Management 06 Dec 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth 14 Nov 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV

demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Our fundamental U.S. electricity demand forecast is detailed in the Utilities Observer we published in May, "U.S. Electricity Demand Outlook: Energy Efficiency Is No Death Knell." Our fundamental EV forecast is detailed in the Electric Vehicles Observer published Nov. 14.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities 09 Nov 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns 08 Nov 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases,

Exelon Corp EXC (NYSE) | ★★

Last Price	**Fair Value**	**Uncertainty**	**Economic Moat™**	**Moat Trend™**	**Stewardship**	**Industry Group**
35.73 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Regulated Utilities Continue Driving Growth for Exelon

26 Oct 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

09 Aug 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast

35.73 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

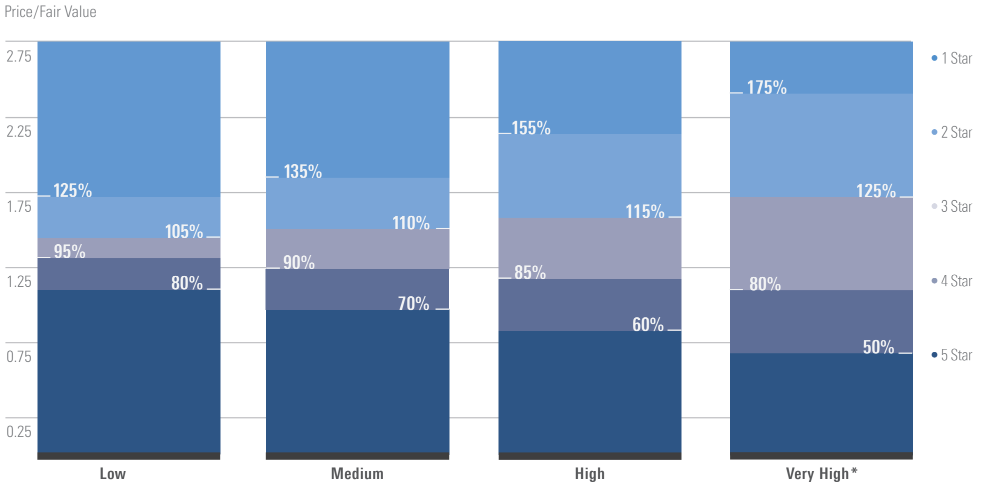
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Investment Thesis 14 Nov 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels could be a boon for Exelon if nuclear receives clean energy incentives like those for wind and solar, although we think this is unlikely.

Exelon's world-class operating efficiency preserves that upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. Even though we think there is long-term value in these plants, we expect Exelon will have to rationalize its fleet in the coming years to preserve cash. This reduces Exelon's upside.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth 14 Nov 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Our fundamental U.S. electricity demand forecast is detailed in the Utilities Observer we published in May, "U.S. Electricity Demand Outlook: Energy Efficiency Is No Death Knell." Our fundamental EV forecast is detailed in the Electric Vehicles Observer published Nov. 14.

Valuation, Growth and Profitability 14 Nov 2016

We are raising our fair value estimate to $31 from $30 after incorporating time-value appreciation since our last update offset by 2017-19 hedged gross margin at the generation business as of September 30 that was below our previous estimates.

On a consolidated basis, our midcycle earnings estimate is $3.00 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.4 billion, about 10% higher than trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our forecasts assume Exelon retires as many as five nuclear plants by 2020. These include the three announced retirements--Quad Cities, Illinois; Clinton, Illinois; and Oyster Creek, New Jersey--as well as Three Mile Island, Pennsylvania, and Byron, Illinois. Three Mile Island did not

Exelon Corp EXC (NYSE) | ★★★

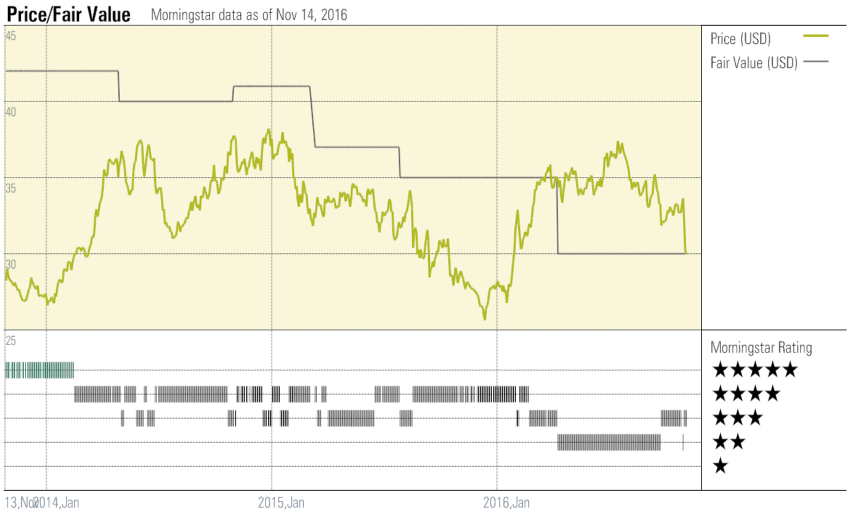
Price/Fair Value Morningstar data as of Nov 14, 2016



clear the last two PJM capacity auctions and Byron only partially cleared the 2019-20 PJM capacity auction.

Our projected closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $650 million change in EBITDA. Our fair value estimate would change by $5 per share. On a mark-to-market basis as of mid-November, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 4 percentage points to near the industry average, it would change our fair value estimate by $1 per share. If Exelon does not retire the Clinton, Quad Cities, and Three Mile Island plants, it would add $2 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. About 70% of the $11 billion of rate base growth in 2016-20 will have rate trackers or formula rates, minimizing regulatory lag. Exelon faces the biggest challenge boosting Pepco's earned returns some 400 basis points to approach its allowed returns. Rate cases in 2016-17 should give it a good start.

In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're

Morningstar Analysis

watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.

- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.

- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.

- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.

- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets as it tries to smooth cash flow at its generation unit. As power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.We see no immediate credit concerns based on current energy market conditions. We project Exelon's consolidated EBITDA/interest coverage will remain above 5 times and leverage will remain below 5 times debt/EBITDA at least through 2019. Even those these ratios are weaker following the Pepco acquisition, we think this is acceptable given the higher share of regulated earnings.Only about one-quarter of Exelon's consolidated debt is directly tied to its generation segment. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing its near-term maturities. Management has committed to reducing Exelon Generation debt by $3 billion during the next five years and use the remaining cash to fund the regulated utilities' growth.We also think management can meet its 2.5% dividend growth goal through 2018 with relative ease. However, this is rather unimpressive compared with most of its peers that we think can grow their dividends at least twice as fast.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm might have to make modest cash contributions. Plant closures also could increase cash decommission costs.

Enterprise Risk

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's

largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management 14 Nov 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. Management already has announced its intention to close at least three of its plants in the coming years. We expect several more are at risk without significant public policy support or improved market conditions.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth 14 Nov 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Our fundamental U.S. electricity demand forecast is detailed in the Utilities Observer we published in May, "U.S. Electricity Demand Outlook: Energy Efficiency Is No Death Knell." Our fundamental EV forecast is detailed in the Electric Vehicles Observer published Nov. 14.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities 09 Nov 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns 08 Nov 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Regulated Utilities Continue Driving Growth for Exelon 26 Oct 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its

Analyst Notes

plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet 09 Aug 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real 02 Jun 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close

Exelon Corp EXC (NYSE) | ★★★

30.77 USD	31.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

ComEd zone cleared at $202.77/MW-day for CP and $182.77/MW-day for base, slightly below the strong 2018-19 results. Base capacity cleared in the Eastern Mid-Atlantic Area Council, or EMAAC, LDC cleared at CP clearing at $119.77/MW-day for CP and $99.77/MW-day for base generation, but well below last year's $210/MW-day for base

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Rating™ For Stocks
★★★★★

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

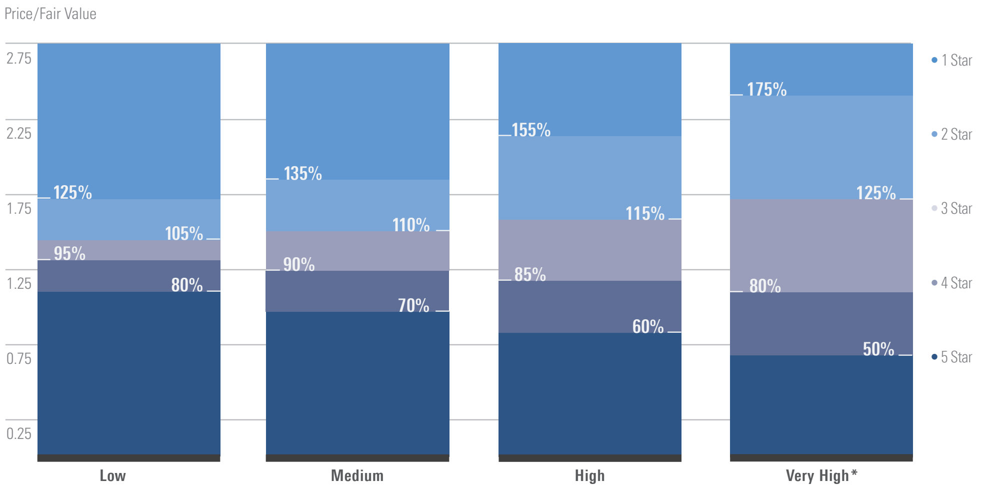
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar. The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Morningstar commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

Morningstar believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources which we believe to be reliable such as, for example, the company’s financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seek independent verification of any of the data, statistics, and information it receives.

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Inc., a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, Morningstar makes no representation that the report contents meet all of the presentation and/or

disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar and its officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. Morningstar encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, or Morningstar affiliates guarantee the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions (“Territories”) by independent third parties or independent intermediaries and/or distributors (“Distributors”). Such Distributors are not acting as agents or representatives of the analyst or Morningstar. In Territories where a Distributor distributes our report, the Distributor, and not the analyst or Morningstar, is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

• No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

• Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

• Morningstar does not receive commissions for providing research and does not charge companies to be rated.

• Morningstar is not a market maker or a liquidity provider of the security noted within this report.

• Morningstar has not been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

• Morningstar affiliates (i.e., its investment management group) have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion

prepared by them.

- Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm-?doctype=Proxy&year=&x=12

- Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which Morningstar currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities we have covered, including their fair value estimate, please contact your local office.

For Recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products. To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at http://www.morningstar.com.au/fsg.pdf .

For Recipients in Hong Kong: The Report is distributed by Morningstar Investment Management Asia Limited, which is regulated by the Hong Kong Securities and Futures Commission to provide services to professional investors only. Neither Morningstar Investment Management Asia Limited, nor its representatives, are acting or will be deemed to be acting as an investment advisor to any recipients of this information unless expressly agreed to by Morningstar Investment Management Asia Limited. Contents

Analyst Note 09 Aug 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

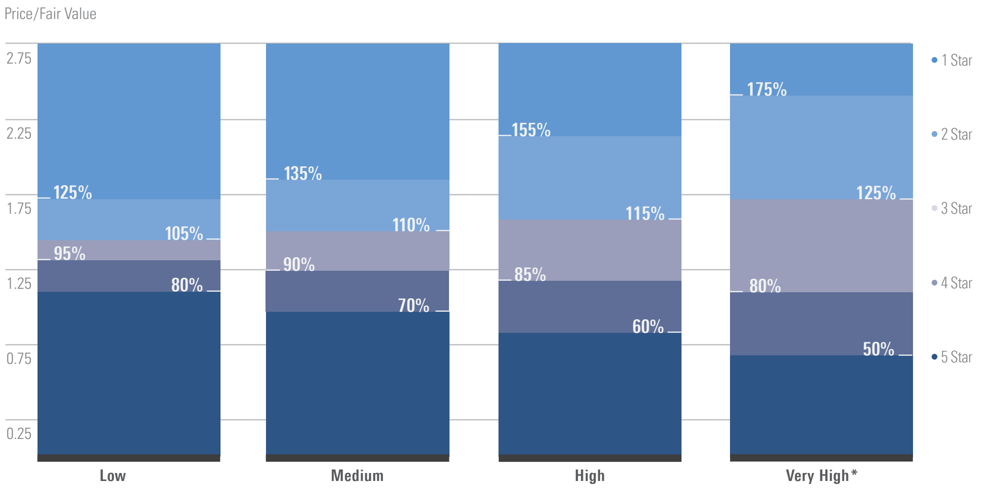
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Contents

Analyst Note 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Pennsylvania closes in 2018 absent state support.

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

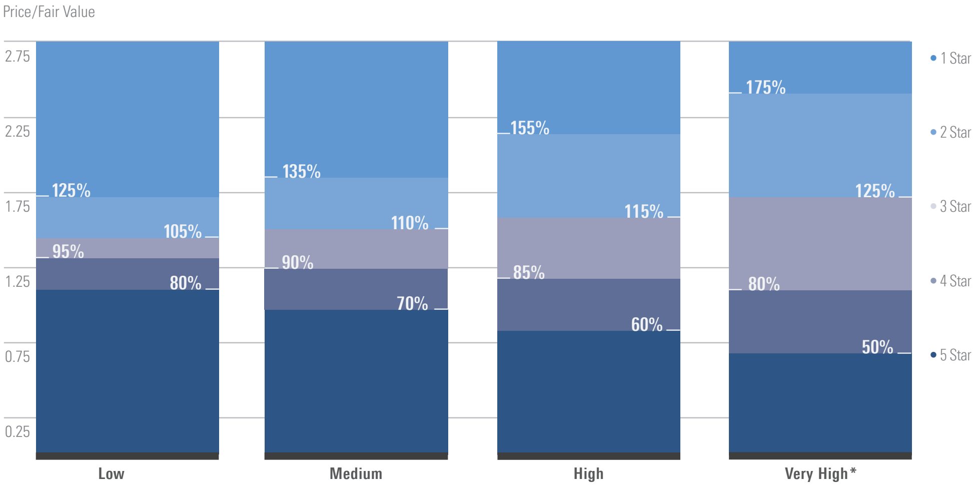
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

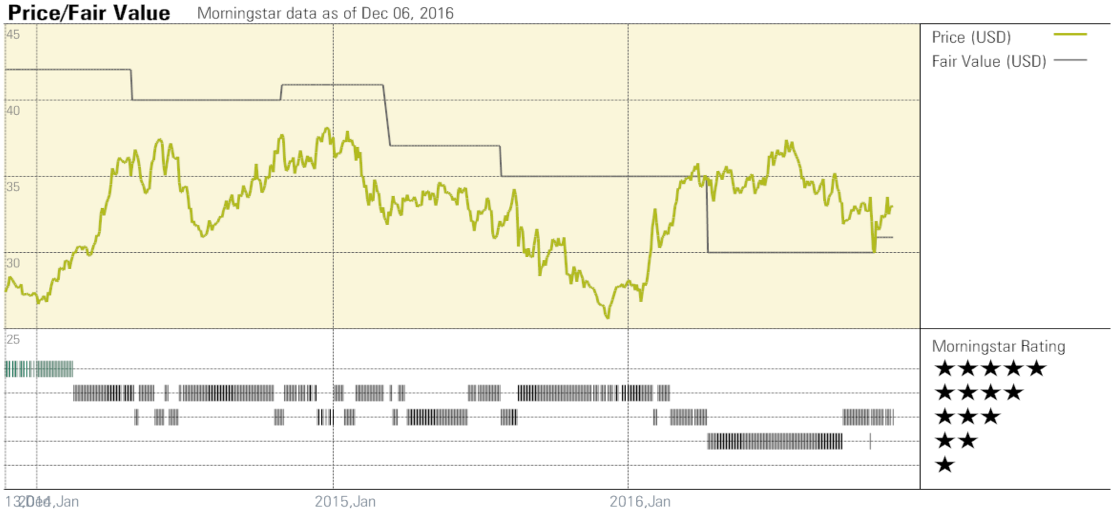
Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.



General Disclosure
The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar. The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Morningstar commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

Morningstar believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources which we believe to be reliable such as, for example, the company’s financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seek independent verification of any of the data, statistics, and information it receives.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, Morningstar makes no representation that the report contents meet all of the presentation and/or

disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar and its officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. Morningstar encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, or Morningstar affiliates guarantee the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst or Morningstar. In Territories where a Distributor distributes our report, the Distributor, and not the analyst or Morningstar, is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

• No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

• Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

• Morningstar does not receive commissions for providing research and does not charge companies to be rated.

• Morningstar is not a market maker or a liquidity provider of the security noted within this report.

• Morningstar has not been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

• Morningstar affiliates (i.e., its investment management group) have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion

prepared by them.

- Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

- Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which Morningstar currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities we have covered, including their fair value estimate, please contact your local office.

For Recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products. To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at http://www.morningstar.com.au/fsg.pdf .

For Recipients in Hong Kong: The Report is distributed by Morningstar Investment Management Asia Limited, which is regulated by the Hong Kong Securities and Futures Commission to provide services to professional investors only. Neither Morningstar Investment Management Asia Limited, nor its representatives, are acting or will be deemed to be acting as an investment advisor to any recipients of this information unless expressly agreed to by Morningstar Investment Management Asia Limited. Analyst Note 08 Nov 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

New York.

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

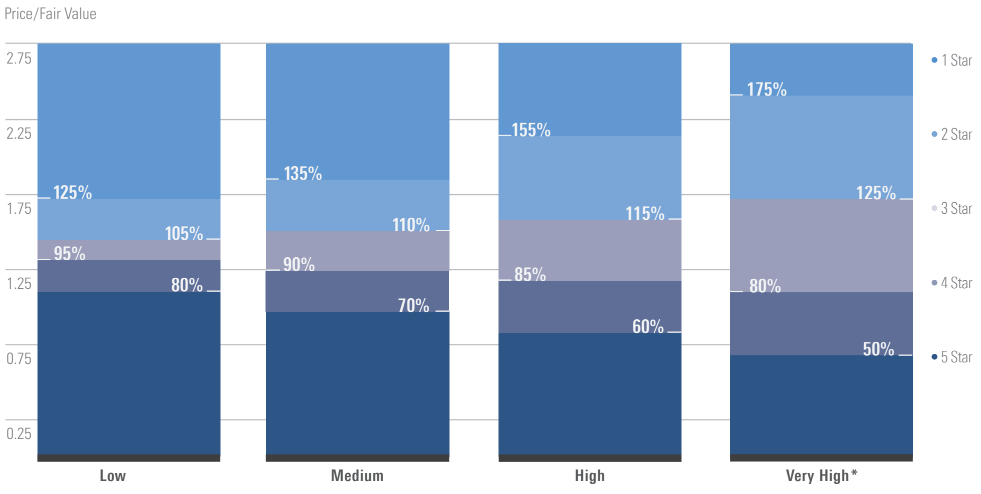
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar. The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Morningstar commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

Morningstar believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources which we believe to be reliable such as, for example, the company’s financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seek independent verification of any of the data, statistics, and information it receives.

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Inc., a U.S.A. domiciled financial institution.

Contents

Analyst Note 26 Oct 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

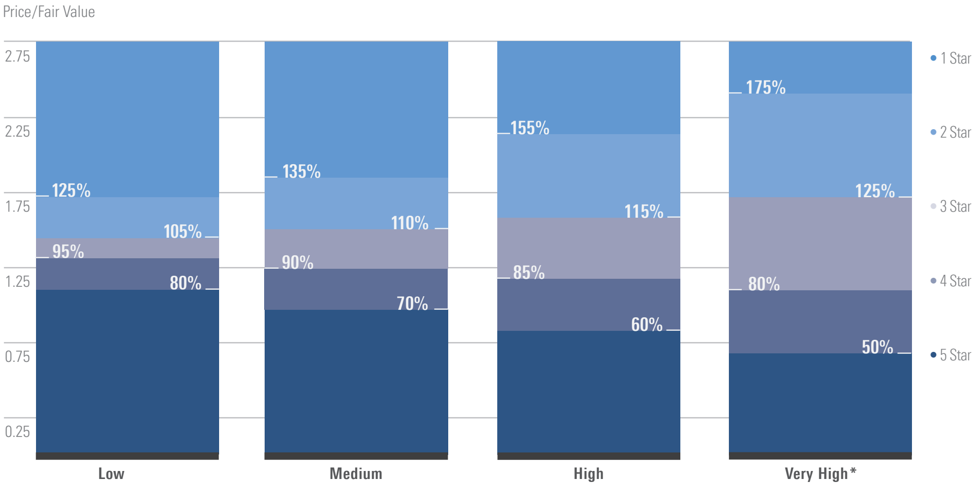
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

COMPANY UPDATE
August 2, 2016

Exelon Corporation (EXC)

SUNTRUST ROBINSON HUMPHREY

New York PSC Vote Has Positive Implications

What's Incremental To Our View

We estimate that the plan approved by the New York PSC yesterday could represent $0.09-$0.12 of incremental earnings per share for EXC in 2017-18.

IMPORTANT POINTS

- Yesterday the New York PSC voted to approve the Clean Energy Standard (CES) plan for the state. Specifically, the plan implies an additional payment (initially set at $17.48/mwh) for EXC's nuclear capacity in New York (1126mw). We expect rates to be in effect from 4/1/17 through 3/31/29.

- We view this development favorably, and make the following observations: (1) we estimate that this plan would represent $0.09 of incremental earnings for EXC in 2017 and $0.12 in 2018 (based on the company's existing nuclear ownership in the state); (2) it increases the probability of EXC buying the 838mw Fitzpatrick nuclear plant in New York; and (3) we would make any required changes to our estimates once we get an update on EXC's latest hedge positions (expected at the company's investor day on 8/10/16).

- Our incremental earnings calculations are based on the following key assumptions: (1) 9.7m mwh of annual output; (2) price of $17.48/mwh; (3) a 33%-34% tax rate; and (4) share count of 947 million shares in 2017 and 965 million shares in 2018.

- EXC appears attractively priced at a 6% P/E multiple discount to the peer group (based on our 2018 estimate). Assuming a 14.7x P/E on our 2018 estimate of $2.71 (in line with the peer group), we derive our price target of $40. We reiterate our **Buy** rating.

- We have included our latest 2016-18 earnings and cash flow models in this report.

Note

1) Our PECO Implied Margin ratios factor in the impact of Gas sales.

2) Rate Base - Com Ed: $10.8bn in 2015, $11.8bn in 2016E, $12.8bn in 2017E, $13.6bn in 2018E; PECO: $6.0bn in 2015, $6.5bn in 2016E, $6.9bn in 2017E, $7.3bn in 2018E; BGE: $5.0bn in 2015, $5.3bn in 2016E, $5.9bn in 2017E, $6.4bn in 2018E; PEPCO: $8.8bn in 2016E and $9.7bn in 2017E, $10.2bn in 2018E.

3) Earned ROE - Com Ed: 8.0% in 2015, 8.3% in 2016, 8.2% in 2017, 8.3% in 2018; PECO: 11.7% in 2015, 11.5% in 2016, 11.3% in 2017, 11.2% in 2018; BGE: 10.7% in 2015, 10.2% in 2016, 10.5% in 2017, 10.2% in 2018; PEPCO: 5.5% in 2016, 5.5% in 2017, 6.5% in 2018.

4) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

5) We assume EXC achieves its growth targets for Power and Non Power new business for 2016 onwards.

6) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

7) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

8) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

9) Forward curves as of 5/5/16.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity.

Valuation and Risks

VALUATION

Assuming a P/E multiple of 14.7x our 2018 estimate of $2.71 (in line with the peer group), we derive our price target of $40.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending regulatory issues

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. NYPSC Approved Modified ZEC Program for Upstate Nukes

EXC shares are up 35% YTD but we still think they are cheap.

One of the three catalysts we were counting on just happened!

1.The NY Public Service Commission just approved a zero emissions credit (ZEC) program in NY by the Public Service Commission for upstate nuke plants. EXC owns 2 of the 3: Nine Mile Point and Ginna.

a. This could add 10 cents to EPS in FY ’18 for EXC that is NOT in consensus expectations.

1. There are several modifications to the proposal. The most important is a potential ratcheting down of the rate paid for carbon attributes (mostly in the back portion of the 12 year plan) as renewable energy penetration increases in NY state. It could result in the value for carbon leveling off or declining, rather than increase from $17.50 to $29 over the 12 year period as estimated in the initial proposal.

1. The potential acquisition of the third plant—Fitzpatrick—from ETR. The sale will now likely happen because the ZEC deal is done. ETR has been exiting merchant power and has said they would shut the unit.
   a. This could add 5 cents to EPS in FY ’18 for EXC that is not in consensus.

2. EXC’s analyst day on August 10th

1. **Valuation: Our EPS forecast is $2.60 / $2.65 / $2.75 share for ’16-’18 BEFORE the above mentioned potential deals in NY. The stock is at 13.6X ’18 EPS and a 3.4% yield.**
   a. The utility is $1.70 of ’18 EPS. At the peer average multiple today of 18X that is worth $30/share.
   b. So you are paying $6.5/share for the merchant power biz (ExGen), which is 7X ’18 EPS, 5.5X ’18 EV/EBITDA and a FCF/EV for ExGen of 12%. All that cash is being used to fund the utility’s growth, the dividend (growing 2.5% a year) and debt paydown.
   c. Our $40 target assumes just 1 turn on EBITDA to 6.4X for the Genco on our base case estimates (no deal in NY). That would put the valuation at 14.5X FY ’18 EPS and a dividend yield of 3.2%.
   d. Our numbers DO NOT include $0.15 of potential EPS accretion in FY ’18 from the NY ZEC deal / buying Fitzpatrick. Both together add $1.50 a share to value using the most conservative valuation approach (putting 12% FCF yield on the CF uplift).
   e. Our numbers DO NOT include the impact of the company closing two nukes in IL and the run rate cash flow savings is $120mm fully loading by ’19. This would add another $1/share to value.
   f. Our numbers DO NOT include the upside if Stephen Richardson’s nat gas price forecast of $3.25/mmbtu in FY ’18 is correct. That is also over $1/share accretive to value.
   g. So, you have insulation from P/E multiple contraction on the utility side of the equation and can still get to our $40 target if utilities—which are at punchy valuations—decline. We think this is a great long idea and at a bare minimum a definitive relative long vs. the index. PSEG (PEG) is the best individual pair.

1. **The ZEC deal will start adding revenue in April ’17 and have a 12 year term.** The subsidy starts at around $17.5/mwh and goes up over the life of the deal with a revenue cap.
   a. The deal would add a little over $0.10/share and +/-$110 to cash flow at NMP and Ginna

1. **ETR has announced they will either sell Fitzpatrick or shut it down next year. EXC is in negotiations to buy but will only do so if the ZEC deal is approved by the State first.** Probably won’t be done by analyst day.
   a. We did a DCF and come up with a $450mm purchase price and a little over $0.05 of EPS accretion

1. **Shut down of Clinton and Quad Cities nukes in IL is $120mm accretive to cash flow, fully loaded in FY ’19. Clinton shuts mid ’17 and Quad mid ’18**
    a. This is a known. Not new. But our value added is we have done the work to show how you get to the numbers.
    b. The company had said $140mm of savings on a run rate using end of February forward curves. We see $120mm using current curves.
    c. The savings is from capital. It looks like a push on EPS impact.
    d. If the IL government follows suit and gives them a subsidy the uplift could be double the $120mm. We don’t expect it.

1. **Analyst Day is August 10th in Philly.**
    a. We think the analyst day will be positive. They will have the ZEC deal in hand. Probably won’t have Fitzpatrick done.
    b. We expect a more detailed review of what we heard from EXC management in early June when we hosted investor meetings was a continued commitment to invest in and grow rate base/earnings power at their four utility platforms, grow the dividend 2.5% per year at least through 2018, and use cash flow in excess of what is needed for those to activities to de-lever (that amount articulated at the time by EXC at +/-$2.9bn through 2020).
    c. This plan is fully supported by the robust cash flow profile at Exelon Generation without the need for equity. With ExGen projected at <3X debt/EBITDA that deleveraging could (and should) be done at the parent level. EXC’s forecast for utility EPS contribution minus parent overheads this year is $1.30/share which by 2017 we expect to be $1.55-$1.60 per share. With EXC aspiring to grow rate base to +/-$40bn by 2020 that earnings power (utility EPS minus parent) could theoretically grow to $1.85. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth $30/share in our view. As we said above.
    d. They will continue to commit to zero growth capital to ExGen unless the assets are contracted and are accretive to EPS and cash flow.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of regulation to bolster the revenue stream of the NY nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in NY to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Buy, Hold or Sell) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%

Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Evercore ISI ratings distribution (as of 08/01/2016)

NYPSC Approves Nuclear Subsidy

This afternoon, the New York Public Service Commission (NY PSC) voted in favor of the Clean Energy Standard (CES), along with a zero emissions credit (ZEC) provision designed to subsidize upstate nuclear power plants (Ginna and Nine Mile Point owned by Exelon and FitzPatrick owned by Entergy). The plan also calls for a 40% reduction in carbon emissions and an increase in RPS to 50% by 2030.

The proposed nuclear subsidies are capped at $17.48/MWh for the first two years and can only be received by plants located in markets with depressed electricity prices (downstate nuclear plant Indian Point does not qualify).

Entergy had earlier announced its intention to close FitzPatrick, but subsequently, Exelon indicated that should the subsidies be approved, it would be interested in acquiring FitzPatrick. Discussions regarding the potential sale of FitzPatrick to Exelon are ongoing.

Our View:

- We regard the commission’s decision as favorable for Exelon (EXC, $37.46, Market Perform) and Entergy (ETR, $81.27, Market Perform).
- We believe Entergy will still likely sell FitzPatrick as it continues to derisk and focus on its utility operations. We expect additional details on Entergy’s 2Q16 earnings call tomorrow.
- It is possible New York’s action could have a positive read-through to other states (particularly Illinois) where Exelon is facing the early shutdown of certain nuclear plants due to weak market prices adopt similar plans.
- In addition, the RPS should result in incremental investment opportunities for renewable generation developers, such as NextEra Energy (NEE, $128.50, Outperform), Southern Company (SO, $53.65, Market Perform) and Con Edison (ED, $80.46, Market Perform), among others.

Please refer to pages 2 to 6 for Important Disclosures, including the Analyst's Certification.

IMPORTANT DISCLOSURES

Analyst's Certification

I, Michael S. Worms, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA (exception: Brodie Woods). These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 and 2242 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company specific disclosures for Exelon

Disclosure 10: A research analyst, associate, or any person (or their household members) directly involved in the preparation of this research report has a financial interest in securities of this issuer.

Methodology and Risks to Our Price Target

Methodology: Our valuation is based on a combination of our 2017 adjusted EBITDA estimate with an 8x EV/EBITDA multiple and 16x 2017E P/E multiple.

Risks: A material decline in power prices and / or a change in the regulatory environment could affect our price target.

Company specific disclosures for Entergy

Methodology and Risks to Our Price Target

Methodology: Our valuation is based on a 14.3x 2016E P/E multiple

Risks: A material decline in power prices and / or a change in the regulatory environment could affect our price target.

Company specific disclosures for NextEra Energy

Disclosure 1: BMO Capital Markets has undertaken an underwriting liability with respect to this issuer within the past 12 months.
Disclosure 2: BMO Capital Markets has provided investment banking services with respect to this issuer within the past 12 months.
Disclosure 3: BMO Capital Markets has managed or co-managed a public offering of securities with respect to this issuer within the past 12 months.
Disclosure 4: BMO Capital Markets or an affiliate has received compensation for investment banking services from this issuer within the past 12 months.
Disclosure 6: This issuer is a client (or was a client) of BMO NB, BMO Capital Markets Corp., BMO CM Ltd. or an affiliate within the past 12 months: Investment Banking Services.
Disclosure 10: A research analyst, associate, or any person (or their household members) directly involved in the preparation of this research report has a financial interest in securities of this issuer.

Methodology and Risks to Our Price Target

Methodology: Our valuation is based on a combination of our 2016 adjusted EBITDA estimate with a 10x EV/EBITDA multiple and 16x 2016E P/E multiple.

Risks: A material decline in power prices and / or a change in the regulatory environment could affect our price target.

Company specific disclosures for Southern Company

Disclosure 9: BMO Capital Markets makes a market in this security.

Methodology and Risks to Our Price Target
Methodology: Our valuation is based on a 16.2x 2016E P/E multiple
Risks: A change in the regulatory environment and weaker economic conditions could affect our price target.

Company specific disclosures for Consolidated Edison
Methodology and Risks to Our Price Target
Methodology: Our valuation is based on a 15.9x 2016E P/E multiple
Risks: A change in the regulatory environment and weaker economic conditions could affect our price target.

However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters
To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

Unauthorized reproduction, distribution, transmission or publication without the prior written consent of BMO Capital Markets is strictly prohibited.

QUICK THOUGHTS
December 1, 2016

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

Passage Of Illinois Energy Bill Should Be Earnings Accretive

Buy

Price: $32.51

- We expect final clarity today on whether the Illinois legislature will pass the Energy Bill in the state. Late yesterday afternoon, EXC announced an agreement with the state Governor on the Bill, which (in our opinion) appears to have increased the probability of passage.

- Based on our preliminary analysis, we estimate that the passage of the Bill would cause a net addition of $0.07-$0.11 to annual earnings (which is not in our current estimates). We note that our current 2018 estimate is already $0.07 above consensus.

- We reiterate our **Buy** recommendation.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website:
https://suntrustlibrary.bluematrix.com/client/library.jsp
please email the Research Department at STRHEquityResearchDepartment@SunTrust.com
or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = drop coverage
CS = Coverage Suspended
I = initiate coverage
T = transfer coverage

The prior rating system until Oct. 7, 2016:
3 designations based on total returns* within a 12-month period**
· **Buy** – total return ≥ 15% (10% for low-Beta securities)***
· **Reduce** – total return ≤ negative 10% (5% for low Beta securities)
· **Neutral** – total return is within the bounds above
· **NR** – NOT RATED, STRH does not provide equity research coverage
· **CS** – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 12/01/2016):

Coverage Universe			Investment Banking Clients Past 12 Months		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	363	57.62%	Buy	90	24.79%
Hold/Neutral	266	42.22%	Hold/Neutral	46	17.29%
Sell/Reduce	1	0.16%	Sell/Reduce	0	0.00%

Exelon

EXC-NYSE	Rating	Price: Oct-25	Target ↓	Total Rtn
	Market Perform	$32.90	$35.00	10%

Power Prices Weigh on 2017-2018 Outlook; Lowering Estimates/PT

Bottom Line: Largely reflecting favorable weather, as well as improved margins at Constellation, Exelon reported 3Q16 EPS of $0.91 versus $0.83 in 3Q15 and well above guidance of $0.65-$0.75 (consensus $0.76). As a result of the strong YTD results, Exelon increased its FY2016 EPS guidance to $2.55-$2.75 from $2.40-$2.70. We are raising our 2016 EPS estimate accordingly to $2.69. With ExGen gross margins under continued pressure and despite cost-cutting efforts, we are lowering our 2017 and 2018 EPS estimates to $2.58 and $2.68, respectively.

Key Points

Results for 3Q16 exceeded expectations due to favorable weather (hot summer and fewer storms, ~+$0.08) and improved results at Constellation (higher volumes and lower cost to serve). Other earnings drivers included rate relief partially offset by higher taxes and lower capacity prices at ExGen. Reflecting strong YTD results ($2.24 vs. $2.13), we are raising our 2016 EPS estimate to $2.69.

We are cutting our 2017-2018 EPS estimates as weak power prices continue to weigh on ExGen's outlook. ExGen's gross margin outlook for 2017/2018 was lowered by $100 million/$250 million, respectively, since June 30, 2016, offset in part by increased cost-cutting efforts.

Should New York's Zero Emissions Credits (ZECs) be implemented as currently planned, ExGen's gross margins could rise by $100 million/$150 million in 2017/2018, respectively. In addition, should the acquisition of the FitzPatrick nuclear plant (from Entergy) be completed in 2Q17, incremental gross margin is projected at $200 million/ $250 million in 2017/2018, respectively. While a lawsuit has been filed against the ZEC program, Exelon indicated the suit did not request a stay or expedited treatment.

Exelon believes there is the potential for legislation supporting nuclear subsidies in Illinois to be passed in the November/December veto session. In the absence of such legislation, Exelon will retire the Clinton and Quad Cities nuclear plants as planned.

In light of our earnings revisions, we are lowering our price target to $35 based on our SOTP valuation.

Our Thesis

We believe EXC will continue to face headwinds at its competitive nuclear generation business stemming from continued weak power and natural gas prices, rising O&M costs, and challenges from renewable generation. Growth at its regulated business could somewhat mitigate the pressures at the competitive business.

New Scenarios

Valuation

We find EXC shares fairly valued in the current market and see few near-term catalysts that would propel earnings or the stock at this time. Power price fundamentals remain weak and are likely to remain so for some time. Therefore, we expect Exelon to trade in a relatively narrow range, recognizing that downside risk is limited, in our opinion, unless power prices further deteriorate.

Upside Scenario $38.00

In a declining interest rate environment, we could see P/E multiples expand by approximately 5% to 16.8x. This, together with a rising power and natural gas price environment, which could lead to EV/EBITDA multiple expansion by 5% to 8.4x, would equate to a price target of $38.

Downside Scenario $30.00

In a rapidly rising interest rate environment, we could see P/E multiples contract by approximately 10% to 14.4x. This, together with a declining power and natural gas price environment, which could lead to EV/EBITDA multiple contraction by 10% to 7.2x, would equate to a price target of $30.

Company Description

Exelon is the largest competitive U.S. power generator, with ~32,700 MW of owned capacity. Its Constellation business unit provides energy products and services to business, public, and residential sector customers. Exelon's utilities deliver electricity and natural gas to 10 million customers in Delaware, DC, Illinois, Maryland, New Jersey, and Pennsylvania.

IMPORTANT DISCLOSURES

Analyst's Certification

I, Michael S. Worms, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA (exception: Brodie Woods). These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosures

Disclosure 10: A research analyst, associate, or any person (or their household members) directly involved in the preparation of this research report has a financial interest in securities of Exelon.

Methodology and Risks to Price Target/Valuation for Exelon (EXC-NYSE)

Methodology: Our valuation is based on a combination of our 2017 adjusted EBITDA estimate with an 8x EV/EBITDA multiple and a 17x 2017E P/E multiple.

Risks: A material decline in power prices and / or a change in the regulatory environment

General Disclaimer

"BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale arm of Bank of Montreal and its subsidiaries BMO Nesbitt Burns Inc., BMO Capital Markets Limited in the U.K. and BMO Capital Markets Corp. in the U.S. BMO Nesbitt Burns Inc., BMO Capital Markets Limited and BMO Capital Markets Corp are affiliates. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian

regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the “Order”) or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as “relevant persons”). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

Unauthorized reproduction, distribution, transmission or publication without the prior written consent of BMO Capital Markets is strictly prohibited.

Ltd. and the institutional broker dealer businesses of BMO Capital Markets Corp. (Member SIPC) in the U.S., BMO Nesbitt Burns Inc. (Member Canadian Investor Protection Fund) in Canada, Europe and Asia, BMO Capital Markets Limited in Europe and Australia and BMO Advisors Private Limited in India.

COMPANY UPDATE
October 27, 2016

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

Raising 2016 Estimate But Trimming 2017-18 Estimates

What's Incremental To Our View

Based on updated assumptions, we have raised our 2016 estimate but trimmed our 2017-18 estimates. EXC still trades at a discount to the peer group. Factoring in our revised estimates we have trimmed our price target to $38 from $39.

IMPORTANT POINTS

- EXC reported 3Q results of $0.91 vs $0.83, well above our estimate of $0.81 and consensus of $0.79. The positive variance (vs our estimate) was primarily due to stronger than expected Utility results (reflecting favorable weather) and Retail marketing results (driven by higher volume and margins).

- Factoring in year to date results, latest forward commodity curves, updated hedge disclosures, and revised Utility growth assumptions, we make the following changes to our estimates: 2016 is increased to $2.65 from $2.55; 2017 is decreased to $2.57 from $2.65; and 2018 is decreased to $2.81 from $2.85. Our preliminary 2019 estimate is $2.74.

- We note that our estimates include contributions from the New York Zero Emission Credit (ZEC) program and the acquisition of the Fitzpatrick nuclear plant (838mw, $110 million price) from 2Q 2017 onwards. We expect all the relevant contracts to be signed in 4Q 2016, and all the approvals to be finalized in 1Q 2017. We will closely monitor the Federal court challenge filed against these contracts on 10/19/16, although we do not expect the challenge to prevail.

- Our estimates also assume the retirement of the Clinton (1069mw) and Quad City (1403mw) nuclear plants. However, there is still an opportunity later this year for the Illinois Legislature to provide regulatory support for these plants. Key dates are 11/15 – 11/17 and 11/29 – 12/1.

- EXC appears attractively priced at a 13% P/E multiple discount to the peer group (based on our 2018 estimate). Assuming a P/E multiple of 13.5x our 2018 estimate of $2.81 (in line with the peer group), we derive our price target of $38. We reiterate our **Buy** rating.

- We have included our revised 2016-18 earnings and cash flow models in this report.

Note

1) Our PECO Implied Margin ratios factor in the impact of Gas sales.

2) Rate Base - Com Ed: $10.6bn in 2015, $12.2bn in 2016E, $13.0bn in 2017E, $13.6bn in 2018E; PECO: $6.0bn in 2015, $6.3bn in 2016E, $6.9bn in 2017E, $7.3bn in 2018E; BGE: $5.0bn in 2015, $5.2bn in 2016E, $5.8bn in 2017E, $6.2bn in 2018E; PEPCO: $8.4bn in 2016E and $9.1bn in 2017E, $9.5bn in 2018E.

3) Earned ROE - Com Ed: 8.0% in 2015, 8.7% in 2016, 8.5% in 2017, 8.7% in 2018; PECO: 11.7% in 2015, 12.2% in 2016, 11.5% in 2017, 11.7% in 2018; BGE: 10.7% in 2015, 10.5% in 2016, 10.3% in 2017, 10.4% in 2018; PEPCO: 5.7% in 2016, 6.0% in 2017, 7.5% in 2018.

4) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

5) We assume EXC achieves its growth targets for Power and Non Power new business for 2016 onwards.

6) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

7) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

8) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

9) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw, nuclear $110m price) from Q2 2017.

10) We have factored the retirement of Clinton (1069mw) from 6/1/17 and Quad City (1403mw) from 6/1/18.

11) Forward curves as of 10/25/16.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a P/E multiple of 13.5x our 2018 estimate of $2.81 (in line with the peer group), we derive our price target of $38.

RISKS

- Outlook for forward power prices.

- Timing of upcoming EPA regulations.

- Outcome of pending and future rate cases.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website:
https://suntrustlibrary.bluematrix.com/client/library.jsp
please email the Research Department at STRHEquityResearchDepartment@SunTrust.com
or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision.

As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = drop coverage
CS = Coverage Suspended
I = initiate coverage
T = transfer coverage

The prior rating system until Oct. 7, 2016:
3 designations based on total returns* within a 12-month period**
- **Buy** – total return ≥ 15% (10% for low-Beta securities)***
- **Reduce** – total return ≤ negative 10% (5% for low Beta securities)
- **Neutral** – total return is within the bounds above
- **NR** – NOT RATED, STRH does not provide equity research coverage
- **CS** – Coverage Suspended

*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 10/27/2016):

COMPANY UPDATE
August 11, 2016

Exelon Corporation (EXC)

Raising Estimates And Price Target

What's Incremental To Our View

Factoring in updated assumptions, following EXC's investor day, we have raised our 2016-18 estimates. Based on our higher estimates, and latest peer valuations, we have raised our price target to $41 from $40.

IMPORTANT POINTS

Yesterday EXC hosted an investor day. Key takeaways:

- **We are raising our 2016-18 estimates.** Factoring in the announced retirement of two nuclear plants, the implications of the Zero Emission Credit (ZEC) program in New York, the acquisition of the Fitzpatrick (838mw, nuclear) plant, updated hedge disclosures, latest forward commodity curves, and higher return assumptions for the regulated utilities, we have increased our estimates as follows: 2016 to $2.55 from $2.51; 2017 to $2.65 from $2.63; and 2018 to $2.85 from $2.71. Our new 2018 estimate puts us $0.05 above consensus.

- **Our revised estimates could still prove conservative.** We see two areas of potential upside: (1) there is still a possibility that Illinois (like New York) may provide regulatory support for the two nuclear plants that EXC is retiring (we believe the point of no return for the retirement decision is mid December 2016); and (2) our 2017-18 estimates for Pepco still imply $0.11-$0.15 of regulatory lag, leaving further room for upside.

- **Completion of regulatory milestones should provide positive news flow in coming months.** We expect the following upcoming events: (1) completion of the power purchase agreement that locks in the New York ZEC program (expected in the next few weeks); and (2) completion of regulatory approvals for the Fitzpatrick plant acquisition (expected by 1Q 2017).

- **EXC appears attractively priced at a 14% P/E multiple discount to the peer group (based on our 2018 estimate).** Assuming a 14.5x P/E multiple on our 2018 estimate of $2.85 (in line with the peer group), we derive our price target of $41. We reiterate our **Buy** recommendation.

- We have included our revised 2016-18 earnings and cash flow models in this report.

Buy

Price Target: $41.00
Prior: $40.00

Δ Key Drivers

- *Latest forward commodity curves.*
- *Inclusion of New York ZEC program and Fitzpatrick plant acquisition.*
- *Higher return assumptions for the regulated utilities.*

Note

1) Our PECO Implied Margin ratios factor in the impact of Gas sales.

2) Rate Base - Com Ed: $10.6bn in 2015, $12.2bn in 2016E, $13.0bn in 2017E, $13.6bn in 2018E; PECO: $6.0bn in 2015, $6.3bn in 2016E, $6.9bn in 2017E, $7.3bn in 2018E; BGE: $5.0bn in 2015, $5.2bn in 2016E, $5.8bn in 2017E, $6.2bn in 2018E; PEPCO: $8.4bn in 2016E and $9.1bn in 2017E, $9.5bn in 2018E.

3) Earned ROE - Com Ed: 8.0% in 2015, 8.0% in 2016, 8.1% in 2017, 8.3% in 2018; PECO: 11.7% in 2015, 11.6% in 2016, 11.5% in 2017, 11.5% in 2018; BGE: 10.7% in 2015, 10.0% in 2016, 10.3% in 2017, 10.2% in 2018; PEPCO: 5.5% in 2016, 6.5% in 2017, 7.4% in 2018.

4) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

5) We assume EXC achieves its growth targets for Power and Non Power new business for 2016 onwards.

6) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

7) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

8) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

9) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw, nuclear $110m price) from Q2 2017.

10) We have factored the retirement of Clinton (1069mw) from 6/1/17 and Quad City (1403mw) from 6/1/18.

11) Forward curves as of 8/9/16.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a 14.5x P/E multiple on our 2018 estimate of $2.85 (in line with the peer group), we derive our price target of $41.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending regulatory issues

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Exelon Corporation (EXC)

Raising Estimates And Price Target To Reflect Illinois Energy Bill Passage

What's Incremental To Our View

Following the passage of the Illinois Energy Bill last night, we are raising our 2017-18 estimates. Based on our higher estimates, and latest peer valuations, we have raised our price target to $39 from $38.

IMPORTANT POINTS

- Late last night the Illinois Legislature passed its Energy Bill, which now goes to the Governor for final approval (which we expect he will sign). The bill goes into effect 6/1/17.

- Factoring in the impact of the bill on two of EXC's nuclear plants (Clinton and Quad City), coupled with the latest forward commodity curves, we have raised our 2017 estimate to $2.64 from $2.57, and our 2018 estimate to $2.92 from $2.81. Our preliminary 2019 estimate is $2.80 - $2.85. Our revised 2017-18 estimates put us well above consensus.

- EXC appears attractively priced at an 18% P/E multiple discount to the peer group (based on our 2018 estimate). Assuming a 13.5x P/E multiple (in line with the peer group) on our 2018 estimate of $2.92, we derive our price target of $39. We reiterate our **Buy** rating.

- We have included our latest 2016-18 earnings and cash flow models in this report.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a 13.5x P/E multiple (in line with the peer group) on our 2018 estimate of $2.92, we derive our price target of $39.

RISKS

- Outlook for forward power prices.

- Timing of upcoming EPA regulations.

- Outcome of pending and future rate cases.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website:
https://suntrustlibrary.bluematrix.com/client/library.jsp
please email the Research Department at STRHEquityResearchDepartment@SunTrust.com
or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision.

As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = drop coverage
CS = Coverage Suspended
I = initiate coverage
T = transfer coverage

The prior rating system until Oct. 7, 2016:
3 designations based on total returns* within a 12-month period**
· **Buy** – total return ≥ 15% (10% for low-Beta securities)***
· **Reduce** – total return ≤ negative 10% (5% for low Beta securities)
· **Neutral** – total return is within the bounds above
· **NR** – NOT RATED, STRH does not provide equity research coverage
· **CS** – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 12/02/2016):

Coverage Universe			Investment Banking Clients Past 12 Months		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Regulated Utilities Continue Driving Growth for Exelon

Investment Thesis

Travis Miller, Sector Director, 24 March 2016

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Travis Miller, Sector Director, 26 October 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Close Competitors	Currency (Mil)	Market Cap	TTM Sales	Operating Margin	TTM/PE
Public Service Enterprise Group Inc PEG	USD	21,187	9,249	24.68	16.50
FirstEnergy Corp FE	USD	14,650	14,934	6.33	0.00
Entergy Corp ETR	USD	12,809	10,952	-2.55	10.00

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 13 April 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results.

Andrew Bischof, CFA, Eq. Analyst, 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Andrew Bischof, CFA, Eq. Analyst, 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real

Travis Miller, Sector Director, 02 June 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management

finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

Travis Miller, Sector Director, 09 August 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Regulated Utilities Continue Driving Growth for Exelon

Travis Miller, Sector Director, 26 October 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon

goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Morningstar Research Methodology for Valuing Companies

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

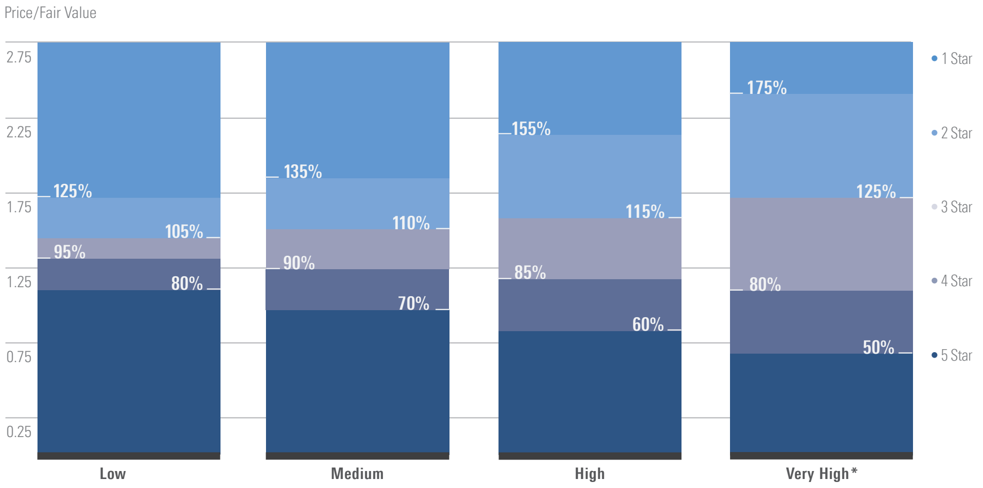
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ▶**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ▶**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ▶**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ▶**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ▶**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ▶**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ▶**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ▶**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ▶**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ▶**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ▶**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

Price/Fair Value Morningstar data as of Nov 07, 2016

General Qualitative Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar. The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Morningstar commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

Morningstar believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources which we believe to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seek independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

General Disclosure (applicable to both Quantitative and Qualitative Research)

Conflicts of Interest:

- No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

- Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

- Morningstar is not a market maker or a liquidity provider of the security noted within this report.

- Morningstar has not been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

- Morningstar affiliates (i.e., its investment management group) have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

- Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

- Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which Morningstar currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities we have covered, including their fair value estimate, please contact your local office.

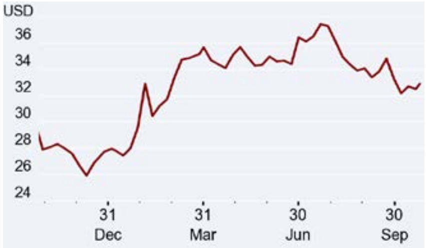
Exelon Corp (EXC)

Results: ExGen Margins Declining; We think ZECs NOT = RECs. Reiterate Sell Rating.

Sell	3
Price (25 Oct 16)	US$32.90
Target price	US$27.00
Expected share price return	-17.9%
Expected dividend yield	3.9%
Expected total return	-14.1%
Market Cap	US$30,363M

Price Performance
(RIC: EXC.N, BB: EXC US)



- **Citi's Take — Good 3Q16 Results above guidance and Citi's estimates.** EXC reported 3Q16 EPS of $0.91/share on an adjusted basis vs. Citi's estimates of $0.72/share. Favorable weather as well as lower O&M helped utilities' business, while solid performance at retail contributed to strong quarter at ExGen.
- **2016 Full-year guidance increased.** EXC has increased 2016 full-year operating EPS range guidance to $2.55-2.75/share vs. initial guidance of $2.40-2.70/share on the back of strong YTD utility performance. ExGen guidance unchanged.
- **We focus on ExGen as it continues to be the key marginal driver of value.**
- **2019 Commodity Margin at $6.8B, almost $1B lower than 2016.** Management indicated that low power market liquidity and uneconomic plants drive down pricing. We think power prices continue to stay challenged as old coal and nuclear units are replaced by renewables and gas plants.
- **So it comes back to the bailout programs. ZECs not the same as RECs.** It is clear that many nuclear plants only survive with some form of bailout given their high cash cost of generation $30-$35/MWh. We think ZECs are different from RECs because the criteria to qualify for ZECs is that the plant isn't adequately compensated in the FERC regulated wholesale power markets. By making plant economics a criteria to qualify for ZECs (to keep plants like IP2/3 out), ZECs by definition are 'tethered' to power markets. The annual adders of ZECs are also tethered to capacity markets. This fact pattern goes against the Supreme Court ruling in Hughes vs. Talen and why we believe ZEC will be cancelled.
- **Implications** — Differing views on EXC TP primarily driven by views on ExGen. Our valuation of ExGen is $6/share because we use a 5.5x EBITDA multiple to value ExGen reflecting a ~15yr asset life. Without a bailout and higher renewables, penetration, nuclear assets will continue to be challenged.

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $27 target. We value ExGen at $6/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $21/share based on a 16x terminal PE multiple. We also add $6/share value provided by PEPCO. We back out $6/share for the parent to get to our price target

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Maxwell S Burke; Tulkin Niyazov, CFA; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day’s market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that were at the time investment banking clients shown in brackets) is as follows: Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%); Q1 2016 Buy 31% (67%), Hold 45% (63%), Sell 24% (61%); Q4 2015 Buy 31% (67%), Hold 45% (63%), Sell 24% (63%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

USA | Energy | Electric Utilities

October 27, 2016

Jefferies

Exelon (EXC)

Strong 3Q Results but Weak Commodity Lowers Out Year Estimates

BUY
Price target $37.00
(from $36.00)
Price $33.26^

Key Takeaway

Exelon reported strong 3Q EPS of $0.91 versus our estimate $0.85 and Consensus of $0.79. Management provided an update of hedge disclosures for ExGen which highlighted a continued deterioration of power prices. Management announced incremental ExGen O&M savings for $100M-$125M in 2018-19. We continue to believe EXC is the best way to invest in power.

Exelon operating EPS was $0.91 on a diluted basis, versus $0.83 for the same period a year ago, our estimate of $0.85, and Consensus of $0.79. The year-over-year improvement was driven by increased earnings at the regulated utilities, particularly PHI, offset by a decline at ExGen.

Exelon increased its 2016 earnings guidance to $2.55-$2.75 versus a previous range of $2.40-$2.70 (Street at $2.57). Drivers for the increase are better than expected results at the company's regulated utilities. Sector guidance is $1.20-$1.30 ExGen, $0.55-$0.65 ComEd, $0.40-$0.50 PECO, $0.25-$0.35 from BGE, and $0.15-$0.25 for PHI.

Purchase of Fitzpatrick plant. Management is continuing with the transaction and is expecting NYPSC and FERC approval in November and NRC approval in 1Q17. The unit is scheduled for a refueling in 2017 and at that time Exelon will effectively be the owner of the plant regardless of what happens with New York's plan to award upstate nuclear operators with Zero Emission Credit (ZEC) revenues. Exelon estimates the ZEC revenues would add $0.02-$0.08 to earnings.

The company is expecting a 4Q16 decision in the ComEd Distribution Formula Rate case. Back in April the utility filed for a $138 million rate increase based off an 8.64% ROE and 46% equity ratio.

We are lowering our 2017-18 EPS estimates by $0.10 to $2.50 and $2.75; respectively. Our revised estimates reflect ExGen's updated hedging information and the company's new O&M savings program (2018).

Valuation/Risks

Our $37.00 price target is based on P/E analysis. Taking our 2019 EPS estimate of $2.65 in conjunction with a P/E group average multiple of 13.9x results in a price target of $37.00. Based on yesterday's closing price of $33.26 this would result in a 12-month price appreciation potential of 11.2% and total return potential of 15.0% including the current yield of 3.8%. **Risks** –Risks include exposure to change in the commodity price for electricity associated with Exelon's merchant generation business, and regulatory issues associated with the company's regulated subsidiaries.

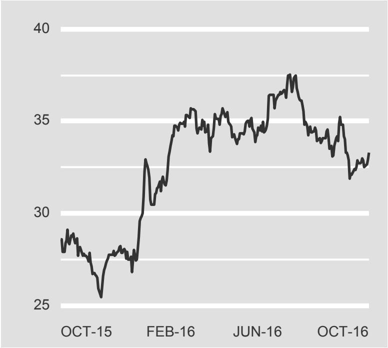
Price Performance



^Prior trading day's closing price unless otherwise noted.

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation. For investors looking for merchant exposure we believe EXC is the best way to play power.

Exelon operating EPS was $0.91 on a diluted basis, versus $0.83 for the same period a year ago, our estimate of $0.85, and Consensus of $0.79. The year-over-year improvement was driven by increased earnings at the regulated utilities, particularly PHI, offset by a decline at ExGen.

Exelon increased its 2016 earnings guidance to $2.55-$2.75 versus a previous range of $2.40-$2.70 (Street at $2.57). Drivers for the increase are better than expected results at the company's regulated utilities. Sector guidance is $1.20-$1.30 ExGen, $0.55-$0.65 ComEd, $0.40-$0.50 PECO, $0.25-$0.35 from BGE, and $0.15-$0.25 for PHI.

Purchase of Fitzpatrick plant. Management is continuing with the transaction and is expecting NYPSC and FERC approval in November and NRC approval in 1Q17. The unit is scheduled for a refueling in 2017 and at that time Exelon will effectively be the owner of the plant regardless of what happens with New York's plan to award upstate nuclear operators with Zero Emission Credit (ZEC) revenues. Exelon estimates the ZEC revenues would add $0.02-$0.08 to earnings.

The company is expecting a 4Q16 decision in the ComEd Distribution Formula Rate case. Back in April the utility filed for a $138 million rate increase based off an 8.64% ROE and 46% equity ratio.

Settlement approved in Atlantic City Electric for $45 million based on a 9.75% ROE. In August the NJ BPU adopted a settlement that calls for a $45 million rate increased predicated on a 9.75% ROE and 49.5% equity ratio. This compares to the utility's request of an $84.4 million increase and a 10.6% ROE.

3Q16 operating EPS excludes $0.38 of non-recurring losses as follows: a $0.22 gain related to accelerated depreciation and amortization expense from the decision to retire Quad Cities and Clinton, a $0.21 charge due to the recognition of a recent court decision associated with Exelon's like-kind exchange tax position, a $0.06 market to market gain associated with the impact of economic hedging activities, a $0.07 gain associated with nuclear decommission trust, a $0.01 loss associated with the amortization of commodity contract intangibles, a $0.01 charge related to merger and integration costs, a $0.01 loss due to merger commitments, a $0.01 charge associated with generation impairment, a $0.01 charge related to a cost management program, and a $0.03 loss due to CENG non-controlling interest. 3Q15 earnings exclude $0.14 of non-recurring losses primarily associated with NDT gains.

Commonwealth Edison (CWE) earnings improved by $0.03 to $0.20 on a year-over-year comparison. Increased capital investment and favorable weather was slightly offset by a decline in ROE. Gross margin increased 5.8% to $1,043 million reflecting increased electric distribution earnings from the impact of greater capital investment. Retail sales increased 7.0%, or 0.9% on a weather-adjusted projection, during the quarter due to beneficial weather. Cooling degree days were up 32.5% relative to the same period last year and 37.0% greater than normal. The company estimates the beneficial impact of weather relative to last year to be $0.02.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Operating income increased 17.9% to $389 million due to greater gross margin reflecting the impact of increased capital investment. Operating and maintenance expense declined 6.0% to $377 million which was partially offset by an 11.4% to $196 million increase in depreciation expense due to greater net plant. Earnings increased 23.2% to $186 million driven primarily by higher operating income, offset by greater interest expense. The effective tax rate for the quarter was 38.6% versus 39.8% last year.

PECO earnings increased by $0.03 to $0.10 due to new electric rates. The principal drivers for the year-over-year change were new electric rate ($0.02) and beneficial weather ($0.02) partly offset by greater O&M expenses ($0.01). Gross margin grew by 35.2% to $123 million due to new electric rates at PECO. Electric sales versus 3Q15 grew 5.1% but decreased 0.4% on a weather adjusted basis. Gas sales declined 2.6% as compared to 3Q15 and were down 3.0% on a weather-adjusted basis. Cooling degree days increased 8.6% versus 3Q15 and 38.6% relative to normal. Operating Income improved by 32.9% to $206 million due to greater gross margin. Operating and maintenance expense rose $197 million and depreciation expense declined by 1.5% to $67 million. Earnings increased by 35.2% to $123 million due to greater operating income partly offset by increased tax expense. The effective tax rate during the quarter was 30.9% versus 28.9% last year.

BGE earnings were unchanged at $0.06 during the quarter. The benefit from higher rates was offset by increased O&M and depreciation expenses. Gross margin grew by 9.2% to $452 million based on higher rates.

Operating income increased 4.5% to $116 million reflecting greater gross margin partially offset by higher operating expenses. Operating and maintenance expense increased 6.0% to $177 million and depreciation expense rose 27.8% to $101 million driven by higher amortization due to the initiation of costs recovery of the AMI programs. Earnings improved 5.8% to $55 million due to greater operating margin. The effective tax rate during the quarter was 39.6% versus 40.9% last year.

PHI earnings added $0.14 to the quarterly improvement with no contribution in 2015. The company closed on the PHI transaction earlier this year and is guiding to 2016 EPS contribution of $0.15-$0.25 which was increased from a previous range of $0.10-$0.20.

Earnings at Exelon Generation decreased $0.14 to $0.41 during the quarter mainly due to lower capacity prices and higher nuclear decommissioning amortization expense. Gross margin improved slightly by 0.6% to $2,407 million which was driven by increased production offset by lower capacity prices. Nuclear generation increased 5.3% to 44.7 million MWh with NY nuclear production improving 14.5% and Mid-Atlantic/Mid-West output increasing 4.3%. Operating income declined 15.5% to $647 million driven by higher O&M and greater depreciation expense. O&M expense increased 7.3% to $1,330 million. Depreciation expense grew by 11.4% to $294 million due to increased nuclear decommissioning amortization. Net income decreased by 24.6% to $376 million driven by lower operating income partially offset by greater Other income. Other income grew by 82% to $40 million. The effective tax rate during the quarter was 36.5% versus 29.4% in 3Q15. Dilution impacted the quarter by $0.01.

The company's Other business segment improved by $0.01 to a loss of ($0.03).

We are increasing our 2016 EPS estimate by $0.10 to $2.70 reflecting the strong 3Q16 performance and an update of our forecast model. Our revised estimate is at the high-end of management's updated guidance of $2.55-$2.75

We are lowering our 2017-18 EPS estimates by $0.10 to $2.50 and $2.75; respectively. Our revised estimates reflect ExGen's updated hedging information and the company's new O&M savings program (2018).

We are maintaining our 2019 EPS estimate of $2.65 which reflects updated hedging information and $125 million of O&M expense savings.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

Recommendation Distributed	, 05:05 ET. October 27, 2016

Company Specific Disclosures

For Important Disclosure information on companies recommended in this report, please visit our website at https://javatar.bluematrix.com/sellside/Disclosures.action or call 212.284.2300.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for

inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

Tax Court Decision A Modest Negative As Financing Plan Had Assumed Paying A Penalty, But Not Quite As Steep

This doesn't materially change the value proposition. Rating Buy, Target $40.

EXC Loses A Tax Court Case Related To A 1999 SILO Lease Transaction, Will Pay +/-$1.1bn To IRS: On 9/19 a United States Tax court ruled against EXC in a case regarding a tax position they took on their 1999 income tax return to defer approximately $1.2 billion of tax gain on the sale of ComEds fossil generating assets. The Internal Revenue Service (IRS) disagreed with this position and asserted that the entire gain of approximately $1.2 billion was taxable in 1999. The IRS asserted that the Exelon purchase and leaseback transaction was substantially similar to a SILO lease transaction which the IRS does not respect as the acquisition of an ownership interest in property. The IRS also asserted a penalty of approximately $90 million for a substantial understatement of tax. While EXC is going to appeal, they will still have to pay the IRS, with the tax and after-tax interest, exclusive of penalties as much as $870 million. In addition, if the penalty ruling stands, the amount of penalties and after-tax interest that would be due is approximately $190 million. So the total amount approaches $1.1bn.

The EXC 2016 Financing Plan Assumed A Payment of approximately $800mm. So the "damage" is $250mm or +/-$0.25/share. This exposure had been disclosed in EXC's 10K/10Q's and the company had a non-cash reserve of $800mm against losing in tax court on this issue. They did not contemplate penalties. As we said above they are going to appeal this ruling, but have to pay it in the interim. We reviewed the impact of this decision with EXC and they indicated that the 2016 financing plan laid out at their analyst day contemplated an $800mm payment to the IRS funded by debt issuance. So the impact of losing this case and imposition of penalties is a $300mm drag on the cash flow forecast over the forecast period. Also recall that their cash flow forecast did NOT include $750m of cash flow from approval of the NY ZEC deal and repayment to EXC of a loan from their nuke JV partner EDF.

Our '16 / '17 / '18 EPS forecast is $2.60 / $2.70 / $2.90. Rating Buy, Target $40/Share based on 8/3/16 forward power curves. On a MTM basis we would be a bit lower as ATC power pricing has come off a bit since then. However, we still believe the assumptions driving EXC's view of the earnings growth drivers in its core utilities business and Exelon Generation (ExGen) as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management and find are wholly credible, taking in to account the +/-$250mm impact of this decision vs. their base plan. The core utilities are forecast to grow rate base at 6% from '16-20, with earnings growth of 7-9% due to the assumption of improved earned ROE's at recently acquired POM. With rate cases pending at most of the PHI companies and the ability to harvest operating synergies we see a turnaround similar to the one EXC engineered at BG&E after the CEG acquisition as feasible. So, there is line of sight for EPS at EXC's utilities (ex-parent overheads) growing from $1.35 in FY '16 to $1.85 in 2020, consistent with our prior expectations. At ExGen, our forecast assumes $0.10/share uplift by FY '18 from passage of the NY Zero Emissions Credit (ZEC) program and our estimate of $.05/share of uplift from recently announced Fitzpatrick plant acquisition from ETR. The impact of the closing of the Clinton and Quad Cities power plants is $0.07 accretive to EPS with a $75mm improvement to cash flow but won't fully hit the P&L until FY 2019. From a cash flow perspective we now see ExGen producing $3.1bn of free cash flow through FY '18 down from $3.4bn, ~53% of the $6.3 billion they are targeting through 2020 ($5.6bn base case plus $750mm from the NY ZEC deal and repayment of a loan to their nuke JV partner EDF), with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. ExGen debt/EBITDA, currently at ~3.4X, should fall to at 3X over the forecast period after adding $300mm to account for the above mentioned tax court decision. On the subject of the dividend, they are committed to 2.5% growth through 2018 but are confident the financial profile supports at least that level of growth through 2020. Investors obviously "wear" commodity price risk at ExGen and 2019 EPS are likely lower at ExGen due to a fall-off in capacity prices at current power forwards (on the margin we calculate that headwind is currently $0.10/share net of $0.07 of improvement from shutting Quad and Clinton, or $200mm of EBITDA). So while the story is not perfect at the current share price the value proposition looks quite compelling.

Our price target remains $40, maintaining BUY rating. Our forecast for utility EPS contribution minus parent overheads (+/-$0.15) is $1.35/share which by 2018 we expect to be $1.70 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to $1.85. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth $29.50/share in our view (17.3X '18 EPS, an average multiple). That implies ExGen is worth only +/-$4.50/share today, which is around 4X '18 EPS or 4.2X '18 EV/EBITDA and an unlevered free cash flow yield to EV of 18% with debt/EBITDA at YE '18 of 3X. To put it more succinctly, EXC is trading at +/-12X overall FY '18 earnings and a 3.5% dividend yield while pure regulated names are at 17.3X and yields averaging 3%. While the dividend growth commitment of 2.5% annually is lower than that articulated by purely regulated peers and '19 EPS and EBITDA at ExGen should moderate (we estimated those numbers above at $0.10/share / $200mm of EBITDA) the balance sheet will also shrink. Our view is that the overall valuation gap is just too high.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of regulation to bolster the revenue stream of the NY nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in NY to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%

Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

October 10, 2016

Jefferies

EQUITY RESEARCH AMERICAS

Exelon (EXC)

The Best Way to Invest in Power

BUY

Price target $36.00
(from $40.00)
Price $32.06^

Key Takeaway

Following an update of our forecast model we believe Exelon is the best way to safely invest in merchant generation. While the recovery in power prices may take time, Exelon gives investors a strong and improving balance sheet, optionality on the Clean Power Plan/ZECs, and a growing base of regulated earnings. We find Exelon's merchant business trading at less than $5/sh on 2019 EV/EBITDA and at less than 4x is the cheapest merchant stock in the sector.

At 32,700 MW investors get significant upside to power and natural gas prices. Our forecast assumes no changes in prices from 2018-19 but for every $5/MWh change in NiHub prices we see a $0.22 impact to 2019 EPS.

Although ExGen is a Nuclear ATM, the cash will be used to fund utility capex and retire debt. Jefferies forecast assumes 7.0% UP&O EPS growth (2016 through 2020) funded primarily by $2.9B of distributions from ExGen. In 2020 ExGen has $2.3B of debt maturities which will consume all of the cash cushion we are modeling.

Jefferies believes that off of 2019 ExGen is trading at 5.6x EV/EBITDA (less maint. capex) or 3.8x EV/EBITDA, making it the cheapest merchant stock in our coverage universe.

Our forecast excludes any benefit from the NY Zero Emission Credit (ZEC) program or passage of Illinois legislation to keep the Clinton and Quad Cities units operating past 2017-2018. If instituted, beginning in 2017 ZEC's will provide up to $350M of cash flow benefit (through 2020) and add an incremental $0.08-$0.10 to earnings.

Jefferies forecast includes only modest (less than 5%) rate increases at the PHI utilities which leaves upside to our estimates if the regulatory outcomes are better than expected.

Valuation/Risks

Our $36.00 price target is based on P/E analysis. Taking our 2019 EPS estimate of $2.65 in conjunction with a P/E group average multiple of 13.6x results in a price target of $36.00. Based on Friday's closing price of $32.18, this would result in a 12-month price appreciation potential of 11.9% and total return potential of 15.8% including the current yield of 3.9%. **Risks** –Risks include exposure to change in the commodity price for electricity associated with Exelon's merchant generation business, and regulatory issues associated with the company's regulated subsidiaries.

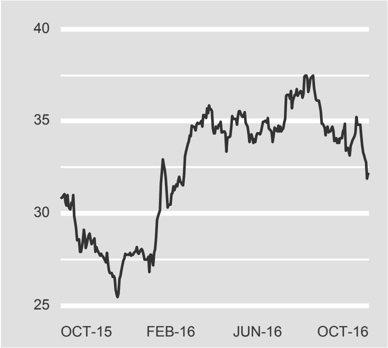
Price Performance



^Prior trading day's closing price unless otherwise noted.

Exelon Corporation

Buy: $36.00 Price Target

Scenarios

Target Investment Thesis

- Exelon should trade at a group average P/E multiple.
- Expected growth in regulated earnings and accretion from the Pepco acquisition.
- Company moves to a more regulated P/E valuation since the merger with Pepco.
- 2019 EPS $2.35; Target Multiple: 13.6x. Target Price $36.00.

Upside Scenario

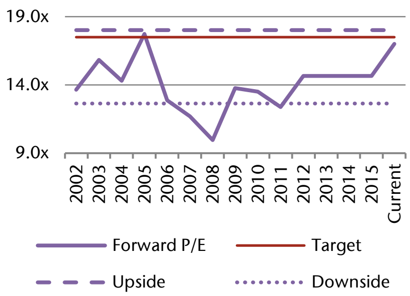
- Exelon Generation earnings increase due to improvement in gas and power prices.
- Power plant values increase due to growing short supply.
- Regulated business earns at or above its allowed ROE.
- Carbon regulation increases nuclear margins
- 2019 EPS $3.00; target multiple: 13.6x. Target Price $41.00

Downside Scenario

- Exelon EBITDA decreases due to declining gas and power prices.
- Power plant prices in the secondary market which are currently at less than replacement value move lower
- Reinvestment opportunities become more limited.
- Regulated utilities under-earn their allowed ROE.
- 2019 EPS: $2.00; Target Multiple: 13.6x Target Price: $27.00.

Long Term Analysis

1 Year Forward P/E



Long Term Financial Model Drivers

LT EBITDA CAGR	**(8.5%)**
LT EPS Growth	**4.6%**
FFO/Debt	**31%**
Equity Ratio	**52%**

Other Considerations

While we assume no benefit from ZECs or any type of carbon regulation the benefit to Exelon's 19,000 MW of nuclear plants is significant.

Recommendation / Price Target

Ticker	**Rec.**	**PT**
EXC	**Buy**	**$36**
PEG	Hold	$47.50
ETR	Hold	$85.50
ED	Buy	$82
PPL	Hold	$37
FE	Hold	$36

Catalysts

- Legal challenges to New York's ZECs.
- PJM Capacity Auction.
- Rate increases at PHI utilities.

Company Description

Exelon, incorporated in Pennsylvania in February 1999, is a utility services holding company engaged, through its principal subsidiary Generation, in the energy generation business, and through its principal subsidiaries Com Ed, PECO, DPL, ACE, Pepco, and BGE, in the energy delivery businesses discussed below. Exelon is headquartered in Chicago and trades on the NYSE under the ticker symbol EXC.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation. For investors looking for merchant exposure we believe EXC is the only safe way to play power.

Following an update of our Exelon model we are lowering our 2017 EPS estimate by $0.10 and introducing a 2018 and 2019 EPS estimate of $2.85 and $2.65, respectively. Our revised 2017 estimate includes an update of commodity prices and hedges for the company's unregulated generation fleet.

By year-end 2018 we are including the closure of the 1,069 MW Clinton plant (closing on June 1, 2017) and the 1,403 MW Quad Cities (closing on June 1, 2018) but excluding any benefit from NY ZECs. The closure of both Quad Cities and Clinton will aid management on its path of removing costs from the merchant business. Jefferies assumes merchant O&M continues on its 1-2% annual reductions which are helped with the closure of these two plants. Additionally, there is an expected $100 million reduction in depreciate expense as a result of the retirement. Our forecast does not include any benefit from the New York Zero Emission Credit (ZEC) program which would add $0.07 to our 2017 estimate and $0.10 to our 2018-2019 estimates. Although the ZEC program has been approved by the NYPSC we expect some legal challenges and want to sharpen our pencil as the case is heard at FERC.

Valuation: Using a P/E valuation we apply a 2019 group average multiple of 13.6x on our 2019 EPS estimate of $2.65 and arrive at a price target of $36. As an alternative valuation using a SOTP analysis we find the utility business, based on a group average P/E multiple (15.8x), worth $27.50, and the merchant business valued at $8.50 using an 8.0x EV/EBITDA multiple. For every half-turn (0.5) change in the EV/EBITDA multiple the price target is impacted by $1.00. We currently find the merchant business of Exelon trading at 5.6x EV/EBITDA net maintenance capex and 3.9x if you exclude maintenance capex from the calculation. We believe this compares to other merchant stocks trading at an 8.0x EV/EBITDA net maintenance capex or 6.4x excluding maintenance capex.

Table 1: On an EV/EBITDA basis EXC is as cheap as it gets

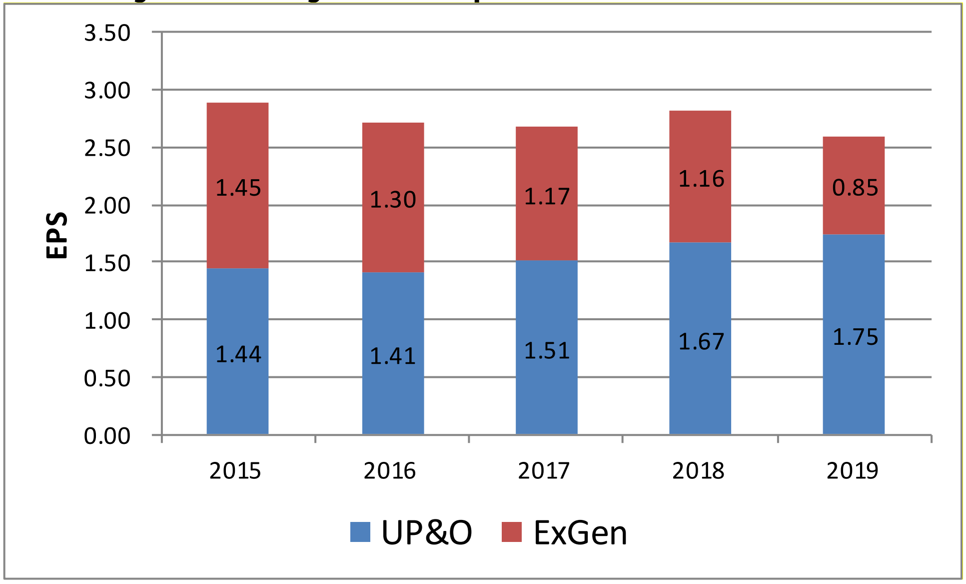
	2019
EBITDA ($M)	2,480
EV/EBITDA	3.9x
Maintenance Capex ($M)	-800
EV/(EBITDA less MC)	5.6x

Source: Jefferies

Regulated earnings will make up a larger part of consolidated earnings. With the completion of the PHI merger we forecast the regulated utilities going from 50% of EXC earnings to 67% by 2019. We see two main drivers to this transition: 1) rate increases at the regulated utilities, primarily at PHI, and 2) a decline in earnings at ExGen.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Chart 1: Regulated Earnings will make up 67% of EPS in 2019



Source: Jefferies estimates, company data

We note that management successfully navigated the integration of Baltimore Gas & Electric and improved results even in a challenging regulatory environment.

We believe management will be successful in navigating the rate increases at PHI. While our assumptions are within management's utility growth of 7-9%, we believe they are reasonable and if the company is successful in the rate arena, we could see upside from that range. In each of the three PHI subsidiaries rate increases are all below 5% and have the utilities earning below a 10% ROE. In 2017-2019 we assume a total of $565 million of rate increases across the PHI complex. Also, investors should realize that management successfully navigated the integration of Baltimore Gas & Electric and improved results even in a challenging regulatory environment.

ExGen is a cash machine but proceeds will be used to pay down debt and fund regulated capex. Our forecast has ExGen cash balance growing from $431 million at the end of 2015 growing to $2,300 in 2019. During this time (2016-2019) we have the subsidiary upstreaming $2,500 million cash to the parent. In 2020 ExGen has $2,200 million of debt maturities which, consistent with management's forecast, we assume is paid down.

Should power prices start increasing investors may see some curtailment in regulated capex but the upside at ExGen would be significant and offset any regulated earnings decline.

Concerns over declining utility capex post-2019 are overblown. Some investors believe that management will struggle to find incremental capex opportunities once this construction cycle comes to an end (2019). Jefferies struggles to see that happening as long as power prices stay relatively flat. Utilities have consistently found projects to reinforce the grid or enhance the ratepayer experience and with power prices at historic lows there seems to be ample room in customer bills for new capex. We would view a slowdown in capex spending as more of an industry issue and not specific to Exelon's utilities. Should power prices start increasing investors may see some curtailment in regulated capex but the upside at ExGen would be significant and offset any regulated earnings decline.

ExGen also provides investors with a free option on the Clean Power Plan or some social cost of carbon. Our forecast excludes any benefit from the NY ZEC program, as we are awaiting the legal challenges from intervenors. Based on Exelon's New York nuclear exposure ZECs would add $0.08-$0.10 beginning in 2017. The uncertainty surrounding the Clean Power Plan limits our ability to quantify the earnings potential that it could have on the remainder of Exelon's carbon-free fleet. Just to put in perspective the benefit that a "ZEC like" program would have if it were adopted in all of the states that Exelon has over 19,000 MW of nuclear assets we could see $1.70 of incremental earnings.

We are assuming $0.15 of losses at the parent throughout the forecast period.

Our forecast assumes annual dividend increases of 2.5% and by 2019 assuming a dividend of $1.57 we have a UPO payout ratio of 88%. This compares with an average of 64% for the utility sector.

We are increasing our 2016 EPS estimate by $0.10 to $2.60 due to fine tuning. At the August analyst conference Exelon affirmed its 2016 earnings guidance of $2.40-$2.70 (Street at $2.56) and 3Q16 guidance of $0.65-$0.75. Sector guidance is $1.20-$1.30 ExGen, $0.50-$0.60 ComEd, $0.40-$0.50 PECO, $0.25-$0.35 from BGE and $0.10-$0.20 for PHI.

We are lowering our 2017 EPS estimate by $0.10 to $2.60 following an update of our forecast model.

We are initiating our 2018-19 EPS estimates of $2.85 and $2.65, respectively.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

Analyst Certification:

I, Anthony C. Crowdell, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

I, Benjamin Budish, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

As is the case with all Jefferies employees, the analyst(s) responsible for the coverage of the financial instruments discussed in this report receives compensation based in part on the overall performance of the firm, including investment banking income. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for

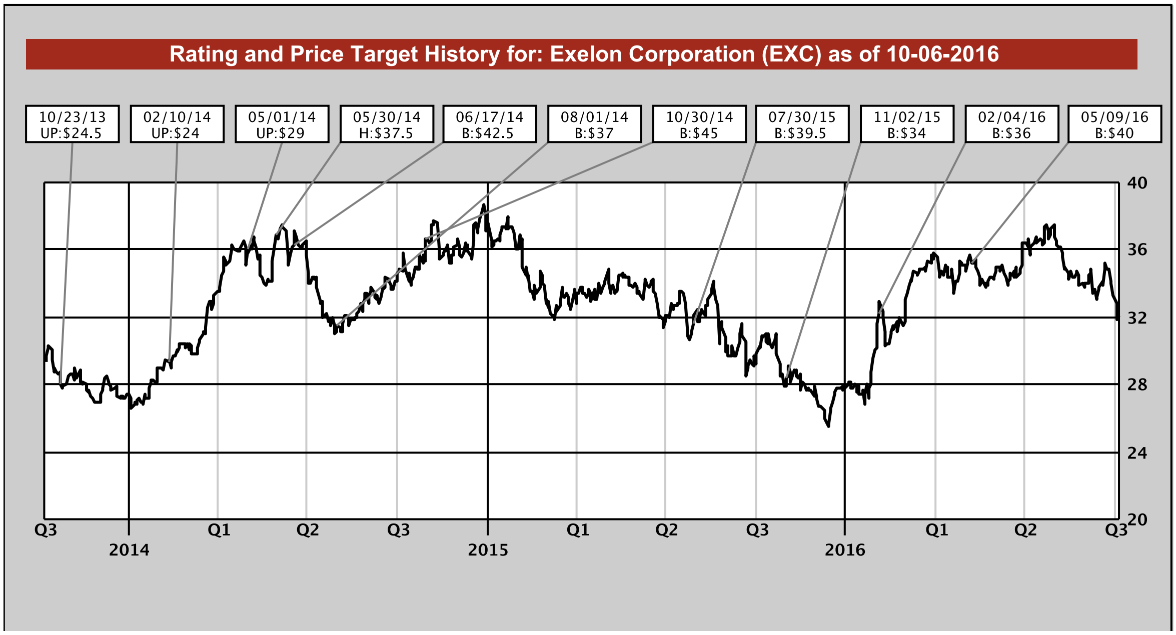
inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

Other Companies Mentioned in This Report

- Consolidated Edison Inc. (ED: $72.33, BUY)
- Entergy Corporation (ETR: $73.81, HOLD)
- Exelon Corporation (EXC: $32.06, BUY)
- FirstEnergy Corp. (FE: $31.47, HOLD)
- PPL Corp. (PPL: $32.50, HOLD)
- Public Service Enterprise Group Inc. (PEG: $40.75, HOLD)



Notes: Each box in the Rating and Price Target History chart above represents actions over the past three years in which an analyst initiated on a company, made a change to a rating or price target of a company or discontinued coverage of a company.

U.S. Power & Utilities: Day 3 Recap of Edison Electric Institute (EEI) Conference - AEP, AES, CNP, EIX, EXC

Sentiment Indicator : neutral

Produced by Tucker, Shelby (RBC Capital Markets, LLC) on Wednesday, November 09, 2016, 06:33 AM ET

Disseminated on Wednesday, November 09, 2016, 06:44 AM ET

American Electric Power (AEP)

We met with Nick Akins (President & CEO), Bob Powers (EVP & COO), Lisa Barton (EVP, AEP Transmission), and Bette Jo Rozsa (Managing Director of IR).

- **Building a robust regulated portfolio.** With the exit out of the competitive generation business, management plans to focus on maintaining a portfolio of regulated utilities that present robust growth opportunities in a constructive regulatory environment. Use and allocation of capital is of utmost importance; management plans to evaluate each of its utilities to determine whether it deserves additional capital to help growth AEP's book of business. If they deem certain utilities to lack the favorable profiles (i.e. sub-par economic conditions/outlook, non-constructive regulatory environment), they could potentially decide to monetize them and re-allocate the capital toward other utilities or businesses (i.e. transmission, renewables). Regarding regulated earnings growth, they believe upside to 5-7% earnings CAGR is possible through continued O&M management, further reduction in regulatory lag, and legislative changes such as the potential re-regulation of Ohio's generation business.
- **Sticking with the electric side of the equation.** Despite other electric utilities' recent acquisitions of gas utilities, AEP management does not expect to actively look for similar opportunities, especially given high valuations placed on many gas utilities. They believe their strength is in being at the forefront of the electric grid modernization, including implementation of smart meters, as well as investment into energy storage and its integration to the utility model.

The AES Corp (AES)

We met with Andres Gluski (President & CEO), Tom O'Flynn (EVP & CFO), Ahmed Pasha (VP of IR), and Vincent Sipowicz (Director of IR).

- **Pressures in Chile.** Management noted that the delay and the over-budget nature of the Alto Maipo hydro facility was primarily due to unforeseen construction issues with the site's landscape. They are currently in negotiations with the project lenders regarding the 10-20% cost overruns ($200-$400 million). If AES Gener is required to inject a large additional amount of equity, they may choose to walk away from the project; their decision will likely come in the next three months. Another risk with the plant is that it's only 40% contracted; the other 60% would be sold at market prices, which would be materially lower at this point. Combined with the recently procured contract prices that were materially lower year-over-year (YoY), management plans to take a more measured approach to future growth opportunities in the region.
- **OPGC 2 project chugging along, but could see some delays.** Management does not anticipate the OPGC II coal plant construction in India to incur the same type of cost overruns as experienced in Chile. However, they do potentially see some delay in the expected on-line date of the project, currently estimated to be 1H18.
- **Focusing future growth in gas, renewables, energy storage.** In the U.S., they see future investments in all three categories, with 150 MW of contracted solar expected by 2017 and continued build-out of the battery storage platform. Internationally, they see significant storage investment opportunities in India. However, they do not expect any significant earnings or cash contributions from storage investments over the next couple of years.

CenterPoint Energy (CNP)

We met with Scott Prochazka (President & CEO), Bill Rogers (EVP & CFO), David Mordy (Director of IR), and Olivia Webb (Manager of IR).

- **Enabling CNP value: all tracks still in play.** Management reiterated their recent comments on considering a sale, spin, or maintaining stake of the company's stake in Enable Midstream. Their takeaway from recent conversations with investors is that they are not beginning to be less concerned about the Enable strategic review process as before; investors also seemed fairly neutral regarding the C-Corp spin-off option. Management also continued to be open to the possibility of a stock exchange transaction with another midstream entity as an alternative to maintaining the Enable stake. Finally, regarding the sale option, management does not intend to delay the strategic decision timeline to try to capture higher valuation from a positive turn in the commodity markets.
- **Upside to capex; looking to minimize lag.** Management expects to update their capex forecast with the 4Q16 earnings release, but they believe it's likely that the update shows increased level of investments at both the electric and gas utilities. The utilities are doing fairly well in earning close to the allowed ROEs, with an on-going 50-80 basis point drag due to regulatory lag. The utilities plan to continue to work with regulators to implement lag-reducing mechanisms, like the formula rate plan at the Arkansas gas utility. At Houston Electric, the utility would like to legislatively remove the sunset provision related to the Distribution Cost Recovery Factor (DCRF), which currently is set to expire in 2019. Depending on that development, the utility may or may not decide to file a formal rate case in late 2018.
- **Opportunistic in growing Competitive Energy Services.** With the Continuum and proposed Atmos Energy Marketing acquisitions expected to be immediately accretive to earnings, management continues to look to selectively expand this business through additional acquisitions (looking for double-digit return profiles). They see the services business as complementary to the utilities businesses and a sustained part of the CenterPoint value proposition.
- **Positive surprise in 2017 guidance?** While management does not expect to provide 2017 guidance until 4Q16 earnings, we note that management's recent utility earnings walk from 2016 to 2017 implies EPS of $0.96-$0.99, an 8% increase year-over-year (YoY) from 2016 utility guidance of $0.88-$0.92. In addition, Enable's recently announced 2017 net income guidance of $315-$385 million would roughly translate into $0.32-$0.38 of EPS for CenterPoint's stake, based on our calculations. All else being equal, and assuming Enable is still part of CNP, this results in potential 2017 EPS for CenterPoint of $1.28-$1.38 ($1.33 mid-point), or almost 13% increase YoY.

Edison International (EIX)

We met with Pedro Pizarro (President & CEO), Ron Nichols (President, SoCalEd), Tres Petmecky (CFO, SoCalEd), Drew Murphy (SVP, Strategic Planning), and Scott Cunningham (VP, IR).

- **Edison Energy in focus.** With EIX management guiding to $(0.12) of Edison Energy drag this year, our meeting with management focused on the strategic and financial vision for the entity. Specifically, management had two main messages: 1) EIX expects Edison Energy to be a real business that delivers shareholder value, and 2) the guidance for this year represents the upper bound of EPS impact going forward (and it should not be viewed as a perpetuity). We sense that there is currently some investor skepticism regarding the benefits of these investments, but we expect more clarity to emerge when EIX presents a more detailed business plan in its 4Q16 conference call.
- **Cost of capital discussions.** Given that the past two cost of capital mechanism settlements have been announced in late October/early November, we would expect to hear something on this front soon if an agreement is reached between the California utilities and its intervenors. EIX indicated that there are generally four levers to consider in these negotiations - the cost of debt, ROE, the trigger mechanism, and the length of extension. The trigger mechanism was given up last year. We continue to believe that an extension of the cost of capital is likely, although our view is that there could be some tweaks to the mechanism including a true-up of the cost of debt.

Exelon Corp (EXC)

We met with Jack Thayer (Senior EVP & CFO), Joe Nigro (CEO, Constellation), Denis O'Brien (CEO, Exelon Utilities), and Kathleen Barron (SVP, Federal

Regulatory Affairs).

- **Focus on utility growth.** Management reiterated their strategy to increase the regulated profile of Exelon, with earnings mix soon to be 70-80% utilities, and 20-30% unregulated generation. Management wants utility earnings to cover the dividend, while also providing support for holding company debt. At the Pepco utilities, management plans to file rate cases every 12-15 months over a five-year period to improve their earned ROE profile.
- **Continue to see upside in energy markets.** ExGen continues to be hedged behind ratable in the outer years, as the company does not believe the current backwardated forward power curves. They hope to take advantage of the turn if they are proven correct.
- **Looking for positive outcomes to nuclear proposals.** Exelon believes it presents a good case to successfully implement the Zero Emission Credits (ZECs) to New York's nuclear fleet, while it remains on track to finalize the Fitzpatrick sale. In Illinois, the current veto session could potentially bring up the nuclear subsidies program, with a 3/5 majority needed to pass the law.

October 16, 2016

United States: Utilities

Equity Research

Now what with utilities, after leading in 1H2016, lagging in 2H2016? Sharpen the pencils!

Despite the recent pullback…

After outperforming the S&P500 significantly (18%) in 1H2016, especially in January and in June after Brexit, utilities have lagged by more than 1,200 bps since July 1. P/E multiples now sit just above 17x on FY2 EPS compared to a YTD high of roughly 18.5x-18.6x.

…still too early to get overly bullish, as valuations remain above historical levels

On an absolute value basis, utilities still trade above historical P/E multiple levels. Over the past five years, for example, the average P/E multiple for utilities on FY2 EPS appears closer to 15.3x and the 10-20 year trend is even lower at 12.0x-14.0x. Simply put, compared to their own trading history, utilities do not appear cheap. On a relative basis, versus the broader S&P500 and the interest rate environment, utilities screen less expensively after this pullback – and almost price in already a higher US 10-year Treasury yield of 2.5%. Historically, utilities traded at a premium to the S&P500 when the 10-year remains below 2.5%-3.0% – the futures curve and GS economist forecast imply treasury yields below 3.0% through 2018.

Dividend growth + dividend yield implies more than 10% total return potential

We use P/E multiples to set target prices for most utilities and believe, for the next 12 months, multiples will stay elevated given expectations for the 10-year Treasury yield. Our target prices imply 10%-12% total return on average. Another screen we commonly employ using dividend growth and yield, shows total return of approximately 10%, with median dividend growth for the sector of roughly 5% through 2018/2019.

Our top picks include…

We generally favor stocks that offer above-average capital allocation potential or that trade at a discount on either P/E multiples or a sum of the parts.

- **Our top large cap ideas include PCG** – added to the Conviction List in a note published today as well as PEG (which we upgraded to Buy today), ETR and AEP.
- **Among smaller cap stocks, we prefer CPN, NYLD and NEP** – all capital allocation leaders.

October 16, 2016- "Public Service Enterprise Group (PEG) Buy: An under-appreciated New Jersey story –upgrading PEG to Buy"

October 16, 2016- "PG&E Corp. (PCG) Buy: Growth ahead, dividend acceleration on the horizon; add to CL"

October 16, 2016- "Entergy Corp. (ETR): Near-term risk, long-term relative value – off CL but remain Buy"

August 28, 2016- "Spotlight on solar competitiveness, returns, tax credits and PPAs"

PM Summary: Back where we started, here we go round again? Stay Neutral utilities

Although the XLU lagged the S&P500 by 1,200 bps since July 1, we remain Neutral on Utilities and Attractive on IPPs – utilities basically price in a higher US treasury yield, near the levels many investors expect to come in 2017. Utilities currently trade at 17.3x on FY2 or 2017 EPS, below the peak of approximately 18.5x-18.6x reached earlier this year. Multiples remain elevated compared to utilities own trading history, so absolute valuation does not appear overly compelling, in our view. On a relative basis, though (especially in a low interest rate environment as expected by our GS economics team), after this recent pullback, utilities appear more interesting on valuation. Utilities historically traded at a premium to the S&P500 when the 10-year Treasury yield remains below 2.5%-3% and utilities outperform the market in periods when the yield curve flattens – both trends expected by the GS economists, through YE2017 and implied by the futures rate curve – a positive potentially for utilities. We expect more in-line performance for utilities, after significant volatility in the first nine months of 2016 with strong outperformance in January and June almost fully offset by weak relative performance since July and especially in the past 30 days. We believe Utilities can now serve as a defensive ballast, at least over the next 12 months, unless interest rates rise far faster than forecast or implied but futures.

- **Although the utilities sector as a whole exhibits strong correlation to the 10-year UST, subsector and individual stock correlations vary…** We find that Regulated Utilities tend to exhibit stronger correlation to longer-term rates than Diversified Utilities. Among Regulated Utilities, SMid-cap utilities show slightly higher variance explained by the 10-year UST than large-cap utilities, with individual stocks displaying varying degrees of correlation. We generally find that large-cap Regulated Utilities exhibit much stronger correlation to longer-term rates, rather than shorter-term rates. For large caps, PCG, ED and WEC show the strongest correlation, while WR and POR show the strongest correlation among small/mid cap stocks.
- **…while the changing shape of the yield curve also matters – where utilities tend to outperform during a period of flattening.** We find that utilities generally underperform relative to the S&P 500 following Federal Reserve meetings which hint tightening monetary policy. However, during the six-month time frame with periods of yield curve flattening (e.g., when shorter-term rates rise faster than longer-term rates), utilities generally outperform.
- **Total return potential appears solid, but not spectacular; downside may emerge for longer-term P/E multiples, but utilities can provide a defensive attribute in the near term given current valuation**. Utilities offer total return potential (using dividend growth and dividend yield as one screen) of more than10%, while our target prices (which assume a baseline P/E multiple of 16.75x 2018E earnings) imply total return of 10%-12% on average. We believe this low beta sector can provide defensive options for investors concerned about broader market valuations but is not attractive enough for an overweight position at these levels, especially as utilities trade above their 5-year and longer-term average P/E multiple levels.

Our top picks remain capital allocation leaders or stocks trading at a discount to peers. We continue to favor (1) companies with above-average capital allocation potential, like PCG, NEP, NYLD and CPN, and (2) those that trade at a discount such as ETR, AEP and PEG (which was upgrading in a corresponding note published today).

Exhibit 1: We maintain our coverage views of Neutral on Utilities and Attractive on IPPs…

Source: FactSet, Goldman Sachs Global Investment Research.

Absolute P/E multiples remain elevated for the broader utilities sector

Utilities and other high yielding sectors outperformed the S&P 500 year-to-date, leading to absolute multiples slightly below historical peaks. The majority of the outperformance occurred in 1H2016 due to depressed 10-year UST yields, but the outperformance contracted in 2H2016 primarily as the market, in our view, may have overreacted to investors' perception of "imminent" rate hikes. Utility stocks largely trade as a group, resulting in limited dispersion between sub-sectors.

…but relative P/E multiples and valuation levels versus the market appear more attractive here after the recent pullback…

During the second half of 2016, utilities lagged the S&P 500, although recent outperformance reduced that gap. Recent price declines across the sector resulted in utilities coming slightly off peak absolute multiples, with little dispersion between stocks during the second half, similar to overall performance year-to-date.

…and the "interest rate" correlation for utilities can be difficult for investors to understand

Although the utility sector as a whole show correlation to overall changes to interest rates, the changing shape of the yield curve also matters. Although GS economists expect 10-year UST yields to increase – even at a faster rate than what the forwards imply – they also expect meaningful flattening of the yield curve. During periods of yield curve flattening – either due to shorter-term rates increasing faster than longer-term rates, or longer-term rates falling faster than shorter-term rates – utilities tend to outperform relative to other S&P sectors.

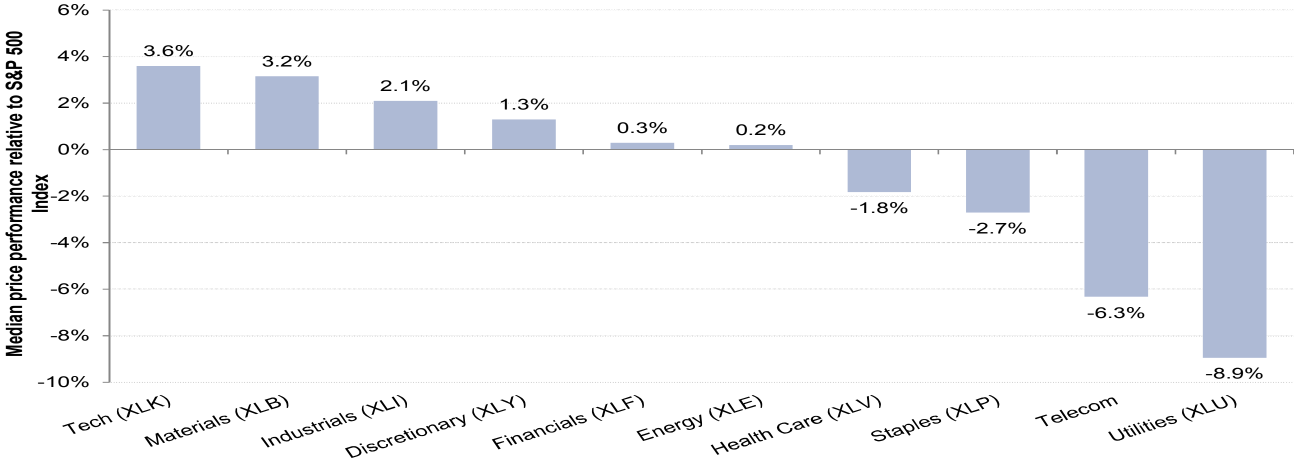
Exhibit 16: ...while we remain wary that the Utility Sector remains the worst performing sector during a rising rate environment...

Performance of sectors during rising rate environment on a rolling 6-month period



Our Methodology:

- We look across all rolling 6-month periods from 1990 through today, identifying periods during which 10-year US Treasury yields rose by at least 30bps, which represents roughly a "top quartile" move.
- During each of these rising rate periods, the price performances of the selected indices are measured relative to that of the SPX.
- A median of these observations is then taken for each index to identify historically strong and weak subsectors during rising rate environments.

A simplistic "total return" snapshot implies utilities may screen more attractively than investors realize

Despite utility EPS growth falling below average in comparison to other S&P 500 sectors, DPS growth remains attractive. We expect US utility coverage EPS to grow roughly 4-6%, in line with historical trends, but below other S&P 500 sectors. From a dividend yield and DPS growth perspective, utilities screen more attractively given our expectation for a free cash flow inflection in the near future.

We recommend waiting before becoming more bullish on utilities

Significant uncertainty surrounding the path of interest rates prevents us from being more bullish on utilities. Utilities as a whole historically underperform following Federal Reserve meetings where tightening policy is hinted. However, changes in shorter-term interest rates generally do not correlate strongly to changes in longer-term rates, with individual stocks exhibiting different levels of correlation.

Exhibit 34: …seeing key risks related to our estimates and price target assumptions
Price target methodologies, drivers of change, and key risks

Price Target Methodologies, Drivers of Change, and Key Risks

Ticker	Price Target Methodology	Rating	Total Return (%)	Drivers of Changes	Key Risks Relate To
EXC	SOTP, 12month	Neutral	17%	Updated forecasts for the ACE rate case and revised our PHI valuation to reflect a 0.5x discount multiple -- now applying a 16.25x 2018 P/E multiple to the segment	Regulatory risk; demand risk; commodity risk; decommissioning risk
CNP	SOTP, 12month	Neutral	12%	Adjusted cash flow and financing assumptions to reflect greater pension contributions, transition bond roll off, and our cash tax assumptions	Regulatory risk; demand risk; commodity risk
DUK	P/E based, 12month, 16.75x P/E multiple on 2018E EPS	Neutral	9%	Revised our estimates to reflect the close of the PNY acquisition, midstream project timing, and introduced our 2019 forecasts	Regulatory risk; demand risk
ES	P/E based, 12month, 17.25x P/E multiple on 2018E EPS	Neutral	10%	Adjusted price target to reflect a 0.5x premium multiple rather than a 1.0x premium given historical averages and upcoming regulatory pressures	Regulatory risk; demand risk
PPL	SOTP, 12month	Neutral	14%	Lower updated estimates for rate case, FX, and operating cost assumptions; we also introduced 2019 estimates; lower PT on lower estimates	Regulatory risk; demand risk; currency risk
SO	P/E based, 12month, 16.25x P/E multiple on 2018E EPS	Neutral	9%	Introduced 2019 estimates while making modest adjustments to SO Power and various rate cases; higher PT on higher estimates	Regulatory risk; construction risk; financing risk
WEC	P/E based, 12month,18.25x P/E multiple on 2018E EPS	Neutral	8%	Updated estimates for new segment disclosures as well as weather-adjusted electric demand	Regulatory risk; demand risk
AEE	P/E based, 12month, 16.75x P/E multiple on 2018E EPS	Neutral	8%	Introduced 2019 estimates and updated forecasts for the 30-year yield, MO rate case, and O&M assumptions	Regulatory risk; demand risk
SCG	P/E based, 12month, 15.75x P/E multiple on 2018E EPS	Sell	2%	Adjusted estimates for rate case and capital expenditure recovery assumptions, while revising assumed nuclear RoE; higher PT on higher estimates	Regulatory risk; demand risk; construction risk; financing risk
WR	--	NR	--	Revise our estimates to reflect operating and pension cost assumptions per disclosures	--
CPN	EV/EBITDA, 12month, EV/EBITDA: 8.0x, M&A EV/EBITDA: 9.5x, 2018 EBITDA	Buy	15%	Revised capacity factor and cost assumptions; maintain multiples; lower PT on lower estimates	Power price risk; volume risk; capacity price risk

Disclosure Appendix

Reg AC

We, Michael Lapides, Daniel Yu, CFA, David Fishman, Dylan Campbell and Siddharth Verma, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Investment Profile

The Goldman Sachs Investment Profile provides investment context for a security by comparing key attributes of that security to its peer group and market. The four key attributes depicted are: growth, returns, multiple and volatility. Growth, returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe.

The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

Growth is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Volatility** is measured as trailing twelve-month volatility adjusted for dividends.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/125/EC is available at http://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Regional Conviction Buy and Sell lists represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return.

Return potential represents the price differential between the current share price and the price target expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

COMPANY UPDATE
November 10, 2016

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

Upcoming Milestones Should Help Stock Performance

What's Incremental To Our View

We expect finalization of contracts and clarity on plant retirement plans in coming weeks to potentially cause consensus estimates to increase.

IMPORTANT POINTS

Following our recent meeting with EXC management at the EEI Conference, we wanted to highlight the following upcoming milestones that could be positive for stock performance:

- **We expect the Zero Emission Credit (ZEC) contracts in New York to be signed on November 18th.** The signing of the contract is also a key milestone in the purchase of the Fitzpatrick (838mw, $110 million price) nuclear plant, which we expect to be completed in 1Q 2017. In aggregate, we estimate $0.15 of annual earnings from these related transactions. While this earnings contribution is already factored in our estimates, the signing of these contracts should increase the visibility of the contribution. In addition, we note that our 2018 estimate is $0.06 above consensus.

- **The Illinois legislature has six days in November to come up with legislation to prevent the Clinton (1069mw) and Quad Cities (1403mw) plants from retiring.** The "point of no return" for the retirement decision is December 1st. Our understanding is that the proposal being looked at would be similar to the New York ZEC program. Our current estimates already assume the plants will be retired, so any decision to keep the plants open would require the economics to be even more favorable for EXC.

- **We expect the sale of the Mystic power plant (1998mw) to be announced before year end.** On a preliminary basis, we estimate a value of $700 million - $750 million for the power plant. We expect the proceeds to be primarily used to pay down merchant generation debt (as part of the $3.0 billion debt reduction target over 2016-2020).

- **EXC appears attractively priced at a 16% P/E multiple discount to the peer group (based on our 2018 estimate).** Assuming a 13.5x P/E multiple (in line with the peer group) on our 2018 estimate of $2.81, we derive our price target of $38. We reiterate our **Buy** recommendation.

- We have included our latest 2016-18 earnings and cash flow models in this report.

Note

1) Our PECO Implied Margin ratios factor in the impact of Gas sales.

2) Rate Base - Com Ed: $10.6bn in 2015, $12.2bn in 2016E, $13.0bn in 2017E, $13.6bn in 2018E; PECO: $6.0bn in 2015, $6.3bn in 2016E, $6.9bn in 2017E, $7.3bn in 2018E;
BGE: $5.0bn in 2015, $5.2bn in 2016E, $5.8bn in 2017E, $6.2bn in 2018E; PEPCO: $8.4bn in 2016E and $9.1bn in 2017E, $9.5bn in 2018E.

3) Earned ROE - Com Ed: 8.0% in 2015, 8.7% in 2016, 8.5% in 2017, 8.7% in 2018; PECO: 11.7% in 2015, 12.2% in 2016, 11.5% in 2017, 11.7% in 2018;
BGE: 10.7% in 2015, 10.5% in 2016, 10.3% in 2017, 10.4% in 2018; PEPCO: 5.7% in 2016, 6.0% in 2017, 7.5% in 2018.

4) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

5) We assume EXC achieves its growth targets for Power and Non Power new business for 2016 onwards.

6) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

7) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

8) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

9) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw , nuclear $110m price) from Q2 2017.

10) We have factored the retirement of Clinton (1069mw) from 6/1/17 and Quad City (1403mw) from 6/1/18.

11) Forward curves as of 10/25/16.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a P/E multiple of 13.5x our 2018 estimate of $2.81 (in line with the peer group), we derive our price target of $38.

RISKS

- Outlook for forward power prices.

- Timing of upcoming EPA regulations.

- Outcome of pending and future rate cases.

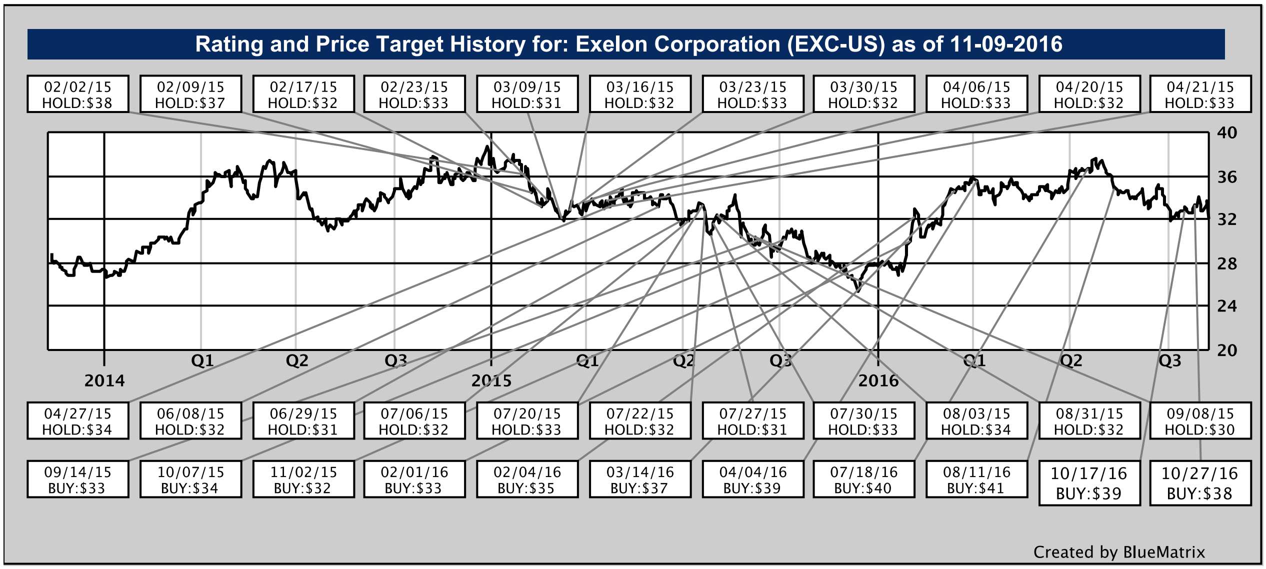
Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.



STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website:
https://suntrustlibrary.bluematrix.com/client/library.jsp
please email the Research Department at STRHEquityResearchDepartment@SunTrust.com
or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision.

As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = drop coverage
CS = Coverage Suspended
I = initiate coverage
T = transfer coverage

The prior rating system until Oct. 7, 2016:
3 designations based on total returns* within a 12-month period**
- **Buy** – total return ≥ 15% (10% for low-Beta securities)***
- **Reduce** – total return ≤ negative 10% (5% for low Beta securities)
- **Neutral** – total return is within the bounds above
- **NR** – NOT RATED, STRH does not provide equity research coverage
- **CS** – Coverage Suspended

*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 11/10/2016):

Coverage Universe			**Investment Banking Clients Past 12 Months**		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	377	58.63%	Buy	86	22.81%
Hold/Neutral	265	41.21%	Hold/Neutral	46	17.36%
Sell/Reduce	1	0.16%	Sell/Reduce	0	0.00%

EXC/ETR – NY PSC adopts Clean Energy Standard (+ for EXC, ETR)

At their open meeting today, the NY Public Service Commission adopted a Clean Energy Standard to help NY State achieve its goal of generating 50% of electricity from renewable sources by 2030 in “the best possible way.” The CES would establish revised Renewable Energy Credits and, important to EXC and ETR, a new Zero Emissions Credit (ZEC), designed specifically to support upstate NY nuclear units, FitzPatrick, Ginna, and Nine Mile Point. With regard to the ZECs and based on our understanding of the discussion today, the PSC has largely adopted Staff’s original proposal for calculating payments. That said, there were some modest changes to the formula for calculating ZEC payments, including allowing the emissions rate conversion to be variable, which Staff suggested would lower ZEC payments in future years. Consistent with the Staff’s proposal, Zero Emissions Credit payments would start in April 2017 and run through March 2029. Passage of the ZEC framework will result in higher revenues for EXC’s merchant generation business starting in 2017 and ensure EXC’s Nine Mile Point and Ginna remain open. We calculate incremental revenues of $123M in 2017 and $164M in 2018 for Ginna and Nine Mile (assuming initial ZEC price of $17.48/MWh). The CES will also likely pave the way for EXC to purchase ETR’s FitzPatrick nuclear plant. Last month, the companies announced that they had been in discussions regarding a potential transaction, with any deal dependent on the state’s passage of the ZEC methodology. An announcement from the companies is expected later this month.

ES – MA legislature passes energy bill late Sunday (+ for ES)

Late last night before the MA legislature broke for summer recess, the House and Senate passed compromise energy legislation that would require electric utilities in the state to enter into long-term contracts for 1,600 MW of offshore wind power and 1,200 MW of hydropower or other renewables (wind, solar). The passed bill did not include a provision that would prohibit electric ratepayers from paying for new gas pipelines as had originally been included in the Senate’s proposed energy bill, which would have been negative for ES’s Access Northeast gas pipeline expansion project. We view the legislation as favorable for ES by likely creating new transmission investment opportunities in order to connect new offshore wind and renewables. We also believe ES’s Northern Pass will be well positioned to secure contracts to supply hydropower to the state.

EXC, DYN – IL House Committee considers energy bill amid vocal opposition

On Wednesday afternoon the Energy Committee of the Illinois House of Representatives heard the best part of five hours of at times noisy testimony on Exelon's mammoth energy bill (SB 2814) now dubbed the Future Energy Jobs Bill (FEJB). As would be expected with such a broad piece of energy legislation, certain areas of the new bill drew significant opposition from witnesses during the hearing as well as support from their various proponents and beneficiaries. While the Zero Emission Credits (ZECs) targeted at helping nuclear plants were not without their detractors, the most vigorous pushback seemed to be channeled more towards other areas. Again, not surprisingly, one particularly contentious piece was the so-called Fixed Resource Adequacy Plan (FRAP) which would provide incremental capacity revenues to downstate coal plants – likely those owned by DYN – which many felt had been added to the mix with little time for consideration. And opposition was particularly vigorous for the proposed elimination of net metering and shift towards more demand-based utility rates. This was predictably a notable flashpoint for the solar industry representatives and we found ourselves wondering if this might be an area that may be negotiated out of the bill in future iterations.

Committee votes (9-1) to move forward, but bill still a work in progress

There are only four more days scheduled in the legislature's ongoing Veto Session (Thursday this week and Tues-Thurs 11/30-12/1) so time is clearly getting very short. And next steps remained somewhat opaque to us as at the close of today's hearing. Right at the end the Committee voted (9-1) to recommend adoption of the bill and move it to the House floor. Immediately prior to this vote, however, it was specifically stated that the bill would be held on second reading with several members seeking assurances that it would yet be brought back before the Energy Committee with further amendments and conditioning their votes on this understanding. Bill sponsor Rep. Robert Rita's closing comments highlighted imminent threat of closure for Exelon's Clinton and Quad Cities nuclear plants absent the support provided for in the bill. At the same time he acknowledged that the legislation may still require changes and indicated he intends to continue "working through" the issues brought up at today's hearing before returning to the Energy Committee with amended language. In this discussion Committee Chair Linda Chapa LaVia specifically requested that the Attorney General and AARP should be included in ongoing discussions. Net/net our prior experience with the Illinois state legislature and energy bills reminds us that the process is never simple and often subject to last-minute surprises and intriguing procedural twists. As such, our sense is that SB 2814 remains very much in play, but still far from assured of ultimate passage and a work in progress likely to be further refined as the legislative process unfolds over the next two weeks.

Meeting List for November Edison Electric Institute (EEI) Conference

The 51st Edison Electric Institute Financial Conference is being held from November 6 to November 9 in Phoenix, Arizona. We will be hosting small group meetings with management from several utilities and power companies over the course of the conference. All meetings will be held at the JW Marriott Desert Ridge Resort & Spa, with specific locations to be provided at a later date to confirmed attendees. Please see our team's current meeting schedule below, but note that we will likely add to this later as we get closer to the event. These meetings are by request only; please submit requests directly to Jonathan Arnold via email at jonathan.arnold@db.com.

Figure 1: DB Utilities & Power – 2016 EEI Meeting List

Sunday, November 6th

6:30 PM	CenterPoint Energy (CNP)

Monday, November 7th

8:00 AM	FirstEnergy (FE)
9:00 AM	Exelon Corp. (EXC)
10:00 AM	Public Service Enterprise Group (PEG)
11:00 AM	Avangrid (AGR)
12:00 PM	CMS Energy (CMS) - Lunch
1:00 PM	PG&E Corp. (PCG)
2:00 PM	American Electric Power (AEP)
4:00 PM	Dominion Resources (D)

Tuesday, November 8th

9:00 AM	Entergy (ETR)
11:00 AM	Xcel Energy (XEL)
12:00 PM	PPL Corp. (PPL) - Lunch
1:00 PM	Edison International (EIX)
2:00 PM	WEC Energy Group (WEC)
3:00 PM	Duke Energy (DUK)
4:00 PM	NextEra Energy (NEE)

EXC / DYN – Future Energy Jobs Bill (FEJB) takes shape in IL Veto Session

Today, the Illinois legislature's Veto Session begins. EXC, the state's largest utility and power company, is urging the legislature to pass a comprehensive energy reform bill that would save its 2 challenged nuclear plants from closure. Per press reports, key components of the compromise bill include a zero emissions credit for the nukes, a doubling of the state's energy efficiency goals, support for five microgrids, and strengthening IL's renewable portfolio standard, with ~$200M/yr of funding. Also reportedly included, is a capacity reform provision designed to support DYN's down-state coal plants. Unlike MISO, which allows participation from neighboring utilities with excess capacity, IL's procurement would likely be specifically limited to in-state generators, likely raising prices. ExGen and DYN would be beneficiaries of the proposed legislation, but we think FEJB, if enacted, could open additional growth avenues for in-state utilities like EXC's ComEd and AEE. During the Veto Session, legislation needs a 3/5 super-majority to pass with immediate effect. Whether this can be achieved in the face of competing priorities and election gains by Republican candidates last week clearly remains a critical question. House Speaker Madigan (D) is yet to articulate a public position on FEJB and reportedly refused to meet with Gov. Rauner yesterday.

PCG – CEO transition announced as PCG continues to focus forward

PCG continues its forward looking transition, announcing that Geisha Williams will succeed Tony Earley as CEO on March 1, 2017. Earley will remain on the Board as Executive Chairman. Williams is well known by the Street having joined PG&E in 2007 from FP&L (NEE). She currently serves as President of the electric business alongside gas business President Nick Stavropoulos. These two roles are now being consolidated under Stavropoulos who will serve as the sole utility President. In our view, the split role is a preferred structure and we believe it is particularly appropriate in this instance given the ongoing need to continue rebuilding regulatory trust with the CPUC. One issue which had been under scrutiny by the commission is the question of whether the lack of a separate senior management for the gas utility might have contributed to the lapses which ultimately led to the San Bruno gas explosion. This will be an area to watch, although with relations between company and commission on an improving track it is to be hoped regulators are on board. Near-term stock wise we see some risk that investors, hoping for a potential take-out, may see reason to be disappointed by the internal transition. While not inconceivable, we never saw an M&A outcome as the central thesis with PCG, and the stock remains one of our limited regulated Buy-rated names predicated on resolution of legacy issues and reverting to a simpler rate base utility story with above-average growth. In fact, for investors concerned about the overall trajectory of clean energy policy under President-elect Trump, California is the state where we have the highest confidence that policy direction will be little changed. Closer at hand, hopes for an agreement to extend the current cost of capital adjustment can only be helped by the recent upward spike in yields.

Michigan – State to work with MISO/FERC on electric reliability solution

Yesterday, Gov. Snyder and MISO announced a plan designed to address future electric reliability concerns in Michigan. Under the plan, MISO states with competitive retail choice would have the option to select a "state compensation mechanism" for purchasing electric capacity rather than participate in MISO's new proposed forward capacity auction. Alternative electric suppliers would be forced to pay the state-established capacity charge or show how they have contracted adequate capacity elsewhere three-years in advance. MI would then be able to use funds collected under the plan to ensure sufficient investment in new capacity by load-serving entities such as CMS and DTE. The proposal will be filed as part of MISO's proposed competitive retail solution changes to FERC for approval early this November, and could take effect in 2018, if approved next year. We view this as a potentially positive development for CMS/DTE, and perhaps a model which could influence Illinois electricity market restructuring talks for EXC and DYN. On a related note, MI Senator Mike Nofs, Chairman of the Senate Energy and Technology Committee, noted late last week that he hoped to move revised energy legislation through the MI Senate this week but these efforts could be complicated by yesterday's proposal, which accomplishes some of the goals of Nofs' legislation. As reported in the press, various MI parties have now called for action on energy legislation to be suspended until the new MISO proposal can be properly vetted.

NEE – Ups bid for Oncor, wins support from Fidelity, Bankruptcy Court

Yesterday, Energy Future Holdings received approval from the U.S. Bankruptcy Court to enter into an amended merger agreement with NextEra for its 80% stake in Oncor. NEE's bid was raised by $300M, to a total EV of $18.7B, which allowed it to secure support from Fidelity, a key EFH creditor which had at one point been pushing its own plan to buy Oncor. With the bankruptcy court approval in hand, NEE and Oncor will file jointly with the Public Utilities Commission of Texas for approval of the transaction, kicking off a 180 day review period. Prior to closing the proposed transaction, NEE also needs bankruptcy court confirmation of EFH's plan of reorganization, which is expected in December, as well as other regulatory approvals. We view this as an important step for NEE's execution of the proposed transaction and the future regulated growth investment opportunities it could provide.

Raising regulated values (again); marking power to a July deck

Despite pulling back modestly in the post-Brexit rally, utilities are still on top YTD (+20%) with global macro unease and low bond yields continuing to fuel demand for low beta, high quality income. While absolute values are elevated vs. history, the relative P/E premium (~7%) remains below prior peaks of ~20%+ (2008 and 2011-12) and solid single-digit growth plus growing 3-4% yields clearly have appeal in today's market given limited alternatives. In this note we preview 2Q and raise regulated target values another turn while keeping a conservative bias and narrow focus. Commodities marked to early July; PJM discount removed now sparks have normalized.

Raising regulated values ~7% with lower-for-longer backdrop extended

Our average regulated PT is up ~7% as we raise our base regulated P/E from 16x 2018E to 17x. This reflects 1) further extension of the lower for longer rate backdrop with 10-year yields down 20bp since our April mark; 2) the higher market multiple; and 3) further time-value accretion as 2018 moves closer. While the overall group is no doubt vulnerable to a major shift in the macro and rate outlook, risks do seem balanced to us with upside potential on relative value if US yields end up falling back sub-1.5% as DB strategists expect.

We remain highly selective in regulateds with a limited Buy list

Our focus in regulated utilities is on secular growth (NEE), superior quality (CMS), and late-stage de-risking transitions (AEP, PCG). While we are raising most regulated PTs, upsides remain fairly slim and constrained by a below-market multiple. PPL is the one exception with an unchanged PT as our lower GBP FX ($1.25 on un-hedged 2018E) offsets the higher target multiple.

Upgrading EXC to Buy; cheap play on regulated assets with catalysts

In merchant generation we have removed our PJM discount from valuations given normalization seen in regional spark spreads as gas prices have rallied off lows. We highlighted this in our June Power Q note but kept the discount pending marking our commodity numbers. Combined with a higher regulated multiple this move bolsters valuations on PJM integrated heavyweights EXC and PEG, with both having lagged top-performing regulateds and IPPs. Of the two we see a better near-term catalyst set with EXC and an entry point for a cheaper way to own regulated assets with attractive growth.

IPP valuations remain attractive; in YieldCos we still prefer NYLD over NEP

IPPs have performed well YTD amid mixed fundamentals, but we continue to see decent upside to target valuations and remain buyers of DYN and NRG. Our price target revision is most positive for DYN (+10%) given PJM discount removal. Within our YieldCo coverage we still see better relative value in Buy-rated NYLD versus Hold-rated NEP – a trade which has worked well YTD.

Detailed quarterly earnings preview work inside starting on page 28

Utility earnings begin on Tuesday with DTE and continue through August 9. 2Q is a shoulder demand period and regional weather data versus last year do not look to be a significant driver. DB estimates show average growth for our coverage ex-IPPs and YieldCos of ~1% on a market cap-weighted basis. We are most above consensus for CMS, XEL, NEE and most below for EIX, ITC, PCG. EXC will not hold a 2Q call but we expect their post-POM analyst day update on August 10 to be a key investor focus this quarter.

Table of Exhibits

Table of Exhibits (Cont'd)

Key ratings and changes

Rating changes and updated investment theses for our Buy-rated stocks are summarized in the following paragraphs. For our full list of rating and target price changes please see Figure 1. Updated estimates which for the most part reflect our July commodity mark are in Figure 2, with an updated comparison of DB estimates with company guidance and consensus in Figure 3. Our valuation methodologies, price target upsides and total returns are in Figure 12, and we discuss individual company quarterly estimates along with updated valuations in our company section beginning on page 28.

Exelon (EXC): Upgrading to Buy, TP raised to $39

Cheaper way to own utility growth with H2 catalysts pending

Target up from $36 to $39 reflecting higher target regulated multiple, removal of PJM multiple discount and detailed quarterly refresh with 2018E up $0.05 to $2.80

We are putting EXC back on the Buy list as we view this genuine hybrid name as a way to add exposure to a superior regulated growth story at a discounted valuation. We also see a favorable catalyst set-up with an Analyst Day coming on August 10 and the potential establishment of a Zero Emissions Credit in NY. With 60% of earnings expected to come from its T&D utilities by 2018, EXC trades at around 13.0x 2018 whereas mostly regulated utilities currently trade at ~17.5x (ex M&A influenced names) on average. We also believe EXC has a more favorable regulated growth story than peers. EXC has indicated that their utility net income growth should be in the 7-9% range (well above peer average) going forward with Pepco Holdings in the mix, although we suspect that it could actually be higher depending on the base year used and whether historical POM earnings are added to that base. Clarity on future growth at the EXC utilities is expected at the Analyst Day. Planned de-levering of the generation company should also help drive higher equity value over time while reducing risk. Separately, we also see potential for incremental value creation at the merchant generation business through the closure of certain value destroying nuclear plants or the establishment of clean energy subsidies for nuclear plants under consideration in IL and NY. Currently, a subsidy through the form of a zero emissions credit (ZEC) looks more likely in NY (potentially as soon as August 1) than in IL where a new law will be required and the legislature is currently on summer recess. Absent new legislation in IL though, we would still expect EXC to move forward with plans to close Quad Cities and Clinton, which EXC has said would lose about $140M in 2017 (excluding hedge value) on a “free cash flow” basis. Clarity on how much these plants are earning presumably could also come at next month’s meeting. Assuming Quad Cities and Clinton are losing as much money as implied by EXC, we believe a shutdown would be accretive to EPS.

AEP (AEP): Reiterating Buy, TP raised to $72

Regulated transition execution story with generation sale nearing

Target up from $66 to $72 on higher target utility multiple plus $1-$2/sh for genco sale optionality (previously zero)

AEP continues to maintain a strategic focus on moving toward a fully-regulated business model and earning a premium valuation relative to regulated peers. We see the potential for a catalyst later this year with an expected announcement of the sale of some of AEP’s merchant generation fleet. AEP might also sell the remaining merchant fleet, though management has also discussed the potential for some (limited) re-regulation in Ohio if new legislation is passed. Overall, we view a sale (or re-regulation) of the generation fleet as a positive for AEP as it would improve earnings quality and predictability and further strengthen management's credibility on execution.

CMS Energy (CMS): Reiterating Buy, TP raised to $46

Top quality regulated at well-deserved premium valuation

Target raised to $46 on higher base regulated multiple; target premium still 15%

We continue to view CMS as an above-average growth utility with below-average execution risks and believe it still merits a significant premium valuation relative to more growth-challenged regulated peers. While upside beyond our $46 price target is limited CMS has shown an ability to execute across a number of conditions and even raised its EPS growth target earlier this year. CMS' ongoing focus on cost containment via process improvements and increasing efficiency continues to deliver results, keeping rate increases lower despite significant rate base investments.

NextEra Energy (NEE): Reiterating Buy, TP raised to $134

Rate case and renewables execution could support LT earnings growth

Target raised from $123 to $134 on higher regulated P/E and higher NEER multiple reflecting growing appeal of contracted renewable book

We continue to view NEE as a premium large cap utility, with above-average growth in EPS (6-8%) and dividends (12-14%) through 2018. NEE's Florida utility FP&L has low bills, high reliability, organic load growth, and strong customer service, arguably an optimal set up in an important rate case year. While the initial rate case bid-ask is unsurprisingly large with different views on ROEs, capital structure, depreciable lives etc., FP&L has worked constructively with stakeholders and regulators in the past and we would expect that to continue. A positive rate case outcome, allowing NEE to provide earnings visibility through the end of the decade, could remove an overhang although we note that investors have seemed relatively unfazed by the case to date. Outside of the utility, NEE's industry-leading renewable development business is well positioned for sustained earnings growth with 5+ year clarity on tax policy and an upcoming management update on potential wind repowering opportunities expected later in the year (likely on the Q3 call). Outside of the current footprint we also could also finally see a resolution of the Oncor M&A process in the coming months, which if NEE were successful, would likely provide earnings accretion, business mix and credit enhancement, plus additional long-term rate base investment opportunities.

PG&E Corp. (PCG): Reiterating Buy, TP raised to $68

California growth at a discount with past overhangs nearing resolution

Target raised from $62 to $68 on higher base utility target multiple plus 2-3% premium for ongoing progress towards L-T overhang resolution

We continue to believe PCG is in the latter stages of a turnaround story, with the company moving to resolve long-standing gas safety-related proceedings. We view this year's dividend increase as a key step forward in PCG's "back to basics" regulated strategy. PCG also has a solid growth outlook driven in part by state-mandated clean energy objectives as well as general infrastructure replacement. We continue to view California as an overall constructive regulatory environment and believe the recently-announced California PUC reform package removes a potential overhang of a major regulatory overhaul.

Dynegy Inc. (DYN): Reiterating Buy, TP raised to $23

DYN continues to surprise with value-enhancing initiatives

Target up from $21 to $23 with lower 2017 and 2018 EBITDA trumped by removal of PJM discount

We are reiterating our Buy on Dynegy, as the company's transformation to a large, regionally diverse, primarily gas-based generation company is nearly complete. A large percentage of DYN's margins are from contracted capacity revenues, where we see significant upside potential (PJM transition to 100% Capacity Performance, MISO tightening and reform potential). DYN's fuel-diverse fleet provides downside protection from lower gas prices (PJM CCGTs), while preserving upside optionality to higher gas prices (coal units, ISO-NE and ERCOT CCGTs). And with its latest Engie transaction, DYN provides exposure to Texas which could tighten with load growth, a lack of new builds and coal retirements – the latter both looking likely to us without meaningful gains in the pricing. With permanent financing for Engie in place and DYN securing 100% control of the assets, we forecast significant free cash flow which the company could use to pay down debt and reward shareholders as soon as 2017. Value-enhancing asset sales (e.g. Independence CCGT) could provide more of a near-term catalyst.

NRG Energy (NRG): Reiterating Buy, TP raised to $20

Recent refinancings provide more time value for the upside option

Price target raised from $19 to $20 with modestly lower 2018 EBITDA offset by cash benefits from Aurora sale and lower interest costs

NRG is a very different company from this time last year. A good chunk of senior management has turned over and the new NRG has a focus on the bottom line rather than top line growth. In recent months, NRG has raised over $4 billion of new debt at attractive rates to repay near and medium term maturities, positioning the company for upside in power and gas prices later in the decade. NRG's leading position in wholesale and retail electric markets is rare and strategically valuable, while its repositioning towards capacity auctions and contracted cash flows helps protects the downside. Environmental CapEx is expected to be way down beginning in 2H16, and with increased cost cutting initiatives, NRG should be poised to deliver significant free cash flow in 2017+. A continued consistent message and more reliable execution will be key to re-earning investor support longer-term.

NRG Yield (NYLD): Reiterating Buy, TP unchanged at $18

Healthy coupon with strategic options intact

NYLD's ~6% current dividend is safe in our view, with 15% DPS growth through 2018 feasible even without new drop downs due to its low CAFD payout ratio. Additionally, we view NYLD's independent CEO position as an improvement, as he would likely be interested in accretive growth whatever the origin (NRG or elsewhere). Further, the absence of an IDR provides NYLD a cost of capital advantage versus some peers.

Commodity, value mark

Marking estimates and valuations to a July deck

In conjunction with our Q2 earnings preview, we are marking our regulated values to a higher base regulated target multiple (17x 2018E vs. 16x before) and commodity exposures to an early July deck (see page 23). As shown in Figure 1 our average PT increases +7% with the highest being PCG (+10%) where we have factored in the higher base multiple and also added a modest relative premium (2-3% vs. zero before). This reflects progress on resolving key multi-year overhangs and our continued positive view of California as a growth utility investment jurisdiction. DYN sees a ~10% target uplift as removal of our PJM discount offsets lower 2017E and 2018E EBITDA marks (-$70M and -$30M, respectively). AEP, CNP and NEE also see above-average 9% increases on a new generation asset sale adder, higher ENBL market value and higher NEER multiple, respectively. As noted on our front page we keep our regulated Buy list intact although a below-market target multiple keeps price target upsides relatively slim – most obviously with CMS which we view as a core high quality holding with returns from here much more likely to come from execution of superior (~8%) growth and yield (~3%) rather than multiple expansion. Our EXC upgrade reflects underperformance versus growthy regulated and IPP peers, higher regulated value, removal of the PJM discount in our merchant valuation and relative cheapness versus pure-play peers.

Figure 1: Summary of Rating and Price Target Changes

	Stock	Price	DB Stock Rating		DB Price Target				Target	Div.	Yield	Total

Broad-based utility and power leadership in 2016

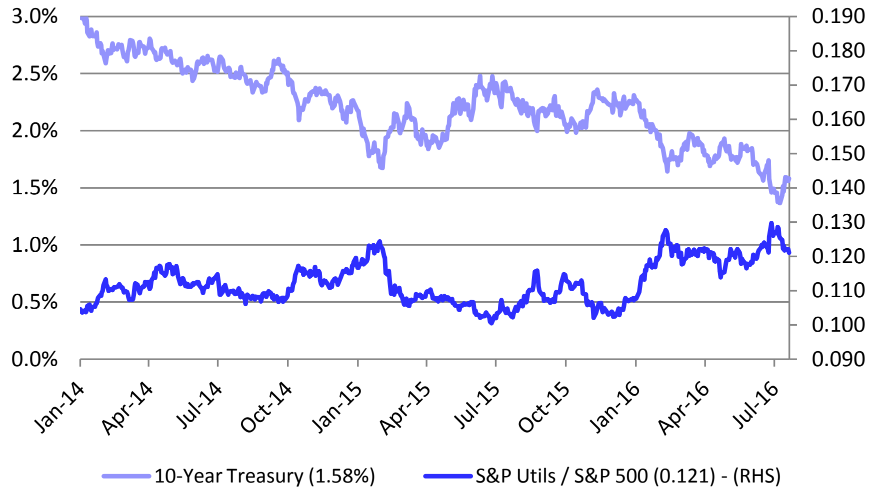
Source: Deutsche Bank

Valuation thoughts

Yields the key driver; marking higher but still selective

Heading into 2016 utility stocks were trading at under 15x 12M forward earnings and looked reasonable value to us at a near-10% discount to the broader US market. Back then investors were fearful of utilities ahead of an expected Fed rate hike cycle, although at the time we argued that the Fed risk was priced in so long as rate hikes were accompanied by a flattening yield curve (as in 2004). In the event, the market environment and macro turbulence which have prevailed so far in 2016 have generally pushed out expectations for timing of Fed hikes and substantially eliminated the fear which dominated the US utility investment backdrop in late 2015. Now after YTD gains of ~20% we see the 12M forward utility P/E multiple at a new high of ~18.5x, effectively having broken through prior resistance in the 17-18x range. Whether this will represent a new high and how long it can be sustained are questions that may well have more to do with the macro picture than underlying utility fundamentals. That said, at these levels we continue to view superior quality and low risk of earnings disappointment as key thematic criteria in stock selection given undeniably elevated valuations.

Figure 14: S&P Utils / S&P 500 vs. 10-Year Yield (2014-2016)



Source: Deutsche Bank

DB 10-Year yield forecast is 1.25% at year-end 2016; hard to get too bearish utilities if that scenario plays out

In Figure 14 above we chart relative performance of the S&P Utilities index versus 10-Year Treasury yields showing the marked correlation of utility strength (and peaks) with periods when the 10-Year bond yield has moved towards or below the 1.5% level. This may end up being the key issue for H2 sector positioning and while we remain as uncertain on which way the macro will break as anybody else, the DB year-end 2016 10-Year forecast of 1.25% is one of the factors leading us to mark our regulated values higher and remain invested in the few regulated names where we still have Buy ratings.

Global context matters - overseas incoming call volume on the rise

Looking at a broader macro context, while we typically view utility stocks as the ultimate domestic plays to be evaluated relative to their local market, it seems increasingly apparent that demand for the group is being further boosted by investors facing ultra-low and negative rates in other geographies - notably Europe. Anecdotally over the past few weeks we have seen an uptick in our incoming requests for sector intro calls from investors outside the US, many of whom are clearly looking at the group with fresh eyes and seem attracted to prospects of predictable mid-single-digit earnings growth, low volatility and 3-4% dividend yields with much less apparent concern over valuation levels than our typical US-focused utility clients. For example, we have been asked more than once lately for comparisons of US utility yields with German bunds - not a relationship we typically track, but a notable line of questioning nonetheless.

Macro-wise it seems clear that low global bond yields and the prospects of these being sustained for substantially longer than previously expected are the primary factors driving demand for US utility stocks at what are unprecedented valuations.

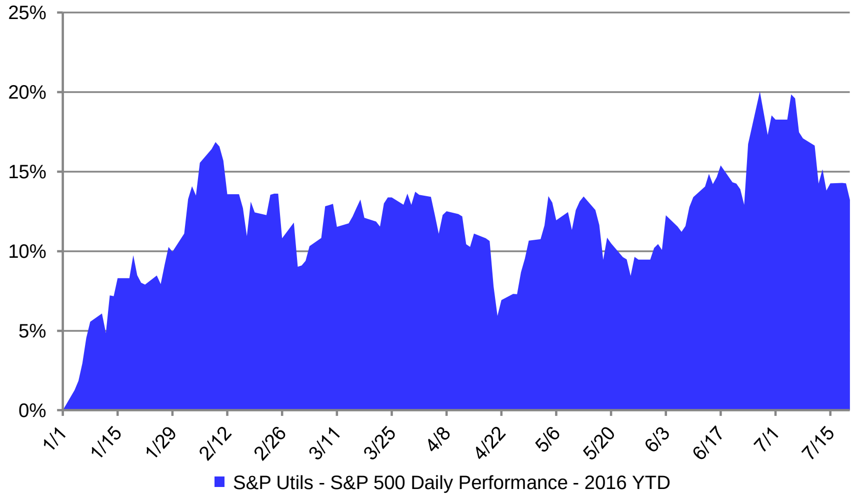
Target regulated valuation of 17x remains below current trading levels

Factors driving utility valuations higher seem fairly clear - and by no means certain to reverse quickly. That said, experience in the post-crisis environment has taught us that reversals in macro sentiment by definition tend to come quickly and catch the market unawares. Reflecting such caution, while we have raised our average regulated valuation by ~7% our new base target regulated P/E multiple of 17x 2018E remains almost a turn below where we see the average regulated stock in our coverage currently trading.

Removing PJM discount on normalized sparks; upgrading EXC

As discussed elsewhere in today's update we are eliminating the valuation discount we have been applying to PJM-heavy generators. This is additive to the valuations of PJM hybrids EXC and PEG, both of which also benefit from our higher target utility valuations. Combined with a higher regulated multiple this move bolsters valuations on PJM integrated heavyweights EXC and PEG, with both also having lagged regulateds as well as IPP peers. Of the two we see a better near-term catalyst set with EXC and an entry point for a much cheaper way to own regulated assets with total return north of 10% and a now-growing dividend. We also view adding EXC as an element of portfolio hedging against risks of a macro-driven pullback in more defensive bond proxy pure-play regulateds.

Figure 15: S&P Utilities vs. S&P 500 Daily Performance (2016 YTD)



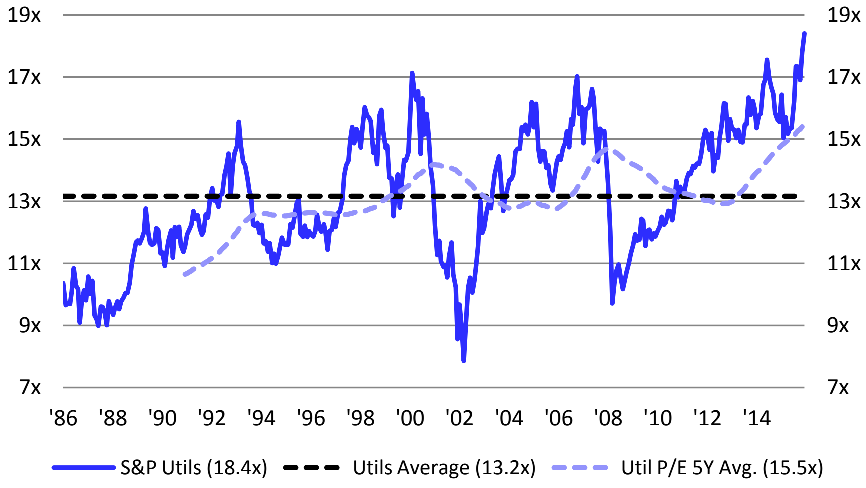
Source: Deutsche Bank, Reuters

Multiple sets a new high as low yield paradigm extended

As shown in Figure 16 the sector multiple has now spiked from sub-15x in late 2015 to a new high of 18.4x, causing us to raise the scale on our chart for the first time ever. While valuations already felt extended at ~17.5x in April the fact that the P/E has now broken through prior resistance further raises the question whether we are indeed entering a new paradigm. While our natural value-oriented bias makes us inherently reluctant to propose such a conclusion we certainly cannot ignore the prevailing low-return environment which is causing yield-hungry investors to further push the historical envelope on value.

For historical context, today's valuation is now beyond the level where the group peaked in early 2015 as well as prior historical peaks in 2001 (pre-Enron) and 2007 (natgas peak). On an absolute basis the current multiple is a 3-turn (20%) premium to the 5-year average and over five turns (40%) ahead of our long-run average which looks back to the mid-1980s. Unless a return to much higher growth, inflation and interest rates is in the cards we would continue to argue that recent history is likely a better guidepost than the long-run average. Even so, utility valuations are clearly at the high end of their historical trading range and therefore vulnerable to any significant shift in macro narrative.

Figure 16: S&P Utilities P/E vs. Long-Run and 5-Yr Average



Source: Deutsche Bank and FactSet

Relative now +7% but only in-line with 5-year average

Relative to the broader market the P/E picture is significantly less extended with the group trading 1.1 turns higher than the S&P 500 or a premium of 6%. This isn't dramatically higher than the 3% premium we saw in our April update although clearly the group has now moved significantly from the 10% discount level ahead of the first Fed rate hike in December. It will be interesting to see how valuations hold up if recent heightened expectations around a September Fed hike continue to build. While short-term investors might certainly want to bear that risk in mind over the coming weeks, from our perspective the more important driver will likely be the 10-year and steepness of the curve. Versus history we note that today's 6% premium is clearly far above the long-run 11% discount but actually still more or less in line with the 5-year average (7%).

Removing PJM discount from merchant power

Lower heat rates remove some PJM downside risk

In February, coincident with our inaugural DB Power Q analysis, we lowered the EBITDA multiple for PJM-based EBITDA by a half turn, reflecting what we argued at the time were likely to be unsustainable market heat rates. These heat rates were both well above PJM's own history and that of comparable power markets. We argued that if the heat rates were to normalize, profitability could be materially lower justifying the discount. Since then, our thesis largely played out with an additional 5 GW of low-cost supply additions green-lighted, while only 2 GW of low-cost plants announced retirements. Additionally, the pipeline of projects has also increased. Masking this pressure, gas prices rose significantly, helping support power prices, but causing material heat rate and spark spread compression. Having now incorporated the lower margins into our estimate, we believe it is appropriate to remove the PJM discount, as heat rates appear to be more in line with other markets as shown in Figure 23 below. Companies impacted where we applied the discount for PJM-heavy exposure include DYN, EXC, FE and PEG. Detailed valuations and risks are included beginning on page 38.

Source: Deutsche Bank, SNL

Henry Hub up 5-15% since April. Forwards roughly in-line with DB commodity view.

Northeast gas saw further increases

PJM heat rates declined reversing their multi-quarter gains as power price remained "sticky"

Texas and California heat rates remained resilient

Strong gains in Northeast, Texas and California power prices driven by gas

Lower spark spreads in PJM

Higher sparks in Texas, California and NYC

CAPP coal prices declined, NAPP and PRB increased

Rising forward gas prices reverse (some of) 2015 pain

In 2015 and into 1Q16, gas prices fell bringing down wholesale power prices significantly in gas-heavy regions Texas, California and New England. Prices in PJM, where coal was on the margin over half the time, were more resilient leading to record high spark spreads in PJM. In 2Q16, these trends reversed as the gas supply and demand picture tightened. Texas, California and New England saw sharp increases in forward power prices and spark spreads in the quarter. On the other hand, PJM predictably saw little movement in its power price (as it was still coal driven) and the significantly higher gas costs will eat into anticipated gas plant margins.

Company updates

American Electric Power (AEP)

AEP is scheduled to report on July 28 and hold a call that day at 9:00am. Our 2Q16 EPS estimate is $0.88 versus $0.89 consensus and $0.88 in 2Q15. On the call, we expect questions on AEP's ongoing efforts to sell its unregulated generation fleet and the potential for Ohio re-regulation.

Figure 37: AEP Quarterly EPS Build-up

Quarterly EPS Build-up	EPS	Notes
2Q15 EPS	**0.88**	
Rate changes	0.06	
Lower Generation & Mktg earnings	(0.12)	
Weather	0.02	Weather was +$0.01 in 1Q16
Higher D&A	(0.02)	
Higher interest expense	(0.02)	
Higher transmission earnings	0.02	
Normal load	0.02	
Lower O&M	0.05	
2Q16 EPS Estimate	**0.88**	

Source: Deutsche Bank

Valuation – Raising PT to $72 from $66

We value AEP by applying a 17.9x P/E multiple to our 2018 EPS estimate. This is a 5% premium to our base regulated target of 17x. We then add in $1.50/sh of value for AEP's merchant generation fleet representing proceeds in line with recent trade press commentary and a conservative view of tax leakage as well as ability to deploy proceeds accretively. A sales process for a portion of the fleet is well underway (final bids expected in Q3), and we expect the remaining fleet to either be sold or potentially re-regulated (if the Ohio legislature passes new legislation).

Risks

Downside risks for AEP include disallowance of capital spending projects or ROE adjustments in regulatory proceedings. A renewed economic downturn could also impact our estimates and slow growth at the utilities.

Calpine Corp (CPN)

CPN is scheduled to report on July 29 and hold a call that day at 10:00am. Our 2Q16 adjusted EBITDA estimate is $400M, slightly below consensus of $405M and below last year's $457M. On the call, we expect CPN will continue its recent efforts to outline its upside sensitivity to higher gas prices and tightening power markets. We also expect CPN will highlight its financing activities in the quarter which leave it with no maturities until 2019, and no recourse corporate maturities until 2022. While certain to be a topic of questions, we believe CPN will wait until after the summer is completed to address further capital allocation decisions.

Figure 38: CPN Quarterly Adjusted EBITDA Build-up

Calpine Corp	Estimate	Commentary
2Q15 Adj. EBITDA	**457**	
Regulatory capacity payments	10	Higher RPM revenues in 1H 2016
Portfolio changes, net	10	Addition of Granite Ridge and Garrison
Contracts	(10)	Pastoria contract expiration
Market prices / hedges /costs	(67)	Lower spark spreads and volumes in PJM and Calif, partially offset by hedges
2Q16 Adj. EBITDA	**400**	

Source: Deutsche Bank

Estimates

Our 2016 adjusted EBITDA estimate of $1,900M is unchanged. We are increasing our 2017 estimate from $1,975M to $2,050 and our 2018 estimate from $2,100M to $2,175M on higher power prices and spark spreads in Texas and California, per our new deck.

Valuation – PT up $1 to $18

We value CPN, and peer IPPs, using a weighted average of two methodologies; EV/EBITDA (75%) and Free Cash Flow yield (25%) as shown in Figure 39 below. We value CPN at 7.0x 2018 EV/EBITDA and 14% FCF yield, a premium to IPP peers due to its more attractive gas-fired portfolio (newer assets, better environmental footprint and EBITDA to cash conversion). We also add the NPV value of CPN's NOL position above peers, which amounts to ~$1/sh.

Figure 39: Calpine Valuation

CPN EV/EBITDA Valuation			
	2018E	**Multiple**	**Value**
2018 Adjusted EBITDA	2,175	7.0x	15,225
Relative benefit of NOLs above peers			335
Enterprise Value			**15,560**

Add: Net debt from unconsolidated projects			110
Less: Adj. for 75% interest in Russell City			(133)
2018E Adjusted Net Debt			**10,107**
Total Equity Value			**5,453**
2018E Diluted Shares Outstanding			316
EV/EBITDA Based Valuation (75% Weight)			**$17**

CPN FCF Valuation	
2018E Free Cash Flow	934
Target FCF Yield	14.0%
	6,675
Relative benefit of NOLs above peers	**335**
Total Equity Value	**7,009**
2018E Diluted Shares Outstanding	316
FCF Yield Based Valuation (25% Weight)	**$22**
Price Target (75% EV/EBITDA, 25% FCF Yield)	**$18**

Source: Deutsche Bank

Risks

Upside risks are higher spark spreads, value-enhancing M&A and lower interest rates.

Downside risks are lower spark spreads, increased leverage, operational issues, higher interest rates, increased renewable energy penetration, and market intervention.

CenterPoint Energy (CNP)

CNP is scheduled to report on August 5 and hold a call that day at 11:00am. Our 2Q16 EPS estimate is $0.19 versus $0.19 in 2Q15 and $0.20 consensus.

Figure 40: CNP Quarterly EPS Build-up

Quarterly EPS Build-up	EPS	Notes
2Q15 EPS	**0.19**	
Customer growth	0.01	
Higher D&A	(0.02)	
Rate relief	0.05	
Higher O&M	(0.02)	
Less favorable weather	(0.02)	
2Q16 EPS Estimate	**0.19**	

Source: Deutsche Bank

Valuation – Raising PT to $24.50 from $22.50

We value CNP using a sum-of-the-parts analysis. For CNP's utilities, we apply a 17.3x P/E multiple to our 2018E. This is a 2% premium to our target regulated utility multiple reflecting our expectation for above-average rate base growth, solid earnings growth, and ongoing customer growth partially offset by the inclusion of the non-utility gas marketing business and the absence of an execution track record relative to some utility peers. We value CNP's share of ENBL in two parts. The limited partner (LP) units held are valued at ENBL's most recent market value. For the general partner (GP), we value the expected 2018 cash flows at a 30x multiple, though we note that given the current small size of the expected GP cash flows they do not have a meaningful impact on our valuation.

Figure 41: CNP Sum-of-the-Parts Valuation

CenterPoint Energy (NYSE: CNP) Sum of the Parts Valuation	
CNP Ex-Midstream	
Net income	414
P/E multiple	17.3x
Utility Equity Value	**7,175**
Enable Midstream (ENBL)	
Share price	14.62
CNP units held	233.8
LP Equity Value	**3,419**
2018 GP Cash Flows	1
CNP Share	40%
Multiple	30.0x
GP Equity Value	**13**
MLP Equity Value	**3,432**
Total Equity Value	10,607
2018E Share Count	432
Equity Value Per Share	**$24.50**

Source: Deutsche Bank

Risks

Upside risks for CNP include faster growth at the utilities, whether through additional investment or stronger customer growth. Higher commodity prices or faster growth at the MLP are also upside risks. Downside risks include the inability to grow earnings with rate base, lower commodity prices, and slower MLP growth.

CMS Energy (CMS)

CMS is scheduled to report on July 28 and hold a call that day at 10:00am. Our 2Q16 EPS estimate is $0.37 versus $0.25 in 2Q15 and $0.36 consensus. On the call, we expect discussion of the proposed Michigan energy legislation and the ongoing electric rate case.

Figure 42: CMS Quarterly EPS Build-up

Quarterly EPS Build-up	EPS	Notes
2Q15 EPS	**0.25**	
Weather	0.04	
New electric/gas rates	0.07	Apr. gas settlement; Dec. electric decision
Lower O&M and weather offsets	0.06	Adjusting spending/donations to offset weather
Higher investment costs	(0.05)	Depreciation, property taxes
2Q16 EPS Estimate	**0.37**	

Source: Deutsche Bank

Valuation – Raising PT to $46 from $43

We value CMS by applying an 19.6x P/E multiple (15% premium to our target 17x regulated utility multiple) to our 2018 EPS estimate. In our view, a strong premium for CMS is justified based on CMS' execution track record, Michigan's constructive regulatory jurisdiction, and above-average growth.

Risks

The key downside risks for CMS include the disallowance of major capital spending projects, as we expect roughly $17B of spending for 2016-2025 to drive rate base growth, and any inability of the utilities to earn their authorized returns. A negative turn in Michigan's economy is also a downside risk for CMS. A new economic downturn in the state would likely further increase rate pressure and could restrict growth opportunities. Rising natural gas prices would also be a risk since they would push CMS' expected annual electric rate increases higher. A negative outcome in Michigan's review of its 2008 energy legislation could be a risk.

Consolidated Edison (ED)

ED is scheduled to report on August 4 after the market close. They do not hold an earnings call. Our Q2 EPS estimate is $0.69 versus $0.77 last year and $0.69 consensus.

Figure 43: ED Quarterly EPS Build-up

Quarterly EPS Build-up	Est	Notes
Q2 2015 EPS	**0.77**	Excludes mark-to-market
CECONY rate plans	0.07	
CECONY O&M	(0.02)	
Depreciation/property taxes	(0.04)	
Net interest expense	(0.02)	
Other	(0.09)	Back out regulatory benefit in Q2-15, other
O&R	0.02	
Competitive	0.02	Crestwood JV, renewables
Parent	-	Assume flat
Q2 2015 Shares	**0.71**	Excludes mark-to-market
Dilution	(0.01)	Dilution related to equity offering
Q2 2016 EPS	**0.69**	

Source: Deutsche Bank

Estimates

We have adjusted our model to account for ED's joint venture with Crestwood, which closed last quarter. The transaction is expected to be neutral to 2016 but accretive thereafter. We are maintaining our 2016E of $4.05, which is at the top end of management's guidance range ($3.85-$4.05). We are raising our 2017E by $0.05 to $4.25 but are maintaining our 2018E of $4.35. Generally, we see Crestwood as a few pennies accretive assuming relatively steady EBITDA, although with our rounding convention, our 2017 is up a nickel while our 2018 is unchanged.

Valuation – Raising PT to $74 from $70, maintaining Sell

Our price target is based on a 17.0x P/E multiple applied to our 2018 EPS estimate. We believe ED merits no higher than an average valuation given below average growth potential and a pending investigation into the 2014 Harlem explosion, which could result in financial penalties. These negatives are offset by ED's arguably low risk business profile as a primarily delivery-only utility serving NYC which also benefits from revenue decoupling and certain cost deferral mechanisms.

Risks

Upside risks include better-than-anticipated rate case outcomes, including the pending CECONY rate case, stronger-than-anticipated earnings at the competitive business, faster-than-anticipated rate base growth/capital spending, lower financing needs, reduced pension plan contribution requirements, and lower market interest rates.

Dominion Resources (D)

D is scheduled to report on August 3 and hold a call that day at 10:00am. Our 2Q16 EPS estimate is $0.70 versus $0.73 last year and $0.71 consensus. On the call, we expect an update on the progress of receiving the relevant approvals for the Questar (STR, Not covered) acquisition as well as commentary on the FERC approvals process for the Atlantic Coast Pipeline.

Figure 44: D Quarterly EPS Build-up

Source: Deutsche Bank

Estimates

We are raising our 2017 and 2018 EPS estimates by $0.05 each to $3.85 and $4.20, respectively, based on our updated commodity price deck.

Valuation – Raising PT to $78 from $72

We value D on a sum-of-the-parts valuation. We apply a 19x P/E multiple to our 2018 EPS estimate for D's electric utility (VEPCO) and parent earnings. We value D's merchant generation and retail EBITDA at 7x, in line with our target multiple for merchant generation. We value D's gas distribution at 10.5x, reflecting its regulated growth profile, and gas transmission at 10.5x, recognizing the strong growth potential. We then add in D's stake in Dominion Midstream (DM, Not Covered) at market value and value D's general partner ownership at 25x discounted 2020 cash flows from DM, which we believe is justifiable given strong growth expectations for the GP cash flows. We also include STR by a weighted average EV/EBITDA multiple to consensus 2018 EBITDA. Our weighted average multiple reflects 10.5x for STR's gas utility and gas pipeline business (consistent with the multiples we apply to D's similar businesses) and 8x for STR's regulated oil and gas business.

Figure 45: D Sum-of-the-Parts Valuation

Dominion Resources (NYSE: D)
Sum of the Parts Valuation

Business Segment	Valuation Metric	2018E	Multiple	Value
VEPCO+Parent	P/E	1.97	19.0x	24,350
Add: 2018 VEPCO/Implied Parent Debt				26,487
VEPCO+Parent EV				50,837
Merchant Generation/Retail	EV/EBITDA	515	7.00x	3,606
Gas Distribution	EV/EBITDA	421	10.50x	4,420
Gas Transmission (less DM)	EV/EBITDA	1,369	10.50x	14,373
STR Consensus EBITDA	EV/EBITDA	651	9.45x	6,152

Less: Total Net Debt (2018E)				(34,353)
Total Equity Value				**50,511**
Diluted Average Shares Outstanding (2018E)				648
Equity Value Per Share				**$78**

Source: Deutsche Bank

Risks

The key downside risk for D would be the disallowance of major capital spending projects, which drive our earnings growth outlook. Inability to execute on growth projects, including the Cove Point LNG export project or Atlantic Coast Pipeline are also negative risks. Unfavorable changes to Virginia's utility regulatory framework would be a negative. Upside risks include higher gas and/or power prices than we assume at the merchant generation segment and significant additional growth opportunities at the regulated segments, which we view as most likely at gas transmission.

DTE Energy (DTE)

DTE is scheduled to report on July 26 and hold a call that day at 9:00am. Our 2Q16 EPS estimate is $0.87 versus $0.76 in 2Q15 and $0.89 consensus. On the call, we expect to hear updates on the proposed Michigan energy legislation and the NEXUS pipeline approvals process.

Figure 46: DTE Quarterly Operating Income by Segment

Quarterly Op. Income by Segment	2Q15 Op. Inc.	2Q16 Op. Inc.	Key Drivers
DTE Electric	111	126	New electric rates, weather, no decoupling amort.
DTE Gas	(7)	(4)	Weather
Gas Pipelines & Storage	25	27	
Power & Industrial	18	20	
Energy Trading	3	-	Assume no contribution from Trading
Parent	(13)	(14)	Assume parent even across remaining quarters
DTE Consolidated	**137**	**156**	
Shares Outstanding	179	180	
Operating EPS	**0.76**	**0.87**	

Source: Deutsche Bank

Valuation – Raising PT to $96 from $90

We apply an 18.7x P/E multiple to our 2018 EPS estimate for DTE excluding the Reduced Emissions Fuel (REF) business. This multiple reflects a 10%

premium to our 17x target regulated electric utility multiple, reflecting DTE's solid Michigan utilities with a strong regulatory construct partially offset by the inclusion of DTE's Power & Industrial segment. We add in ~$1/share for DTE's REF business. This represents the NPV of estimated future REF earnings through 2021 when the relevant tax credit expires. We note that our treatment of this segment represents a value decrement of $6/sh versus a more simple capitalization of the 2018 earnings contribution at our target multiple.

Figure 47: DTE Sum-of-the-Parts Valuation

DTE Energy (NYSE: DTE)
Sum of the Parts Valuation

Business Segment	Valuation Metric	2018E	Multiple	Value
DTE ex-REF	P/E	$5.07	18.7x	17,191
Reduced Emissions Fuel Tax Credit NPV				188
Total Equity Value				**17,379**
Diluted Average Shares Outstanding (2018E)				181
Equity Value Per Share				**$96**

Source: Deutsche Bank

Risks

Upside risks include stronger rate base growth than we assume and a stronger economic recovery, which could increase capital spending opportunities. Stronger-than-expected earnings from the Reduced Emissions Fuel (REF) business is also an upside risk. Downside risks include less favorable rate case outcomes than we assume, especially if they disallow capital spending, a renewed economic downturn in Michigan, and a slowdown at DTE's midstream business.

Duke Energy (DUK)

DUK is scheduled to report on August 4 and to hold a call that day at 10:00am. Our 2Q16 EPS estimate is $1.03 versus $0.95 last year and $1.01 consensus. On the call, we expect updates on the status of the LatAm sale, timing for the Piedmont merger to close, and impacts from the recently signed NC coal ash legislation.

Figure 48: DUK Quarterly EPS Build up

Other		
Q2 2015 Shares	**1.02**	
Share Issuance	0.00	
Q2 2016 EPS	**1.03**	

Source: Deutsche Bank

Valuation – Raising PT to $85 from $80

With DUK pursuing a sale of its LatAm business and purchase of Piedmont Natural Gas, we believe it is appropriate to use a pro forma adjusted earnings base in our valuation methodology. Therefore, we adjust our current 2018E of $5.00 for potential dilution from the LatAm sale (we estimate about $0.20/sh) and accretion from the proposed PNY deal (we estimate $0.05-$0.08/sh). We then apply a 17.4x P/E multiple to an adjusted 2018E, which is a 2-3% premium over our target average regulated utility multiple. We believe DUK will merit a premium following the sale of its LatAm business given a more fully regulated business mix, large cap bellwether status and cleaner base. That said with more limited growth than some regulated peers and execution challenges in the near-term we see a modest premium as reasonable at this stage.

Risks

Upside risks include accelerated capital expenditures, lower treasury yields, favorable regulatory outcomes, and stronger-than-expected sales growth. Downside risks include higher treasury yields, regulatory disappointments, higher-than-expected financing needs, a stronger US dollar relative to the Brazilian real, and lower oil prices, which negatively impact the earnings contribution from DUK's National Methanol Corp. interests.

Dynegy Inc (DYN)

DYN is scheduled to report earnings after the close on August 3, and hold a conference call on August 4 at 9:00am. Our 2Q16 adjusted EBITDA estimate is $188M, considerably below consensus at $242M. Gas prices rose in the quarter, which we think led to PJM spark spread compression for relatively less hedged DYN compared to the year ago period. With 2Q16 the first quarter with a clean year-on-year comp since the acquisition of the DUK and ECP assets last year, our analysis shows a similar margin contribution from the same assets which contributed $193M of adjusted EBITDA in the year-ago period.

On the call we expect DYN will provide updates on its plans for retiring several of its MISO coal units and what impact, if any, proposed capacity auction reforms could have. DYN may also explain its capital structure after several unique financing transactions over the past 18 months. DYN may also be asked for updates on restructuring talks with IPH Genco bondholders which on the Q1 call management said would kick-off in May as well as ongoing asset divestiture efforts, particularly its Independence combined-cycle in New York.

Figure 49: DYN Quarterly Adjusted EBITDA Build-up

Expenses	1
Corporate 2Q16E Adj. EBITDA	**(32)**
DYN 2Q16E Adj. EBITDA	**188**

Source: Deutsche Bank

Estimates

We are lowering our adjusted EBITDA estimates from $1,110M (2016), $1,670M (2017) and $1,795M (2018) to $1,085M (2016), $1,600M (2017) and $1,765M (2018). Lower PJM spark spreads were the primary driver for the lower earnings outlook.

Valuation – PT up $2 with removal of PJM discount

We value DYN using a weighted average of two methodologies; EV/EBITDA (75%) and Free Cash Flow yield (25%). As discussed earlier, we remove the 0.5x PJM discount on merchant generation we began to apply in February as spark spreads rationalized to more normal levels. As such, we now use 7.0x 2018 EV/EBITDA for the Gas and Engie assets, with Coal up to 6.0x. In our free cash flow based valuation, we now use 15.0% FCF yield target from a prior 16.5% with removal of the PJM discount.

Figure 50: Dynegy Valuation

DYN EV/EBITDA Valuation	**2018E**	**Multiple**	**Value**
GasCo Adjusted EBITDA	994	7.0x	6,958
Engie Assets Adjusted EBITDA	595	7.0x	4,162
CoalCo Adjusted EBITDA	214	6.0x	1,284

Price Target (75% EV/EBITDA, 25% FCF Yield)	**$23**

Source: Deutsche Bank

Risks

Risks are commodity prices, unfavorable market intervention, operational issues, increased new builds and unfavorable merger approval decisions.

Edison International (EIX)

EIX is scheduled to report after the market closes on July 28 and hold a call that day at 4:30pm. Our 2Q16 diluted EPS estimate is $0.86 versus $1.15 in 2Q15 and $0.98 consensus.

Figure 51: EIX Quarterly EPS Build-up

Quarterly EPS Build-up	**EPS**	**Notes**
2Q15 EPS	**1.15**	
2015 GRC decision	(0.06)	Lower revenues
2016 rate base growth	0.11	
Uncertain tax positions	(0.30)	2Q15 benefit not expected to recur
Higher parent expenses	(0.04)	No Edison Capital earnings, higher costs
2Q16 EPS Estimate	**0.86**	

Source: Deutsche Bank

Valuation – Raising PT to $76 from $71

We value EIX by applying a 5% premium over our 17x P/E multiple to our 2018 EPS estimate. We believe EIX merits a premium valuation based on its above-average earnings and dividend growth outlook, and the constructive California regulatory mechanisms in place.

Risks

In our view, the primary near-term downside risks for EIX are the potential reopening of the San Onofre nuclear plant (SONGS) investigation. Disallowance or delays of major capital spending at SCE is another downside risk. We view this risk as most acute for SCE's transmission projects, which have historically had problems with delays throughout the regulatory review process. Upside risks include a near-term denial of the rehearing requests in the SONGS investigation, better cost management that pushes earned returns above our expectations, and approval by the California PUC for EIX to invest above currently authorized levels over our forecast period (EIX has requested this in the distribution resources plan case).

Entergy Corp (ETR)

ETR is scheduled to report on August 2 and to hold a call at 11:00am. Our Q2 estimate is $1.04 versus $0.83 last year and $1.07 consensus.

Figure 52: ETR Quarterly EPS Build-up

Quarterly EPS Build-up	EPS	Notes
Q2 2015 EPS	**0.83**	
Utility Q2 2015	**1.11**	
Sales/pricing	0.29	Union, EAI rate case, ETI riders, underlying sales

Q2 2015 Shares	**1.03**	
Share dilution	0.00	
Q2 2016 EPS	**1.04**	

Source: Deutsche Bank

Estimates

We are raising our 2016 EPS estimate to $5.75 from $5.05 to reflect as yet unidentified tax benefits, which ETR expects to realize this year allowing them to achieve the top end of their guidance range or higher. We are lowering our 2017E to $5.30 from $5.45, largely to reflect the removal of a spent nuclear fuel storage litigation benefit, which we had previously included in our estimate consistent with ETR’s prior presentation of EWC’s EBITDA. We then have raised our 2018E to $5.40 from $5.05 to reflect the impact of our revised commodity deck on EWC.

Valuation – Raising PT to $83 from $78

We are revising our methodology for valuing ETR to better reflect the company’s transformation from a true hybrid utility to more of a mostly regulated entity. Therefore, we have retired our somewhat complex sum-of-the-parts valuation, which we use to value hybrid utilities, in favor of a simpler P/E based valuation that we use to value regulated utilities. We now value ETR by focusing entirely on Utility, Parent & Other EPS in 2018 of $4.88. To calculate our new PT, we apply an average regulated utility multiple of 17x to this earnings stream. This results in a valuation of $83. While ETR could theoretically merit a premium valuation given above-average EPS growth potential through 2020 as laid out at the June Analyst Day, there are lingering questions over whether they will be able to deliver on these targets given anticipated future nuclear plant costs that have yet to be identified and might ultimately not be recoverable from ratepayers. We expect clarity on these costs later this year. While we currently see some incremental value to ETR given their merchant nuclear power plant ownership, we feel it makes sense to focus on the value that ETR provides from its regulated business, with the company now focused on transitioning to a regulated pure-play.

Risks

We see the following downside risks to our price target: negative rate case decisions, the inability to deliver on utility growth targets due to unrecoverable nuclear plant costs, weaker-than-expected power and natural gas prices, delays on major capital projects, and a weaker economic environment in ETR’s Gulf South territory. Upside risks are higher gas and power prices, faster than expected utility load growth, a successful extension of Indian Point’s operating license, and the sale of the FitzPatrick nuclear plant to EXC.

Exelon Corp (EXC)

EXC is expected to report ahead of their Analyst Day on August 10 but will not hold an earnings call this quarter. Our Q2 estimate is $0.57 versus $0.59 last year and $0.56 consensus.

Figure 53: EXC Quarterly EPS Build-up

Source: Deutsche Bank

Estimate changes

We are maintaining our 2016 and 2017 EPS estimates of $2.55 and $2.65 but raising our 2018E to $2.80 from $2.75 to reflect our revised commodity deck.

Valuation – Raising PT to $39 from $36

We value the utility segment by applying a 17.5x P/E multiple to our 2018 estimates for ComEd, PECO and the POM utilities, and an average 17x multiple for BG&E. We believe POM earnings merit a premium as we anticipate faster growth at this segment as EXC closes the gap between authorized and earned returns in 2018 and beyond. We also apply premiums to ComEd earnings given potential upside from higher interest rates as ComEd's ROE is set based on a formula incorporating the yield on the 30-year Treasury bond. We also give PECO a premium given a history of over-earning and our expectations for this to continue.

Meanwhile, we value ExGen by applying a 6.5x EV/EBITDA multiple to our 2018 estimate. Our 6.5x multiple is now relatively in line with our targeted EV/EBITDA multiple for merchant generators. On the one hand, we believe a modest discount is merited given ExGen's still more limited free cash flow generation than IPP peers given their capital-intensive nuke fleet. On the flipside, EXC's nuclear fleet merits some incremental value vs. IPPs given the potential for new revenue streams from clean energy standards (NY and IL) or a future carbon trading scheme. In addition, EXC also has a stronger credit and lower leverage profile at ExGen than pure-play IPP peers, with a plan to de-lever over the coming years.

Similar to our valuation methodology for FirstEnergy, we take a hybrid approach for the corporate / other segment. We derive a $38 price target when valuing the corporate segment EBITDA at a 6.5x EBITDA multiple and then subtracting corporate debt as a direct offset to equity value (effectively treating parent debt as being on the merchant business). In our other scenario we see a $41 price target valuing EXC's corporate earnings drag of $0.12/sh using our regulated distribution P/E multiple of 17.4x (treats parent debt as effectively being on the utilities). Our $39 price target reflects a 50/50 weighting of these two book-end valuation approaches, which we believe is currently appropriate. As the regulated component grows, however, and if ExGen follows through on planned de-levering, arguably over time we could justify shifting our weighting towards the higher Valuation B scenario.

Figure 54: EXC Sum-of-the-Parts Valuation

Valuation A

Business Segment	**Valuation Metric**	**2018E**	**Multiple**	**Value**
ComEd	P/E	$0.56	17.5x	9,463
PECO	P/E	$0.44	17.5x	7,403

Source: Deutsche Bank

Risks

Downside risks include lower-than-expected forward power prices, worse-than-anticipated rate case outcomes, lower retail margins given heightened competition, higher interest rates, and a lower-than-expected contribution from POM (expected to be clarified at August Analyst Day).

Eversource Energy (ES)

ES is scheduled to report on July 28 after the close and to hold a call the following day on July 29 at 9:00am. Our Q2 estimate is $0.65 versus $0.66 last year and $0.65 consensus.

Figure 55: ES Quarterly EPS Build-up

Q2 2016 EPS	**0.65**	

Source: Deutsche Bank

Valuation – Raising PT to $61 from $58

We believe ES merits a 10% premium vs. our regulated utility target, given above average earnings growth, share repurchasing capability, and strong management. These positives are offset by ES's growth being so sensitive to success on Northern Pass, in particular, and Access Northeast (longer-term). We also remain concerned about next year's NSTAR electric distribution rate case, although we have at least attempted to reflect this risk in our 2018 and 2019 estimates.

Risks

Downside risks include transmission project delays or cancellations, a worse-than-expected outcome in the NSTAR electric rate case, reduced support for transmission at FERC, higher-than-expected O&M, lower-than-expected capital expenditures on growth investments, lower-than-anticipated sales, and higher-than-anticipated financing needs. Upside risks include stronger cost control measures, acceleration of growth projects, higher sales, a larger share repurchase plan than currently anticipated, and lower financing needs/costs.

FirstEnergy (FE)

FE is likely to report after the close on July 28 and to hold a call the following day at 10:00am. Our Q2 estimate is $0.54 versus $0.53 last year and $0.54 consensus.

Figure 56: FE Quarterly EPS Build-up

Estimate changes to remove Rider RRS

Our estimates and valuation assume no longer assume any Ohio rider upside given the ongoing uncertainty

We are lowering our 2016E to $2.55 from $2.80. The reduction primarily reflects the removal of revenue uplift at the competitive business from our prior assumption that the proposed Ohio PPA (Rider RRS) would go into effect starting June 1 of this year. That said, we are raising our 2017E to $2.70 from $2.65 despite the loss of earnings from Rider RRS. The net increase reflects a number of key factors: 1) reduced pension expense as we assume FE issues ~$1.5B of equity at the very end of 2016 to their pension plan. We expect this will lower pension expense given a higher assumed return on assets from an increased pension asset base (FE currently expects a return on assets of 7.5%; 2) a more significant benefit from pending rate cases in PA and NJ than we had previously been modeling; 3) higher shares outstanding (average diluted shares up 51 million vs. 2016), and 4) the loss of Rider RRS revenues. Finally, we lower our 2018E by $0.05 to $2.55. We assume incremental equity issuance in 2017 and 2018 (~$1.4B) will be required to finance FE's capital plans (although we have reduced our assumption on total capex in 2017 and 2018) to offset the loss of Rider RRS. These negative drivers are offset by continued contributions to the pension plan with this equity, which further reduce pension expense, and somewhat higher-than-previously expected revenues at the regulated utilities. In total we now assume total equity issuance of about $3B in order to achieve FFO to debt of over 14% in 2017 and 2018. This results in a total share issuance of about 80 million new shares, which would be above the 67 million FE currently has authorization to issue.

It's important to note that we continue to feel below average conviction in our estimates for FE given the absence of any material guidance from the company and uncertainty over how much equity FE would have to raise to protect their investment grade credit rating and how much assistance the company may receive from Ohio (or other state regulators) to support their credit rating or merchant generation fleet. Further, FE has indicated that they would intend to use any equity raise to contribute to their pension plans rather than pay down corporate or competitive debt. This should be a more efficient way to increase CFO / Debt (credit rating agencies include unfunded pension in their debt calculations), as reducing the unfunded status of the plan will minimize required pension contributions in the future. That said, calculating the implications to earnings and cash flow are a bit more complicated than paying down debt with this approach. As discussed above, we have attempted to account for the impacts we would expect to earnings and cash flow in our model, but given movements in interest rates and other factors that impact ongoing pension expense and plan funded status, not to mention FE's history of excluding mark-to-market impacts from ongoing EPS, makes this a somewhat more challenging exercise than just assuming debt balances are reduced. We also expect that some of the benefits from contributing to the pension at the utility business would eventually flow through to ratepayers through future rate cases, although we have not accounted for this in our model at this time.

Potential upsides

We note the potential for upside to our estimates should FE find more significant cost reductions than we have accounted for or if Ohio should approve the Modified Rider RRS proposal made by FE or even Staff's less helpful Distribution Modernization Rider (DMR) proposal, which would provide $131M of incremental revenue for three years. We note that Staff's proposal would not eliminate all of FE's equity needs, as FFO to Debt would still be below Moody's required 14% level, but would still be preferable to our current assumptions. That said, based on our analysis, we do not believe the stock is pricing in much if any assumed uplift in Ohio at current levels.

Valuation – Raising PT to $39 from $37

We value FE by applying a 15.6x P/E multiple to our 2018E for the distribution utilities, an 8% discount to our baseline regulated multiple of 17x. The utility business could arguably merit a higher multiple in the future, but we have below average conviction in our outlook given FE's history of disappointing on growth at the regulated distribution business and our revised assumptions on pension expense. That said, with FE promising a regulated utility growth rate at their yet-to-be-scheduled analyst day, we think there could be reason to raise this multiple later this year. We apply an 18.7x P/E multiple (10% premium) to our 2018E for transmission to reflect this business' strong growth outlook (over 20% annual EPS growth at ATSI and TrailCo). Finally, we value the competitive segment EBITDA by applying a 6.5x EV/EBITDA multiple to our estimate for EBITDA.

We derive a $37 price target when valuing the corporate segment EBITDA drag at a 6.5x multiple and then subtracting parent debt as a direct offset to equity value (effectively treating parent debt as support for the merchant business). On the other hand, we derive a $42 price target when valuing FE's corporate earnings drag of $0.41/sh using our regulated distribution P/E multiple of 15.6x (treats parent debt as support for the utilities). Our $39 price target reflects a 50/50 weighting of these two valuation approaches, although the latter (higher) one may become more of the focus if FE successfully begins to deliver on its broader de-risking strategy. Other potential equity value upside cases might involve an eventual walk-away scenario from the competitive business although we believe this is not a likely near-term event.

Figure 57: FE Sum-of-the-Parts Valuation

Valuation Framework A

Business Segment	Valuation Metric	2018E	Multiple	Value
Regulated Distribution	P/E	$1.95	15.6x	15,111
Regulated Transmission	P/E	$0.79	18.7x	7,305
Utility Equity Value				**22,416**
Competitive	EV/EBITDA	755	6.50x	4,910
Less: Competitive Debt (2018E)				(3,470)
Competitive Equity Value				**1,440**
Corporate & Other	EV/EBITDA	($57)	6.50x	(371)
Less: Parent Debt (2018E)				(5,425)
Parent Equity Drag				**(5,796)**
Total Equity Value				**18,061**
Diluted Shares Outstanding (2018)				495
Equity Value Per Share				**$37**

Valuation Framework B

Business Segment	Valuation Metric	2018E	Multiple	Value
Regulated Distribution	P/E	$1.95	15.6x	15,111
Regulated Transmission	P/E	$0.79	18.7x	7,305
Corporate and Other	P/E	($0.41)	15.6x	(3,134)
Utility and Parent Equity Value				**19,283**
Competitive	EV/EBITDA	755	6.50x	4,910
Less: Competitive Debt (2018E)				(3,470)
Competitive Equity Value				**1,440**
Total Equity Value				**20,723**
Diluted Shares Outstanding (2018)				495
Equity Value Per Share				**$42**

Source: Deutsche Bank

Risks

Downside risks are lower gas and power prices, disappointing regulated growth, high financial leverage, higher interest rates, and weak electric demand. Upside risks are the approval of a rider in Ohio that will support more significant deleveraging, lower-than-expected equity issuance, lower interest rates, and approval of MAIT.

ITC Holdings (ITC)

ITC is scheduled to report on July 28 but will not hold a call this quarter due to the pending acquisition by Fortis Inc. Our Q2 estimate is $0.49 versus $0.46 last year and $0.56 consensus. Note that we continue to include ROE refund liabilities in our operating earnings and estimates, while other analysts may not do so, thereby skewing consensus.

Estimates

We are raising our estimates modestly in 2016 through 2018 by a nickel each to $1.90, $2.10, and $2.30, respectively. While we have reflected the impacts of bonus depreciation in our model, we believe we may have slightly overstated its impacts in our prior forecasts. Our estimates reflect both bonus depreciation and a reduced MISO ROE assumption (11% all-in).

Valuation – Raising PT to $47 from $45

We are raising our price target to reflect a higher underlying utility base multiple and a higher takeout value implied by the Fortis (FTS) deal. We now see standalone value for ITC of $41 and deal value of almost $48. We continue to weight deal value at 85% as we believe the FTS deal has an above-average chance of closing.

Our view of ITC's takeout value (~$48) is based on the terms of the proposed FTS deal and is therefore tied to movements in FTS's stock price and the Canadian dollar.

Our standalone valuation is based on a weighted average of three scenarios where we have modeled different outcomes on ROE, development capex, and share repurchases and is consistent with how we have historically valued ITC.

See our table below for our assumptions. We give our “Mid Case” scenario the highest weighting (70%) given a greater likelihood of an outcome on both ROE and development spend somewhere between the High and Low Cases. We weight our High Case scenario at only 5% given a low probability for ITC to achieve this level of development spend through 2018 and our view that the FERC will ultimately approve an ROE that is lower than that included in the High Case scenario. We weight our Low Case scenario at 25%.

Figure 58: ITC Standalone Valuation Methodology

	High Case	**Mid Case**	**Low Case**
MISO ROE	10.57%	10.00%	9.00%
Incentive Cap	11.74%	11.00%	10.50%
Development Spend	$650M	$250M	-
Repurchases ('14-'18)	$550M	$400M	$550M
2018 Adjusted EPS	2.60	2.30	2.05
P/E Multiple	19.6x	18.2x	17.0x
Valuation	51.00	42.00	35.00
Weighting	5%	70%	25%
Weighted Average Price Target			**41.00**

Source: Deutsche Bank

Risks

Downside risks include the failure of the FTS deal to close, poor performance of FTS stock pre-close, USD to CAD exchange rate risk, transmission project delays, a worse-than-anticipated outcome in the MISO base ROE proceeding and a challenge to the ITC Great Plains ROE, greater-than-anticipated financing needs, and reduced support for transmission at FERC. Upside risks include success on the development front and in the pending ROE complaints, and a higher FTS stock price.

NextEra Energy (NEE)

NEE is schedule to report on July 27 and hold a combined conference call with NEP at 9:00am. Our 2Q16 EPS estimate is $1.60, above consensus of $1.54 and last year's $1.55. On the call, we expect NEE to provide an update on its pending FP&L rate case and NEER's progress towards achieving its 2017-2018 renewables development program. We expect an update on potential wind repowering opportunities eagerly anticipated by investors will need to wait at least another quarter given prior management commentary and the complex and location specific analysis required.

Figure 59: NEE Quarterly Adjusted EPS Build-Up

NEE	Estimate	Commentary
NEE 2Q15 Consolidated Adjusted EPS	**1.56**	
FP&L 2Q15 Adjusted EPS	**0.97**

Corporate and Other 2Q16 EPS	**(0.01)**	
NEE 2Q16 Adjusted EPS	**1.60**	

Source: Deutsche Bank

Estimates

Our adjusted EPS estimates are unchanged at $6.20 (2016), $6.50 (2017) and $7.10 (2018).

Valuation – PT up $11 on higher utility and contracted renewables multiples

We value NextEra on a sum-of-the-parts approach. We value FP&L at a 12% premium to our regulated utility average multiple, now increased to 17x from 16x. We feel this premium is warranted due to FP&L's above-average growth and a generally supportive Florida regulatory framework. We value Energy Resources at 11.0x EBITDA, up from 10.0x previously, with expected sustainable high growth following the IRS' multi-year extension of renewable tax credits, repowering opportunities and the current low cost of capital environment for predictable cash flows. Next, we value NEE's shareholdings in NEP at NEP's ~$31 stock price, worth $7 per NEE share. Finally, we value NEE's IDRs from NEP at 25x or $5/sh, with rapid growth expected.

Figure 60: NEE Valuation

NextEra Energy (NYSE: NEE) **Sum-of-the-Parts Valuation**	
FP&L & Corporate 2018E EPS	4.00
P/E Multiple	19.0x
FP&L & Corporate Equity Value per Share	**$76**
NEER 2018E EBITDA	4,035
Add: Full year impact of assets added in 2018	200
Less: NEP 2018E EBITDA (ex-IDR)	(996)
Core NEER 2018E EBITDA	3,239
EV/EBITDA Multiple	11.0x
Core NEER EV	35,628

NEE 2018E Shares Outstanding	473
NEP IDR Value to NEE	**$5**
NEE Price Target	**$134**

Source: Deutsche Bank

Risks

Downside risks are higher interest rates, unfavorable capital market conditions, unfavorable regulatory outcomes, increased competition and poorly received M&A.

NextEra Energy Partners (NEP)

NEP is schedule to report on July 27 and hold a combined conference call with NEE at 9:00am. Our 2Q16 adjusted EBITDA estimate is $168M, compared to consensus at $164M and $102M on a smaller fleet last year. On the call, we expect management to reiterate its support and commitment to NEP and its dividend growth, as evidenced by recent drop downs and dividend raise. We expect NEP to also reiterate its ability to add debt at multiple levels (holdco, projects) that could support growth without needing to issue equity near-term.

Estimates

We incorporate NEP's latest drop down of Cedar Bluffs and Golden Hills wind farms into our model and correspondingly delay several assumed drop downs from 2017 to 2018. As such, our new adjusted EBITDA estimates are increased to $655M (2016), $752M (2017) and $903M (2018). Our year-end DPS estimates of $1.40 (2016), $1.58 (2017) and $1.80 (2018), representing 13.5% annual growth, is unchanged.

Valuation – PT up $2 on higher EBITDA

We value NEP using a blended average of two methodologies, the target dividend yield method (weighted 75%) and EV/EBITDA method, reflecting its fundamental nature as a renewable power company (weighted 25%). We utilize a 6% target yield on 2018 forecasted dividend, reflecting growth and income potential. Our EV/EBITDA utilizes a 10x multiple, reflecting the contracted nature of NEP's fleet and its potential growth.

Figure 61: NEP Valuation

2018E Shares Outstanding - Period End	160
Equity Value Per Share - EV/EBITDA Method	**$30**
75% Dividend Yield method, 25% EV/EBITDA method	**$30**

Source: Deutsche Bank

Risks

Upside risks include faster growth, supportive capital markets and M&A.

Downside risks include slower growth, difficult financing markets, operational issues and weather.

NRG Energy (NRG)

NRG is schedule to report on August 9 and hold a conference call that day at 9:00am. Our adjusted EBITDA estimate is $685M slightly ahead of consensus at $678M and $729M last year. Having completed the GreenCo strategic review last quarter, we expect investor focus to shift back to the core integrated wholesale and retail business. Management could provide an update on its ongoing cost cutting initiatives, asset divestitures and non-recourse financings which would help NRG delever its corporate balance sheet. Management may also provide an update on the status of restructuring talks with GenOn bondholders it kicked off this spring.

Figure 62: NRG Adjusted EBITDA Quarterly Build-Up

	Estimate	Commentary
NRG 2Q15 Adj. EBITDA	**729**	
Business 2Q15 Adj. EBITDA	**285**

*In NRG's presentation Business, Renew and NYLD 2015 results could be restated

Source: Deutsche Bank

Estimates

Our 2016 adjusted EBITDA estimate of $3,100M is unchanged. We are lowering our 2017 estimate from $2,875M to $2,850M and our 2018 estimate from $3,100M to $3,075M reflecting asset sales and lower spark spreads in PJM, partially offset by higher power prices in Texas.

Valuation – PT up $1 to $20

We value NRG with a 75% weighting on EV/EBITDA and a 25% weighting on Free Cash Flow yield. For NRG residual – which excludes NYLD, we continue to use a 6.0x 2018 EV/EBITDA multiple which reflects NRG’s asset mix of predominately coal and less-efficient gas plants. We value NRG’s stake in NRG Yield at market. In our FCF yield valuation, we utilize a 17% yield for the core business.

Figure 63: NRG Valuation

NRG Energy Inc. (NRG) EV/EBITDA Valuation	
2018E Adjusted EBITDA - NRG Residual	2,120
EV/EBITDA Multiple	6.00x
2018E NRG Residual Enterprise Value	**12,720**
2018E NRG & Genon Debt	(9,878)
Add: NRG Cash	2,057
Less: Preferred stock	(304)
2018E NRG Residual Adjusted Net Debt	**(8,125)**

Price Target (75% EV/EBITDA, 25% FCF Yield)	**$20**

Source: Deutsche Bank

Risks

Risks are commodity prices, unfavorable weather, operational challenges, challenging financial markets and regulatory intervention.

NRG Yield (NYLD)

NYLD is scheduled to report August 9 and hold a call that day at 11:00am. Our adjusted EBITDA estimate is $235M vs. consensus at $238M and $187M on an as originally reported basis last year. This will be new CEO Christopher Sotos' first earnings call, and as such we would expect an update on his strategic vision for the company and growth opportunities he sees from NRG drop downs and elsewhere.

PG&E Corp. (PCG)

PCG is scheduled to report July 28 and hold a call that day at 11:00am. Our 2Q16 EPS estimate is $0.89 versus $0.91 in 2Q15 and $0.95 consensus. On the call, we expect discussion of PCG's recently-announced plan to retire the Diablo Canyon nuclear plant.

Figure 64: PCG Quarterly EPS Build-up

Quarterly EPS Build-up	EPS	Notes
2Q15 EPS	**0.91**	
Rate base growth	0.05	
Timing of taxes	0.02	1Q16 timing issue
Absence of GT&S decision	(0.01)	
Nuclear refueling outage	(0.06)	
Share dilution	(0.03)	
2Q16 EPS Estimate	**0.89**	

Source: Deutsche Bank

Valuation – Raising PT to $68 from $62

We value PCG by applying a 2-3% premium over our target 17x P/E multiple to our 2018 EPS estimate.

Risks

The key downside risk for PCG, in our view, is an unfavorable decision in the Gas Transmission & Storage Case. Additional fines, penalties, or disallowances related to PCG's operations, impermissible ex parte communications between PCG and the California PUC, or San Bruno legal cases are also risks.

PPL Corp. (PPL)

PPL is scheduled to report on August 9 and hold a call that day at 8:30am. Our 2Q16 EPS estimate is $0.50 versus $0.49 last year and $0.53 consensus. On the call, we expect discussion of PPL’s post-Brexit currency hedging strategy.

Figure 65: PPL Quarterly EPS by Segment

Quarterly EPS by Segment	2Q15 EPS	2Q16 EPS	Key Drivers
UK Regulated	0.36	0.33	Higher D&A, interest expense
Kentucky Regulated	0.09	0.11	Rate increase
Pennsylvania Regulated	0.07	0.09	Rate increase
Corporate and Other	(0.03)	(0.03)	
PPL Consolidated	**0.49**	**0.50**	

Source: Deutsche Bank

Estimates

We are lowering our 2018E to $2.30 from $2.45 as we are marking our GBP/USD exchange rate to $1.25, down from ~$1.45 previously. In the event PPL decided to monetize its FX hedges and rebase earnings lower we could see ~$0.10-$0.15 of additional downside to our 2018E albeit with potential for some mitigation in the event that proceeds could be deployed to incremental investment on a timely basis.

Valuation – Maintaining $39 PT

We value PPL by applying a 17x P/E multiple to our 2018 EPS estimate. This is in line with our target regulated electric utility P/E multiple, reflecting PPL's solid growth, international-heavy business mix, and above-average dividend yield.

Risks

Downside risks for PPL include delays in capital projects or unfavorable rate case outcomes. A decline in the GBP/USD exchange rate is also a risk. Upside risks include higher earned ROEs at the utilities, a more favorable exchange rate, and an increase in the rate base forecast.

Public Service Enterprise Group (PEG)

PEG is scheduled to report on July 29 and to hold a call that day at 11:00am. Our Q2 estimate is $0.56 vs. $0.57 last year and $0.61 consensus.

Figure 66: PSEG Quarterly EPS Build-up

	EPS	Notes
2Q15 Consolidated EPS	**0.57**	
PSE&G 2Q15 EPS	**0.33**	
Net transmission earnings	0.04	
Energy Strong	0.01	
Weather	(0.01)	
O&M	0.01	Storm expense was negative last quarter
PSE&G 2Q16 EPS	**0.38**	
Power 2Q15 EPS	**0.22**

PEG 2Q15 EPS	**0.56**	
Dilution	0.00	
PEG 2Q16 EPS	**0.56**	

Source: Deutsche Bank

Estimate changes

We are maintaining our 2016E of $2.90 and our 2017E of $2.95. Our 2018E is down $0.05 to $2.95 primarily reflecting the impact of our new commodity deck (lower spark spreads).

Valuation – Raising PT to $49 from $47

We value PEG based on a sum-of-the-parts analysis. This valuation applies an 18.3x P/E multiple to our 2018E at PSE&G, a 7-8% premium over our baseline 17x regulated multiple given superior medium term growth opportunities, the significant and fast-growing transmission component, weighting towards contemporaneous return investments and a capex plan that is closely aligned with state energy objectives. That said, we have tempered this premium given upcoming rate case risk in NJ, which could lower earned returns, and the potential for a challenge to PEG's above-average transmission ROE. We value the Power business at 7.0x EV/EBITDA on our 2018E, although we note some exposure here if PJM East capacity values fail to rebound from 2019/2020 auction levels. For the Parent/Other segment, we use 16x 2018E a discount to our baseline utility multiple of 17x reflecting some uncertainty as to the ongoing contribution.

Figure 67: PSEG Sum-of-the-Parts Valuation

Business Segment	Valuation Metric	2018E	Multiple	Value
PSE&G Utility	**P/E**	**$1.97**	**18.3x**	**18,314**
Holdings/Other	**P/E**	**$0.12**	**16.0x**	**949**
PSEG Power	EV/EBITDA	$1,338	7.0x	9,368
Less: Non-Utility Net Debt (2018E)				(3,715)
PSEG Power Equity Value				**5,653**
Total Equity Value				**24,916**
Diluted Average Shares Outstanding (2018E)				510
Equity Value Per Share				**$49**

Source: Deutsche Bank

Risks

Upside risks are higher gas and power prices, increased capital investment at the regulated utility, and lower-than-anticipated financing needs. Downside risks include lower gas and power prices, a potential future challenge to PSE&G's transmission ROE, and a worse-than-expected outcome in the upcoming PSE&G rate case.

Southern Company (SO)

SO is expected to report on July 27 and to hold a call that day at 1pm. Our Q2 estimate is $0.71 (consistent with SO's operating EPS methodology which excludes debt issued mid-quarter to finance the AGL Resources acquisition), versus $0.71 last year and $0.70 consensus. Including the impact of the debt offering, our Q2 estimate is $0.70, and this is the number which appears in our published estimate.

Figure 68: SO Quarterly EPS Build-up

	Estimate	Notes
Q2 2015	**0.71**	
Weather	(0.01)	CDDs down 5%
Retail revenue impacts	0.08	
Wholesale revenues	(0.01)	
Non-fuel O&M	-

Interest expense	(0.03)	Last year included $41M benefit
Southern Power	0.03	
Q2 2015 Shares	**0.73**	
Dilution	(0.02)	Issuance related to AGL deal
Q2 2016 EPS	**0.71**	
Including AGL Debt	(0.02)	
Q2 2016 EPS	**0.70**	

Source: Deutsche Bank

Estimate changes

We are revising our model to reflect the recently closed AGL Resources acquisition and the pending transaction with Kinder Morgan (SO intends to acquire a 50% stake in KMI's Southern Natural Gas pipeline company). While SO has not provided an updated view on the impact of AGL since the deal closed earlier this month or specific guidance on the impact from SNG, we believe the combination of these transactions is accretive versus our prior estimates. We are raising our 2016E to $2.95 from $2.85 and our 2017E to $3.05 from $2.95. Our 2016 EPS estimate is above SO's guidance range of $2.76-$2.88 for this year, but SO did not incorporate the net impact of one half year of earnings from AGL Resources (deal closed July 1) and over half a year of incremental interest expense related to deal-related debt. They did incorporate anticipated equity issuance related to the deal, however. On an apples-to-apples basis in 2016, our estimate would be $2.85. In 2018, we have raised our estimate by a nickel to $3.15. Through 2018, we now expect SO to achieve close to the high end of projected 4-5% EPS growth off a 2016 base of $2.76-$2.88.

Valuation – Raising PT to $54 from $50

We calculate our target by applying a 17x P/E multiple to our increased 2018E estimate. SO has historically commanded a premium valuation due to a long-history of delivering or exceeding financial targets, favorable regulatory relationships, and a better-than-average service territory (stronger sales growth). In more recent years, however, the company's premium has eroded due to concerns about cost overruns at the Vogtle new nuclear and Kemper County IGCC projects. Management has lost some credibility as a result of these projects and has also had to reduce long-term growth expectations that were once above-average. We now expect SO to deliver average EPS growth (potentially above-average if AGL is more accretive than we are currently modeling) but still see risks associated with the Vogtle and Kemper capital projects. As a result, we continue to believe SO merits an average valuation.

Risks

Upside risks to our target include better-than-anticipated rate case outcomes, accelerations in construction schedules for major capital projects, higher than-expected electric sales, lower-than-expected market interest rates, and lower-than-anticipated financing needs. Downside risks include worse-than-anticipated rate case outcomes, capital project delays, including SO's new nuclear project, lower-than-anticipated sales, higher interest rates, higher-than-anticipated financing needs, and reduced electricity demand.

Talen Energy (TLN)

TLN is scheduled to report on August 4 and hold a call at 9:00am. Our adjusted EBITDA estimate is $101M vs. consensus at $141M and $174M last year. Investor interest will likely be focused on status and timing of regulatory approvals. The company may also announce optimization plans for its challenged Harquahala plants.

Estimates

Our 2016 adjusted EBITDA estimate of $770M is unchanged. Our 2017 estimate is down $5M to $695M, while our 2018 estimate is up $25M as the additional flexibility of Montour to run on gas more than offsets slight core business weakness.

WEC Energy Group (WEC)

WEC is scheduled to report on July 27 and to hold a call that day at 2:30pm. Our Q2 estimate is $0.57 versus $0.59 last year and $0.56 consensus.

Figure 69: WEC Quarterly EPS Build-up

Quarterly EPS Build-up	**EPS**	**Notes**
Q2 2015 EPS	**0.59**	WEC standalone
Weather	0.05	Higher HDDs in April and CDDs in June
O&M	0.03	
Depreciation	(0.01)	
Power the Future	0.00	
American Transmission Company	0.00	
Interest expense, net	(0.02)	
Other	0.00	
TEG Acquisition	0.13	
Q2 2015 Shares	**0.78**	
Share dilution	(0.22)	Issuance related to TEG
Q2 2016 EPS - Operating	**0.57**	

Source: Deutsche Bank

Valuation – Raising PT to $65 from $61

Our $65 target is based on a 19.6x P/E multiple applied to our 2018E. We believe WEC merits a 15% premium to our 17x regulated target reflecting the company's strong management team, constructive regulatory relationships in Wisconsin, above-average earnings growth, and history of over-delivering on financial targets. WEC merits one of the highest premiums in the regulated sector in our view given these factors.

Risks

Upside risks to our valuation include higher capital spending and therefore rate base, lower interest rates, and higher electric demand. Downside risks include worse-than-anticipated rate case outcomes, capital project delays or cost overruns, lower-than-anticipated sales, higher interest rates, higher-than-anticipated financing needs, and reduced electricity demand.

Xcel Energy (XEL)

XEL is scheduled to report on August 3 and hold a call that day at 10:00am. Our 2Q16 EPS estimate is $0.42 versus $0.39 in 2Q15 and $0.40 consensus.

Figure 70: XEL Quarterly EPS Build-up

Quarterly EPS Build-up	EPS	Notes
2Q15 EPS	**0.39**	
Weather	0.02	
Rate changes	0.06	CO, MN, WI, ND, and SD
Higher rider revenues	0.02	
Higher D&A	(0.06)	
Higher property taxes	(0.01)	
Higher interest expense	(0.01)	
Lower tax rate	0.01	Assume 35% vs. 36% in 2Q15
2Q16 EPS Estimate	**0.42**	

Source: Deutsche Bank

Valuation – Raising PT to $43 from $40

We value XEL by applying a 5% premium over our target regulated utility P/E multiple of 17x to our 2018 EPS estimate. We believe a modest premium is warranted given XEL's low risk profile and solid dividend growth.

Risks

As a fully regulated utility, the most important downside risk is negative rate case decisions. XEL is also exposed to the general economic environment in its territories, and a continued sales decline would weaken earnings growth. Upside risks include a faster or stronger economic recovery in XEL's service territories than we expect and better rate case outcomes than we forecast.

Equity rating key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.

Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction.

Utility Growth Story Funded by Robust Merchant Generation Cash Flow; Stock is Cheap

Analyst Day Confirmed Our Perspective on the Value Proposition

Our ’16 / ’17 / ’18 EPS forecast is $2.60 / $2.70 / $2.90 up from $2.60 / $2.65 / $2.75 based on 8/3/16 forward power curves. We have spent the last few days scrubbing our forecast and “sanity checking” the assumptions driving EXC’s view of the earnings growth drivers in its core utilities business and Exelon Generation (ExGen) as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management and find them wholly credible. The core utilities are forecast to grow rate base at 6% from ’16-20, with earnings growth of 7-9% due to the assumption of improved earned ROE’s at recently acquired POM. With six rate cases pending at the PHI companies and the ability to harvest operating synergies we see a turnaround similar to the one EXC engineered at BG&E after the CEG acquisition as feasible. So, there is line of sight for EPS at EXC’s utilities (ex-parent overheads) growing from $1.35 in FY ’16 to $1.85 in 2020, consistent with our prior expectations. At ExGen, our forecast now assumes $0.10/share uplift by FY ‘18 from passage of the NY Zero Emissions Credit (ZEC) program and our estimate of $.05/ share of uplift from recently announced Fitzpatrick plant acquisition from ETR. The impact of the closing of the Clinton and Quad Cities power plants looks better for earnings ($0.07 accretive) but worse for cash flow ($75mm improvement) than our prior estimates, but won’t fully hit the P&L until FY 2019. From a cash flow perspective we see ExGen producing $3.4bn of free cash flow through FY ’18, ~52% of the $6.6 billion they are targeting through 2020 ($5.9bn base case plus $750mm from the NY ZEC deal and repayment of a loan to their nuke JV partner EDF), with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. ExGen debt/EBITDA, currently at ~3.4X, should fall to at least 3X over the forecast period. On the subject of the dividend, they are committed to 2.5% growth through 2018 but are confident the financial profile supports at least that level of growth through 2020. Investors obviously “wear” commodity price risk at ExGen (in fact our forecast would be closer to $3/share in 2018 using EXC’s disclosures based on 6/30/16 power curves, but prices have fallen since then), and 2019 EPS are likely lower at ExGen due to a fall-off in capacity prices at current power forwards (on the margin we calculate that headwind is currently $0.10/share net of $0.07 of improvement from shutting Quad and Clinton, or $200mm of EBITDA). So while the story is not perfect at the current share price the value proposition looks quite compelling.

Our price target remains $40, maintaining BUY rating. Our forecast for utility EPS contribution minus parent overheads (+/-$0.15) is $1.35/share which by 2018 we expect to be $1.70 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to $1.85. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth $30/share in our view (17.5X ’18 EPS, an average multiple). That implies ExGen is worth only +/-$5/share today, which is around 4.2X ’18 EPS or 4.3X ’18 EV/EBITDA and an unlevered free cash flow yield to EV of 19% with debt/EBITDA at YE ’18 of <3X. To put it more succinctly, EXC is trading at 12X overall FY ’18 earnings and a 3.6% dividend yield while pure regulated names are at 17.5X and yields averaging 3%. While the dividend growth commitment of 2.5% annually is lower than that articulated by purely regulated peers and ‘19 EPS and EBITDA at ExGen should moderate (we estimated those numbers above at $0.10/share / $200mm of EBITDA) the balance sheet will also shrink. Our view is that the overall valuation gap is just too high. At a minimum we think investors should consider PEG as EXC’s most comparable peer. Using the same mathematical approach, PEG is trading today at 14.5X FY ’18 EPS, with its merchant power business trading at an implied P/E of 7X and an implied EV/EBITDA multiple of 6X and no demonstrable free cash given growth capital commitments. Debt/EBITDA for PEG at YE ’18 looks strong at a similar 2.6X. If EXC were to trade to PEG’s valuation on its generation business that would lead to $4-$5 of uplift in equity value, more or less validating our target price of $40/share, which is 13.8X 2018 EPS. That is 6X FY ’18 EV/EBITDA which we think is reasonable looking at ExGen’s free cash flow profile, cost of capital, and the useful life of its assets. If the forward curve for ’18 gas were to rise to EVRISI’s $3.25/MMBtu forecast over the next 12 months, ExGen’s valuation expanded to 6.5X, the regulated multiple expanded to 18.5X and they earned towards the high end of utility EPS guidance for FY ‘18, all things equal the stock could rise to ~$45. On the flip side, at 16.5X ’18 EPS, assuming they earn toward the lower end of their guidance range and we assume a $0.50/MMBtu decline in natural gas in FY ’18 and no multiple expansion at ExGen we see downside to ~$32.50/share. We like that risk/reward.

What’s next? The Con Ed Solutions deal is expected to close by YE’16, with the deal for Entergy’s Fitzpatrick plant to close in 2Q17. In Illinois, Clinton and Quad Cities will retire by 6/1/17 and 6/1/18 respectively, barring legislative action during short legislative sessions in November and December 2016. On the rate case front, a decision is expected in Pepco’s pending electric rate filing in MD (in which they requested $126.6mm premised on a 10.60% ROE) by 11/15/16. The IL PSC will issue a final order on ComEd’s electric FRP by December. A decision in DPL’s electric distribution rate case in MD (in which it requested $66mm based on a 10.60% ROE) is expected in Q1’17. A NJBPU decision on the electric distribution rate filing ACE made on 3/22/16 (seeking $79.4mm premised on a 10.60% ROE) is expected on 3/22/17. On 6/30/16, Pepco filed an electric distribution rate case in DC, requesting an $85.5mm increase premised on 10.60% ROE – a decision is expected in Q2 or Q3’17. The DE PSC is expected to rule on Delmarva’s pending electric and gas distribution case (seeking an $84mm increase in aggregate based on a 10.60% ROE) in Q3’17.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of regulation to bolster the revenue stream of the NY nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in NY to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst’s compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC (“Evercore Group”), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority (“FINRA”), and International Strategy & Investment Group (UK) Limited (“ISI UK”), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI (“Evercore ISI”). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners’ total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst’s judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst’s area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst’s long-term recommendation (Buy, Hold or Sell) that reflects a stock’s forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst’s long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI’s recommendations are based on a stock’s total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%

Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Utility Rate Base Growth Funded by Generation Cash Flow; Stock Is Cheap, Raising Target to $40 From $38.

Upcoming Analyst Day Should “Shine A Light” on the Value Proposition

EXC’s financial outlook — even before the recent announcement of the shut-down of the Clinton and Quad Cities nuke plants, the pending approval of zero emissions credits in NY for Nine Mile Point and Ginna, and the potential acquisition of Fitzpatrick under that credit construct — supports our view that the stock is fundamentally cheap. What we heard from EXC management a few weeks ago when we hosted investor meetings was a continued commitment to invest in and grow rate base/earnings power at their four utility platforms, grow the dividend 2.5% per year at least through 2018, and use cash flow in excess of what is needed for those two activities to de-lever (that amount articulated at the time by EXC at +/-$2.9bn through 2020). This plan is fully supported by the robust cash flow profile at Exelon Generation without the need for equity. With ExGen projected at <3X debt/EBITDA that deleveraging could (and should) be done at the parent level. EXC’s forecast for utility EPS contribution minus parent overheads this year is $1.30/share which by 2017 we expect to be $1.55-$1.60 per share. With EXC aspiring to grow rate base to +/-$40bn by 2020 that earnings power (utility EPS minus parent) could theoretically grow to $1.85. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth $30/share in our view. That implies ExGen is worth only +/-$6.50/share today, which is around 6X ’18 EPS or 5X ’18 EV/EBITDA and a free cash flow yield to EV of 13%. Or to put it more succinctly, EXC is trading at 13.3X overall FY ’18 earnings and a 3.5% dividend yield while pure regulated names are at 18X and yields averaging 3%. While the dividend growth commitment of 2.5% annually is lower than that articulated by purely regulated peers the overall valuation gap is in our view just too high. And our numbers don’t incorporate $0.15 of accretion that could be derived by FY ‘18 from the passage of a zero emissions credit program in NY and the acquisition of Fitzpatrick from ETR. Our valuation also doesn’t incorporate the shut-down of Clinton and Quad, which should be $120mm accretive to cash flow in FY ’19 (read more on all of these factors in the body of this note). We expect EXC’s analyst day on August 10th to “shine a light” on EXC’s robust financial profile and the cheapness of the shares.

We are increasing our price target to $40 from $38, maintaining BUY rating. Taking apart EXC in the wake of the POM deal we think its regulated business is worth +/-$30/share, as articulated above. That means ExGen is trading at $6.75 a share or roughly $6.5bn of equity value on '18 pro forma shares (a 5X EV/EBITDA multiple on our ’18 estimates and a debt/EBITDA multiple of +/-3X). Our target price of $40 assumes an EV/EBITDA multiple about a turn higher at 6X which we think is more than reasonable looking at ExGen’s free cash flow profile, cost of capital, and the useful life of its assets. If the forward curve for ’18 gas were to rise to EVRISI’s $3.25/MMBtu forecast over the next 12 months, ExGen’s valuation expanded to 6.5X, and the regulated multiple expanded to 18.5X, all things equal the stock could rise to ~$43.50. On the flip side, at 16.5X ’18 EPS, assuming a $0.50/MMBtu decline in natural gas in FY ’18 and no multiple expansion at ExGen we see downside to ~$33.25/share. This math would be skewed higher if the NYPSC approves the proposed zero emission credit (ZEC) scheme supported by PSC Staff, they buy Fitzpatrick, and/or we include the presumed cash flow improvement from the shuttering of Clinton and Quad. We like that risk/reward.

Our ’16 / ’17 / ’18 EPS forecast is $2.60 / $2.65 / $2.75 from $2.60 / $2.70 / $2.75 on 7/13/16 curves. Forward curves are down a bit since our last update, but our forecast does not incorporate upside potential (+/-$0.10/share by FY ‘18) that we estimate could result from passage of the aforementioned ZEC program, over $0.05/share of uplift possible from the Fitzpatrick acquisition, and Clinton / Quad retirements (although the latter won’t have a meaningful “run rate” impact until ’19). We also presume that updated hedging will mitigate the impact from lower forwards. Our forecast would be higher given the commodity price improvement since 3/31/16 but for the inability of ExGen to take the Domestic Production Activities Deduction (DPAD) through 2018 stemming from additional NOLs and bonus depreciation from the acquired PHI utilities. EXC estimates ExGen’s higher effective tax rate resulting from said inability to utilize DPAD is a -$0.01 / -$0.07 drag on ’17 / ’18 EPS (returning to normal by 2019). Still, the ~$775mm in additional cash flow ($0.80/share of cash on ’18 pro forma shares) attributable to bonus D and NOLs at PHI will help supplement the FCF generated by ExGen.

Nine Mile Point (NMP), Ginna, and ETR’s Fitzpatrick may receive incremental revenues with the creation of a Zero-Emissions Credit (ZEC) program in New York. The Cuomo administration has been looking for a financial remedy for upstate reactors to retain both their local economic contributions and to achieve the carbon reduction goals laid out in its broader proposed Clean Energy Standard. As detailed on 7/8/16, the latest iteration of the ZEC program would provide a 12 year revenue program for these plants, starting at $17.48/MWh for generation by those plants over the course of the initial 4/1/17-3/31/19 tranche, a subsidy that escalates to $29.15/MWh by 2029 but would be ratcheted downwards if expected market (upstate energy and capacity) revenues exceed a baseline $39/MWh price. For the initial tranche at current forward curves, the ZEC subsidy would net these generators $52 - $54/MWh revenue. By our math, ZECs would provide ExGen with ~$120mm / ~$40mm in annual EBITDA uplift (EPS of $0.08 / $0.03) for its share of Nine Mile Point and Ginna, respectively (*Exhibit 1*). The public comment period on the PSC’s proposal extends through 7/22/16. EXC is pushing for a NYPSC order on the proposed program by 8/1/16 so that it then has sufficient lead time to execute a ZEC PSA and then make the necessary refueling orders by the end of September. NMP Unit 1 and Ginna have refueling outages scheduled for March and April 2017 if they are to continue to operate, for which expedited reactor fabrication would cost $55mm and $45mm, respectively.

Exhibit 1

ZEC Uplift Estimates for Nine Mile Point and Ginna

Facility	Average Output (Annual MWh)	Total ZEC Revenue (millions)	EBITDA (at EXC Ownership %)	Net Income (@ 34% tax rate)	EPS Impact (2018 Shares)
Nine Mile Point	15,687,027	$ 274	$ 121	$ 80	0.08
Ginna	4,819,061	$ 84	$ 42	$ 28	0.03
Total	**20,506,088**	**$ 358**	**$ 163**	**$ 107**	**0.11**

Source: Evercore ISI Research

On 7/13/16, Entergy announced it was exploring a sale of its 852 MW Fitzpatrick plant to EXC. A deal would be contingent on the establishment of the ZEC program by the state since EXC would only acquire Fitzpatrick if it receives the 12 year ZEC credit revenue plan. This is consistent with EXC’s strategy of only deploying growth capital at ExGen if it is on contracted assets that are accretive to cash flow and earnings. In the absence of a sale, ETR will shut down the unit on 1/27/17 as it looks to shift away from its merchant power business which has been hamstrung by low commodity prices, an observed decline in performance across its entire nuclear fleet (which it is looking to reverse) and political pressure by Cuomo over its operation of Indian Point. As for EXC's interest, the plant lies directly adjacent to its Nine Mile Point units (*Exhibit 2*) so the potential for operating synergies is palpable. A DCF analysis of the plant assuming a '17 / '18 EBITDA uplift of $80mm / $115mm from the ZEC scheme suggests a fair value at ~$450mm (*Exhibit 3).* At that price, which is ~4X '18 EBITDA, Fitzpatrick could provide $0.06 / $0.08 per share to EPS were it folded into ExGen (funded 50% debt). See *Exhibit 4*. EXC had $960mm in cash on hand at the end of Q1.

In Illinois, the shutdown of Clinton and Quad Cities is now inevitable barring legislative action. The plants have drained $800mm in cash from 2009 through 2015, and their shutdown would be accretive to cash flow. EXC made the requisite filings with the NRC on 6/22/16, to shut down Clinton and Quad Cities on 6/1/17 and 6/1/18, following the failure of the IL legislature to pass desired energy legislation in the session coupled with the latter's continued inability to clear the PJM auction. In Exhibit 5 we estimate the plants are burning ~$165mm in cash annually at current forward curves, and are a +/- 0.05 share drag on earnings. Assuming dis-synergies from shutting the plants of a bit greater than $50mm due to EXC's inability to scale down its nuclear operating company expenses, we estimate on a run-rate basis the shutdown of the plants would add $120mm to cash flow by 2019 and be EPS neutral. This analysis is consistent with EXC's assertion that he plants are losing $140mm of cash flow annually based on 2/29/16 curves. EXC will incur estimated total one-time cash expenses of ~$175mm in '16 and up to $25mm in each of '17 and '18, as well as ongoing non-cash impacts for '16-'18 of ~$825mm / ~$825mm / ~$215mm mostly attributable to accelerated depreciation and nuclear fuel amortization associated with the decision to retire the units early. Early retirement of these units could result in a funding shortfall relative to their NRC minimum nuclear decommissioning trust fund (NDTF) obligations, necessitating additional parent guarantees of as much as $385mm for Clinton (up from $315mm as of the 10-K) and $65mm for Quad Cities to allow ExGen to access its NDTF fund for radiological decommissioning costs in the most expensive decommissioning scenario. There may also be an additional $160mm and $180mm cost required for Clinton and Quad Cities respectively, if they are not granted an exemption allowing them to use the NDTF for spent fuel management and site-restoration costs. These fuel and site restorations costs would not need to be funded immediately, however and are capable of being expensed over the next 10 years so it wouldn't be a massive drag on cash. It is also our understanding that these numbers could come down materially after EXC declares its intent to put the plants in to the SAFSTOR program.

Exhibit 5

EXC's Clinton & Quad Cities Plant Level Financials Before +/- $50mm Of Dis-Synergies

What's next? EXC will be hosting an Analyst Day on 8/10/16 in Philadelphia. A potential acquisition of Fitzpatrick from Entergy is likely to be finalized in mid-August pending NYPSC action authorizing a ZEC program, which could happen by 8/1/16. On 6/30/16, Pepco filed an electric distribution rate case in DC, requesting an $85.5mm increase premised on 10.60% ROE – a decision is expected. Delmarva plans to make an electric distribution rate filing in MD within the next few months. The DE PSC will rule on Delmarva's pending electric and gas distribution case there in 1H17. The IL PSC will issue a final order on ComEd's electric FRP by December, with a final order by the MD PSC on the electric distribution rate case Pepco filed on 4/19/16 expected then as well. A NJBPU decision on the electric distribution rate filing ACE made on 3/22/16 is expected in 1H'17.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of regulation to bolster the revenue stream of the NY nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in NY to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Buy, Hold or Sell) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%

Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Evercore ISI ratings distribution (as of 07/18/2016)

Coverage Universe

Ratings	Count	Pct.
Buy	312	48%
Hold	299	46%

What's New?

SRE – Port Arthur LNG files formal application with FERC
EXC – IL House Energy Committee approved revised Future Energy Jobs
NEE – Florida PSC grants FPL multi-year increase totaling $811mm
VVC – Final stakeholder meeting on IRP lays out pathway to modify generation portfolio
EXC – Delaware intervenors recommend lower ROEs
PCG – Released a new report and interactive map to support EV adoption in CA
PPL – Request base rate increases at KU and LG&E subsidiaries
FE – New sustainable management plans for Bruce Mansfield facility

SRE – Port Arthur LNG files formal application with FERC

- SRE subsidiaries filed applications with the Federal Energy Regulatory Commission (FERC) seeking formal authorization to site, construct and operate Port Arthur LNG.
- The project consists of 2 natural gas liquefaction trains with total capacity ~13.5mm metric tons/year (698Bcf per year); 3 LNG storage tanks; NGLS and refrigerant storage; feed gas pre-treatment facilities; 2 berths and associated marine and loading facilities.
- A separate application was filed seeking authorization to construct natural gas pipelines to deliver natural gas to the project.

Guggenheim takeaway: *A positive event as this investment opportunity is not slated in base plans, but rather an incremental development opportunity supporting continued growth post 2020. SRE has no shortage of growth avenues, in our view, so too much investor emphasis or concern around Cameron, which will get built. SRE's current valuation doesn't reflect the above-average growth trajectory.* ***See our recent note HERE.*** *As of late last night, FERC site down so we will provide deeper thoughts in the NT on Port Arthur once we go through the doc's. We recently launched on SRE and highlighted as a core holding for investors at the current phase of the rate cycle.* ***See HERE.***

EXC – IL House Energy Committee approved revised Future Energy Jobs Bill

- The IL House Energy Committee voted 10 to 1 to approve the streamlined version of the Future Energy Jobs Bill, which seeks to create a clean energy standard to support at-risk nuclear facilities.
- The amendment of the Bill was filed Monday with a revised below 25 cents average monthly customer bill increase, lowered revenue that ComEd could generate from customers from $285mm to $235mm annually, and scaled back energy efficiency investments from $500mm to $400mm annually.

Guggenheim takeaway: *EXC continues to reduce the scope of the bill, which, in our view, is an incremental positive; we note that the condensed legislation session still does not bode well but we are seeing some positive light.*

NEE – Florida PSC grants FPL multi-year increase totaling $811mm

- The Florida Public Service Commission unanimously approved a settlement with major intervenors and NEE's Florida Power & Light Co for a total of $811mm through mid-2019.
- Revenue increases call for an additional $400mm in 2017, $211mm in 2018 and $200mm through mid-2019 versus an initial ask of $1.3bn.
- The midpoint of allowed return on equity increases to 10.55%, from 10.5%, also still reflecting a range in which NEE can manage returns by amortizing reserves authorized for that purpose; the authorized range is now 9.6-11.6% ROE.

Guggenheim takeaway: *A positive outcome although no surprise to us as we weren't anticipating a contentious proceeding considering NEE's industry leading operating performance going into the rate case, coupled with relatively low rates to begin with. Post rate case (which just concluded) and Oncor deal, we continue to highlight that NEE is in a good position to revisit growth –* ***see our EEI links below.***

VVC – Final stakeholder meeting on IRP lays out pathway to modify generation portfolio

- VVC held the Final shareholder meeting on its preferred integrated resource plan.
- VVC estimates it will spend approximately $250mm to comply with regulations including Coal Combustion Residual and Effluent Limitations Guideline, regarding coal ash, wastewater and air pollution handling and disposal.
- A final IRP report is expected to be submitted to IURC in December 2016 and details about the plan should be released in Feb 2017, with finalized plan in late summer of 2017.

Guggenheim takeaway: *We note the IRP in Indiana is the NT catalyst that could prompt additional spending opportunities and a revisit of growth; timing of execution is key.* ***For additional details see our EEI takeaway.***

EXC – Delaware intervenors recommend lower ROEs

- The Division of Public Advocate recommends to DE PSC that Delmarva receive a $12mm (2.1%) rate increase with a 9% ROE (49.44% of capital) and a $771.4mm rate base for a 205 test year.
- In a filing with the PSC staff recommends a $9.5mm (1.6%) rate increase with a 9.2% ROE (49.44% equity) and a $773.3mm rate base.
- Delmarva initially filed for a $62.8mm increase based on a 10.6% ROE and $846.2mm rate base.

Guggenheim takeaway: *No surprise here, as is typical of any rate case preceding, interveners set the floor.*

PCG – Released a new report and interactive map to support EV adoption in CA

- PCG released a new report as part of its Electric Program Investment Charge Program (EPIC) and an interactive map to support and ease the installation of DC Fast chargers in CA.

- The EPIC report and mapping tool will support siting of DCFC based on state travel data and other factors so as to increase EV adoption and extend benefits across communities.

Guggenheim takeaway: *CA policy continues to push for further GHG reduction but we believe this won't be achieved without a focus on transportation, and PCG has directed investor attention on electrification and gasification of the transport sector as a long-term opportunity around CA's carbon policy; for* ***additional details see our EEI takeaways from management in our note HERE.***

PPL – Request base rate increases at KU and LG&E subsidiaries

- PPL requested a base rate increase of $103mm (6.4%) at KU and electric and gas increases at LG&E of $94mm (8.5%) and $14mm (4.2%), respectively.
- The filings are based on a forecasted test year of July 1, 2017 through June 30, 2018 and request an authorized ROE of 10.23%; hearings on the applications are expected in 2Q17.

Guggenheim takeaway: *The resolution of this proceeding will be a catalyst for the broader story, as we will likely see management's next moves with regard to their currency positioning once this proceeding is behind them in mid 2017; as a reminder, PPL is well hedged through 2018 now, although investors still look beyond 2018, so the extent to which they roll in-the-money hedge value forward to 2019/2020 will be incremental.*

FE – New sustainable management plans for Bruce Mansfield facility

- FE intends to ship coal combustion residuals (CCRs) from the Bruce Mansfield Plant for use in reclamation of a site owned by the Marshall County Coal Company in WV.
- Now 100% of the CCRs created at the plant will be used for mine reclamation or recycled to drywall materials, with delivery commencing in early December.

Guggenheim takeaway: *An incremental positive towards coal ash management.*

(1) Neutral rated companies do not have price targets; target reflects fair equity value per share estimate.

(2) Regulated utilities deliver power to end-use customers via regulated transmission & distribution (T&D) infrastructure; vertically integrated utilities with regulated or mostly contracted generation are also included.

(3) Integrated utilities own and operate regulated T&D franchises, as well as un-regulated power generation with commodity exposure.

(4) IPPs operate merchant (i.e., un-regulated, non-utility) power plants that compete to sell power in wholesale markets or through retail marketing businesses.

(5) Local Gas Distribution Companies (LDCs), as well as diversified utilities with a business mix largely comprised of gas infrastructure and related activities (i.e., LDC franchises, interstate pipelines, and/or other gas midstream activities).

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-

service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the “Order”), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as “relevant persons”). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

We have removed NextEra Energy as our Top Pick as we see greater near-term upside potential in Exelon. Exelon Corp. is our new Top Pick (replacing NextEra Energy). Exelon's enhanced focus on utility growth provides for a top quartile growth story (excluding the earnings impacts from the genco), in our view. The 7-9% projected utility EPS growth through 2020 is visible based on rate base growth and regulatory outcomes. The funding for the utility investment, which the company estimates at $25bn or higher, is likely to be supported without the need for external equity as cash flow is provided by a stable merchant generating business comprised of primarily nuclear generation. In an ever more carbon-constrained world this generating footprint will have enhanced value as evidenced by the Clean Energy Standard recently passed in New York. Both the utility franchise and the merchant generation franchise appear to trade at meaningful discounts to their peers based on our EPS and EBITDA estimates. We are maintaining our $39 price target.

While we continue to favor NEE owing to its sizable renewable development backlog and CPP-compliant utility opco, two upcoming events give us pause in the near-term. 1) There is ROE risk associated with the pending rate case for Florida Power and Light. FPL is seeking an 11.5% ROE compared to its authorized ROE of 10.5% and recent industry comparisons in the 9–10% range. A staff recommendation is due by October 14 and a final PSC decision is expected by year-end. 2) Should the Republicans win in the presidential election, this would dampen U.S. renewable growth outlook based on the party platform's stated energy policy goals. We still think NEE has significant development growth potential from increasing state renewable mandates, and NEE's general partnership relationship with NextEra Energy Partners, LP provides an intrinsic outlet for developed projects as well as a source of capital. Therefore, we are maintaining our Overweight rating and $142 price target.

Completed: 05-Oct-16, 04:46 GMT Released: 05-Oct-16, 09:55 GMT

Stock Rating: OW: Overweight; EW: Equal Weight; UW: Underweight; RS: Rating Suspended
Industry View: Pos: Positive; Neu: Neutral; Neg: Negative

Valuation Methodology and Risks

North America Power & Utilities

NextEra Energy (NEE)

Valuation Methodology: Our price target of $142 is based on applying a 10% premium to the regulated utility multiple of 17.7x to our 2018 EPS estimate of $6.90. In addition, we add $7.50/share value for NEE's pro rata ownership of NEP.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: NextEra Energy Resources has merchant exposure to volatile gas and power prices, and risks associated with expansion in the size of its wind asset base. In addition, volatility around fuel prices and high levels of capital spending at its utility present regulatory risk. There is also risk of an extended merger approval process for HE, incremental acquisition announcements, and a contentious FP&L rate case.

Price (04-Oct-2016)	USD 31.86
Price Target	**USD 39.00**

Why Overweight? We believe that that utility growth of 7-9% is achievable and will be funded by cash flow from the generation company even with the current forward curves. Any additional legislation similar to the CES in New York or the inclusion of the CES in our numbers is upside to our estimates.

Upside case	USD 44.00

Our upside case assumes the impact of the zero emission credits in New York for the genco and assumes a 10% premium for the utility valuation given the above average growth.

Downside case	USD 30.00

Our downside case assumes a 10% discount for the utility and a 4x EBITDA at the genco based on current forwards, with no consideration of the CES or FitzPatrick acquisition

Upside/Downside scenarios

Interest cover (x)	3.8	3.9	4.0	4.2	4.0
Regulated (%)	63.6	63.6	63.6	63.6	63.6

Price (04-Oct-2016)	USD 118.90
Price Target	USD 142.00

Why Overweight? NEE's Overweight rating is supported by 6-8% earnings growth and 12-14% dividend growth which exceeds the industry average. NEE is also considered one of the premier renewable developers in the industry.

Upside case **USD 148.00**

We assume in this scenario that NEE's core earnings trade at a 15% premium to the regulated utility group on the strength of its growth. We do not include incremental value from NEE's GP stake in NEP, so further upside potential is possible as that value becomes evident.

Downside case **USD 116.00**

Our downside case applies an industry average multiple to 2018E earnings and excludes any value for gas pipelines or yieldco.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

AES Corp. (AES)
Alliant Energy (LNT)
Ameren Corp. (AEE)
American Electric Power (AEP)
American States Water Company (AWR)
American Water Works (AWK)
Aqua America (WTR)
Brookfield Infrastructure Partners LP (BIP)
Brookfield Infrastructure Partners LP (BIP_u.TO)
Brookfield Renewable Energy Partners LP (BEP)
Brookfield Renewable Energy Partners LP (BEP_u.TO)
California Water Service Group (CWT)
Calpine Corp. (CPN)
Canadian Utilities Ltd. (CU.TO)
CenterPoint Energy Inc. (CNP)
CMS Energy (CMS)
Connecticut Water Service Inc. (CTWS)
Consolidated Edison (ED)
Dominion Resources (D)
DTE Energy (DTE)
Duke Energy (DUK)
Dynegy Inc. (DYN)
Edison International (EIX)
Emera Inc. (EMA.TO)
Entergy Corp. (ETR)
Eversource Energy (ES)
Exelon Corp. (EXC)

Distribution of Ratings:

Barclays Equity Research has 1740 companies under coverage.

40% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 78% of the issuers with this rating have received financial services from the Firm.

41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 49% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

16% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 46% of companies with this rating are investment banking clients of the Firm; 67% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to http://publicresearch.barclays.com.

Explanation of other types of investment recommendations produced by Barclays Equity Research:

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

Disclosure of previous investment recommendations produced by Barclays Equity Research:

A: Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of Exelon Corp. in the previous 12 months.

CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by Exelon Corp..

CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by Exelon Corp..

D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from Exelon Corp. in the past 12 months.

J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by Exelon Corp. and/or in any related derivatives.

K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from Exelon Corp. within the past 12 months.

L: Exelon Corp. is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

M: Exelon Corp. is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our $39 price target is premised upon a 2018 group average multiple of 16.7x applied to the utility net parent earnings of $1.68 resulting in $28 of utility value. Exgen is valued at 6.5x 2018 EBTIDA netted against debt resulting in $11 of value for Exgen, The combined value is $39.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

A: Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of NextEra Energy in the previous 12 months.

CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by NextEra Energy.

CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by NextEra Energy.

D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from NextEra Energy in the past 12 months.

E: Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from NextEra Energy within the next 3 months.

J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by NextEra Energy and/or in any related derivatives.

K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from NextEra Energy within the past 12 months.

L: NextEra Energy is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

M: NextEra Energy is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our price target of $142 is based on applying a 10% premium to the regulated utility multiple of 17.7x to our 2018 EPS estimate of $6.90. In addition, we add $7.50/share value for NEE's pro rata ownership of NEP.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: NextEra Energy Resources has merchant exposure to volatile gas and power prices, and risks associated with expansion in the size of its wind asset base. In addition, volatility around fuel prices and high levels of capital spending at its utility present regulatory risk. There is also risk of an extended merger approval process for HE, incremental acquisition announcements, and a contentious FP&L rate case.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

PEG – LIPA set to approve offshore wind farms
NEE – Berkshire Hathaway has reportedly submitted a bid for Oncor
Natural Gas – EIA expects gas-fired electrical generation to reach new record
CAISO – Utah lawmakers act for greater influence in proposed multi-state energy market
EXC – Partnership talks underway with Japanese firm on emerging market opportunities

PEG – LIPA set to approve offshore wind farms

- There are reports the Long Island Power Authority (LIPA) will approve an offshore wind farm contract for the 90MW, 15-turbine Deep One-South Fork with Deepwater Wind.
- The proposed development would be the nation's largest to date; 3 times larger than the Block Island project (in-service 2016) off of Rhode Island.
- Gov. Andrew Cuomo has urged support for the wind project, calling on LIPA's board of directors to grant approval, and help the state achieve the goals of his Clean Energy Plan.

***Guggenheim takeaway:** At the end of the day, the governor's low carbon aspirations will likely have a hefty price tag, but subsidies to maintain viability of upstate nuclear are likely a more cost-effective solution than offshore wind.*

NEE – Berkshire Hathaway has reportedly submitted a bid for Oncor

- There are claims that Warren Buffet's holding company, Berkshire Hathaway (BRK.A, NC, $218,590.50) has submitted a bid for Oncor Electric Delivery.
- We believe Oncor could be valued at about $18B based on prior indications of interest.

***Guggenheim takeaway:** We look to the bankruptcy proceeding as a catalyst for coal retirement in ERCOT as well as a potential new opportunity for NEE. While NEE has not come out and made a public comment that it is re-interested in the Oncor assets, it is continually mentioned in the press. We think these assets are a great strategic fit for NEE; despite a potential equity raise, the transaction should be noticeably accretive – this should not present an overhang on NEE shares.*

Natural Gas – EIA expects gas-fired electrical generation to reach new record

- The EIA's Short-Term Energy Outlook (STEO) has natural gas-fired generation reaching record highs in July and August; pushing up the year's average to 3.8mm Mwh/day in 2016, or 4% higher than in 2015.
- The forecast has gas ultimately providing 34% of the United States' electricity generated this year, with coal's share of the generating mix at 30%, nuclear at 19%, and renewables at 15%.

Guggenheim takeaway: *In line with our industry outlook; we estimate gas could fuel 41% of U.S. power generation after an additional 33GW of coal retires. For additional takeaways, see our recent coal retirement analysis HERE).*

CAISO – Utah lawmakers act for greater influence in proposed multi-state energy market

- Utah lawmakers began drafting legislation to allow them to block the state's participation in California's proposed regional electrical grid. Utah currently has some of the nation's lowest energy costs and relevant details on the benefits for other participating states remain unknown.
- Moreover truly successful expansion to a singular regional grid would require participation of all 11 western states and uniform transmission fees.

Guggenheim takeaway: *CAISO expansion could create transmission investment opportunities, although policy makers will have to strike a balance – CA wouldn't want to dilute its low-carbon progress by welcoming states with relatively less renewables, while those states likely aren't willing to pay the same low-carbon premium. That said, we hosted Commissioners at Guggenheim for breakfast and Utah rep was, in our view, clearly against the EIM.*

EXC – Partnership talks underway with Japanese firm on emerging market opportunities

- Japan Atomic Power and EXC are in negotiations over a partnership that would focus on emerging countries; with the collaboration leveraging Japanese and American expertise, with a Japanese executives noting "nuclear reactors in emerging economies tend to follow U.S. regulations."

Guggenheim takeaway: *Too early to have investment implications, but potentially some form of service contract or consulting agreements come into play. Maybe they touch on it at the Analyst Day.*

*Coverage of WR and GXP suspended given investment banking activity

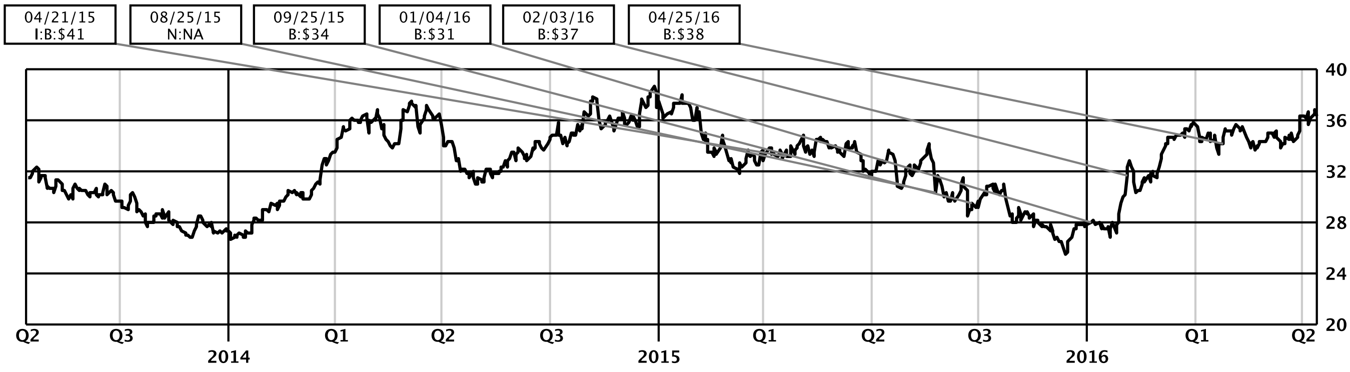
ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

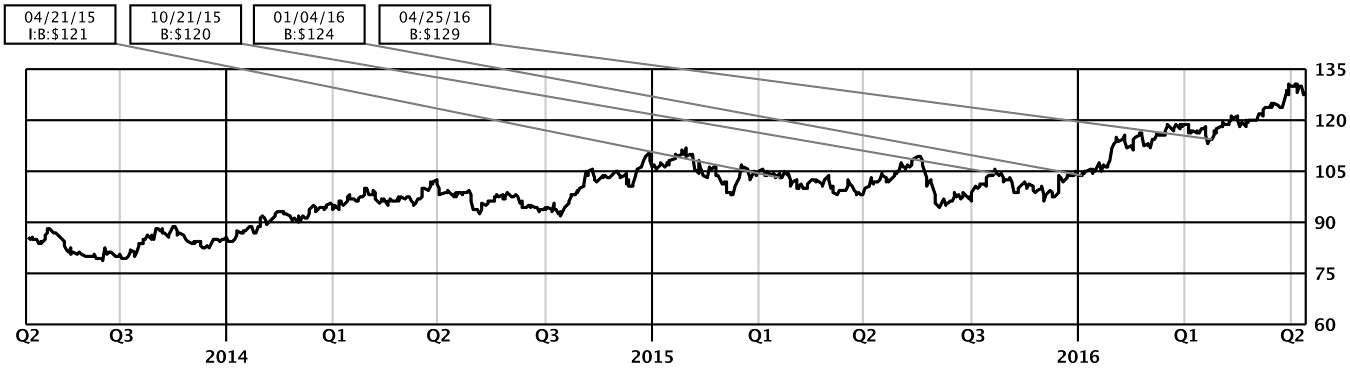
The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, NextEra Energy, Inc. and Public Service Enterprise Group Inc. in the next 3 months.



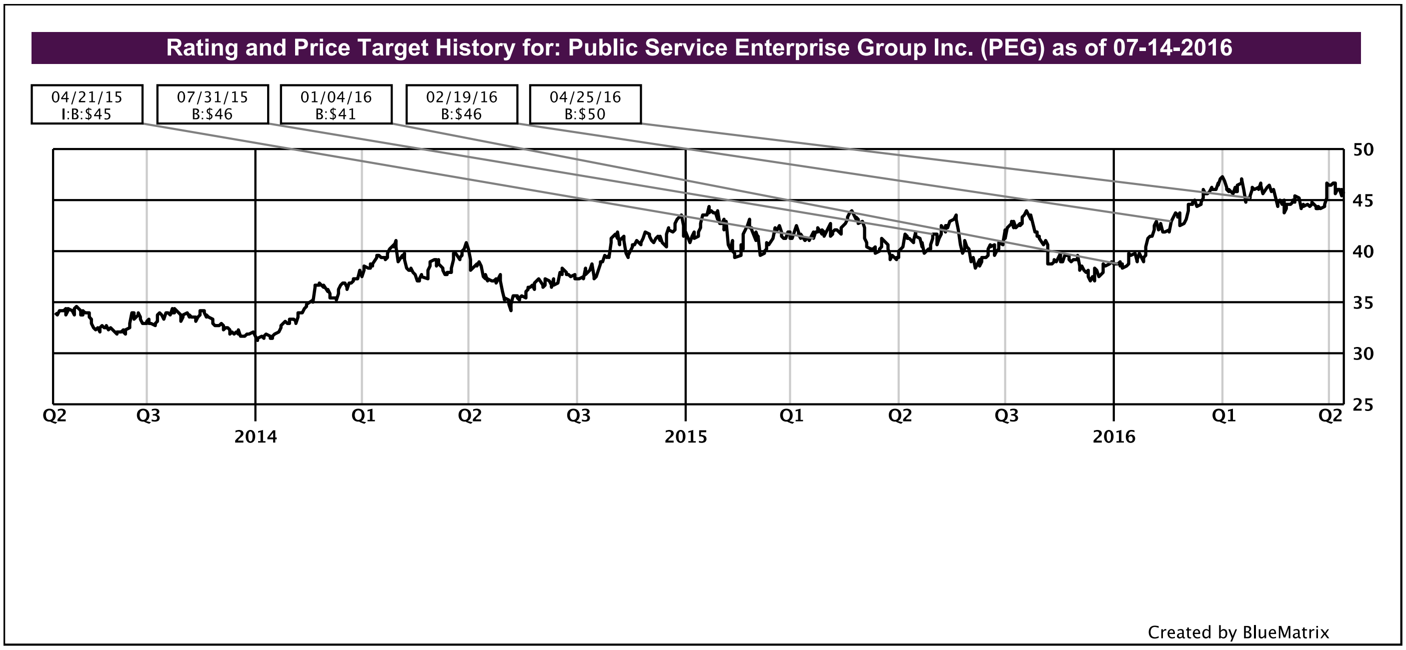
Rating and Price Target History for: Exelon Corporation (EXC) as of 07-14-2016

Created by BlueMatrix



Rating and Price Target History for: NextEra Energy, Inc. (NEE) as of 07-14-2016

Created by BlueMatrix



RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

EXC – Analyst Day Articulates the Story: Strong Free Cash Flows, Shrinking Balance Sheet & Regulated Growth (See note HERE)
ERCOT – Demand surpasses 70,500MW, breaks hourly peak record set earlier this week
EXC – Illinois leaders promote NY energy program as model
ISO-NE – Demand to hit summer high this week
PCG – City of San Bruno statement regarding guilty verdict in PG&E criminal trial
PCG – Guilty verdict means felon image for PG&E

ERCOT – Demand surpasses 70,500MW, breaks hourly peak record set earlier this week

- ERCOT systemwide demand reached 70,531MW between 3 and 4 p.m. and then breached those levels with another new record at 70,572MW within the hour, topping Monday's record by 403 MW.
- On a month-to-date basis ERCOT load has averaged 68,100MW; more than 2,175MW higher than last year's demand for the same time period.

Guggenheim takeaway: *Positive for IPPs in TX (CPN, DYN, NRG). Energy-only market can produce very healthy returns with a return to weather. Why aren't the IPP share prices starting to reflect a very strong Q3 on weather? This is the biggest quarter for their CFs.*

EXC – Illinois leaders promote NY energy program as model

- In a letter to state lawmakers, a group of Illinois mayors and community leaders called for policy similar to the New York Clean Energy Standard, specifically an energy program to safeguard Illinois' struggling nuclear plants.
- Without passage of new state energy legislation, the Clinton and Quad-cities plants are scheduled to close in 2017 and 2018, respectively.

Guggenheim takeaway: *In light of legislation supporting nuclear in NY, and following the recent sales agreement with ETR (to acquire Fitzpatrick), EXC could emerge as a nuclear savior; although we don't believe management is interested in owning merchant generation, so we wouldn't expect EXC to accept an outcome unless it ensures transparent cash flow to keep the plants open. Management recently iterated December as a drop-dead date for formal notice to MISO. They have some opportunities to move in November and December.*

ISO-NE – Demand to hit summer high this week

- Peak demand in the ISO-NE is forecast to reach 25.1GW, 0.8GW higher than the current season-to-date record set July 22, similarly for the 2015 and 2014 summer peaks, respectively. Peak load has not breached 25GW since summer 2013 when peak demand rose to over 27.3GW.

- Mass Hub on-peak prices jumped $20/MWh day over day to average $64.77/MWh for Thursday delivery on the Intercontinental Exchange. Prices are also up nearly $18/MWh from July 22 levels.

Guggenheim takeaway: *Positive for power generators in New England including CPN, DYN NRG, EXC.*

PCG – City of San Bruno statement regarding guilty verdict in PG&E criminal trial

- The City of San Bruno notes the incident was not an accident but a "man-made disaster, one that resulted from negligent decision making and actions by PG&E corporate executives over 6 decades and from the failure of the California Public Utilities Commission to protect our safety."
- The City will request that the judge install an independent monitor at PG&E for oversight of the company's policy and operational practices.

PCG – Guilty verdict means felon image for PG&E

- A *Bloomberg* piece quotes the city manager opining that the case has "never been about the money" but rather the convictions that "provide a black mark on the corporate seal of PG&E. It is a strong reminder that criminal negligence will not be tolerated."
- Prosecutors dismissed the $562mm charge as the available information was insufficient to charge any individuals with a crime.

Guggenheim takeaway: *While the maximum penalty associated with this trial was recently reduced to ~$6mm, damages to PCG's reputation could present challenges in regulatory proceedings going forward, although not something that's easy to quantify. The above sounds more like sour grapes. Could be time to move on.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

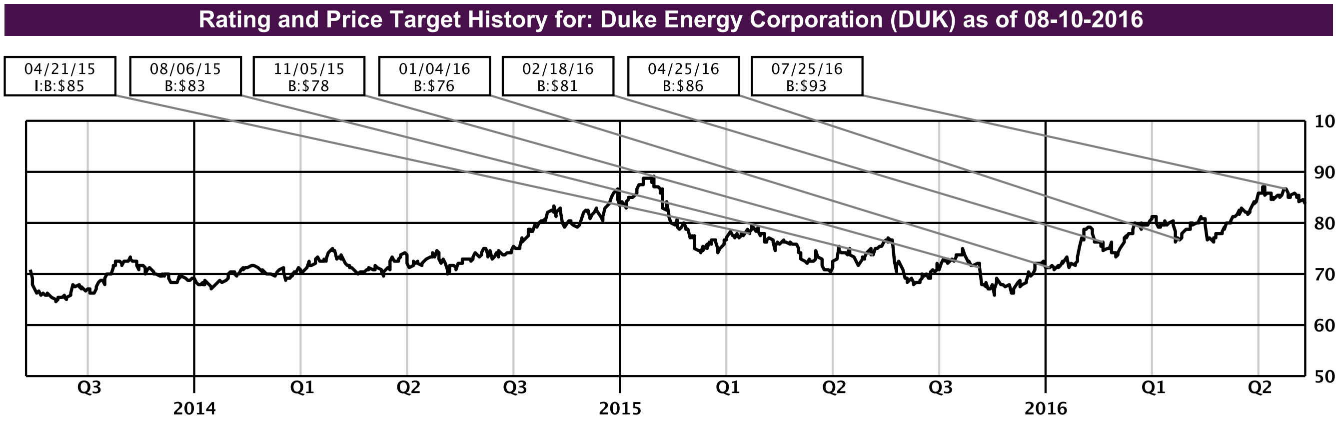
The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC managed or co-managed a public offering of securities for Duke Energy Corporation during the past 12 months.

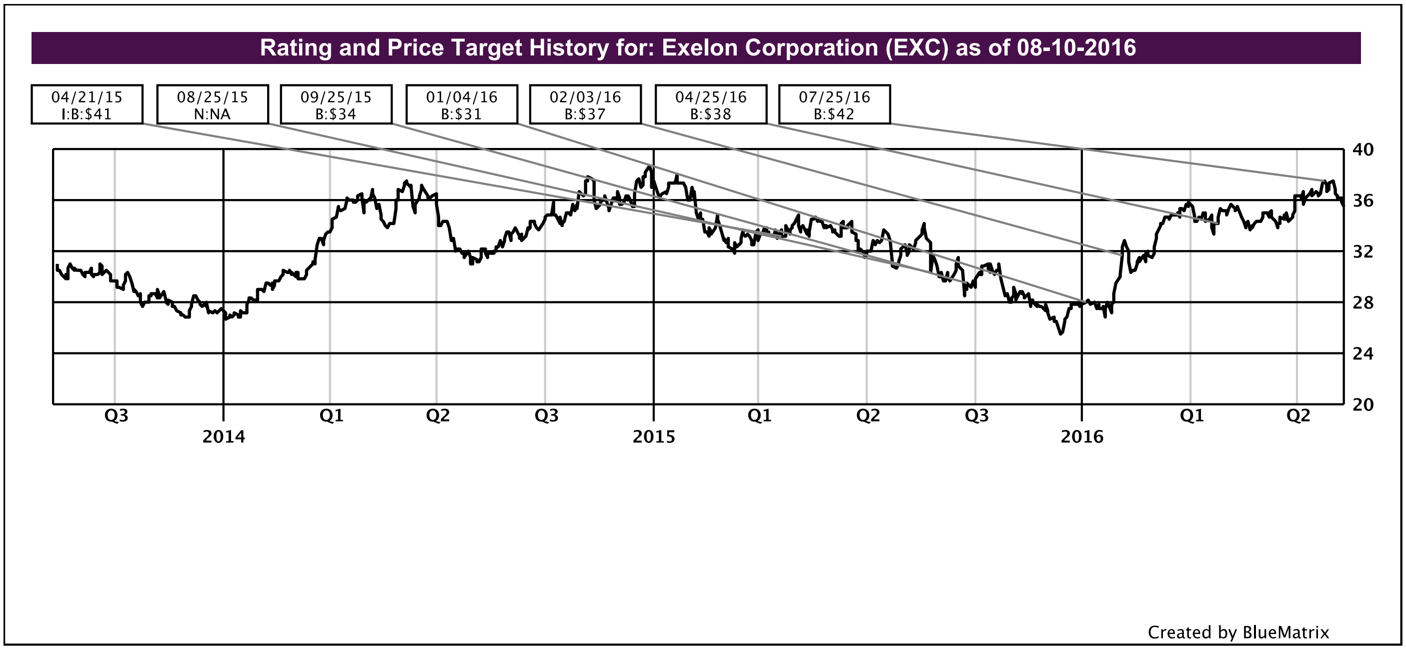
Duke Energy Corporation is or was during the 12-month period preceding the date of the distribution of this report a client of Guggenheim Securities, LLC. Guggenheim Securities, LLC provided Duke Energy Corporation investment banking services.

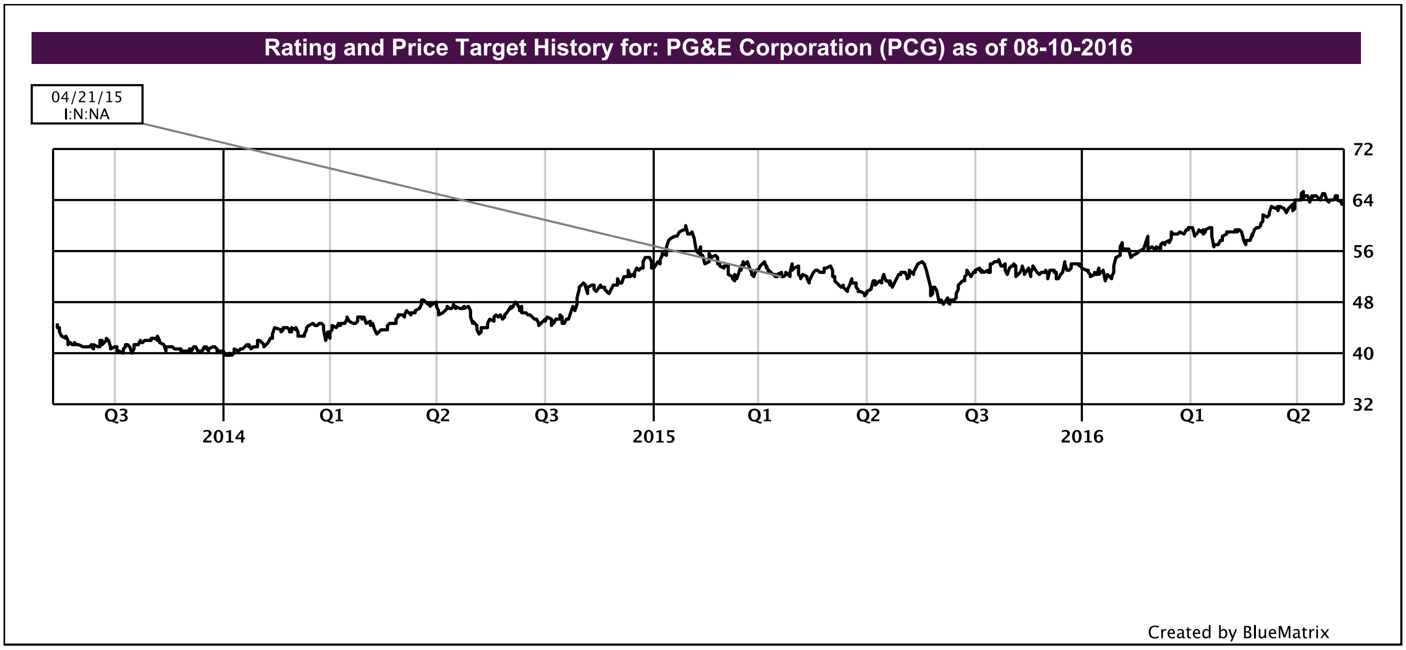
Guggenheim Securities, LLC or its affiliates received compensation for investment banking services from Duke Energy Corporation during the past 12 months.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Duke Energy Corporation, Exelon Corporation and PG&E Corporation in the next 3 months.



Created by BlueMatrix





RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market

risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Investment Thesis 06 Dec 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Valuation, Growth and Profitability 06 Dec 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin

from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $650 million change in EBITDA. Our fair value estimate would change by $5 per share. On a mark-to-market basis as of mid-November, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 4 percentage points to near the industry average, it would change our fair value estimate by $1 per share. If Exelon does not retire the Clinton, Quad Cities, and Three Mile Island plants, it would add $2 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an

effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. About 70% of the $11 billion of rate base growth in 2016-20 will have rate trackers or formula rates, minimizing regulatory lag. Exelon faces the biggest challenge boosting Pepco's earned returns some 400 basis points to approach its allowed returns. Rate cases in 2016-17 should give it a good start.

In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

Exelon Corp EXC (NYSE) | ★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
35.80 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Morningstar Analysis

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets as it tries to smooth cash flow at its generation unit. As power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.We see no immediate credit concerns based on current energy market conditions. We project Exelon's consolidated EBITDA/interest coverage will remain above 5 times and leverage will remain below 5 times debt/EBITDA at least through 2019. Even those these ratios are weaker following the Pepco acquisition, we think this is acceptable given the higher share of regulated earnings.Only about one-quarter of Exelon's consolidated debt is directly tied to its generation segment. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing its near-term maturities. Management has committed to reducing Exelon Generation debt by $3 billion during the next five years and use the remaining cash to fund the regulated utilities' growth.We also think management can meet its 2.5% dividend growth goal through 2018 with relative ease. However, this is rather unimpressive compared with most of its peers that we think can grow their dividends at least twice as fast.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm might have to make modest cash contributions. Plant closures also could increase cash decommission costs.

Enterprise Risk

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's

largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management 06 Dec 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth 14 Nov 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV

demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Our fundamental U.S. electricity demand forecast is detailed in the Utilities Observer we published in May, "U.S. Electricity Demand Outlook: Energy Efficiency Is No Death Knell." Our fundamental EV forecast is detailed in the Electric Vehicles Observer published Nov. 14.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities 09 Nov 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns 08 Nov 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases,

Analyst Notes

management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Regulated Utilities Continue Driving Growth for Exelon

26 Oct 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

09 Aug 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast

Exelon Corp EXC (NYSE) | ★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
35.80 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

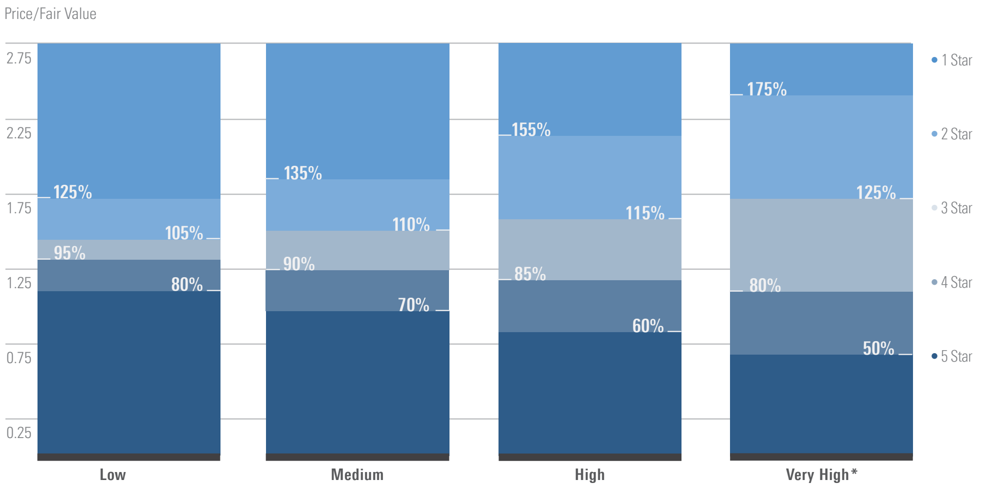
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

COMPANY UPDATE

Exelon Corp. (EXC)

Neutral

Equity Research

Risks do exist at EXC, especially ZEC and RPM; remain Neutral

What's changed

In efforts to halt early nuclear retirements in their states, both New York and Illinois created either regulatory (NY) or legislation (IL) frameworks to provide nuclear subsidies, in the form of Zero Emission Credits (ZECs), to existing nuclear plants owned by Neutral-rated EXC in 2H2016. A coalition of power companies filed a complaint with the US Second Circuit Court of Appeals on 10/19/16, challenging the legal standing of the ZECs in NY, alleging that these ZECs (1) imply an intrusion on federally regulated wholesale power markets by a state authority, and (2) the allocation of the ZECs discriminates against other generators. We believe, given their similarities in design, a read across may exist between the NY case and any potential future cases filed against the ZECs in IL as both ZEC programs provide above-market subsidies to only nuclear generation.

Implications

While we do not take a view on any potential outcome of the litigation, we view the ZEC challenge at the Second Circuit as a near-term risk for EXC's shares. Circuit courts traditionally respond to motions to dismiss within a month of all briefs filed suggesting that the federal court could decide in the coming week(s) whether to accept or dismiss the ZEC complaint. Our forecasts include the ZECs, which represent $500mn+ in EBITDA, and we see the plants with ZECs contributing $0.25-$0.30 to EPS annually. Other near-term risks for EXC's shares also exist. Given reductions in its demand forecast, PJM's planning parameter details for the RPM capacity auction, due out on Jan 31, could prove modestly bearish – a headwind for EXC's merchant given its sizable PJM exposure. Despite our 4Q2016 estimates being above consensus and a modestly compelling valuation, near-term headwinds keep us Neutral.

Valuation

We derive our 12-month PT of $38 using a multiples-based SOTP valuation.

Key risks

Key risks include power prices, litigation, and regulation.

PM Summary: Potential negative catalysts exist; remain Neutral on EXC

Litigation over the Zero Emissions Credits (ZECs), as well as other factors, could create negative catalysts and weigh on EXC's shares in the coming weeks. The catalyst with the most potential to significantly impact the stock includes a potential ruling on the motion to dismiss the NY nuclear subsidy. As detailed in our recent note on nuclear retirements published January 23 (*"America's Potential Nuclear Power Challenge"*), both NY and IL created new nuclear subsidies (ZECs) to keep select, existing nuclear plants from retiring. A group of other power companies[1] , with assets in NY that did not receive the ZEC, filed a complaint at the US Second Circuit Court of Appeals, claiming the ZEC interferes with the Federal Energy Regulatory Commission's oversight, and not state authority, of wholesale power markets – with specific claims that this will impact energy margins for other generators as well as potentially influence capacity auction results there. The complaint also highlights potential discrimination as the state of NY did not offer ZECs in a competitive process to other zero emission assets in NY or out of state, with access to NY (i.e., interstate commerce).

- **A decision by the Second Circuit Court on whether to dismiss this complaint – or set the case for trial – could come in early / mid-February as circuit courts traditionally rule on a motion to dismiss within a month of all briefs filed, highlighting potential risk to our forecasts**. If the Second Circuit Court accepts the case filed by the complainants, we would view this as a potential risk to EXC's earnings. We note the ZEC designed in IL appears similar to the one in NY as both programs provide above-market subsidies for only nuclear generation – investors could imply a potential read across from the NY case for the IL ZEC's, if the court accepts the NY complaint.
- **We estimate the plants impacted by the ZEC create roughly $0.25-$0.30 in EPS annually (2019E run rate).** We assume the ZEC subsidies contribute $522mn in direct additional revenue for 2019E, and combined (1) with forecast energy and capacity sales from the plants receiving the ZEC, and (2) our estimate of direct cost for these plants, we estimate they create roughly $500mn-$600mn of EBITDA (2019) and $0.25-$0.30 in EPS.
- **PJM's planning parameters, due on January 31, could also weigh on EPS in the near term – given reductions in forecast demand**. Other key catalysts to watch include PJM parameters released on January 31 and 4Q2016 earnings for EXC on February 8. The release of the PJM parameters (publicly released detailed data which highlights supply/demand conditions ahead of the May capacity auction) could appear as a neutral-to-bearish catalyst as PJM recently lowered demand forecasts again in PJM. While our 4Q2016 EPS forecast is above consensus, at $0.51 versus $0.45 for consensus, we note discussion on the ZEC litigation and PJM's capacity auction may outweigh the focus on the 4Q2016 results.

We remain Neutral on EXC given near-term event risk, though the stock already trades at a discount to peers on our sum-of-the-parts. After a 2016 with strong outperformance of 16% above the sector index (XLU), the stock still trades at a 0.5x-1.5x discount to Diversified Utilities peers with merchant generation. That said, we view the upcoming catalysts – particularly the potential ruling on the ZEC program – as substantial enough risks to remain on the sidelines. However, we note that the sum-of-the-parts valuation does appear modestly compelling.

A potential loss of ZEC revenues, while not our base case, would present risk to EXC…

Key hearings present headwinds for the Zero Emission Credit (ZEC) programs that provide several EXC nuclear plants with subsidies. The ZEC program represents $522mn in additional revenue for EXC's IL and NY nuclear power plants, and we see these plants with ZECs representing close to $0.25-$0.30/share in 2019E EPS. We use 2019 as a baseline given prior assumptions on the expected, but now cancelled, early retirement of these plants. The ZEC subsidy program also ensures that several nuclear plants remain online, including James A. FitzPatrick, Nine Mile Point and Ginna in NY, as well as the Quad Cities and Clinton Power Station in IL. Combined, we see these plants as creating $500mn-$600mn in total EBITDA, with the ZEC subsidy contribution roughly $522mn of this amount.

Exhibit 3: Potential loss of the ZEC program creates headwinds of between $500-$600m in EBITDA and $0.25-$0.30 in EPS
2019E EBITDA ($m) and EPS impact from ZEC program revenues and saved retirements

…but upside to consensus EPS and discounted valuation keep us sidelined

Our forecasts, which include the ZEC given the existing legislation/regulation, are above consensus – also, EXC trades at a discount. Our EPS estimates come-in 3% above consensus in 2018/2019 – and more in 2017 – which we attribute in part to assumed cost management by EXC, our power price and volume assumptions, and potential use of free cash flow for debt reduction. We still expect improving free-cash-flow for the consolidated business driven partially by strong free-cash-flow at the generation segment. Although these fundamentals and the discounted valuation for EXC appear positive, we remain Neutral as the ZEC litigation presents downside risk – we use a discount multiple of 5.25x on 2018E generation segment EBITDA in our sum of the parts to reflect this risk.

PJM parameters due in late January could also act as a near-term negative catalyst for EXC

EXC's power generation segment remains heavily exposed to PJM and the upcoming PJM parameter release could prove neutral or bearish. PJM releases preliminary parameters for its May capacity auctions on January 31. We estimate, given PJM again reduced its demand forecast earlier in January 2017, that this detailed release could prove either neutral or modestly bearish. With EXC delivering almost 35%-45% of annual EPS from its generation segment, investors could see this as a bearish sign for the upcoming auction, which impacts 2020-2021 capacity revenues.

Exhibit 11: PJM lowered its peak demand forecast again for this year's auction

Investment Profile

The Goldman Sachs Investment Profile provides investment context for a security by comparing key attributes of that security to its peer group and market. The four key attributes depicted are: growth, returns, multiple and volatility. Growth, returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe.

The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

Growth is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Volatility** is measured as trailing twelve-month volatility adjusted for dividends.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Goldman Sachs had a non-investment banking securities-related services client relationship during the past 12 months with: Exelon Corp. ($35.08)

Goldman Sachs had a non-securities services client relationship during the past 12 months with: Exelon Corp. ($35.08)

Goldman Sachs has managed or co-managed a public or Rule 144A offering in the past 12 months: Exelon Corp. ($35.08)

Goldman Sachs makes a market in the securities or derivatives thereof: Exelon Corp. ($35.08)

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	32%	54%	14%	64%	60%	51%

As of January 1, 2017, Goldman Sachs Global Investment Research had investment ratings on 2,902 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and views and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Price target and rating history chart(s)

The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/125/EC is available at http://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms

Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Regional Conviction Buy and Sell lists represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return.

Return potential represents the price differential between the current share price and the price target expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them

may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data available on a particular security, please contact your sales representative or go to http://360.gs.com.

Disclosure information is also available at http://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

PJM Released Planning Parameters on February 1

We See EMAAC and ComEd Breaking Out From RTO. PJM released the planning parameters for the upcoming Reliability Pricing Model (RPM) capacity auction in May. The net cost of new entry (Net CONE) stayed relatively flat in the three regions at $293/MW-day, $283/MW-day, and $330/MW-day this year versus $299/MW-day, $284/MW-day, and $328/MW-day last year for the RTO, EMAAC, and ComEd regions respectively. Drivers we see for this year's auction price versus last year are the move to 100% capacity performance from 80%, a 2.1% reduction in PJM's demand forecast, lower CETO/CETL ratios year on year in EMAAC and ComEd, net MWs between retirements and new build, and the required balancing of demand response (DR) resources in summer with a winter resource. This DR balancing requirement may push DR out of EMAAC and into RTO, shifting EMAAC pricing higher and RTO pricing lower all else equal. Companies with sensitivity to the capacity auction outcome include: DYN, NRG, CPN, AES, FE, EXC, and PEG.

Our predicted ranges for the 2020/21 Capacity Auction to be conducted in May are provided in the table below. The PJM planning parameters can be found on PJM's website at http://www.pjm.com/markets-and-operations.aspx.

Figure 1

ISO-NE Capacity Auction for FCM11 on Monday 2/6

We See Maine and SEMA Breaking out From Rest of Pool. The New England Independent System Operator (ISO-NE) will hold their 11th Forward Capacity Market (FCM11) auction on Monday February 6th. Last year the auction cleared at $7.03/kw-month. We expect this year that Maine and Southeastern Massachusetts (SEMA) could break out at different pricing than the rest of pool. Our predictions are driven by higher Net CONE ($11.64/kw-month vs. $10.81/kw-month last year), higher MWs of capacity resources, and lower demand. Companies with sensitivity to the New England capacity auction include: CPN, D, DYN, EMA.TO, EXC, NEE, NRG, and PEG.

Our predictions are provided in Figure 2 below. The planning parameters for the FCM11 auction can be found on the ISO-NE website at https://www.iso-ne.com/markets-operations/markets/forward-capacity-market.

Figure 2

ISO-NE FCM11 Capacity Auction Prediction

$/kW-month	Cleared '19/20	Predicted '20/21
Maine	$7.030	$7.00 - $7.50
SEMA	$7.030	$7.00 - $7.50
Rest of Pool	$7.030	$6.50 - $7.00

Company Update

USA | Energy | Electric Utilities

February 9, 2017

Jefferies

EQUITY RESEARCH AMERICAS

Exelon (EXC)

Boston CCGT Party?

BUY
Price target $39.50
Price $35.23^

Key Takeaway

EXC reported solid 4Q earnings of $0.44 vs Street and Jef at $0.45 driven by improvement at the utilities and ExGen. We continue to like EXC and were surprised at the stock performance today given 2017 guidance ($2.50-$2.80) was in line with Consensus ($2.64). Investors seemed to focus on the delays with the sale of non-core assets such as the Mystic CCGT and Renewables JV. Also of concern was the BAT tax impact on nuclear fuel.

We were surprised at the underperformance of the stock today with investors pointing to 1) delays in the sale of non-core assets such as the 1,700 MW Mystic CCGT located in Boston and Renewables JV, 2) was hoping for more color on the impact of the tax reform although we felt EXC did a solid job given all the proposals (we believe tax relief is more of a 2018 event which will align it with the Congressional mid-term elections), and 3) a whisper 2017 number that had consensus at the low end of guidance.

Sale of Non-core assets - At EEI management was guiding to a Mystic sale in 1Q and although we still have time left we don't think a delay changes the value proposition that EXC is cheap stock.

Impact of tax proposals will take time - Given all the proposals with all the different tax plans we believe management provide ample detail and expect more granularity once a final tax proposal is voted on. Until then its just noise.

2017 guidance was spot-on to Consensus - With guidance at $2.50-$2.80 and the Street at $2.64 we never really expected an upside surprise given the company still has to resolve 4 rate cases and doesn't have a full year benefit from the ZECs. The court challenge to the NY ZEC program has been fully briefed and management expects it to be dismissed. If the court were to hear the challenge a trial would start in 2Q with a final decision in the summer.

Springtime for Fitzpatrick. The company expects the 838 MW Fitzpatrick nuclear plant sale to close in the spring and have included its contribution in 2017 guidance.

Valuation/Risks

Our $39.50 price target is based on P/E analysis. Taking our 2019 EPS estimate of $2.80 in conjunction with a P/E group average multiple of 14.1x results in a price target of $39.50. Based on yesterday's closing price of $35.23 this would result in a 12-month price appreciation potential of 12.1% and total return potential of 15.8% including the current yield of 3.7%. **Risks** –Risks include exposure to change in the commodity prices and regulatory issues associated with the company's regulated subsidiaries.

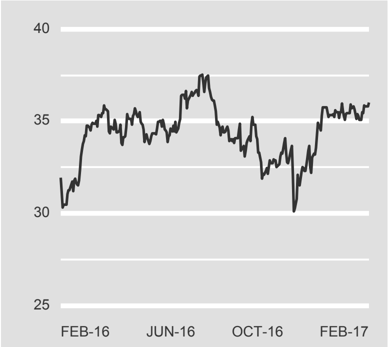
Price Performance



^Prior trading day's closing price unless otherwise noted.

Exelon Corporation

Buy: $39.50 Price Target

Scenarios

Target Investment Thesis

- Exelon should trade at a group average P/E multiple.
- Expected growth in regulated earnings and accretion from the Pepco acquisition.
- Company moves to a more regulated P/E valuation since the merger with Pepco.
- 2019 EPS $2.80; Target Multiple: 14.1x. Target Price $39.50.

Upside Scenario

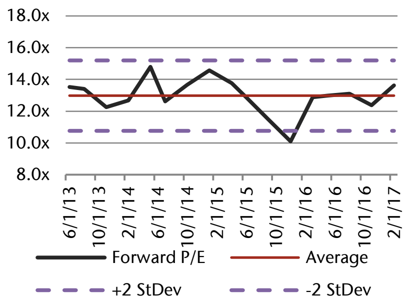
- Exelon Generation earnings increase due to improvement in gas and power prices.
- Power plant values increase due to growing short supply.
- Regulated business earns at or above its allowed ROE.
- Carbon regulation increases nuclear margins
- 2019 EPS $3.00; target multiple: 14.1x. Target Price $42.50

Downside Scenario

- Exelon EBITDA decreases due to declining gas and power prices.
- NY and IL nuclear ZEC programs are found to be in violation of power rules.
- Reinvestment opportunities become more limited.
- Regulated utilities under-earn their allowed ROE.
- 2019 EPS: $2.50; Target Multiple: 14.1x Target Price: $35.00.

Long Term Analysis

1 Year Forward P/E



Source: Facstet, Jefferies estimates

Long Term Financial Model Drivers

LT EBITDA CAGR	**(8.5%)**
LT EPS Growth	**4.6%**
FFO/Debt	**31%**
Equity Ratio	**52%**

Other Considerations

While we assume no benefit from ZECs or any type of carbon regulation the benefit to Exelon's 19,000 MW of nuclear plants is significant.

Peer Group

Group P/Es

Recommendation / Price Target

Ticker	**Rec.**	**PT**
EXC	**Buy**	**$39.50**
PEG	Hold	$43.50
ETR	Hold	$772
ED	Buy	$82.50
PPL	Hold	$36.50
FE	Hold	$34.50

Catalysts

- Legal challenges to Illinois and New York's ZECs.
- PJM Capacity Auction.
- Rate increases at PHI utilities.

Company Description

Exelon, incorporated in Pennsylvania in February 1999, is a utility services holding company engaged, through its principal subsidiary Generation, in the energy generation business, and through its principal subsidiaries Com Ed, PECO, DPL, ACE, Pepco, and BGE, in the energy delivery businesses discussed below. Exelon is headquartered in Chicago and trades on the NYSE under the ticker symbol EXC.

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation.

Exelon operating EPS was $0.44 on a diluted basis, versus $0.38 for the same period a year ago, our estimate of $0.45, and Consensus of $0.45. The year-over-year improvement was driven by increased earnings at both the regulated utilities and ExGen.

Management issued 2017 guidance of $2.50-$2.80 which compares to Consensus of $2.64 and our estimate of $2.60. For 1Q17 management is guiding to $0.55-$0.65. Earnings include both the NY and IL ZEC programs (reversal of the Quad Cities and Clinton closure), Fitzpatrick ownership, and a full year of PHI contribution.

2017-2020 utility capex increased $400 million driven mainly by higher spending at ComEd as a result of the Illinois Future Energy Jobs Bill. Additionally Exelon Utilities EPS CAGR is now 6-8% off of 2017 versus a previous rate of 7-9%. The decline is due a higher base in 2017 ($1.35-$1.65) versus 2016 ($1.15-$1.45).

Management will wait on tax reform. Given all the moving pieces Exelon felt it was a little premature to comment on the Trump Proposal, House Blueprint, or Senate proposals. According to the House blueprint the change in the BAT would negatively impact the importation of nuclear fuel providing additional drag to ExGen.

Springtime for Fitzpatrick. The company expects the 838 MW Fitzpatrick nuclear plant sale to close in the spring and have included its contribution in 2017 guidance.

ZECtopia – The court challenge to the NY ZEC program has been fully briefed and management expects it to be dismissed. If the court were to hear the challenge a trial would start in 2Q with a final decision in the summer.

Improved cash flow at ExGen as a result of NY and IL ZEC helps pay down debt at both ExGen and Parent. At the analyst day management guided to $2.7 -$3.2 billion of ExGen debt reduction and have revised it to $2.8$3.2 billion of parent/ExGen debt paydown. There is a $900 million 2020 parent maturity that the company could potentially retire all or a portion of it.

Mystic and Renewable Asset Sales – Investors were looking for information on the 1,700 MW Mystic CCGT sale process that was originally expected to be completed in 1Q17 and also the monetization of the company's renewable business. The Mystic sale "continues to be underway" and the renewable process is "going well".

4Q16 operating EPS excludes $0.22 of non-recurring items as follows: a $0.05 market to market gain associated with the impact of economic hedging activities, a $0.08 benefit due to asset retirement obligations, a $0.06 loss related to sales of assets and asset impairment charges, a $0.10 loss due to the reversal of a previous booked charge associated with retiring Clinton and Quad Cities, a $0.04 loss related to merger and integration costs, a $0.07 loss associated with CENG non-controlling interest, a $0.03 loss associated with the amortization of commodity contract intangibles, a $0.02 loss related to merger and integration costs, a $0.01 loss associated with nuclear decommissioning trust investments, a $0.01 loss from the reassessment of state deferred income taxes, and

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

a $0.01 loss due to a cost management program. 4Q15 operating EPS excludes $0.05 of non-recurring items primarily due to nuclear decommissioning trust investments.

Commonwealth Edison (CWE) earnings were flat at $0.09 on a year-over-year comparison. Increased capital investment and favorable weather was slightly offset by a decline in ROE. Gross margin increased 4.3% to $906 million reflecting increased electric distribution earnings from the impact of weather. Retail sales improved 3.3% but declined 0.1% on a weather-adjusted projection. Heating degree days were up 18.6% relative to the same period last year and 11.2% below normal.

Operating income increased 0.5% to $218 million due to greater gross margin reflecting the impact of increased capital investment and weather. Operating and maintenance expense increased 3% to $416 million and depreciation expense grew by 12.3% to $201 million due to greater net plant. Earnings declined 6.9% to $81 million driven primarily by higher interest and tax expense. The effective tax rate for the quarter was 41.7% versus 38.3% last year.

PECO earnings increased by $0.01 to $0.10 due to weather and new electric rates. The principal drivers for the year-over-year change were weather, contributing $0.02, and new electric rates which contributed $0.01 to the quarterly improvement. Gross margin grew by 13.2% to $463 million due to new electric rates at PECO. Electric sales versus 4Q15 improved 4.6% but declined 1.3% on a weather adjusted basis. Gas sales grew by 26.1% as compared to 4Q15 but were down 1.3% on a weather-adjusted basis. Heating degree days were up 45.3% versus the same period a year ago but declined 12.7% relative to normal.

Operating Income improved by 19.5% to $153 million due to greater gross margin. Operating and maintenance expense grew 10.3% to $203 million and depreciation expense increased 11.3% to $69 million. Earnings increased by 19.0% to $94 million due to greater operating income offset by higher tax and interest expense. The effective tax rate during the quarter was 24.2% versus 21.0% last year.

BGE earnings improved by $0.03 to $0.11 during the quarter. The principal drivers of the year-over-year change were new rates effective June 2016. Gross margin grew by 7.1% to $512 million based on higher rates.

Operating income increased 34.0% to $193 million driven by greater gross margin and reduced O&M expense. O&M expense declined 21.1% to $146 million due to decreased uncollectible accounts expense and the settlement of the Baltimore City conduit fee dispute. Depreciation expense rose 22.3% to $115 million driven by increased amortization due to the initiation of cost recovery of the AMI programs. Earnings increased 41.9% to $105 million due to greater operating margin. The effective tax rate during the quarter was 38.6% versus 39.3% last year.

PHI earnings added $0.05 to the quarterly improvement with no contribution in 2015. The company closed on the PHI transaction in 2016 and is guiding to 2017 EPS contribution of $0.30-$0.40.

Earnings at Exelon Generation increased $0.02 to $0.17 during the quarter mainly due to fewer nuclear outage days (4Q16: 103 days vs. 4Q15: 124 days). Gross margin improved by 3.5% to $2,160 million which was driven by greater nuclear and fossil output coupled with the Ginna Reliability Support services Agreement. Partly offsetting the improvement in gross margin were lower energy prices. Nuclear generation improved 2.3% to 44.83 million MMh with NY nuclear production declining

0.7% and Mid-Atlantic/Mid-West output increasing 2.6%. Operating income increased 20.2% to $304 million driven by greater gross margin offset by higher depreciation expense. Depreciation expense grew by 6.8% to $299 million due to increased nuclear decommissioning amortization. Net income rose by 14.1% to $162 million driven by greater operating income partially offset by higher tax expense. The effective tax rate during the quarter was 38.6% versus 40.1% last year.

The company's Other business segment declined by $0.04 to a loss of ($0.08).

We are maintaining our 2017 EPS estimate of $2.60 which compares to guidance of $2.50-$2.80. Earnings include both the NY and IL ZEC programs, Fitzpatrick ownership, and a full year of PHI contribution. Management issued segment guidance of: ComEd $0.60-$0.70, PECO $0.40-$0.50, BGE $0.25-$0.35, PHI $0.30-$0.40, ExGen $1.05-$1.15, and parent drag of $0.10-$0.30.

We are maintaining our 2018-19 EPS estimates of $2.85 and $2.80, respectively.

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

Analyst Certification:

I, Anthony C. Crowdell, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

I, Benjamin Budish, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

As is the case with all Jefferies employees, the analyst(s) responsible for the coverage of the financial instruments discussed in this report receives compensation based in part on the overall performance of the firm, including investment banking income. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for

inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

WELLS FARGO SECURITIES

Equity Research

Exelon Corporation

EXC: Solid Results & Outlook--Reiterate Outperform

Outperform

Sector: Diversified Electric Utilities
Market Weight

- **Summary.** We reiterate our Outperform rating and nudge up our valuation range to $40-41/share from $39-40/share. We viewed the Q4 results and updated outlook as generally positive (both rate base growth and ExGen free cash flow prospects were modestly higher). In addition, the key factors underpinning our positive thesis remain intact including above average rate base & EPS growth for utility operations and increasing state/regulatory support for the non-regulated nuclear generation fleet. Our 17-20E EPS are $2.67, $2.80 (vs. $2.78 before), $2.70 & $2.70.
- **EPS Outlook.** EXC established '17 EPS guidance of $2.50-2.80, which was in-line with our estimate of $2.67 and the consensus estimate of $2.64. In addition, mgmt. updated the '17-20 rate base outlook, which resulted in a $200M net increase to projected '20 year-end rate base. The net change reflects a positive impact of $800M at ComEd driven by energy efficiency (EE) – under the recently passed Future Energy Jobs Bill, ComEd is now able to earn a return on EE spend – partially offset by lower projected rate base for PHI and PECO (due to in-service date timing as opposed to lower capex). We project '17-20 Utility/Parent annual EPS growth of 8% off of the 16A Utility/Parent EPS of $1.41 – our 20E EPS for Utility/Parent is $1.92, which is near the mid-point of EXC's $1.75-2.05 guidance.
- **ExGen Thoughts.** We continue to believe EXC's shares do not adequately reflect the value of the company's nuclear fleet. Our positive thesis is predicated on our assessment that states will step in to provide incentives to keep a large percentage of EXC's nuclear units running should they become economically distressed. To that end, the Zero Emission Credit (ZEC) programs approved in NY and IL are clearly supportive of our thesis and other states (CT, OH, NJ & PA) could consider similar mechanisms in the future. In the near-term, we will be keenly interested in the pending legal challenge to the NY program – a federal district court could rule on EXC's motion to dismiss in Q1'17. The case boils down to if NY has the right to incent nuclear generation for a justifiable public policy reason (environmental/carbon free resource) or does the ZEC program represent an impermissible state over-reach into the federally regulated wholesale power market?
- **Tax Reform.** EXC indicated that the EPS impact of potential federal tax reform will depend on what is ultimately passed. A lower corporate tax rate should be a modest overall positive but other items, such as a border tax adjustment, could offset the lower rate (ExGen imports nuclear fuel).

Valuation Range: $40.00 to $41.00 from $39.00 to $40.00

Our $40-41/sh valuation range is premised on a sum-of-the-parts analysis (1) Utility & Parent value of $30/sh (based on a P/E multiple of 17.5-18.0X our 2018E of $1.70) and (2) $10-11/sh for ExGen using a DCF analysis. Risks include commodity price sensitivity and unfavorable regulatory/policy developments.

Investment Thesis:

Our Outperform rating is largely premised on our belief that the share price undervalues ExGen's nuclear fleet. Other positive features include above average utility rate base growth prospects and strong nuclear operational track record.

Company Description:

Exelon Corporation was formed in October 2000 through the merger of Unicom, which was the parent company of Commonwealth Edison (ComEd) and PECO Energy (PECO). The company's business segments include independent power production (Exelon Generation) and Energy Delivery (ComEd and PECO). Exelon Generation owns approximately 25,000 MW of unregulated electric generating capacity, primarily located in Illinois and Pennsylvania. The company's 17,000 MW nuclear fleet is the largest in the nation. Generation currently accounts for approximately 70% of EXC's overall earnings. The Energy Delivery businesses serve roughly 3.8 million electric distribution customers in Northern Illinois (ComEd) and approximately 1.6 million electric and 0.5 million natural gas distribution customers in Southeastern Pennsylvania (PECO).

Exelon Corporation

EXC - ALERT: 4Q16 Earnings Results and Guidance Aligned with Views

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

Key Investment Points

February 7, 2017 Close: $36.01

4Q16 Ongoing EPS: $0.44 vs. $0.38 in 4Q15/Consensus of $0.45/KBCM of $0.42

Initial Take: We expect a neutral response with the in line quarter and newly issued 2017 guidance aligned with views.

2016 KBCM EPS Estimate: $2.65 (Consensus: $2.68)

2017 KBCM EPS Estimate: $2.65 (Consensus: $2.64)

Guidance: Exelon introduced 2017 EPS guidance of $2.50-$2.80 and 1Q17 guidance of $0.55-$0.65

Highlights:

- Relative to our estimate, the Generation segment posted improved results vs. our forecast of flattish earnings.
- Generation segment ongoing earnings increased $20 million ($162 million vs. $142 million) due to lower nuclear outage days, improved gas portfolio results, Ginna support agreement and the addition of ConEd solutions, partly offset by lower energy and capacity prices and higher depreciation.
- ComEd ongoing results fell $6 million ($81 million vs. $87 million), due to retroactive adjustments to formula rates.
  - Heating degree days increased 18.6% compared to 4Q15 and were 11.2% below normal.
  - Deliveries increased 3.3%, while weather normalized deliveries were largely flat.
- PECO ongoing results increased $15 million ($94 million vs. $79 million), primarily due to favorable weather and increased electric distribution revenue from the Jan. 1 rate increase, partially offset by higher uncollectibles.
  - Heating Degree days were up 45.3% YOY and were 12.7% below normal.
  - Electric deliveries increased 4.6% vs. 4Q15 and were down 1.3% on a weather-normalized basis.
  - Gas deliveries increased 26.1% YOY and essentially unchanged on a weather normalized basis.
- BGE earnings increased $31 million ($105 million vs. $74 million) due to June 2016 rates and transmission revenue, lower uncollectibles and the settled Baltimore conduit fee dispute partly offset by increased amortization associated with the AMI program.
  - BGE has revenue decoupling, so weather minimally impacts earnings.
- PHI earned $42 million in the quarter.

11:00 A.M. ET Conference Call #: (800) 690-3108 ID#: 44412052

We will be focused on:

- View of the market for the Generation segment
- Sales trend and economic commentary
- Update on ConEd Solutions Business

EXC – Shares Sell on the News Despite Solid Outlook, Sound Balance Sheet, and Upside Growth Opportunities

February 8, 2017

Today's weak performance was a function of selling-on-the-news in our view, as many perceive EXC as an over-crowded long position; investors shouldn't overlook potential upside though – EXC remains our favored integrated utility. Shares of EXC were down 2.2% today vs. UTY up 0.9%, which in our view reflects a "sell on the news" event (similar to the last Analyst Day), despite some merit to concern around a potential border adjustment tax; and **likely overlooks potential upside presented by nuclear lifelines in PA (See notes from meetings we hosted with commissioners HERE), synergies between Fitzpatrick/Nine-Mile, accelerated de-levering with strong FCF generation, sell-down of renewables and further upside from POM coming in better than expected.** We would also note dividend growth of 2.5% vs. robust 6-8% regulated earnings growth, not to mention incremental CF visibility provided by ZECs in IL and NY – As EXC cements its earnings and CF outlook it could also re-visit its dividend growth trajectory. Reiterate BUY – good entry point given stock reaction.

We view concern around lower growth trajectory as misplaced, as the 6-8% earnings growth is off a ~20% higher base; only incremental negative data point was potential border adjustment tax on nuclear fuel and T&D components imports. We've fielded a lot of questions around the company's "lower" utility growth trajectory, which represents misplaced concerns in our view, as the 6-8% utility growth trajectory has been re-based off a MUCH higher starting point, with the mid-point of management's 2017 outlook reflecting a 19% increase over their 2016 outlook (i.e., growth trajectory is now based off $1.55 vs. $1.35). There is merit to concern around a potential border adjustment tax, which management pro-actively addressed on the call, as the company does import a significant amount of nuclear fuel at the non-regulated segment, in addition to components of T&D infrastructure at the regulated segment; that said, we have yet to see draft tax reform legislation, and it's too early to react to those concerns in our view (See note on our Guggenheim hosted tax symposium HERE). We would also remind investors that while BAT presents an incremental overhang, other parts of the EXC business should benefit from lower corp. tax rates esp. with the deregulated operations.

NOT yet factoring in potential nuclear lifelines elsewhere, or synergies between Fitzpatrick and Nine Mile. While management's outlook now incorporates CF from ZECs for nuclear in NY and IL, as well as the addition of Fitzpatrick to their portfolio, it does not yet factor in potential synergies between Fitzpatrick (which EXC is in the process of acquiring) and their existing Nine Mile facility. Management indicated they are still reviewing potential synergies - We believe synergies could be material between these two facilities, as they effectively share the same property (i.e. savings around corporate overheard, fuel mgmt.).

In-line quarter brings a transformational year to a close; management introduces a healthy 2017 outlook despite misconceived optics. EXC reported 4Q16 operating EPS of $0.44 vs. our estimate of $0.42 and consensus $0.45, bringing full-year earnings to $2.68 vs. our estimate of $2.67. Management introduced their full year 2017 outlook of $2.50-2.80 vs. our new estimate of $2.67. Q1/17 EPS guidance range of $0.55-0.65 is in-line with our new estimate of $0.59. Note the company's earnings expectations in 2017 and 2020 are both $0.05/share higher than their previous outlook.

Management announces further de-levering with incremental CF contributions from ZECs for nuclear in their outlook. Management's outlook now reflects not only the additional nuclear generation added to their portfolio with the acquisition of Fitzpatrick (expected to close 2Q17 with $0.05 of upside), but cash flows provided by Zero Emission Credits in IL and NY, which management plans to re-deploy toward shrinking their balance sheet; highlighting a $900mm corporate maturity in particular. Note our estimates don't incorporate ZECs for nuclear at this juncture as there is some opposition that has yet to be overcome, although we estimate annual cash contributions of ~$230-400mm in NY and ~ $220mm in IL, which is in-line with management's outlook. For additional detail see our analysis on NY ZECs HERE and IL ZECs HERE. **We also highlight that the $1.15bn equity issuance simply reflects mandatory converts, not anything incremental.**

Wrapped up a fruitful year of rate recovery, another round expected at PHI in 2017. EXC settled several rate cases in 2016 with fairly constructive outcomes at ComEd, BGE and Pepco. Management indicated plans to close the gap between earned and allowed ROEs at PHI with another round of rate case filings in 2017 at each utilities of PHI – we model lower lag through 2020 at PHI as we note that gap between earned and allowed ROEs at PHI could be an opportunity although could be a challenge to close in the NT. As a reminder, current active rate cases include: (1) Washington D.C.: $82mm electric distribution revenue ask with 10.6% ROE – final decision due 07/2017; (2) Delaware: 63mm electric revenue ask and (3) $22mm gas revenue ask, with 10.6% ROE - decision by 05/2017; (4) Maryland: $82mm electric distribution revenue ask with 10.6% ROE – final decision due 07/2017.

Valuation

Our $41 price target is based on a sum-of-the-parts analysis. We assign ~$17/share for ExGen using a 7x weighted average EV/EBITDA applied to ExGen's various assets. We assign $29/share for the regulated utilities combined based on our 2018E EPS of $1.86 applied to a 15.5x regulated utility multiple. Subtracting out ~$5 in parent drag, we arrive at our 12-month price target.

Risks

Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM.

The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

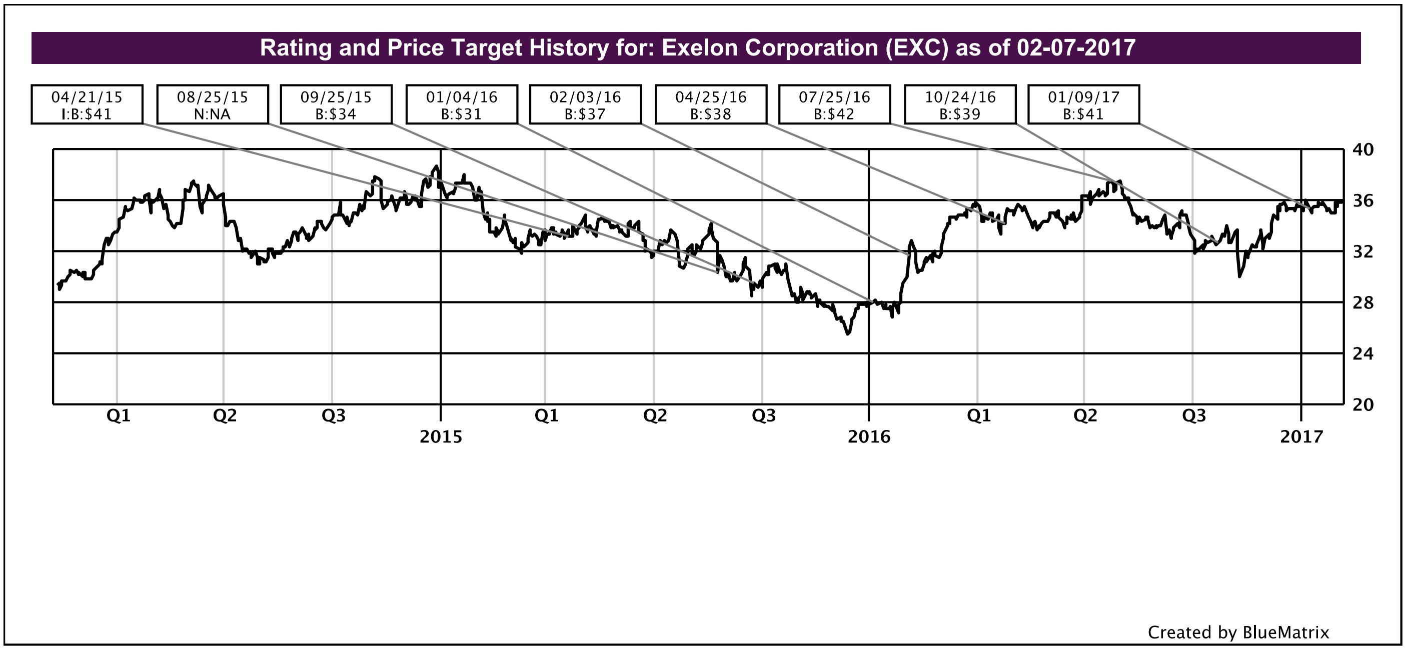
By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.



Rating and Price Target History for: Exelon Corporation (EXC) as of 02-07-2017

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Exelon

4Q16 delivers solid update as expected; potential border taxes add a new data point

Maintain Rating: NEUTRAL | PO: 37.00 USD | Price: 35.23 USD

Equity | 08 February 2017

Border taxes could be a mixed bag for Exelon & peers

Exelon commented on potential border tax adjustment during its earnings call – the first utility under our coverage to do so. First, the company noted regulated distribution equipment costs, such as transformers, could become more expensive from a border tax, and would put higher bill pressure on ratepayers. Second, it noted nuclear fuel costs could marginally escalate as a portion is typically internationally sourced. Our thoughts on this are as follows:

a) On the positive side, if border taxes are enacted, rate base growth projections could be partly higher, depending on what proportion of regulated capex consists of internationally-sourced parts. We have not yet conducted an analysis of this, but at this stage we would view this as an industry-level potential positive, not just an Exelon positive. Given Exelon's business mix, it would at first glance likely benefit Exelon less so than other more purely regulated utilities.

b) Also on the positive side, Canadian electric imports could become more expensive, particularly in New England and New York. In theory this should marginally help ExGen supply resources in those regions.

c) On the negative side, deregulated nuclear fuel costs could be marginally higher and could impair ExGen gross margins. Nuclear fuel costs consist of the raw uranium (about 20% of the total fuel cost), plus the cost of enrichment. At this stage, it seems likely the uranium raw fuel costs would be higher due to border taxes, but it is unclear to what extent fuel enrichment costs are derived from overseas sources.

d) Also on the negative side, nuclear maintenance costs would likely be higher and potentially impair ExGen cash flows to some extent. Exelon has recently updated major big-ticket nuclear items (steam turbines for example) that could help mitigate against potential border tax effects on maintenance spending at ExGen.

We have yet to quantify any of these considerations. But, we believe utility tax policy analysis has largely ignored border taxes, making this an area of future analytical study.

Slight miss on 4Q16; slight beat on 2017 EPS guidance

Exelon reported 4Q16 EPS of $0.44, slightly below both our and Street's estimates of $0.46 and $0.45, respectively. The company also provided 2017 EPS guidance with a midpoint of $2.65, which is slightly ahead of Street's estimate of $2.64. In addition, the company raised both the 2017 and 2020 midpoints by $0.05, accounting for higher rate base growth trajectory for ComEd. Overall, we saw the earnings release as largely in line with expectations and the revised outlook as a fundamentally solid development. That said, we believe expectations were high that the addition of ZECs and FitzPatrick to ExGen and increased energy efficiency spend at ComEd would boost Exelon's earnings outlook. When the company did so, we think EXC shares sold off as investors "sold the news".

Continues to fine tune the regulateds; maintain Neutral

The improved EPS outlook continues to deliver on the regulated story, but power markets continue to dampen the overall outlook. EXC's attractive valuation offsets ExGen's structural challenges, in our view; maintain Neutral.

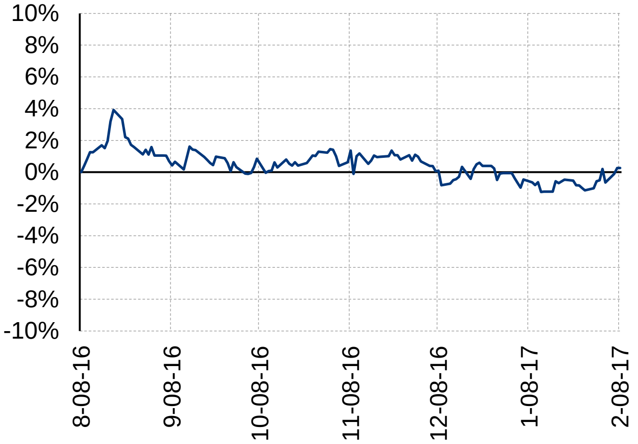
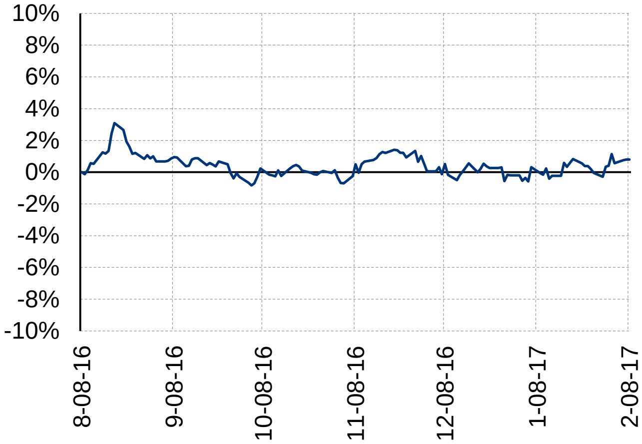
Relative Performance Charts

Chart 1: EXC relative performance vs. utilities group average



Source: BofA Merrill Lynch Global Research, Bloomberg

Chart 2: EXC relative performance vs. integrated electrics average



Source: BofA Merrill Lynch Global Research, Bloomberg

The indicators identified as Charts 1 and 2 are intended to be an indicative metric only and may not be used for reference purposes or as a measure of performance for any financial instrument or contract, or otherwise relied upon by third parties for any other purpose, without the prior written consent of BofA Merrill Lynch Global Research. These indicators were not created to act as a benchmark.

Price objective basis & risk

Exelon (EXC)

Our $37/share price objective for EXC shares is derived from our sum of the parts valuation model, where we assign approximately $9 of value to ExGen and approximately $28 of value to the regulated utility. We value integrated electric utilities, including Exelon, using a sum of the parts valuation model based on 2019E earnings and EBITDA. For Exelon specifically we use a target 6.8x EV/EBITDA multiple to value the deregulated generation segment, in line with peers. We apply our discounted price target 14.5x P/E multiple with a 0.5x premium for favorable rate case outcomes (15.0x total) to value the regulated side of the business based on our 2019 EPS estimates.

Downside (upside) risks to our price objective are: 1) increasing (decreasing) of forward power prices driven by rising natural gas prices, heat rates, or Northeast and Midwest gas basis to Henry Hub, 2) regulatory outcomes as well as changes in nuclear regulation, 3) deterioration (improvements) in operating efficiency beyond our base scenario.

Light grey shading indicates the security is not covered. Chart is current as of January 31, 2017 or such later date as indicated.

Equity Investment Rating Distribution: Utilities Group (as of 31 Dec 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	62	49.60%	Buy	42	67.74%
Hold	31	24.80%	Hold	24	77.42%
Sell	32	25.60%	Sell	16	50.00%

Equity Investment Rating Distribution: Global Group (as of 31 Dec 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1590	50.64%	Buy	989	62.20%
Hold	702	22.36%	Hold	438	62.39%
Sell	848	27.01%	Sell	406	47.88%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This research report provides general information only. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of any specific person. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.

Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. Not much new; lack of tax granularity likely the missing ingredient

EXC missed our 4Q estimate by $0.02, while guidance for 2017 was in line ($2.50-$2.80) with a higher quality mix (more regulated, less ExGen). This also carried into the longer-term utility outlook with Illinois legislation helping drive ComEd rate base forecasts $0.8B or ~5% higher by 2020. With stronger cash flow guidance EXC now see headroom for parent de-levering once ExGen's 3.0x target is met – an incremental positive in our view. Tax reform comments were perhaps less granular than some had hoped for, hence a negative stock reaction (-300bp relative) but we continue to see EXC better positioned than levered HoldCos without a non-utility earnings component. Reiterate Buy.

ExGen update for ZECs as expected; litigation pending but in early rounds

As expected, EXC folded NY and IL Zero Emission Credits (ZECs) and the FitzPatrick acquisition into the ExGen gross margin outlook. This was more or less as expected, although overall margin was ~$300M (4%) below DBe for 2017E and ~$100M (1%) below in 2019E. Attention may now turn to pending legal challenges in NY where a federal court ruling on EXC's dismissal request may come this month. With several rounds of litigation likely – potentially as far as the Supreme Court – and EXC expected to be collecting ZECs while appeals are pending – we would not anticipate a final resolution any time soon.

Waiting for news on ExGen sales processes, other nuclear support

Other catalysts might include the possible JV which EXC is pursuing around its renewables book with CFO Thayer optimistic this will accelerate de-leveraging at ExGen. Similarly a sale process for the Mystic plant in New England is under way with "broad interest" noted. In terms of other states supporting nuclear, EXC see CT as furthest along with efforts in OH, PA and NJ at earlier stages. As for federal nuclear support, CEO Crane endorsed the concept but noted "concrete conversations" with the Administration have yet to occur.

No change to bottom line estimates with several moving parts

After working (78 slides of) updated disclosures through our model, headline estimates are unchanged at $2.65, $2.95 and $2.75 for 2017E-2019E. In terms of moving parts our utility numbers are $0.04-$0.06 higher with ComEd up $0.06-$0.08 on investments in Energy Efficiency and Solar it is now allowed to rate base thanks to a less focused-on provision of the IL ZEC legislation. The offset, lower ExGen contribution and (marginally) higher parent drag. Net-net this is a slightly higher quality business mix than we had expected.

Reiterate Buy, $41 Price Target; valuation makeup skewed slightly more Utility

We value EXC using a SOTP framework in which we value the utilities at an average of 16.4x 2019E EPS (a modest premium to our regulated target of 16.0x). We value the generation and retail businesses using a 7.0x EV/EBITDA multiple on 2019. Our $41/sh Price Target is unchanged, although the makeup is now $1/sh more weighted to the utilities ($30/sh vs. $29/sh previously). Downside risks are lower-than-expected forward power prices, successful legal challenges of nuclear support in NY or IL, less de-levering and falling short of targeted ROE improvements at the underperforming POM utilities.

Company Profile

Exelon is a diversified utility with ownership of the largest nuclear fleet and retail services business in the U.S. and three regulated utilities serving Chicago, Philadelphia and Baltimore. EXC owns ~35,000MW of merchant generation capacity located primarily in the Midwest and Mid-Atlantic, with smaller gas-fired and nuclear assets in New England, New York, and Texas.

Source: Company data, Deutsche Bank estimates

Quarterly Review

EXC reported Q4 Operating EPS of $0.44, $0.01 shy of consensus and $0.02 below DBe. Compared to our numbers, ComEd was light by $0.02 on a "one-time" rate adjustment for ComED's 2015 and 2016 electric distribution formula revenues. EXC's corporate segment was also $0.04 below our expectations due to a sizable donation to the corporate foundation. Partially offsetting these pressures were the PHI utilities ($0.01 better) and BG&E ($0.03 better, of which $0.02 was associated with a non-recurring city conduit fee settlement). While excluded from operating earnings, also notable in the quarter, was a $57M charge for "curtailment of generation growth and development activities", the follow through of a prior commitment to focus the bulk of growth investment at the regulated utilities.

Modeling Updates

We update our model to include EXC's latest CapEx and rate base projections by utility. The total utility rate base in 2019 is up $0.4B, with the $0.8B increase at ComEd partially offset by decreases of $0.3B at PECO and $0.1B at PHI. EXC's first round of PHI rate cases are nearing their conclusion, with decisions in DC, Maryland, and 2 in Delaware expected by mid-year. EXC has indicated it intends to file for rate increases every 12-18 months at PHI, which could mean new filings come by Q4. Importantly, 75% of EXC's planned $9B of rate base growth is already subject to trackers or formula rates where cost recovery is more expedited. We see this profile as supportive of a premium valuation when combined with superior growth and visibility plus ComEd's formulaic upside ROE leverage to higher long-term bond yields.

On the ExGen side, we update our model to include EXC's updated hedging disclosures, up 6%, 2% and 5% in 2017, 2018 and 2019 respectively. This leaves EXC over 90% hedged for 2017, more than half in 2018 and just under a third in 2019, behind ratable in those years due to potential for "fundamental upside". We also re-calibrate our expected generation forecast and update line items below gross margin as the shift in portfolio mix led to some changes.

Valuation

We value EXC's utility segment by applying a 16.5x P/E multiple (half-turn premium over our 16x target average) to our 2019 estimates for ComEd, PECO and the POM utilities, and an average multiple for BG&E. We believe POM earnings merit a premium as we anticipate faster growth at this segment as EXC closes the gap between authorized and earned returns. We also apply premiums to ComEd earnings given potential upside from higher interest rates as ComEd's ROE is set based on an annual formula directly incorporating the yield on the 30-year Treasury bond. We also give PECO a premium given a constructive regulatory backdrop. For BG&E we view the regulatory regime as average at best.

We value ExGen by applying a 7.0x EV/EBITDA multiple to our 2018 estimate. This is towards the higher end of multiples for merchant generation which reflects the longer-term visibility into a significant portion of cash flows between ZECs and capacity payments and the expected benefit to ExGen from potential corporate tax reform. In addition, EXC also has a stronger credit and lower leverage profile at ExGen than pure-play IPP peers, with a strong commitment to de-lever further over the coming years.

We continue to take a hybrid approach for the corporate / other segment. We derive a $37 price target when subtracting corporate debt as a direct offset to equity value (effectively treating parent debt as being wholly on the merchant business) while we see a $42 price target when valuing EXC's corporate earnings drag of $0.17/sh using our weighted average regulated distribution P/E multiple of 16.4x (treats parent debt as being on the utilities). Our $41 price target reflects a 25/75 weighting of these two book-end valuation approaches. Since EXC’s August analyst day we have been giving a higher weighting to Valuation B given EXC’s increasing strategic focus on the regulated utilities and ongoing commitment to de-levering at ExGen.

Equity rating key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.

Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst’s judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash

flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA, NFA and SIPC. Analysts located outside of the United States are employed by non-US affiliates that are not subject to FINRA regulations.

Germany: Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorized under German Banking Law and is subject to supervision by the European Central Bank and by BaFin, Germany's Federal Financial Supervisory Authority.

United Kingdom: Approved and/or distributed by Deutsche Bank AG acting through its London Branch at Winchester House, 1 Great Winchester Street, London EC2N 2DB. Deutsche Bank AG in the United Kingdom is authorised by the Prudential Regulation Authority and is subject to limited regulation by the Prudential Regulation Authority and Financial Conduct Authority. Details about the extent of our authorisation and regulation are available on request.

Hong Kong: Distributed by Deutsche Bank AG, Hong Kong Branch.

India: Prepared by Deutsche Equities India Pvt Ltd, which is registered by the Securities and Exchange Board of India (SEBI) as a stock broker. Research Analyst SEBI Registration Number is INH000001741. DEIPL may have received administrative warnings from the SEBI for breaches of Indian regulations.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. Exelon Corp (EXC): In-line 2016 results; 2017 guidance range roughly in line

Sentiment Indicator : neutral

Produced by Tucker, Shelby (RBC Capital Markets, LLC) on Wednesday, February 08, 2017, 09:19 AM ET

Disseminated on Wednesday, February 08, 2017, 09:23 AM ET

Our View: Given the better-than-expected gross margin forecast at ExGen, we believe management's 2017 guidance could be relatively conservative. We expect additional commentary on the improved ExGen margin outlook, latest update to the challenges to the nuclear subsidies legislation, and updates at the various utilities as well as details on re-allocation of capex between the utilities.

Exelon Corp (EXC; $36.01; Outperform; $40 PT) reported 4Q16 and 2016 adjusted earnings of $0.44 and $2.68, respectively, a penny below our estimate as well as consensus. Management introduced 2017 adjusted EPS guidance range of $2.50-$2.80; our estimate is $2.69 versus consensus of $2.64. Management also guided 1Q17 adjusted EPS at $0.55-$0.65 versus consensus of $0.72 and 1Q16 result of $0.68, although we note that consensus is comprised of only a few estimates at this point.

ExGen gross margin outlook better than expected. Total gross margin outlook for 2017-2019 as of December 31, 2016 are $8.15 billion, $8.3 billion, and $7.9 billion, respectively, versus our estimates of $7.90 billion, $7.89 billion, and $7.39 billion (an increase of $250 million, $400 million, and $500 million). We believe this is mostly due to higher open gross margins and is an apples-to-apples comparison that includes the impact of the New York and Illinois nuclear subsidies, as well as the benefit from the Fitzpatrick acquisition. Management has kept hedging behind ratable (91-94%, 56-59%, and 28-31% hedged for 2017-2019, respectively), given their view of power price upside.

Regulated growth forecast mostly unchanged; rate base allocation shifted away from PECO/PHI. Management expects annual utility EPS growth to average 6-8% from 2017-2020 versus 7-9% expected from 2016-2020. We note that this is roughly in line given the expected larger growth from 2016-2017. They also increased the 2017 and 2020 range by $0.05, respectively. Rate base growth guidance from 2016-2020 now stands at a 6.5% CAGR versus 6.1% guided previously; however, management moderately decreased the rate base outlook for PHI and PECO while increasing that for ComEd.

2017 segment guidance mostly within range. The company guided ExGen adjusted EPS at $1.05-$1.15 (vs. RBCe of $1.06), ComEd at $0.60-$0.70 (vs. RBCe of $0.61), PECO at $0.40-$0.50 (vs RBCe of $0.47), PHI at $0.30-$0.40 (vs. RBCe of $0.39), and BGE at $0.25-$0.35 (vs. RBCe of $0.29). We note the 2017 expected average shares outstanding of 949 million versus 927 million recorded in 2016 given the expected conversion of $1.15 billion in equity units in 2Q17.

Conference call at 11 AM ET. The dial-in number is (800) 690-3108, with pass code 44412052.

J.P.Morgan

Exelon Corp.

2017, Long-Term Outlook On-Track; Reiterating OW

Overweight

EXC, EXC US

Price: $36.01

Price Target: $40.00

Exelon reported 4Q16 EPS and introduced 2017 guidance in line with expectations, as well as reiterated long term utility rate base and earnings growth forecasts introduced last summer. We expected more detail to be given regarding the asset sale process for the Mystic unit and a renewables sell-down, but management noted both are still on-track despite perhaps taking longer than originally expected. We view EXC shares' sell-off as a buying opportunity here, and still view the valuation as providing more than enough compensation for ZEC legal and PHI execution risk going forward and we are reiterating our OW rating.

- **PHI integration proceeding according to plan:** 2017-2020 utility and parent EPS guidance was increased 5c in 2017 and 5c in 2020 versus August analyst meeting guidance, and overall rate base growth is slightly more back-weighted but largely unchanged**.** Notably, EXC expects PHI to contribute $0.30-0.40 to 2017 EPS, well above our $0.28 estimate. Management expressed early confidence in integration and lag catch up efforts as the company positions for the 2nd round of rate case filings at the segment this year.
- **Focus remains on NY ZEC legal challenge:** Although EXC formally incorporated the impact of NY & IL ZEC into guidance, we are still awaiting ultimate legal clarity for both programs. The best case scenario entails the federal court granting a motion to dismiss the challenge to NY's ZECs in the next several months. Should the case not be dismissed, a final litigated decision could come in Q3. In either case, a decision by the federal court to uphold the NY ZEC program would bode well for the legal standing of the IL ZEC program given the similar constructs.
- **Underwhelming color on tax reform and asset sales.** Unlike some peers, EXC did not quantify the impact of tax reform and instead provided directional impacts. The Administration's tax plan was described as being "meaningfully" beneficial to earnings, though a border tax adjustment would have negative implications for nuclear fuel costs and significant holdco debt would weigh on any positive factors. No update was provided on the sale of Mystic or renewable assets, and the sale process is ongoing.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $40.00)*

Investment Thesis

ExGen continues to generate strong cash flow even in a challenging commodity environment, allowing it to fund a top-tier utility growth story and a growing dividend. We believe investors may not be fully appreciating the ~4c tailwind from an increase in the 30-year treasury yield since multi-year utility EPS guidance was issued in August. A sale of the company's large Mystic CCGT in MA or renewable assets could bring in several hundred million as well. Resulting ExGen debt reduction will accelerate their de-leveraging strategy and lower interest expense could mostly offset lost earnings, according to our calculations.

Valuation

We are maintaining our December 2017 price target of $40/share. Our valuation is based on a sum-of-the-parts analysis using our 2019 forecasts. We use an average 18.6 P/E multiple for the regulated utility and corporate business segments. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. The maintenance of our price target is driven by a higher regulated peer multiple partially offset by lower earnings estimates relative to our prior estimate.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company’s earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), Dominion Resources (D), Duke Energy Corp. (DUK), Emera Inc. (EMA.TO), Entergy Corp. (ETR), Exelon Corp. (EXC), FirstEnergy (FE), Great Plains Energy (GXP), Hawaiian Electric Industries Inc. Maintaining ratings as regulated growth strategy unfolds

We maintain our ratings across Exelon (Exhibit 1) after the company reported FY16 earnings results in line with expectations. Exelon's 2016 accomplishments included 1) closing its acquisition of Pepco Holdings which a) added $8.3 billion of rate base to its asset portfolio, b) provides additional regulated rate base investment opportunities, and c) provides opportunities to reduce regulatory lag of between 220 bp and 440 bp across the Pepco Holdings' utilities, 2) achieving regulatory success in New York and legislative success in Illinois which, combined, will keep five nuclear stations running for at least an additional 10 years as the stations are compensated for their zero-carbon emission attributes, 3) achieved regulatory approvals for utility revenue increases of nearly $400 million, and 4) acquiring ConEd Solutions to extend its capabilities of matching retail customers to its long wholesale generation profile, Exelon's strategy is to 1) invest heavily in its six regulated electric and gas utilities to drive earnings growth, 2) maximize the margins and value contributed by Exelon Generation, and 3) use Exelon Generation's free cash flow to reduce debt by ~$3.0 billion by the end of 2020, first by paring its leverage, expected to be ~3.3x at 2017 year-end, to ~3.0x, and then paying down debt at the parent holding company. As a result of its 2016 accomplishments and strategy, for the first time in Exelon's history, the majority of its annual earnings were contributed by its regulated utilities.

PHI acquisition, utilities' capex drives FY16 earnings growth

Exelon reported FY16 adjusted operating EPS of $2.68 ($2,488 million), matching consensus and up from $2.49 ($2,227 million) in FY15. Key drivers for the YOY improvement were the March 2016 acquisition of Pepco Holdings Inc. ("PHI") and higher utility rates and formula revenues, partly offset by higher depreciation and amortization expense and higher levels of several sub-categories of operating and maintenance ("O&M") expense. (Exhibit 2 at right). Exelon introduced a FY17 adjusted operating earnings guidance range of $2.50 to $2.80; primary factors for YOY changes include a full year of PHI ownership PHI and higher rate-base-investment-related revenues at its three legacy utilities, partly offset by higher depreciation and amortization expense and net negative factors, primarily unfavorable market conditions, at Exelon Generation.

2017 financing plans address debt maturities, utility capex

Exelon's 2017 projected sources and uses of cash include debt issuances primarily to support rate base capex at the regulated utilities and refinancing of long-term debt maturities. Potential 2017 debt issuances include $1,050 million by Commonwealth Edison ($425 million 6.15% first mortgage bonds maturing September 15), $325 million by PECO Energy, $200 million collectively across the PHI complex ($81 million PHI 6.125% notes maturing June 1), $750 million by Exelon Generation ($700 million 6.20% senior notes maturing October 1), and $1,150 million by Exelon Corporation; Exelon also plans equity issuances of $1,150 million. We assume that the pair of the parent company's issuances is related to its outstanding 6.50% corporate units, issued in 2014 to finance a portion of the Pepco Holdings acquisition, which require the holders to purchase Exelon common stock on June 1, 2017 and include an optional remarketing of the junior subordinated notes due 2024. Exelon Corp. also has $550 million 1.55% notes maturing June 9, which we assume are refinanced with commercial paper, based on the 4Q16 earnings presentation.

BofA Merrill Lynch does and seeks to do business with issuers covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Summary Profile

Description

Exelon Corporation is a Fortune 100 energy company with the largest number of utility customers in the U.S. Exelon's six utilities deliver electricity and natural gas to approximately 10 million customers, the largest number of any utility company in the U.S., in Delaware, the District of Columbia, Illinois, Maryland, New Jersey and Pennsylvania. Exelon is one of the largest competitive U.S. power generators, with more than 32,700 megawatts of nuclear, natural gas, wind, solar and hydroelectric generating capacity comprising one of the nation's cleanest and lowest-cost power generation fleets.

Exelon's Value Proposition

- Regulated Utility Growth – EPS rising 6%-8% annually from 2017 to 2020, rate base growth of 6.5%, representing an expanding majority of earnings;
- Exelon Generation's Strong Free Cash Generation – support utility growth while also reducing debt by ~$3B over the next 4 years
- Optimizing Exelon Generation – seek fair compensation for zero-carbon attributes of its fleet; close uneconomic plants; monetize assets; and maximize value of the fleet through generation-to-load matching strategy;
- Strong Balance Sheet – a priority;
- Capital Allocation Priorities – targeting organic utility growth, return of capital to shareholders with 2.5% annual dividend growth through 2018, debt reduction, and modest contracted generation investments.

Significant Events

- December 7, 2016: Illinois' Future Energy Jobs Bill enables the Clinton and Quad Cities plants to operate for at least another 10 years.
- August 1, 2016: New York regulators approved the Clean Energy Standard which will provide incremental revenues to upstate nuclear plants for 10 years.
- March 23, 2016: Exelon and Pepco Holdings close their merger following approval by DC regulators.
-

Comparables

- Public Service Enterprise Group (PEG)
- NextEra Energy (NEE)

Valuation & risk

Exelon Corp. (EXC)

We view Exelon Corporation credit spreads as attractive relative to other mid-BBB electric utility holding company bonds. In addition, Exelon's credit profile has improved slightly following its March 2016 acquisition of Pepco Holdings' three regulated, transmission-and-distribution-only utilities. The utilities not only dilute Exelon Generation's proportion of Exelon's consolidated EBITDA, but also enable a broader and more diversified portfolio of regulated cash flows and opportunities for reducing regulatory lag and rate base investment. Management remains committed to a strong balance sheet and solid credit metrics and plans to reduce parent debt levels by the end of 2020. Primary risks include a declining EBITDA profile at Exelon Generation as a result of persistently low power prices, or an increase of parent or consolidated leverage. Potential changes to the U.S. income tax code are an uncertainty for the electric utility sector.

Baltimore (EXC)

We view Baltimore Gas & Electric as a low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. In addition, Baltimore Gas & Electric has had a ring fence to insulate its credit quality from affiliates. We view secondary credit spreads as fairly valued relative to T&D peers. We view the primary risk to be a historically below-average regulatory environment in Maryland but which has improved in recent years.

Commonwealth Edison (EXC)

We view Commonwealth Edison as a low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. We view credit spreads as fairly valued relative to other T&D utilities. We view the primary risk to be what has at times in the past been a below-average regulatory environment in Illinois due to political interferences, but the environment has been much more stable and more supportive in recent years.

Exelon Generation Co (EXC)

Exelon Generation is the largest owner and operator of nuclear plants in the U.S. with an excellent track record in operational performance. Also, management is highly committed to investment grade ratings and a solid balance sheet. Recently, both New York State and Illinois have approved electricity price surcharges to recognize the value of non-carbon, baseload nuclear power for 10-year periods. Risks include challenging merchant power market conditions, higher capital and expense requirements following the 2013 Fukushima Daiichi nuclear accident, and varied public perceptions of nuclear power.

PECO Energy Co. (EXC)

We view PECO Energy as a high-quality, low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. PECO Energy's secondary credit spreads are fair to tightly valued relative to its electric T&D peers. Given its solid credit profile, we view the primary potential credit risk to be an adverse action at or development by either its parent or its sister merchant generation business.

BofA Merrill Lynch Credit Opinion Key
BofA Merrill Lynch Global Research provides recommendations on an issuer's bonds (including corporate and sovereign external debt securities), capital securities, equity preferreds and CDS as described below. Convertible securities are not rated. An issuer level recommendation may also be provided for an issuer as explained below. BofA Merrill Lynch Global Research credit recommendations are assigned using a three-month time horizon.
Issuer Recommendations: If an issuer credit recommendation is provided, it is applicable to bonds and capital securities of the issuer except bonds and capital securities specifically referenced in the report with a different credit recommendation. Where there is no issuer credit recommendation, only individual bonds and capital securities with specific recommendations are covered. CDS and equity preferreds are rated separately and issuer recommendations do not apply to them.

BofA Merrill Lynch Global Research credit recommendations are assigned using a three-month time horizon:
Overweight: Spreads and /or excess returns are likely to outperform the relevant and comparable market over the next three months.
Marketweight: Spreads and/or excess returns are likely to perform in-line with the relevant and comparable market over the next three months.
Underweight: Spreads and/or excess returns are likely to underperform the relevant and comparable market over the next three months.

BofA Merrill Lynch Global Research uses the following rating system with respect to **Credit Default Swaps (CDS):**
Buy Protection: Buy CDS, therefore going short credit risk.
Neutral: No purchase or sale of CDS is recommended.
Sell Protection: Sell CDS, therefore going long credit risk.

Corporate Credit Issuer Investment Rating Distribution: Global Group (as of 31 Dec 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	143	35.93%	Buy	125	87.41%
Hold	183	45.98%	Hold	157	85.79%
Sell	72	18.09%	Sell	58	80.56%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only corporate credit issuer recommendations. A corporate credit issuer rated Overweight is included as a Buy, a corporate credit issuer rated Marketweight is included as a Hold, and a corporate credit issuer rated Underweight is included as a Sell.

Credit Opinion History Tables for the securities referenced in this research report are available at http://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
MLPF&S or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Baltimore.
The issuer is or was, within the last 12 months, an investment banking client of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
The issuer is or was, within the last 12 months, a non-securities business client of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or one of its affiliates has a significant financial interest in the fixed income instruments of the issuer. If this report was issued on or after the 15th day of the month, it reflects a significant financial interest on the last day of the previous month. Reports issued before the 15th day of the month reflect a significant financial interest at the end of the second month preceding the report: Baltimore, Exelon Corp., Exelon Generation.
MLPF&S or one of its affiliates trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of this research report: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.
BofA Merrill Lynch Global Credit Research analysts regularly interact with sales and trading desk personnel in connection with their research, including to ascertain pricing and liquidity in the fixed income markets.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

This report may refer to fixed income securities that may not be offered or sold in one or more states or jurisdictions. Readers of this report are advised that any discussion, recommendation or other mention of such securities is not a solicitation or offer to transact in such securities. Investors should contact their BofA Merrill Lynch representative or Merrill Lynch Financial Global Wealth Management financial advisor for information relating to fixed income securities
Rule 144A securities may be offered or sold only to persons in the U.S. who are Qualified Institutional Buyers within the meaning of Rule 144A under the Securities Act of 1933, as amended.
SECURITIES DISCUSSED HEREIN MAY BE RATED BELOW INVESTMENT GRADE AND SHOULD THEREFORE ONLY BE CONSIDERED FOR INCLUSION IN ACCOUNTS QUALIFIED FOR SPECULATIVE INVESTMENT.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.

The securities discussed in this report may be traded over-the-counter. Retail sales and/or distribution of this report may be made only in states where these securities are exempt from registration or have been qualified for sale.

Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

This report, and the securities discussed herein, may not be eligible for distribution or sale in all countries or to certain categories of investors.

Information relating to Affiliates of MLPF&S and Distribution of Affiliate Research Reports:

BofA Merrill Lynch includes Merrill Lynch, Pierce, Fenner & Smith Incorporated ("MLPF&S") and its affiliates. Investors should contact their BofA Merrill Lynch representative or Merrill Lynch Global Wealth Management financial advisor if they have questions concerning this report. "BofA Merrill Lynch" and "Merrill Lynch" are each global brands for BofA Merrill Lynch Global Research.

MLPF&S distributes, or may in the future distribute, research reports of the following non-US affiliates in the US (short name: legal name, regulator): Merrill Lynch (South Africa): Merrill Lynch South Africa (Pty) Ltd., regulated by The Financial Service Board; MLI (UK): Merrill Lynch International, regulated by the Financial Conduct Authority (FCA) and the Prudential Regulation Authority (PRA); Merrill Lynch (Australia): Merrill Lynch Equities (Australia) Limited, regulated by the Australian Securities and Investments Commission; Merrill Lynch (Hong Kong): Merrill Lynch (Asia Pacific) Limited, regulated by the Hong Kong Securities and Futures Commission (HKSFC); Merrill Lynch (Singapore): Merrill Lynch (Singapore) Pte Ltd, regulated by the Monetary Authority of Singapore (MAS); Merrill Lynch (Canada): Merrill Lynch Canada Inc, regulated by the Investment Industry Regulatory Organization of Canada; Merrill Lynch (Mexico): Merrill Lynch Mexico, SA de CV, Casa de Bolsa, regulated by the Comisión Nacional Bancaria y de Valores; Merrill Lynch (Argentina): Merrill Lynch Argentina SA, regulated by Comisión Nacional de Valores; Merrill Lynch (Japan): Merrill Lynch Japan Securities Co., Ltd., regulated by the Financial Services Agency; Merrill Lynch (Seoul): Merrill Lynch International Incorporated (Seoul Branch) regulated by the Financial Supervisory Service; Merrill Lynch (Taiwan): Merrill Lynch Securities (Taiwan) Ltd., regulated by the Securities and Futures Bureau; DSP Merrill Lynch (India): DSP Merrill Lynch Limited, regulated by the Securities and Exchange Board of India; PT Merrill Lynch (Indonesia): PT Merrill Lynch Indonesia, regulated by Otoritas Jasa Keuangan (OJK); Merrill Lynch (Israel): Merrill Lynch Israel Limited, regulated by Israel Securities Authority; Merrill Lynch (Russia): OOO Merrill Lynch Securities, Moscow, regulated by the Central Bank of the Russian Federation; Merrill Lynch (DIFC): Merrill Lynch International (DIFC Branch), regulated by the Dubai Financial Services Authority (DFSA); Merrill Lynch (Spain): Merrill Lynch Capital Markets Espana, S.A.S.V., regulated by Comisión Nacional del Mercado De Valores; Merrill Lynch (Brazil): Bank of America Merrill Lynch Banco Multiplo S.A., regulated by Comissão de Valores Mobiliários; Merrill Lynch KSA Company, Merrill Lynch Kingdom of Saudi Arabia Company, regulated by the Capital Market Authority.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This research report provides general information only. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of any specific person. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.

Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

This report may contain a trading idea or recommendation which highlights a specific identified near-term catalyst or event impacting a security, issuer, industry sector or the market generally that presents a transaction opportunity, but does not have any impact on the analyst’s particular “Overweight” or “Underweight” rating (which is based on a three month trade horizon). Trading ideas and recommendations may differ directionally from the analyst’s rating on a security or issuer because they reflect the impact of a near-term catalyst or event.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented in this report. Such ideas or recommendations reflect the different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this report.

TOP PICK

Exelon Corp.

4Q $0.44; '17 Guidance $2.50-$2.80

Price Target Remains $40: We are reiterating our Overweight rating and our price target of $40. We are updating our EPS estimates to $2.68/$2.90 from $2.69/$2.97 for '17/18 and are publishing at 2019 estimate of $2.81.

Pepco (PHI) Integration Drives the Story: We continue to believe that the PHI integration drives the growth story with benefits also from outperformance at the legacy utilities that could continue. The PHI utilities currently earn ROEs of 5.6%/6.3%/7.5% vs. allowed levels of 10%/10%/9.7% for ACE, Delmarva, and Pepco respectively. The legacy utilities earned 10.5% in 2016 that was somewhat boosted by weather and lower storm costs and would have been 10.1% on a normalized basis.

Power Remains an Upside Option: The ExGen business remains an upside option where we value the business at a 1.0x turn discount to mid-cycle levels of 7.6x and gross margin was marked up $650/$1,050/$1,100 from 9/30/16 related to the ZEC revenues and higher open gross margin related to the reversal of the IL plant closures. Management committed to a 3.0x Net Debt/EBITDA target at ExGen from 3.3x in 2017. The renewable and Mystic sales processes continue and successful execution will lead to incremental deleveraging versus the 3.0x target level.

Risks to the Call: Border adjustment tax could be a risk if included in any tax reform package. Barclay's believes a boarder adjustment tax is unlikely in any final tax package (see *Border adjustments - The feasibility of implementation and the potential effect on retail*, published 2/8/17). However, if included at a 20% marginal rate it could equate to a $200 million hit to EXC. Further, the Federal Court case related to the ZEC programs in New York is moving at a faster pace than expected, and is likely to reach the decision stage by summer. This leads to a much earlier decision risk for the market to weigh than expected. If ZECs are not upheld it could also impact the similar program in Illinois, which would lead to reconsideration of plant closures and in a worst case analysis would hit gross margins by $800 million but lower costs by $575 million.

Price (08-Feb-2017)	USD 35.23
Price Target	USD 40.00

Why Overweight? We believe that that utility growth of 7-9% is achievable and will be funded by cash flow from the generation company even with the current forward curves. Any additional legislation similar to the CES in New York or the inclusion of the CES in our numbers is upside to our estimates.

Upside case **USD 45.00**

Our upside case assumes the impact of the zero emission credits in New York for the genco and assumes a 10% premium for the utility valuation given the above average growth.

Downside case **USD 31.00**

Our downside case assumes a 10% discount for the utility and a 4x EBITDA at the genco based on current forwards, with no consideration of the CES or FitzPatrick acquisition

Upside/Downside scenarios

Note: FY End Dec

o

Exelon Remains Our Top Pick – Two Risks to the Call

We believe the Exelon story combines strong growth at the utilities mostly premised upon regulatory and operational recovery with a proven management team that can execute on both fronts. ExGen is more stable with the ZEC programs and with deleveraging will become less risky over time. Further, ExGen provides an upside potential we do not believe the market currently appropriately values should power or natural gas prices recover from their significantly low recent levels.

There are however two risks that may weigh on the stock in the near term and create an overhang to performance that we would view as a buying opportunity.

Border Adjustment Tax

First, any border tax that is included in comprehensive tax reform would hit import of fuels for ExGen and be an approximate $200 million hit (at a 20% rate) to that subsidiary, all else constant. That said, there would likely be other mitigating positive factors, like an overall lower marginal rate that could have offsetting positive impacts for the company, including immediate expensing of capital and the potential for non-deductable nature of interest expense.

Barclays' house view is that the border tax is unlikely to remain in any final tax reform package given the significant impact on several industries in the US, including or most especially retail (see *Border adjustments - The feasibility of implementation and the potential effect on retail*, published 2/8/17 by Shawn Golhar, Barclays Public Policy Research). Even if border tax was included, it cannot be looked at in a vacuum apart from other items that would likely be included within the entire tax reform package. We estimate a range of impacts from tax between ($0.12) - $0.22 per share for our sector universe, depending on the final elements of any passed tax reform bill.

ZEC Federal Court Case

Management indicated on the call that a decision on whether to dismiss the lawsuit filed against the ZEC programs in New York in Federal Court would be forthcoming shortly. Further, and somewhat surprisingly if the trial is not dismissed, management indicated that a decision in the case could come as early as this summer. We believe this was significantly earlier than the market was anticipating and brings the risk of the ZECs being overturned closer into view. We estimate if the ZECs were overturned it could also likely mean the similar program in Illinois could also be overturned and see ($0.17) of earnings per share risk in that scenario. The gross margin loss would be offset by the closure of the nuclear plants in the program, so even in a worst case scenario the impact might not be as great as the market fears. We will have to await the outcome of the case, but Exelon management believes the ZEC program is defendable as it mimics the renewable energy credit (REC) market in New York, is not tethered to the wholesale market price, and cannot be attacked with the commerce clause because it is not confined to only in-state resources.

2017 Earnings per Share Guidance and Growth Outlook

2017 Earnings per Share Guidance

Management released 2017 earnings per share guidance in a range of $2.50 - $2.80 which is in line with our estimate of $2.68. Management expects Q1 2017 earnings per share between $0.55 - $-0.65. The 2017 full year guidance range by business segment is broken down in the table below.

FIGURE 1

2016 Results and 2017 Guidance Breakdown

	2016	2017 Guidance	
	Actual	Low	High
BGE	$ 0.31	$ 0.25	$ 0.35
PHI	$ 0.25	$ 0.30	$ 0.40
PECO	$ 0.48	$ 0.40	$ 0.50
ComEd	$ 0.57	$ 0.60	$ 0.70
ExGen	$ 1.27	$ 1.05	$ 1.15
HoldCo	$ (0.19)	$ (0.20)	$ (0.20)
Total	**$ 2.68**	**$ 2.50**	**$ 2.80**

Source: 2016 EXC Earnings Release and Presentation, Barclays Research Estimates

According to management, BGE will be driven by higher D&A partially offset by normalization of one-time items and distribution revenue. PHI will be driven by a full-year of earnings contribution and higher distribution and transmission revenues. PECO will be driven by higher O&M for storms and higher D&A as a result of higher capital expenditures. ComEd will be driven by higher capital investments under the Illinois tracker and higher treasury yields driving higher allowed return levels. ExGen will be driven by lower realized energy prices partially offset by the New York and Illinois ZEC programs.

PHI Drives Utility Growth Story

The Pepco Holding integration will continue to drive growth through implementation of better operational performance, in our view. Exelon management has a proven track record of closing earned versus allowed return gaps post acquisition. Currently the earned returns at PHI were 5.6%/6.3%/7.5% versus allowed return levels of 10%/10%/9.7% at ACE, Delmarva, and Pepco respectively. The legacy Exelon utilities also outperformed in 2016 even when normalized for lower storm costs and better than normal weather. Reported return levels were 10.5% while normalized returns were approximately 10.1%.

We believe that management has a proven track record of closing the gap to allowed return levels as proven by the improved performance at BGE post the Constellation acquisition. All utilities at Exelon ended 2016 with strong metrics with BGE, ComEd, and PECO achieving 1st quartile performance in customer satisfaction which was the best ever performance at each utility. ComEd and PECO also achieved 1st decile performance for outage frequency which ComEd achieving best ever results. This is important as we should see that operational strength translate into the PHI utilities and drive returns closer to allowed levels as well as potentially create a positive feedback loop with regulators. We began to see the first signs of this with PHI recording their best ever outage frequency performance in 2016.

Rate base growth will be driven by solid capital plan and will also drive earnings growth over time as approximately 75% of the rate base growth for the next four years will be recovered through existing tracker or formula mechanisms. Management sees utility earnings per share growth of 6% - 8% through 2020. It will also allow the utility ex parent earnings of the company to support the dividend going forward with a theoretical affordability dropping from a utility earnings payout ratio of 84% in 2017 to 75% in 2020.

ExGen Becomes Less Volatile, Could Provide Upside

With the ZEC programs in place, although a legal challenge remains to be resolved, the ExGen fleet has increased gross margins and changed the mix to become more stable over time. The 2016 year saw record generation from the nuclear fleet with a 94.6% capacity factor and an all-time low refueling outage duration of 22 days. Retail continued to perform well with a 28% new customer win rate at 77% customer retention rate with margins remaining stable.

On a mark to market and inclusion of the ZEC programs, gross margin guidance was increased by $650/$1,050/$1,100 million for '17/18/19 respectively.

FIGURE 3

ExGen Gross Margin Update

US$m	As of December 31, 2016			Chg from September 30,2016		
	2017	2018	2019	2017	2018	2019
Open Gross Margin	4,100	4,200	4,050	300	550	450
Capacity and ZEC Revenues	1,850	2,250	2,050	400	550	600
MTM of Hedges	1,200	450	350	-	(50)	50

Source: 2016 EXC Earnings Release and Presentation, Barclays Research Estimates

Management also guided to approximately $3 billion in debt reduction over the next four years part of which will be at ExGen. We believe the long-term target of 3.0x Net Debt to EBITDA from current levels of 3.3x can be achieved or even exceeded pending execution of the renewable portfolio joint-venture sale process and the sale process for assets in New England. Further, once the new CCGT plants are commissioned in Texas, there could emerge a scenario where they could either be sold in a deleveraging transaction or be financed with project level non-recourse debt, both of which would reduce ExGen leverage further.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities		
AES Corp. (AES)	Alliant Energy (LNT)	Ameren Corp. (AEE)
American Electric Power (AEP)	American States Water Company (AWR)	American Water Works (AWK)
Aqua America (WTR)	Brookfield Infrastructure Partners LP (BIP)	Brookfield Infrastructure Partners LP (BIP_u.TO)
Brookfield Renewable Energy Partners LP (BEP)	Brookfield Renewable Energy Partners LP (BEP_u.TO)	California Water Service Group (CWT)
Calpine Corp. (CPN)	Canadian Utilities Ltd. (CU.TO)	CenterPoint Energy Inc. (CNP)
CMS Energy (CMS)	Connecticut Water Service Inc. (CTWS)	Consolidated Edison (ED)
Dominion Resources (D)	DTE Energy (DTE)	Duke Energy (DUK)
Dynegy Inc. (DYN)	Edison International (EIX)	Emera Inc. (EMA.TO)

IMPORTANT DISCLOSURES CONTINUED

Entergy Corp. (ETR)

Distribution of Ratings:

Barclays Equity Research has 1771 companies under coverage.

40% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 77% of the issuers with this rating have received financial services from the Firm.

41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 50% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 38% of companies with this rating are investment banking clients of the Firm; 63% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Explanation of other types of investment recommendations produced by Barclays Equity Research:

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

Disclosure of previous investment recommendations produced by Barclays Equity Research:

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/ResearchInvestmentRecommendations*.

M: Exelon Corp. is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our $40 price target is premised upon a 2019 group average multiple of 15.1x applied to the utility net parent earnings of $1.81 resulting in $28 of utility value. Exgen is valued at 6.5x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, The combined value is $40.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

Goldman Sachs India SPL

Exelon Corp (EXC, Neutral) reported ongoing 4Q2016 EPS of $0.44, missing GS of $0.50 and coming relatively in line with consensus of $0.45. EXC provided 2017 guidance of $2.50-$2.80, a midpoint below GS estimate of $2.83, but relatively in line with consensus of $2.64.

A few key initial insights include:

- ComEd, EXC's largest regulated segment, reported 4Q2016 ongoing net income of $81mn, lower than GS estimate of $90mn and lower than 4Q2015 of $87mn – driven by one-time ordered and proposed adjustments to ComEd's distribution formula revenues, while PHI reported 4Q2016 ongoing net income of $42mn, lower than GS estimate of $73mn – driven by higher O&M than our estimates.
- ComEd weather-normalized retail electric deliveries decreased by (0.1%) 4Q2016 relative to 4Q2015 while PECO weather-normalized retail electric deliveries decreased by (1.3%) in 4Q2016 relative to 4Q2015.
- Exelon Generation, EXC's non-regulated segment, reported 4Q2016 ongoing net income of $162mn, lower than GS estimate of $194mn, but higher than 4Q2015 net income of $142mn.
- EXC increased Exelon Generation's expected generation volume hedged to 91-94% for 2017, 56-59% for 2018 and 28-31% for 2019 – compared to 85-88% for 2017, 54-57% for 2018, and 23-26% for 2019, as previously disclosed in 3Q2016. Disclosed hedged pricing remained relative flat for most regions, but with New York seeing declines of $3-$7/MWh.
- EXC lowered EPS growth through 2020 from 7-9% off of 2016 to 6-8% off of 2017, although the company raised Utility capital expenditure guidance by $125-$225mn in 2019/2020.

Topics to monitor on the earnings call include (1) cost management relating to EXC's acquisition of Pepco Holdings, (2) an update on regulated earnings growth potential and rate case timing, (3) insights into capacity markets in PJM, ISO-NE and MISO, (4) overview on demand trends and (5) outlook for Exelon Generation, especially its nuclear generation portfolio.

Our 12-month price target of $38 is derived using a sum-of-the-parts valuation and applying a 16.75x 2018E P/E multiple on ComEd, PECO and BGE EPS, a 16.25x

2018E P/E multiple on PHI, and a 5.25x EV multiple on non-regulated 2018E EBITDA. Key risks include natural gas prices, power prices, and regulation (last close price $36.01).

Disclosure Appendix

Reg AC

We, Michael Lapides, Daniel Yu, CFA, David Fishman, Dylan Campbell and Siddharth Verma, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Investment Profile

The Goldman Sachs Investment Profile provides investment context for a security by comparing key attributes of that security to its peer group and market. The four key attributes depicted are: growth, returns, multiple and volatility. Growth, returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe.

The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

Growth is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Volatility** is measured as trailing twelve-month volatility adjusted for dividends.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Disclosures

Coverage group(s) of stocks by primary analyst(s)

Michael Lapides: America-Diversified Utilities, America-Independent Power Producers, America-Regulated Utilities.

America-Diversified Utilities: Centerpoint Energy Inc., Dominion Resources Inc., Entergy Corp., Exelon Corp., FirstEnergy Corp., NextEra Energy Inc., Public Service Enterprise Group, Sempra Energy.

America-Independent Power Producers: Calpine Corp., Dynegy Inc., NextEra Energy Partners, NRG Energy Inc., NRG Yield Inc..

America-Regulated Utilities: Ameren Corp., American Electric Power, American Water Works, Consolidated Edison Inc., Duke Energy Corp., Edison International, Eversource Energy, Great Plains Energy Inc., NiSource Inc., PG&E Corp., Pinnacle West Capital Corp., Portland General Electric Co., PPL Corp., SCANA Corp., Southern Co., WEC Energy Group Inc., Westar Energy Inc..

Company-specific regulatory disclosures

The following disclosures relate to relationships between The Goldman Sachs Group, Inc. (with its affiliates, "Goldman Sachs") and companies covered by the Global Investment Research Division of Goldman Sachs and referred to in this research.

Goldman Sachs has received compensation for investment banking services in the past 12 months: Exelon Corp. ($36.01)

Goldman Sachs expects to receive or intends to seek compensation for investment banking services in the next 3 months: Exelon Corp. ($36.01)

Goldman Sachs had an investment banking services client relationship during the past 12 months with: Exelon Corp. ($36.01)

Goldman Sachs had a non-investment banking securities-related services client relationship during the past 12 months with: Exelon Corp. ($36.01)

Goldman Sachs had a non-securities services client relationship during the past 12 months with: Exelon Corp. ($36.01)

Goldman Sachs has managed or co-managed a public or Rule 144A offering in the past 12 months: Exelon Corp. ($36.01)

Goldman Sachs makes a market in the securities or derivatives thereof: Exelon Corp. ($36.01)

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	32%	54%	14%	64%	60%	51%

As of January 1, 2017, Goldman Sachs Global Investment Research had investment ratings on 2,902 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and views and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/125/EC is available at http://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Regional Conviction Buy and Sell lists represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return.

Return potential represents the price differential between the current share price and the price target expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data available on a particular security, please contact your sales representative or go to http://360.gs.com.

Disclosure information is also available at http://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Investment Thesis

Travis Miller, Sector Director, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Sector Director, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Exelon Corp EXC (XNYS)

Economic Moat

Travis Miller, Sector Director, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★ 17 Feb 2017 22:30, UTC	35.58 USD 17 Feb 2017	32.00 USD 07 Dec 2016 02:29, UTC	1.11	3.62 17 Feb 2017	3.68 17 Feb 2017	32.97 17 Feb 2017	Utilities - Diversified	Standard

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets. Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Sector Director, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets.

Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Regulated Utilities Continue Driving Growth for Exelon

Travis Miller, Sector Director, 26 October 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Travis Miller, Sector Director, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities

Travis Miller, Sector Director, 09 November 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth

Travis Miller, Sector Director, 14 November 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Travis Miller, Sector Director, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Sector Director, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

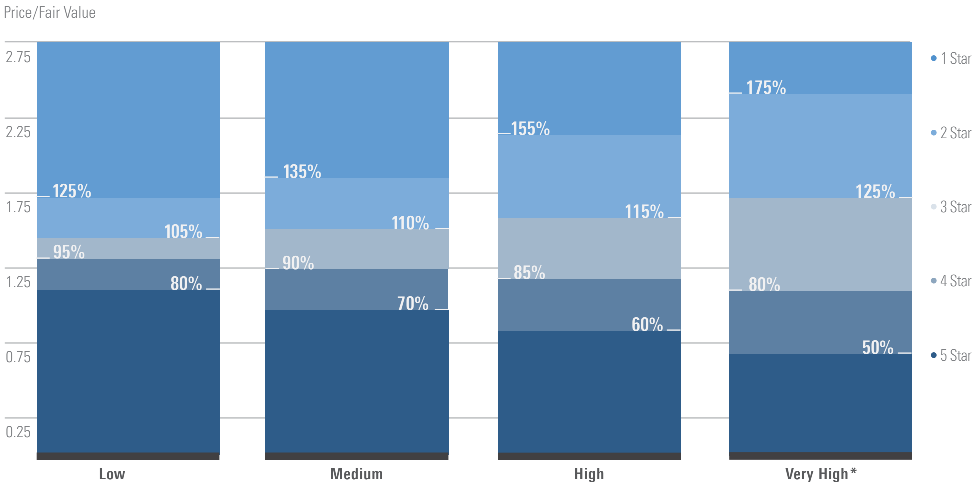
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ►**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ►**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ►**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ►**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ►**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ►**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ►**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ►**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

Price/Fair Value Morningstar data as of Feb 17, 2017

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

9 February 2017
Macquarie Capital (USA) Inc.

Event

- Strong retail/generation hedges coupled with cost efficiencies and nuclear subsidies in IL/NY continue to support EXC's merchant power earnings. EXC's large nuclear portfolio spread between the ComEd and EMAAC zones of PJM should continue to command premium capacity prices thanks to EXC's bidding strategies (unaffected by IL nuclear subsidies), transmission constraints, and limited new build in these zones. State subsidies for EXC's nuclear plants in NY/IL are being challenged in court/FERC with a ruling on the NY lawsuit dismissal coming soon. Lastly, we are not concerned about the impact of a potential border tax on ExGen's nuclear fuel given very low uranium prices. We reiterate our OP rating and EXC remains our favourite diversified utility.
- EXC reported '16 adjusted EPS of US$2.68, just shy of our estimate of US$2.69. Management initiated '17 EPS guidance of US$2.50-2.80, with the midpoint just above consensus and just below our previous expectations.

Impact

- **Legal challenge to NY ZECs:** In late October '16, a coalition of power producers filed a lawsuit against the NYPSC's zero emission credits (ZECs), subsidies for nuclear plants in upstate NY, claiming that this state initiative infringed on FERC's jurisdiction over wholesale power markets. We are hopeful the lawsuit gets dismissed, and if not, the court should rule on the case this summer. The ruling would be important for future legal challenges of NY ZECs that IL ZECs are based on. We wonder what happens with the future pricing of the ZECs if the federal government stops publishing estimates of the social cost of carbon.
- **Border tax and imported nuclear fuel:** On the upcoming corporate tax reform, management was concerned about the impact of a potential border tax on the cost of nuclear fuel for ExGen. The company buys uranium from Niger, Australia and Kazakhstan, with the nuclear fuel enrichment also done abroad. Even if the border tax were to be imposed, we would expect uranium (among others) to be excluded as uranium mining cannot be moved back into the US. We also point out that uranium yellow cake prices are close to historical lows (~US$26 per pound vs. all-time highs of ~US$135) due to significant oversupply of the commodity and no real mining discipline with the price of uranium enrichment also low, neither of which has reacted to the debate about a potential border tax. Separately, such a tax would boost the cost of utility T&D capex which in turn could be earnings accretive for regulated utilities.

Earnings and target price revision

- We have updated our estimates to reflect EXC's new utility capex, and higher hedged gross margins at ExGen offset by higher O&M, depreciation and interest expense. Our new '17/'18/'19 EPS estimates are US$2.69/2.97/2.88 vs. US$2.67/2.92/2.90, previously. Our US$41 TP remains unchanged.

Price catalyst

- 12-month price target: US$41.00 based on a Sum of Parts methodology.
- Catalyst: ISO NE capacity auction, potential dismissal of legal challenges to the NY ZEC program, PJM capacity auction.

Action and recommendation

- We reiterate our Outperform rating.

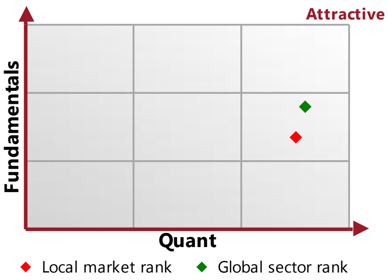
Macquarie Quant View

The quant model currently holds a reasonably positive view on Exelon Corp. The strongest style exposure is Valuations, indicating this stock is under-priced in the market relative to its peers. The weakest style exposure is Growth, indicating this stock has weak historic and/or forecast growth. Growth metrics focus on both top and bottom line items.

59/432

Global rank in Utilities

% of BUY recommendations	62% (15/24)
Number of Price Target downgrades	1
Number of Price Target upgrades	6

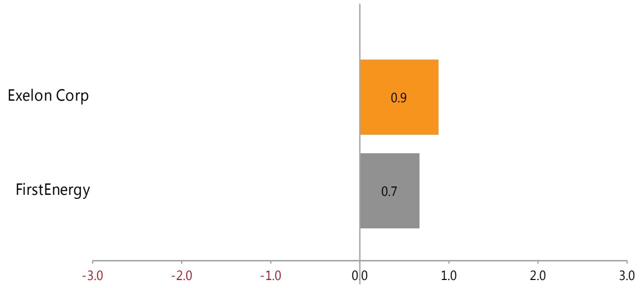


Displays where the company's ranked based on the fundamental consensus Price Target and Macquarie's Quantitative Alpha model.

Two rankings: Local market (United States) and Global sector (Utilities)

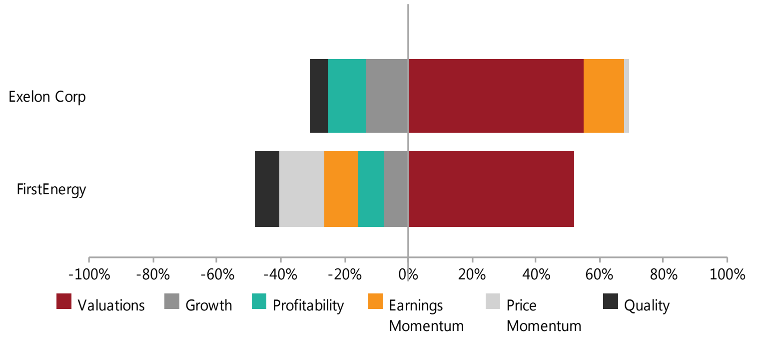
Macquarie Alpha Model ranking

A list of comparable companies and their Macquarie Alpha model score (higher is better).



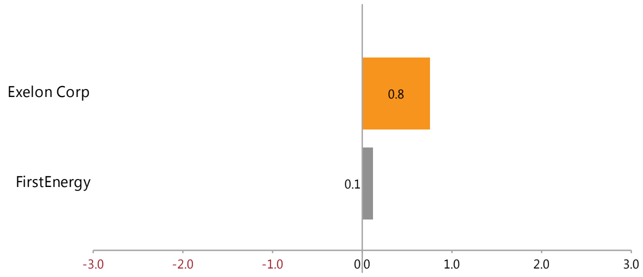
Factors driving the Alpha Model

For the comparable firms this chart shows the key underlying styles and their contribution to the current overall Alpha score.



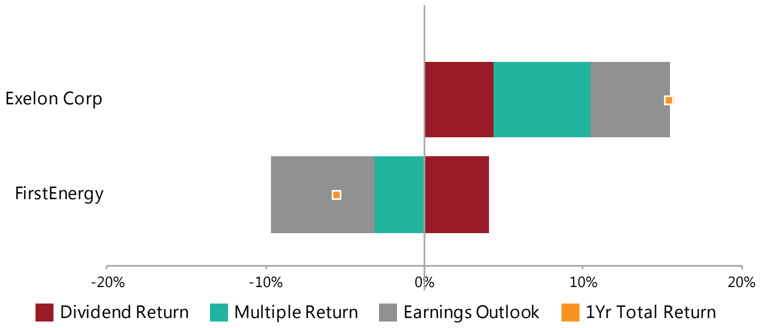
Macquarie Earnings Sentiment Indicator

The Macquarie Sentiment Indicator is an enhanced earnings revisions signal that favours analysts who have more timely and higher conviction revisions. Current score shown below.



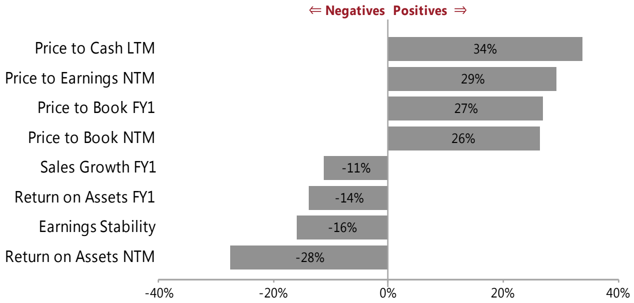
Drivers of Stock Return

Breakdown of 1 year total return (local currency) into returns from dividends, changes in forward earnings estimates and the resulting change in earnings multiple.



What drove this Company in the last 5 years

Which factor score has had the greatest correlation with the company's returns over the last 5 years.



How it looks on the Alpha model

A more granular view of the underlying style scores that drive the alpha (higher is better) and the percentile rank relative to the sector and market.

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie – South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 31 December 2016

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	57.53%	50.72%	45.57%	42.28%	60.58%	52.79%	(for global coverage by Macquarie, 8.71% of stocks followed are investment banking clients)
Neutral	33.90%	33.97%	43.04%	50.11%	37.23%	35.62%	(for global coverage by Macquarie, 8.05% of stocks followed are investment banking clients)
Underperform	8.56%	15.30%	11.39%	7.61%	2.19%	11.59%	(for global coverage by Macquarie, 4.63% of stocks followed are investment banking clients)

Contents

Analyst Note 08 Feb 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

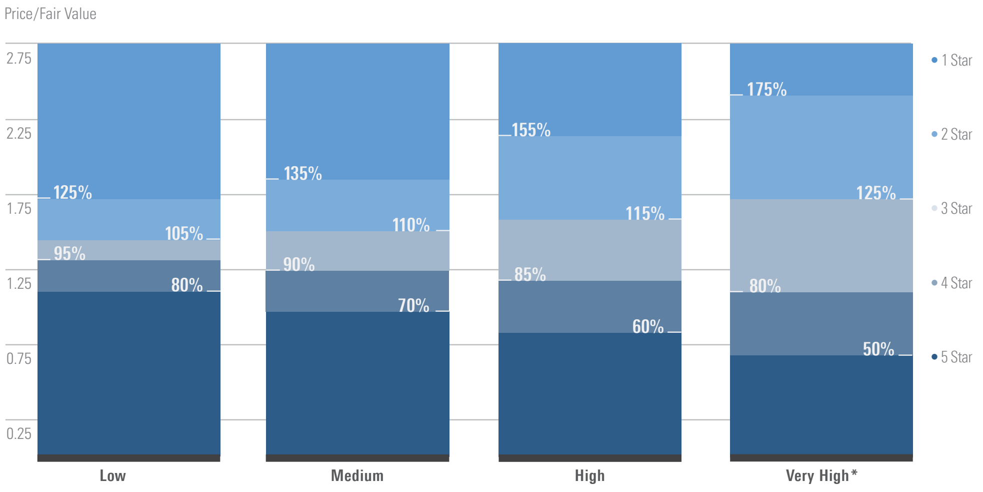
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc.performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the

suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. The Equity Research Group encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Exelon

EXC-NYSE	Rating	Price: Feb-8	Target	Total Rtn
	Market Perform	$35.23	$37.00	9%

Raising Estimates to Include Nuclear Credits

Bottom Line: EXC reported 2016 EPS as expected, and introduced 2017 EPS guidance of $2.50-2.80, including the benefit of ZECs in New York and Illinois and a slightly higher contribution from the utilities. We are raising our 2017/2018 estimates to $2.70/$2.80, respectively, to include ZECs. While we recognize EXC's de-risking efforts, we believe its merchant generation remains a drag on consolidated growth compared to utility growth of 6-8%. As such, we find EXC shares fairly valued trading at a discount to its peers.

Key Points

2016 adjusted EPS of $2.68, were in line with expectations and largely driven by the March 2016 acquisition of PHI, favorable weather/cost-cutting at the utilities, and lower cost to serve/higher nuclear output at ExGen.

2017 EPS guidance of $2.50-$2.80 comprises utility, $1.55-1.95, supported by rate base growth of 8.5% in 2017 over 2016; ExGen, $1.05-1.15 (down from $1.27 in 2016) as lower energy prices are only partially offset by New York and Illinois ZECs. EXC expects a favorable resolution of the pending NY ZECs lawsuit by 3Q17 at the latest.

Key drivers for 2018 and beyond. Rate relief totaled $317 million in 2016; requests totaling $216 million are expected to be decided by 3Q17. Notably, ~75% of 2017-2020 rate base growth of ~$9 billion (6.5% growth from 6.1% previously) is recoverable through riders/formula. For the remainder, EXC will file timely rate cases, particularly as it seeks to close the gap between earned and allowed ROEs at its PHI utilities.

ExGen's outlook is enhanced by the ZECs approved in New York and Illinois; similar programs possible in Pennsylvania and New Jersey could provide incremental upside. While EXC remains focused on cutting O&M expenses, the planned March 2017 acquisition of the FitzPatrick nuclear plant as well as reversal of costs associated with Clinton and Quad Cities, have raised the spending outlook since EXC's August guidance for ExGen. As such, O&M expenses are expected to decline by only 0.5% (2017-2020) from a previously expected decline of 1.3%.

ExGen is expected to generate ~$7 billion of free cash flow through 2020, with ~$3 billion to be used to lower ExGen debt. Once it reaches its targeted 3.0x ExGen debt/EBITDA ratio (in ~2019), free cash will be applied toward Holdco debt reduction.

Dividend growth is forecast at 2.5% through 2018.

EPS: 2016 adjusted as reported; model will be updated post 10K filing.

Our Thesis

We believe EXC will continue to face headwinds at its competitive mainly nuclear generation business stemming from continued weak power and natural gas prices, rising O&M costs, and challenges from renewable generation, partially offset by ZEC subsidies. Growth at its regulated business could somewhat mitigate the pressures at the competitive business.

New Scenarios

Valuation

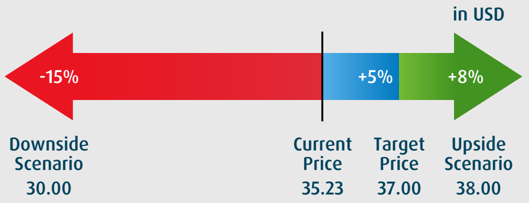
We find EXC shares fairly valued and see few catalysts that would propel earnings or the stock at this time, although proceeds from asset sales would be a near-term positive. Power prices are weak and are likely to remain so for some time. We expect Exelon to trade in a relatively narrow range, recognizing that downside risk is limited, in our opinion, unless power prices further deteriorate.

Upside Scenario $38.00

In a declining interest rate environment, we could see P/E multiples expand. This, together with a rising power and natural gas price environment, which could lead to EV/EBITDA multiple expansion to 8.4x, would equate to a price target of $38.

Downside Scenario $30.00

In a rapidly rising interest rate environment, we could see P/E multiples contract. This, together with a declining power and natural gas price environment, which could lead to EV/EBITDA multiple contraction to 7.2x, would equate to a price target of $30.



Company Description

Exelon is the largest competitive U.S. power generator, with ~32,700 MW of owned capacity. Its Constellation business unit provides energy products and services to business, public, and residential sector customers. Exelon's utilities deliver electricity and natural gas to 10 million customers in Delaware, DC, Illinois, Maryland, New Jersey, and Pennsylvania.

EXC-NYSE Research

Industry Research

Company Models

Key Takeaways From the Conference Call

Raising EPS Estimates

Exelon introduced 2017 EPS operating guidance of $2.50-2.80, with the utilities accounting for $1.55-1.95 ($1.61 in 2016), ExGen at $1.05-1.15 ($1.27 in 2016), and Parent/Other, a loss of $0.20 (-$0.19 in 2016).

Key 2017 utility drivers include a full-year contribution from PHI (integration is ahead of plan), rate-base growth and rate relief, offset by higher O&M at PECO and BGE, assuming a normal storm pattern (fewer than normal storms in 2016) as well as higher depreciation expenses (new investment).

The anticipated 2017 decline at ExGen reflects the impact of hedging at lower energy prices, somewhat offset by partial-year revenues from the New York (April 1, 2017) and Illinois (June 1, 2017) ZEC programs, contributions from the FitzPatrick plant after closing (March 2017) as well as the new Texas CCGTs expected to enter commercial operation this summer.

We are raising our 2017 and 2018 EPS estimates to $2.70 and $2.80, respectively, largely to reflect the Zero Emissions Credits (ZECs) in New York and Illinois as well as other updated drivers.

Utility Update

- The outlook for utility EPS since Analyst Day August 2016 is higher by $0.05 in 2017 and 2020, such that the growth rate remains 6-8%. The increase in the 2017 base is due to continued cost management efforts, while 2020 reflects ComEd ROEs and efficiency-related investments.
- EXC will invest more than $20 billion at its utilities, a slight increase since Analyst Day, largely reflecting the Future Energy Jobs Bill in Illinois.
  - The new legislation provides a number of benefits for ComEd, including a decoupling mechanism, recovery of energy efficiency investments, additional renewable generation and extending the formula rate to 2022. As a result, capex for ComEd was increased such that the 2016-2020 rate base is expected to grow by 6.8% from 4.8% forecast in August 2016.

- Total utility rate base growth is now projected at 6.5% through 2020, from 6.1% previously. As mentioned, ~75% of rate-base spending is recoverable through formulaic mechanisms and more than 70% of rate base is decoupled, providing earnings visibility.
- Pending rate cases total $216 million for Pepco and Delmarva Power & Light. A final ruling on the Delmarva Maryland case is expected in mid-February, with the remaining three cases to be completed over the summer. EXC plans to file rate cases in each of the PHI jurisdictions again in 2017 as it seeks to close the gap between allowed and earned ROEs (EXC expects it will take at least two cycles of “catch-up” rate cases at the PHI utilities).
  - In 2016, the earned ROE for the consolidated electric utilities was 9.5% as a 10.5% ROE for the legacy utilities was hurt by below-average returns at the PHI subsidiaries: Pepco, 7.5% (9.7% allowed); Delmarva, 6.3% (10% allowed) and ACE, 5.6% (10% allowed).

ExGen Update

- ExGen gross margins have been updated to include ZEC revenues, the FitzPatrick acquisition, and the reversal of the shutdown decisions for Quad Cities and Clinton. Since August 2016, total gross margin increased by $650 million, $1.05 billion, and $1.1 billion in 2017, 2018, and 2019, respectively, almost entirely related to the fleet updates including ZECs; since September 2016, mark-to-market hedges are lower by $50 million in 2018 and higher by $50 million in 2019. Retail margins remain steady in the $2-$4/MWH range.
  - Gross margin is currently forecast at $8.15 billion in 2017, $8.3 billion in 2018, and $7.9 billion in 2019.

- On the O&M side, EXC updated the outlook to include the FitzPatrick, Quad Cities, and Clinton nuclear plants. In September, EXC had announced it was reducing O&M by $100 million in 2018 and $125 million in 2019 at ExGen, driving O&M costs down by 1.3% through 2020. However, by including FitzPatrick and re-including Quad Cities and Clinton, O&M costs are substantially higher and now are expected to decline by only 0.5% over the 2017-2020 period.

- ExGen is expected to generate ~$7 billion of free cash flow 2017-2020, higher than previous expectations primarily driven by the incremental cash associated with the New York and Illinois ZEC programs, partially offset by the impact of lower power prices in the outer years.
  - ExGen's free cash flow will be used to fund utility investment and pay down more than $3 billion of debt through 2020. The company is forecasting a 3.3x debt to EBITDA ratio at ExGen by YE2017 with a goal of 3.0x within the next few years. Once it has achieved its goal, it will look to retire holding company debt.

- **Update on portfolio rationalization.** EXC has been seeking a joint venture for its renewables business and looks forward to making an announcement in this regard. Proceeds would be used for debt reduction. The company is also pursuing the sale of its ~2,000 MW Mystic natural gas-fired plant (Boston), and indicated there has been broad interest in the plant.

Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian

regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

Unauthorized reproduction, distribution, transmission or publication without the prior written consent of BMO Capital Markets is strictly prohibited.

Click here for data vendor disclosures when referenced within a BMO Capital Markets research document.

ADDITIONAL INFORMATION IS AVAILABLE UPON REQUEST

BMO Financial Group (NYSE, TSX: BMO) is an integrated financial services provider offering a range of retail banking, wealth management, and investment and corporate banking products. Diversified Utilities
North America | United States

Exelon Corp (EXC)

Results: ZECs are key part of the story…and all is not settled.

- **Citi's Take — Slight miss vs. Citi Estimates mostly driven by HoldCo.** EXC reported full-year 2016 operating EPS of $2.68/share vs Citi's estimate of $2.74/share. The variance was primarily driven by HoldCo EPS of ($0.19)/share vs Citi's forecast of ($0.13)/share. ExGen operating EPS came at $1.27/share slightly below Citi's estimates of $1.30/share.

- **2017 Guidance in line with Citi's estimates adjusted for ZECs.** EXC introduced 2017 full year consolidated operating EPS range of $2.50-$2.80/share vs Citi's estimate of $2.59/share. Regulated EPS guidance range is $1.55-1.95/share inline Citi's forecasts of $1.71/share. ExGen operating EPS range of $1.05-$1.15/share vs. Citi's estimates of $1.01/share. We include IL ZEC ($0.07/share) in our model but not NY. Including NY ZEC EPS impact of $0.14/share does get us on the higher end of ExGen's 2017 guidance.

- **ZEC – on the margin is the key driver of the stock in the near term.** We value NY ZEC at ~$2/share and IL ZEC at $1/share (please see report for details). We think a large part of this $3/share value is already embedded in EXC's current stock price. There is also some probability of potential upside from other states implementing ZECs. With legal challenges that have merit outstanding on the ZECs (ruling is expected in 2Q17), we think the risk / reward isn't attractive at this point. It is important to note that the deleveraging program at EXC relies on the ZECs cash flow as well.

- **Implications — ZEC is the key driver of the story.** We continue to think EXC will deliver on its regulated growth story of ~7% growth through 2020. The economics of nuclear continue to weaken and the importance of ZECs only increases further. With most of the ZEC upside already priced in, we stay on the sidelines.

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $31 target. We value ExGen at $4/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $22/share based on a 17x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent to get to our price target. We ascribe 1$ per share to the impact of Trump's tax plan and $1 per share due to IL ZEC.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 31 Dec 2016	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	47%	39%	14%	1%	99%	0%
% of companies in each rating category that are investment banking clients	65%	61%	60%	72%	63%	50%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day’s market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%); Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%); Q1 2016 Buy 31% (67%), Hold 45% (63%), Sell 24% (61%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Utility EPS Outlook Is Modestly Better, and ExGen Cash Flow Profile Has Improved

But EXC Faces Some Near-Term Uncertainties. The Stock Is Cheap. Rating Buy, Target $39.

EXC reported 4Q16 / FY '16 EPS in line with consensus and initiated consolidated EPS guidance for FY'17 of $2.50-$2.80. The LT EPS outlook has improved. Adjusted EPS for the quarter was $0.44 vs. $0.45 consensus, earning $2.68 for FY '16 which was right on top of consensus. The quarter was higher YoY (+$0.06) on favorable weather at ComEd and PECO, higher rates, and decreased nuclear outage days on ExGen, partially offset by lower realized capacity and energy prices (at ExGen) and higher D&A (on higher capex) across all the operating companies. The mid-point of '17 guidance is $2.65 which was also consistent with expectations. Consolidated FY'17 EPS are flat relative to FY'16 guidance, with a significantly improved outlook for PHI contribution (improving $0.15, which we had already assumed in our numbers) and to a lesser extent, ComEd (improving $0.05), offset by a reduction in ExGen (-$0.15, not a surprise) and higher parent expense (-$0.05). The stated guidance range for utility in FY'17 is actually $0.05 above their analyst day forecast from last year, as is the FY '20 forecast, driven by higher capex and rate base growth over the '17-'20 period.

There are a bunch of "puts and takes" to the ExGen forecast which we delineate below but the bottom line is that EXC projects an increase in cash flow at ExGen through 2020 of $500m vs. their analyst day forecast from mid '16. At ExGen, the updated gross margin outlook now reflects the Illinois ZEC deal, the pending acquisition of Fitzpatrick, and Clinton and Quad Cities staying open. The numbers are in line with our expectations. Hedging and forward curves drive a +/- $50mm variance from the 9/30/16 "mark" through YE '16. They are committed to reducing leverage at ExGen from 3.3X Debt/EBITDA today to 3X, then using cash flow in excess of that required to pay the EXC dividend and fund utility capital expenditures to pay down parent debt.

The ExGen outlook now includes ZEC revenues, Fitzpatrick, and the Illinois nukes. Updating their disclosures for changes in nuclear fleet retirement decisions and their ZEC revenue streams from IL and NY serve to drive large increases to EXC's gross margin forecast, offset by accompanying increases to the O&M forecast. Interest expense in FY'17 is expected to be $425mm, higher than the +/-$350mm booked in FY'16 due to the cessation of capitalized interest on the ERCOT CCGTs that come in to service in mid '17. There will be a further impact in FY '18 from capitalized interest ceasing on a peaker investment in ISO-NE. D&A and nuclear fuel expense are also impacted by the ERCOT CCGTs and Fitzpatrick joining the fleet. On the hedging front, NI Hub and NYISO appear more open than last guidance with the re-inclusion of Clinton, Quad, and Fitzpatrick, but elsewhere hedging volumes have increased. The overall hedge position for '17-'19 is now 92.5% / 57.5% / 29.5% from 86.5% / 55.5% / 24.5%, the company remaining behind ratable based on view that an improving price outlook that is not reflected in the forward curves is likely. Their point of view is not in guidance, but a $5 increase in power prices across their major markets would drive an increase in '19 gross margin of $605MM (7.5% of current expected '19 GM).

EXC declined 2.2% yesterday vs. a 0.1% increase for the diversified index despite posting solid numbers and a modestly improved outlook. We are guessing that is due to a combination of factors. Perhaps it was a “sell the news” event with EXC having significantly outperformed the index during FY ’16 / since the election, as the earnings and outlook were good/improved but there was no big incremental change in expectations to the upside. Another factor weighing on sentiment is perhaps that legal action in NY to challenge ZEC revenues might not be dismissed and instead head to trial, which would occur in 1H17. The legal basis for ZECs seems sound (see RECs) but it remains a risk. No further insight was given on the Mystic sale or the expected sell-down of EXC’s stake in their Renewable business, the former perhaps perceived as more challenging given EXC seemingly tempering expectations, the ISO-NE capacity print for ‘20/’21 (released this afternoon, it was ~$5.30/kW-m, which a bit below already low expectations) and the lack of a quorum at FERC to approve a deal in a timely manner even if one was forthcoming. In addition, the PJM capacity auction is coming up in May ’17 and sentiment on the pricing outcome is cautious to negative. Our views on PJM capacity pricing can be found here. Last but not least the “Trump tax” risk of a financial impact from the proposed “border adjustment tax” could drive up nuclear fuel expense as they import the majority of their uranium, making EXC look like less of a relative winner vs. the peer group under tax reform scenarios. From a border tax perspective every 10% increase in nuclear fuel expense would be a ~$90mm annual decrease in cash flow with an increase in nuclear fuel amortization over time becoming a drag on earnings. Before the impact of a presumed border tax EXC would look like a relative winner in our Trump tax scenario, as we outline in our tax note here.

Our ’17-’19 EPS forecast is a nickel higher in ’17 and ’18, unchanged in ’19 at $2.65 / $2.85 / $2.85 vs. our prior forecast of $2.60 / $2.80 / $2.85. Our forecast is based on 2/1/17 curves and the adjustments outlined above for both the utilities and ExGen. On a MTM basis we are lower than EXC’s gross margin forecast in ’18 and ‘19 as pricing is a bit lower than the 12/30/16 “mark” used in their Q4 update. That being said we still think the assumptions driving EXC’s view of the earnings growth drivers in its core utilities business and ExGen as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management are still wholly credible. The core utilities are forecast to grow rate base at 6.5% from ’17-20 with earnings growth of 6-8% (down from 7-9% from ’16-’20 solely due to a higher ’17 base, the ’20 forecast is up a nickel). We see a turnaround at PHI similar to the one EXC engineered at BGE after the CEG acquisition as feasible, with annual rate cases at most of the PHI companies and the ability to harvest operating synergies. So, there is line of sight for EPS at EXC’s utilities (ex-parent overheads) growing from $1.59 in FY ’17 to ~$2.00 in 2020, consistent with our prior expectations. From a cash flow perspective we see ExGen producing ~$4.9bn of free cash flow through FY’19, ~78% of the $6.3bn they are targeting through 2020 with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. They are committed to 2.5% dividend growth through 2018 but are confident the financial profile supports at least that level of growth through 2020. There are also the pending sales of the Mystic plant in ISO-NE and a 49% stake in its renewables JV, which we think could add over $1.5bn in cash to amortize debt at valuations that would accelerate deleveraging (by our estimate $1.25-1.5bn from Mystic, a few hundred million from the renewables sale). There would be a near-term reduction to EBITDA with those sales—especially at Mystic— but it appears front-loaded and we believe the sale prices for both portfolios will be well in excess of the implied EV/EBITDA multiple of 4.5X ’19 at which ExGen is currently trading.

Our price target remains $39, maintaining BUY rating. Our forecast for utility EPS contribution minus parent overheads is $1.59/share in ’17 which by 2019 we expect to be ~ $1.85 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to +/-2.00/share. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth ~$30.50/share (16.4X ’19 EPS). That implies ExGen is worth only ~$4.75/share today, which is around 4.8X ’19 EPS or 4.5X ’19 EV/EBITDA and a levered free cash flow yield to EV of 13% with debt/EBITDA at YE ’19 of ~3.0X. They are taking all the cash flow from that lower multiple part of the business and either returning it to shareholders or investing in the higher multiple utility business. Overall, EXC is trading at +/-12.4X FY ’19 earnings while pure regulated names are at +/-16.4X. The EXC dividend yield is just above that of the regulated peer group at ~3.7%. While the dividend growth commitment of 2.5% annually through at least 2018 is lower than that articulated by purely regulated peers and some risks to ExGen revenues are palpable, we think that the overall valuation gap, given our view of the value of the businesses and capital allocation plan, still remains too high. At $39 share our target price implies a valuation for ExGen of 5.75X ‘19 EV/EBITDA and a levered free cash flow yield of ~10%. The consolidated P/E would still be only 13.6X ’19 EPS.

What’s next? EXC has not provided a specific timetable on when the sale of the Mystic facility in ISO-NE, or the ~50% stake in its renewables JV, might close but we think a sale of both could be forthcoming in 1H ’17. The purchase of Fitzpatrick from EXC is expected to close before 4/1/17. EXC will appeal the IRS’ assessed tax penalty for the 1999 gain on sale of fossil assets from ComEd in Q1’17, which could result in a refund of ~$200mm. We await the outcome of litigation in New York on the ZEC package, with no timetable on a decision to move to trial but the potential for action in 1H ‘17. A decision in DPL’s electric distribution rate case in MD (in which they are requesting $57.0mm based on a 10.60% ROE) is expected by 2/17/17. A decision in Pepco's electric distribution rate case in DC (in which they are requesting a $76.8mm increase premised on 10.60% ROE) is expected by 7/25/17. A decision in Delmarva's pending electric and gas distribution rate cases (in which they are requesting $81.7mm in aggregate based on a 10.60% ROE) is expected in Q3'17. The PJM capacity auction window opens on 5/10/17 and closes on 5/16/17, with results to be posted on 5/23/17.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions would be accretive but a significantly lower PJM capacity auction price would be negative.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Buy, Hold or Sell) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%

Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long – the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short – the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.

No Position – the stock is not included in the model portfolio.

Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.

Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal 100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Buy, Hold and Sell. However, for the purposes of ratings distribution disclosure only (below), FINRA requires members who use a ratings system with terms different than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. **For this purpose, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.**

Evercore ISI ratings distribution (as of 02/08/2017)

Investment Thesis 06 Dec 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes 08 Feb 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Valuation, Growth and Profitability 06 Dec 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin

Exelon Corp EXC (NYSE) | ★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
35.58 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Price/Fair Value Morningstar data as of Feb 17, 2017

from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $650 million change in EBITDA. Our fair value estimate would change by $5 per share. On a mark-to-market basis as of mid-November, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 4 percentage points to near the industry average, it would change our fair value estimate by $1 per share. If Exelon does not retire the Clinton, Quad Cities, and Three Mile Island plants, it would add $2 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an

effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. About 70% of the $11 billion of rate base growth in 2016-20 will have rate trackers or formula rates, minimizing regulatory lag. Exelon faces the biggest challenge boosting Pepco's earned returns some 400 basis points to approach its allowed returns. Rate cases in 2016-17 should give it a good start.

In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

Exelon Corp EXC (NYSE) | ★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
35.58 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Morningstar Analysis

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets as it tries to smooth cash flow at its generation unit. As power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.We see no immediate credit concerns based on current energy market conditions. We project Exelon's consolidated EBITDA/interest coverage will remain above 5 times and leverage will remain below 5 times debt/EBITDA at least through 2019. Even those these ratios are weaker following the Pepco acquisition, we think this is acceptable given the higher share of regulated earnings.Only about one-quarter of Exelon's consolidated debt is directly tied to its generation segment. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing its near-term maturities. Management has committed to reducing Exelon Generation debt by $3 billion during the next five years and use the remaining cash to fund the regulated utilities' growth.We also think management can meet its 2.5% dividend growth goal through 2018 with relative ease. However, this is rather unimpressive compared with most of its peers that we think can grow their dividends at least twice as fast.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm might have to make modest cash contributions. Plant closures also could increase cash decommission costs.

Enterprise Risk

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's

largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management 06 Dec 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth 14 Nov 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV

35.58 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Our fundamental U.S. electricity demand forecast is detailed in the Utilities Observer we published in May, "U.S. Electricity Demand Outlook: Energy Efficiency Is No Death Knell." Our fundamental EV forecast is detailed in the Electric Vehicles Observer published Nov. 14.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities 09 Nov 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns 08 Nov 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases,

management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Regulated Utilities Continue Driving Growth for Exelon

26 Oct 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Morningstar Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ▶**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ▶**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ▶**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ▶**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ▶**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

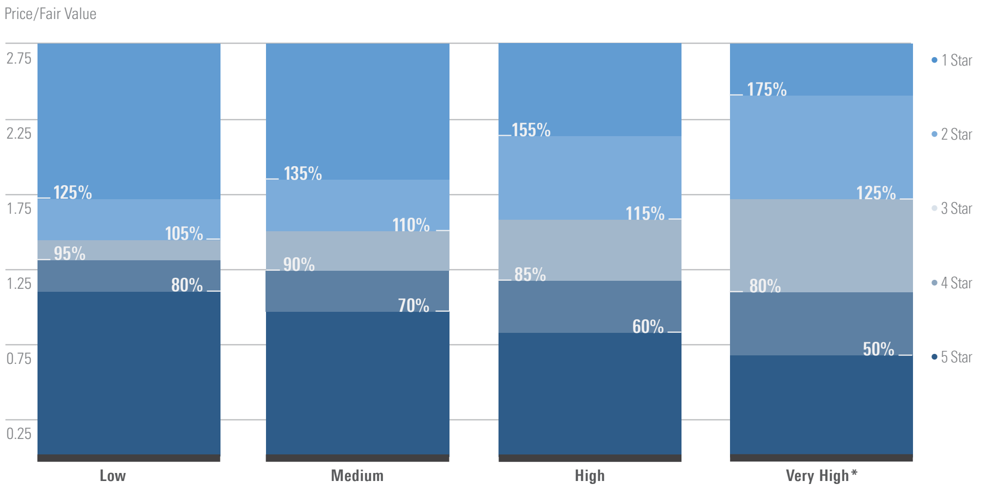
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc.performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the

suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. The Equity Research Group encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, Inc., or the Equity Research Group guarantees the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst, Morningstar, Inc. or the Equity Research Group. In Territories where a Distributor distributes our report, the Distributor is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

- No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.• Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.

- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.

- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.

- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the

previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

• Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

• Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

• Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which the Equity Research Group currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities covered, including their fair value estimate, please contact your local office.

For Recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products. To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at http://www.morningstar.com.au/fsg.pdf .

For Recipients in Hong Kong: The Report is distributed by Morningstar Investment Management Asia Limited, which is regulated by the Hong Kong Securities and Futures Commission to provide services to professional investors only. Neither Morningstar Investment Management Asia Limited, nor its representatives, are acting or will be deemed to be acting as an investment advisor to any recipients of this information unless expressly agreed to by Morningstar Investment Management Asia Limited. For Recipients in India: This Investment Research is issued by Morningstar Investment Adviser India Private Limited. Morningstar Investment Adviser India Private Limited is registered with the Securities and Exchange Board of India (Registration number INA000001357) and provides investment advice and research. Morningstar Investment Adviser India Private Limited has not been the subject of any disciplinary action by SEBI or any other legal/regulatory

body. Morningstar Investment Adviser India Private Limited is a wholly owned subsidiary of Morningstar Investment Management LLC. In India, Morningstar Investment Adviser India Private Limited has one associate, Morningstar India Private Limited, which provides data related services, financial data analysis and software development.

The Research Analyst has not served as an officer, director or employee of the fund company within the last 12 months, nor has it or its associates engaged in market making activity for the fund company.

*The Conflicts of Interest disclosure above also applies to relatives and associates of Manager Research Analysts in India # The Conflicts of Interest disclosure above also applies to associates of Manager Research Analysts in India. The terms and conditions on which Morningstar Investment Adviser India Private Limited offers Investment Research to clients, varies from client to client, and are detailed in the respective client agreement.

For recipients in Japan: The Report is distributed by Ibbotson Associates Japan, Inc., which is regulated by Financial Services Agency. Neither Ibbotson Associates Japan, Inc., nor its representatives, are acting or will be deemed to be acting as an investment advisor to any recipients of this information.

For recipients in Singapore: For Institutional Investor audiences only. Recipients of this report should contact their financial adviser in Singapore in relation to this report. Morningstar, Inc., and its affiliates, relies on certain exemptions (Financial Advisers Regulations, Section 32B and 32C) to provide its investment research to recipients in Singapore.

COMPANY UPDATE
February 9, 2017

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

Reducing 2018 Estimate; However, Valuation Appears Attractive

What's Incremental To Our View

Based on updated assumptions, we have reduced our 2018 estimate. Correspondingly, our price target is reduced to $40 from $41. Despite our lower estimate, the stock appears attractively priced.

IMPORTANT POINTS

- EXC reported 4Q results of $0.44 vs $0.38, modestly below our estimate of $0.46 and consensus of $0.45. The shortfall (vs our estimate) was primarily due to a higher than expected tax rate.

- Based on updated hedge disclosures, latest forward commodity curves, and revised operating cost assumptions, we have modestly increased our 2017 estimate to $2.65 from $2.64; however, we have reduced our 2018 estimate to $2.82 from $2.92.

- We remain intrigued by the significant regulatory lag at the Pepco utilities (which we currently estimate at $0.15), and believe that faster than expected reduction in that lag could lead to positive earnings surprises. Our current 2018 estimate assumes a $0.05 reduction in the lag from current levels.

- While there is uncertainty regarding the implications of any corporate tax reform (including a potential tax on imports, which would impact EXC’s nuclear fuel purchases), we believe that the process is in the very early stages and it is unclear what (if any) final outcome will emerge.

- EXC appears attractively priced, trading at a 13% P/E multiple discount to the peer group (based on our 2018 estimate). Assuming a P/E multiple of 14.3x (in line with the peer group) on our 2018 estimate of $2.82, we derive our price target of $40. We reiterate our **Buy** recommendation.

- We have included our revised 2017-18 earnings and cash flow models in this report.

Buy

Price Target: $40.00

Note

1) Rate Base - Com Ed: $10.6bn in 2015, $11.9bn in 2016, $13.2bn in 2017E, $14.0bn in 2018E; PECO: $6.0bn in 2015, $6.2bn in 2016, $6.6bn in 2017E, $7.0bn in 2018E;
BGE: $5.0bn in 2015, $5.3bn in 2016, $5.7bn in 2017E, $6.1bn in 2018E; PEPCO: $8.3bn in 2016, $8.9bn in 2017E, $9.4bn in 2018E.

2) Earned ROE - Com Ed: 8.0% in 2015, 8.8% in 2016, 9.3% in 2017, 9.4% in 2018; PECO: 11.7% in 2015, 13.3% in 2016, 12.1% in 2017, 12.2% in 2018;
BGE: 10.7% in 2015, 10.5% in 2016, 9.7% in 2017, 10.3% in 2018; PEPCO: 5.5% in 2016, 7.4% in 2017, 7.7% in 2018.

3) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

4) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

5) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

6) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

7) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw, nuclear $110m price) from Q2 2017.

8) We have factored the IL ZEC payments for Clinton (1069mw) and Quad City (1403mw) from 6/1/17.

9) Forward curves as of 2/7/17.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a P/E multiple of 14.3x (in line with the peer group) on our 2018 estimate of $2.82, we derive our price target of $40.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

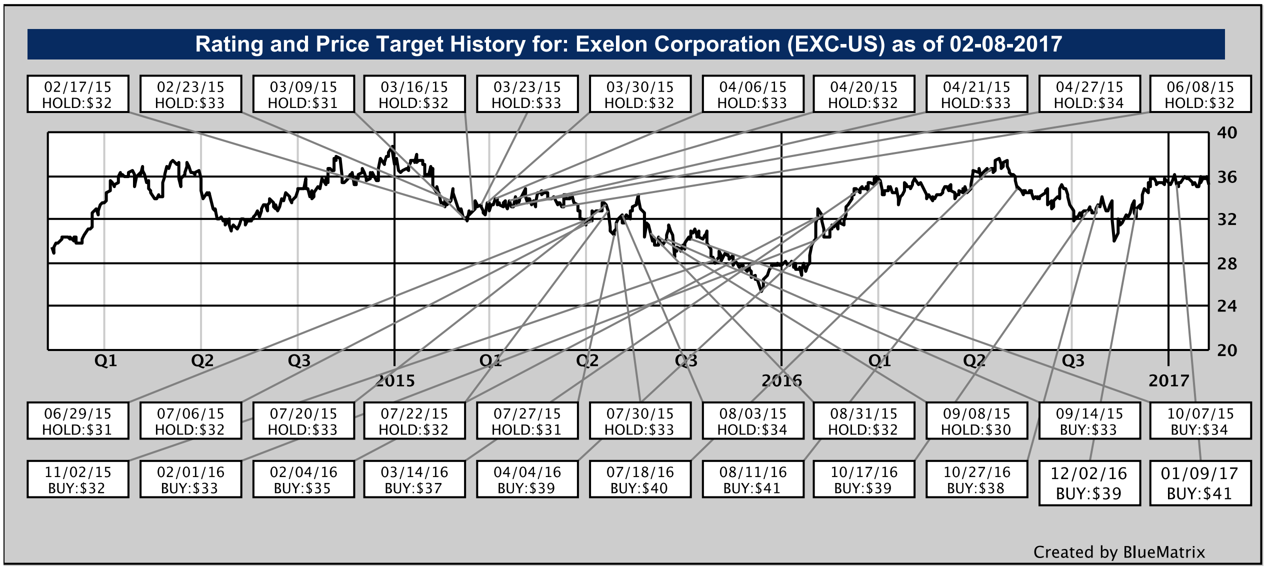
Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.



STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website:
https://suntrustlibrary.bluematrix.com/client/library.jsp
please email the Research Department at STRHEquityResearchDepartment@SunTrust.com
or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision.

As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = drop coverage
CS = Coverage Suspended
I = initiate coverage
T = transfer coverage

The prior rating system until Oct. 7, 2016:
3 designations based on total returns* within a 12-month period**
· **Buy** – total return ≥ 15% (10% for low-Beta securities)***
· **Reduce** – total return ≤ negative 10% (5% for low Beta securities)
· **Neutral** – total return is within the bounds above
· **NR** – NOT RATED, STRH does not provide equity research coverage
· **CS** – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

Scotia Howard Weil

COMPANY UPDATE

Friday, February 10, 2017

Exelon Corporation

4Q16 Takeaways: Executing Growth Strategy

QUICK TAKE: Quick Take: The stock underperformed versus the group following the earnings call despite what was largely a reiteration of the Company's long-term outlook as lower headline growth targets at its utility segments and decreasing gross margin outlook at ExGen beginning in 2019 likely weighed on the stock. We are willing to look through these issues and continue to believe the name provides the most potential upside to out-year forecasts among our coverage group and note the stock trades at about one turn below its average forward earnings multiple based on our FY18 forecasts.

KEY POINTS

Guidance In Line with Expectations: The Company offered a projected earnings guidance range for FY17 of $2.50 to $2.80/share in its presentation materials, straddling our estimate and the current Street consensus of $2.65/share. The longer-term outlook was consistent with forecasts provided at the analyst day and subsequent events, with small, positive changes in contributions from both the Utility and Generation segments. We are maintaining our FY17 and FY18 EPS estimates of $2.65 and $2.85, respectively.

ExGen Updates: EXC updated the gross margin and operating costs assumptions for the segment to include contributions from ZEC subsidies in New York and Illinois, the "un-retirement" of the Clinton and Quad Cities facilities, and the upcoming FitzPatrick acquisition (expected 2Q17). The net impact of these changes is about $100 to $200 million per year (pre-tax), which we believe was largely priced into the stock. The Company has hedged about 57% and 30% of expected 2018 and 2019 generation, respectively. This is in line with out-year hedged volumes at this time last year, providing meaningful upside should power prices recover from recent historically low levels. Synergies from the operation of the FitzPatrick plant, located near the Company's Nine Mile Point facility could also materialize over time.

Utility Rate Base Additions Fuel Growth: 2016 actual results were above the midpoint of guidance, reducing long-term growth expectations to 6 to 8% on an annual basis through 2020, compared to forecasts of 7 to 9% growth offered at the Company's analyst day in August. Higher earnings were accomplished despite rate base coming in a bit below forecasts, which conversely creates expectations for better rate base increases over the planning period. The Illinois legislation allows for ComEd to recover energy efficiency investments, more than offsetting relative lag at the other utilities. EXC has four rate cases outstanding at legacy PHI utilities that seek allowed returns well in excess of those currently earned at DPL and PEPCO. Orders are expected through 3Q17 and the Company plans on filing additional rate cases at each PHI utility during 2017.

Qtly EPS (Dil)	Q1	Q2	Q3	Q4	Year	P/EPS
2015A	$0.71	$0.59	$0.83	$0.38	$2.49	11.1x
2016A	$0.68	$0.65	$0.91	$0.44	$2.68	13.2x
2017E	$0.62	$0.61	$0.79	$0.63	$2.65	13.3x
2018E	$0.71	$0.66	$0.82	$0.67	$2.85	12.3x

(FY-Dec.)	2014A	2015A	2016A	2017E	2018E
EBITDA (M)	$6,367	$6,937	$8,376	$8,754	$9,245
Enterprise Value (M)	$53,537	$46,117	$69,934	$71,396	$71,710
EV/EBITDA	8.4x	6.6x	8.3x	8.2x	7.8x

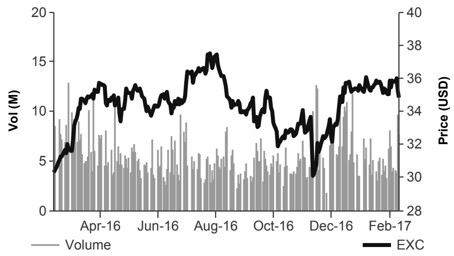
Volume and Closing Price for EXC



Source: FactSet.

Tax Policy Implications: EXC earns a relatively large share of earnings from its merchant operations, and as such is widely viewed as having more upside to proposed tax code changes than its utility peers. Management briefly discussed potential impacts to earnings based on a variety of assumptions, keeping the talk at a very high level while noting that no specific legislation has been proposed. The outlook based on the House proposal including no interest deduction, but excluding boarder adjustment taxes would be neutral to the utility segments, neutral to slightly positive at ExGen (assuming a lower corporate tax rate), and negative at HoldCo. Including a boarder tax adjustment would be a negative to ExGen as it imports nuclear fuel.

There are clearly any number of outcomes regarding federal tax policy, but some of the negative reaction in the stock may have been predicated on the potential that changes could be a drag on future earnings, a stark change from the consensus view heading into the call. We believe EXC is prudent to stay away from specific guidance given all of the moving pieces and that the most likely outcome at this point is that final tax code revisions would be positive to neutral for the name, either driven by lower corporate tax rates or the industry receiving certain exemptions that take the regulated nature of its operations into consideration.

Rate Case Schedules: As noted above, the Company has a number of rate cases outstanding after receiving four final orders over the course of 2H16. Legacy EXC utilities (ComEd, PECO, and BGE) earned equity returns of about 10.5% during 2017, compared to 5.6% at ACE, 6.3% at DPL, and 7.5% at PEPCO. The PHI utilities are currently allowed ROEs ranging from 9.7% to 10.0%. Recent orders regarding the ACE electric and PEPCO Maryland filings and the outstanding cases summarized below should help to bridge this gap.

Figure 1: EXC Outstanding Rate Cases - Requests

Jurisdiction	Revenue ($MM)	ROE	Equity Layer	Order Expected
DPL - Maryland	57	10.6%	49.10%	February
PEPCO - DC	77	10.6%	49.14%	3Q17
DPL - Delaware (Electric)	60	10.6%	49.44%	3Q17
DPL - Delaware (Gas)	22	10.6%	49.44%	3Q17

Company Overview

Company Description

Exelon Corporation is a diversified power utility company with operations throughout the United States, operating generation, transmission, and distribution assets in both merchant and regulated markets. The Generation segment operates a large regional and fuel-diversified competitive electricity business, including the largest nuclear power generation fleet in the country. The company owns regulated utilities ComEd, BGE, PECO, and Pepco Holdings, which provide electric transmission and distribution services to customers within their designated service areas.

Risks

Risk Factors Which May Impede the Achievement of the Price Target: (1) Industry fundamentals with respect to customer demand or product/service pricing could change and adversely impact expected revenues and earnings; (2) issues relating to major competitor or market shares or new product expectations could change investor attitudes toward the sector or the company; (3) Unforeseen developments with respect to the management, financial condition or accounting policies or practices could alter the prospective valuation; or (4) external factors that affect the U.S. economy, interest rates, the U.S. dollar or major segments of the economy could alter investor confidence and investment prospects.

Key Risks: Regulatory factors, interest rates, commodity prices, operational factors, including running fleet of nuclear power reactors

Definition of Scotia Howard Weil Equity Research Ratings & Risk Rankings

We have a four-tiered rating system, with ratings of Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

The rating assigned to each security covered in this report is based on the Scotiabank, Global Banking and Markets research analyst's 12-month view on the security. Analysts may sometimes express to traders, salespeople and certain clients their shorter-term views on these securities that differ from their 12-month view due to several factors, including but not limited to the inherent volatility of the marketplace.

Ratings

Focus Stock (FS)
The stock represents an analyst's best idea(s); stocks in this category are expected to significantly outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Outperform (SO)
The stock is expected to outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Perform (SP)
The stock is expected to perform approximately in line with the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Underperform (SU)
The stock is expected to underperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Other Ratings

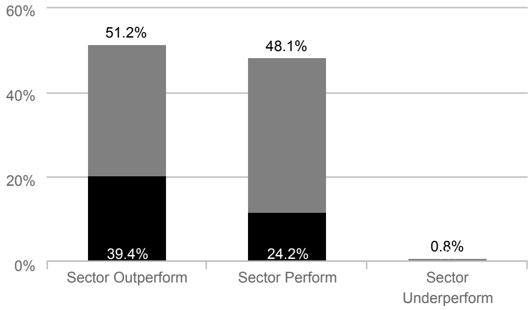
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Ranking
As of June 22, 2015, Scotiabank, Global Banking and Markets discontinued its Low, Medium, and High risk rankings. The Speculative risk ranking reflects exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, and exceptionally high stock volatility. The Director of Research and the Supervisory Analyst jointly make the final determination of the Speculative risk ranking.

Scotia Howard Weil Equity Research Ratings Distribution*

Distribution by Ratings and Equity and Equity-Related Financings*



▨ Percentage of companies covered by Scotia Howard Weil within each rating category.

■ Percentage of companies within each rating category for which Scotia Howard Weil has undertaken an underwriting liability or has provided advice for a fee within the last 12 months.

For the purposes of the ratings distribution disclosure FINRA requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to strong buy, buy, neutral and sell ratings, respectively.

General Disclosures

This research report was prepared by employees of Scotia Howard Weil, a division of Scotia Capital (USA) Inc. who have the title of Research Analyst. Scotia Capital (USA) Inc., an SEC registered broker-dealer and a member of FINRA and the NYSE, is wholly owned by Scotia Capital Inc., a Canadian Investment Dealer, and indirectly owned by The Bank of Nova Scotia. Scotiabank, together with "Global Banking and Markets," is a marketing name for the global corporate and investment banking and capital markets businesses of The Bank of Nova Scotia and certain of its affiliates in the countries where they operate, including Scotia Capital (USA) Inc.

All other trademarks are acknowledged as belonging to their respective owners and the display of such trademarks is for informational purposes only.

The frequency of reports is determined by the analyst on a case-by-case basis, driven by external market factors and issuer announcements. Analysts will endeavor to review and publish such estimates and recommendations as soon as possible after the release of material information by the issuer or the occurrence of other relevant events. This will typically involve, at a minimum, a summary of quarterly earnings releases.

In addition to Scotia Howard Weil Research, Scotiabank publishes and distributes Scotiabank Global Banking and Markets Equity Research (“Scotiabank Research”), which is a separate research publication. Scotia Howard Weil Research Analysts and Scotiabank Research Analysts are independent from one another and their respective coverage of issuers is different. In addition, because they are independent from one another, Scotia Howard Weil Research Analysts and Scotiabank Research Analysts may have different opinions on the short-term and long-term outlooks of local and global markets and economies.

February 10, 2017

COMPANY UPDATE

Exelon Corp. (EXC)

Neutral

Equity Research

Staying Neutral: Now slightly below consensus & ZEC risks remain

What's changed

After 4Q2016 earnings, we lower our estimates from $2.83/$2.89/$2.84 in 2017/2018/2019 to $2.73/$2.77/$2.70 as we adjust for revised (1) capital spending levels and YE2016 rate base levels, (2) rate case assumptions, (3) operating expense and financing assumptions, and (4) generation output and hedged pricing levels. We assume modestly lower estimates, especially at the PHI segment, given slightly higher costs and lower rate base levels, as well as lower hedged pricing – and our forecasts now appear slightly below consensus in 2018/2019. We remain Neutral and lower our 12-month price target from $38 to $37.

Implications

Weakness during the quarter – where EXC missed GS – appeared driven mostly by higher than expected operating costs at PHI – as we expected even greater cost management at this recently acquired (early 2016) segment. We reiterate our concern regarding a federal court case over the nuclear subsidies – the Zero Emissions Credits (ZECs) – granted to several EXC nuclear plants in New York and Illinois. We view a decision by the federal court in New York on whether to hear or dismiss this case as key, given – as we outlined in our recent note "Risks do exist at EXC, especially ZEC and RPM; remain Neutral" published January 30, 2017 – that losing these subsidies would pose roughly $0.25-$0.30 of EPS risk for EXC.

Valuation

We derive our 12-month price target of $37 using a SOTP methodology applying P/E multiples on the regulated segments and an EV multiple on EXC's generation business. We use a discount multiple on the generation segment given the potential litigation risk on the nuclear subsidies.

Key risks

Key risks include power prices, litigation, and regulation.

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

Disclosure Appendix

Reg AC

We, Michael Lapides, Daniel Yu, CFA, David Fishman, Dylan Campbell and Siddharth Verma, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Investment Profile

The Goldman Sachs Investment Profile provides investment context for a security by comparing key attributes of that security to its peer group and market. The four key attributes depicted are: growth, returns, multiple and volatility. Growth, returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe.

The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

Growth is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Volatility** is measured as trailing twelve-month volatility adjusted for dividends.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Goldman Sachs had a non-securities services client relationship during the past 12 months with: Exelon Corp. ($34.85)

Goldman Sachs has managed or co-managed a public or Rule 144A offering in the past 12 months: Exelon Corp. ($34.85)

Goldman Sachs makes a market in the securities or derivatives thereof: Exelon Corp. ($34.85)

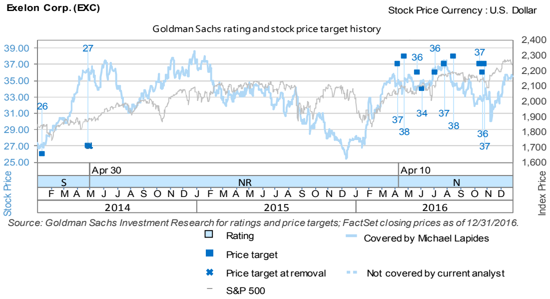
Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	32%	54%	14%	64%	60%	51%

As of January 1, 2017, Goldman Sachs Global Investment Research had investment ratings on 2,902 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and views and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Price target and rating history chart(s)



Source: Goldman Sachs Investment Research for ratings and price targets; FactSet closing prices as of 12/31/2016.

The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Regional Conviction Buy and Sell lists represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return.

Return potential represents the price differential between the current share price and the price target expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them

may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data available on a particular security, please contact your sales representative or go to http://360.gs.com.

Sector: US Power & Utilities

February 10, 2017

Exelon Corporation

Keep calm and carry on

Our view: We continue to see Exelon as the best deregulated play with robust utility growth combined with the best leverage to improving power prices. We believe recent concerns regarding impact from potential tax reform, while not unfounded, may have been overdone. We reiterate our Outperform rating.

Key points:

Tax reform and the fear of BATs. Investors seem to be somewhat concerned regarding the impact from potential tax reform, after management only discussed directional impact to the various segments. One item that caught us off guard was the impact from a border adjustment tax (BAT) on ExGen. Our simplified analysis (on page 3) shows that, at a 20% corporate tax rate, the loss of interest deductibility would still result in a net EPS benefit to Exelon, while the addition of BAT would result in modest dilution. While we could see a bad scenario (tax rate lowered only moderately coupled with BAT) having a more meaningful hit to Exelon's earnings, the average of the various scenarios seems to indicate a more neutral impact overall.

Mystic sale mystery? Be patient. Management is continuing their plan to sell the ~2,000 MW Mystic facility in Middlesex, MA (discussed late last year) after evaluating all offers. We believe investors may be a bit concerned that lack of an announcement thus far could be indicating lower-than-expected offer values. We expect the Mystic 8, 9 CCGT (7,500 heat rate) to be sold for average market prices, which we estimate to be around $750/kW. Our model incorporates $1.2 billion in sales proceeds (at a $600/kW blended price) in 3Q17 used to pay down ExGen/HoldCo debt.

Issues for 2017: further nuclear support? With the passage of recent nuclear subsidy legislation in both New York and Illinois, helping nearly 4.5 GW of nuclear capacity for Exelon, other states are in various stages of discussions regarding similar support for their nuclear plants. These states include Connecticut, Pennsylvania, Ohio, and New Jersey. Connecticut seems to be the front runner, with our view that a bill could pass this year. Exelon does not own any nuclear in the state, although it does own 4.5 GW in Pennsylvania and 1.6 GW in New Jersey that could see upside if similar legislation is passed in the respective states.

Maintain Outperform and $40 price target. Despite continued power price pressure for ExGen, we remain positive on the increased cash flow stability provided via the New York/Illinois ZECs, as we estimate around 60% of our 2018 and 2019 EBITDA derived from ZECs and capacity revenues. We also believe there is upside to our utility earnings, as we currently incorporate annual EPS growth at the lower end of the 6-8% CAGR guided by management. Our valuation reflects $32 of value for the utilities; at current levels, we believe there is limited downside for the stock.

Outperform

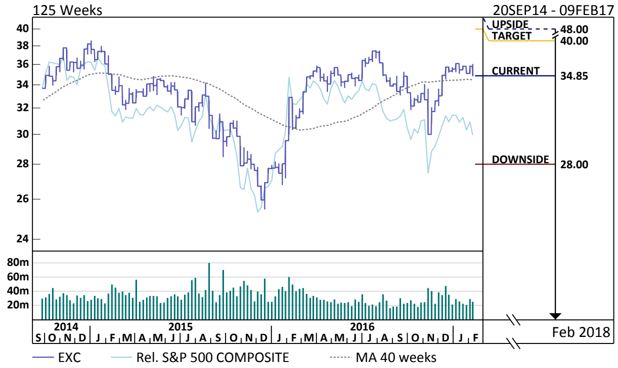
Target/Upside/Downside Scenarios

Exhibit 1: Exelon Corporation



Source: Bloomberg and RBC Capital Markets estimates for Upside/Downside/Target

Target price/base case

- Base case price target of $40.
- 18.2x 2018E P/E for ComEd, PECO, and BGE and 18.2x 2017E P/E for PEPCO, DPL, ACE, which represents a 5% and no premium to our estimated industry average multiple.
- ExGen gross margin for 2017–2019 of $8.16 billion, $8.30 billion, and $7.81 billion, respectively, including the benefit of New York and Illinois' nuclear Zero Emission Credits (ZECs), as well as the earnings accretion from the Fitzpatrick nuclear plant acquisition.
- 7.5x EV/EBITDA multiple on ExGen's 2018 "open" EBITDA.

Upside scenario

- Upside scenario of $48.
- Same premiums on the various utilities but on the upside scenario base P/E multiple of 18.2x.
- 10% increase in forward power prices.
- 8.0x EV/EBITDA multiple on ExGen's 2018 "open" EBITDA.

Downside scenario

- Downside scenario of $28.
- Same premiums on the various utilities but on the downside scenario base P/E multiple of 14.7x.
- 10% decrease in forward power prices.
- 6.0x EV/EBITDA multiple on ExGen's 2018 "open" EBITDA to reflect on-going pressure of power prices on plant economics.

Investment summary

With the Pepco acquisition complete, Exelon now derives over 60% of its earnings from regulated utilities. The company now is tasked with reducing the under-earning profile at the legacy Pepco utilities (PEPCO, DPL, ACE), while working to achieve the projected synergies from the deal. Combined with the expected earnings boost at ExGen due to the recently passed New York and Illinois legislation supporting nuclear plants, we expect Exelon warrants a premium multiple to its de-regulated peers.

Potential catalysts

- Recovery in forward power curves lead to improved ExGen gross margins.
- Successful implementation of O&M expense control through 2019 help offset impact of low power prices.
- Exelon receives constructive rate case decisions in the upcoming rate cases for the three legacy Pepco utilities (PEPCO, DPL, ACE).

Risks to call

- Less-than-expected merger synergies are realized or delayed.
- Unfavorable turn in regulatory environment in the various regulatory states.
- The Pepco utilities continue to materially under-earn.
- EDF put price is much higher than expected.
- Ratings agencies downgrade parent and/or subsidiary debt to non-investment grade.

Incremental thoughts post-4Q16 earnings

Tax reform and the fear of BATs. Management expects the House version of the proposed tax reform to be neutral/neutral-to-positive/negative for utilities/ExGen/HoldCo, respectively, with HoldCo negatively impacted by the potential elimination of interest deductibility. They also noted a potentially negative impact from a border adjustment tax (BAT), which results in loss of deductibility of imported raw materials and would affect Exelon's import of uranium for nuclear fuel. We believe Exelon's underperformance since earnings was partially due to investors' increased concern regarding the impact of tax reform, given initial thoughts may have pointed to a more positive net impact.

Below, we attempted to quantify the net impact of a potential House tax reform, with and without BAT. Exhibit 1 shows that, at a 20% corporate tax rate, the loss of interest deductibility would still result in a net EPS benefit to Exelon, while the addition of BAT would result in modest dilution. We assume that the impact to utilities is net neutral. Our estimate of uranium import cost is based on $5/MWh of total nuclear fuel cost, with around half ($2.50/MWh) comprising the imported uranium, on annual ExGen nuclear generation of around 170,000 GWh.

Exhibit 1: Potential tax reform impact a modest negative to positive @ 20% tax rate

ExGen	2018E	2018E	2018E	Assumed annual uranium import cost ($2.5/MWh on 170,000 GWh)	
	Current	**20% tax rate + loss of int. deduction**	**20% tax rate + loss of int. deduction + BAT**		
EBIT	2,194.2	2,194.2	2,194.2	425.0	(d)
Interest expense	(355.1)	(355.1)	(355.1)	(a)	
EBT	1,839.1	1,839.1	1,839.1	(b)	
Tax rate	32%	20%	20%	(c)	
Tax	(588.5)	(367.8)	(367.8)	(b) * (c)	
non-deductible int. exp. impact	-	(71.0)	(71.0)	(a) * (c)	
non-deductible nuclear fuel impact	-	-	(85.0)	(c) * (d)	
Net income	1,250.6	1,400.3	1,315.3		
Shares O/S	962.5	962.5	962.5		
ExGen EPS	$ 1.30	$ 1.45	$ 1.37		
ExGen EPS impact		*$ 0.16*	*$ 0.07*		
HoldCo		2018E	2018E		
Estimated LTD		6,724.3	6,724.3		
Avg. interest rate		4.31%	4.28%		
Interest expense		289.8	287.6		
Tax rate		33%	33%		
non-deductible int. exp. impact		(95.6)	(94.9)		
Shares O/S		962.5	962.5		
HoldCo EPS impact		*$ (0.10)*	*$ (0.10)*		
Exelon EPS Impact		**$ 0.06**	**$ (0.03)**		
Sentivity to 1% increase in tax rate		*$ (0.023)*	*$ (0.027)*		

Source: Exelon Corp, RBC Capital Markets estimates

We do note that, in this analysis, the net impact is more negative as the corporate tax rate increases from the assumed 20% rate. While we acknowledge that a bad scenario (tax rate lowered only moderately coupled with BAT) could see Exelon taking a more meaningful hit to earnings, the average of various scenarios indicates a more neutral impact overall.

Mystic asset sale process still ongoing. Management is continuing their plan to sell the ~2,000 MW Mystic facility in Middlesex, MA (discussed late last year) after evaluating all offers. We believe investors may be a bit concerned that lack of an announcement thus far could be indicating lower-than-expected offer values. We expect the Mystic 8, 9 CCGT (7,500 heat rate) to be sold for average market prices, which we estimate to be around $750/kW. Our model incorporates $1.2 billion in sales proceeds (at a $600/kW blended price) in 3Q17 used to pay down ExGen/HoldCo debt.

Exhibit 2: Estimating $1.2 billion from Mystic sale to be used for de-leveraging

Plant	Plant Type	State	Owned Capacity	$/kW	Estimated Sales Price
Mystic 7	Peaker	MA	575	$250.0	$143.8
Mystic 8, 9	CCGT	MA	1,415	$750.0	$1,061.3
Mystic Jet	Peaker	MA	8	$100.0	$0.8
			1,998	**$603.5**	**$1,205.8**

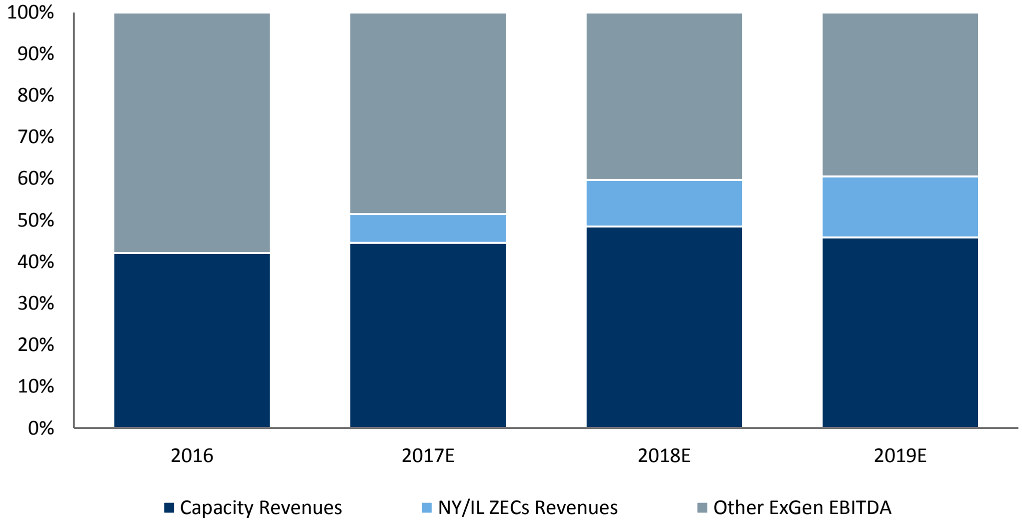
Source: Exelon Corp, RBC Capital Markets estimates

Issues for 2017 and Beyond

Further nuclear support? With the passage of recent nuclear subsidy legislation in both New York and Illinois, helping ~4 GW of nuclear capacity for Exelon, other states are in various stages of discussions regarding similar support for their nuclear plants. These states include Connecticut, Pennsylvania, Ohio, and New Jersey. Connecticut seems to be the front runner, with our view that a bill could pass this year. Exelon does not own any nuclear in the state, although it does own 4.5 GW in Pennsylvania and 1.6 GW in New Jersey that could see upside if similar legislation is passed in the respective states.

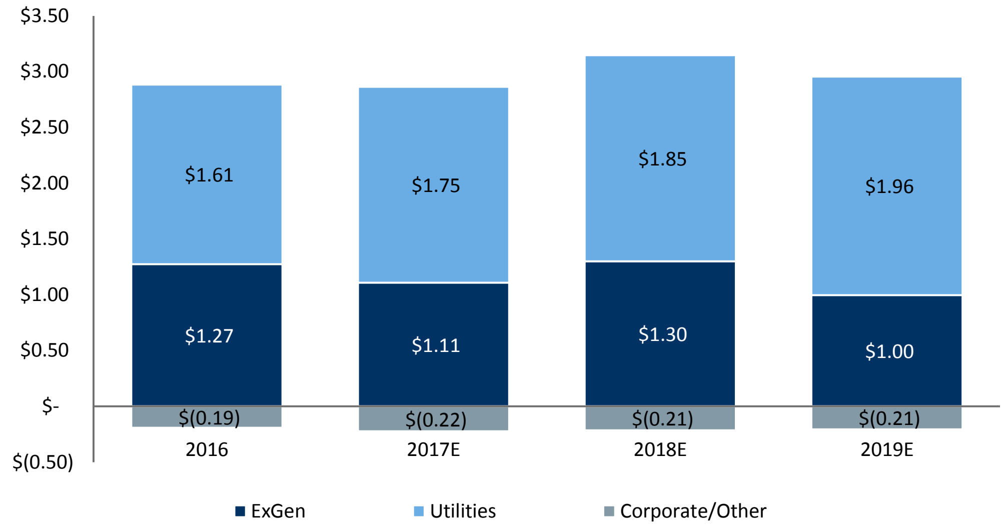
Looking for power price recovery. Exelon continues to maintain that there is upside to power prices, choosing to stay behind ratable in their power hedging plans. Given the downward-sloping forward power curve and potential for lack of a boost in the upcoming 2020/2021 PJM capacity auction, we continue to see a challenging outlook for ExGen for the time being. However, we are encouraged by the increasingly fixed EBITDA profile coming from capacity revenues and ZECs.

Exhibit 3: Majority of ExGen EBITDA fixed via capacity revenues, ZECs



Source: Exelon Corp, RBC Capital Markets estimates

Exhibit 4: 70% of EPS coming from utilities in 2019



Source: Exelon Corp, RBC Capital Markets estimates

Model assumption changes. We lower our 2017-2019 estimates from $2.69, $2.98, and $2.79 to $2.64, $2.93, and $2.75, respectively, mainly to reflect lower earnings at the HoldCo, as well as moderately negative impact from lower power prices at ExGen.

Maintain Outperform and $40 price target. Despite continued power price pressure for ExGen, we remain positive on the increased cash flow stability provided via the New York/Illinois ZECs, as we estimate around 60% of our 2018 and 2019 EBITDA derived from ZECs and capacity revenues. We also believe there is upside to our utility earnings, as we currently incorporate annual EPS growth at the lower end of the 6-8% CAGR guided by management. Our valuation reflects $32 of value for the utilities; at current levels, we believe there is limited downside for the stock.

Exhibit 5: Our valuation reflects $32 of value for the utilities.

Exelon Corp. Sum-of-the-Parts Analysis

Utilities	P/E x	2018E Net Income	
BGE	17.3x	308	5,336
PECO	17.3x	467	8,089

		Potential Value per Share	**$40.00**

Source: RBC Capital Markets estimates

Valuation

Our $40 price target uses a sum-of-the-parts analysis. For PECO, ComEd and BGE, we apply a 5% premium to the industry average P/E multiple of 16.5x to the utilities' 2018E net income, while we apply no premium for the Pepco utilities (Potomac Electric, Delmarva Power, Atlantic City Electric). We believe the company's increased regulated profile warrants the premium for the legacy Exelon utilities, but not for the Pepco utilities given their under-earning profiles. For Exelon Generation (ExGen), we apply an 7.5x multiple to its 2018 "open" EBITDA, which reflects the potential value of selling all of its output at the spot price. Finally, we calculate the net present value (NPV) of existing hedges for 2017–2019, which represents an additional cash benefit to the company. Our price target supports an Outperform rating.

Risks to rating and price target

- Further deterioration or non-recovery of forward power curves leads to non-profitable power plant economics .
- Less-than-expected merger synergies are realized or delayed further than forecasted.
- Unfavorable turn in regulatory environment in Illinois and Maryland.
- The Pepco utilities receive non-constructive rate case decisions in upcoming rate cases, resulting in continued under-earning.
- EDF put price is higher than expected.
- Ratings agencies downgrade parent/sub to non-investment grade.

Company description

Exelon Corp., now including the Pepco Holdings utilities, is the nation's leading competitive energy provider. With its generation portfolio providing approximately 19,300 MW of nuclear capacity, Exelon is also the largest nuclear operator in the United States. Exelon's total generation capacity is approximately 32,700 MW. Exelon's six utilities deliver electricity and natural gas to approximately 10 million customers in Delaware, the District of Columbia, Illinois, Maryland, New Jersey and Pennsylvania through its Atlantic City Electric, BGE, ComEd, Delmarva Power, PECO and Pepco subsidiaries.

Required disclosures

Conflicts disclosures

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors, including total revenues of the member companies of RBC Capital Markets and its affiliates, a portion of which are or have been generated by investment banking activities of the member companies of RBC Capital Markets and its affiliates.

Please note that current conflicts disclosures may differ from those as of the publication date on, and as set forth in, this report. To access current conflicts disclosures, clients should refer to https://www.rbccm.com/GLDisclosure/PublicWeb/DisclosureLookup.aspx?entityId=1 or send a request to RBC CM Research Publishing, P.O. Box 50, 200 Bay Street, Royal Bank Plaza, 29th Floor, South Tower, Toronto, Ontario M5J 2W7.

A member company of RBC Capital Markets or one of its affiliates managed or co-managed a public offering of securities for Exelon Corporation in the past 12 months.

A member company of RBC Capital Markets or one of its affiliates received compensation for investment banking services from Exelon Corporation in the past 12 months.

RBC Capital Markets, LLC makes a market in the securities of Exelon Corporation.

A member company of RBC Capital Markets or one of its affiliates received compensation for products or services other than investment banking services from Exelon Corporation during the past 12 months. During this time, a member company of RBC Capital Markets or one of its affiliates provided non-investment banking securities-related services to Exelon Corporation.

A member company of RBC Capital Markets or one of its affiliates received compensation for products or services other than investment banking services from Exelon Corporation during the past 12 months. During this time, a member company of RBC Capital Markets or one of its affiliates provided non-securities services to Exelon Corporation.

RBC Capital Markets is currently providing Exelon Corporation with non-investment banking securities-related services.

RBC Capital Markets is currently providing Exelon Corporation with non-securities services.

RBC Capital Markets has provided Exelon Corporation with investment banking services in the past 12 months.

RBC Capital Markets has provided Exelon Corporation with non-investment banking securities-related services in the past 12 months.

RBC Capital Markets has provided Exelon Corporation with non-securities services in the past 12 months.

Explanation of RBC Capital Markets Equity rating system

An analyst's 'sector' is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector average. Although RBC Capital Markets' ratings of Top Pick (TP)/Outperform (O), Sector Perform (SP), and Underperform (U) most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis.

Ratings

Top Pick (TP): Represents analyst's best idea in the sector; expected to provide significant absolute total return over 12 months with a favorable risk-reward ratio.

Outperform (O): Expected to materially outperform sector average over 12 months.

Sector Perform (SP): Returns expected to be in line with sector average over 12 months.

Underperform (U): Returns expected to be materially below sector average over 12 months.

Risk Rating

As of March 31, 2013, RBC Capital Markets suspends its Average and Above Average risk ratings. The **Speculative** risk rating reflects a security's lower level of financial or operating predictability, illiquid share trading volumes, high balance sheet leverage, or limited operating history that result in a higher expectation of financial and/or stock price volatility.

Distribution of ratings

For the purpose of ratings distributions, regulatory rules require member firms to assign ratings to one of three rating categories - Buy, Hold/Neutral, or Sell - regardless of a firm's own rating categories. Although RBC Capital Markets' ratings of Top Pick(TP)/ Outperform (O), Sector Perform (SP), and Underperform (U) most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of ratings
RBC Capital Markets, Equity Research
As of 31-Dec-2016

			Investment Banking Serv./Past 12 Mos.	
Rating	**Count**	**Percent**	**Count**	**Percent**

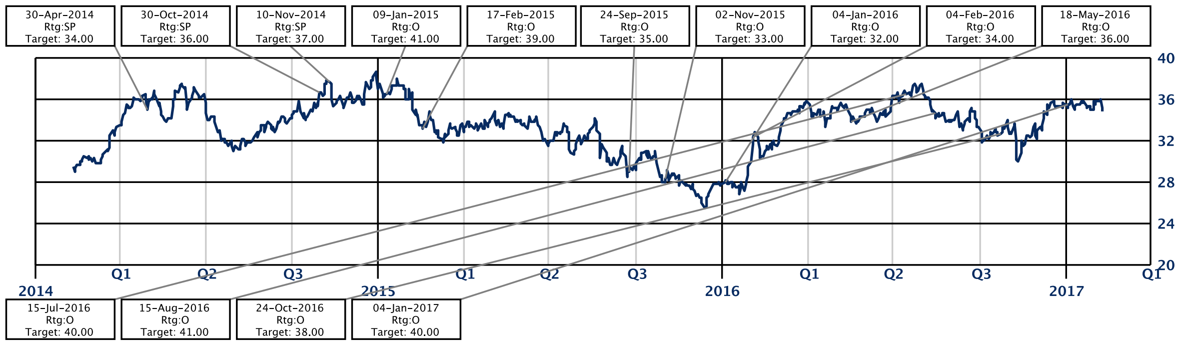
Rating and price target history for: Exelon Corporation as of 09-Feb-2017 (in USD)



Legend:
TP: Top Pick; O: Outperform; SP: Sector Perform; U: Underperform; I: Initiation of Research Coverage; D: Discontinuation of Research Coverage; NR: Not Rated; NA: Not Available; RL: Recommended List - RL: On: Refers to date a security was placed on a recommended list, while RL Off: Refers to date a security was removed from a recommended list; Rtg: Rating.

Created by BlueMatrix

References to a Recommended List in the recommendation history chart may include one or more recommended lists or model portfolios maintained by RBC Wealth Management or one of its affiliates. RBC Wealth Management recommended lists include the Guided Portfolio: Prime Income (RL 6), the Guided Portfolio: Dividend Growth (RL 8), and the Guided Portfolio: ADR (RL 10), and former lists called the Guided Portfolio: Large Cap (RL 7), the Guided Portfolio: Midcap 111 (RL 9), and the Guided Portfolio: Global Equity (U.S.) (RL 11). RBC Capital Markets recommended lists include the Strategy Focus List and the Fundamental Equity Weightings (FEW) portfolios. The abbreviation 'RL On' means the date a security was placed on a Recommended List. The abbreviation 'RL Off' means the date a security was removed from a Recommended List.

Equity valuation and risks

For valuation methods used to determine, and risks that may impede achievement of, price targets for covered companies, please see the most recent company-specific research report at https://www.rbcinsight.com or send a request to RBC Capital Markets Research Publishing, P.O. Box 50, 200 Bay Street, Royal Bank Plaza, 29th Floor, South Tower, Toronto, Ontario M5J 2W7.

Exelon Corporation

Valuation

Our $40 price target uses a sum-of-the-parts analysis. For PECO, ComEd and BGE, we apply a 5% premium to the industry average P/E multiple of 16.5x to the utilities' 2018E net income, while we apply no premium for the Pepco utilities (Potomac Electric, Delmarva Power, Atlantic City Electric). We believe the company's increased regulated profile warrants the premium for the legacy Exelon utilities, but not for the Pepco utilities given their under-earning profiles. For Exelon Generation (ExGen), we apply an 7.5x multiple to its 2018 "open" EBITDA, which reflects the potential value of selling all of its output at the spot price. Finally, we calculate the net present value (NPV) of existing hedges for 2017–2019, which represents an additional cash benefit to the company. Our price target supports an Outperform rating.

Risks to rating and price target

- Further deterioration or non-recovery of forward power curves leads to non-profitable power plant economics .
- Less-than-expected merger synergies are realized or delayed further than forecasted.
- Unfavorable turn in regulatory environment in Illinois and Maryland.
- The Pepco utilities receive non-constructive rate case decisions in upcoming rate cases, resulting in continued under-earning.
- EDF put price is higher than expected.
- Ratings agencies downgrade parent/sub to non-investment grade.

Conflicts policy

RBC Capital Markets Policy for Managing Conflicts of Interest in Relation to Investment Research is available from us on request. To access our current policy, clients should refer to
https://www.rbccm.com/global/file-414164.pdf
or send a request to RBC Capital Markets Research Publishing, P.O. Box 50, 200 Bay Street, Royal Bank Plaza, 29th Floor, South Tower, Toronto, Ontario M5J 2W7. We reserve the right to amend or supplement this policy at any time.

Dissemination of research and short-term trade ideas

RBC Capital Markets endeavors to make all reasonable efforts to provide research simultaneously to all eligible clients, having regard to local time zones in overseas jurisdictions. RBC Capital Markets' equity research is posted to our proprietary website to ensure eligible clients receive coverage initiations and changes in ratings, targets and opinions in a timely manner. Additional distribution may be done by the sales personnel via email, fax, or other electronic means, or regular mail. Clients may also receive our research via third party vendors. RBC Capital Markets also provides eligible clients with access to SPARC on the Firms proprietary INSIGHT website, via email and via third-party vendors. SPARC contains market color and commentary regarding subject companies on which the Firm currently provides equity research coverage. Research Analysts may, from time to time, include short-term trade ideas in research reports and / or in SPARC. A short-term trade idea offers a short-term view on how a security may trade, based on market and trading events, and the resulting trading opportunity that may be available. A short-term trade idea may differ from the price targets and recommendations in our published research reports reflecting the research analyst's views of the longer-term (one year) prospects of the subject company, as a result of the differing time horizons, methodologies and/or other factors. Thus, it is possible that a subject company's common equity that is considered a long-term 'Sector Perform' or even an 'Underperform' might present a short-term buying opportunity as a result of temporary selling pressure in the market; conversely, a subject company's common equity rated a long-term 'Outperform' could be considered susceptible to a short-term downward price correction. Short-term trade ideas are not ratings, nor are they part of any ratings system, and the firm generally does not intend, nor undertakes any obligation, to maintain or update short-term trade ideas. Short-term trade ideas may not be suitable for all investors and have not been tailored to individual investor circumstances and objectives, and investors should make their own independent decisions regarding any securities or strategies discussed herein. Please contact your investment advisor or institutional salesperson for more information regarding RBC Capital Markets' research.

EXC: Making Nukes Great Again; Upgrading to Overweight and Establishing $41 PT

Paul T. Ridzon/(216) 689-0270
pridzon@key.com

John Barta/(216) 689-3386
john_j_barta@key.com

We are upgrading shares of EXC to **Overweight** from Sector Weight as we have redefined our view at ExGen, given recent nuclear subsidies, and continue to see strong EPS growth at the regulated entities, with a 6.5% rate-base growth over the coming years under favorable recovery mechanisms.

Key Investment Points

Near to Medium-Term Outlook at ExGen: We have long held a cautious view on names with merchant exposure; however, we have warmed up on EXC as we believe the recent nuclear subsidies provide somewhat of a floor to the at risk assets. Additionally, EXC remains focused on operational efficiencies and deleveraging, which should bode well for profitability.

Regulated Utilities: With targeted 6.5% rate-base growth powering utility EPS growth of 6-8% annually from 2017-2020, we view the regulated segment as a best-in-class entity given a status-quo-to-slight improvement in ROEs at the legacy utilities, as well as from operational improvement at Pepco (PHI). Similarly, as management deploys the technology and thought leadership at ComEd to PHI, we believe PHI will see meaningful growth in earned returns over the coming years.

ExGen Is Underappreciated: The dark cloud over ExGen has started to lift; however, we do not believe this is fully reflected in EXC's current valuation. With recent nuclear subsidies in IL and NY likely here to stay and continued focus on deleveraging, we believe there are several incremental opportunities (FitzPatrick synergies, asset divestitures, legislation in other states,) which could drive upside to improved profitability over coming years. Given this dynamic, we see a reduction from the current 35% discount to peers embedded at ExGen (35% discount to IPP peer-average EV/EBITDA of 7.3x).

Top-Tier Regulated Entity + ExGen = $41: We believe the regulated entity should trade at a modest premium to its large-cap, regulated peers as we remain constructive on EXC's ability to reduce lag at PHI and maintain the status quo to show a slight improvement at the legacy utilities, particularly in IL, where a formulaic ROE will capture any rise in treasury rates. Switching gears to ExGen, with recently approved nuclear subsidies and potential asset sales and JV'ing of renewables providing an opportunity for further deleveraging, we believe the segment should trade at a 10-15% discount to IPP peers. We are upgrading shares to **Overweight** from Sector Weight and establishing a $41 price target on a SOTP basis, for which we value the regulated entity at $31 and ExGen at $10.

Valuation

Based upon our 2018 estimate of $2.90, shares of EXC trade at a P/E ratio of 12.1x, a meaningful discount to larger-cap utilities trading at 17.2x. We view this discount as excessive. We are upgrading shares to **Overweight** from Sector Weight, using a SOTP. We believe the regulated entity should trade a modest premium to large-cap, regulated peers. Based on EXC's regulated 2018 EPS estimate of $1.75 and the current group multiple of 17.2x, we value the regulated part of the business at $31 per share. Similarly, based on our $3.372 billion 2018 EBITDA estimate at ExGen and applying a 10-15% discount to IPP peers of 7.3x EV/EBITDA, we value the unregulated segment at $10 per share. We view our $41 price target as reasonable given its well-performing Regulated Segment and recent legislative actions at ExGen. We find shares attractive and are upgrading to **Overweight** from Sector Weight and are establishing a $41 price target, representing a potential total return of nearly 21% over the coming year.

Investment Risks

We believe the primary risks facing EXC that could impede shares from reaching our price target include any deterioration of regulatory relationships in the jurisdictions where EXC has regulated operations, any further weakening of commodity pricing, and any potential changes in policy toward nuclear plants.

Derivatives

Recent legislation aimed toward EXC's nuclear plants in Illinois and New York could gain greater support from other states as preliminary conversations have started to take place in the following states: Connecticut, Ohio, New Jersey, and Pennsylvania. We view potential legislation positive for D, EXC, or FE.

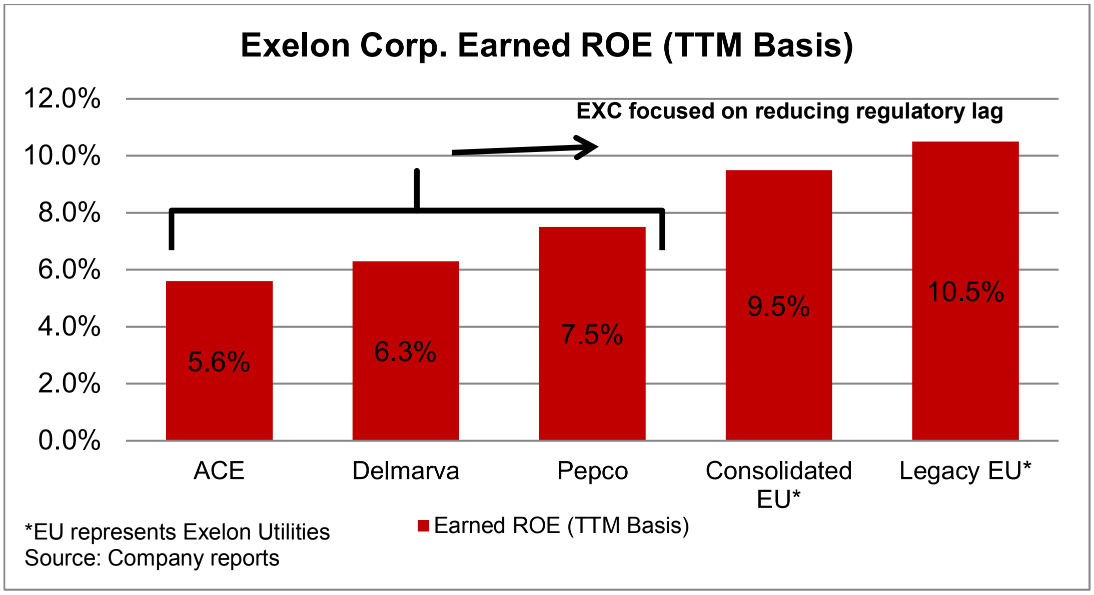
Overview

We view shares of EXC as somewhat of a special situation given our longer-term, selective view on utilities, where we remain cautious on merchant names and hold a preference for regulated names with visible capex, constructive regulation, and credible management. Looking at EXC, we believe the regulated segment has these key characteristics, with $20 billion of utility investment over the next four year, 75% of investment recovered in a timely fashion via formula rates or similar mechanisms, and a credible management team. Although we have historically been cautious around the merchant business, especially over the last several years in light of depressed natural gas prices, we now have a redefined view on the business given the subsidies targeted for at-risk nuclear units and the Company’s emphasis on deleveraging, among other initiatives.

Regulated Utilities

EXC has remained focused on operational efficiencies over the years at the regulated utilities as the majority of operational metrics have obtained first quartile performance (system performance, emergency preparedness, corrective and preventative maintenance, and customer care). Although these metrics are often overlooked, we view these metrics as key characteristics in building regulatory goodwill. We think that over the coming years EXC will be able to move the second and third quartile operational metrics at ACE, Delmarva, and Pepco higher by investing in technology and adopting the Exelon Companies operational focus. Over time, we see actual PHI ROEs moving closer to 9.5-10.5% levels from the current 5.6-7.5% range.

Below we highlight TTM (at 12/31/16) earned ROEs for Exelon Utilities:



*EU represents Exelon Utilities
Source: Company reports

With regulated capital expenditures of roughly $5 billion per year over the next four years under favorable regulatory environments (formula rates and recovery mechanism), we have a high level of confidence EXC Utilities can grow EPS at least 7% per year.

Below, we provide our EPS estimates for each of EXC's businesses:

Exelon EPS Breakdown By Segment:

	2016 EPS	**2017 Guidance**	**2017E EPS**	**2018E EPS**
BGE	$0.31	$0.25-$0.35	$0.31	$0.33
PHI	$0.25	$0.30-$0.40	$0.35	$0.40
PECO	$0.48	$0.40-$0.50	$0.49	$0.49
ComEd	$0.57	$0.60-$0.70	$0.66	$0.72
ExGen	$1.27	$1.05-$1.15	$1.14	$1.15
HoldCo	($0.19)	($0.20)	($0.20)	($0.20)
EPS	**$2.68**	**$2.50-$2.80**	**$2.75**	**$2.90**

Source: Company Reports and KeyBanc Capital Markets Inc. Estimates

ExGen Is Underappreciated

We have a more optimistic view on ExGen than in years past as the volatility from realized energy prices will be more subdued as Illinois and New York both passed legislation to help support struggling nuclear assets. ExGen will benefit from Zero Emission Credit (ZEC) revenues of $400 million in 2017 and $550 million in 2018, the addition of FitzPatrick, and the continued emphasis of cost optimization and deleveraging.

ExGen continues to project annual cost declines of 0.5%, including the reversal of the decision to deactivate the Quad Cities and Clinton plants in IL and the addition of FitzPatrick to the fleet. We believe there could be incremental savings announced from synergies at FitzPatrick once the sale closes. Based on commentary from the 2016 earnings call, management made it seem reasonable that in a worst case scenario, in which a renewables JV or sale of the 2,000 MW Mystic plant (in MA) did not come to fruition, the target 3.0x debt/EBITDA level could be achieved over the next two to three years, after which EXC could target reducing Holdco debt in 2019-2020. We believe the renewables JV and Mystic sale would likely come to fruition sooner rather than later, and are likely a function of "when, not if". Based on this scenario, it appears the target ExGen 3.0x debt/EBITDA level can be achieved with roughly half of the $3.0 billion of cash, while the remainder would be used for $900 million of Holdco debt (maturity in 2020) and $600 million of incremental Holdco debt in 2017 (debt not tied to the mandatory convertibles reissuance of $1.15 billion in 2017). For illustrative purposes, applying the $3 billion of debt reductions evenly over four years would equate to interest savings of roughly $0.03 per year ($750M at 6%). We have baked in a conservative reduction of interest expense into our ExGen income statement.

We think that as the legislative subsidy matters continue to progress through court challenges and work as intended other states may consider similar action, which could act as a positive catalyst for other plants. Currently, Connecticut is farthest along in the process; however, Ohio, New Jersey, or Pennsylvania could also further discussions.

Shares reacted negatively to 2016 earnings call discussion around a headwind from a border tax on uranium. We estimate any such headwind to be in the $0.04-$0.06 per share range and, therefore, manageable. We believe recent concerns are overblown.

Our border tax analysis is shown below:

Analysis of Border Tax on EXC Nuclear Fuel Cost

Fuel Cost ($/MWh)	$5.50
Annual Nuclear Output (TWh) (2016 + Fitzpatrick)	183.7
Annual EXC Nuclear Fuel Cost ($M)	$1,010.35
% of Fuel Related to Imported Uranium/Processing	35%
Cost of Imported Fuel Component ($M)	$353.62
Border Tax Implemented	20%
Extra Cost of Fuel ($M)	$70.72
Tax Complement	65%
After Tax Impact ($M)	$45.97
Per Share Impact	$0.05

Source: KeyBanc Capital Markets Inc. Estimates

With the subsidies acting somewhat as a floor for ExGen, we have started to warm up on ExGen and, ultimately, EXC. We have used a sum-of-the-parts analysis to break down our view of how investors are currently valuing ExGen against peers. We are initiating our 2018 EPS estimate of $2.90 (ExGen earnings of $1.15 and regulated utilities EPS of $1.75). On the regulated EPS of $1.75, we applied the 2018 group multiple of 17.2x to arrive at a value of roughly $30.10. Using $35 (recent trading price) and backing out the implied $30.10 associated with the regulated segment leaves us with roughly $4.90 ascribed to ExGen. Converting our $4.90 a share onto an EV/EBITDA basis, we conclude ExGen is currently being valued at 4.8x EV/EBITDA vs. peers of 7.3x, representing a 35% discount.

Below, we provide our analysis in how shares are being valued today on a SOTP basis:

Exelon Current Sum of the Parts Analysis: Highlighting Deep Discount Embedded at ExGen

	2018E P/E		**2018E EV/EBITDA**		**2018E P/E**

Source: Company Reports and KeyBanc Capital Markets Inc. Estimates

We view this 35% discount as unreasonable, particularly after the legislative initiatives that unfolded in IL and NY over the last several months and the continued emphasis on fuel diversity across the nation. Moving forward, and although we are taking these comments with a grain of salt, President Trump has made general comments on nuclear, which we view positively for EXC given its industry-leading position. Furthermore, with Trump's focus on creating jobs and growing the economy, we see nuclear being well positioned to weather any potential storm given its labor intensity and overall economic impact on local/regional economies.

We highlight our target SOTP analysis on EXC below. At the regulated entity, we are a applying a modest premium (2.5%) to regulated, large-cap peers to arrive at a value of roughly $31. At ExGen, we are applying a 10-15% discount to IPP peers on an EV/EBITDA basis and arriving at a fair value of $10. Looking at the Company on a consolidated basis, this approach leaves us at a 15-20% discount to regulated peers, which we view as reasonable.

Below, we highlight our SOTP and how we arrive at our $41 Price Target:

Exelon Target Sum of the Parts Analysis: Establishing $41 Price Target

	2018E P/E		2018 EV/EBITDA		2018E P/E

Source: Company Reports and KeyBanc Capital Markets Inc. Estimates

Conclusion

Overall, we think EXC has a solid opportunity to transition legacy POM into a top-quartile performing entity, which we think will bode well with regulators given the historical underperformance. As EXC improves the ROEs at legacy PHI, the Company could also see improvement at legacy EXC utilities given a continued focus on efficiencies as well as from ComEd's authorized ROE being formulaically tied to treasury yields. We estimate a 100 bps increase in the 30-year treasury yield equates to EPS power slightly over $0.04. Looking at ExGen, we see meaningful cost savings opportunities as management continues its blocking and tackling approach, particularly as FitzPatrick is added to the fleet. With ExGen currently trading at a 35% discount to merchant peers, we are somewhat perplexed by the disconnect relative to peers, particularly given nuclear's zero carbon attributes, increasing state support and potential for federal support to develop. Over the coming years, EXC is positioning itself more toward regulated EPS by focusing capital on its utilities; however, we have an increased level of confidence in ExGen and strongly recommend owning shares of EXC as we upgrade to **Overweight** from Sector Weight and establish a $41 price target.
