Exelon Corp (EXC)

Alert: IL ZECs Complaints Dismissed. Read through Nuanced.

- **District court rules in favor of ZECs and Exelon.** EPSA and another plaintiff brought claims against Director of the Illinois Power Agency and the Commissioners of the Illinois Commerce Commission seeking to invalidate The Future Energy Jobs Act that supports Zero Emission Credits (ZECs) for nuclear power plants. Exelon intervened to defend the ZEC program and the court granted Exelon's motion to dismiss the complaints on 7-14-2017.

- **Court finds ZECs are not really tethered to the wholesale market.** We think the key debate is around whether ZECs are viewed as tethered to wholesale markets. Per the earlier Supreme Court ruling in Hughes v. Talen, a subsidy cannot be linked to the wholesale market as that is the purview of the FERC.

  - **Price adjustment – not relevant:** The argument by the plaintiffs was that annual price adjustment in the ZEC is linked to the wholesale market. However, the Judge here found that the price adjustment clause in the ZEC is not really the part that causes harm to the plaintiff. Without the price adjustment the impact on the plaintiff could be even worse.

  - **Federal Power Act Exemption – participation in power markets not required.** One of the arguments made by plaintiffs was that by participating in the wholesale energy and capacity auction, bailed out nuclear plants impact the markets and that is the jurisdiction of FERC. However, the court found that the IL ZECs do not really require participation or clearing of capacity in PJM capacity auctions. We do think that energy markets are impacted but the courts clearly didn't think so.

  - **Direct effect on markets.** In terms of being tethered to wholesale markets, the court found that the tether should have a direct effect on the wholesale market and, in this case, subsidizing a nuclear operator who may then underbid in the energy or capacity market isn't a direct effect. This argument on a direct effect will be a little tougher to prove in future challenges for the plaintiffs.

- **Other legal arguments also not supported.** The judge found that Plaintiffs do not have prudential standing for preemption claims and plaintiffs do not have article III standing for dormant commerce clause claims.

- **EXC Impact – Clearly a Positive but IL ZECs already priced in.** We think the IL and NY subsidies are already priced into the stock. We estimate NY and IL ZEC programs contribute $3/share of value to our PT of $36/share. For now, we aren't attributing value of ZECs in other states to our EXC PT but that would clearly be the next key catalyst. We think this matter is far from settled but EXC clearly well positioned with the plaintiffs really on the defensive here to make their case.

- **What does this mean for other states?** The ZECs were designed to avoid the legal challenges around tethering. This decision lines up with this initial structuring by legal teams. However, we expect further legal challenges from the plaintiffs. Also, the discussion in other states is not necessarily linked to the legality of the ZEC structure – it is more about economics and broader support of nuclear plants/jobs and economics. In the end, giving nuclear plants a bailout that helps them earn a meaningful profit at the expense of customers doesn't make for easy politics in any state. Note also that in NY, the exclusion of IP2/3, based on a test of economic viability of a plant, adds further opportunity for plaintiffs to highlight tethering.

- **IPP Impact – Appeal + Push for Market reform.** While the decision clearly is a negative, we think this decision will likely drive two reactions:

  - Decision will likely be appealed. We continue to believe there are different interpretations to the tethering argument and all parties involved agree that markets will be impacted by bailouts. This topic is too important for IPPs and they will likely appeal. Having larger investors now vested in IPPs may add more firepower.

  - Further push for market reform. We think this decision will highlight the need for a market structure that excludes bailed out units from energy markets and capacity auctions. We think the discussion at the FERC technical conference was a good start but there is a lot of wood to chop to get to a reasonable solution/outcome. We think these legal outcomes will act as a catalyst to push for a more reasonable solution on price formation in both the energy and capacity market.

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $36 price target. We value ExGen at ~$5/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The legacy utility business is valued at $25/share based on a 17.5x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $4/share for the parent net debt and add $3/share for ZECs (IL and NY) to get to our rounded PT of $36/share.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day’s market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author’s previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to “Buy”,”Hold”,”Sell” at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q2 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (57%); Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%); Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm’s global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm’s proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author’s previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Motion to Dismiss in Illinois ZEC Lawsuit Granted, Plaintiffs Claims Dismissed in Full

Illinois ZEC Program Upheld, New York next to Rule. Friday after the close, Judge Manish S. Shah of the United States District Court for the Northern District of Illinois, Eastern Division, granted the motion to dismiss in cases No.17 CV 1163 an No. 17 CV 1164. The cases were brought by the Electric Power Supply Association, representing several other generators in the market, and consumer groups in Illinois. The ruling on our reading offered a straightforward conclusion that the Defendants' (Exelon and the Illinois Power Authority) motion to dismiss is granted, the plaintiffs' claims were dismissed in full, and the plaintiff's motion for a preliminary injunction was also denied. The cases have thus been terminated by the ruling. The ruling could be appealed, but based on our reading it seemed a thorough and conclusive order dismissing the plaintiffs' claims. The ruling did indicate a role for the FERC in the adjudication of "fair and reasonable" wholesale rates as allowed under its statute, so a complaint could still be brought to the FERC by the plaintiffs, but we believe the path in the Courts will be more challenging going forward after Friday's ruling. Further, we believe this ruling is likely to point to a similar decision in the ongoing ZEC case in New York (United States District Court for the Southern District of New York, case 1:16-CV-8164).

ZEC Programs Are Included in Our Estimates, Contribute $625mln to Gross Margins. We have both the Illinois and New York ZEC programs in our estimated gross margins for the Exelon Generation business ("ExGen") as we believed it to be significantly more likely than not that the programs would survive legal challenge. The Illinois program in and of itself prices each ZEC for each MWh of energy produced at $16.50/MWh which is the calculated social cost of carbon. On that basis the IL ZEC program contributes $350mln to gross margins (Clinton station contributes approximately $150mln while Quad Cities contributes approximately $200mln). The New York program prices carbon at $17.50/MWh and constitutes $275mln in gross margin uplift (Fitzpatrick - $110mln, Ginna - $45mln, Nine Mile - $120mln). Overall therefore, current margin included in our model from both the New York and Illinois ZEC programs constitutes $625mln, or at our valuation methodologies 6.6x the mid-cycle valuation multiple approximately $4/share of our $43/share price target.

Next Catalysts. We believe that the ZEC ruling to dismiss the case in Illinois will catalyze upside in the shares as the widened risk premium in the market for risk of ZECs being overturned fades. Although there is no statutory deadline for a ruling in the New York case we would anticipate a ruling to come soon now that the Illinois courts have ruled on the matter. Importantly the Illinois ruling calls out that although the ZEC price references a market forecast price at which it is reduced, this does not constitute "tethering" to wholesale markets and does not impinge of the FERC's jurisdiction. This is important because a key factor in the plaintiffs' argument in the New York case also hinged on the market reference price at which payments are lowered as "tethering". The judge in Illinois ruled that not only does the reference price lower the ZEC price, thus not produce any injury to the plaintiffs (ex the reference price not existing at all), but further that the reference price relies on forward projected prices rather than actual wholesale rates, and therefore "tethering" is not created regardless of lack of injury.

Analyst(s) Certification(s):
We, Daniel Ford, CFA and Ross A. Fowler, CFA, hereby certify (1) that the views expressed in this research report accurately reflect our personal views about any or all of the subject securities or issuers referred to in this research report and (2) no part of our compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this research report.

Important Disclosures:

Barclays Capital Inc. and/or one of its affiliates does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Barclays Research is a part of the Investment Bank of Barclays Bank PLC and its affiliates (collectively and each individually, "Barclays").

Availability of Disclosures:
Where any companies are the subject of this research report, for current important disclosures regarding those companies please refer to https://publicresearch.barclays.com or alternatively send a written request to: Barclays Research Compliance, 745 Seventh Avenue, 13th Floor, New York, NY 10019 or call +1-212-526-1072.
The analysts responsible for preparing this research report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by investment banking activities, the profitability and revenues of the Markets business and the potential interest of the firm's investing clients in research with respect to the asset class covered by the analyst.
All authors contributing to this research report are Research Analysts unless otherwise indicated.
The publication date at the top of the report reflects the local time where the report was produced and may differ from the release date provided in GMT.

Analysts regularly conduct site visits to view the material operations of covered companies, but Barclays policy prohibits them from accepting payment or reimbursement by any covered company of their travel expenses for such visits.

Mentioned Stocks (Ticker, Date, Price)

Exelon Corp. (EXC, 14-Jul-2017, USD 36.06), Overweight/Neutral, A/CD/CE/D/E/J/K/L/M

Valuation Methodology: Our current $43 price target is premised upon a 2019 group average multiple of 16.8x applied to the utility net parent earnings of $1.81 resulting in $31 of utility value. Exgen is valued at 6.6x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, the combined value is $43.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

Disclosure Legend:
A: Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of the issuer in the previous 12 months.
B: An employee or non-executive director of Barclays Bank PLC and/or an affiliate is a director of this issuer.
CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by this issuer.
CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by this issuer.
D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.
E: Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer within the next 3 months.
FA: Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with US regulations.
FB: Barclays Bank PLC and/or an affiliate beneficially owns a long position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.
FC: Barclays Bank PLC and/or an affiliate beneficially owns a short position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.
GD: One of the analysts on the fundamental credit coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.
GE: One of the analysts on the fundamental equity coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.
H: This issuer beneficially owns more than 5% of any class of common equity securities of Barclays PLC.
I: Barclays Bank PLC and/or an affiliate is party to an agreement with this issuer for the provision of financial services to Barclays Bank PLC and/or an affiliate.
J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities of this issuer and/or in any related derivatives.
K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from this issuer within the past 12 months.
L: This issuer is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an

affiliate.
M: This issuer is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.
N: This issuer is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.
O: Not in use.
P: A partner, director or officer of Barclays Capital Canada Inc. has, during the preceding 12 months, provided services to the subject company for remuneration, other than normal course investment advisory or trade execution services.
Q: Barclays Bank PLC and/or an affiliate is a Corporate Broker to this issuer.
R: Barclays Capital Canada Inc. and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.
S: This issuer is a Corporate Broker to Barclays PLC.
T: Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.
U: The equity securities of this Canadian issuer include subordinate voting restricted shares.
V: The equity securities of this Canadian issuer include non-voting restricted shares.

Guide to the Barclays Fundamental Equity Research Rating System:
Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (“the industry coverage universe”). To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.
In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Distribution of Ratings:

Barclays Equity Research has 1717 companies under coverage.

42% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 52% of companies with this rating are investment banking clients of the Firm; 73% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 35% of companies with this rating are investment banking clients of the Firm; 59% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry

(as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).
To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Big legal win as judge dismisses challenges to Illinois nuclear credits

District Court decision upholds Illinois ZEC program on all counts

Late Friday afternoon we learned that the judge in the challenge brought against the Illinois Zero Emission Credit (ZEC) program had ruled categorically in favor of Exelon's motion to dismiss the case. While unlikely to be the final word in a multi-stage and high-profile legal battle over state-level nuclear subsidies, the Illinois decision looks like an important and comprehensive first win for Exelon in a case with direct implications for $235M of annual revenues. There is also an indirect read-across into other existing programs (New York) and efforts to pursue similar arrangements in other key states (Pennsylvania, New Jersey).

Motions to dismiss had been seen as heavy legal lift; still pending in NY

From the outset the motions to dismiss had been seen as relatively heavy lifts legally, making Friday's news yet more welcome. The ruling from Judge Manish Shah of the U.S. District Court for the Northern District of Illinois Eastern Division also had not been expected so soon, with the case against the New York ZEC program in the Southern District of New York further along in the process. Judge Shah's Friday ruling covers two cases, one brought by various individual consumers and the other by the Electric Power Supply Association (EPSA) and various independent generators (IPPs).

Judge rejects plaintiffs standing and legal arguments

As noted, the Illinois ruling looks like a significant win for Exelon and proponents of the ZEC nuclear subsidies, with the judge essentially ruling that the parties wanting to argue states have intruded into wholesale power markets need to bring such challenges before the FERC. The ruling rejected the standing of the plaintiffs to bring their case in several respects. In addition the 43-page ruling included a comprehensive rejection of the plaintiffs' arguments on their merits, citing several Supreme Court precedents and in multiple instances explicitly endorsing key components of Exelon's motion. On key arguments such as the alleged "tethering" of ZEC pricing to wholesale market prices, Judge Shah makes the distinction that the Illinois credits are not "directly conditioned on clearing wholesale auctions" and therefore do not suffer from the "fatal defect" in the *Hughes* case which overturned Maryland's attempt to subsidize new entrants and circumvent the PJM capacity auction. Per Judge Shah's ruling "to read *Hughes* to apply to this program [Illinois] would intrude on the state's authority to regulate wholesale power generation". The judge goes on to argue that Illinois "has sufficiently separated ZECs from wholesale transactions such that the Federal Power Act does not preempt the state program under principles of field preemption". Later he argues that the "market distortion created by subsidizing

Valuation & Risks

nuclear power can be addressed by FERC". On Commerce Clause arguments that the Illinois ZEC program discriminates by pre-determining Clinton and Quad Cities as the "winners" of the ZEC contracts, Judge Shah disagrees. Instead, he argues that the statute does not preclude out-of-state generators from submitting bids noting the "neutral, non-discriminatory standards" given to the state agencies to adjudicate the ZEC auctions. Importantly in our view the judge also notes that it is "possible that the ICC will decide that Illinois generators are in the best position to reduce air pollution in Illinois, which would justify a decision to select only Illinois generators". This appears to be a key position in the ongoing states vs. wholesale markets discussion.

Next stop likely appeal to the 7th Circuit; plaintiffs have 30-days to file

In terms of next steps the plaintiffs would have to argue that Judge Shah erred in his findings, but the comprehensive nature of the decision does not appear to invite further discussion at the District Court level. The next appeal would be to the 7th Circuit and plaintiffs have 30 days to indicate their intent to make such a filing although we imagine this could happen sooner. Once filed it is likely that briefs before the 7th Circuit would come in the fall with arguments over the winter and a decision next spring. Beyond the 7th Circuit the case could then be appealed to the Supreme Court.

Keeping an eye on NY ZEC challenge; decision possible at any time

One logical question will be what are the implications for the pending decision in the similar case challenging the NY ZEC program at the Southern District of New York. In this case the judge recently called for additional briefing related to the Allco Finance case decision, but the initial read of the hearings back in March already was fairly constructive for EXC's position. We would expect EXC and related parties to waste no time filing to make Judge Caproni in the New York case formally aware of the Illinois decision, although we note that she is under no obligation to reach the same conclusion.

DOE baseload and reliability still pending; Perry tweet on nuclear over the weekend

In terms of other potential newsflow, industry sources suggest that the DOE's delayed study on baseload resources and grid reliability could be forthcoming shortly. To this end we note that over the weekend Energy Secretary Rick Perry tweeted "Nuclear power is a key component of our all-of-the-above energy strategy. Zero emissions, always on." While the context wasn't entirely clear this appeared to be in response to the DOE Press Office tweeting a link to an article in the Baltimore Sun which had highlighted the "need for federal action to reverse the U.S. nuclear industry's impending decline" as a "national security imperative". Whether this means the DOE study release is imminent or not remains to be seen, but nuclear certainly seems to be top of mind currently for Secretary Perry.

Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of these websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

District Court Dismisses ZEC Legal Challenge in Illinois

Rating Outperform, Target $39

On 7/14/17, District Judge Shah granted motions by EXC, the Illinois Commerce Commission, and the Illinois Power Agency to dismiss lawsuits filed by EPSA, other power producers, and certain ComEd customers (17-CV-01164) that would have put a stay on that state's "Zero Emissions Credit" (ZEC) program. The ZEC program was instituted with the passage of the Energy Future Jobs Act on 12/7/16 and became effective on 6/1/17, providing up to $235mm in annual revenues to keep the economically challenged Clinton and Quad Cities nuclear plants online. In his ruling in favor of the defendants, Judge Shah cited both (1) a lack of subject matter jurisdiction on the part of the plaintiffs and (2) a failure to state a claim as grounds for the dismissal. The plaintiffs are likely to appeal the decision in IL, which would move it U.S. Court of Appeals for the Seventh Circuit. If they do so, such an appeal must be made within the next 30 days (we think it will be much sooner). It is likely that the legal challenges will be a protracted affair. However, we think for the district court to have dismissed the case outright (decision here) on both merits and jurisdiction represents a significant legal victory.

The New York court case is still pending. Furthermore, it is possible the strength of this outcome may influence the parallel legal challenge underway in New York in EXC's favor. On that front, on 3/29/17 the Southern District Court heard oral arguments on the state and EXC's motion to dismiss the legal complaint to that ZEC program brought by a number of IPPs and consumer watchdogs (16-CV-8164). The judge has yet to set a date on which it will rule on said motion. The New York Clean Emissions Standard (CES) was established on 8/1/16, went into effect on 4/1/17, and provides up to ~$480mm in annual revenues for the Ginna, Nine Mile Point, and Fitzpatrick nuclear plants.

The DOE study may be imminent. Tax policy changes are being studied. Back on 4/14/17, Secretary of Energy Rick Perry directed the DOE to perform a study exploring issues critical to maintaining the reliability of the electric grid, including the efficacy of wholesale electricity markets and the role that tax policies, subsidies, and regulation are having on early retirement of baseload power plants. We think the DOE is supportive of the idea that price formation in energy and capacity markets is not adequate for baseload generators and want to help bolster economic outcomes for nuclear and coal plants. However, practically speaking they have limited jurisdiction. We think DOE may intervene by opining that the FERC should take action to change market rules. Also the pending FY18 Energy and Water Development Appropriations Bill orders the DOE to analyze the potential impact of a "Zero Emissions Energy Credit" which contemplates a change in the Federal tax code that would replace the renewable energy subsidies (after they phase out) with a broader tax benefit applicable to all zero-emissions power plants like nuclear units. That analysis would be provided to Congress within 180 days of the enactment. It is not at all clear how much momentum this idea has in Congress, whether it will receive a favorable analysis from DOE, or whether it would be a component of any near-term tax reform package. *However, its biggest beneficiaries would be merchant nuclear operators like EXC, PEG, and FE.*

We maintain our ’17-’19 EPS forecast of $2.65 / $2.85 / $2.85, which include the full ZEC revenues across its portfolio. EXC is committed to 2.5% dividend growth through 2018 but are confident the financial profile supports at least that level of growth through 2020. We think the assumptions driving EXC’s view of the earnings growth drivers in its core utilities business and ExGen as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management are still wholly credible. The core utilities are forecast to grow rate base at 6.5% from ’17-20 with earnings growth of 6-8% (down from 7-9% from ’16-’20 solely due to a higher ’17 base, the ’20 forecast is up a nickel). We see a turnaround at PHI similar to the one EXC engineered at BGE after the CEG acquisition as feasible, with annual rate cases at most of the PHI companies (the first “wave” of these largely resolved) and the ability to harvest operating synergies. So, there is line of sight for EPS at EXC’s utilities (ex-parent overheads) growing from $1.59 in FY ’17 to ~$2.00 in 2020. From a cash flow perspective we see ExGen organically producing ~$5.8bn of free cash flow through FY’19, >66% of the $8.75bn they are targeting through 2020 with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. That is also without the $400mm from the renewables JV which puts them at 71%. The sale price of that 49% stake implies there may be up to an $85mm degradation in EBITDA but at >10X EV/EBITDA that is not only a good transaction multiple but it is also very accretive as ExGen is trading at an implied 3.9X. Assuming they can sell their impaired TX assets (the EGTP portfolio) that will be another $650mm in debt that comes off the books and should be accretive to credit metrics.

Our price target remains $39, maintaining Outperform rating. Our forecast for utility EPS contribution minus parent overheads is $1.59/share in ’17 which by 2019 we expect to be ~ $1.85 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to +/-$2.00/share. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth ~$32.25/share (17.3X ’19 EPS). That implies ExGen is worth only ~$3.85/share today, which is around 3.9X ’19 EPS or 4.2X ’19 EV/EBITDA and a levered free cash flow yield to the EV of 11% with debt/EBITDA at YE ’19 of ~3.0X. They are taking all the cash flow from that lower multiple part of the business and either returning it to shareholders or investing in the higher multiple utility business. Overall, EXC is trading at +/-12.7X FY ’19 earnings while pure regulated names are at +/-17.3X. The EXC dividend yield is 20bps above that of the regulated peer group at ~3.6%. While the dividend growth commitment of 2.5% annually through at least 2018 is lower than that articulated by purely regulated peers and some risks to ExGen revenues are palpable, we think that the overall valuation gap, given our view of the value of the businesses and capital allocation plan, is too high. At $39/share our target price implies a valuation for ExGen of 5.6X ‘19 EV/EBITDA and a levered free cash flow yield of ~8%. The consolidated P/E would still be only 13.7X ’19 EPS.

Since hitting $33.50 on 5/11/17, the stock has climbed nearly 8%. Valuation got extremely compressed and risk aversion on the pricing outcome of the last PJM capacity auction (after the ISO-NE and MISO disappointments) proved misplaced. As we discussed earlier the EMAAC and ComEd zones (where EXC has the majority of its exposure) both priced better than expectations. That being said legal action in NY and IL to challenge ZEC revenues could be successful and we think that remains a factor still impacting valuation. The legal basis for ZECs seems sound but it remains a risk and could impact ’19 EPS by +/-$0.25/share if 100% successful in rolling back those programs. Still, with ExGen trading at only 3.9X ’19 EPS on a SOTP basis the exposure seems small at this point if they lose on this front. Generally we also think that investor concern about 2020 earnings power has been a real factor, despite the long time horizon, since power prices out the forward curve would drive a significant decline in ExGen earnings. We do not have a formal 2020 EPS forecast for EXC. We now know the capacity revenue delta and include the TMI shut-down benefit. Those factors mitigate lower energy pricing that could be a significant headwind. Taking in to account 6-8% growth at the core utilities, consolidated EPS could fall as much as $0.15/share if current forwards were realized. But just a $1/MWh improvement in power price at their given sensitivities is $0.09/share. So it doesn’t take much to start valuing EXC more highly on 2020 forward curves, at least in our view.

EXC fared OK vs. expectations in the ‘20/’21 PJM capacity auction. Our base case expectations for EMAAC and ComEd leading up the auction were $160/MW-d and $180/MW-d respectively, and those zones ended up clearing higher at $187.87/MW-d and $188.12/MW-d. EXC disclosed that an additional 1,150 MW of nuclear capacity cleared at ComEd in the auction YoY, however as they also said that Quad Cities didn't clear (again) the balance presumably came from Byron. We estimated Byron cleared about 20% of its available capacity last year, and thus estimate closer to 70% this year. We think it is justifiable Quad Cities was not offered more aggressively in the auction, as the plant had yet to formally receive the ZEC contract and associated revenues. Our full discussion of the last PJM capacity auction can be found here.

What’s next at ExGen? ExGen’s announced 3/31/17 sale its 49% share of the renewables JV should close in late 2Q17 or early 3Q17, subject to FERC and PUCT approval. The sale process for the economically-challenged EGTP portfolio of CCGTs and NG peakers (3,398 MW) in ERCOT is underway, with an agreement possible by late 3Q17 or early 4Q17. There is no timetable for a decision on the motion to dismiss the legal challenges to NY's ZEC program, which went into effect on 4/1/17.

What's next at the utilities? On 3/8/17 and 4/6/17, DPL entered into settlement agreements in its DE electric (16-0649) and gas rate cases (16-0650) for $32mm and $4.9mm, respectively, both based on a 9.7% ROE (they had requested $81.7mm in aggregate based on a 10.60% ROE) with DPSC approval received on 5/23/17 and 6/6/17, respectively. A DCPSC in Pepco's electric distribution rate case (in which they filed on 6/30/16 for a $76.8mm increase premised on 10.60% ROE) is expected by 7/25/17 (1139). A MDPSC decision in Pepco's electric distribution rate case (in which they filed on 3/24/17 for a $69mm increase premised on 10.10% ROE) is expected by 10/20/17 (9443). A NJBPU decision in ACE's electric distribution rate case (in which they filed on 3/30/17 for a $70mm increase premised on 10.10% ROE) is expected in 1H18 (ER17030308).

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming capacity auctions would be accretive but a significantly lower capacity auction price would be negative.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform – the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line – the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform – the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and

trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long – the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short – the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position – the stock is not included in the model portfolio.
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal 100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Exelon Corporation

EXC – Illinois Judge Rules in Favor of EXC in ZECs Case, Direct Read-Through to NY

July 17, 2017

What's new? The U.S. District Court for the Northern District of IL, Eastern Division granted (see HERE) EXC's motion to dismiss complaints against Zero Emission Credits (ZECs) on 7/14, thus denying motions for a preliminary injunction; ultimately ruling the ZEC program does not intrude on FERC jurisdiction over wholesale electric markets and the plaintiffs' preemption and dormant commerce clause claims are not justiciable. The ruling came in as we expected, albeit the timing is ahead of our expectations, as we expected IL to follow NY. **DYN (BUY, $8.24), one of the plaintiffs in the case, expects to file an appeal to the ruling as soon as Today** – either way, EXC is inching closer to cementing the benefits of the IL ZECs as well as NY. Reiterate BUY.

Now what about New York? We are still awaiting a decision from the U.S. District Court for the Southern District of New York on EXC's motion to dismiss complaints against the NY ZECs program. EXC filed a brief on the implication of the recent second U.S. Court of Appeals ruling in CT (i.e. rejected challenges to the CT's renewable energy procurement law – see our take on D's (BUY, $76.55) Millstone nuclear plant HERE) per the Judge's request – now we are truly waiting. That said, at the time it was to our surprise (and many others') that the Judge even decided to hear oral arguments in NY, as EXC's filing was purely mechanical – we wouldn't expect the Judge to take too long to form a ruling given the direct read-through from the CT REC and IL ZEC cases – likely before YE 2017. In any case, many expect appeals will start at the Appellate Court and potentially go all the way through to the Supreme Court, but bars are very high to overturn given structures formed similarly to renewable energy credits (REC) – This was a point in the order which basically found that Illinois did not encroach on FERC.

Our EPS/valuation has upside: our estimates do not reflect accretion from ZECs, although we are becoming increasingly confident. EXC will continue to earn ZEC revenue, which is nonrefundable, and with the constructive ruling in IL, coupled with read-throughs from CT, **we are increasingly confident the accretion can be achieved and a perpetual multiple can be assigned to it** – Representing upside to our estimates and valuation as we are not currently modeling ZEC accretion; **we estimate accretion from ZECs to EXC could amount to ~$0.25 comprising**: **(1)** $0.15 for existing plants in NY (Ginna and Nine Mile); **(2)** $0.02-0.03 for Fitzpatrick; and **(3)** ~$0.07 for Clinton and Quad (net of higher OPEX from bringing plants back)… **which would translate to upside of ~$5/share to our EXC price target**. See our analysis for NY HERE and IL HERE.

Reiterate BUY – We continue to like the story and see sizeable upside potential on EXC shares. We expect growth will continue to be driven by EXC's regulated utilities, currently accounting for 75% of EXC's business mix, with investments driving ~7% rate base growth and eventually self-funding the HoldCo interest expense and dividend; while we view GenCo as more of a free call option on merchant power fundamentals (e.g., natural gas prices), albeit still generating very healthy FCF which could eventually be given back to shareholders in multiple forms, including buybacks as leverage approaches ~2.5x net debt/EBITDA (we still model ~3x). Management's outlook for 6-8% regulated EPS growth is also conservative in our view, given EXC's tendency to manage low-double-digit returns from some segments... ***Continued on the next page...***

Market Data	
52-Week Range	$29.82 - $37.70
Market Cap (M)	$33,383
Dividend	$1.28
Dividend Yield	3.5%
ADV (3 mo; 000)	4,891

coupled with incremental O&M saving opportunities from former POM utilities, where regulatory lag is becoming less of a drag with the first round of rate filings tracking ahead of expectations, and a second round already kicking off. EXC's Dividend is well-positioned for growth beyond 2018 as well especially as ZEC's become more of a sustainable reality.

Signposts are increasingly suggesting our valuation may likely prove conservative. **For additional insight see HERE for our note following investor meetings we recently hosted with senior management.**

Valuation

Our $42 price target is based on a sum-of-the-parts analysis. We assign ~$17/share for ExGen using a 7.4x weighted average EV/EBITDA applied to ExGen's various assets. We assign $30/share for the regulated utilities combined based on our 2018E EPS of $1.79 applied to a 17.0x regulated utility multiple. Subtracting out ~$5 in parent drag, we arrive at our 12-month price target.

Risks

Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM.

The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, Dominion Resources, Inc. and Dynegy Inc. in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

Exelon Corp (EXC): Illinois District Court dismisses case against ZECs program

Sentiment Indicator : positive

Produced by Tucker, Shelby (RBC Capital Markets, LLC) on Monday, July 17, 2017, 09:35 AM ET

Disseminated on Monday, July 17, 2017, 09:40 AM ET

Our view: We expect Exelon (EXC; $36.06; Outperform; $40 price target) to outperform the group today, as the ruling further solidifies the company's ability to receive $235 million (~$0.16 per share) per year for its Clinton and Quad Cities nuclear plants in Illinois. We also see this ruling as positive for the pending litigation in New York associated with the ZECs program for that state (court decision expected soon), which also involves EXC's nuclear plants. Finally, we see this ruling as a positive data for other states also considering similar programs (NJ, OH, PA), as it sets a precedent. Our 2017-2019 EPS estimates of $2.67, $2.93, and $2.76 assume both the New York and Illinois ZECs programs are ultimately upheld.

On Friday, U.S. District Court for the Northern District of Illinois dismissed the case by the Electric Power Supply Association (EPSA) challenging the Zero Emission Credits (ZECs) program passed by the state legislature in December 2016. In the ruling, the federal judge noted that the state has the authority to determine the appropriate fuel mix and thus compensate specific plants to achieve that goal, and that ZECS do not directly infringe on the wholesale power market system.

EPSA and associated plaintiffs have 30 days to file an appeal with the 7th Circuit Court of Appeals.

COMPANY UPDATE
July 17, 2017

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

IL Court Decision Is A Positive

What's Incremental To Our View

We believe that the favorable court ruling in Illinois (after the close on Friday) could potentially translate into an incremental $2/share value for the stock.

IMPORTANT POINTS

- Late on Friday, a Federal Judge upheld the Zero Emission Credit (ZEC) payments that two of EXC's nuclear plants in Illinois - Quad City (1403mw) and Clinton (1069mw) - are scheduled to receive.

- While we do expect the court decision to be appealed, we see this as a positive development, and make the following observations: (1) we estimate that the ZEC payments in IL represent $0.16 of annual earnings for the company (starting in 2018); (2) while these payments are included in our current estimates, our analysis suggests that these earnings are getting essentially no value in the current stock price; (3) we calculate that increased confidence in this payment stream could potentially translate into $2/share of incremental stock value; and (4) we believe that this ruling also bodes well for a similar legal case pending in New York, which represents an annual earnings stream of $0.18 for the company.

- EXC appears attractively priced, trading at an 8%-11% P/E multiple discount to the peer group (based on our 2018-19 estimates). Assuming a P/E multiple of 14.3x (in line with the peer group) on our 2019 estimate of $2.78, we derive our price target of $40. We reiterate our **Buy** rating.

- We have included our latest 2017-19 earnings and cash flow models in this report.

Note

1) Rate Base - Com Ed: $10.6bn in 2015, $11.9bn in 2016, $13.2bn in 2017E, $14.0bn in 2018E, $14.8bn in 2019E; PECO: $6.0bn in 2015, $6.2bn in 2016, $6.6bn in 2017E, $7.0bn in 2018E, $7.4bn in 2019E;
BGE: $5.0bn in 2015, $5.3bn in 2016, $5.7bn in 2017E, $6.1bn in 2018E, $6.5bn in 2019E; PEPCO: $8.3bn in 2016, $8.9bn in 2017E, $9.4bn in 2018E, $9.9bn in 2019E.

2) Earned ROE - Com Ed: 8.0% in 2015, 8.8% in 2016, 9.3% in 2017, 9.4% in 2018, 9.5% in 2019; PECO: 11.7% in 2015, 13.3% in 2016, 12.1% in 2017, 12.2% in 2018, 12.1% in 2019;
BGE: 10.7% in 2015, 10.5% in 2016, 9.7% in 2017, 10.3% in 2018, 10.3% in 2019; PEPCO: 5.5% in 2016, 7.4% in 2017, 7.7% in 2018, 8.0% in 2019.

3) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

4) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

5) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

6) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

7) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw, nuclear $110m price) from Q2 2017.

8) We have factored the IL ZEC payments for Clinton (1069mw) and Quad City (1403mw) from 6/1/17.

9) Total ZEC payments represent $500m / year of pre tax income (from 2018 onwards).

10) Forward curves as of 6/12/17.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a 14.3x P/E multiple (in line with the peer group) on our 2019 estimate of $2.78, we derive our price target of $40.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

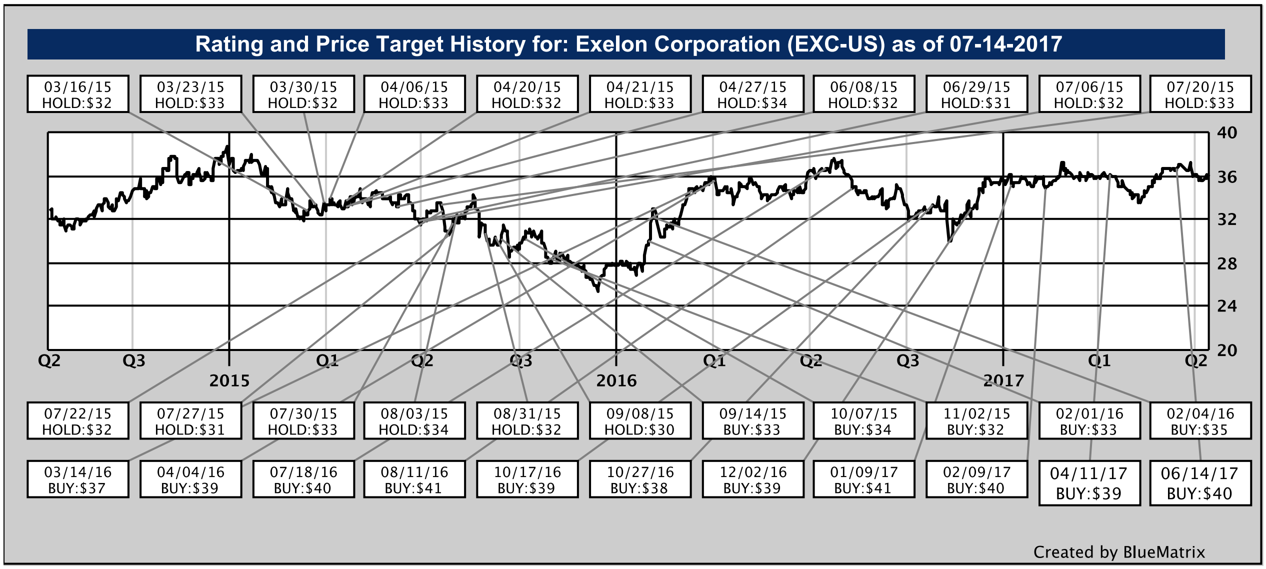
I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.



STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock’s total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock’s total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock’s total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH’s rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may

exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 07/17/2017):

Coverage Universe			Investment Banking Clients Past 12 Months		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	405	59.47%	Buy	118	29.14%
Hold/Neutral	274	40.23%	Hold/Neutral	58	21.17%
Sell/Reduce	2	0.29%	Sell/Reduce	0	0.00%

Alert
July 25, 2017
Energy: Electric Utilities
NYSE: EXC

Exelon Corporation

EXC - ALERT: NY Lex Ejects Hex to ZEC's

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

Following a similar ruling in Illinois on July 13, a judge for the U.S. District Court for the Southern District of New York on July 25 dismissed a lawsuit challenging New York's authority to permit Zero Emission Credits (ZEC's) to Exelon's nuclear plants in the state. The suit was brought by competitive generators. While we would expect this decision to be appealed, we find that the ruling by two separate courts bodes well for the ultimate outcome of continued support for EXC's unregulated nuclear plants in IL and NY. We view this development as incrementally positive and expect shares to react positively tomorrow.

For analyst certification and important disclosures, please refer to the Disclosure Appendix.

Disclosure Appendix

Exelon Corporation - EXC

We have managed or co-managed a public offering of securities for Exelon Corporation within the past 12 months.

Exelon Corporation is an investment banking client of ours.

We have received compensation for investment banking services from Exelon Corporation during the past 12 months.

We expect to receive or intend to seek compensation for investment banking services from Exelon Corporation within the next three months.

During the past 12 months, Exelon Corporation has been a client of the firm or its affiliates for non-securities related services.

As of the date of this report, we make a market in Exelon Corporation.

Reg A/C Certification

The research analyst(s) responsible for the preparation of this research report certifies that:(1) all the views expressed in this research report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers; and (2) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst(s) in this research report.

Rating System

Overweight - We expect the stock to outperform the analyst's coverage sector over the coming 6-12 months.

Sector Weight - We expect the stock to perform in line with the analyst's coverage sector over the coming 6-12 months.

Underweight - We expect the stock to underperform the analyst's coverage sector over the coming 6-12 months.

Other Disclosures

KeyBanc Capital Markets is a trade name under which corporate and investment banking products and services of KeyCorp and its subsidiaries, KeyBanc Capital Markets Inc., Member NYSE/FINRA/SIPC (“KBCMI”), and KeyBank National Association (“KeyBank N.A.”), are marketed.

KeyBanc Capital Markets Inc. (“KBCMI”) does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report has been prepared by KBCMI. The material contained herein is based on data from sources considered to be reliable; however, KBCMI does not guarantee or warrant the accuracy or completeness of the information. It is published for informational purposes only and should not be used as the primary basis of investment decisions. Neither the information nor any opinion expressed constitutes an offer, or the solicitation of an offer, to buy or sell any security. The opinions and estimates expressed reflect the current judgment of KBCMI and are subject to change without notice. This report may contain forward-looking statements, which involve risk and uncertainty. Actual results may differ significantly from the forward-looking statements. This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the specific needs of any person or entity.

No portion of an analyst’s compensation is based on a specific banking transaction; however, part of his/her compensation may be based upon overall firm revenue and profitability, of which investment banking is a component. Individuals associated with KBCMI (other than the research analyst(s) listed on page 1 of this research report) may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(A), financial interest, if any, by any research analysts listed on page 1 of this report will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosure Appendix. KBCMI itself may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(F), if KBCMI, or its affiliates, beneficially own 1% or more of any class of common equity securities in the subject company(ies) in this research report, it will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosures Appendix. This communication is intended solely for use by KBCMI clients. The recipient agrees not to forward or copy the information to any other person without the express written consent of KBCMI.

TOP PICK Exelon Corp.

Court Upholds New York Zero Emission Credits

Stock Rating/Industry View: Overweight/Neutral
Price Target: USD 43.00
Price (25-Jul-2017): USD 37.02
Potential Upside/Downside: 16%
Tickers: EXC

U.S. District Court for the Southern District of New York Dismisses ZEC Lawsuit

Fear of Downward Revision Removed. The Honorable Judge Valerie Caproni dismissed the Zero Emission Credit (ZEC) lawsuit by the Coalition for Competitive Electricity, et. al. In her written order, she indicated that the ZECs do not violate the Federal Power Act, are rightfully within a state's jurisdiction over its electricity grid, and are fully Constitutional. With two ZEC programs upheld in both Illinois (see our earlier note: EXC: Illinois Zero Emissions Credit (ZEC) Case Dismissed, published July 16 2017) and New York, we believe that the market will assume ZEC programs are legal in spite of the potential for further appeal. The ZEC margins are in our numbers, and we believe that they are also in consensus estimates. We believe that these decisions should remove fears of downward estimate and valuation revisions. We reiterate our earnings per share estimates of $2.68/$2.83/$2.80/$2.97 for '17/18/19/20, respectively, and our price target remains $43/share.

The ZECs in New York price the avoided cost of carbon at $17.48/MWh and contribute $275 million in gross margins to Exelon. The Illinois program prices carbon at $16.50/MWh and contributes $350 million in gross margin. With two ZEC programs now upheld by Federal District Courts in two states there is the possibility that other states in PJM could consider similar programs. Exelon has nuclear plants that would benefit from ZEC programs in both New Jersey (Oyster Creek – 637MWs and Salem – 422MWs) and Pennsylvania (Limerick – 2,386MWs, Peach Bottom – 646MWs, and Three Mile Island (TMI) 829MWs – TMI has been slated for retirement in 2018 absent any ZEC like program).

Next Catalysts. We are awaiting the grid reliability and security study from the U.S. Department of Energy, where release is now expected for some time around mid-August. Outcomes could range from promoting better price formation by removing subsidized resources from being the price setting unit in both energy and capacity markets (see our latest Monthly for an analysis: North America Power & Utilities: July Preview/June Review, published July 17, 2017). Or in a unlikely scenario, the DOE could use emergency powers under a national security mandate to enforce minimum price rules. This would benefit all generators but significantly benefit Exelon's nuclear fleet, which is a price taker in the market. Exelon will report earnings for the second quarter on August 2, and we estimate earnings per share of $0.53 essentially in line with consensus estimates of $0.54/share. We expect Exelon to highlight the ZEC case dismissals, its progress on improving ROEs at the Pepco utilities, potential strategic decisions around its ExGen Texas Power portfolio, and the targeted deleveraging at ExGen. We anticipate a reiteration of guidance for 2017 of $2.50 - $2.80, with $1.05 - $1.15 from ExGen. We also anticipate a reiteration of utility operating earnings guidance of $1.40 - $1.70 in '17, $1.50 - $1.80 in '18, $1.60 - $1.90 in '19, and $1.75 - $2.05 in '20.

Mentioned Stocks (Ticker, Date, Price)

Exelon Corp. (EXC, 25-Jul-2017, USD 37.02), Overweight/Neutral, A/CD/CE/D/E/J/K/L/M

Valuation Methodology: Our current $43 price target is premised upon a 2019 group average multiple of 16.8x applied to the utility net parent earnings of $1.81 resulting in $31 of utility value. Exgen is valued at 6.6x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, the combined value is $43.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

U: The equity securities of this Canadian issuer include subordinate voting restricted shares.
V: The equity securities of this Canadian issuer include non-voting restricted shares.

Guide to the Barclays Fundamental Equity Research Rating System:
Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (“the industry coverage universe”). To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.
In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating
Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.
Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.
Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.
Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View
Positive - industry coverage universe fundamentals/valuations are improving.
Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.
Negative - industry coverage universe fundamentals/valuations are deteriorating.

Distribution of Ratings:
Barclays Equity Research has 1721 companies under coverage.
41% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.
41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 52% of companies with this rating are investment banking clients of the Firm; 73% of the issuers with this rating have received financial services from the Firm.
15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 36% of companies with this rating are investment banking clients of the Firm; 59% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:
Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:
Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry

(as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).
To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Explanation of other types of investment recommendations produced by Barclays Equity Research:
Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

Disclosure of previous investment recommendations produced by Barclays Equity Research:
Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to https://live.barcap.com/go/research/ResearchInvestmentRecommendations.

EXC – Stood In Line but NY State of Mind Didn't Keep Us Waiting Too Long: Rules In Favor of ZECs

July 25, 2017

What's new? The U.S. District Court for the Southern District of New York granted (see HERE) EXC's motions to dismiss complaints against Zero Emission Credits (ZECs) in NY, citing the plaintiffs' failure to distinguish ZECs from RECs as the "death knell"; ultimately dismissing the plaintiffs' preemption and dormant commerce clause claims and thus ruling that the ZECs program does not intrude on FERC jurisdiction over wholesale electric markets. The decision came in not too long after the IL court's decision to uphold ZECs programs on July 13 (See HERE), further cementing the benefit of the ZECs overall for EXC. Reiterate BUY.

New York didn't keep us waiting too long… As we noted in our previous note after IL ZECs ruling, we wouldn't expect the Judge in NY to take too long to form a ruling given the direct read-through from the CT REC and IL ZECs cases. The NY court's ruling gives us additional confidence that the legal arguments around ZECs would be a very high hurdle to overcome, given structures formed similar to renewable energy credits (REC), which are exactly what the Judge's ruling was based on in NY. In any case, many expect appeals will continue at the Appellate Court and potentially go all the way through to the Supreme Court.

… and the ruling further reinforces confidence in our decision to build-in the full amount of the ZECs accretion without risk adjusting which we recently did in our Q2 preview note. As a reminder, the full amount of NY and IL ZECs accretions are now embedded in our updated estimates and PT, which were published this AM together with our 2Q17 earnings preview for the Power and Utility sector (see HERE), given the increasing clarity provided by recent legislative outcomes (i.e., in IL, CT, and now in NY). As a reminder, **our estimates now include: (1)** ~$0.15 for existing plants in NY (Ginna and Nine Mile); **(2)** ~$0.02-0.03 for Fitzpatrick; and **(3)** ~$0.07 for Clinton and Quad (net of higher OPEX from bringing plants back). We are increasingly confident that the accretion can be achieved and a perpetual multiple can be assigned to it – hence the change in our PT, which increased to $44 from $42, with full amount of ZECs upside (~$5/share) more than offsetting the negative impact as we marked our regulated utility valuations to reflect current yield expectations (16x vs. 17x of group multiple) as well as earnings impact from asset sales at ExGen Renewable through the JV. See our Q2 earnings preview piece – link above.

Reiterate BUY – We continue to like the story. Growth will continue to be driven by EXC's regulated utilities, currently accounting for 75% of EXC's business mix, with investments driving ~7% rate base growth and eventually self-funding the HoldCo interest expense and dividend; while we view GenCo as more of a free call option on merchant power fundamentals (e.g., natural gas prices) albeit still generating very healthy FCF which could eventually be given back to shareholders in multiple forms including buybacks as leverage approaches ~2.5x net debt/EBITDA (we still model ~3x). Management's outlook for 6-8% regulated EPS growth is also conservative in our view, given EXC's tendency to manage low-double-digit returns from some segments, coupled with incremental O&M saving opportunities from former POM utilities – where regulatory lag is becoming less of a drag with the first round of rate filings tracking ahead of expectations, and a second round already kicking off. EXC's dividend is well-positioned for growth in 2018 and beyond as ZECs become more of a sustainable reality. **For additional insight see HERE for our note following investor meetings we recently hosted with senior management.**

Market Data	
52-Week Range	$29.82 - $37.76
Market Cap (M)	$34,272
Dividend	$1.28
Dividend Yield	3.5%
ADV (3 mo; 000)	4,914

Valuation

Our $44 price target is based on a sum-of-the-parts analysis. We assign ~$19/share for ExGen using a 7x weighted average EV/EBITDA applied to ExGen's various assets. We assign $30/share for the regulated utilities combined based on our 2018E EPS of $1.88 applied to a 16x regulated utility multiple. Subtracting out ~$5 in parent drag, we arrive at our 12-month PT.

Risk

Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM.

The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

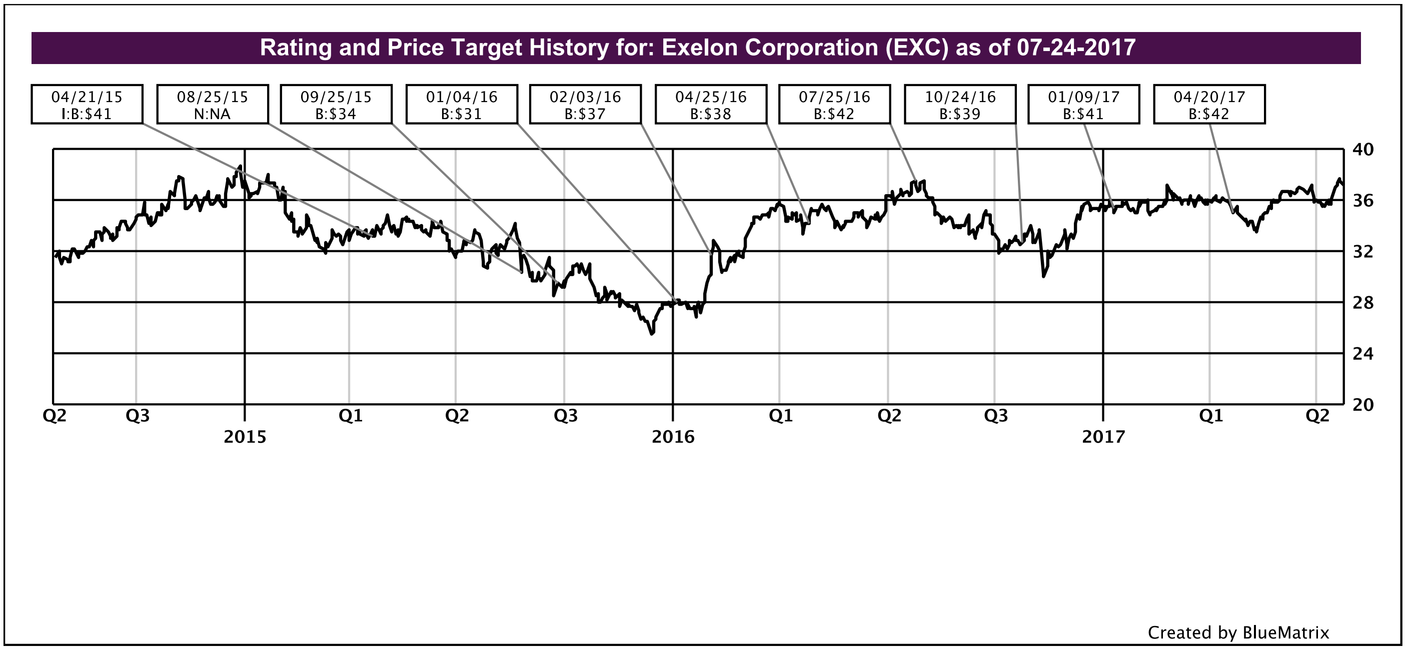
By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.



RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Nuclear Subsidies Take Big Step Forward with 2nd Federal Court Dismissal - ALERT

Overweight

EXC, EXC US
Price: $37.02
25 Jul 2017

Utilities and Power
Christopher Turnure AC
(1-212) 622-5696
christopher.turnure@jpmorgan.com
Bloomberg JPMA TURNURE <GO>
J.P. Morgan Securities LLC

Today's Federal District Court dismissal of the NY ZEC challenge was another positive surprise for growing state nuclear subsidy efforts, in our opinion, with investors having generally seen both this and the IL ZEC challenge as more likely than not to go to trial. The rulings are clear positive signs for similar programs in other states, potentially emboldening legislatures and diminishing chances of future FERC interference. In our view the court outcomes were wildcards, but we saw EXC shares pricing in little benefit since the programs were initiated in 2H16. We see continued challenges lingering well past this year, but view the decisions as material de-risking events.

- **Dismissal is 2nd victory this month:** Today the U.S. District Court for the Southern District of NY dismissed a challenge to NY's Zero Energy Credit program initiated by the NYPSC last summer to subsidize nuclear plants in the State. This follows a July 14 dismissal of a Federal Court challenge to the IL ZEC program passed by the IL legislature in December. Both programs took effect in 2Q17 despite the legal challenges.
- **Court rejected all plaintiff arguments:** All key plaintiff arguments were rejected, with the Court finding no grounds for violation of interstate commerce or cause for Federal preemption of State interference with power markets. Like the District Court decision regarding IL ZECs, today's decision relied on subtle distinction in the U.S. Supreme Court ruling in the *Hughes* case preserving wide latitude for States to indirectly impact FERC regulated wholesale markets.
- **Appeals process likely to continue well past 2017:** Trade group EPSA has already filed an appeal at the U.S. 7th Circuit Court of Appeals for the IL ZEC case, and a briefing schedule has been set through October. We expect a similar challenge to the NY ZEC decision, and for the appeals process to continue well past this year.
- **Positive for EXC, PEG, D and FE, negative for non-nuclear gencos:** We estimate both programs have a $3/shr NPV using a 4% discount rate for EXC, and continue to reflect 50% of this in our valuation given the likely continued legal challenges. PEG, D and, to a lesser degree, FE now stand a better chance of seeing supportive policies in NJ, PA, CT and OH, partially offset by the perpetuation of oversupplied wholesale energy and capacity markets stemming from such programs.

See page 2 for analyst certification and important disclosures.

Other Companies Discussed in This Report (all prices in this report as of market close on 25 July 2017)
Dominion Energy Inc (D/$76.79/Neutral), FirstEnergy (FE/$30.87/Neutral), Public Service Enterprise Group (PEG/$43.86/Overweight)

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock’s expected total return is compared to the expected total return of a benchmark country market index, not to those analysts’ coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst’s coverage universe can be found on J.P. Morgan’s research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Algonquin Corp. (AQN.TO), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), CenterPoint Energy, Inc. (CNP), Dominion Energy Inc (D), Duke Energy Corp. (DUK), Emera Inc. (EMA.TO), Entergy Corp. (ETR), Exelon Corp. (EXC), FirstEnergy (FE), Fortis Inc. (FTS.TO), Great Plains Energy (GXP), Hawaiian Electric Industries Inc. (HE), NextEra Energy Inc. (NEE), Nextera Energy Partners (NEP), NiSource Inc. (NI), PG&E Corp. (PCG), Pattern Energy (PEGI), Portland General Electric Co. (POR), Public Service Enterprise Group (PEG), Sempra Energy (SRE), South Jersey Industries (SJI), Spire Inc (SR), Westar Energy Inc (WR), Xcel Energy (XEL)

J.P. Morgan Equity Research Ratings Distribution, as of July 03, 2017

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage	44%	45%	11%
IB clients*	52%	50%	31%
JPMS Equity Research Coverage	44%	50%	6%
IB clients*	68%	65%	46%

*Percentage of investment banking clients in each rating category.
For purposes only of FINRA/NYSE ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

Equity Analysts' Compensation: The equity research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. Further information about J.P. Morgan's conflict of interest policy and a description of the effective internal organisations and administrative arrangements set up for the prevention and avoidance of conflicts of interest is set out at the following link https://www.jpmorgan.com/jpmpdf/1320678075935.pdf. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch which is regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com.sg. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: This material is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited. According to Paragraph 2, Article 7-1 of Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers (as amended or supplemented) and/or other applicable laws or regulations, please note that the recipient of this material is not permitted to engage in any activities in connection with the material which may give rise to conflicts of interests, unless otherwise disclosed in the “Important Disclosures” in this material. **India:** For private circulation only, not for sale. **Pakistan:** For private circulation only, not for sale. **New Zealand:** This material is issued and distributed by JPMSAL in New Zealand only to persons whose principal business is the investment of money or who, in the course of and for the purposes of their business, habitually invest money. JPMSAL does not issue or distribute this material to members of "the public" as determined in accordance with section 3 of the Securities Act 1978. The recipient of this material must not distribute it to any third party or outside New Zealand without the prior written consent of JPMSAL. **Canada:** The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed judgment upon these materials, the information contained herein or the merits of the securities described herein,

and any representation to the contrary is an offence. **Dubai:** This report has been issued to persons regarded as professional clients as defined under the DFSA rules. **Brazil**: Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. The recipient of this report must make its own independent decisions regarding any securities or financial instruments mentioned herein. JPMS distributes in the U.S. research published by non-U.S. affiliates and accepts responsibility for its contents. Periodic updates may be provided on companies/industries based on company specific developments or announcements, market conditions or any other publicly available information. Clients should contact analysts and execute transactions through a J.P. Morgan subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

NY District Court Dismisses ZEC Legal Challenge Just Over a Week After IL Court Did the Same

Rating Remains Outperform, Target Still $39

Today, District Judge Valerie Caproni granted motions by the NYPSC and EXC to dismiss a lawsuit filed by the Coalition for Competitive Electricity, EPSA, and other power producers (16-CV-8164) challenging the legality of the state's zero emissions credit (ZEC) revenues provided under the state's "Clean Energy Standard" (CES). The New York CES was established on 8/1/16, went into effect on 4/1/17, and amongst other items provides up to ~$480mm in annual ZEC revenues for EXC's Ginna, Nine Mile Point, and Fitzpatrick nuclear plants. In her opinion here, Judge Caproni stated that "the effect of ZECs on the wholesale auction is legally indistinguishable from the effect of RECs" and thus "the Court cannot find any principled basis to hold that the ZEC program is preempted even though its sibling REC program is not." This is a claim EXC has repeatedly made (to apparent success) and one which we have agreed with. A number of the 29 states that have adopted renewable portfolio standards have continued to employ RECs as a means of compensation, so we find the strength of the opinion here especially salient. The plaintiffs are likely to appeal the decision, which would move it U.S. Court of Appeals for the Second Circuit. We think such an appeal will occur very quickly based on the IL proceedings (discussed below). In that case, an appeal was filed by EPSA within one business day of the motion to dismiss being granted. We reiterate it is likely that the totality of legal challenges will be a protracted affair. However, we think - *yet again* - for a district court to have dismissed a case outright represents a significant legal victory.

On 7/14/17, District Judge Shah granted motions by EXC, the Illinois Commerce Commission, and the Illinois Power Agency to dismiss lawsuits filed by EPSA, other power producers, and certain ComEd customers (17-CV-01164) that would have put a stay on that state's ZEC program. The appellate court has since set a briefing schedule. The ZEC program was instituted with the passage of the Energy Future Jobs Act on 12/7/16 and became effective on 6/1/17, providing up to $235mm in annual revenues to keep the economically challenged Clinton and Quad Cities nuclear plants online. In his ruling in favor of the defendants, Judge Shah cited both (1) a lack of subject matter jurisdiction on the part of the plaintiffs and (2) a failure to state a claim as grounds for the dismissal. That opinion can be found here. The plaintiffs appealed the decision on 7/17/17, which moved it to the U.S. Court of Appeals for the Seventh Circuit. That court has since set an expedited schedule requiring appellant briefs by 8/28/17, appellee briefs by 9/27/17, and appellant reply briefs by 10/27/17.

The DOE study may be imminent. Tax policy changes are being studied. Back on 4/14/17, Secretary of Energy Rick Perry directed the DOE to perform a study exploring issues critical to maintaining the reliability of the electric grid, including the efficacy of wholesale electricity markets and the role that tax policies, subsidies, and regulation are having on early retirement of baseload power plants. We think the DOE is supportive of the idea that price formation in energy and capacity markets is not adequate for baseload generators and want to help bolster economic outcomes for nuclear and coal plants. However, practically speaking they have limited jurisdiction. We think DOE may intervene by opining that the FERC should take action to change market rules. Also the pending FY18 Energy and Water Development Appropriations Bill orders the DOE to analyze the potential impact of a "Zero Emissions Energy Credit" which contemplates a change in the Federal tax code that would replace the renewable energy subsidies (after they phase out) with a broader tax benefit applicable to all zero-emissions power plants like nuclear units. That analysis would be provided to Congress within 180 days of the enactment. It is not at all clear how much momentum this idea has in Congress, whether it will receive a favorable analysis from DOE, or whether it would be a component of any near-term tax reform package. *However, its biggest beneficiaries would be merchant nuclear operators like EXC, PEG, and FE.*

We maintain our '17-'19 EPS forecast of $2.65 / $2.85 / $2.85, which include the full ZEC revenues across its portfolio. EXC is committed to 2.5% dividend growth through 2018 but are confident the financial profile supports at least that level of growth through 2020. We think the assumptions driving EXC's view of the earnings growth drivers in its core utilities business and ExGen as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management are still wholly credible. The core utilities are forecast to grow rate base at 6.5% from '17-20 with earnings growth of 6-8% (down from 7-9% from '16-'20 solely due to a higher '17 base, the '20 forecast is up a nickel). We see a turnaround at PHI similar to the one EXC engineered at BGE after the CEG acquisition as feasible, with annual rate cases at most of the PHI companies (the first "wave" of these largely resolved) and the ability to harvest operating synergies. So, there is line of sight for EPS at EXC's utilities (ex-parent overheads) growing from $1.59 in FY '17 to ~$2.00 in 2020. From a cash flow perspective we see ExGen organically producing ~$5.8bn of free cash flow through FY'19, >66% of the $8.75bn they are targeting through 2020 with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. That is also without the $400mm from the renewables JV which puts them at 71%. The sale price of that 49% stake implies there may be up to an $85mm degradation in EBITDA but at >10X EV/EBITDA that is not only a good transaction multiple but it is also very accretive as ExGen is trading at an implied 4.4X. Assuming they can sell their impaired TX assets (the EGTP portfolio) that will be another $650mm in debt that comes off the books and should be accretive to credit metrics.

Our price target remains $39, maintaining Outperform rating. Our forecast for utility EPS contribution minus parent overheads is $1.59/share in '17 which by 2019 we expect to be ~ $1.85 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to +/-$2.00/share. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth ~$32.60/share (17.5X '19 EPS). That implies ExGen is worth only ~$4.40/share today, which is around 4.5X '19 EPS or 4.4X '19 EV/EBITDA and a levered free cash flow yield to the EV of 10% with debt/EBITDA at YE '19 of ~3.0X. They are taking all the cash flow from that lower multiple part of the business and either returning it to shareholders or investing in the higher multiple utility business. Overall, EXC is trading at +/-13X FY'19 earnings while pure regulated names are at +/-17.5X. The EXC dividend yield is 10bps above that of the regulated peer group at ~3.5%. While the dividend growth commitment of 2.5% annually through at least 2018 is lower than that articulated by purely regulated peers and some risks to ExGen revenues are palpable, we think that the overall valuation gap, given our view of the value of the businesses and capital allocation plan, is too high. At $39/share our target price implies a valuation for ExGen of 5.6X '19 EV/EBITDA and a levered free cash flow yield of ~8%. The consolidated P/E would still be only 13.7X '19 EPS.

Since hitting $33.50 on 5/11/17, the stock has climbed nearly 11%. Valuation got extremely compressed, and risk aversion on the pricing outcome of the last PJM capacity auction (after the ISO-NE and MISO disappointments) proved misplaced. As we discussed earlier the EMAAC and ComEd zones (where EXC has the majority of its exposure) both priced better than expectations. That said, legal action in NY and IL to challenge ZEC revenues could be successful and we think that remains a factor still impacting valuation. The legal basis for ZECs seems sound but it remains a risk and could impact '19 EPS by +/-$0.25/share if 100% successful in rolling back those programs. Still, with ExGen trading at only 4.5X '19 EPS on a SOTP basis the exposure seems small at this point if they lose on this front. Generally we also think that investor concern about 2020 earnings power has been a real factor, despite the long time horizon, since power prices out the forward curve would drive a significant decline in ExGen earnings. We do not have a formal 2020 EPS forecast for EXC. We now know the capacity revenue delta and include the TMI shut-down benefit. Those factors mitigate lower energy pricing that could be a significant headwind. Taking in to account 6-8% growth at the core utilities, consolidated EPS could fall as much as $0.15/share if current forwards were realized.

But just a $1/MWh improvement in power price at their given sensitivities is $0.09/share. So it doesn't take much to start valuing EXC more highly on 2020 forward curves, at least in our view.

EXC fared OK vs. expectations in the '20/'21 PJM capacity auction. Our base case expectations for EMAAC and ComEd leading up the auction were $160/MW-d and $180/MW-d respectively, and those zones ended up clearing higher at $187.87/MW-d and $188.12/MW-d. EXC disclosed that an additional 1,150 MW of nuclear capacity cleared at ComEd in the auction YoY, however as they also said that Quad Cities didn't clear (again) the balance presumably came from Byron. We estimated Byron cleared about 20% of its available capacity last year, and thus estimate closer to 70% this year. We think it is justifiable Quad Cities was not offered more aggressively in the auction, as the plant had yet to formally receive the ZEC contract and associated revenues. Our full discussion of the last PJM capacity auction can be found here.

What's next at ExGen? ExGen's announced 3/31/17 the sale its 49% share of the renewables JV should close in late 2Q17 or early 3Q17, subject to FERC and PUCT approval. The sale process for the economically-challenged EGTP portfolio of CCGTs and NG peakers (3,398 MW) in ERCOT is underway, with an agreement possible by late 3Q17 or early 4Q17.

What's next at the utilities? On 3/8/17 and 4/6/17, DPL entered into settlement agreements in its DE electric (16-0649) and gas rate cases (16-0650) for $32mm and $4.9mm, respectively, both based on a 9.7% ROE (they had requested $81.7mm in aggregate based on a 10.60% ROE) with DPSC approval received on 5/23/17 and 6/6/17, respectively. A DCPSC in Pepco's electric distribution rate case (in which they filed on 6/30/16 for a $76.8mm increase premised on 10.60% ROE) is expected by 7/25/17 (1139). A MDPSC decision in Pepco's electric distribution rate case (in which they filed on 3/24/17 for a $69mm increase premised on 10.10% ROE) is expected by 10/20/17 (9443). A NJBPU decision in ACE's electric distribution rate case (in which they filed on 3/30/17 for a $70mm increase premised on 10.10% ROE) is expected in 1H18 (ER17030308).

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming capacity auctions would be accretive but a significantly lower capacity auction price would be negative.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform – the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line – the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform – the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and

trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long – the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short – the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position – the stock is not included in the model portfolio.
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal 100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Another legal win on ZECs

Valuation & Risks

Judge dismisses challenges to NY ZEC program

After the close on Tuesday the judge presiding over the challenge brought against the New York Zero Emissions Credit (ZEC) Program ruled to dismiss the case. The ruling from Judge Valerie Caproni of the U.S. District Court for the Southern District of New York follows a similar decision in the Illinois ZEC case earlier this month. Like the Illinois decision, Judge Caproni's dismissal is likely to be quickly appealed by the plaintiffs, with the next level in this instance being the Second Circuit Court of Appeals. While unlikely to be the final legal word on an issue widely expected to wind up before the Supreme Court, this latest ruling is undoubtedly another win for state-sponsored ZEC programs and for EXC in particular. And as with the Illinois ruling, we also see an indirect read-across into efforts to pursue similar nuclear support arrangements in other key states such as Pennsylvania and New Jersey (PEG).

Another first round victory an incremental positive data point

Following a hearing held on the motions to dismiss in late March, investors have been hoping that Judge Caproni could dismiss the case given her line of questioning. This hope was bolstered after she asked for briefing on a related case involving Connecticut renewable credits (Allco Finance) and then again after the comprehensive dismissal in the Illinois ZEC case. There was no guarantee of a similar dismissal, however, so this week's news is an incremental positive for EXC with direct relevance for around $280M in annual revenues under the New York ZEC program along with the $235M expected from Illinois.

As in Illinois, plaintiffs' standing and arguments roundly rejected

Judge Caproni ruled that the District Court does not have jurisdiction over the plaintiffs' claims since they fall under FERC. However, she also determined that the plaintiffs' claims would fail regardless. While the plaintiffs argued that the NY ZEC Program is field and conflict preempted by the Federal Power Act like a Maryland program overturned by the Supreme Court in *Hughes vs. Talen Energy Marketing*, Caproni disagreed. Like Judge Shah in the Illinois case, Caproni concluded that the New York ZEC program "does not require the nuclear generators to sell into the NYISO auction" and that "the ZEC program is critically different from the challenged program in *Hughes*, which specifically conditioned subsidy payments on the generator’s sale of capacity into the auction." The Judge also noted that the plaintiffs could not justify why the ZECs were preempted whereas other state incentives such as land grants, tax exemptions, Renewable Energy Credits (RECs) or direct financial subsidies are not. Per the Judge, this was a fatal flaw in their argument as *Hughes* was never intended to restrict

Key indicators (FY1)

state's abilities to incentivize clean energy development with such measures. With regard to conflict preemption, the Judge agrees that the Federal Energy Regulatory Commission could take action if it determined that the ZEC program was interfering with federal objectives, which it has not done. Finally with regard to the plaintiffs' allegations that the ZEC program violates the Commerce Clause, the Judge noted that the plaintiffs did not represent any out-of-state nuclear generators and could not claim sufficient injury.

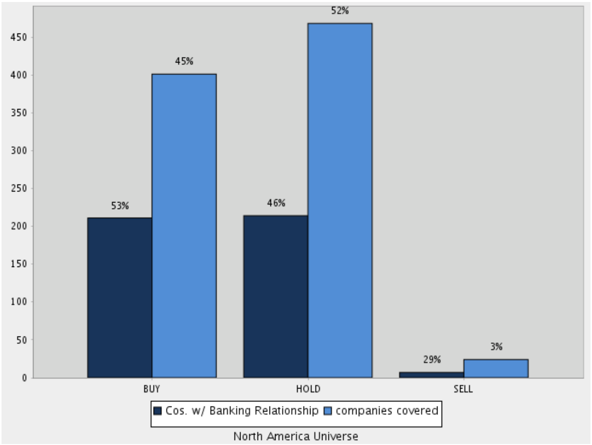
Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Equity rating dispersion and banking relationships



Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of these websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst’s judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

COMPANY UPDATE
July 26, 2017

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

NY Court Decision Another Positive Data Point

What's Incremental To Our View

We believe that the favorable court ruling in New York could translate into an incremental $3/share of value for the stock.

IMPORTANT POINTS

- Yesterday, after the close, a New York District Court dismissed the legal challenge to the Zero Emission Credit (ZEC) payments that EXC's nuclear plants in New York State are receiving. We note this is a similar outcome to Illinois, where a District Court recently dismissed a legal challenge for that state's ZEC payments. See our July 17, 2017 research report for more details.

- While we expect this ruling to be appealed (similar to the appeal already filed on the Illinois court ruling), we see this as a positive development for the following reasons: (1) we estimate that the ZEC payments in New York represent $0.18 of annual earnings for EXC; (2) while our estimates include the New York (and Illinois) ZEC payments, our analysis suggests that, in the current stock price, EXC is receiving minimal credit for this earnings stream; (3) we estimate that increased confidence in this earnings stream could potentially translate into $3/share of incremental equity value; and (4) given favorable court decisions in two different states, EXC appears to have strong legal standing even if the decisions are challenged in a different court.

- EXC is currently trading at a 7%-11% P/E multiple discount to the peer group (based on our 2018-19 estimates). Assuming a 14.3x P/E multiple (in line with the peer group) on our 2019 estimate of $2.78, we derive our price target of $40. We reiterate our **Buy** rating.

- We have included our latest 2017-19 earnings and cash flow models in this report.

Note

1) Rate Base - Com Ed: $10.6bn in 2015, $11.9bn in 2016, $13.2bn in 2017E, $14.0bn in 2018E, $14.8bn in 2019E; PECO: $6.0bn in 2015, $6.2bn in 2016, $6.6bn in 2017E, $7.0bn in 2018E, $7.4bn in 2019E;
BGE: $5.0bn in 2015, $5.3bn in 2016, $5.7bn in 2017E, $6.1bn in 2018E, $6.5bn in 2019E; PEPCO: $8.3bn in 2016, $8.9bn in 2017E, $9.4bn in 2018E, $9.9bn in 2019E.

2) Earned ROE - Com Ed: 8.0% in 2015, 8.8% in 2016, 9.3% in 2017, 9.4% in 2018, 9.5% in 2019; PECO: 11.7% in 2015, 13.3% in 2016, 12.1% in 2017, 12.2% in 2018, 12.1% in 2019;
BGE: 10.7% in 2015, 10.5% in 2016, 9.7% in 2017, 10.3% in 2018, 10.3% in 2019; PEPCO: 5.5% in 2016, 7.4% in 2017, 7.7% in 2018, 8.0% in 2019.

3) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

4) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

5) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

6) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

7) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw , nuclear $110m price) from Q2 2017.

8) We have factored the IL ZEC payments for Clinton (1069mw) and Quad City (1403mw) from 6/1/17.

9) Total ZEC payments represent $500m / year of pre tax income (from 2018 onwards).

10) Forward curves as of 6/12/17.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a 14.3x P/E multiple (in line with the peer group) on our 2019 estimate of $2.78, we derive our price target of $40.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may

exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management‘s approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg’s 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 07/26/2017):

Exelon Corp (EXC)

Jump on the ZEC Train with EXC. Upgrade to Buy, $43PT.

- Target Price Change
- Rating Change
- Estimate Change

- **NY District Court Grants EXC Motion to Dismiss Challenging NY ZECs.** On July 25th, NY District Judge Valerie Caproni dismissed a lawsuit challenging ZECs, a second positive outcome on ZECs given the IL ruling earlier. Key points from ruling:
  - **Tethering is linked to market *participation*.** The key argument of the Plaintiff was that ZECs go against the Hughes vs. Talen Supreme Court ruling in which states cannot offer an incentive that is 'tethered' to participation in markets. The key point here is *participation* and Judge Caproni makes the point that ZECs do not require nuclear plants to participate in the wholesale market/auction for them to receive ZECs.
  - **ZECs don't directly impact wholesale prices.** The key test applied here was a direct impact on prices and clearly ZECs have been designed to ensure there isn't a direct impact on wholesale energy/capacity prices.
  - **ZECs and RECs.** Judge found that they are effectively the same from a legal perspective in terms of their impact on wholesale markets.
  - **ZECs do not conflict with FERCs goals on power markets.**
- **Comprehensive victories in NY, IL on ZECs pave way for other states.** While these rulings will be challenged, we think the tethering challenge is in tatters. With a strong legal structure in place and the political will to keep nuclear plants around, we think NJ, PA, CT will come around to offering ZECs.
- **With ZECs working, power prices down = EXC wins; power prices up = EXC wins!** If prices stay low, states should step in to support the weakest nuclear units with ZECs. If power prices go up, the fleet becomes more valuable and EXC wins.
- **We calculate potential upside for EXC at $8/share by valuing ZECs in other states.** Note that there are multiple paths to value the upside. Our approach of assuming ZECs in other states is only one approach – an increase in 2019 prices could also result in upside without the need for ZECs. We model an additional 10.5GW of EXC's nuclear generation would get ZEC revenues in a phased manner from 2019-2022. This includes plants in PA, NJ and IL. While timing of support may vary, we believe the trend of nuclear support will play out and the cash flows will allow EXC to further de-lever balance sheet and grow their utility business.

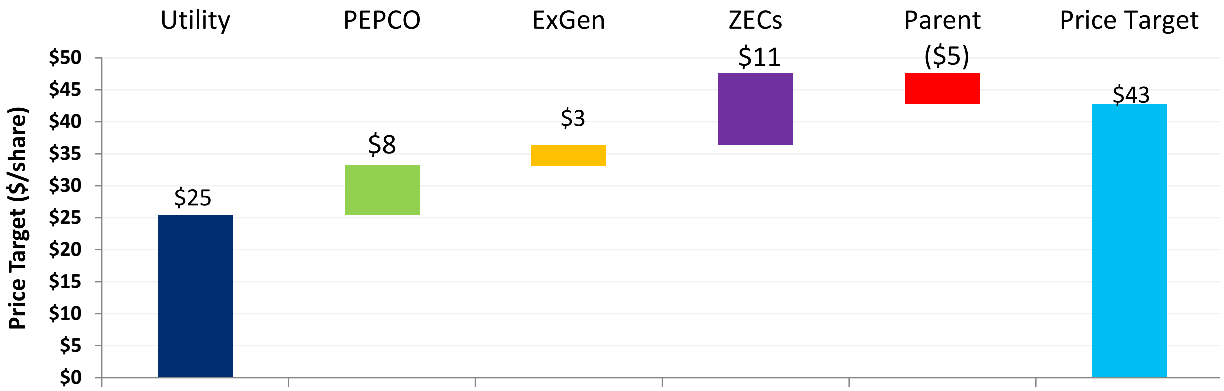
Sum-of-Parts Valuation

- In the Figure below we lay out our sum-of-parts valuation of EXC
- The change in the valuation is the value of ZECs for all their other nuclear generation assets worth $8/share. Note, we initially estimated the benefits of ZECs in NY and IL worth $3/share.
- We also think this incremental cash flow from ZECs will help EXC de-lever its balance sheet and fund further growth at the utility business

Figure 1. Sum-of-the-parts



Components	Utility	PEPCO	ExGen	ZECs	Parent	Price Target
Terminal Multiple	18.0x	18.0x	5.5x			
Discount Rate	6.5%	6.5%	8.5%			
Firm Value ($mm)	$38,269	$13,805	$12,984			
Net Debt ($mm)	(13,742)	(6,357)	(9,935)			
Equity Value ($mm)	24,527	7,448	3,048	10,802	(4,539)	41,286
Share Price ($/share)	**$25**	**$8**	**$3**	**$11**	**($5)**	**$43**

Source: Citi Research

- **Key Assumptions:** To value the incremental ZECs we assumed:
  - 3GW of nuclear capacity annually would be eligible for ZECs for 12 years starting in 2019. In total, we have assumed 10.5GW of nuclear capacity would receive ZECs by 2022.
  - We have calculated value of ZECs based on NY CES structure and pricing. In particular, we have assumed first two year tranche would get $17.48/MWh. Next five tranches would gradually increase by approximately ~$2/MWh per tranche.
  - We have applied a tax rate of 35% to calculate after tax cash flow impact. Next we discounted back ZEC cash flows at WACC of 6.0% to get to NPV of ~$7.6B or $8/share. Table below shows annual cash flows and EPS impact.
- **ZECs Allows EXC to Win in Most Scenarios.** If power prices stay at current levels, then, as hedges roll-off, further nuclear plants will be economically challenged and will go in for support. If power prices pick up then EXC's fleet is significantly more valuable and they won't need ZECs. We think there is a higher likelihood of prices continuing their trajectory downwards as renewables continue their march in the U.S.

- **Table below Highlights How EXC Is Well Positioned in Most Power Price Scenarios:**
  - Under the base case, which reflects current forward energy and capacity prices in 2019, the net margin for a nuclear plant is only $6/MWh. If cost of operations are higher or if prices drop, then the ZECs case kick in and offers $780m of value for every 1,000MW of capacity that gets ZECs
  - If energy prices go up by $5/MWh, then net margin increases and keeping the same multiple, value of a 1,000MW plant goes up by $519m. Note that we are keeping the terminal EBITDA multiple flat in this case. The reality is that if power prices do go up, the economic asset life of nuclear plants also increase and the terminal EBITDA multiple could increase as well.

Figure 2. Scenario Analysis

Financial Metrics PJM 2020	Units	Base Case	Prices Up Case	Downside Case - ZECs
Power Prices (ATC)	$/MWh	$32	$37	$17.5
Capacity Prices	$/MWh	7	7	
Forward Prices & Capacity Prices	$/MWh	38	43	
Cash Cost of Operation	$/MWh	32	32	
Net Margin	$/MWh	$6	$11	
Nuclear Plant	MW	1,000	1,000	1,000
Capacity Factor	%	95.0%	95.0%	95.0%
Generation	MWh	8,322	8,322	8,322
ZECs Revenue (post tax)				$95
EBITDA	**$mm**	**$53**	**$94**	
Terminal Multiple	x	5.5x	5.5x	
Valuation Impact		$291	$519	$780 [1]
ZECs 1st Tranche	$/MWh	$17.5		
ZEC Revenue	$mm	$145		

1.Valuation of ZECs based on WACC of 6%. ZEC valuation is based on 12 yrs

Source: Citi Research

Updated Estimates

- With additional benefits of ZECs starting in 2019, our estimates reflect higher EPS. The charts below lay out our updated EPS estimates for EXC and the updated ExGen EBITDA and FCF. We have refined our ZEC calculations based on latest management guidance.

- We also highlight the improved FFO/Debt as a result of the assumed additional ZEC revenues.

- **Key Assumptions to Model ZECs**

  - 3GW of nuclear capacity annually would be eligible for ZECs for 12 years starting in 2019. In total, we have assumed 10.5GW of nuclear capacity would receive ZECs by 2022.

  - We have calculated value of ZECs based on NY CES structure and pricing. In particular, we have assumed the first two-year tranche would get $17.48/MWh. Next five tranches would gradually increase by approximately ~$2/MWh per tranche.

  - We have applied a tax rate of 35% to calculate the after tax cash flow impact. Next we discounted back ZEC cash flows at WACC of 6.0% to get to NPV of ~$7.6B or $8/share. Table below shows annual cash flows and EPS impact.

Read-through for Rest of Sector

- **IPPs likely saved by market reform.** With ZECs gaining further momentum, we think the need for market reform will increase further to protect price signals in capacity and energy markets. Given the significant GWs that will put their hand up for bailouts, we think FERC and different markets will have to come up with a solution soon. That is why we don't think the negative impact for IPPs is significant.

- **PEG clearly should benefit as well with the NJ & PA bailout.** From a value perspective, the ZECs in NJ & PA will be worth $2.8B assuming ~3.6GW of nuclear capacity would be eligible for ZECs

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates six utilities in Pennsylvania, Illinois, New Jersey, DC, Delaware, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Atlantic City Electric, BGE, ComEd, Delmarva Power, PECO, and Pepco. Exelon Generation operates the largest nuclear fleet in the United States, with plants concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Buy (1).

Our rating is not only based on the IL and NY ZECs but we believe that other states will follow suit in providing support for nuclear plants and that will further improve EXC's financial strength and valuation. We like this regulated utility's robust growth profile of 6-8% through 2020E.

Valuation

We value EXC using a sum-of-the-parts approach to get to our $43 price target. We value ExGen at ~$3/share and believe ExGen’s core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The legacy utility business is valued at $25/share based on a 18.0x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent net debt and add $11/share for ZECs to get to our rounded PT of $43/share.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the risks get rejected after further legal challenge then the stock has downside as some value of ZEC is already in the stock price

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Public Service Enterprise Group Inc

(PEG.N; US$44.29; 2; 26 Jul 17; 16:00)

Valuation

We value PEG using sum of the parts approach. We value PEG's Utility business using our standard DCF methodology with 17.5x terminal multiple. We believe this multiple is appropriate given PEG's strategic positioning. Our value per share for the Utility business is $35. We value PEG's Merchant business using the DCF approach as well. We use terminal EV/EBITDA multiple of 7.0x. As with other merchants, we're using lower multiple to account for a hybrid discount. Our value per share for the Merchant business is $9. Lastly, Parent & Other adds ($0)/share to our combined valuation of $44.

Risks

Commodities price risk affecting merchant generation – If natural gas prices fall (rise), wholesale power prices will likely fall (rise), limiting (raising) commodity margins. PSEG is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices fall significantly from current prices, PSEG might have to re-contract at incrementally lower margins. Regulatory risk – PSEG relies on regulatory recovery mechanisms in NJ and has a substantial growth capex program in the state. If PSEG was unable to obtain regulatory recovery at the rates that we are projecting, our estimates and valuation could be adversely impacted. If any of these risk factors has a greater downside impact than we anticipate, the share price will likely have difficulty attaining our target price. Conversely, if the impact of any of these upside risks is greater than we anticipate, the stock could exceed our target price.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by “AC” in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Public Service Enterprise Group Inc, Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Public Service Enterprise Group Inc, Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Public Service Enterprise Group Inc, Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Public Service Enterprise Group Inc, Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Public Service Enterprise Group Inc, Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Public Service Enterprise Group Inc, Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Public Service Enterprise Group Inc, Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Jun 2017	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	47%	39%	13%	2%	97%	1%
% of companies in each rating category that are investment banking clients	64%	64%	58%	57%	64%	51%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q2 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (57%); Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%); Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Contents

Analyst Note 27 Jul 2017

We are reaffirming our fair value estimates, moat and moat trend ratings for all U.S. utilities with nuclear exposure after analyzing the economics, regulation, and sustainability attributes of nuclear generation in the U.S.

Nuclear power is at an inflection point in the U.S., with a wide gap developing between the anti-nuclear and pro-nuclear factions. This is a critical debate. The 99 nuclear units in the U.S. provide 20% of the nation's electricity and meet essential reliability needs for major cities. Competition from cheap natural gas generation and renewable energy are pinching profits now, but we think a long-term perspective is important.

Our forecast for flat or growing U.S. nuclear capacity is more bullish than most forecasts. In particular, we think the U.S. could add as much as 5% net new nuclear capacity by 2040 primarily due to nuclear uprates. Most market forecasts assume natural gas is the marginal generation source, but our calculations show nuclear uprates have similar economic returns and less long-term capital reinvestment risk. We think nuclear has a more favorable environmental, social, and governance, or ESG, profile than most other nonrenewable energy sources. Its low carbon-emissions profile and reliability make it a critical contributor to meeting state and federal environmental policy goals.

We think the best opportunity for investors is to take advantage of the market's concerns about spiraling new-build nuclear costs and regulatory risk. Scana and Southern Company trade at steep discounts to peers even after adjusting for their new-build project risks. Among existing plant owners, only one utility has maintained a big bet on nuclear: Exelon. The stock looks pricey now, but its scale and political clout as the largest U.S. operator give it more option upside than any U.S. utility. We also think top-tier

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

nuclear operators such as Exelon and Xcel Energy should earn premium valuations for their positive ESG characteristics.

For our full analysis, see our Utilities Observer: U.S. Nuclear Down But Not Out.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth — or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital — the return on capital of the next dollar invested ("RONIC") — to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ▸**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ▸**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ▸**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ▸**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ▸**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

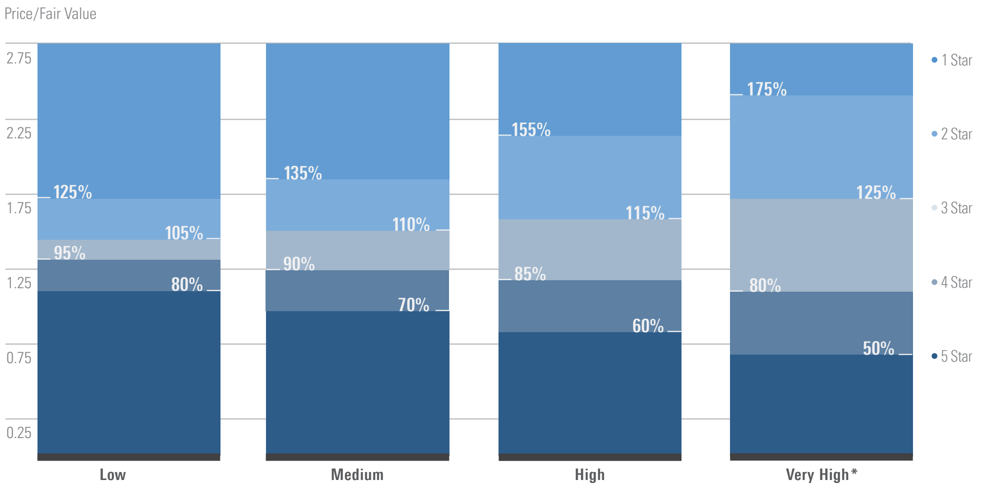
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

U.S. Nuclear: Down but Not Out

Investment Thesis

Travis Miller, Strategist, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Strategist, 27 July 2017

We are reaffirming our fair value estimates, moat and moat trend ratings for all U.S. utilities with nuclear exposure after analyzing the economics, regulation, and sustainability attributes of nuclear generation in the U.S.

Nuclear power is at an inflection point in the U.S., with a wide gap developing between the anti-nuclear and pro-nuclear factions. This is a critical debate. The 99 nuclear units in the U.S. provide 20% of the nation's electricity and meet essential reliability needs for major cities. Competition from cheap natural gas generation and renewable energy are pinching profits now, but we think a long-term perspective is important.

Our forecast for flat or growing U.S. nuclear capacity is more bullish than most forecasts. In particular, we think the U.S. could add as much as 5% net new nuclear capacity by 2040 primarily due to nuclear uprates. Most market forecasts assume natural gas is the marginal generation source, but our calculations show nuclear uprates have similar economic returns and less long-term capital reinvestment risk. We think nuclear has a more favorable environmental, social, and governance, or ESG, profile than most other nonrenewable energy sources. Its low carbon-emissions profile and reliability make it a critical contributor to meeting state and federal environmental policy goals.

We think the best opportunity for investors is to take advantage of the market's concerns about spiraling new-build nuclear costs and regulatory risk. Scana and Southern Company trade at steep discounts to peers even after adjusting for their new-build project risks. Among existing plant owners, only one utility has maintained a big bet on nuclear: Exelon. The stock looks pricey now, but its scale and political clout as the largest U.S. operator give it more option upside than any U.S. utility. We also think top-tier nuclear operators such as Exelon and Xcel

Economic Moat

Travis Miller, Strategist, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Strategist, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, CPA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

PJM Capacity Auction Results: Surprisingly, No Surprises

Travis Miller, Strategist, 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers

Travis Miller, Strategist, 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Trump's Announcement to Exit Paris Agreement Has Little Effect on Utilities

Andrew Bischof, CFA, CPA, Sr. Eq. Analyst, 02 June 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities after President Trump announced plans to exit the Paris Climate Agreement.

Despite the withdrawal, we continue to forecast U.S. renewable energy capacity doubling during the next eight years. State renewable portfolio standards, or RPS, and other local policies remain the industry's primary growth driver, not federal environmental policy. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use by 2025, up from 15% now, based solely on existing state RPS.

We think Trump's move to abandon the U.S. Clean Power Plan and Paris Agreement could even embolden states to strengthen renewable energy standards, offering upside to our forecasts. Supportive tax policy and pro-manufacturing initiatives also offer upside. And corporate renewable energy purchases should continue to grow as businesses realize the economic and public perception benefits. Thus, we are not surprised that many business leaders denounced Trump's decision.

We also forecast carbon emissions from the power generation sector will keep falling toward Paris Agreement targets given the growth in renewable energy and gas generation. Low natural gas prices and turbine efficiency improvements are forcing coal plant shutdowns and reduced run times for competing coal generators, which emit twice as much carbon as an equivalent gas plant.

Utilities operating in states with constructive regulation and environmental policy support could realize 7%-9% annual earnings and dividend growth the next three to five years. Best positioned are utilities like Dominion Energy, Duke Energy, American Electric Power, and CMS Energy that are investing billions of dollars in new infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

U.S. Nuclear: Down but Not Out

Travis Miller, Strategist, 27 July 2017

We are reaffirming our fair value estimates, moat and moat trend ratings for all U.S. utilities with nuclear exposure after analyzing the economics, regulation, and sustainability attributes of nuclear generation in the U.S.

Nuclear power is at an inflection point in the U.S., with a wide gap developing between the anti-nuclear and pro-nuclear factions. This is a critical debate. The 99 nuclear units in the U.S. provide 20% of the nation’s electricity and meet essential reliability needs for major cities. Competition from cheap natural gas generation and renewable energy are pinching profits now, but we think a long-term perspective is important.

Our forecast for flat or growing U.S. nuclear capacity is more bullish than most forecasts. In particular, we think the U.S. could add as much as 5% net new nuclear capacity by 2040 primarily due to nuclear uprates. Most market forecasts assume natural gas is the marginal generation source, but our calculations show nuclear uprates have similar economic returns and less long-term capital reinvestment risk. We think nuclear has a more favorable environmental, social, and governance, or ESG, profile than most other nonrenewable energy sources. Its low carbon-emissions profile and reliability make it a critical contributor to meeting state and federal environmental policy goals.

We think the best opportunity for investors is to take advantage of the market's concerns about spiraling new-build nuclear costs and regulatory risk. Scana and Southern Company trade at steep discounts to peers even after adjusting for their new-build project risks. Among existing plant owners, only one utility has maintained a big bet on nuclear: Exelon. The stock looks pricey now, but its scale and political clout as the largest U.S. operator give it more option upside than any U.S. utility. We also think top-tier nuclear operators such as Exelon and Xcel Energy should earn premium valuations for their positive ESG characteristics.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

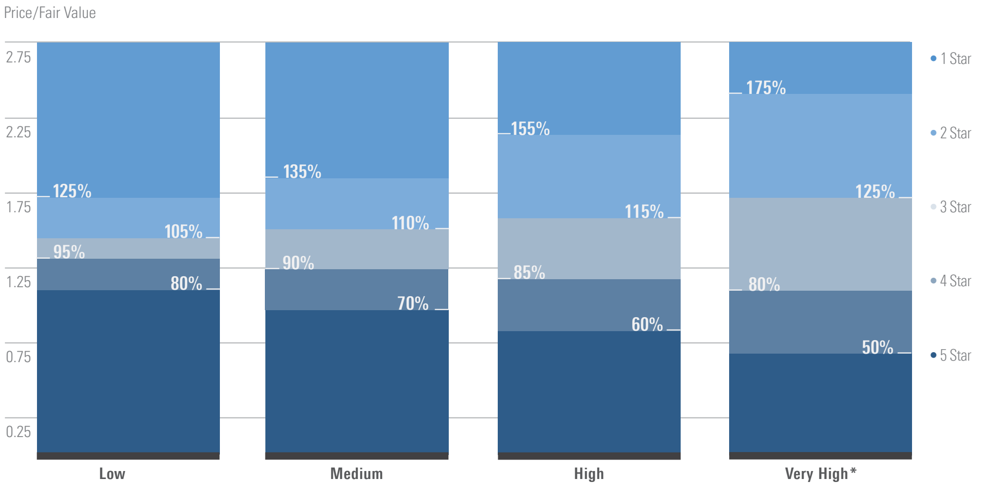
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ▶**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ▶**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ▶**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ▶**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ▶**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ▶**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ▶**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ▶**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ▶**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ▶**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ▶**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

Price/Fair Value Morningstar data as of Jul 27, 2017

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

General Disclosure (applicable to both Quantitative and Qualitative Research)

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. The Equity Research Group encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an

investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, Inc., or the Equity Research Group guarantees the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst, Morningstar, Inc. or the Equity Research Group. In Territories where a Distributor distributes our report, the Distributor is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

- No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.

- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.

- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.

- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

- Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which the Equity Research Group currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities covered, including their fair value estimate, please contact your local office.

Scotia Howard Weil

COMPANY UPDATE

Wednesday, August 2, 2017

Exelon Corporation

2Q17 Results at Top End of Range, Reiterate Full-Year Guidance

QUICK TAKE: A positive release, with adjusted earnings at the top end of the guidance range, reiteration of full-year operating expectations, and the previously announced news regarding the dismissal of legal challenges to the ZEC programs in Illinois and New York late last month. The company continues to execute on its strategic objectives by optimizing its nuclear fleet and maintaining a consistent schedule of rate cases at its utility subsidiaries, which should ultimately drive improved cash flows and lower debt levels. These results and updates should be supportive of the stock in the near term, in our opinion.

KEY POINTS

2Q17 Earnings at Top End of Guidance: The company reported GAAP earnings of $0.09/share, including non-recurring items totalling $0.45/share, including mark-to-market hedge activity and asset impairments. Recurring earnings of $0.54/share were a bit above our estimate of $0.51/share, in line with the Street consensus, and at the top end of the prior $0.45 to $0.55/share guidance range. The company reiterated FY17 earnings guidance of $2.50 to $2.80/share (SHW $2.65/share pre-2Q17 print). 3Q17 earnings are guided to be between $0.80 and $0.90.share (SHW $0.83/share, Street $0.93/share pre-2Q17 print).

Nuclear Updates: Federal courts in Illinois and New York dismissed cases challenging those states' ZEC programs supporting some of the underperforming plants in the company's nuclear fleet. These results add some certainty to the ultimate recognition of these payments for EXC, and the outcomes also create a template for future programs that could benefit facilities in other states, in our opinion. Along those lines, the company announced plans for the early retirement by September 2019 of its Three Mile Island nuclear plant after it failed to clear the most recent PJM capacity auction.

Rate Cases Underway: The company entered into settlement agreements on DPL electric and gas cases during 2Q17 and received an order to increase DC electric distribution rates by $37 million at Pepco late last month. DPL filed another electric rate case last month requesting a 10.1% ROE and $27 million rate increase, with a decision expected 1Q18.

Company Overview

Company Description

Exelon Corporation is a diversified power utility company with operations throughout the United States, operating generation, transmission, and distribution assets in both merchant and regulated markets. The Generation segment operates a large regional and fuel-diversified competitive electricity business, including the largest nuclear power generation fleet in the country. The company owns regulated utilities ComEd, BGE, PECO, and Pepco Holdings, which provide electric transmission and distribution services to customers within their designated service areas.

Risks

Risk factors that may impede the achievement of the price target: (1) Industry fundamentals with respect to customer demand or product/service pricing could change and adversely impact expected revenues and earnings; (2) issues relating to major competitor or market shares or new product expectations could change investor attitudes toward the sector or the company; (3) unforeseen developments with respect to the management, financial condition or accounting policies or practices could alter the prospective valuation; or (4) external factors that affect the U.S. economy, interest rates, the U.S. dollar or major segments of the economy could alter investor confidence and investment prospects.

Key Risks:
Regulatory factors, interest rates, commodity prices, operational factors, including running fleet of nuclear power reactors

Appendix A: Important Disclosures

I, Jonathan Donnel, certify that (1) the views expressed in this report in connection with securities or issuers that I analyze accurately reflect my personal views and (2) no part of my compensation was, is, or will be directly or indirectly, related to the specific recommendations or views expressed by me in this report.

This research report was prepared by employees of Scotia Howard Weil, a division of Scotia Capital (USA) Inc., who have the title of Research Analyst.

All pricing of securities in reports is based on the closing price of the securities' principal marketplace on the night before the publication date, unless otherwise explicitly stated.

All Equity Research Analysts report to the Head of Equity Research. The Head of Equity Research reports to the Managing Director and Co-Head, Global Capital Markets, who is not and does not report to the Head of the Investment Banking Department. Scotia Howard Weil has policies that are reasonably designed to prevent or control the sharing of material non-public information across internal information barriers, such as between Investment Banking and Research.

The compensation of the research analyst who prepared this report is based on several factors, including but not limited to, the overall profitability of Scotiabank, Global Banking and Markets, and the revenues generated from its various departments, including investment banking, trading fees and other types of transactions. Furthermore, the research analyst's compensation is charged as an expense to various Scotiabank, Global Banking and Markets departments, including investment banking. Research Analysts may not receive compensation from the companies they cover.

For Scotia Howard Weil Research analyst standards and disclosure policies, please visit www.scotiahowardweil.com.

For applicable current disclosures for all covered companies, please write to the Scotia Howard Weil Research Department at the following address:

Definition of Scotia Howard Weil Equity Research Ratings & Risk Rankings

We have a four-tiered rating system, with ratings of Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

The rating assigned to each security covered in this report is based on the Scotiabank, Global Banking and Markets research analyst's 12-month view on the security. Analysts may sometimes express to traders, salespeople and certain clients their shorter-term views on these securities that differ from their 12-month view due to several factors, including but not limited to the inherent volatility of the marketplace.

Ratings

Focus Stock (FS)
The stock represents an analyst's best idea(s); stocks in this category are expected to significantly outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Outperform (SO)
The stock is expected to outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Perform (SP)
The stock is expected to perform approximately in line with the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Underperform (SU)
The stock is expected to underperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Other Ratings

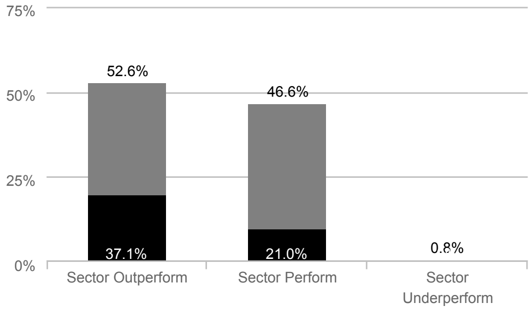
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Ranking
As of June 22, 2015, Scotiabank, Global Banking and Markets discontinued its Low, Medium, and High risk rankings. The Speculative risk ranking reflects exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, and exceptionally high stock volatility. The Director of Research and the Supervisory Analyst jointly make the final determination of the Speculative risk ranking.

Scotia Howard Weil Equity Research Ratings Distribution*

Distribution by Ratings and Equity and Equity-Related Financings*



▨ Percentage of companies covered by Scotia Howard Weil within each rating category.

For the purposes of the ratings distribution disclosure FINRA requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to strong buy, buy, neutral and sell ratings, respectively.

General Disclosures

This research report was prepared by employees of Scotia Howard Weil, a division of Scotia Capital (USA) Inc. who have the title of Research Analyst. Scotia Capital (USA) Inc., an SEC registered broker-dealer and a member of FINRA and the NYSE, is wholly owned by Scotia Capital Inc., a Canadian Investment Dealer, and indirectly owned by The Bank of Nova Scotia. Scotiabank, together with "Global Banking and Markets," is a marketing name for the global corporate and investment banking and capital markets businesses of The Bank of Nova Scotia and certain of its affiliates in the countries where they operate, including Scotia Capital (USA) Inc.

All other trademarks are acknowledged as belonging to their respective owners and the display of such trademarks is for informational purposes only.

The frequency of reports is determined by the analyst on a case-by-case basis, driven by external market factors and issuer announcements. Analysts will endeavor to review and publish such estimates and recommendations as soon as possible after the release of material information by the issuer or the occurrence of other relevant events. This will typically involve, at a minimum, a summary of quarterly earnings releases.

In addition to Scotia Howard Weil Research, Scotiabank publishes and distributes Scotiabank Global Banking and Markets Equity Research (“Scotiabank Research”), which is a separate research publication. Scotia Howard Weil Research Analysts and Scotiabank Research Analysts are independent from one another and their respective coverage of issuers is different. In addition, because they are independent from one another, Scotia Howard Weil Research Analysts and Scotiabank Research Analysts may have different opinions on the short-term and long-term outlooks of local and global markets and economies.

This report is provided to you for informational purposes only. This report is not, and is not to be construed as, an offer to sell or solicitation of an offer to buy any securities and/or commodity futures contracts.

The securities mentioned in this report may neither be suitable for all investors nor eligible for sale in some jurisdictions where the report is distributed.

The information and opinions contained herein have been compiled or arrived at from sources believed reliable; however, Scotia Howard Weil makes no representation or warranty, express or implied, as to their accuracy or completeness.

Scotia Howard Weil has policies designed to make best efforts to ensure that the information contained in this report is current as of the date of this report, unless otherwise specified.

Alert
August 2, 2017
Energy: Electric Utilities
NYSE: EXC

Exelon Corporation

EXC - ALERT: 2Q17 Results Point to in Line Quarter

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

We expect a mixed response to the in line quarter and affirmed FY guidance, muted by 3Q17 guidance coming in below current expectations.

August 1, 2017 Close: $38.55

2Q17 Ongoing EPS: $0.54 vs. $0.65 in 2Q16 / Consensus of $0.53 / KBCM of $0.53

Initial Take: We expect a mixed response to a largely in line quarter and affirmed 2017 EPS guidance; however, we could see some pressure from a 3Q17 guidance range with a midpoint ($0.85) below current consensus ($0.93).

2017 KBCM EPS Estimate: $2.70 (Consensus: $2.67)

2018 KBCM EPS Estimate: $2.90 (Consensus: $2.88)

Guidance: Exelon affirmed 2017 EPS guidance of $2.50-$2.80 and initiated 3Q17 guidance of $0.80-$0.90 (consensus of $0.93)

Highlights:

- Results were in line with our estimate.
- Courts granted motions to dismiss legal challenges to the ZEC programs in Illinois and New York.
- TTM Consolidated Earned ROE came in at 9.7% vs. 9.9% sequentially.
- EXC reported EPS of $0.54 vs. $0.65 in 2Q16 as primary drivers include: weaker results at ExGen (-$0.13), lower ComEd (-$0.01), and lower PECO (-$0.01), slightly offset by HoldCo (+$0.03), BGE (+$0.02), and PHI (+$0.01). We note rounding.
- Generation segment ongoing earnings fell $0.22 vs. $0.35 as poor market conditions (-$0.16) and higher O&M (-$0.05) were slightly offset by ZEC revenue (+$0.05) and other (+$0.03).
- ComEd ongoing results were $0.15 vs. $0.16 as rate base (+$0.01) and Treasuries/ROE (+$0.01) were offset by weather (-$0.01) and other (-$0.01). We note rounding.
- PECO ongoing results were $0.10 vs. $0.11 as weather and load impacted results (-$0.01).
  - Heating Degree days were down 29.9% YOY and were 28.9% below normal.
  - Cooling Degree days were up 6.1% YOY and were 19.3% above normal.
  - Weather-normalized electric sales fell 0.8%, while weather-normalized gas sales increased 5.3%.
- BGE earnings increased to $0.05 vs. $0.03 due to increased distribution rates (+$0.01) and the absence of 2016 rate case disallowances (+$0.03), which were slightly offset by income taxes (-$0.01) and other (-$0.01).
  - BGE has revenue decoupling, so weather minimally impacts earnings.
- PHI earned $0.07 vs. $0.06 in the quarter from increased distribution rates (+$0.02), slightly offset by O&M (-$0.01).
- HoldCo reported a loss of $0.03 vs. a loss of $0.06 from income taxes (+$0.02) and O&M (+$0.01).

11:00 A.M. ET Conference Call #: (800) 690-3108 ID#: 44816529

We will be focused on:

- View of the market for the Generation segment
- Update on Next Steps for Nuclear subsidies
- Commentary on mitigating regulatory lag across regulated jurisdictions

Disclosure Appendix

Exelon Corporation - EXC

We have managed or co-managed a public offering of securities for Exelon Corporation within the past 12 months.

Exelon Corporation is an investment banking client of ours.

We have received compensation for investment banking services from Exelon Corporation during the past 12 months.

We expect to receive or intend to seek compensation for investment banking services from Exelon Corporation within the next three months.

During the past 12 months, Exelon Corporation has been a client of the firm or its affiliates for non-securities related services.

As of the date of this report, we make a market in Exelon Corporation.

Reg A/C Certification

The research analyst(s) responsible for the preparation of this research report certifies that:(1) all the views expressed in this research report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers; and (2) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst(s) in this research report.

Rating System

Overweight - We expect the stock to outperform the analyst's coverage sector over the coming 6-12 months.

Sector Weight - We expect the stock to perform in line with the analyst's coverage sector over the coming 6-12 months.

Underweight - We expect the stock to underperform the analyst's coverage sector over the coming 6-12 months.

Other Disclosures

KeyBanc Capital Markets is a trade name under which corporate and investment banking products and services of KeyCorp and its subsidiaries, KeyBanc Capital Markets Inc., Member NYSE/FINRA/SIPC (“KBCMI”), and KeyBank National Association (“KeyBank N.A.”), are marketed.

KeyBanc Capital Markets Inc. (“KBCMI”) does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report has been prepared by KBCMI. The material contained herein is based on data from sources considered to be reliable; however, KBCMI does not guarantee or warrant the accuracy or completeness of the information. It is published for informational purposes only and should not be used as the primary basis of investment decisions. Neither the information nor any opinion expressed constitutes an offer, or the solicitation of an offer, to buy or sell any security. The opinions and estimates expressed reflect the current judgment of KBCMI and are subject to change without notice. This report may contain forward-looking statements, which involve risk and uncertainty. Actual results may differ significantly from the forward-looking statements. This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the specific needs of any person or entity.

No portion of an analyst’s compensation is based on a specific banking transaction; however, part of his/her compensation may be based upon overall firm revenue and profitability, of which investment banking is a component. Individuals associated with KBCMI (other than the research analyst(s) listed on page 1 of this research report) may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(A), financial interest, if any, by any research analysts listed on page 1 of this report will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosure Appendix. KBCMI itself may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(F), if KBCMI, or its affiliates, beneficially own 1% or more of any class of common equity securities in the subject company(ies) in this research report, it will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosures Appendix. This communication is intended solely for use by KBCMI clients. The recipient agrees not to forward or copy the information to any other person without the express written consent of KBCMI.

SOPHIE KARP ANALYST
sophie.karp@guggenheimpartners.com
212 518 9162

EXC reported inline results; guidance reaffirmed. EXC reported operating earnings of $0.54 vs. Guggenheim estimate of $0.53, consensus estimate of $0.54. Inline results despite weak power forwards which was somewhat offset by ZEC revenues, distribution rates etc. 2017 guidance reiterated within the range of $2.50-$2.80 and 6-8% utility growth trajectory vs. Guggenheim updated EPS estimate of $2.72 for 2017 as we incorporate 2Q17 results and 7% LT earnings growth.

Wow, a lot of focus (too much) on future ExGen spin scenario - We were certainly surprised by the number of inquiries on the call regarding a potential ExGen spin scenario as management has done a good job, in our view, addressing this topic on the past several calls. And, as we have highlighted in the past, the Merchant GenCo should remain core, for now – the ratings agencies are the governor on any potential strategic divestures...Mgmt. already took a very hard look at a potential divestiture of the de-regulated ExGen segment – over a year long process. It was very well noted during our past meetings that the nuclear aspect of the GenCo adds a level of complexity not seen with other strategic moves – the importance of an investment grade credit rating for the NRC has been front and center. In our view, given this very high bar to overcome with the rating agencies, EXC will likely need to make the best of it and continue to garner support with investors…Growth at the regulated utilities diluting ExGen exposure, removal of any remaining ZEC uncertainties coupled with further non-core asset sales will be key. As the utility self-funds dividend and HoldCo interest expense, we believe ExGen FCF could be used to further de-lever debt and even buy back stock IF the valuation disconnect continues – low valuation doesn't necessarily mean the company will spin the two businesses. And, IF a spin is unlocked, it would likely not come until the 2022-2023 time frame at the earliest, in our view. For reference, we estimate $1B in buybacks equates to 2-3% EPS and dividend growth given lower share count.

Dividend upside? Mgmt. reiterated that the board will be in discussions over the next couple of meetings for a possible change in dividend policy – recent ZEC rulings likely went a long way to building much needed confidence on potential policy changes. As we have noted in the past, the dividend appears well set up for growth but mgmt. will likely exercise caution before changing policy with growth of 2.5% noticeably below peers - any revisit of the dividend policy by Board approval would likely be meaningful, in our view. ***See our recent management roadshow note HERE for additional thoughts.***

ZEC in PA – given recent wins, Mgmt. underway with discussions with policymakers, intervenors and various other constituencies. With the bar set very high in recent decisions in Illinois and New York (and even CT), focus should turn to PA. Management reiterated TMI closure by September 2019 with end of the current refueling cycle – closure expected to be EPS accretive within the $0.04-0.07 range. Too early in the process to estimate traction – for our recent thoughts on PA ZEC opportunities, see our recent Commissioner hosted breakfast note HERE. ***See our note following the Judge rulings in IL HERE and NY HERE.***

Regulatory Jurisdictions – good traction in achieving ROE targets at POM by 2019; Mgmt. remains confident that two rate case cycles should remove the lag at POM... ***Continued on the next page...***

Management wrapped up the first cycle of rate cases and is underway with the second set of filings which are expected to conclude between Q4/17-Q1/18. As a reminder, current active rate cases include: (1) Maryland: $68.6mm electric distribution revenue ask at PEPCO with 10.10% ROE – final decision expected 10/2017; $27mm electric distribution revenue ask at DPL with 10.1% ROE – final decision due 02/2018; (2) Illinois: $95.6mm FRP filing at ComEd with 8.4% ROE – final decision due 12/2017. (3) New Jersey: $72.6mm electric revenue ask at ACE with 10.1% ROE – final decision due 12/2017.

Valuation

Our $44 price target is based on a sum-of-the-parts analysis. We assign ~$19/share for ExGen using a 7x weighted average EV/EBITDA applied to ExGen's various assets. We assign $30/share for the regulated utilities combined based on our 2018E EPS of $1.88 applied to a 16x regulated utility multiple. Subtracting out ~$5 in parent drag, we arrive at our 12-month PT.

Risks

Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM.

The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

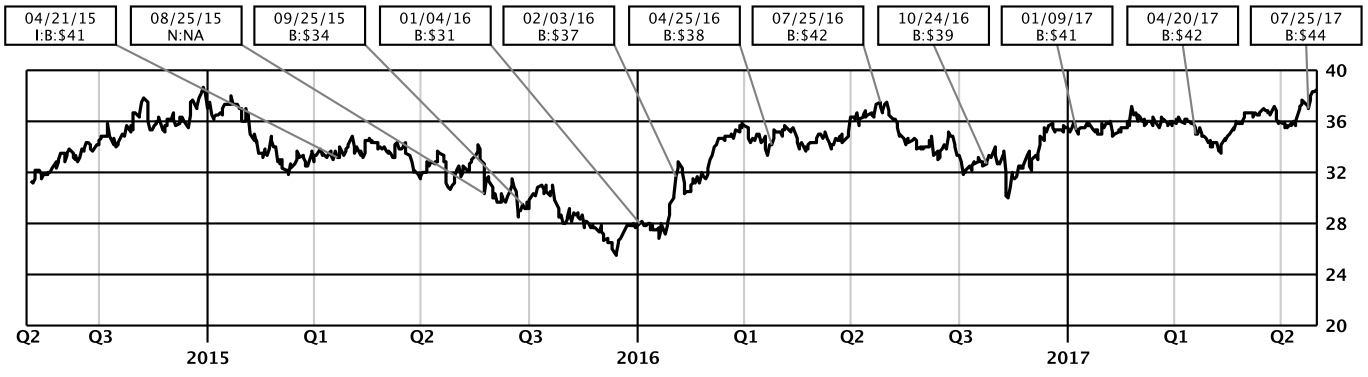
IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: Exelon Corporation (EXC) as of 08-01-2017



Created by BlueMatrix

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

EXC Remains on Track to Meet Expectations

Bottom Line: EXC reported 2Q17 operating EPS in line with consensus and at the high-end of its guidance range. Utility earnings were slightly favorable relative to plan, driven primarily by O&M timing across all utilities/rate relief. ExGen EPS were also favorable to plan, although $0.13 below 2Q16, reflecting timing of O&M and realized gains from the nuclear decommissioning trust, offset by weaker market conditions. EXC reaffirmed 2017 EPS guidance of $2.50-2.80, with all business segment contributions unchanged from prior disclosures. We find EXC fairly valued trading at a discount to its peers.

Key Points

2Q17 adjusted EPS of $0.54, at the high end of EXC's expectations, but $0.11 lower than the $0.65 earned in 2Q16. EPS benefited this quarter largely from incremental rate relief at its utility businesses and timing of O&M, offset by higher increased planned outages and declining market conditions adversely impacting ExGen, which were partially offset by a $0.05 ZEC contribution in NY and gains from the NDT. Utility earnings were $0.33 in 2Q17, compared to $0.36 a year ago, while ExGen earned $0.22 compared to $0.35.

2017 EPS guidance maintained at $2.50-2.80, with no change to segment contributions. EXC's utilities are expected to earn $1.55-1.95/share in 2017, supported by rate base growth of 8.5% over 2016 levels; ExGen's EPS guidance range is $1.05-1.15 (down from $1.27 in 2016) as lower energy prices and higher O&M are only partially offset by New York ZECs. As of 6/30/17, ExGen's 2017 gross margin is unchanged from prior guidance, but is $150 million lower for both 2018 and 2019, mainly reflecting the expected sale of EGTP and the expected closure of TMI.

Maintaining EPS estimates and price target. We find EXC shares fairly valued trading at a discount to its peers, as the merchant generation business continues to weigh on EXCs valuation, in our opinion. Our price target remains $37.

EPS: 2016 adjusted as reported; model will be updated post 10K filing.

Our Thesis

We believe EXC will continue to face headwinds at its competitive mainly nuclear generation business stemming from continued weak power and natural gas prices, rising O&M costs, and challenges from renewable generation, partially offset by ZEC subsidies. Growth at its regulated business could somewhat mitigate the pressures at the competitive business.

New Scenarios

Valuation

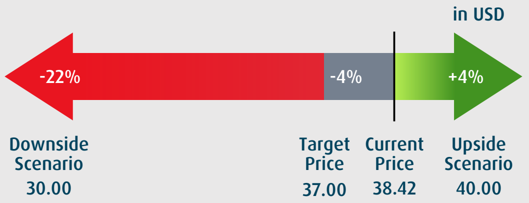
We find EXC shares fairly valued with few catalysts that would propel earnings or the stock at this time, although proceeds from asset sales would be a near-term positive. Power prices are weak and likely to remain so for some time. We expect Exelon to trade in a relatively narrow range, recognizing that downside risk is limited, in our opinion, unless power prices further deteriorate.

Upside Scenario $40.00

In a declining interest rate environment, we could see P/E multiples expand. This, together with a rising power and natural gas price environment, which could lead to EV/EBITDA multiple expansion to 8.9x, would equate to a share price of $40.

Downside Scenario $30.00

In a rapidly rising interest rate environment, we could see P/E multiples contract. This, together with a declining power and natural gas price environment, which could lead to EV/EBITDA multiple contraction to 7.2x, would equate to a share price of $30.



Company Description

Exelon is the largest competitive U.S. power generator, with ~32,700 MW of owned capacity. Its Constellation business unit provides energy products and services to business, public, and residential sector customers. Exelon's utilities deliver electricity and natural gas to 10 million customers in Delaware, DC, Illinois, Maryland, New Jersey, and Pennsylvania.

Company Models

Key Takeaways From the Conference Call

EPS Estimates

Exelon reaffirmed its 2017 EPS operating guidance of $2.50-2.80, with the utilities accounting for $1.55-1.95 ($1.61 in 2016), ExGen at $1.05-1.15 ($1.27 in 2016), and Parent/Other, a loss of $0.20 (-$0.19 in 2016).

Key 2017 utility drivers include a full-year contribution from PHI, rate-base growth and rate relief, offset by higher O&M, as well as higher depreciation expenses (new investment).

ExGen earnings guidance reflects the impact of hedging at lower energy prices, somewhat offset by partial-year revenues from the New York (April 1, 2017) ZEC program; contributions from the recently acquired FitzPatrick plant (March 2017); as well as the new Texas CCGTs (2,200 MW) that entered commercial operation this summer. While the ZEC program went into effect in Illinois on June 1, 2017, the Illinois Commerce Commission (ICC) has not yet conducted its ZEC procurement process. Therefore, EXC now expects this process to be completed and the ICC to award the winning ZEC contracts in 4Q17. As such, no ZEC-related revenue from Illinois will be recognized until the process is completed, although once in place, the Illinois ZEC revenue will be recognized retroactive to June 1, 2017.

We are making no change to our 2017-2019 EPS estimates of $2.70, $2.80 and $2.75, with declines at ExGen offsetting utility growth.

Utility Update

- EXC continues to make headway toward improving ROEs. That said, earned ROEs are still woefully low for its PHI units, with ACE currently at 6.4% on a trailing 12-month basis, and Delmarva and Pepco, both at 7.3%.
- EXC entered into settlement agreements in Delaware; with both the electric and gas cases approved totaling some $36 million and ROEs of 9.7%.
- Recently, EXC received a commission decision for its Pepco unit in D.C. for $36.9 million based on a 9.5% ROE.
- Recent filings for its PHI electric companies include cases for Pepco Maryland, ACE and Delmarva Maryland, totaling $168 million. Decisions are expected in October for Pepco MD and in 1Q18 for ACE and Delmarva MD.
- EXC also has a $95.6 million request pending before the ICC in Illinois with an expected decision during 4Q17.
- Total utility rate base growth is projected at 6.5% through 2020. About 75% of rate-base spending is recoverable through formulaic mechanisms and more than 70% of rate base is decoupled, providing earnings visibility.

ExGen Update

- As of June 30, 2017, total gross margin for 2017 is unchanged from EXC's YE16 disclosures at $8.15 billion, but lower by $50 million to $8.1 billion in 2018 and $7.77 billion in 2019. The lower margins in 2018 and 2019 reflect the anticipated sale of ExGen Texas Power, LLC (EGTP) and the possible retirement of the TMI nuclear plant in September 2019, after the next fuel cycle. That being said, EXC is working with stakeholders in Pennsylvania on a ZEC-like process that would enable the plant to continue to operate.

  - While the sale of EGTP will result in lower gross margin in 2018 and 2019 by about $100 million each year, it is nonetheless accretive to EPS by $0.02-0.03.
  - Should TMI be ultimately closed prematurely, due to poor economics and the lack of a ZEC being adopted in Pennsylvania. The 2019 impact on gross margin (from September 2019 to YE19) would approximate $50 million. However, as is the case with EGTP, the closure would benefit EPS by $0.04-0.07 annually beyond 2019 depending on the refueling year and positive cumulative cash flows of some $225 million through 2021.
  - The lower gross margin in 2018 of $150 million reflects the removal of EGTP from its portfolio and the impact of lower capacity revenue in MISO and New York. The lower gross margin in 2019 of $150 million is due to EGTP and the anticipated closure of TMI in September 2019.
  - As has been the case for some time now, EXC is about 11-14% behind its ratable hedging program for 2018 and is 8-11% behind for 2019. The majority of this is in the Midwest, as EXC's fundamental view of the spot market is higher in NiHub than current forward prices, which the company believes will correct itself.

- EXC's FFO/debt is projected at 21% for 2017, with a goal of 18-20% over the next several years. ExGen's debt/EBITDA ratio should approximate 2.9x in 2017, in line with its 3.0x target by 2020.

IMPORTANT DISCLOSURES

Analyst's Certification

I, Michael S. Worms, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA. These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosures

Disclosure 10: A research analyst, associate, or any person (or their household members) directly involved in the preparation of this research report has a financial interest in securities of Exelon.

Methodology and Risks to Target Price/Valuation for Exelon (EXC-NYSE)

Methodology: Our valuation is based on a combination of our 2018 adjusted EBITDA estimate with an 8x EV/EBITDA multiple and a 17x 2018E P/E multiple.

Risks: A material decline in power prices and/or a change in the regulatory environment.

ADDITIONAL INFORMATION IS AVAILABLE UPON REQUEST

BMO Financial Group (NYSE, TSX: BMO) is an integrated financial services provider offering a range of retail banking, wealth management, and investment and corporate banking products. BMO serves Canadian retail clients through BMO Bank of Montreal and BMO Nesbitt Burns. In the United States, personal and commercial banking clients are served by BMO Harris Bank N.A., (Member FDIC). Investment and corporate banking services are provided in Canada and the US through BMO Capital Markets.

BMO Capital Markets is a trade name used by BMO Financial Group for the wholesale banking businesses of Bank of Montreal, BMO Harris Bank N.A, (Member FDIC), BMO Ireland Plc, and Bank of Montreal (China) Co. Ltd. and the institutional broker dealer businesses of BMO Capital Markets Corp. (Member SIPC) in the U.S., BMO Nesbitt Burns Inc. (Member Canadian Investor Protection Fund) in Canada, Europe, and Asia, BMO Capital Markets Limited in Europe and Australia and BMO Advisors Private Limited in India.

Exelon Corp (EXC): Largely in-line 2Q17; 2017 guidance reiterated at $2.50-$2.80

Sentiment Indicator : neutral

Produced by Tucker, Shelby (RBC Capital Markets, LLC) on Wednesday, August 02, 2017, 08:58 AM ET

Disseminated on Wednesday, August 02, 2017, 09:05 AM ET

Our View: 2Q17 driven by better than expected nuclear volumes and other ExGEn margins, partially offset by worse than expected weather and higher expenses from nuclear refueling outages. We expect questions on the call to focus on: 1) thoughts on key points to be argued in the NY/IL appeal process; 2) updated expectations on timing and results of the DOE study on baseload generation; and 3) latest management thoughts regarding potential NJ/PA nuclear subsidy legislation.

Exelon Corp (EXC; $38.55; Outperform; $40 PT) reported 2Q17 adjusted earnings of $0.54 per share, $0.02 above our estimate of $0.52 per share and in line with consensus. The result is also at the upper end of management's guidance of $0.45-$0.55 per share and compares to 2Q16 results of $0.65 per share. Management reiterated their 2017 adjusted EPS guidance of $2.50-$2.80; our estimate is $2.67 versus consensus of $2.68. They also guided 3Q17 adjusted EPS to $0.80-$0.90. The following highlight some of the key EPS drivers of the quarter on a year-over-year (YoY) basis versus our estimates:

Exelon Generation margins: -$0.08 YoY, $0.06 above our estimate.

- Nuclear volume: $0.03, $0.05 better.
- Market conditions/portfolio management/ZECs: -$0.11, $0.01 better.

Utility margins (ComEd, PECO, BGE, PHI): +$0.04 YoY; $0.04 below our estimate.

- Weather: -$0.02, $0.02 worse.
- ComEd/BGE/PHI rates: $0.06, $0.02 worse.

Expenses/Other

- Planned refueling outage: -$0.05, $0.02 worse.
- Depreciation expense: -$0.04, $0.01 worse.
- Interest expense, net: $0.01 better.
- Share dilution: -$0.01, $0.01 better.

Consolidated trailing 12mo. earned ROEs at 9.7%. This compares to 9.9% reported as of 1Q17.

ExGen gross margin lower for 2018-2019 but mainly due to EGTP/TMI. The $8.1 billion and $7.7 billion in margin expectations for 2018 and 2019, respectively, are $150 million lower in both years versus that reported in 1Q17. We do note that most of the net decline is impacted by the removal of ExGen Texas Power (EGTP) and Three Mile Island (TMI) margins, both which are expected to have positive annual EPS impacts ($0.02-$0.03 for EGTP and $0.04-$0.07 for TMI).

Conference call at 11 AM ET. The dial-in number is (800) 690-3108, with pass code 44816529.

BARCLAYS

TOP PICK Exelon Corp.

2Q 2017 Results; Story on Track

Reiterate Overweight rating: We reiterate our Overweight rating and raise our price target to $44 from $43 on higher earnings per share estimates of $2.74/$2.85/$2.82 from $2.68/$2.83/$2.80 for ‘17/18/19 respectively mainly on deconsolidation of the Texas power portfolio. Exelon remains our Top Pick and we see upside drivers to our base case valuation related to the potential for further zero emission credit programs in NJ, PA, and OH similar to those recently legally upheld in IL and NY. Further, PJM has released white papers on corrective actions to address price formation to eliminate the impact of subsidies in the market, and we believe the impacts could be greater than those we cited in our July monthly (see *North America Power & Utilities: July Preview/June Review*, 7/17/’17). This is a result of minimum pricing potentially being higher than our $15/MWh assumption and the impacts of addressing the “missing-money” problem related to letting intermittent units set the marginal price could be significantly larger than the impacts of the other two market corrections we were able to analyze. We await the U.S. Department of Energy’s report on grid security and supply diversity which is expected this month.

Deconsolidation of Texas EPS Accretive: In the quarter EXC deconsolidated the Texas based assets in the ETGP portfolio. While this lowers ExGen gross margins by $100mln in ‘18/19 it is EPS accretive by $0.02-$0.03 as costs related to ETGP must also be removed. Three Mile Island (TMI) has not cleared a capacity auction in three years and therefore EXC announced that short of a zero emission credit like program in PA, TMI will shut down in September ‘19 at the end of the current fuel cycle. This impacts gross margins at ExGen by $50mln in ’19. Management noted on the call that the nuclear industry in PA contributes $2Bln to the state economy and is responsible for 1,600 jobs.

Utility Progress Continuing: Exelon management continues to improve the performance of the Pepco utilities with Pepco identified in the JD Power customer satisfaction survey as one of the most improved utilities ’17 over ’16. LTM ROEs remain at 7.3% versus 9.7% allowed levels but we anticipate continued constructive regulatory outcomes consistent with the Pepco D.C. order last week will allow EXC to continue to close the ROE gap. For the quarter EXC reported $0.54 vs. $0.65 last year, consensus and our estimate of $0.53. Management reiterated 2017 guidance of $2.50-$2.80.

Selected operating metrics					Average
Payout ratio (%)	47.2	47.2	46.5	48.2	47.3
Interest cover (x)	3.1	3.1	3.2	3.2	3.2
Regulated (%)	52.4	48.7	55.3	63.8	55.1

Price (02-Aug-2017)	USD 38.42
Price Target	USD 44.00

Why Overweight? We believe that that utility growth of 7-9% is achievable and will be funded by cash flow from the generation company even with the current forward curves. Any additional legislation similar to the CES in New York or the inclusion of the CES in our numbers is upside to our estimates.

Upside case USD 49.00

Our upside case assumes the impact of the zero emission credits in New York for the genco and assumes a 10% premium for the utility valuation given the above average growth.

Downside case USD 32.00

Our downside case assumes a 10% discount for the utility and a 4x EBITDA at the genco based on current forwards, with no consideration of the CES or FitzPatrick acquisition

Upside/Downside scenarios

ANALYST(S) CERTIFICATION(S):

We, Daniel Ford, CFA and Ross A. Fowler, CFA, hereby certify (1) that the views expressed in this research report accurately reflect our personal views about any or all of the subject securities or issuers referred to in this research report and (2) no part of our compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this research report.

IMPORTANT DISCLOSURES

Barclays Research is a part of the Investment Bank of Barclays Bank PLC and its affiliates (collectively and each individually, "Barclays").

Availability of Disclosures:

Where any companies are the subject of this research report, for current important disclosures regarding those companies please refer to https://publicresearch.barclays.com or alternatively send a written request to: Barclays Research Compliance, 745 Seventh Avenue, 13th Floor, New York, NY 10019 or call +1-212-526-1072.

The analysts responsible for preparing this research report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by investment banking activities, the profitability and revenues of the Markets business and the potential interest of the firm's investing clients in research with respect to the asset class covered by the analyst.

All authors contributing to this research report are Research Analysts unless otherwise indicated.

The publication date at the top of the report reflects the local time where the report was produced and may differ from the release date provided in GMT.

Analysts regularly conduct site visits to view the material operations of covered companies, but Barclays policy prohibits them from accepting payment or reimbursement by any covered company of their travel expenses for such visits.

In order to access Barclays Statement regarding Research Dissemination Policies and Procedures, please refer to https://publicresearch.barcap.com/static/S_ResearchDissemination.html. In order to access Barclays Research Conflict Management Policy Statement, please refer to: https://publicresearch.barcap.com/static/S_ConflictManagement.html.

The Investment Bank's Research Department produces various types of research including, but not limited to, fundamental analysis, equity-linked analysis, quantitative analysis, and trade ideas. Recommendations contained in one type of research product may differ from recommendations contained in other types of research, whether as a result of differing time horizons, methodologies, or otherwise.

V: The equity securities of this Canadian issuer include non-voting restricted shares.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

AES Corp. (AES)
American Electric Power (AEP)
Aqua America (WTR)
Brookfield Renewable Energy Partners LP (BEP)
Calpine Corp. (CPN)
CenterPoint Energy Inc. (CNP)
Consolidated Edison (ED)

Distribution of Ratings:

Barclays Equity Research has 1722 companies under coverage.

41% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 52% of companies with this rating are investment banking clients of the Firm; 73% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 37% of companies with this rating are investment banking clients of the Firm; 60% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Explanation of other types of investment recommendations produced by Barclays Equity Research:

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

Disclosure of previous investment recommendations produced by Barclays Equity Research:

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/ResearchInvestmentRecommendations*.

M: Exelon Corp. is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our current $44 price target is premised upon a 2019 group average multiple of 16.9x applied to the utility net parent earnings of $1.81 resulting in $31 of utility value. Exgen is valued at 6.6x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, the combined value is $44.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

Contents

Analyst Note 02 Aug 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced earnings per share of $0.54 on an adjusted basis during the second quarter of 2017, down from $0.65 in the second quarter of 2016. Earnings are tracking in line with our full-year estimate, and management reaffirmed its $2.50-$2.80 EPS guidance range.

Exelon achieved two key court victories in July affirming the legality of nuclear subsidies it began receiving this year in New York and Illinois. We think this is just the start of the legal and regulatory debate. We do not include the five subsidized plants in our long-term forecast, but including them would not have a sizable impact on our fair value estimate because the subsidies limit their value upside and downside.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed by Exelon's ability remain the world's premier nuclear operator. The fleet realized a 91% capacity factor in the quarter despite six refueling outages.

This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations. Its next area of focus is in Pennsylvania, where it has committed to close its Three Mile Island nuclear plant by September 2019 unless it receives subsidies. We assume TMI closes as scheduled.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020. Management reported the utilities'

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

returns on equity are near 10% with upside potential at the Pepco Holdings utilities. This return is better than many of Exelon's peers'.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ▶**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ▶**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ▶**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ▶**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ▶**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

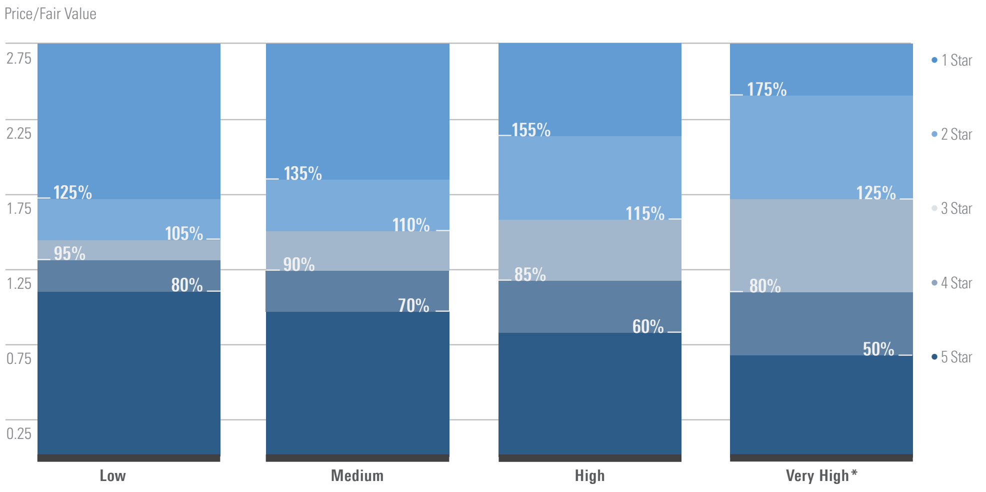
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc.performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

Solid Quarter & Good L-T Reasons to Stay "Long"

Rating Outperform, 12 Month Target up to $41 from $39

EXC reported 2Q17 adjusted EPS of $0.54 vs. consensus $0.55 ($0.65 in 2Q16), which was just below the high end of their $0.45 - $0.55 guidance range for the quarter. The FY'17 outlook was affirmed at $2.50 - $2.80. ExGen was down $0.13 but this was driven by factors contemplated in guidance. That includes lower realized power prices and the expiration of the Ginna nuke plant RSSA payment (-$0.16 in aggregate) and higher O&M on planned outages (-$0.05) offset by NY ZEC revenues that became effective 4/1/17 (+$0.05) and other items (+$0.03). Also lower were ComEd and PECO (by -$0.01 YoY). At the former higher rate base and formula earnings (+$0.02) were more than offset by the absence of a 2016 weather benefit and other items (-$0.02). At the latter it was primarily on weather / sales volumes (-$0.01). BGE was the biggest utility gainer, adding $0.02 YoY on the absence of a 2016 rate case disallowance and distribution rates (+$0.04) partially offset by income taxes / other (-$0.02). PHI was also higher, adding $0.01 YoY as higher distribution rates (+$0.02) were partially offset by higher O&M (-$0.01). Guidance for 3Q17 was initiated at $0.80-$0.90, which does *not* include the impact of IL ZEC revenues. Although that program went into effect on 6/1/17, ZEC procurement and contract execution will not occur until Q4, at which point they will be recognized retroactive to the program start date. We discuss recent developments on those ZEC legal proceedings and the pending DOE study here.

The cash flow outlook is still very solid through 2020. Going forward, their utility financial outlook was unchanged. At ExGen the outlook looked worse at first glance but that was not an accurate read. Gross margin is forecast now to drop $150mm in each of FY'18 and FY'19, however that is due to the removal of the ExGen Texas Power (EGTP) portfolio from guidance (assets are for sale) - which is responsible for $100mm of that delta in each of those years - and the removal of Three Mile Island (TMI is being retired in '19) - which is responsible for the remaining $50mm of the delta in FY'19. That leaves a $50mm reduction to FY'18, which is due to lower realized and expected capacity revenues in MISO and NYISO. Otherwise, the ExGen gross margin outlook was fundamentally unchanged through the forecast period, even as they updated for 6/30/17 power forward curves. New business executions and hedges limited the impact of degradation in forwards. Cash flow actually looks marginally better over the forecast period as these decisions are accretive to earnings and cash flow. TMI's shutdown will add $0.05 to FY'19 EPS, as even though it will not retire until 9/30/19 ExGen will be able to avoid a costly refueling outage. The run-rate EPS accretion number associated with shutting down TMI will be $0.04 in refueling and $0.07 in non-refueling years. Similarly, EGTP's sale will produce $0.02-$0.03 in EPS benefits. EXC remains committed to maintaining leverage at ExGen below 3X debt/EBITDA and is ahead of that target based on the current outlook. They indicated they now have flexibility to consider parent debt paydown (although they don't have material maturities until 2020) and may revisit the current divided growth policy (EXC is committed to 2.5% dividend growth through 2018) at YE'17.

We are updating our '17-'19 EPS forecast to $2.70 / $2.80 / $2.85 from $2.65 / $2.85 / $2.85, taking in to account updated guidance and 7/26/17 curves. We think the assumptions driving EXC's view of the earnings growth drivers in its core utilities business and ExGen as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management are still wholly credible. The core utilities are forecast to grow rate base at 6.5% from '17-20 with earnings growth of 6-8% (down from 7-9% from '16-'20 solely due to a higher '17 base, the '20 forecast is up a nickel). We see a turnaround at PHI similar to the one EXC engineered at BGE after the CEG acquisition as feasible, with annual rate cases at most of the PHI companies (the first "wave" of these largely resolved) and the ability to harvest operating synergies. So, there is line of sight for EPS at EXC's utilities (ex-parent overheads) growing from ~$1.60 in FY '17 to ~$2.00 in 2020. From a cash flow perspective we see ExGen organically producing ~$5.85bn of free cash flow through FY'19, 67% of the $8.75bn they are targeting through 2020 with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. The ~$300mm garnered from the 7/6/17 sale of 49% of its interest in the renewables JV puts that at 70%. Assuming they can sell their TX assets (the EGTP portfolio) that will be another $662mm in debt that comes off the books and should be accretive to credit metrics.

Our 12-month price target is increased to $41 from $39, maintaining Outperform rating. Our forecast for utility EPS contribution minus parent overheads is ~$1.60/share in '17 which by 2019 we expect to be ~$1.85 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to +/-$2.00/share. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth ~$33.15/share (17.8X '19 EPS). That implies ExGen is worth only ~$5.25/share today, which is around 5.1X '19 EPS or 4.8X '19 EV/EBITDA and an unlevered free cash flow yield to the EV of 13% with debt/EBITDA at YE '19 of ~3.0X. They are taking all the cash flow from that lower multiple part of the business and either returning it to shareholders or investing in the higher multiple utility business. Overall, EXC is trading at 13.5X FY'19 earnings while pure regulated names are at +/-17.8X. The EXC dividend yield is 7bps above that of the regulated peer group at ~3.4%. While The dividend growth commitment of 2.5% annually through 2018 is below average that may change in early '18 given their success in meeting debt reduction goals at ExGen. Some risks to ExGen revenues are also palpable, but we think that the overall valuation gap, given our view of the businesses risk and capital allocation plan, is too high. This is especially considering the wins EXC recently gained on nuke plant revenue enhancements in IL and NY and potentially growing momentum for this type of action in other states and/or price formation reform in the organized power markets. At $41/share our target price implies a valuation for ExGen of 6.5X '19 EV/EBITDA and an unlevered free cash flow yield of ~10%. The consolidated P/E would still be only 14.4X '19 EPS.

On 7/25/17 District Judge Valerie Caproni granted motions by the NYPSC and EXC to dismiss a lawsuit filed by the Coalition for Competitive Electricity, EPSA, and other power producers (16-CV-8164) challenging the legality of the state's zero emissions credit (ZEC) revenues provided under the state's "Clean Energy Standard" (CES). The New York CES was established on 8/1/16, went into effect on 4/1/17, and amongst other items provides up to ~$480mm in annual ZEC revenues for EXC's Ginna, Nine Mile Point, and Fitzpatrick nuclear plants. In her opinion here, Judge Caproni stated that "the effect of ZECs on the wholesale auction is legally indistinguishable from the effect of RECs" and thus "the Court cannot find any principled basis to hold that the ZEC program is preempted even though its sibling REC program is not." This is a claim EXC has repeatedly made (to apparent success) and one which we have agreed with. A number of the 29 states that have adopted renewable portfolio standards have continued to employ RECs as a means of compensation, so we find the strength of the opinion here especially salient. The plaintiffs are likely to appeal the decision, which would move it U.S. Court of Appeals for the Second Circuit. We think such an appeal will occur very quickly based on the IL proceedings (discussed below). In that case, an appeal was filed by EPSA within one business day of the motion to dismiss being granted. We reiterate it is likely that the totality of legal challenges will be a protracted affair. However, we think - *yet again* - for a district court to have dismissed a case outright represents a significant legal victory.

On 7/14/17, District Judge Shah granted motions by EXC, the Illinois Commerce Commission, and the Illinois Power Agency to dismiss lawsuits filed by EPSA, other power producers, and certain ComEd customers (17-CV-01164) that would have put a stay on that state's ZEC program. The appellate court has since set a briefing schedule. The ZEC program was instituted with the passage of the Energy Future Jobs Act on 12/7/16 and became effective on 6/1/17, providing up to $235mm in annual revenues to keep the economically challenged Clinton and Quad Cities nuclear plants online. In his ruling in favor of the defendants, Judge Shah cited both (1) a lack of subject matter jurisdiction on the part of the plaintiffs and (2) a failure to state a claim as grounds for the dismissal. That decision can be found here. The plaintiffs appealed the decision on 7/17/17, which moves it U.S. Court of Appeals for the Seventh Circuit. That court has since set an expedited schedule requiring appellant briefs by 8/28/17, appellee briefs by 9/27/17, and appellant reply briefs by 10/27/17.

The DOE study may be imminent. Tax policy changes are being studied. Back on 4/14/17, Secretary of Energy Rick Perry directed the DOE to perform a study exploring issues critical to maintaining the reliability of the electric grid, including the efficacy of wholesale electricity markets and the role that tax policies, subsidies, and regulation are having on early retirement of baseload power plants. We think the DOE is supportive of the idea that price formation in energy and capacity markets is not adequate for baseload generators and want to help bolster economic outcomes for nuclear and coal plants. However, practically speaking they have limited jurisdiction. We think DOE may intervene by opining that the FERC should take action to change market rules. Also the pending FY18 Energy and Water Development Appropriations Bill orders the DOE to analyze the potential impact of a "Zero Emissions Energy Credit" which contemplates a change in the Federal tax code that would replace the renewable energy subsidies (after they phase out) with a broader tax benefit applicable to all zero-emissions power plants like nuclear units. That analysis would be provided to Congress within 180 days of the enactment. It is not at all clear how much momentum this idea has in Congress, whether it will receive a favorable analysis from DOE, or whether it would be a component of any near-term tax reform package. However, its biggest beneficiaries would be merchant nuclear operators like EXC, PEG, and FE.

What's next? The sale process for the economically-challenged EGTP portfolio of CCGTs and NG peakers (3,398 MW) in ERCOT is underway, with an agreement possible by late 3Q17 or early 4Q17. On 7/25/17, the DCPSC in Pepco's electric distribution rate case (in which they filed on 6/30/16 for a $76.8mm increase premised on a 10.60% ROE) authorized a $36.9mm increase premised on a 9.50% ROE (1139). A MDPSC decision in Pepco's electric distribution rate case (in which they filed on 3/24/17 for a $69mm increase premised on 10.10% ROE) is expected by 10/20/17 (9443). A final MDPSC decision in Delmarva Power & Light's pending electric rate case (filed on 7/14/17 seeking a $27mm increase premised on a 10.10% ROE) is expected by 2/14/18. A NJBPU decision in ACE's electric distribution rate case (in which they filed on 3/30/17 for a $70mm increase premised on 10.10% ROE) is expected in March 2018 (ER17030308).

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming capacity auctions would be accretive but a significantly lower capacity auction price would be negative.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform – the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line – the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform – the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and

trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long – the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short – the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position – the stock is not included in the model portfolio.
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal 100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

With Nuclear Subsidy Debate Past, Exelon Hits Core Growth Expectations

Investment Thesis

Travis Miller, Strategist, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Strategist, 02 August 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced earnings per share of $0.54 on an adjusted basis during the second quarter of 2017, down from $0.65 in the second quarter of 2016. Earnings are tracking in line with our full-year estimate, and management reaffirmed its $2.50-$2.80 EPS guidance range.

Exelon achieved two key court victories in July affirming the legality of nuclear subsidies it began receiving this year in New York and Illinois. We think this is just the start of the legal and regulatory debate. We do not include the five subsidized plants in our long-term forecast, but including them would not have a sizable impact on our fair value estimate because the subsidies limit their value upside and downside.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed by Exelon's ability remain the world's premier nuclear operator. The fleet realized a 91% capacity factor in the quarter despite six refueling outages.

This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations. Its next area of focus is in Pennsylvania, where it has committed to close its Three Mile Island nuclear plant by September 2019 unless it receives subsidies. We assume TMI closes as scheduled.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020. Management reported the

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship

Entergy Corp ETR	USD	13,846	10,824	-11.18	0.00

utilities' returns on equity are near 10% with upside potential at the Pepco Holdings utilities. This return is better than many of Exelon's peers'.

Economic Moat

Travis Miller, Strategist, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle

Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move

so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Strategist, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, CPA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

PJM Capacity Auction Results: Surprisingly, No Surprises

Travis Miller, Strategist, 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers

Travis Miller, Strategist, 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Trump's Announcement to Exit Paris Agreement Has Little Effect on Utilities

Andrew Bischof, CFA, CPA, Sr. Eq. Analyst, 02 June 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities after President Trump announced plans to exit the Paris Climate Agreement.

Despite the withdrawal, we continue to forecast U.S. renewable energy capacity doubling during the next eight years. State renewable portfolio standards, or RPS, and other local policies remain the industry's primary growth driver, not federal environmental policy. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use by 2025, up from 15% now, based solely on existing state RPS.

We think Trump's move to abandon the U.S. Clean Power Plan and Paris Agreement could even embolden states to strengthen renewable energy standards, offering upside to our forecasts. Supportive tax policy and pro-manufacturing initiatives also offer upside. And corporate renewable energy purchases should continue to grow as businesses realize the economic and public perception benefits. Thus, we are not surprised that many business leaders denounced Trump's decision.

We also forecast carbon emissions from the power generation sector will keep falling toward Paris Agreement targets given the growth in renewable energy and gas generation. Low natural gas prices and turbine efficiency improvements are forcing coal plant shutdowns and reduced run times for competing coal generators, which emit twice as much carbon as an equivalent gas plant.

Utilities operating in states with constructive regulation and environmental policy support could realize 7%-9% annual earnings and dividend growth the next three to five years. Best positioned are utilities like Dominion Energy, Duke Energy, American Electric Power, and CMS Energy that are investing billions of dollars in new infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

U.S. Nuclear: Down but Not Out

Travis Miller, Strategist, 27 July 2017

We are reaffirming our fair value estimates, moat and moat trend ratings for all U.S. utilities with nuclear exposure after analyzing the economics, regulation, and sustainability attributes of nuclear generation in the U.S.

Nuclear power is at an inflection point in the U.S., with a wide gap developing between the anti-nuclear and pro-nuclear factions. This is a critical debate. The 99 nuclear units in the U.S. provide 20% of the nation’s electricity and meet essential reliability needs for major cities. Competition from cheap natural gas generation and renewable energy are pinching profits now, but we think a long-term perspective is important.

Our forecast for flat or growing U.S. nuclear capacity is more bullish than most forecasts. In particular, we think the U.S. could add as much as 5% net new nuclear capacity by 2040 primarily due to nuclear uprates. Most market forecasts assume natural gas is the marginal generation source, but our calculations show nuclear uprates have similar economic returns and less long-term capital reinvestment risk. We think nuclear has a more favorable environmental, social, and governance, or ESG, profile than most other nonrenewable energy sources. Its low carbon-emissions profile and reliability make it a critical contributor to meeting state and federal environmental policy goals.

We think the best opportunity for investors is to take advantage of the market's concerns about spiraling new-build nuclear costs and regulatory risk. Scana and Southern Company trade at steep discounts to peers even after adjusting for their new-build project risks. Among existing plant owners, only one utility has maintained a big bet on nuclear: Exelon. The stock looks pricey now, but its scale and political clout as the largest U.S. operator give it more option upside than any U.S. utility. We also think top-tier nuclear operators such as Exelon and Xcel Energy should earn premium valuations for their positive ESG characteristics.

With Nuclear Subsidy Debate Past, Exelon Hits Core Growth Expectations

Travis Miller, Strategist, 02 August 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced earnings per share of $0.54 on an adjusted basis during the second quarter of 2017, down from $0.65 in the second quarter of 2016. Earnings are tracking in line with our full-year estimate, and management reaffirmed its $2.50-$2.80 EPS guidance range.

Exelon achieved two key court victories in July affirming the legality of nuclear subsidies it began receiving this year in New York and Illinois. We think this is just the start of the legal and regulatory debate. We do not include the five subsidized plants in our long-term forecast, but including them would not have a sizable impact on our fair value estimate because the subsidies limit their value upside and downside.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed by Exelon's ability remain the world's premier nuclear operator. The fleet realized a 91% capacity factor in the quarter despite six refueling outages.

This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations. Its next area of focus is in Pennsylvania, where it has committed to close its Three Mile Island nuclear plant by September 2019 unless it receives subsidies. We assume TMI closes as scheduled.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020. Management reported the utilities' returns on equity are near 10% with upside potential at the Pepco Holdings utilities. This return is better than many of Exelon's peers'.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

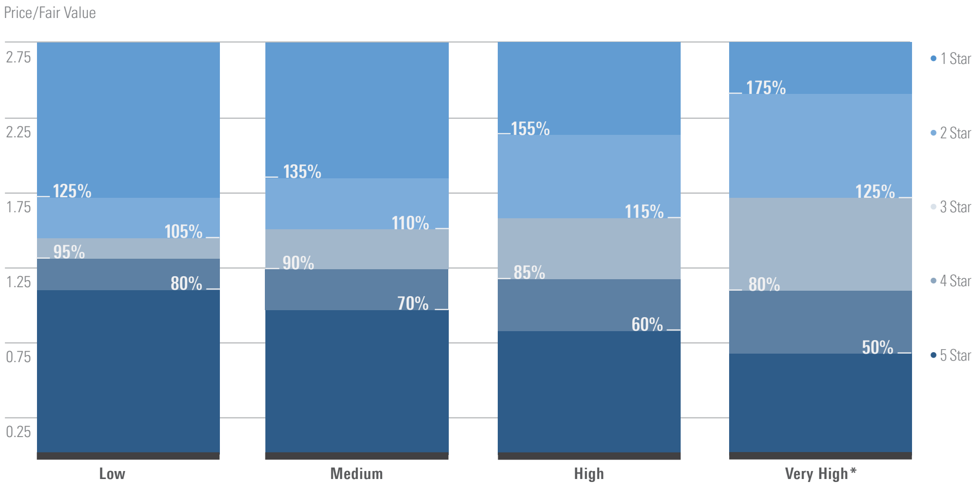
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ▶**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ▶**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ▶**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ▶**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ▶**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ▶**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ▶**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ▶**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ▶**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ▶**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ▶**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

Building legal momentum

Still a cheap way to play regulated growth

EXC delivered a relatively in line Q2 and reaffirmed 2017 EPS guidance of $2.50-$2.80. The stock has outperformed a shrinking hybrid utility group YTD by 4-5% but has still lagged the S&P utilities. We continue to view EXC as a discounted way to play high-quality regulated utility growth coupled with a cash-flow driven merchant/retail de-levering story. Upside optionality from policy-related catalysts, such as the potential establishment of further state ZEC programs (Pennsylvania or New Jersey) and other power market reforms being worked on in the Regional Transmission Organization (RTO) arena remain a key component of the EXC story. DOE's pending baseload and reliability study may be the next data point with our core expectation being that report will support and encourage ongoing initiatives at the FERC and in the RTOs. We reiterate our Buy rating and $41 PT.

Gross margin down on EGTP and TMI removal

EXC updated forecast gross margin disclosures for 2017-2019 to reflect the anticipated retirement of Three Mile Island nuclear plant (TMI) and the sale of the ExGen Texas portfolio as well as new hedges added in the quarter. Versus the Q1 stage, 2018 gross margin declined $150M to $8.1B with 2019 also $150M lower at $7.7B. The planned sale of EGTP accounts for $100M of the reduction in each year while the assumed shut-down of TMI lowers 2019 by $50M for the partial year. While these margin declines for portfolio changes are notable, lower ongoing expenses will more than offset, with EXC disclosing that the EGTP sale should be $0.02-$0.03 accretive to EPS with the TMI shut-down adding $0.04-$0.07 in 2020 and beyond. Management also expect $0.05 of TMI-related accretion in 2019 as they will no longer have refueling outage costs at the facility in that year, if it indeed retires.

Largely maintaining estimates

While we have adjusted our model for Q2 results, updated gross margin, and other adjustments, we largely leave our 2017-2019 EPS estimates unchanged. 2017 is still $2.65, 2018 is down $0.05 to $2.85 driven by modestly lower UP&O and generation forecasts and 2019 is unchanged at $2.70. For Utility and Parent our forecasts are close to the midpoint of management's previously provided guidance, with an expectation that EXC will be able to narrow the gap between the PHI utilities' earned and authorized return on equity.

Pushing for action in Pennsylvania and elsewhere; FERC quorum imminent?

Sounding confident after robust first-round legal wins on NY and IL ZEC programs, EXC highlighted that they are continuing to push for market reforms that will

better value the benefits of reliable and zero emissions nuclear plants. Attention is now clearly focused on the potential for a ZEC program in PA and also the potential for wholesale market reforms stemming from the DOE's ongoing baseload power study, with the results expected later this month. Relatively consistent with our view, EXC believes the results of the study will help set an agenda for the newly appointed FERC commissioners rather than result in any immediate targeted benefits for specific generators. Overall, though with potential action this fall in Pennsylvania and a pick-up in activity at FERC once the new commissioners are eventually confirmed by the Senate, we continue to believe EXC is favorably positioned. **As a late side note, industry reports this evening indicate that late on Wednesday the White House sent the formal nomination packages for Democrat nominee Richard Glick and expected chairman Kevin McIntyre to the Senate Energy and Natural Resources Committee. This reportedly could pave the way for a Senate floor vote before the August recess on a package of pending nominees including Robert Powelson and Neil Chatterjee who have already been approved by the Committee.**

Merchant-utility split? Not so fast, at least while stock is working

While a lot of investor attention, including ours, has focused on the possibility for EXC to potentially separate its regulated and merchant businesses, management did not appear in any rush. CEO Crane reiterated the benefits of the combination with EXC's utilities utilizing ExGen's free cash flow for infrastructure investment while also noting a recent improvement in stock value. From our perspective it is probably this recent uptick in relative performance which limits the urgency of considering a more significant strategic transaction. In terms of metrics, EXC will most likely continue to assess their relative valuation versus peers through a combination of measures including P/E and sum-of-parts.

Dividend update expected early next year

With debt targets largely met, EXC noted plans to discuss a dividend strategy with their board in the coming months with the expectations being for another multi-year outlook to be communicated in early 2018. Incremental dividend growth is likely to be weighed against incremental debt reduction at the holding company.

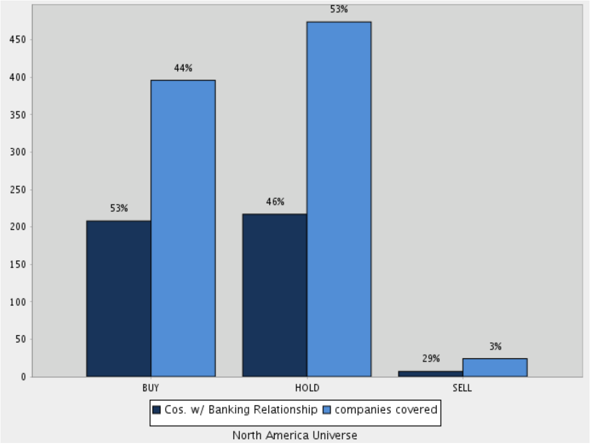
Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Equity rating dispersion and banking relationships



Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of these websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst’s judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

COMPANY UPDATE

Thursday, August 3, 2017

Exelon Corporation

Improved Visibility Drives Multiple Expansion

QUICK TAKE: The stock traded off versus the group despite the reiteration of guidance and earnings beat, giving back some of its recent outperformance. Concerns regarding the downtick in gross margin expectations at ExGen for the guidance period and the chance this trend extends into 2020 and beyond given the current market dynamics are overblown, in our opinion. We view the outlook at ExGen to have more clarity following the dismissals of the ZEC lawsuits and the likelihood of improved cash flows resulting from the planned retirement of underperforming assets. **We are increasing our price target from $37 to $40**, expanding our P/E multiple to reflect these factors and the increasing contributions from the company's utility segments.

KEY POINTS

ZEC Lawsuits Dismissed: Cases in New York and Illinois contesting the legality of the state programs were dismissed in separate federal court rulings last month on both procedural and substantive grounds, suggesting a higher probability of the rulings being upheld at the pending appeals. These rulings create more certainty regarding the ultimate receipt of the ZEC subsidies for the eligible plants, and also provide a clear road map for similar legislative relief for underperforming plants in other jurisdictions. EXC has clearly demonstrated an ability to influence outcomes to support its nuclear fleet and we would expect this trend to continue.

TMI Shutdown: On that note, the company has announced it will retire the Three Mile Island nuclear plant after it once again failed to clear the most recent PJM capacity auction. The facility will close by September 2019 before its refueling cycle should a ZEC-like subsidy not materialize. The planned closing reduces out-year gross margin forecasts, but greater cash flow savings make the plans about $0.05/share accretive to earnings on an annualized basis.

PHI Rate Cases On Schedule: EXC has received rulings on four legacy PHI rate cases year-to-date, with total revenue increases of about $112 million. Authorized ROEs range from 9.5% to 9.7%, well ahead of current returns closer to 7%. Three more rate cases are outstanding with aggregate revenue requests of about $168 million with associated ROEs of 10.1%. Execution of a steady succession of these claims drives the 6.5% rate base and 6%-8% earnings CAGRs at the utility segments.

Qtly EPS (Dil)	Q1	Q2	Q3	Q4	Year	P/EPS
2015A	$0.71	$0.59	$0.83	$0.38	$2.49	11.1x
2016A	$0.68	$0.65	$0.91	$0.44	$2.69	13.2x

Company Overview

Company Description

Exelon Corporation is a diversified power utility company with operations throughout the United States, operating generation, transmission, and distribution assets in both merchant and regulated markets. The Generation segment operates a large regional and fuel-diversified competitive electricity business, including the largest nuclear power generation fleet in the country. The company owns regulated utilities ComEd, BGE, PECO, and Pepco Holdings, which provide electric transmission and distribution services to customers within their designated service areas.

Risks

Risk factors that may impede the achievement of the price target: (1) Industry fundamentals with respect to customer demand or product/service pricing could change and adversely impact expected revenues and earnings; (2) issues relating to major competitor or market shares or new product expectations could change investor attitudes toward the sector or the company; (3) unforeseen developments with respect to the management, financial condition or accounting policies or practices could alter the prospective valuation; or (4) external factors that affect the U.S. economy, interest rates, the U.S. dollar or major segments of the economy could alter investor confidence and investment prospects.

Key Risks:
Regulatory factors, interest rates, commodity prices, operational factors, including running fleet of nuclear power reactors

Appendix A: Important Disclosures

I, Jonathan Donnel, certify that (1) the views expressed in this report in connection with securities or issuers that I analyze accurately reflect my personal views and (2) no part of my compensation was, is, or will be directly or indirectly, related to the specific recommendations or views expressed by me in this report.

This research report was prepared by employees of Scotia Howard Weil, a division of Scotia Capital (USA) Inc., who have the title of Research Analyst.

All pricing of securities in reports is based on the closing price of the securities' principal marketplace on the night before the publication date, unless otherwise explicitly stated.

All Equity Research Analysts report to the Head of Equity Research. The Head of Equity Research reports to the Managing Director and Co-Head, Global Capital Markets, who is not and does not report to the Head of the Investment Banking Department. Scotia Howard Weil has policies that are reasonably designed to prevent or control the sharing of material non-public information across internal information barriers, such as between Investment Banking and Research.

The compensation of the research analyst who prepared this report is based on several factors, including but not limited to, the overall profitability of Scotiabank, Global Banking and Markets, and the revenues generated from its various departments, including investment banking, trading fees and other types of transactions. Furthermore, the research analyst's compensation is charged as an expense to various Scotiabank, Global Banking and Markets departments, including investment banking. Research Analysts may not receive compensation from the companies they cover.

Definition of Scotia Howard Weil Equity Research Ratings & Risk Rankings

We have a four-tiered rating system, with ratings of Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

The rating assigned to each security covered in this report is based on the Scotiabank, Global Banking and Markets research analyst's 12-month view on the security. Analysts may sometimes express to traders, salespeople and certain clients their shorter-term views on these securities that differ from their 12-month view due to several factors, including but not limited to the inherent volatility of the marketplace.

Ratings

Focus Stock (FS)
The stock represents an analyst's best idea(s); stocks in this category are expected to significantly outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Outperform (SO)
The stock is expected to outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Perform (SP)
The stock is expected to perform approximately in line with the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Underperform (SU)
The stock is expected to underperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Other Ratings

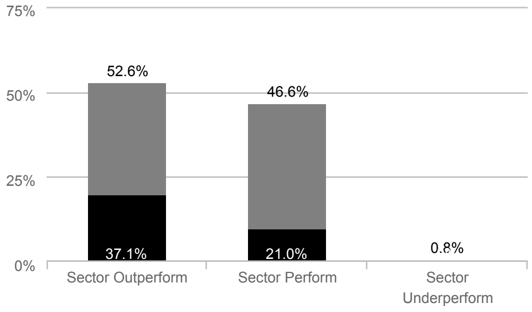
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Ranking
As of June 22, 2015, Scotiabank, Global Banking and Markets discontinued its Low, Medium, and High risk rankings. The Speculative risk ranking reflects exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, and exceptionally high stock volatility. The Director of Research and the Supervisory Analyst jointly make the final determination of the Speculative risk ranking.

Scotia Howard Weil Equity Research Ratings Distribution*

Distribution by Ratings and Equity and Equity-Related Financings*



▨ Percentage of companies covered by Scotia Howard Weil within each rating category.

■ Percentage of companies within each rating category for which Scotia Howard Weil has undertaken an underwriting liability or has provided advice for a fee within the last 12 months.

* As of July 31, 2017. Source: Scotia Howard Weil.

For the purposes of the ratings distribution disclosure FINRA requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to strong buy, buy, neutral and sell ratings, respectively.

General Disclosures

This research report was prepared by employees of Scotia Howard Weil, a division of Scotia Capital (USA) Inc. who have the title of Research Analyst. Scotia Capital (USA) Inc., an SEC registered broker-dealer and a member of FINRA and the NYSE, is wholly owned by Scotia Capital Inc., a Canadian Investment Dealer, and indirectly owned by The Bank of Nova Scotia. Scotiabank, together with "Global Banking and Markets," is a marketing name for the global corporate and investment banking and capital markets businesses of The Bank of Nova Scotia and certain of its affiliates in the countries where they operate, including Scotia Capital (USA) Inc.

All other trademarks are acknowledged as belonging to their respective owners and the display of such trademarks is for informational purposes only.

The frequency of reports is determined by the analyst on a case-by-case basis, driven by external market factors and issuer announcements. Analysts will endeavor to review and publish such estimates and recommendations as soon as possible after the release of material information by the issuer or the occurrence of other relevant events. This will typically involve, at a minimum, a summary of quarterly earnings releases.

In addition to Scotia Howard Weil Research, Scotiabank publishes and distributes Scotiabank Global Banking and Markets Equity Research (“Scotiabank Research”), which is a separate research publication. Scotia Howard Weil Research Analysts and Scotiabank Research Analysts are independent from one another and their respective coverage of issuers is different. In addition, because they are independent from one another, Scotia Howard Weil Research Analysts and Scotiabank Research Analysts may have different opinions on the short-term and long-term outlooks of local and global markets and economies.

This report is provided to you for informational purposes only. This report is not, and is not to be construed as, an offer to sell or solicitation of an offer to buy any securities and/or commodity futures contracts.

The securities mentioned in this report may neither be suitable for all investors nor eligible for sale in some jurisdictions where the report is distributed.

The information and opinions contained herein have been compiled or arrived at from sources believed reliable; however, Scotia Howard Weil makes no representation or warranty, express or implied, as to their accuracy or completeness.

Scotia Howard Weil has policies designed to make best efforts to ensure that the information contained in this report is current as of the date of this report, unless otherwise specified.

Any prices that are stated in this report are for informational purposes only. Scotia Howard Weil makes no representation that any transaction may be or could have been effected at those prices.

Any opinions expressed herein are those of the author(s) and are subject to change without notice and may differ or be contrary from the opinions expressed by other departments of Scotia Howard Weil or any of its affiliates.

Neither Scotia Howard Weil nor its affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

This report and all the information, opinions, and conclusions contained in it are protected by copyright. This report may not be reproduced in whole or in part, or referred to in any manner whatsoever, nor may the information, opinions, and conclusions contained in it be referred to without the prior express consent of Scotia Howard Weil.

Equity research reports published by Scotia Howard Weil are available electronically via: Bloomberg, Thomson Reuters, Capital IQ, and FactSet. Institutional clients with questions regarding distribution of equity research or who wish to access the proprietary model used to produce this report should contact Scotia Howard Weil at 1-800-322-3005. A list of all investment recommendations in any financial instrument or issuer that have been disseminated during the preceding 12 months is available at the following location: www.scotiahowardweil.com/disclosures.

Scotia Capital (USA) Inc. is a multidisciplined financial services firm that regularly intends to seek investment banking business with companies covered in its research reports, and thereby seeks to receive compensation from these companies for services including, but not limited to, acting as an underwriter in an offering or financial advisor in a merger or acquisition, or serving as a placement agent for private transactions. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report.

This report/email may be considered advertising under federal law. If you decide not to receive Scotia Howard Weil Research via email, please reply to howardweil@howardweil.com and ask to be removed.

3 August 2017
Macquarie Capital (USA) Inc.

Event

- While EXC's regulated utilities likely account for ~80-85% of EXC's market cap, merchant power-related topics dominated EXC's 2Q17 earnings call, starting with (initial) legal wins for EXC's nuclear subsidies in IL and NY, the pending DOE study of baseload power resources, the PJM capacity auction, and ending with a discussion about the limited liquidity in forward power curves. EXC's newly-founded enthusiasm toward the DOE study caught us by surprise – management hopes that the report (to be released sometime this month) together with the reconstituted FERC quorum could result in meaningful and timely changes in competitive power markets, starting with changes to the power price formation in PJM. EXC believes that those could result in meaningful upside to power prices (especially during off-peak hours) thus reducing the amount of state support needed to maintain continued operations of merchant nuclear plants. The need for the federal/state support for baseload power plants keeps growing as forward power prices keep sliding along with falling natural gas prices. We reiterate Outperform on EXC as we await the release of the DOE study.
- EXC reported 2Q17 adjusted EPS of US$0.54, ahead of our estimate of US$0.51 thanks to the timing of O&M expenses. Management reiterated its '17 EPS guidance range of US$2.50-2.80.

Impact

- **Falling power prices, cost cutting and power market changes:** ExGen keeps delivering on current and future earnings expectations despite falling forward power/gas curves thanks to its large (and growing) retail book, power plant portfolio changes, and cost efficiencies. Federal and state subsidies together with changes in the power price formation in competitive power markets could largely negate the impact of falling natural gas prices and the low trading liquidity in forward power curves on ExGen's earnings. Even more importantly, those would make ExGen's earnings and cash flows even more regulated-like, thus supporting an even higher valuation, we believe. But first we need to see the DOE study and judge ourselves if EXC (and FE) have been justifiably optimistic.

Earnings and target price revision

- We have updated our earnings estimates to reflect ExGen's power hedges as well as changes (reductions) in forward power/gas curves. Our new '17/'18/'19/'20 EPS estimates are US$2.71/2.92/2.86/2.72 vs. US$2.71/2.92/2.87/-, respectively. Our US$41 TP remains unchanged.

Price catalyst

- 12-month price target: US$41.00 based on a Sum of Parts methodology.
- Catalyst: The release of the baseload power study by the DOE

Action and recommendation

- We reiterate our Outperform rating.

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie – South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

EQUITY RESEARCH AMERICAS

Exelon (EXC)

Nothing Compares 2U

BUY
Price target $43.50
(from $39.50)
Price $38.42^

Key Takeaway

Exelon reported in-line results of $0.54 driven by lower power and capacity prices at ExGen. Given the recent strength in IPPs investors were wondering if management would consider spinning off ExGen but management highlighted the benefit of a diverse business mix and the "free cash flow" machine at ExGen. With the addition of ZECs we think it is unlikely that EXC would spin-off ExGen and continue to recommend EXC as the best way to invest in power.

Jefferies does not expect EXC to split ExGen even with surging merchant valuations. With investors wondering if management would spin-off ExGen we would highlight the significant cash it generates and the ability (over the last year) for EXC to receive ZECs to stablize the nuclear fleet.

Exelon operating EPS was $0.54 on a diluted basis, versus $0.68 for the same period a year ago, our estimate of $0.52, and Consensus of $0.54. The year-over-year decline was related to lower earnings at ExGen driven by lower capacity and energy prices.

Going for the Hail Mary on ZEC Challenges – Recent court decisions in NY and Illinois have dismissed challenges to the ZEC program. In NY EXC expects a challenge at the Court of Appeals and given the decisive ruling from a lower court management does not expect the petitioners to be successful. The quarterly results were positively impacted from the NY ZEC program and although the IL program went into effect on June 1 the state has yet to conduct its ZEC procurement process. Once that process is complete the company will book ZEC revenues retroactive to June 1.

Three Mile Island Retirement announced back in May. Following the PJM capacity auction in which TMI did not clear it was revealed that TMI would retire after this current fuel cycle (September 30, 2019). Absent a legislative change, Pennsylvania ZEC, the retirement would be accretive to EPS by $0.04-$0.07 and improve cumulative cash flow through 2021 by $225 million.

Valuation/Risks

Our $39.50 price target is based on P/E analysis. Taking our 2019 EPS estimate of $2.80 in conjunction with a P/E group average multiple of 15.5x results in a price target of $43.50. Based on yesterday's closing price of $38.42, this would result in a 12-month price appreciation potential of 13.2% and total return potential of 16.6% including the current yield of 3.4%. **Risks** include exposure to change in the commodity prices and regulatory issues associated with the company's regulated subsidiaries.

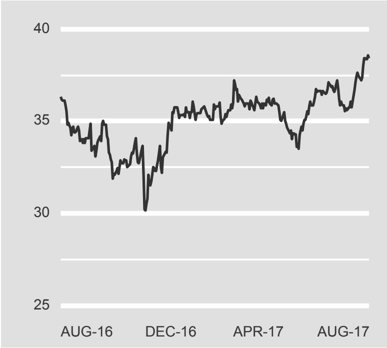
Price Performance



^Prior trading day's closing price unless otherwise noted.

Scenarios

Target Investment Thesis

- Exelon should trade at a group average P/E multiple.
- Company moves to a more regulated P/E valuation since completing the merger last year.
- The Nuclear ZECs in Illinois and New York only add to the solid "regulated-like" earnings profile.
- 2019 EPS $2.80; Target Multiple: 15.5x. Target Price $43.50.

Upside Scenario

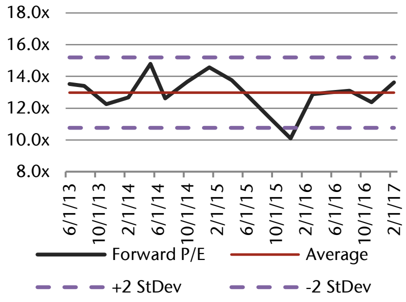
- Exelon Generation earnings increase due to improvement in gas and power prices.
- Power plant values increase due to growing short supply.
- Regulated business earns at or above its allowed ROE.
- 30Y US TSY yields increase raising the ROE at ComEd through its distribution formula rate
- 2019 EPS $3.00; target multiple: 15.5x Target Price $46.50

Downside Scenario

- Exelon EBITDA decreases due to declining gas and power prices.
- NY and IL nuclear ZEC programs are found to be in violation of power rules.
- Reinvestment opportunities become more limited.
- Regulated utilities under-earn their allowed ROE.
- 2019 EPS: $2.50; Target Multiple: 15.5x Target Price: $38.50.

Long Term Analysis

1 Year Forward P/E



Source: Facstet, Jefferies estimates

Long Term Financial Model Drivers

LT EBITDA CAGR	**(8.5%)**
LT EPS Growth	**7.0%**
FFO/Debt	**31%**
Equity Ratio	**52%**

Other Considerations

While we assume no benefit from ZECs or any type of carbon regulation the benefit to Exelon's 19,000 MW of nuclear plants is significant.

Peer Group

Group P/Es

Recommendation / Price Target

Ticker	**Rec.**	**PT**
EXC	**Buy**	**$43.50**
PEG	Hold	$46.50
ETR	Hold	$78
ED	Hold	$83.50
PPL	Buy	$42
FE	Hold	$33

Catalysts

- Legal challenges to Illinois and New York's ZECs.
- Rate increases at PHI utilities.

Company Description

Exelon, incorporated in Pennsylvania in February 1999, is a utility services holding company engaged, through its principal subsidiary Generation, in the energy generation business, and through its principal subsidiaries Com Ed, PECO, DPL, ACE, Pepco, and BGE, in the energy delivery businesses discussed below. Exelon is headquartered in Chicago and trades on the NYSE under the ticker symbol EXC.

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation.

Exelon operating EPS was $0.54 on a diluted basis, versus $0.68 for the same period a year ago, our estimate of $0.52, and Consensus of $0.54. The year-over-year decline was related to lower earnings at ExGen driven by lower capacity and energy prices.

Going for the Hail Mary on ZEC Challenges – Recent court decisions in NY and Illinois have dismissed challenges to the ZEC program. In NY EXC expects a challenge at the Court of Appeals and given the decisive ruling from a lower court management does not expect the petitioners to be successful. The quarterly results were positively impacted from the NY ZEC program and although the IL program went into effect on June 1 the state has yet to conduct its ZEC procurement process. Once that process is complete the company will book ZEC revenues retroactive to June 1.

Three Mile Island Retirement announced back in May. Following the PJM capacity auction in which TMI did not clear it was revealed that TMI would retire after this current fuel cycle (September 30, 2019). Absent a legislative change, Pennsylvania ZEC, the retirement would be accretive to EPS by $0.04-$0.07 and improve cumulative cash flow through 2021 by $225 million.

Texas Unload'em – On May 2, 2017, ExGen Texas Power (EGTP) entered into a consent agreement with its lenders to permit EGTP to sell the assets of its wholly-owned subsidiaries. The fleet of 3,476 MW is located in ERCOT and consists of CCGTs and simple cycle steamers that are economically challenged due to suppressed power prices in ERCOT. These assets have $650 million of non-recourse project level debt which is currently trading at a discount to face value. This portfolio does not contain two new state-of-the-art CCGTs that Exelon is building in Texas.

Management reaffirmed 2017 guidance of $2.50-$2.80 which compares to Consensus of $2.68 and our estimate of $2.60. For 3Q17 management is guiding to $0.80-$0.90. Earnings include both the NY and IL ZEC programs (reversal of the Quad Cities and Clinton closure), Fitzpatrick ownership, and a full year of PHI contribution.

Exelon has completed its first cycle of rate cases at PHI and is beginning its second cycle of rate cases requesting a $168 million rate increase across the platform.

Last month Delmarva Power filed for a $27 million rate increase with the Maryland PSC. The utility is requesting new rates, based on a 10.1% ROE) to cover the costs of system improvements and deferred costs for smart meters that were not recovered in the utility's last rate filing. In February the Maryland PSC authorized 67% of Delmarva's requested rat increase using a 9.6% ROE.

PEPCO DC gets approval for new rates on July 25, 2017. New rates are predicated on a 9.5% ROE and a $36.9 million revenue increase. This compares to the utility request of a 10.6% ROE and a $76.8 million increase.

Atlantic City Electric filed for new rates with the NJBPU. Back in March ACE filed for a $70.2 million rate increase based on a 10.1% ROE and a $1,371 million rate base.

The drivers for the rate filing are increased capital investment and declining customer usage. A final decision is expected in December 2017.

In June the ICC Staff recommended a $99.1 million rate increase in ComEd's formula rate plan. The utility filed its annual formula rate plan requesting a $99.9 million increase based on a 8.4% ROE. The ROE is set based on a 580 bps premium to the 12 month average 30y Treasury Bond yield.

2Q17 operating EPS excludes $0.42 (GAAP earnings $0.09) of non-recurring items as follows: a $0.12 market to market loss associated with the impact of economic hedging activities, a $0.05 gain due to unrealized NDT gain, a $0.29 loss related to a long-lived asset impairment on ExGen Texas assets held for sale, a $0.07 loss from the expected retirement/divestiture of TMI, a $0.01 loss associated with the amortization of commodity contract intangibles, a $0.01 loss from merger and integration costs, a $0.02 loss related to CENG non-controlling interest, and a $0.03 gain from a like-kind exchange tax position. 2Q16 operating EPS excludes $0.65 (GAAP earnings of $0.29) of non-recurring items primarily due to mark-to-market impacts at ExGen.

Commonwealth Edison (CWE) earnings decreased by $0.01 to $0.15. Gross margin increased 3.3% to $979 million reflecting increased electric distribution and transmission earnings and higher ROE partly offset by weather (versus 2016). Retail sales decreased 3.1% and on a weather-adjusted basis were down 1.4%. Beginning in 2017 ComEd's customer rates are adjusted to eliminate the impact weather has on earnings.

Operating income decreased 1.5% to $320 million due to higher operating expenses. Operating and maintenance expense increased 2% to $376 million and depreciation expense grew by 11.1% to $211 million due to greater net plant. Earnings declined by 3.4% to $141 million driven by lower operating income partly offset by reduced interest expense. The effective tax rate for the quarter was 40.5% versus 38.4% last year.

PECO earnings declined by $0.01 to $0.10 mainly due to mild weather. Gross margin declined by 3.1% to $433 million due to the negative impact mild weather had on retail sales. Electric sales versus 2Q16 declined 0.3% and on a weather-adjusted basis down by 0.8%. Gas sales decreased by 3.0% as compared to 2Q16 but were up 5.3% on a weather-adjusted basis. Heating degree days declined 29.9% relative to 2Q16 and were 28.9% below normal.

Operating Income decreased by 12.3% to $135 million due to lower gross margin and higher depreciation expense. Depreciation expense grew by 6.0% to $71 million due to greater net plant balances and O&M expense rose by 2.1% to $192 million. Earnings decreased by 13.9% $87 million due to lower operating income. The effective tax rate during the quarter was 17.9% versus 19.2% last year.

BGE earnings improved by $0.02 to $0.05 due to the absence of 2Q16 rate case disallowances and new rates effective June 2016. Gross margin grew by 5.0% to $440 million based on higher rates.

Operating income increased 81.8% to $100 million driven by greater gross margin and reduced O&M expense. O&M expense declined 18.9% to $100 million while depreciation expense rose by 15.5% to $112 million due to the initiation of cost recovery of the AMI programs. Earnings increased 58.6% to $126 million due to greater operating margin. The effective tax rate during the quarter was 41.0% versus 12.1% last year.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

PHI earnings grew by $0.01 to $0.07 driven by new rates and lower O&M expense. Gross margin rose by 6.3% to $691 million due to new electric rates.

Operating income increased by 5.1% to $143 million due to greater gross margin partially offset by higher operating expenses. O&M expense rose by 11% to $273 million and depreciation expense grew by 3.1% to $165 million. Earnings increased by 18.9% to $63 million due to greater operating income. The effective tax rate during 2Q17 was 35.7% versus 34.6% in 2Q16.

Earnings at Exelon Generation decreased by $0.13 to $0.22 during the quarter mainly due to lower power prices, greater nuclear outage days and the conclusion of a services agreement. Gross margin declined by 4.9% to $2,223 million which was driven by lower energy and capacity prices. Partly offsetting the gross margin erosion was NY ZEC revenue. Nuclear generation increased by 3.8% to 44.1 million MWh with NY nuclear production rising 47.3% to 6.2 million MWh due to the addition of Fitzpatrick. Operating income was reduced by 49.0% to $290 million driven by greater operating expenses. Because of the increased outage days O&M expense rose by 10.2% to $1,494 million while depreciation expense grew by 1.7% to $299 million due to increased nuclear decommissioning amortization. Property taxes increased 18.6% to $140 million. Net income decreased by 38.4% to $202 million driven by lower operating income partially offset by reduced tax expense. The effective tax rate during the quarter was 38.0% versus 33.5% last year.

The company's Other business segment increased by $0.03 to a loss of ($0.03) driven by lower O&M and tax expenses.

We are maintaining our 2017 EPS estimate of $2.60 which compares to guidance of $2.50-$2.80. Earnings include both the NY and IL ZEC programs, Fitzpatrick ownership, and a full year of PHI contribution. Management affirmed segment guidance of: ComEd $0.60-$0.70, PECO $0.40-$0.50, BGE $0.25-$0.35, PHI $0.30-$0.40, ExGen $1.05-$1.15, and parent drag of $0.10-$0.30.

We are maintaining our 2018-19 EPS estimates of $2.85 and $2.80, respectively.

Source: Jefferies estimates, company data

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

I, Benjamin Budish, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

As is the case with all Jefferies employees, the analyst(s) responsible for the coverage of the financial instruments discussed in this report receives compensation based in part on the overall performance of the firm, including investment banking income. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Recommendation Distributed	, 03:18 ET. August 3, 2017

Company Specific Disclosures

For Important Disclosure information on companies recommended in this report, please visit our website at https://javatar.bluematrix.com/sellside/Disclosures.action or call 212.284.2300.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for

inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

Jefferies International Limited Equity Research personnel are separated from other business groups and are not under their supervision or control. Jefferies International Limited has implemented policies to (i) address conflicts of interest related to the preparation, content and distribution of research reports, public appearances, and interactions between research analysts and those outside of the research department; (ii) ensure that research analysts are insulated from the review, pressure, or oversight by persons engaged in investment banking services activities or other persons who might be biased in their judgment or supervision; and (iii) promote objective and reliable research that reflects the truly held opinions of research analysts and prevents the use of research reports or research analysts to manipulate or condition the market or improperly favor the interests of the Jefferies International Limited or a current or prospective customer or class of customers. Jefferies International Limited may allow its analysts to undertake private consultancy work. Jefferies International Limited's conflicts management policy sets out the arrangements Jefferies International Limited employs to manage any potential conflicts of interest that may arise as a result of such consultancy work. Jefferies International Ltd, its affiliates or subsidiaries, may make a market or provide liquidity in the financial instruments referred to in this investment recommendation. For Canadian investors, this material is intended for use only by professional or institutional investors. None of the investments or investment services mentioned or described herein is available to other persons or to anyone in Canada who is not a "Designated Institution" as defined by the Securities Act (Ontario). In Singapore, Jefferies Singapore Limited is regulated by the Monetary Authority of Singapore. For investors in the Republic of Singapore, this material is provided by Jefferies Singapore Limited pursuant to Regulation 32C of the Financial Advisers Regulations. The material contained in this document is intended solely for accredited, expert or institutional investors, as defined under the Securities and Futures Act (Cap. 289 of Singapore). If there are any matters arising from, or in connection with this material, please contact Jefferies Singapore Limited, located at 80 Raffles Place #15-20, UOB Plaza 2, Singapore 048624, telephone: +65 6551 3950. In Japan this material is issued and distributed by Jefferies (Japan) Limited to institutional investors only. In Hong Kong, this report is issued and approved by Jefferies Hong Kong Limited and is intended for use only by professional investors as defined in the Hong Kong Securities and Futures Ordinance and its subsidiary legislation. In the Republic of China (Taiwan), this report should not be distributed. The research in relation to this report is conducted outside the PRC. This report does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. In India this report is made available by Jefferies India Private Limited. In Australia this information is issued solely by Jefferies International Limited and is directed solely at wholesale clients within the meaning of the Corporations Act 2001 of Australia (the "Act") in connection with their consideration of any investment or investment service that is the subject of this document. Any offer or issue that is the subject of this document does not require, and this document is not, a disclosure document or product disclosure statement within the meaning of the Act. Jefferies International Limited is authorised and regulated by the Financial Conduct Authority under the laws of the United Kingdom, which differ from Australian laws. Jefferies International Limited has obtained relief under Australian Securities and Investments Commission Class Order 03/1099, which conditionally exempts it from holding an Australian financial services licence under the Act in respect of the provision of certain financial services to wholesale clients. Recipients of this document in any other jurisdictions should inform themselves about and observe any applicable legal requirements in relation to the receipt of this document.

This report is not an offer or solicitation of an offer to buy or sell any security or derivative instrument, or to make any investment. Any opinion or estimate constitutes the preparer's best judgment as of the date of preparation, and is subject to change without notice. Jefferies assumes no obligation to maintain or update this report based on subsequent information and events. Jefferies, its associates or affiliates, and its respective officers, directors, and employees may have long or short positions in, or may buy or sell any of the securities, derivative instruments or other investments mentioned or described herein, either as agent or as principal for their own account. Upon request Jefferies may provide specialized research products or services to certain customers focusing on the prospects for individual covered stocks as compared to other covered stocks over varying time horizons or under differing market conditions. While the views expressed in these situations may not always be directionally consistent with the long-term views

expressed in the analyst's published research, the analyst has a reasonable basis and any inconsistencies can be reasonably explained. This material does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this report is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of the investments referred to herein and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments. This report has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of securities. None of Jefferies, any of its affiliates or its research analysts has any authority whatsoever to make any representations or warranty on behalf of the issuer(s). Jefferies policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis. Any comments or statements made herein are those of the author(s) and may differ from the views of Jefferies.

This report may contain information obtained from third parties, including ratings from credit ratings agencies such as Standard & Poor's. Reproduction and distribution of third party content in any form is prohibited except with the prior written permission of the related third party. Third party content providers do not guarantee the accuracy, completeness, timeliness or availability of any information, including ratings, and are not responsible for any errors or omissions (negligent or otherwise), regardless of the cause, or for the results obtained from the use of such content. Third party content providers give no express or implied warranties, including, but not limited to, any warranties of merchantability or fitness for a particular purpose or use. Third party content providers shall not be liable for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use of their content, including ratings. Credit ratings are statements of opinions and are not statements of fact or recommendations to purchase, hold or sell securities. They do not address the suitability of securities or the suitability of securities for investment purposes, and should not be relied on as investment advice.

Jefferies research reports are disseminated and available primarily electronically, and, in some cases, in printed form. Electronic research is simultaneously available to all clients. COMPANY UPDATE
August 3, 2017

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

Raising 2017 Estimate But Reducing 2018-19 Estimates

What's Incremental To Our View

Based on updated assumptions, we have increased our 2017 estimate but reduced our 2018-19 estimates. Stock still appears attractively priced on our revised estimates.

IMPORTANT POINTS

- EXC reported 2Q results of $0.54 vs $0.65, in line with our estimate of $0.54 and consensus of $0.54. Relative to our assumptions, modestly lower O&M expense was offset by lower contribution from rate increases.

- Factoring in the latest forward commodity curves, updated hedge disclosures, the planned retirements of Three Mile Island (837mw, September 2019) and Oyster Creek (625mw, December 2019), and the planned sale of the legacy Texas portfolio (3398mw), we make the following changes to our estimates: 2017 is increased to $2.70 from $2.67; 2018 is reduced to $2.83 from $2.91; and 2019 is reduced to $2.75 from $2.78.

- EXC appears attractively priced at a 5%-8% discount to the peer group (based on our 2018-19 estimates). Assuming a 14.8x P/E multiple (in line with the peer group) on our 2019 estimate of $2.75, we derive our price target of $41. We reiterate our **Buy** recommendation.

- We have included our revised 2017-19 earnings and cash flow models in this report.

Buy

Price Target: $41.00
Prior: $41.00

Δ Key Drivers

- *Latest forward commodity curves.*
- *Updated hedge disclosures.*
- *Planned retirements of Three Mile Island and Oyster Creek*
- *Planned sale of legacy Texas portfolio.*

Total	2,670		2,738		2,564		2,488		2,227		2,068		2,149		2,330	

Note

1) Rate Base - Com Ed: $10.6bn in 2015, $11.9bn in 2016, $13.2bn in 2017E, $14.0bn in 2018E, $14.8bn in 2019E; PECO: $6.0bn in 2015, $6.2bn in 2016, $6.6bn in 2017E, $7.0bn in 2018E, $7.4bn in 2019E; BGE: $5.0bn in 2015, $5.3bn in 2016, $5.7bn in 2017E, $6.1bn in 2018E, $6.5bn in 2019E; PEPCO: $8.3bn in 2016, $8.9bn in 2017E, $9.4bn in 2018E, $9.9bn in 2019E.

2) Earned ROE - Com Ed: 8.0% in 2015, 8.8% in 2016, 9.3% in 2017, 9.4% in 2018, 9.5% in 2019; PECO: 11.7% in 2015, 13.3% in 2016, 12.1% in 2017, 12.2% in 2018, 12.1% in 2019; BGE: 10.7% in 2015, 10.5% in 2016, 9.7% in 2017, 10.3% in 2018, 10.3% in 2019; PEPCO: 5.5% in 2016, 7.4% in 2017, 7.7% in 2018, 8.0% in 2019.

3) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

4) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

5) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

6) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

7) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw, nuclear $110m price) from Q2 2017.

8) We have factored the IL ZEC payments for Clinton (1069mw) and Quad City (1403mw) from 6/1/17.

9) Total ZEC payments represent $500m / year of pre tax income (from 2018 onwards).

10) We assume retirement of TMI (September 2019), Oyster Creek (December 2019), and exit from EGTP (2018 onwards).

11) Forward curves as of 8/1/17.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a 14.8x P/E multiple (in line with the peer group) on our 2019 estimate of $2.75, we derive our price target of $41.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

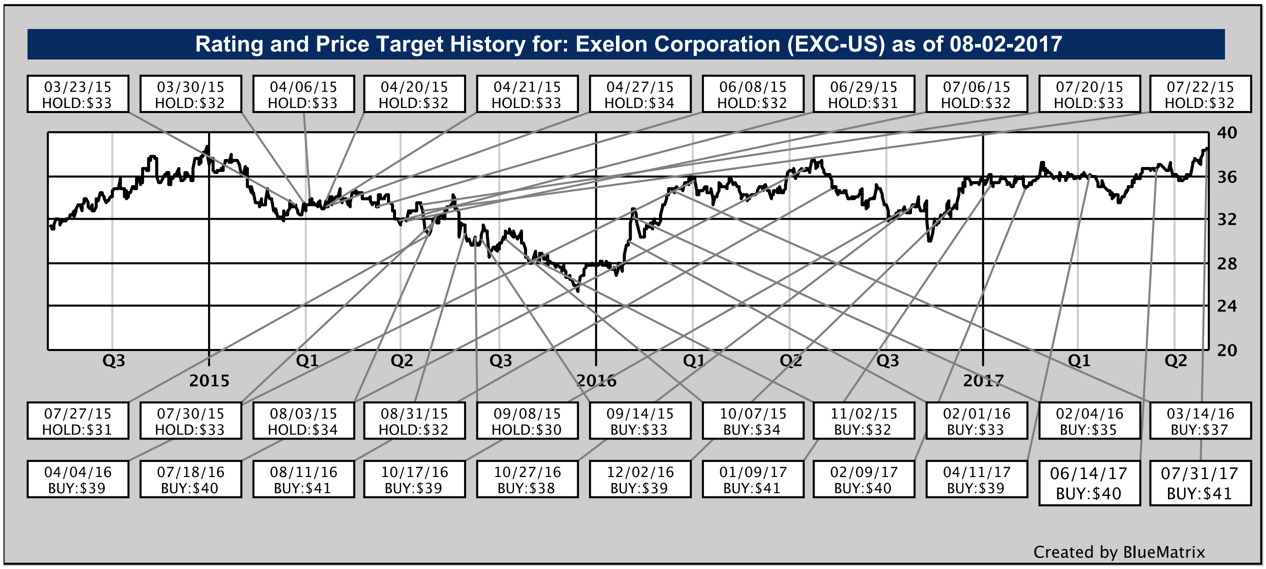
Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.



STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock’s total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock’s total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock’s total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH’s rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may

exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 08/03/2017):

Citi Research
Equities

03 Aug 2017 16:36:15 ET | 8 pages

Diversified Utilities
North America | United States

Exelon Corp (EXC)

Results: ZECs - the Gift that'll keep on Giving.

- **Citi's Take — Q2 results slightly higher, FY2017 guidance re-affirmed and in-line with estimates.** EXC reported consolidated operating EPS of $0.54/share vs. Citi estimates of $0.51/share. ExGen came in at $0.22/share slightly above Citi estimates of $0.20/share. O&M management at Utilities and ExGen as well as NDT realized gains drove the strong results. For full year, EXC maintained consolidated EPS guidance range of $2.50-$2.80/share in-line with Citi's estimates of $2.76/share. For Q3, EXC introduced EPS guidance range of $0.80-$0.90. ExGen gross margins were reduced by $150m in 2018 and 2019 to reflect removal of EGTP and early retirement of TMI.
- **Nuclear Support including ZECs – We believe this is bigger than just a couple of assets in a couple of states.** Comprehensive victories in NY & IL on ZECs will pave the way for other states given the legal blessings and the political power of jobs/economy. The DOE study also forms a good safety net. While the actual process in NJ, PA and CT will play out over the next few years, we think nuclear plants will get more than just market prices for their generation. (please see note)

- **More nuclear support creates more financial flexibility.** ExGen has achieved a Debt/EBITDA of 2.9x vs. target of 3.0x. The company maintains its $3B debt reduction plan at ExGen/HoldCo through 2020 and future ZECs can only further support this effort. We think deleveraging at the holdco is an excellent way to allocate capital, de-risk the business and create flexibility for additional utility growth. Over time, we would expect dividend growth to move up from the 2.5% to something more in line with the growth of the utility business.

- **Implications — Nuclear bailouts propel story.** EXC's utility growth story and the transformation of Pepco have been well understood. The nuclear business has completely transformed from one of weakness and potential decommissioning to one that now will generate significant FCF to propel the EXC story. We reiterate our Buy rating and $43PT on the back of this now improving nuclear generation story.

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $43 price target. We value ExGen at ~$3/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The legacy utility business is valued at $25/share based on a 18.0x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent net debt and add $11/share for ZECs to get to our rounded PT of $43/share.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the risks get rejected after further legal challenge then the stock has downside as some value of ZEC is already in the stock price

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations

published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Jun 2017	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	47%	39%	13%	2%	97%	1%
% of companies in each rating category that are investment banking clients	64%	64%	58%	57%	64%	51%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day’s market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author’s previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to “Buy”,”Hold”,”Sell” at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q2 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (57%); Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%); Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm’s global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm’s proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author’s previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Important Disclosures for Bell Potter Customers: Bell Potter is making this Product available to its clients pursuant to an agreement with Citigroup Global Markets Australia Pty Limited. Neither Citigroup Global Markets Australia Pty Limited nor any of its affiliates has made any determination as to the suitability of the information provided herein and clients should consult with their Bell Potter financial advisor before making any investment decision.

United States: Utilities

Equity Research

A post-earnings wrap for EXC (Neutral) and ETR (Neutral)

We incorporate EPS changes for Neutral-rated diversified utilities EXC and ETR after 2Q17 earnings

We update EXC following 2Q2017 earnings, changing our 2017E-2020E EPS to $2.64/$2.79/$2.88/$2.83 from $2.59/$2.78/$2.79/$2.77, reflecting revised rate case, operating expense and financing assumptions. Although we stay Neutral, we become incrementally bearish on valuation as we have (-5%) total return potential to our 12-month price target. We tweak higher (by 0.5x) our applied P/E multiples on the regulated utilities (given favorable regulation/growth particularly at the ComEd and PECO utilities) but see much of this is as already priced-in. We also note every 0.5x change in our EV multiple on the Generation segment implies a ~$1.5/sh change in value in our SOTP. We derive our unchanged 12-month price target of $35 using a SOTP methodology applying P/E multiples on updated EPS for the regulated segments and an EV multiple on EXC's generation business. Key risks for EXC include power prices, litigation and regulation.

For ETR (Neutral), we revise 2017E-2019E EPS estimates from $4.55/$5.28/$4.89 to $7.02/$5.50/$4.76, incorporating revised (1) rate case assumptions, (2) higher operating expenses for the utility segments, (3) updated financing assumptions and (4) lower hedged pricing for EWC. We lower our estimates for the utility, parent/other (UPO) segment to reflect higher costs, greater regulatory lag (especially in the Arkansas utility) and higher debt financing expenses. We see guidance risk for this segment in 2017/18 – and only see ETR hitting its guidance here in 2019, after multiple rate increases at the Arkansas utility and on cost management as higher nuclear spend winds down. For EWC, our estimates move largely on revised & lower hedged pricing. We lower our 12-month price target to $78 (from $80) on lower estimates and continue to remain Neutral-rated. Key risks for ETR include power prices, power demand, O&M costs and utility regulation.

Disclosure Appendix

Reg AC

We, Michael Lapides, David Fishman and Siddharth Verma, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/125/EC is available at http://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular analyst's coverage group may vary as determined by the regional Investment Review Committee. Additionally, each Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data available on a particular security, please contact your sales representative or go to http://360.gs.com.

Disclosure information is also available at http://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

Important Disclosures

*Other information available upon request

*Prices are current as of the end of the previous trading session unless otherwise indicated and are sourced from local exchanges via Reuters, Bloomberg, and other vendors. Other information is sourced from Deutsche Bank, subject companies, and other sources. For disclosures pertaining to recommendations or estimates made on securities other than the primary subject of this research, please see the most recently published company report or visit our global disclosure look-up page on our website at http://gm.db.com/ger/disclosure/DisclosureDirectory.eqsr. Aside from within this report, important conflict disclosures can also be found at https://gm/db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

Analyst Certification

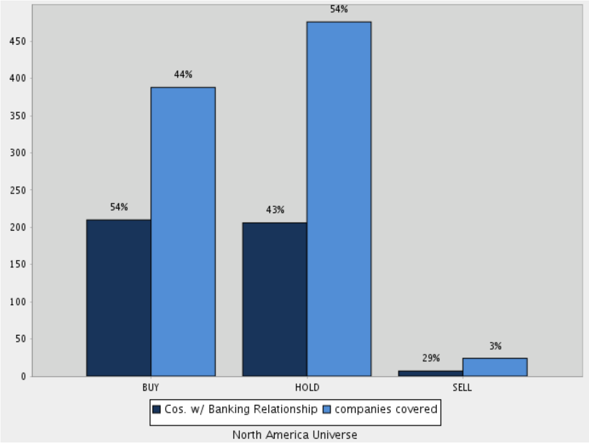
The views expressed in this report accurately reflect the personal views of the undersigned lead analyst about the subject issuers and the securities of those issuers. In addition, the undersigned lead analyst has not and will not receive any compensation for providing a specific recommendation or view in this report. Jonathan Arnold, Caroline Bone

Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Equity rating dispersion and banking relationships



Additional Information

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst’s judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options”, at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and all affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you, any of your agents (collectively, "You" or "Your") with respect to any information provided in the materials attached hereto. Deutsche Bank does not provide investment, legal, tax or accounting advice, Deutsche Bank is not acting as Your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products

and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA, NFA and SIPC. Analysts located outside of the United States are employed by non-US affiliates that are not subject to FINRA regulations.

Germany: Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorized under German Banking Law and is subject to supervision by the European Central Bank and by BaFin, Germany's Federal Financial Supervisory Authority.

United Kingdom: Approved and/or distributed by Deutsche Bank AG acting through its London Branch at Winchester House, 1 Great Winchester Street, London EC2N 2DB. Deutsche Bank AG in the United Kingdom is authorised by the Prudential Regulation Authority and is subject to limited regulation by the Prudential Regulation Authority and Financial Conduct Authority. Details about the extent of our authorisation and regulation are available on request.

Hong Kong: Distributed by Deutsche Bank AG, Hong Kong Branch or Deutsche Securities Asia Limited.

India: Prepared by Deutsche Equities India Pvt Ltd, which is registered by the Securities and Exchange Board of India (SEBI) as a stock broker. Research Analyst SEBI Registration Number is INH000001741. DEIPL may have received administrative warnings from the SEBI for breaches of Indian regulations.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. "Moody's", "Standard & Poor's", and "Fitch" mentioned in this report are not registered credit rating agencies in Japan unless Japan or "Nippon" is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of DSI are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI. Some of the foreign securities stated on this report are not disclosed according to the Financial Instruments and Exchange Law of Japan. Target prices set by Deutsche Bank's equity analysts are based on a 12-month forecast period.

Korea: Distributed by Deutsche Securities Korea Co.

South Africa: Deutsche Bank AG Johannesburg is incorporated in the Federal Republic of Germany (Branch Register Number in South Africa: 1998/003298/10).

Singapore: by Deutsche Bank AG, Singapore Branch or Deutsche Securities Asia Limited, Singapore Branch (One Raffles Quay #18-00 South Tower Singapore 048583, +65 6423 8001), which may be contacted in respect of any matters arising from, or in connection with, this report. Where this report is issued or promulgated in Singapore to a person who is not an accredited investor, expert investor or institutional investor (as defined in the applicable Singapore laws and regulations), they accept legal responsibility to such person for its contents.

Taiwan: Information on securities/investments that trade in Taiwan is for your reference only. Readers should independently evaluate investment risks and are solely responsible for their investment decisions. Deutsche Bank research may not be distributed to the Taiwan public media or quoted or used by the Taiwan public media without written consent. WELLS FARGO SECURITIES

Between The Lines: Wells Fargo Utility Monthly

Utilities

- **Utilities Shine.** The S&P Utilities +3.2% total return outpaced the S&P 500's +0.3% in August amidst a nearly 20 bps drop in the 10-yr Treasury and as further doubt was cast on the Trump Administration's ability to effect tax reform. The outperformance was widespread among the Diversified Infrastructure (+4.3%), Regulated Electric (+3.6%) and Gas LDC (+3.0%) sub-sectors, while Water Utilities (+0.0%) and Yieldcos (+0.3%) underperformed. Within our coverage, VVC (+9.9%), AGR (+7.5%) & AEE (+6.9%) led the way while SCG (-6.2%), CTWS (-4.3%) & CWT (-3.3%) lagged.

- **Utilities Appear Fully Valued.** The forward P/E is 113% of the S&P 500, above the 103% 10-yr median, and on an absolute basis the 21.2X forward P/E remains rich to the 10-yr median of 15.9X. More importantly, utilities screen modestly expensive versus interest rates.

- **M&A.** Sempra made its debut on the M&A stage this month with the planned acquisition of Oncor. SRE's deal represents the fourth formal agreement to purchase Oncor following the PUCT's denial of both Hunt and NEE as well as Berkshire's July announcement that never got off the ground. If history is any guide, the approval process should be thorny, though SRE has committed to strong ring-fencing provisions, a majority independent Board, and the pay down of Oncor holdco debt within 7 years. Elsewhere in the sector, the Staff of the Maryland Commission recommended against the ALA/WGL deal (though conditions were provided should the Commission approve it) and GXP/WR filed a formal merger application in Kansas. Lastly, July saw another M&A leak as Bloomberg reported that VVC hired an advisor after receiving takeover interest (mgmt. has not commented). Also keeping in mind last month's H/AVA news, utility M&A activity is alive and well as tax reform concerns fade into the background.

- **Renewables Ascendant.** Utilities are announcing major renewables initiatives at a seemingly increasing pace. Recent examples include (1) AEP's 2,000 MW Wind Catcher project (7/26 announcement), (2) XEL's "Colorado Energy Plan" for up to 1,000 MW of wind and up to 700 MW of solar (8/29 announcement) and (3) AQN's plan for 500-800 MW of wind for Empire District. In addition, AEE has indicated that the company's October 2017 MO Integrated Resource Plan will include substantially more wind than previously contemplated. The flurry of activity is due, in part, to the desire to capture the full benefits of the production tax credit, which requires safe harbor projects be in-service by year-end 2020. That said, it is also evident that utilities are increasingly comfortable with renewables on the system and the additions are coming at the expense of not only coal generation (earlier retirements) but also combined cycle generation (mitigating longer-term CC needs as is the case with Wind Catcher).

- **New Nuclear.** SO and partners announced 8/31 a desire to press on with Vogtle 3 & 4 construction subject to GA regulatory approval. This was the first piece of good new nuclear news in a while as SCG/Santee halted work on 7/31 at V.C. Summer and DUK officially pulled the plugs on the proposed Levy County and Lee plants in the last week.

Wells Fargo Securities, LLC’s research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: August 31, 2017

43% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Outperform.	Wells Fargo Securities, LLC has provided investment banking services for 47% of its Equity Research Outperform-rated companies.

MARKET COMMENTARY/STRATEGY

Bright Light – 31 August 2017

Our fortnightly Bright Light compiles the latest research reports published by the Global Utilities Team, our high conviction stock ideas, valuation tools and key market performance data.

Report of the week: Brazilian Utilities – Lessons from 2Q17's Earnings Season

Vinicius Canheu shares his take-aways from the 1H17 earnings season of Brazilian Utilities. Click here

- **Recapping the quarter.** After another eventful earnings season, Vinicius recaps the main findings from the Brazilian sector as a whole. He highlights recurring themes and analyzes the major drivers of company performance in the quarter, based on reported figures, conference calls and investor events regarding 2Q17.
- **Seven major themes in 2Q17.** In his work, Vinicius finds 7 major themes that dominated discussions throughout the earnings season. On the operational side, he highlights (1) falling total volumes in distribution; (2) the evolution of delinquency vs. losses, for discos; and the generation dilemma, with gencos (3) having to deal with the hydro short in the short-run while (4) still seeing low prices and liquidity for long-term PPAs. On the financial side, he highlights (5) the impact of lower inflation rates on the transcos' IFRS results; and (6) short-term maturities as well as the companies' de facto leverage situation. Finally, he highlights (7) the very marked split between companies on a growth agenda and those on the sellers' side given their troubled leverage outlooks.
- **Four big changes in recurring themes.** After a rebounding 1Q17, volume growth went back to negative territory. The drop in IFRS revenues led to a lower distributable income for transcos, to which he believes many in the market seemed previously oblivious. Finally, after a quarter, potential M&A and the participation in auctions returned to the spotlight, with several potential deals in the horizon.
- **Sector analysis; individual perspectives.** After the thematic analysis, he includes his perspective on the individual companies he covers, analyzing their results, highlighting the main points of conference calls and meetings, and determining the main triggers for them going forward.

SECTOR REVIEW

Lessons from 2Q17's Earnings Season

Recapping the quarter. After another eventful earnings season, we recap the main findings from the sector as a whole. We highlight recurring themes and analyze the major drivers of company performance in the quarter, based on reported figures, conference calls and investor events regarding 2Q17.

Through this product, we seek to provide investors with a single summary of the quarter that could be used as (1) a recap of the main recent developments; (2) a reference for meetings and discussions with management teams, and (3) a guide of potential events and triggers for the stocks.

Seven major themes in 2Q17. In our work, we found 7 major themes that dominated discussions throughout the earnings season. On the operational side, we highlight (1) falling total volumes in distribution; (2) the evolution of delinquency vs losses, for discos; and the generation dilemma, with gencos (3) having to deal with the hydro short (GSF) in the short-run while (4) still seeing low prices and liquidity for long-term PPAs.

On the financial side, we highlight (5) the impact of lower inflation rates on the transcos' IFRS results; and (6) short-term maturities and the companies' *de facto* leverage situation. Finally, we highlight (7) the very marked split between companies on a growth agenda and those on the sellers' side given their troubled leverage outlooks.

Four big changes in recurring themes. After a rebounding 1Q17, volume growth went back to the negative territory. In generation, we saw a much stronger focus on short-term contracting situations increased further, as the hydro short (GSF) started to pressure 2017 results. Meanwhile, the drop in IFRS revenues led to a lower distributable income for transcos, to which we believe many in the market seemed previously oblivious. Finally, after a quarter, potential M&A and the participation in auctions returned to the spotlight, with several potential deals in the horizon.

Sector analysis; individual perspectives. After the thematic analysis, we included our perspective on the individual companies we cover, analyzing their results, highlighting the main points of conference calls and meetings, and determining the main triggers for them going forward.

Recent Research

Europe

CEZ
Underperform
TP CZK345

- **Vincent Gilles** revises his TP and estimates for **CEZ** (CZK418, TP CZK345, U/P) reflecting a new reporting structure, investments in onshore wind in Germany and France and the acquisition of the energy service company, Elevion. He believes that 2017E earnings will strongly benefit from one-offs. In his estimates, he assumes a 90% pay-out ratio. He forecasts a 2017E DPS of CZK31 which implies a dividend yield of 7.4%, one of the highest in the sector. However, he expects the dividend to halve in 2018 to CZK16 as a result of lower net income. Click here

North America

Brookfield Infrastructure Partners
Neutral
TP US$44

- **Andrew Kuske** downgrades **Brookfield Infrastructure Partners** (US$44, TP US$44, N) to Neutral (from Outperform) as the stock is trading above his target price. He continues to believe there are some near-term trading positives arising from a potential index inclusion. Such an inclusion could further aid stock performance, however, on a more fundamental basis the current valuation is less attractive versus a number of other stocks in his coverage universe. He continues to believe BIP's organic asset base growth underpins an attractive network story. That visibility should be regarded as a positive and enabling a significant high-grading of M&A opportunities. Click here

Latin America

Sabesp
Outperform
TP R$42

- **Vinicius Canheu** comments on the negotiations between **Sabesp** (R$32, TP R$42, O/P) and the city of Guarulhos (one of Sabesp's biggest defaulting municipalities). He notes that part of this deal involves setting up a new contract for future wholesale water supply with a guarantee structure based on utilities-related receivables owned by the city and automatic payments. In exchange, Sabesp will give a 20% discount on the monthly bills for the water supply. After a series of bad news for the company, which included the preliminary draft of its second tariff review, he sees this announcement as positive, as he expects it to lead to the monetization of receivables that were not in investors' numbers. Click here

Asia

China Wind Sector

- **Dave** shares his take-aways from 1H17 results reported by **China Wind Sector**. Despite volatile wind resources, utilisation hours for **Longyuan Power** (HK$5.9, TP HK$7.6, O/P) and **Huaneng Renewables** (HK$2.4, TP HK$3.6, O/P) expanded by 5% and 1%, respectively. Average realised tariff, due to increasing direct sales, declined by 2% for both. Despite curtailment ease, he attributes sector's YTD weakness to the uncertainties of green certificate pricing. However, he expects more clarity of green certificate by year-end including renewables quotas and floor prices. He sees sector valuation as appealing at 0.6x P/B FY18E. Click here

China Power Sector

- **Dave** comments on the proposed merger of Guodian and Shenhua groups approved by SASAC. At the listco level, **GD Power** (Rmb3.6, not covered) and **Shenhua Energy** (HK$20.1, not covered) also announced the proposal to consolidate their thermal assets. He states that there is no mention of the impact on **Longyuan Power** (HK$5.9, TP HK$7.6, O/P), the designated renewable generation platform under Guodian. He believes this supports his view China is pushing for power industry consolidation. He expects this to result in more rational pricing behaviour in the liberalising power market and more effective control on power capacity planning. Click here

China Resources Gas
Outperform
TP HK$36

- Following 1H17 results, **Dave Dai** reviews his estimates for **China Resources Gas** (HK$27, TP HK$36, O/P). He slightly cuts his EPS forecasts with a higher volume growth, but lower industrial dollar margins. CRG has underperformed key peers YTD, but the valuation is appealing at 12x FY18E PE with a 26% FY17-19E EPS CAGR backed by its strength in the city gas business. His TP of HK$36 and Outperform rating are unchanged. Click here

ENN Energy
Outperform
TP HK$57

- **Dave** revisits his estimates for **ENN Energy** (HK$50, TP HK$57, O/P) following the 1H17 results. The company raised its full-year retail gas volume guidance to >25% y-y (from >15%) and the new connection target to 1.9m (from 1.8m). He states that cost control was strong in 1H17 for SG&A. He expects the company to provide more value-added products following the management's positive outlook in energy solutions. He raises his 2017E EPS estimates by 1.7% and retains his Outperform rating. Click here

India Utilities Sector

- **Lokesh Garg** comments on the **Indian Utilities Sector**. Overall, power demand has remained weak with growth of just 5.0- 5.5% in FY17 and 1Q FY18, while renewables have been taking away about 25-30% of the incremental demand. Given weak demand, renewables, and sector reform aimed at system optimisation, he reiterates his Neutral rating on **NTPC** (Rs168, TP Rs180, N). Click here

Malakoff
Neutral
TP RM1.1

- Post 1H17 results, **Joanna Cheah** lowers her TP for **Malakoff** (RM1.1, TP RM1.1, N), as she widens her discount to DCF from 15% to 30%. In her view, the larger discount is warranted due to earnings volatility and management uncertainty. She sees the dividend as the only reason to hold the stock. Her new 2017-18E DPS estimates of 6sen (cut from 7sen) imply a yield of c6%. She thinks cash flows are strong, but the bulk of these goes toward debt servicing and repayment. Click here

Kunlun Energy
Underperform
TP HK$5.2

- **Horace Tse** cuts his estimates for **Kunlun Energy** (HK$7.2, TP HK$5.2, U/P), following disappointing 1H17 results. He lowers his 2017-19E EPS by 8-11% post model update and his forecast point to flat earnings in 2016-18E. He notes that despite all the hype on domestic LNG recovery, the LNG processing segment did not witness any recovery in 1H17, a big mismatch vs. market expectations. He reiterates his Underperform rating and slightly increases his SOTP-based TP to HK$5.2 (from HK$5.0). Click here

Australia / New Zealand

Genesis Energy
Underperform
TP NZ$2.16

- **Nevill Gluyas** downgrades his rating for **Genesis Energy** (NZ$2.43, TP NZ$2.16, U/P) from Neutral to Underperform. He believes the company has a sound strategy to leverage its competitive advantages, but in his view it is trading above underlying value, likely due to a strong dividend yield (albeit sustainable over the medium term, based on his FCF modelling). He notes that the FY18E EBITDAF guidance range of NZ$345m to NZ$365m was weaker than he expected and he revises his FY18E EBITDAF forecast down by 11% to NZ$346m. Click here

Meridian Energy
Neutral
TP NZ$2.87

- Following FY17 results, **Nevill** raises his TP for **Meridian Energy** (NZ$2.91, TP NZ$2.87, N) to NZ$2.87 (from NZ$2.74) on roll-forward. He keeps his FY18E EBITDAF estimate of NZ$668m unchanged and other key driver assumptions change by c1%. He believes that the company continues to plot a steady course despite facing the highest hydro volatility in the sector and maintains his Neutral rating. Click here

Mercury NZ
Underperform
TP NZ$3.07

- **Nevill** increases his TP for **Mercury NZ** (NZ$3.46, TP NZ$3.07, U/P) to NZ$3.07 (from NZ$2.83) and reiterates his Underperform rating. His revised FY18E EBITDAF forecast falls to NZ$501m which is consistent with MCY's maiden FY18E NZ$500m guidance. He believes the company stands out in the sector for relatively stable earnings, very good retail capabilities and reduced exposure to some of the key sector risks due to the location and mix of its generation and retail portfolio. Nevertheless, he struggles to justify the current trading levels against his view of value fundamentals. Click here

APA Group
Underperform
TP A$8.45

- **Peter Wilson** reviews his estimates for **APA Group** (A$8.83, TP A$8.45, U/P) following FY17 results. He increases his forecast EBITDA by 1.7% in FY18E and 3.2% in FY19E incorporating fully the growth projects. While a headline free cash flow yield of c9.2% looks attractive, if he adjusts for the amortisation of the WGP (Wallumbilla Gladstone Pipeline) receipts, this falls to a more modest 7.3% estimated to grow at 4% per annum FY17-20E. **AusNet Services** (A$1.7, TP A$1.8, O/P) and **Spark Infrastructure Group** (A$2.7, TP A$2.4, U/P) offer a similar or better dividend yield with comparable asset growth and lower risk. He increases his TP to A$8.45 (from A$8.10) and retains his Underperform rating. Click here

Spark Infrastructure
Underperform
TP A$2.4

- **Peter** revises his estimates for **Spark Infrastructure** (A$2.7, TP A$2.4, U/P). He raises his consolidated NPAT by 12.3% in FY17 due to an increase in proportionate EBITDA estimates and lower tax and depreciation charges. As SKI gave dividend guidance to FY18, he decreases his growth expectation for FY18-19E to 3% with risk to the downside. He highlights that low rates are clearly a positive for valuation, given SKI's correlation with bond prices. However, low inflation also means that SKI has to spend more to keep its asset base flat in nominal terms, yet its actual capex is well below the regulatory allowance. Click here

Vector
Neutral
TP NZ$3.6

- **Gregory Main** reiterates his Neutral rating for **Vector** (NZ$3.3, TP NZ$3.6, N) and raises his price target from NZ$3.44 to NZ$3.60 on a roll-forward of his DCF and assuming a higher earnings track in the Technology division. He increases his EBITDA forecast for FY18E and FY19E by 2.6% and 1.9%, respectively, rises his near-term capex forecasts and lowers his DPS forecasts. He expects VCT to deliver relatively flat earnings growth over the next few years as it is impacted by a reset in gas distribution and faces headwinds in its gas trading business. VCT can sustain a reasonable dividend, in his view. Click here

Closing prices as of 30th August 2017

Global Utilities Conviction List

MOST PREFERRED STOCKS	Currency	TP	Last close	Upside	Inclusion date	Price on inclusion	Performance since inclusion (vs. MSCI World Utilities)*	YTD performance (vs. MSCI World Utilities)*	Investment rationale
Cheung Kong Infrastructure	HKD	84.0	71.3	18%	8 May 2017	67.4	(2%)	(2%)	The three reasons for choosing the stock as our sector top-pick are: (i) lowest earnings exposure to Hong Kong, (ii) continuing overseas expansion and the acquisition momentum as exhibited by the recent bid for DUET group, and (iii) the recent correction in the share price. **Our latest research:** *Cheung Kong Infrastructure - Further overseas expansion; proposing to buy 35% stake in European energy service provider*
Enel	EUR	5.70	5.09	12%	21 Feb 2017	4.01	29%	20%	Enel's growth prospects remain at the top end of the sector, with an 11% net income CAGR in 2016-19E (excluding the impact of minority buyouts/share buybacks), more than double the average of the sector. We recall that in the latest plan Enel targeted €16.2bn 2018E EBITDA and €17.2bn EBITDA in 2019E. We see upside risk on the company's targets driven by regulation in Latin America and efficiency in the network/supply business. We do not see any rationale to the stock's discount to the sector, given its superior growth prospects, improved track record and restructuring progress. We expect an acceleration in minority buyouts in Q4, following the recent announcement of the corporate reorganization in Chile. Trading at 12.3x 2018E P/E (integrated peers 13.8 x, sector 14.7x) and 7.0x 2018E EV/EBITDA (integrated peers 8.2x, sector 8.9x), we believe the current price provides an attractive entry point. **Our latest research:** *Enel - Unjustified discount*
Powergrid Corporation	INR	250	216	16%	8 May 2017	210	(4%)	8%	We reiterate an Outperform rating on attractive valuation and steady medium-term growth of 10% CAGR over FY17-22E despite potential returns cut. PGCIL is trading at par with Asian utilities and is cheaper than European and US utilities. It has much stronger growth of 15% CAGR vs. low mid-single digit growth rates for others. P/B valuation is positively correlated with benign rates and general market valuation. **Our latest research:** *Powergrid Corporation - Powergrid Corporation: 1Q results: Steady quarter; commissioning progress tad soft, can catch up during the year. Maintain Outperform*
Exelon	USD	42.0	37.8	11%	7 Feb 2017	36.0	(11%)	(10%)	EXC remains our highest conviction top pick after incorporating the company-specific results for the PJM 2020/21 capacity auction; we increase our TP US$2, to US$42, on an increase in capacity revenues which we account for within our capacity payments NPV in our sum of the parts valuation. Risks to our call include ExGen power price/commodity exposure, nuclear operator risk, and PHI regulatory risks. **Our latest research:** *Exelon Corporation - ZECs in Hand; Looking for Market Reforms*

LEAST PREFERRED STOCKS	Currency	TP	Last close	Downside	Inclusion date	Price on inclusion	Performance since inclusion (vs. MSCI World Utilities)*	YTD performance (vs. MSCI World Utilities)*	Investment rationale
Hong Kong Electric	HKD	5.30	7.14	(26%)	21 Feb 2017	6.72	(9%)	(6%)	The stock faces uncertainties in regulated return negotiation and debt re-financing. 100% of its earnings are exposed to regulatory uncertainty in Hong Kong. We also highlight that re-financing risk remains in 2017. The company expects there could be increase in total finance costs after debt refinancing in 2017, if there are further US interest rate hikes. We estimate that a 25bp effective interest rate increase would lower the company's FY17E EPS by 2.5%. **Our latest research:** *Hong Kong Electric Investments: 1H17 distributed income flat despite asset growth; prefer CKI for strong growth*
CGN Power	HKD	1.65	2.14	(23%)	21 Feb 2017	2.37	(24%)	(17%)	The stock is the most expensive vs. H-share power peers trading on 1.6x FY17E P/B. We are less convinced that the management target operations for the Taishan units for 2H17/1H18 will be met on time as no fueling license has been granted. We also feel that utilisation and tariff risks are key downsides for the stock. **Our latest research:** *CGN Power - 1H17 results in line with output momentum but tariff overhang in 2H17*
National Grid	GBp	850	966	(12%)	14 Jan 2015	908	(27%)	(11%)	Concerns core to our Underperform thesis are based upon lower asset base growth. We also believe the company is at peak returns and earns a c12% all-in return on equity. We see most of the £4bn capex comes from the US (7% p.a. rate base growth), where returns are lower than in the UK (5% p.a. RAB growth). We note that the stock is sensitive to the recent rise in bond yields (we estimate each +/-50bps on discount rates is +/-6% on our TP) and this has driven the shares over the past year. We see a lack of short-term catalysts. The stock trades on a c46% premium to combined RAB and ratebase. **Our latest research:** *National Grid - Revisiting our Underperform thesis*

*Source: Credit Suisse Research, Thomson Reuters, * - USD terms; All MOST PREFERRED STOCKS are Outperform rated and all LEAST PREFERRED STOCKS are Underperform rated. Data as of 30th August 2017*

Recent Rating Changes

Company	Old rating	New rating	Change	Change on	Currency	TP	Last close	Country	Rationale for change
Brookfield Infrastructure Partners	Outperform	**Neutral**	▼	22 Aug	USD	44.0	43.7	US	We downgrade to stock to Neutral (from Outperform) as the stock is trading above our target price. We continue to believe there are some near-term trading positives arising from a potential index inclusion. Such an inclusion could further aid stock performance, however, on a more fundamental basis the current valuation is less attractive versus a number of other stocks in our coverage universe. We continue to believe BIP's organic asset base growth underpins an attractive network story. That visibility should be regarded as a positive and enabling a significant high-grading of M&A opportunities.
Gensis Energy	Neutral	Underperform	▼	22 Aug	NZD	2.16	2.43	NZ	We downgrade Genesis Energy from Neutral to Underperform as we believe the company has a sound strategy to leverage its competitive advantages, but in our view it is trading above underlying value, likely due to a strong dividend yield (albeit sustainable over the medium term, based on our FCF modelling).

Important Global Disclosures

Nevill Gluyas and Gregory Main each certify, with respect to the companies or securities that the individual analyzes, that (1) the views expressed in this report accurately reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including FNZC's total revenues, a portion of which are generated by FNZC's investment banking activities.

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, First NZ Capital's policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	24%	(0% banking clients)
Neutral/Hold*	54%	(0% banking clients)
Underperform/Sell*	19%	(0% banking clients)
Restricted	3%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

See the Companies Mentioned section for full company names

As of the date of this report, First NZ Capital makes a market in the following subject companies (GNE.NZ, MCY.NZ, MEL.NZ, VCT.NZ).

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(60% banking clients)
Underperform/Sell*	14%	(53% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Note: Share prices as of close on 29 August, 2017.
Source: FactSet, Macquarie Capital (USA), August 2017

***Please see Fig 1 on page 3, and company-specific sections for changes in estimates and TPs.**

Event

- M&A actions, deleveraging, and a potential PJM market reform and state nuclear subsidies have supported stocks of power producers despite mild summer weather. **NRG** and **EXC** remain our top picks among power names. Asset sales, deleveraging, and plant retirements in TX could extend the rally in **NRG**'s stock. **PEG** and **EXC** are about to start their push for nuclear subsidies in NJ, and those together with a change to marginal power pricing in PJM could meaningfully boost their merchant power earnings.
- We have downgraded **CPN** to N from OP on the limited upside to its current market valuation from a pending acquisition offer.

Impact

- **DOE study and PJM's price formation reform:** The long-awaited DOE study on the reliability of competitive power markets was released in late August, and owners of merchant nuclear and coal plants, especially in PJM, seemed unanimously satisfied with it. They all hope FERC now instructs PJM to expeditiously revise its tariff allowing non-flexible power plants to start setting marginal power prices and eliminate negative bids from wind farms as soon as the summer of 2018. This PJM price formation reform was endorsed by the DOE study, but PJM's Board has been reluctant to revise its tariff via a FERC complaint, so power generators are hopeful that the newly reconstituted FERC will order PJM to do so. Initial scenarios imply a US$2-4/MWh upside to ATC power price throughout PJM, especially in off-peak hours, thus benefitting most nuclear and baseload coal plants. Gas fired plants should also benefit from higher margins, especially as PJM power prices would get less dependent on gas prices.
- **State nuclear subsidies and PJM market reforms:** Owners of merchant nuclear plants in PJM seem optimistic about the price formation reform, but they are still pushing their state legislatures for nuclear subsidies. NJ should try to pass a nuclear support bill after the gubernatorial elections in November. Nuclear power generators in the state do not seem discouraged by the lack of support for nuclear subsidies in OH and CT – they are pledging ongoing ownership and operations of the plants as well as financial transparency. While non-nuclear merchant power companies will continue to fight these state subsidies, the state interventions could further accelerate PJM's power price formation reform.
- **Harvey and ERCOT's power supply/demand balances:** For months, we had been waiting for a hot August in TX, Houston in particular. Instead, Hurricane Harvey hit the Houston area, causing widespread flooding, and sharply reducing power demand in the area. NRG's retail book in the area must have been caught long-power, which should make it difficult for the company to deliver on its 2017 EBITDA guidance. The weak load has pressured forward power curves in ERCOT, making power plant retirements even more important. With NRG focused on asset sales and retail margin improvements, we don't expect it to announce plant shutdowns in TX, at least not this year, so all eyes are on Vistra. The DOE study, even if done by the former governor of TX, is unlikely to lead to changes in the power price formation in the TX power market, if only because FERC has no jurisdiction over ERCOT, so those power plant retirements are crucial.

DOE study and PJM energy price formation reform

The long-awaited DOE study on the reliability of competitive power markets was released in late August (https://energy.gov/sites/prod/files/2017/08/f36/Staff%20Report%20on%20Electricity%20Markets%20and%20Reliability_0.pdf). Frankly, we were somewhat disappointed by the content of the report and its recommendations, but owners of merchant nuclear and coal plants, especially those in PJM, seemed unanimously satisfied with the study, pointing out that DOE's authority over power markets is limited and as such the report should be seen as a list of guidelines for FERC to follow.

The PJM power generators seem particularly happy that the DOE report suggested that FERC should expedite its efforts to improve energy price formation in regional power markets and mitigate negative energy bids from renewable power plants, in a way endorsing PJM's current price formation proposal. FERC has been analyzing various price formation reforms in competitive power markets over the last couple of years, with little (if any progress). In June 2017, PJM came out with its own price formation effort (covered by this working paper http://www.pjm.com/~/media/library/reports-notices/special-reports/20170615-energy-market-price-formation.ashx). In short, PJM is proposing to let inflexible power resources (mainly nuclear and coal plants) set location marginal prices (LMPs). Currently, as these resources have no dispatchable range, they play no role in the price formation in PJM, while wind resources that can dispatch at negative power prices (thanks to federal tax subsidies), do. While PJM has yet to run a scenario analysis of the impact of the price reform on power prices, early estimates suggest a meaningful US$2-4/MWh (10%+) uplift to calendar ATC power prices throughout PJM, with ~US$1/MWh associated with potential failures of natural gas pipeline systems and the rest with the elimination of negative wind offers and the inclusion of coal/nuclear marginal pricing. The uplift to power prices would be particularly pronounced during offpeak hours, thus benefitting nuclear and coal-fired power plants the most, yet gas-fired plants in PJM should also see some benefit during on-peak hours, if only as the price formation reform should make PJM power prices even less correlated with natural gas prices. We would not anticipate any changes in generation volumes from nuclear, coal, or gas-fired plants.

Not surprisingly, the price formation reform is strongly supported by owners of nuclear and coal plants throughout PJM, and they all see the DOE study as instrumental at accelerating the market reform. The question remains if the change can be implemented by the summer of 2018, with power producers pointing to the newly reconstituted FERC which is still awaiting a new Chairman.

It's our understanding that PJM does not have (205) rights to revise the piece of its tariff that covers the price formation change – PJM either needs to file a complaint with FERC claiming that this portion of its tariff is unjust and unreasonable, (a move which the PJM Board seems reluctant to pursue), or make a change to the tariff through a majority vote, which seems even less likely. What the power producers are all hoping for is that based on the findings of the DOE study, FERC will order PJM to make a change to its tariff. For now, however, there is no docket at FERC to discuss the PJM price formation change, making the June 2018 implementation timeline rather ambitious, we believe.

State subsidies for nuclear power plants – NJ should be next

Owners of nuclear power plants in PJM, **EXC** and **PEG** in particular, seem excited about the proposed changes to the energy price formation in PJM, but despite that, they are still pursuing their push for state subsidies for their nuclear plants in NJ and PA. Those state actions could further accelerate PJM's push for a power market reform, we believe.

In OH, **FE** has clearly struggled to garner support for its zero emission nuclear credits (ZENs) from both the Legislature and the Governor. It does not help that FE keeps emphasizing that its OH nuclear plants will be sold and that OH sits on top of the Utica Shale with numerous gas-fired power plants being added to the state. The US$2-4/MWh uplift to Ohio power prices starting in the summer of 2018 (best case) should not be enough to continue operations of FE's nuclear plants, we believe.

D's push for the inclusion of its nuclear plant in CT (Millstone) in the renewable power procurement for the state has been challenged by D's unwillingness to provide any disclosures on the financial standing of the asset. We are still hopeful D could reach an agreement with CT legislators, but that will require at least some level of financial disclosures, maybe provided in a confidential way.

PEG and **EXC** do not seem discouraged by **FE's** and **D's** problems with garnering supporting for their nuclear plants, and we would expect **PEG/EXC** to launch a legislative effort to support their nuclear plants in NJ after the gubernatorial election in November, still this year. It's our understanding that the support for the NJ nuclear units would not take a form of zero emission credits, and as such would have no direct link to energy/capacity prices in PJM. However, the state support could be waived if the financial standing of NJ nukes were to meaningfully improve based on changes in power market fundamentals.

ERCOT: Hurricane Harvey and power plant retirements

For months, we had been waiting for a hot August in TX, Houston in particular. Instead, Hurricane Harvey hit the Corpus Christi/Houston area last Friday causing wide-spread flooding, killing at least 17 people, and sending more than 30,000 people to emergency shelters.

While large baseload power plants have been largely unaffected by the storm, peaking power plants owned by **NRG** and **CPN** have flooded and could take time to restart, with temperatures gradually increasing in Houston – business interruption insurance should cover any damage to the plants, we believe. However, **NRG**'s retail book in the area must have been caught long-power, with high temperatures in Houston in mid 70s F as opposed to low 100s F in late August, typically the peak power usage season. That in turn should make it difficult for NRG to meet even the low-end of its 2017 EBITDA guidance.

The weak load has pressured forward power curves in ERCOT, making power plant retirements even more important. With NRG focused on asset sales and retail margin improvements, we don't expect it to announce plant shutdowns in TX, at least not this year, so all eyes are on Vistra Energy. The DOE study, even if done by the former governor of TX, is unlikely to lead to changes in the power price formation and the elimination of negative power bids from wind farms in the TX power market, if only because FERC has no jurisdiction over ERCOT. Therefore those power plant retirements are crucial to support forward power prices in TX, we believe.

Changes to earnings estimates and TP for competitive power producers

We have updated our earnings estimates and TPs to reflect changes in forward power/gas curves and the upside potential coming from the PJM price formation reform and potential nuclear subsidies in NJ. Please refer to company-specific section for a discussion of changes in estimates and TPs.

Fig 1 Competitive power producers: Changes in TP and earnings estimates

	TP		2017		2018		2019		2020	
	New	Old	New	Old	New	Old	New	Old	New	Old
Diversified utilities - EPS estimates (US$)										
EXC	41	41	2.70	2.71	2.91	2.92	2.81	2.86	2.62	2.72
PEG	49	46.50	2.89	2.90	2.93	2.96	2.89	2.93	2.98	3.00
Independent power producers - EBITDA estimates (US$m)										
CPN	15.25	16	1,830	1,868	1,933	1,944	1,942	1,986	1,887	1,992
DYN	12	12	1,206	1,266	1,354	1,437	1,186	1,357	1,003	1,180
NRG	27	25	2,500	2,600	2,567	2,547	2,692	2,558	2,811	2,623

Source: FactSet, Macquarie Capital (USA), August 2017

NRG Energy (NRG, OP, TP US$27 up from US$25): Deleveraging and cost cutting trump weak power market fundamentals

- **Deleveraging and cost cutting:** NRG plans to raise US$2.5-4bn in net cash proceeds from renewable power assets included in its yieldcos, NRG Yield (NYLD US), and C&I renewables at NRG, as well as non-core conventional power plants such as contracted power plants in Louisiana and other non-core operations. We expect the first of these transactions to be announced in September, though the renewable deals could take until November/December, we believe.
- The assets slated for divestitures have an EBITDA of US$1,440m (NYLD accounting for US$920m of it) and ~US$10bn of net debt (~US$8.1bn at NYLD), but NRG expects to replenish ~US$800m of the EBITDA reduction by '19 through cost cutting and margin improvements especially on the retail side. We admit that the latter is rather ambitious given how high retail margins have been and the intense competition among retail providers, hence our proforma estimates do not fully credit NRG for this retail margin expansion. Yet, even under this assumption NRG would end up with less than US$300m in net debt by the end of 2020, assuming NYLD is sold at its current market valuation.
- **Asset acquisitions to follow:** Management plans to maintain a 3x net debt/EBITDA ratio and redeploy excess cash in retail/conventional generation assets. While we may first have to wait for the GenOn restructuring to be complete (which could be as soon as this fall), we would expect NRG to try to grow its retail operations in PJM, likely backed by DYN's power generation assets.
- **ERCOT has disappointed, even before Hurricane Harvey:** We had been excited about the upside to Houston power prices given the load growth in the zone (up ~4% YoY, though partly thanks to the weather) and transmission constraints which will not get relieved until at least next summer. NRG has recently retired Greens Bayou 5 peaker (406MW), CPN shut its Clearlake co-gen (400MW), making the Houston zone truly tight even with EXC's Colorado Bend (1,000MW) coming online. Yet, after a strong 2Q17, ERCOT power prices have been declining due to a combination only party due to weather, and long before the impact of Hurricane Harvey. While NRG's baseload power plants survived the hurricane and flooding that followed largely unaffected, its peaking plants have been flooded and their restart could take some time. Importantly, late August/early September is typically the peak power usage season for Houston and NRG's retail business, Reliant Energy, should have been caught with a large long power position reflective of 100+ F temperatures vs. mid-70s/low 80s F. The low temperatures and rain seem to have eroded the TX load more so than any T&D outages in the region. Forward power prices in TX have fallen on the back of disappointing spot prices this summer, and now all eyes are on Vistra Energy and their potential power plant retirements in TX to be announced this fall, we believe.
- **PJM price formation reform:** Following the divestiture from GenOn, NRG's main exposure to the PJM power market is through the portfolio of coal plants in Northern Illinois (4,336MW in the ComEd zone). If PJM is successful at the price formation reform, these assets could see earnings uplift (at least ~US$40-50m in annualized EBITDA starting as soon as the summer '18, we estimate).
- **Changes in estimates:** We have updated our earnings estimates to reflect changes in forward power curves and lower retail margins in TX this summer. Beyond 2017, the lower forward power prices in TX should be more than offset by lower costs and potentially higher retail margins. Our new '17/'18/'19/'20 EBITDA estimates are US$2,500m/2,567m/2,692m/2,811m vs. US$2,600m/2,547m/2,558m/2,623m, respectively These estimates do not account for the upcoming sales of non-core assets– those are reflected in our proforma estimates in the table below (Fig. 2).

Fig 2 NRG: EBITDA/Net debt proforma the proposed asset divestitures and cost initiatives

	2017E	2018E	2019E	2020E
EBITDA (US$m)	942	1,590	1,710	1,830
Net debt (US$m)	-5,985	-2,709	-1,587	-237
Share count		316	316	316
Equity value per share @ 5.5x EV/EBITDA			**24.74**	**31.10**

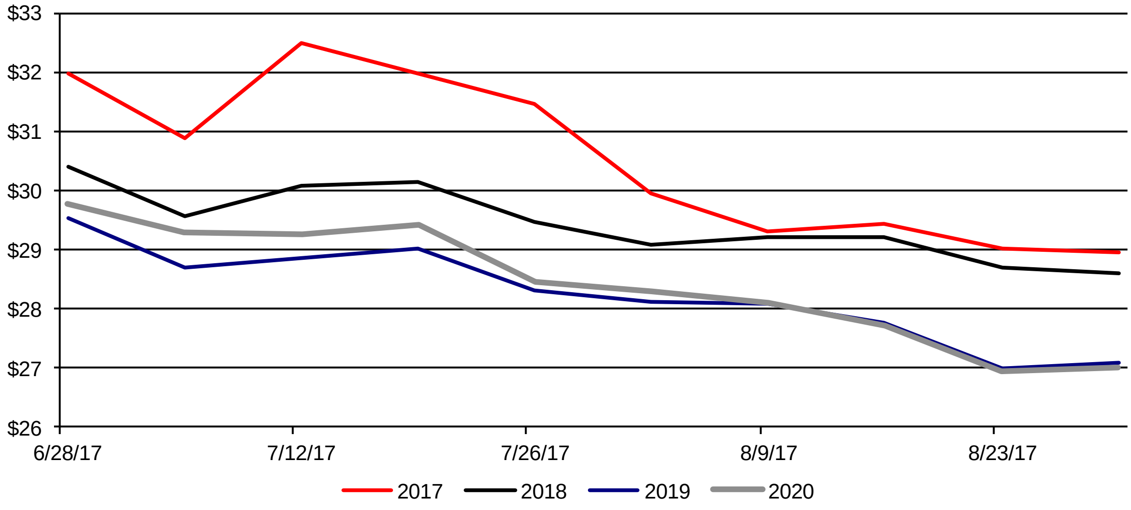
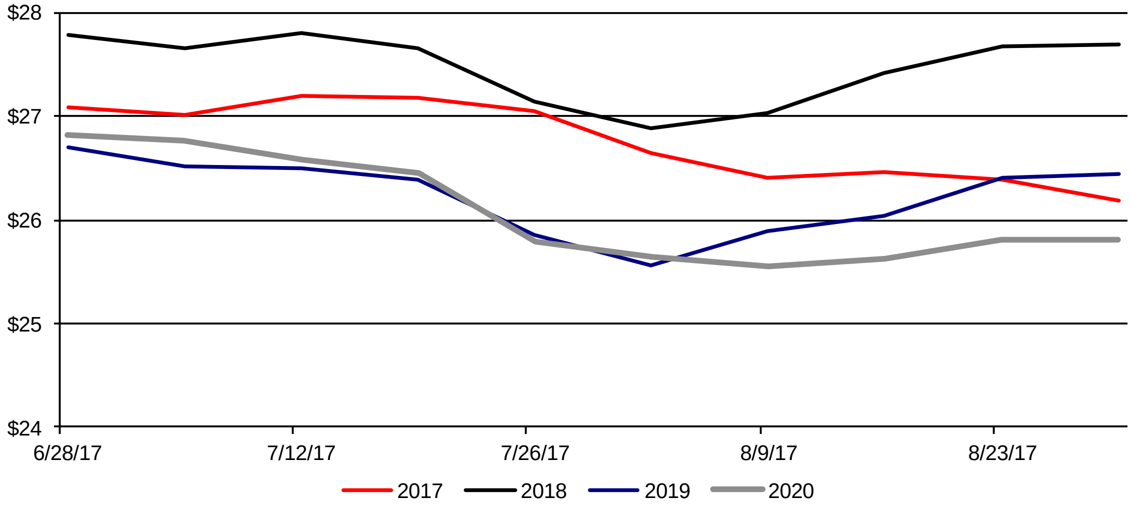
Fig 3 ERCOT Houston ATC power prices (US$/MWh) have been falling even before Hurricane Harvey



Source: Macquarie Energy, Macquarie Capital (USA), August 2017

Fig 4 NI Hub ATC power prices (US$/MWh) remain weak, but changes in PJM's price formation could boost calendar prices to low US$30s, we estimate

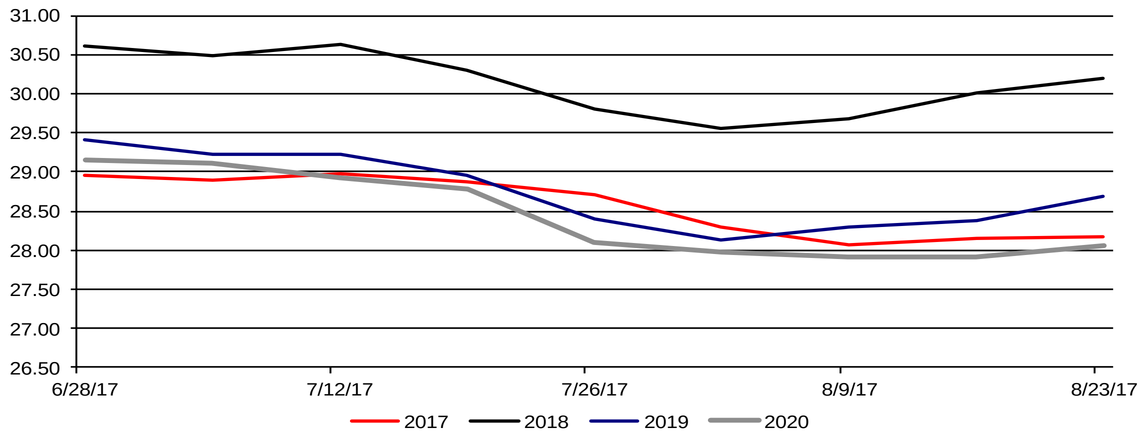


Source: Macquarie Energy, Macquarie Capital (USA), August 2017

Exelon (EXC, OP, TP US$41 unchanged): PJM price formation reform and state support for nukes in NJ

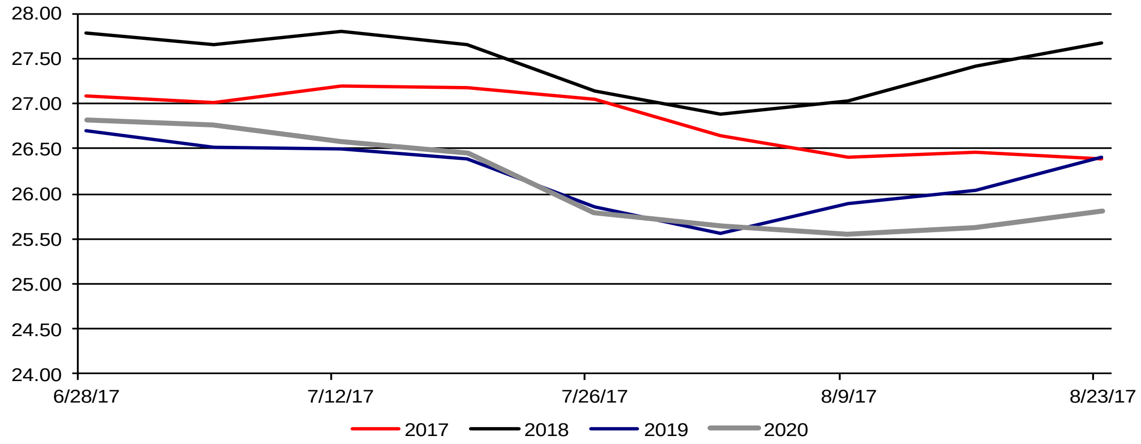
- **Power market fundamentals:** Forward power prices in PJM have weakened since the beginning of the summer, partly due to the mild weather, but also weak weather-normalized power demand. We are hopeful, however, that the DOE study should lead to power price formation reform in PJM, with EXC's nuclear plants as the biggest beneficiaries of the power price uplift on the back of the market reform. EXC should join PEG's efforts to push for state support for its nuclear plants in NJ during the lame duck session, after the gubernatorial elections this November.
- **Changes in estimates:** We have updated our earnings estimates to reflect changes in power/gas prices in the forward curve as of 08/30/17 and mild August. Our new '17/'18/'19/'20 EPS estimates are US$2.70/2.91/2.81/2.62 vs. US$2.71/2.92/2.86/2.72, previously. We see meaningful upside to ExGen earnings from the price formation reform in PJM and potential nuclear subsidies in NJ. Those two could add up to US$0.35-0.40 in an annualized EPS uplift starting as soon as the summer of 2018, we estimate.

Fig 5 PJM West ATC (US$/MWh) have weakened partly due to mild summer weather



Source: Macquarie Energy, Macquarie Capital (USA), August 2017

Fig 6 NI Hub ATC power prices (US$/MWh): 2018/2019 power prices have remained largely unchanged during the summer, but still very weak

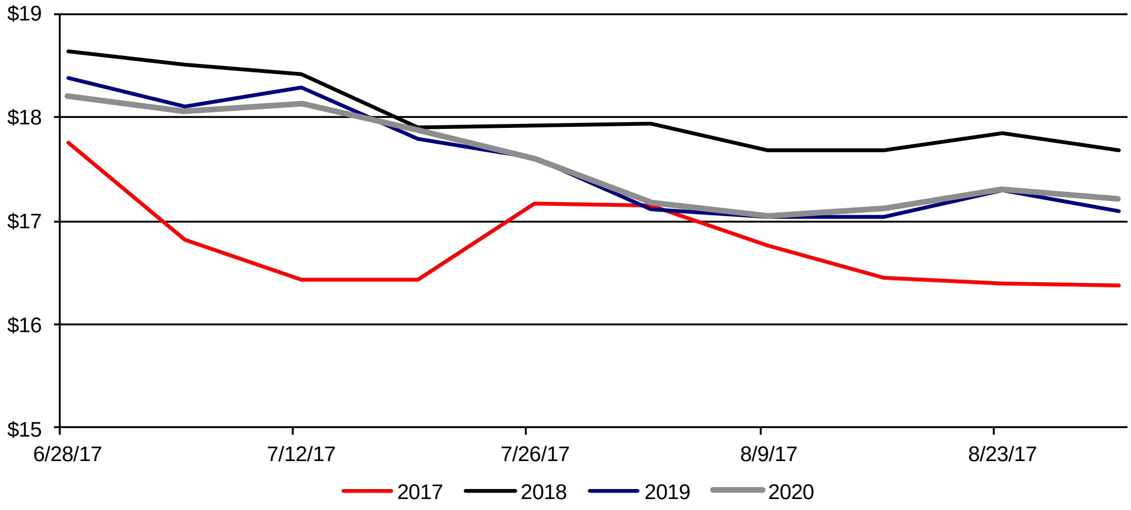


Source: Macquarie Energy, Macquarie Capital (USA), August 2017

Dynegy (DYN, OP, TP US$12 unchanged): Deleveraging and M&A against weakening spark spreads

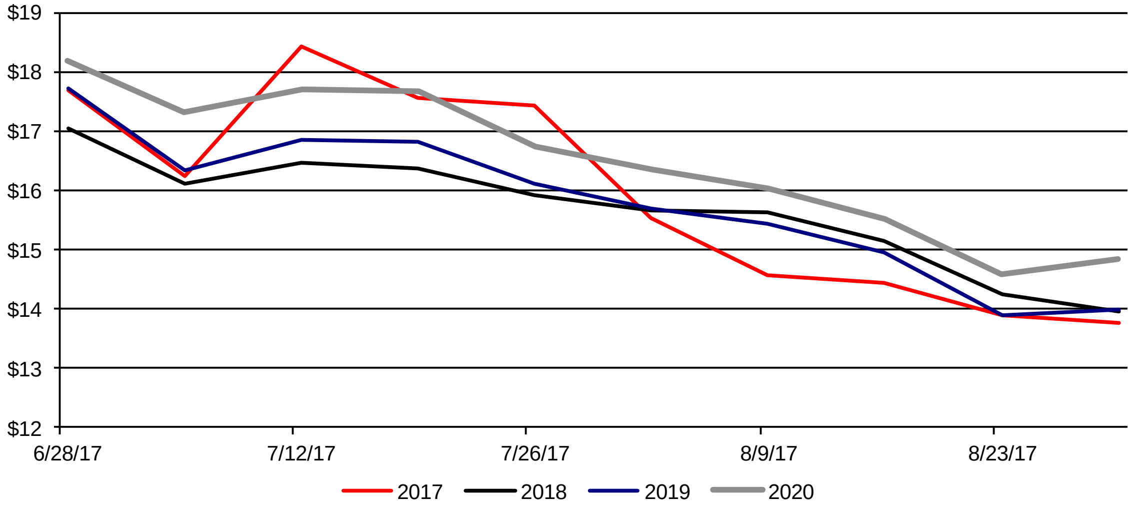
- **Power market fundamentals:** DYN's spark spreads in PJM and ERCOT have continued to shrink on the back of unfavourable summer weather and shrinking load in PJM. DYN could see some margin uplift in both markets on the back of power plant retirements (by Vistra Energy in ERCOT) and the PJM price formation change, but the main impact should be during offpeak hours when DYN's plants are offline. It seems to us that we are getting close to the bottom of the PJM power market, though we wonder if this potential uplift to power prices could be offset by lower capacity prices.
- **Delevering and M&A:** It has been a very busy 3Q17 for DYN – the company sold Armstrong and Troy peakers in PJM, entered into sale deals for Lee/Dighton and Milford peakers in New England, and issued US$850m in 9 year bonds through a private placement. The debt offering together with cash proceeds from asset sales and FCF should allow DYN to repay up to US$1.25bn of its US$2.1bn '19 debt maturity. Additional asset sales together with internally generated cash could allow DYN to address the remainder of the maturity. We continue to see DYN as an acquisition target for either NRG Energy or Vistra Energy, and such a transaction would trigger change of control clauses on all of DYN's debt, but we are still glad to see DYN addressing the 2019 debt maturity.
- **Changes in estimates:** We have updated our earnings estimates to reflect changes in power/gas prices and announced sales of Lee/Dighton/Milford power plants. Our new '17/'18/'19/'20 EBITDA estimates are US$1,206m/1,354m/1,186m/1,003m vs. US$1,266m/1,437m/1,357m/1,180m. Our US$12 TP remains unchanged.

Fig 7 PJM West/Tet M3 on-peak spark spreads (US$/MWh) have continued to weaken mostly due to cool summer weather.



Source: Macquarie Energy, Macquarie Capital (USA), August 2017

Fig 8 ERCOT South/HH on-peak spark spreads (US$/MWh) have fallen sharply since the beginning of the summer, even before Hurricane Harvey

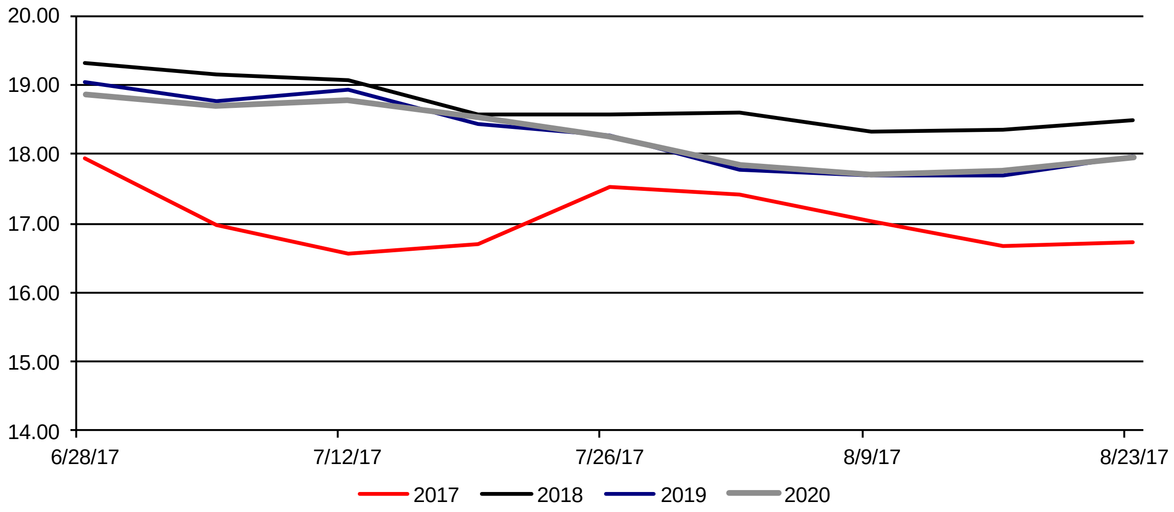


Source: Macquarie Energy, Macquarie Capital (USA), August 2017

PSEG (PEG, N, TP US$49 up from US$46.50) – NJ nuclear subsidies and PJM price formation reform

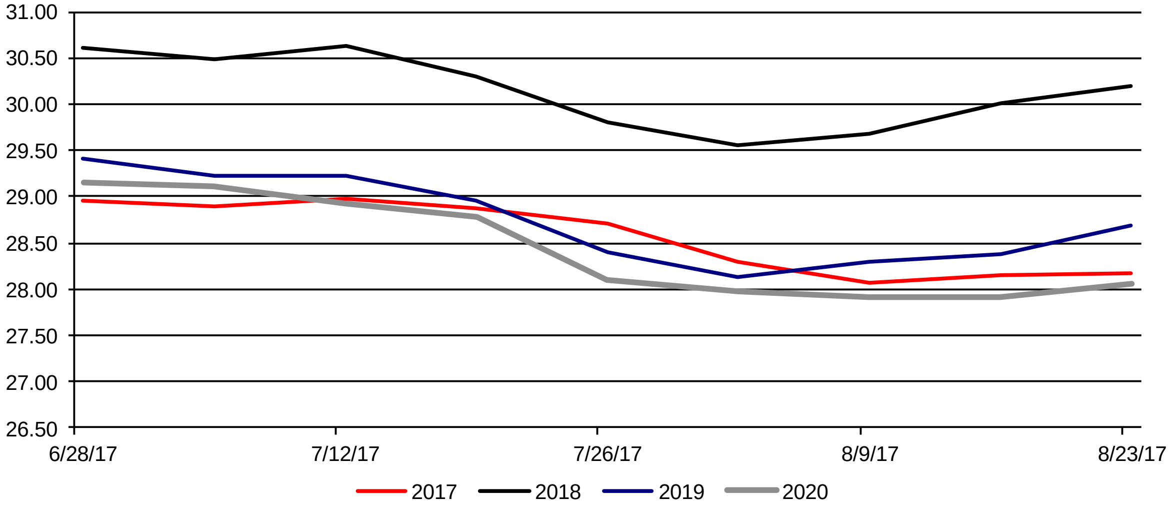
- **NJ nuclear subsidies and changes to PJM energy price formation:** Forward power prices in PJM have weakened since the beginning of the summer, partly due to the mild weather, but also weak weather-normalized power demand. We are hopeful, however, that the DOE study should lead to a power price formation reform in PJM, with PEG's nuclear and coal plants as the biggest beneficiaries of the power price uplift on the back of the market reform.
- Even more importantly, we expect PEG to push for a state support for its nuclear plants in NJ from the NJ Legislature during the lame duck session after the gubernatorial elections in November. The nuclear subsidy would not take the form of zero emission credits, and as such would have no direct link to PJM power/capacity markets. Yet, PSEG Power seems open to waive the state support for its nuclear plants if PJM power market fundamentals were to sharply improve.
- The DOE study should lead to a reform to the power price formation in PJM and that in turn should boost PSEG Power's margins for its coal and nuclear plants in particular, as the uplift should be particularly pronounced during offpeak hours. The power company is likely to push for a state support for its nuclear plants in NJ during the lame duck session, after the gubernatorial elections in November. Not ZECs, no direct link to power/energy markets, but willingness not to rely on the state support if PJM power prices were to meaningfully increase.
- **Changes in estimates, TP:** We have updated our earnings estimates to reflect changes in power/gas prices in the forward curve and mild August. Our new '17/'18/'19/'20 EPS estimates are US$2.89/2.93/2.89/2.98 vs. US$2.90/2.96/2.93/3.00, previously. Despite the lower earnings estimates we have raised our TP to US$49 from US$46.50 to reflect a meaningful upside to PSEG Power earnings from the price formation reform in PJM and potential nuclear subsidies in NJ. Those two could add up to US$0.30 in an annualized EPS starting as soon as the summer of 2018, we estimate.

Fig 9 PJM East/Dom South on-peak spark spreads (US$/MWh) have continued to decline over the summer, at least partly due to mild weather



Source: Macquarie Energy, Macquarie Capital (USA), August 2017

Fig 10 Similarly, PJM West ATC power prices (US$/MWh) have weakened



Source: Macquarie Energy, Macquarie Capital (USA), August 2017

Calpine (CPN, N down from OP, TP US$15.25 down from US$16): Going private at just shy of fair value

M&A: In mid-August, CPN agreed to be acquired for US$15.25 per share in cash by a consortium led by Energy Capital Partners. While the sale price came (just) shy of our expectation of US$16, CPN had little choice but to go private, we believe. Management has cut cost and monetized its most transactable assets, and a merger with one of the other public IPPs would have been difficult given market power issues in TX or balance sheet leverage.

Based on our estimates, the sale price implies a 7.35x ’19 EV/EBITDA, which seems fair to us given the potential upside to TX spark spreads and downside to CAISO earnings as CPN’s long-term capacity contracts gradually expire. The sale agreement includes a 45-day “go-shop” period, but given that the review of strategic options for CPN has been pending since at least early May, we would not expect a higher offer. The transaction should close in 1Q18.

Estimate, TP and rating changes: We have lowered our earnings estimates to reflect lower spark spreads in ERCOT and PJM. Our new ’17/’18/’19/’20 EBITDA estimates are US$1,830m/1,933m/1,942m/1,887m vs. US$1,868m/1,944m/1,986m/1,992m, respectively. We have lowered our TP to US$15.25, down from US$16, to reflect the pending offer from ECP. With limited upside to the current share price, we have downgraded CPN to Neutral from Outperform.

IMPORTANT DISCLOSURES

Analyst's Certification

I, Carl Kirst, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA. These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Distribution of Ratings (August 31, 2017)

Rating category	BMO rating	BMOCM US Universe*	BMOCM US IB Clients**	BMOCM US IB Clients***	BMOCM Universe****	BMOCM IB Clients*****	StarMine Universe
Buy	Outperform	45.4%	22.5%	59.2%	47.7%	59.6%	53.9%
Hold	Market Perform	51.6%	13.3%	39.8%	49.4%	39.2%	41.1%
Sell	Underperform	3.0%	5.9%	1.0%	2.9%	1.2%	5.0%

* Reflects rating distribution of all companies covered by BMO Capital Markets Corp. equity research analysts.

** Reflects rating distribution of all companies from which BMO Capital Markets Corp. has received compensation for Investment Banking services as percentage within ratings category.

*** Reflects rating distribution of all companies from which BMO Capital Markets Corp. has received compensation for Investment Banking services as percentage of Investment Banking clients.

**** Reflects rating distribution of all companies covered by BMO Capital Markets equity research analysts.

***** Reflects rating distribution of all companies from which BMO Capital Markets has received compensation for Investment Banking services as percentage of Investment Banking clients.

Ratings Key (as of October 2016)

We use the following ratings system definitions:
OP = Outperform - Forecast to outperform the analyst’s coverage universe on a total return basis;
Mkt = Market Perform - Forecast to perform roughly in line with the analyst’s coverage universe on a total return basis;
Und = Underperform - Forecast to underperform the analyst’s coverage universe on a total return basis;
(S) = Speculative investment;
Spd = Suspended - Coverage and rating suspended until coverage is reinstated;
NR = No Rated - No rating at this time; and
R = Restricted - Dissemination of research is currently restricted.

BMO Capital Markets' seven Top 15 lists guide investors to our best ideas according to different objectives (CDN Large Cap, CDN Small Cap, US Large Cap, US Small Cap, Income, CDN Quant, and US Quant have replaced the Top Pick rating).

Other Important Disclosures

For Important Disclosures on the stocks discussed in this report, please go to http://researchglobal.bmocapitalmarkets.com/Public/Company_Disclosure_Public.aspx or write to Editorial Department, BMO Capital Markets, 3 Times Square, New York, NY 10036 or Editorial Department, BMO Capital Markets, 1 First Canadian Place, Toronto, Ontario, M5X 1H3.

Dissemination of Research

Dissemination of BMO Capital Markets Equity Research is available via our website https://research-ca.bmocapitalmarkets.com/Public/Secure/Login.aspx? ReturnUrl=/Member/Home/ResearchHome.aspx. Institutional clients may also receive our research via Thomson Reuters, Bloomberg, FactSet, and Capital IQ. Research reports and other commentary are required to be simultaneously disseminated internally and externally to our clients.

~ Research distribution and approval times are provided on the cover of each report. Times are approximations as system and distribution processes are not exact and can vary based on the sender and recipients' services. Unless otherwise noted, times are Eastern Standard and when two times are provided, the approval time precedes the distribution time.

BMO Capital Markets may use proprietary models in the preparation of reports. Material information about such models may be obtained by contacting the research analyst directly. There is no planned frequency of updates to this report.

General Disclaimer

"BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale arm of Bank of Montreal and its subsidiaries BMO Nesbitt Burns Inc., BMO Capital Markets Limited in the U.K. and BMO Capital Markets Corp. in the U.S. BMO Nesbitt Burns Inc., BMO Capital Markets Limited and BMO Capital Markets Corp are affiliates. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. Nothing herein constitutes any investment, legal, tax or other advice nor is it to be relied on in any investment or decision. If you are in doubt about any of the contents of this document, the reader should obtain independent professional advice. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Andrew Breichmanas, Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To E.U. Residents: In an E.U. Member State this document is issued and distributed by BMO Capital Markets Limited which is authorised and regulated in the UK and operates in the E.U. on a passported basis. This document is only intended for Professional Clients, as defined in Annex II to "Markets in Financial Instruments Directive" 2004/39/EC ("MiFID").

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

These documents are provided to you on the express understanding that they must be held in complete confidence and not republished, retransmitted, distributed, disclosed, or otherwise made available, in whole or in part, directly or indirectly, in hard or soft copy, through any means, to any person, except with the prior written consent of BMO Capital Markets.

Things We've Learned This Week

Our Take: The sector took a late-summer breather with 130 bps underperformance vs the broader market this past week. The most significant news this week was SO's unsurprising recommendation to move forward with the Vogtle new nuclear project. Notable in the report was the project's positive NPV vs a new gas plant based on updated forward gas price (and other) assumptions. Also, the option to cancel Unit 4 was dismissed given limited savings that would reduce this NPV compared with proceeding on both units.

- **Hurricane Harvey Aftermath.** As Hurricane Harvey swept across the Texas Coast this past week, heavy damage was left in its path as a result of high winds and torrential flooding. As of August 31st, CNP reported 25K of its 2.4M customers and have restored power to over 850K customers, AEP reported 87K of its 1M Texas customers were without power and have restored power to approximately two-thirds of the customers that lost power, ETR reported 56K of its 444K Texas customers were without power and have restored power to 129K customers. Also as of August 31st, ERCOT showed load in areas affected by Harvey to be down by less than 22% compared to August 24th, a week ago. The largest difference was in the Coastal weather region down 5,639MW or 29%, followed by the South Central region down 1,006MW or 13%, and lastly the Southern region down 548MW or 14%. Natural gas infrastructure along the Gulf Coast has seen minimal damage. Though the assets of Houston's largest IPPs are relatively unscathed, weaker electricity demand in Harvey's aftermath is likely to dampen revenues in the near term. While Harvey mostly spared Texas' generation assets and to a lesser extent electric transmission infrastructure, distribution lines have been heavily damaged.
    - While we expect CNP (and other Texas utilities) to ultimately recover storm damage expenses, it's worth noting that Houston Electric does not have insurance covering its transmission and distribution system, other than substations. While the company has issued storm restoration bonds in the past (Hurricane Ike in 2008 with 90% of customers then affected), there could be material regulatory lag depending on the size of any deferred asset. However, in any event, it is still too soon to determine whether any special relief will be needed in the first place. ENBL's assets are mostly away from the coast and underground and likely to be relatively unaffected.
- **EEI Financial Conference 2017 Meetings Signup Now Open**: Please join us in Orlando 11/5-11/7 as we host 24 management meetings and a takeaways dinner on 11/7: *WEC, NI, BKH, AVA, ED, DUK (dinner), DTE, AEP, EXC, NEE, NWE, ES, EIX, D, SRE, CMS, CNP, PNW, XEL, PPL, PEG, PCG, SO, ETR.*

- **Illinois ZEC Appeal filed.** Following their appeal filing in NY, EPSA and other plaintiffs have now also filed an appeal of the July 14th Memorandum Opinion and Order from the District Court for the Norther District of Illinois (Case 17 CV 1164) that granted defendant's (**EXC**) motions to dismiss the case again ZEC nuclear subsidies in the state. The Illinois ruling upholds $235M/yr of ZEC subsidies for EXC's Quad Cities and Clinton nuclear plants.
    - ***From our 8/27 weekly*: NY ZEC Appeal filed.** As expected, the Electric Power Supply Association (EPSA) and other plaintiffs filed an appeal of the July 25th Memorandum Opinion and Order from the District Court for the Southern District of NY (Case 16 CV 8164) that granted defendants' (EXC) motions to dismiss the case against Zero Emission Credit nuclear subsidies in the state. Recall that the NY ruling upheld approximately ~$330M/yr of subsidies for EXC's Ginna, Nine Mile, and Fitzpatrick plants (*7/25 EXC: Case Dismissed…Again*) and came just over a week after a similar case in IL was dismissed (*7/16 EXC: Case Dismissed*) that upholds $235M/yr of ZEC subsidies for the Clinton and Quad Cities plants. An appeal had already been previously filed for the Illinois ruling in the 7th Circuit. That the two District Court rulings came so close

together is indicative of independent reasoning coming to essentially the same conclusion. This gives us increased confidence for success in these follow-on appeals processes.

- **AEP Ohio Electric Security Plan.** On August 28th, AEP Ohio filed a settlement with the Public Utilities Commission of Ohio (PUCO) addressing its Electric Security Plan (ESP). Key elements of the ESP discussed in the settlement include EV charging, renewable generation, and through 2024. The settlement calls for AEP to invest in grid reliability infrastructure and to develop pilot programs for EV charging station and microgrids. It also offers customer rate stability through 2024 with minimal customer impacts (*details will be available as part of the hearing process*). In addition, the settlement provides support for AEP's efforts to develop wind and solar generation projects through the creation of a renewable generation rider. It also establishes an option for AEP to seek approval for a renewable plant, of which the plant's output can be purchased through a bilateral contract with a retail customer.
- **Winds of change for AEP's Wind Catcher legal case.** The Oklahoma Corporation Commission (OCC) denied a motion to dismiss made by Oklahoma Attorney General Mike Hunter, permitting Wind Catcher's preapproval case to move ahead. (**AEP**)
    - ***From our 8/21 weekly***: **Wind Catcher catching some legal wind**. Following AEP's announcement on July 26 that it would purchase the 2GW Wind Catcher Energy Project for $4.5B, Oklahoma Attorney General Mike Hunter filed his objection to this purchase. He argued that Public Service Co of Oklahoma (PSO), a subsidiary of AEP, did not demonstrate that it needs additional generation capacity and failed to conduct a competitive process before announcing the purchase. On this basis, Hunter asked that PSO's application with the Oklahoma Corporation Commission for cost recovery of the project to be dismissed.
- **Chopped Down to Size – Michigan PSC trims DTE rate request.** On Tuesday (8/29) the Michigan Public Service Commission (MPSC) Staff recommended a $70.8M electric rate increase (1.5%), based on a 9.8% ROE and $15.244B of ratebase. This compares to DTE's requested $230.9M rate increase (4.8%) based on a 10.5% ROE and $15.391B of ratebase and the currently authorized 10.1% ROE based on a $14.244B ratebase. Staff's recommendation would result in a $0.12 EPS increase vs $0.38 from the company's request. Rebuttal testimony is due 9/22, hearings are scheduled 10/9-10/17, briefs are due in November, with an ALJ proposed decision estimated to come by Jan 26, 2018. The MPSC is required to issue a final decision by April 18, 2018. (Case U-18255).
- **Another two bite the dust, XEL retiring coal plants.** Xcel Energy and other stakeholders reached an agreement calling for early retirement of two coal-fired generation units representing 660MW of capacity, a third unit will remain operating. As Xcel continues to shift away from coal, the company will also request competitive bids for 1000MW of wind, 700MW of solar, and 700MW of natural gas under its ~$2.5B "Colorado Energy Plan Portfolio" filed with the Colorado PUC.

Recent Excerpts:

- **Northern Pass decision delay is not a surprise**. On 8/31, the New Hampshire Site Evaluation Committee (NHSEC) voted to postpone their final decision on Eversource Energy's (ES) Northern Pass Transmission (NPT) project for another six months to the end of March 2018. This is considered the most critical gating approval, to be followed by a Presidential permit to construct and operate the line across the US/Canada border. Previously, the decision was due at the end of September; although we had highlighted a probability of delay in our Aug 11 weekly (see below) due to the need for "weeks" of intervenor cross examination after ES witnesses finish (they wrapped on Aug 30). ES stated it was "disappointed considering the review process was already extended by nine months for what was originally a 12-month process", but was also encouraged by the committee's "willingness to pursue options for concluding the review in advance of the new deadline." Also pending are the issuance of federal permits, including the Presidential permit, a Special Use permit from the U.S. Forest Service, and the Section 404 Permit from the U.S. Army Corps of Engineers. All major contractor and equipment contracts are fully executed and ES remains confident in its ability to achieve a 2020 in-service date (recently extended a year), anticipating construction to begin in 2Q18.

  - ***From our 8/11 weekly: Still targeting yearend approvals but New Hampshire unlikely to grant siting approvals by Sept 30.*** On Aug 10, ES received the Final Environmental Impact Statement (FEIS) from the US Department of Energy for NPT. With 11 of 13 ES witness panels now completed, the remaining ES witnesses are expected to testify through mid-Sept, to be followed by rounds of intervenor testimony and cross examination. That could take weeks depending on how tolerant the NH Siting and Evaluation Committee (NHSEC) is of "friendly cross examination" between the various intervenor groups opposed to the project (we hear that the Chair of the committee is inclined to limit such cross). Once finished, we expect another 2-4 weeks of briefs (no replies though) followed by deliberations and finally, a vote. A formal written order would then take another 30-60 days. In addition to the NHSEC process, the NH Public Utility Commission is also reviewing approval for leases of rights of way from Public Service Co of New Hampshire (an ES subsidiary), with hearings in late November. See our 7/28 report "Holding the (Transmission) Line Through 2020".

- **SO: It's a Go; Let the Neutrons Flow.** On Aug 31st, SO filed its 17th Vogtle new nuclear construction Monitoring Report (VCM) with Georgia regulators recommending continued construction of Vogtle Units 3 and 4. The new target in-service dates for Units 3/4 are 29 months delayed from the prior schedule to Nov 2021/Nov 2022, respectively; with $1.41B higher capital costs vs the current regulatory stipulation net of $1.7B guarantee payments from Toshiba. The VCM also seeks the usual approvals for $542M spending from Jan-June 2017. We expect regulators to make a decision by Feb 2018, although likely sooner given their close involvement in the process and the need to contain costs in the very unlikely event that the proposal to proceed is rejected.

  - ***From our 8/21 weekly*: SO pursuing expanded nuclear loan guarantees.** This week, SO and Vogtle new nuclear project partner Oglethorpe Power announced that they had filed an application to increase the amount of federal loan guarantees. The guarantees now stand at a total of $8.3B to help reduce financing costs for the project (45.7% owned by SO), recently estimated to cost as much as $27.5B (excluding $3.7B of guarantee payments from Toshiba). Note that before SCG announced the cancellation of sister project VC Summer, that company had also asked the Department of Energy for federal grants to help defray construction costs, but to no avail.

- **DUK: Sunshine for Another Three Year**

Extension of 2013 Florida rate settlement pushes out a ratecase filing and provides more rate and earnings certainty for at least 3 years. No change to estimates or TP*.* *Florida represents ~18-19% of total ratebase and EPS; we continue to project about 6.2% ratebase growth through 2021. The settlement included the Office of Public Counsel and other consumer advocates. If approved, retail bills would increase 1-3% annually ($67M annual increases plus Solar Base Rate Adjustments) from 2019-2021 vs the prior* *expectation for filing a general ratecase there in mid-2018 for rates in 2019. Key provisions are support for $6B of capital investment at the same 9.5-11.5% ROE band (10.5% for solar), including $1.1B for grid modernization and $1B for 700 MW of solar over a four year period; the latter is a significant acceleration of the previously articulated plan for $1B for 500 MW over 10 years. Solar costs are capped at $1,650/kWac per filing.*

Another nuclear cancellation. *It also formally cancels the proposed Levy nuclear project and forgoes recovery of the remaining $135M unrecovered costs and $15M of previously expensed legal fees (vs over $800M already recovered), with a $135M write-off taken in 3Q17. Other provisions include regulatory deferrals for a small 50-MW battery storage program capped at $115M, and an $8M electric vehicle charging station pilot.*

Potential tax reform impact agreement. *The utility would retain 40% of any reduced revenue requirement to accelerate depreciation of Crystal River coal units 4&5 (60% flow back to customers) and excess deferred taxes would be passed back to customers over 5 or 10 years unless specified by law*

- **Last Week's Things We've Learned This Week (8/25):**

Our Take: *This was a surprisingly busy week for a normally slow end-of-summer period. Beyond continued Texas M&A bidding, we also had the Department of Energy release its long-awaited study of baseload resources and grid reliability. As we've noted previously, we expect the report to push the Federal Energy Regulatory Commission (FERC) to order grid operators to submit proposals in 1H18 for sweeping energy market reforms that will ultimately benefit coal and nuclear units. These reforms could include higher payments for non-intermittent supply, ancillary services, low-carbon attributes, as well as the elimination of negative off-peak nodal energy pricing that frequently results from nighttime tax-subsidized wind energy production.*

Disclosure Appendix

Analyst Certification

I, Michael Weinstein, certify that (1) the views expressed in this report accurately reflect my personal views about all of the subject companies and securities and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.
**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(60% banking clients)
Underperform/Sell*	14%	(52% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. Additional Regional Disclaimers

Hong Kong: Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an Australian financial services licence (AFSL) and is exempt from the requirement to hold an AFSL under the Corporations Act 2001 (the Act) under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Act). Research on Taiwanese securities produced by Credit Suisse AG, Taipei Securities Branch has been prepared by a registered Senior Business Person.

Australia (to the extent services are offered in Australia): Credit Suisse Securities (Europe) Limited (“CSSEL”) and Credit Suisse International (“CSI”) are authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority (“FCA”) and the Prudential Regulation Authority under UK laws, which differ from Australian Laws. CSSEL and CSI do not hold an Australian Financial Services Licence (“AFSL”) and are exempt from the requirement to hold an AFSL under the Corporations Act (Cth) 2001 (“Corporations Act”) under Class Order 03/1099 published by the Australian Securities and Investments Commission (“ASIC”), in respect of the financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). This material is not for distribution to retail clients and is directed exclusively at Credit Suisse's professional clients and eligible counterparties as defined by the FCA, and wholesale clients as defined under section 761G of the Corporations Act. Credit Suisse (Hong Kong) Limited (“CSHK”) is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). Credit Suisse Securities (USA) LLC (CSSU) and Credit Suisse Asset Management LLC (CSAM LLC) are licensed and regulated by the Securities Exchange Commission of the United States under the laws of the United States, which differ from Australian laws. CSSU and CSAM LLC do not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1100 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act).

Malaysia: Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd, to whom they should direct any queries on +603 2723 2020.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the “FAA”), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority (“DFSA”). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Dissemination of Research

Dissemination of BMO Capital Markets Equity Research is available via our website https://research-ca.bmocapitalmarkets.com/Public/Secure/Login.aspx? ReturnUrl=/Member/Home/ResearchHome.aspx. Institutional clients may also receive our research via Thomson Reuters, Bloomberg, FactSet, and Capital IQ. Research reports and other commentary are required to be simultaneously disseminated internally and externally to our clients.

~ Research distribution and approval times are provided on the cover of each report. Times are approximations as system and distribution processes are not exact and can vary based on the sender and recipients' services. Unless otherwise noted, times are Eastern Standard and when two times are provided, the approval time precedes the distribution time.

BMO Capital Markets may use proprietary models in the preparation of reports. Material information about such models may be obtained by contacting the research analyst directly. There is no planned frequency of updates to this report.

General Disclaimer

"BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale arm of Bank of Montreal and its subsidiaries BMO Nesbitt Burns Inc., BMO Capital Markets Limited in the U.K. and BMO Capital Markets Corp. in the U.S. BMO Nesbitt Burns Inc., BMO Capital Markets Limited and BMO Capital Markets Corp are affiliates. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. Nothing herein constitutes any investment, legal, tax or other advice nor is it to be relied on in any investment or decision. If you are in doubt about any of the contents of this document, the reader should obtain independent professional advice. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Andrew Breichmanas, Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To E.U. Residents: In an E.U. Member State this document is issued and distributed by BMO Capital Markets Limited which is authorised and regulated in the UK and operates in the E.U. on a passported basis. This document is only intended for Professional Clients, as defined in Annex II to “Markets in Financial Instruments Directive” 2004/39/EC (“MiFID”).

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

These documents are provided to you on the express understanding that they must be held in complete confidence and not republished, retransmitted, distributed, disclosed, or otherwise made available, in whole or in part, directly or indirectly, in hard or soft copy, through any means, to any person, except with the prior written consent of BMO Capital Markets.

Click here for data vendor disclosures when referenced within a BMO Capital Markets research document.

Forward Power/Gas Curves – 08/31/17. Below, we provide estimated forward curves for power, heat rates, spark, dark, and quark spreads for peak, off-peak, and around-the-clock for various regions in the United States, broken down by each RTO/ISO in North America. In addition, we model forward gas, basis, as well as coal through the 2026 time frame.

Investors should use this link to open an Excel spreadsheet of various curves that can be used for power and utility models (click here to download our weekly price deck summary).

Forward Curve Weekly Highlights: Power and Heat Rates, for the week of 8/31 versus the prior week, **2018 national peak power prices** ($/MWh) were up 0.4% to $34.10 from $33.95 and around-the-clock power was up 0.6% to $29.55 from $29.36. Peak power in PJM was up 0.8% to $37.00 from $36.70; ERCOT was up 0.4% to $32.37 from $32.23; NE-ISO was up 0.4% to $44.58 from $44.39; NY-ISO was down 0.2% to $45.85 from $45.96; and MISO was up 0.1% to $34.70 from $34.69. **2018 peak heat rate (Btu/kWh) contractions:** 1.3% to 11,495 in NYISO, 0.7% to 11,953 in MISO, 0.5% to 10,120 in NE-ISO, 0.3% to 10,870 in ERCOT, 0.1% to 11,650 in PJM.

Forward Curve Weekly Highlights: Spark and Dark Spreads versus the prior week, **2018 Peak Spark Spreads** ($/MWh) in PJM were up 0.6% to $14.77 from $14.68; ERCOT was down 0.1% to $11.52 from $11.54; NE-ISO was down 0.6% to $13.75 from $13.83; NYISO was down 2.2% to $17.93 from $18.33; and MISO was down 1.0% to $14.38 from $14.52. **2018 Around-the-Clock Dark Spreads** ($/MWh) in PJM were up 1.2% to $24.96 from $24.67; ERCOT was up 0.7% to $20.33 from $20.19; NE-ISO was up 0.2% to $31.98 from $31.90; NYISO was up 0.3% to $32.28 from $32.20; and MISO was up 0.7% to $23.22 from $23.07.

Illustrative impact of marking our IPP and integrated utility models to the current forward curves versus published live estimates: PEG, FE, EXC, NRG, and DYN are lower overall, and CPN is higher. **See the next page for illustrative MtM implications on Guggenheim's IPP and Integrated Utility coverage throughout our forecast period.**

Natural Gas Storage Levels and Eastern Gas Basis Tracker, Gas in storage increased to 3,155 Bcf as of 08/25/2017 a weekly increase of 30 Bcf, resulting in storage 7.0 Bcf below one year ago, 0.3 Bcf above the five-year average for this week. Eastern gas basis (TETCO M3) is currently reflecting a discount to Henry Hub for 2017 and a premium from 2018 through 2020 (-$0.36/$0.14/$0.09/$0.09 for '17/'18/'19/'20), contracting since last week.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.	
Rating Category	Count	Percent	Count	Percent

Neutral	123	39.68%	10	8.13%
Sell	2	0.65%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

The content of this report is based upon information obtained from sources that Guggenheim generally considers reliable, but Guggenheim makes no representations or warranties with respect to its accuracy, completeness, timeliness, suitability or otherwise, and assumes no responsibility to update it for subsequent events or knowledge. What's Inside

Figure 1 includes our STRH Electric Power & Utilities Regulatory Tracker. Figure 2 includes our Fact Finder.

What's Incremental To Our View

This report focuses on regulatory trends impacting our utilities coverage, including pending rate cases, status of merger approval processes, and new rate design proposals.

IMPORTANT POINTS

- Specifically, this report highlights the following: (1) a calendar of upcoming milestones in regulatory filings (including their respective Docket numbers); (2) a summary of key stakeholder positions in pending cases; and (3) a quantification of incremental revenue and ROE trends that will have earnings implications for the sector.

- **Key Events In September**:

AEP – Staff Testimony (September 14th) in Michigan rate case [Docket: 18370]; Intervenor Testimony (September 21st) in Oklahoma rate case [Docket: 201700151].
AES – Expected Decision (September) in DPL ESP settlement [Docket: 16-0395].
CMS – Reply Briefs (September 1st) and Expected Decision (September 28th) in proceedings for Early Termination of Palisades PPA [Docket: 18250]; Rebuttal Testimony (September 7th) in Consumers Electric rate case [Docket: 18322].
EIX – Briefs (September 8th) and Reply Briefs (September 29th) in Electric rate case [Docket: A. 16-09-001].
EXC – Hearings (September 5th) in Pepco Maryland rate case [Docket: 9443]; Rebuttal Testimony (September 6th) in Atlantic City Electric rate case [Docket: ER17030308]; Financial True up (September 8th) in Delmarva Maryland rate case [Docket: 9455]; Initial Briefs (September 12th) in ComEd 2016-17 Electric Formula Rate case [Docket: 17-0196].
SO –Deadline to reach settlement with staff (September 5th) on Kemper plant [Docket: 2017-AD-0112]; Hearings (September 6th) and Initial Briefs (September 29th) in Northern Illinois Gas rate case [Docket: 17-0124]; Rebuttal Testimony (September 18th) in Virginia Natural Gas rate case [PUE-2016-00143].
XEL – Staff Testimony (September 12th) and Rebuttal Testimony (September 26th) in Wisconsin Electric and Gas rate cases [Docket: 4220-UR-123].

		Rate Case Filing Components					
Company	Utility	Rate Base	Equity Ratio	ROE	Rate Increase	Rate Case Status	
		($MM)			($MM)		
Great Plains	*GXP/WR Merger	*Missouri				Expected Filing for Merger Approval	August 2017
		*Kansas (Docket: 18-KCPE-095-MER)				Filed	8/25/17
		*FERC				Expected Filing for Merger Approval	August 2017
Pinnacle West 3.50%	Arizona Public Service (Last Authorized ROE: 10.00%) (Docket: E-01345A-16-0036)		55.80%	10.00%	95	Settlement Filed - 3-year stay-out (until 6/1/19)	3/1/17
						Cost deferral and $62m step increase on 1/1/19 for Four Corners SCR	
						Cost deferral and rate increase in next rate case for Ocotillo	
						Settlement Approved, with rates in effect on 8/19/17	8/15/17
PNM Resources 2018: 3.90% 2019: 3.40%	*PNM New Mexico (Last Authorized: 9.58%) (Docket: 16-00276)	2,385	49.61%	9.58%	62	Settlement Filed - $32m increase in 2018, additional $30m in 2019	5/5/17
						-$8m financial impact from amortization of excess deferred state taxes over three years	
						-Recovery of SCR investment at Four Corners at debt-only return	
						-Rate design to be addressed in a separate phase	
						Hearing Examiner Recommends NMPRC to reject settlement	5/12/17
		2,385	49.61%	9.58%	62	Modified Settlement Filed. Key financial terms remain same. Removes rate design proposal and eliminates accelerated depreciation proposal.	5/23/17
						Decision Expected	4Q 2017
						Suspension Period Ends	1/6/18
Southern Co	*Mississippi Power - Kemper Plant Construction (596 MW) (Docket: 2009-UA-14)					Settlement Approved - Withdraws pending litigation regarding customer rates relating to Kemper Plant ($2.88bn construction cost cap)	1/24/13
						SO announces additional cost overruns of $186m and extension of expected in service date to end of June 2017; total cost overruns above cap: $3.06bn. Total amount eligible for recovery (including the $600m for the 15% interest that was planned for sale): $4.31bn, of which approximately $900m is already in rates.	6/5/17
						MS PSC passes a motion with the following parameters: (1) Run Kemper as a gas fired plant; and (2) no rate increases for customers.	6/21/17
	*Mississippi Power - Settlement Discussions on Kemper Plant (Docket: 2017-AD-0112)					Docket Opened	7/6/17
						Settlement Filed - no rate increase; no recovery for costs associated with gasifier portion of project; CPCN modified to limit Kemper to natural gas operation; and MS Power to file a reserve margin plan in future.	8/21/17
						Deadline to Reach Settlement with Staff	9/5/17
						Expected Decisions	4Q 2017
	*Georgia Power - Vogtle Units 3 and 4 Cost Approval (1,005 MW) (Docket: 29849)					Seventeenth Semi-Annual Monitoring Report Filed - approve $542m of spending from January 1, 2017 to June 30, 2017. Recommend continued construction of Vogtle with SO as project manager. Revised start up dates: Unit 3 (November 2021) and Unit 4 (November 2022). SO share of additional capital costs: $1.4bn (net of $1.7bn of Toshiba guarantee payments). Total Construction Costs Approved to Date: $3.9bn	8/31/17
						Expected Decision	February 2018

Notes:

(A) Investment Rating: Buy (B) = the stock's total return is expected to outperform the S&P 500 over the next 12-18 months; Hold (H) = the stock's total return is expected to perform in line with the S&P 500 over the next 12-18 months; Sell (S) = the stock's total return is expected to underperform the S&P 500 over the next 12-18 months. Only stocks under coverage are assigned an investment rating.

(B) Near-term price target over the next 12 months.

(C) 2017 FCF is calculated as cash flow from operations minus capex.

VALUATION

AEP
Assuming an 18.9x P/E multiple (a 10% premium to the peer group to reflect the above average earnings growth profile) on our 2019 estimate of $4.11, we derive our price target of $78.

AES
Assuming an 11.4x P/E multiple (which would still imply a 10% “conglomerate” discount to the peer group) on our 2019 estimate of $1.32, we derive our price target of $15.

CMS
Assuming a 19.8x P/E multiple (a 10% premium to the peer group to reflect the above average growth outlook) on our 2019 estimate of $2.47, we derive our price target of $49.

CNP
Based on the market value of CNP’s ownership in ENBL, we derive an $8.0/share value. Factoring a 17.6x P/E multiple (in line with the peer group) on our 2019 Utility estimate of $1.09, we derive a $19.2/share value. Consequently, our sum of the parts price target is $27.

CPN
Based on the company's take out price, and our assumption that a higher bid will not emerge, we derive our price target of $15.

DUK
Assuming a 17.7x P/E multiple (in line with the peer group) on our 2019 estimate of $5.09, we derive our price target of $90.

DYN
Assuming an EV/EBITDA multiple of 7.8x (a 3% discount to the peer group to reflect the higher leverage at the company) on our 2019 EBITDA estimate of $1.30bn, coupled with implied net debt of $8.26bn (which factors in all the announced asset sales), we derive our price target of $11.

EIX
Assuming a 19.0x P/E multiple (a 7% premium to the peer group to reflect the company’s above average earnings and dividend growth profile) on our 2019 estimate of $4.69, we derive our price target of $89.

EXC
Assuming a 14.8x P/E multiple (in line with the peer group) on our 2019 estimate of $2.75, we derive our price target of $41.

GXP
Assuming a 17.4x P/E multiple (a 2% discount to the peer group to reflect the uncertainties around the final merger approval) on our 2019 estimate of $1.80, we derive our price target of $32.

NRG
Based on the current market value of NRG's ownership in NYLD, we derive a $5/share equity value. Applying a 9.0x EV/EBITDA multiple (a 10% premium to the current peer average to reflect the potential upside from the successful execution of the Transformation Plan) to our residual NRG 2019 EBITDA estimate of $1.90 billion, coupled with implied residual Net Debt of $11.4 billion, we derive an $18/share value for the residual NRG. Consequently, our price target is $23.

PNM
Assuming an 18.1x P/E multiple (in line with the small cap peer group) on our 2019 estimate of $2.03, we derive our price target of $37.

PNW
Assuming a P/E multiple of 18.4x (in line with other small / mid cap peers) on our 2019 estimate of $4.71, we derive our price target of $87.

SO
Assuming a 16.5x P/E multiple (a 5% discount to the large cap peer group, reflecting ongoing uncertainty around the Vogtle project) on our 2019 estimate of $3.15, we derive our price target of $52.

XEL
Assuming a 18.0x P/E (in line with the peer group) on our 2019 EPS estimate of $2.60, we derive our price target of $47.

RISKS

AEP

- Final resolution of pending regulatory issues.
- Future earnings power post merchant exit
- Impact of proposed and future EPA regulations.

AES

- Potential regulatory/economic changes in key international markets.
- Investor sentiment regarding emerging/international markets.
- Successful execution of portfolio restructuring strategy.

CMS

- Outlook for Retail Open Access in Michigan.
- Change in the regulatory regime.
- Load growth trends.

CNP

- Macro trends and growth outlook for the MLP portfolio.
- Load growth trends in service territories.
- Ability to restructure MLP ownership position.

CPN

- Outlook for future spark spreads.
- Timing of additional EPA regulations.
- Electric load growth trends.

DUK

- O&M cost management.
- Future electric load growth trends.
- Impact of future regulatory initiatives.

DYN

- Outlook for forward commodity curves.
- Integration of the pending acquisitions.
- Final outcome of debt restructuring discussions.
- Implication of future EPA regulations.

EIX

- Capital investment and growth plans for non-utility operations.
- Final CPUC decision on applications to reopen SONGS retirement settlement.
- Outcome of pending and future regulatory cases.

EXC

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

GXP

- Load growth outlook in service territories.
- Outcome of pending rate cases.
- Impact of higher property taxes and transmission costs.
- Completion of the WR acquisition.

NRG

- Execution of the Reset plan.
- Outlook for forward commodity curves.

PNM

- Final New Mexico PRC decision on the rate case settlement.
- Electric load growth trends in service territories.

PNW

- Impact of energy efficiency and distributed generation programs.
- Any regulatory changes regarding distributed generation
- Load growth outlook

SO

- Outlook for load growth.
- Dilution from additional equity issuance.
- Potential for further delays and cost increases at the large construction projects.
- Higher than expected accretion from AGL acquisition.

XEL

- Outcome of pending and future rate cases.
- Outlook for future capital expenditure (and rate base) growth.
- Load growth trends in service territories.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/01/2017):

Coverage Universe			**Investment Banking Clients Past 12 Months**		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	415	59.20%	Buy	130	31.33%
Hold/Neutral	282	40.23%	Hold/Neutral	58	20.57%
Sell/Reduce	4	0.57%	Sell/Reduce	1	25.00%

COVERAGE DROPPED/SUSPENDED					
GDEN	H	NA		--	

Morning Meeting Highlights

Eastman Chemical Co. (EMN, $86.20, Hold) - Relatively Unscathed by Hurricane Harvey - We expect higher Chemical Intermediates profitability over the next 4-6 weeks due to rising spot ethylene prices and olefins spreads. Propylene prices are rising due to outages in Texas, while propane prices have weakened due to reduced demand and the closing of export terminals. We caution that disrupted supply chains and distribution networks may erode the gains in intermediates, and that volatility-prone olefins earnings could weaken again in 4Q as markets recover from Hurricane Harvey. We raise our PT to $90, 4.4% upside from current share price. With valuation of 8.4x 2018E EBITDA, Hold. - **James Sheehan**

Other Focus Items Today

Consumer

Golden Entertainment Inc. (GDEN, $22.81, NA) - Dropping Coverage of Golden Entertainment Inc. - We are dropping coverage of Golden Entertainment Inc. (GDEN) due to a reallocation of resources. The last rating on the stock was Hold. Research issued before 9/1/2017, the date of coverage termination, should not be relied upon going forward. - **C. Patrick Scholes**

Oxford Industries, Inc. (OXM, $57.81, Buy) - Expect Momentum to Build for Holiday - OXM beat consensus by a penny, led by strength at TB. LP profitability robust, but comps light. Management has identified and addressed areas of potential improvement at LP, and should see initiatives bear fruit in 4Q. Near term, the division just completed its After-Party Sale, which was a success (and testament to brand strength) and likely ensures that it meets internal 3Q target. Continue to believe that TB and LP are uniquely positioned to gain momentum both online and in-stores. Reiterate Buy, $66 PT (16.2x fwd PE vs. 17.2x historical avg). - **Pamela Quintiliano**

Genesco, Inc. (GCO, $21.15, Buy) - Encouraged by Journeys Improvements - Trends at Journeys and Schuh (58% of F17 revs) built in F2Q and August. Positive response and store traffic on new assortments at Journeys was offset by Lids (30% revs) which had weak traffic on an uninspiring sports calendar and soft hat sales. Trends at Lids worsened 3QTD, with tough Oct comps still ahead (on ly's Cubs win). That said, guidance assumes ongoing struggles. At 5.5x fwd PE, GCO has the lowest multiple in our universe despite operating unique concepts and has initiatives in place to combat challenges LT. Reiterate Buy, lowering PT to $33 (4x EV/EBITDA) on potential NT challenges. - **Pamela Quintiliano**

InterContinental Hotels Group, PLC (IHG, $49.56, Hold) - Our takeaways from today's investor breakfast - **C. Patrick Scholes**

Restaurants - INVITE — (9/8) Restaurant Commodity Outlook Conference Call with David Maloni - **Jake Bartlett**

Fred's Inc. (FRED, $6.03, Hold) - August Comps In Line - Although FRED's August same store sales were still negative (-0.5%), the results were consistent with recent trends on a 1-year basis, and slightly improved on a 2, 3 year basis. Still, while certain categories are growing, overall sales are being dragged down by negative trends in consumables. - **David Magee**

Electric Power and Utilities

Electric Power and Utilities - Power/Utilities Monthly Regulatory Tracker - This report focuses on regulatory trends impacting our utilities coverage, including pending rate cases, status of merger approval processes, and new rate design proposals. - **Ali Agha**

Financials

Athene Holding Ltd. (ATH, $53.00, Buy) - New Data Highlights Momentum in Pension Market - **Mark Hughes**

Healthcare

The Biotech Monthly Monitor — Preview for September 2017 - A recent pickup in M&A activity is likely to have positive read-through for late-stage assets, and with a cooperative FDA we believe a new product cycle is underway (32 approvals YTD vs. 22 in 2016). These factors are leading to improved investor sentiment in biotech (reflected in YTD performance ~+37%/26% BTK/NBI vs. 10% S&P) and are likely to further increase generalist participation in the space. While Aug. fund-flow has swung slightly negative, we believe more clarity over healthcare policy, positive catalyst flow, and good earnings performance should drive investors to overweight biotech.

MacroGenics, Inc. (MGNX, $18.91, Buy) - JNJ Returns Duvortuxizumab — Negative, but No Read Through to Platform - Today JNJ handed back duvortuxizumab, the CD19xCD3 T cell redirecting bispecific antibody, to MacroGenics. The decision was related to 1) side effects (neurotoxicity related to CD19 treatments) and 2) the increasingly competitive nature of the CD19 market (with multiple CAR Ts approaching launch). On the positive, JNJ remains committed to the partnership (with MGD015 entering phase 1 in 2018), and duvortuxizumab's side effects seem related to the target and not MacroGenics' platform. While this is a negative development we remain confident in MacroGenics' pipeline, and reiterate BUY/$26 PT. - **Peter Lawson**

Industrials

Eastman Chemical Co. (EMN, $86.20, Hold) - Relatively Unscathed by Hurricane Harvey - We expect higher Chemical Intermediates profitability over the next 4-6 weeks due to rising spot ethylene prices and olefins spreads. Propylene prices are rising due to outages in Texas, while propane prices have weakened due to reduced demand and the closing of export terminals. We caution that disrupted supply chains and distribution networks may erode the gains in intermediates, and that volatility-prone olefins earnings could weaken again in 4Q as markets recover from Hurricane Harvey. We raise our PT to $90, 4.4% upside from current share price. With valuation of 8.4x 2018E EBITDA, Hold. - **James Sheehan**

Olin Corp. (OLN, $32.23, Buy) - Raises Price Increase Nomination and Declares Production Shipment Force Majeure - **Jason Freuchtel**

IT Services

Blackhawk Network Holdings, Inc. (HAWK, $44.80, Buy) - Bullish On Strategic M&A. Buy. - We reiterate our Buy and maintain our $50 price target (15.8x C18E EPS). We like the CashStar acquisition, as it signals a continued expansion into Digital. CashStar's 25%+ revenue growth boosts our confidence in Blackhawks' ability to achieve its l-t 5%-8% Retail growth target. We update our model to reflect the acquisition. Our new C17 and C18 revenue and EBITDA estimates are $1,124m/$246m and $1,261m/$298m (Prior: $1,109m/$243m and $1,217m/$285m; Street: $1,082m/$237m and $1,195m/$278m). - **Oscar Turner**

Huron Consulting Group Inc. (HURN, $29.90, Buy) - Questions for Management Post-2Q17 Results - **Tobey Sommer**

Analyst Certification

By issuing this research report, each SunTrust Robinson Humphrey, Inc. analyst named in this report hereby certifies that the recommendations and opinions expressed accurately reflect the research analyst's personal views about any and all of the subject securities or companies discussed herein and no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

<u>The prior rating system until Oct. 7, 2016:</u>

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/01/2017):

Coverage Universe			**Investment Banking Clients Past 12 Months**		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	415	59.20%	Buy	130	31.33%
Hold/Neutral	282	40.23%	Hold/Neutral	58	20.57%
Sell/Reduce	4	0.57%	Sell/Reduce	1	25.00%

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: September 1, 2017

43% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Outperform.	Wells Fargo Securities, LLC has provided investment banking services for 46% of its Equity Research Outperform-rated companies.
55% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Market Perform.	Wells Fargo Securities, LLC has provided investment banking services for 33% of its Equity Research Market Perform-rated companies.
2% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underperform.	Wells Fargo Securities, LLC has provided investment banking services for 26% of its Equity Research Underperform-rated companies.

Important Disclosure for International Clients

EEA – The securities and related financial instruments described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. For recipients in the EEA, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority. For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 ("the Act"), the content of this report has been approved by WFSIL a regulated person under the Act. WFSIL does not deal with retail clients as defined in the Markets in Financial Instruments Directive 2007. Initiating coverage with a BUY rating and $20 price target – A well-integrated IPP with strong retail presence and a generation fleet getting younger and gassier; comparatively clean balance sheet supports further strategic move(s) – control is in VST's hands. On a standalone basis, VST fits very well within our IPP thesis: **(1)** boasts the largest asset base among peers in Texas, a region we are more constructive on; **(2)** operates a proven integrated business model, providing advantages when compared to pure play generators or retailers; **(3)** has a highly efficient CF conversion cycle - without as much investment required to maintain the fleet, VST converts its EBITDA into unlevered free cash flows more efficiently vs. other IPP peers; **(4)** newly acquired CCGTs add scale and increasingly make coal a free call option while also providing fast ramp capabilities as a backstop to intermittent resources; **(5)** management expected to maintain a conservative balance sheet strategy on a go-forward basis, aiming to keep Net Debt/EBITDA comfortably below 3.0x vs. IPP peers' >4.0x. At this juncture, finding the right asset(s)/strategic partner to better utilize the balance sheet capacity remains the near-term focus – it is all within VST's control. **VST has been a highly successful offering but we still see a solid entry point with shares trading at a healthy ~14% FCF yield.** We highlight any announcement of strategic combination or further asset acquisitions and potential coal plant retirements are key NT potential catalysts and could present material upside to valuation – helps support our BUY.

Where should VST go from here? Our thought process has evolved… Our initial thoughts were VST wouldn't likely move away from their comfort zone in ERCOT, as uneconomic coal facilities are likely to retire in line with our thesis – opportunities are plentiful inside ERCOT. Management has also been vocal about not feeling compelled to grow outside with their strong presence in Texas, and has been executing in line with our initial thesis by adding another CCGT (Odessa) recently. **But, the bid/ask spread might just be too wide with some other potential gas asset opportunities within the state.** For instance, we highlighted in our EXC non-deal roadshow note (see HERE) that we believed EXC mgmt. could see a strategic opportunity with their newly completed Colorado Bend and Wolf Hollow CCGTs in South/North ERCOT zones. That said, the price that EXC has likely been seeking, in our view, seems materially higher than what VST is willing to pay, resulting in a significant bid/ask spread - we wouldn't expect this to close anytime soon. EXC has other options to realize value while VST isn't willing to pay up for any one asset.

…and we now see strategic corporate combination a more likely scenario. This was well-supported following our conversations with VST management and our recent DYN meetings we hosted with investors (see note HERE) – **Could we eventually see a strategic combination? Why not?** DYN operates a more diverse fleet spread across each US power market and possesses significant NOLs which could benefit VST given the elimination of substantially all its NOL carryforwards with fresh start accounting. The financial rationale also became evident with VST's clean balance sheet (~1.8x net debt/EBITDA — Guggenheim 2018 estimate), need for scale and share liquidity – **we see the logic that could potentially motivate a well-timed combination especially given the valuation levels where DYN trades.** In our view and incorporating some mosaic theory, both companies should be going through an education process with their boards but nothing is confirmed. ***Continued on the next page...***

EBITDA accretive cost saving opportunities in the $200-300MM range could be very plausible post a strategic combo and could actually prove conservative in time – assuming a mid cycle multiple, value creation could equate to $1.5B-2.5B. Note – we assume any deal would be purely a cash transaction given VST underutilized balance sheet and we have in the past valued DYN at ~$15/share assuming Vistra's debt capacity – SEE OUR PRIOR NOTE HERE.

The "Prisoners Dilemma" could be ending – someone's going to bail in TX. ERCOT will experience a greater shift in the generation mix than what's implied in the ISO's own outlook, in our view, and more importantly, we expect tighter market conditions would result from incremental coal retirements. ERCOT has yet to experience tighter conditions as coal plants are sticking it out despite weak power market fundamentals – at least through the summer. We believe the balance of power will continue to shift to natural gas and renewables at the expense of coal; **we expect ~8.2GW of coal retirements in ERCOT in the near term (NT), with 8 out of 17 existing coal plants struggling for survival at the current price environment.** When factoring in potential coal retirements that our analysis in this note suggests possible, **we believe ERCOT could fall below their targeted 13.75% reserve margin much sooner than many expect**, which can provide not only support for power over the LT but also bring back scarcity pricing NT. Note: We emphasize our coal retirement analysis at the asset level by ultimately estimating unlevered free cash flow for each plant in TX, which we believe is reasonable considering the plant could continue operating in default. **Coal retirements build on our IPP thesis: Quality assets generating strong cash flows with long useful lives matter, with a focus on low and sustainable leverage ratios.**

The Retail Oligopoly continues to take shape: Margins have remained sticky for some time. Owning generation assets is a necessity for retail electricity providers in order to mitigate the risk of gas/power price hikes/volatility and to maintain market share, in our view, especially with scarcity pricing coming back to play. VST has been maintaining customers attrition at a fairly low rate (-0.7%) while anticipating 1-2% annual consumption growth of retail business, which is above the average of 0-0.5% annual growth rate in the U.S., primarily driven by above-average population growth in TX. We would also highlight VST's retail business serves as a natural hedge against low commodity prices, with a significant portion (~50%) of its generation sold through contracts within the retail segment – margins have remained sticky for some time. Given current forward outlook, a bend towards a natural retail hedge makes sense to us – tough to sell power based on pure economics in this environment – Calpine and Talen learned this quickly. **VST could potentially look to expand to other retail markets (i.e., NY-ISO and ISO-NE) as well – Dynegy has the generating assets.**

Our $20 price target is based on a bottom-up, asset-by-asset DCF methodology, implying a 12% ETR. We model each plant in VST's fleet using August 24 forward commodity curves. **Our unlevered DCF valuation implies: (1)** ~$624/kw, which is in line with public/private gas asset transactions that have ranged from ~$292-$646/KW over the past three years and **(2)** 7.6x EV/EBITDA on 2018E fundamentals – below theoretical mid cycle. For 2024E terminal year cash flow, we apply a VST-specific 7.4x multiple that's weighted toward the individual asset portfolio, and we calculate NPV at VST's estimated WACC.

PORTFOLIO MANAGER'S SUMMARY

Initiating coverage with a BUY rating and $20 price target – A well-integrated IPP with strong retail presence and a generation fleet getting younger and gassier; comparatively clean balance sheet supports further strategic move(s) – control is in VST's hands. On a standalone basis, VST fits very well within our IPP thesis: **(1)** boasts the largest asset base among peers in Texas, a region we are more constructive on; **(2)** operates a proven integrated business model, providing advantages when compared to pure play generators or retailers; **(3)** has a highly efficient CF conversion cycle - without as much investment required to maintain the fleet, VST converts its EBITDA into unlevered free cash flows more efficiently vs. other IPP peers; **(4)** newly acquired CCGTs add scale and increasingly make coal a free call option while also providing fast ramp capabilities as a backstop to intermittent resources; **(5)** management expected to maintain a conservative balance sheet strategy on a go-forward basis, aiming to keep Net Debt/EBITDA comfortably below 3.0x vs. IPP peers' >4.0x. At this juncture, finding the right asset(s)/strategic partner to better utilize the balance sheet capacity remains the near-term focus – it is all within VST's control. **VST has been a highly successful offering but we still see a solid entry point with shares trading at a healthy ~14% FCF yield.** We highlight any announcement of strategic combination or further asset acquisitions and potential coal plant retirements are key NT potential catalysts and could present material upside to valuation – helps support our BUY.

Where should VST go from here? Our thought process has evolved… Our initial thoughts were VST wouldn't likely move away from their comfort zone in ERCOT, as uneconomic coal facilities are likely to retire in line with our thesis – opportunities are plentiful inside ERCOT. Management has also been vocal about not feeling compelled to grow outside with their strong presence in Texas, and has been executing in line with our initial thesis by adding another CCGT (Odessa) recently. **But, the bid/ask spread might just be too wide with some other potential gas asset opportunities within the state.** For instance, we highlighted in our EXC non-deal roadshow note (see HERE) that we believed EXC mgmt. could see a strategic opportunity with their newly completed Colorado Bend and Wolf Hollow CCGTs in South/North ERCOT Zones. That said, the price that EXC has likely been seeking, in our view, seems materially higher than what VST is willing to pay, resulting in a significant bid/ask spread - we wouldn't expect this to close anytime soon. EXC has other options to realize value while VST isn't willing to pay up for any one asset.

…and we now see a strategic corporate combination a more likely scenario. This was well-supported following our conversations with VST management and our recent DYN meetings we hosted with investors (see note HERE) – **could we eventually see a strategic combination? Why not?** DYN operates a more diverse fleet spread across each US power market and possesses significant NOLs which could benefit VST given the elimination of substantially all its NOL carryforwards with fresh start accounting. The financial rationale also became evident to us with VST's clean balance sheet (~1.8x net debt/EBITDA — Guggenheim 2018 estimate), need for scale and share liquidity – **we see the industrial logic that could potentially motivate a well-timed combination especially given the valuation levels where DYN trades.** In our view and incorporating some mosaic theory, both companies should be going through an education process with their boards but nothing is confirmed. **EBITDA accretive cost saving opportunities in the $200-300MM range could be very plausible post a strategic combo and could actually prove conservative in time – assuming a mid cycle multiple, value creation could equate to $1.5B-2.5B. Note – we assume any deal would be purely a cash transaction given VST underutilized balance sheet and we have in the past valued DYN at ~$15/share assuming Vistra's debt capacity – SEE OUR PRIOR NOTE HERE.**

The "Prisoners Dilemma" could be ending – someone's going to bail in TX. ERCOT will experience a greater shift in the generation mix than what's implied in the ISO's own outlook, in our view, and more importantly, we expect tighter market conditions would result from incremental coal retirements. ERCOT has yet to experience tighter conditions as coal plants are sticking it out despite weak power market fundamentals – at least through the summer. We believe the balance of power will continue to shift to natural gas and renewables at the expense of coal; **we expect ~8.2GW of coal retirements in ERCOT in the NT, with 8 out of 17 existing coal plants struggling for survival at the current price environment.** When factoring in potential coal retirements that our analysis in this note suggests possible, **we believe ERCOT could fall below their targeted 13.75% reserve margin much sooner than many expect**, which can provide not only support for power over the LT but also bring back scarcity pricing in the NT. Note: We emphasize our coal retirement analysis at the asset level in this note by ultimately estimating unlevered free cash flow for each plant in TX, which we believe is reasonable considering the plant could continue operating in default. **Coal retirements build on our IPP thesis: Quality assets generating strong cash flows with long useful lives matter, with a focus on low and sustainable leverage ratios.**

The Retail Oligopoly continues to take shape: Margins have remained sticky for some time. Owning generation assets is a necessity for retail electricity providers in order to mitigate the risk of gas/power price hikes/volatility and to maintain market share, in our view, especially with scarcity pricing coming back to play. VST has been maintaining customers attrition at a fairly low rate (-0.7%) while anticipating 1-2% annual consumption growth of retail business, which is above the average of 0-0.5% annual growth rate in the U.S., primarily driven by above-average population growth in TX. We would also highlight VST's retail business serves as a natural hedge against low commodity prices, with a significant portion (~50%) of its generation sold through contracts within the retail segment – margins have remained sticky for some time. Given current forward outlook, a bend towards a natural retail hedge makes sense to us – tough to sell power based on pure economics – Talen and Calpine figured this out the hard way. **VST could potentially look to expand to other retail markets (i.e., NY-ISO and ISO-NE) as well – Dynegy has the generating assets.**

Already a lean company emerging from bankruptcy, VST finds no shortage of incremental cost levers to pull – trend in the industry. Upon its emergence from bankruptcy, VST conducted cost saving initiatives which successfully reduced annual corporate overhead, IT and other business function costs by ~$225MM. Upon completion of the support cost structure right-sizing, VST now has turned its attention toward an operational improvement review of its generating fleet for further cost reductions – a trend we have seen in the industry. 2017 new base year is on strong footing, with EBITDA accretive improvements identified equating up to ~$50mm with more upside potential. Management expects to complete the review by 3Q17 – stay tuned.

Our $20 price target is based on a bottom-up, asset-by-asset DCF methodology, implying a 12% ETR. We model each plant in VST's fleet using August 24 forward commodity curves. **Our unlevered DCF valuation implies for VST: (1)** ~$624/kw, which is in line with public/private gas asset transactions that have ranged from ~$292-$646/KW over the past three years and **(2)** 7.6x EV/EBITDA on 2018 fundamentals – below mid cycle figures. For 2024 terminal year cash flow, we apply a VST-specific 7.4x multiple that's weighted toward the individual asset portfolio, and we calculate NPV at VST's estimated WACC.

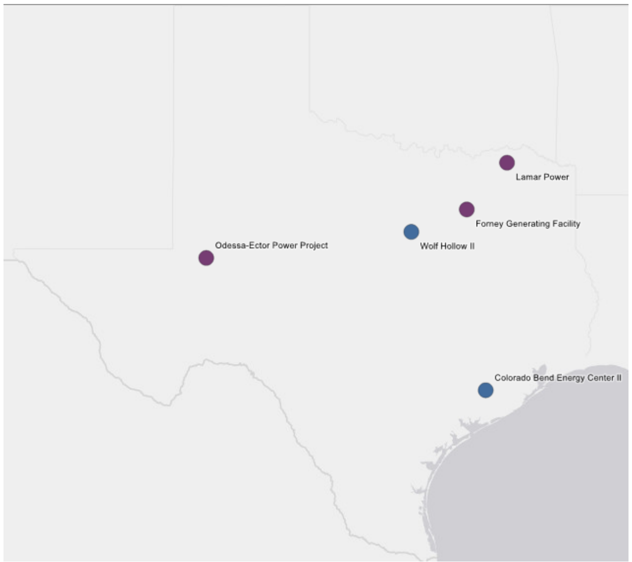
EVOLUTION OF OUR THOUGHT PROCESS

VST operates the largest fleet in Texas (17.8GW), the market with the most upside potential stemming from a pent-up need for capacity rationalization. We also highlight some areas the recently listed IPP lacks are: scale and diversity across power markets, and share liquidity with three holders representing upwards of ~40% of VST's public equity market float.

Our initial thought: focus remains solely in ERCOT.

Our initial thoughts were that VST would not likely come out of its comfort zone in ERCOT… as uneconomic coal facilities are likely to retire in line with our thesis, which we now expect to see 8.2GW of coal retirements as we mark our model to the updated forward commodity curves, while lower power prices will keep pushing more single-asset gas plant operators to capitulate – opportunities are plentiful inside ERCOT. Concurrently, we thought VST would look to acquire more gas fired generating capacity within the state (e.g., EXC's Colorado Bend and Wolf Hollow CCGTs) in order to maintain a balanced hedge position especially as they potentially prepare for further coal retirements including their own Big Brown, Monticello and Martin Lake coal plants in time – **buy gas/shut coal.** Management has also been vocal about not feeling compelled to grow outside of ERCOT with their strong presence there, and has been executing in line with our initial thesis by adding another CCGT, Odessa, in West ERCOT with a similar profile (7.1 MMBtu/MWh heat rate) as Forney and Lamar CCGTs acquired back in 2016.

Figure 2: VST Recent Gas Acquisitions and Potential New Opportunities



Source: Company disclosures, SNL Energy, Guggenheim Securities, LLC.

ERCOT gas asset bid/ask spreads now likely too wide for new opportunities.

...but the bid/ask spread might just be too wide for additional gas asset deals within the state as they executed in the past, in our view… We highlighted in our EXC management roadshow note (See HERE) that we believed EXC could see a strategic opportunity (i.e., an outright sale) with their newly completed Wolf Hollow and Colorado Bend CCGTs in North/South ERCOT Zones (see above), which would fit perfectly with the balance of VST's gas fleet while providing some geographic diversity inside ERCOT – **the EXC assets share very similar plant economics as VST's prior gas deals**. But the timing may not be right as Wolf Hollow and Colorado Bend are now likely worth closer to $500-$600/KW vs. their new build cost of ~$700-900/KW given the current forward curve environment, coupled with the absence of price volatility/scarcity pricing within the state.

So, in our view, **the price that EXC could be asking for these assets may be materially higher than what VST is willing to pay, resulting in a significant bid/ask spread which we wouldn't expect to close anytime soon even though those are comparably non-core assets for EXC** – EXC has other options to realize the value (e.g., drop down to its newly formed private YieldCo if contracted or sell to private equity who could be willing to pay more); while VST is not willing to pay up at this juncture. As a reminder, VST paid ~$350mm, or $332/KW, for the Odessa plant – substantially less than what EXC could be willing to sell their two new CCGTs for.

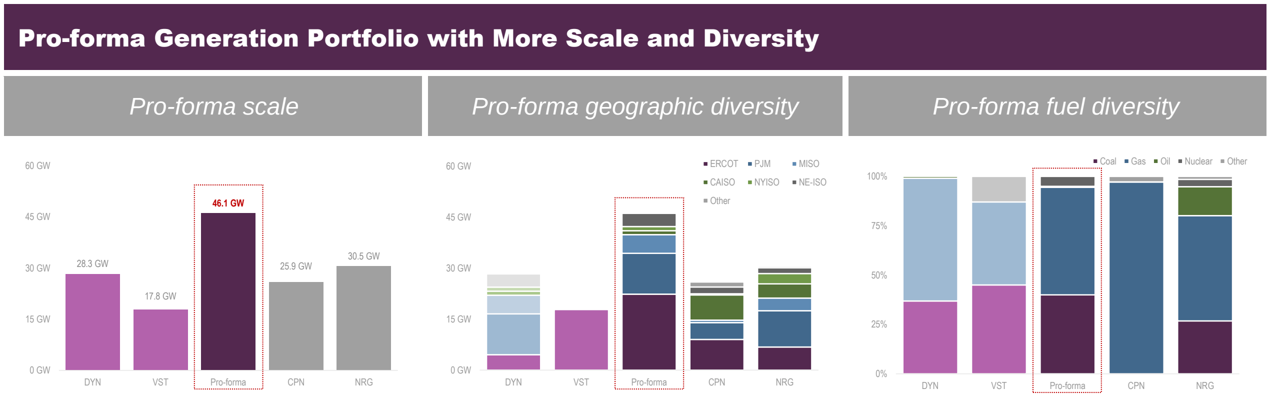
Thought process evolved: strategic combination a more likely scenario.

…so, our thought process has evolved - the stars could finally be aligning for a strategic corporate combination. This was well-supported following our conversations with VST management and our recent DYN meetings we hosted with investors, as well as takeaways from past earnings calls. **EBITDA accretive cost saving opportunities in the $200-300MM range could be very plausible post a strategic combo and could actually prove conservative in time – assuming a mid-cycle multiple, value creation could equate to $1.5B-2.5B. Note – we assume any deal would be purely a cash transaction given VST underutilized balance sheet and we have in the past valued DYN at ~$15/share assuming Vistra's debt capacity – SEE OUR PRIOR NOTE HERE.** The financial rationale also became more evident to us with VST's clean balance sheet, relative to peers in a race to de-lever coupled with the `need to eventually build scale and improve trading liquidity – we see the logic that could potentially motivate a combination especially given the valuation level where DYN trades. **In our view and incorporating some mosaic theory following management conversations, comments on live calls and client hosted meetings, both companies should be going through some education process with their boards, but nothing is confirmed and may not necessarily lead to a combination – this is pure upside to our thesis.**

Industrial logic: diversity, economies of scale and cost synergies.

Industrial logic behind the potential combination is obvious: Scale, diversity and cost synergies. VST has 17 power plants with a total capacity of 17.8GW located in Texas through its wholesale arm, Luminant. A VST-DYN combination would own 46.1GW (before potential mitigation measures), surpassing NRG, which owns 30.5GW (excluding GenOn) of total capacity. In the meantime, adding DYN's 4.5GW of generation capacity in ERCOT (mostly CCGTs) will further enhance VST's leading position with 22.3GW total capacity, thus better positioning VST to further capitalize on economies of scale in the local market. **Pro forma VST would also gain access to PJM and ISO-NE at a trough as well as lower exposure to coal as the main fuel source – coal would essentially become a free call option.** The 46.1GW combined portfolio would consist of 54% of gas-fired generation and 40% coal vs. VST's current mix of 42% gas, 45% coal, and 13% nuclear. **But at the very least, the increase in scale would prompt further coal retirements.**

Figure 3: Pro-forma Generation Portfolio by Region Fuel Type



Source: Company disclosures, Guggenheim Securities, LLC estimates.

VISTRA AT A GLANCE

VST operates one of the more fuel diversified, geographically concentrated generating fleets in the sector, Luminant, which pairs nicely with the largest retail business in ERCOT, TXU Energy. Luminant generates and sells electricity from a fairly fuel-diverse fleet totaling approximately 17.8GW of capacity in ERCOT, including 2.3GW of nuclear, 8.0GW of coal and 7.5GW of natural gas. TXU Energy sells retail electricity and value-added services to ~1.7MM residential, small business and larger C&I customers in Texas.

WHOLESALE – LUMINANT

Concentrated Portfolio Getting Gassier – Age is Everything

Getting gassier and younger.

VST added material gas exposure through two CCGT acquisitions – Forney and Lamar. VST purchased two CCGTs from NEE back in 2015, including the 1.9GW Forney plant with a commercial operation date of 2003 and a 6,600 btu/kWh heat rate, and the 1.1GW Lamar plant with a commercial operation date of 2000 and a heat rate of 6,620 btu/kWh. The purchase price was $1.3Bn (or $439/kW), plus $239MM for cash and $37MM for working capital, with total amount paid equates to $1.6Bn. The transaction closed in April 2016, after receiving regulatory approval from the PUCT. VST also owns several peaking gas plants (4 gas ST and 3 gas CT with 3.5GW total capacity), opportunistically capturing the upside in power prices while adding flexibility to the overall generating fleet.

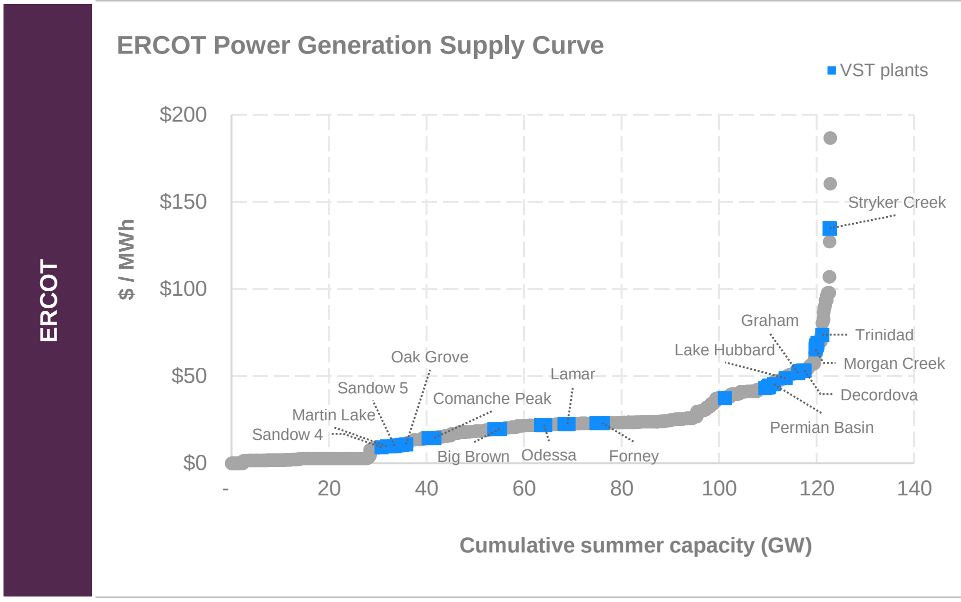
CCGTs are key for ERCOT markets – for efficiency and fast ramp capability

Recently, VST added another highly efficient CCGT – Odessa. Completed in early August, the $350MM (or $332/kW) acquisition of the 1.05GW Odessa plant (7,100 btu/kWh) added another efficient gas fired plant to VST's generation portfolio. VST has been selective in acquiring CCGT's in TX, aiming to capture the current natural gas price advantage in the Permian Basin while bringing geographic diversity to the existing fleet into West Texas. To be more specific, the Odessa plant has direct access to both the El Paso and One Oak pipeline, through which multiple gas producers are connected, enabling the plant to source gas from deep within the Permian Basin, adding even a deeper discount than what is seen at the Waha Hub.

Note: Adding highly efficient and fast ramping CCGTs to a fleet in Texas is key as the assets can exploit at various gas price conditions: enabling spark spread expansion at higher gas prices; generating higher volumes at lower gas prices - i.e., generators can *almost* become somewhat agnostic to gas price swings.

Figure 5: VST's Fleet on Various Generation Dispatch Curves



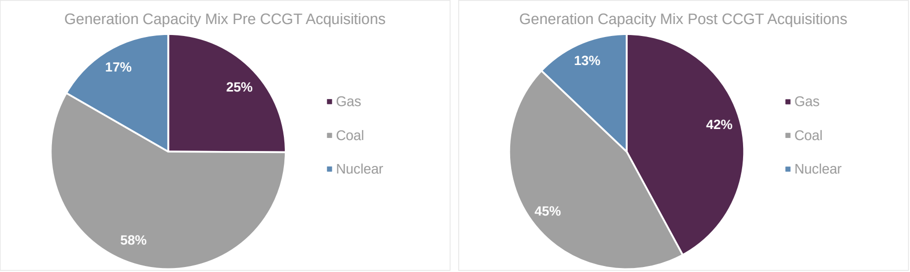
- Electric demand in Texas has been resilient despite weak oil prices; most of the demand is served by competitive retailers (VST is largest in Texas).
- ERCOT's Wholesale Market Subcommittee and the PUCT have initiated projects and workshops to assess the price formation rule changes.
- VST would be a beneficiary of increasing marginal power prices as cost to dispatch coal increases.
- With PTC/ITC extension, further wind and solar growth could impact this stack.

Source: SNL, company disclosures, Guggenheim Securities, LLC

New generation portfolio continues to shift towards gas

Coal is expected to play an ever-decreasing role for VST. VST's diverse fleet now totals ~17.8GW of generation in Texas, including 8GW fueled by coal, 7.5GW fueled by natural gas and 2.3GW fueled by nuclear. **VST owns two of the youngest coal plants in ERCOT – Oak Grove (1.6GW) and Sandow Unit 5 (580MW), both went online in 2010.** Oak Grove and Sandow Unit 4&5 are fully compliant with all existing environmental regulations and fueled by lignite from mines owned/leased and operated by VST, enabling those plants to dispatch more frequently than other coal plants in a low gas price environment with comparably low fuel costs. As a reminder, Sandow Unit 4 (557MW) is partially contracted (120MW) at favorable terms with Alcoa through 2038. VST is also currently developing one of the largest solar facilities in Texas, the 180MW Upton County Solar 2 development project, which is expected to come online the summer of 2018 and sell electricity to TXU Energy retail customers. Luminant is also TX's largest lignite coal miner, which helps fuel some of the power plants in VST's generation portfolio, including 100% of Sandow and Oak Grove and part of Martin Lake and Big Brown.

Figure 6: Generation Capacity Mix Pre vs. Post CCGT Acquisitions



Source: Company disclosures, Guggenheim Securities, LLC.

Nuclear plant now delivering solid performance.

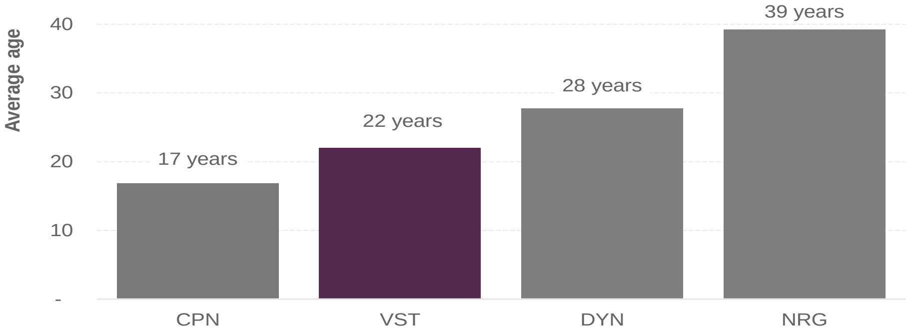
VST operates the second newest nuclear plant in North America – Comanche Peak. Comanche Peak is a dual-unit nuclear facility with 2.3GW of capacity and an average of 90+% capacity factor over the last several years. The plant is also one of the lowest cost nuclear plant in the U.S. based on analysis from EUCG provided by VST. **Management highlighted that the unplanned outage at Comanche Peak's Unit 2 should not be a big concern despite drawing a lot of investor attention and rightfully so – the plant is already back up and running.** As a side note - The Comanche Peak outage began when the plant operators observed increasing temperatures inside the Unit 2 steam turbine generator in May. As a reminder, the steam turbine generator is unrelated to the nuclear power reactor side of the plant. Management expects the full year EBITDA impact of the outage to be $75MM, of which $20MM relates to incremental O&M expenses occurred and the remaining $55MM relates to lose of revenue during the unplanned outage. **Management is working to mitigate the impact through filing insurance claims as well as indemnification claims against third parties, and expects to recover the full out-of-pocket expenses ($20MM)**, although receipt of any insurance proceeds will likely not occur until 2018. **That said, 2017 EBITDA guidance remains unchanged.**

High Quality CCGTs – Younger Fleet; Lower Heat Rates; More Efficient EBITDA-to-UFCF Conversion

Generation fleet becomes younger…

VST's fleet is now fairly young relative to its IPP peers thanks to recent deals – age is everything in this industry. The recent three gas deals helped drive down the average age of VST's fleet – now second youngest in the industry next to Calpine. While age isn't everything (we argue it is in this industry), the composition of VST's fleet of newer and more efficient CCGTs dilutes maintenance CapEx needs compared to an older fleet thereby improving free cash flow conversion cycles among other items – see next section. **Overall, VST's younger fleet is now better positioned to take advantage of structural changes in the power market (i.e., shifting to natural gas; backstop to intermittent resources).**

Figure 7: Average Age of Each IPP Fleet



Source: SNL, Guggenheim Securities LLC estimates

…with more efficient EBITDA to cash conversion…

CCGT's lead to more efficient EBITDA-to-unlevered free cash conversion (UFCF) cycles. VST now generates cash more efficiently than most peers because the addition of those CCGT's doesn't require as much maintenance and/or environmental CapEx as other fossil fuel sources. Additionally, lower environmental spending (from $82MM in 2015 to $20MM in 2017E) on the coal plants also help mitigate or moderate concerns that the coal fleet will continue to be a large drag on forward CapEx requirements. **Based on this improved non-growth CapEx profile, VST has a much healthier and almost industry-leading free cash flow conversion rate - at an average of ~73% through 2024.**

See table below.

Figure 8: VST Adjusted EBITDA / UFCF Conversion

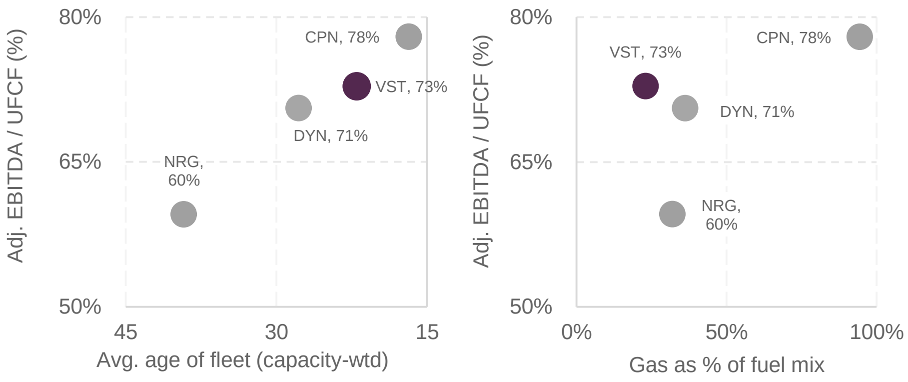
Figure 9: Cash Flow Conversion Efficiency



Note: Based on average of 2018-2020 estimates. Source: Guggenheim Securities, LLC estimates.

… and less sensitive to gas price movement.

Impact from gas price movement has also been mitigated - slowly becoming more agnostics to gas prices. Gas plants set marginal power prices for the most part, so higher prices support higher margins for VST, while lower prices drive more volumes as VST's gas plants dispatch ahead of coal and more relied upon/run harder – limiting downside exposure to lower gas prices. VST also has existing and rolling contracts for a significant portion of their output (50%) through sales to its retail segment as well as hedges in place to secure near-term margin – not just through financial markets, but physical.

Figure 10: VST commodity margin sensitivity

Time to Bail as "Prisoners Dilemma" Ends: We See ERCOT Market Tightening

"Prisoners Dilemma" in ERCOT could be coming to an end.

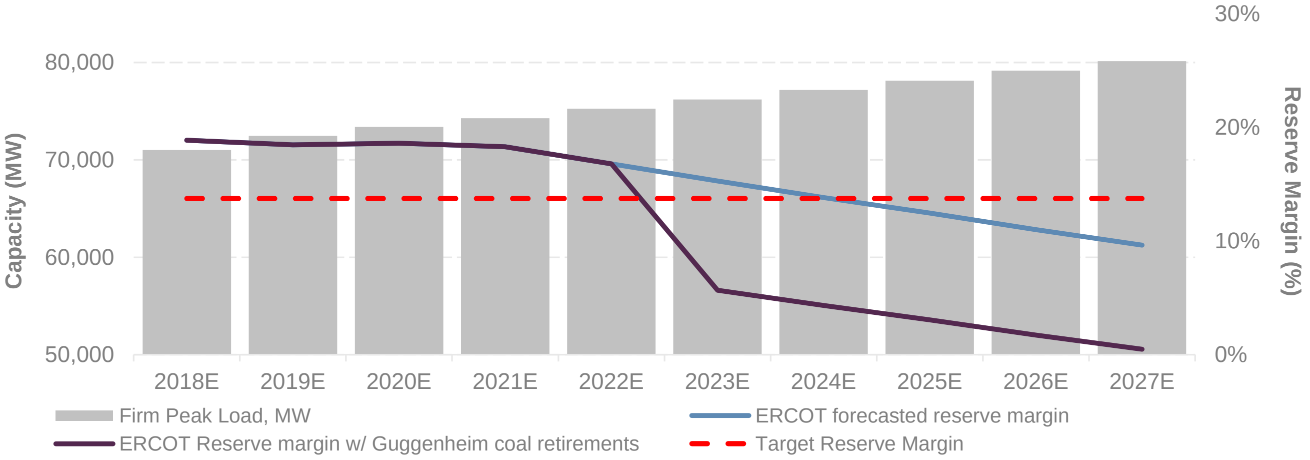
ERCOT has yet to experience tighter conditions as coal plants are sticking it out despite weak forwards. ERCOT's generation has been shifting toward natural gas and will continue to do so, in our view, once uneconomic coal plants are forced to make the decision to shut down. That said, the ISO's current forecast doesn't incorporate the potential coal plant retirements we foresee over the next several years due to weak economic fundamentals. **We believe ERCOT will experience a greater shift in the generation mix than what's implied in their outlook, and, more importantly, we expect tighter market conditions would result from incremental coal retirements.**

Reserve margin could fall below 13.75% sooner than expected.

ERCOT's own CDR report also started to project lower reserve margins, with the most recent estimate for the 2018 summer planning reserve margin projected to be 18.9%, compared to 20.2% reported in December 2016, primarily driven by delays in forecasted commercial operation dates beyond 2018 for several new projects. **The May CDR report reflects a few modest updates from the prior December version though the CDR generally assumes reserve margins will remain above 18% through 2021 – our analysis states otherwise.** Recent new builds in ERCOT have filed for bankruptcy in the last several months, further supporting our view that new build economics are not justifiable in the current market environment. ERCOT, as an energy-only market, has proven to be challenging for single asset owners who do not benefit from the strength and stability offered by an integrated portfolio such as VST's. **We continue to believe some of these irrational new investments will not be completed, in which case we should start to see tightening in the ERCOT market especially when layering in to our projected coal retirements.**

We estimate ERCOT's reserve margin could fall below targeted levels sooner than they think. When factoring in potential coal retirements that our analysis suggests is possible, we believe ERCOT could fall below their targeted 13.75% reserve margin much sooner. **Current forecasted higher-than-expected reserve margins are one of few key inputs impacting the outlook on forward heat rates and thus, forward power prices.**

Figure 11: ERCOT Reserve Margin Forecast – Guggenheim Estimates Quicker Tightening Conditions



Source: ERCOT, SNL, Guggenheim Securities, LLC estimates

Note: We estimate ERCOT's reserve margin would be well below targeted levels, much sooner than the grid operator's current expectations based on their supply and demand assumptions; removing our estimate of uneconomic coal-fired capacity would bring us below ERCOT's targeted level today – That said, timing of these potential retirements is the swing factor here, as we can't predict the behavior of the various parties in this "Prisoners Dilemma."

Coal Retirements in the Near Horizon

Coal outlook remains bleak in ERCOT.

We continue to expect coal retirements on the horizon. We took a bottom-up approach in Texas, modeling each coal plant in ERCOT to understand how they fare with today's forward commodity outlook. Texas has managed to avoid the wave of coal retirement that has hit other markets; coal plants have survived despite ongoing development of highly efficient CCGTs and as wind continues to push thermal plants up the generation supply curve, taking market share; however, **much of the coal capacity is economically irrational and generates negative cash flows, so time is running out, in our view.**

How did our previous analysis change? The difference between the 8.2GW of retirements we now currently project and the 6.9GW we estimated in our previous analysis (December 2016 – see HERE) can be attributed to deterioration of the forward curves; see later in this note where we highlight weekly changes in the forward curves over time. **Refreshing our analysis with the latest forward curves diminished economics for one plant** (1.3GW J.K. Spruce) in our analysis, which was on the fence in our previous outlook. **We also took out the potential impact from incremental investment required to comply with regional haze standards.** At this juncture, we wouldn't expect any near term impact given that as part of the federal Clean Air Act, the Regional Haze Rule is under challenge with President Trump's initiative to make significant cuts to the EPA and rolling back numerous regulations of recent years, and we could see more appeals and revisits coming.

We estimate 8.2GW of coal retirements in the NT.

Long story short, we now estimate 8.2GW of coal retirements in ERCOT based the latest 8/24/17 forward curves – solely on economics: current forward power and commodity price outlook in ERCOT generating negative CFs for ~**8.2GW** of coal assets. We should start to see tightening of the ERCOT market, particularly as older, more challenged assets begin to retire in the NT. **We emphasize our analysis is at the asset level; our assumptions avoid bias based on the owner of an individual plant, as they range between public vs. private, municipal vs. commercial, contracted vs. merchant, etc.** Based on the approach described above, we estimate 8 of the 17 plants aren't generating cash flow that would support continued operation; **this includes the J.T. Deely plant, which has already announced plans to retire, even though it is owned and operated by municipality.**

Source: Company disclosures, Guggenheim Securities, LLC.

Big Brown, Monticello and Martin Lake likely retired in step functions.

Focusing on VST's three legacy coal plants with seasonal operations – Big Brown, Monticello and Martin Lake. Three legacy coal plants with total capacity of 5.3GW in VST's generation portfolio (Big Brown, Monticello and Martin Lake), are likely more challenged in the current heat rate and gas price environment, comparing to VST's other younger and more efficient coal plants (Oak Grove, Sandow 4&5). **VST has been running those plants, especially in the past three years, on a seasonal dispatch during summer months, which explains the fluctuation in capacity factors for those plants for the past several years.** That said, we expect these plants to run on a full year round basis in 2017 as VST opportunistically executed attractive hedge contracts when natural gas prices climbed at the end of 2016, while **we would not expect this to be repeatable beyond 2017 and capacity factors of those plants will likely return back to normal levels**.

From a purely economic standpoint, we see Monticello as most challenged (as we highlighted above) with the highest likelihood to retire in the NT, while Big Brown and Martin Lake are marginally free cash flow positive, although still not highly attractive on a risk-adjusted basis. **We would note that management is evaluating the prudent path forward with those plants (i.e. shutting down vs. keeping them on lifeline) especially given where they sit on the dispatch curve.** Management indicated that retirement of all three of those plants in one fell swoop is highly unlikely – **retirements could be in step functions**. That said, we fell short of building any retirements for the VST assets mentioned above in our model for now, given an uncertain path forward. **More scale with ERCOT through additional potential gas deals or a strategic combination with another player could prompt a speedier end to these assets.**

Detailed Assumptions for Luminant

Below are our modeling assumptions in greater detail.

RETAIL – TXU ENERGY

The largest electricity retail service provider in ERCOT.

Crown jewel of the story – VST operates the largest retail platform in ERCOT. VST's retail arm, TXU Energy, is the largest retail electric provider in Texas with a 25% share of the residential retail market. TXU sells retail electricity and value-added services (primarily through TXU Energy brand) to approximately 1.7MM residential and business customers, with concentration in Dallas, Houston and Corpus Christi areas. Management anticipates 1-2% annual consumption growth of retail business, which is above the average of 0-0.5% annual growth rate in the U.S., primarily driven by above-average population growth in TX. Within the retail customer base, ~53% retail load comes from residential customers and the remaining balance comes from small business and larger C&I customers.

Why ERCOT Is So Attractive from a Retail Standpoint?

Oligopoly continues to form with sticky margins and some hints of profit expansion; mature market with growth opportunities as retail books change hands. Starting in 1999, the PUCT established the framework to require retail competition in electricity for customers; the tendency to shop around for electrical providers has been steadily growing ever since, ultimately ending the monopolies over power generation and electricity sales held by a handful of regulated utilities.

ERCOT retail market: oligopoly, mature, resilient margins with growth opportunities.

The favorable retail margins in ERCOT can also be explained by the different market structures. In ERCOT, the retail electric provider has full ownership of the customer relationship, including performing the billing function and customer service, with the exception of outages, which is handled by the regulated utilities. In the other regions, the interface for billing and service is largely through the regulated utilities, who serve as a default to provider that effectively limits the amount of competition and thus curtails the incentive for product design and innovation. That said, (1) the elimination of default service provider/pricing; (2) the full ownership of customer relationship; and (3) ability to offer innovative plants, help sustain the higher margins. ERCOT also enjoys meaningfully higher (~30%) consumption for residential customers than the rest of the U.S. and the strong economy also helps facilitate consumption growth of 1-2% annually - we expect that trend to continue while many other markets are actually shrinking.

How Does TXU Stand Out?

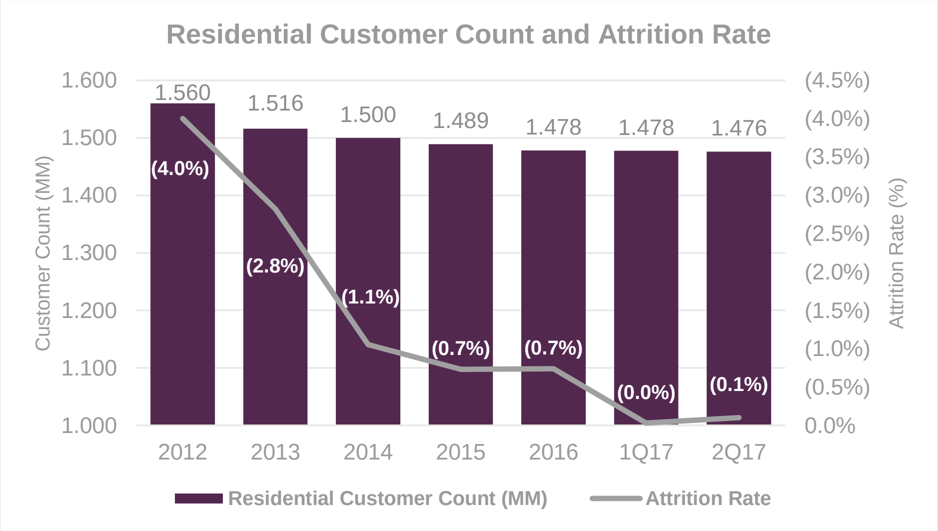
With this highly competitive market structure, nearly every household (+90%) has exercised to choose a retail electric provider at least once since the market opened to competition, as evidenced by the PUCT's 2016 study. Currently, the market has more than 50 REPs, alongside non-competitive municipal, cooperative and investor-owned suppliers. **How does TXU stand out within such a high customer attrition environment?**

A strong brand supported by multi-target strategy and multi-channel marketing.

Apparently having a strong brand and a strong business model enables TXU to maintain market share leadership through time. At TXU, customer attrition has stabilized in recent years through product innovation, customer service, multi-channel marketing and multi-target strategy, as VST strives to maintain and expand its position as the largest retail electricity provider in ERCOT, with positive economy as a solid backdrop. TXU also entered the market with different brands, including 4Change and Express Energy, focusing on the different needs of different customer groups. The 4Change brand offers affordable retail electricity rate through scaled back low touch customer services, while Express Energy differentiate themselves from other providers by providing online only services for Texas electricity customers. **Management continues to look at different needs of customers, and believes the multi-brand strategy will ultimately help grow customer base on an overall basis.**

TXU also executes a multi-channel marketing strategy. Management takes an innovative approach to marketing with Free Nights, Cash Back Rewards and Solar Club, and incorporates a data-driven approach that leverages analytics for how to manage marketing, service as well as energy supply. Despite intense competition, **TXU has been able to drive customer attrition rates substantially lower from -4.0% to -0.7% through 2016 and maintains a fairly stable residential customer count, with 65% of its residential base from loyal customers who are less sensitive to rates and more focused on innovative products as well as quality of customer services.**

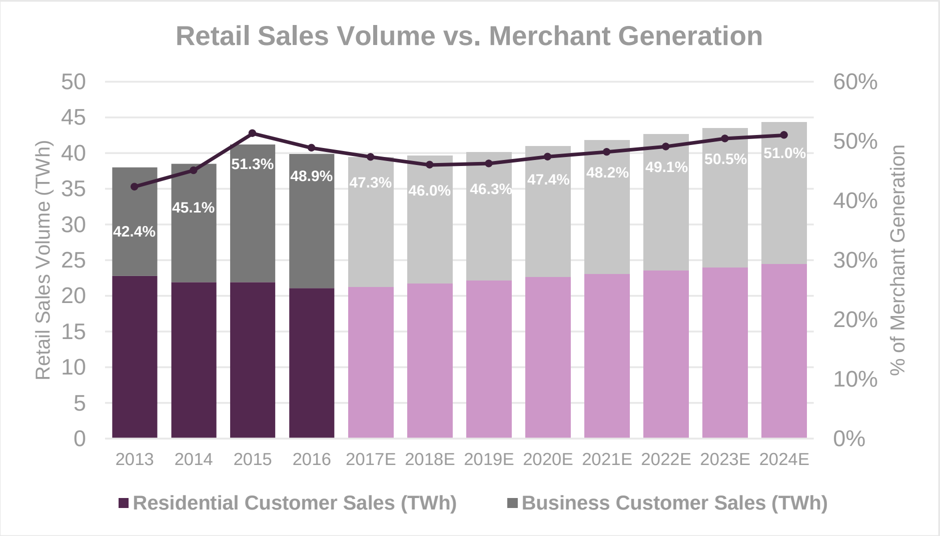
Figure 16: Residential Customer Count and Attrition Rate



Source: Company disclosures, Guggenheim Securities, LLC.

The strong business model is further enhanced by the integration with Luminant. VST's retail business benefited significantly from having a large generation fleet to back its position, avoiding the needs to purchase power at a higher cost from third party providers when markets tighten, as opposed to smaller retailers who run the risk of earning negative margins – we have seen plenty of them go out of business in such cycles in the past. The integration of retail and wholesale also allows VST to avoid certain bid-ask cost of transactions on exchanges. Although smaller retailers would be able to offer much lower promotional contracts at the beginning to attract price sensitive customers, we don't believe this is a viable, sustainable business model without the support of generation in such a cyclical market.

Figure 17: Retail Sales Volume vs. Merchant Generation



Source: Company disclosures, Guggenheim Securities, LLC.

Further Expansion Opportunities

Expansion opportunities targeting the Northeast markets.

Expanding in core markets through organic growth and/or acquisitions. According to management, VST is trying to potentially expand the integrated model into other markets (likely the Northeast) with the current ERCOT position on solid footing. That said, **investing in the existing platform and expanding their retail offering is one component of retail EBITDA enhancement, while M&A is separate**. Acquisition of retail books is likely not off the table either if it aligns with VST's integrated model and further enhances the business. **Management stated it continues to see acquisition opportunities in the market, with some independent retailers willing to sell their books as they typically run into balance sheet capacity constraints when they grow to a certain scale and are unable to sustain the business**. Management also highlighted that scarcity pricing and eventually upward moves (and volatility) in power prices should lead to further asset-light retail providers capitulating.

Valuation Assumptions for TXU Energy

For VST's retail business, we estimate flattish customer attrition rate, in line with the historical average from 2014 through 2Q 2017, and model 2% of electricity demand growth through our forecast period as ERCOT presents meaningfully higher consumption for residential customers than the rest of the U.S. with a strong economy – we expect that trend to continue.

OPERATIONS PERFORMANCE INITIATIVE

Cost saving opportunities beyond $75MM.

Already a lean company emerging from bankruptcy, VST appears to be finding no shortage of incremental cost saving opportunities with potential upside. Upon its emergence from bankruptcy, VST conducted cost saving initiatives that successfully reduced annual corporate overhead, IT and other business function costs by ~$225MM. Upon completion of the support cost structure right-sizing, **VST now has turned its attention toward an operational improvement review of its generating fleet for further cost reductions**, with the low gas prices, and renewable penetration continue to pressure the economics of wholesale generation in ERCOT.

VST is undertaking admirable efforts to strengthen the core. Management has already been engaging third party consultants, as well as internal employee programs, into the process of reviewing operational procedures and cost elements to identify further cost reduction opportunities, which are **expected by the company to yield incremental cost savings beyond the $45-50MM that have been discussed on VST's last earnings call.** Management expects this round of cost saving initiatives to be focused on generation, mining, O&M and CapEx, with the majority (80%) of the already identified opportunities in 2017 to be around the O&M expenses (e.g. consumable optimization, maintenance strategy, etc).

Timing? Management's initial focus was on the three largest coal sites in terms of generation and mining activity (Martin Lake, Oak Grove and Sandow), while management continued their efforts at other sites. **Management expects to complete the review of a majority of the fossil fleet by 3Q17 and the review of Comanche Peak nuclear units by 3Q18.** We expect further enhancements to be communicated on the Q3 earnings conference call. Stay tuned…

> *More clarity expected by 3Q17.*

VALUATION

Below is a summary of our valuation, which brings us to our $20 price target, implying a 12% ETR, supporting our BUY rating. We value IPPs including VST using an unlevered discounted cash flow methodology before accounting for growth CapEx through 2024 terminal year at which point we apply an asset-weighted terminal multiple. VST emerged from bankruptcy with clean start accounting resulting in the elimination of substantially all NOL carryforwards generated through 2013. We subtract net debt (recourse) of ~$2.6bn to arrive at equity value.

Our model is marked to the 8/24/2017 forwards through 2024 terminal year. We project VST's unlevered free cash flows based on consolidated adjusted EBITDA, which is a summation of individual plant-level modeling among other segments including retail, subtracting environmental and maintenance CapEx through 2024 terminal year. We apply an asset weighted 7.4x multiple to derive a terminal value.

Our unlevered DCF valuation implies: (1) ~$624/kw, which is in line with public/private gas asset transactions that have ranged from ~$292-$646/KW over the past three years and **(2)** 7.6x EV/EBITDA on 2018 fundamentals – below theoretical mid cycle.

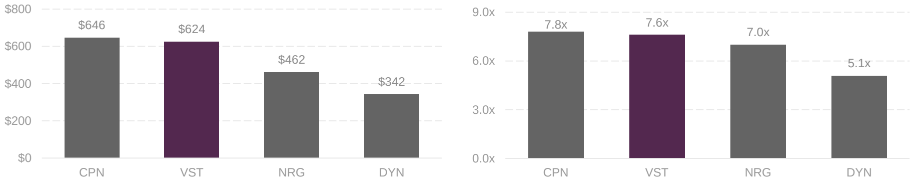
RELATIVE VALUATION

As we did with our analysis for other IPPs, we look at the value proposition of VST on a relative basis comparing to its IPP peers. When taking into consideration each fleet's quality (i.e., location, fuel type, age of assets), **we believe greater value should be attributed to companies with higher quality assets and the ability to weather the structural changes in deregulated power markets, including those with more balance sheet discipline, higher FCF conversion cycles, etc**. The implied value of VST's portfolio comes to $624/KW, comparing to $462/KW for NRG, which operates also in ERCOT with retail presence although a more geologically diversified fleet. In terms of EV/EBITDA, VST arrives at 7.6x.

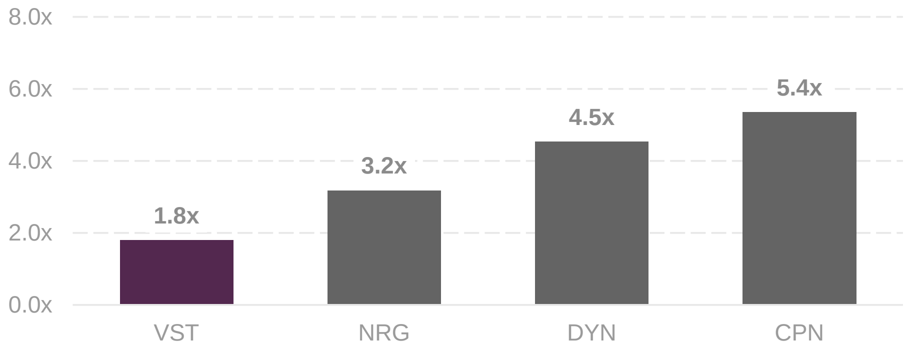
Figure 19: Enterprise value $/KW vs. EV/EBITDA



Source: Guggenheim Securities LLC estimates

VST has much <u>less leverage</u> than IPP peers – an excellent position to grow upon. IPPs may have cash, but a conservative approach to balance sheet is key, especially if highly levered to natural gas. VST emerged from bankruptcy with a clean balance sheet (~1.8x net debt/EBITDA – Guggenheim 2018 estimates), relative to peers in a race to de-lever, although the question remains how to better utilize the balance sheet capacity to grow the company while maintaining a disciplined approach. **Even following growth aspirations, management's target 3.0x leverage ratio would still remain best-in-class.** See Figure 19 below.

Figure 20: Net Debt / Adjusted EBITDA



Source: Guggenheim Securities LLC estimates

Cash conversion is also <u>comparably efficient</u> among other IPPs. VST's strong cash flow profile is coupled with a disciplined approach to allocating the cash – management highlighted the possiblity of returning cash to shareholders when the right opportunity doesn't exist to do a deal. See Figure 20 below.

FULL COMMODITY PRICE ENVIRONMENT

2017 experienced a continued reduction in natural gas and power forward prices, while basis differential volatility continued, driven by weather, midstream capacity constraints, contract relationships and coal retirements.

In general, commodity prices decreased since the beginning of 2017. Below we present 2017 gas price, power price, spark spread, dark spread, and heat rate changes in key regions.

RISKS

Commodity price risk: If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. VST is still inherently a long natural gas call, with gas the marginal price setter in ERCOT.

Environmental/Policy risk: Environmental regulations could require increased spending; permitting and compliance associated with these regulations could require significant capital and operating expenditures. Considering timing to comply with these regulations and costs, some retirements of plants could be accelerated. Changes to these regulations could increase costs of operating these plants and/or increase competition.

Operational risks: VST's fleet could experience unforced outages or other operational issues that are inherent risks of the power generation business.

GUGGENHEIM

VST

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

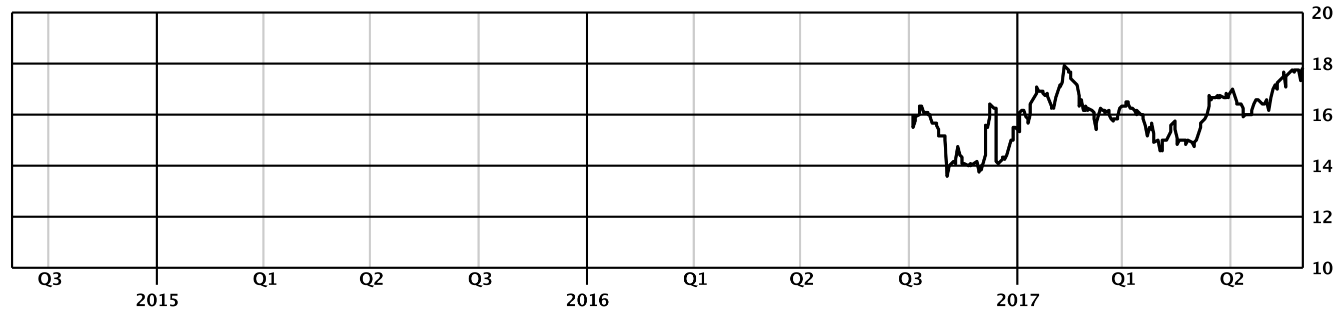
IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Vistra Energy Corp., Dynegy Inc., Exelon Corporation, NextEra Energy, Inc. and NRG Energy, Inc. in the next 3 months.

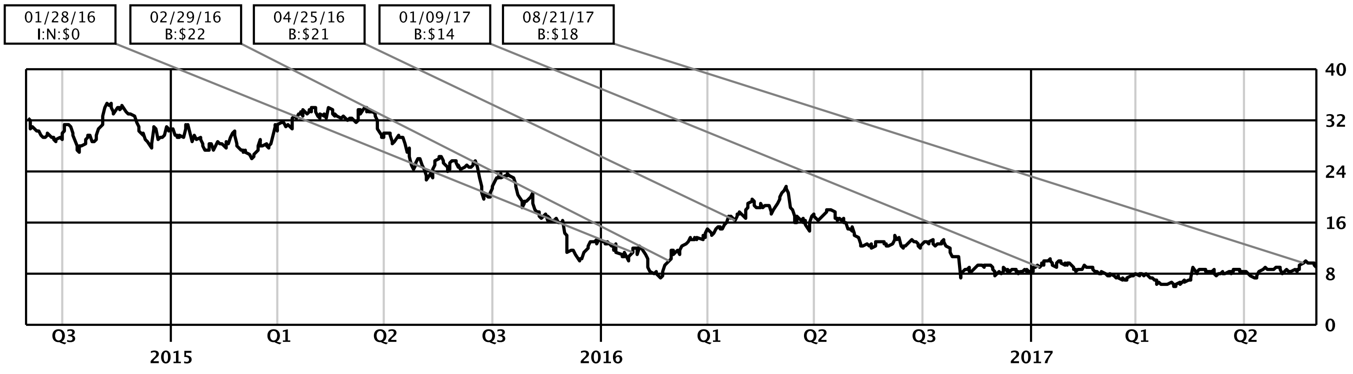
Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: Vistra Energy Corp. (VST) as of 09-01-2017



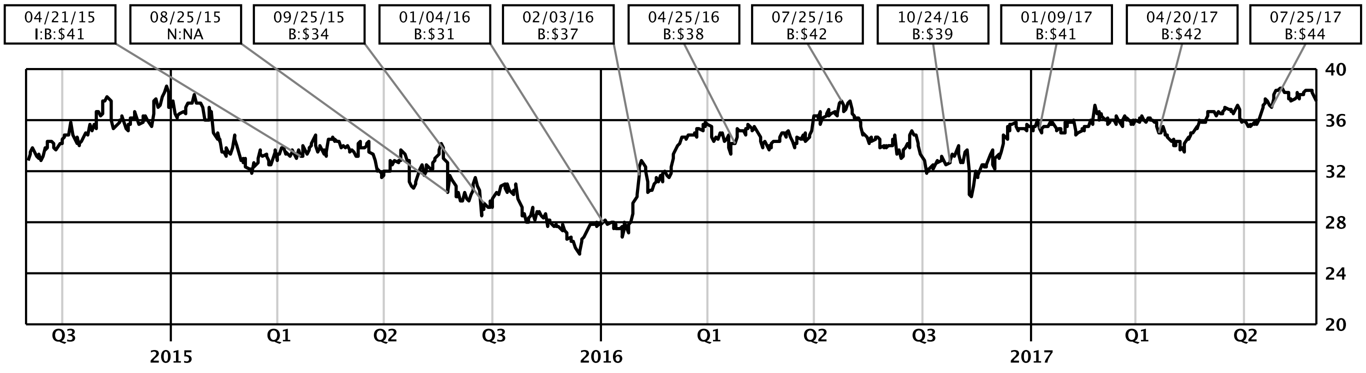
Created by BlueMatrix

Rating and Price Target History for: Dynegy Inc. (DYN) as of 09-01-2017

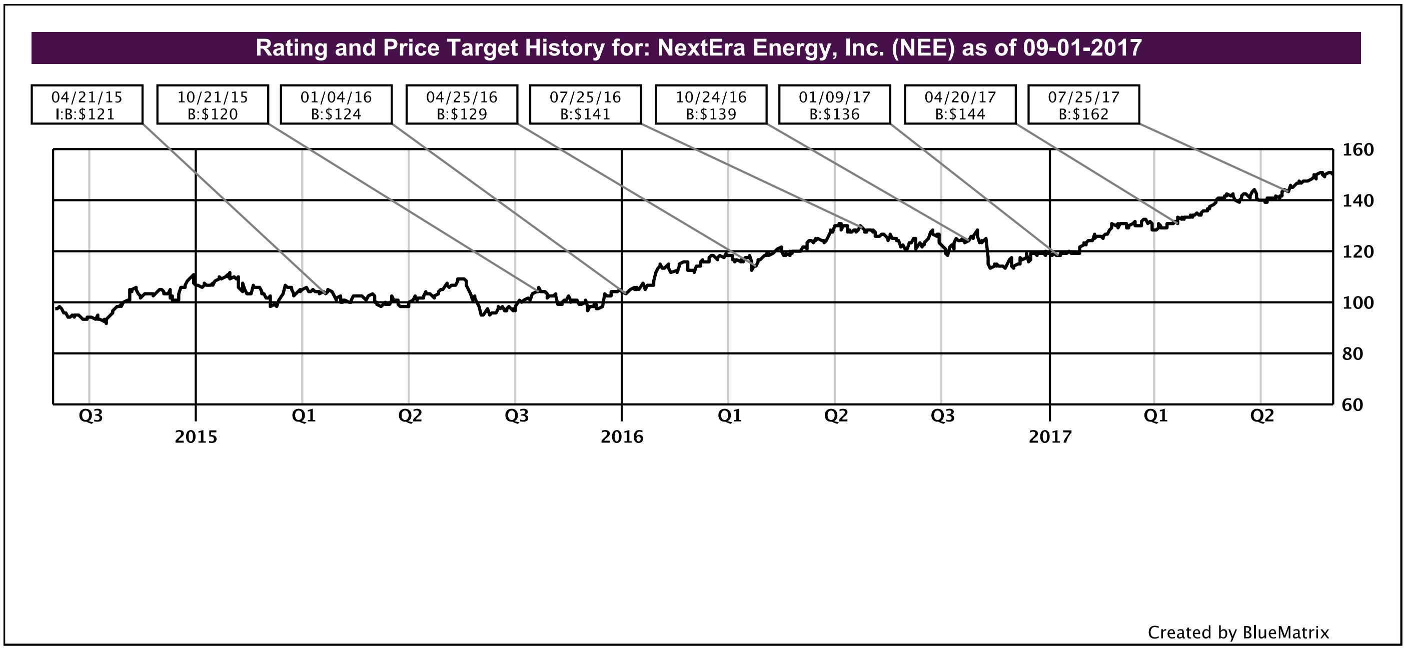


Created by BlueMatrix

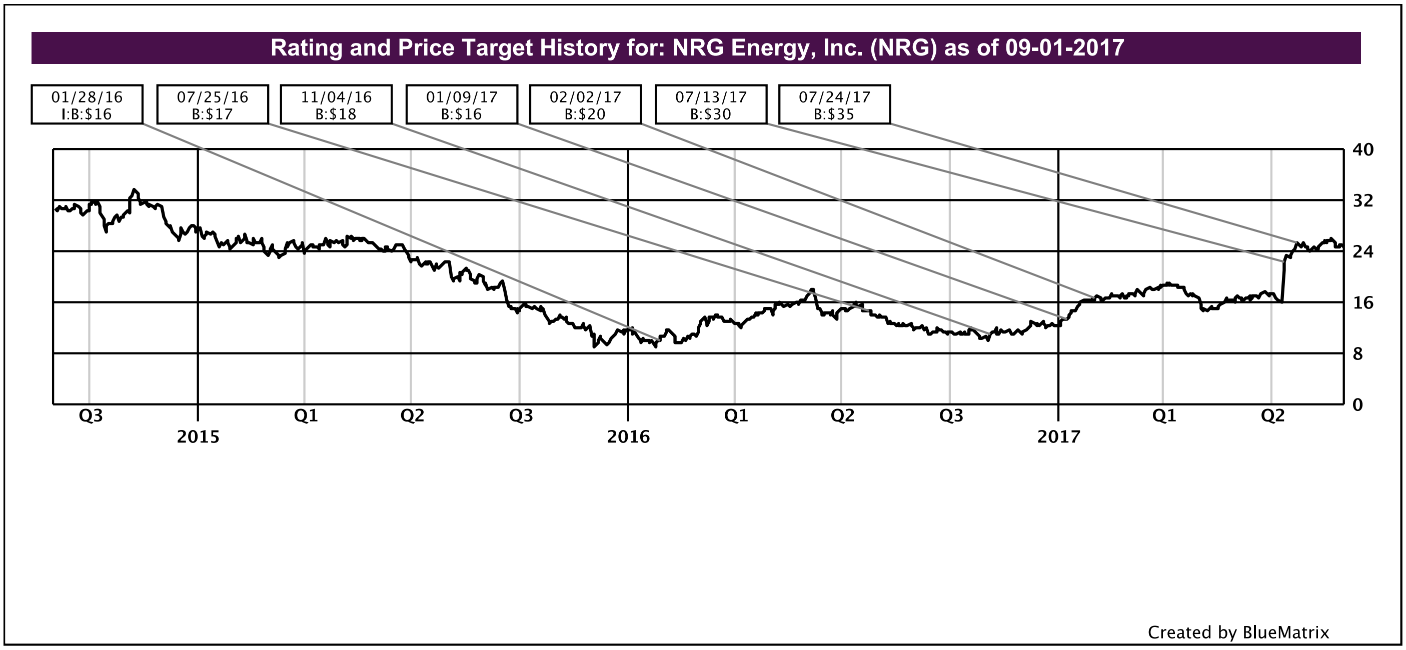
Rating and Price Target History for: Exelon Corporation (EXC) as of 09-01-2017



Created by BlueMatrix



Rating and Price Target History for: NextEra Energy, Inc. (NEE) as of 09-01-2017



Rating and Price Target History for: NRG Energy, Inc. (NRG) as of 09-01-2017

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Personal Auto Improvement Initiatives Provide Additional Upside Catalyst

Bottom Line: To address a rising personal auto loss ratio and declining outperformance versus the industry, IFC outlined several strategic initiatives at its 2017 Investor Day, including: rate increases, claims initiatives, Ontario auto reforms and improvements in risk selection models. While our estimates and consensus conservatively forecast personal auto loss ratio improvement of 4CR pts in 2018E (vs. Q4/16) we believe IFC could surpass expectations. Delivering the full 6CR pt improvement would add $0.50 to EPS and 80bps to ROE, increasing our target price by 6% to $117.

Key Points

Personal auto improvement initiatives are working so far; opportunity exists to surpass expectations. Initiatives have resulted in 2pts improvement in personal auto CR H1/17 (ex. industry pools and non-CAT weather-related losses). We believe early signs of improvement in 2017 support management's claim that profitability actions to address cost inflation are gaining traction and the majority of benefits are expected to materialize in H2/17. Given our estimates (and consensus') incorporate 4pts of personal auto CR improvement in 2018E (bottom of IFC's 4-6CR pt guidance), the potential exists for IFC to exceed expectations.

Auto Price Hikes (3CR pts) - IFC is currently ahead of the industry. IFC has been taking rate increases across the country and is ahead of the market in this regard. In Ontario and Alberta (30% of total DPW) IFC has increased private passenger auto rates 7% and 18%, respectively, since Q2/16. IFC has a history of taking rate increases early in the auto cycle, and we believe industry leading price action since Q2/16 presents similar to previous auto cycles and will have a meaningful impact over the next 6 to 18 months.

Claims initiatives and Ontario auto reforms (1-3CR pts). Supplementing price increases, IFC has undertaken claims initiatives to control claims costs, including increased BI claims staff, greater focus on supply chain management, tighter indemnity controls, and a new focus on driving higher utilization from IFC's Rely Network. When combined with claims initiatives, IFC expects further benefits from Ontario auto reforms (including changes to the Statutory Accident Benefits Schedule and new CAT definition) to lower the personal auto CR 1-3pts by 2017YE.

Top end of IFC guidance could lead to a potential 6% increase in target price, to $117. Delivering 6CR pts improvement in personal auto would result in 16.2% ROE, and 6% increase to our target price, based on 2.4x 09/30/18E BVPS (vs. current 2.25x 09/30/18E BVPS).

Our Thesis

IFC boasts a "best-in-class" management team and industry-leading 17% Canadian market share. Investment in growth initiatives, including branding, digital leadership, and product innovation, are expected to support strong top-line growth. The potential for market share gains in the highly fragmented Canadian market, where 15-20% market share is expected to change hands, is an additional catalyst.

New Scenarios

Valuation

IFC is trading at 2.3x P/BV (proforma OneBeacon acquisition), 7% above the average since 2011 of 2.14x P/BV. On a P/BV versus 2018E operating ROE regression (versus North American P&C Personal Lines and Auto Insurers), IFC trades at a 6% discount to the regression line.

Upside Scenario $120.00

The upside scenario would see IFC exceed its "mid-single-digit" EPS accretion from the OneBeacon acquisition through better-than-expected CR improvement, yield enhancement of OneBeacon's investment portfolio, and increased commercial lines revenue synergies. Assuming 10% EPS accretion and a 16% operating ROE, our upside target is $120, based on a 2.35x 09/30/18E P/BV multiple.

Downside Scenario $88.00

The downside scenario would see IFC's underwriting performance decline, likely resulting in a high 97%+ CR, a decline in operating ROE, and the loss of its premium valuation multiple. We estimate every 1CR point increase reduces operating EPS by $0.50 (8%). Assuming a CR of 98% and a 1.9x P/BV multiple, our downside target is $88.

Company Description

Intact Financial Corp. is the largest property and casualty insurer in Canada. It is focused primarily on personal lines and small to medium-sized businesses, with the majority of products distributed through its broker channel and the rest through direct distribution.

August U.S. Auto Sales: Similar Trends, With Harvey the Rest-of-Year Wild Card

Bottom Line: August sales volumes again came in below expectations, though mix remains positive while pricing and incentive spending appear stable. The full impacts of Hurricane Harvey remain unknown and likely had a modest negative impact on monthly sales. However, we expect the replacement of vehicles lost in the storm could help support used pricing and provide a small boost to 4Q sales. At this stage of the North American cycle, our preference remains for the more geographically diverse suppliers benefiting from content gains.

Key Points

- **More of the same: volume down but mix positive.** August's U.S. SAAR of 16.0 million was down 6.4% YoY, with the YTD SAAR of 16.8 million down 3.1%. However, mix remains positive with car sales continuing to decline at a double-digit pace while light truck (which includes utilities) showed a modest single-digit decline but expanded its share of the monthly SAAR by 280 bp to 64.2% versus the prior year.
- **Industry ATPs and incentive spending appear stable.** According to J.D. Power's mid-August report, industry average transaction prices (ATPs) were up modestly (less than 0.5%) both YoY and MoM, while incentive spending increased 4.3% YoY, but decreased by the same amount MoM. Incentive spending as a percentage of ATP was 12.3%, which compares to a range over the past 12 months of 11.5-12.8%.
- **Ford: volume decline in line with industry, mix remains positive.** Unadjusted for an extra selling day, Ford's August sales fell 2.1% with retail sales down 2.7%. On a daily sales basis, August volume was down 5.8%. F-Series truck sales were again the star with sales up 15%, which helped the company's ATPs grow well above the industry average, while incentive spending was below the industry. Management also noted that they are seeing high demand particularly in trucks and SUVs for premium trim packages.
- **GM: strong rebound from a weak July, inventory improving.** Unadjusted for an extra selling day, GM's August sales improved 7.5%, with retail sales up 4.2%. On a daily sales basis, August sales were 3.5% better than the prior year. A key driver was a 27% increase in CUV/SUV sales. Passenger car sales surged MoM following a very weak July, but still declined double digits YoY and accounted for just over 25% of total monthly volume. GM's ATPs fell roughly 4% and 2% YoY and MoM, respectively, while incentive spending increased 12.8% and 6.3%, which we believe was driven by both mix (higher fleet sales) and a push to reduce inventory. GM finished the month with a total of 88 days' supply of vehicles, down from 104 days at July month-end but up from 74 a year ago.
- **What about the stocks?** Our preference continues to be for the more geographically diverse suppliers that are strongly positioned to benefit from increased content driven by the demand for advanced features and improved fuel economy. While we believe Ford and GM can continue to report strong profits over the foreseeable future, the high concentration to the peaked North American market keeps us worried we will not see any meaningful multiple expansion this cycle, and thus, we are comfortable on the sidelines. Our top picks remain DLPH, VC, and BWA.

REIT Model Updates

Bottom Line: As summer fades to an end, we have updated our models for BXP, CPT, CXP, DOC, ESRT, EQR, HCP, MAA, NHI, TIER, UDR post 2Q17 results, and we have updated our price targets by an average of 0.5% based on our revised valuation metrics.

Key Points

Our price targets are primarily based on our NAV and DCF estimates. Changes in our price targets include the following:

- Boston Properties (BXP): $135 (from $145) based on our NAV ($141.87) and DCF ($110.13).
- Camden (CPT): $91 (from $89) based on our NAV ($90.82) and DCF. ($92.82)
- Physicians Realty (DOC): $20 (from $21) based on our NAV ($19.35) and DCF ($20.11).
- Equity Residential (EQR): $68 (from $66) based on our NAV ($65.62) and DCF ($70.04).
- MAA (MAA): $108 (from $105) based on our NAV ($102.89) and DCF ($113.30).
- National Health Investors (NHI): $80 (from $75) based on our NAV ($67.15) and DCF ($88.58).
- UDR (UDR): $40 (from $39) based on our NAV ($39.36) and DCF ($42.57).

Canadian Banks

Q3/17 Express Postview

Bottom Line: Industry operating earnings were $10.5 billion, up 9% y/y driven by surprisingly good results from the Canadian Banking segments which is about half of overall earnings (NIM expansion; positive operating leverage). Credit was a tailwind in all segments with 4% lower y/y industry credit costs as were central bank rate increases in the U.S., Canada, and Mexico (helped with +7% overall NII on +3% average assets). Our 2018E increased most for **TD** (+3%), **NA** (+2%), **CWB** (+4%). We continue to rate **TD** and **BNS** Outperform.

Key Points

- All banks **exceeded consensus expectations** with **widest margin at TD**; we had **dividend increases** at **RY** (+5%), **BNS** (+4%), **CM** (+2%), and **CWB** (+4%). Refer to Exhibit 1.
- **Better net interest margins** (total bank y/y NIM at **NA** and **CWB** +20bps; **TD** +10bps) contributed to **solid revenue growth of 6%** for the industry (see also Exhibit 2).
- This combined with **efficiency gains, particularly in the Canadian Banking** segments (see also Exhibit 3) helped **improve industry NIX ratio to 56.5%** from 56.7% a year ago.
- Industry **PCL ratio was 30bps** with all the banks with the exception of **NA** reporting lower y/y credit costs benefitting from the continued **benign credit environment** (see also Exhibit 4).
- The group **remains well capitalized** (see also Exhibit 5) with the highest excess capital levels to a theoretical 10.5% CET1 threshold at **BMO** and **BNS**; **TD** increased the size of its current NCIB.
- The Canadian bank index is currently trading at valuation multiples in line with its more recent historical average but **relative to the P/E valuation multiple of the broader equity markets in Canada, we see room for ~5% re-rating** (see also Exhibit 6).
- We remain selective favoring well diversified, scale names with sustainable growth drivers and continue to rate **TD** and **BNS** Outperform.

LHS: Price / RHS: Volume (k) Source: FactSet

Bottom Line: Canadian residential mortgages are a key ingredient of the Canadian banks' balance sheet. We have compiled this "survival guide" comprised of eleven pertinent tables and charts on residential mortgage exposures in Canada and at the "Big 6".

Key Points

Canadian residential mortgages are a key ingredient of the Canadian banks' balance sheet. The following eleven exhibits show:

- Exhibit 1 - Snapshot of "Big 6" Canadian banks real estate secured Canadian consumer loans (residential mortgages and home equity lines of credit) (updated for Q3)
- Exhibit 2 - Real estate secured loan (RESL) account for about 25% of the overall assets of the “Big 6” – highest at CM; lowest at BMO (updated for Q3)
- Exhibit 3 - In part a reflection of the robust house price appreciation in Canada, the residential mortgage portfolio average LTV of the "Big 6" is currently below 60% (updated for Q3)
- Exhibit 4 - Excluding HELOC, residential mortgage loans at the “Big 6” account for ~67% of the overall residential mortgage market in Canada (updated)
- Exhibit 5 - Within RESL, home equity lines of credit (HELOC) generally represent a smaller and declining proportion (updated for Q3)
- Exhibit 6 - Post the ‘global financial crisis’ of 2009, growth rate in uninsured residential mortgages has been about 3.3x the growth rate in insured mortgages at the Canadian chartered banks (updated)
- Exhibit 7 - A reflection of both the presence of mortgage insurance and favourable loan-to-value underwriting criteria, the Canadian residential mortgage asset class has historically performed very well through economic cycles (updated for Q3)
- Exhibit 8 - On average, over the past 25 years or so, Canadian residential mortgages have tended to grow at about 1.7-2.2x the nominal GDP growth in Canada (updated)
- Exhibit 9 - Canada Nominal GDP Growth Post Recession/Economic Slowdown (new)
- Exhibit 10 - Canadian Chartered Banks Residential Mortgage Growth Post Recession/ Economic Slowdown (new)
- Exhibit 11 - National Average Home Price Growth Post Recession/Economic Slowdown (new)

BRP

DOO-TSX ⑮	Rating	Price: Sep-1	Target ↑	Total Rtn
	Outperform	$40.81	$46.00	14%

2Q Provides Another Beat, but Not Much of a Raise

Bottom Line: BRP (DOO) reported its fifth consecutive earnings beat and its tenth beat in the last 11 quarters. However, a failure to lift operational guidance (the increase came from share buybacks) was met negatively by investors, selling the stock off by 1.7% on the day. Comments on capacity constraints allude to missed sales opportunities and higher levels of spending to satisfy demand. We believe these are high quality problems to have, which the company will overcome. With strong brand momentum in growing worldwide markets, we continue to recommend purchase of shares.

Key Points

BRP reported normalized FY2Q18 (ended July) EPS of $0.18, ahead of our $0.03 expectation, the Street consensus of $0.08, and normalized EPS of $0.01 in FY2Q17.

The company’s North American powersport unit retail sales grew 14% in the quarter, driven by market share capture from new products, mainly the Maverick X3 sport SxS and the Defender utility SxS, as well as continued strength in Sea-Doo personal watercraft.

BRP raised its FY2018 EPS guidance to a range of $2.23-2.35 (midpoint of $2.29), up from prior guidance was $2.20-2.32 (midpoint of $2.26). However, the company did not raise operational guidance but rather only followed through the accretion from the company’s $350 million substantial issuer bid.

Guidance might be viewed as disappointing given the strong performance in the quarter, as well as management's insistence this was not a case of conservatism but rather uncertainty around the global political situation and NAFTA, currency swings as well as capacity constraints. The back half also holds more "weather uncertainty" as snow, or lack thereof, can impact snowmobile retail sales, which, in turn, can affect margin (promotions), and parts, accessories, and clothing.

The company is also set to unveil new products at its dealer meeting (aka "Club") on September 20 where a new off-road vehicle platform (we think a trail-ready side-by-side) is set to be introduced. With consistently positive dealer feedback and additional capacity coming online for FY2019 we expect the company to continue to gain share and increase sales in growing worldwide markets.

Key Changes

Target	Estimates	Q2/18E	2018E	2019E
$46.00↑	Revenue		$4,501	$4,633
$44.00	*Previous*		*$4,387*	*$4,577*
	EBITDA		$594	$631
	Previous		*$578*	*$615*
	EPS	$0.18		$2.80
	Previous	*$0.03*		*$2.75*

New Scenarios

Valuation

Our $46 price target represents a 16.5x multiple on our FY2019/CY2018 EPS estimate of $2.80, or 9x our FY2019/CY2018 EBITDA estimate of $631 million.

Upside Scenario $67.00

If the company's retail mometum contitues and the company can adequately expand capacity we believe BRP can earn $3.36 per share in FY2019 (CY2018), which would be a 20% outperformance relative to our FY2018 EPS estimate of $2.80, we would apply a 20x multiple to shares, offering potential upside to $67.

Downside Scenario $22.00

If demand falls short of expectations or capacity constraints limit the company's ability to satisfy current demand, we see potential downside to our FY2019 (CY2018) EPS estimate of 20% to $2.24. We think the market would award a discount multiple of 10x, putting downside risk to $22.

Company Description

BRP manufactures and markets power sports vehicles and propulsion systems and related parts, accessories, and clothing. The portfolio of brands and products includes Ski-Doo and Lynx snowmobiles, Sea-Doo Personal Watercraft, Can-Am Off-Road Vehicles, Can-Am Spyder roadsters, Evinrude outboard engines, and Rotax engines.

Cominar REIT

CUF.UN-TSX	Rating	Price: Aug-31	Target	Total Rtn
	Outperform	$13.54	$15.00	19%

Highlights From Non-Deal Roadshow

Bottom Line: We hosted Cominar for a series of meetings with institutional investors in Edmonton, Calgary, and Toronto. Meetings/discussions largely reinforced our conviction in the factors supporting our Outperform thesis on Cominar. We expect Cominar to successfully execute on its strategic plan of selling $1.2 billion of assets, reducing leverage and repurchasing 9 million of trust units. Upon execution of the plan CUF is expected to have a stronger balance sheet and improved operating metrics (higher occupancy, stronger SPNOI) which should support a return to FFO and NAV growth.

Key Points

Confident in the Ability to Sell Assets, Ontario a Key Driver of Success: We are confident in the REIT's ability to achieve the $1.2 billion of asset sales at a 6% cap rate which is below our estimate of the IFRS value of $1.4 billion. An estimated 48% of the NOI identified for sale is in Ontario and primarily in the GTA where cap rates are generally below the 6% targeted. Although Alberta will be harder to sell, at over 50% of the value, success in Ontario will be a key driver of total proceeds. We are forecasting a 6.25% cap rate to be conservative and believe this will be easily achieved.

NCIB: Management intends to repurchase up to 9 million units at up to ~$14.50 per unit and will begin repurchasing prior to executing asset sales. We estimate the repurchase will be ~$0.07 accretive to FFO/unit and will temporarily increase leverage to ~55%.

Option Issue Timing Not Ideal: The REIT is issuing 3.6 million options to management and employees at a conversion price of $13.46/unit (effective strike of $14.80 for management). Investor reaction has understandably been mixed given the poor operating and stock price performance. We think some of the negative reaction has been overdone and outline some of the mitigating factors herein.

Distribution Cut Could Have Been Deeper: Most investors shared our view that a deeper distribution cut would have been preferred. That being said, we do not expect an additional cut. We believe Cominar will maintain distributions at current levels and emerge with a payout ratio at a run rate of ~90% of AFFO based on CUF's capex reserves and in the range of ~100% on ours.

Strategic Plan Accretive to FFO: We estimate the strategic plan adds $0.07 per unit to Q2/17 annualized FFO and outline the build up to that number in our note.

Our Thesis

We believe that the REIT's strategic plan will improve operating performance, strengthen the balance sheet, improve the organic growth and provide greater flexibility to pursue acquisitions and development in the Quebec market where Cominar has a competitive advantage and strong platform. We expect the NAV discount to narrow as the strategy is executed.

Scenarios

Valuation

We value Cominar based on a ~10% discount to NAV, which reflects a ~13x 2018E P/AFFO multiple.

Upside Scenario $18.00

Our upside scenario is derived from a 25 bps compression in our cap rate assumption, and the units trading at NAV.

Downside Scenario $11.00

Our downside scenario is derived from a 3% decrease to our NOI estimate, a 25 bps expansion in our cap rate assumption, and the units trading at a 20% discount to NAV.

Company Description

Cominar owns a diversified portfolio of 528 properties comprising ~44 million sf, with about 53% of its net operating income (NOI) generated in Montreal, 24% in Quebec City, 15% Ontario, 5% Western Canada, and 4% Atlantic Canada. By property type, about 43% of NOI is from office, 36% retail, and 22% industrial/mixed use.

Buffalo Wild Wings

BWLD-NSDQ	Rating	Price: Aug-31	Target	Total Rtn
	Market Perform	$102.75	$130.00	27%

Weekly Wing Wrap-Up

Bottom Line: Wing prices this week increased sequentially for the fifth consecutive week after remaining largely range-bound in June/July. Specifically, wing prices averaged $2.17-$2.18 this week, which represents approximately 36% inflation from last year. The move higher in wing prices during August poses risk to 3Q17 consensus EPS and holding current wing prices for the rest of 2017 implies risk to BWLD's 2017 guidance.

Key Points

Wing prices continue to realize seasonal sequential increases into football season. Specifically, wing prices reached an average of $2.17-$2.18 this week and increased an average of $0.01-$0.02 per week in August after remaining range-bound at approximately $2.09 through all of June and July. The sequential increases likely reflects supply/demand imbalance as wing demand is increasing ahead of football season against the backdrop of a tight jumbo wing supply environment.

The upward move in wing prices during August creates risk to BWLD's 3Q17 consensus EPS estimates and recently revised guidance. First, our regression analysis implies 3Q17 COGS in the mid-31% range, which would create an approximately $0.05 EPS headwind relative to consensus assumptions. That said, the shift in BWLD's Tuesday promotion to boneless wings from traditional bone-in wings complicates its COGS outlook. Second, holding current wing prices for the remainder of 2017 implies approximately 11% annual wing price inflation for BWLD (after adjusting for its wing price collar), ~100 basis points above the high-end of its 8-10% wing price inflation guidance. We estimate every 100-basis-point change in wing inflation assumptions creates a $0.05-$0.10 impact to BWLD's 2017 EPS.

Typical seasonality into football season implies that wing prices likely will continue to move higher into October. Wing prices typically increase sequentially through the beginning of football season in September and peak in October. Specifically, the historical average increase from the beginning of September to peak levels in October is $0.15.

Scenarios

Valuation

Our $130 price target is based on a 7.5-8.0x EV/EBITDA multiple on our 2018 estimate, which reflects a discount to its historical average multiple to reflect challenged fundamentals.

Upside Scenario $165.00

We derive upside of $165 assuming a 9.5x EV/EBITDA multiple on our 2018 estimate.

Downside Scenario $90.00

We derive downside to $90 assuming a trough EV/EBITDA multiple of 6.5x on a downside EBITDA that is 10% below our 2018 estimate.

Company Description

Buffalo Wild Wings is the owner, operator, and franchisor of Buffalo Wild Wings restaurants, which aim to provide a superior environment to enjoy sporting events. The company has investments in emerging concept R-Taco. The company operates more than 1,200 restaurants across the U.S. and four other countries, including more than 600 franchise locations.

GM Rate Pressure Looks to Persist, Maintaining Market Perform and Target Price

Bottom Line: Comments follow our initial impressions note/conference call with analysts following a better-than-expected 2Q17 EPS print of $1.10 on 2.6% growth in SSS. Despite the $0.01 beat, stronger-than-expected SSS growth and a bump higher in the low-end of the 2017 EPS and SSS guide the stock traded down ~5.4% on GM rate pressure worries. Management attempted to lessen fears about the GM rate pressures, expecting sequential improvement in the 3Q17 on an easing comparison, but we see WMT and others taking deeper y/y price rollbacks causing us to remain MP.

Key Points

GM Pressure to Persist, Albeit Expected to Moderate in the Second Half 2017. Management continues to assert that the headwinds from deflation, changes in SNAP benefits are transitory and its product pricing is competitive with all classes of trade and geographic region. Our concern is the latter, where we see greater dynamic pricing in key traffic driving items (i.e., bread, milk, eggs); WMT taking deeper y/y target price rollbacks; Family Dollar's execution improving; Aldi lowering private label price points 15% on key BTS food items; and apparel under siege with back-to-school graphic tees and leggings priced at $4, dresses at $7, pressuring the dollar stores value/quality proposition in apparel. In short, additional targeted price and promotional investments, above those planned, may be needed to maintain relevancy and drive units/transactions, which in turn could continue to pressure the mix of sales towards lower margin items and manifest itself into unexpected GM pressure as we see emerged in the 2Q17 where it declined 47bp vs 34bp in the 1Q17. Management has several levers to offset price/promotional pressures, including improving inventory shrinkage, reducing global sourcing costs, increasing higher margin private label penetration, and lowering transportation and logistics costs, but these benefits are not yet emerging as full offsets. We look to learn more about how management intends to balance GM and expense levers when we meet with them on September 21, 2017.

Expense Leverage on 2.5% to 3.0% SSS Growth Looks Achievable. Store labor and occupancy costs grew faster than sales in the 2Q17 leading to margin pressure. Management pointed to expected SG&A leverage on 2.5% to 3.0% SSS growth and that excluding one-time expenses in 2Q17 the company would have levered instead of SG&A increasing 51bps to 22.3%. The one-time 2Q17 expenses included approximately 20bps from acquisition-related costs and approximately 40bps from salary investments.

Key Changes

New Scenarios

Valuation

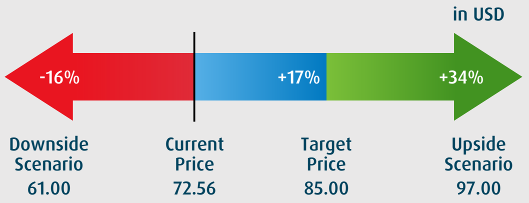
YTD, the stock is down ~1% and trades at ~14.6x our 2018 EPS estimate, which compares to the S&P 500's 10.4% advance and 17.4x P/E on 2017 consensus EPS. If DG is able deliver 3% SSS growth in the 3Q and 1.5% growth in the 4Q17, and achieve our GM forecast, we see the P/E multiple expanding to 17.1x from 14.6x on our 2018 EPS estimate of $4.97 leading to a 12-month price target of $85.

Upside Scenario $97.00

Were SSS growth to accelerate to 3.0% or greater, new store growth remained at 7% and EBIT margin rate looked to be rising 30bp, then we could see the P/E multiple expand to 18.5x, which, coupled with a likely 2018 EPS outcome of $5.24, could lead to upside in the stock to $97.

Downside Scenario $61.00

If management's actions are unable to restore SSS growth to at least 2% and EPS growth is below the low end of target of 10%, we could see the P/E multiple contract to ~13x, or it return back to the most recent low. Applying this assumption to a likely EPS outcome of $4.70 in 2018 would imply downside risk to $61.



Company Description

Dollar General is a discount retailer with more than 14,000 stores located primarily in the southern, southwestern, Midwestern, and eastern U.S. Dollar General offers a broad selection of merchandise, including consumables, seasonal, home products, and apparel. The company offers national brands as well as private brands at everyday low prices (most $10 or less).

Business and Industrial Services

August 2017: Headline OK, Temp Penetration Falls Slightly

Bottom Line: The 156,000 non-farm jobs added in August were just below consensus. The unemployment rate rose slightly sequentially, despite the labor participation rate being flat. Annual temp growth was slightly weaker sequentially, and the temp penetration rate fell slightly from last month. Fundamental trends suggest somewhat stable, though slightly slowing, temporary labor demand. Staffing stocks have been volatile this quarter, owing to concerns over choppy demand or elongated purchase decisions. We continue to recommend selective staffing exposure: later-cycle or secular-growth trends (AMN, CCRN, ASGN) or attractive geographic exposure (MAN).

Key Points

The U.S. economy added 156,000 jobs in August, shy of the consensus expectations of a 170,000 increase. Private employment (excluding government agencies) increased by 165,000 jobs; sectors that added jobs included manufacturing, construction, professional and technical services, health care, and mining.

The **unemployment rate of 4.4%** increased slightly from last month's 4.3% rate, while the labor participation rate was 62.9% - flat with last month's 62.9% rate.

Average hourly earnings rose by $0.03 to $26.39 with annualized wage inflation up to 2.5%, stable with last month's 2.5% rate. **Weekly hours for production workers were flat sequentially**, while **average weekly overtime hours were up slightly sequentially.**

Annual temp staffing growth relatively stable, though slowing slightly. Temp staffing volume (seasonally adj.) increased 4.3% y/y in August, relatively stable with last month's 4.4% y/y increase (as revised). On an unadjusted basis (more indicative of actual results), volume rose 4.3% y/y in August, decelerating a bit from last month's 4.7% y/y increase (as revised).

Sequentially, seasonally adjusted volume was flat, relative to the historical 0.3% increase from July to August. On an unadjusted basis, volume rose 1.7%, relative to its historical 2.8% sequential increase.

Temp penetration rate (temp as % of total workforce) hit 2.07% in August, down slightly from the prior month's 2.072% (as revised), which had been an all-time high. The peaks in the prior two cycles were 2.029% (April 2000) and 1.953% (Nov. 2005), respectively.

As always, we caution investors that these data are based on monthly surveys and are notorious for revisions. Staffing stocks have been volatile recently as Trump-related euphoria has subsided and there have been indications of choppy demand or elongated purchase decisions. Still, fundamental trends in this release appear to indicate somewhat stable, though slightly slowing temporary labor demand.

We continue to be selective on staffing exposure. We recommend healthcare staffing names AMN ($43) and CCRN ($15) for attractive healthcare labor dynamics (strong demand and tight supply). We also recommend ASGN ($59, IT staffing; some secular growth components) and MAN ($124) exposure to European recovery).

Extracts From Qs / Ks – ADI, MRVL, MXIM, NVDA, SYNA

Bottom Line: We offer notes from our review of the SEC filings in our coverage universe for C2Q. We have reviewed the filings and extracted what we believe to be important/relevant information. We have also reviewed the risks sections for material changes from the prior period.

Key Points

Analog Devices: In FY3Q17, ADI repaid all of the $4.1 billion of outstanding loans under the 90-day Bridge Credit Agreement, repaid $250.0 million of principal on the five-year unsecured term loan, and repaid $350.0 million of principal on the three-year unsecured term loan.

The amount of revenue attributable to Linear included in ADI's consolidated statements of income for the three- and nine-month periods was $368.6 million and $516.1 million, respectively.

Marvell: In FY2Q18, 10% customers included WDC (21.8% vs. 18.3% a year ago), Toshiba (15.1% vs. 13.6%), STX (9.8% vs. 8.8%), and CSCO (10.6% vs. 10.0%), implying sales to WDC, Toshiba, STX, and CSCO were up 20%, 12%, 12%, and 7% y-y in FY2Q18, respectively. Sony was a 10% customer a year ago, and is not listed in the quarter.

In May 2017, Marvell sold the LTE thin-modem operations for $52.9 million. The divestiture resulted in a pre-tax gain on sale of $34.0 million.

Maxim: Sales to Samsung accounted for approximately 10%, 14%, and 15% of net revenues in FY2017, FY2016, and FY2015, respectively, implying sales to Samsung were down 25% y-y in FY17 and down 10% y-y in FY16.

Sales to distributors were 42% of sales in FY17 vs. 38% of sales in FY17, implying sales to distributors were up 16% y-y in FY17.

In FY17, MXIM's partner foundries and merchant foundries increased, now representing 75% of total wafer production, up from 57% in FY16 and 47% in FY15.

NVIDIA: In F2Q18, NVIDIA terminated all outstanding warrants, settled an aggregate of $136 million principal of the Convertible Notes and had $86 million principal outstanding as of July 30, 2017. The company added some discussion on cryptocurrency, where PC OEM revenue increased by approximately 200% due primarily to strong demand for GPU products targeted for use in cryptocurrency mining. Additionally, information regarding the Polaris Innovations litigation was updated in the Legal section.

Synaptics: The company disclosed that it had one OEM customer, which we believe is Apple, that integrates its discrete display products into its mobile products and that it accounted for approximately 24% of revenue. Revenues to Samsung were 19% of total in FY17 vs. 21% in FY16, implying revenues to Samsung were down 6% y-y.

As of the end of FY2017, Synaptics had an orders backlog of $221.8 million, an increase of $39.0 million compared with an orders backlog as of the end of FY2016 of $182.8 million. Cash and cash equivalents were $367.8 million as of the end of FY2017 compared with $352.2 million as of the end of FY2016, an increase of $15.6 million.

Updating Model for Recent Acquisition and Refinancing

Bottom Line: We are updating our model for the company's recent acquisition of StratAcuity Staffing Partners and term loan repricing - both completed in recent weeks. Each item has only a moderate impact on our earnings forecast.

Key Points

- **On August 8, 2017, ASGN completed the acquisition of StratAcuity Staffing Partners.** StratAcuity is a Boston-based provider of specialized clinical/scientific staffing solutions for biotechnology and pharmaceutical organizations, supporting clients with contract, permanent placement and managed services solutions. StratAcuity generated $16 million in 2016 revenues. This tuck-in acquisition will be part of ASGN's Apex Life Sciences segment. Financial details re: the transaction were not disclosed.
- **On August 23, 2017, ASGN announced it had completed a previously announced amendment to its credit facility.** This included a repricing of its existing $594 million (gross) Term B loan, reducing the annual interest rate by 25 bps to LIBOR + 2%.
- **We have updated our model for these transactions.**

Key Changes

Estimates	2017E	2018E

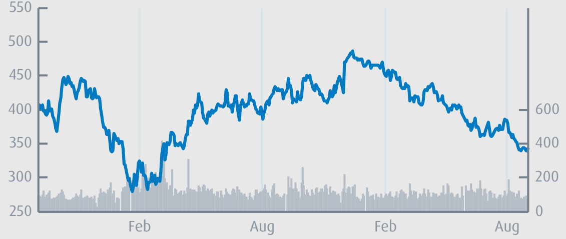
Oil & Gas Exploration & Production



LHS: Price / RHS: Volume (k) Source: FactSet

Bottom Line: The unconventional resource revolution in the U.S. has led to a resurgence of oil and natural gas production growth. However, this has come at the expense of lower commodity prices and corporate level returns. Following prolonged E&P share price underperformance, many investors are calling for a new model, which places less emphasis on growth and more on a combination of moderate production gains, return on capital employed (ROCE), and free cash flow (FCF) generation. In this report, we look whether this new business model (moderate growth, FCF) is a viable strategy and what it could mean for E&P equity valuations and corporate returns. We summarized conclusions from our analysis below.

Key Points

How Much FCF Can Be Generated? We estimate a 25% reduction in U.S. drilling activity versus our base case assumptions would generate a 2020 FCF yield of 2.0% ($50bbl WTI) to 9.2% ($65Bbl WTI), while also achieving high-single digit production growth.

How Does This Growth and Yield Profile Compare to Other Sectors? We compared E&P to non-energy sectors focusing on top-line, EPS, and EBITDA growth, in addition to FCF Yield, valuation multiples, and return on equity (ROE). Estimated top-line (production 16:1) growth for E&Ps of mid to-high teens through 2020 significantly exceeds other sectors (mid-single digits), although FCF yield and ROE are well below. Assuming 25% lower activity, top-line growth would still be high-single digits, while FCF yield would be competitive with other sectors at $60Bbl. We think this growth and FCF profile could help close the sector's broader market multiple discount (3x EV/EBITDA).

A Lower Growth Model Can Still Drive Competitive Total Return Without Higher Commodity Prices. While production growth is reduced with 25% lower activity, total return/debt-adjusted growth is only ~200-500bp lower on a flat price deck, but we think higher commodity prices and multiple expansion would more than offset this.

Reduced Activity Can Be NAV Neutral to Positive. We estimate the negative NAV impact from a 25% reduction in activity would be more than offset by lower OFS costs. In fact, median NAV increases by 4% under our 25% lower activity (10% lower costs) scenario. Commodity prices would provide further upside.

Valuation Multiples Likely to Move Higher Despite Lower Growth; . As E&P valuations are a function of NAV, we think longer inventory lives and improved corporate returns would increase multiples, while FCF generation would reduce WACC, further contributing to multiple expansion.

Multiple Expansion Could Offset Reduced EBITDA. We estimate a 25% reduction in U.S. activity equates to ~5-15% lower equity valuations assuming no change to current multiples. That said, if E&Ps can reduce the EV/EBITDA discount to the S&P to 2x (vs. 3x), this would drive a 15-25% increase in E&P equity valuations, which increases to ~35-40% at a 1x discount assuming no change to commodity prices.

Oil Services

Pressure Pumping Remains Favored; RES Expands Lead

Bottom Line: We continue to favor pressure pumping and expect profitability to remain near current levels as long as oil prices remain in the $47.50-$50.00 range. Pricing gains have slowed but the market remains undersupplied—we think much of any newbuilds will be partially offset by attrition and expanding crew sizes. This report does the heavy lifting to resolve accounting differences and compare 2Q results on an apples-to-apples basis. RES, our top pick, generates more than 2.5x the EBITDA/HHP of peers and expanded its lead during 2Q. SPN/FRAC made improvements but profitability still lags; we prefer CJ due to upside optionality from idle assets. Pumping results should continue to improve in 2H17 and while there is risk of margins peaking in 4Q, we think PP stocks offer best risk/reward due to a combination of attractive valuation on 2H17 annualized EBITDA and significant upside optionality to higher oil prices.

Key Points

This report updates our pressure pumping (PP) supply/demand outlook and continues the work begun in our initiation report, *Not all Horsepower is Equal* and our *1Q17 benchmarking analysis*. We standardize for different accounting of corporate expenses, which are not always reflected in segment results. This meaningfully impacts profitability for some (CJ, FRAC), less for others (PTEN, RES, SPN). The market appears to mostly adjust for these differences when comparing adj. EBITDA/HHP to EV/HHP. There is relative value in CJ vs. FRAC as CJ does not appear to get credit for its idle assets. For 3Q/4Q17, we are 6/12% above consensus for CJ, 6%/12% above for RES, 5%/6% above for SPN, and 5%/11% below adjusted consensus for FRAC.

We still favor PP in the context of a guarded sector view. PP remains undersupplied and should stay tight through year-end even if the rig count declines 10%. SMID stocks are trading near historical averages on 4Q17E ann. EV/EBITDA while most of OFS is trading 1-2 standard deviations above. This suggests that US PP stocks are closer to discounting current oil prices than most OFS stocks. **We estimate PP demand of 15mm HHP with active supply of 13mm going to 14-15mm by year-end and think near leading-edge margins can be sustained in a $47.50-$50.00 oil price environment**. We expect industry leaders, such as HAL, to quietly shift to a market share strategy, preventing a material increase in newbuilds. Newbuild estimates range from 1-2mm HHP but a large portion will likely offset attrition and rising crew sizes due to required redundancy and rotation of equipment between wellsites and repair yards.

Key points: 1) RES's lead expanded in 2Q with adj. EBITDA/HHP increasing by $173 to $441 vs. peers increasing by $117 to $176. **2) FRAC is improving and expects to play catch up**. Adjusted EBITDA/HHP of $145 was up nearly 400% QoQ but was $89 below FRAC's peer average of $234. FRAC offered the most aggressive guidance for 3Q and may narrow the gap to $78. **3) CJ had a strong 2Q despite transitory issues**. We still see upside to consensus but are lowering our estimates partly due to a slower pace of reactivations and lower margins due to higher sand costs as contracts re-set. **4)** SPN continues to lag but delivered high incrementals. **5)** PTEN has idiosyncratic opportunities via normalizing SSE assets. **6) RES's quality not fully reflected in near-term EBITDA multiples.** On annualized 4Q17E, RES trades in line with peers despite lower 2018 estimate risk, in our view, higher capital discipline, and better operational performance. 7**)** We are lowering our CJ/SPN price targets by 10%/17% respectively.

rene.cartier@bmo.com (416) 359-5011

Legal Entity: BMO Nesbitt Burns Inc.

What's Inside

In this report, we take a look at cost reporting across the royalty/streaming companies under coverage and which are best-positioned among the peer group. On the back of this report, we introduce GEO production as well as cash cost and AISC data for our royalty/streaming companies as part of our comprehensive *GoldPages*.

LHS: Price / RHS: Volume (mm) Source: FactSet

Bottom Line: In this report, we take a look at some of the evolutionary trends and introduce cost reporting for the precious metal royalty/streaming sector. We ask the question, "who has the better deck of cards?" While all companies under coverage have their respective strengths, we favour Royal Gold on higher margins and cash flow per share and Wheaton Precious Metals on cash generation and liquidity.

Key Points

We are seeing increased competition in the precious metal royalty/streaming sector from new players, private equity, and mining companies that look to spin out their own royalty/streaming companies. We estimate that over the past two years, royalty/streaming companies have conservatively lost out on upward of 290koz of gold equivalent ounce (GEO) delivery potential in deals totaling $2.4B.

While the royalty/streaming companies under coverage appear to be in a reasonably strong position, we are of the view that the sector will have to become increasingly innovative to grow. Gone are the days of the "vanilla" royalty/streaming company. Over the past 12 months we have seen a step change in innovation with a number of companies adding:

- Exploration (Royal Gold) and project ownership, either directly (Sandstorm), or indirectly through a variety of incubator models to organically grow new royalties or streams. While cost effective, we have yet to see a successful conversion to a stream.
- OR has increased the breadth of options available as a royalty/streaming company through the C$1.1B acquisition of Orion Mine Finance. Included in the portfolio were a number of streams with counterparty buyback provisions to shorten the duration of a stream. This is a significant divergence from the traditional royalty/streaming model as it potentially caps exposure to life of mine optionality.

Our concern for the precious metal royalty/streaming sector is that the drive to innovate and maintain a competitive advantage increases risk and may compromise one of the core strengths that royalty/streaming companies provide investors: **low-cost optionality to growth driven by counterparty efforts to build new mines, extend mine life, and/or expand production through ongoing exploration**. There is a view among investors that this portfolio optionality is the principal reason that royalty/streaming companies trade at a premium to the miners.

On a positive note, another core strength of the royalty/streaming companies lies in their cost structure, with companies under coverage realizing all-in sustaining cost margins (AISC) of +60% of the average realized gold price. **Companies with the higher margins are Franco Nevada and Royal Gold.**

Following the old adage that "cash is king," **Wheaton Precious Metals is king, generating +40% of total cash flow among its peer group annually. Royal Gold is the standout leader on a per share basis**. Barring any future equity raises, Franco Nevada and Wheaton Precious Metals have the most enviable liquidity positions to be able to transact on future opportunities.

Toys

Lights, Camera, Inaction! Movie Toys Underperform; Lowering Estimates

Bottom Line: In 2017, we believe the toy industry is experiencing movie fatigue, with toys tied to movies underperforming expectations for retailers, manufacturers, and we expect for investors, as well.

With a heavy slate of toyetic movies to be released in the balance of 2017 and through 2018, we see risk to investor expectations and toy company EPS estimates over the near to intermediate term. We are taking the opportunity to moderate expected contribution from these movie events, reduce our estimate for toy industry growth, as well as our estimates for toy companies reliant on movie licenses.

Key Points

A major focus for investors in recent years has been the impact of movie licenses on toy manufacturers like Hasbro, Mattel, Spin Master, and JAKKS Pacific. This area of licensing has grown rapidly owing to the increased speed to market and popularity of "toyetic" franchise films at the box office.

So far this year, though, total U.S. box office receipts are down about 5%, with the Labor Day weekend being the weakest domestic box office in 178 years. In addition to lackluster performance at the box office, we blame an over-saturated movie market, fatigue in certain properties associated with multiple sequels, and competition from entertainment from other screens for underperformance of movie-related toys.

In this note we are reducing our growth estimate for the U.S. toy industry to 2% from 3% in 2017 and to 1.5% from 2% in 2018. We are also reducing EPS expectations for Hasbro, Mattel, and JAKKS Pacific, while leaving our estimates unchanged for Spin Master. We are also lowering our target price for Hasbro to $90 (from $95) and for Mattel to $23 (from $25) owing to EPS reductions and further risk to earnings owing to exposure to underperforming merchandise programs tied to movies.

However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. Nothing herein constitutes any investment, legal, tax or other advice nor is it to be relied on in any investment or decision. If you are in doubt about any of the contents of this document, the reader should obtain independent professional advice. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Andrew Breichmanas, Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To E.U. Residents: In an E.U. Member State this document is issued and distributed by BMO Capital Markets Limited which is authorised and regulated in the UK and operates in the E.U. on a passported basis. This document is only intended for Professional Clients, as defined in Annex II to "Markets in Financial Instruments Directive" 2004/39/EC ("MiFID").

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

This Month's Additions and Removals from Energy Best Ideas List

Exhibit 1: This Month's Removals

Parex Resources (PXT) Nathan Piper, Analyst (+44) 131-222-3649 nathan.piper@rbccm.com	• We maintain our Outperform rating; however, we are removing Parex from the RBC Best Ideas list due to compliance with the mandatory RBC Best Idea stop loss sell limit reached since it was added to the list.

Investment Highlights

Below, we provide a summary of our analysts' views on each *Best Idea*.

Canadian Natural Resources (CNQ)
Greg Pardy
(416) 842-7848
greg.pardy@rbccm.com

- **Attractive free cash flow profile.** By virtue of its Horizon oil sands expansion and the Athabasca Oil Sands Project acquisition, CNQ should see an increase in its free cash flow into 2018 and beyond. CNQ's free cash flow generation opens the door to balance sheet deleveraging, shareholder returns, organic resource development, and opportunistic acquisitions.
- **Superior execution wins the race.** CNQ has evolved into a super independent with an international scope because of its ability to successfully navigate through successive stages of growth under all kinds of conditions.
- **Returns to shareholders.** CNQ has never cut its dividend, and along with Q4-2016 results, the company announced a 10% increase to $1.10/share (annualized).
- **Core energy holding.** We firmly believe that CNQ ought to be a core holding for global energy investors given its compelling combination of visible upstream growth and impressive shareholder returns. Overarching all of this is management + directors' ownership of approximately 2.3% of common shares.

Devon Energy (DVN)
Scott Hanold, Analyst
(512) 708-6354
scott.hanold@rbccm.com

- **Three core onshore oil plays underpin growth outlook.** We expect 8% production growth in 2018 led by high-margin US oil production up 15–20%. Activity in the Delaware, STACK, and Eagleford should help the company return to growth in 2H17 and accelerate in 2018. We think there could be upside to 2017 production expectations.
- **STACK provides potential operational catalysts into 2017 and beyond.** Several pilots testing spacing and acreage extent that are under way could increase drilling inventories by 50% or more. The 39-well "Hobson Row" (STACK Woodford) pilot is 40% online and initial results are outperforming the 1.6 MMboe EUR typecurve. DVN also plans a new STACK Meramec test using 15 wells/unit. Strong results will help prove up the play's multi-zone development potential.
- **Asset monetization plans provide increased focus and development capital to the portfolio.** DVN plans to divest assets worth $1 billion that are non-core, including portions of the Barnett Shale (data room opens soon), with a sale anticipated to occur in the next 12–18 months. We think ConocoPhillips' recent non-core Barnett divestiture ($4,000–5,000 Mcfe/d) is a positive read-through for DVN. Continued delineation success in the Delaware Permian and STACK that adds more core inventory could drive additional sales as other portions of the Barnett, Eagleford, and/or PRB become expendable. Proceeds will further enhance the balance sheet but also provide capital to continue to accelerate growth in 2018+, in our view.
- **Valuation is appealing.** DVN trades at a 10–15% discount on EV/EBITDA to large cap peers despite similar oil growth rates in 2018.

Energy Transfer Partners, L.P. (ETP)

Elvira Scotto, Analyst
(212) 905-5957
elvira.scotto@rbccm.com

- **Strong position in the Permian; should benefit as basin takeaway capacity tightens.** ETP has sizable exposure to Permian Basin production through its long-haul crude oil pipelines such as Permian Express II and West Texas Gulf. We believe Permian takeaway capacity could become constrained in 2018, which would likely cause the WTI-Midland price spread to widen. We believe ETP can capitalize on widening crude oil price differentials through its marketing business.
- **Merger of SXL/ETP a longer-term positive.** We view the ETP/SXL merger favorably, as we believe the transaction will: (1) improve the overall cost of capital (legacy SXL completes projects at lower cost of capital vs. legacy ETP); (2) diversify legacy SXL's and legacy ETP's businesses; and (3) reduce cash outflows from distributions, which should improve combined leverage. In addition, management believes the surviving entity can generate $200MM of annual commercial synergies starting in 2019.
- **Poised for double-digit distribution growth in 2017.** We expect ETP to deliver distribution growth of 10% and 9% in 2017 and 2018, respectively.
- **Growth projects should deliver increasing cash flows into 2017 year-end.** We expect the Dakota Access Pipeline Project to generate EBITDA of ~$240MM. In addition, we expect ETP to complete its Mariner East 2 and ME2X project in 2H17 at 8.0x EBITDA, resulting in annual EBITDA of ~$375MM.

Exelon Corp (EXC)
Shelby Tucker, Analyst
(212) 428-6462
shelby.tucker@rbccm.com

- **Increased regulated footprint.** With the Pepco acquisition in 2016, Exelon now derives more than 60% of its annual earnings from regulated utilities, expected to grow 6–8% annually through 2019 from rate base growth and ROE improvement at the Pepco utilities.
- **State support for nuclear plants.** In late 2016, both Illinois and New York passed legislation to provide financial subsidies to the states' nuclear plants, which included those owned by Exelon. While there is ongoing litigation at both states, we expect the courts to uphold the legislation, which should serve as a positive catalyst. In addition, other states, including New Jersey, are also considering a similar program, which would further support Exelon's merchant power business.
- **Value play.** The stock is currently trading at 13.6x P/E on 2019E, versus 17.6x for the defensive utilities. While we acknowledge the warranted discount for EXC given its exposure to competitive power markets, we believe the valuation gap is not reflecting the increased and growing regulated footprint.

Galp Energia (GALP)
Biraj Borkhataria, Analyst
(+44) 207-029-7650
biraj.borkhataria@rbccm.com

- **Galp remains one of the few majors that ticks multiple boxes for investors**, with: 1) a strong balance sheet; 2) limited dividend risk; 3) growth pipeline unlikely impacted by a prolonged weaker oil price; and 4) M&A optionality.
- **Locked-in growth in Brazil.** Unlike its peers in other regions, we believe Galp offers investors a growth opportunity that is not dependent on the oil price. Our production forecasts see volumes growing from 68kboed in 2016 to 164kboed by 2021, or a 19% CAGR, through additional production units in Brazil, all of which have been sanctioned and are in development.
- **Valuation remains attractive and justified.** On a price to cash flow basis, Galp is trading at a relative low both versus its history and the peer group average. Although there has been some near-term uncertainty around the risers and well hook-ups, we continue to see a clear path to Galp growing its production base over the next five years.

Halliburton (HAL) Kurt Hallead, Co-Head of Global Energy Research 512-708-6356 kurt.hallead@rbccm.com	• **Direct play on US land and frac.** HAL continues to gain market share and grow revenues, with NAM revenue up 24%, relative to peer SLB up 17% sequentially. HAL is sold out on frac crews through Q3 and looks to align with the most efficient operators to maximize its own returns. • **Limited competition in mature fields.** Revenue from mature fields could triple to $9 billion. The key driver to growth would be two or three integrated asset management projects per year. • **Trading at a discount.** HAL's 2019E EV/EBITDA is at a significant discount to SLB.
Patterson-UTI Energy (PTEN) Kurt Hallead, Co-Head of Global Energy Research 512-708-6356 kurt.hallead@rbccm.com	• **DUCs on the rise, gross margins increase.** DUCs have continued to rise as frac capacity lags drilling activity. Permian DUCs have increased +28% q/q, while Permian wells drilled are +27% q/q. PTEN projects at least 21% gross margin for fac in 3Q17, including reactivation costs of Seventy Seven Energy frac capacity. • **Super-spec rigs driving demand.** Super-spec rigs will likely continue to be 100% utilized, even if rig count were to decline in aggregate. We think PTEN's rig mix will continue to shift toward a higher percentage of Tier 1 rigs over the next two years, which we think should lead to higher cash margins over the long run. We estimate +75% of PTEN's rigs are Tier 1 currently. Dayrates would need to reach the mid-$20k to justify newbuild activity. • **Trading at a discount.** PTEN's 2019E EV/EBITDA is at a significant discount to NBR.
RSP Permian (RSPP) Scott Hanold, Analyst (512) 708-6354 scott.hanold@rbccm.com	• **Disciplined high-rate growth is underappreciated.** There is visibility for more than 30% in 2018 at cash flow levels assuming at least $55/bbl. However, we think the company will be proactive and target near cash flow neutrality and remain disciplined if oil prices remain below $50/bbl. Our current view is that rig activity will increase slightly through 2017 and be at 30–35% in both 2018 and 2019. In 2017, 85% of the company's budget targets wells with IRRs greater than 40% at $55/oil. This helps keeps the balance sheet strong and we model net debt-to-EBITDA below 1.5x through 2018. • **The Delaware Basin is a significant catalyst for improving capital efficient growth.** The "slow" start to activity and growth from the recent entrance into the Delaware caused some investor angst, but we think the infrastructure development is on track. The expansion of infrastructure through the recent acquisition of salt-water disposal wells and improvements to facilities should improve costs and further enhance returns. We think enhanced completion techniques, longer laterals, and additional delineation could also boost returns and drilling locations meaningfully over the coming years. • **Opportunities exist in the Midland to expand resource potential.** Recent strong test results from the company's furthest west Wolfcamp A well in an area not carried in inventory provide confidence that the zone is prospective farther west than previously thought and could add locations to inventory. RSPP is also seeing strong performance from 500' spacing tests in the Lower Spraberry and sees potential for simultaneous development of three landing intervals within the Lower Spraberry in some areas. Additional "high-density spacing" could significantly increase inventory. • **Valuation momentum.** RSPP trades in line (EV/EBITDA) with Permian peers but has one of the best debt-adjusted production growth outlooks among the peer group. RSPP's margins are also among the top in the industry.

Summit Midstream Partners LP (SMLP) Elvira Scotto, Analyst (212) 905-5957 elvira.scotto@rbccm.com	• **Final dropdown structure shifts performance risk to GP.** Given the deferred payment structure and calculation, SMLP will pay an effective 6.5x EBITDA multiple. Summit Investments bears the risk of asset under-performance or incremental capex. SMLP has the option to make the payment in cash or common units, and can pre-fund the payment by opportunistically issuing debt or equity if capital markets are favorable. • **Well positioned for Utica growth.** Across its Utica AMI, SMLP estimates that its customers have ~1,200–1,500 potential drilling locations. SMLP expects fully developed pad sites to have 6–8 wells (vs. 3.2 currently), which implies an extra ~230–400 future wells that will not require additional pipeline capex. • **MVCs mitigate volume risk; fee-based revenues minimize direct commodity price risk.** SMLP has a weighted average MVC life of 8.4 years and ~98% of its revenue is fee-based. • **Recent acreage sales a positive:** CHK sold its Barnett acreage to a First Reserve-backed entity, which we believe will result in increased activity in SMLP's acreage. Also, four of SMLP's top six producers in the Piceance Basin are now private equity-backed with limited outside drilling options.
Suncor Energy (SU) Greg Pardy (416) 842-7848 greg.pardy@rbccm.com	• **Best in breed.** In our view, Suncor represents a best-in-breed global integrated oil company adhering to capital discipline, cost improvement, and superior execution. We believe that Suncor has emerged as the Canadian integrated name of choice, with well-defined production growth and a strong balance sheet. • **Growth preservation.** Suncor is preserving its longer-term upstream growth profile through the advancement of its Hebron development, and its Fort Hills oil sands mining project. Both projects are expected to come on-line at the end of 2017, collectively adding about 130,000 bbl/d of production net to Suncor. • **Free cash flow potential.** By adhering to long cycle-time projects, Suncor has poured the foundation of substantial free cash flow generation in 2017 and beyond. Along with Q1-2017 results, the company announced a $2.0 billion share buyback program through a Normal Course Issuer Bid (NCIB). As of July 27, the company had repurchased some $450 million (over 11 million shares) of its shares to date.
Targa Resources (TRGP) TJ Schultz, Analyst (512) 708-6385 tj.schultz@rbccm.co	• **Superior position in most attractive basin.** We believe TRGP is well positioned to benefit from increased producer activity in the Permian Basin and from improved NGL fundamentals through 2017/2018. In addition to completing the Outrigger acquisition, TRGP most recently announced a new NGL takeaway pipeline project (300 Mbpd capacity) that will transport NGLs from the Permian to Mont Belvieu. These two strategic actions enhanced the company's footprint in the most lucrative basin in the U.S. At current valuations, we see a good buying opportunity, as TRGP should benefit from increased volumes through its systems in 2H17 and 2018 as producers ramp up D&C activity.

TransCanada (TRP) Robert Kwan, Analyst (604) 257-7611 robert.kwan@rbccm.com	• **The "new" TransCanada provides a platform for above average growth.** The company has a number of small to medium-sized projects that should underpin 8–10% annual dividend growth through 2020, with upside from the Columbia acquisition providing another avenue for growth with its pipeline footprint in the Marcellus and Utica. The visible growth from the highly executable small to medium-sized initiatives reduces the headline risk from the larger projects (e.g., Keystone XL, Energy East). Further, the sale of the U.S. merchant power business will result in the company's cash flows being almost all regulated or contracted. • **Attractive characteristics and relative valuation.** Management has guided to the upper end of the 8–10% annual dividend growth rate range through 2020 on top of the 3.5–4.0% dividend yield, with that total return profile being above average for our infrastructure coverage universe. Further, the dividend coverage from distributable cash is expected to average roughly 2x through 2020, which is superior to almost all of the Canadian and U.S. peers, and despite superior growth and dividend coverage, the stock trades in line with its peer group.
Trican Well Service Ltd. (TCW) Ben Owens, Analyst (403) 299-2394 benjamin.owens@rbccm.com	• **Industry consolidation a positive for pricing, margins.** We see industry consolidation through the combination of Trican and Canyon as a clear positive for the Canadian frac services market. We expect consolidation to result in greater competition for active equipment and increased industry pricing discipline. • **We see material pricing power for Canadian frac services by 2018.** We forecast a tight WCSB pressure-pumping market by 2018, driving pricing power. We forecast industry utilization breaching the key 80% threshold for pricing power in 4Q17 and forecast full-year 2018 utilization of 85%. In this scenario, we see significant pricing power for Canadian frac services companies.

Dissemination of research and short-term trade ideas

RBC Capital Markets endeavors to make all reasonable efforts to provide research simultaneously to all eligible clients, having regard to local time zones in overseas jurisdictions. RBC Capital Markets' equity research is posted to our proprietary website to ensure eligible clients receive coverage initiations and changes in ratings, targets and opinions in a timely manner. Additional distribution may be done by the sales personnel via email, fax, or other electronic means, or regular mail. Clients may also receive our research via third party vendors. RBC Capital Markets also provides eligible clients with access to SPARC on the Firms proprietary INSIGHT website, via email and via third-party vendors. SPARC contains market color and commentary regarding subject companies on which the Firm currently provides equity research coverage. Research Analysts may, from time to time, include short-term trade ideas in research reports and / or in SPARC. A short-term trade idea offers a short-term view on how a security may trade, based on market and trading events, and the resulting trading opportunity that may be available. A short-term trade idea may differ from the price targets and recommendations in our published research reports reflecting the research analyst's views of the longer-term (one year) prospects of the subject company, as a result of the differing time horizons, methodologies and/or other factors. Thus, it is possible that a subject company's common equity that is considered a long-term 'Sector Perform' or even an 'Underperform' might present a short-term buying opportunity as a result of temporary selling pressure in the market; conversely, a subject company's common equity rated a long-term 'Outperform' could be considered susceptible to a short-term downward price correction. Short-term trade ideas are not ratings, nor are they part of any ratings system, and the firm generally does not intend, nor undertakes any obligation, to maintain or update short-term trade ideas. Short-term trade ideas may not be suitable for all investors and have not been tailored to individual investor circumstances and objectives, and investors should make their own independent decisions regarding any securities or strategies discussed herein. Please contact your investment advisor or institutional salesperson for more information regarding RBC Capital Markets' research.

Disclaimer

RBC Capital Markets is the business name used by certain branches and subsidiaries of the Royal Bank of Canada, including RBC Dominion Securities Inc., RBC Capital Markets, LLC, RBC Europe Limited, Royal Bank of Canada, Hong Kong Branch and Royal Bank of Canada, Sydney Branch. The information contained in this report has been compiled by RBC Capital Markets from sources believed to be reliable, but no representation or warranty, express or implied, is made by Royal Bank of Canada, RBC Capital Markets, its affiliates or any other person as to its accuracy, completeness or correctness. All opinions and estimates contained in this report constitute RBC Capital Markets' judgement as of the date of this report, are subject to change without notice and are provided in good faith but without legal responsibility. Nothing in this report constitutes legal, accounting or tax advice or individually tailored investment advice. This material is prepared for general circulation to clients and has been prepared without regard to the individual financial circumstances and objectives of persons who receive it. The investments or services contained in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about the suitability of such investments or services. This report is not an offer to sell or a solicitation of an offer to buy any securities. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. RBC Capital Markets research analyst compensation is based in part on the overall profitability of RBC Capital Markets, which includes profits attributable to investment banking revenues. Every province in Canada, state in the U.S., and most countries throughout the world have their own laws regulating the types of securities and other investment products which may be offered to their residents, as well as the process for doing so. As a result, the securities discussed in this report may not be eligible for sale in some jurisdictions. RBC Capital Markets may be restricted from publishing research reports, from time to time, due to regulatory restrictions and/ or internal compliance policies. If this is the case, the latest published research reports available to clients may not reflect recent material changes in the applicable industry and/or applicable subject companies. RBC Capital Markets research reports are current only as of the date set forth on the research reports. This report is not, and under no circumstances should be construed as, a solicitation to act as securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction. To the full extent permitted by law neither RBC Capital Markets nor any of its affiliates, nor any other person, accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or the information contained herein. No matter contained in this document may be reproduced or copied by any means without the prior consent of RBC Capital Markets.

Additional information is available on request.

To U.S. Residents:

This publication has been approved by RBC Capital Markets, LLC (member FINRA, NYSE, SIPC), which is a U.S. registered broker-dealer and which accepts responsibility for this report and its dissemination in the United States. Any U.S. recipient of this report that is not a registered broker-dealer or a bank acting in a broker or dealer capacity and that wishes further information regarding, or to effect any transaction in, any of the securities discussed in this report, should contact and place orders with RBC Capital Markets, LLC.

To Canadian Residents:

This publication has been approved by RBC Dominion Securities Inc.(member IIROC). Any Canadian recipient of this report that is not a Designated Institution in Ontario, an Accredited Investor in British Columbia or Alberta or a Sophisticated Purchaser in Quebec (or similar permitted purchaser in any other province) and that wishes further information regarding, or to effect any transaction in, any of the securities discussed in this report should contact and place orders with RBC Dominion Securities Inc., which, without in any way limiting the foregoing, accepts responsibility for this report and its dissemination in Canada.

To U.K. Residents:

This publication has been approved by RBC Europe Limited ('RBCEL') which is authorized by the Prudential Regulation Authority and regulated by the Financial Conduct Authority ('FCA') and the Prudential Regulation Authority, in connection with its distribution in the United Kingdom. This material is not for general distribution in the United Kingdom to retail clients, as defined under the rules of the FCA. However, targeted distribution may be made to selected retail clients of RBC and its affiliates. RBCEL accepts responsibility for this report and its dissemination in the United Kingdom.

To German Residents:

This material is distributed in Germany by RBC Europe Limited, Frankfurt Branch which is regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin).

To Persons Receiving This Advice in Australia:

This material has been distributed in Australia by Royal Bank of Canada - Sydney Branch (ABN 86 076 940 880, AFSL No. 246521). This material has been prepared for general circulation and does not take into account the objectives, financial situation or needs of any recipient. Accordingly, any recipient should, before acting on this material, consider the appropriateness of this material having regard to their objectives, financial situation and needs. If this material relates to the acquisition or possible acquisition of a particular financial product, a recipient in Australia should obtain any relevant disclosure document prepared in respect of that product and consider that document before making any decision about whether to acquire the product. This research report is not for retail investors as defined in section 761G of the Corporations Act.

To Hong Kong Residents:

This publication is distributed in Hong Kong by Royal Bank of Canada, Hong Kong Branch, which is regulated by the Hong Kong Monetary Authority and the Securities and Futures Commission ('SFC'), RBC Investment Services (Asia) Limited and RBC Investment Management (Asia) Limited, both entities are regulated by the SFC. Financial Services provided to Australia: Financial services may be provided in Australia in accordance with applicable law. Financial services provided by the Royal Bank of Canada, Hong Kong Branch are provided pursuant to the Royal Bank of Canada's Australian Financial Services Licence ('AFSL') (No. 246521.)

To Singapore Residents:

This publication is distributed in Singapore by the Royal Bank of Canada, Singapore Branch, a registered entity granted offshore bank licence by the Monetary Authority of Singapore. This material has been prepared for general circulation and does not take into account the objectives, financial situation, or needs of any recipient. You are advised to seek independent advice from a financial adviser before purchasing any product. If you do not obtain independent advice, you should consider whether the product is suitable for you. Past performance is not indicative of future performance. If you have any questions related to this publication, please contact the Royal Bank of Canada, Singapore Branch. Royal Bank of Canada, Singapore Branch accepts responsibility for this report and its dissemination in Singapore.

To Japanese Residents:

Unless otherwise exempted by Japanese law, this publication is distributed in Japan by or through RBC Capital Markets (Japan) Ltd. which is a Financial Instruments Firm registered with the Kanto Local Financial Bureau (Registered number 203) and a member of the Japan Securities Dealers Association ("JSDA").

roger.song@suntrust.com

What's Inside

Page 2 includes the Table of Contents for all the relevant macro trends that we track.

What's Incremental To Our View

This report includes our analysis of the key macro factors impacting the power/utility sector, including: forward power prices, spark spread, dark spread, and gas/coal spread trends; domestic electric consumption growth; and national weather patterns. Based on the latest peer group valuations, we are changing our price targets on AEP, CNP, EIX, and PNW.

IMPORTANT POINTS

- On-Peak spark spreads currently suggest an increase over the 2017-2020 period ($12.7/MWh - $15.7/MWh) and increased 1% versus the prior week.

- On-Peak dark spreads currently suggest an increase over the 2017-2020 period ($6.2/MWh - $7.5/MWh) and increased 5% versus the prior week.

- Forward power prices increased 1% last week, versus a 2% increase in forward gas prices and no change in forward coal prices.

- Domestic electric consumption decreased 2% for the week ended August 26 and has decreased 1% year to date.

- The STRH Power Index was flat for the week (versus +2% for the S&P 500) and has increased 14% year to date (versus +11% for the S&P 500).

- The STRH Power Index is trading at a P/E multiple of 17.6x our 2019 estimates (a 13% premium to historical levels); an EV/EBITDA multiple of 9.7x our 2019 estimates (an 11% premium); P/B multiple of 2.0x (a 20% premium); and a Treasury-dividend yield spread of -112 basis points (a 13% discount).

- Based on the latest peer group valuations, we make the following changes to our price targets: AEP is increased to $80 from $78; CNP is increased to $28 from $27; EIX is increased to $90 from $89; PNW is decreased to $86 from $87.

VALUATION

AEP
Assuming a 19.5x P/E multiple (a 9% premium to the peer group to reflect the above average earnings growth profile) on our 2019 estimate of $4.11, we derive our price target of $80.

AES
Assuming an 11.4x P/E multiple (which would still imply a 10% “conglomerate” discount to the peer group) on our 2019 estimate of $1.32, we derive our price target of $15.

CMS
Assuming a 19.8x P/E multiple (a 10% premium to the peer group to reflect the above average growth outlook) on our 2019 estimate of $2.47, we derive our price target of $49.

CNP
Based on the market value of CNP’s ownership in ENBL, we derive an $8.1/share value. Factoring a 17.9x P/E multiple (in line with the peer group) on our 2019 Utility estimate of $1.09, we derive a $19.5/share value. Consequently, our sum of the parts price target is $28.

CPN
Based on the company's take out price, and our assumption that a higher bid will not emerge, we derive our price target of $15.

DUK
Assuming a 17.7x P/E multiple (in line with the peer group) on our 2019 estimate of $5.09, we derive our price target of $90.

DYN
Assuming an EV/EBITDA multiple of 7.8x (a 3% discount to the peer group to reflect the higher leverage at the company) on our 2019 EBITDA estimate of $1.30bn, coupled with implied net debt of $8.26bn (which factors in all the announced asset sales), we derive our price target of $11.

EIX
Assuming a 19.2x P/E multiple (a 7% premium to the peer group to reflect the company’s above average earnings and dividend growth profile) on our 2019 estimate of $4.69, we derive our price target of $90.

EXC
Assuming a 14.8x P/E multiple (in line with the peer group) on our 2019 estimate of $2.75, we derive our price target of $41.

GXP
Assuming a 17.4x P/E multiple (a 2% discount to the peer group to reflect the uncertainties around the final merger approval) on our 2019 estimate of $1.80, we derive our price target of $32.

NRG

Based on the current market value of NRG’s ownership in NYLD, we derive a $5/share equity value. Applying a 9.0x EV/EBITDA multiple (a 10% premium to the current peer average to reflect the potential upside from the successful execution of the Transformation Plan) to our residual NRG 2019 EBITDA estimate of $1.90 billion, coupled with implied residual Net Debt of $11.4 billion, we derive an $18/share value for the residual NRG. Consequently, our price target is $23.

PNM

Assuming an 18.1x P/E multiple (in line with the small cap peer group) on our 2019 estimate of $2.03, we derive our price target of $37.

PNW

Assuming a P/E multiple of 18.3x (in line with other small / mid cap peers) on our 2019 estimate of $4.71, we derive our price target of $86.

SO

Assuming a 16.5x P/E multiple (a 5% discount to the large cap peer group, reflecting ongoing uncertainty around the Vogtle project) on our 2019 estimate of $3.15, we derive our price target of $52.

XEL

Assuming a 18.0x P/E (in line with the peer group) on our 2019 EPS estimate of $2.60, we derive our price target of $47.

RISKS

AEP
- Final resolution of pending regulatory issues.
- Future earnings power post merchant exit
- Impact of proposed and future EPA regulations.

AES
- Potential regulatory/economic changes in key international markets.
- Investor sentiment regarding emerging/international markets.
- Successful execution of portfolio restructuring strategy.

CMS
- Outlook for Retail Open Access in Michigan.
- Change in the regulatory regime.
- Load growth trends.

CNP
- Macro trends and growth outlook for the MLP portfolio.
- Load growth trends in service territories.
- Ability to restructure MLP ownership position.

CPN

- Outlook for future spark spreads.
- Timing of additional EPA regulations.
- Electric load growth trends.

DUK

- O&M cost management.
- Future electric load growth trends.
- Impact of future regulatory initiatives.

DYN

- Outlook for forward commodity curves.
- Integration of the pending acquisitions.
- Final outcome of debt restructuring discussions.
- Implication of future EPA regulations.

EIX

- Capital investment and growth plans for non-utility operations.
- Final CPUC decision on applications to reopen SONGS retirement settlement.
- Outcome of pending and future regulatory cases.

EXC

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

GXP

- Load growth outlook in service territories.
- Outcome of pending rate cases.
- Impact of higher property taxes and transmission costs.
- Completion of the WR acquisition.

NRG

- Execution of the Reset plan.
- Outlook for forward commodity curves.

PNM

- Final New Mexico PRC decision on the rate case settlement.
- Electric load growth trends in service territories.

PNW

- Impact of energy efficiency and distributed generation programs.
- Any regulatory changes regarding distributed generation
- Load growth outlook

SO

- Outlook for load growth.
- Dilution from additional equity issuance.
- Potential for further delays and cost increases at the large construction projects.
- Higher than expected accretion from AGL acquisition.

XEL

- Outcome of pending and future rate cases.
- Outlook for future capital expenditure (and rate base) growth.
- Load growth trends in service territories.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/05/2017):

Coverage Universe			Investment Banking Clients Past 12 Months		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	417	59.57%	Buy	130	31.18%
Hold/Neutral	279	39.86%	Hold/Neutral	58	20.79%
Sell/Reduce	4	0.57%	Sell/Reduce	1	25.00%

INDUSTRY UPDATES

Application Software - Tillman's Software Monday Morning Missives Delivered Post Holiday

Building Products/Durable Goods - Building Products Hurricane Update- Biggest Beneficiaries Still Have Upside

Chemicals - Hurricane Harvey Chemicals Outage Update

Morning Meeting Highlights

Prologis Inc. (PLD, $63.78, Buy) - Upgrading PLD to Buy From Hold - We are upgrading PLD to Buy (on a relative basis) from Hold and increasing our price target to $68/sh from $58/sh. To be clear, we think PLD is relatively attractive within the REIT sector and even within the industrial REIT sector. In our view, the industrial warehouse sector feels crowded and multiples are certainly not cheap, but we think PLD offers relatively attractive growth prospects and asset quality per amount of valuation paid. - **Ki Bin Kim**

Mack-Cali Realty Corporation (CLI, $23.38, Buy) - Risks Outweighed by Potential Rewards; Upgrading to Buy - Our upgrade to Buy is driven by a strong growth outlook for 2019 and beyond, coupled with a very compelling valuation. Our Hold rating was partially based on what we viewed as overly optimistic 2018 consensus FFO. We still see '18 guidance (expected on 3Q EPS call) as a potential risk, but since our last note, the consensus estimate came down 2%, and our conversations with investors suggest that buy-side expectations may already be lower than the sell-side consensus. Our $30 PT implies a 32% total return. - **Michael Lewis**

Towers - Increasing Tower Targets as 2018 Poised to Deliver Upside - We believe the accelerating activity levels of AT&T in deploying the FirstNet spectrum in addition to the WCS and AWS-3 bands provides greater clarity on the developing tailwinds for the tower industry for the next 3 years. In combination with other AWS-3, 600 MHz and maybe DISH deployments, we believe our avg. est. of 150bps potential increase in revenue growth could prove conservative. With greater certainty and a continued low probability of a TMUS-S merger, we increase our AMT, CCI and SBAC targets on higher multiples while reiterating our Buy ratings. - **Greg Miller**

Newell Brands Inc. (NWL, $48.28, Buy) - Stop Sniffing the Glue and Check This (Stock) Out - We believe now is the time to Buy NWL shares with a highly attractive valuation and multiple catalysts on the horizon. We are maintaining our $60 price target (17x 2018 EPS, below peers) and reiterate our Buy rating. - **William Chappell, Jr.**

Building Products/Durable Goods - Building Products Hurricane Update- Biggest Beneficiaries Still Have Upside - The hurricane has re-focused investors on our sector. We believe (1) inevitable weak revenue in 3Q17 will be overlooked (2) the storm's impact on demand in 2018 is low single digits but we see more upside in BMCH and BLDR given their Houston exposure while BLD and IBP labor could cause more upside than anticipated (3) petrochemical prices could spike impacting inputs for AFI (vinyl) MHK (carpet, vinyl), OC (roofing), TPX (mattress), SCSS (mattress), TILE (carpet). Again, we believe investors will look past these short-term impacts. TREX use of recycled material should protect availability. - **Keith Hughes**

Industrial REITs - REITs - Warehouse rent is a minor cost in e-commerce biz per AMZN's FBA

Tech, Semis, Components and Distributors - Semiconductor Cycle Path - Proprietary Macro Indicator Remains Strong

Today's Events

9/5	John Boris - Analyst Trip - Boston
9/5	Neal Dingmann - Analyst Trip - New York

Application Software - Tillman's Software Monday Morning Missives Delivered Post Holiday - **Terry Tillman**

Industrial REITs - REITs - Warehouse rent is a minor cost in e-commerce biz per AMZN's FBA - Using detailed data from Amazon, we estimate that warehouse rent represents a small portion of e-commerce costs, supporting our view that rents may have room to move higher, especially for well-located high quality product. Cost of labor & transportation dwarfs storage costs for all products and, coupled with the rise of same-day delivery, we believe industrial space closest to consumers has more upside and is currently undervalued vs. more commodity-like assets. We think this bodes well for well-located industrial REITs like PLD, and in this vein we are upgrading PLD to Buy from Hold. - **Ki Bin Kim**

Card Networks - Invitation- Expert Call 9/12 On European Fleet Card Market (FLT/WEX) - **Oscar Turner**

Other Focus Items Today

Consumer

Newell Brands Inc. (NWL, $48.28, Buy) - Stop Sniffing the Glue and Check This (Stock) Out - We believe now is the time to Buy NWL shares with a highly attractive valuation and multiple catalysts on the horizon. We are maintaining our $60 price target (17x 2018 EPS, below peers) and reiterate our Buy rating. - **William Chappell, Jr.**

Conn's, Inc. (CONN, $17.35, Buy) - Hurricane Harvey Impact; Rebuilding an Opportunity - **David Magee**

The Scotts Miracle-Gro Co. (SMG, $95.59, Hold) - Updating Estimates Following Euro Biz Sale, JV Dilution - Based on the company's announcements yesterday after market close (completed sale of European business, incremental dilution from TruGreen JV), we are lowering our FY17 EPS estimate to $3.85 from $4.14. Based on the company's long-term EPS growth target of 8%-10%, we are lowering our FY18 EPS estimate to $4.24 from $4.53 (10% EPS growth). We are maintaining our $95 price target (22x FY18 EPS, high end of peers) and Hold rating. - **William Chappell, Jr.**

Electric Power and Utilities

Electric Power and Utilities - Power/Utilities Macro Trends Tracker - Increase In Forward Spreads - This report includes our analysis of the key macro factors impacting the power/utility sector, including: forward power prices, spark spread, dark spread, and gas/coal spread trends; domestic electric consumption growth; and national weather patterns. Based on the latest peer group valuations, we are changing our price targets on AEP, CNP, EIX, and PNW. - **Ali Agha**

Energy

Midstream Oil and Gas - PAA/PAGP - Money, Cash, Flows - While not unequivocal, the cut brings retained CF (where previously there was none) closer to funding needs and suggests de-levering. That said, we think asset sales and a Preferred (and EBITDA growth) need to occur precisely as planned to see the de-levering occur. With substantial ramp in cash flow guided for 4Q and 2018, paired against investors' patience with the name, the risk of any potential shortfall and the likely impact on the units keeps us sidelined. We are reducing our EBITDA projections but increasing targets to $24 from $23 for both securities as financial risk appears improved. - **Tristan Richardson**

Financials

Regions Financial Corp. (RF, $14.23, Buy) - Reiterate Buy Following Visit With Management - Following a visit with RF management, we are maintaining our Buy rating, '17/'18 EPS estimates of $1.01/$1.13 and PT of $16. The valuation remains compelling at 12.6x '18E EPS/1.6x TBV compared to the peer median at 12.5x/1.8x. While revenue growth has been challenging, management is confident that they can achieve a 12%-14% ROTCE by the end of '18 which should result in an improved valuation. If more rate hikes don’t occur and/or economic growth remains slow, the company has other levers it can pull to achieve the low end of the ROTCE target, primarily through more cost reduction efforts. - **Jennifer Demba**

Brown & Brown Inc. (BRO, $44.96, Hold) - Updating Model - **Mark Hughes**

Interactive Brokers Group, Inc. (IBKR, $41.93, Hold) - Increasing Estimates and PT on Strong August Metrics Report - We are increasing our 2017/2018 EPS estimates following IBKR's August monthly metrics report to $1.54/$1.66 from $1.52/$1.64, due to continued strength in DARTs and margin balance growth, slightly offset by a lower Fed Funds futures curve. We continue to expect strong account growth through the remainder of 2017, but offset slightly by lower DARTs per account. We are increasing our price target to $40 from $38 equaling ~24x FY18E EPS, which we believe adequately reflects the strong growth prospects of the company and diminishing impact from its market-making operations overhang. - **Douglas Mewhirter**

Cadence Bancorporation (CADE, $20.84, Hold) - Cadence Details Minimal Hurricane Harvey Impact - **Jennifer Demba**

Healthcare

Global Blood Therapeutics (GBT, $30.40, Buy) - Highlights from the Road — HOPE Part A & IPF Data The Key N-T Inflection Points - We recently hosted a series of investor meetings with GBT's senior management (CEO Ted Love, CFO Jeff Farrow, and Sr. Director of IR Myesha Lacy). Key takeaways are GBT440's (1) top-line HOPE Part A data in sickle cell disease are more likely in 1H18 (vs. our prior YE17/early 2018E), (2) pivotal HOPE Part B data remain on track for 1H19, and (3) top-line IPF data remain on track for 4Q17. Also in 4Q17, we expect updated HOPE-

KIDS 1 data at ASH. Management indicates that gene therapy is unlikely to pose a threat to GBT440. We reiterate our Buy rating and NPV-derived $56 PT. - **Yatin Suneja**

TG Therapeutics, Inc. (TGTX, $12.70, Buy) - Upcoming ECTRIMS Abstract Titles Indicate TG-1101 Reduces Lesion Size - **Yatin Suneja**

Industrials

Building Products/Durable Goods - Building Products Hurricane Update- Biggest Beneficiaries Still Have Upside - The hurricane has re-focused investors on our sector. We believe (1) inevitable weak revenue in 3Q17 will be overlooked (2) the storm's impact on demand in 2018 is low single digits but we see more upside in BMCH and BLDR given their Houston exposure while BLD and IBP labor could cause more upside than anticipated (3) petrochemical prices could spike impacting inputs for AFI (vinyl) MHK (carpet, vinyl), OC (roofing), TPX (mattress), SCSS (mattress), TILE (carpet). Rockwell Collins Inc. (COL, $130.61, Hold) - Done Deal - UTX To Buy COL for $140 Per Share - **Michael Ciarmoli**

Chemicals - Hurricane Harvey Chemicals Outage Update - Outages at US petrochemical facilities remain substantial. As of August 31 roughly 58% of US commodity chemical capacity and 44% of commodity polymers capacity is shut down or significantly impacted, not counting plants that are in the process of re-starting, according to Chemical Data, Inc. The most severely impacted commodities are ethylene (67%), the industry’s key building block chemical, propylene (77%) and butadiene (80%). Many other plants are operating at low rates due to feedstock supply issues or lack of downstream demand. Please see the summary of chemical industry outages on pg 2. - **James Sheehan**

IT Services

Card Networks - Invitation- Expert Call 9/12 On European Fleet Card Market (FLT/WEX) - **Oscar Turner**

eHealth, Inc. (EHTH, $24.28, Buy) - Tailwind from Cuts to ACA Marketing Spending - **Tobey Sommer**

Real Estate Investment Trusts

Prologis Inc. (PLD, $63.78, Buy) - Upgrading PLD to Buy From Hold - We are upgrading PLD to Buy (on a relative basis) from Hold and increasing our price target to $68/sh from $58/sh. To be clear, we think PLD is relatively attractive within the REIT sector and even within the industrial REIT sector. In our view, the industrial warehouse sector feels crowded and multiples are certainly not cheap, but we think PLD offers relatively attractive growth prospects and asset quality per amount of valuation paid. - Ki Bin Kim

Mack-Cali Realty Corporation (CLI, $23.38, Buy) - Risks Outweighed by Potential Rewards; Upgrading to Buy - Our upgrade to Buy is driven by a strong growth outlook for 2019 and beyond, coupled with a very compelling valuation. Our Hold rating was partially based on what we viewed as overly optimistic 2018 consensus FFO. We still see ‘18 guidance (expected on 3Q EPS call) as a potential risk, but since our last note, the consensus estimate came down 2%, and our conversations with investors suggest that buy-side expectations may already be lower than the sell-side consensus. Our $30 PT implies a 32% total return. - **Michael Lewis**

Industrial REITs - REITs - Warehouse rent is a minor cost in e-commerce biz per AMZN’s FBA - Using detailed data from Amazon, we estimate that warehouse rent represents a small portion of e-commerce costs, supporting our view that rents may have room to move higher, especially for well-located high quality product. Cost of labor & transportation dwarfs storage costs for all products and, coupled with the rise of same-day delivery, we believe industrial space closest to consumers has more upside and is currently undervalued vs. more commodity-like assets. We think this bodes well for well-located industrial REITs like PLD, and in this vein we are upgrading PLD to Buy from Hold. - **Ki Bin Kim**

FelCor Lodging Trust Incorporated (FCH, $7.30, NA) - Dropping coverage - We are dropping coverage of FelCor Lodging Trust (FCH) as a result of the closure of its merger with RLJ Lodging Trust (RLJ, $20.18, NR). Our last rating on the stock was Hold. Research issued before 9/1/2017, the date of coverage termination, should not be relied upon going forward. - **C. Patrick Scholes**

TMT

Towers - Increasing Tower Targets as 2018 Poised to Deliver Upside - We believe the accelerating activity levels of AT&T in deploying the FirstNet spectrum in addition to the WCS and AWS-3 bands provides greater clarity on the developing tailwinds for the tower industry for the next 3 years. In combination with other AWS-3, 600 MHz and maybe DISH deployments, we believe our avg. est. of 150bps potential increase in revenue growth could prove conservative. With greater certainty and a continued low probability of a TMUS-S merger, we increase our AMT, CCI and SBAC targets on higher multiples while reiterating our Buy ratings. - **Greg Miller**

Application Software - Tillman's Software Monday Morning Missives Delivered Post Holiday - **Terry Tillman**

Alphabet Inc. (GOOGL, $951.99, Buy) - EC Could Levy Fine Against GOOGL Over Android As Early As This Month - Media outlets reported over the weekend that the outcome of the EU's anti-trust probe into Google's Android could come as early as this month, resulting perhaps in a fine that exceeds last June's $2.7B penalty over its comparison shopping service. The EC has been looking into whether the Android OS was used to stifle competition; and the bigger concerns for us are whether 1) Google will be forced to dramatically alter Android and unbundle key parts of it, and 2) there'll be further action from the EC on other issues such as AdSense for Search. We are not changing our estimates at this time. - **Youssef Squali**

Maxim Integrated (MXIM, $46.99, Hold) - Business model update should be a positive catalyst; here's why we stay at Hold - MXIM announced its plans to introduce a new business model to investors after market close today. We expect the new model to include a more believable revenue growth view, higher gross & operating margins, and potentially some incremental financial leverage to accelerate growth in FCFE and EPS. If we're right, it will be a near-term positive catalyst for the stock. We retain our Hold rating as we see other stocks in our coverage with better growth vs. valuation characteristics (CY, MSCC) and more consistent, reliable upside potential (ADI, AVGO). - **William Stein**

Tech, Semis, Components and Distributors - Semiconductor Cycle Path - Proprietary Macro Indicator Remains Strong - Consumer sentiment momentum (our proprietary 5-month leading indicator for semiconductor industry growth) remained strong in August at +7.8%. Our other demand indicators are also mostly constructive: inventory momentum supports a gradual growth fade, cycle altitude/duration is at least benign for stocks, and while absolute valuation looks stretched, semis do not look expensive relative to the broader S&P, in our view. The constructive macro supports our more cyclically exposed long ideas: CY, AVGO, MSCC, and ADI. From a structural growth standpoint we like NVDA. - **William Stein**

Analyst Certification

By issuing this research report, each SunTrust Robinson Humphrey, Inc. analyst named in this report hereby certifies that the recommendations and opinions expressed accurately reflect the research analyst's personal views about any and all of the subject securities or companies discussed herein and no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/05/2017):

Coverage Universe			Investment Banking Clients Past 12 Months		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	417	59.57%	Buy	130	31.18%
Hold/Neutral	279	39.86%	Hold/Neutral	58	20.79%
Sell/Reduce	4	0.57%	Sell/Reduce	1	25.00%

Electric Utilities & Power

Watts and Bonds - Fixed Income Weekly

Industry Overview

06 September 2017

High Grade, High Yield Credit
United States
Electric Utilities / Power

Markets wind down the last days of summer

A mix of the market's constructive view of the U.S. economy, dovish comments from Fed officials, concerns about lack of progress on tax reform, and the slowdown of the last week of summer ahead of the Labor Day holiday added up to a relative lack of direction last week – our investment grade corporate bond index produced negative 2 bp of excess returns. Utilities generated negative 13 bp of excess returns to trail our index by 11 bp (Chart 1). Within the utilities sector last week, there were no clear trends among the leading or lagging bonds. High yield electric utilities generated 9 bp of excess returns last week but trailed our high yield corporate bond index by 24 bp (Chart 2). Bonds of Talen Energy Supply, which went private last year, were among the top performers in the sector, while FirstEnergy Solutions was the lagging performer with multiple tranches of bonds of Calpine and NRG Energy underperforming.

SO: Georgia Power recommends finishing both nuclear units

As expected, Georgia Power recommended to the Georgia Public Service Commission to continue construction of the two nuclear units (Unit 3 and Unit 4), and stated that the other three members of the consortium all support the recommendation. Georgia Power stated that based on all factors considered, completing both units represents the most economic choice for customers and preserves the benefits of carbon-free, baseload generation. The revised estimates for Georgia Power's 45.7% ownership interest are $8.77 billion of construction and capital costs, up from $5.44 billion in the prior semi-annual VCM, though that increase is expected to be mitigated by $1.7 billion of payments (Georgia Power's share) over the next four years from Toshiba (Caa1/CC), which had guaranteed certain obligations of Westinghouse, the EPC contractor which filed for bankruptcy in March 2017. The schedule for commercial operation were extended by 29 months for each of the two units, to November 2021 for Unit 3 and November 22 for Unit 4. Accordingly, Georgia Power's expected financing cost estimates for its 45.7% stake were raised to $3.4 billion from $2.3 billion. The PSC is expected to review the recommendation and make a decision on the project as part of the 17th Vogtle Construction Monitoring proceeding. One of the five PSC commissioners expressed his support for the project in a Wall Street Journal opinion column less than two weeks before Georgia Power filed its recommendation; he is currently serving his second term as commissioner, scheduled to end in December 2022. Among the other commissioners, two are serving terms scheduled to end in December 2018 and two are serving terms scheduled to end in December 2020; all commissioners are elected to their position. Moody's stated that the recommendation to complete the increasingly expensive and significantly-delayed Vogtle units is credit negative, as total costs are open-ended and as Georgia Power's parent company will be assuming construction risk on its balance sheet. Fitch maintained Georgia Power on Rating Watch Negative, stating that the "go-forward" decision increases credit risks of possible further schedule delays and escalation in project costs, potential non-payment by Toshiba, and receipt of production tax credits.

Performance Summaries

Performance Summary: Investment Grade

A mix of the market's constructive view of the U.S. economy, dovish comments from Fed officials, concerns about lack of progress on tax reform, and the slowdown of the last week of summer ahead of the Labor Day holiday added up to a relative lack of direction last week – our investment grade corporate bond index produced negative 2 bp of excess returns. Utilities generated negative 13 bp of excess returns to trail our index by 11 bp (Chart 3). Within the utilities sector last week, there were no clear trends among the leading or lagging bonds. Year-to-date, though, electric utilities have generated 212 bp of excess returns to outperform our investment grade corporate bond index by 20 bp. Issuers whose bonds have contributed meaningfully to the sector's outperformance include Électricité de France, Comision Federal de Electricidad, Enel and Exelon Generation. Bonds whose performance has constrained the sector's year-to-date excess returns are largely bond tranches with less than $300 million outstanding after a competitor raised its index eligibility minimum to $300 million from $250 million.

Credit spreads of the electric utilities sector widened by 1 bp last week to lag the unchanged investment grade corporate bond index (Chart 4). Utilities' credit spreads 113 bp wide to Treasuries, 1 bp more than our index (Chart 5).

Source: BofA Merrill Lynch Lighthouse Data Analysis & BofA Merrill Lynch Global Index System.

Performance Summary: High Yield

High yield electric utilities generated 9 bp of excess returns last week but trailed our high yield corporate bond index by 24 bp (Chart 6). Bonds of Talen Energy Supply, which went private last year, were among the top performers in the sector, while FirstEnergy Solutions was the lagging performer with multiple tranches of bonds of Calpine and NRG Energy underperforming. Year-to-date, high yield electrics have generated 564 bp of excess returns to lead our high yield corporate bond index by 163 bp. Among the top-performing bonds were those called by Talen Energy Supply, FirstEnergy Solutions and Dynegy, while Calpine's bonds and Talen Energy Supply's still-outstanding bonds have largely lagged.

High yield electrics have generated total returns of 788 bp year-to-date to outperform our high yield corporate bond index by 173 bp. Electrics ended the week with an average YTW of 5.72%, 10 bp more than our index's 5.62% (Chart 8).

Credit Ratings

Actions of the Past Week

Direction	Bond Ticker	Agency	Issuer	Securities	Rating To:	Rating From:	Outlook: To:	Outlook: From:	Rationale
MOST POSITIVE									
	PNW	S&P	Pinnacle West Capital Corp.	CCR	A-	A-	Pos.	Stable	● The positive outlooks reflect the company's continued effective management of regulatory risk and S&P's expectations that the company will effectively manage the potential risks of distributed generation. ● The changes of outlooks follow regulatory approval of an Arizona Public Service settlement with a net rate increase of about $95 million. ● Additionally, the order implements net metering rates for new solar customers consistent with the Arizona Corporation Commission's December 2016 order.

Primary reasons for the ‘Watch’ listings include:

- Uncertainties regarding the costs and schedules of construction projects following Westinghouse’s filing for bankruptcy protection and planned exit from nuclear power plant construction (Southern Company, Georgia Power, South Carolina Electric & Gas and SCANA Corp.),
- Potential removal of a distressed majority parent and elimination of a significant amount of debt above the utility (ONCRTX),
- Supreme Court ruling that can potentially resolve employee strike (Israel Electric Corp. Ltd.),
- M&A-related activities (TerraForm Power and TerraForm Global), and
- Strong rating linkage with potentially weaker parent ratings (Mississippi Power).

15-Aug-16	**NRG**: NRG Energy continues progress on corporate fitness regimen
15-Aug-16	**GENONE**: NRG seeks to reduce GenOn's leverage; how and when remain uncertain

Disclosures

Important Disclosures

BofA Merrill Lynch Credit Opinion Key
BofA Merrill Lynch Global Research provides recommendations on an issuer's bonds (including corporate and sovereign external debt securities), capital securities, equity preferreds and CDS as described below. Convertible securities are not rated. An issuer level recommendation may also be provided for an issuer as explained below. BofA Merrill Lynch Global Research credit recommendations are assigned using a three-month time horizon.
Issuer Recommendations: If an issuer credit recommendation is provided, it is applicable to bonds and capital securities of the issuer except bonds and capital securities specifically referenced in the report with a different credit recommendation. Where there is no issuer credit recommendation, only individual bonds and capital securities with specific recommendations are covered. CDS and equity preferreds are rated separately and issuer recommendations do not apply to them.

BofA Merrill Lynch Global Research credit recommendations are assigned using a three-month time horizon:
Overweight: Spreads and /or excess returns are likely to outperform the relevant and comparable market over the next three months.
Marketweight: Spreads and/or excess returns are likely to perform in-line with the relevant and comparable market over the next three months.
Underweight: Spreads and/or excess returns are likely to underperform the relevant and comparable market over the next three months.

BofA Merrill Lynch Global Research uses the following rating system with respect to **Credit Default Swaps (CDS):**
Buy Protection: Buy CDS, therefore going short credit risk.
Neutral: No purchase or sale of CDS is recommended.
Sell Protection: Sell CDS, therefore going long credit risk.

BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.
BofA Merrill Lynch Global Credit Research analysts regularly interact with sales and trading desk personnel in connection with their research, including to ascertain pricing and liquidity in the fixed income markets.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

This report may refer to fixed income securities that may not be offered or sold in one or more states or jurisdictions. Readers of this report are advised that any discussion, recommendation or other mention of such securities is not a solicitation or offer to transact in such securities. Investors should contact their BofA Merrill Lynch representative or Merrill Lynch Financial Global Wealth Management financial advisor for information relating to fixed income securities
Rule 144A securities may be offered or sold only to persons in the U.S. who are Qualified Institutional Buyers within the meaning of Rule 144A under the Securities Act of 1933, as amended.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Exelon's political clout has helped it win state subsidies for struggling nuclear plants.

Investment Thesis

Travis Miller, Strategist, 06 September 2017

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future. But Exelon has shown its political clout recently, winning subsidies in key states to keep its nuclear fleet mostly in tact.

However, Exelon's growth engine is its regulated gas and electric distribution utilities. Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think at least five of Exelon's plants remain uneconomic without state subsidies that face stiff legal and regulatory challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2019, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Strategist, 02 August 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced earnings per share of $0.54 on an adjusted basis during the second quarter of 2017, down from $0.65 in the second quarter of 2016. Earnings are tracking in line with our full-year estimate, and management reaffirmed its $2.50-$2.80 EPS guidance range.

Exelon achieved two key court victories in July affirming the legality of nuclear subsidies it began receiving this year in New York and Illinois. We think this is just the start of the legal and regulatory debate. We do not include the five subsidized plants in our long-term forecast, but including them would not have a sizable impact on our fair value estimate because the subsidies limit their value upside and downside.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed by Exelon's ability remain the world's premier nuclear operator. The fleet realized a 91% capacity factor in the quarter despite six refueling outages.

This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations. Its next area of focus is in Pennsylvania, where it has committed to close its Three Mile Island nuclear plant by September 2019 unless it receives subsidies. We assume TMI closes as scheduled.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020. Management reported the utilities' returns on equity are near 10% with upside

potential at the Pepco Holdings utilities. This return is better than many of Exelon's peers'.

Economic Moat

Travis Miller, Strategist, 06 September 2017

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 September 2017

We are raising our fair value estimate to $33 per share from $32 per share after incorporating time-value appreciation since our last update and year-to-date results in line with our expectations.

On a consolidated basis, our midcycle earnings estimate is now $3.40 per share after adding the New York and Illinois zero emissions credits. Our midcycle EBITDA estimate at Exelon Generation is $2.7 billion, up from trough EBITDA in 2019 when weak power prices and at least two nuclear plant closures will hurt earnings at Exelon Generation. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.50/mmbtu

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★ 06 Sep 2017 13:11, UTC	37.60 USD 06 Sep 2017	33.00 USD 06 Sep 2017 13:07, UTC	1.14	3.46 05 Sep 2017	3.48 05 Sep 2017	36.10 05 Sep 2017	Utilities - Diversified	Standard

gas basis in the mid-Atlantic region and market heat rates 15% above current 2018 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 6% consolidated annual earnings growth through 2020. Our forecasts show Exelon's regulated utilities contributing two thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2020 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. We remove the Oyster Creek (N.J.) and Three Mile Island (Pa.) plants in 2019 per Exelon's current plants. TMI failed to clear the last three PJM capacity auctions but could survive if Pennsylvania passes legislation that would subsidize the state's nuclear plants. Nuclear subsidy legislation in Pennsylvania could have a slight positive impact on our fair value estimate.

At the retail business, we assume 20% long-term normalized gross margins and volumes that grow to 245 terawatt hours by 2020.

We assume a 9% cost of equity and a 6.6% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 September 2017

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 September 2017

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the lives of its distressed nuclear plants. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 2.6 million shares and vested options as of January 2017.

Analyst Notes Archive

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, CPA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

PJM Capacity Auction Results: Surprisingly, No Surprises

Travis Miller, Strategist, 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers

Travis Miller, Strategist, 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Trump's Announcement to Exit Paris Agreement Has Little Effect on Utilities

Andrew Bischof, CFA, CPA, Sr. Eq. Analyst, 02 June 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities after President Trump announced plans to exit the Paris Climate Agreement.

Despite the withdrawal, we continue to forecast U.S. renewable energy capacity doubling during the next eight years. State renewable portfolio standards, or RPS, and other local policies remain the industry's primary growth driver, not federal environmental policy. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use by 2025, up from 15% now, based solely on existing state RPS.

We think Trump's move to abandon the U.S. Clean Power Plan and Paris Agreement could even embolden states to strengthen renewable energy standards, offering upside to our forecasts. Supportive tax policy and pro-manufacturing initiatives also offer upside. And corporate renewable energy purchases should continue to grow as businesses realize the economic and public perception benefits. Thus, we are not surprised that many business leaders denounced Trump's decision.

We also forecast carbon emissions from the power generation sector will keep falling toward Paris Agreement targets given the growth in renewable energy and gas generation. Low natural gas prices and turbine efficiency improvements are forcing coal plant shutdowns and reduced run times for competing coal generators, which emit twice as much carbon as an equivalent gas plant.

Utilities operating in states with constructive regulation and environmental policy support could realize 7%-9% annual earnings and dividend growth the next three to five years. Best positioned are utilities like Dominion Energy, Duke Energy, American Electric Power, and CMS Energy that are investing billions of dollars in new infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

U.S. Nuclear: Down but Not Out

Travis Miller, Strategist, 27 July 2017

We are reaffirming our fair value estimates, moat and moat trend ratings for all U.S. utilities with nuclear exposure after analyzing the economics, regulation, and sustainability attributes of nuclear generation in the U.S.

Nuclear power is at an inflection point in the U.S., with a wide gap developing between the anti-nuclear and pro-nuclear factions. This is a critical debate. The 99 nuclear units in the U.S. provide 20% of the nation’s electricity and meet essential reliability needs for major cities. Competition from cheap natural gas generation and renewable energy are pinching profits now, but we think a long-term perspective is important.

Our forecast for flat or growing U.S. nuclear capacity is more bullish than most forecasts. In particular, we think the U.S. could add as much as 5% net new nuclear capacity by 2040 primarily due to nuclear uprates. Most market forecasts assume natural gas is the marginal generation source, but our calculations show nuclear uprates have similar economic returns and less long-term capital reinvestment risk. We think nuclear has a more favorable environmental, social, and governance, or ESG, profile than most other nonrenewable energy sources. Its low carbon-emissions profile and reliability make it a critical contributor to meeting state and federal environmental policy goals.

We think the best opportunity for investors is to take advantage of the market's concerns about spiraling new-build nuclear costs and regulatory risk. Scana and Southern Company trade at steep discounts to peers even after adjusting for their new-build project risks. Among existing plant owners, only one utility has maintained a big bet on nuclear: Exelon. The stock looks pricey now, but its scale and political clout as the largest U.S. operator give it more option upside than any U.S. utility. We also think top-tier nuclear operators such as Exelon and Xcel Energy should earn premium valuations for their positive ESG characteristics.

With Nuclear Subsidy Debate Past, Exelon Hits Core Growth Expectations

Travis Miller, Strategist, 02 August 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced earnings per share of $0.54 on an adjusted basis during the second quarter of 2017, down from $0.65 in the second quarter of 2016. Earnings are tracking in line with our full-year estimate, and management reaffirmed its $2.50-$2.80 EPS guidance range.

Exelon achieved two key court victories in July affirming the legality of nuclear subsidies it began receiving this year in New York and Illinois. We think this is just the start of the legal and regulatory debate. We do not include the five subsidized plants in our long-term forecast, but including them would not have a sizable impact on our fair value estimate because the subsidies limit their value upside and downside.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed by Exelon's ability remain the world's premier nuclear operator. The fleet realized a 91% capacity factor in the quarter despite six refueling outages.

This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations. Its next area of focus is in Pennsylvania, where it has committed to close its Three Mile Island nuclear plant by September 2019 unless it receives subsidies. We assume TMI closes as scheduled.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020. Management reported the utilities' returns on equity are near 10% with upside potential at the Pepco Holdings utilities. This return is better than many of Exelon's peers'.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

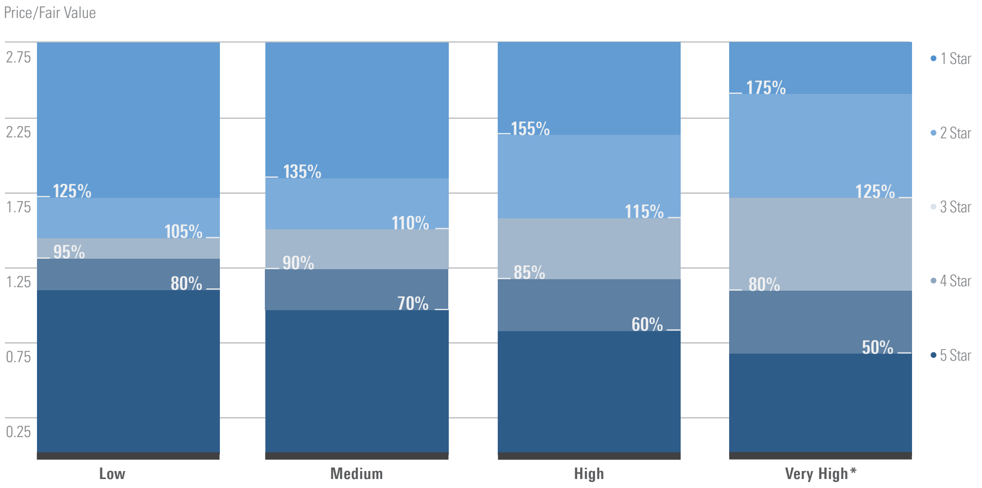
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- **Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- **Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- **None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- **One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- **Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- **Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- **Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- **Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

Investment Thesis 06 Sep 2017

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future. But Exelon has shown its political clout recently, winning subsidies in key states to keep its nuclear fleet mostly in tact.

However, Exelon's growth engine is its regulated gas and electric distribution utilities. Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think at least five of Exelon's plants remain uneconomic without state subsidies that face stiff legal and regulatory challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2019, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Valuation, Growth and Profitability 06 Sep 2017

We are raising our fair value estimate to $33 per share from $32 per share after incorporating time-value appreciation since our last update and year-to-date results in line with our expectations.

On a consolidated basis, our midcycle earnings estimate is now $3.40 per share after adding the New York and Illinois zero emissions credits. Our midcycle EBITDA estimate at Exelon Generation is $2.7 billion, up from trough EBITDA in 2019 when weak power prices and at least two nuclear plant closures will hurt earnings at Exelon Generation. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.50/mmbtu gas basis in the mid-Atlantic region and market heat rates 15% above current 2018 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 6% consolidated annual earnings growth through 2020. Our forecasts show Exelon's regulated utilities contributing two thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2020 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. We remove the Oyster Creek (N.J.) and Three Mile Island (Pa.) plants in 2019 per Exelon's current plants. TMI failed to clear the last three PJM capacity auctions but could survive if Pennsylvania passes legislation that would subsidize the state's nuclear plants. Nuclear subsidy legislation in Pennsylvania could have a slight positive impact on our fair value estimate.

At the retail business, we assume 20% long-term normalized gross margins and volumes that grow to 245 terawatt hours by 2020.

We assume a 9% cost of equity and a 6.6% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $650 million change in EBITDA. Our fair value estimate would change by $5 per share. On a mark-to-market basis, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 4 percentage points to near the industry average, it would change our fair value estimate by $1 per share.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

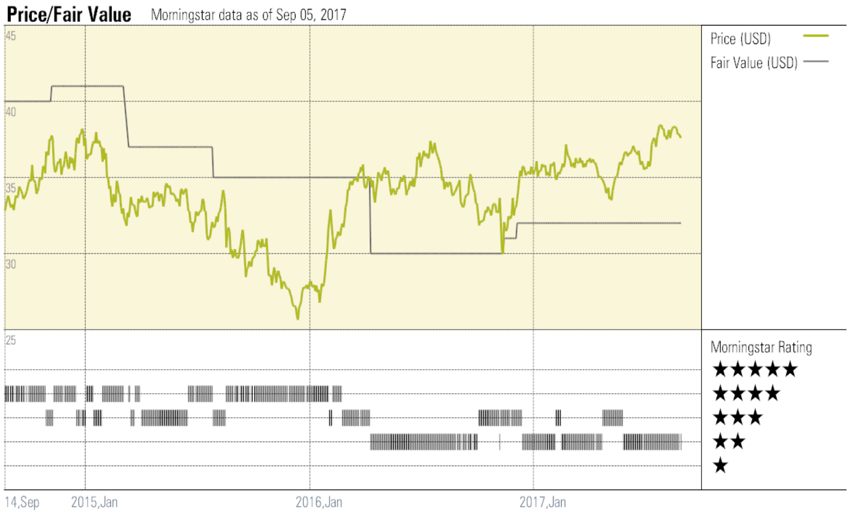
Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics,

Exelon Corp EXC (NYSE) | ★★

Last Price	**Fair Value**	**Uncertainty**	**Economic Moat™**	**Moat Trend™**	**Stewardship**	**Industry Group**
37.60 USD	33.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated



with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. About 70% of the $11 billion of rate base growth in 2016-20 will have rate trackers or formula rates, minimizing regulatory lag. Exelon faces the biggest challenge boosting Pepco's earned returns some 400 basis points to approach its allowed returns. Rate cases in 2017 should give it a good start.

In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.

- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.

- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.

- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.

- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

As power markets have fallen from their 2008 peaks, Exelon's generation unit has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow. Now management is targeting a $3 billion reduction in parent-level debt through 2020.We see no immediate credit concerns based on current energy market conditions. We project Exelon's consolidated EBITDA/interest coverage will remain above 5 times and leverage will remain below 5 times debt/EBITDA at least through 2019. Even though these ratios are weaker following the Pepco acquisition, we think this is acceptable given the higher share of regulated earnings.Only about one-quarter of Exelon's consolidated debt is directly tied to its generation segment. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing its near-term maturities.We also think management can meet its 2.5% dividend growth goal through 2018 with relative ease. However, this is rather unimpressive compared with most of its peers that we think can grow their dividends at least twice as fast.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm might have to make modest cash contributions. Plant closures also could increase cash decommission costs.

Enterprise Risk

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management 06 Sep 2017

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the lives of its distressed nuclear plants. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 2.6 million shares and vested options as of January 2017.

Analyst Notes

With Nuclear Subsidy Debate Past, Exelon Hits Core Growth Expectations 02 Aug 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced earnings per share of $0.54 on an adjusted basis during the second quarter of 2017, down from $0.65 in the second quarter of 2016. Earnings are tracking in line with our full-year estimate, and management reaffirmed its $2.50-$2.80 EPS guidance range.

Exelon achieved two key court victories in July affirming the legality of nuclear subsidies it began receiving this year in New York and Illinois. We think this is just the start of the legal and regulatory debate. We do not include the five subsidized plants in our long-term forecast, but including them would not have a sizable impact on our fair value estimate because the subsidies limit their value upside and downside.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed by Exelon's ability remain the world's premier nuclear operator. The fleet realized a 91% capacity factor in the quarter despite six refueling outages.

This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations. Its next area of focus is in Pennsylvania, where it has committed to close its Three Mile Island nuclear plant by September 2019 unless it receives subsidies. We assume TMI closes as scheduled.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020. Management reported the utilities' returns on equity are near 10% with upside potential at the Pepco Holdings utilities. This return is better than many of Exelon's peers'.

U.S. Nuclear: Down but Not Out 27 Jul 2017

We are reaffirming our fair value estimates, moat and moat trend ratings for all U.S. utilities with nuclear exposure after analyzing the economics, regulation, and sustainability attributes of nuclear generation in the U.S.

Nuclear power is at an inflection point in the U.S., with a wide gap developing between the anti-nuclear and pro-nuclear factions. This is a critical debate. The 99 nuclear units in the U.S. provide 20% of the nation’s electricity and meet essential reliability needs for major cities. Competition from cheap natural gas generation and renewable energy are pinching profits now, but we think a long-term perspective is important.

Our forecast for flat or growing U.S. nuclear capacity is more bullish than most forecasts. In particular, we think the U.S. could add as much as 5% net new nuclear capacity by 2040 primarily due to nuclear uprates. Most market forecasts assume natural gas is the marginal generation source, but our calculations show nuclear uprates have similar economic returns and less long-term capital reinvestment risk. We think nuclear has a more favorable environmental, social, and governance, or ESG, profile than most other nonrenewable energy sources. Its low carbon-emissions profile and reliability make it a critical contributor to meeting state and federal environmental policy goals.

We think the best opportunity for investors is to take advantage of the market's concerns about spiraling new-build nuclear costs and regulatory risk. Scana and Southern Company trade at steep discounts to peers even after adjusting for their new-build project risks. Among existing

Exelon Corp EXC (NYSE) | ★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
37.60 USD	33.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

plant owners, only one utility has maintained a big bet on nuclear: Exelon. The stock looks pricey now, but its scale and political clout as the largest U.S. operator give it more option upside than any U.S. utility. We also think top-tier nuclear operators such as Exelon and Xcel Energy should earn premium valuations for their positive ESG characteristics.

For our full analysis, see our Utilities Observer: U.S. Nuclear Down But Not Out.

Trump's Announcement to Exit Paris Agreement Has Little Effect on Utilities 02 Jun 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities after President Trump announced plans to exit the Paris Climate Agreement.

Despite the withdrawal, we continue to forecast U.S. renewable energy capacity doubling during the next eight years. State renewable portfolio standards, or RPS, and other local policies remain the industry's primary growth driver, not federal environmental policy. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use by 2025, up from 15% now, based solely on existing state RPS.

We think Trump's move to abandon the U.S. Clean Power Plan and Paris Agreement could even embolden states to strengthen renewable energy standards, offering upside to our forecasts. Supportive tax policy and pro-manufacturing initiatives also offer upside. And corporate renewable energy purchases should continue to grow as businesses realize the economic and public perception benefits. Thus, we are not surprised that many business leaders denounced Trump's decision.

We also forecast carbon emissions from the power generation sector will keep falling toward Paris Agreement targets given the growth in renewable energy and gas generation. Low natural gas prices and turbine efficiency improvements are forcing coal plant shutdowns and reduced run times for competing coal generators, which emit twice as much carbon as an equivalent gas plant.

Utilities operating in states with constructive regulation and environmental policy support could realize 7%-9% annual earnings and dividend growth the next three to five years. Best positioned are utilities like Dominion Energy, Duke Energy, American Electric Power, and CMS Energy that are investing billions of dollars in new infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Our full report, "Trump Can't Thwart Green Progress," is available on Morningstar Select Investment Research.

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings.

Analyst Notes

Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

PJM Capacity Auction Results: Surprisingly, No Surprises 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain

Analyst Notes

the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth 19 Apr 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Our full report, "Trump Can't Thwart Green Progress," is available on Morningstar Select Investment Research.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities 28 Mar 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

For more information on our outlook for renewable growth and carbon emissions, see our most recent report "Trump Can't Thwart Green Progress" on Morningstar Select Investment Research.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Morningstar Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

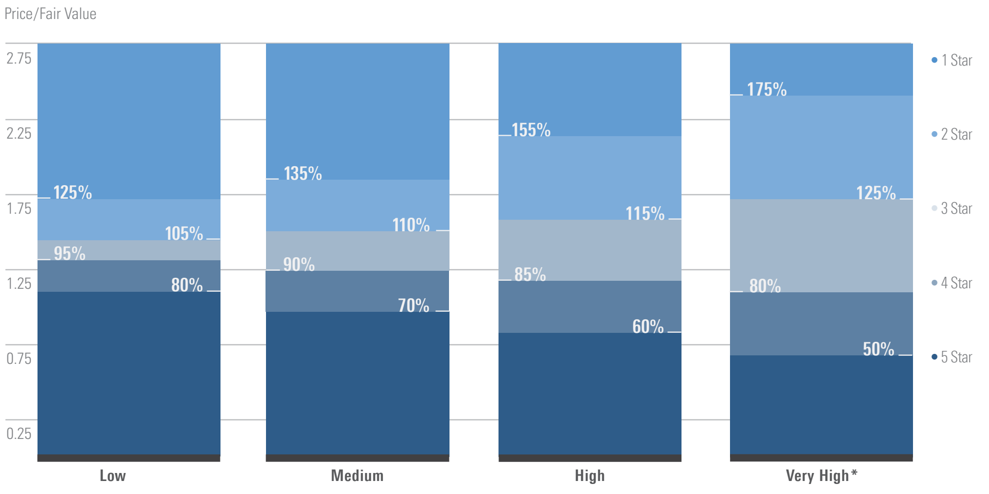
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★

We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★

Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc.performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

Highlighting Potential from Energy Reforms

Our Take: We're raising our target price for EXC $1 to $43 and maintain Outperform with no changes to estimates at this time. The increase reflects partial credit for the potential uplift in energy gross margin resulting from expected price formation reform in PJM in 2018 where the energy market could be restructured to provide more support for 'inflexible' baseload generation.

- **"Soft" Section 206 changes could come in 2018.** As previously noted, we expect the 8/23 release of DoE's long-awaited grid reliability study to be the catalyst for FERC to issue a notification this Fall to all regional transmission operators (RTOs) to study problems with energy market designs across the country, with an eye toward avoiding undesirable early retirements of baseload resources. The RTO studies could then result in proposal filings with FERC around Feb/Mar 2018 followed by orders under Section 206 from FERC to make changes sometime thereafter. Sometimes referred to as a "soft 206", this could result in implementation without a full stakeholder review (in PJM, this would otherwise require a tough 66% assent). As such, we are looking closely to PJM's recent white paper review of energy market price formation at PJM, recommends more support for "inflexible" generation (including nuclear) that is harmed by ramped (lower) marginal pricing as well as negative pricing at night that results from nighttime oversupply of power coming from tax-advantaged wind turbines.

- **Our calculations** estimate potential off-peak price uplift ~$1.20-$4.30/MWh across PJMW and NI Hub, resulting in up to $210M-$370M incremental open (unhedged) EBITDA or about $0.15-$0.25 EPS.

- **Valuation and Risks.** Raising TP $1 to $43 to reflect a 50% probability of energy price reform uplift at a 7.5x 2019E EV/EBITDA multiple. Risks include ExGen commodity exposure and nuclear operator risk; regulatory outcomes.

Investors should consider this report as only a single factor in making their investment decision.

- **Recall that on June 15th, PJM proposed energy market reforms to support "inflexible" baseload resources and address negative nodal pricing.** One proposal is to create more value for large baseload units that have little/no ramping capability by allowing them to set local marginal pricing (LMP) even when they are forced to flood the system with a chunk of MWhs upon activation (under current rules, their dispatch would immediately suppress the price that triggered their activation in the first place). Simultaneously, the value of flexibility would be enhanced through additional reforms, such as the development of a load-following product to compensate flexible resources forced to ramp up or down uneconomically. A second proposal would seek to end the prevalence of off-peak negative LMP pricing that comes from wind generation subsidized by federal wind production tax credits. These negative LMPs erode the value of revenue streams for baseload, particularly nuclear, and PJM suggests further stakeholder/regulator discussion on ways to address the problem. This may include more price-setting eligibility for inflexible resources as well as possibly some kind of floor price for marginal nodal energy.

- **Our calculations below show PJM energy price formation reform could raise off peak prices ~$1.20-$4.30/MWh across PJMW and NI Hub, although on-peak prices would likely remain mostly unchanged.** In Figures 5 and 6 below, we illustrate that allowing inflexible resources such as baseload nuclear and coal to set off-peak prices could eliminate negative night-time pricing and improve average off-peak prices in PJMW by ~$1.20-$2.70/MWh. Figures 7 and 8 show that off-peak prices in NI Hub could increase by $2.30-$4.30/MWh.

- **Our analysis below assumes that PJM will set a floor for marginal heat rates** to eliminate the negative pricing and suppressed positive pricing sometimes seen when in-merit tax-subsidized wind generation must be curtailed to allow out-of-merit baseload (particularly inflexible nuclear) to continue running, especially at night. Mechanically, we assume a system where energy prices are reset higher in the hours where implied market heat rates fall below a threshold level. We illustrate three scenarios: 4, 5 or 6 MMBtu/MWh. Our guiding assumption is that prices below the threshold are reset higher to a new reference level determined by a hypothetical 7 MMBtu/MWh heat rate.

- **We calculate a $130M - $370M improvement in EBITDA or $0.09 - $0.25 EPS uplift in 2019 coming from energy price formation reform.** The range depends on the heat rate floor level chosen under our hypothetical reform assumptions. In Figures 1, and 2 below, we demonstrate a range of potential impacts on ExGen's 2018 and 2019 EBITDA and EPS resulting from ~$1.30-$4.30/MWh uplift in off peak energy prices. The impact on 2018 ($61M-105M EBITDA and $0.04-0.07 EPS) is somewhat muted due to higher hedging percentages, while more upside can be realized in lesser-hedged 2019 ($129M-$225M and $0.09-$0.15 EPS). Note that we also assume that hedging is skewed heavier (60%) toward on-peak hours, where there's more liquidity, a factor that helps push ExGen's margins higher for off-peak improvements. Finally, in Figure 3 below, we illustrate the effect on open unhedged EBITDA (for 2019), with as much as $366M upside or $0.25 EPS.

Source: Company data, Credit Suisse estimates

- ***From our 8/27 weekly*****:** **As expected, the DOE Grid Reliability Report supports baseload coal and nuclear. Next step: FERC changes to energy market structures.** On August 23, the DOE issued its long-awaited grid reliability study. Recall that back in April, Energy Secretary Perry ordered DOE staff to conduct a study evaluating the reliability of the nation's electric grid, pertaining to his concerns regarding closures of baseload power plants, particularly coal and nuclear. He had also warned that the DOE would overrule state renewable energy policies (such as renewable mandates) on the grounds of national security if reliability was found to be threatened.

  However, the study found that persistently low natural gas prices to be the greatest driver of baseload power plant retirements, followed by flat power demand, with increased costs from environmental regulations and the additions of renewables to the grid as lesser drivers. In addition, the study concluded that renewables are not a threat to grid reliability to the surprise of many utility and developer executives and other analysts. Many utility executives had feared that the study might preempt state policies, particularly hard-won financial supports for struggling nuclear fleets if the opposite conclusion had been reached. However, the study concluded that "ultimately, the continued closure of traditional baseload power plants calls for a comprehensive strategy for long-term reliability and resilience." **Perhaps most important, the study also suggested that existing market designs may not be able to address further challenges in the future and recommended that FERC expedite its study of wholesale power market structures to improve energy price formation and create fuel-neutral markets that compensate attributes that boost grid reliability.** The DOE also encouraged the EPA "to allow coal-fired power plants to improve efficiency and reliability without triggering new regulatory approvals and associated costs" as well as target an R&D portfolio to help those plants boost efficiency and that federal agencies accelerate and cut the costs of permitting for grid infrastructure for nuclear, hydropower, and coal generation.

  - ***From our 8/20 weekly*****:** FERC support for baseload. Federal Energy Regulatory Commission (FERC) incoming commissioner Neil Chatterjee said on **FERC's podcast** that all generation facilities, especially coal and nuclear, need to be "properly compensated to recognize the value they provide to the system". We expect FERC to order RTOs to submit energy market reform proposals later this year.
  - ***From our 8/3 EXC report "ZECs in Hand; Looking for Market Reforms*****: FERC action expected next.** The DoE release could be a catalyst for FERC to issue a notification this fall (once a quorum is in place) to all regional transmission operators (RTOs) to study problems with energy market designs across the country with an eye toward avoiding undesirable early retirements of baseload resources.
  - **"Soft" Section 206 changes could come in 2018.** The RTO studies could then result in proposal filings with FERC around Feb/Mar 2018 followed by orders under Section 206 from FERC to make changes sometime thereafter. Sometimes referred to as a "soft 206", this could result in implementation without a full stakeholder review. (In PJM, this would require 66% assent, a tough hurdle.)

- **For PJM, a focus on energy markets.** EXC has previously noted that it would be premature for RTOs to focus on capacity markets and MOPR (minimum offer price rule) extensions when the need to "fix" energy markets and fair energy price formation should be a much higher priority. As such, the company is more focused on PJM's whitepaper reviews of energy market price formation at PJM that among its conclusions, recommends more support for "inflexible" generation (including nuclear) that is harmed by ramped (lower) marginal pricing as well as negative energy pricing at night that results from nighttime oversupply of power coming from tax-advantaged wind turbines. On the capacity side, EXC's look at PJM's initial proposals for a two-stage capacity auction would appear to indicate that only Quad Cities would fail to clear, likely resulting in higher capacity prices for the remaining fleet. See 6/16 Goals Achievable Even Through ZEC Appeals, for full details.

- **Valuation.** Our valuation for EXC as shown in Figure 4 increased to $43 (from $42) after accounting for the average potential EBITDA upside of ~$286M (Figure 3). We assumed a 50% probability that EXC will realize this benefit giving rise to ~$1/sh incremental valuation based on a 7.5x multiple or ~15% upside vs current share price.

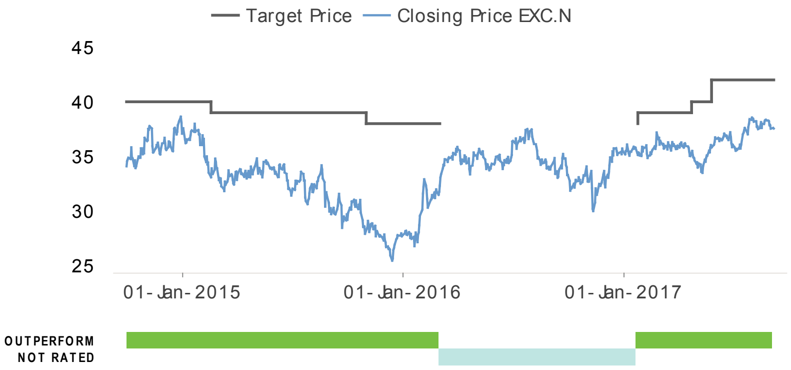
Analyst Certification

Michael Weinstein and Maheep Mandloi each certify, with respect to the companies or securities that the individual analyzes, that (1) the views expressed in this report accurately reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

3-Year Price and Rating History for Exelon Corporation (EXC.N)

EXC.N	Closing Price	Target Price	
Date	(US$)	(US$)	Rating
30-Sep-14	34.09	40.00	O
17-Feb-15	33.09	39.00	
01-Nov-15	27.92	38.00	
02-Mar-16	32.32		NR
24-Jan-17	35.13	39.00	O *
23-Apr-17	35.03	40.00	
26-May-17	35.82	42.00	

** Asterisk signifies initiation or assumption of coverage.*



The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	14%	(53% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Credit Suisse does not provide any tax advice. Any statement herein regarding any US federal tax is not intended or written to be used, and cannot be used, by any taxpayer for the purposes of avoiding any penalties.

Credit Suisse has decided not to enter into business relationships with companies that Credit Suisse has determined to be involved in the development, manufacture, or acquisition of anti-personnel mines and cluster munitions. For Credit Suisse's position on the issue, please see https://www.credit-suisse.com/media/assets/corporate/docs/about-us/responsibility/banking/policy-summaries-en.pdf .

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Exelon Corporation (EXC.N)

Method: To arrive at our $43 target price for EXC we use a sum of the parts valuation methodology valuing each of the business segments separately. To value the utilities we use a peer average 2019 P/E multiple of 17x discounted to reflect the respective risks at each of the utilities. To value the generation business we apply a 7.5x EV/EBITDA multiple under our embedded power price scenarios. The values of ZECs and capacity payments are removed from EBITDA estimates and valued separately. Our Outperform rating for EXC reflects a forecasted total return greater than the group average.

Risk: Risks to our $43 price target and Outperform rating for EXC are 1) regulatory risk--PHI ratecase risk, 2) legislative risk, 3) commodity and power and capacity price risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk, 7) weather risk, 8) environmental and climate change risk, and 9) physical infrastructure and cybersecurity risk.

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

See the Companies Mentioned section for full company names

Important disclosures regarding companies or other issuers that are the subject of this report are available on Credit Suisse's disclosure website at https://rave.credit-suisse.com/disclosures or by calling +1 (877) 291-2683.

This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Things We've Learned This Week

Our Take: As we watch Hurricane Irma approach Florida, it would appear that the Carolinas are likely to escape serious harm. Nevertheless, we recall that DUK's $25B grid modernization plan includes a 10-year, $13B Power Forward Carolinas utility investment initiative, with $4.9B of undergrounding and $3.5B of storm hardening (DUK has been making storm hardening investments in Florida for years). When this was initially proposed earlier this year (citing the impact from last year's Hurricane Matthew), we noted caution around these programs given PEG's experience in NJ with regulator pushback after Hurricane Sandy. However, we tend to think that on the margin, this Hurricane season is likely to help the company gain buy-in for such long-term plans. See our Feb 20th note "Stronger 5-Year Plan Bears Watching" and May 10th note "Carolinas on their Minds" for more detail.

- **D** presented an updated post-2020 view this week, which emphasized a growing push for programmatic investments recovered through trackers and riders, a notable change from the current 5-year plan heavily sprinkled with major project investments. For Dominion Midstream (DM), we don't see any urgency to reset the GP's IDR with at least a year before the next significant dropdown (Cove Point). In any case, our analysis continues to show a reduction in dropdown multiple could be just as effective and result in similar NPV of overall cash flows to D. See our note today "From Projects to Programs after 2020" for more detail.
- For **EXC**, our analysis shows $1-$4/MWh improvement in off-peak power is a likely result from coming energy market reforms in PJM, although the mechanics of such reforms could vary widely (e.g., would higher nodal pricing apply to all units or just targeted baseload?). We continue to expect FERC to issue a notification this Fall to all regional transmission operators (RTOs) to study problems with energy market designs across the country, with an eye toward avoiding undesirable early retirements of baseload resources. The RTO studies could then result in proposal filings with FERC around Feb/Mar 2018 followed by orders under Section 206 from FERC to make changes sometime thereafter. While some investors think this is more likely, a 2019 event, we don't see reason for skepticism at this time and in any event, a 2019 implementation would change neither our valuation nor view. See our 9/7 note "Highlighting Potential from Energy Reforms" for more detail.
- **EEI Financial Conference 2017 Meetings Signup Now Open**: Please join us in Orlando 11/5-11/7 as we host 24 management meetings and a takeaways dinner on 11/7: *WEC, NI, BKH, AVA, ED, DUK (dinner), DTE, AEP, EXC, NEE, NWE, ES, EIX, D, SRE, CMS, CNP, PNW, XEL, PPL, PEG, PCG, SO, ETR.*

Figure 1: CS Utilities Catalyst Calendar – 2017

Company	Ticker	Description	Timing	Comments
Duke Energy	DUK	Appeals Decision RE: Constitution Pipeline Water Quality Certificate	Mid-2017	Fed court: denial of water quality permit upheld
Eversource	ES	ISO-NE Midyear Analysis, expected to support ANE	Mid-2017	
ALL Regulateds		FOMC September Meeting	9/20/2017	
All Solar		USITC preliminary decision on 201 trade case against solar imports	9/22/2017	
NiSource	NI	PULJ Proposed order in Columbia of MD ratecase	9/26/2017	Expected 9/26
Centerpoint	CNP	Decision in OK PBR Proceeding	September, 2017	
CMS Energy	CMS	MPSC Commission Order on Palisades Securitization	September, 2017	From Aug to End of Sept
Eversource	ES	Northern Pass NHSEC Decision	9/30/2017	Decision postponed six months to March 2018
Southern	SO	DOE additional loan request for Vogtle Plant	September, 2017	"By End of Sept" - Oglethorpe investor call
Southern	SO	Final Decision in Kemper Proceeding	10/6/2017	Expected 10/6 (Docket No. 2017-AD-0112)
DTE Energy	DTE	Possible PSC Decision on Interim Rates in Electric ratecase	10/13/2017	Docket No. C-U-18255

Duke Energy	DUK	Lee CCGT Completion	November, 2017	
Spire	SR	STL Pipeline Milestone; FERC Final Order	November, 2017	
Eversource	ES	WMECO and NSTAR Electric Ratecase Decisions	November, 2017	decision in Nov, rate design in Dec
ALL Regulateds		FOMC December Meeting	12/13/2017	
Dominion	D	Cove Point In-Service	2H17	on-line in late 2017
Black Hills Corp	BKH	Sale of Non-Core Oil and Gas Properties Completed	2H17	Complete by YE
Northwestern Corp	NWE	Colstrip Litigation Resolution	2H17	Expected 'end of year'
Northwestern Corp	NWE	FERC/DGGS Resolution	2H17	Second half at the earliest'
Southern Company	SO	Mississippi PSC decision on Kemper Settlement	4Q17	If approved, SO expects additional cost of $100-200M
Black Hills Corp	BKH	Renewable RFP Issuance - Approval at year-end	4Q17	Issued June 23rd, up to 60 MW
Southern	SO	Sanmen (China) AP1000 Reactor - Fuel Loaded	4Q17	previously at some point in the summer
DTE Energy	DTE	NEXUS Pipeline completed	4Q17	Before year end, early approval late Aug
All Solar		Trump to decide solar import duty under 201 trade case	Nov-Dec, 2017	60 days approval period starting Nov 11
Spire	SR	Missouri PSC - Commissioner Stoll Term Expires	December, 2017	(D)
Exelon	EXC	Deadline for Decision in FRP proceeding	December, 2017	
Eversource	ES	PSNH Generation Divestiture	2017	Late-2017
Eversource	ES	Aquarion transaction expected close date	2017	Expected to close by 12/31
Eversource	ES	Massachusetts Solar Filing Facility Completion	2017	YE 2017
Black Hills Corp	BKH	Colorado IRP Approval	2017	Expected by YE
Black Hills Corp	BKH	IRP for South Dakota and Wyoming	2017	
DTE Energy	DTE	IRP Filing in Michigan	2017	"later this year", 4q16 call
Black Hills Corp	BKH	Cost of Service Gas Filing	2018	Previously 1H17, 2Q/3Q17
Dominion	D	Millstone study order results	2018	Millstone study order on 7/25, results due Feb. 2018

Source: Company data, Credit Suisse estimates

Yield spreads are widening. Utilities generally performed in-line with the S&P 500 this week. Interestingly, the spread between dividend yields and 10-year bond yields has widened 10 bps since late-August to 131 bps as the Treasury yield has plummeted almost 2.0%. This might suggest some additional defensive yield support for utility sector P/Es. As illustrated below, there is now ~131 bps of “slack” spread between 10-year bond yields and the utility dividend yield (historically this spread is closer to zero). There is usually a high degree of correlation between the 10-year yield and the premium/discount P/E that utilities trade at vs. the S&P 500. This spread acts as a sort of shock absorber, reducing the “control” rates should have over utility valuation if rates begin to rise sustainably.

Figure 2: Spread Between Utility Dividend Yield and 10-Year Treasury Bond Yield

Source: the BLOOMBERG PROFESSIONAL™ service

As the Fed gets closer to finalizing its tightening cycle over the next couple of years, longer-duration bond yields should begin to rise as the yield curve steepens. Once over ~4% yield for the 10-Year, we would expect a return to a more historically "normal" relationship between utility equities and bonds (i.e., no spread between the 10-year and dividend yields and utilities trading at about 70%-80% of the S&P 500 forward P/E).

Figure 3: 10-Year Treasury Yield vs. Utilities / SPX Relative Performance

- **Newly released audit report bears more woes for VC Summer owners.** An audit report prepared in February 2016, which owners SCG and Santee Cooper previously claimed they did not have access to, was released to South Carolina Governor McMaster on Labor Day. The report warned that the development of the two reactors was not likely to be successful, highlighting multiple problems, including lack of a detailed construction schedule, the reactor design being "often not constructible", and contractor Westinghouse not being "commercially motivated" to finish the project**.** The report came ~1.5 years before the project was scrapped in late July 2017, and three months before regulators were asked for an $800M increase for the budget.
  - ***From our 8/21 weekly*****: VC Summer unlikely to come back despite petition withdrawal.** On August 15th, SCG decided to withdraw its abandonment petition for VC Summer to give the legislative committees and Governor McMaster time to assess the project. We would characterize this largely as a procedural move made necessary by the lack of any way to temporarily suspend abandonment proceedings short of outright withdrawal. On a call, management emphasized that they have not changed their own assessment that abandonment is in the best interests of all stakeholders, and we are very skeptical of the Governor's reported overtures to SO, DUK, and D to partner with SCG on completing either one or both units. All three companies carry significant parent-level debt on their balance sheets, although Dominion is set to begin a significant debt-reduction program once its Cove Point LNG terminal opens later this year. Dominion had been previously considering an expansion at the North Anna nuclear plant, although that plan has been tabled for now. We doubt that SO would be interested in taking on even more construction risk than they already carry. Recall that In Jan 2014, DUK previously rejected the opportunity to buy a 5%-10% stake from Santee Cooper. Furthermore, DUK is currently engaged in a ratecase for Duke Energy Carolinas that seeks recoupment of ~$370M development costs for the proposed Lee nuclear facility, also an AP1000 design ($531M total allocated 70% NC/30% to SC). In any event, SC Senate and House special committees have been set up to review the abandonment of the project. While an option to restart is not ruled out, there is a significant hurdle to get there as SCG management highlighted and emphasized a lengthy procedure required with at least a year with additional costs under a completely new construction contract.
- **Third time's the charm, now can I get an Oncor?** Sempra Energy's (SRE) $9.45B cash bid to acquire Energy Future Holdings (EFH) and its 80% ownership interest in Dallas-area utility Oncor has taken the first step forward, receiving approval from bankruptcy court. The $9.45B offer will be financed with $3B of debt issued by a new holding company to ringfence Oncor from EFH's bankruptcy, with the remaining $6.45B funded 60% by SRE and 40% from currently undisclosed third party investors. This structure would give SRE an initial 48% ownership and the third party investors a 32% ownership, with SRE ultimately purchasing the 32% ownership. The next step is approval by the Public Utility Commission of Texas (PUCT), with Oncor and SRE expected to file a joint application in October.

  Recall that the previous two offers made by Hunt Consolidated and NextEra Energy (NEE) fell through due to PUCT concerns regarding commitments related to infrastructure improvements and customer benefits, retention of existing strict ringfencing provisions, and independence of the utility over dividend payments, investment decision, and board members. In contrast, SRE indicated a commitment to meeting these conditions that had led to the demise of the previous transactions.
- **Showdown on Capitol Hill, clash to reform PURPA.** On Sept. 6th, hearings were held in Congress over the need to reform or repeal the Public Utilities Regulatory

Policies Act (PURPA). Supporters argue that PURPA is essential to expanding US renewable energy and that PURPA has yet to fully achieve its objectives.

Opponents argue that PURPA's requirements are leading to higher costs as QFs displace energy from higher efficiency power plants and impede development of non-QF renewable energy. Complaints include that QF developers are taking advantage of the "1-mile rule" (minimum distance between plants) and are dividing larger projects into batches. Another complaint is that the cost structure is based on outdated (too high) avoided cost rates, which is the cost the utility would have had to pay to build generation itself or to purchase the power from another source.

Proposed reforms include requiring QFs to negotiate with utilities on power purchase contracts or bid into organized wholesale markets like other suppliers, lowering the 80MW qualifying threshold for QFs, and modifying must-purchase contracts to consider utilities' needs and resources.

  - Background: PURPA is a law enacted in 1978 that requires utilities to buy power at avoided cost rates from small co-generation facilities running on renewable, biomass, waste, or geothermal resources, with capacities of <80MW. PURPA was amended by congress in 2015 allowing utilities to terminate PURPA contracts if a qualifying facility (QF) is deemed to have non-discriminatory access to relevant whole markets. FERC established that a QF with 20MW or less does not have non-discriminatory access. FERC regulates QFs, while state regulators decide avoided cost rate.
  - Five states have changed PURPA rules so far - North Carolina reduced PPA terms to 10 years and also introduces a solar bidding process over the next three years, Montana reduced PURPA duration to 5 years (from 25) and PPAs to $40/MWh (from $66/MWh), Idaho reduced contract duration to 2 years (from 20), Utah reduced it to 15 years (from 20), and Oregon lowered opportunity cost for >3 MW solar projects but maintained the 20 year contract duration. Michigan wants to lower avoided cost payments from 7-8c/kWh to ~4.5c/kWh.

- **You're going to need a permit for that – Millennium Pipeline permits denied in NY.** The NY State Department of Environmental Conservation (DEC) denied necessary water permits for the proposed Millennium Pipeline, intended to supply the CPV Valley power plant. DEC Deputy Commissioner stated that FERC's environmental review of the project was "inadequate and deficient" citing the recent Sabal Trail ruling. In addition, the Commissioner stated that under state law, DEC can deny permits for reasons that include "newly discovered material information or a material change in environmental conditions, relevant technology or applicable law or regulations" with an emphasis on "applicable law or regulations".
  - ***From our 8/27 weekly*: DC Circuit rejects FERC approval of Southeast Pipelines Project.** On August 22nd, the Court of Appeals for the DC Circuit ruled that when considering approval of the Southeast Market Pipelines Project last year, FERC should have either "given a quantitative estimate of the downstream greenhouse gas (GHG) emissions that will result from burning the natural gas" transported by the pipelines or offered a satisfactory explanation for why it could not do so. The Southeast Market Pipelines designed to meet growing demand from gas-fired generation in Florida spans a combined 685 miles across Florida, Georgia, and Alabama consisting of three pipelines, the largest of which is the Sabal Trail Pipeline. While the decision should not immediately impact operation of the pipelines, it leads to wide-ranging implications for infrastructure, directing FERC to examine climate impacts of the gas usage particularly in regards to GHG emissions. Furthermore, it is expected that this will lead FERC to require its environmental impact

statement (EIS) contractors to run quantitative analysis in the future, leading to more transparency on emissions.

- **Duke Energy Kentucky (DEK) files for ratecase.** DEK filed for a $49M rate increase with the Kentucky Public Service Commission (KYPSC), representing a 10.3% ROE, 48.9% equity ratio on an average rate base of $705.1M using a test year ending March 31, 2019. The KYPSC is expected to issue a final decision on the case April 2018.
- **Piedmont Natural Gas (PNG) files gas ratecase settlement.** PNG, a wholly owned subsidiary of Duke Energy (DUK) and the South Carolina Office of Regulatory Staff (ORS) filed a settlement with the Public Service Commission (PSC) of South Carolina. The settlement specifies a $5.5M rate increase at a 10.2% ROE, 53% equity ratio, and $304.1M ratebase using a test year ending March 31, 2017. PNG initially filed for a $17.2M base rate increase at a 12.6% ROE based on a 53% equity ratio and a $304.8M ratebase. The PSC is required to issue a final decision by Oct 15th.
- **Nevada back at it with net metering.** The Public Utilities Commission (PUC) of Nevada adopted an order signed by Governor Sandoval in June restoring net metering credits at 95% of retail electricity rates for rooftop solar customers, reversing its 2015 decision to reduce net metering and implement fixed fees. Under new rules, energy exported by customers will receive credit at 95% for the first 80MW, declining by 7% for every additional 80MW exported until reaching the minimum rate of 75%. The PUC also rejected NV Energy's request to raise the fixed service charge for all electricity customers to compensate for higher NEM credits for solar customers, and noted that rate design issues would be discussed in future rate cases. SolarCity (now Tesla), Sunrun, and Vivint, all of which previously ended Nevada operations in 2015, have announced that they will resume operations following this decision.
- **Tweaking Mark Twain.** Ameren (AEE) has finalized a new route for its planned 345-kV Mark Twain transmission line. After receiving resistance to an earlier proposed route in 2015, the proposed route will now pass through almost entirely existing rights of way. The ~100 mile line will run from the Maywood substation to the new Zachary substation up to northern Missouri. AEE expects to invest $250M in the project, including construction of the new Zachary substation, reconstruction of 59 miles of transmission line owned by Northeast Missouri Electric Power Cooperative, and upgrades to an existing 161-kV line. AEE plans to apply for a construction permit with the Missouri Public Service Commission (PSC) in mid-September and hopes to receive approval by 1Q18 to begin the construction process so the project can stay on schedule to be placed in-service in December 2019.

  Separately, NEE is seeking to acquire the remaining 20% minority interest held by Texas Transmission Holdings Corp.
- **Northern Pass comes back with another pass.** The US Forest Service is recommending a special issue permit to be given to Eversource's (ES) Northern Pass, permitting the transmission project to bury 11 miles of power line within the White Mountain National Forest. The permit is one of three key approvals needed before construction can begin, with the others being from the US Department of Energy and the New Hampshire Site Evaluation Committee (NHSEC). This decision comes a week after the NHSEC voted to postpone a decision for six months. Following the decision by the US Forest Service, ES continues to remain confident in meeting a 2020 in-service date, anticipating construction to begin in 2Q18.
  - **Northern Pass decision delay is not a surprise**. On 8/31, the New Hampshire Site Evaluation Committee (NHSEC) voted to postpone their final decision on Eversource Energy's (ES) Northern Pass Transmission (NPT) project for another six months to the end of March 2018. This is considered the most critical gating approval, to be followed by a Presidential permit to construct and operate the line across the US/Canada border. Previously, the decision was due at the end of

September; although we had highlighted a probability of delay in our Aug 11 weekly (see below) due to the need for "weeks" of intervenor cross examination after ES witnesses finish (they wrapped on Aug 30). ES stated it was "disappointed considering the review process was already extended by nine months for what was originally a 12-month process", but was also encouraged by the committee's "willingness to pursue options for concluding the review in advance of the new deadline." Also pending are the issuance of federal permits, including the Presidential permit, a Special Use permit from the U.S. Forest Service, and the Section 404 Permit from the U.S. Army Corps of Engineers. All major contractor and equipment contracts are fully executed and ES remains confident in its ability to achieve a 2020 in-service date (recently extended a year), anticipating construction to begin in 2Q18.

- ***From our 8/11 weekly:* Still targeting yearend approvals but New Hampshire unlikely to grant siting approvals by Sept 30.** On Aug 10, ES received the Final Environmental Impact Statement (FEIS) from the US Department of Energy for NPT. With 11 of 13 ES witness panels now completed, the remaining ES witnesses are expected to testify through mid-Sept, to be followed by rounds of intervenor testimony and cross examination. That could take weeks depending on how tolerant the NH Siting and Evaluation Committee (NHSEC) is of "friendly cross examination" between the various intervenor groups opposed to the project (we hear that the Chair of the committee is inclined to limit such cross). Once finished, we expect another 2-4 weeks of briefs (no replies though) followed by deliberations and finally, a vote. A formal written order would then take another 30-60 days. In addition to the NHSEC process, the NH Public Utility Commission is also reviewing approval for leases of rights of way from Public Service Co of New Hampshire (an ES subsidiary), with hearings in late November. See our 7/28 report "Holding the (Transmission) Line Through 2020".

Recent Excerpts:

- **D: From Projects to Programs after 2020. Laying out a stable foundation beyond 2020:** With the current 5-year capital plan through 2020 focused on discrete large project investments, the company intends to transition to a more programmatic approach with long-term investment programs under various forms of tracked/rider recovery post-2020. This is notably similar to DUK's approach, as we highlighted in our 6/26 report "DUK: Story to Improve Further with Grid Riders". D already has tracked non-ratecase recovery mechanisms for much of its utility investment, including electric transmission, generation, gas utility infrastructure, and is working with the VA legislature to gain support for tracked transmission undergrounding programs as well. On undergrounding, the VA Senate has been very supportive despite some hesitancy from state regulators. As the next step, we expect D to seek programmatic recovery at DTI for its pipeline programs with a 2018 federal ratecase filing, likely followed with similar asks for South Carolina and Utah pipeline investment.
    - **Reiterated $8B cash from Dominion Midstream (DM)** including dropdown proceeds through 2020. Still plan to cut $3B-$4B parent debt, likely around 2019/20 with an objective to reduce the proportion of total debt at the parent to 30%-40% from the current ~50%. D will also pursue opportunistic stock buybacks from 2018-2020 (not a regular program), and continue to raise DM's distribution at 22% annual rate through 2020 (likely less after that). D also announced an increase to 10% annual dividend growth through 2020.
    - **We don't see any urgency to reset the IDR at DM.** With at least a year before the next significant dropdown (Cove Point), D can wait for LP

pricing/liquidity to improve. In any case, our analysis continues to show a reduction in dropdown multiple could be just as effective and result in similar NPV of overall cash flows to D.

- **EXC: Highlighting Potential from Energy Reforms.** We're raising our target price for EXC $1 to $43 and maintain Outperform with no changes to estimates at this time. The increase reflects partial credit for the potential uplift in energy gross margin resulting from expected price formation reform in PJM in 2018 where the energy market could be restructured to provide more support for 'inflexible' baseload generation. Our calculations estimate potential off-peak price uplift ~$1.20-$4.30/MWh across PJMW and NI Hub, resulting in up to $210M-$370M incremental open (unhedged) EBITDA or about $0.15-$0.25 EPS.
- **Last Week's Things We've Learned This Week (9/1): Our Take:** The sector took a late-summer breather with 130 bps underperformance vs the broader market this past week. The most significant news this week was SO's unsurprising recommendation to move forward with the Vogtle new nuclear project. Notable in the report was the project's positive NPV vs a new gas plant based on updated forward gas price (and other) assumptions. Also, the option to cancel Unit 4 was dismissed given limited savings that would reduce this NPV compared with proceeding on both units.
