRP filings.

Commodity Price Exposure: Ratings benefit from the absence of commodity price exposure and the associated cash flow volatility.

Liquidity: A $1 billion unsecured credit facility provides ample liquidity. Annual debt maturities will require on-going capital market access.

Like-Kind-Exchange: Comed's exposure to the IRS's disallowance of the tax benefits associated with a like-kind-exchange is a credit concern, however the issue is not likely to be resolved for several years and was not factored into the rating decision. As of Jan. 28, 2013, EXC's potential tax and after-tax interest that could become payable, excluding penalties, is $860 million, of which $260 million would be paid by Comed.

PECO

Financial Position: Historical and projected credit measures are well in excess of Fitch's target ratios for the current rating category and the companies' peer group of 'BBB+' distribution utilities. In 2013, Fitch estimates EBITDA/interest of approximately 7.0x, FFO/interest 5.0x and FFO/Debt about 20%.
Regulatory Environment: In February 2012, HB 1294 was signed into law. The legislation is intended to encourage utilities to invest in infrastructure by providing cost recovery through an automatic adjustment mechanism. Under the law, utilities will file a long-term infrastructure improvement plan starting in 2013 and the Pennsylvania Public Utility Commission (PUC) will establish a distribution system investment charge (DSIC) to recover the invested capital. The DSIC will be updated quarterly. The new legislation also allows rate filings to include fully forecasted test years, significantly reducing regulatory lag.

Commodity Price Exposure: Ratings benefit from the absence of commodity price exposure and the associated cash flow volatility.

BG&E

Financial Position: The BG&E rating reflects historical and projected credit measures that are consistent with the rating category. In 2013, Fitch estimates EBITDA/interest of approximately 5.5x, FFO/interest 4.5x and FFO/Debt about 20%.

Regulatory Recovery Mechanisms: Rate adjustment mechanisms outside of base rate cases tend to stabilize BG&E's on-going cash flow. These include decoupling for both residential and certain commercial gas and electricity deliveries and purchased gas and purchased power recovery mechanisms.

Regulatory Environment: The regulatory environment in Maryland remains challenging largely due to regulatory lag and the authorization of equity returns that are among the lowest in the industry. The MPSC has been resistant to adopting forward looking test years or other approaches to shorten regulatory lag.

Rate Filing: On July 27, 2012, BG&E filed a request with the MPSC for electric and gas distribution rate increases. Including updates during the rate proceedings the electric and gas rate requests were $130.1 million and $45.6 million, respectively. The increases are premised on a 10.5% return on equity (ROE). A decision is required in February 2013.

RATING SENSITIVITIES

What could trigger a negative rating action:

--Lack of rate support for utility infrastructure investments or changes in the commodity cost recovery provisions in Illinois, Pennsylvania or Baltimore.
--More aggressive growth strategy that increased business risk and/or leverage.
--Sustained nuclear outage.
--Increase in risk appetite as evidenced by change in hedging strategy at Exgen.

What could trigger a positive rating action:

--Other than an unexpected change in business strategy (i.e. additional sources of regulated earnings and cash flow), positive rating action at parent is unlikely at the present rating level.
--For Comed, a constructive decision in Comed's next FRP proceeding that supports infrastructure investments and strengthens cash flow could lead to a one-notch upgrade.

Fitch has affirmed the following ratings with a Stable Outlook:

Exelon Corp.
--Issuer Default Rating (IDR) at 'BBB+';
--Senior unsecured debt at 'BBB+';
--Junior Subordinated Notes at 'BBB-'
--Commercial paper at 'F2';
--Short-term IDR at 'F2'.

Exelon Generation Co., LLC
--Issuer Default Rating (IDR) at 'BBB+';
--Senior unsecured debt at 'BBB+';
--Commercial paper at 'F2';
--Short-term IDR at 'F2'.

PECO Energy Co.
--Issuer Default Rating (IDR) at 'BBB+';
--First mortgage bonds at 'A';
--Senior unsecured debt at 'A-';
--Preferred stock at 'BBB';
--Commercial paper at 'F2';
--Short-term IDR at 'F2'.

PECO Energy Capital Trust III
--Preferred stock at 'BBB'.

PECO Energy Capital Trust IV
--Preferred stock at 'BBB'.

Baltimore Gas and Electric Company
--Issuer Default Rating (IDR) at 'BBB;
--First mortgage bonds at 'A-';
--Senior unsecured debt at 'BBB+';
--Pollution Control Bonds at 'BBB+'
--Preferred stock to at 'BBB-';
--Short-term IDR at 'F2';

--Commercial paper at 'F2'.

BGE Capital Trust II
--Preferrred stock at 'BBB-'.

Fitch has affirmed the following ratings with a Positive Outlook:

Commonwealth Edison Company
--Issuer Default Rating (IDR) at 'BBB-;
--First mortgage bonds at 'BBB+';
--Senior unsecured debt at 'BBB';
--Preferred stock at 'BB+';
--Short-term IDR at 'F3';
--Commercial paper at 'F3'.

ComEd Financing Trust III
--Preferred stock at 'BB+'.

Table Of Contents

Summary:

Exelon Corp.

Corporate Credit Rating	**BBB/Stable/A-2**

Profile Assessments

BUSINESS RISK	**STRONG**
FINANCIAL RISK	**SIGNIFICANT**

Business Risk:: Strong

- 35% rate-regulated utility operations
- Low-cost base-load generation
- Strong operating track record
- Exposure to market prices of a price-taking fleet
- A capacity market that is still not responding to price signals
- Exposure to nuclear generation.

Financial Risk: Significant

- Backdated EBITDA profile and potential for a significant decline in cash flow
- Positive operating cash flow
- Strong liquidity position

Outlook: Stable

The outlook on the ratings is stable. That said, we believe that higher natural gas production from shale gas plays and a delay in environmental rules related to plant retirements can significantly hurt the company's financial performance. We believe these headwinds have increased and Exelon faces a potential earnings decline in 2014. Should the prevailing commodity environment persist, the company may have to address its declining earnings profile by reducing capital spending. We expect Exelon and Exelon Generation Co. LLC (ExGen) to maintain consolidated funds from operations (FFO) to debt of at least 23% and 27%, respectively, to maintain current ratings.

Downside scenario

We could lower the ratings if adjusted FFO to debt is consistently lower than 22%. This could happen if Exelon sees increasing competition in its markets in Pennsylvania and Illinois, which would threaten customer retention in its retail business. Gross margins could also come under pressure by a further decline in power prices brought about by declining natural gas prices, or lower market heat rates due to increasing energy efficiency.

Upside scenario

A positive outlook--currently not under consideration--can result if natural gas prices stabilize and power prices respond favorably to coal-plant retirements, resulting in an improvement in consolidated FFO to debt levels of more than 28% on a sustained basis. This could stem from an improved economy and higher electricity prices, as well as a robust increase in the rate base of Exelon's regulated utility subsidiaries.

Standard & Poor's Base-Case Scenario

Assumptions

- Henry Hub gas price between $3.50 to $3.75 through 2016; PJM West hub power prices between $40.50 per megawatt-hour (MWh) to $43 per MWh in 2016. Northern Illinois hub between $33 per MWh in 2014 to $34.50 per MWh by 2016
- Pensions/other post-employment benefits: Based on Dec. 31, 2012 actuarial valuation by Towers (a third party firm)
- 50% bonus depreciation in 2013
- Nuclear capacity factors: between 93.3% and 93.7% through 2017 (each 1% fleet decline results in a $45 million hit to FFO)
- Growth rate at utilities consistent with management assumptions

Key Metrics

	2013E	2014E	2015E
FFO/debt (%)	25-28	26-28	27-28
Debt/EBITDA (x)	4.6-4.7	4.0-4.2	3.8-3.6

E—Estimate.

Business Risk: Strong

Standard & Poor's Ratings Services' rating on diversified energy company Exelon reflects its consolidated business risk profile, which we view as "strong." Exelon's business risk profile reflects the higher-risk operations of unregulated supply affiliate ExGen. Exelon's business risk also reflects the excellent business risk profiles of regulated delivery businesses Commonwealth Edison Co. (ComEd), PECO Energy (PECO), and Baltimore Gas & Electric Co. (BGE), which have generally predictable transmission and distribution cash flows. Because of ring-fencing, we will continue to deconsolidate BGE and analyze it as an equity investment, counting only distributions to the parent as primary contributions to the parent's credit quality and financial profile.

As of June 30, 2013, Exelon (excluding BGE) had about $16.7 billion of on-balance-sheet debt. We also impute a significant amount of debt to Exelon, as much as $4.2 billion (excluding BGE imputed debt as of June 30, 2013), which consists mostly of about $2.2 billion related to pensions and other post-employment benefits, about $500 million related to operating leases and about $1.4 billion related to power purchase agreements. This is offset by about $1.2 billion of off-balance-sheet credit for nonrecourse project financing.

After the merger with Constellation Energy Group Inc., Exelon is the nation's second-largest regulated distributor of electricity and gas, with 3.8 million customers in Illinois, 1.6 million customers in Pennsylvania, and 1.2 million customers in Maryland. Exelon also distributes natural gas to 497,000 customers in the Philadelphia metropolitan area through PECO and 655,000 customers in Maryland. ExGen engages in unregulated energy generation, wholesale power marketing, and energy delivery. The company has long-term exposure to market risk and meaningful exposure to nuclear plants (19 gigawatts [GW] across 23 units). The company has about 35 GW of generating capacity and 415 billion cubic feet (bcf) of natural gas business.

Exelon gets a larger portion of earnings from its regulated and retail operations. Through retail and wholesale channels, ExGen now provides about 165 terawatt-hours, or about 4.75% to 5%, of total U.S. power demand. The company's generation units are well positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. Exelon's 2012 combination with Constellation provides it with regional diversification of its generating plants and a customer-facing load business because generation and load positions are now better balanced across multiple regions. In most locations, ExGen will have adequate intermediate and peaking capacity within the portfolio for managing load shaping (matching resources with energy needs) risks. However, the company will still need to buy and sell generation in the market to manage portfolio needs, in our opinion. Moreover, ExGen has a significant open position in the Midwest (exposed to merchant market), and a somewhat tight position in Texas and New England, where it has some risk of finding itself short when loads are high, in our opinion.

ExGen's cash flow is sensitive to commodity prices because almost 82% of its generation is nuclear, all of which low natural gas prices are impairing. ExGen's unregulated operations accounted for about 65% of the consolidated enterprise by cash flow and capital spending in 2012. Given that base-load generation is price-taking we expect ExGen's adjusted FFO to debt to remain volatile relative to its peers. For instance, all else remaining equal, we estimate gross margins in 2015 will be lower by about $575 million for every $5 per megawatt--hour (MWh;

round-the-clock) decline in power prices, about $375 million for every $1 per million cubic feet (mcf) decline in gas prices, and about $85 million for every $1 per MWh decline in retail margins.

As a result, ExGen's contribution to the overall Exelon cash flow declines to about 60% under our projected base case, because of the decline in unregulated cash flow when commodity prices fall. However, despite the lower power prices, we view the business risk profile of parent Exelon as strong. We expect financial measures to decline through 2015. However, the corporate credit ratings reflect our expectation that 2014 and 2015 will be the trough years. Based on the present forward curve, cash flow measures are adequate for the rated level in that year, especially after parent Exelon announced significantly reduced dividend payouts and ExGen deferred or eliminated some planned capital spending. However, despite the improvement in free operating cash flow, as a result of the decline in future gross margins, we view Exelon's cash flow adequacy ratio as having "significant" financial risk.

We view ExGen's ratable hedging strategy favorablybecause it ensures that a high percentage of the company's near-term generation is locked in. Hedging not only protects unregulated generation cash flows from steep price declines, it also provides the company time to adjust its cost structure or its capital structureif prices remain depressed. However, hedging activities insulate, but do not isolate, power merchants from commodity price effects. Current hedges show the significant value of Exelon's hedging program. Even though these hedges insulate ExGen, perversely, they also show the sensitivity of ExGen's margins to the prospect of a continued shale gas production onslaught. The decline in mark-to-market value through 2014 shows the limit to which Exelon can hedge--a price-taking fleet can hedge, but only at the prices the market will bear. Also, the merchant generation margins at ExGen will face a decline as high-priced hedges expire, evident in the drop in wholesale hedged gross margins. Still, the forward prices do show a contango as reflected in the increase in ExGen's open EBITDA from higher natural gas forward prices. In addition, although retail competition has increased, and ExGen has lowered its growth estimates, we believe retail contributions can mitigate the wholesale decline, given the potential for cost savings, volumes gained from the Constellation merger, and acquisitions.

Financial Risk: Significant

Because of the decline in commodity prices, we expect ExGen's FFO to debt to range around 40% in 2014. Although ExGen's cash flows are relatively more volatile compared with peers because of the larger base-load generation, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must decline and stay below $2.75 per mcf before its FFO to debt falls below 20%.

We still view Exelon's internal funding as "aggressive," but we view Exelon's decision to lower its dividends as bolstering credit quality. Dividend payout is now in line with peers (at about 55% to 60%). However, Exelon's capital spending requirements remain significant between 2013 and 2015, at about $8 billion for the regulated companies and about $7.6 billion at the unregulated GenCo. Although utility capital spending tends to be funded in rate base, unregulated generation will have to fund its own capital requirements and recover them in market prices. Importantly, because of announced cuts, consolidated cash flow from operations will largely cover capital spending and dividends, resulting in modest external financing needs. Still, incrementally lower gas prices would hurt ExGen's debt protection measures more than the level of new debt financing, or operating and maintenance cost increases in ExGen's forecast through 2015.

Under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect Exelon's FFO to total debt of the company to decline to hover at 27% to 29% through 2015. We expect free operating cash flow to debt to remain positive even in 2013 and 2014 when we expect financial measures to trough. Importantly, we expect to see the negative discretionary cash flow (after dividends) to improve meaningfully. Similarly, we expect debt to EBITDA to decline to about 4.2x in 2014. These ratios are consistent with Standard & Poor's 'BBB' rating guideposts for a financial risk profile we assess as "significant," especially since a meaningful amount of capital spending is discretionary (ExGen has lowered capital spending estimates in 2014 by more than $2.3 billion since July 2012 estimates).

Liquidity: Strong

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views the liquidity across the Exelon group of companies as "strong," in light of the debt maturities we expect and available credit facilities. We estimate that sources of cash will exceed the companies' uses by about 2x during the next 12 to 24 months. We expect sources over uses for Exelon and ExGen to remain positive even if EBITDA declines by 50%. In addition, because of Exelon's solid relationships with banks and high conversion of FFO to discretionary cash flow, we believe the company can absorb low-probability, high-impact shocks.

Exelon has sufficient alternative sources of liquidity to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen on its forward hedges. The next large maturities are in 2015 for Exelon and 2014 for ExGen.

As of June 30, 2013, Exelon, ExGen, ComEd, PECO, and BGE had credit facilities of $500 million, $5.7 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire between December 2015 and August 2018. Availability as of June 30, 2013 under these facilities was $498 million for Exelon; $4.1 billion for ExGen; and $626 million, $599 million, and $600 million for ComEd, PECO, and BGE, respectively.

Commercial paper outstanding was about $650 million and the aggregate availability was $5.8 billion (excluding BGE's $600 million).

Principal Liquidity Sources	Principal Liquidity Uses
• Assumed FFO of about $5.75 billion • Revolver availability	• Working capital • Dividend payments of about $1 billion, annually • The annual maturities for the next several years are about $1 billion to $1.6 billion, which is about 20% of Exelon's annual FFO ($1 billion in 2013) • Capital spending and maintenance and environmentalcosts of about $4.8 billion to $5.5 billion, annually, through 2015

Business And Financial Risk Matrix

	Financial Risk					
Business Risk	Minimal	Modest	Intermediate	Significant	Aggressive	Highly Leveraged
Excellent	AAA/AA+	AA	A	A-	BBB	--
Strong	AA	A	A-	BBB	BB	BB-
Satisfactory	A-	BBB+	BBB	BB+	BB-	B+
Fair	--	BBB-	BB+	BB	BB-	B
Weak	--	--	BB	BB-	B+	B-
Vulnerable	--	--	--	B+	B	B- or below

Note: These rating outcomes are shown for guidance purposes only. The ratings indicated in each cell of the matrix are the midpoints of the likely rating possibilities. There can be small positives and negatives that would lead to an outcome of one notch higher or lower than the typical matrix outcome. Moreover, there will be exceptions that go beyond a one-notch divergence. For example, the matrix does not address the lowest rungs of the credit spectrum (i.e., the 'CCC' category and lower). Other rating outcomes that are more than one notch off the matrix may occur for companies that have liquidity that we judge as "less than adequate" or "weak" under our criteria, or companies with "satisfactory" or better business risk profiles that have extreme debt burdens due to leveraged buyouts or other reasons. For government-related entities (GREs), the indicated rating would apply to the standalone credit profile, before giving any credit for potential government support.

Table Of Contents

Summary:

Exelon Corp.

Credit Rating:	BBB/Stable/A-2

Rationale

Standard & Poor's Ratings Services' 'BBB' corporate credit ratings on diversified energy company, Exelon Corp, reflects its consolidated business risk profile, which we view as "strong." Exelon's business risk profile reflects the higher-risk operations of unregulated supply affiliate Exelon Generation Co. LLC (ExGen), which has increased in size to subsume Constellation's unregulated business. Exelon's business risk also reflects the excellent business risk profiles of regulated delivery businesses, Commonwealth Edison (ComEd), PECO Energy (PECO), and Baltimore Gas & Electric Co. (BGE), which have generally predictable transmission and distribution cash flows. Because of ring-fencing, we will continue to deconsolidate BGE and analyze it as an equity investment, counting only distributions to the parent as primary contributions to the parent's credit quality and financial profile.

As of June 30, 2012, Exelon had about $18.4 billion of on-balance-sheet debt. We also impute about $4.4 billion of off-balance-sheet debt on the books for computing financial ratios, pertaining mostly to unfunded pension and other postemployment benefit obligations and power-purchase agreements.

Postmerger, Exelon is now the nation's second-largest regulated distributor of electricity and gas, with 5.4 million customers in Illinois and Pennsylvania and 1.2 million customers in Maryland. Exelon also distributes natural gas to 490,000 customers in the Philadelphia metropolitan area through PECO and 650,000 customers in Maryland. ExGen engages in unregulated energy generation, wholesale power marketing, and energy delivery. The company has long-term exposure to market risk and meaningful exposure to nuclear assets (19,000 megawatts [MW] across 23 units). The company now has about 35,000 MW and 465 billion cubic feet (bcf) (2012 estimates) of natural gas business. The company has recently divested about 2,648 MW of generation to address market power concerns.

Exelon derives a larger proportion of earnings from its regulated and retail operations. Through retail and wholesale channels, ExGen now provides about 170 terawatt-hours, or approximately 5%, of total U.S. power demand. We expect the switched markets in Pennsylvania, Ohio, Michigan, and Arizona to grow at about 10% in the commercial and industrial class and at about 15% in the residential class between 2011 and 2014. The fleet is well positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. The combination provides ExGen regional diversification of the generation fleet and a customer-facing load business, as generation and load positions are now better balanced across multiple regions. In most locations, ExGen will have adequate intermediate and peaking capacity within the portfolio for managing load shaping (matching resources with energy needs) risks. However, the company will still need to buy and sell length in the market to manage portfolio needs, in our opinion. Moreover, ExGen has a significant open position in the mid-west (exposed to merchant market), and a somewhat tight position in ERCOT and New England, where it has some risk of finding itself short when loads are high, in our opinion.

Supply subsidiary, ExGen's cash flow is sensitive to commodity prices as almost 95% of its premerger generation is nuclear, all of which sliding gas prices are impairing. ExGen's unregulated operations accounted for about 65% of the consolidated enterprise by cash flow and capital spending in 2011. Given that base-load generation is price-taking--it doesn't affect the market price--we expect ExGen's adjusted funds from operations (FFO) to debt to remain volatile--relative to its peers--and we expect it to swing in a band of over 40% in 2011 to about 27% by 2014. For instance, all else remaining equal, we estimate gross margins in 2014 will be lower by about $500 million for every $5 per MW-hour (round-the-clock) decline in power prices, about $215 million for every $0.5 per million cubic feet (mcf) decline in gas prices, and about $110 million for every $1 per MWh decline in retail margins.

As a result, ExGen's contribution to the overall Exelon cash flow declines to about 55% under our base case, because of the decline in unregulated cash flow when commodity prices fall. However, despite the lower power prices, we view the business risk profile of parent Exelon as strong. We expect financial measures to decline over the next two years and the corporate credit ratings reflect our expectation that 2014 will be the trough year. Based on the present forward curve, cash flow measures are still adequate for the rated level in that year. However, as a result of the declining gross margin in forward years, we view Exelon's cash flow adequacy ratio as more akin to the "significant" financial risk profile than the erstwhile "intermediate" one.

We view ExGen's ratable hedging strategy favorably, as it ensures that a high percentage of the company's near-term generation is locked in. Hedging not only protects unregulated generation cash flows from steep price declines, it also provides the company time to adjust its cost structure or its capital structure, should prices remain depressed. However, hedging activities insulate, but do not isolate, power merchants from commodity price effects. Current hedges show the significant value of Exelon's hedging program. Even though these hedges insulate ExGen, perversely, they also show the sensitivity of ExGen's margins to the prospect of a continued shale production onslaught. The decline in mark-to-market value through 2014 shows the limit to which Exelon can hedge--a price-taking fleet can hedge, but only at the prices the market will bear. Also, the gross margin contribution at ExGen will face a decline as higher-priced hedges expire, evident in the drop in wholesale hedged gross margins. Still, the forwards show a contango as reflected in the increase in ExGen's open EBITDA from higher natural gas forwards. Additionally, we believe retail contributions will increase, given the potential for cost savings, volumes gained from the constellation merger, and recent acquisitions (StarTex and MX Energy Holdings).

We view parent Exelon's financial policy and internal funding as "aggressive." The current level of dividends, at about $1.8 billion, results in a dividend payout of about 80%, according to our estimates--meaningfully higher than the 50% to 65% range for peers. Moreover, Exelon's capital spending requirements are significant between 2012 and 2014, at about $18.5 billion. Although utility capital spending tends to be funded in regulated rates (i.e., under rate base), unregulated generation will have to fund its own capital requirements and recover them in market prices. However, cash flow from operations will be insufficient for capital spending and dividends, resulting in external needs of financing. We estimate that the funding gap would be greatest in 2014 because of a trough in earnings even as ExGen's requirements to contribute toward Exelon's dividend commitments are the highest internal financing needs of the utilities. This funding gap could widen if the company fails to achieve merger driven O&M savings in its forecast. We estimate Exelon's incremental long-term financing needs at an average of about $1.4 billion to $1.5 billion in 2014 and 2015. Still, incrementally lower gas prices, combined with higher than anticipated O&M costs, would hurt ExGen's debt protection measures more than the level of new debt financing in ExGen's forecast through 2015.

Under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect FFO to total debt of the pro forma company (i.e., Exelon and Constellation combined) to decline to about 25% in 2012 and then to hover at 22% to 23.5% through 2015. We expect free operating cash flow to debt to remain marginally positive even in 2013 and 2014 when we expect financial measures to trough. However, we expect discretionary cash flow (after dividends) to turn significantly negative--in a range between $1.1 and $1.7 billion through the period--mostly because of high capital spending. Similarly, we expect total debt to total capital to be about 57% and debt to EBITDA to hover at about 4.0x. These ratios are still consistent with Standard & Poor's 'BBB' rating guideposts for a financial risk profile we assess as "significant," especially since a meaningful amount of capital expenditure is discretionary. The company's recent decision to defer the LaSalle extended power uprate (EPU) by two years demonstrates flexibility to adjust the program as needed based on market conditions. We estimate that deferring the project by two years will free-up about $400 million through 2014.

Liquidity

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views the liquidity across the Exelon group of companies as "strong," in light of the debt maturities we expect and available credit facilities. We estimate that sources of cash will exceed the companies' uses by about 2x during the next 12 to 24 months. We expect sources over uses for Exelon and ExGen to remain positive even if EBITDA declines by 50%. In addition, because of Exelon's solid relationships with banks and high conversion of FFO to discretionary cash flow, we believe the company can absorb low-probability, high-impact shocks.

Exelon has sufficient alternative sources of liquidity to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, a declining power price environment is favorable from a liquidity perspective as cash is being posted to ExGen on its forward hedges. The next large maturities are in 2015 for Exelon and 2014 for ExGen.

In March 2010, ComEd replaced its $952 million credit facility with a three-year, $1 billion unsecured revolving credit facility that expires March 25, 2013. On March 10, 2012, the capacity under Constellation's revolving facility fell to $1.5 billion from $2.5 billion, reducing aggregate bank commitments to $3.2 billion. All facilities reside at the parent level. In addition, Exelon is working through the migration of letters of credit and has a liquidity reduction plan in place that it will finalize toward the end of 2012.

As of July 27, 2012, Exelon, ExGen, ComEd, PECO, and BGE had credit facilities of $2.84 billion, $5.6 billion, $1.0 billion, $0.6 billion, and $0.6 billion, respectively. These facilities expire between September 2013 and March 2017. Availability under these facilities was $2,319 million and $3,807 million respectively for Exelon and ExGen, respectively, and $999 million, $599 million and $564 million for ComEd, PECO, and BGE, respectively. Excluding commercial paper outstanding, the aggregate availability was $7.86 billion.

Outlook

The outlook on the ratings is stable. That said, we believe that higher natural gas production from shale plays and a delay in environment rules related to plant retirements can significantly hurt the company's financial performance. We believe these headwinds have increased and Exelon faces a potential earnings decline in 2014. Should the prevailing commodity environment persist, the company may have to address its declining earnings profile by reducing capital spending. We expect Exelon and ExGen to maintain consolidated FFO to debt in the 21% to 23% and 25% to 27% ranges, respectively, in 2014 to maintain current ratings. We will specifically monitor the expected negative discretionary cash position that results from Exelon's large dividend commitment. A positive outlook--currently not under consideration--can result if natural gas prices stabilize and power prices respond favorably to coal-plant retirements, resulting in an improvement in consolidated FFO to debt levels of over 27%.

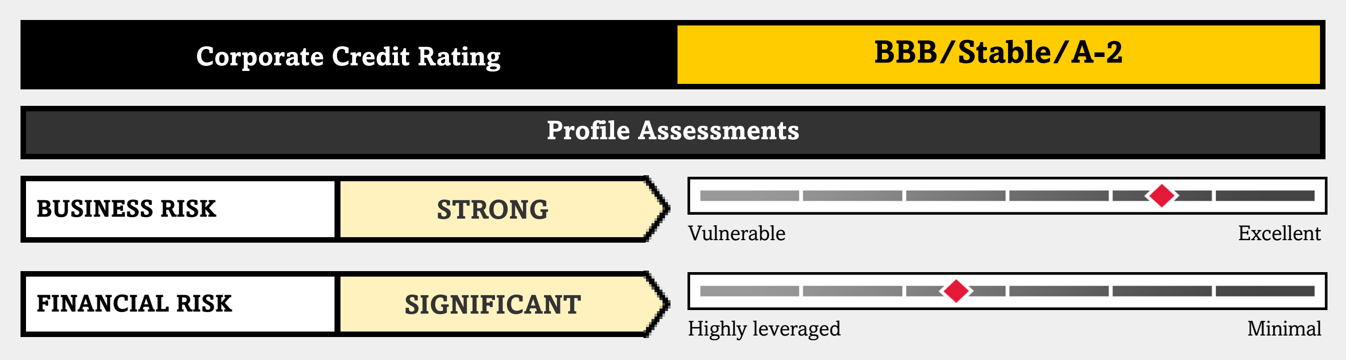
Table Of Contents (cont.)

Exelon Corp.



Corporate Credit Rating	BBB/Stable/A-2

Profile Assessments

BUSINESS RISK	**STRONG**	Vulnerable – Excellent
FINANCIAL RISK	**SIGNIFICANT**	Highly leveraged – Minimal

Outlook

The outlook on the ratings is stable. That said, Standard & Poor's Ratings Services believes that higher natural gas production from shale natural gas plays and a delay in environmental rules related to plant retirements can significantly hurt the company's financial performance. We believe these headwinds have increased and Exelon faces a potential earnings decline in 2014. Should the prevailing commodity pricing environment persists, the company may have to address its declining earnings profile by reducing capital spending. We expect Exelon Corp. and Exelon Generation Co. LLC (ExGen) to maintain consolidated funds from operations (FFO) to debt of at least 23% and 27%, respectively, to maintain current ratings.

Downside scenario

We could lower the ratings if adjusted FFO to debt is consistently lower than 22%. This could happen if Exelon sees increasing competition in its markets in Pennsylvania and Illinois, which would threaten customer retention in its retail business. Gross margins could also come under pressure by a further decline in power prices brought about by declining natural gas prices, or lower market heat rates due to increasing energy efficiency.

Upside scenario

A positive outlook--currently not under consideration--can result if natural gas prices stabilize and power prices respond favorably to coal-plant retirements, resulting in an improvement in consolidated FFO to debt levels of more than 28% on a sustained basis. This could stem from an improved economy and higher electricity prices, as well as a robust increase in the rate base of Exelon's regulated utility subsidiaries.

Standard & Poor's Base-Case Scenario

Assumptions

- Henry Hub gas price between $3.5 and $3.75 through 2016; PJM West hub power prices between $40.5 per megawatt-hour (MWh) and $43 per MWh in 2016; Northern Illinois hub $33 per MWh in 2014 and $34.5 per MWh by 2016.
- Pensions/other post-employment benefits (OPEB), based on a Dec. 31, 2012 actuarial valuation by Towers (a third-party firm)
- 50% bonus depreciation in 2013

- Nuclear capacity factors of between 93.3% and 93.7% through 2017 (each 1% fleet decline results in a $45 million hit to EBITDA)
- Growth rate at utilities consistent with management's assumptions

Key Metrics

	2013E	**2014E**	**2015E**

Debt/EBITDA (x)	4.6-4.7	4.0-4.2	3.8-3.6

E—Estimate.

Company Description

After the merger with Constellation Energy Group Inc. (CEG), Chicago-based Exelon is the nation's second-largest regulated distributor of electricity and gas, with 3.8 million customers in Illinois, 1.6 million customers in Pennsylvania, and 1.2 million customers in Maryland. Exelon also distributes natural gas to 497,000 customers in the Philadelphia metropolitan area through PECO Energy Co. and 655,000 customers in Maryland. ExGen engages in unregulated energy generation, wholesale power marketing, and energy delivery. The company has long-term exposure to market risk and meaningful exposure to nuclear plants (19 gigawatts [GW] across 23 units). The company has about 35 GW of generating capacity and 415 billion cubic feet (bcf) of natural gas business. Exelon Corp. is publicly owned and there are no external support considerations.

Business Risk

Standard & Poor's rating on diversified energy company Exelon reflects its consolidated business risk profile, which we view as "strong." Exelon's business risk profile reflects the higher-risk operations of unregulated supply affiliate ExGen. Exelon's business risk also reflects the excellent business risk profiles of regulated delivery businesses Commonwealth Edison Co. (ComEd), PECO Energy, and Baltimore Gas & Electric Co. (BGE), which have generally predictable transmission and distribution cash flows. Because of ring-fencing, we will continue to deconsolidate BGE and analyze it as an equity investment, counting only distributions to the parent as primary contributions to the parent's credit quality and financial profile.

As of June 30, 2013, Exelon (excluding BGE) had about $16.7 billion of on-balance-sheet debt. We also impute a significant amount of debt to Exelon, as much as $4.2 billion (excluding BGE imputed debt as of June 30, 2013), which consists mostly of about $2.2 billion related to pensions and OPEB, about $500 million related to operating leases, and about $1.4 billion related to power purchase agreements. This is offset by about $1.2 billion of off-balance-sheet credit for nonrecourse project financing.

Exelon gets a larger portion of earnings from its regulated and retail operations. Through retail and wholesale channels, ExGen now provides about 165 terawatt-hours, or about 4.75% to 5%, of total U.S. power demand. The company's generation units are well positioned to grow where capacity available for competitive supply has room to grow. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices. Exelon's 2012 combination with Constellation provides it with regional diversification of its generating plants and a customer-facing load business because generation and load positions are now better balanced across multiple regions. In most locations, ExGen will have adequate intermediate and peaking capacity within the portfolio for managing load shaping (matching resources with energy needs) risks. However, the company will still need to buy and sell generation in the market to manage portfolio needs, in our opinion. Moreover, ExGen has a significant open position in the Midwest (exposure to merchant markets), and a somewhat tight position in Texas and New England, where it has some risk of finding itself short when loads are high, in our opinion.

ExGen's cash flow is sensitive to commodity prices because almost 82% of its generation is nuclear, all of which low natural gas prices are impairing. ExGen's unregulated operations accounted for about 65% of the consolidated enterprise by cash flow and capital spending in 2012. Given that base-load generation is price-taking, we expect ExGen's adjusted FFO to debt to remain volatile relative to its peers. For instance, all else remaining equal, we estimate gross margins in 2015 will be lower by about $575 million for every $5 per MWh (round-the-clock) decline in power prices, about $375 million for every $1 per million cubic feet (mcf) decline in gas prices, and about $85 million for every $1 per MWh decline in retail margins.

As a result, ExGen's contribution to the overall Exelon cash flow declines to about 60% under our projected base case, because of the decline in unregulated cash flow when commodity prices fall. However, despite the lower power prices, we view the business risk profile of parent Exelon as strong. We expect financial measures to decline through 2015. However, the corporate credit ratings reflect our expectation that 2014 and 2015 will be the trough years. Based on the present forward curve, cash flow measures are adequate for the rated level in that year, especially after parent Exelon announced significantly reduced dividend payouts and ExGen deferred or eliminated some planned capital spending. However, despite the improvement in free operating cash flow , as a result of the decline in future gross margins, we view Exelon's cash flow adequacy ratio as having "significant" financial risk.

We view ExGen's ratable hedging strategy favorably because it ensures that a high percentage of the company's near-term generation is locked in. Hedging not only protects unregulated generation cash flows from steep price declines, it also provides the company time to adjust its cost structure or its capital structure if prices remain depressed. However, hedging activities insulate, but do not isolate, power merchants from commodity price effects. Current hedges show the significant value of Exelon's hedging program. Even though these hedges insulate ExGen, perversely, they also show the sensitivity of ExGen's margins to the prospect of a continued shale gas production onslaught. The decline in mark-to-market value through 2014 shows the limit to which Exelon can hedge--a price-taking fleet can hedge, but only at the prices the market will bear. Also, the merchant generation margins at ExGen will face a decline as high-priced hedges expire, evident in the drop in wholesale hedged gross margins. Still, the forward prices do show a contango as reflected in the increase in ExGen's open EBITDA from higher natural gas forward prices. In addition, although retail competition has increased, and ExGen has lowered its growth estimates, we believe retail contributions can mitigate the wholesale decline, given the potential for cost savings, volumes gained from the Constellation merger, and acquisitions.

Financial Risk

Because of the decline in commodity prices, we expect ExGen's FFO to debt to range around 40% in 2014. Although ExGen's cash flows are relatively more volatile compared with peers because of the larger base-load generation, the low variable cost (and highly depreciated nature) of its nuclear plants means that natural gas prices must decline and stay below $2.75 per mcf before its FFO to debt falls below 20%.

We still view Exelon's internal funding as aggressive, but view Exelon's decision to lower its dividends as bolstering credit quality. Dividend payout is now in line with peers (at about 55% to 60%). However, Exelon's capital spending requirements remain significant between 2013 and 2015, at about $8 billion for the regulated companies and about $7 .6 billion at unregulated ExGen. Although utility capital spending tends to be funded in rate base, unregulated generation will have to fund its own capital requirements and recover them in market prices. Importantly, because of announced cuts, consolidated cash flow from operations will largely cover capital spending and dividends, resulting in modest external financing needs. Still, incrementally lower gas prices would hurt ExGen's debt protection measures more than the level of new debt financing, or operating and maintenance cost increases in ExGen's forecast through 2015.

Under our consolidated base case (we assume lower gas prices and market heat rates that result in power prices roughly 10% lower than the current forward contracts), we expect Exelon's FFO to total debt of the company to decline to hover around 27% to 29% through 2015. We expect free operating cash flow to debt to remain positive even in 2013 and 2014 when we expect financial measures to trough. Importantly, we expect to see the negative discretionary cash flow (after dividends) to improve meaningfully. Similarly, we expect debt to EBITDA to decline to about 4.2x in 2014. These ratios are consistent with Standard & Poor's 'BBB' rating guideposts for a financial risk profile we assess as "significant," especially since a meaningful amount of capital spending is discretionary (ExGen has lowered capital spending estimates in 2014 by more than $2.3 billion since July 2012 estimates).

Liquidity

The short-term rating on Exelon and affiliates is 'A-2'. Standard & Poor's views the liquidity across the Exelon group of companies as "strong," in light of the debt maturities we expect and available credit facilities. We estimate that sources of cash will exceed the companies' uses by about 2x during the next 12 to 24 months. We expect sources over uses for Exelon and ExGen to remain positive even if EBITDA declines by 50%. In addition, because of Exelon's solid relationships with banks and high conversion of FFO to discretionary cash flow, we believe the company can absorb low-probability, high-impact shocks.

Exelon has sufficient alternative sources of liquidity to cover current liquidity needs, including ongoing capital requirements, moderate capital spending, and upcoming debt maturities. Ironically, declining power prices are favorable from a liquidity perspective because cash is being posted to ExGen on its forward hedges. The next large maturities are in 2015 for Exelon and 2014 for ExGen.

As of June. 30, 2013, Exelon, ExGen, ComEd, PECO, and BGE had credit facilities of $500 million, $5.7 billion, $1 billion, $600 million, and $600 million, respectively. These facilities expire between December 2015 and August 2018. Availability as of June 30, 2013, under these facilities was $498 million for Exelon; $4.1 billion for ExGen; and $626 million, $599 million, and $600 million for ComEd, PECO, and BGE, respectively.

Commercial paper outstanding was about $650 million and the aggregate availability was $5.8 billion (excluding BGE's $600 million).

Principal Liquidity Sources

- Assumed FFO of about $5.75 billion
- Revolving credit facility availability

Principal Liquidity Uses

- Working capital
- Dividend payments of about $1 billion annually
- Capital spending and maintenance and environmental costs of about $4.8 billion to $5.5 billion, annually through 2015

Debt maturities

The annual maturities for the next several years are about $1 billion to $1.6 billion, which is about 20% of Exelon's annual FFO ($1 billion in 2013)

Rating Methodologies/Key Criteria Considerations

- Ratings of Exelon and ExGen are considered inextricably linked because ExGen is considered a core and primary subsidiary of Exelon.
- The utility subsidiaries in Illinois and Pennsylvania are consolidated when assessing credit quality, given the absence of any meaningful structural (ring-fencing) or regulatory insulation. A measure of this is an assessment of the likelihood of Exelon providing financial support to affiliate utilities in Illinois and Pennsylvania if any adverse regulatory/legislative developments occur. We may rate the subsidiaries more on a stand-alone basis if we were to determine that Exelon may not support an affiliate under a stress scenario, or that the subsidiary is no longer a core holding.
- BGE is ring-fenced from the parent's operations. The ring-fenced structure insulates BGE's credit from that of Exelon, allowing up to a three notch separation. Because BGE's credit profile is insulated, but not isolated, from the effects of the larger unregulated operations, should the parent's credit profile deteriorate, we would expect BGE's credit ratings to weaken as well. Although BGE is ring-fenced from the parent, we incorporate its distributions to the parent into the parent's business risk assessment.

In 2012, Exelon completed the merger with CEG, and CEG became a wholly owned subsidiary of Exelon. CEG's interest in RF Holdco LLC, which held CEG's interest in BGE, was transferred to Exelon Energy Delivery Co. LLC, a wholly owned subsidiary of Exelon that also owns Exelon's interest in ComEd and PECO. CEG's generation and customer supply businesses were transferred to ExGen. CEG's shareholders received 0.93 shares of Exelon common stock in exchange for each share of CEG. We affirmed the rating on Exelon on March 23, 2012, after the merger consummated. From an issue-specific ratings perspective, structuring the transaction in this manner results in debt at Exelon becoming somewhat further disadvantaged because CEG's unsecured debt now resides at this entity while the generation assets are at ExGen.

The parent holding company is rated one-notch below at 'BBB-' because of the 20% priority debt test. All of CEG's debt (excluding BGE) now resides at Exelon even as all assets were combined at the ExGen level. As a result, priority debt is more than 20% and holding company debt is considered disadvantaged.

Business Risk Profile

The table below presents our estimate of Exelon's business break-out over 2013 and 2014. For this analysis, we impute significant off balance sheet debt on ExGen and also allocate all of Exelon's debt on the unregulated subsidiary.

We consider about 65% of Exelon's operations as unregulated in our business risk profile assessment. This assessment incorporates limited contributions from BGE because of BGE's ring-fencing from Exelon.

Because the unregulated operations are driving Exelon's credit quality, we focus largely on ExGen's operations in this report.

The Regulated Businesses

Regulation

Maryland and Illinois, the states where BGE and ComEd operate, respectively, are categorized as "less credit supportive" by S&P, while Pennsylvania, where PECO operates, is categorized as "credit supportive".

Market pposition

- Pennsylvania (where PECO operates) permits competition by electricity generators for the supply of retail electricity while transmission and distribution services remains regulated under the Competition Act.
- ComEd has a monopoly over its service territory, however, the operations suffer from the effect of the economic downturn as sales depend on industrial and wholesale customers.
- Maryland has implemented customer choice and competition among electric suppliers, so customers can choose their electricity supplier. However, BGE remains the sole distributor to customers.

The continued tepid economy and growing energy efficiency initiatives have limited demand for electricity across the Exelon utilities. ComEd is projecting load volumes to remain essentially flat in 2013 compared with 2012, while PECO and BGE are projecting an increase (decrease) of 0.5% and (1.0%), respectively, in 2013 compared with 2012.

Commonwealth Edison

ComEd is a regulated transmission and distribution company that serves 3.8 million customers in Chicago and surrounding areas. ComEd has some diversity in that about 50% of its revenues come from residential electric sales with small commercial and industrial accounting for about 30%. About 75% of revenues pertain to distribution and are regulated by the Illinois Commerce Commission (ICC). The balance is transmission related and regulated by the Federal Energy Regulatory Commission (FERC).

The formula rate plan that Illinois adopted under the Energy Infrastructure Modernization Act (EIMA) was viewed initially as a potential enhancement of the utility's credit quality. However, ComEd's first rate order was less constructive than expected because the ICC's initial recommendation was a rate reduction of more than $165 million; the ICC adopted a $133.4 million rate reduction after rehearing the issues. ComEd's second rate case filing, which was decided in December 2012, received a more favorable order. In this case, the ICC ordered a rate increase of $89.3 million against a request for $91 million. Still, the ICC has used an average rather than year-end rate base and provided for a short-term debt rate as the appropriate interest rate to apply to under/over recoveries of incurred costs.

Senate Bill 9 (SB 9), a bill that clarifies some of the issues that have emerged under the interpretation of the EIMA, was approved by the state Senate and House but the governor vetoed it. On May 22, 2013, the Illinois General Assembly overrode the Governor's May 5, 2013 veto of SB 9, which resulted in the legislation becoming effective immediately. The ICC issued a rate order on June 5, 2013 approving ComEd's May 30, 2013 filing to update 2013 rates reflecting SB 9 impacts. ComEd projects the override of SB 9 will result in increased operating revenues of about $15 million in the second half of 2013 and $65 million in 2014, respectively. Also, ComEd projects that due to the SB 9 override it will accelerate capital spending by about $40 million in 2013 and $45 million in 2014.

PECO Energy

PECO is a regulated electric and gas transmission and distribution company that serves 1.6 million electric customers and 497,000 gas customers in Philadelphia and surrounding areas. PECO generates about 80% of its revenues from electric sales (20% gas) with about 60% of those being residential sales and about 20% being small commercial and industrial sales. Retail sales account for most gas revenues. The Pennsylvania Utility Commission regulates distribution-related revenues and the FERC regulates transmission.

About 90% of revenues relate to distribution and 10% comes from transmission. We view the recent passage of Pennsylvania Act 11, which authorizes the use of projected test years in rate cases and permits the use of an automatic adjustment clause for project-specific distribution system improvements, as supportive of credit quality.

Baltimore Gas & Electric

BGE is a regulated transmission and distribution company that serves 1.2 million customers and 655,000 natural gas customers in Central Maryland, including the city of Baltimore. BGE generates about 75% of its revenues from electric sales (25% gas), with about 60% of those being residential sales and about 20% being large commercial and industrial sales. The Maryland Public Service Commission (MPSC) regulates distribution-related revenues and the FERC regulates those related to transmission.

We continue to view the MPSC's order requiring BGE and others to enter into a contract for differences with CPV Maryland LLC as detracting from credit quality. The major challenge that we view arising from this contract is the utilities' ability to recover the costs incurred, especially after the recent decision to remove the "regulatory out clause," which made the utilities' payment obligations contingent upon complete and timely recovery of these costs from ratepayers. The commission's order is still subject to pending litigation and a final outcome is expected before the end of 2013. Notwithstanding these challenges in Maryland, we view as supportive the recent passage of the Maryland Strategic Infrastructure Development and Enhancement Program (STRIDE). STRIDE was signed into law on May 2, 2013, and allows utilities to recover the costs of gas infrastructure replacement projects.

In BGE's most recent rate case, decided on Feb. 22, 2013, the MPSC authorized an increase of $81 million in electric rates and $32 million in natural gas rates effective Feb. 23, 2013. Overall, we view this decision as constructive, despite the 9.75% allowed return on equity (ROE) used for electric rates and 9.6% for gas rates, which continue to be below average. On May 17, 2013, BGE filed a new case requesting an increase of $101.5 million in electric rates based on a

10.5% ROE and a $29.7 million increase in gas rates based on a 10.35% ROE. In addition, BGE and other utilities in Maryland are proposing a tracker to recover costs associated with incremental and accelerated investments in electric reliability that, if adopted, would further improve our view of the regulatory climate. We expect BGE to continue its efforts to reduce regulatory lag by frequent filing of rate cases and to effectively manage regulatory risk in Maryland.

As per one condition to the 2012 merger approval of Exelon and Constellation, BGE is not making any distributions to Exelon through 2014.

Unregulated Businesses

We believe ExGen's base load nuclear assets have a competitive cost structure, which is the primary reason for parent Exelon's strong business risk profile despite having significant merchant generation operations. However, we note that ExGen's cash flows vary significantly with changes in electricity and natural gas commodity prices. Specifically, we note that ExGen is more exposed to drops in commodity price than its peers. Falling natural gas prices harm ExGen more than its peers because almost 82% of its generation (excluding power purchased through contracts) is from base load nuclear generation, all of which declining natural gas prices affect. However, we recognize that the company's cost structure is among the most competitive in the industry.

As long as the economy grows modestly, ExGen's assets in regions such as the Mid-Atlantic will likely benefit from improving structural fundamentals for its fleet such as environmental legislation. We also believe that the competitive position of ExGen's nuclear fleet will remain strong in the medium term as these assets are best positioned to serve the wholesale needs of regional transmission and distribution companies. However, ExGen is also most exposed to higher costs associated with nuclear safety, with nuclear generation accounting for nearly 55% of its total capacity. As such, ExGen's ability to operate the fleet reliably and safely will be one key determinant of its credit quality.

Industry Risk

Standard & Poor's outlook for business conditions and credit quality in the U.S. merchant power and independent power producers sector for 2013 and 2014 is increasingly unfavorable, despite improving economic indicators in the U.S.

Our outlook for the U.S. power sector is negative, based on the following fundamentals:

- Declining demand growth due to a combination of declining usage-per-customer and slower growth in new customer count.
- Potential for higher natural gas production that will hurt power prices.
- Changing natural gas prices, which is influencing power prices downwards in regions that typically attracted a premium.
- A capacity market that could remain depressed despite an increasing need for new build.
- We expect a combination of energy efficiency and demand-side management, with significant effects on residential/small commercial demand, to weigh on demand growth.

Ominously, the thesis that the shutdown of coal plants in 2015---when the Mercury and Air Toxins Standards are adopted--will result in a natural gas price response appears a bit weaker in the face of a deluge of shale gas production.

Although a number of speculative-grade companies have already been downgraded, we see increasing headwinds for investment-grade diversified energy companies. While these companies were hitherto insulated from market forces because of hedging activities, these hedges are now being rolled at substantially lower realized prices resulting in significantly backwardated gross margins. As a result, we think some companies will need to address their capital structure to preserve ratings.

ExGen's Business

ExGen's generation assets by capacity are mostly base-load nuclear (55%) and gas (28%). Geographically, the assets are largely located in the Midwest (34%) and Mid-Atlantic (33%) regions, with most of the assets concentrated in Illinois (33%) and Pennsylvania (25%). The company is the largest nuclear operator in the U.S and nuclear generation poses numerous operating, regulatory, and environmental risks. ExGen's nuclear assets consist of 14 operating nuclear sites (some sites have dual units) with an equity ownership of about 19,000 MW, representing about 55% of the company's total owned generation capacity.

The company's strong operational track record mitigates significant exposure to nuclear assets. During the past five years, ExGen's nuclear capacity factor has been at or exceeded 93%, which is among the highest in the industry. With gas on the margin in most markets, ExGen's well-run nuclear fleet gives it an significant advantage in the market as most of its plants are depreciated and the variable costs of nuclear generation is low. Still, nuclear generation's systemic risks weigh negatively on credit quality.

Table 2

ExGen Operating Statistics

(%)	2012	2011	2010
Nuclear capacity factor	92.7	93.3	93.9
Fossil equivalent forced outage rate	3.4	5.1	2.3
Hydro equivalent availability factor	95.7	95.2	96.8
Wind energy capture	93.9	93.1	88.9

Although the portfolio has geographic and fuel diversity, economically, Exelon's cash flow is highly susceptible to natural gas price movements, which is the marginal fuel in most regions. While the company also has a long position on market heat rates, carbon, and other emissions, the price taking nature of its large base-load fleet makes it more vulnerable to downward movements in gas prices compared with its peers. It was for this reason the company considers renewable assets a good hedge for its existing business, as they help diversify away from natural gas exposure, and also because states such as Pennsylvania and Illinois also have a renewable portfolio standard mandate.

On July 30, 2013, Exelon announced that through April 2014, CENG will be fully integrated operationally into ExGen's nuclear fleet. Exelon will lend $400 million to CENG to support a special dividend to Electricite de France, which will retain an option to sell its CENG stake to Exelon at fair market value between 2016 and 2022. We view the announcement as credit neutral but note that the decision results in a claim on cash flow that competes with cash available for debt servicing not incorporated in our previous credit assessment.

Credit Issues And Considerations

Credit concerns remain largely the same as 2012. We're listing credit concerns that we anticipated in 2012 and whether those credit concerns have heightened or have reduced over the year.

The merchant energy markets continue to remain depressed as slowing customer new counts, energy efficiency and low natural gas prices weigh down energy prices

Our concern last year. ExGen has among the more competitive merchant power plants because of its nuclear assets. As long as the economy grows modestly, ExGen's assets in regions such as the Mid-Atlantic will likely benefit from improving structural fundamentals for its fleet of plants such as environmental legislation. We also believe that the competitive position of ExGen's nuclear fleet will remain satisfactory in the medium term as these assets are best positioned to serve the wholesale needs of regional transmission and distribution companies. However, ExGen's cash flows are also among the most sensitive to natural gas prices declines because almost 82% of its generation is nuclear, all of which is affected by declining gas prices.

Our concern stems from ExGen's relatively larger exposure to merchant margin volatility due to its base-load nuclear generation. Furthermore, these contracts expose ExGen's margins to market risks, including load-shaping, fuel, and volume risks. Although margins are highly hedged, hedging has its limitations. As nuclear assets are essentially price-takers, hedged gross margins depend on power prices set by longer-term marginal fuel prices (natural gas in most instances). With significantly higher expected production from the Marcellus and Utica areas, not only are natural prices held back, even the basis differential historically witnessed at the TETCO Hub has disappeared (we expect TETCO to eventually trade at a 30 cent discount to Henry Hub prices from a 50 cent premium in 2008).While the backwardated EBITDA still supports current rating levels, deterioration in merchant market fundamentals has the most potential to affect Exelon's credit quality.

2013 update. Standard & Poor's projections for 2014 remain sensitive to natural gas and power price assumptions. All else remaining equal, our estimate for gross margins in 2015 would be lower by about $375 million for a $1 per mcf decline in gas prices. Given that base-load generation is price-taking, we expect ExGen's adjusted FFO to debt to remain volatile relative to its peers. Despite Exelon's relatively successful recent cost-cutting efforts, we believe that the company has limited ability to cut operating and maintenance expenses and capital spending at its nuclear units (and that spending can only rise as the Nuclear Regulatory Commission further evolves guidelines on safety protocols). Moreover, given low gas prices and declining basis, we believe the economics of ExGen's single-unit nuclear plants, like Clinton and Ginna, are at increasing risks. Still, given the the low cost structure of its nuclear generation fleet, gas prices have to fall and remain below $2.75 per mcf levels over a sustained period before ExGen's FFO to debt declines below 20%. Also, following the merger, Exelon gets a larger proportion of earnings from its regulated and retail operations. We expect these incremental revenue streams to make the consolidated Exelon somewhat more resilient to commodity prices.

Current forward natural gas prices still imply downside risks

The downside pressure on natural gas has affected forward prices through 2016 due to still surging gas production. Production growth in the Northeast is outpacing expectations, despite a slower pace of drilling. Industry experts now expect the Marcellus and Utica shale gas regions to grow by 3.6 bcf/d in 2013 and 3.3 bcf/d in 2014. The region could become a net exporter through most of the year by 2015. Pipeline flows from other regions to the Northeast have already started to reverse, and some basis points are trading at negative differentials. As deliverability of gas out of the region improves, and as Tetco M3 basis declines closer to Henry Hub, we see continuing pressure on power prices not only for PJM West and Ni-hub generators but also for PJM East generators. Also, there is an increasing possibility that the Mid-Atlantic locational premium may erode as some new merchant gas projects get built over the producing regions of the Marcellus formation.

The forward curve has flattened, with 2015 forwards declining from $5.4 per mcf in September 2011 to about $4 in August 2013. Still, the issue is that shale gas production could continue to impress as increasing amounts of production in the Marcellus Shale region is brought to market. On the flip side, while PJM and other eastern independent system operators remain well supplied through 2014, the market is heavily discounting (not reflecting any uplift in power prices) forthcoming power plant retirements or higher costs to meet new emissions rules.

Current hedges show the significant value of Exelon's hedging program. As of June 30, 2013, the percentage of expected generation hedged was 96%-99% in 2013, 78%-81% in 2014, and 41%-44% in 2015. Although most total projected margin is under contract for the next two years, this percentage rolls off in the outer years, pointing to the need for ExGen to constantly enter into new contracts and exposing it to the volatility of wholesale market prices. Although these hedges insulate ExGen, perversely, they also show the sensitivity of ExGen's margins to the prospect of a continued shale production onslaught. The decline in mark-to-market value through 2014 shows the limitation of a price-taking fleet--a company can hedge, but only at the prices the market will bear. Still, the forward prices do show a contango as reflected in the increase in open gross margins due to higher natural gas forwards.

Our concern last year. The price-taking nature of the fleet results in margin erosion as wholesale power prices begin to decline and contracts are renewed at lower levels. The merchant generation contribution at ExGen will face a decline as above-market hedges expire, evident in the drop in wholesale hedged gross margins. However, retail contributions are expected to increase given potential for cost savings, volumes gained from the Constellation merger, and acquisitions (StarTex and MX Energy Holdings).

2013 update. The decline through 2015 continues, but is within our base-case calculations. However, power prices have weakened since June and we expect to see weaker open gross margins levels. We note the approximate $1 billion decline in wholesale gross margins between 2012 and 2015 despite the ratable hedging. However, we expect that there will be volatility in the forward market that will allow Exelon to capture the benefits of its hedging practices as it has in the past.

Table 3

Margins

	As Of June 2012			As Of June 2013			
(Mil. $)	**2012 E**	**2013**	**2014**	**2012 A**	**2013**	**2014**	**2015**
Open gross margins	4,450	5,400	5,850	4,500	5,750	5,400	5,900
Mark-to-market hedges	3,100	1,650	600	3,200	1,450	850	400
Hedged margin	7,550	7,050	6,450	7,700	7,200	6,250	6,300
Total gross margin (includes retail, etc.)	8,050	8,200	7,900	8,100	8,000	7,700	7,650
Gross margin assuming a 2- sigma decline in power prices and all unhedged volumes are sold in the spot market	7,900	7,800	6,900	N/A	7,850	7,250	6,750

Management maintains its view of $2 to $4/MWh upside to power in the PJM. Interestingly, ExGen is framing the conversation as still being predicated on coal plant retirements and modest net load growth across the PJM footprint of 0.5% to 0.75% growth. Because it expects better price discovery, ExGen is tracking 7% below its ratable hedging plan in 2015 positions (hedged about 41% to 44% for 2015 instead of about 49% of 51% two years forward as it normally is) in expectation of better price discovery as more coal-fired generation retirement announcements are made. More notable though is that the company expects retail operation and margins to capture about $500 million of lost wholesale margins.

The retail business is facing increasing competition

We think there is risk to retail gross margins from increasing competition. Although usage per customer has been on decline due to energy efficiency, the new customer count remains below levels seen before the recession. In particular, growth for utilities in the Midwest and Mid-Atlantic, like Exelon and FirstEnergy Corp., lagged in most areas of customer growth. For Exelon, the growth in commercial customers in 2011 and 2012 remained lower than the growth in the previous decade. As a result, competition has increased significantly in the retail business. We think the focus has moved to gaining scale rather than maintaining margins. In perhaps the most significant scaling back of retail ambitions management formally pulled back its aggregate retail target from 185 terawatt-hours (TWh) to 155 TWh. ExGen's latest projections suggest a relatively flat profile with total volumes only increasing to 155 TWh by 2015 from 150 TWh in 2013, with the volume composition shifting by 5% upward to retail (65% to 75% of total). Moreover, management admitted of late once again its latest contracts were being signed at below the bottom end of its $2 to $4/MWh range.

Growth assumptions in December 2012 were for retail sales to grow to 185 TWh by 2015. These numbers were already reductions from earlier estimates in June 2012 of 180 TWh and 200 TWh for 2013 and 2014, respectively. By August 2013, Exelon had lowered these estimates further to a range of 150 to 155 TWh. At current average margins, we estimate a decline of $50 million to $70 million in 2014 from the reduction in volumes over 2012 estimates

Capacity markets will likely be biased to the downside

The PJM auction results came out lower than we expected, especially for the regional transmission organization (RTO) region. We suspect the lower prices stemmed from significant new supply additions (an increase of 9 GW, including new generation, uprates and transmission imports) in the face of lower growth rate forecasts. Almost 4.3 GW of new generation cleared the auction (5.2 GW was bid).Together with 1.2 GW of cleared up-rates (mostly natural gas) and 1.3 GW of withdrawn deactivation requests, these increase were higher than the 2.2 GW reduction in demand response resources. On balance, about 13 GW of generation did not clear the auction, much of which (9.5 GW) is coal-fired generation. As a result, we expect continuing announcements of coal-fired generation retirements in the PJM region.

Although the increase in new generation was higher than anticipated, the major surprise was the increase in imports that almost doubled to 7.5 GW (from 3.9 GW), of which 2.6 GW are coming from the Mid-Continent Independent System Operator (MISO), and an aggregate 4.7 GW of imports from MISO and regions integrating into MISO. We believe these additions affected the RTO price exclusively. However, of the 7.5 GW, about one-third (2.7 GW) does not have transmission service in "confirmed" status. Ominously, about 15 GW of new imports are "under study," suggesting that there could be a lot of stranded generation in MISO that could potentially bid into future PJM auctions, although substantial transmission may be required to achieve delivery capability.

In particular, the RTO capacity prices have been the most volatile. We note that with nearly 11,800 MW in the RTO region, a $1 per MW-day decline in capacity price affects Exelon's bottom-line by about $4.5 million.

Still, the merger with Constellation has provided greater scope and scale benefits

From a credit perspective, the combination of Exelon and CEG has worked out. While the combination has diversification benefits, it largely centers around expanding the retail power business that matches load to generation. The combination provides Exelon regional diversification of the generation fleet and a customer-facing load business as generation and load positions are now better balanced across multiple regions. In almost all locations, Exelon will have adequate intermediate and peaking capacity in the portfolio for managing load-shaping risks. For instance, Exelon has generation in the Miso, PJM Interconnection, and Electric Reliability Council of Texas (ERCOT) regions, while CEG has significant retail load in these locations but is short on generation. However, the company will still need to buy and sell long in the market to manage portfolio needs, in our opinion.

Load-generation matching. Through retail and wholesale channels, Exelon expects to provide about 155 TWh, or about 4.75% to 5%, of total U.S. power demand. The company expects the switched markets in Pennsylvania, Ohio, Michigan, and Arizona to grow at about 15% in the residential class between 2012 and 2015. The fleet is well positioned to grow where capacity available for competitive supply has room to grow. That said, Exelon has a significant open position in the Midwest (exposed to merchant market), and a somewhat tight position in New England and ERCOT where it is at risk of being caught short under strong load assumptions, in our opinion.

Table 4

*Represents generation's proportionate share of the output of its generating plants. ¶Reflects all power purchased under long-term contracts. §Reflects ownership interest in CENG assets.

The combination is extracting budgeted merger synergies

Merger synergies accrue from a combination of labor and information technology savings from corporate and commercial consolidations, reduced collateral requirements, supply chain savings, among others. Exelon expects to maintain an operating and maintenance cost compound annual growth rate of about 1%--lower than inflation. Although Exelon expects to hit a run-rate of $550 million by 2014, our assumptions are relatively more conservative at about $350 million in synergies in 2015-2016. We have assumed this level because Exelon has experienced reasonable success in past cost-reduction initiatives and in assimilating past mergers. Management has indicated that 75% of steady-state (2014 and beyond) synergies are already locked in.

Table 5

Company Assumptions

(Mil. $)	2012 (9 months)	2013	2014
Merger synergies	170	305	550
of which capital spending synergies	35	55	70

Financial Governance And Policies/Risk Tolerance

Under the forward commodity environment, Exelon's dividend payout ratio was climbing to about 80%-85%. That has been addressed, which we view as favorable for lenders.

The prevailing level of dividend payments in 2012 required about $1.8 billion, which was significant relative to 2014 net income. Exelon has addressed this decisively. Although the need to lower dividends was on account of headwinds in the merchant markets we view Exelon's willingness to change its financial policy as favorable for credit. As a result of the reduction:

- Exelon has lowered its external dividend obligations by $3.5 billion through 2017.
- The proportion of distributions contributed by the utilities towards external dividend increases from 45% in 2013 to about 65%-70% post 2014.

Several actions have been taken to strengthen the balance sheet

In 2012, we estimated Exelon's capital spending requirements at about $18.5 billion between 2012 and 2014. Although utility capital spending tends to be funded in rate base, companies have to fund the capital requirements of their unregulated generation and recover costs in market prices. Under the current commodity environment, ExGen is expected to generate about $3.4 billion to $3.7 billion of cash flow from operations in 2013-2015. These were not sufficient for capital spending and dividends resulting in external needs of financing. Apart from dividend reduction, some of the other actions taken to reduce financing needs include the following, which have resulted in a significant reduction in capital spending:

- Nuclear fuel inventory optimized,
- Removal of undesignated renewable spending, and
- Cancel LaSalle and Limerick uprates.

Exelon has increased the use of project financing (nonrecourse) to fund its renewable projects. Currently, about $1.2 billion of debt is off-balance–sheet, which is nonrecourse to Exelon. The largest among these are AVSR (solar) and Continental Wind, being about $600 million to $650 million each.

Funding gap is in a better position

The financing plan contemplates no new senior unsecured financing through 2016 at Exelon or ExGen. Still, incrementally lower gas prices would have a much greater effect on ExGen's debt protection measures than the level of new debt financing in ExGen's forecast through 2016. The overall impact is that ExGen will be free operating cash flow positive through 2016.

Exelon has implemented a 40% cut of its dividends to $1.24 per share (annualized) from $2.10 per share (annualized). This translates to a reduction in claims on cash flow of about $735 million annually.

Exelon has cancelled a number of nuclear uprate programs based on market conditions and estimates of long-term returns. During first-quarter 2013 Exelon cancelled the Dresden and Quad Cities measurement uncertainty recapture upgrade projects. During second-quarter 2013, the extended power uprate programs at LaSalle and Limerick were also cancelled. These cancellations alleviate the necessity for additional debt funding.

Peer Comparisons

Exelon compares well with peers like FirstEnergy, exhibiting its stronger financial measures. While PPL Corp. has weaker financials, its business risk profile is higher given its significantly larger dependence on regulated cash flows. Similarly, compared with PSEG Energy Holdings LLC, Exelon is less regulated. PSEG is also expanding its regulated business and is therefore we viewed it as having stronger credit.

Accounting

Exelon's accounting policies conform to industry standards. We impute a significant amount of debt to Exelon, as much as $4.2 billion (excluding BGE imputed debt as of March 31, 2013) which consists mostly of about $2.2 billion related to pension/OPEB, about $500 million related to operating leases, and about $1.4 billion related to their power purchases.

Key Assumptions In Our Forecast

Table 7 displays the S&P price assumptions.

Table 7

S&P Price Assumptions

	2014	**2015**	**2016**
Henry Hub ($/mil. Btu)	3.5	3.75	3.75
West Hub ($/MWh)	40.54	41.43	42.35
Ni-Hub ($/MWh)	32.99	33.72	34.47
Mass Hub ($/MWh)	49.7	47.8	46.5
NY Zone A ($/MWh)	37.5	38	38.62

MWh—Megawatt-hour.

Other assumptions

- Pensions/OPEB: Based on Dec. 31, 2012 actuarial valuation by Towers (a third party-firm),
- 50% bonus depreciation in 2013,
- Nuclear capacity factors: between 93.3% and 93.7% through 2017 (each 1% fleet decline results in a $45 million hit to FFO),
- Growth rate at utilities consistent with management assumptions, and
- Interest rates on debt at utilities range from 3.25% in 2013 to 4.75% in 2016; ExGen and Exelon at 4.5% in 2013 to 5% in 2016.

Projected Cash Flow Adequacy And Capital Structure/Asset Protection

Cash flow adequacy

- Our Ventyx derived gross margin is right on top of the company's projections through 2015.
- We assess the cash flow adequacy of not only Exelon but also of ExGen because it's the dominant cash flow provider. We do so because we view the utilities' ability to upstream dividends consistently as somewhat uncertain because of their capital spending requirements based on their changing smart grid/renewable energy plans.
- We expect FFO to debt to remain largely at about 27% to 29% thru 2015. Ratios are buttressed by the utilities' low-risk business profile and the relatively stable, but lower cash flow they generate. For ExGen we expect the ratio to be better at about 35% to 38% as the company hedges a significant proportion of generation.

Major adjustments to gross margins in 2012 included:

- Adjustments for retail business margins ($50 million lower due to lower volumes than anticipated)
- Adjustments for $3.5-$3.75 natural gas price instead of $4.0-$4.25 per mcf

Table 8

TWh--Terawatt-hours. MWh--Megawatt-hours.

Capital structure/Asset protection

- Exelon has significant off-balance-sheet obligations that represent about one-fourth of total adjusted debt.
- After adjusting for ExGen's tolling contracts and the consolidated entity's unfunded pension and postretirement benefit obligations, we consider Exelon's capital structure as significant. However, about 55% of total adjusted debt is at utility operating companies.
- As of March 31, 2013, Exelon's adjusted debt to total capital was about 54.3%. Given the current business mix, which depends considerably on the volatile generation business, we consider leverage to be high. Still, because the book value of ExGen's nuclear assets is undervalued, we would characterize book value debt to capital as a somewhat weak indicator of financial risk. Nonetheless, we give relatively less importance to the debt to capital ratio as Exelon's ability to service its debt is not affected directly by this ratio.
- Debt per kilowatt (kW), a more relevant leverage statistic, remains modest. Excluding debt at the utilities and after imputing all debt relating to PPAs and unfunded pensions and post-retirement obligations, Exelon's stand-alone merchant business of adjusted owned and contracted kW has increased to about $370 per kW and about $670 per kW when we include only base-load kW. We believe this is well below the replacement value of base load nuclear units.

Contingent, environmental, legal, and other liabilities

If we downgrade ExGen to speculative grade, the company could be required to post additional collateral of $1.88 billion as of June 30, 2013.

Related Criteria And Research

- Business Risk/Financial Risk Matrix Expanded, Sept. 18, 2012
- Liquidity Descriptors For Global Corporate Issuers, Sept. 28, 2011

Business And Financial Risk Matrix

	Financial Risk					
Business Risk	Minimal	Modest	Intermediate	Significant	Aggressive	Highly Leveraged
Excellent	AAA/AA+	AA	A	A-	BBB	--
Strong	AA	A	A-	BBB	BB	BB-
Satisfactory	A-	BBB+	BBB	BB+	BB-	B+
Fair	--	BBB-	BB+	BB	BB-	B
Weak	--	--	BB	BB-	B+	B-
Vulnerable	--	--	--	B+	B	B- or below

Note: These rating outcomes are shown for guidance purposes only. The ratings indicated in each cell of the matrix are the midpoints of the likely rating possibilities. There can be small positives and negatives that would lead to an outcome of one notch higher or lower than the typical matrix outcome. Moreover, there will be exceptions that go beyond a one-notch divergence. For example, the matrix does not address the lowest rungs of the credit spectrum (i.e., the 'CCC' category and lower). Other rating outcomes that are more than one notch off the matrix may occur for companies that have liquidity that we judge as "less than adequate" or "weak" under our criteria, or companies with "satisfactory" or better business risk profiles that have extreme debt burdens due to leveraged buyouts or other reasons. For government-related entities (GREs), the indicated rating would apply to the standalone credit profile, before giving any credit for potential government support.

*Unless otherwise noted, all ratings in this report are global scale ratings. S&P Global Ratings' credit ratings on the global scale are comparable across countries. S&P Global Ratings' credit ratings on a national scale are relative to obligors or obligations within that specific country. Issue and debt ratings could include debt guaranteed by another entity, and rated debt that an entity guarantees.

FitchRatings

Fitch Affirms Ratings of Exelon Following Merger

Fitch Ratings-New York-12 March 2012: Fitch Ratings has affirmed the Issuer Default Ratings (IDR) and instrument ratings of Exelon Corp. (EXC) and each of its existing operating subsidiaries, including the newly acquired Baltimore Gas and Electric Co. (BG&E). The rating affirmations follow the closing of the merger between EXC and Constellation Energy Group, Inc. (CEG).

Fitch also upgraded the ratings of CEG's outstanding senior unsecured debt to 'BBB+' from 'BBB-' and junior subordinated notes to 'BBB-' from 'BB'. The CEG upgrade reflects the assumption of CEG's publicly traded debt and bank credit facility following an internal restructuring that includes an upstream merger of CEG with and into EXC. Consequently, EXC will be responsible for CEG's debt obligations. The restructuring is expected immediately after the merger. CEG's 'BBB-' long-term IDR, short-term 'F3' IDR and 'F3' commercial paper ratings are withdrawn. The Rating Outlook for all entities is Stable. See the full list of rating actions at the end of this release.

Rating Drivers

Financial position: Fitch expects EXC's post-merger consolidated financial position to remain solid and only moderately weaker than Fitch's previous expectation of EXC's standalone credit profile. On a pro forma basis as of Dec. 31, 2011, Fitch calculates EBITDA/interest and Debt/EBITDA of the combined entity were 6.7 times (x) and 2.6x, respectively. In 2012 those ratios are expected by Fitch to approximate 6.0x and 2.75x.

Risk Profile: EXC's post-merger business risk profile is unchanged, with regulated earnings contributing nearly half of projected 2012 EBITDA on either a standalone or a combined basis. Moreover, the addition of CEG's retail energy business should lower liquidity requirements. By matching EXC's long generation position and CEG's load-serving retail business, Fitch anticipates net margin postings will decline.

The addition of CEG's retail energy business complements the cash flow profile of EXC's wholesale generation business; high wholesale power prices result in wider margins and greater cash flow for the larger generation segment and compressed margins for the retail segment and vice versa.

The post-merger credit profile of EXC's wholesale generation subsidiary, Exelon Generation Company, LLC (Exgen), is expected by Fitch to remain strong. Including the debt to be assumed by EXC, which Fitch expects will ultimately be refinanced at Exgen, debt and leverage measures will weaken from historical levels, but remain supportive of the existing ratings due to the headroom provided by Exgen's currently low leverage and strong interest coverage measures.

Going forward, Exgen's credit measures will be pressured by Fitch's expectation that power prices will remain low for the next several years and by a large capital spending program. A significant portion of the planned expenditures are discretionary. Ultimately, credit quality measures and ratings will depend on the level of capital investment and financing plan. Fitch expects a portion of the proceeds from asset sales required by the Federal Energy Regulatory Commission (FERC) as a condition of the merger will be applied to debt reduction.

The ratings of regulated subsidiaries Commonwealth Edison Company, PECO Energy Company and Baltimore Gas and Electric Company are unaffected by the proposed merger.

The combined company will have increased scale, with approximately 34,390 megawatts (MWs) of generating capacity (of which 18,967 MWs would be nuclear), three regulated electric utilities serving 7.8 million customers in three states (Illinois, Pennsylvania and Maryland,)and a national footprint serving retail and wholesale load.

Fitch has upgraded the following ratings with a Stable Outlook:

Constellation Energy Group
--Senior unsecured debt to 'BBB+' from 'BBB-';
--Junior subordinated notes to 'BBB-' from 'BB'.

Fitch has affirmed the following ratings with a Stable Outlook:

Exelon Corp.
--IDR at 'BBB+';
--Senior unsecured debt at 'BBB+';
--Commercial paper at 'F2';
--Short-term IDR at 'F2'.

Exelon Generation Co., LLC
--IDR at 'BBB+';
--Senior unsecured debt at 'BBB+';
--Commercial paper at 'F2';
--Short-term IDR at 'F2'.

Commonwealth Edison Company
--IDR at 'BBB-;
--First mortgage bonds at 'BBB+';
--Senior unsecured debt at 'BBB';
--Preferred stock to at 'BB+';
--Short-term IDR at 'F3';
--Commercial paper at 'F3'.

ComEd Financing Trust III
--Preferred stock at 'BB+'.

PECO Energy Co.
--IDR at 'BBB+';
--First mortgage bonds at 'A';
--Secured pollution control bonds at 'A';
--Senior unsecured debt at 'A-';
--Preferred stock at 'BBB';
--Commercial paper 'F2';
--Short-term IDR at 'F2'.

PECO Energy Capital Trust III
--Preferred stock at 'BBB'.

PECO Energy Capital Trust IV
--Preferred stock at 'BBB'.

Baltimore Gas and Electric Company
--IDR at 'BBB;
--First mortgage bonds at 'A-';
--Senior unsecured debt at 'BBB+';
--Pollution control bonds at 'BBB+';
--Preferred stock to at 'BBB-';
--Short-term IDR at 'F2';
--Commercial paper at 'F2'.

BGE Capital Trust II
--Preferred stock at 'BBB-'.

Fitch has withdrawn the following ratings:

Constellation Energy Group
--IDR of 'BBB-';
--Commercial paper rating of 'F3';
--Short-term IDR of 'F3'.

Solicitation Status

Fitch Ratings was paid to determine each credit rating announced in this Rating Action Commentary (RAC) by the obligatory being rated or the issuer, underwriter, depositor, or sponsor of the security or money market instrument being rated, except for the following:

Endorsement Policy - Fitch's approach to ratings endorsement so that ratings produced outside the EU may be used by regulated entities within the EU for regulatory purposes, pursuant to the terms of the EU Regulation with respect to credit rating agencies, can be found on the EU Regulatory Disclosures (https://www.fitchratings.com/regulatory) page. The endorsement status of all International ratings is provided within the entity summary page for each rated entity and in the transaction detail pages for all structured finance transactions on the Fitch website. These disclosures are updated on a daily basis.

FitchRatings

Fitch Affirms Exelon Corp. and Subs' Ratings; Outlook Stable

Fitch Ratings-New York-22 March 2017: Fitch Ratings has affirmed the 'BBB' Long-Term Issuer Default Ratings (IDR) of Exelon Corp. (EXC), Exelon Generation Co., LLC (Exgen), Pepco Holdings LLC (PHI), Potomac Electric Power Co. (Pepco) and Atlantic City Electric Co. (ACE), and the 'BBB+' IDRs of Commonwealth Edison Co. (ComEd), PECO Energy Co. (PECO), Baltimore Gas and Electric Co. (BGE) and Delmarva Power and Light Co. (DPL). The Rating Outlook for each entity is Stable. Fitch has also withdrawn PHI's Short-Term IDR and commercial paper (CP) ratings. PHI has terminated its CP program and has been removed as a borrower from the credit agreement it previously shared with Pepco, DPL and ACE. See the full list of the rating actions at the end of this release.

Key Rating Driver for Exelon Corp.

Improving Risk Profile: The March 2016 acquisition of PHI furthers EXC's goal of increasing regulated earnings and lowering business risk. Post-merger, Fitch expects regulated earnings to account for roughly 65%-70% of consolidated earnings from its six regulated utilities compared with an estimated 55%-60% without the acquisition. The proportion of regulated earnings should continue to grow due to a capital allocation strategy that is heavily weighted to infrastructure investments at EXC's six utility operating utilities, particularly ComEd, and substantially reduced growth investments at it competitive generation subsidiary.

Increased leverage: The PHI acquisition resulted in a rise in leverage, reflecting the acquisition funding and the consolidation of the more leveraged PHI. Fitch estimates adjusted debt/EBITDAR will approximate 4.5x in 2017, the first full year of operation after the merger, compared with about 3.7x prior to the acquisition. Leverage should fall below 4.0x given the expected earnings growth and planned debt reductions of approximately $3 billion at Exgen and EXC over the next four years.

Merchant Risk: The ratings also consider the more volatile earnings and cash flow contribution of EXC's competitive generation business, which is exposed to market price risk. The operating environment for competitive generating companies remains challenging, with abundant natural gas supply and energy efficiency initiatives constraining demand and power prices with little relief in sight. To mitigate the cash flow volatility Exgen employs a three-year hedging strategy. In addition, management has nearly eliminated Exgen growth capex and reduced upstreamed dividends. Consequently Exgen is expected to be substantially free cash flow (FCF) positive beginning in 2018 and plans to pay down roughly $3 billion of debt by 2020 with a goal of debt/EBITDA of 3x. Once the leverage target is reached, FCF will be used to retire parent debt.

Nuclear Subsidies: EXC's earnings and cash flow profile has also been stabilized by the passage of legislation/regulations in Illinois and New York that provide financial support to certain nuclear generating units operating in those states. EXC owns five nuclear units that are expected to benefit from the zero emission credit (ZEC) programs that will provide roughly $500 million to $600 million annually. Among the five plants is the James A. Fitzpatrick nuclear unit, which was acquired as a direct result of the New York ZEC program, and three units in Illinois (Quad Cities units 1 and 2 and the Clinton) that were scheduled to be retired prior to the enactment of the Illinois and New York initiatives. Without the ZECs, a fifth unit, R.E. Ginna was also a likely retirement candidate.

Utility-Centric Capital Allocation Strategy: Going forward, the majority of capital investment is allocated to EXC's six utility subsidiaries, furthering the transition to a more stable earnings base. The share of utility investments increases in each of the next three years, reaching more than 70% of consolidated capex by 2018. The majority of the regulated investments are at ComEd, EXC's largest utility, which operates with a constructive formula rate plan that provides timely recovery of invested capital.

Adverse Tax Ruling: In September 2016, the tax court rejected EXC's position related to a 1999 like-kind-exchange (LKE) transaction and also ruled that the company is responsible for interest and penalties. The total exposure is $1.45 billion less any tax benefits. EXC expects to file an appeal in 2017 at which time it will be required to pay taxes due. To stop the on-going accrual of interest, EXC has posted a $1.25 billion deposit, initially funded with CP which was repaid with proceeds from a $750 million Exgen bond issue in February and the remainder with cash on hand.

PHI Utilities Rate Strategy: Following a two-year period of rate case avoidance during the merger review process, PHI's three utilities filed six distribution rate cases and three Federal Energy Regulatory Commission (FERC) formula transmission cases totaling $465 million. Three of the distribution cases have been completed and three are pending. Going forward management expects to file rate cases every 12-15 months. Beyond the rate filings, management also plans to seek alternative rate recovery mechanisms to address regulatory lag, which has been a persistent issue for each of the PHI utilities. The rate lag results from reliance on historical test years with limited forward adjustments and an extended review process that have combined to prevent the companies from earning their authorized returns.

Key Rating Drivers for Exelon Generation Company, LLC
Challenging Operating Environment: Weak natural gas and power prices are expected by Fitch to continue to restrict the earnings power and cash flow of Exgen's competitive generation business. Demand is also expected to remain sluggish due in large part to energy efficiency measures and slow economic growth. Favorably, ZEC programs in NY and IL and the capacity pricing mechanism in the PJM Interconnection LLC (PJM), where the majority of Exgen's capacity is located, provide a meaningful boost to earnings and cash flow.

Hedging Strategy: To moderate cash flow volatility and commodity price risk, Exgen employs a three-year ratable hedging strategy. The strategy targets a financial hedge range of 90%-98% in the prompt year, 70%-90% in year two, and 50%-70% year three. As of Dec. 31, 2016, the percentage of expected generation hedged was 91% -94%, 56%-59% for 2018 and 28%-31% in 2017, 2018 and 2019, respectively. The hedging strategy includes forward power contracts and financial hedges, primarily natural gas options, as well as a significant retail electricity business that complements its wholesale energy business. When forward market prices are below Exgen's expectation the company has operated below its ratable hedging policy, which has recently been the case in the outer years.

Dwindling Growth Capex: Management has slashed Exgen's growth capex budget and instead will be harvesting cash for debt reduction and investments in its utility businesses. Planned growth capex declines to $850 million in 2017 from $1.2 billion in 2016 and then falls to about $175 million in 2018 and $125 million in the following two years. Maintenance capex is also declining from a peak of $1.1 billion in 2015 to an estimated $875 million in 2020. Any growth investments are expected to be in fully contracted assets

Nuclear Operating Risk: Exgen derives approximately 88% of its generation output from nuclear facilities and the remainder from renewables and oil and gas. The nuclear operating risk is mitigated by the diversity of owning 25 nuclear units (including the pending acquisition of the Fitzpatrick plant) at 15 sites in three regions and Exgen's long record of strong nuclear performance. Over the past three years the nuclear capacity factor averaged approximately 94% including a record 94.6% in 2016 compared to the industry average of about 90%. In 2016, the company also had its shortest average refueling duration of just over 22 days. Because of their high fixed costs, the long-term operation of the nuclear fleet is challenged in the current low power price environment, particularly in regions with insufficient capacity payments and/or a ZEC program that values low carbon emissions.

Improving Financial Position: Exgen's financial position is sound and should improve with the implementation of the ZEC programs in NY and IL and the planned debt reduction. After a temporary rise in 2017 to about 4x related to the tax payment financing and lower earnings prior to a full year of ZEC payments, Fitch estimates debt/EBITDAR will trend down to about 3x over the next several years. The leverage measure includes about $2.55 billion of non-recourse debt that provides additional financial flexibility and optionality.

Key Rating Drivers for Commonwealth Edison Co.

Solid Credit Profile: ComEd's financial position is consistent with its current ratings and Stable Outlook. A formula rate plan (FRP) that allows for annual rate adjustments should allow ComEd to sustain its financial position over the next few years. Fitch estimates Debt/EBITDAR and FFO lease-adjusted leverage will average approximately 3.5x and 4.0x, respectively, over the next few years and FFO fixed charge coverage 6.0x, which is well positioned within the current rating level.

Regulatory Predictability: The FRP implemented in October 2011 provides increased regulatory predictability in IL. The FRP is filed annually and recognizes forward-looking capital additions and includes a true-up mechanism reducing, albeit not eliminating, rate lag. Recent legislation extended the FRP to 2022. One draw-back is the formulaic return on equity (ROE) calculation, which in the current low interest rate environment results in a below-average ROE.

Constructive Rate Decision: ComEd's most recent FRP decision, issued on Dec. 6, 2016 was supportive of ComEd's credit quality. The company was authorized a $130.9 million revenue increase - virtually 100% of the company's request. The 8.64% ROE used in the proceeding is well below the industry average of about 9.6% due to the legislative imposed ROE calculation, which is based on the 12-month average of the 30-year treasury plus a 580bp risk premium. Based on the formulaic approach, a rising interest rate environment will drive up the ROE in future rate proceedings with minimal lag given the annual filings.

Rising Capex: Capex is forecasted to rise to $7.7 billion over the four-year period 2017-2020, well above the prior four years and about $300 million higher than the August 2016 forecast for the same period. The overall level of expenditures is primarily driven by the Energy Infrastructure modernization Act (EIMA), which requires investments in system reliability and smart grid deployment and provides for recovery through the FRP filings. A recent increase in capex reflects provisions of the Future Energy Jobs Act (FEJA) in IL that allows ComEd to earn a return on energy-efficient investments. The higher capex also reflects an increase in transmission expenditures, which are subject to credit supportive FERC policies. Expenditures are expected to peak in 2017 at $2.2 billion and then trend down to about $1.8 billion in 2020. The higher expenditures should also increase earnings and cash flow.

Decoupling: The FEJA includes a provision that eliminates the +/-50bp collar in the FRP, which effectively decouples energy usage from revenue.

Key Rating Drivers for PECO Energy Co.

Strong Credit Profile: PECO's already strong credit ratios improved in 2016 and are well in excess of the targets for the current rating level. Fitch attributes the improvement, which exceeded Fitch's expectations, to a rate increase implemented in January 2016, favorable weather and lower storm expenses. With a return to normal weather and storm related costs and moderately rising operating and maintenance expenses, flat sales, and rising capex, some attrition is likely in 2017, but credit metrics are expected to remain strong within the current rating level. Over the next few years Fitch estimates debt/EBITDAR and FFO lease-adjusted leverage will average approximately 3.4x and 3.7x, respectively, compared to 2.8x for both ratios in 2016.

Alternative Regulatory Model: Fitch considers the regulatory legislation enacted in Pennsylvania in February 2012 (HB 1294) to be supportive of credit quality. The law allows the PA Public Utility Commission (PUC) to establish a distribution system investment charge (DSIC) to provide timely recovery of certain capital costs incurred to enhance electric and gas distribution systems. Once implemented the DSIC is updated quarterly. The legislation also allows traditional rate filings to include fully forecasted test years, further reducing regulatory lag.

Constructive Rate Order: PECO implemented a $127 million rate increase effective Jan. 1, 2016 following the approval of a settlement agreement by the PUC. The increase equates to about two-thirds of PECO's $190.1 million rate request. The settlement agreement also includes implementation of a DSIC for the company's electric operations, but not until eligible investments exceed the Dec. 31, 2016 levels projected by PECO.

Demand Reduction: Pennsylvania Act 129 (Act 129) requires PA utilities to reduce electric consumption with the companies absorbing the associated revenue loss between rate cases. The PUC recently approved phase III of the energy efficiency and consumption plan requiring PECO to reduce consumption by an additional 2% by 2021. PECO met the initial consumption reduction targets of 1% by 2011 and 3% by May 31, 2013. Importantly, Act 129 provides a surcharge to recover implementation costs (other than lost sales) on a timely basis.

Rising Capex: A planned rise in capex and the associated financing and operating costs are expected to moderately weaken financial measures. Capex is expected to aggregate $3.1 billion over the next four years, an average of $750 million annually, which is meaningfully higher than the $650 million of annual capex over the past three years. The financial impact is moderated by PECO's strong internal cash generation and the surcharge mechanism associated with Act 129.

Key Rating Drivers for Baltimore Gas and Electric Co.

Strong Credit Metrics: BGE credit metrics are strong for the current rating level primarily due to a series of electric and gas base rate increases implemented over the past four years aggregating $345 million, including electric and gas rate increases of $92 million effective July 2016. Fitch expects credit metrics to remain strong for the rating level with debt/EBITDAR and FFO lease-adjusted leverage expected to average of about 3.1x and 4.0x, respectively.

Regulatory Recovery Mechanisms: Rate adjustment mechanisms outside of base rate cases tend to stabilize BGE's cash flow. These include decoupling for both residential and commercial gas and electricity sales, and purchased gas and purchased power recovery mechanisms. In 2014, Maryland regulators approved a rider to recover gas infrastructure improvements and have approved two subsequent surcharges. Certain capex is also subject to tracking mechanisms, including energy efficiency.

Recent Rate Case: In June 2016, BGE was authorized electric and gas base rate increases aggregating $92 million or about 47% of the company's $194 million request. The majority of the rate requests were to recover smart grid investments the company had been deferring since 2010. The increase was based on equity returns of 9.75% and 9.65% for the electric and gas operation, respectively.

Ring-fencing: BGE has several measures in place that ring-fence the utility from parent EXC and affiliates. These include maintaining separate books and records, separate credit facilities and CP programs and allocating parent expenses according to a Cost Allocation Manual. Also, BGE does not participate in the EXC corporate money pool, and BGE's financings do not contain any provisions that could result in cross defaults between BGE and EXC.

Key Rating Drivers for Potomac Electric Power Co.

Credit Metrics: Despite avoiding rate filings during the nearly two-year merger review period, credit quality measures, after adjusting for non-recurring merger related costs, have been relatively stable and generally in line with the current rating, which Fitch attributes to reduced capex and equity support from EXC. A rate increase implemented in Pepco's Maryland jurisdiction in November 2016 along with a pending rate case in District of Columbia (DC) that should be decided in July 2017 and an aggressive rate strategy should enable Pepco to maintain a credit profile that supports current ratings.

Exelon Merger: The 2016 acquisition of Pepco and its affiliates by EXC provides a stronger, better capitalized parent company with far greater financial flexibility that supports current ratings. Fitch expects Pepco to benefit from improved operating efficiency and lower costs as a result of the merger.

Revenue Stability: Pepco's regulated electric transmission and distribution operations have minimal commodity, volumetric and environmental exposure. Decoupling mechanisms that eliminate the revenue impact of weather and energy efficiency are in effect in both Maryland and the DC and both jurisdictions permit full recovery of power procurement costs. The significant presence of state and federal government customers also contributes to revenue stability.

Ring Fencing: Pepco has several ring-fencing measures in place that protect bondholders from the activities of its parent and affiliates including maintaining a rolling 48% equity ratio, maintenance of separate books and records and separate debt. In addition, a bankruptcy remote special purpose entity (SPE) holds 100% of the equity of direct parent PHI. The Board of Directors of the SPE has four directors, one of which is independent.

Persistent Regulatory Lag: Regulatory lag has been an on-going issue in each of Pepco's regulatory jurisdictions. The rate lag, which results from the reliance on historical test years with limited forward adjustments and an extended review process, restricts Pepco's ability to earn its authorized ROE and adversely affects credit quality measures. The lag is particularly troublesome during periods of high capex. Moreover, ROE authorizations have generally been below the industry average, particularly in Maryland.

Base Rate Increase: Pepco implemented a $52.5 million base rate increase in MD effective November 2016. The rate increase was roughly 50% of the company's revised request and was based on a 9.55% ROE which is generally in line with the industry average (9.6%) and slightly below the 9.62% allowed in the company's last rate case decided in November 2014. Given the reliance on a historical test year (2015) and average rate base, Pepco is unlikely to be able to earn the authorized ROE in the first year rates are in effect.

Significant Capital Program: Capex ramps up to approximately $2.9 billion over 2017-2020, about 27% above the prior four-year outlays of $2.3 billion. The increase is largely to improve the reliability of the electric distribution system and to replace an aging infrastructure. The large capex budget is particularly challenging given the rate lag issues and relatively low authorized ROEs and will require regular rate filings to maintain credit quality.

Rate strategy: After avoiding rate cases during the two-year review of the EXC merger review, management plans to pursue rate cases every 12-15 months and to pursue alternative rate-making policies to alleviate regulatory lag.

Key Rating Drivers for Delmarva Power and Light Co.

Exelon Merger: The acquisition of DPL and its affiliates by EXC provides a stronger, better capitalized parent company with far greater financial flexibility that supports current ratings. Fitch expects DPL to benefit from improved operating efficiency and lower costs as a result of the merger.

Credit Metrics: Credit quality measures are moderately weak for the current rating level following two-years of rate case avoidance, but should improve as the company implements its strategy of annual rate filings. Initially, the expected improvement will be hindered by rate concessions agreed to as part of the merger approval process. Fitch expects equity support from EXC to fund the rate concessions and to maintain a balanced capital structure.

Decoupling Reduces Business Risk: In MD, which accounts for about 35% of retail electric sales, DPL operates with a Bill Stabilization Adjustment (BSA) that reduces volumetric exposure and stabilizes revenue. The BSA provides for a fixed distribution charge per a customer- rather than a usage-based charge. Any deviation from the approved charge is either recovered from or credited to customers effectively decoupling revenue from sales.

Moderate Capex: Projected capex of $1.4 billion over the next four years is not materially different than the prior four-year period and projected to increase rate base by a moderate 4% annually. Nonetheless the outlays will require a moderate level of external funding.

Ring Fencing: DPL has several ring-fencing measures in place that protect bondholders from the activities of its parent and affiliates including maintaining a rolling 48% equity ratio, maintenance of separate books and records and separate debt. In addition, a bankruptcy-remote SPE holds 100% of the equity of direct parent PHI. The Board of Directors of the SPE has four directors, one of which is independent.

Rate strategy: After avoiding rate cases during the two-year review of the EXC merger review, management plans to pursue rate cases every 12-15 months and to pursue alternative rate-making policies to alleviate regulatory lag.

Key Rating Drivers for Atlantic Electric Co.

Constructive Rate Settlement: Following a settlement ACE was authorized a $45 million rate increase, or about 57% of the company's rate request effective Aug. 24, 2016. Although the settlement did little to address rate lag issues it did allow rates to become effective five months after filing rather than the more typical 12 months in New Jersey and should have a positive effect on 2017 credit metrics.

Exelon Merger: The acquisition of ACE and its affiliates by EXC provides a stronger, better capitalized parent company with far greater financial flexibility that supports current ratings. Fitch expects ACE to benefit from improved operating efficiency and lower costs as a result of the merger.

Ring Fencing: ACE has several ring-fencing measures in place that protect bondholders from the activities of its parent and affiliates including maintaining a rolling 48% equity ratio, maintenance of separate books and records and separate debt. In addition, a bankruptcy remote special purpose entity (SPE) holds 100% of the equity of direct parent PHI. The Board of Directors of the SPE has four directors, one of which is independent.

Rate strategy: After avoiding rate cases during the two-year review of the EXC merger review, management plans to pursue rate cases every 12-15 months and to pursue alternative rate-making policies to alleviate regulatory lag.

KEY ASSUMPTIONS

--Common stock dividend increased 2.5% annually
--Subsidiary dividends managed to achieve last allowed equity ratio
--ComEd formula rate plan remains in effect
--Each of the PHI subsidiaries file rate cases annually; PECO files an electric rate increase and BGE an electric and gas case over the forecast period
--FERC formula rate plan updated annually for each utility
--ZEC plans in Illinois and New York remain in effect
--Relatively flat sales and customer growth for each utility
--EXC equity units remarketed in 2017 adding $1.15 of cash (equity)
--Forward gas and power prices as of Dec. 31, 2016 plus existing hedges

RATING SENSITIVITIES
Exelon Corp.
Positive Rating Action: Positive action is unlikely over the next few years given the current business mix and leverage, but could occur if debt/EBITDAR is reduced below 3.5x and lease- adjusted leverage is sustained below 4.2x.

Negative Rating Action: Negative action may be considered if FFO lease-adjusted leverage exceeds 4.5x on a consistent basis. A renewed emphasis on non-regulated investments could also have an adverse effect on ratings.

Commonwealth Edison Co.
Positive Rating Action: Positive action may be considered if Fitch were to expect debt/EBITDAR to fall below 3.4x on a consistent basis, while FFO lease-adjusted leverage is maintained below 4.0x and FFO fixed charge coverage above 4.7x.

Negative Rating Action: Negative action may be considered if Fitch were to expect FFO lease-adjusted leverage to exceed 4.8x and/or FFO fixed charge coverage to fall below 4.7x on a sustained basis.

A change in the FRP or other regulatory policies that inhibit ComEd's ability to recover invested capital or commodity costs on a timely basis could also lead to lower ratings.

PECO
Positive Rating Action: Positive action could be considered if adjusted debt/EBITDAR and FFO lease-adjusted debt remains comfortably below 3.4x and 4.0x, respectively.

Negative Rating Action: Given the headroom in existing ratings a downgrade is not likely, but could be considered if debt/EBITDAR and FFO lease-adjusted debt exceeded 3.7x and 4.8x, respectively, on a consistent basis.

BGE
Positive Rating Action: Positive action may be considered if BGE is able to maintain debt/EBITDAR and FFO lease-adjusted leverage comfortably below 3.4x and 4.0x, respectively.

Negative Rating Action: Given the headroom in existing ratings a downgrade is not likely, but could occur if adjusted debt/EBITDAR and FFO lease-adjusted leverage exceed 3.7x and 4.8x on a consistent basis.

Pepco
Positive Rating Action: Positive action is not expected in the near term, but could occur if adjusted debt/EBITDAR falls comfortably below 3.7x on a sustainable basis and FFO lease-adjusted leverage is maintained below 5.0x.

Negative Rating Action: Negative action may be considered if FFO lease-adjusted leverage is above 5.0x or FFO coverage is below 4.3x on a consistent basis.

DPL
Positive Rating Action: Positive action is not expected in the near term given the current level of credit protection measures, but could occur if debt/EBITDAR fell below 3.4x on a sustainable basis.

Negative Rating Action: Negative action may be considered if Debt/EBITDAR and FFO lease-adjusted leverage is above 3.7x and 4.8x and FFO fixed charge coverage fell below 4.7x on a consistent basis.

ACE
Positive Rating Action: Positive action is not likely in the near term, but could occur if, on a sustainable basis, debt/EBITDAR falls comfortably below 3.7x, lease adjusted FFO lease-adjusted leverage is below 5.0x and FFO coverage exceeds 4.5x.

Negative Rating Action: Negative action may be considered if FFO lease-adjusted leverage is above 5.0x and FFO fixed charge coverage below 4.3x on a consistent basis.

Exgen
Positive Rating Action: An upgrade is unlikely given the inherent cash flow volatility of the competitive generation business.

Negative Rating Action: Negative action may be considered if debt/EBITDAR exceeded 3.3x on a consistent basis. A renewed emphasis on non-regulated investments could also have an adverse effect on ratings.

Pepco Holdings
Positive Rating Action: An upgrade is unlikely given the current financial position, but could be considered if debt/EBITDAR and FFO lease-adjusted leverage fell below 3.7x and 5.0x, respectively.

Negative Rating Action: Negative rting action may be considered if FFO lease-adjusted leverage exceeds 5.0x and fixed charge coverage falls below 4.3x on a consistent basis.

LIQUIDITY
CP borrowings and committed bank credit facilities provide ample liquidity. EXC and each of its operating subsidiaries have credit facilities in place. EXC and its legacy subsidiaries maintain separate credit facilities and CP programs and Pepco, DPL and ACE share a $4,900 million facility with sub-borrowing limits for each entity (PHI does not have a credit facility or CP program). The syndicated credit facilities at EXC and its subsidiaries aggregate $9 billion and support CP programs; Exgen also has a $500 million bilateral credit agreement and each of the six operating utilities have credit agreements with minority and community banks within their service territories that are solely utilized to issue letters of credit. The syndicated facilities include $600 million at EXC, $5.3 billion at Exgen, $1 billion at ComEd and $600 million each at both PECO and BGE, and $300 million at Pepco, DPL and ACE. The syndicated facilities support CP programs throughout the EXC organization.

EXC also operates a corporate money pool with subsidiaries Exgen, PECO and PHI. EXC can lend to the money pool but not borrow from the pool. ComEd, BGE, Pepco, DPL, and ACE are excluded from the money pool due to ring-fencing measures.

FULL LIST OF RATING ACTIONS
Fitch has affirmed the following ratings with a Stable Outlook:

Exelon Corp.
--IDR at 'BBB';
--Senior unsecured debt at 'BBB';
--Junior subordinated debt at 'BB+';
--Short-term IDR/Commercial paper at 'F2'.

Exelon Generation Co., LLC
--IDR at 'BBB';
--Senior unsecured debt at 'BBB';
--Short-term IDR/Commercial paper at 'F2'.

Commonwealth Edison Company
--IDR at 'BBB+';
--First mortgage bonds at 'A';
--Senior unsecured debt at 'A-';
--Preferred stock at 'BBB';
--Short-term IDR/Commercial paper at 'F2'.

ComEd Financing Trust III
--Preferred stock at 'BBB'.

PECO Energy Co.
--IDR at 'BBB+';
--First mortgage bonds at 'A';
--Senior unsecured debt at 'A-';
--Short-term IDR/Commercial paper/ at 'F2'.

PECO Energy Capital Trust III
--Preferred stock at 'BBB'.

PECO Energy Capital Trust IV
--Preferred stock at 'BBB'.

Baltimore Gas and Electric Company
--IDR at 'BBB+';
--First mortgage bonds at 'A';
--Senior unsecured debt at 'A-';
--Pollution Control Revenue Bonds at 'A-';
--Preferred stock at 'BBB';
--Short-term IDR/Commercial paper at 'F2'.

BGE Capital Trust II

--Preferred stock at 'BBB'.

Pepco Holdings LLC
--IDR at 'BBB';
--Senior unsecured notes at 'BBB';

Potomac Electric Power Company
--IDR at 'BBB';
--Secured debt at 'A-';
--Short-term IDR/commercial paper at 'F2'.

Delmarva Power & Light Co.
--IDR at 'BBB+';
--Secured debt and PCRBs at 'A';
--Senior unsecured notes at 'A-';
--Short-term IDR/commercial paper at 'F2'.

Atlantic City Electric Company
--IDR at 'BBB';
--Secured debt at 'A-';
--Senior unsecured notes at 'BBB+';
--Short-term IDR/commercial paper at 'F2'.

Fitch has withdrawn the following ratings:

Pepco Holdings LLC.
--Short-term IDR/commercial paper.

DETAILS OF THIS SERVICE FOR RATINGS FOR WHICH THE LEAD ANALYST IS BASED IN AN EU-REGISTERED ENTITY CAN BE FOUND ON THE ENTITY SUMMARY PAGE FOR THIS ISSUER ON THE FITCH WEBSITE.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third- party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US$1,000 to US$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US$10,000 to US$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial

Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001

Solicitation Status

Fitch Ratings was paid to determine each credit rating announced in this Rating Action Commentary (RAC) by the obligatory being rated or the issuer, underwriter, depositor, or sponsor of the security or money market instrument being rated, except for the following:

Endorsement Policy - Fitch's approach to ratings endorsement so that ratings produced outside the EU may be used by regulated entities within the EU for regulatory purposes, pursuant to the terms of the EU Regulation with respect to credit rating agencies, can be found on the EU Regulatory Disclosures (https://www.fitchratings.com/regulatory) page. The endorsement status of all International ratings is provided within the entity summary page for each rated entity and in the transaction detail pages for all structured finance transactions on the Fitch website. These disclosures are updated on a daily basis.

Exelon Corporation (/gws/en/esp/issr/80464126)

FitchRatings

Fitch Downgrades Exelon Corp. IDR to 'BBB'; Outlook Stable

Fitch Ratings-New York-25 March 2016: Fitch Ratings has downgraded Exelon Corp.'s (EXC) Issuer Default Rating and senior unsecured debt ratings to 'BBB' from 'BBB+ and the junior subordinated debt rating to 'BB+' from 'BBB-'. The commercial paper (CP) rating is affirmed at 'F2'. The ratings are removed from Rating Watch Negative where they were placed in April 2014 following the announcement of an agreement to acquire Pepco Holdings, Inc. (PHI) in an all-cash transaction. The Rating Outlook is Stable. The ratings of EXC's four operating subsidiaries are unaffected by this rating action.

The downgrades reflect the increased consolidated leverage that results from the PHI acquisition and to a lesser extent the weak operating environment of its competitive generation business. The higher leverage is a product of the acquisition financing, which included approximately 65% debt and consolidation of the more levered PHI. The rise in leverage is softened by a modest reduction in business risk from the increase in regulated earnings. Post-merger regulated earnings are expected to account for roughly 65% of 2017 consolidated earnings compared to an estimated 55% without the acquisition.

KEY RATING DRIVERS

Increased Leverage: The acquisition results in a meaningful increase in consolidated leverage compared to EXC's current and projected stand-alone financial condition. Fitch estimates adjusted debt to EBITDAR will approximate 4.25x - 4.5x in the first full year after the merger compared to about 3.0x - 3.5x on a stand-alone basis. The rise in leverage is driven by the combination of the acquisition debt to be issued by EXC and the assumption of existing PHI consolidated debt. Funding for the $6.9 billion acquisition plus fees, integration costs and regulatory commitments includes approximately $4.2 billion of EXC corporate debt and $1 billion of mandatory convertible debt (issued in 2014). Under Fitch criteria the convertible debt issued by EXC, in the form of equity units, receives no equity credit. The remainder of the acquisition financing consisted of common stock and proceeds from asset sales. In addition, EXC will assume approximately $6 billion of PHI consolidated debt.

Regulatory Concessions: To gain merger approval, EXC agreed to a number of rate concessions in each of PHI's four regulatory jurisdictions aggregating to an estimated $350 million - $400 million, including customer rate credits and deferral of rate increases and funding for a variety of customer investment funds largely related to energy efficiency, renewable energy programs, and low-income customer programs. Moreover the PHI utility subsidiaries deferred rate filings during the nearly two-year merger review process that increased PHI's leverage and weakened its credit quality.

Ring Fencing: Each of the utility commissions imposed several ring-fencing provisions to protect the PHI utilities, but none are considered to be onerous or to impair EXC's credit quality.

The requirements include:
--Potomac Electric Power Co. (Pepco), Delmarva Power & Light Co. (DPL) and Atlantic City Electric Co. (ACE) maintaining a rolling 48% equity ratio (no other dividend restrictions)
--Creation of a bankruptcy-remote special purpose entity (SPE) to hold 100% of PHI equity
--Maintenance of separate books and records
--Pepco, DPL and ACE will maintain separate debt
--The Board of Directors of the SPE will have four directors, one of which will be independent
--The seven-member PHI board will include one director from each of PHI's utility subsidiaries

Corporate Structure: PHI will be structured as a subsidiary of EXC and the parent of its existing three regulated transmission and distribution utilities.

Utility Earnings Contribution: The acquisition furthers EXC's goal of increasing regulated earnings and lowering business risk. Post-merger regulated earnings are expected to account for roughly 65% of consolidated earnings from its six regulated utilities compared to an estimated 55% - 60% without the acquisition. Even without the PHI acquisition the regulated earnings contribution was expected to increase due to significant amount of planned utility investment, particularly at Commonwealth Edison Co (ComEd).

Competitive Generation Business: The operating environment for EXC's competitive generation business is expected to remain challenging with sluggish demand and low natural gas and power prices expected by Fitch to persist for several years. Favorably, the business is well capitalized and the credit profile has stabilized during a low point in the commodity cycle. In addition, management employs a three-year hedging strategy that moderates earnings and cash flow volatility.

KEY ASSUMPTIONS
--Relatively flat load growth
--Each of the PHI subsidiaries file rate cases in 2016 and every 12-15 months thereafter
--Commonwealth Edison Co. formula rate plan updated annually
--$1 billion in cash from the remarketing of junior subordinated debt in 2017
--Henry Hub Natural gas prices as of Dec. 31, 2015
--Nihub and PJM forward power prices as of Dec. 31, 2015

RATING SENSITIVITIES
Positive Rating Action: An upgrade seems unlikely over the next few years given the rise in leverage associated with the PHI acquisition, but could occur if on a sustained basis debt/EBITDAR is reduced below 3.5x while lease-adjusted FFO leverage is below 4.25x.

Negative: Ratings could be lowered if lease adjusted FFO leverage exceeds 4.5x on a sustained basis. A renewed emphasis on non-regulated investments could also have an adverse effect on ratings.

LIQUIDITY

Cash flow from operations, CP borrowings and committed bank credit facilities provide ample liquidity. EXC and each of its operating subsidiaries maintain separate credit facilities and CP programs. Syndicated credit facilities aggregate to $8 billion (excluding minority and community banks) and bilateral agreements an additional $400 million. The syndicated facilities include $500 million at EXC, $5.3 billion at Exelon Generation Co., LLC (Exgen), $1 billion at ComEd and $600 million each at PECO Energy Co. (PECO) and Baltimore Gas and Electric Co. (BGE). The syndicated facilities support CP programs of equal size and have five-year terms.

EXC also operates a corporate money pool with subsidiaries Exgen and PECO. EXC can lend to the money pool, but not borrow from the pool. ComEd and BGE are excluded from the money pool due to ring fencing measures.

Fitch has downgraded the following ratings:

Exelon Corp.
--Long-term IDR to 'BBB' from 'BBB+';
--Senior unsecured debt to 'BBB' from 'BBB+';
--Junior subordinated debt to 'BB+' from 'BBB-'.

Fitch has affirmed the following ratings:
--Commercial paper at 'F2;
--Short-term IDR at 'F2'

Exelon Corporation (/gws/en/esp/issr/80464126)

FitchRatings

Fitch Rates Exelon Corp.'s $1.8B Notes 'BBB'

Fitch Ratings-New York-04 April 2016: Fitch Ratings has assigned a 'BBB' rating to Exelon Corp.'s (EXC) new $1.8 billion issue of notes to be offered in multiple tranches maturing in five, 10 and 30 years. Proceeds will be used to retire short-term debt incurred to complete the funding of the recently closed Pepco Holdings LLC acquisition and for general corporate purposes. The notes will rank equally with all other senior unsecured debt and will be senior in right of payment to all subordinated debt. The Rating Outlook is Stable.

KEY RATING DRIVERS

Growing Utility Earnings Contribution: The recent acquisition of Pepco Holdings LLC furthers EXC's goal of increasing regulated earnings and lowering business risk. Post-merger regulated earnings are expected to account for roughly 65% of consolidated earnings from its six regulated utilities compared to an estimated 55% - 60% without the acquisition. Even without the PHI acquisition the regulated earnings contribution was expected to increase due to the significant amount of planned utility investment, particularly at Commonwealth Edison Co (ComEd).

Increased leverage: The increase in regulated earnings was accompanied by an increase in leverage to fund the Pepco Holdings LLC acquisition. Fitch estimates adjusted debt-to-EBITDAR will be approximately 4.25x - 4.5x in the first full year after the merger compared to about 3.0x - 3.5x on a stand-alone basis.

Competitive Generation Business: The ratings also consider the more volatile earnings and cash flow contribution of EXC's competitive generation business. The operating environment is challenging with sluggish demand and low natural gas and power prices expected by Fitch to persist for several years. Partly offsetting the low energy prices is the recent rise in forward capacity prices in the PJM interconnection where the majority of EXC's merchant generating assets are located. The business is well capitalized and employs a three-year hedging strategy that moderates commodity exposure and the associated volatility.

Growing Utility Investments: Going forward, the majority of capital investment is allocated to EXC's utility subsidiaries, which should provide a more stable earnings base. The majority of the regulated investments are at ComEd, its largest utility, which operates with a constructive formula rate plan that provides timely recovery of invested capital.

Regulatory Concessions: To gain merger approval, EXC agreed to a number of rate concessions in each of PHI's four regulatory jurisdictions aggregating an estimated $350 million - $400 million, including customer rate credits and deferral of rate increases and funding for a variety of customer investment funds largely related to energy efficiency, renewable energy programs, and low-income customer programs

Ring Fencing: Each of the utility commissions imposed several ring-fencing provisions to protect the Pepco Holdings LLC utilities, but none are considered to be onerous or likely to impair EXC's credit quality.

The requirements include:
--Potomac Electric Power Co. (Pepco), Delmarva Power & Light Co. (DPL) and Atlantic City Electric Co. (ACE) maintaining a rolling 48% equity ratio (no other dividend restrictions)
--Creation of a bankruptcy-remote special purpose entity (SPE) to hold 100% of PHI equity
--Maintenance of separate books and records
--Pepco, DPL and ACE will maintain separate debt
--The Board of Directors of the SPE will have four directors, one of which will be independent
--The seven-member PHI board will include one director from each of PHI's utility subsidiaries

KEY ASSUMPTIONS
--Relatively flat load growth
--Each of the PHI subsidiaries to file rate cases in 2016 and every 12-15 months thereafter
--Commonwealth Edison Co. formula rate plan updated annually
--$1 billion in cash from the remarketing of junior subordinated debt received in 2017
--Henry Hub Natural gas prices as of Dec. 31, 2015

--Nihub and PJM forward power prices as of Dec. 31, 2015

RATING SENSITIVITIES

Positive Rating Action: An upgrade seems unlikely over the next few years given the rise in leverage associated with the recent acquisition, but could occur if on a sustained basis debt/EBITDAR is reduced below 3.5x while lease-adjusted FFO leverage is below 4.25x.

Negative: Ratings could be lowered if lease adjusted FFO leverage exceeds 4.5x on a sustained basis. A renewed emphasis on non-regulated investments could also have an adverse impact on ratings.

LIQUIDITY

Cash flow from operations, commercial paper (CP) borrowings and committed bank credit facilities provide ample liquidity. EXC's syndicated credit facilities aggregate $8 billion (excluding minority and community banks) and bilateral agreements an additional $400 million. Pepco Holdings LLC has an additional $1.5 billion facility. The syndicated facilities support CP programs throughout the EXC organization.

Endorsement Policy - Fitch's approach to ratings endorsement so that ratings produced outside the EU may be used by regulated entities within the EU for regulatory purposes, pursuant to the terms of the EU Regulation with respect to credit rating agencies, can be found on the EU Regulatory Disclosures (https://www.fitchratings.com/regulatory) page. The endorsement status of all International ratings is provided within the entity summary page for each rated entity and in the transaction detail pages for all structured finance transactions on the Fitch website. These disclosures are updated on a daily basis.

FitchRatings

Fitch Downgrades Exelon Generation; Upgrades BGE; Revises Comed's Outlook to Positive

Fitch Ratings-New York-29 April 2015: Fitch Ratings has taken the following rating actions on Exelon Corp. (EXC) and its subsidiaries:

EXC
--'BBB+' Issuer Default Ratings (IDR) maintained on Rating Watch Negative;

Exelon Generation Co., LLC's (Exgen)
--IDR and senior unsecured debt ratings downgraded to 'BBB' from 'BBB+'; Rating Outlook revised to Stable from Negative;

Baltimore Gas and Electric Co.'s (BGE)
--IDR upgraded to 'BBB+' from 'BBB'; Outlook revised to Stable from Positive;

Commonwealth Edison Co.'s (Comed)
--IDR affirmed at 'BBB'' Outlook revised to Positive from Stable;

PECO Energy Co. (PECO)
--IDR affirmed at 'BBB+'; Outlook Stable.

A full list of the rating actions follows at the end of this release.

The Rating Watch Negative for EXC reflects the increased leverage that results from its pending acquisition of Pepco Holdings, Inc. (PHI, IDR rated 'BBB' by Fitch). The higher leverage reflects the acquisition financing plan and the consolidation of the more levered PHI. The rise in leverage is mitigated in part by an increase in regulated earnings.

The Exgen downgrade reflects Fitch's view that the previous ratings are inconsistent with the inherent cash flow volatility of the commodity sensitive competitive generation business. The ratings also reflect the on-going weakness in forward power and natural gas prices, soft power demand and aggressive competition in the retail supply business. Credit protection measures that are solidly within the investment grade category are also captured in the revised ratings.

The BGE upgrade reflects the improvement in the company's financial profile in recent years, which Fitch Ratings believes is sustainable, although on-going rate support will be required.

The Positive Ratings Outlook for Comed recognizes the uptrend in financial performance in recent years and the regulatory predictability in Illinois due to a formula rate plan (FRP) that provides for annual rate adjustments that reduce regulatory lag. On-going improvement is expected by Fitch in 2015.

KEY RATING DRIVERS FOR EXELON CORP.

Pending Merger: The proposed acquisition increases consolidated leverage compared to EXC's stand-alone financial position. The additional leverage reflects the financing plan that includes a significant debt component and the consolidation of the higher levered PHI. The financing plan for the $7.2 billion acquisition includes $3.5 billion of new EXC corporate debt, $1 billion from Exgen asset sales (completed in 2014), $1.7 billion of common equity and $1.0 billion of mandatorily convertible debt (issued in 2014). Under Fitch criteria the convertible debt issued by EXC, in the form of equity units, receives no equity credit. In addition, EXC will assume approximately $5.0 billion of PHI consolidated debt. The merger is expected to close in 2015 Q2 or Q3.

Utility Earnings Contribution: EXC's ratings benefit from the predictable and growing earnings and cash flow contributions of its three regulated utilities. The utilities accounted for approximately 53% of 2014 adjusted operating income growing to an estimated 60% (excluding the pending PHI acquisition) by 2019. The utilities have sound and/or improving credit profiles, limited commodity price risk and a relatively predictable earnings, balancing the more volatile earnings and cash flow of the commodity sensitive competitive generation business.
Competitive Generation Business: The operating environment for EXC's competitive generation business is

expected to remain challenging with sluggish demand and low natural gas and power prices likely to persist for several years. Favorably, the business is well capitalized and the credit profile has stabilized during a low point in the commodity cycle. In addition, management employs a three-year hedging strategy that moderates earnings and cash flow volatility.

Sound Financial Position: Despite the reduced earnings contribution of its competitive generation business, EXC has maintained a solid credit profile. Fitch estimates EXC's adjusted ratio of Debt/EBITDAR and FFO adjusted leverage will average approximately 3.5x and 3.0x, respectively, over the next two years and FFO fixed charge coverage about 6x, all of which supports existing ratings. Proforma for the PHI acquisition, 2015 Debt/EBITDAR, FFO adjusted leverage and FFO fixed charge coverage are estimated to approximate 4.2x, 3.5x and 5x, respectively. The proforma adjustments do not reflect the customer credits related to the proposed merger, which will weaken the credit metrics of PHI and its subsidiaries in the near-term.

KEY RATING DRIVERS FOR EXELON GENERATION COMPANY, LLC

Operating Environment: Fitch expects gas and power prices to remain at or near currently low levels over the next several years, which will continue to pressure credit metrics. However, several proposed market reforms in PJM and in Illinois are constructive and, if enacted, will increase gross margin, strengthen credit quality measures and reduce the risk of nuclear plant closures.

Market Reforms: Market reforms instituted in New England and proposed in PJM, where the majority of Exgen's generating capacity is located should, if enacted, have a material beneficial impact on Exgen. The PJM pay for performance capacity product has the potential to meaningfully enhance EBITDA in the 2020/2021 delivery year and lesser amounts beginning this year.

The performance capacity product, which raises the cap on capacity prices, is intended to reward generators that are capable of sustained operations during peak load periods and extreme weather events. With their base load dispatch profile and high capacity factors, nuclear units are likely beneficiaries of the incentive payments. The proposed capacity plan is not without risk since there are substantial penalties for non-performance.

In addition, the state of Illinois is considering legislation that, if enacted, would support the on-going operation of in-state nuclear units that are at risk of closure. The pending legislation would require electric utilities in Illinois to purchase energy credits from low carbon sources, including nuclear, to match 70% of the electricity used on the delivery system. Utilities would collect a charge from customers for procuring the low carbon power, subject to a cap of 2.015% annually. If the Illinois legislation is not enacted, Exgen is likely to shut several nuclear plants in Illinois.

Also, Exgen entered into a Reliability Services Agreement (RSA) with Rochester Gas and Electric Co. (RGE) that, pending FERC final approval, assures the continued operation of the Ginna nuclear unit through September 2018. Exgen will receive fixed capacity payments of $17.5 million per month ($210 million annually) plus 15% of the unit's energy and capacity revenue. Exgen will offer the energy and capacity into the NYISO spot markets.

Competitive Position: Exgen's largely nuclear-fueled generating fleet is positioned low on the dispatch curve and likely to be dispatched under any price scenario. The emission free nuclear portfolio is also well positioned to benefit from any uplift in power prices from higher environmental costs or reduced supply from coal retirements and the proposed market reforms alluded to above.

Financial Position: Exgen's financial position has stabilized in recent years, and remains solidly within the investment grade category. Fitch estimates Exgen's adjusted ratio of Debt/EBITDAR to range between 2.75x and 3.0x over the next two years and FFO adjusted leverage between 2.0x and 2.25x over the same period. FFO fixed charge coverage is expected to range between 7.25x and 6.5x.

Hedging Strategy: To moderate cash flow volatility and commodity price risk, Exgen employs a three-year ratable hedging strategy. The strategy targets a financial hedge range of 90% - 98% in the prompt year, 70% - 90% in year two and 50% - 70% year three.

Strong Nuclear Operator: Exgen has a long record of strong nuclear performance. Over the past three years the nuclear capacity factor averaged approximately 94% and re-fueling outages have averaged about 30 days, in each case setting the industry standard.

KEY RATING DRIVERS FOR COMMONWEALTH EDISON COMPANY

Strong Credit Metrics: Higher rates effective Jan. 1, 2014 and a FRP that allows for annual rate adjustments should allow Commonwealth Edison Co. (Comed) to sustain its currently sound financial position over the next few years. Fitch estimates Debt/EBITDAR and FFO leverage will approximate 3.75 and FFO fixed charge coverage 5x over the next two years, which is strong within the current rating level.

Regulatory Predictability: The FRP implemented in October 2011 provides increased regulatory predictability in Illinois. The FRP, which is filed annually, recognizes forward looking capital additions and includes a true-up mechanism reducing, albeit not eliminating, rate lag. However, due to the formulaic ROE determination, Comed is substantially impacted by changes in long-term treasury rates, which have declined since the last ROE determination. The most recently filed FRP requests a $50 million rate reduction. The FRP was enacted into law by the Illinois Energy Infrastructure Modernization Act (EIMA).

Constructive Rate Decision: In response to Comed's latest FRP filing, in December 2014, the Illinois Commerce Commission (ICC) approved a $232 million increase in distribution rates or approximately 86% of the company's rate request. An additional $23 million is recoverable through other rider mechanisms. Although the legislatively set ROE of 9.25% is below the industry average, Comed should have a reasonable opportunity to earn the allowed ROE.

Commodity Price Exposure: Ratings and credit quality benefit from the absence of commodity price exposure, which limits cash flow volatility and reduces business risk. Comed retains the provider of last resort obligation for customers that do not choose an alternative energy provider, but recovers its energy supply costs from customers through a monthly fuel adjustment mechanism.
Rising Capex: Capex is forecasted to rise to $6.0 billion over the three-year period 2015 - 2017, a significant increase over the $4.4 billion invested in the prior three years. The higher outlays are primarily driven by the EIMA, which requires investments in system reliability and smart grid deployment and provides for recovery through the FRP filings. The higher capex also reflects an increase in transmission expenditures, which are subject to credit supportive Federal Energy Regulatory Commission (FERC) regulatory policies.

Like-Kind-Exchange: Comed's exposure to the IRS's disallowance of the tax benefits associated with a like-kind-exchange continues to linger. As of Dec. 31, 2014, Comed's potential tax exposure, excluding penalties, is $310 million, which although significant should be manageable within the current rating. EXC has indicated that it will hold Comed harmless for any after-tax interest.

KEY RATING DRIVERS FOR PECO ENERGY COMPANY

Strong Credit Profile: Fitch expects PECO's credit measures to remain strong relative to both Fitch's target ratios for the current rating level and the companies' peer group of 'BBB+' distribution utilities. Adjusted debt/EBITDAR is expected to increase to a still strong 3.3x in 2015 and then range between 2.8x and 3.0x over the following two years, reflecting the impact of a pending rate case. FFO adjusted leverage is expected to range between 3.8x and 4.0x over the next three years. The modest downtrend reflects the expiration of bonus depreciation and rising debt, which had been relatively flat over the past few years.

Rate Increase: A requested rate increase filed in March 2015 is expected by Fitch to allow PECO to maintain its strong credit profile in 2016 and beyond. The rate filing seeks a $190.1 million (4.4%) revenue increase based on a 10.95% return on equity (ROE). A final decision on the rate filing is expected in December 2015. PECO's last rate increase was implemented in December 2010 based on an 11.75% ROE.

Manageable Capital Spending: Forecasted capex of approximately $1.6 billion over the next three years is relatively unchanged from the prior three-year period. However, unlike the prior period, PECO no longer has a large cash balance to help fund the expenditures and will be more reliant on external funding.
Low business Risk: Ratings and credit quality benefit from the absence of commodity price exposure and the associated cash flow volatility. PECO retains the provider of last resort obligation for customers that do not choose an alternative energy provider, but recovers its' electric and gas supply costs from customers through monthly fuel adjustment mechanisms.

Alternative Regulatory Model: Fitch considers the regulatory legislation enacted in Pennsylvania in February 2012 (HB 1294) to be supportive of credit quality. The law allows the Pennsylvania Public Utility Commission (PUC) to establish a distribution system investment charge (DSIC) to provide timely recovery of capital costs incurred to enhance electric and gas distribution systems. The DSIC will be updated quarterly. The new legislation also allows traditional rate filings to include fully forecasted test years further reducing regulatory lag.

Demand Reduction: Pennsylvania Act 129 (Act 129) requires Pennsylvania utilities to reduce electric consumption with the companies absorbing the associated revenue loss. PECO met the initial consumption reduction targets of 1% by 2011 and 3% by May 31, 2013. Act 129 also requires the installation of smart meter technology and the implementation of time of use rates and real time price plans. Importantly, Act 129 provides a surcharge mechanism to recover the implementation costs (other than lost sales) on a timely basis.

KEY RATING DRIVERS FOR BALTIMORE GAS AND ELECTRIC COMPANY

Credit Metrics: BGE's financial position is strong and supportive of the revised rating. The strong credit profile is largely due to electric and gas base rate increases implemented in February and December 2013. Subsequent electric and gas tariff increases effective December 2014 should allow BG&E to sustain its sound credit profile. Fitch expects Debt/EBITDAR and FFO fixed charge coverage to approximate the 2014 levels of 2.9x and 5.8x, respectively, with FFO adjusted leverage increasing to a still strong range of 3.25x - 3.5x.

Regulatory Recovery Mechanisms: Rate adjustment mechanisms outside of base rate cases tend to stabilize BGE's cash flow. These include decoupling for both residential and commercial gas and electricity sales and purchased gas and purchased power recovery mechanisms. In 2014, Maryland regulators' approved a rider to recover gas infrastructure improvements and has approved two subsequent surcharges. Certain capex is also subject to tracking mechanisms, including energy efficiency and smart grid/automated meter initiatives.

Base Rate Decision: In December 2014, BGE implemented electric and gas rate increases aggregating $60 million, the third in a 22-month period. Although the tariff increase was only about 33% of the amounts supported by BGE, the higher rates should support BGE's existing financial position. Importantly, the rate case was approved after a settlement agreement, which is highly unusual in Maryland, only five months after filing compared to the more typical seven month review period in fully litigated Maryland rate cases.

Ring-fencing: BGE's funding and Treasury practices result in moderate ring fencing of the utility from its parent Exelon Corp. (EXC) and affiliates. These include maintaining separate books and records and separate credit facilities and commercial paper programs and allocating parent expenses according to a Cost Allocation Manual. Also, BGE does not participate in the corporate money pool and BGE's financings do not contain any provisions that could result in cross defaults between BGE and EXC.

Dividend Restrictions Expired: Dividend restrictions imposed on BGE in 2012 as a condition for approving the merger between BGE's corporate parent EXC and Constellation Energy Group, Inc. expired Dec. 31, 2014, which will adversely affect future cash flow. Based on a mid-point of management's earnings guidance and a 70% payout ratio, 2015 dividends will be roughly $150 million.
Rating Sensitivities for Exelon Corp.

Positive Rating Action: Positive rating action is not likely at the present rating level given the meaningful earnings and cash flow contribution of the company's competitive generation business. However, ratings could be maintained if post acquisition debt/EBITDAR remains below 3.6x and FFO adjusted leverage below 4.5x.

Negative Rating Action: Ratings could be downgraded if post acquisition debt EBITDAR exceeds 3.6x and FFO adjusted leverage exceeds 4.5x on a sustained basis.

Onerous regulatory concessions or a renewed emphasis on non-regulated investments could also have an adverse effect on ratings.

Ratings could also be downgraded if the ratings of EXC's merchant generation business, Exgen, fall below 'BBB'.

RATING SENSITIVITIES FOR EXELON GENERATION CO., LLC

Positive Rating Action: Positive rating action is not likely given the inherent cash flow volatility in the competitive generation business.

Negative Rating Action: Ratings could be downgraded if debt/ EBITDAR exceed 3.25x and FFO adjusted leverage exceeds 3.5x on a sustained basis.

Ratings could also be downgraded if management were to pursue a more aggressive growth strategy.

RATING SENSITIVITIES FOR COMMONWEALTH EDISON CO.

Positive Rating Action: Reducing debt/EBITDAR below 3.6x on a sustained basis, while maintaining FFO leverage below 4.5x and FFO fixed charge coverage above 4.7x could lead to higher ratings.

Negative Rating Action: While not expected, FFO adjusted leverage above 5.25x and/or and FFO fixed charge coverage below 4.5x on a sustained basis could lead to lower ratings.

A change in the FRP or other regulatory policies that inhibit Comed's ability to recover invested capital or commodity costs on a timely basis could also lead to lower ratings.

RATING SENSITIVITIES FOR PECO ENERGY CO.

Positive Rating Action: Positive rating action is not likely prior a decision in its pending rate filing.

Ratings could be upgraded with a constructive rate decision that allows PECO to maintain debt/EBITDAR below 3.4x and FFO leverage below 4x on a sustained basis.

Negative Rating Action: A change in the regulatory policies that restrict PECO's ability to recover invested capital or commodity costs on a timely basis could also lead to lower ratings.

RATING SENSITIVITIES BALTIMORE GAS AND ELECTRIC CO.

Positive Rating Action: Reducing debt/EBITDAR below 3.4x on a sustained basis, while maintaining FFO leverage below 4x and FFO fixed charge coverage above 4.8x could lead to higher ratings.

Negative Rating Action: While not expected, FFO adjusted leverage above 4.75x and/or and FFO fixed charge coverage below 4.5x on a sustained basis could lead to lower ratings.

KEY ASSUMPTIONS

Commonwealth Edison Company
Electric load growth of about 0.5%
FRP updated annually

PECO Energy Company
Electric and gas load growth of about .5%
Electric distribution rate case effective Jan. 1, 2016
Targeted equity capital of 53% by 2015

Baltimore Gas and Electric Company
Electric customer growth of about 0.5%; flat growth for gas customers
BGE begins paying dividends in 2015
On-going rate support

Exelon Generation Co., LLC
Henry Hub Natural gas prices (as of Dec. 31, 2014)
Nihub and PJM forward power prices (as of Dec. 31, 2014)

Fitch maintains the Rating Watch Negative on the following:

Exelon Corp.
--IDR 'BBB+';
--Senior unsecured debt 'BBB+';
--Junior subordinated debt 'BBB-'.

Fitch has downgraded the following ratings:

Exelon Generation Co., LLC
--IDR to 'BBB' from 'BBB+';
--Senior unsecured debt to 'BBB' from 'BBB+';

The Rating Outlook is Stable.

Fitch has affirmed the following ratings::

Commonwealth Edison Company
--IDR at 'BBB';
--First mortgage bonds at 'A-';
--Senior unsecured debt at 'BBB+';
--Preferred stock at 'BBB-';
--Short-term IDR at 'F2';
--Commercial paper at 'F2'.

The Rating Outlook is Positive.

ComEd Financing Trust III
--Preferred stock at 'BBB-'.

Fitch has upgraded the following ratings:

Baltimore Gas and Electric Company
--IDR to 'BBB+' from 'BBB;
--First mortgage bonds to 'A' from 'A-';
--Senior unsecured debt to 'A-' from 'BBB+';
--Pollution Control Revenue Bonds to 'A-' from 'BBB+'
--Preferred stock to 'BBB' from 'BBB-';

The Rating Outlook is Stable.

Fitch has affirmed the following ratings:

PECO Energy Co.
--IDR at 'BBB+';
--First mortgage bonds at 'A';
--Senior unsecured debt at 'A-';
--Commercial paper at 'F2';
--Short-term IDR at 'F2'.

PECO Energy Capital Trust III
--Preferred stock at 'BBB'.

PECO Energy Capital Trust IV
--Preferred stock at 'BBB'.

The Rating Outlook is Stable.

Fitch has affirmed the following ratings:

Exelon Corp
--Commercial paper at 'F2';
--Short-term IDR at 'F2'.

Fitch has affirmed the following ratings:

Exelon Generation Co., LLC
--Commercial paper at 'F2';
--Short-term IDR at 'F2'.

Baltimore Gas and Electric Co.

--Short-term IDR at 'F2';
--Commercial paper at 'F2'.

FitchRatings

Fitch Upgrades ComEd; Affirms BGE, PECO and Exgen's Ratings

Fitch Ratings-New York-28 April 2016: Fitch Ratings has upgraded Commonwealth Edison Co.'s (ComEd) Long-Term Issuer Default Rating (IDR) to 'BBB+' from 'BBB' and revised the Rating Outlook to Stable from Positive. Fitch has also affirmed the 'BBB+' IDRs of PECO Energy Co. (PECO) and Baltimore Gas and Electric Co. (BGE) and the 'BBB' IDR of Exelon Generation Co., LLC (Exgen). The Rating Outlook for each entity is Stable.

The ratings of EXC and its newly acquired subsidiaries Pepco Holdings LLC, Potomac Electric Power Co., Delmarva Power and Light Co. and Atlantic City Electric Co. were previously addressed in a Rating Action Commentary dated March 25, 2016, and are unaffected by these actions.

A full list of the rating actions is shown at the end of this release.

ComEd's upgrade to 'BBB+' from 'BBB' reflects its sound credit profile and the regulatory predictability in Illinois due to a formula rate plan (FRP) that provides for annual rate adjustments. The FRP mitigates the impact of a rising capex program that is primarily driven by infrastructure modernization investments required by Illinois' Energy Infrastructure modernization Act.

The rating affirmations of PECO and BGE reflect credit metrics that are strong within the ratings level.

Exgen's rating affirmation reflects solid financial metrics that are consistent with the greater earnings and cash flow volatility of its competitive generation business.

Key Rating Drivers for Commonwealth Edison Company
Strong Credit Metrics: Fitch expects the annual FRP rate adjustments to allow ComEd to sustain and moderately improve its currently sound financial position over the next few years. Fitch estimates debt/EBITDAR and funds from operations (FFO) leverage will average approximately 3.75x and 3.5x, respectively over the next two years and FFO fixed charge coverage 6x, which is well positioned within the current rating level.

Regulatory Predictability: The FRP implemented in October 2011 provides increased regulatory predictability in Illinois. The FRP, which is filed annually, recognizes forward looking capital additions and includes a true-up mechanism reducing, albeit not eliminating, rate lag. The FRP was enacted into law by the Illinois Energy Infrastructure Modernization Act (EIMA).

Commodity Price Exposure: Ratings and credit quality benefit from the absence of commodity price exposure, which limits cash flow volatility and reduces business risk. Comed retains the provider of last resort obligation for customers that do not choose an alternative energy provider, but recovers its energy supply costs from customers through a monthly fuel adjustment mechanism.

Elevated Capex: Capex is forecasted to rise to $6.5 billion over the three-year period 2016-2018, approximately 18% above the $5.5 billion invested in the prior three years. The higher outlays, which peak at $2.4 billion in 2016, are primarily driven by the EIMA, which requires investments in system reliability and smart grid deployment and provides for recovery through the FRP filings. The higher capex also reflects an increase in transmission expenditures, which are subject to credit supportive Federal Energy Regulatory Commission (FERC) regulatory policies. The rise in expenditures began in 2015 and begins to trend downward starting in 2017.

Like-Kind-Exchange: Comed's exposure to the IRS's disallowance of the tax benefits associated with a like-kind-exchange continues to linger. As of Dec. 31, 2015, Comed's potential tax exposure is $280 million after consideration of EXC's agreement to hold Comed harmless for interest and penalties, which although significant should be manageable within the current rating.

Key Rating Drivers for PECO Energy Company
Strong Credit Profile: Aided by a rate increase implemented in January 2016, Fitch expects PECO's credit measures to remain strong relative to both Fitch's target ratios for the current rating level and the company's peer group of 'BBB+' rated distribution utilities, but moderately weaker than recent historical results. Over the next few years, Fitch estimates debt/EBITDAR and FFO-adjusted leverage will approximate 3.5x and 3.75x, respectively in 2018 compared to 3.0x and 3.1x in 2015. The modest increase reflects a rising capex plan and relatively flat sales growth.

Low Business Risk: Ratings and credit quality benefit from the absence of commodity price exposure and the associated cash flow volatility. PECO retains the provider of last resort obligation for customers that do not choose an alternative energy provider, but recovers its' electric and gas supply costs from customers through monthly fuel adjustment mechanisms. The constructive regulatory environment in Pennsylvania and the alternative regulatory model implemented to recover certain capital costs also reduces business risk.

Alternative Regulatory Model: Fitch considers the regulatory legislation enacted in Pennsylvania in February 2012 (HB 1294) to be supportive of credit quality. The law allows the Pennsylvania Public Utility Commission (PUC) to establish a distribution system investment charge (DSIC) to provide timely recovery of certain capital costs incurred to enhance electric and gas distribution systems. Once implemented, the DSIC is updated quarterly. The legislation also allows traditional rate filings to include fully forecasted test years further reducing regulatory lag.

Constructive Rate Order: PECO implemented a $127 million rate increase effective Jan. 1, 2016 following the approval of a settlement agreement by the PUC. The approved increase equates to about two-thirds of PECO's $190.1 million rate request. The settlement agreement also includes implementation of a DSIC for the company's electric operations, but not until eligible investments exceed the Dec. 31, 2016 levels projected by PECO.

Demand Reduction: Pennsylvania Act 129 (Act 129) requires Pennsylvania utilities to reduce electric consumption with the companies absorbing the associated revenue loss between rate cases. The PUC recently approved phase III of the energy efficiency and consumption plan requiring PECO to further reduce consumption by 2021. PECO met the initial consumption reduction targets of 1% by 2011 and 3% by May 31, 2013. Importantly, Act 129 provides a surcharge to recover implementation costs (other than lost sales) on a timely basis.

Rising Capex: Capex is forecasted to rise to $2.2 billion over the next three years compared to $1.8 billion over the prior three years. The expenditures reflect investments in energy efficiency and modernization of its electric and gas systems. The financial impact is moderated by the extension of bonus depreciation and the surcharge mechanism associated with Act 129.

Key Rating Drivers for Baltimore Gas and Electric Company
Strong Credit Metrics: Baltimore Gas and Electric Company's (BGE) credit metrics strengthened materially in 2015 and are strong for the current rating level. The improvement is due to electric and gas base rate increases effective December 2014, lower interest and storm related expenses and modest rise in debt. Fitch expects credit metrics to weaken moderately in 2016 due to an expanded capex budget, but to remain strong for the rating level, with debt/EBITDAR and FFO lease-adjusted leverage to average about 3.25x and 3.50x, respectively, over the next two years.

Regulatory Recovery Mechanisms: Rate adjustment mechanisms outside of base rate cases tend to stabilize BGE's cash flow. These include decoupling for residential and commercial gas and electricity sales, and purchased gas and purchased power recovery mechanisms. In 2014, Maryland regulators approved a rider to recover gas infrastructure improvements and have approved three subsequent surcharges (2014, 2015 and 2016). Certain capex is also subject to tracking mechanisms, including energy efficiency.

Pending Rate Case: A decision in BGE's pending rate case is expected in June 2016. BGE requested electric and gas base rate increases aggregating $200.4 million (revised to $196.7 million), equal to approximately 11% of 2015 net revenue. The majority of the rate requests are to recover smart grid investments based on equity returns of 10.6% and 10.5% for the electric and gas operations, respectively.

Rate Strategy: BGE has implemented a series of electric and gas base rate increases since early 2013 that have materially strengthened its credit profile. The most recent increases were implemented in December 2014, when BGE was permitted electric and gas rate increases aggregating $60 million, the third increase in 22 months. Due to the frequent rate increases and absence of major storms the return on common equity, on a GAAP basis, improved to 10.5% in 2015.

Key Rating Drivers for Exelon Generation Company, LLC
Challenging Operating Environment: Weak natural gas and power prices continue to restrict Exgen's earnings power with little relief in sight. Demand is also expected to remain sluggish due in large part to energy efficiency measures and slow economic growth. Although actual and planned coal retirements have the potential to drive up power prices in the next few years it is not yet evident in the forward power curve. Favorably, capacity prices have improved materially.

Improving Capacity Prices: Capacity market reforms instituted in PJM, where the majority of Exgen's generating capacity is located resulted in a significant increase in the clearing price for the 2018/2019 delivery year that Fitch estimates will boost EBITDA by roughly $375 million. Capacity prices were particularly strong in the Comed zone where Exgen's generating resources are concentrated. Capacity prices were also higher in two subsequent transition auctions for the 2016/2017 and 2017/2018 delivery years.

Sound Financial Position: Exgen's financial position has stabilized in recent years, and remains solidly within the investment grade category. Fitch estimates adjusted debt/EBITDAR to approximate 2.5x in 2016 and then trend downward as free cash flow (FCF) is used to retire debt. FFO lease adjusted leverage and FFO fixed charge coverage are equally strong.

Hedging Strategy: To moderate cash flow volatility and commodity price risk, Exgen employs a three-year ratable hedging strategy. The strategy targets a financial hedge range of 90%-98% in the prompt year, 70%-90% in year two and 50%-70% year three. When forward market prices are below Exgen's expectation the company has operated below its ratable hedging policy, which has been the case recently in the outer years. The hedging strategy includes forward power contracts and financial hedges, primarily natural gas options.

Competitive Position: Exgen's largely nuclear-fueled generating fleet is positioned low on the dispatch curve and likely to be dispatched under most price scenarios. The emission free nuclear portfolio also stands to benefit from any uplift in power prices from higher environmental costs or coal retirements. However, due to their high fixed costs several nuclear units, particularly those that compete with renewable energy resources and/or receive inadequate capacity payments are at risk of closure. Closure of these under-performing assets would boost EBITDA and cash flow.

Strong Nuclear Operator: Exgen has a long record of strong nuclear performance. Over the past three years, the nuclear capacity factor averaged approximately 93% and re-fueling outages have averaged about 30 days, in each case setting the industry standard.

KEY ASSUMPTIONS

Commonwealth Edison Company
--Relatively flat electric load growth;
--Formula Rate Plan updated annually;
--Three-year capex plan of $6.5 billion.

PECO Energy Company
--Relatively flat electric load growth;
--Retail gas load growth ranging between 0.5% and 1.0%;
--Electric distribution rate increase of $127 million effective Jan. 1, 2016;
--Equity capital of 53%-54% of total capital;
--Three-year capex plan of $2.1 billion.

Baltimore Gas and Electric Company
--Customer growth: 0.4% (Electric), 0.0% (Gas);
--June 2016 rate increase;
--Three-year capex plan of $2.7 billion.

Exelon Generation Co., LLC
--Forward gas and power prices as of Dec. 31, 2015;
--Oyster Creek retirement in 2020 (no other changes in nuclear portfolio);
--Three-year capex plan of $7.6 billion

RATING SENSITIVITIES
Rating Sensitivities for Commonwealth Edison Co.
Positive Rating Action: A positive rating action may be considered if debt/EBITDAR is below 3.4x on a consistent basis, while maintain FFO leverage below 4.5x and FFO fixed charge coverage above 4.7x.

Negative Rating Action: Negative rating action would be considered if FFO adjusted leverage rose above 5x and/or FFO fixed charge coverage fell below 4.5x on a sustained basis .
A change in the FRP or other regulatory policies that inhibit Comed's ability to recover invested capital or commodity costs on a timely basis could also lead to lower ratings.

Rating Sensitivities PECO Energy Co.
Positive Rating Action: Positive rating action could be considered if adjusted debt/EBITDAR and FFO lease adjusted debt remains comfortably below 3.4x and 4.0x, respectively.

Negative Rating Action: Given the headroom in existing ratings a downgrade is not likely, but could be considered if debt/EBITDAR and FFO lease-adjusted debt exceeded 3.7x and 4.75x, respectively, on a consistent basis.

Rating Sensitivities Baltimore Gas and Electric Co.
Positive Rating Action: Positive rating action may be considered if, following the resolution of its' pending rate case, BGE is able to maintain debt/EBITDAR and FFO lease adjusted leverage comfortably below 3.4x and 4.0x, respectively.

Negative Rating Action: Given the headroom in existing ratings a downgrade is not likely, but could occur if adjusted debt/EBITDAR and FFO lease adjusted leverage exceed 3.7x and 4.75x on a consistent basis.

Rating Sensitivities Exelon Generation Co., LLC
Positive Rating Action: Positive rating action is not likely given the inherent cash flow volatility in the competitive generation business.

Negative Rating Action: Ratings could be lowered if debt/EBITDAR exceed 3.25x and FFO adjusted leverage exceeds 3.5x on a sustained basis. Ratings could also be lowered if management were to pursue a more aggressive growth strategy.

LIQUIDITY

EXC and its subsidiaries have ample liquidity. Comed and BG&E meet their short-term liquidity needs through the issuance of commercial paper (CP) and Exgen and PECO through the issuance of CP and borrowings from the inter-company money pool. Comed and BG&E are excluded from the money pool due to ring fencing measures. All CP borrowings are supported by committed credit facilities at each entity including $5.725 billion at Exgen, $1 billion at Comed and $600 million at both PECO and BGE (EXC has an additional $500 million). As of Dec. 31, 2015, there were no borrowings under the credit facilities. Available cash was $438 million at Exgen, $67 million at Comed, $295 million at PECO and $9 million at BGE.

FULL LIST OF RATING ACTIONS

Fitch upgraded the following ratings:

Commonwealth Edison Company
--Long-Term IDR to 'BBB+' from 'BBB';
--First mortgage bonds to 'A' from 'A-';
--Senior unsecured debt to 'A-' from 'BBB+';
--Preferred stock to 'BBB' from 'BBB-'.

The Rating Outlook is Stable.

ComEd Financing III
--Preferred stock to 'BBB' from 'BBB-'.

Fitch has affirmed the following ratings:

Exelon Generation Co., LLC
--Long-Term IDR at 'BBB';
--Senior unsecured debt at 'BBB';
--Commercial paper at 'F2';
--Short-Term IDR at 'F2'.

The Rating Outlook is Stable.
Commonwealth Edison Company
--Short-Term IDR at 'F2';
--Commercial paper at 'F2'.

Baltimore Gas and Electric Company
--Long-Term IDR at 'BBB+';
--First mortgage bonds at 'A';
--Senior unsecured debt at 'A-';
--Pollution Control Revenue Bonds at 'A-';
--Preferred stock at 'BBB';
--Short-Term IDR at 'F2';
--Commercial paper at 'F2'.

BGE Capital Trust II
--Preferred stock at 'BBB'.

The Rating Outlook is Stable.

PECO Energy Co.
--Long-Term IDR at 'BBB+';
--First mortgage bonds at 'A';
--Senior unsecured debt at 'A-';
--Commercial paper at 'F2';
--Short-Term IDR at 'F2'.

PECO Energy Capital Trust III
--Preferred stock at 'BBB'.

PECO Energy Capital Trust IV
--Preferred stock at 'BBB'.

The Rating Outlook is Stable.

Exelon Corporation (/gws/en/esp/issr/80464126)

FitchRatings

Fitch Places Exelon's Ratings on Negative Watch Following Acquisition Announcement

Fitch Ratings-New York-30 April 2014: Fitch Ratings has placed the 'BBB+' long-term Issuer Default Rating (IDR) and senior unsecured debt ratings of Exelon Corp. (EXC) on Rating Watch Negative. The actions follow today's announcement of a definitive agreement to acquire Pepco Holdings, Inc. (PHI) for $6.9 billion (plus transaction fees). Prior to this action, EXC's Rating Outlook was Negative.

The cash offer will be financed with a combination of EXC corporate debt and equity and proceeds from planned asset sales at subsidiary Exelon Generation Co., LLC (Exgen, 'BBB+'/Outlook Negative). Including assumed debt of approximately $5 billion the enterprise value is $11.9 billion. The purchase price equates 11.5x PHI's 2013 EBITDA.

The ratings of EXC's subsidiaries and those of PHI ('BBB') and its subsidiaries are unaffected by this transaction. Post-closing, PHI will become a second tier holding company of EXC and will remain as the direct parent of its three operating utilities Potomac Electric Power Co. ('BBB' IDR), Delmarva Power & Light Co. ('BBB+') and Atlantic City Electric Co. ('BBB').

Rating Drivers

Financing plan: The proposed acquisition results in a meaningful increase in consolidated leverage compared to EXC's current and projected stand-alone financial condition. The rise in leverage is driven by the combination of the acquisition debt to be issued by EXC and the assumption of existing PHI consolidated debt. EXC has indicated it plans to fund 50% of the acquisition price with corporate debt and the remaining amount with mandatory convertible debt, equity and proceeds from planned asset sales. The mandatory convertible securities typically used in the utility sector (equity units) do not receive any equity credit from Fitch.

Business risk: Fitch did not consider the acquisition of PHI to meaningfully lessen EXC's business risk. The pro forma earnings contribution from regulated businesses increases to approximately 60% to 65% of pro forma earnings over 2015 -2016 compared to about 55% to 60% on a stand-alone basis. Consequently, the non-regulated generation business remains significant.

Financial measures: Fitch expects consolidated cash flow leverage and fixed charge coverage measures of the combined entities to remain solidly within the 'BBB' category but meaningfully weaker than EXC's standalone credit profile without a significant reduction in the risk profile. Fitch forecasts Debt/EBITDAR in the first full year of operation to be less than 4.0x and FFO fixed charge coverage in the range of 5.5x to 6.0x.

Regulatory Approvals: Regulatory approvals are required by each of PHI's four regulatory jurisdictions Maryland, Delaware, the District of Columbia and New Jersey, as well as the Department of Justice (DOJ) and the Federal Energy Regulatory Commission (FERC). EXC expects to close this deal in the second or third quarter of 2015.

Rating Triggers

Positive: Positive rating action is not likely at the present rating level.

Negative: Regulatory concessions in excess of those assumed in the financial forecasts or a reduction in asset sale proceeds that is not funded with equity could have an adverse effect on ratings.

Even without the completion of this merger ratings may also be lowered in recognition of EXC's willingness to pursue a leveraged acquisition and/or if there is not a material improvement in wholesale power prices.

Fitch has placed the following ratings on Watch Negative:

Exelon Corp.
--Long-term IDR 'BBB+';
--Senior unsecured debt 'BBB+.

Exelon Corporation (/gws/en/esp/issr/80464126)

FitchRatings

Fitch Rates Exelon Corp.'s Senior Notes 'BBB+'; Rating Watch Negative

Fitch Ratings-New York-08 June 2015: Fitch Ratings has assigned a 'BBB+' rating to Exelon Corp.'s (EXC) new issue of senior notes to be offered in multiple tranches. Proceeds will be used for to fund a portion of EXC's pending acquisition of Pepco Holdings, Inc. (PHI), with any remaining balance to be used for general corporate purposes. The notes will rank equally with all other senior unsecured debt and will be senior in right of payment to all subordinated debt. The new issues are placed on Rating Watch Negative, as are EXC's outstanding securities.

The Negative Watch for EXC reflects the increased leverage that results from its pending acquisition of PHI (Fitch Issuer Default Rating [IDR] of 'BBB'). The higher leverage is a product of the acquisition financing plan and the consolidation of the more levered PHI. The rise in leverage is mitigated in part by an increase in regulated earnings.

KEY RATING DRIVERS

Pending Merger: The proposed PHI acquisition increases consolidated leverage compared to EXC's stand-alone financial position. The additional leverage reflects the financing plan which includes a significant debt component and the consolidation of the higher-levered PHI. The financing plan for the roughly $7.2 billion acquisition includes $3.5 billion of new EXC corporate debt, $1 billion from Exgen asset sales (completed in 2014), $1.7 billion of common equity, and $1 billion of mandatorily convertible debt (issued in 2014). Under Fitch criteria the convertible debt issued by EXC, in the form of equity units, receives no equity credit. In addition EXC will assume approximately $5.8 billion of PHI consolidated debt. The merger is expected to close in the third quarter of 2015.
Utility Earnings Contribution: EXC's ratings benefit from the predictable and growing earnings and cash flow contributions of its three regulated utilities. The utilities accounted for approximately 53% of 2014 adjusted operating income growing to an estimated 60% (excluding the pending PHI acquisition) by 2019. The utilities have sound and/or improving credit profiles, limited commodity price risk and relatively predictable earnings, balancing the more volatile earnings and cash flow of the commodity-sensitive competitive generation business.
Competitive Generation Business: The operating environment for EXC's competitive generation business is expected to remain challenging with sluggish demand and low natural gas and power prices likely to persist for several years. Favorably, the business is well capitalized and its credit profile has stabilized during a low point in the commodity cycle. In addition, management employs a three-year hedging strategy that moderates earnings and cash flow volatility.
Sound Financial Position: Despite the reduced earnings contribution of its competitive generation business, EXC has maintained a solid credit profile. Fitch estimates EXC's adjusted ratio of debt/EBITDAR and funds from operations (FFO)-adjusted leverage will average approximately 3.5x and 3.0x, respectively, over the next two years and FFO fixed-charge coverage at about 6x, all of which supports existing ratings. Pro forma for the PHI acquisition, 2015 debt/EBITDAR, FFO-adjusted leverage, and FFO fixed-charge coverage are estimated to be approximately 4.2x, 3.5x and 5x, respectively. The pro forma adjustments do not reflect the customer credits related to the proposed merger, which will weaken the credit metrics of PHI and its subsidiaries in the near term.

KEY ASSUMPTIONS

--Commonwealth Edison Co. formula rate plan updated annually;
--PECO Energy Co. electric distribution rate increase effective Jan. 1, 2016;
--On-going rate support for capital investments;
--Existing regulatory recovery mechanisms remain in place;
--No change to pro rata three-year hedging strategy;
--Forward natural gas and power prices as of Dec. 31, 2014.

RATING SENSITIVITIES

Positive Rating Action: Positive rating action is not likely at the present rating level given the meaningful earnings and cash flow contribution from Exelon's competitive generation business and the additional merger-related leverage. However, ratings could be affirmed if post-acquisition debt/EBITDAR remains at or below 3.6x and FFO-adjusted leverage at or below 4.5x.
Negative Rating Action: Ratings could be lowered if post-acquisition debt EBITDAR exceeds 3.6x and FFO-adjusted leverage exceeds 4.5x on a sustained basis.

Onerous regulatory concessions or a renewed emphasis on non-regulated investments could also have an adverse effect on ratings.

Ratings could also be lowered if the ratings of EXC's merchant generation business, Exgen, fall below 'BBB'.

LIQUIDITY

EXC has ample liquidity. EXC and each of its operating subsidiaries maintain committed bank credit facilities aggregating $8.5 billion. The credit facilities support commercial paper borrowings and letters of credit. As of March 31, 2015, consolidated cash aggregated $1.8 billion.

DETAILS OF THIS SERVICE FOR RATINGS FOR WHICH THE LEAD ANALYST IS BASED IN AN EU-REGISTERED ENTITY CAN BE FOUND ON THE ENTITY SUMMARY PAGE FOR THIS ISSUER ON THE FITCH WEBSITE.

Solicitation Status

Fitch Ratings was paid to determine each credit rating announced in this Rating Action Commentary (RAC) by the obligatory being rated or the issuer, underwriter, depositor, or sponsor of the security or money market instrument being rated, except for the following:

Endorsement Policy - Fitch's approach to ratings endorsement so that ratings produced outside the EU may be used by regulated entities within the EU for regulatory purposes, pursuant to the terms of the EU Regulation with respect to credit rating agencies, can be found on the EU Regulatory Disclosures (https://www.fitchratings.com/regulatory) page. The endorsement status of all International ratings is provided within the entity summary page for each rated entity and in the transaction detail pages for all structured finance transactions on the Fitch website. These disclosures are updated on a daily basis.

Exelon Corporation (/gws/en/esp/issr/80464126)

FitchRatings

Fitch Rates Exelon Corp.'s Junior Subordinated Notes 'BBB-'

Fitch Ratings-New York-12 June 2014: Fitch Ratings has assigned a 'BBB-' rating and Negative Watch to Exelon Corp.'s (EXC) new $1.0 billion issuance of 2.50% junior subordinated notes (the Notes), which are a component of EXC's equity units. The equity units consist of the Notes due 2024 and a forward purchase contract obligating the holder to purchase on June 1, 2017, $1.0 billion of EXC shares.

The Notes will be pledged as security for the holders obligation to purchase the EXC common stock on June 1, 2017. The securities will be remarketed in 2017 as junior subordinated obligations of EXC and will remain outstanding until maturity in 2024. The Notes will initially pay an annual fixed 2.50% rate of interest, payable through June 1, 2017. Holders of the equity units will also receive annual contract payments of 4.00% on the forward purchase contract.

Prior to respective remarketing dates in 2017, EXC will have the right to defer interest on the securities one or more times for one or more consecutive interest periods without giving rise to an event of default.

Under Fitch's criteria, the junior subordinated notes will receive no equity credit.

Net proceeds of the equity units will be used to fund a portion of EXC's pending acquisition of Pepco Holdings, Inc.

The ratings of EXC are on Rating Watch Negative.

KEY RATING DRIVERS

Negative Rating Watch: The Negative Rating Watch reflects EXC's pending acquisition of Pepco Holdings, Inc. The proposed acquisition results in a meaningful increase in consolidated leverage compared to EXC's current and projected stand-alone financial condition. The rise in leverage is driven by the combination of the acquisition debt to be issued by EXC and the assumption of existing PHI consolidated debt.

Business risk: Fitch does not believe that the acquisition of PHI will meaningfully lessen EXC's business risk. The pro forma earnings contribution from regulated businesses increases to approximately 60% to 65% of pro forma earnings over 2015 - 2016 compared to about 55% to 60% on a stand-alone basis.
Competitive Generation Business: EXC's competitive generation business is exposed to commodity price volatility in the markets in which it operates. It seeks to minimize the commodity risk by hedging a portion of its portfolio on a three-year rolling basis. The hedge targets are approximately 90% - 98% in the prompt year, 70% - 90% in year two and 50% - 70% in year three.

Financial measures: Fitch expects consolidated cash flow leverage and fixed charge coverage measures of the combined entities to remain solidly within the 'BBB' category, but meaningfully weaker than EXC's standalone credit profile without a significant reduction in the risk profile. Fitch forecasts Debt/EBITDAR in the first full year of operation to be less than 4.0x and FFO fixed charge coverage in the range of 5.5x to 6.0x.

RATING SENSITIVITIES

Positive: Positive rating action is not likely at the present rating level.

Negative: Regulatory concessions in excess of those assumed in the financial forecasts or a reduction in asset sale proceeds that is not funded with equity could have an adverse effect on ratings.

Even without the completion of this merger ratings may also be lowered in recognition of EXC's willingness to pursue a leveraged acquisition and/or if there is not a material improvement in wholesale power prices.

PECO Energy Co. (/gws/en/esp/issr/80088954)

FitchRatings

Fitch Rates PECO's $300MM First Mortgage Bonds 'A'

Fitch Ratings-New York-08 September 2014: Fitch Ratings has assigned an 'A' rating to PECO Energy Co.'s (PECO) proposed new $300 million offering of First and Refunding Mortgage Bonds maturing in 2044. The Rating Outlook is Stable. Net proceeds will be used to pay at maturity $250 million 5.0% first and refunding mortgage bonds due Oct. 1, 2014 and for general corporate purposes.

KEY RATING DRIVERS

Strong Credit Profile: Historical and projected credit measures are strong and well in excess of Fitch's target ratios for the current rating level and the companies' peer group of 'BBB+' distribution utilities. Over the next few years Fitch estimates EBITDA/interest and FFO/interest will average about 7.0x and 6.0x, respectively and FFO/Debt and debt/EBITDA about 20% and 3.0x.

Alternative Regulatory Model: Fitch considers the regulatory legislation enacted in Pennsylvania in February 2012 (Pennsylvania Act 11) to be supportive of credit quality. Act 11 allows the Pennsylvania Public Utilities Commission (PUC) to implement a distribution system investment charge (DSIC) to provide timely recovery of capital costs incurred to improve or replace aging electric and gas systems. Act 11 also allows utilities to use a fully forecasted test year to capture in rate base assets that will placed in service during the first year new rates are in effect. Prior to implementing a DSIC utilities must have a long-term infrastructure improvement plan (LTIP) approved by the PUC. The PUC approved PECO's DSIC plan in May 2013.

Manageable Capital Spending: PECO expects to invest approximately $1.6 billion over the next three years, moderately higher than the $1.4 billion expended in the prior three-years. The rise is primarily attributable to the installation of advanced meters and a smart grid. The expenditures equate to about 2.2x depreciation and amortization, which approximates the industry in average. Fitch expects 80% of the three-year capital budget to be funded with internal sources.

Low business Risk: Ratings and credit quality benefit from the absence of commodity price exposure and the associated cash flow volatility. PECO retains the provider of last resort obligation for customers that do not choose an alternative energy provider, but recovers its energy supply costs from customers through a monthly fuel adjustment mechanism. The new regulatory paradigm in Pennsylvania also reduces business risk.

Demand Reduction: Pennsylvania Act 129 (Act 129) requires Pennsylvania utilities to reduce electric consumption with the companies absorbing the associated revenue loss. PECO met the 3% consumption reduction target required by May 31, 2013. Act 129 also requires the installation of smart meter technology and the implementation of time of use rates and real time price plans. Importantly, Act 129 provides a surcharge mechanism to recover the implementation costs (other than lost sales) on a timely basis.

RATING SENSITIVITIES

Positive: Positive rating action is not likely prior to the resolution of the Negative Rating Watch of its parent Exelon Corp., which is driven by the pending merger with Pepco Holdings, Inc. and the challenging operating environment of its non-regulated generation subsidiary.

Negative: An increase in parent company Exelon Corp.'s leverage or risk profile could adversely affect PECO's ratings. However, given that PECO's credit profile is strong within its rating category, it likely could withstand a one-notch parent downgrade.

Lack of rate support for utility infrastructure investments or a change in the commodity cost recovery mechanism in Pennsylvania could also adversely affect PECO's ratings.

PECO Energy Co. (/gws/en/esp/issr/80088954)

FitchRatings

Fitch Rates PECO Energy's $350MM First Mtge Bonds 'A'

Fitch Ratings-New York-11 September 2012: Fitch Ratings has assigned an 'A' rating to the new $350 million, 2.375% First and Refunding Mortgage Bonds issued by PECO Energy Co.(PECO). The Rating Outlook is Stable. The bonds mature on Sept. 15, 2022 and rank equally with all existing and future secured debt obligations. Net proceeds will be used to refund $225 million, 4.75% First Mortgage Bonds due Oct. 1, 2012 and for general corporate purposes.

Key Rating Drivers

Strong Credit Profile: PECO Energy Co.'s (PECO) leverage, interest coverage and cash flow measures are expected to weaken moderately over the next several years, but remain strong relative to the company's peer group of distribution utilities and to Fitch's guidelines for companies with a 'BBB+' Issuer Default Rating (IDR) and similar risk profiles. Over the next several years debt/EBITDA is expected to range between 2.75 times (x) and 3.0x, and EBITDA/interest and FFO/debt to approximate 6.5x and 22%, respectively.

High Capital Expenditures: Following a two-year decline, capital expenditures are expected to trend upward beginning in 2013 to reflect the deployment of smart meters and rising investments in electric distribution infrastructure. Smart meter investments are forecasted to aggregate $300 million in 2013 and 2014, net of a $200 million grant from the Department of Energy (DOE) and total capex $$1.075 billion. By comparison, expenditures in 2011 and estimated in 2012 were $900 million.

Commodity Price Exposure: PECO has no commodity price exposure, which limits cash flow volatility. The company is required to serve as the electricity provider of last resort for customers that do not choose an alternative energy provider and recovers 100% of its electricity procurement costs from rate payers.

Alternative Rate Making: Enactment of H.B. 1294 earlier this year is a constructive credit development. The legislation permits recovery of distribution infrastructure investments through an automatic cost recovery mechanism and use of a fully projected forward test year in base rate cases, both of which should reduce regulatory lag.

Liquidity: Fitch considers PECO's liquidity to be adequate. In addition to cash from operations, liquidity needs are supported through the issuance of commercial paper, credit facility borrowings, and a corporate money pool. The $600 million unsecured credit facility extends to March 2017. Debt maturities are well laddered, and considered manageable by Fitch with $150 million due in December 2012, $300 million in 2013 and $250 million in 2014 followed by a gap until 2018.

What could lead to consideration of a negative rating action:
--Lack of regulatory support for capital investments is the primary credit risk or a change in the commodity cost recovery provisions.

What could lead to consideration of a positive rating action:
--Not likely at the current rating level.

PECO Energy Co. (/gws/en/esp/issr/80088954)

FitchRatings

Fitch Rates PECO Energy's First and Refunding Mortgage Bonds 'A'

Fitch Ratings-New York-11 September 2017: Fitch Ratings has assigned an 'A' rating to PECO Energy's Company's (PECO) new issue of first and refunding mortgage bonds due 2047. The proceeds will be used for general corporate purposes. The Rating Outlook on PECO's Long-Term Issuer Default Rating (IDR; 'BBB+') is Stable.

KEY RATING DRIVERS

Strong Credit Profile: Aided by a January 2016 rate increase, favorable weather and lower storm costs, PECO Energy Co.'s already-strong credit metrics improved in 2016. With normal weather, moderately rising operating costs, higher capex and flat sales, some attrition is likely in 2017, but metrics should remain strong within the rating level. Over the next few years, Fitch estimates debt/EBITDAR and funds from operations (FFO)-adjusted leverage to approximate 3.3x and 3.6x, respectively, compared with 2.8x and 2.9x in 2016.

Alternative Regulatory Model: Fitch considers regulatory legislation enacted in Pennsylvania in 2012 (HB 1294) to be supportive of credit quality. The law allows the state's Public Utility Commission (PUC) to establish a distribution system investment charge (DSIC) to provide timely recovery of certain capital costs incurred to enhance electric and gas distribution systems. Once implemented, the DSIC is updated quarterly. The law also allows traditional rate filings to include fully forecasted test years, further reducing regulatory lag.

Constructive Rate Order: PECO implemented a $127 million rate increase effective Jan. 1, 2016 following the approval of a settlement agreement by the

PUC. The approved increase equates to about two-thirds of PECO's $190.1 million rate request. The settlement agreement also includes implementation of a DSIC for the company's electric operations, but not until eligible investments exceed the Dec. 31, 2016 levels projected by PECO.

Demand Reduction: Pennsylvania Act 129 (Act 129) requires utilities to reduce electric consumption, with companies absorbing the associated revenue loss between rate cases. The PUC recently approved Phase III of the energy efficiency and consumption plan, requiring PECO to reduce consumption by an additional 5% by 2021. PECO met the initial consumption reduction targets of 1% by 2011 and 3% by May 31, 2013. Importantly, Act 129 provides a surcharge to recover implementation costs (other than lost sales) on a timely basis.

Rising Capex: Forecasted capex averages approximately $775 million annually over the next four years compared with an average of about $620 million over the prior four-year period. The increase is driven by investments in electric system reliability and acceleration of the natural gas pipeline replacement program. The financial impact is moderated by the extension of bonus depreciation and the surcharge mechanism associated with Act 129.

Low Business Risk: Due to the absence of commodity price exposure and generally constructive regulation, PECO's regulated electric and gas operations are considered to have low business risk by Fitch.

KEY ASSUMPTIONS

--Relatively flat electric load growth;
--Retail gas load growth ranging between 1.0%, and 0.5%;
--Dividends managed to achieve equity ratio of 53%-54%;
--Four year capex plan of approximately $3.1 billion.

RATING SENSITIVITIES

Positive Rating Action: Positive rating action could be considered if adjusted debt/EBITDAR and FFO lease adjusted debt remains comfortably below 3.4x and 4.0x, respectively.

Negative Rating Action: Given the headroom in existing ratings a downgrade is not likely, but could be considered if debt/EBITDAR and FFO lease-adjusted debt exceeded 3.7x and 4.8x, respectively, on a consistent basis.

LIQUIDITY

A $600 million committed credit facility provides ample liquidity. The credit facility supports a commercial paper program of equal size and also provides for direct borrowings. The credit facility extends to May 2022. PECO also participates in a corporate money pool along with its affiliates Exelon Generation Company, LLC and Exelon Business Services Co., LLC. Parent Exelon Corp. (EXC) can lend to, but not borrow from, the money pool. As of June 30, 2017, PECO had no commercial paper borrowings or draws under its credit facility. Outstanding letters of credit of $2 million reduced the available borrowing capacity to $598 million. Cash and cash equivalents as of June 30, 2017 were $45 million.

PECO's long-term debt (including current maturities) as of June 30, 2017 aggregated $2.8 billion, including $184 million of subordinated debentures that qualify for 50% equity credit under Fitch's methodology. Other than the subordinated debentures, all of the long-term debt outstanding is first-mortgage bonds secured by PECO's utility property.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third- party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided “as is” without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be

changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US$1,000 to US$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US$10,000 to US$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.
For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001

Solicitation Status

Fitch Ratings was paid to determine each credit rating announced in this Rating Action Commentary (RAC) by the obligatory being rated or the issuer, underwriter, depositor, or sponsor of the security or money market instrument being rated, except for the following:

Endorsement Policy - Fitch's approach to ratings endorsement so that ratings produced outside the EU may be used by regulated entities within the EU for regulatory purposes, pursuant to the terms of the EU Regulation with respect to credit rating agencies, can be found on the EU Regulatory Disclosures (https://www.fitchratings.com/regulatory) page. The endorsement status of all International ratings is provided within the entity summary page for each rated entity and in the transaction detail pages for all structured finance transactions on the Fitch website. These disclosures are updated on a daily basis.

PECO Energy Co. (/gws/en/esp/issr/80088954)

FitchRatings

Fitch Rates PECO Energy's $550MM First Mortgage Bonds 'A'

Fitch Ratings-New York-17 September 2013: Fitch Ratings has assigned an 'A' rating to PECO Energy Co.'s (PECO) dual-tranche debt offering consisting of $300 million first and refunding mortgage bonds (FRMBs), 1.20% series due Oct. 15, 2016 and $250 million FRMBs 4.8% Series due Oct. 15, 2043. The Rating Outlook is Stable. The bonds rank equally with all existing and future secured debt obligations. Net proceeds will be used to pay at maturity $300 million 5.60% first mortgage bonds due Oct. 15, 2013 and for general corporate purposes.

Key Rating Drivers

Strong Credit Profile: Historical and projected credit measures are strong and well in excess of Fitch's target ratios for the current rating category and the companies' peer group of 'BBB+' rated distribution utilities. Over the next few years Fitch estimates EBITDA/interest and funds from operations (FFO)/interest will average more than 7.0x and 6.0x, respectively, FFO/Debt more than 20% and debt/EBITDA less than 3.0x. The strong performance reflects expectations of timely rate recovery and moderate debt financing.

Alternative Regulatory Model: Fitch considers the regulatory legislation enacted in Pennsylvania in February 2012 (HB 1294) to be supportive of credit quality. Under the law, utilities are required to file a long-term infrastructure improvement plan and the Pennsylvania Public Utility Commission (PUC) will establish a distribution system investment charge (DSIC) to provide timely recovery of the invested capital. The DSIC will be updated quarterly. The legislation further reduces regulatory lag by allowing traditional rate filings to include fully forecasted test years.

Manageable Capital Spending: PECO expects to invest approximately $1.6 billion over the next three years, moderately higher than the $1.4 billion expended in the prior three years. The rise is primarily attributable to the installation of advanced meters and a smart grid. The expenditures equate to about 2.2x depreciation and amortization, which approximates the industry average. Fitch expects approximately 80% of the three-year capital budget to be funded with internal sources of cash.

Low Business Risk: Ratings and credit quality benefit from the absence of commodity price exposure and the associated cash flow volatility. PECO retains the provider of last resort obligation for customers that do not choose an alternative energy provider, but recovers its energy supply costs from customers through a monthly fuel adjustment mechanism. The new regulatory paradigm in Pennsylvania also reduces business risk.

Demand Reduction: Pennsylvania Act 129 (Act 129) requires Pennsylvania utilities to reduce electric consumption with the companies absorbing the associated revenue loss. PECO met the initial 1% consumption reduction target for 2011 and the 3% reduction by May 31, 2013. Act 129 also requires the installation of smart meter technology and the implementation of time of use rates and real time price plans. Importantly, Act 129 provides a surcharge mechanism to recover the implementation costs (other than lost sales) on a timely basis.

Rating Sensitivities

Regulatory Changes: Lack of rate support for utility infrastructure investments or a change in the commodity cost recovery mechanism in Pennsylvania would adversely affect PECO's ratings.
Parent Risk Profile: An increase in parent company Exelon Corp.'s leverage or risk profile could adversely affect PECO's ratings.

PECO Energy Co. (/gws/en/esp/issr/80088954)

FitchRatings

Fitch Rates PECO Energy Co.'s First and Refunding Bonds 'A'

Fitch Ratings-New York-28 September 2015: Fitch Ratings has assigned an 'A' rating to PECO Energy Co.'s (PECO) new $350 million issue of 10-year first-mortgage and refunding-mortgage bonds. Proceeds will be used for general corporate purposes. The Rating Outlook is Stable.

KEY RATING DRIVERS
Strong Credit Profile: Fitch expects PECO's credit measures to remain strong relative to both Fitch's target ratios for the current rating level and the company's' peer group of 'BBB+' rated distribution utilities. Over the next few years Fitch estimates debt/EBITDAR and FFO-adjusted leverage to approximate 3.2x and 3.7x, respectively.

Manageable Capital Spending: Forecast capex of approximately $1.6 billion over the next three years is relatively unchanged from the prior three-year period. However, unlike the prior period, PECO no longer has a large cash balance to help fund the expenditures and will be more reliant on external funding.

Low Business Risk: Ratings and credit quality benefit from the absence of commodity price exposure and the associated cash flow volatility. PECO retains the provider of last resort obligation for customers that do not choose an alternative energy provider, but recovers its electric and gas supply costs from customers through monthly fuel adjustment mechanisms. The new regulatory paradigm in Pennsylvania also reduces business risk.

Alternative Regulatory Model: Fitch considers the regulatory legislation enacted in Pennsylvania in February 2012 (HB 1294) to be supportive of credit quality. The law allows the Pennsylvania Public Utility Commission

(PUC) to establish a distribution system investment charge (DSIC) to provide timely recovery of capital costs incurred to enhance electric and gas distribution systems. The DSIC will be updated quarterly. The PUC approved a DSIC for PECO's natural gas delivery business in September 2015. However, the company did not request an initial revenue requirement associated with the DSIC. The new legislation also allows traditional rate filings to include fully forecasted test years, further reducing regulatory lag.

Pending Rate Case: The parties to PECO's pending rate case filed a settlement agreement with the PUC in September 2015 that if approved should bolster credit metrics beginning in 2016. The settlement provides for a $127 million rate increase or about two-thirds of PECO's $190.1 million rate request. The settlement agreement also includes implementation of a DSIC for the company's electric operations, but not until eligible investments exceed the Dec. 31, 2016 levels projected by PECO.

Demand Reduction: Pennsylvania Act 129 (Act 129) requires Pennsylvania utilities to reduce electric consumption with the companies absorbing the associated revenue loss. PECO met the initial consumption reduction targets of 1% by 2011 and 3% by May 31, 2013. Act 129 also requires the installation of smart-meter technology and the implementation of time of use rates and real time price plans (See Act 129 below). Importantly, Act 129 provides a surcharge mechanism to recover the implementation costs (other than lost sales) on a timely basis.

RATING SENSITIVITIES

[Positive Rating Action: Positive rating action is not likely prior to the resolution of the Negative Rating Watch of its corporate parent Exelon Corp., which is driven by the pending merger with Pepco Holdings. Inc. and the challenging operating environment of its merchant generation subsidiary.

Negative Rating Action: An increase in parent company leverage or risk profile could adversely affect ratings. However, given that PECO's credit profile is strong within its rating level, it likely could withstand a one-notch parent downgrade.]

KEY ASSUMPTIONS

--Constructive resolution of pending rate case
--Capital structure with approximately 53% equity
--Electric sales growth of about 0.5% annually
--Capex of $1.6 billion over the 2015-2017 time period

LIQUIDITY

A $600 million committed credit facility provides ample liquidity. The credit facility supports a commercial paper program of equal size and also provides for direct borrowings. The credit facility extends to May 2019 and allows for a one-year extension. PECO also participates in a corporate money pool along with its affiliates Exelon Generation Company, LLC and Exelon Business Services Co., LLC. Parent Exelon Corp. can lend to, but not borrow from, the money pool. At June 30, 2015, PECO had no short-term borrowings and available cash of $26 million.

Exelon Corporation

Diversified Utility and Merchant Power Company

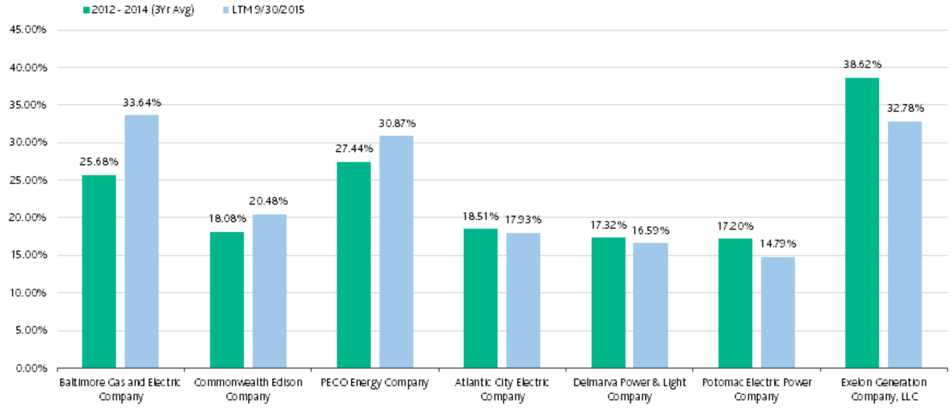
Summary Rating Rationale

Exelon Corporation's (Exelon) Baa2 senior unsecured rating reflects its diversified operations across a growing, low risk transmission and distribution (T&D) utility business and a shrinking, high risk unregulated utility and merchant power business. As a diversified power company, Exelon is well capitalized, has adequate liquidity reserves, and can generate a ratio of cash flow from operations (CFO) to debt over 20% and retained cash flow to debt in the high teen's range. Exelon's T&D utilities include PECO Energy Company (PECO: A2 stable) in Philadelphia, Baltimore Gas and Electric Company (BGE: A3 stable) in Baltimore and Commonwealth Edison Company (CWE: Baa1 positive) in Chicago. The foundation of Exelon's Baa2 rating is its stable and predictable regulated utility business, which will benefit from the acquisition of Pepco Holdings (PHI: Baa3 developing). The merger is expected to close by March 31st.

Exelon's rating is principally constrained by Exelon Generation Company LLC (ExGen: Baa2 stable), which owns a large fleet of unregulated nuclear generation assets and a retail energy marketing business. Although ExGen is conservatively capitalized, these unregulated businesses are volatile; exposed to commodity prices, such as natural gas and electricity; and face increasingly challenging market conditions.

Exhibit 1

CFO Pre-W/C to debt for Exelon's and PHI's subsidiaries



Source: Moody's Investors Service

Credit Strengths

- Acquisition of Pepco Holdings, expected to close Q1 2016, brings incremental rate base and regulatory diversity
- Utilities serve big city-systems in supportive regulatory jurisdictions
- Consolidated financial profile is strong, with relatively predictable cash flow generation and a balanced shareholder rewards program
- ExGen performing well in a challenging market environment, thanks to its large, diversified nuclear generating fleet, although nuke economics look stressed
- Adequate liquidity reserves
- Utilities serve big city-systems in supportive regulatory jurisdictions
- Consolidated financial profile is strong, with relatively predictable cash flow generation and a balanced shareholder rewards program
- ExGen performing well in a challenging market environment, thanks to its large, diversified nuclear generating fleet, although nuke economics look stressed
- Adequate liquidity reserves and balanced shareholder rewards program

Credit Challenges

- Holding company leverage is high (including PHI but excluding ExGen) which could pressure structural subordination notching relationships, if increased
- ExGen faces a prolonged period of low power prices and rising operating costs, especially across its aging nuclear fleet
- Exposure to Electricite de France (EDF: A1 negative) “put” related to selected nuclear reactors represents a liquidity risk more than a fundamental credit risk
- Once PHI acquisition is completed, some execution risks associated with delivering on regulatory commitments

Rating Outlook

Exelon's stable rating outlook reflects the stability and predictability of its large T&D utility businesses, its adequate liquidity profile and a conservatively capitalized unregulated generation business. Exelon is well positioned to generate cash flow of over $7.0 billion (pro-forma for PHI), which results in a ratio of cash flow to debt of around 18% - 20% - an important threshold for maintaining a stable rating outlook. With respect to ExGen, Exelon's stable outlook incorporates a view that ExGen's nuclear reactors will continue to operate in a safe and efficient manner, with roughly 90% capacity factors. We also think that the reactors will operate for the life of their existing, authorized NRC operating licenses and that Exelon's utilities (including PHI, assuming the transaction closes as scheduled), will continue to receive constructive and timely regulatory recovery mechanisms.

Factors that Could Lead to an Upgrade

- A material shift in its corporate finance policies, where parent holding company debt is eliminated or significantly reduced and the ratio of consolidated CFO to debt were to rise to the mid-20% range (assuming the successful completion of the PHI acquisition) for a sustained period of time
- A material derisking of the consolidated corporate family, specifically with respect to ExGen's large, merchant nuclear reactor fleet or its large commodity trading and marketing business

- Regulatory or legislative intervention into existing wholesale power markets could also lead to a rating upgrade, where structures designed to re-regulate the nuclear reactor fleet's revenue stream or cost structure create long term cash flow visibility and certainty

Factors that Could Lead to a Downgrade

- If Exelon's financial performance deteriorated for a sustained period of time, where the ratio of CFO to debt fell to the low-teen's range (assuming the successful completion of the PHI acquisition)
- If there were material shifts in shareholder rewards programs, resulting in higher leverage or an unsustainable dividend payout ratio
- A more aggressive use of parent holding company debt, where the ratio of parent holding company debt to total consolidated debt (including PHI but excluding ExGen) increases to the high-20%
- A material increase in the consolidated business risk profile, especially if it is associated with additional businesses within ExGen
- The emergence of a highly contentious regulatory environment in either Maryland or Illinois
- A major physical or cyber-related operating challenge with one or several of ExGen's nuclear reactors
- If attempts at market intervention pressured ExGen's margins or profitability, or where the financial profile was negatively impacted
- A material change in ExGen's retail market trading and marketing volatility, especially if sizeable, unexpected swings in liquidity demands arose

Key Indicators

Detailed Rating Considerations

Large, diversified regulated utility portfolio is credit positive

Exelon's suite of regulated utilities provides a strong foundation to its consolidated credit profile. BGE, CWE and PECO are all low risk, big city T&D systems. They all receive relatively supportive and constructive regulatory treatment and enjoy the timely recovery of most operating costs and capital investments. We see Exelon's regulated utility business growing, with the acquisition of the contiguous PHI T&D utilities as a prime example.

Combined, Exelon's three T&D utilities have roughly $20 billion in rate base, and generate close to $7.0 billion in revenues and $3.4 billion in cash flow. These service territories are not growing volumes quickly, but a heavy infrastructure refurbishment program will drive higher capital expenditures for the next few years. A supportive and transparent regulatory environment across Illinois, Maryland and Pennsylvania creates good visibility in rate base growth, a material credit positive.

Closing the PHI merger

Exelon's Baa2 rating is not materially impacted by the outcome of the PHI merger. That said, we think Exelon has a lot of money and reputation tied into the process, and is looking forward to completing the transaction by March 31st. Today, we view the Public Service Commission of the District of Columbia (DC PSC) as a higher risk regulatory environment, in part because of the unexpected August denial of the merger agreement. We still incorporate a view that managing regulatory relationships is a core competency for both Exelon and PHI management, despite the unexpected result delivered in August. If the merger is completed, we think PHI benefits from Exelon's larger size, greater resources, and relief from financing its shareholder dividends. Exelon will look to squeeze operating efficiencies from a bigger asset platform.

Reliance on parent holding company debt will constrain the rating due to structural subordination notching considerations

Exelon's decision to finance a large portion of the PHI acquisition with parent holding company debt is a credit negative, because it adds complexity to the capital structure, and raises an opportunity cost to not finance at the holding company in the future. Prior to the PHI merger, Exelon was reducing its parent holding company debt, mostly by transferring or refinancing holding company debt to ExGen. From a credit perspective, a parent holding company with little to no debt is credit positive because it provides some incremental financial flexibility.

Looking at Exelon's consolidated debt at its various levels, i.e., parent holding company, regulated utilities and ExGen is an additional component to our credit assessment, particularly given the increase in M&A activity in the sector and willingness to increase consolidated leverage. In light of Exelon's revised corporate finance policies, which looks to use parent holding company debt as a source of financing for the expansion of its regulated utility business segment, we expect to refine our analysis as additional insights regarding the use of holding company debt are provided. This could be challenging, since cash is fungible and parent holding company debt is not necessarily tied directly to a given subsidiary.

We expect to see roughly $18 billion of debt at Exelon's T&D utilities after the PHI acquisition, another roughly $8 billion at the parent holding company and $12 billion at ExGen. With the utilities producing roughly $4 billion in CFO, we see a ratio of utility CFO to utility debt at 22%, which translates to a low-A rating for low risk T&D utilities in supportive regulatory jurisdictions. This implied low-A rating for the T&D utilities would imply a 2-notch rating differential from the current Baa2 consolidated parent rating.

In our illustrative example, we also look at the $4 billion in utility CFO but add another $8 billion to the debt. This would result in a ratio of utility CFO to utility debt + holdco debt of roughly 15%, which is more characteristic of a Baa2 rating for low risk T&D utilities. Continuing with this example, the percentage of holding company debt to utility and holding company debt would be around 30%. When compared to selected peers, a 30% holding company debt level is usually associated with a 2-notch rating differential between the parent and the subsidiaries. A materially higher ratio of holding company debt would be more indicative of a 3-notch rating differential.

If we include the $12 billion of ExGen debt into our illustration, the ratio of utility CFO to total consolidated debt would fall to roughly 10% ($4 billion of utility CFO divided by $38 billion of total consolidated debt). This illustrative example assumes zero contribution from ExGen, an extreme and unlikely scenario. Nevertheless, the ratio of holding company debt to total consolidated debt would fall to 20%, which is typically associated with only a 1-notch rating differential for structural subordination.

ExGen performing well thanks to nuclear fleet

ExGen's cash flow generation is more volatile than its regulated utility affiliates. For example, ExGen's CFO fell to $1.8 billion in 2014 from $3.9 billion in 2013, largely due to a negative working capital use associated with its hedging program. For the twelve months ended September 2015, CFO rose back to $3.2 billion. This volatility, a material credit negative, was impacted primarily by the retail trading and marketing business. However, we note that ExGen keeps a significant amount of liquidity availabile to absorb these short-term swings.

Fundamentally, we see an extended period of low natural gas prices and rising operating costs for the nuclear fleet. Low natural gas prices usually keep a lid on power prices, which limits ExGen's ability to produce cash flow.

Despite the challenging market fundamentals, we see incremental transparency in forward power prices with respect to capacity payments in the Pennsylvania-New Jersey-Maryland (PJM) market. Given the most recent PJM capacity price auction, we estimate close to $1.0 billion in annual capacity payments accruing to ExGen's benefit, this equates to roughly $6.5/Mwh if the nuclear fleet continues to generate roughly 150 TWh's. Although we don't see capacity payments as a key driver of the financials, over the next few years, ExGen's capacity payments alone will represent about 7% - 8% coverage of ExGen's debt. That said, the improved capacity prices were both directly and indirectly impacted by recent rule changes and amendments implemented by the PJM, and these rules can change again.

In addition to low natural gas prices and an improving capacity market, we also see higher power prices over the next few years due to the EPA's recently announced Clean Power Plan (CPP). In general, we think the CPP is favorable to nuclear powered electric generation, because nuclear generation does not produce any material carbon dioxide emissions.

EDF put option viewed a liquidity event

We see debt at ExGen rising, in part due to its exposure to Electricitie de France's (EDF: A1 negative) option to “put” its interests in Constellation Energy Nuclear Group, LLC (CENG) back to ExGen staring on 1 January 2016. The put option expires on 31 December 2022, so EDF has plenty of time to evaluate its various options. Importantly, we think the relationship between both EXC and EDF is healthy and professional, and we do not see any contentiousness in the relationship at this time.

CENG includes minority ownership interests in roughly 3,400 MW's of nuclear generation capacity, including Ginna, Fitzpatrick and Nine Mile Point in New York and Calvert Cliffs in Maryland. Combined, these reactors generated over 34 GWh's of electricity in 2014. Based on publicly available information, we estimate fuel, non-fuel variable and fixed operating costs of roughly $25 per MWh. This excludes capital costs and depreciation. As a result, we see more profits in PJM markets than in NY.

From a liquidity perspective, we assume the value of the put (to EDF from EXC) might be somewhere in a range between $250 million and $2.0 billion. Our illustrative values capture a wide disparity of outcomes on purpose. In our opinion, the put is not a material credit event, but instead represents a demand on liquidity. Because EXC is aware of the existence of the put option, and management is presumably in discussions with EDF about how best to value the option, we do not think EDF exercising the option will be a surprise to EXC.

From a credit perspective, we see the EDF put as a known risk factor, and incorporate a view that ExGen has ample liquidity resources and has prepared for the possibility that the put is exercised. We also incorporate a view that high put valuations will benefit ExGen's remaining fleet. Any signs of improving market conditions, in terms of the EPA's Clean Power Plan or higher sustained PJM capacity prices, will increase the value of the put option in favor of EDF.

Maintaining a strong financial profile will be key to credit

In 2014 and 2013, Exelon generated a ratio of funds from operations to debt of approximately 25%. This is down materially from the 40% ratio generated in 2010 and 2011 and the 30% ratio generated in 2012. It should be noted that during this time, Exelon acquired Constellation Energy, and its debt increased from roughly $17 billion (in 2010 - 2011) to today's roughly $30 billion range. Including another $8 to 9 billion in debt for PHI's utility subsidiaries and parent holding company will increase total pro-forma consolidated debt closer to the $40 billion range.

As a result, maintaining a ratio of CFO to debt near the 18% - 20% range means Exelon will generate CFO of roughly $7.0 to $8.0 billion. Assuming the T&D utilities (including PHI) could sustain the roughly $4.0 billion in CFO generation that they achieved for the twelve months ended September 2015, this means ExGen will need to contribute roughly $3.0 to $4.0 billion in CFO. Assuming ExGen can continue to generate and sell at least 150 terawatt-hours (TWH's) of power from its nuclear fleet, this equates to roughly $20- - $25 / MWh in CFO.

Liquidity Analysis

As of September 30, 2015, Exelon's liquidity arrangements totaled $8.5 billion. Approximately $6.3 billion supports its unregulated business platform, including $500 million at Exelon and nearly $5.8 billion directly at ExGen. The regulated businesses have access to $2.2 billion of liquidity, $600 million at PECO, $600 million at BGE and $1 billion at CWE. The Exelon, PECO, BG&E and most of the ExGen facilities expire in May 2019. The CWE facility expires March 2019.

At September 30, Exelon and ExGen had about $625 million in letters of credit and no commercial paper outstanding, leaving availability of about $5.7 billion for the unregulated business. As of June 30, 2015, these draws amounted to $1.5 billion.

Exelon's core syndicated credit facilities are used primarily to provide liquidity support and for the issuance of letters of credit. While the credit agreements do not contain any rating triggers that would affect borrowing access to the commitments and do not require material adverse change (MAC) representation for borrowings or the issuance of LOCs, there is a financial covenant for each entity; all of which were compliant.

At CWE, commercial paper outstanding totaled $604 million and there were $2 million in letters of credit outstanding, leaving approximately $395 million of availability under its credit facility. As of June 30, 2015, CWE's commercial paper outstanding totaled $503 million and there were $2 million in letters of credit outstanding, leaving approximately $495 million of availability under its credit facility.

At BGE, there was $50 million commercial paper and no letters of credit outstanding, respectively, leaving $550 million of availability under its credit facility. As of June 30, 2015, BGE had no commercial paper or letters of credit outstanding, respectively, leaving $600 million of availability under its credit facility

At PECO, there were $1 million in letters of credit and no outstanding commercial paper borrowings, leaving $599 million of availability under its credit facility. As of June 30, 2015, PECO had no letters of credit outstanding and $1 million in outstanding commercial paper borrowings, leaving $599 million of availability under its credit facility.

As of the last reporting period (September 30, 2015), in the event that ExGen were downgraded below investment grade, ExGen could be required to post additional collateral of $2.1 billion. If PECO, BGE or CWE were downgraded to below investment grade, they would have been required to post $18 million $34 million, and $17 million, respectively, of additional collateral.

As of June 30, 2015, in the event that ExGen were downgraded below investment grade, ExGen could be required to post additional collateral of $2.2 billion. If PECO, BGE or CWE were downgraded to below investment grade, they would have been required to post $20 million $35 million, and $8 million, respectively, of additional collateral.

On January 9, 2013, the US Court of Appeals reached a decision for the government in a lawsuit involving Consolidated Edison`s (ConEd's) participation in a lease-in, lease-out (LILO) transaction that the IRS also has characterized as a tax shelter, and disallowed ConEd's deductions stemming from its participation in this investment. CWE deferred the $1.2 billion of gain on the 1999 sale of its fossil generating facilities by acquiring like-kind property via a purchase leaseback transaction. The IRS has asserted that the Exelon purchase leaseback transaction is substantially similar to a leasing transaction known as a sale-in, lease-out transaction (SILO). Exelon believes that its like-kind exchange transaction is not the same as or substantially similar to a SILO.

In the first quarter of 2013, Exelon recorded a non-cash charge to earnings of approximately $265 million, which represents the full amount of interest expense (after-tax) and incremental state tax expense in the event that Exelon is unsuccessful in its litigation efforts. Approximately $170 million of the amount was recorded at CWE.

Exelon expects to hold CWE harmless from any unfavorable impacts of the after-tax interest amounts on CWE's equity. In the event of a fully successful IRS challenge to Exelon's like-kind exchange position, the potential tax and after-tax interest, exclusive of penalties, that could become payable as of September 30, 2015 may be as much as $560 million, of which approximately $165 million would be attributable to CWE and the remainder to Exelon.

Structural Considerations

Separating Exelon's debt between its parent holding company, its utilities and ExGen is a component to our credit assessment. In light of Exelon's revised corporate finance policies, which looks to use parent holding company debt as a source of financing for its regulated utilities, but not its unregulated ExGen, we expect to refine our analysis as additional facts regarding the use of holding company debt are provided. This could be challenging, since cash is fungible and parent holding company debt is not necessarily tied directly to a given subsidiary.

Profile

Exelon Corporation (Exelon: Baa2 stable) is a large diversified US holding company that owns three regulated transmission and distribution utilities and a large unregulated power company. It's three regulated transmission and distribution (T&D) utilities include: PECO Energy Company (PECO: A2 stable), Baltimore Gas and Electric Company (BGE: A3 stable) and Commonwealth Edison Company (CWE: Baa1 positive). PECO is regulated by the Pennsylvania Public Utility Commission (PAPUC), BGE is regulated by the Maryland Public Service Commission (MPSC) and CWE is regulated by the Illinois Commerce Commission (ICC). All three utilities are also regulated by the Federal Energy Regulatory Commission (FERC).

Exelon also owns Exelon Generation Company, LLC (ExGen: Baa2 stable), one of the largest competitive electric generation companies globally as measured by owned and controlled megawatts (MW),with net capacity of approximately 32 GW's. ExGen is regulated by the Federal Energy Regulatory Commission (FERC) and by the Nuclear Regulatory Commission (NRC).

In May 2014, Exelon agreed to acquire Pepco Holdings. The acquisition is expected to close no later than March 31, 2015.

[3] This represents Moody's forward view; not view of the issuer; and unless noted in the text, does not incorporate significant acquisitions and divestitures
Source: Moody's Investors Service

If the acquisition of PHI is completed, we would consider moving Exelon into our Global Regulated Electric and Gas Utilities rating methodology (published in December 2013) and out from the Unregulated Utilities and Power Companies rating methodology (published in November 2014).

PHI helps shift Exelon's consolidated mix of regulated and unregulated business activities to approximately 60% regulated from roughly 50% today and diversifies its jurisdictional exposure to include New Jersey, Delaware and the District of Columbia. We viewed PHI's $8 billion additional regulated rate base to Exelon's $20 billion as a credit positive for the corporate family.

Absent the PHI transaction, we would likely keep Exelon under the Unregulated Utilities and Power Company rating methodology, but for analytical purposes, will continue to view Exelon under both methodologies, given the strategic focus on regulated assets.

Recent Developments

On 25 August 2015, the Public Service Commission of the District of Columbia (DC PSC) rejected the merger application between Exelon and PHI. On 6 October 2015, Exelon and PHI reached a settlement with the Office of the Mayor of the District of Columbia, the District's People's Counsel, the US Attorney of the District of Columbia and other stakeholders regarding the proposed merger. Along with the settlement, the merger agreement, which was originally set to expire on 29 October 2015, gets a 150-day extension until early March 2016. The settlement is credit positive for both Exelon and PHI because it puts the proposed merger back on track, with an aim to close in early March 2016. For now, we still assign a 50%-50% probability that the transaction will close. PHI's developing outlook will most likely be resolved when the transaction is completed, or when the merger agreement expires.

Exelon Corporation

Diversified Utility and Merchant Power Company

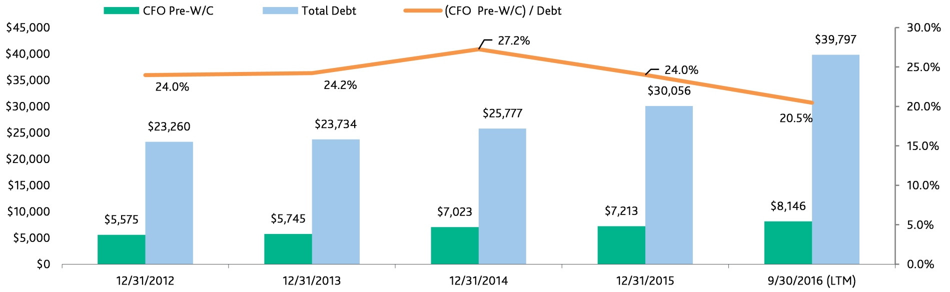
Summary Rating Rationale

Exelon Corporation's (Exelon) Baa2 senior unsecured rating reflects its size, regional diversity, and strong financial profile. Exelon's credit strength comes from its roughly $30 billion in regulated rate base. The rate base consists of regulated transmission and distribution (T&D) utilities and is diversified across Illinois, Maryland, Pennsylvania, New Jersey, Delaware and the District of Columbia.

Exelon's rating is principally constrained by its higher-risk unregulated utility and merchant power subsidiary, Exelon Generation Company LLC (ExGen: Baa2 stable). ExGen owns a large fleet of unregulated nuclear generation facilities and a retail energy trading and marketing business. These unregulated businesses are vastly more volatile compared to their regulated T&D businesses . Moreover, nuclear generation faces a sustained period of challenging conditions because of the competition from low natural gas prices due to shale gas development. As a diversified power company, Exelon is well capitalized, has adequate liquidity reserves, and is expected to generate a ratio of cash flow from operations (CFO) to debt around 20%. Retained cash flow (RCF) to debt is expected to remain in the mid-to-high teen's range.

Exhibit 1

Ratio of CFO pre-WC to Debt Historical Trend



Source: Moody's Investors Service

Credit Strengths

- Large and growing rate base
- Adequate financial profile
- Strong nuclear operator
- Adequate liquidity reserves

Credit Challenges

- Stiff competition from cheap natural gas
- High risk associated with unregulated generation and retail business
- High leverage at the holding company

Rating Outlook

Exelon's stable rating outlook primarily reflects the stability and predictability of its large T&D utility businesses, its adequate liquidity profile and a conservatively capitalized unregulated generation business. Exelon is well positioned to generate a ratio of CFO to debt of around 18% - 20%, an important threshold for maintaining a stable rating outlook, given the weak business fundamentals at ExGen. The stable outlook incorporates a view that ExGen's nuclear reactors will continue to operate in a safe and efficient manner, with roughly 90% capacity factors. We also think that the reactors will operate for the life of their existing, authorized Nuclear Regulatory Commission (NRC) operating licenses and that Exelon's utilities will continue to receive constructive and timely regulatory recovery mechanisms.

Factors that Could Lead to an Upgrade

- A material shift in its corporate finance policies, including the elimination of parent holding company debt and the sustained production of a ratio of CFO to debt in the mid-20% range
- A material de-risking across the corporate family, specifically with respect to ExGen's large, merchant nuclear reactor fleet or its large commodity trading and marketing business

Factors that Could Lead to a Downgrade

- If Exelon's financial performance deteriorated for a sustained period of time, where the ratio of CFO to debt fell to the low-teen's range
- Material shifts in shareholder rewards programs, resulting in higher leverage or an unsustainable dividend payout ratio or more aggressive use of parent holding company debt, where the ratio of parent holding company debt to total consolidated debt increases to the high-20% range
- A material increase in the consolidated business risk profile, especially if it is associated with additional businesses within ExGen
- The emergence of a highly contentious regulatory environment in either Maryland or Illinois
- Other event-like risks include: a major physical or cyber-related operating challenge with one or several of ExGen's nuclear reactors; attempts at market intervention pressured ExGen's margins or profitability, or where the financial profile was negatively impacted; material changes in ExGen's retail market trading and marketing volatility, especially if sizeable, unexpected swings in liquidity demands resulted

Detailed Rating Considerations

Large, diversified regulated utility portfolio is foundation to credit profile

Exelon's suite of regulated utilities provides a strong foundation to its consolidated credit profile. Baltimore Gas and Electric Company (BGE: A3 stable), Commonwealth Edison Company (CWE: Baa1 positive), PECO Energy Company (PECO: A2 stable), Potomac Electric Power Company (Pepco: Baa1 stable), Delmarva Power & Light Company (DPL Baa1 stable), and Atlantic City Electric Company (ACE: Baa2 stable) are all low risk T&D systems which receive supportive and constructive regulatory treatment in their jurisdictions. We see Exelon's regulated utility business growing in strategic importance across the Exelon corporate family.

Subsidy for nuclear generation is a credit positive

In late 2016, New York and Illinois approved subsidy programs that will support some of Exelon's struggling nuclear plants that might otherwise shutdown. If these subsidy programs survive legal challenges from non-nuclear generators, we estimate that the company will likely receive over $500 million a year of additional revenue on a run rate basis and $200 million improvement to its after-tax cash flows compared to retiring these units. Based on $12.5 billion of Moody's adjusted debt balance, $200 million of additional after-tax cash flow would bolster Ex-Gen's CFO to debt by about 160 basis points. ExGen could receive additional cash support if other states such as New Jersey and Pennsylvania adopt similar subsidy programs. However, it is highly uncertain at this point if New Jersey and Pennsylvania would adopt similar programs because the legislative or the regulatory process required can be long and difficult, especially when the risk of plant closure is not imminent.

Parent holding company debt constrains rating due to structural subordination notching considerations

Exelon's decision to finance a large portion of the PHI acquisition with parent holding company debt is a credit negative, because it adds complexity to the capital structure. Prior to the PHI merger, Exelon was reducing its parent holding company debt, mostly by transferring or refinancing holding company debt to ExGen. More recently, Exelon is exhibiting a willingness to use parent holding company leverage to help ExGen, a credit negative for both Exelon and its regulated T&D utilities.

Prospectively, we see roughly $20 billion of debt across Exelon's T&D utilities, $12 billion at ExGen and roughly $8 billion at the parent holding company. With the utilities producing roughly $4 billion in CFO, the ratio of utility CFO to utility debt should hover near the 20% range. This level generally translates to a low-A rating for low risk T&D utilities in supportive regulatory jurisdictions. This would imply an approximate 2-notch rating differential from Exelon's current Baa2 consolidated parent rating and the average implied rating across its T&D utilities.

As a comparative illustration, Exelon's ratio of CFO to debt would fall to the 15% range if we included the $8 billion in holding company debt with the $20 billion of utility debt (and only looked to the utility's $4 billion in CFO). The 15% range is more characteristic of a Baa2 rating for low risk T&D utilities, but our example excludes any affects from ExGen. In a downside scenario, Exelon's ratio of CFO to debt would fall to the 10% range if we include ExGen's $12 billion of debt, but only look to the utility's $4 billion in CFO. The ratio of holding company debt to total consolidated debt is almost 30% if we exclude ExGen's debt from the denominator. But the ratio would fall to about 22% if we added ExGen's debt in the denominator. A ratio of holding company debt to total consolidated debt in the 20-25% range (or below) is typically associated with only a 1-notch rating differential for structural subordination.

Maintaining a strong financial profile will be key to credit

Maintaining a ratio of CFO to debt near the 18% - 20% range will keep Exelon well positioned within its rating category. This means Exelon will generate CFO of roughly $7.0 to $8.0 billion. Assuming the T&D utilities generate roughly $4.0 billion in CFO, ExGen will need to contribute the remaining $3.0 to $4.0 billion.

Liquidity Analysis

As of September 30, 2016, Exelon's liquidity arrangements totaled $9.5 billion. Approximately $6.4 billion supports its unregulated business platform, including $5.8 billion at ExGen. The regulated businesses have access to $3.1 billion of liquidity, including: $600 million at PECO, $600 million at BGE, $1 billion at CWE, and$300 million each at Pepco, DPL and ACE. All of the facilities expire in May 2021.

At September 30, ExGen had about $1.6 billion in letters of credit and no commercial paper outstanding, leaving availability of about $4.0 billion for the unregulated business.

Exelon's core syndicated credit facilities are used primarily to provide liquidity support and for the issuance of letters of credit. While the credit agreements do not contain any rating triggers that would affect borrowing access to the commitments and do not require material adverse change (MAC) representation for borrowings or the issuance of LOCs, there is a financial covenant for each borrowing entity - all of whom were compliant.

At CWE, commercial paper outstanding totaled $10 million and there were $2 million in letters of credit outstanding, leaving approximately $988 million of availability under its credit facility. In comparison, as of March 31, 2016, CWE's commercial paper outstanding totaled $643million (with $2 million in letters of credit outstanding).

At BGE, there was no commercial paper or letters of credit outstanding, leaving the full $600 million available under its credit facility. Again, by way comparison, as of March 31, 2016, BGE had $150 million in commercial paper (and no letters of credit) outstanding.

At PECO, there were $2 million in letters of credit issued and no outstanding commercial paper borrowings.

At DPL, there were no letters of credit and $17 million in outstanding commercial paper borrowings, leaving $283 million of availability under its credit facility. At both Pepco and ACE there were no letters of credit and only $1 million in outstanding commercial paper borrowings leaving $300 million and $299 million of availability under each credit facility respectively.

As of the last reporting period (September 30, 2016), in the event that ExGen were downgraded below investment grade, ExGen could be required to post additional collateral of $1.9 billion.

Back on December 31, 2015, ExGen below investment grade collateral posting requirement was $2.0 billion.

On January 9, 2013, the US Court of Appeals reached a decision for the government in a lawsuit involving Consolidated Edison`s (ConEd's) participation in a lease-in, lease-out (LILO) transaction that the IRS also has characterized as a tax shelter, and disallowed ConEd's deductions stemming from its participation in this investment. CWE deferred the $1.2 billion of gain on the 1999 sale of its fossil generating facilities by acquiring like-kind property via a purchase leaseback transaction. The IRS has asserted that the Exelon purchase leaseback transaction is substantially similar to a leasing transaction known as a sale-in, lease-out transaction (SILO). Exelon believes that its like-kind exchange transaction is not the same as or substantially similar to a SILO.

In the first quarter of 2013, Exelon recorded a non-cash charge to earnings of approximately $265 million, which represents the full amount of interest expense (after-tax) and incremental state tax expense in the event that Exelon is unsuccessful in its litigation efforts. Approximately $170 million of the amount was recorded at CWE.

On 19 September 2016, the US Tax Court ruled that Exelon was not entitled to defer tax on the transaction. The potential tax and after-tax interest that could become payable is approximately $870 million, of which approximately $300 million would be attributable to CWE and the remainder to Exelon. In addition, the court ruled that Exelon is liable for accuracy-related penalties totaling $190 million. In order to appeal the decision, Exelon would be required to either post a bond or pay the tax, penalties and interest for the tax years before the court.

Structural Considerations

Separating Exelon's debt between its parent holding company, its utilities and ExGen is a component to our credit assessment. In light of Exelon's revised corporate finance policies, we are incorporating a view that looks to Exelon's parent holding company debt as a source of financing for its regulated utilities, but not its unregulated ExGen. However, Exelon might use parent holding company debt to also finance ExGen. This could impact the relationship between the parent and its unregulated subsidiary, ExGen, but could also impact its regulated T&D utility subsidiaries.

Profile

Exelon Corporation is a large diversified US holding company that owns six regulated transmission and distribution utilities and a large unregulated power company.

Rating Action: Moody's upgrades Exelon's T&D utilities; rating outlooks stable

Global Credit Research - 30 Jan 2014

Approximately $9 Billion of Debt Affected

New York, January 30, 2014 -- Moody's Investors Service today upgraded the senior unsecured ratings of Baltimore Gas & Electric Company (BGE) to A3 from Baa1, Commonwealth Edison Company (CWE) to Baa1 from Baa2, and PECO Energy Company (PECO) to A2 from A3. Moody's also upgraded the short-term rating at PECO to Prime 1 from Prime 2. This rating action completes our review of BGE, CWE and PECO initiated on November 8, 2013. The outlooks for BGE, CWE and PECO are stable.

"Exelon's three electric transmission and distribution utilities are financially secure and operate under supportive regulatory environments in Maryland, Illinois and Pennsylvania. All three jurisdictions provide a good suite of timely cost recovery mechanisms." said Jim Hempstead, Associate Managing Director.

RATINGS RATIONALE

The primary driver of today's rating action was Moody's more favorable view of the relative credit supportiveness of the US regulatory environment, as detailed in our September 2013 Request for Comment titled "Proposed Refinements to the Regulated Utilities Rating Methodology and our Evolving View of US Utility Regulation."

The rating upgrades for BGE and CWE reflect the improved regulatory frameworks in Maryland and Illinois, where formulaic or forward looking recovery mechanisms, rate riders or other single-issue special purpose trackers exist. The upgrade for PECO reflects the continued supportive regulatory framework in Pennsylvania. All three utilities benefit from a reasonably transparent regulatory framework.

"Evidence of supportive regulatory decisions can be found in recent rate orders in Maryland and Illinois," added Hempstead "states where the utilities were often a party in more contentious proceedings."

In Maryland, BGE's upgrade reflects the existence of a more constructive political and regulatory environment. The merger conditions, which included a 3-year share-holder dividend holiday, also help lay the foundation to a more constructive relationship. Over the next 3-5 years, BGE's ratio of cash flow to debt is expected to remain in the high-teen's range. Next year, in 2015, shareholder dividends will recommence with a 70% payout range.

In December, BGE received a rate increase of about $46 million with an authorized return on equity of 9.6% for the gas distribution business and an authorized return on equity of 9.75% for the electric business. BGE also received a small infrastructure tracker.

In Illinois, Commonwealth Edison's upgrade reflects a more constructive political and regulatory environment, which will provide greater predictability. Recent legislations, Energy Infrastructure and Modernization Act (EIMA) and Senate Bill 9, established a framework to adopt more formulaic cost recovery mechanisms. In the formula's first material regulatory proceeding, CWE was authorized a revenue increase of $341 million, as compared to the $353 million request. The small difference appears to indicate that the utility and commission have a shared understanding of how utilities should apply for cost recovery for these types of distribution investments, a credit positive.

In fact, CWE's suite of recovery mechanisms, taken as a whole, actually look better than both BGE and PECO. The rating is one-notch lower than BGE and two-notches lower than PECO because the regulatory lag in Illinois had been running almost twice as long as that of Maryland and Pennsylvania. Nonetheless, allowed returns are on par with the broader peer groups of T&D utilities as well as with vertically integrated electrics that do not operate in states that legislatively enacted the unbundling of the traditional electric utility framework.

In Pennsylvania, PECO operates with a good suite of recovery mechanisms and riders. These include recovery for fuel and purchased power, and investments for generation, environmental and natural gas T&D infrastructure, among others. PECO is not expected to file for a revenue increase for a few years.

RATING OUTLOOK

The rating outlook for all three utilities is stable. BGE, CWE and PECO own and operate critical infrastructure around the greater Baltimore, Chicago and Philadelphia metro-regions, respectively. In all three states, Moody's expects regulators and politicians to provide a reasonably supportive and constructive framework for the utilities to pursue, submit and ultimately receive authorization to recover the vast majority of their prudently incurred costs and investments. The financial profile for the three T&D utilities is strong, and cash flows (combined for all three utilities) should grow to roughly $2.8 -- $3.0 billion over the next 3 years. Assuming the three utilities can keep their total debt outstanding near $15 billion, the ratio of CFO to debt should remain in the high-teen's range over the next five years.

WHAT COULD CHANGE RATING -- UP

All three utilities could be upgraded as the new formulaic rate setting framework and other positive legislative intervention (such as the Illinois EIMA law) starts to build a track record. It will take a few years to fully understand the credit impacts associated with new trackers and recovery mechanisms as they experience different economic and financial cycles. For now, we incorporate a view that the regulatory environment will remain supportive for at least the next 2 -- 3 years, and that the suite of recovery mechanisms will not be materially diminished.

WHAT COULD CHANGE RATING -- DOWN

All three utilities could be downgraded if the ratio of cash flow to debt fell below the 15% threshold for a sustained period of time, especially if the decline was in cash flow and associated with an unexpected regulatory or political intervention. Mis-managing liquidity or an unbalanced shareholder rewards policy, where the dividend payout ratio was near 100%, could also create negative rating pressure. At this point, the biggest credit rating exposure appears to reside in the three utility's relationship with their unregulated affiliate, Exelon Generation.

The principal methodology used in this rating was Regulated Electric and Gas Utilities published in December 2013. Please see the Credit Policy page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this rating action, and whose ratings may change as a result of this rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

Rating Action: Moody's affirms Exelon at Baa2; Downgrades Exelon Generation to Baa2; Outlook stable

Global Credit Research - 07 Feb 2013

Approximately $7.9 Billion of Debt Securities Affected

New York, February 07, 2013 -- Moody's Investors Service affirmed the ratings of Exelon Corporation (Exelon), including its Issuer Rating and all of its senior unsecured debt at Baa2, while also downgrading the senior unsecured and Issuer rating of Exelon Generation Company, LLC (ExGen) to Baa2 from Baa1. Both Exelon's and ExGen's short-term rating for commercial paper is affirmed at Prime-2. The rating outlook for both Exelon and ExGen is changed to stable from negative. Similarly, the rating outlook for Exelon Capital Trust I, Exelon Capital Trust II, and Exelon Capital Trust III is changed to stable from negative. The ratings of Exelon subsidiaries PECO Energy Company (PECO: A3 stable), Baltimore Gas and Electric Company (BG&E: Baa1 stable) and Commonwealth Edison Company (CWE: Baa2 stable) are unaffected by today's rating announcement.

"The rating action follows today's announcement that Exelon will reduce its common dividend by 40%, enhancing annual retained and free cash flow by more than $700 million, which collectively helps to stabilize long-term credit quality at Exelon and ExGen," said A.J. Sabatelle, Senior Vice President at Moody's. "While the Exelon dividend cut and previously announced deferrals of growth capital investment will reduce near-term cash flow pressure at subsidiary ExGen, the one-notch downgrade at ExGen incorporates our expectation for sustained weak market fundamentals across the unregulated power sector which we believe are likely to result in ExGen's credit profile moving to a mid-Baa rating category during the next three years."

RATINGS RATIONALE

The rating affirmation at Exelon incorporates the long-term stability to the company's consolidated credit quality that should emerge from the 40% reduction to the common dividend which collectively enhances internal cash flow by approximately $720 million on a annualized basis. The rating affirmation acknowledges that the revised dividend policy is better aligned with Exelon's hybrid business strategy where the rate regulated businesses provide dividends equal to 65-70% of sustainable utility earnings and the commodity unregulated business provides over time a payout ratio closer to 30% of sustained unregulated net income. The rating affirmation further recognizes current plans to move Exelon holding company debt and the Constellation Energy debt assumed by Exelon to the ExGen operating company level, to the extent that such debt is not repaid from internal sources. In that vein, the dividend reduction increases the prospects for overall debt reduction throughout Exelon over time. The rating action acknowledges that with the reduced dividend, Exelon's funding requirements for the common dividend and for other holding company expenses, including debt service, can more comfortably be provided by Exelon's rate regulated subsidiaries -- PECO, BG&E, and CWE. This is particularly the case after 2014 based upon expected earnings growth from the rate regulated segments and when the prohibition on BG&E providing a dividend to Exelon is lifted. To that end, the rating affirmation factors in some degree of structural subordination as we view the collective credit profile of the three regulated transmission and distribution companies as having Baa1 rating characteristics.

The rating downgrade at ExGen to Baa2 from Baa1 reflects our belief that during the next three years, ExGen is likely to record financial metrics more in-line with a mid-Baa rated unregulated power company even after factoring in the benefits of the Exelon dividend cut and the deferral of growth capital investments announced during the fourth quarter of last year. Specifically, in our case, we calculate that for the next three year period from 2013 through 2015, the ratio of ExGen's cash flow (CFO-pre WC) to debt will average between 27-30%, ExGen's cash flow interest coverage will be above 6.0x, while the ratio of retained cash flow to debt will average around 22%, with the company being modestly free cash flow positive in most of these years. These metrics incorporate the company's plan to move holding company debt to ExGen and factor in other standard and non-standard adjustments including ExGen's anticipated unfunded pension obligation and the present value of the remaining tolling obligations which are used to support ExGen's unregulated power platform. Moody's further notes that while the Exelon dividend reduction will enhance ExGen's retained cash flow and free cash flow prospects, Exelon will continue to lean on ExGen for dividends in 2013 and 2014, a period when margin prospects are expected to remain compressed at this subsidiary and when BG&E dividends are restricted. The rating recognizes that with the common dividend reduction, management will focus its attention on growth initiatives in order to enhance shareholder value. While these initiatives could include incremental rate regulated and contracted generation investments, both of which we would likely view as benign to ExGen and Exelon's overall credit quality, we also believe that given the sizeable unregulated footprint that has emerged at ExGen in the wholesale and retail space, incremental investments intended to augment this position remain high on management's wish list. In that vein, we believe that being strongly positioned in the Baa2 rating category will enable ExGen to more freely pursue growth initiatives across the energy spectrum.

The Prime-2 rating affirmation at Exelon and at ExGen reflects the strong liquidity profile anticipated to be maintained by the company over the intermediate term enhanced by the common dividend reduction and by the deferral of growth capital investments. We understand that from a liquidity standpoint, neither Exelon or ExGen had any commercial paper outstanding at January 30, 2013, and excluding the $2.2 billion of virtually undrawn liquidity facilities across the three utilities, the company had available liquidity at January 30, 2013 of nearly $4.5 billion, the majority of which expires in 2017.

The stable rating outlook for Exelon and ExGen considers the benefits to credit quality from deferring growth capital investments and from the parent's decision to reduce the common dividend by 40%. Exelon's stable rating outlook factors in our belief that with the dividend cut, Exelon's liquidity requirements will in the long-run be more dependent upon cash flow generation from the three large rate regulated utility systems, particularly beginning after 2014. ExGen's stable rating outlook factors in our belief that ExGen remains well-positioned as a mid-Baa company during the current down cycle and incorporates some degree of financing flexibility which should help facilitate incremental growth prospects as opportunities arise.

In light of the challenges facing the unregulated power sector, including sustained weak margins, the ratings at Exelon and ExGen are not likely to be upgraded in the near-term. To the extent that growth initiatives center around acquisitions of rate regulated businesses, credit quality at Exelon could be enhanced, particularly if such acquisitions are financed in a credit-friendly way.

While both Exelon and ExGen remain well-positioned in the mid-Baa rating category, these ratings could be downgraded if weaker than expected financial performance surfaced either as a result of a further sustained drop in operating margins across the unregulated power sector or a substantial outage at several of the company's generating assets resulting in negative free cash flow being financed with material incremental indebtedness. Additionally, negative rating pressure could surface at Exelon if adverse regulatory decisions at one or more of the utility subsidiaries occurred, particularly at PECO or CWE since both are larger than BG&E. Exelon's ratings could be downgraded if cash flow to debt fell below 20%, retained cash flow to debt below 12%, and cash flow interest coverage approached 4.5x on a sustained basis. With respect to ExGen, the subsidiary's ratings could be downgraded if cash flow to debt fell into the low twenties, retained cash flow to debt dropped below 15%, cash flow interest coverage was below 5.0x and substantial negative free cash flow occurred on a sustained basis.

Ratings Affirmed:

..Issuer: Exelon Corporation

.... Issuer Rating at Baa2

....Senior Unsecured Regular Bond/Debenture at Baa2

....Shelf for senior unsecured, subordinated debt and preferred at (P)Baa2, (P)Baa3, and (P)Ba1

....Senior Unsecured Commercial Paper at Prime-2

Headquartered in Chicago, IL, Exelon is the holding company for non-regulated subsidiary, ExGen and for regulated subsidiaries, PECO, BG&E and CWE. At 09/30/2012, Exelon had total assets of $78.4 billion.

The principal methodology used in this rating was Unregulated Utilities and Power Companies published in August 2009. Please see the Credit Policy page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this rating action, and whose ratings may change as a result of this rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

....Senior Unsecured Bank Credit Facility, Affirmed Baa2

....Senior Unsecured Commercial Paper, Affirmed P-2

....Senior Unsecured Regular Bond/Debenture, Affirmed Baa2

RATINGS RATIONALE

"With the merger completed, PHI benefits as an intermediate subsidiary holding company of Exelon," said Jim Hempstead, Associate Managing Director. "We see Exelon's larger size and scale bringing more resources and capital to help accelerate PHI's investment plans."

PHI's Baa2 rating reflects the company's status as an intermediate subsidiary holding company of Exelon, and its portfolio of three low business risk profile transmission and distribution (T&D) utilities. PHI's utilities (Atlantic City Electric Company, (Baa2 stable); Delmarva Power and Light Company, (Baa1 stable) and Potomac Electric Power Company, (Baa1 stable)) provide electric and natural gas delivery services to roughly 2.0 million customers. PHI's service territories cover the District of Columbia (DC), Maryland, Delaware and New Jersey, and are contiguous to Exelon's Maryland and Pennsylvania service territories. In 2015, PHI's T&D utilities produced roughly $1.0 billion in cash flow that covered approximately $7.1 billion in debt.

For Exelon, and its Baa2 senior unsecured rating, the acquisition of PHI is credit positive because it helps transition the company more towards a regulated business. PHI brings an incremental $8 billion in rate base to Exelon's roughly $20 billion, and adds regulatory diversity with new service territories in DC, Delaware and New Jersey.

"We see Exelon's business shifting more towards its regulated utilities, so we will now assess Exelon's credit profile under our Global Regulated Electric and Gas Utilities rating methodology," Hempstead added.

Prospectively, we see Exelon's roughly $28 billion of regulated T&D utility rate base remaining higher than its combined T&D utility debt of approximately $20 billion. In addition, we count an additional $5.0 billion in parent holding company debt, which if added to the T&D utility debt, is still below the rate base, a credit positive. When looking at Exelon without its unregulated business operations, we see an ability to generate a ratio of cash flow to debt in the 20% range (considering only the T&D utility debt) and the mid-teen's range (considering the T&D utility debt and incorporating the holding company debt). In addition, we see approximately $3.5 billion of debt at Baltimore Gas and Electric Company (A3 stable), $8.1 billion of debt at Commonwealth Edison Company (Baa1 positive), $3.1 billion of debt at PECO Energy Company (A2 stable), $1.3 billion of debt at Atlantic City Electric Company (Baa2 stable), $1.6 billion of debt at Delmarva Power and Light Company (Baa1 stable) and $2.6 billion of debt at Potomac Electric Power Company (Baa1 stable).

Liquidity Profile

PHI's Prime-2 short term commercial paper rating reflects the strength and liquidity resources of Exelon. Going forward, we incorporate a view that PHI will no longer be utilized as a principal financing vehicle, and we expect the debt at PHI, including its existing short-term debt, to slowly transition to the Exelon parent holding company level.

Rating Outlook

The stable rating outlook for PHI reflects its role as an intermediate subsidiary holding company of Exelon. Exelon's stable rating outlook reflects the stability and predictability of its larger suite of T&D utilities, its adequate liquidity profile and its conservatively managed and capitalized unregulated business operations. The stable outlook incorporates a view that Exelon will generate a consolidated ratio of cash flow to debt ratio in the high-teen's to 20% range on a sustained basis.

What Could Change the Rating -- Up

PHI's Baa2 rating could be upgraded with an upgrade in Exelon's rating. Exelon's Baa2 rating could be upgraded if its consolidated ratio of cash flow to debt rose to the mid-20% range for a sustained period of time, or if there was a material reduction in the corporate family's business risk profile.

What Could Change the Rating - Down

PHI's Baa2 rating could be downgraded with a downgrade in Exelon's rating. Exelon's Baa2 rating could be downgraded if there was a material increase in regulatory contentiousness in one or more of its major jurisdictions (i.e., Illinois, Maryland or Pennsylvania), or if the consolidated ratio of cash flow to debt declined to the low-to-mid-teen's range for a sustained period of time. Ratings could also be downgraded if Exelon deployed a more aggressive corporate finance strategy, where the level of holding company debt as a percentage of total consolidated debt rose to over 25% (excluding the debt of Exelon Generation Company LLC) or if there were any materially adverse developments in the unregulated business operations related to the nuclear generation fleet or the retail trading and marketing business.

The principal methodology used in these ratings was Regulated Electric and Gas Utilities published in December 2013. Please see the Ratings Methodologies page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

Rating Action: Moody's affirms ratings for Exelon and PEPCO families upon merger announcement; outlooks remain stable

Global Credit Research - 30 Apr 2014

Approximately $28 Billion of Debt Affected

NOTE: On May 5, 2014 the Press Release was revised as follows: The following affirmations were added to the debt list: Exelon Capital Trust I – (P)Baa3, Exelon Capital Trust II – (P)Baa3, Exelon Capital Trust III (P)Baa3 and PECO Energy Capital Trust IV - (P)A3. Revised release follows.

New York, April 30, 2014 -- Moody's Investors Service today affirmed the ratings of Exelon Corporation (Exelon) and its subsidiaries. Ratings affirmed include: Exelon's Baa2 senior unsecured and Prime-2 short term commercial paper ratings; Baltimore Gas & Electric Company's (BGE) A3 senior unsecured rating; Commonwealth Edison Company's (CWE) Baa1 senior unsecured rating; and PECO Energy Company's (PECO) A2 senior unsecured rating and Prime-1 short term commercial paper rating. In addition, Moody's affirmed Exelon Generation Company's (ExGen) Baa2 senior unsecured rating. The rating outlook for Exelon and all of its subsidiaries is stable.

Concurrently, Moody's affirmed the ratings of Pepco Holdings Inc (PHI) and its subsidiaries. Ratings affirmed include PHI's Baa3 long-term issuer and Prime-3 short term commercial paper ratings; Potomac Electric Power Company's (PEPCO) Baa1 long-term issuer and Prime-2 short term commercial paper ratings; Delmarva Power & Light Company's (DPL) Baa1 long-term issuer and Prime-2 short term commercial paper ratings; and Atlantic City Electric Company's (ACE) Baa2 long-term issuer and Prime-2 short term commercial paper ratings. The rating outlook for PHI and all of its subsidiaries is stable.

"This transaction fundamentally shifts Exelon's business mix towards lower risk regulated transmission and distribution utilities" said Jim Hempstead, Associate Managing Director "and looks to have a high degree of execution certainty given the company's presence in the region and prior success with the BGE integration."

"Although PHI has had some success in addressing several regulatory overhangs across its jurisdictions, being part of a large company, and eliminating the need to finance its common dividend are positive" said Lesley Ritter, Analyst. "As the planned investment in rate base unfolds and the recovery structures commence, we think PHI and its utility subsidiaries will be better positioned for rating upgrades."

RATINGS RATIONALE

The primary driver of today's rating action is the shift in Exelon's business mix towards the lower risk transmission and distribution (T&D) utility business, the improved diversity of regulatory jurisdictions, increased scale and scope of the company and balanced acquisition financing plans. We also view this transaction as a credit positive for PHI and its subsidiaries because it eliminates the pressure of maintaining an aggressive common dividend, thereby reducing the need for further leverage at this entity, during a period of heightened capital spending.

With the addition of PHI, Exelon's mix of regulated and unregulated business activities will shift to approximately 60% regulated -- 40% unregulated from roughly 50% - 50%, and its revenue concentration in Maryland, Illinois and Pennsylvania shifts to 33%, 30% and 21% from 29%, 42% and 29%, respectively. In addition, Exelon picks up exposure to New Jersey, Delaware and the District of Columbia.

Exelon's credit profile will also benefit by the larger and more diversified rate base, which is expected to grow across all of the jurisdictions. Exelon's roughly $18 billion T&D rate base will grow with PHI's roughly $7 billion rate base, creating one of the largest T&D utilities in the US. The greater breadth and diversity of these regulated jurisdictions is a credit positive because all of the jurisdictions are viewed as being relatively supportive to long term credit quality and provide a reasonable suite of timely recovery mechanisms.

We also see improvement in the upstream subsidiary dividend policy, with the reliance on upstream dividends shifting further away from ExGen and more toward regulated cash flows. PHI benefits because incorporation into a large diversified family of businesses eliminates the pressure of maintaining an aggressive common dividend, thereby reducing the need for further leverage at this entity.

Exelon is defending its Baa2 rating by utilizing a balanced mix of debt and equity, and ExGen will dividend roughly $1.0 billion in non-core, after-tax asset sale proceeds to help finance the purchase of PHI. That said, the rating is constrained by the shift in Exelon's corporate finance policies, where roughly $3.5 billion in holding company debt will be issued along with mandatorily convertible debt. Assuming 50% equity treatment for the convertible debt, and including an additional $500 million of debt that currently resides at Exelon's parent holding company (but excluding an expected retirement of $800 million that currently resides at Exelon), the ratio of parent holding company debt to total consolidated debt will rise from around 6% today. If this ratio of parent holding company debt to total consolidated debt rose above the 25%-30% range, a wider notching between the parent and its subsidiaries could result. Still, the issuance of approximately $2.8 billion of equity is viewed as a credit positive, and the convertible debt should convert to additional equity in about 3 years.

On a pro-forma basis, Exelon's consolidated financial metrics will also weaken somewhat, with the ratio of consolidated cash flow to debt expected to remain in the low 20% range over the next few years. This compares with the 2013 ratio of roughly 25%. The higher concentrations of regulated operations will provide some cushion lower credit metric thresholds for a given rating because of the inherent stability of regulated cash flows.

RATING OUTLOOKS

The stable rating outlook for Exelon considers the stability and predictability of its large T&D utility businesses, the reduced shareholder dividend outflows, adequate liquidity profile and conservatively levered unregulated generation business.

The stable rating outlook for ExGen considers the benefits to credit quality from deferring growth capital investments and from the parent's decision to reduce the common dividend by 40%. The stable rating outlook factors in our belief that ExGen is strongly positioned as a mid-Baa company during the current down cycle that also incorporates some degree of financing flexibility which should help facilitate incremental growth prospects as they arise.

The stable rating outlooks for BGE, CWE and PECO reflects the critical utility infrastructure they operate around the greater Baltimore, Chicago and Philadelphia metro-regions, respectively. In all three states, Moody's expects regulators and politicians to provide a reasonably supportive and constructive framework for the utilities to pursue, submit and ultimately receive authorization to recover the vast majority of their prudently incurred costs and investments. The financial profile for the three T&D utilities is strong, and cash flows (combined for all three utilities) should grow to roughly $2.8 - $3.0 billion over the next 3 years. Assuming the three utilities can keep their total debt outstanding near $15 billion, the ratio of CFO to debt should remain in the high-teen's range over the next five years.

The stable rating outlooks for PHI and its subsidiaries factor in the benefits of the merger as being a part of a larger family, including the likely reduction of negative free cash flow across the companies.

WHAT COULD CHANGE RATING -- UP

Exelon's ratings could be upgraded with a continued shift in business mix towards the regulated T&D utilities and away from the unregulated merchant power and retail businesses. To the extent that growth initiatives continue to center around acquisitions of rate regulated businesses, credit quality for Exelon could be enhanced, particularly if such an acquisition was financed in a credit friendly fashion. Exelon's ratings could also be upgraded if it can produce a ratio of cash flow to debt in the mid-20% range for a sustained period of time and if the T&D utilities produced sustained ratios of cash flow to debt in the mid- to high-teen's range. At this level, Exelon's more risky unregulated businesses will be sufficiently mitigated with its strong financial profile.

In light of the most recent negative rating action in February 2013 that lowered ExGen's long-term rating to Baa2 along with a continuing negative rating outlook for the unregulated power sector, it is unlikely for ExGen's ratings to upgraded over the next several years.

PHI will likely see upwards rating pressure once regulatory approvals for the merger are reached and there is further clarity on the company's pro forma dividend policy. While the PHI rating could benefit from merger completion, rating upgrades at the utility levels are unlikely for now given the sizeable capital spending program at each of the subsidiaries.

For BGE, CWE and PECO, ratings could be upgraded as the new formulaic rate setting framework and other positive legislative intervention (such as the Illinois EIMA law) starts to build a track record. It will take a few years to fully understand the credit impacts associated with new trackers and recovery mechanisms as they experience different economic and financial cycles. For now, we incorporate a view that the regulatory environment will remain supportive for at least the next 2 -- 3 years, and that the suite of recovery mechanisms will not be materially diminished.

WHAT COULD CHANGE RATING -- DOWN

Exelon's rating could be downgraded if weaker than expected financial performance surfaced for a sustained period of time, either as a result of a further sustained drop in operating margins across the unregulated power sector or a substantial outage at several of the company's generating assets. In addition, if sizeable negative free cash flows were financed with material increase in indebtedness, or if a more contentious regulatory environment in Illinois, Maryland or Pennsylvania were to materialize, ratings could be pressured. From a financial perspective, Exelon's ratings could be downgraded if cash flow to debt fell below 20% for a sustained period of time, or it retained cash flow to debt below 12%.

ExGen's rating is strongly-positioned in the mid-Baa rating category and its hedging strategy enhances the reliability of its near-term cash flow. The rating, however, could be downgraded if weaker than expected financial performance surfaced either as a result of a further sustained drop in operating margins across the sector or a substantial outage at several of the company's generating assets resulting in negative free cash flow being financed with material incremental indebtedness. Specifically, ExGen's ratings could be downgraded if cash flow to debt declined to the low twenties percentages, retained cash flow to debt fell below 15%, cash flow interest coverage was below 5.0x and material negative free cash flow surfaced on a sustained basis.

PHI's rating could be downgraded if the company encounters adverse regulatory or political developments at its utility subsidiaries, or finances its near-term capital expenditure program in a manner that impairs its ability to maintain low Baa metrics over a sustained period of time.

The ratings of Pepco, DPL and ACE could be lowered if there were a deterioration in the regulatory environment, which might include greater regulatory lag, uncertainty about recovery of investments, further compression in rates, or if there were a downward revision in our expectation of future financial metrics relative to our current view.

For BGE, CWE and PECO, ratings could be downgraded if the ratio of cash flow to debt fell below the 15% threshold for a sustained period of time, especially if the decline was in cash flow and associated with an unexpected regulatory or political intervention. Mis-managing liquidity or an unbalanced shareholder rewards policy, where the dividend payout ratio was near 100%, could also create negative rating pressure. At this point, the biggest credit rating exposure appears to reside in the three utility's relationship with their unregulated affiliate, Exelon Generation.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this rating action, and whose ratings may change as a result of this rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY’S IN ANY FORM OR MANNER WHATSOEVER.

Moody’s Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody’s Corporation (“MCO”), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody’s Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody’s Investors Service, Inc. for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS’s ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading “Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy.”

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY’S affiliate, Moody’s Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody’s Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to “wholesale clients” within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY’S that you are, or are accessing the document as a representative of, a “wholesale client” and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to “retail clients” within the meaning of section 761G of the Corporations Act 2001. MOODY’S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be reckless and inappropriate for retail investors to use MOODY’S credit ratings or publications when making an investment decision. If in doubt you should contact your financial or other professional adviser.

Additional terms for Japan only: Moody's Japan K.K. (“MJKK”) is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody’s Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody’s SF Japan K.K. (“MSFJ”) is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization (“NRSRO”). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

PECO Energy Co. (/gws/en/esp/issr/80088954)

Fitch Ratings

Fitch Rates PECO Energy First and Refunding Mortgage Bonds 'A'

Fitch Ratings-New York-14 September 2016: Fitch Ratings assigns an 'A' rating to PECO Energy Co.'s (PECO) new issue of first and refunding mortgage bonds due 2021. The Rating Outlook is Stable. A portion of the proceeds will be used to repay the $300 million 1.2% first and refunding mortgage bonds due Oct. 15, 2016, with the remainder, if any, for general corporate purposes.

KEY RATING DRIVERS

Strong Credit Profile: Fitch expects PECO's credit measures, aided by a rate increase implemented in January 2016, to remain strong relative to Fitch's target ratios for the rating level and PECO's peer group of 'BBB+' rated distribution utilities, but moderately weaker than recent historical results. Over the next few years, Fitch estimates debt/EBITDAR and funds from operations (FFO)-adjusted leverage to approximate 3.25x and 3.50x, respectively, compared with 3.0x and 3.1x in 2015. The increase reflects the effects of a rising capex plan and relatively flat sales growth.

Low Business Risk: Ratings and credit quality benefit from the absence of commodity price exposure and the associated cash flow volatility. PECO retains the provider of last resort obligation for customers that do not choose an alternative energy provider, but recovers its electric and gas supply costs from customers through monthly fuel adjustment mechanisms. The alternative regulatory model implemented in Pennsylvania to recover certain capital costs also reduce business risk.

Alternative Regulatory Model: Fitch considers regulatory legislation enacted in Pennsylvania in 2012 (HB 1294) to be supportive of credit quality. The law allows the state's Public Utility Commission (PUC) to establish a distribution system investment charge (DSIC) to provide timely recovery of certain capital costs incurred to enhance electric and gas distribution systems. Once implemented, the DSIC is updated quarterly. The law also allows traditional rate filings to include fully forecasted test years, further reducing regulatory lag.

Constructive Rate Order: PECO implemented a $127 million rate increase effective Jan. 1, 2016, following the approval of a settlement agreement by the PUC. The approved increase equates to about two-thirds of PECO's $190.1 million rate request. The agreement also includes implementation of a DSIC for the company's electric operations, but not until eligible investments exceed the Dec. 31, 2016 levels projected by PECO.

Demand Reduction: Pennsylvania Act 129 (Act 129) requires Pennsylvania utilities to reduce electric consumption, with the companies absorbing the associated revenue loss between rate cases. The PUC recently approved phase III of the energy efficiency and consumption plan, requiring PECO to reduce consumption further by 2021. PECO met the initial consumption reduction targets of 1% by 2011 and 3% by May 31, 2013. Importantly, Act 129 provides a surcharge to recover implementation costs (other than lost sales) on a timely basis.

Rising Capex: Capex is forecasted to rise about 12% to $675 million in 2016 from $601 million in 2015 and to range between $775 million and $750 million over the following four years. The growth in capex primarily reflects investments in electric reliability and acceleration of a gas pipeline replacement program. The financial impact is moderated by the extension of bonus depreciation and the surcharge mechanism associated with Act 129.

KEY ASSUMPTIONS

--Relatively flat electric load growth;
--Retail gas load growth ranging between 0.5% and 1.0%;
--Electric distribution rate increase of $127 million effective Jan. 1, 2016;
--Equity capital of 53%-54% of total capital;
--Five-year capex plan of $3.7 billion.

RATING SENSITIVITIES

Positive: Positive action could be considered if adjusted debt/EBITDAR and FFO lease-adjusted debt remain comfortably below 3.4x and 4.0x, respectively.

Negative: Given the headroom in existing ratings, a downgrade is not likely, but could be considered if debt/EBITDAR and FFO lease-adjusted debt exceeded 3.70x and 4.8x, respectively, on a consistent basis.

LIQUIDITY

A $600 million committed credit facility provides ample liquidity. The credit facility supports a commercial paper program of equal size and also provides for direct borrowings. The credit facility extends to May 2021 and allows for a one-year extension. PECO also participates in a corporate money pool along with its affiliates Exelon Generation Company, LLC and Exelon Business Services Co., LLC. Parent Exelon Corp. (EXC) can lend to, but not borrow from, the money pool. As of June 30, 2016, PECO had no short-term borrowings and available cash of $203 million.

Q. SDR-ROR-5 Please provide a workpaper showing the derivation of the Company's current AFUDC rate.

A. SDR-ROR-5 Refer to Attachment SDR-ROR-05(a) for the calculation of PECO's current AFUDC rate, effective January 1, 2018 through March 31, 2018.

AFUDC Calculation
January - March 2018

	Amount ($000s)	Capitalization Ratio	Weighted Average Cost Rate
Average Short-term Debt	**85,339**		**1.42%**
Long-term Debt at 12/31/2017	**3,103,933**	**46.47%**	**4.34%**
Preferred Stock at 12/31/2017	**-**	**0.00%**	**0.00%**
Common Equity at 12/31/2017	**3,575,780**	**53.53%**	**10.00%**
Total Capitalization	**6,679,713**	**100.00%**	
Average CWIP	**264,618**		
Gross Rate for Borrowed Funds			**1.82%**
Rate for Other Funds			**3.63%**
Gross AFUDC Rate			**5.45%**

SDR-ROR-6
Phillip S. Barnett

Q. SDR-ROR-6 Please supply copies of all presentations by the Company's and, if applicable, its parent's management to securities analysts during the past 2 years. This would include presentations of financial projections.

A. SDR-ROR-6 All presentations made by the Company's management to securities analysts during the past 2 years can be located on the Exelon Corporation website at www.exeloncorp.com. Once on the site, select "Investors", then click on "Events & Presentations" or go directly to: http://www.exeloncorp.com/investor-relations/events-and-presentations

Q. SDR-ROR-7

Please provide a listing of all securities issuances for the Company and, if applicable, its parent projected for the next two years. The response should identify for each projected issuance the date, dollar amount, type of security, and effective cost rate.

A. SDR-ROR-7

DISCLAIMER: This answer contains forward-looking information and is subject to change.

PECO Energy Company currently does not project any equity issuances for the next two years. Regarding PECO's long-term debt issuances for 2018, on February 15th, PECO issued $325 million of First Mortgage Bonds with a coupon rate of 3.90% and a yield to maturity of 3.928%, because the Company is retiring $500 million of First Mortgage Bonds that mature on March 1, 2018 (CUSIP 693304AL1). PECO plans to issue additional long-term debt of $325 million on or around September 2018 with an estimated coupon rate of 4.00%. PECO also plans to issue a $50 million Philadelphia Industrial Development Corporation (PIDC) loan in the second half of 2018 under the Welcome Fund (EB-5) Loan federal program with an estimated coupon rate of 2.00%. In 2019, PECO plans to issue $250 million of long-term bonds on or around September with an estimated coupon rate of 4.05%.

Parent company issuances are not applicable.

Q. SDR-ROR-8	Please identify all of the Company's and, if applicable, its parent's publicly underwritten common stock issuances written in the last five years. Identify which such issuances were related to mergers or acquisitions, and which were undertaken to fund facility investments in utility plant and equipment.
A. SDR-ROR-8	PECO Energy Company has not had a publicly underwritten common stock issuance in the last five years. PECO's Parent Company, Exelon Corporation, had a merger-related public, underwritten issuance of common equity in June of 2014, which is described in the response to Filing Requirement III-D-4. Exelon Corporation did not have any other public, underwritten issuance of equity in the last five years.

Q. SDR-ROR-9 Please identify any plan by the Company to refinance high cost long-term debt or preferred stock.

A. SDR-ROR-9 At the present time, PECO Energy Company does not have any “high cost” long-term debt. PECO has no preferred stock outstanding. However, the Company is constantly evaluating market conditions for refinancing opportunities that could reduce its weighted average cost of long-term debt.

SDR-ROR-10
Page 1 of 1
Phillip S. Barnett

Q. SDR-ROR-10 Please provide copies of all securities analysts reports relating to the Company and/or its parent issued within the past 2 years.

A. SDR-ROR-10 See Attachment SDR-ROR-10 (a-f) for the requested reports that PECO and Exelon have or were able to obtain based on a reasonable investigation. Not all securities analysts' reports are made available to PECO or Exelon. The reports are organized by date and year.

THE REQUESTED DOCUMENTS ARE VOLUMINOUS. THEREFORE, THEY ARE BEING PROVIDED ONLY IN ELECTRONIC FORM ON THE CD ACCOMPANYING THE COMPANY'S FILING.

Guggenheim's Power & Utilities Daily

Guggenheim's Power and Utilities Daily: WR, NEE, ETR, FE, EXC, AEP, PJM, CPP, DUK, SO, ED

January 4, 2016

SHAHRIAR POURREZA, CFA ANALYST
212 518 5862
shahriar.pourreza@guggenheimpartners.com

What's New?

See here for Guggenheim's Power & Utilities 2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

WR/NEE – WR purchases 200 MW of wind from NEE
ETR – NY Commission launches investigation on Indian Point operations
FE/EXC/AEP – Exelon submits testimony offering alternative plan to PPAs
PJM – FERC orders technical conference on financial transmission rights
CPP – W.VA and Ohio litigating against CPP but still plans to file state implementation plan
DUK/NEE/SO – New FPSC Chairman
ED – FERC rejects NYISO tariff revisions
DUK – Coal ash basins classified by NCDEQ

WR/NEE – WR purchases 200 MW of wind from NEE

- WR announced it will purchase 200 MW of wind from NEE's Kingman Wind Energy Center
- Part of the transaction allows WR the option to purchase one-half od the facility before substantial completion, which is expected by early 2017.
- The purchase will help to increase Westar Energy's wind generation to over 1,700 MW.

Guggenheim takeaway: *As we highlighted in our research, we expected WR to own a majority of their incremental ~500MW wind RFP. We believe WR's decision to own wind plants is for economic benefits, given that the PTC has been extended, and is also a hedge to CPP compliances. Wind generation in KS is cheap and the resource has high capacity factors in the state. We believe that WR could ask for recovery on the investments outside of a rate case, but could file a rate case if not successful. See our note for more details on WR's wind investment strategy.*

ETR – NY Commission launches investigation on Indian Point operations

- The NY PSC has launched a special investigation on Indian Point after recent unplanned outages in December.
- The investigation will focus on evaluation of capital and maintenance budgets.
- NY Governor asked for the PSC to conduct the investigation after Indian Point 3 shut down on Dec. 14.
- Indian Point 3 had 6 unplanned outages in 2015.

Guggenheim takeaway: *The NY Governor has remained adamant on shutting down Indian Point and requested an investigation on the plant over safety concerns. An investigation from the PSC creates more noise on top of pending coastal zone management and water quality certification hearings.* ***As a reminder, Guggenheim will be hosting a field trip to Indian Point on January***

5 for investors to meet with ETR's senior management team, and will include a tour of the nuclear plant and the spent fuel pool. See our corporate access calendar below for additional detail for January events.

FE/EXC/AEP – Exelon submits testimony offering alternative plan to PPAs

- Exelon submitted testimony opposing FE's PPA settlement.
- They propose to provide an alternative should the OH Commission decide to reject FE's PPA, that they hold a competitive process and obtain a PPA from other providers.
- EXC believes their 8-year PPA offer for "100% emissions-free power… will provide well over $2B in savings to Ohio families and businesses…"
- EXC asserts that a competitive process " will wash away the stain of this affiliate backroom deal where FirstEnergy has positioned its regulated utility to benefit its affiliate First Energy Solutions exclusively."
- EXC's PPA will be an 8-year bundled fixed price for energy and capacity delivered to ATSI from wind, solar, and nuclear resources, with EXC maintaining 100% of the PJM capacity performance risk.

Guggenheim takeaway: *EXC's alternative PPA proposal highlights their companies' ability to deliver renewable energy to Ohio. From our meeting with OH commission, renewable energy and fuel diversity is just one of their many concerns about OH's energy future (jobs, reliability, and economic development to name a few). We believe FE's PPA settlement with PUCO staff will be passed by the Commission as it addresses staff concerns and delivers more than just renewable energy. See here for a deep dive on FE's PPA settlement.*

PJM – FERC orders technical conference on financial transmission rights

- FERC ordered a technical conference to explore PJM"s claim that existing rules on financial transmission rights (FTRs) and auction revenue rights are unjust and unreasonable and that the problems would be solved by PJM's proposed changes.
- An FTR allows the holder to gain credits based on the difference between real-time and day-ahead prices in the energy market when there is congestion on the transmission grid.
- PJM notes their rule changes would solve the unfair shift of revenues from ARR holders to FTR holders.

Guggenheim takeaway: *Commenters including utilities generally supported PJM's proposed changes to treatment of portfolio positions in allocating underfunding or surplus among FTR holders. However, the Financial Marketers Coalition protested PJM's proposal claiming that PJM failed to show current rules are unjust. FERC's decision to order a technical conference will provide more information before making a ruling on PJM's proposal.*

CPP – W.VA and Ohio litigating against CPP but still plans to file state implementation plan

- A West Virginia University College of Law's Center for Energy and Sustainable Development concluded that if the state were to comply with the Clean Power Plan, there would be "minimal impact on coal mining activity."
- W.VA and OH attorney generals have filed suit against CPP.
- Both the OH Environmental Protection Agency and the W.VA Department of Environmental Protection are creating state implementation plans to comply with CPP.
- OH EPA officials hope to have their SIP completed by Sept. 2016.

***Guggenheim takeaway:** As we continue to highlight in our research, states with heavy coal generation and production will continue to litigate against the CPP, citing negative economic impacts from complying. Even with litigation, we expect most states to file an SIP to comply with CPP. Much like with the case of MATS, we believe the outlook for coal is bleak and the coal retirement path to continue if not accelerate.*

DUK/NEE/SO – New FPSC Chairman

- FPSC Commissioner Brown begins 2-year term as Chairman.
- Chairman Brown replaces Commissioner Graham, who will continue to serve through 2018.

***Guggenheim takeaway:** We recently hosted investor meetings with FPSC Commissioners in Florida and came away with a very constructive outlook on the regulatory environment for utilities in the sunshine state. The faces at FPSC remain the same since our meetings, so we expect continued support for upstream utility investment to secure gas supplies and a constructive backdrop for FP&L's next rate case, which management expects to file soon – see here for additional takeaways from our meetings with the Florida Commissioners.*

ED – FERC rejects NYISO tariff revisions

- As part of their compliance with FERC 1000, NYISO proposed changes to their system planning process related to public policy transmission projects in June 2015.
- FERC rejected their proposal because requirements for developers are different than incumbent utilities.

***Guggenheim takeaway:** NY's AC Transmission proceeding is taking a FERC-1000 approach to system planning, which could create investment opportunities or potentially take them away from incumbent utilities. ED is participating through majority ownership in the NY TransCo, which has proposed several transmission projects under the Governor's NY Energy Highway initiative. Lower-cost proposals from other developers present competition, and this isn't a positive sign for projects proposed by incumbent utilities.*

DUK – Coal ash basins classified by NCDEQ

- The North Carolina Department of Environmental Quality (NCDEQ) released their proposed classification for coal ash basins, based on 3 main criteria: structural integrity, surface water impact, and groundwater impact.
- 4 of DUK's 14 facilities were designated high-risk under the coal ash law, and the NCDEQ was required to propose classifications for the remaining 10 per the Coal Ash Management Act, which was enacted in 2014.
- The proposed classification for the H.F. Lee (five impoundments), Cape Fear (five impoundments), Weatherspoon (one impoundment) and Roxboro (East basin) facilities is intermediate.
- The proposed classification for the Cliffside Plant (two non-active basins), Roxboro Plant (West basin) and the Mayo Plant (one impoundment) is low.
- For the remaining impoundments, the NCDEQ only had enough information to narrow the classification to between low and intermediate.

***Guggenheim takeaway:** These recommendations address DUK's remaining 24 basins, and the company now has additional information to make closure decisions. We recently hosted investor meetings with DUK management that included a tour of the Riverbend coal facility and these recommendations support* *our expectation that Coal Ash investment upside would likely be limited – see here for additional takeaways from our meetings.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.	
Rating Category	Count	Percent	Count	Percent
Buy	171	61.29%	34	19.88%
Neutral	108	38.71%	3	2.78%
Sell	0	0.00%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Guggenheim's Power & Utilities Daily

Guggenheim's Power and Utilities Daily: PCG, NEE, SO, ES, AEP, EXC, ISO-NE, MISO

January 6, 2016

SHAHRIAR POURREZA, CFA ANALYST
212 518 5862
shahriar.pourreza@guggenheimpartners.com

What's New?

See here for Guggenheim's Power & Utilities 2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

PCG – Consumer advocates seek $163mm fine for pipeline safety and record keeping
NEE – FL regulators approve need for $1.2bn Okeechobee CCGT
SO – Management evaluating Kemper schedule following start-up and operational challenges
ES – $483mm Interstate Reliability Project complete
AEP – Committing to burn gas at Conesville under PPA settlement
ES – FERC extends public comment period on KMI's New England pipeline proposal
ISO–NE – ISO-NE defends including solar DG for its capacity requirement
MISO/EXC – FERC directs MISO to revise capacity market tariff for next auction
FE – FE conducting study on whether to reopen PA coal plant

PCG – Consumer advocates seek $163mm fine for pipeline safety and record keeping

- The Office of Ratepayer Advocates (ORA), a CA consumer advocate, filed a motion for an Order to Show Cause alleging PG&E misrepresented pipeline safety inspections and record keeping; the group is asking regulators to impose a $163mm fine.
- ORA claims PCG misrepresented their reporting of maximum allowable operating pressure because the utility wouldn't have been able to perform calculations without complete system records.
- PCG responded to the filing, noting issues raised by ORA are outside the scope of their GT&S proceeding (where ORA filed their motion), and had already been fully-litigated and resolved.
- PCG argued that ORA's issue with pressure reporting was a misunderstanding rather than a misrepresentation; noting regulators were already aware PCG did not have complete records and had authorized the use of engineering assumptions.
- PCG defended system operations and processes since 2011, when CPUC proceedings began calling for significantly more documentation and transparency.

Guggenheim takeaway: *PCG managed to shed some of the remaining San Bruno overhang recently with a court ruling that cut potential criminal sanctions in half (to ~$0.6bn from $1.1bn), but parties continue to seek damages at every possible opportunity; even if unsuccessful/repetitive, each new claim/attempt maintains public focus on past transgressions.*

NEE – FL regulators approve need for $1.3bn Okeechobee CCGT

- The FPSC approved the need for the 1.6 GW Okeechobee CCGT proposed by FP&L, NEE's Florida utility.
- Construction of the $1.3bn plant would begin in 2017, and operational in mid-2019.
- NEE initially proposed the facility in 2015, and will require site certification and air permitting from the Florida DEP; NEE already filed for both and expects to progress through reviews with other agencies during 2016.

Guggenheim takeaway: *We view this as a big positive for NEE as Florida may be leaning toward a rate-based approach to comply with the EPA's Clean Power Plan, and also as further dependence on natural gas could create additional opportunities for their Florida utility to invest further upstream to secure gas supplies. We recently hosted investor meetings at the FPSC in Florida and expect continued support for NEE investment in low-cost gas generation that keeps rates low and investment upstream to secure supplies for their growing dependency on natural gas. For additional takeaways from our meetings with FL commissioners and NEE C-suite management see here.*

SO – Management evaluating Kemper schedule following start-up and operational challenges

- SO disclosed they were evaluating the construction, commissioning, and start-up schedule for Kemper as the result of challenges in ongoing start-up and commissioning activities.
- Challenges include repairs and modifications to the refractory lining inside the gasifiers, as well as operational readiness.
- The previously-disclosed projected in-service date is 1H16, and any specific cost/schedule updates are expected to be reflected in the next monthly status report (which SO expects to file in early February 2016).

Guggenheim takeaway: *The update from SO doesn't specifically tell us Kemper's schedule has changed as management is still evaluating, but it appears the saga in Mississippi may continue. SO previously estimated delays beyond June 2016 would cost ~$30mm per month, but the company had included planning contingencies; the monthly status report filed with the MPSC shows SO utilized some contingency so it has yet to be seen how this update might impact the overall project schedule.*

ES – $483mm Interstate Reliability Project complete

- ES announced the $483mm Interstate Reliability Project has been completed.
- ES partnered with National Grid (NGG, NC, $69.06) on the project.

Guggenheim takeaway: *This announcement completes the New England East West Solution (NEEWS), a suite of projects that make up the largest regional transmission upgrade in many years. We expect to see much more infrastructure development from ES to relieve constraints on New England's electric transmission and gas pipelines, and to mitigate volatile commodity prices like we saw during the Polar Vortex. We highlight New England on the forefront of infrastructure development and ES as the beneficiary in our 2016 Power & Utilities Outlook – see our 2016 outlook here for additional takeaways and deep-dives into the various projects underway in New England.*

AEP – Committing to burn gas at Conesville under PPA settlement

- AEP will displace 50% of coal generation from Conesville (two ~400MW units) with gas by YE2017 per their PPA settlement.

- In PPA hearings that are currently taking place, AEP noted sufficient gas supply was available, but could not conclude how much this would cost.
- AEP had agreed to retire, refuel, or repower units at their Cardinal and Conesville plants by 2029 and 2030, respectively.

Guggenheim takeaway: *AEP is going through the PPA hearings in OH with support from two groups representing the largest electric customers in Ohio (including the Sierra Club). Based on meetings we hosted with regulators in Ohio, we believe PUCO will approve the settlement to maintain jobs, local investment, and fuel diversity (although getting a little gassier); with approval AEP will be one step closer toward fully regulated status – merchant GenCo divestiture could be next. For additional takeaways see our recent note on AEP's PPA settlement.*

ES – FERC extends public comment period on KMI's New England pipeline proposal

- FERC extended the public comment period on KMI's (NC, $15.58) New England pipeline proposal, the Northeast Energy Direct (NED).
- The extension comes as a result of an eFiling error on FERC's website that didn't allow interested parties to comment.

Guggenheim takeaway: *While KMI's pipeline hits another snag (although seemingly out of their control here), we do not expect ES's Access Northeast Project to experience as much pushback. Access Northeast would be supported by contracts with electric utilities securing fuel for their power plants; a variation to KMI's traditional model where gas LDCs contract for pipeline capacity. Much of the gas capacity in New England is secured under firm contract by gas LDCs to meet heating demand, so a cold winter reduces the supply of gas available to fuel power plants. Limited gas supplies during a cold winter can challenge electric reliability and result in volatile prices as we experienced during the polar vortex.*

ISO–NE – ISO-NE defends including solar DG for its capacity requirement

- ISO-NE defended its calculation for its installed capacity requirement (ICR) auctions, which includes behind-the-meter solar resources.
- The proposed ICR for the upcoming auction is 34,151 MW, which reflects a 390 MW reduction due to DG.
- Generators protested inclusion of solar arguing that ISO-NE failed to hold a full stakeholder process before implementing these calculation changes.
- ISO-NE argued that inclusion of solar does not warrant changes to the ISO's tariff.

Guggenheim takeaway: *Including solar DG to reflect a reduction in demand in ISO-NE's load forecast would be a negative impact to generators bidding into the upcoming capacity auction. ISO-NE believes solar DG will better reflect the grid's changing load especially as it is being adopted at a more rapid rate.*

MISO/EXC – FERC directs MISO to revise capacity market tariff for next auction

- FERC found that provisions in MISO's tariff for its capacity auction are no longer reasonable and need to be revised.
- Provisions include reference levels used to mitigate market power, and capacity import limits.
- FERC did not address complaints on the high $150/MW-day clearing price in zone 4 (was $16.75/MW-day the year before) from the auction in 2015. The issue will be addressed in a future order.

- If FERC does order refunds, it will begin from May 28, 2015.
- FERC also did not address claims on market manipulation for the previous auction, and will conduct a separate investigation.

Guggenheim takeaway: *FERC ordered revisions to MISO's tariff and also noted that stakeholders are already exploring revisions to MISO's capacity auction. FERC directed MISO to revise its capacity import limits and reference levels for the upcoming capacity auction held in April 2017. We highlight that EXC is looking for MISO's capacity market reform to fall closer in line with PJM, as it will be a major factor in their decision on whether to retire Clinton.*

FE – FE conducting study on whether to reopen PA coal plant

- FE is conducting a long-term study on whether it is feasible to open its closed coal plant, Hatfield Ferry, in PA.
- Hatfield Ferry has rights to offer power into PJM through the second quarter of 2019. The 1,710 MW plant was closed in Oct. 2013.
- FE is conducting an evaluation as to whether the plant could burn coal, natural gas, or a combination of both.
- FE notes they have seen some "positive movement" in the market and capacity conditions in PJM.

Guggenheim takeaway: *We believe that bringing the coal plant back online could be expensive and unlikely given the costs associated with complying with MATS and other environmental standards. In our view, the natural gas outlook would have to be more positive in order for the plant to come online. FE will also have to see how PA will comply with CPP and if Hatfield Ferry could fit into the plan.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

Sell	0	0.00%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Guggenheim's Power & Utilities Daily

Guggenheim's Power and Utilities Daily: D, MISO, EXC, DUK, ETR, AEP, WR, Gas, EPA

January 8, 2016

SHAHRIAR POURREZA, CFA ANALYST
212 518 5862
shahriar.pourreza@guggenheimpartners.com

What's New?

See here for Guggenheim's Power & Utilities 2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

D – FERC defends Cove Point approval
MISO/EXC – IL AG wants refunds from MISO auction
DUK – Residents join environmental groups, publish list of coal ash demands for Duke and NC
D – Customers prepared to file suit against VA rate freeze
ETR – LA Commission approves ETR transmission projects
WR – KS Commission reviews effects of nonbinding renewable standards law
Gas – Natural gas outpaces coal in electric generation in 2015
EPA – Oklahoma Senator demands EPA maintain its ruling that fracking doesn't threaten drinking water

D – FERC defends Cove Point approval

- FERC approved D's Cove Point LNG export terminal in 2014.
- FERC dismissed environmental group's claim that it did not appropriately consider environmental impacts before approving the project.
- FERC defended its environmental review and noted that the DOE conducted a separate environmental review on impacts of gas production and climate impacts of LNG exports.

Guggenheim takeaway: *D is confident FERC's approval will be upheld in U.S. Court of Appeals; we assume the project will be complete in 2018.*

MISO – IL AG wants refunds from MISO auction

- FERC found that provisions in MISO's tariff for its capacity auction are no longer reasonable and need to be revised.
- FERC did not address complaints on the high $150/MW-day clearing price in zone 4 (was $16.75/MW-day the year before) from the auction in 2015. The issue will be addressed in a future order.
- The increase in capacity prices had sparked political backlash and complaints to FERC by IL AG to conduct a formal investigation. The IL AG urged regulators to deliver relief from last year's jump.

Guggenheim takeaway: *Several stakeholders filed complaints from the results of MISO's capacity auction. FERC ordered revisions to MISO's tariff and also noted that stakeholders are already exploring revisions to MISO's capacity auction. FERC also directed MISO to revise its capacity import limits and reference levels for the upcoming capacity auction held in April 2017. We highlight that EXC is looking for MISO's capacity market reform to fall closer in line with PJM, as it will be a major factor in its decision on whether to retire Clinton.*

DUK – Residents join environmental groups, publish list of coal ash demands for Duke and NC

- An environmental group ACT Against Coal Ash released a set of demands that would include classifying DUK's coal ash sites as high-priority and having the utility take responsibility for harm caused by coal ash ponds.
- The environmental group also called for Duke to store coal ash on its property rather than moving it to other communities.

Guggenheim takeaway: *The NC DEQ recently released their proposed classification of DUK's coal ash basins; four had been designated high-risk under the 2014 Coal Ash Management Law, and the remaining sites were deemed low or intermediate risk. We recently hosted investor meetings with DUK management that included a tour of the Riverbend coal facility and these recommendations support our expectation that Coal Ash investment upside would likely be limited – see here for additional takeaways from our meetings.*

D – Customers prepared to file suit against VA rate freeze

- Senate Bill 1349 allows Dominion to freeze its base rates until 2023 unless the company seeks an emergency increase.
- The Virginia Attorney General criticized the law, claiming that the legislation could charge customers excessive rates.
- VA Commissioner Dimitri questioned the law's constitutionality, saying that the law has stripped the Commission of its proper authority.
- The Virginia Committee for Fair Utility Rates, a group of large industrial customers, filed papers with regulators indicating intent to appeal with the VA Supreme Court.

Guggenheim takeaway: *D has managed to avoid full-blown ratecases by using riders for growth CapEx; and the company doesn't agree with other parties that argue the utility is over-earning its allowed ROE and deserves a refund. We don't believe D will be pulled into a proceeding, as it appears to be working well with State officials on a path toward CPP compliance, and evaluating investment requirements that would be required.*

ETR – LA Commission approves ETR transmission projects

- The LA PSC approved ETR's largest transmission project, the $187mm Lake Charles Transmission project.
- The project will include a 500-kv transmission line, 18 miles of new 230-kV transmission line, two new substations, and one substation expansion.
- The project is expected to be completed in mid-2018 and will serve more than 800MW of new industrial load in the Lake Charles area by 2019.
- AEP and Duke protested that the transmission project should have been reviewed through the more formal MTEP process.
- The LA PSC also approved ETR's $57mm Louisiana Economic Transmission Project to reduce congestion.

Guggenheim takeaway: *ETR's out-of-cycle request for its Lake Charles Transmission Projects was needed to meet the needs of major industrial projects that will come online in the area. These projects were not made known to ETR LA before its load forecast was submitted to MISO, according to ETR. We believe ETR will continue to benefit from industrial load growth in the region by building new gas-fired generation and transmission lines.*

WR – KS Commission reviews effects of nonbinding renewable standards law

- The KS Commission is reviewing the 2015 law that made the 2009 requirement for utilities to purchase 20% of their electricity from renewable sources by 2020 into a voluntary target.
- KS lawmakers repealed portions of the Renewable Energy Standards Act established in 2009 that directed the Commission to establish reporting and enforcement mechanisms.
- Utilities are still allowed to recover reasonable costs incurred to meet the renewable target.
- The KS commission on January 5 ordered staff to file a report recommending a course of action to evaluate the impact of making the law voluntary.

Guggenheim takeaway: *While the renewable energy targets for utilities are now voluntary, we believe WR is already surpassing its targets by installing over 1,700 MW of wind generation. We believe WR's decision to own wind plants is for economic benefits, given that the PTC has been extended, and is also a hedge to CPP compliance. WR's renewable mix will be 14% in 2016, and we expect that percentage to increase with wind coming online. See our note for more details on WR's wind investment strategy.*

Gas – Natural gas outpaces coal in electric generation in 2015

- American Petroleum Institute President and CEO Jack Gerard noted in his keynote speech that "in 2015 there were several months in which natural gas produced more electricity than any other fuel for the first time in U.S. history."
- The speech also noted that in the first 10 months of 2015, natural gas outpaced coal for five of the ten months.
- Gerard also claimed that natural goes does not reduce "opportunity for wind and solar power," it "provides the reliable base load power necessary to integrate those intermittent sources."

Guggenheim takeaway: *As we highlight in our research, we believe the outlook for coal is bleak and for the coal retirement path to continue if not accelerate. Even with our estimated ~71GW of coal retiring, we don't anticipate enough demand pull to materially influence natural gas prices given oversupply. Assuming the coal retirement path continues, we believe coal as a % of power generation will decrease from 46% to 30% by the end of the decade, and natural gas to increase from 23% to 38%. See our 2016 outlook for more details.*

EPA – Oklahoma Senator demands EPA maintain its ruling that fracking doesn't threaten drinking water

- Senate Environment and Public Works Committee head Sen. James Inhofe demanded that the EPA leave intact its original conclusion that fracking does not systematically threaten the nation's drinking water.
- Inhofe contests with Democratic lawmakers wanting to bring fracking under federal control by amending the Safe Water Drinking Act.
- The board recommended that the EPA add to its study improvements the industry has made in well design, well casing, and green completions.

Guggenheim takeaway: *We believe the supply of natural gas will continue to grow, regardless of litigation against hydraulic fracking. Depending on renewable penetration, we estimate ~3.5-6.0 bcf/d of incremental gas demand when all ~71GW of coal retirements are completed.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Guggenheim's Power & Utilities Daily

Guggenheim's Power and Utilities Daily: EXC, FE, DTE, NEE, D, DUK, NEE January 11, 2016

SHAHRIAR POURREZA, CFA ANALYST
212 518 5862
shahriar.pourreza@guggenheimpartners.com

What's New?

See here for Guggenheim's Power & Utilities 2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

EXC – MD court upholds Commission's approval of merger
FE - Residents oppose proposed coal ash disposal site for Bruce Mansfield
FE - OH Commission will hear complaints against 2014 polar vortex pass-through charges
DTE – Engineers recommend pipeline should be away from water sources
NEE – HI PUC Chairman doesn't appreciate last minute filings from NEE, questions their intentions
D/DUK – State water board will hear coal ash plans from D
ISO-NE/EXC – FERC denies rehearing on ISO-NE new entry pricing
NEE – FERC denies incentive ROE for CA transmission projects

EXC – MD court upholds Commission's approval of merger

- The MD circuit court upheld the MD PSC's decision to approve EXC's acquisition of POM (NC, $25.75) and denied an appeal from the Office of the People's Council.
- The petitioners had the support of MD Attorney General Brian Frosh who filed a friend of the court brief asking that the decision be reconsidered.
- The court ruled that the MD commission properly considered issues brought up by the appealing party in their decision to approve the merger.
- The DC PSC is expected to make a decision on the settlement proposal in 1Q 2016.

Guggenheim takeaway: *As we highlighted in our research, we did not believe there would be minimal headwinds from the challenge against MD Commission's decision. Approval from the DC Commission is the final step in closing the deal. With respect to the process going forward after the record closes, we believe a decision will come from the DC Commission in 1Q16. The question remains whether the settlement will sway two of the three Commissioners for majority approval. We expect this deal will close.*

FE- Residents oppose proposed coal ash disposal site for Bruce Mansfield

- One proposed coal ash disposal site for Bruce Mansfield is in Fayette County, PA.
- Residents oppose this new site during the public comment period held by the Department of Environmental Protection for a water discharge permit for the site.
- PA has ordered the Little Blue Run impoundment, the largest coal ash landfill in the country, to be closed by Dec. 31, 2016.

- Another method of waste disposal is to use coal combustions residual materials (CCR) for closure and reclamation of legacy coal mines. FE would need a beneficial reuse permit" from the state DEP.

Guggenheim takeaway: *Bruce Mansfield will continue to operate given savings from coal contracts and FE's Cash Flow Improvement Plan. Although the Little Blue Run coal ash landfill site is set to close, FE is looking for alternative options to dispose of the plant's coal ash.*

FE - OH Commission will hear complaints against 2014 polar vortex pass-through charges

- The OH Commission (PUCO) will hear a complaint against FE's competitive business over its pass-through charges during the 2014 winter polar vortex.
- FES stated that PUCO does not have jurisdiction over these charges as it is a "pure contract claim, which is the jurisdiction of Ohio courts."
- PUCO claims that their "expertise is necessary to interpret the regulations and statutes that govern" these markets.

Guggenheim takeaway: *The extra charges during the polar vortex in 2014 were charges imposed by PJM. In a similar case, PUCO ruled in November 2015 that, all in all, competitive retail electric service contracts, "fixed should mean fixed." We believe PUCO's ruling on these charges could be a negative if FE has to refund its pass-through charges.*

DTE – Engineer recommends pipeline should be away from water sources

- A sanitary engineer of Sandusky County posted his concern for the pipeline's proximity to water wells to FERC.
- DTE is currently accepting public comment on the path for NEXUS pipeline and has filed a formal application to FERC.
- The pipeline would run through Ohio counties and pass close to public water wells in Fremont County.
- NEXUS submitted its FERC application for the ~255 mile, 1.5 Bcf/day pipeline requesting that a decision be made before 4Q 2016 so that construction could being in early 2017.

Guggenheim takeaway: *We continue to note in our research that we believe NEXUS will be built according to plan and DTE has been accepting public comment on the route, and is expected to be completed in 2018. After the line is built, upsizing to 2.0bcf/day will likely be driven by increases in volume from additional Utica shale gas producers, as well as markets along the Ohio path, in our view.*

NEE – HI PUC Chairman doesn't appreciate last minute filings from NEE, questions their intentions

- Local media reports more tension growing between NEE and Hawaii State regulators regarding their proposed acquisition of HE (NC, $28.78); highlighting an opinion attached to recent rulings by the PUC Chairman.
- The Chairman suggests NEE is making it difficult for parties to participate in the proceeding with last minute changes to terms of the transaction, and expresses concern with NEE's disregard of commission orders.
- As a reminder, NEE reached an agreement with the Department of Defense that would have them withdraw intervenors from NEE's following more specific commitments to develop renewables from NEE; the commission accepted NEE's additional commitments, however they would not allow the DOD to withdraw.

Guggenheim takeaway: *We have continuously highlighted our diminishing confidence in this transaction closing, even as NEE managed to win over some stakeholders such as the DOD; efforts to appease local opponents only bring more criticism and the clock is still ticking. The merger agreement includes a regulatory approval clause that expires in June, and NEE will likely pay the $90mm break-up fee and walk away, in our view; they could always walk away sooner, but management is likely honoring their agreement through June.*

D/DUK – D's coal-ash plans to go before VA water board

- As part of an effort to seal a Virginia coal ash pond (and an EPA mandate), D proposed a plan that would drain water into a nearby creek after it has been treated to remove pollutants.
- The plan brought opposition from environmental advocates, some alleging D was already discharging contaminated water and calling for a federal investigation.
- D emphasizes they are focused on closing ash-ponds as quickly as possible; they noted the instance concerning contamination was referring to a storm drain intended to divert water.
- Virginia's State Water Control Board is considering the approach and could make a decision when they convene on Thursday this week.

Guggenheim takeaway: *Handling coal-ash is a delicate task, considering the environmental interest and regulatory scrutiny that come with, but we believe D and DUK are well-equipped to manage; potential investment upside is limited in our view. Focus has mainly been on DUK's coal ash strategy in NC thus far, but we expect interest will grow as plans are put forward. We recently hosted investor meetings with DUK management that included a tour of the Riverbend coal facility – see here for additional takeaways from our meetings.*

ISO-NE/EXC – FERC denies rehearing on ISO-NE new entry pricing

- FERC reaffirmed the zero-price offer requirement for new resources in ISO-NE's capacity auction.
- ISO-NE allows for new resources to lock in capacity prices for six subsequent delivery years by offering as a price-taker with a price of zero.
- EXC argued that the rule creates two-tiered pricing in that existing resources could receive lower capacity payments than the new resources if capacity prices fall in future auctions.
- FERC noted that locking in capacity prices for new resource may "result in lower cpacacity clearing prices" but that it was a "reasonable balance between incenting new entry and protecting customers from high prices."
- ISO-NE's next capacity auction (FCA 10) is scheduled for Feb. 8.

Guggenheim takeaway: *FERC notes that the zero bid offer is an appropriate rule for ISO-NE to incent new generation build. In a scenario where new generators bid higher than zero in subsequent options could raise costs according to FERC. The zero-offer price requirement stands for the upcoming capacity auction.*

NEE – FERC denies incentive ROE for CA transmission projects

- FERC denied NEE's request for a transmission incentive ROE under section 219 that would close the gap between their formula rate and a 10% ROE, if the base ROE is determined to be less than 10%.

- NEE filed the request in July 2015 along with other proposals related to participating in a transmission-owner tariff and implementation protocols for the CA ISO to calculate revenue requirement.
- The commission accepted and suspended NEE's proposal for the transmission-owner tariff to become effective, subject to refund.
- The order is subject to re-hearing and FERC has established a procedural schedule regarding the proposed ROE.

Guggenheim takeaway: *The matter is still subject to re-hearing so not yet clear how it will ultimately play out. NEE made binding cost commitments to win the bid for the projects, which would also be the first projects their NEET West affiliate could construct and put into service. NEE established NEET West to develop transmission in CA and participate in the CA ISO; the affiliate was recently awarded the Suncrest Reactive Power Project and a substation project in CA. While NEE is a well-established project developer, their affiliate is seeking a return commensurate with the development risk and as well as the potential for un-recoverable costs.*

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.	
Rating Category	Count	Percent	Count	Percent
Buy	171	60.85%	34	19.88%
Neutral	110	39.15%	3	2.73%
Sell	0	0.00%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Electric Utilities

DYN, EXC Ohio Proposals Unlikely to Derail PPA Settlements

Today's alternative Ohio power supply offer from Dynegy, as well as Exelon's December 30 proposal, are likely to have only a marginally negative impact on public sentiment and PUCO from AEP and FE's perspective. We continue to see PUCO settlement approval as more likely than not, with a small chance of amendment by the commission, but do not see the DYN or EXC offers as likely to gain traction, despite seemingly superior economics. A competitive process for what is essentially a subsidy does not make sense in our view, and would do little to further the key jobs-retaining element of the AEP and FE deals. More importantly, an EXC or DYN contract would seem more vulnerable to the retail vs. wholesale jurisdictional challenge that brought down the 2010-2011 MD and NJ programs.

J.P. Morgan Securities LLC

- **DYN, EXC offer alternatives to AEP, FE OH PPA settlements:** DYN and EXC appear to have both offered near market-priced contracts to supply power to OH customers, resulting in headline numbers of $2.0 to 2.5Bn in customer savings vs. the AEP and FE agreements. DYN has also separately offered to build 6.3GW of new natural gas fired generation in the state for a similar 8-year contract. Both DYN offers relate to in-state plants but are more carbon heavy than the out-of-state nuclear and renewable EXC offer. We see neither as superior from a combined geographic and carbon perspective vs. FE/AEP.

- **Competitive processes don't apply:** The process of procuring power by regulated wires companies, like the FE and AEP utilities, is currently a competitive one that generally clears around the price of forward energy plus capacity. A rationally priced competition would clear at a similar level and theoretically leave the job-maintaining power plants just as much at risk of closure.

- **Retail vs. wholesale distinction key for legal survival:** A EXC or DYN deal would seemingly be viewed as more of a traditional wholesale power contract than those crafted by FE and AEP. This would force it to be closer to market pricing, again removing the subsidy and job-retaining premise of the original deals.

- **Still see FE and AEP settlements as better-positioned vs. NJ/MD:** In our December 22 note, we articulated that although there are many similarities between NJ/MD and the OH contracts, there are also notable differences that may allow them to stand up in court. Court challenges will most likely take years, but we see the U.S. Supreme Court's upcoming 2Q16 decision on the MD subsidy as a key event.

See page 2 for analyst certification and important disclosures.

Analyst Certification: The research analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple research analysts are primarily responsible for this report, the research analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the research analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect his or her personal views about any and all of the subject securities or issuers; and (2) no part of any of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst(s) in this report. For all Korea-based research analysts listed on the front cover, they also certify, as per KOFIA requirements, that their analysis was made in good faith and that the views reflect their own opinion, without undue influence or intervention.

Important Disclosures

Company-Specific Disclosures: Important disclosures, including price charts and credit opinion history tables, are available for compendium reports and all J.P. Morgan–covered companies by visiting https://jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request. J.P. Morgan's Strategy, Technical, and Quantitative Research teams may screen companies not covered by J.P. Morgan. For important disclosures for these companies, please call 1-800-477-0406 or e-mail research.disclosure.inquiries@jpmorgan.com.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), Dominion Resources (D), Duke Energy Corp. (DUK), Entergy Corp. (ETR), Exelon Corp. (EXC), FirstEnergy (FE), Great Plains Energy (GXP), Hawaiian Electric Industries Inc. (HE), ITC Holdings (ITC), NextEra Energy Inc. (NEE), Nextera Energy Partners (NEP), NiSource Inc. (NI), PG&E Corp. (PCG), Pattern Energy (PEGI), Pepco Holdings (POM), Piedmont Natural Gas Co. (PNY), Portland General Electric Co. (POR), Public Service Enterprise Group (PEG), Sempra Energy (SRE), The Laclede Group, Inc. (LG), UIL Holdings Corporation (UIL), Westar Energy Inc (WR), Xcel Energy (XEL)

J.P. Morgan Equity Research Ratings Distribution, as of December 31, 2015

	Overweight (buy)	**Neutral** (hold)	**Underweight** (sell)
J.P. Morgan Global Equity Research Coverage	44%	44%	12%
IB clients*	52%	47%	35%
JPMS Equity Research Coverage	45%	47%	8%
IB clients*	70%	63%	50%

*Percentage of investment banking clients in each rating category.
For purposes only of FINRA/NYSE ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com.

Equity Analysts' Compensation: The equity research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch and J.P.Morgan Chase Bank, N.A., Frankfurt Branch which are regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative

warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. **Japan:** There is a risk that a loss may occur due to a change in the price of the shares in the case of share trading, and that a loss may occur due to the exchange rate in the case of foreign share trading. In the case of share trading, JPMorgan Securities Japan Co., Ltd., will be receiving a brokerage fee and consumption tax (shouhizei) calculated by multiplying the executed price by the commission rate which was individually agreed between JPMorgan Securities Japan Co., Ltd., and the customer in advance. Financial Instruments Firms: JPMorgan Securities Japan Co., Ltd., Kanto Local Finance Bureau (kinsho) No. 82 Participating Association / Japan Securities Dealers Association, The Financial Futures Association of Japan, Type II Financial Instruments Firms Association and Japan Investment Advisers Association. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com.sg. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: This material is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited. **India:** For private circulation only, not for sale. **Pakistan:** For private circulation only, not for sale. **New Zealand:** This material is issued and distributed by JPMSAL in New Zealand only to persons whose principal business is the investment of money or who, in the course of and for the purposes of their business, habitually invest money. JPMSAL does not issue or distribute this material to members of "the public" as determined in accordance with section 3 of the Securities Act 1978. The recipient of this material must not distribute it to any third party or outside New Zealand without the prior written consent of JPMSAL. **Canada:** The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed judgment upon these materials, the information contained herein or the merits of the securities described herein, and any representation to the contrary is an offence. **Dubai:** This report has been issued to persons regarded as professional clients as defined under the DFSA rules. **Brazil**: Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. The recipient of this report must make its own independent decisions regarding any securities or financial instruments mentioned herein. JPMS distributes in the U.S. research published by non-U.S. affiliates and accepts responsibility for its contents. Periodic updates may be provided on companies/industries based on company specific developments or announcements, market conditions or any other publicly available information. Clients should contact analysts and execute transactions through a J.P. Morgan subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

Guggenheim's Power & Utilities Daily

Guggenheim's Power and Utilities Daily: PPL, ETR, FE, AEP, D, NEE, EXC, DUK, SO

January 13, 2016

SHAHRIAR POURREZA, CFA ANALYST
212 518 5862
shahriar.pourreza@guggenheimpartners.com

What's New?

See here for Guggenheim's Power & Utilities 2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

PPL– KY utilities file request for environmental spending on coal ash removal and new gas generation
ETR – AR utility will have hearing on its rate case settlement Jan. 19
FE/AEP – FE states Dynegy's alternative plan "misses the point" on its PPA
D – Vepco highlights $9.5bn infrastructure upgrade plan
NEE/EXC – CAISO selects non-incumbent developer to build project
NEE/DUK/SO – Solar debate continues between FL utilities and advocates
DUK – Federal court approves coal ash plans
FE – West Virginia utility's IRP proposes dual-fired coal plants to meet capacity shortfall

PPL– KY utilities file request for environmental spending on coal ash removal and new gas generation

- Louisville Gas and Electric Company ("LG&E") will file for environmental recovery for closing its remaining coal ash ponds, build a process-water facility and add mercury control systems for an estimated $316mm.
- Closing the ponds is necessary to meet the EPA's Coal Combustion Residuals Rule (CCR) that became effective last year. Additional mercury control systems are needed for the MATs rule.
- Kentucky Utilities Company ("KU") is also requesting a Certificate of Public Necessity and Convenience (CPCN) to close its coal ash ponds, construct process-water facilities and build the second phase of the Brown landfill for an estimated cost of $678mm.
- Both plans will request an Environmental Cost Recovery (ECR) tracker mechanism with a 10% ROE.
- The CPCN and ECR applications are anticipated to be filed on or about January 29, 2016.
- The construction projects are expected to begin in 2016 with construction through 2023.

Guggenheim takeaway: *We believe PPL will most likely receive the environmental recovery tracker to meet the effective CCR and MATs rules in KY. As a reminder, the KY utilities have ~$2.2B estimated spend on projects approved by the KPSC with less than 6 month recovery lag due to the ECR. Through our forecast period, we estimate an average 9.4% earned ROE for the KY utilities.*

ETR – AR utility will have hearing on its rate case settlement Jan. 19

- ETR AR filed a settlement with the AR PSC staff and other parties on a ~ $225mm revenue increase and a 9.75% ROE.

- ETR AR (EA) will have hearings for the settlement with the AR Commission starting on Jan 19.
- The Settlement also called for forward test year formula rate plan. ETR requested that the AR PSC approve the settlement no later than Feb. 24, 2016.

Guggenheim takeaway: *Allowance of the formula rate plan and forward test year in EA's settlement is a positive, in our view, to allow EA to recover closer to its allowed ROE. As we have highlighted in our research, EA has been a major underearner. Through our forecast period, we model an average earned 9.7% ROE for utility.*

FE/AEP – FE states Dynegy's alternative plan "misses the point" on its PPA

- Dynegy (DYN, NC, $12.24) provided an alternative case to the AEP/FE PPAs.
- FE claims that "Dynegy's proposal offers few specifics and provides no assurances that its power plants in the region will continue operating over the long term."
- AEP notes that ""There is no basis for Dynegy's claims of cost savings. They are suggesting that they can provide generation at a lower cost based on inflated assumptions that do not reflect current market realities."

Guggenheim takeaway: *Based on meetings we hosted with regulators in Ohio, we believe PUCO will approve the FE and AEP settlements to maintain jobs, local investment, and fuel diversity (although getting a little gassier). With approval, AEP will be one step closer toward fully regulated status – merchant GenCo divestiture could be next. We believe the settlement for FE will help shore up its balance sheet and make it look more regulated. For additional takeaways see our recent note on AEP's PPA settlement and FE's PPA settlement.*

D – Vepco highlights $9.5bn infrastructure upgrade plan

- D's VA utility plans to invest ~$2bn per year through 2020 to build generation and expand/upgrade the electric grid.
- $2.4bn is for distribution, $3.6bn for transmission and substations, and $3.5bn for new generation and environmental improvements.

Guggenheim takeaway: *Utility investment plans will require regulatory approval, but we would note their VA utility has relatively high demand growth and low rates that have tracked below inflation; implying customer bills have some headroom for incremental investment and supporting a more constructive regulatory proceeding. These plans would be in addition to D's investment in the Atlantic Coast Pipeline, a $5bn pipeline being developed with other utilities (45% D), and we could see even more upside as states decide how they will comply with the Clean Power Plan.*

NEE/EIX/EXC – CAISO selects non-incumbent developer to build project

- CAISO selected LS Power to build the Harry Allen-Eldorado project, a 500kv transmission interconnection between NV and CA.
- CAISO noted the LS Power subsidiary agreed to build the project with a $133mm cost cap, the lowest amongst the three bids they considered.
- EXC and NEE also bid on the project.

Guggenheim takeaway: *Similar to the Delaney-Colorado River project, which CASIO awarded to Abengoa (MCE:ABG, NC, $0.41), another transmission project in the region is awarded to a non-incumbent utility based on cost. That said, we do recognize LS Power's established development presence in the power sector, notably their successful bid to win part of the Artificial Island project from PEG, and CAISO recognized their participation in similar projects through* *their affiliates (particularly in Nevada). Other bidders (EXC and NEE) were not incumbent utilities either, although we recently highlighted collaboration between NEE and EIX on this project after they lost the aforementioned Delaney-Colorado project to Abengoa. We are somewhat surprised utilities have not been very successful with competitive wire bids, but the FERC 1000 bid process is in its infancy stage. That said, Abengoa has since filed for bankruptcy protection in Spain however, so it remains to be seen if their project might go back out to bid.*

NEE/DUK/SO – Solar debate continues between FL utilities and advocates

- Solar advocates in Florida are urging the state's Supreme Court to reject a voter referendum supported by utilities, which wouldn't allow retail customers with solar to sell excess power to anyone other than their utility.
- The utility-supported referendum actually came after solar advocates put forth their own referendum that would amend the constitution to allow customers with <2 MW of solar to sell directly to neighbors.
- Solar advocates argue that language in this proposed referendum is misleading and should be rejected.

Guggenheim takeaway: *Solar growth hasn't taken off in Florida as it has elsewhere, partly because the "sunshine state" doesn't actually have ideal conditions for solar, but also because FL law only allows utilities to sell electricity. If there is an opportunity to develop solar in Florida, we believe utilities would be able to show the most compelling economics to the extent they have existing property for solar use and grid interconnections. We expect DUK, NEE, and SO would participate in a solar opportunity. We recently hosted investors in Florida and solar was a topic of discussion in meetings with NEE and FL commissioners. While the outlook for distributed solar is bleak in Florida, we believe large-scale development will be an opportunity for utilities in the state – for additional insight see our note.*

DUK – Federal court approves coal ash plans

- A federal judge approved two environmental compliance plans filed by DUK.
- DUK's plans include oversight officials, audits, training, and reports focused on compliance with coal ash-related laws.

Guggenheim takeaway: *Following illegal coal ash discharges, DUK reached a settlement with federal prosecutors that required the utility to submit these plans in addition to ~$100mm in fines. DUK is removing coal-ash from several facilities to comply with the Coal Ash Management Act - a delicate task considering the environmental interest and regulatory scrutiny that come with, but we believe DUK is well-equipped to manage; potential investment upside is limited, in our view. We recently hosted investor meetings with DUK management that included a tour of the Riverbend coal facility – see here for additional takeaways from our meetings.*

FE – West Virginia utility's IRP proposes dual-fired coal plants to meet capacity shortfall

- FE's utility Monongahela Power Co. predicts that it will have more than 700MW capacity shortfall by 2020 and will eventually exceed 850 MW in its 2015 IRP.
- In order to meet this capacity shortfall, the utility proposes to acquire 850 MW by the 2017/2018 delivery year.
- The utility also claims that preserving coal fired generation and investing in dual fuel capability with natural gas will help preserve capacity to meet the shortfall in the most "cost-effective manner."

- Retrofitting coal plants to be dual-fuel would cost ~$55-80mm for each unit at the coal plants. Mon Power estimates $85/MW for Harrison and $140/MW for Fort Mason plants.

Guggenheim takeaway: *While FE did consider the cost of new generation, it determined that coal remained the least cost option in West Virginia. Dual fired generation would still use predominately coal to generate energy even if it can fire natural gas. In our view, new gas fired generation has the lowest levelized cost when compared to other generation and will continue to grow to meet CPP compliance. See here for our analysis on levelized cost of energy.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Guggenheim's Power & Utilities Daily

Guggenheim's Power and Utilities Daily: EXC, PEG, TE, ES, DUK January 21, 2016

SHAHRIAR POURREZA, CFA ANALYST
212 518 5862
shahriar.pourreza@guggenheimpartners.com

What's New?
EXC – EXC acquires Blustern Wind Project in OK
PEG – PSEG acquires two solar projects, increasing portfolio to 215 MW
Solar – DOE funds research into solar energy storage
TE – FERC approves Emera acquisition of TECO
ES – Locals want ES to bury more portions of the Northern Pass Transmission line
DUK – NC PUC denies request for hearings on Western Carolinas Modernization Project
ES – Utilities request approval of contracts to support New England gas pipeline

EXC – EXC acquires Blustern Wind Project in OK

- EXC purchased a 198 MW wind project from RES located in OK. Construction is scheduled to be completed at the end of 2016.
- The Bluestern Wind Project has a PPA with Google (GOOG, NC, $698.45)

***Guggenheim takeaway:** As we highlighted in our research, the Great Plains states should continue to rapidly develop wind given the extension of the PTC and the high capacity factors achieved in the region. EXC has over 1,500 MW of wind generation and continues to develop more projects.*

PEG – PSEG acquires two solar projects, increasing portfolio to 215 MW

- PSEG Solar Source announced it has acquired two solar projects from juwi Inc: a 3.9MW facility in Livermore, California, and a 62.7MW site in Millard County, Utah.
- Together the projects cost $110mm and will increase PSEG's solar portfolio to 214.6 MW.
- PSEG Solar Source has 14 utility solar projects in 10 states now including Utah, Maryland, Arizona, California, Delaware, Florida, Ohio, Texas, Vermont and New Jersey.

***Guggenheim takeaway:** While the solar business is a small portion of PSEG Power, we believe it has the potential to grow with additional projects, especially with the extension of the ITC. Other utilities such as ED, DUK, and SO are also growing their contracted solar portfolio.*

Solar – DOE funds research into solar energy storage

- The U.S. Department of Energy announced granting $18mm to six projects that will use energy storage and distributed generation technologies to back up solar installations.
- The DOE SunShot Initiative was created in 2011 with the goal of making solar cost-competitive with other forms of electricity.
- As solar costs come down, the lack of affordable ways to store solar energy for later use has become the lynchpin to more widespread adoption.

- One of the six grants was given to EXC in the amount of $4mm to use smart inverters for solar PV and battery storage systems.

Guggenheim takeaway:*As highlighted in our research on the levelized cost of energy, solar generation has significantly declined in recent years. Battery storage technology will help with the intermittent nature of solar, allowing the stored energy to be dispatched at all hours. See our note here for further analysis on the levelized cost of all generating technologies.*

TE – FERC approves Emera acquisition of TECO

- Emera (EMA.TO, NC, CAD42.66) announced that FERC approved the acquisition of TECO, finding the transaction is consistent with the public interest.
- EMA announced its acquisition of TECO on September 4, 2015. Shareholders approved the acquisition on December 3, 2015.
- The $10.4B acquisition includes ~$3.9B in debt.
- The merger is still subject to approval by the NM Commission. EMA expects the acquisition to close by mid-2016.

Guggenheim takeaway: *The acquisition of TECO is strategic for Emera to grow its exposure to natural gas investment and its reach into the U.S. utility space, potentially investing upstream as allowed in FL. We expect minimal overhangs with TE's acquisition and Emera expects the acquisitions to close by mid-2016.*

ES – Locals want ES to bury more portions of the Northern Pass Transmission line

- Interested parties at a Site Evaluation Committee hearing for the Northern Pass Transmission project want ES to bury more portions of the line in Coos County.
- The currently proposed route would bury 8 miles in the county.
- Over 200 people attended the hearing on Wednesday.

Guggenheim takeaway: *ES suggested there are other ways to reduce NPT's visual impact (e.g., different type of tower), but has previously noted that burying the line would make the project economically unfeasible. We would expect local parties to take interest in any large infrastructure project of this nature, especially during public sessions such as this; we don't anticipate enough opposition to set the project back though. As a reminder, the Site Evaluation Committee recently approved ES's application for review despite opposition from New England Power Generators and the Society for the Protection of NH Forests (parties that would likely make progress more difficult for ES, in our view).*

DUK – NC PUC denies request for hearings on Western Carolinas Modernization Project

- The NC PUC denied a request from non-profit groups for evidentiary hearings on DUK's $1.1bn Western Carolinas Modernization Project.
- NC WARN and The Climate Times argue the application should be denied because the PUC can't evaluate the project in the 45-day window.
- NC PUC staff notes they never indicated inability to conduct an investigation within the time frame.
- DUK requested a certificate of public convenience and necessity to replace their 379MW Asheville coal plant with two 280MW CCGTs.

Guggenheim takeaway: *We recently highlighted modifications DUK made to its Western Carolinas Modernization Plan (including additional energy efficiency and renewables), which have managed to garner local support. As a reminder,* *DUK's ~$1bn Western Carolinas Modernization Plan is intended to address the company's expectation for demand in their Western region to grow more than 15% over the next decade.*

ES – Utilities request approval of contracts to support New England gas pipeline

- National Grid (NGG, NC, $65.82) electric utility subsidiaries have filed for MA DPU approval of two 20-year contracts for capacity on the Access Northeast pipeline, and two 20-year contracts on the Northeast Energy Direct pipeline.
- ES electric utility subsidiaries previously requested approval for two 20-year contracts for capacity on Access Northeast.

***Guggenheim takeaway:** ES is developing the Access Northeast project, a gas pipeline that would be supported by contracts with electric utilities securing fuel for their power plants; a variation to the manner in which gas LDC traditionally contract for pipeline capacity. Much of the gas capacity in New England is secured under firm contract by gas LDCs to meet heating demand, so a cold winter reduces the supply of gas available to fuel power plants. Limited gas supplies during a cold winter can challenge electric reliability and result in volatile prices as we experienced during the polar vortex.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

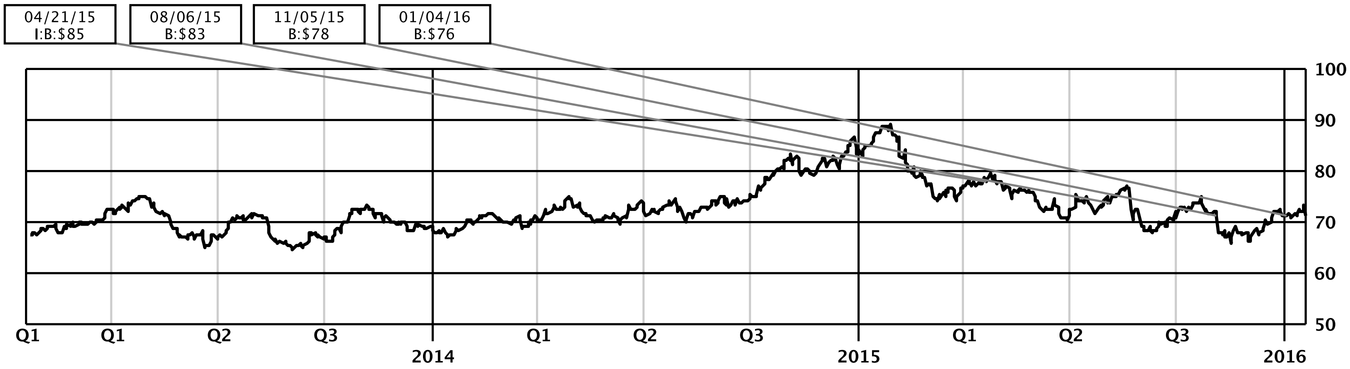
IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Duke Energy Corporation, Eversource Energy, Exelon Corporation, Public Service Enterprise Group Inc. and TECO Energy, Inc. in the next 3 months.

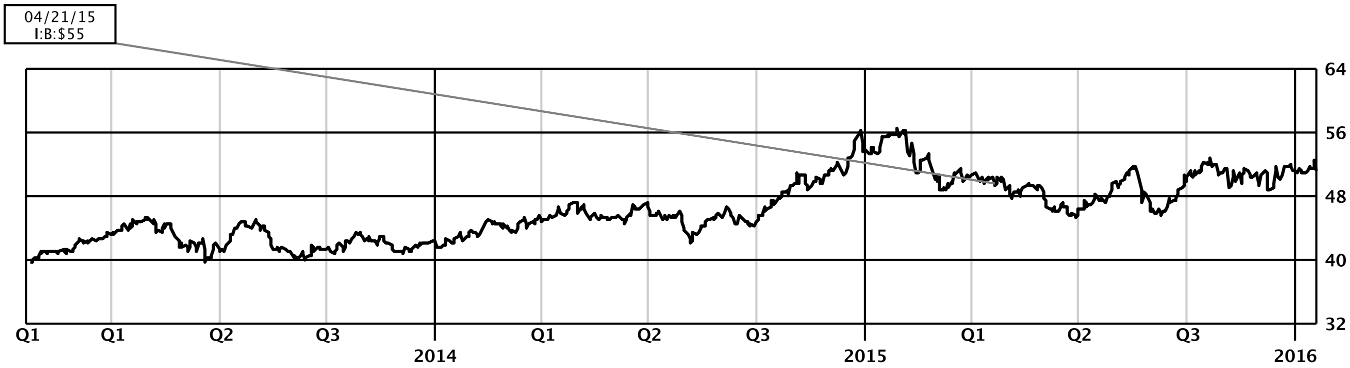
Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: Duke Energy Corporation (DUK) as of 01-20-2016



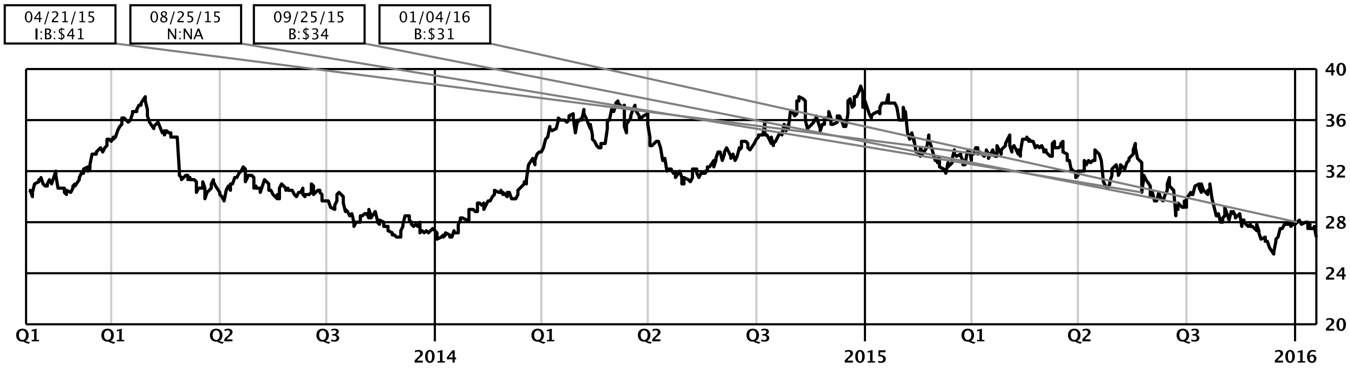
Created by BlueMatrix

Rating and Price Target History for: Eversource Energy (ES) as of 01-20-2016



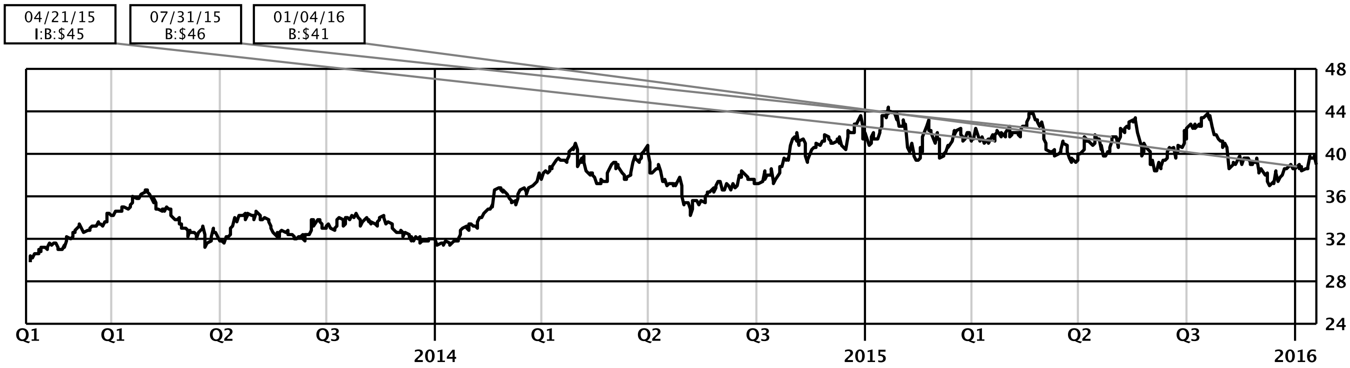
Created by BlueMatrix

Rating and Price Target History for: Exelon Corporation (EXC) as of 01-20-2016



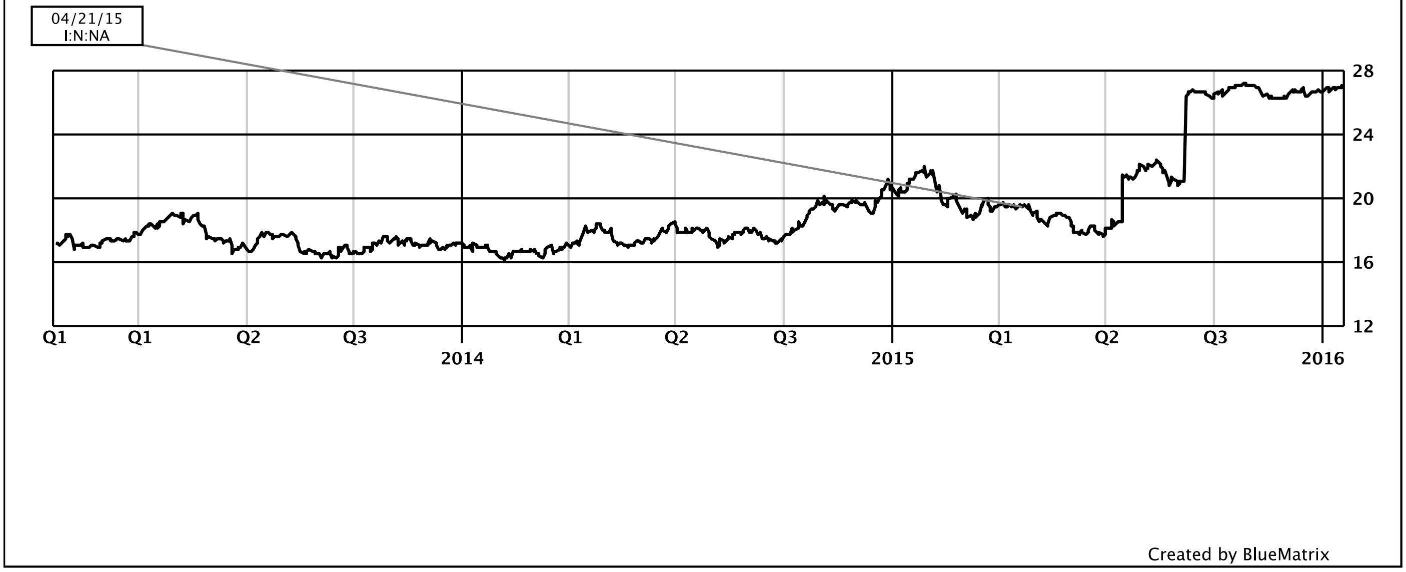
Created by BlueMatrix

Rating and Price Target History for: Public Service Enterprise Group Inc. (PEG) as of 01-20-2016



Created by BlueMatrix

Rating and Price Target History for: TECO Energy, Inc. (TE) as of 01-20-2016



RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Guggenheim's Power & Utilities Daily

Guggenheim's Power and Utilities Daily: CPP, D, DUK, SO, FE, AEP, AWK, ED, EXC, ETR

January 22, 2016

SHAHRIAR POURREZA, CFA ANALYST
212 518 5862
shahriar.pourreza@guggenheimpartners.com

What's New?

CPP – Court of Appeals denies stay of Clean Power Plan
ED/EXC/ETR – NY PSC approves $5.3B clean energy fund
D/DUK/SO – Forest Service rejects Atlantic Coast pipeline route through national forests in VA and W. VA
DUK – Duke files for merger of Piedmont approval to Tennessee Commission
FERC – FERC Commissioner will not seek reappointment in June
FE/AEP – The Office of the Ohio Consumers' Counsel asks lawmakers to examine Ohio utility regulation concerns
AWK – AWK files rate case in Illinois

CPP – Court of Appeals denies stay of Clean Power Plan

- The DC Circuit Court of Appeals on Thursday denied requests by states and industry to stay the Clean Power Plan.
- The federal appeals court will hear merits of the case on June 2, and potentnial for oral arguments to continue on June 3.
- The DC Circuit also ordered parties to submit a proposed briefing schedule that would allow initial briefs to be submitted by April 15 and final briefs by April 22.

***Guggenheim takeaway:** As we highlighted in our research, getting the court to issue a stay of EPA's Clean Power Plan is generally an uphill battle. We note a stay of MATs was not granted either. Regardless of potential delays in the court case, we believe states will submit State Implementation Plans to be in compliance with CPP in 2022.*

ED/EXC/ETR – NY PSC approves $5.3B clean energy fund

- NY PSC approved a $5.3B clean energy fund directed at electric and gas utilities to develop energy efficiency programs.
- The fund will support: existing solar program and green bank, as well as research to address barriers in energy efficiency, and market development.
- The PSC also expanded the scope of its renewable programs to include NY Governor's directive to meet 50% renewables by 2030.
- The PSC will develop a framework by June on the possibility of requiring utilities to procure a share of zero emission credits to support nuclear units.

***Guggenheim takeaway:** As we highlighted in our research, we believe the NY PSC would adopt the NY Governor's goal of trying to keep upstate nuclear, e.g. ETR's Fitzpatrick and EXC's Ginna. In his state of the state address, he requested to have nuclear as a bridge and to switch away from coal. We believe these initiatives help to achieve Clean Power Plan incentives, and could be a positive for ED to develop transmission for increased renewables in the state.*

D/DUK/SO – Forest Service rejects Atlantic Coast pipeline route through national forests in VA and W. VA

- The National Forest Service determined that the proposed Atlantic Coast Pipeline (ACP) did not meet the minimum requirements for passing through areas in the Monongahela and George Washington national forests.
- The Forest Service has requested that Atlantic Coast provide additional information on new routes.
- The Forest Service said new alternative routes must be developed so that it complies with a conservation agreement for the Cow Knob salamander and avoid Cheat Mountain and Back Allegheny Mountain in the Monongahela National Forest and Shenandoah Mountain in the George Washington National Forest.

Guggenheim takeaway: *Another hiccup for ACP, although we would expect issues such as this to surface with an infrastructure development this size. At this juncture we still expect D to keep schedule on track.*

DUK – Duke files for merger of Piedmont approval to Tennessee

- DUK and PNY (PNY, NC, $58.00) filed their proposed merger with the Tennessee Regulatory Authority (TRA).
- The companies indicated merging would not increase rates in TN.
- The companies request the TRA approve the merger before April 30, 2016.

Guggenheim takeaway:*As we highlighted in our research, we believe there are limited hurdles for this transaction. DUK expects the transaction to close in 4Q16 and we don't anticipate any unordinary pushback. See our note here for analysis on the merger.*

FERC – FERC Commissioner will not seek reappointment in June

- FERC Commissioner Tony Clark announced that he will not seek reappointment when his term expires in June 2016.
- Commissioner Tony Clark said he may serve beyond the end of his term if a replacement has not yet been confirmed. He is the only Republican of four FERC commissioners.
- Commissioner Tony Clark joined the commission in 2012.

Guggenheim takeaway: *FERC has become a very restrictive body of oversight from an investor and even re-regulated market standpoint. Changes in regime are welcome.*

FE/AEP – The Office of the Ohio Consumers' Counsel asks lawmakers to examine Ohio utility regulation concerns

- The governing board of the Office of the Ohio Consumers' Counsel released a report on the state of investor-owned utilities in Ohio.
- The report stated that the problem is in how Ohio regulates the electric industry.
- The report also proposes that a 15-member task force be created to examine the issue and propose reforms that will be submitted to the General Assembly no later than Dec. 15.
- The report addresses customer dissatisfaction, and also presents the difficulties investor-owned-utilities face in OH.

Guggenheim takeaway: *This report acts as commentary on the state of utilities in OH in light of the pending hearings on FE and AEP's PPA settlements. The report highlights complaints and generally negative sentiment on the state of electricity* *markets in OH. As we highlight in our research, while there have been alternative plans submitted by IPPs and claims for litigation, we believe PUCO will approve the PPAs. See here for our takeaways on AEP PPA and FE PPA.*

AWK – AWK files rate case in Illinois

- AWK is filing a $40mm revenue increase in its rate case. Rates from this rate case will be effective January 2017.
- Illinois American Water will have invested ~$342mm in water and sewer infrastructure from 2013 to 2017.
- The primary driver for the revenue increase is on water and system investments.

Guggenheim takeaway: *We note that this is the first rate case IL American Water has filed since 2012 and we do not expect the revenue increase to be contentious. American Water has historically settled on their rate cases.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Guggenheim's Power & Utilities Daily

Guggenheim's Power and Utilities Daily: NEE, ED, EXC, ES, DTE, DUK January 25, 2016

SHAHRIAR POURREZA, CFA ANALYST
212 518 5862
shahriar.pourreza@guggenheimpartners.com

What's New?
NEE/ED – Mountain Valley Pipeline secures ED as customer
ES – Importing hydro from Canada top of MA Governor's list
EXC – Environmental groups asks MD Appeals court to weigh in on PSC approval of merger
DUK –Piedmont shareholders approve DUK acquisition
DTE – Opponents to NEXUS seek support from OH Senator
ES – Solar Company cuts jobs as net-metering program limit in New Hampshire reached

NEE/ED – Mountain Valley Pipeline secures ED as customer

- NEE announced that ED will have a 12.5% ownership interest in Mountain Valley Pipeline (MVP).
- ED has also agreed to be a customer of natural gas shipped through MVP.
- MVP requires FERC approval, as it will be a natural gas pipeline crossing West Virginia to the Transco pipeline in Virginia.
- MVP filed their formal application with FERC in October 2015, requesting authorization to construct the pipeline.
- Construction is expected to begin in late 2016, with in-service targeted for 4Q18.

Guggenheim takeaway: *The Mountain Valley Pipeline will transport ~2Bcf/day of Marcellus and Utica gas to markets in Mid/South Atlantic regions. Through the application, FERC is asked to certify public convenience and necessity of MVP, including safety, water resources, and other environmental consideration. Project moving right along.*

ES – Solar Company cuts jobs as net-metering program limit in New Hampshire reached

- SunRay Solar Inc. fired a third of its employees after ES announced the net-metering limit was reached.
- ES announced that the net-metering program limit has been reached and that new applicants for NH's net-metering program would be placed on a wait list.
- ES is working with the Legislature on a proposal to raise existing net metering limit, or "cap," and to ask state regulators to develop a more permanent solution in addressing cost shift.
- Projects on the wait list, will receive a credit or payment that is based on the wholesale market energy price in ISO-NE for exported energy.

Guggenheim takeaway: *As the ongoing discussion on net-metering rates continues, ES has established a wait list in NH that will put new customers under* *the lower, wholesale rate compensation (instead of retail rates). Legislation to address net-metering and to expand the cap is currently under discussion.*

EXC – Environmental groups asks MD Appeals court to weigh in on PSC approval of merger

- The Sierra Club and Chesapeake Climate Action Network have appealed the Circuit Court for Queen Anne's County's decision to deny a request to vacate or remand the MD PSC's order.
- The MD PSC had conditionally approved EXC and POM (NC, $26.26) merger in May 2015, with a 3-2 decision.
- The non-profit law organization Earthjustice filed the appeal on Jan. 21 asking the MD Court of Special Appeals to weigh in on the case.

Guggenheim takeaway: *We believe the appeal could create some noise, but will not likely overturn the MD PSC's decision to approve the merger. As a reminder, EXC has a settlement pending approval from the DC Commission, which is the last regulatory hurdle for the merger to be approved. The settlement will most likely swing a majority of the DC Commission and be approved in 1Q16, in our view. Likely deal approval in February.*

DUK –Piedmont shareholders approve DUK acquisition

- PNY (PNY, NC, $57.97) shareholders voted to approve the acquisition on Jan 22.
- The companies filed their proposed merger with the Tennessee Regulatory Authority (TRA) to transfer Piedmont's Tennessee operating license on Jan. 15, 2016.

Guggenheim takeaway: *As we highlighted in our research, we believe there are limited hurdles for this transaction. DUK expects the transaction to close in 4Q16 and we don't anticipate any unordinary pushback. See our note here for analysis on the merger.*

DTE – Opponents to NEXUS seek support from OH Senator

- Opponents to the NEXUS pipeline have been in conversation with staffers of an OH senator.
- The group requested to have NEXUS re-routed so that it will not cut across Median and Stark counties in OH.

Guggenheim takeaway: *As we continue to highlight in our research, we believe the NEXUS pipeline will be built according to its schedule. While landowners continue to oppose NEXUS' route, we believe there are limited hurdles for the pipeline to be built. As a reminder, NEXUS submitted its FERC application for the ~255 mile, 1.5 Bcf/day pipeline, requesting that a decision be made before 4Q 2016 so that construction could being in early 2017.*

ES – Importing hydro from Canada top of MA Governor's list

- In the MA Governor's State of the Commonwealth's address, he urged lawmakers to pass legislation requiring utilities enter into long-term contracts with hydropower in Canada.
- The MA Governor noted that only hydropower was the most cost effective solution as ~10,000 MW of capacity is expected to retire in the next few years.
- The Governor is seeking to import Canadian hydro to reduce New England's emissions and its dependence on natural gas.

Guggenheim takeaway: *ES's Northern Pass transmission line, which proposes to deliver 1,000 MW of hydro power to New England is in the process of finalizing* *a route. With the Governor's support of hydro power, we believe the project will remain on track. As a reminder, the Site Evaluation Committee recently approved ES's application for review despite opposition from New England Power Generators and the Society for the Protection of NH Forests (parties that would likely make progress more difficult for ES, in our view).*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Supreme Court Sides With Demand Response; No Fair Value Impacts

Contents

Analyst Note 25 Jan 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Independent power producers and diversified utilities are trading at a significant discount to our fair value estimates,

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers at Commonwealth Edison (Illinois), PECO (Pennsylvania), and Baltimore Gas & Electric (Maryland). Exelon also owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 22% of U.S. nuclear power and 4% of all U.S. electricity. Exelon also is the largest power retailer in the U.S., serving about 150 terawatt hours of load. In March 2012, Exelon bought Constellation Energy for $7 billion.

and the Supreme Court's ruling has no material impact on our long-term thesis. We believe the market reaction was overly pessimistic to the ruling and presents a buying opportunity for those with the appropriate risk appetite. We highlight Dynegy and Exelon as those with the most exposure to PJM. Calpine, FirstEnergy, NRG Energy, and Public Service Enterprise Group also have material levels of generation in PJM.

Price/Fair Value Morningstar data as of Jan 22, 2016

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

-Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures.

If you wish to obtain further information regarding previous Reports and recommendations and our services, please contact your local Morningstar office.

Unless otherwise provided in a separate agreement, you may use this Report only in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of this document is Morningstar Inc. Redistribution, in any capacity, is prohibited without permission. The information, data, analyses and opinions presented herein do not constitute investment advice; are provided solely for informational purposes and therefore are not an offer to buy or sell a security; and are not warranted to be correct, complete or accurate, nor may they be construed as a representation regarding the legality of investing in the security/ies concerned, under the applicable investment or similar laws or regulations of any person or entity accessing this report. The opinions expressed are as of the date written and are subject to change without notice. Except as otherwise required by law, Morningstar, its affiliates, and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions or their use. You should seek the advice of your financial, legal, tax, business and/or other consultant, and read all relevant issue documents pertaining to the security/ies concerned, including without limitation, the detailed risks involved in the investment, before making an investment decision.

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. As the price / value / interest rate of a security fluctuates, the value of your investments in the said security, and in the income, if any, derived therefrom may go up or down.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs and generate large profits even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- If gas and power prices remain low for many years, Exelon's move to invest in retail and regulated businesses will preserve value.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions dilute Exelon's economic moat by adding more no-moat retail business and narrow moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Supreme Court Sides With Demand Response; No Fair Value Impacts

Travis Miller, Analyst, 06 October 2015

Investment Thesis

As the largest nuclear power plant owner in the U.S., Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years. The drop in Eastern U.S. gas and coal prices have made those generation sources more competitive.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and made a $12 billion bid for Pepco in April 2014, both including debt. Management's political negotiations appear to have revived the deal in Washington, D.C., where regulators had rejected it in August 2015. We now expect it has a 75% chance of closing. Exelon has received all other regulatory approvals.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our outlook for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings by 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups and adjusted allowed returns. Excluding Pepco, we think the regulated utilities can grow earnings 10% annually the next three years.

Andrew Bischof, CFA, Analyst, 25 January 2016

Analyst Note

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Economic Moat

Travis Miller, Analyst, 06 October 2015

Considering Exelon's full suite of businesses, we think it earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, that spread between long-term returns on capital and Exelon's cost of

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★★★ 22 Jan 2016	28.03 USD 22 Jan 2016	35.00 USD	0.80	4.42 22 Jan 2016	25.78 22 Jan 2016	Utilities - Diversified	Standard

Close Competitors	Currency (Mil)	Market Cap	TTM Sales	Operating Margin	TTM/PE
Public Service Enterprise Group Inc PEG	USD	20,173	10,910	29.67	10.99
FirstEnergy Corp FE	USD	13,656	14,968	11.48	27.40
Entergy Corp ETR	USD	12,261	11,836	2.32	0.00

capital have shrunk based on our midcycle outlook for power prices in the eastern U.S. Exelon's increasing diversification into narrow- and no-moat businesses together with the shrinking returns at its nuclear generation business supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources like coal and natural gas reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must continue to have access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Analyst, 06 October 2015

We are reaffirming our $35 per share fair value estimate after raising our probability of the Pepco acquisition closing to 75% from 25% as a result of an agreement the companies reportedly reached with the Washington, D.C., mayor's office on Oct. 6. Although we think the deal is value-dilutive, it is too small to have a material impact on our fair value estimate. Exelon's $27.25-per-share cash offer represents a 30% premium to our $21 per share standalone fair value estimate for Pepco.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities (Ill.), Oyster Creek (N.J.), and Three Mile Island (Pa.)--as well as the Clinton (Ill.) plant. We now assume a 50% probability that the Byron (Ill.) plant will retire given it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2016, excluding contributions from Pepco. On a midcycle basis, we assume Exelon earns $3.80 per share and Exelon Generation earns $3.9 billion EBITDA. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

Our midcycle earnings forecast at Exelon Generation is based on a $4/mcf midcycle Henry Hub gas price, a negative $0.60/mcf gas basis for PJM West, and heat rates across all regions 10% above current 2017 forward heat rates. At the retail business, we assume 8% long-term normalized gross margins and 1% annual volume growth beyond 2015.

We assume all three regulated utilities earn average 10% returns on equity starting in 2016.

We assume a 9% cost of equity and a 7.1% cost of capital. Our cost of equity assumption is in line with the 9% rate of return we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Analyst, 06 October 2015

Investors should pay the most attention to political developments that would re-regulate competitive electricity markets in the Midwest and Mid-Atlantic. Even though sharp increases in power prices would result in an earnings windfall for Exelon, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely in the current environment, it could have a substantial negative impact on our fair value estimate. If market power prices are capped or regulated, Exelon loses its primary profit source.

As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. In the decade following deregulation, rate caps, and other regulations limited Exelon's profits. Those are gone, and lower power prices have eased concerns about reregulation. But we expect politicians and regulators will continue to monitor customers' utility bills and could intervene if power prices skyrocket.

Reregulation also would destroy Exelon's retail business. Although that business is still a relatively small source of consolidated earnings, it would eliminate Exelon's effective hedge against its generation fleet, potentially leading to more volatile earnings.

As Exelon's regulated utilities generate a greater share of earnings, investors will be subject more acutely to the state and federal regulatory risk that all distribution and transmission utilities face. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth.

Management

Travis Miller, Analyst, 06 October 2015

We give Exelon's management team a Standard stewardship rating. Since Exelon's earnings are at the mercy of wholesale power market ups and downs, we don't see much link between Exelon's recent underperformance and management's capabilities.

President and CEO Chris Crane and Executive Chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and Chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition in 2015. This will increase Exelon's share of regulated utilities earnings and dilute shareholders' exposure to wholesale power markets. Management has shown strong conviction in the value of the deal based on their efforts to gain support for the deal from all parties, particularly in Washington, D.C.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants absent significant public policy support.

We're particularly impressed by management's nuclear fleet operations, the one thing it can control. Crane led the generation segment to world-class results in his five years as COO, and that performance has continued with Crane as CEO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80% range. Exelon's operational excellence preserves the value-creation opportunities available if power prices rise.

The Constellation acquisition reshaped the board along with the executive suite. The postmerger addition of four former Constellation board members and the retirement of five legacy Exelon board members, including Rowe, leaves only two of the 16 members who were on the board when Exelon formed in 2000. In addition, Shattuck has become the largest insider shareholder. He owned 3.8 million shares or vested options as of January 2015.

Supreme Court Sides With Demand Response; No Fair Value Impacts

Andrew Bischof, CFA, Analyst, 25 January 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Management Meeting: Exelon Sticks to March 4 Drop-Dead Date for Pepco Deal

Travis Miller, Analyst, 11 November 2015

We are reaffirming our $35 and $26 fair value estimates for Exelon and Pepco Holdings, respectively, after meeting with Exelon's senior management at the Edison Electric Institute Financial Conference in Hollywood, Florida. Our narrow moat and stable moat trend ratings for both companies are unchanged.

Management reiterated it will withdraw its offer to acquire Pepco if Washington, D.C., regulators do not approve the transaction by March 4, 2016. We continue to incorporate in our fair value estimates a 75% probability of the deal closing as proposed. D.C. regulators' written approval for rehearing suggested they expect to rule within that time frame. We expect Exelon will be able to close the deal immediately following approval.

The most-favored-states contingencies in other states' approvals would take effect after the deal closed and thus are not an impediment to the deal closing. Exelon would file with those states to offer customer benefits comparable with those offered in D.C. We don't expect this to be material to our assessment of the transaction or our fair value estimate for Exelon, which includes $1 per share of dilution from the deal.

Management pushed out the start of its full $0.15-$0.20 earnings per share run-rate accretion to 2019 from 2017 initially. Apart from the closing delay, management said the 2017-18 reduction was based on Pepco's reassessment of its near-term outlook for earned returns. At this point, most of the earnings accretion should come from the extra leverage Exelon will use. We expect it will take two to three years of operational improvements on Exelon's side before it can achieve more constructive regulatory outcomes.

Management estimated the deal could be $0.25 per share earnings-accretive by 2020 if Pepco can achieve a 9% earned return on equity. We think this is a stretch, but even an 8% achieved ROE could make the deal value-neutral relative to our previous stand-alone forecasts for Pepco.

Exelon Still Awaiting Power Market Upside and Pepco Acquisition Approvals

Travis Miller, Analyst, 30 October 2015

We are reaffirming our $35 fair value estimate and narrow economic moat and stable moat trend ratings for Exelon after the firm reported adjusted earnings of $0.83 per share in the third quarter, up from $0.78 per share in the third quarter of 2014. Management raised its full-year earnings guidance range $0.05 per share to $2.40-$2.60, in line with our full-year outlook.

Management noted Exelon's retail-wholesale combination was a meaningful contributor to the higher quarterly and year-to-date earnings, amplified by last year's Integrys acquisition. We've long believed Exelon's retail-wholesale combination and scale can be value-accretive for shareholders, and it appears to be paying off, albeit at still a small level. Favorable weather for Exelon's regulated utilities was a key reason for higher earnings in the quarter. On a weather-normalized basis, we expect capital investment and recent rate activity in Pennsylvania and Maryland to be the key earnings growth driver in 2016-18.

Estimated 2015-17 gross margin for Exelon Generation climbed during the quarter primarily due to above-market hedges. Management now projects $7.8 billion gross margin in 2016 and 2017 with a 2017 upside near $9.0 billion based on hedging about half of its projected generation. We think this is a good position given our bullish power market outlook. Management also announced its intention to delay its nuclear plant retirement decision until next year. We continue to assume a high likelihood that it retires four plants by 2018 based on current market conditions.

Management now expects to close the Pepco acquisition in the first quarter of 2016. We continue to incorporate $1 per share fair value dilution. On Oct. 28, the D.C. commission accepted Exelon-Pepco's appeal and said it expects to make a decision in less than 150 days, suggesting mid-March.

Pepco Reports Third-Quarter Earnings; Acquisition by Exelon Likely to Close Early Next Year

Charles Fishman, Analyst, 26 October 2015

We are reiterating our $35 per share fair value estimate for Exelon and $26 fair value estimate for Pepco after Pepco reported third-quarter earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

Pepco reported operating earnings of $0.33 per share versus $0.46 in the same period last year. Earnings were negatively affected by higher operations and maintenance expense, implementation costs associated with a new customer information system, increased transmission revenue reserves related to a return on equity challenge and higher property taxes.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining approval of the Public Service Commission of the District of Columbia and being completed following the agreement with Washington, D.C., Mayor Muriel Bowser. We expect the D.C. commission to approve Exelon and Pepco's request to reopen the merger proceeding in their meeting on Oct. 28. Assuming the D.C. commission does reopen the proceeding, briefings would not be completed until late December. Therefore, we would not expect the merger to close until early 2016.

Although the merger appears to be on track in D.C., it is unclear whether the proceedings will be reopened in Delaware, New Jersey, and Maryland, jurisdictions that have already approved the transaction. The commitments Exelon made to these states to obtain approval are subject to most-favored-nation clauses and may need to be enhanced.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Exelon Reaches Agreement With D.C. Mayor to Acquire Pepco

Charles Fishman, Analyst, 06 October 2015

We are reiterating our $35 fair value estimate for Exelon and raising our fair value estimate for Pepco Holdings to $26 per share from $23 per share following the announcement by Washington, D.C., Mayor Muriel Bowser's office that they had reached an agreement with Exelon for its proposed acquisition of Pepco. Exelon has now agreed to invest $78 million in the D.C. electric utility system, up from the $14 million it previously proposed.

Based on the proposed agreement, we now believe the merger has a better than 75% chance of gaining approval of the Public Service Commission of the District of Columbia and being completed. We had previously handicapped the chances of the merger closing at only 25% following the Aug. 25, 2015, outright rejection of Exelon's offer without the PSC providing any solutions for gaining approval. Exelon and Pepco have received all other regulatory approvals although there are some outstanding legal challenges to the conditional approval of the Maryland Public Service Commission that we expect to be dismissed.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Pepco and Exelon Refile With D.C. Commission but Offer No Sweeteners

Charles Fishman, Analyst, 30 September 2015

We are reiterating our $35 fair value estimate for Exelon and $23 fair value estimate for Pepco following the firms' filing for reconsideration of their proposed merger to the District of Columbia Public Service Commission. We are maintaining our narrow moat and stable moat trend ratings for both. The filing asserts the merger is in the public interest and the original decision contained numerous errors of law and fact. The companies did not propose any new financial incentives.

We continue to believe that the merger has a 25% chance of closing. Since the D.C. PSC did not provide alternatives to correct its concerns in the original decision, we think the commission is unlikely to reverse itself without any sweeteners. If the companies do offer additional benefits to D.C. customers, the conditional approvals by Delaware, Maryland, and New Jersey will be reopened. Most-favored-nations clauses in these agreements allow for the same incremental benefits, increasing the cost to Exelon of completing the merger. Although incremental customer benefits could be small for the D.C. jurisdiction, making concessions across all of Pepco's service territories could ruin the economics of the merger.

The D.C. commission has 30 days to respond. If it denies the request for rehearing or does not respond, Pepco and Exelon could appeal the decision to the D.C. Court of Appeals. The Washington Post has reported that D.C. Mayor Muriel Bowser has been subject to intense lobbying by business groups favoring the merger and public demonstrations opposing the merger. The Post reported that private negotiations are taking place in the mayor's office trying to determine if a revamped deal is possible.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Exelon Postpones Nuclear Plant Retirement Decision; No Fair Value Impact

Travis Miller, Analyst, 10 September 2015

We are reaffirming our $35 per share fair value estimate for Exelon after management announced it will delay a decision whether to close at least three of its struggling nuclear plants. We recently incorporated into our fair value estimate and financial projections the assumption that it was more likely than not that Exelon would close those three plants in 2018. We also assume a 50% likelihood that Exelon will close its Byron (Illinois) nuclear plant in 2019.

Results of the recent 2016-18 PJM transitional capacity auctions and management's decision to delay potential retirements do not change our assumptions that those plants ultimately will close, absent significant energy market or public policy changes. The Quad Cities (Illinois), Three Mile Island (Pennsylvania), and Oyster Creek (New Jersey) plants are obligated to run at least through mid-2018, and the Byron plant is obligated to run through mid-2019 based on results from PJM's recent capacity auctions.

The key development for Exelon in last week's 2017-18 transitional capacity auction was that the Quad Cities and Byron plants cleared and are now obligated to run. Neither cleared PJM's 2017-18 base capacity auction last year at $120/megawatt-day but did clear last week's capacity performance transitional auction at $151.50/MW-day. Including those plants and the uplift for the rest of the fleet adds about $400 million of EBITDA in 2017-18.

The Clinton (Illinois) plant is the fourth that we assume will close by 2018. It is not part of PJM. It is obligated to run at least through 2016 as part of the Mid-Continent ISO. Exelon continues to lobby Illinois politicians to adopt a subsidy-like scheme that would improve the economics for its six Illinois nuclear plants. We do not include any benefits from policy changes in our fair value estimate.

D.C. Commission Rejects Pepco-Exelon Merger; Lowering Pepco Fair Value Estimate

Charles Fishman, Analyst, 26 August 2015

We are lowering our fair value estimate of Pepco Holdings Inc. to $23 per share from $27 per share, following the decision by the Public Service Commission of the District of Columbia to deny the merger with Exelon Corp, which caused Pepco shares to close down 16.5% on Tuesday. At the time of the merger in April 2014, we had believed the transaction would be value-dilutive for Exelon, and we are reviewing our $35 per share fair value estimate. We note that Exelon shares were down almost 7% on Tuesday, on which day the overall market and utilities were also weak. Our narrow moat and stable moat trend are unchanged for both companies.

Exelon and Pepco issued a joint press release indicating that they were reviewing their options and will respond once the process is complete. A summary of the decision indicated that the D.C. commission did not believe the merger would provide sufficient benefits to customers or guarantees for improvements in reliability. The commission was also concerned that under the new management structure Pepco would become "a second-tier company in a much larger corporation whose primary interest is not in distribution, but in generation." The full decision is due Wednesday, and the companies have 30 days to appeal the decision.

We were surprised by the decision, as we had believed the most difficult regulatory hurdle would be in Maryland. Pepco and Exelon agreed to stringent conditions and additional customer benefits imposed by the Maryland Public Service Commission on May 18. We thought the commission in D.C., the last jurisdiction needed to approve the deal, would agree to similar conditions. They did not.

Our new fair value estimate assumes that there is now only a 25% chance of the transaction being restructured to satisfy the D.C. regulators. If the deal is abandoned, our standalone fair value estimate for Pepco is $21 per share.

PJM Auction Results In Line With Our Forecast in First Auction With Capacity Performance Inclusion

Andrew Bischof, CFA, Analyst, 24 August 2015

Capacity prices across most of the 13-state PJM Interconnection region cleared at $165/MW-day for capacity performance, or CP, and $150/MW-day for base generation for 2018-19. This is comparable to $120/MW-day for last year's 2017-18 results, in which there was no separate CP auction. The results are in line with our auction expectations, in which we previously expected CP to clear at $150/MW-day and base capacity at $140/MW-day for the 2018-19 auction. We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover, as we are maintaining our midcycle capacity assumptions.

Capacity revenue provides significant pretax earnings for our independent power producers and diversified utilities for any one auction year. Dynegy in our opinion is the largest winner from strong base capacity results, as half of its generation is now in PJM. For every $100/MW-day change in capacity prices, we estimate that Dynegy benefits $385 million in pretax earnings. Exelon's fleet also benefited from a strong clearing in the Commonwealth Edison, or COMED, locational deliverability area, or LDA, with CP clearing at $215/MW-day and $200/MW-day for base generation capacity. However, we do not believe that Exelon's Illinois Quad Cities and Byron nuclear units cleared the auction at these prices. Based on recent management commentary, we continue to expect Exelon to close these two plants by the end of 2016, with a final decision expected in September. Public Service Enterprise Group, or PSEG, also benefits from strong base results for the second year in a row, with base capacity clearing in the Eastern Mid-Atlantic Area Council, or EMAAC, LDA clearing at $210/MW-day for base generation and $225/MW-day for CP. The premium clearing price in the PSEG region shows the competitive advantage of PSEG's fleet and supports our positive moat trend. Higher capacity prices also benefit Calpine, FirstEnergy, and NRG Energy.

Upcoming PJM Capacity Auction Could Prove Disappointing

Andrew Bischof, CFA, Analyst, 17 August 2015

We are reaffirming our fair value estimates and our moat and moat trend ratings for our independent power producers and diversified utilities ahead of the upcoming 2018/19 Planning Year auction for Capacity Performance, or CP. The capacity auction is currently under way, with results posted Aug. 21.

In June, the Federal Energy Regulatory Commission approved the proposal from PJM Interconnection to implement CP in its 2018/19 base residual auction, which PJM began on Aug. 10. CP increases the marginal capacity cost for marginal generators, but the bullish impact should be less than the market expects. We maintain our previous estimate that the combination of CP, reduced impact from demand response, and increased confidence of marginal generators to raise prices will cause CP to clear at $150 per megawatt-day and base capacity at $140/MW-day for the 2018-19 auction.

We believe that previous auctions already priced in existing non-CP performance penalties, such as those a generator must pay if it cannot deliver energy during reserve shortages. CP is a further-reaching, stricter penalty structure for nonperformance outside of reserve shortages. Although generators participating in CP will not be constrained by their avoidable cost rates this year, which will allow generation to offer up to net cost of new entry times the balancing ratio, we suspect that few generators will raise offer prices for this reason alone. We also highlight the possible expected increase in dark spreads over the 2018–19 time frame due to the large increase in LNG exports over this time period; this could add downside pressure to capacity offers from coal generation in PJM.

EPA's Final Carbon Rules Positive for Clean Generation and Transmission, Negative for Coal

Charles Fishman, Analyst, 03 August 2015

The Environmental Protection Agency's final Clean Power Plan announced on Aug. 3 offers what we consider a mix of moderate positive and negative changes for utilities from the draft proposal issued in June 2014.

We are reaffirming our fair value estimates, moats, and moat trend ratings for all utilities, but we do not include explicit impacts from the CPP in our forecasts or fair value estimates. We think the rules will face stiff legal and political opposition and could change significantly. If the rules do take effect as written, beneficiaries should be low-carbon power producers such as Exelon, NextEra Energy, and Calpine; and electric transmission developers like wide moat ITC Holdings.

For coal miners and railroads, we are reaffirming our fair value estimates and moat ratings. Coal volumes are already facing near-term weakness from MATS-related plant closures. We forecast coal demand to stabilize as natural gas prices rise and the surviving coal fleet remains economical. CPP could force another wave of closures that would add additional pressure on coal, but the magnitude, timing, and legality remain uncertain. Furthermore, state-specific goals will impact the various coal basins differently. With lawsuits likely and some states vowing noncompliance, we do not think CPP in its current form will survive to full implementation.

The final rule extends the start of the compliance period to 2022 from 2020 but boosts the emissions reduction target to 32% from 2005 levels versus 30% in the draft. We still think the timeline is the biggest challenge given the planning and construction requirements to meet the target. Southern Company and SCANA should benefit from changes that give their home states more credit for their new nuclear projects.

We don't think the rules are strict enough to save Exelon's three Illinois nuclear plants we think are more likely than not to retire. We recently cut our Exelon fair value estimate to $35 per share from $37.

Exelon's Three Distressed Nuclear Plants Likely to Go Dark; Cutting Fair Value Estimate

Travis Miller, Analyst, 31 July 2015

We are cutting our fair value estimate to $35 per share from $37 to reflect our assumption that it is more likely than not that Exelon will close its Byron, Quad Cities, and Clinton nuclear plants by the end of 2016, representing 25% of its nuclear capacity. We are reaffirming our narrow moat rating and stable moat trend.

On July 29, Exelon management said it was discussing the plants' long-term viability with the board and plans to make a retirement decision in September. This presumably will come after grid operator PJM announces results from the 2018-19 Base Residual Auction on Aug. 21 and incremental auctions for 2016-17 (Aug. 31) and 2017-18 (Sept. 9). We agree with management that these auction clearing prices likely will not be high enough to justify keeping the plants running past 2016. Quad Cities and Byron failed to clear the 2017-18 BRA last year. Clinton is not part of PJM.

These plants are value-accretive based on our bullish long-term fundamental view of Eastern U.S. power prices. However, market prices remain 20% below our midcycle forecast. Management said the plants have been free cash flow negative for several years. Retiring the plants has no material impact on our 2017 cash flow estimates because of their challenged economics, but it reduces our consolidated midcycle EBITDA estimate to $8.7 billion from $9.2 billion. Our midcycle consolidated EPS estimate drops 10% to $3.80. We assume Exelon has sufficient reserves for decommissioning.

The only lifesaver is the Low Carbon Portfolio Standard legislation in Illinois, which would give the plants financial benefits similar to renewable energy. The legislation failed to pass the regular session in May. We don't expect it to pass during the state's so-called veto session in November. Our understanding is that Exelon won't be able to reverse the retirement decision after November.

Morningstar Equity Research Methodology

Fundamental Analysis

At Morningstar, we believe buying shares of superior businesses at a discount and allowing them to compound over time is the surest way to create wealth in the stock market. The long-term fundamentals of businesses, such as cash flow, competition, economic cycles, and stewardship, are our primary focus. Occasionally, this approach causes our recommendations to appear out of step with the market, but willingness to be contrarian is an important source of outperformance and a benefit of Morningstar's independence. Our analysts conduct primary research to inform our views on each firm's moat, fair value and uncertainty.

Economic Moat

The economic moat concept is a cornerstone of Morningstar's investment philosophy and is used to distinguish high-quality companies with sustainable competitive advantages. An economic moat is a structural feature that allows a firm to sustain excess returns over a long period of time. Without a moat, a company's profits are more susceptible to competition. Companies with narrow moats are likely to achieve normalized excess returns beyond 10 years while wide-moat companies are likely to sustain excess returns beyond 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe lower-quality no-moat companies will see their returns gravitate toward the firm's cost of capital more quickly than companies with moats will. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

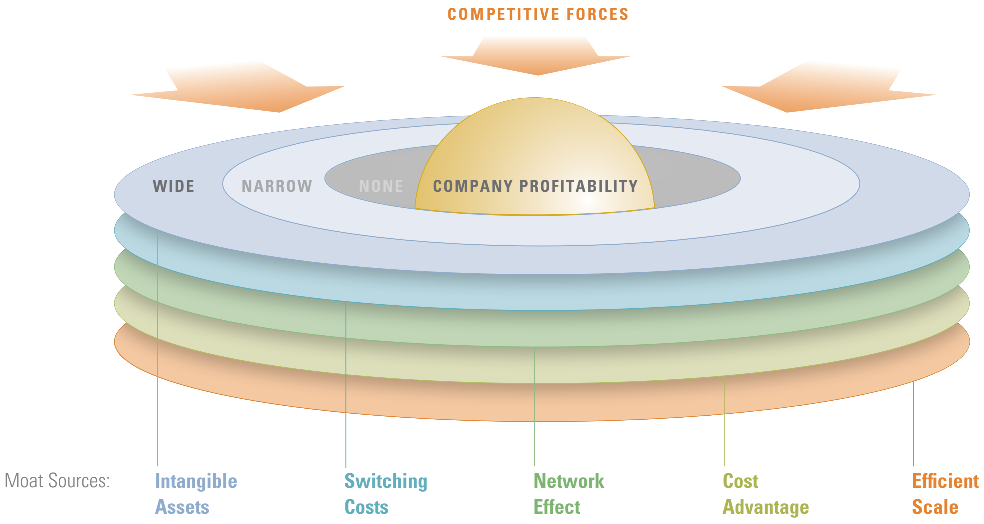
Fair Value Estimate

Our analyst-driven fair value estimate is based primarily on Morningstar's proprietary three-stage discounted cash flow model. We also use a variety of supplementary fundamental methods to triangulate a company's worth, such as sum-of-the-parts, multiples, and yields, among others. We're looking well beyond next quarter to determine the cash-generating ability of a company's assets because we believe the market price of a security will migrate toward the firm's intrinsic value over time. Economic moats are not only an important sorting mechanism for quality in our framework, but the designation also directly contributes to our estimate of a company's intrinsic value through sustained excess returns on invested capital.

Uncertainty Rating

The Morningstar Uncertainty Rating demonstrates our assessment of a firm's cash flow predictability, or valuation risk. From this rating, we determine appropriate margins of safety: The higher the uncertainty, the wider the margin of safety around our fair value estimate before our recommendations are triggered. Our uncertainty ratings are low, medium, high, very high, and extreme. With each uncertainty rating is a corresponding set of price/fair value ratios that drive our recommendations: Lower price/fair value ratios (<1.0) lead to positive recommendations, while higher price/fair value

Economic Moat



Morningstar Equity Research Methodology

ratios (>1.0) lead to negative recommendations. In very rare cases, the fair value estimate for a firm is so unpredictable that a margin of safety cannot be properly estimated. For these firms, we use a rating of extreme. Very high and extreme uncertainty companies tend to have higher risk and volatility.

Quantitatively Driven Valuations

To complement our analysts' work, we produce Quantitative Ratings for a much larger universe of companies. These ratings are generated by statistical models that are meant to divine the relationships between Morningstar's analyst-driven ratings and key financial data points. Consequently, our quantitative ratings are directly analogous to our analyst-driven ratings.

Quantitative Fair Value Estimate (QFVE): The QFVE is analogous to Morningstar's fair value estimate for stocks. It represents the per-share value of the equity of a company. The QFVE is displayed in the same currency as the company's last close price.

Valuation: The valuation is based on the ratio of a company's quantitative fair value estimate to its last close price.

Quantitative Uncertainty: This rating describes our level of uncertainty about the accuracy of our quantitative fair value estimate. In this way it is analogous to Morningstar's fair value uncertainty ratings.

Quantitative Economic Moat: The quantitative moat rating is analogous to Morningstar's analyst-driven economic moat rating in that both are meant to describe the strength of a firm's competitive position.

Understanding Differences Between Analyst and Quantitative Valuations

If our analyst-driven ratings did not sometimes differ from our quantitative ratings, there would be little value in producing both. Differences occur because our quantitative ratings are essentially a highly sophisticated analysis of the analyst-driven ratings of comparable companies. If a company is unique and has few comparable companies, the quantitative model will have more trouble assigning correct ratings, while an analyst will have an easier time recognizing the true characteristics of the company. On the other hand, the quantitative models incorporate new data efficiently and consistently. Empirically, we find quantitative ratings and analyst-driven ratings to be equally powerful predictors of future performance. When the analyst-driven rating and the quantitative rating agree, we find the ratings to be much more predictive than when they differ. In this way, they provide an excellent second opinion for each other. When the ratings differ, it may be wise to follow the analyst's rating for a truly unique company with its own special situation, and follow the quantitative rating when a company has several reasonable comparable companies and relevant information is flowing at a rapid pace.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

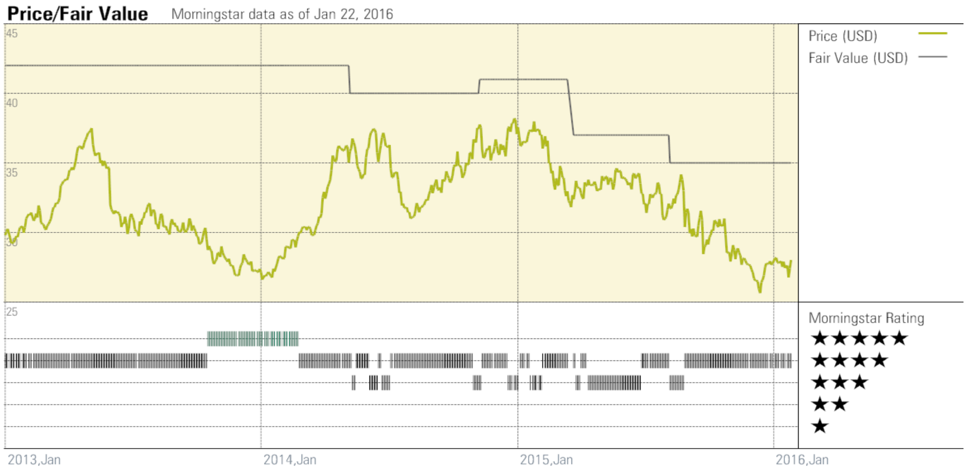
Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.



- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

-Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures.

Supreme Court upholds FERC authority over Demand Response compensation

This morning the Supreme Court issued a split decision (6-2) upholding FERC Order 745 and reversing the US Court of Appeals for the District of Columbia 2014 order. Today's decision upholds the FERC's ability to regulate the compensation of demand response in wholesale energy markets. The lower court had argued that the FERC had overstepped its jurisdictional boundaries because Order 745 directly regulated the retail electricity market (state's jurisdiction). The majority disagreed, concluding that Order 745 affects wholesale electricity rates and that the FERC had not regulated retail sales.

Decision can be read as modest negative for merchant generators

We view today's Supreme Court decision as a modest negative (foregone positive) for merchant generators as a vacated Order 745 could have had positive implications for pricing in the next PJM capacity auction (May 2016). Demand response has represented 7-9% of cleared resources in the last two PJM capacity market auctions. While Order 745 never directly concerned the compensation of DR in capacity markets, it certainly raised questions over the legality of FERC's jurisdiction over demand response in general. Today's decision ensures that demand response can continue participating as currently conceived in capacity markets, such as PJM's.

Implications for Supreme Court's review of state intervention cases?
