Disclosure Appendix

Exelon Corporation - EXC

We have managed or co-managed a public offering of securities for Exelon Corporation within the past 12 months.

Exelon Corporation is an investment banking client of ours.

We have received compensation for investment banking services from Exelon Corporation during the past 12 months.

We expect to receive or intend to seek compensation for investment banking services from Exelon Corporation within the next three months.

During the past 12 months, Exelon Corporation has been a client of the firm or its affiliates for non-securities related services.

As of the date of this report, we make a market in Exelon Corporation.

For the three-year history represented in this chart, this stock has been rated Sector Weight.

Dominion Resources, Inc. - D

We expect to receive or intend to seek compensation for investment banking services from Dominion Resources, Inc. within the next three months.

During the past 12 months, Dominion Resources, Inc. has been a client of the firm or its affiliates for non-securities related services.

As of the date of this report, we make a market in Dominion Resources, Inc..

FirstEnergy Corp. - FE

We have managed or co-managed a public offering of securities for FirstEnergy Corp. within the past 12 months.

FirstEnergy Corp. is an investment banking client of ours.

We have received compensation for investment banking services from FirstEnergy Corp. during the past 12 months.

We expect to receive or intend to seek compensation for investment banking services from FirstEnergy Corp. within the next three months.

During the past 12 months, FirstEnergy Corp. has been a client of the firm or its affiliates for non-securities related services.

As of the date of this report, we make a market in FirstEnergy Corp..

Reg A/C Certification

Rating System

Overweight - We expect the stock to outperform the analyst's coverage sector over the coming 6-12 months.

Sector Weight - We expect the stock to perform in line with the analyst's coverage sector over the coming 6-12 months.

Underweight - We expect the stock to underperform the analyst's coverage sector over the coming 6-12 months.

Note: KeyBanc Capital Markets changed its rating system after market close on February 27, 2015. The previous ratings were Buy, Hold and Underweight. Additionally, Pacific Crest Securities changed its rating system to match KeyBanc Capital Markets' rating system after market close on April 10, 2015, in conjunction with the merger of the broker dealers. The previous ratings were Outperform, Sector Perform and Underperform.

Other Disclosures

KeyBanc Capital Markets is a trade name under which corporate and investment banking products and services of KeyCorp and its subsidiaries, KeyBanc Capital Markets Inc., Member NYSE/FINRA/SIPC ("KBCMI"), and KeyBank National Association ("KeyBank N.A."), are marketed. Pacific Crest Securities is a division of KeyBanc Capital Markets Inc.

KeyBanc Capital Markets Inc. ("KBCMI") does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report has been prepared by KBCMI. The material contained herein is based on data from sources considered to be reliable; however, KBCMI does not guarantee or warrant the accuracy or completeness of the information. It is published for informational purposes only and should not be used as the primary basis of investment decisions. Neither the information nor any opinion expressed constitutes an offer, or the solicitation of an offer, to buy or sell any security. The opinions and estimates expressed reflect the current judgment of KBCMI and are subject to change without notice. This report may contain forward-looking statements, which involve risk and uncertainty. Actual results may differ significantly from the forward-looking statements. This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the specific needs of any person or entity.

No portion of an analyst's compensation is based on a specific banking transaction; however, part of his/her compensation may be based upon overall firm revenue and profitability, of which investment banking is a component. Individuals associated with KBCMI (other than the research analyst(s) listed on page 1 of this research report) may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(A), financial interest, if any, by any research analysts listed on page 1 of this report will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosure Appendix. KBCMI itself may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(F), if KBCMI, or its affiliates, beneficially own 1% or more of any class of common equity securities in the subject company(ies) in this research report, it will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosures Appendix. This communication is intended solely for use by KBCMI clients. The recipient agrees not to forward or copy the information to any other person without the express written consent of KBCMI.

Exelon

Analysis of a Potential 20% Border Tax on Nuclear Fuel Costs

Maintain Rating: NEUTRAL | PO: 37.00 USD | Price: 35.10 USD

Bank of America Merrill Lynch

Equity | 13 February 2017

Key takeaways

- Our analysis of a potential 20% border tax on Exelon's nuclear fuel expense suggests an ($0.08) per share terminal headwind.
- Nuclear fuel expenses would rise by roughly 10% based on % of US foreign/domestic sourcing of nuclear fuel fabrication.
- Potential border tax on ExGen nuclear fuel expense likely overstated by the street; maintain Neutral on EXC shares.

Border tax would be ($0.08) EPS headwind for ExGen

Following our EXC 4Q16 note (which qualitatively focused on border taxes), and our New England industry note (which quantified wholesale power price impacts from border taxes), this note looks quantitatively at a potential border tax impact on ExGen's nuclear fuel cost.

Our analysis determines that if the Trump administration were to implement a border tax of 20%, then ExGen would be subjected to an ($0.08) EPS headwind. We compiled Table 1 to arrive at a rough cost of nuclear fuel of $2,300 per kg U in UO2 assembly. Furthermore, we provide a supplier breakdown of domestic versus foreign sourcing in Table 2 for which we can allocate a 20% border tax.

Our analysis suggests that nuclear fuel would increase by slightly over 10% should a border tax be implemented. We constrained our analysis for current domestic production, particularly for enrichment as there is currently only one operating enrichment facility in the United States. In 2009 an attempt was made to construct a second enrichment facility. This failed to receive a DOE loan guarantee which led the plant developer, United States Enrichment Corporation, to cancel the project. Under a Trump administration there could be incentives to construct a new plant further reducing the cost impact.

Our analysis assumes 100% impact on each year, but due to the amortization of nuclear fuel over the life time (4.5 - 6 years) of the fuel the full EPS impact would not be seen until the early 2020's. The cash flow impact on the other hand would be seen immediately and hence lower the amount of free cash flow.

Border tax marginally less negative than believed

Given the relative minor impact from a potential border tax and based on our discussions with investors, we believe some Exelon observers overestimated the potential impact by conservatively assuming 100% of the nuclear fuel expense is from foreign sources. (We believe this partly explains EXC's underperformance on the day of the 4Q16 call.) We believe our analysis demonstrates a marginal positive to Street expectations for impacts from a border tax. Also, as we noted in our EXC 4Q16 note, the positive aspects of distribution equipment procurement from overseas remains a potential positive datapoint for rate base growth projections, both for Exelon and the industry as a whole. We continue to maintain our Neutral rating on EXC shares.

Nuclear Fuel Border Tax Analysis

Without the border tax, the cost to manufacture 1 kg of Uranium in the form of a UO2 fuel assembly is roughly $2,284 and our estimate is provided in Table 1 below.

Table 1: Nuclear Fuel Fabrication Costs

	Process	Units / kg U as UO2	Price/ Unit	Price / kg U as UO2
a	Uranium (kg U3O8):	8.9	94.6	842
b	Conversion (kg U):	7.5	16	120
c	Enrichment (SWU):	7.3	140	1,022
d	Fuel fabrication (per kg):	1	300	300
e = a + b + c + d	Total, approx:			2,284

Source: BofA Merrill Lynch Global Research, EIA, and World Nuclear Association

Using EIA data for all nuclear material processes (except fabrication which we assumed was 100% domestic), the contribution by US sourced materials / process for 2015 are as follows.

Table 2: Foreign Sourcing of Nuclear Fuel

	Process	
f	% of Uranium Foreign Sourced	93%
g	% of Conversion Foreign Sourced	83%
h	% of Enrichment Foreign Sourced	38%
i	% of Fabrication Foreign Sourced	0%
j = (a*f + b*g + c*h + d*i)*20%	Incremental cost from 20% border tax ($ / kg U as UO2)	254
k = j + e	Total cost including 20% border tax ($ / kg U as UO2)	2,538

Source: BofA Merrill Lynch Global Research, EIA

Taking our estimated electric generation by nuclear fueled plants (ex-Salem), we calculate the thermal output needed by those plants for which we use 34% based on typical thermodynamic steam cycles (Source: EIA). Using the thermal generation of those plants we divided it by the burnup of a typical LWR, which is 45,000 MWd / metric ton Heavy Metal or in this case ton of Uranium (Source: World Nuclear Association). The net result is an estimated cost roughly in line with guidance.

Our numbers are likely high in the back years as uranium prices have fallen and contracts for those years are priced lower. Using the roughly 430 metric tons of Uranium in conjunction with the incremental cost (line j), the net tax effected EPS impact to Exelon is roughly ($0.08).

Table 3: Estimated EPS Impact of 20% Border Tax

		2017	2018	2019
l	GWh - electric BofAML estimate	155,953	157,918	157,054
m	Thermal Efficiency	34%	34%	34%
n = l/m	GWh - thermal	458,685	464,465	461,924
p	Typical LWR Burnup (MWd/ metric ton HM)	45,000	45,000	45,000
q = n*1000 / (p *24)	Metric Tons of HM	425	430	428
r = q /1000	kg of HM	424,709	430,060	427,707
s = e* r	Cost ($M)	970	982	977
t	Company Guidance ($M)	950	900	925
u = l / s	$/MWh	$6.22	$6.22	$6.22
v = r * j	Incremental Border tax ($M)	108	109	109
w = 30% * v	Income Tax Expense (Tax rate @ 30%)	32	33	33
x =-(v - w)	Earnings Impact ($M)	(76)	(77)	(76)
y	Shares (M)	948	967	970
z=x/y	EPS Impact	($0.08)	($0.08)	($0.08)

Source: BofA Merrill Lynch Global Research estimates, Company Report, EIA, World Nuclear Association

Price objective basis & risk

Exelon (EXC)

Our $37/share price objective for EXC shares is derived from our sum of the parts valuation model, where we assign approximately $9 of value to ExGen and approximately $28 of value to the regulated utility. We value integrated electric utilities, including Exelon, using a sum of the parts valuation model based on 2019E earnings and EBITDA. For Exelon specifically we use a target 6.8x EV/EBITDA multiple to value the deregulated generation segment, in line with peers. We apply our discounted price target 14.5x P/E multiple with a 0.5x premium for favorable rate case outcomes (15.0x total) to value the regulated side of the business based on our 2019 EPS estimates.

Downside (upside) risks to our price objective are: 1) increasing (decreasing) of forward power prices driven by rising natural gas prices, heat rates, or Northeast and Midwest gas basis to Henry Hub, 2) regulatory outcomes as well as changes in nuclear regulation, 3) deterioration (improvements) in operating efficiency beyond our base scenario.

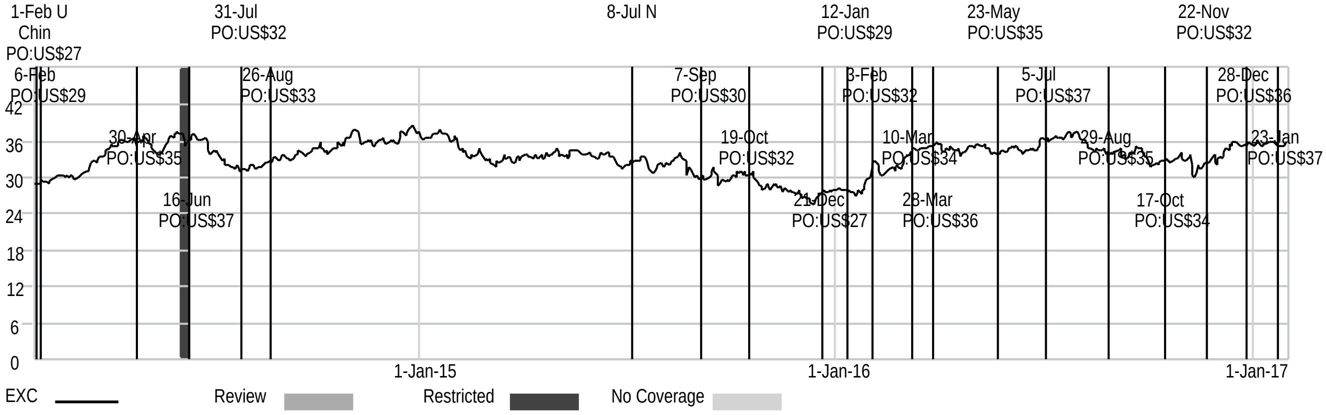
EXC Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of January 31, 2017 or such later date as indicated.

Equity Investment Rating Distribution: Utilities Group (as of 31 Dec 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	62	49.60%	Buy	42	67.74%
Hold	31	24.80%	Hold	24	77.42%
Sell	32	25.60%	Sell	16	50.00%

Equity Investment Rating Distribution: Global Group (as of 31 Dec 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1590	50.64%	Buy	989	62.20%
Hold	702	22.36%	Hold	438	62.39%
Sell	848	27.01%	Sell	406	47.88%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

USA | Energy | Electric Utilities

February 17, 2017

Jefferies

Exelon (EXC)

Don't ZEC Out

BUY

Price target $39.50
Price $35.42^

Key Takeaway

While some investors may be concerned about the impact form tax reform or the recently filed ZEC challenges, we view the recent under-performance as a buying opportunity. We believe that the ZECs will not be overturned and that tax reform is still in the early stages providing management with amble time to navigate any negative impact. With the stock trading at a 10% discount, we believe EXC is the safest way to play power.

We believe the challenges to the NY and IL ZECs will be denied providing EXC with approximately $0.30 of "regulated-like" earnings. Comments by former FERC Commissioner Bay seem to support state's rights regarding nuclear subsidies. Additionally with the ability of the current administration to appoint three FERC commissioners, we would expect a FERC that is in line with President Trump's support of blue-collar jobs.

Taxes are still in the early innings and we don't expect any significant impact. Obviously details matter, which the current proposals are lacking. Given the capital intensity of the business and job creation (all of it domestic), we believe the tax proposals will have little impact to Exelon. Jefferies believes any changes in tax law will be timed for the 2018 mid-term elections given companies ample time to solve ways to mitigate any negative impact such as issuing hybrids.

We see the potential for UP&O earnings to hit the high-end of the company's guidance range. Jefferies 2018-19 UP&O estimates are at the mid-point of guidance, and should the company achieve better than expected rate outcomes or manage costs, investors could see an additional $0.10-$0.12 of earnings.

In a sector with few catalysts, we believe the sale of the company's non-core assets will help narrow the valuation gap. While it has taken longer than management's expectations, we believe the company will divest of its Mystic CCGT and Renewable JV in 1H17 providing additional capital that could be used for incremental debt paydown.

Valuation/Risks

Our $39.50 price target is based on P/E analysis. Taking our 2019 EPS estimate of $2.80 in conjunction with a P/E group average multiple of 14.1x results in a price target of $39.50. Based on yesterday's closing price of $35.42, this would result in a 12-month price appreciation potential of 11.5% and total return potential of 15.2% including the current yield of 3.7%. **Risks** include exposure to change in the commodity prices and regulatory issues associated with the company's regulated subsidiaries.

EXC

Company Update

February 17, 2017

Exelon Corporation

Buy: $39.50 Price Target

Scenarios

Target Investment Thesis

- Exelon should trade at a group average P/E multiple.
- Expected growth in regulated earnings and accretion from the Pepco acquisition.
- Company moves to a more regulated P/E valuation since the merger with Pepco.
- 2019 EPS $2.80; Target Multiple: 14.1x. Target Price $39.50.

Upside Scenario

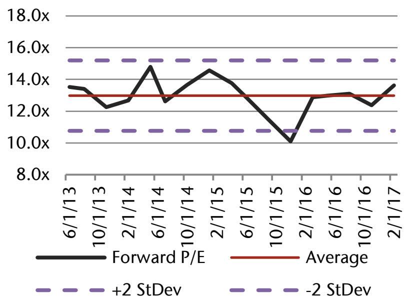
- Exelon Generation earnings increase due to improvement in gas and power prices.
- Power plant values increase due to growing short supply.
- Regulated business earns at or above its allowed ROE.
- Carbon regulation increases nuclear margins
- 2019 EPS $3.00; target multiple: 14.1x. Target Price $42.50

Downside Scenario

- Exelon EBITDA decreases due to declining gas and power prices.
- NY and IL nuclear ZEC programs are found to be in violation of power rules.
- Reinvestment opportunities become more limited.
- Regulated utilities under-earn their allowed ROE.
- 2019 EPS: $2.50; Target Multiple: 14.1x Target Price: $35.00.

Long Term Analysis

1 Year Forward P/E



Source: Facstet, Jefferies estimates

Long Term Financial Model Drivers

LT EBITDA CAGR	**(8.5%)**
LT EPS Growth	**4.6%**
FFO/Debt	**31%**
Equity Ratio	**52%**

Other Considerations

While we assume no benefit from ZECs or any type of carbon regulation the benefit to Exelon's 19,000 MW of nuclear plants is significant.

Peer Group

Group P/Es

Recommendation / Price Target

Ticker	Rec.	PT
EXC	**Buy**	**$39.50**
PEG	Hold	$43.50
ETR	Hold	$772
ED	Buy	$82.50
PPL	Hold	$36.50
FE	Hold	$34.50

Catalysts

- Legal challenges to Illinois and New York's ZECs.
- PJM Capacity Auction.
- Rate increases at PHI utilities.

Company Description

Exelon, incorporated in Pennsylvania in February 1999, is a utility services holding company engaged, through its principal subsidiary Generation, in the energy generation business, and through its principal subsidiaries Com Ed, PECO, DPL, ACE, Pepco, and BGE, in the energy delivery businesses discussed below. Exelon is headquartered in Chicago and trades on the NYSE under the ticker symbol EXC.

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation.

We believe the challenges to the NY and IL ZEC will be denied providing EXC with approximately $0.30 of "regulated-like" earnings. Comments by former FERC Commissioner Bay seem to support state's rights regarding nuclear subsidies. It is understandable that Bay's comments no longer hold the weight since he has resigned form FERC, but we believe it does provide some insight into FERC's thinking on ZECs.

> *The Supreme Court has now made clear that states are permitted to enact a wide range of policy choices that can affect the wholesale market.*
>
> *In our constitutional order, states are rightly celebrated for being laboratories for experimentation. Among other things, those laboratories may incentivize the development of needed energy infrastructure, the deployment of innovative technologies, or the establishment of Renewable Portfolio Standards.*
>
> *States, if they wish, may act as a market participant to benefit their citizens, even if they favor their own at the expense of others and market efficiency.*

While current FERC Chairman Cheryl LaFleur announced that FERC will host a staff-led technical conference on the impacts of state subsidies, we continue to believe these ZECs will survive challenge. FERC currently has three vacancies and given the nuclear plant closures (and loss of jobs) that would happen without a ZEC, we believe any appointees the Trump administration makes will be supportive of these subsidies.

The Electric Power Supply Association (EPSA) had previously filed a challenge in the New York courts related to the ZEC and on Wednesday filed a challenge related to the Illinois ZEC. Some of the key points EPSA makes are:

- While RECs (renewable energy credits) are permitted, a ZEC is very different and should be overturned by the court. RECs are created by all qualified renewable generators, without regard to economic need. A ZEC is only available to qualified nuclear operators and the price of a ZEC is set by the state.

- A ZEC is expressly tied to the price of electricity in the FERC-regulated wholesale markets. EPSA believes the price of a ZEC is currently a 70% premium versus current forwards. With currently power prices in the range of $18-$25 MWh Clinton and Quad Cities would receive a $16.50/MWh subsidy providing the plants with a total of $34.50-$41.50 MWh

- EPSA believes that the Illinois ZEC, which is currently forecasted to provide Exelon with $235 million per year over ten years will hold Illinois ratepayers captive and require them to prop up "two uneconomic nuclear power plants."

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Chart 1: EPSA believes ZECs should not be viewed at a REC

	ZEC	REC
Eligibility	Only for specific nuclear plants	All qualified renewable generators are eligible
Price	Price is fixed by the state and is directly related to wholesale prices	Price is determined by supply and demand
Inclusive	Excludes all other zero carbon resources	

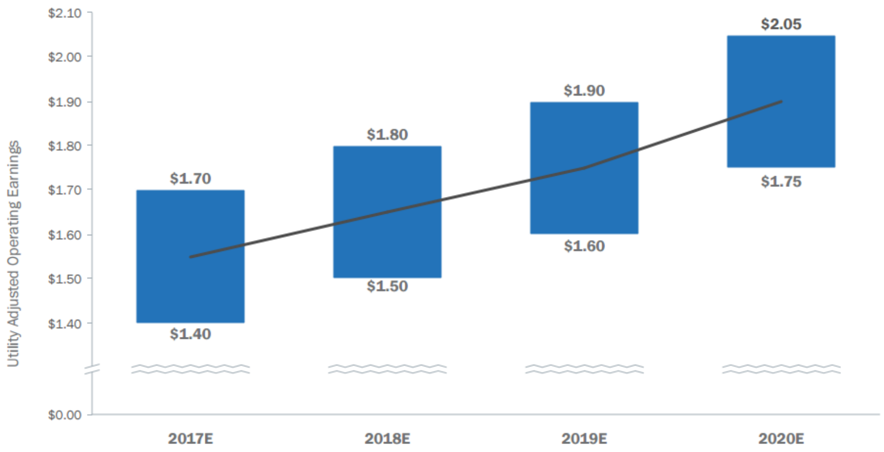
Source: Jefferies estimates

President Trump has also made comments supporting nuclear generation. Bloomberg news recently reported in that Trump advisers were looking for ways to help keep nuclear reactors operating as part of the nation's infrastructure. We are unsure if Trump would seek to do this through regulatory repeal or through a subsidy, although we think a subsidy or tax break is more likely. Trump's advisors are also reportedly considering renewing plans to store radioactive waste at Yucca Mountain in Nevada. In 1982, Congress passed the Nuclear Waste Policy Act, a legally binding pledge to dispose of radioactive material, and in 1987 Congress chose Yucca as the nation's storage site. In 2008, the federal government filed a construction license application for a repository at Yucca, but the Obama administration cut off funding for Yucca in 2010.

Taxes are still in the early innings and we don't expect any significant impact. Obviously details matter, which the current proposals are lacking such as will the non-deductibility of interest expense apply to new or existing debt. Given the capital intensity of the business and job creation (all of it domestic), we believe the tax proposals will have little impact to the utility sector in general. Jefferies believes any changes in tax law will be timed for the 2018 mid-term elections given companies amble time to mitigate any negative impact that tax reform may cause.

We see the potential for UP&O earnings to hit the high-end of the company's guidance range. Jefferies 2018-19 UP&O estimates are at the mid-point of guidance and should the company achieve better than expected rate outcomes or manage costs investors could see an additional $0.10-$0.12 of earnings. Jefferies UP&O forecast is 2017 $1.55, 2018 $1.69, and 2019 $1.78.

Chart 2: UP&O Expected to Grow 6-8%



Source: Company Data

In a sector with few catalysts, we believe the sale of the company's non-core assets will help narrow the valuation gap. While it has taken longer than management's expectations, we believe the company will divest of its Mystic CCGT and Renewable JV in 1H17 providing additional capital that could be used for incremental debt paydown. We don't expect a significant amount of capital from the renewable portfolio given the high level of project financing on the assets and that Exelon is only a 50% holder. For the 1,700 MW Mystic CCGT, recent sales have been transacted at the $500/kW, which would yield $850 million. Jefferies does not include any benefit from the sale of Mystic in our forecast and if the company were to receive $500/kW and use all of the proceeds to pay down parent debt, we believe earnings would benefit by $0.02.

Delmarva-MD provides an estimated $0.03 to EXC consolidated earnings.

Delmarva Power and Light gets 67% of its ask from Maryland regulators. On February 15, the Maryland PSC approved a $38.3 million rate increase based on a 9.6% ROE and $707 million rate base. This compares to the company's July 2016 filing requesting a $57 million (revised from $66M) rate increase predicated on a 10.6% ROE and $726.8 million rate base.

We are maintaining our 2017 EPS estimate of $2.60, which compares to guidance of $2.50-$2.80. Earnings include both the NY and IL ZEC programs, Fitzpatrick ownership, and a full year of PHI contribution. Management issued segment guidance of: ComEd $0.60-$0.70, PECO $0.40-$0.50, BGE $0.25-$0.35, PHI $0.30-$0.40, ExGen $1.05-$1.15, and parent drag of $0.10-$0.30.

We are maintaining our 2018-19 estimates of $2.85 and$ $2.80, respectively.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for

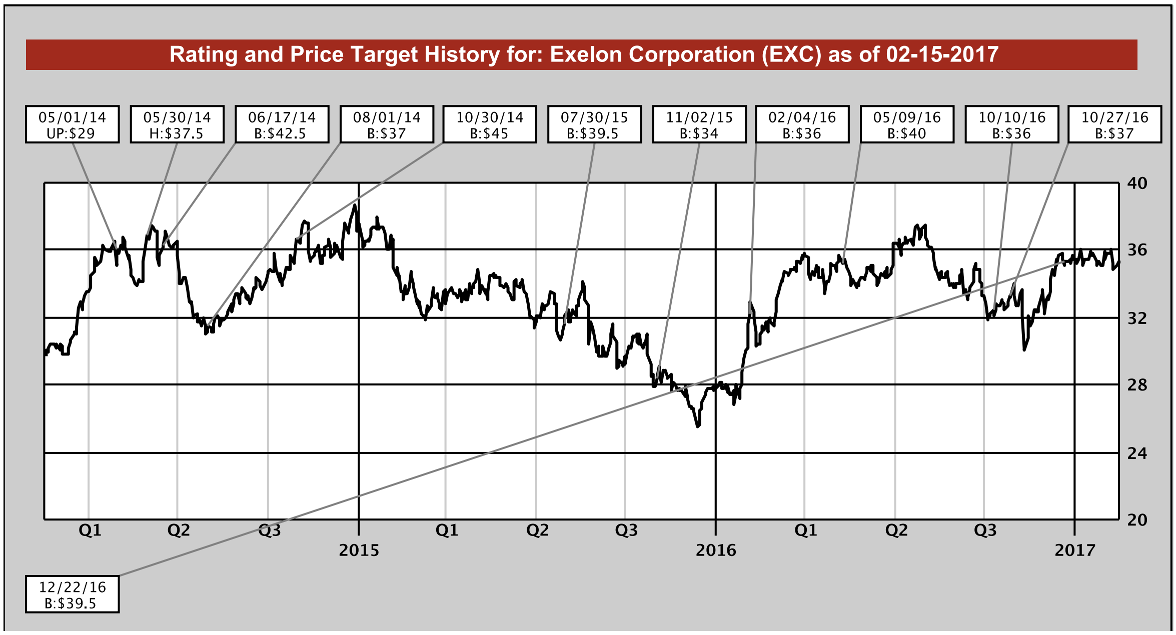
inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

Other Companies Mentioned in This Report

- Consolidated Edison Inc. (ED: $74.29, BUY)
- Entergy Corporation (ETR: $72.77, HOLD)
- FirstEnergy Corp. (FE: $30.62, HOLD)
- PPL Corp. (PPL: $35.72, HOLD)
- Public Service Enterprise Group Inc. (PEG: $43.66, HOLD)



Notes: Each box in the Rating and Price Target History chart above represents actions over the past three years in which an analyst initiated on a company, made a change to a rating or price target of a company or discontinued coverage of a company.

Legend:

I: Initiating Coverage

D: Dropped Coverage

B: Buy

H: Hold

UP: Underperform

FLASH NOTE

SECTOR: Power and Utilities

March 13, 2017

Roadshow with EXC (BUY, $35.97) Management: very well attended, very good dialogue, very clear message - very underappreciated. Meetings certainly reinforced our strong stance on EXC shares – at current levels we continue to see sizeable upside even before accounting for ZEC's; all signs point to our valuation tilting towards the conservative side as we, for now, exclude the subsidies pending modestly higher clarity. But, we are getting there. Our two days of meetings was filled with very good dialogue with a generally under-owned investor base. EXC Mgmt. came out with a very clear message and provided a multitude of takeaways for investors to digest. Reiterate BUY; $41 target price/share which currently exclude ZECs.

A lot of good data points from our meetings – key takes: (1) M&A – on the sidelines for now; at least for the next two to three years; if valuation remains low, could EXC eventually become an accretive target?, **(2) ExGen strategy** – no strategic divestiture; remains core with ~$1B/year in FCF supporting future regulated growth through potential buybacks among other items; despite investor perception, ExGen is not a drag and remains undervalued on any metric including implied gas, **(3) Private YieldCo** – it's coming with very strong demand from potential partners, **(4) Non-core asset sales** - remains on forefront but not a predicator of de-levering success and incremental to plan; Are the Texas CCGT projects next?, **(5) Tax policy** – the reality is that it's not that material, **(6) ZEC's** – on pace and working with stakeholders in other states to help move process along, **(7) Dividend** – could be set up for "material" growth but watch ZECs and upcoming PJM auction for timing, **(8) De-levering** – on pace to reach or even breach, in our view, 3x debt/EBITDA at ExGen, **(9) POM** – lag becoming less of a drag; projected to earn 9.5% by 2019 but this could prove conservative, **(10) Utility growth trajectory** – guidance of 6-8% likely conservative as well with asymmetric upside bias, **(11) Rate cases** – settlement coming in DE; DC expectations tempered – next round in 3-5 months; **(12) Retail** – Oligopoly forming: margins sticky with some expansion signals; opportunities to grow residential but no interest in acquiring a platform; will not be a first mover in CA, **(13) Mystic sale** – sale may or may not happen but too much investor focus as EXC playing with its own money; sale additive to de-levering targets etc.

Merchant GenCo will remain core, for now – the ratings agencies are the governor on any potential strategic divestures... Mgmt. took a "very hard look" at a potential divestiture of the de-regulated ExGen segment – over a year long process. It was very well noted during our meetings that the nuclear aspect of the GenCo adds a level of complexity not seen with other strategic moves – **the importance for an investment grade credit rating for the NRC has been front and center.** As a very recent data point, **Talen had to secure an LOC for Susquehanna equal to 6 months of outages or ~$200mm – EXC has over 24 units so this could get very costly.** Per Mgmt., **any divestures of ExGen will need to come with an investment grade credit rating from the agencies for the standalone IPP** – one of two rating agencies may remain very reluctant to issue an investment grade credit rating to any IPP even despite having very sound credit metrics – it's an ideology that may be very difficult to sway. If rating agencies can support an investment grade merchant IPP, (i.e. Moody's, S&P) then the obstacle to separating diminishes materially – Exelon can move ahead and divest ExGen. **If a spin is unlocked, it will likely not come until the 2022-2023 timeframe at the earliest, according to mgmt.**

In our view, given this very high bar to overcome with the rating agencies, EXC will likely need to make the best of it and continue to garner support with investors… Growth at the regulated utilities diluting ExGen exposure, removal of any remaining ZEC uncertainties coupled with further non-core asset sales will be key. **If ZEC works, retail continues to overachieve expectations, de-levering towards GenCo 3x debt/EBITDA is achieved, remaining non-core assets sales are complete, we do not see any fundamental reason why ExGen cannot trade at a healthier 7-8x EV/EBITDA multiple** (note: we continue to employ a levered free cash flow DCF at the ExGen plant level for valuation purposes; we do not apply flawed mid cycle multiples). We believe EXC's valuation will eventually get rewarded, it's a question of time.

Continued on the next page...

…and don't count out the Merchant anyway – remains a free cash flow generating machine helping to eventually fill utility growth divots with sizeable buyback opportunities among other items. Investors during our roadshow had to be reminded that **ExGen does generate in excess of $1B in FCF/year** and outside of maintenance CAPEX, Mgmt. not deploying any further capital into the business beyond 2017. With ~7% rate base growth at the utility, regulated operations comprising of 75% of consolidated mix, growth will continue to be predicted by the utilities with a free call option on the GenCo - ExGen cash flows could be used to buy back shares to fill any potential growth divots at the utilities as they begin to cover 100% of the dividend/HoldCo level interest rate expense. **For reference, $1B in buybacks equates to 2-3% EPS and dividend growth given less share count.**

Asset Sales – continues to look for more non-core opportunities; Are the Texas CCGT projects next? Outside of the obvious nukes, peakers and pump storage, any other asset is fair game for potential sale. **We believe mgmt. could see a strategic opportunity with the two CCGT projects in TX (Colorado Bend and Wolf Hollow) - either an outright sale or potentially sold-down into a yet-to-be-announced private YieldCo depending on which makes the most economics sense.** It was highlighted that the **assets are likely now worth closer to $500/KW versus new build cost of ~$700/KW** given the current forward curve environment in ERCOT coupled with the absence of volatility – we have seen no volatility in TX despite a very warm '16 summer (**See out Texas analysis HERE**). The key to extracting the most value from these projects could center on potential muni contracts.

…Mystic sale may or may not happen but EXC playing with its own money at this point – de-levering targets not a function of a potential sale; Monetization purely incremental. Potential sale of the Mystic assets in Boston is ongoing but Mgmt. notes that it's been challenging getting investors comfortable with the fact the assets burn LNG (gas supply from LNG delivered to Distrigas LNG facility) – **EXC has worked well with its LNG supplier so potential bidders question whether they can repeat similar economics.** At this juncture, EXC remains in the "education phase." As a reminder, **these assets were purchased for ~$1.15B but with the sale of Fore River (used to help finance POM) for ~$500mm coupled with ~$800mm in cash savings coming out of the plants, EXC playing with its own money at this point.** Given relatively healthy capacity payments, a NT sale could be dilutive prior to capacity payments falling off. Beyond the above mentioned assets, Mgmt. will continue to extrapolate value with further asset sales with non-core units.

Private YieldCo coming – demand high with Infrastructure and Pensions funds but there will be only one winner taking Exelon's 50% stake. While this transaction is not expected to generate a lot of cash, it will very likely bring to light the value of these contracted assets (initially wind followed by solar) and should present an opportunity to drop other noncore assets in time – **all proceeds incremental to EXC debt pay down targets.** Mgmt. in final stages of negotiations and expected to soon announce a new JV partner for 50% of the renewable business. **With $2.2b in project level debt (non-recourse), total transaction enterprise value could equate to ~$3.1B assuming 70% leverage – pre 50-50 split.** While this is expected to be a relatively small transaction, **the private YieldCo could be the entity to serve as an acquisition vehicle for future project dropdowns like AVSR, a wood burning asset in GA, other solar facilities as ITCs phase down and the ~$100mm being spent for rooftop solar for the C&I segment.** Average contracts tenure remaining on the assets equates to 12-15 years. EXC is expected to maintain 50% stake and control of the assets post private YieldCo launch. **The two TX fast start CCGTs could also present a potential drop down opportunity if contracts are struck with investment grade counterparties like munis.**

Losing sleep over tax? Boarder Adjustment Tax (BAT) and interest rate deductibility in focus at investor meetings but the reality is that **it's not so material**. To bookend, **Mgmt. sees potential ~$0.04-$0.08 impact from BAT** with nuclear segment but **drag expected to dissipate in time as fuel enrichment and fabrication is brought back into the US in-between refueling outages** which happen every 1-2 years depending on the unit. The key question is in a BAT scenario, is fuel considered an input or final good – former an obvious lower burden on EXC. On **interest rate deductibility issue**, Mgmt. highlights that every **check seems to point to a tax that is progressive and not regressive** – EXC has an accelerated program to pay down debt; not increase leverage.

We did a deep dive on tax and value potential scenarios under the new regime – **see our analysis HERE.**

All about ZEC's: We are increasingly feeling more confident with building in the accretion and valuation upside into our estimates. As a reminder, we modeled New York and Illinois subsidies in great length (See NY HERE and IL HERE) but stopped short of building in the accretion given the remaining legal overhangs surrounding the program – we have been down this road before with FE. That said, **following our Mgmt. meetings coupled with very constructive dialogue coming out of our Guggenheim hosted Commissioner Breakfast event on 1/18 which included Illinois Chair and PA Commissioner, our confidence has improved (see take HERE).** As one Commissioner noted: the legal hurdles to overturn

ZEC are high given that they were designed to emulate a REC (Renewable Energy Credit). **We are closely watching the oral arguments in New York as a potential catalyst** – discussed below.

New York ZEC further along; could set precedence in Illinois and in Ohio (ZEN's) and other states (i.e., New Jersey). As a reminder, EXC filed a motion to dismiss in New York from a purely mechanical standpoint – to our surprise (and theirs), the Judge decided to hear oral arguments vs. outright rejecting the request – **hearings set for April 29th** with **trials beginning this summer** and **an order with this dismissal request is expected by YE (**the Judge is known to be efficient, business focused but not an energy expert)**.** Key point – in any case, EXC expects appeals will start at the Appellate Court of New York and potentially go all the way through to the Supreme Court. As a reminder, **EXC will continue to earn ZEC revenue which is nonrefundable** (structured to have Fitzpatrick breakeven by two years) – the question for us is whether we should apply a perpetual multiple to it? We are gaining comfort that we should. Reminder, our target price (~$4/share potential upside from ZECs) and EPS estimates exclude any ZEC's upside: $0.15 for existing plants in NY (Ginna and Nine Mile); $0.02-0.03 for Fitzpatrick; ~$0.07 for Clinton and Quad (net of higher OPEX from bringing plants back). Success in NY will be a read through to IL given that they are essentially the exact same case.

Side note: when asked what the potential synergies could equate to by owning Nine Mile next to Fitzpatrick, Mgmt. highlighted that when they brought on the CENG assets, it eventually generated ~$75mm in cash savings – assuming about 1/5th of this with Fitzpatrick/Nine Mile Point is fair.

EXC has a vested interest to make sure other states are successful with their forms of ZECs – will take an active role. It was highlighted in our meetings that EXC is working with FE (BUY, $31.26) in Ohio with ZENs; will play a role in PA once legislation begins to form; expects PSEG (PEG, BUY, $44.43) to run the show in NJ given their political capital. **When asked during our meetings which other states will be successful, Mgmt. highlights**: **(1)** Ohio in better shape than Illinois was at early stage but FE may have challenges keeping rates low given other instate utility support will only come if FE ratepayers solely absorb the subsidy - can cause a large rate impact to FE native load; Illinois and New York subsidies socialized among the entire states; **(2)** PA: slower and more complex to develop given oil and gas lobby and multiple Nuke owners including FE, Talen and Exelon – this is a very consistent read we received from our Commissioner hosted breakfast; **(3)** NJ: should have a much easier process given PSEG's political capital – we agree (**see our PSEG analyst day takes HERE**).

As a reminder, EXC all in cost for nuclear is ~$30-$31/MWh. In NJ, EXC is part owner of Salem nuclear plant with PSEG; in PA. Three Mile Island is negative cash flows but Peach Bottom cash flow positive.

Dividend well set-up for growth but Mgmt. will exercise caution before changing policy – plan set through 2018 but dialogue with board on potential higher growth trajectory happening now. Board taking a very close look at the dividend with growth of 2.5% noticeable below peers and EXC's own regulated EPS growth of 6-8%; rate base growth of 7%. **The goal remains the utilities should cover 100% of the dividend and HoldCo interest rate expense – on pace to do so over the next two years.** Any revisit of dividend policy by Board approval will likely be "meaningfully" but EXC must gain comfort around a successful ZEC process (a successful motion to dismiss in NY could cause a revisit of the dividend sooner than 2018) among other items including better than expected RPM capacity market results (i.e. do generators bid their avoided costs and do we get an excessive number of new assets clear like the prior auction – mgmt. expects ~3GW but anything higher could be an incremental negative data point for a sooner than later dividend increase), in our view. **All signs point to a higher dividend growth rate in 2019 as plan essentially set through.** While ExGen generates significant cash flows now, EXC does not want to be in another position to be forced to cut the dividend – comfort around the above mentioned items will go a long way to garner confidence with the Board.

Regulatory Jurisdictions – good traction in achieving 9.5% ROE at POM by 2019; regulated growth could ultimately prove conservative with asymmetric upside bias given EXC propensity to earn low double returns. Should be filing second round of rate cases in the NT and **sees further savings beyond the $130m target set at POM** (has achieved $131mm to date) – further POM O&M levers will be utilized in the second round of filings which is expected within 4-5 months following each final order. **As a reminder, every dollar of O&M savings equates to $7-$9 of capital deployment with no impact to retail rates.**

Current regulated EPS growth of 6-8%, which appears well cemented, assumes 9.5% earned ROE and likely conservative given EXC's upward bias to earn low double digit returns (i.e. transmission) coupled with additional O&M savings from POM above current plan targets. As a reminder, three rate cases remain: two in Delaware (Delmarva) and one in DC (Pepco) – **Mgmt. expects a settlement in Delaware soon.** So far, first round of filings have been aligned with expectations – ACE settled 6 months sooner than plan; Pepco MD inline. **Expectations low for DC rate outcome** – Chairwoman was against the merger but term ends in 2018 at which point the Governor, who was supportive of the merger (who also appointed the current two Commissioners), will appoint a new Chair – **round 2 filings in DC should be more**

constructive. Reminder, DC is only 6% of rate base. POM utilities remain notable under-earners (ACE earnings 5.6% vs. 10% allowed; Delmarva earning 6.3% vs 10% allowed; Pepco earning 7.5% vs. 9.7% allowed) – Mgmt. confident two rate case cycles should remove the lag at POM. In addition to base rate cases, EXC will be trying to get formula rate plans (i.e. trackers) in DE, MD and NJ. **M&A – sitting on the sidelines for now; accretion through leverage doesn't create value at this juncture.** Mgmt. highlights **POM deal very unique** given the amount of capital needed to be deployed and the transaction multiple the deal was executed at – great fixer-upper given that the prior team chronically underinvested at the utilities. While several gas/electric utilities could present opportunities for EXC, the multiples being paid doesn't make the math work for Mgmt. **Some additional points highlighted during our meetings when thinking of EXC doing further M&A**: **(1)** EXC is going through a major de-levering initiative so a levered deal would run counter to strategic initiatives and **(2)** With potential changes to interest rate deductibility, cash deals will become much harder to come by - despite strong evolution in EXC business mix, shares still continue to trade at a deep discount so relying on equity won't make a deal look as accretive as past transactions (PEG trades at 15.5x vs EXC at 12.5x on '18 EPS). That said, **if EXC finds another utility meeting similar characteristics as POM and EXC equity value rerates as business mix shifts more regulated, another deal could be in the cards – mgmt. doesn't see this happening for the next couple of years.** Muni and coops could present a more nearer term opportunity.

…But we see a floor with valuation. A scenario presented during our meetings: As EXC continues growing the utilities with the business mix shifting to 75% regulated by 2020 coupled with contracted cash flows coming from ZEC's for the core nuclear assets and, the multiple doesn't recover, **shares could become an accretive target for another suitor or at least set groundwork for another integrated merger.**

Retail – some room to expand but not looking for new platforms; any deals will likely not be material enough to move the needle. With 29% mkt share, a leading retail platform, paired book and very few opportunities to acquire assets at around 2x EBITDA as in the past, **Exelon will be disciplined with acquisitive opportunities; will remain a buyer of last resort** – Texas retail markets could be an option – in our view. To date, margins have remained sticky, renewals and wins have been consistent – **Mgmt. has even see some evidence of margin expansion with what appears to be a formation of an oligopoly with the recent IPP buying spree coupled with the industry consolidation.** Mgmt. could selectively look at other nontraditional foot prints (i.e., has a hotel signed up in Nevada) - **CA could present an opportunity if muni and government aggregation picks up steam – won't be a first mover.**

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, FirstEnergy Corp. and Public Service Enterprise Group Inc. in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Investment Thesis

Travis Miller, Strategist, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Andrew Bischof, CFA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric

infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Economic Moat

Travis Miller, Strategist, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle

Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move

so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Regulated Utilities Continue Driving Growth for Exelon

Travis Miller, Strategist, 26 October 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Travis Miller, Strategist, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities

Travis Miller, Strategist, 09 November 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth

Travis Miller, Strategist, 14 November 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Travis Miller, Strategist, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Strategist, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

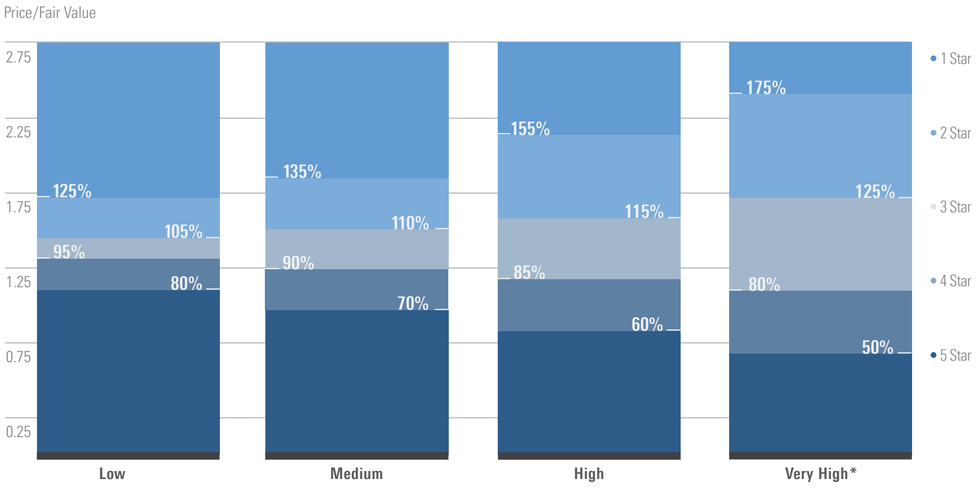
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ►**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ►**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ►**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ►**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ►**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ►**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ►**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ►**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

Price/Fair Value Morningstar data as of Mar 27, 2017

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

General Disclosure (applicable to both Quantitative and Qualitative Research)

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. The Equity Research Group encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an

investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, Inc., or the Equity Research Group guarantees the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst, Morningstar, Inc. or the Equity Research Group. In Territories where a Distributor distributes our report, the Distributor is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

- No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.

- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.

- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.

- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

- Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which the Equity Research Group currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities covered, including their fair value estimate, please contact your local office.

Contents

Analyst Note 28 Mar 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

For more information on our outlook for renewable growth and carbon emissions, see our most recent report "Trump Can't Thwart Green Progress" on Morningstar Select Investment Research.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

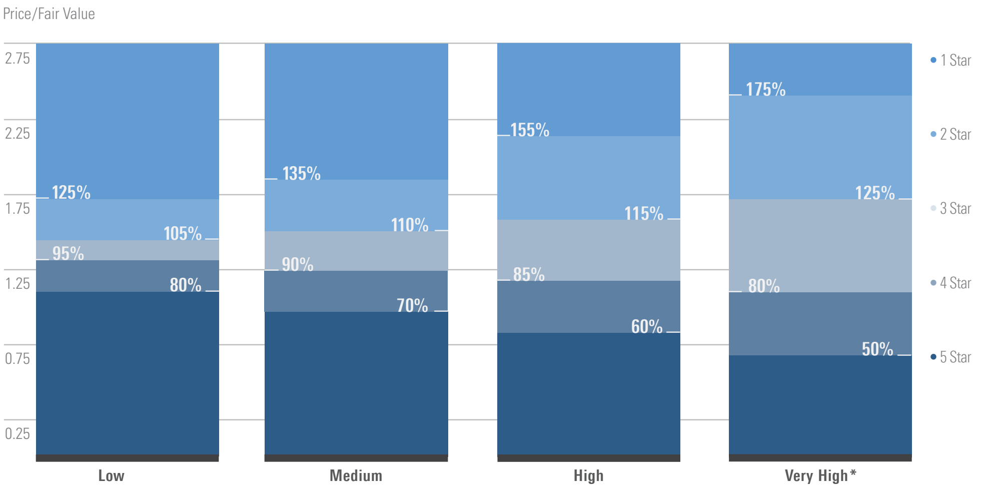
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★

We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★

Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Key issue for 2017 has its (first) day in court

Subsidies for struggling merchant power plants and their impacts on power markets are one of the key issues we highlighted in our 2017 Outlook, and represent an important part of our thesis for Buy-rated hybrids EXC and potentially PEG, while representing a headwind for IPPs who would not benefit from those subsidies. Today’s arguments over NY Zero Emissions Credits (ZECs) represent the first legal skirmish in what could ultimately be a multi-year battle on this topic, and in our opinion the hybrids may have had the better of the encounter. While many in the industry have viewed a dismissal of the case as highly unlikely, the judge’s statements and tone today seemed to suggest otherwise with EXC stock also reacting well in response. A quick dismissal of the NY case could encourage other states (OH, NJ, PA and CT) to pursue ZECs with less concern for legal challenges, and could perhaps signal that an inevitable appeal would be more of a long-shot.

Case background

In October, a group of generators including CPN, DYN and NRG filed suit in the U.S. District Court for the Southern District of New York against the NY PSC’s approval of Zero Emissions Credits for Exelon’s 3 struggling merchant nuclear plants in upstate NY. Citing the Supreme Court decision in Hughes vs. Talen, the plaintiffs argue that ZECs are tethered to wholesale prices and therefore infringe on FERC’s exclusive authority to regulate wholesale markets. Their complaint also argues that the ZECs specific focus on in-state struggling generation violate the interstate commerce clause. Today’s oral arguments were on the New York PSC and Exelon’s motions to dismiss the IPPs’ case.

What we heard today

Throughout today’s hearing Judge Caproni questioned the plaintiffs’ case. She compared ZECs to state property tax breaks for power plants and to Renewable Energy Credits (RECs), which all parties agreed were legal. Further, with regard to ZECs being tethered to wholesale prices, she seemed to latch on to the defendants’ argument that there is no requirement for the plants to sell into the wholesale market to qualify for ZECs. As for the ZEC price potentially adjusting for changes in higher power prices, the Judge said that since ZEC price could only go lower, not higher, she doesn’t see how that would harm the plaintiffs. Finally, attacking the claim about a preference for in-state resources, the judge asked if any of the complainants owned nuclear plants in surrounding regions that were harmed, which they do not, questioning their standing on this issue.

Judge’s concluding remarks could be telling

In concluding, Judge Caproni commented that this is the best briefed case she’s seen in her time on the bench, and that she does not want any more amicus briefs, suggesting that a decision on the motion to dismiss may come sooner rather than later.

Diversified Utilities
North America | United States

Exelon Corp (EXC)

ZECs Continue to Drive the Story

- Estimate Change
- Target Price Change

- **Updated Estimates:** Our updated consolidated EPS estimates for 2017, 2018, and 2019 are $2.63/share, $2.90/share, and $2.89/share, respectively. Over the same period, our ExGen EBITDA estimates are $3.0B, $3.2B and $3.1B and our regulated utility EPS estimates are $1.55, $1.70 and $1.84/share.
- **Merchant nuclear challenges continue; ZECs are a key driver:** Without ZECs (Zero Emission Credits) nuclear generation is challenged. For example, 2019 ATC power prices in Midwest and Mid-Atlantic are ~$27/MWh and ~$30/MWh with an additional ~$5/MWh for capacity prices. However, average cash cost of nuclear generation is ~$30-$35/MWh making nuclear breakeven/negative on a cash basis. With renewables increasing, these challenges will only get worse over time.
- **NY and IL ZEC = $3/share; now included in our TP:** We have valued IL and NY ZECs on standalone basis at $1/share and $2/share, respectively. Judge Shah is expected to rule on IL ZEC by June 1st. For NY, court hearings have begun on the motion to dismiss and looks like DYN/NRG/EPSA have an uphill battle. We now include both IL and NY ZECs in our PT. Also, if ZEC programs were implemented in NJ and PA based on similar pricing and tenure as IL/NY ZECs, they could add an additional ~$4/share of value.
- **High HoldCo debt is a concern, but a path to de-leverage is feasible:** EXC had ~$7.2B of HoldCo debt as of 12/31/2016. Cancelation of interest deductibility under the Trump's tax plan is a concern. We do, however, see a credible path to ~$2B of parent debt pay down by 2019. Again, ZECs are critical to the deleveraging story.
- **Higher PEPCO ROEs to support strong growth at utilities:** We expect regulated utilities would achieve 6-8% of growth in the next few years and we do expect PEPCO would be able to achieve ~9% ROEs by 2019.
- **Increase PT to $35 and maintain Neutral rating:** Utility growth and NY, IL ZECs seem to be largely priced in to the stock at this point. Our $4/share increase in PT is driven by 0.5x higher utility multiple reflecting higher growth and inclusion of NY ZECs. We see upside from here driven by ZECs in PA and NJ = +$4/share; Downside from here is if NY and IL ZECs were reversed = ($3)/share.

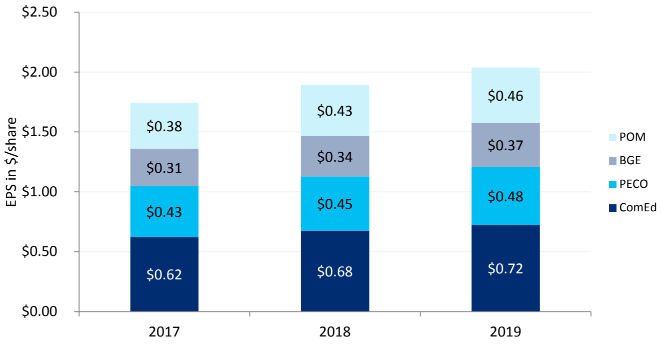
Financial Estimate Updates

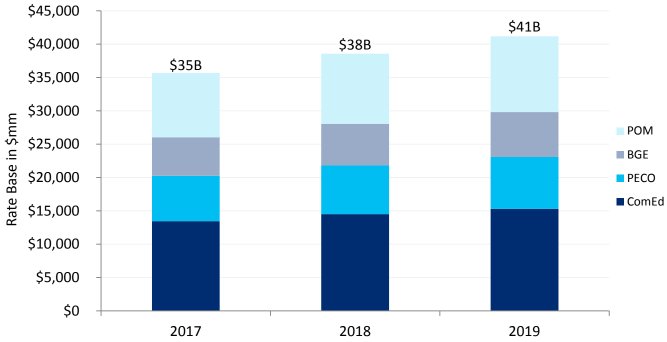
- We have updated our model for 4Q16 financial results, latest management guidance, hedging and generation profile and capital expenditure plans. We have used power curves as of 2/16/2017. Figure 1 shows our updated EPS profile for each regulated utility and Figure 2 depicts rate base for each respective utility.

Figure 1. EPS Estimates – Regulated Utilities



Source: Citi Research

Figure 2. Rate Base – Regulated Utilities

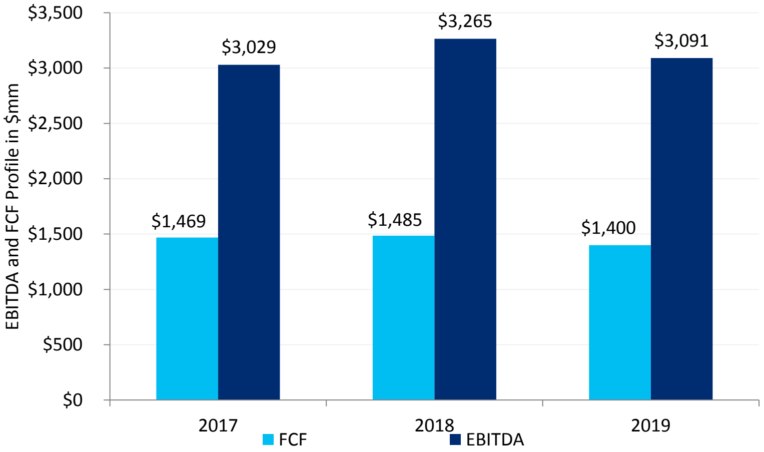


Source: Citi Research

- We have updated our ExGen model to incorporate IL and NY ZEC contributions in line with latest management's updated disclosure. Now, we combine ZEC with Capacity Revenues and flow through our commodity margin calculation. We estimate Capacity and ZEC revenues of $1.8B, $2.2B, and $2.0B for 2017, 2018, and 2019, respectively. Our estimates are in line with management guidance. However, we exclude ZECs from our DCF valuation approach and value them on standalone basis, please see valuation section for details.

- We have also built in Fitzpatrick acquisition into our model and reversed early retirement of Quad Cities and Clinton nuclear plants. We have built in $200m of other revenues into our EBITDA and FCF calculations in line with management guidance. Figure below shows our updated EBITDA and FCF profile for ExGen.

Figure 3. ExGen's EBITDA and FCF profile



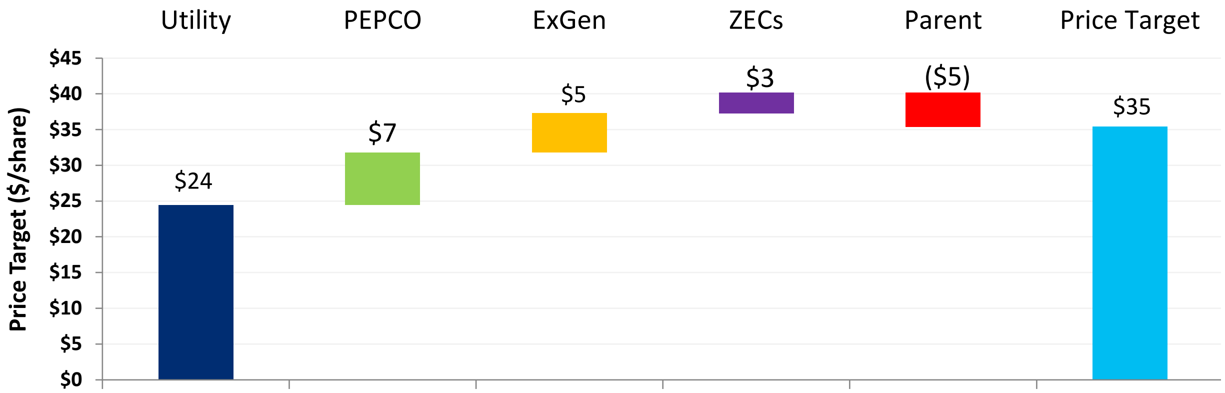
Source: Citi Research Estimates

- We have moved our valuation date to 12/31/2017. We maintain our bottoms up DCF valuation approach for utilities and ExGen. We have increased utilities' terminal PE multiple to 17.5x (from 17.0x) to reflect a robust growth of utility businesses.

- We maintain terminal EBITDA multiple of 5.5x and WACC of 8.5% for ExGen valuation. We exclude ZECs contribution from EBITDA for valuation purposes to avoid capitalizing them over the assumed asset life of nuclear assets. Instead, we value ZECs on standalone basis using their cash flows for next ten years.

- We value ZECs, both NY and IL, on standalone basis at ~$3/share. Essentially, we calculate cash flows associated with these programs and discount them at 8.5% to get to the NPV of these initiatives. Judge Shah is expected to rule on IL ZEC by June 1st. As to NY, the court is expected to rule on the motions to dismiss EPSA complain by the end of March.

Figure 4. SOTP Chart



Components	Utility	PEPCO	ExGen	ZECs	Parent	Price Target

PT doesn't add up due to rounding.

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates three utilities in Pennsylvania, Illinois, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Commonwealth Edison Company (ComEd) in IL, PECO Energy Company (PECO) in PA, and Baltimore Gas & Electric in MD. Exelon Generation operates the largest nuclear fleet in the United States, with plants located concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Neutral (2). Our rating is based on concerns around the management team’s strategic vision and execution, downside concerns around the economics of Exelon’s nuclear fleet with low unlevered free cash flow conversion (UFCF) of ~35% . We do like regulated utility's robust growth profile of 6-8% through 2020.

Valuation

We value EXC using a sum-of-the-parts approach to get to our $35 price target. We value ExGen at ~$6/share and believe ExGen’s core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The utilities business is valued at $24/share based on a 17.5x terminal PE multiple. We also add $7/share value provided by PEPCO. We back out $5/share for the parent net debt and add $3/share for ZECs (IL and NY)

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

% of companies in each rating category that are investment banking clients	65%	61%	60%	72%	63%	50%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term

total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%); Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%); Q1 2016 Buy 31% (67%), Hold 45% (63%), Sell 24% (61%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research

may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted. Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

EXC: Downgrading To Market Perform

- **Summary.** We are downgrading shares of EXC to Market Perform from Outperform. We no longer believe the risk/reward proposition is compelling enough to justify a positive rating. Our Outperform rating was, in large part, predicated on our belief that states would eventually subsidize economically challenged nuclear facilities. While this has played out via the zero emissions credit (ZEC) programs in NY and IL (and potential additional states), the ZEC programs face substantial federal legal challenges under –amongst other legal arguments – the dormant Commerce Clause. Historically, courts have liberally applied the Interstate Commerce Clause (ICC). As such, we believe the potential for multi-year legal challenges could create a challenging environment for EXC to outperform peers (absent a sustained power market recovery – which we do not forecast).
- **ZEC Programs.** Under the ZEC programs, targeted EXC-owned nuclear facilities in NY & IL are eligible to receive cash subsidies ($500M+ annually in total). The programs are designed to provide the economic incentive – in the event the power markets remain depressed – for EXC to keep the nukes in service. Ostensibly, the states' rationale for the ZECs is that they support desired social/environmental policy goals related to clean energy akin to the renewable energy credits (RECs) programs under numerous state mandated renewable standards.
- **Legal Challenges.** EXC's opponents (other merchant generators) contend that the ZEC programs violate the Commerce and Supremacy clauses of the Constitution. Essentially, the complainants argue that the ZECs represent an unlawful state infringement on the federally regulated wholesale power markets to the economic detriment of other power market participants. Historically, federal courts have liberally applied the ICC but have permitted exceptions when the benefit of state action to further legitimate local goals outweighs the burden imposed on the market. The District Court for the Southern District of NY heard oral arguments on 3/29 and requested the parties submit additional briefs (the court is considering NY's Motion to Dismiss). In addition, there is a separate lawsuit in an IL District Court. While we do not profess keen insight, we think the legal challenges could be protracted and eventually end up at the Supreme Court.
- **Valuation Comments.** Our forward valuation range is $38-39/sh (down from $40-41/sh). Assumptions underlying our sum-of-the parts (SOTP) valuation include (1) $33/sh for Utility/Parent based on a P/E multiple of 19X our 18E EPS of $1.74, (2) $9/sh for ExGen under a DCF analysis (we nudged up our WACC to approximately 7.5% from 7.0% to better take into account cash flow risk related to the ZEC lawsuits) and (3) a negative $3.50/sh adjustment to reflect the projected use of ExGen '17-21 cash flows to help finance Utility's growth - addresses a potential double-counting risk under the SOTP methodology.

Valuation Range: $38.00 to $39.00 from $40.00 to $41.00

Our $38-39/sh valuation range is premised on a sum-of-the-parts analysis (1) Utility & Parent value of $33/sh (based on a P/E multiple of 19X our 2018E of $1.74), (2) $9/sh for ExGen using a DCF analysis and (3) -$3.50/sh to reflect use of ExGen cash flows at Utility. Risks include commodity price sensitivity and unfavorable regulatory/policy developments.

Investment Thesis:

Our Market Perform rating reflects our belief that shares adequately reflect the value of the nuclear fleet given uncertainties related to legal challenges.

Please see page 4 for rating definitions, important disclosures and required analyst certifications. All estimates/forecasts are as of 04/05/17 unless otherwise stated. 04/04/17 20:41:58 ET

Company Description:

Exelon Corporation was formed in October 2000 through the merger of Unicom, which was the parent company of Commonwealth Edison (ComEd) and PECO Energy (PECO). The company's business segments include independent power production (Exelon Generation) and Energy Delivery (ComEd and PECO). Exelon Generation owns approximately 25,000 MW of unregulated electric generating capacity, primarily located in Illinois and Pennsylvania. The company's 17,000 MW nuclear fleet is the largest in the nation. Generation currently accounts for approximately 70% of EXC's overall earnings. The Energy Delivery businesses serve roughly 3.8 million electric distribution customers in Northern Illinois (ComEd) and approximately 1.6 million electric and 0.5 million natural gas distribution customers in Southeastern Pennsylvania (PECO).

TOP PICK Exelon Corp.

UPDATE: JV Asset Sale for ExGen Renewables

Stock Rating/Industry View: Overweight/Neutral
Price Target: USD 40.00
Price (03-Apr-2017): USD 35.82
Potential Upside/Downside: 12%
Tickers: EXC

This Update is replacing the "JV Asset Sale for ExGen Renewables" which was published on April 4 2017 at 15:52 GMT. In this note we correct the transaction value for the inclusion of the assumption of a 49% interest in the project debt of $924 million which updates the transaction value to $1,340/kW.

John Hancock Purchases 49% JV Stake in ExGen Renewable Holdings, LLC

Purchase Price of $400 Million. On March 31, Exelon entered into a purchase agreement with John Hancock Life Insurance Company, under which John Hancock agreed to purchase a 49% stake in membership interests of ExGen Renewable Partners LLC. ExGen Renewable Partners LLC is an owner and operator of approximately 1,296MWs of wind and solar electric generating facilities. The portfolio consists of 30 different plants located in 13 states and is representative of 34.9% of Exelon Generation's renewable generation assets and 4.0% of Exelon generation total generation assets. The purchase price agreed to was $400 million subject to certain working capital and post-closing adjustments. This was also inclusive of $924 million in outstanding non-recourse project debt or $452 million in debt assumption by John Hancock at the 49% JV stake. Exelon indicated in their 8-K filing that they expect the transaction to close in the late second or early third quarter of 2017 and that the deal is subject to regulatory approvals from the Public Utility Commission of Texas and the Federal Energy Regulatory Commission (FERC). As a reminder the FERC remains with only two current members and therefore until at least one further member is appointed, confirmed, and seated the FERC does not have a voting quorum with which to approve the transaction.

Valuation Inclusive of Project Debt Above Our Long Term Asset View. Premised upon our long term asset valuation and the terms of the transaction disclosed in the 8-K, John Hancock purchased the joint venture interest in the assets for $1,340/kW for the 49% stake ($400 million + $452 million in debt assumption / 635 MWs). This is 20% above our embedded $1,100/kW at which we value the assets in our long term asset valuation work. We do see the joint-venture structure as slightly disappointing versus expectations of a sale of the whole renewable portfolio as it would have led to incrementally more proceeds with which to deleverage the balance sheet. Exelon has targeted a net debt/EBITDA for the ExGen business of 3.0x versus the 3.3x currently projected for 2017, which contemplates $2.9 - $3.4 billion of ExGen and HoldCo debt reduction through 2020, against which the proceeds from this transaction will be applied. In the 8-K Exelon indicated that the proceeds would be used to pay down debt and for general corporate purposes.

Mentioned Stocks (Ticker, Date, Price)

Exelon Corp. (EXC, 03-Apr-2017, USD 35.82), Overweight/Neutral, A/CD/CE/D/J/K/L/M

Valuation Methodology: Our $40 price target is premised upon a 2019 group average multiple of 15.1x applied to the utility net parent earnings of $1.81 resulting in $28 of utility value. Exgen is valued at 6.5x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, The combined value is $40.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

V: The equity securities of this Canadian issuer include non-voting restricted shares.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (“the industry coverage universe”). To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Distribution of Ratings:

Barclays Equity Research has 1809 companies under coverage.

41% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 62% of companies with this rating are investment banking clients of the Firm; 77% of the issuers with this rating have received financial services from the Firm.

41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 50% of companies with this rating are investment banking clients of the Firm; 72% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 37% of companies with this rating are investment banking clients of the Firm; 59% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that

industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).
To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

What's Incremental To Our View

We calculate an implied EV/EBITDA multiple of 15.3x for the sale of a minority stake in one of EXC's renewable portfolios, which compares favorably with the implied public market valuation of 5.8x for EXC's total generation portfolio.

IMPORTANT POINTS

- Yesterday, after the close, EXC announced an agreement to sell a 49% stake in a portfolio of 1296mw of wind and solar projects for $400 million. The primary use of proceeds will be debt paydown. The transaction is expected to close in late 2Q / early 3Q 2017.

- We calculate that the transaction will be neutral to earnings, and highlight the following positive attributes of this announcement: (1) **Attractive Valuation** – our calculations suggest an implied EV/EBITDA multiple of 15.3x for this transaction, which compares very favorably with the 5.8x EV/EBITDA multiple at which the public market is currently valuing EXC's total generation portfolio; (2) **Additional Deleveraging** – proceeds from this monetization would be additional to the $2.9 - $3.4 billion debt reduction targets for the company over the 2016-2020 period; and (3) **Potential For Additional Transactions** – the renewables assets included in this transaction represent only 35% of EXC's total renewables portfolio.

- Our financial analysis of this transaction is based on the following key assumptions: (1) annual EBITDA estimate of $150 million for the 1296mw of capacity; (2) annual net income of $30 million (implying $15 million for the 49% stake); (3) total debt of $1.5 billion on the projects (implying a total Enterprise Value of $2.3 billion); (4) proceeds used to pay down debt with an average interest rate of 5%; and (5) a 34% tax rate.

- Assuming a 14.1x P/E multiple (in line with the peer group) on our 2018 estimate of $2.82, we derive our price target of $40. We reiterate our **Buy** recommendation.

- We have included our latest 2017-18 earnings and cash flow models in this report.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a 14.1x P/E multiple (in line with the peer group) on our 2018 estimate of $2.82, we derive our price target of $40.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may

exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 04/04/2017):

PJM Publishes Revised Planning Parameters April 13

EMAAC Now More Likely to Not Break Out. PJM released revised planning parameters on Thursday April 13. The revised planning parameters show that the regions most likely to break out are PS North and COMED versus our earlier prediction where we saw EMAAC and COMED breaking out. We are also lowering the likely sensitivity to 100% capacity performance which slightly lowers our auction price projections. EMAAC still has a chance to break out with PS North, but we see a greater likelihood of it clearing with RTO. COMED continuing to break out reads positively for Overweight-rated Exelon Corp, while EMAAC now likely clearing with RTO reads negatively for Overweight rated Calpine Corp. versus our earlier projections.

Our current capacity clearing predictions are shown in the table below, with Figure 2 showing our prior capacity clearing price predictions, which we published on February 2.

The PJM planning parameters can be found on PJM's website at http://www.pjm.com/markets-and-operations.aspx.

Mentioned Stocks (Ticker, Date, Price)

Calpine Corp. (CPN, 13-Apr-2017, USD 10.69), Overweight/Neutral, A/CD/CE/D/J/K/L/M

Valuation Methodology: Our $18 price target is premised upon the mid-cycle multiple of 7.6x our 2018E Open EBITDA of $1.901 billion, net debt of $10.7 billion and an NPV of NOLs of $2.6 billion on 359 million shares outstanding.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks for Calpine are the higher reserve margins, recession, wholesale market regulatory risk; risk of environmental mandates, and the gas price.

Dynegy Inc. (DYN, 13-Apr-2017, USD 7.19), Overweight/Neutral, A/CD/CE/D/E/J/K/L/M/N

Exelon Corp. (EXC, 13-Apr-2017, USD 35.97), Overweight/Neutral, A/CD/CE/D/J/K/L/M

Valuation Methodology: Our $40 price target is premised upon a 2019 group average multiple of 15.1x applied to the utility net parent earnings of $1.81 resulting in $28 of utility value. Exgen is valued at 6.5x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, The combined value is $40.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

T: Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.
U: The equity securities of this Canadian issuer include subordinate voting restricted shares.
V: The equity securities of this Canadian issuer include non-voting restricted shares.

Guide to the Barclays Fundamental Equity Research Rating System:
Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry ("the industry coverage universe"). To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.
In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.
Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.
Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View
Positive - industry coverage universe fundamentals/valuations are improving.
Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.
Negative - industry coverage universe fundamentals/valuations are deteriorating.

Distribution of Ratings:
Barclays Equity Research has 1802 companies under coverage.
41% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 77% of the issuers with this rating have received financial services from the Firm.
40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 50% of companies with this rating are investment banking clients of the Firm; 72% of the issuers with this rating have received financial services from the Firm.
16% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 37% of companies with this rating are investment banking clients of the Firm; 60% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:
Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:
Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).
To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Analyst Note 19 Apr 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Our full report, "Trump Can't Thwart Green Progress," is available on Morningstar Select Investment Research.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

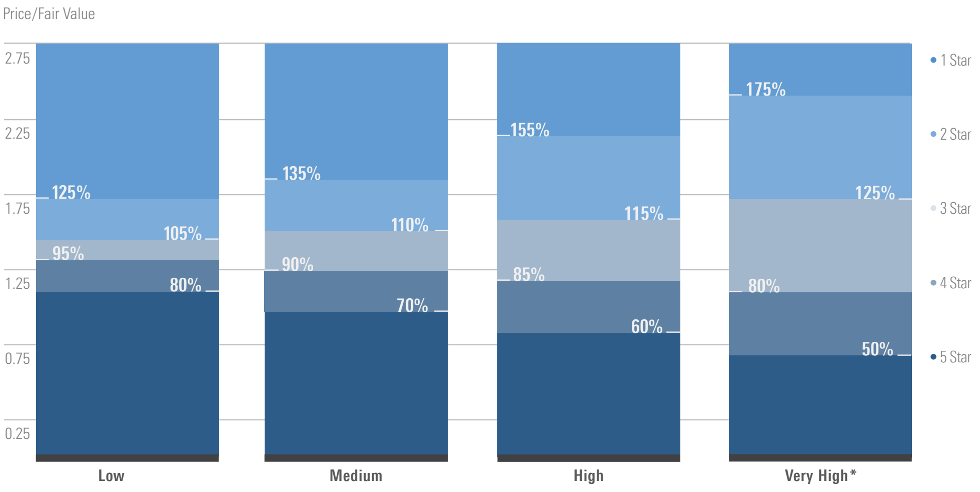
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Investment Thesis

Travis Miller, Strategist, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more

gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Economic Moat

Travis Miller, Strategist, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle

Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move

so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Travis Miller, Strategist, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities

Travis Miller, Strategist, 09 November 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth

Travis Miller, Strategist, 14 November 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Travis Miller, Strategist, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Strategist, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Morningstar Research Methodology for Valuing Companies

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

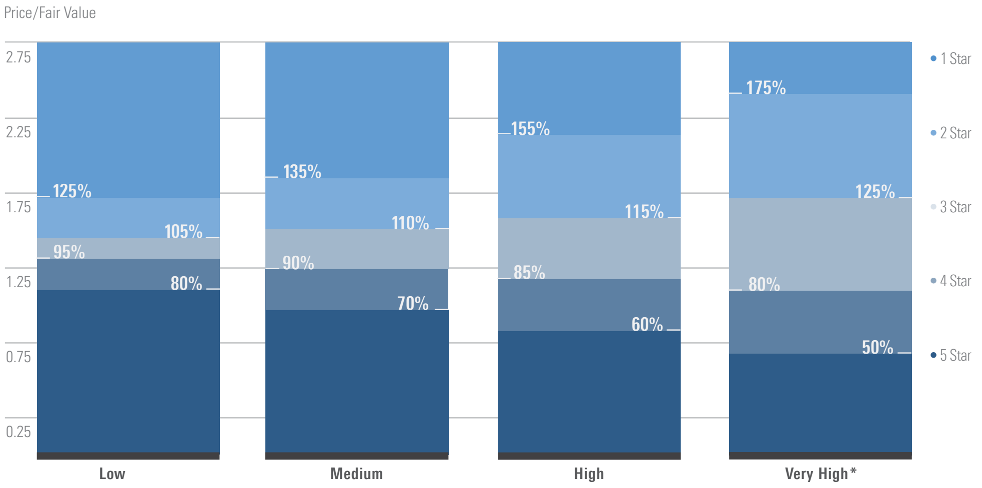
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ►**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ►**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ►**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ►**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ►**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ►**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ►**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ►**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

Update on Illinois ZEC Litigation: We Continue to Believe EXC Will Prevail

Stock Rating	Industry View	Price Target
Equal-weight	Attractive	$39.00

This week, we saw numerous amicus briefs in the Illinois Zero Emissions Credit (ZEC) litigation. After reviewing these briefs, we continue to believe EXC will prevail in court.

Over the past week, we have seen numerous amicus ("friend of the court") briefs in the Illinois Zero Emissions Credit (ZEC) litigation taking place in federal district court in Chicago. Among the parties who filed briefs: PJM, the PJM Independent Market Monitor (IMM), and MISO. In addition, the judge invited FERC to submit a brief, an invitation that FERC declined today. A few key takeaways:

1. PJM's brief was supportive of plaintiffs opposing the Illinois ZECs, A few key statements in PJM's brief:

"PJM submits this brief because the Zero Emission Credit ("ZEC") program established pursuant to the Illinois Future Energy Jobs Act, SB 2814, Public Act 099-0906, 99th Gen. Assemb. (Ill. 2016) ('FEJA') will substantially harm the wholesale electricity markets that PJM operates, as well as the investors, competitive energy providers, and (ultimately) consumers that rely on PJM's markets to provide adequate and reliable electricity at the lowest efficient price. Moreover, the ZEC program will frustrate Congress' intent to promote competition in wholesale electricity markets and, in particular, thwart Congress' assignment to the Federal Energy Regulatory Commission ("FERC") of responsibility to set just and reasonable wholesale electricity rates under the Federal Power Act. For these reasons, as explained in detail below, PJM respectfully requests that the Court deny the Motions to Dismiss."

"At its most basic level, the question before the Court is: Who is responsible for managing "resource adequacy" in Illinois—i.e., ensuring that sufficient generation is available in Illinois when needed to meet future demand. [O]nce a state elects to restructure or unbundle the generation function of the utility and place that function in a competitive wholesale environment, the state effectively cedes authority over the economic determination of which generators will be committed to meet resource adequacy. In deregulated states like Illinois, generation entry and exit decisions are determined by supply and demand in competitive markets."

2. We believe the new FERC Commissioners (who we think will be nominated shortly) will likely support the State of Illinois' position that states are

permitted to pursue environmental objectives as they see fit. Today, FERC formally decline the Chicago federal district court's invitation to submit an amicus brief, stating in part "the Commission has been without a quorum since February 4, 2017, and cannot currently act on the pending complaint." We believe the Illinois ZECs were structured well, allowing the State to pursue a valid environmental goal (zero carbon generation) while avoiding legal issues that have arisen in other situations where states have provided guaranteed, all-in fixed payment streams to new natural gas-fired power plants. The payment level was determined by factoring in a study that calculated the Social Cost of Carbon, which we believe is the critical element of the ZEC structure from a legal perspective. We believe states' rights to pursue environmental objectives results in the ZECs being akin to the payments made by states in support of renewable energy project development. Our view that Exelon will prevail in court is based on the well-structured nature of the ZEC payments, as well as by our view that the Republican nominees to FERC, reflecting a key perspective of President Trump, will respect states' desires to support baseload generation, and will also be likely to defer to state-determined priorities rather than to impose a federally determined outcome on states. We believe a positive legal outcome in Illinois, which we expect, would be a positive read across in regards to the potential for other states such as Connecticut, Pennsylvania, New Jersey and Ohio to successfully pursue similar initiatives for nuclear support over time.

Global Research Conflict Management Policy

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflictpolicies.

Important US Regulatory Disclosures on Subject Companies

As of March 31, 2017, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: Dynegy Inc., NextEra Energy Inc, NRG Energy Inc.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

An employee, director or consultant of Morgan Stanley is a director of AES Corp.. This person is not a research analyst or a member of a research analyst's household.

Morgan Stanley & Co. LLC makes a market in the securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of March 31, 2017)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with NASD and NYSE requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	COVERAGE UNIVERSE		INVESTMENT BANKING CLIENTS (IBC)			OTHER MATERIAL INVESTMENT SERVICES CLIENTS (MISC)	
STOCK RATING CATEGORY	COUNT	% OF TOTAL	COUNT	% OF TOTAL IBC	% OF RATING CATEGORY	COUNT	% OF TOTAL OTHER MISC
Overweight/Buy	**1168**	**36%**	**303**	**43%**	**26%**	**556**	**37%**
Equal-weight/Hold	**1403**	**43%**	**307**	**44%**	**22%**	**692**	**46%**
Not-Rated/Hold	**59**	**2%**	**9**	**1%**	**15%**	**8**	**1%**

TOTAL	**3,250**		**702**			**1520**	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Investment Thesis 06 Dec 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth 19 Apr 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Our full report, "Trump Can't Thwart Green Progress," is available on Morningstar Select Investment Research.

Valuation, Growth and Profitability 06 Dec 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Exelon Corp EXC (NYSE) | ★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
34.84 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Price/Fair Value Morningstar data as of Apr 27, 2017

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $650 million change in EBITDA. Our fair value estimate would change by $5 per share. On a mark-to-market basis as of mid-November, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 4 percentage points to near the industry average, it would change our fair value estimate by $1 per share. If Exelon does not retire the Clinton, Quad Cities, and Three Mile Island plants, it would add $2 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. About 70% of the $11 billion of rate base growth in 2016-20 will have rate trackers or formula rates, minimizing regulatory lag. Exelon faces the biggest challenge boosting Pepco's earned returns some 400 basis points to approach its allowed returns. Rate cases in 2016-17 should give it a good start.

In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're

Exelon Corp EXC (NYSE) | ★★★

Morningstar Analysis

watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.

- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.

- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.

- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.

- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets as it tries to smooth cash flow at its generation unit. As power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.We see no immediate credit concerns based on current energy market conditions. We project Exelon's consolidated EBITDA/interest coverage will remain above 5 times and leverage will remain below 5 times debt/EBITDA at least through 2019. Even those these ratios are weaker following the Pepco acquisition, we think this is acceptable given the higher share of regulated earnings.Only about one-quarter of Exelon's consolidated debt is directly tied to its generation segment. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing its near-term maturities. Management has committed to reducing Exelon Generation debt by $3 billion during the next five years and use the remaining cash to fund the regulated utilities' growth.We also think management can meet its 2.5% dividend growth goal through 2018 with relative ease. However, this is rather unimpressive compared with most of its peers that we think can grow their dividends at least twice as fast.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm might have to make modest cash contributions. Plant closures also could increase cash decommission costs.

Enterprise Risk

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's

largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management 06 Dec 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities 28 Mar 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

For more information on our outlook for renewable growth and carbon emissions, see our most recent report "Trump Can't Thwart Green Progress" on Morningstar Select Investment Research.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes 08 Feb 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Analyst Notes

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth 14 Nov 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about

3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Our fundamental U.S. electricity demand forecast is detailed in the Utilities Observer we published in May, "U.S. Electricity Demand Outlook: Energy Efficiency Is No Death Knell." Our fundamental EV forecast is detailed in the Electric Vehicles Observer published Nov. 14.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities 09 Nov 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency’s carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don’t expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns 08 Nov 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

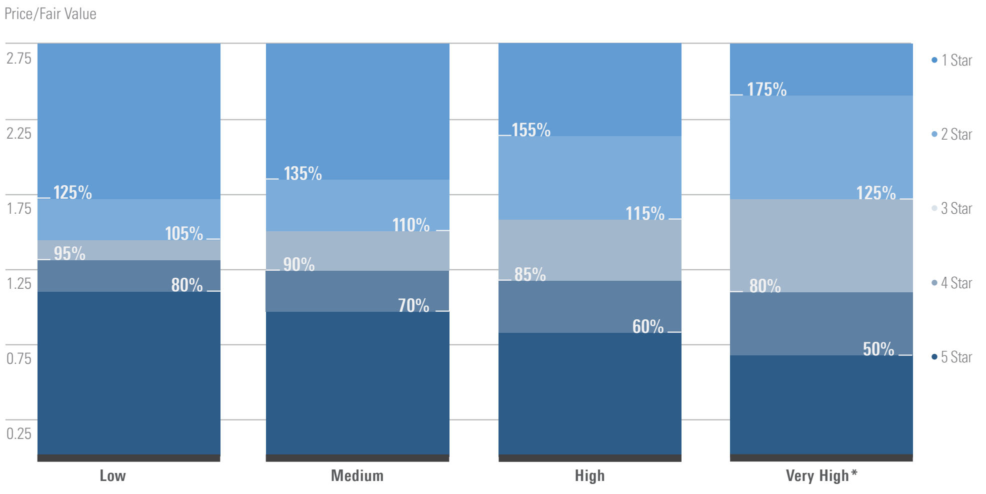
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Exelon Corporation

EXC: May (Potentially) Shaping Up As Important Month

Market Perform

Sector: Diversified Electric Utilities
Market Weight

- **Summary.** April was a rough month for merchant generation-exposed companies – shares of pure-play IPPs (CPN, DYN & NRG) are down 10-20% relative to the S&P Utilities. And despite EXC's more conservative, hybrid strategy vs. the IPPs – 60% of EPS coming from regulated utilities, a strong balance sheet and shares yielding 3.7% – the company has not been insulated from the sell-off (shares are down 5% vs. the group). It is unclear to us what precipitated the recent merchant sell-off with a poor MISO capacity auction perhaps being the most meaningful data point. Conversely, we view the recent Department of Energy (DOE) decision to evaluate the potential impacts of base load generation retirements on the nation's grid as an incrementally positive development. No meaningful changes to our fundamental outlook or Market Perform thesis and forward valuation range of $38-39/sh. That being said, we believe the risk/reward proposition has marginally improved and acknowledge that positive ZEC legal developments and/or a constructive PJM capacity auction result (due in May) could be meaningful near-term catalysts.

- **ZEC Update.** Legal challenges to the ZEC programs are pending in federal district courts in both NY & IL. In NY, the parties are awaiting word from the judge on the state's motion to dismiss the opponents challenge to the legality of the program. If the judge grants the motion to dismiss then the order is likely to be appealed to the Court of Appeals. If the judge does not grant the motion then the case will proceed at the district court level. In IL, which is sequenced behind NY, the judge intends to inform parties of his intentions with regard to the process on 5/22. While we think the ZECs legal challenges are likely to end up at the U.S. Supreme Court (a multi-year process), near-term victories for EXC at the district court level should increase investor confidence in the chances of ultimate success (and vice versa). We consider the ZEC lawsuits to be the predominant issue for EXC given the increasing possibility, in our view, that additional nuclear units could eventually require state subsidies in order to remain economical.

- **Other Updates.** (1) The PJM capacity auction results for 2020/21 are scheduled to be released after market on 5/23. While EXC refrained from predicting the outcome, mgmt. highlighted positive drivers: first year of 100% capacity performance product requirement and tightening imports into ComEd and Eastern MAAC, which should help those regions "break-out". Negative drivers include a lower demand forecast along with the possibility of uneconomical generation being bid into the auction, particularly in OH & PA. All told, our model assumes modestly higher prices across the region vs. the 2019/20 auction. (2) The DOE study into the nation's grid is expected to be completed by mid-June. While it is unclear what the outcome of the study will be, we think the potential for federal policymaker support for base load nuclear is a positive (keeping in mind the ZECs ongoing federal court challenges).

Valuation Range: $38.00 to $39.00
Our $38-39/sh valuation range is premised on a sum-of-the-parts analysis (1) Utility & Parent value of $33/sh (based on a P/E multiple of 19X our 2018E of $1.74), (2) $9/sh for ExGen using a DCF analysis and (3) -$3.50/sh to reflect use of ExGen cash flows at Utility. Risks include commodity price sensitivity and unfavorable regulatory/policy developments.

Investment Thesis:
Our Market Perform rating reflects our belief that shares adequately reflect the value of the nuclear fleet given uncertainties related to legal challenges.

Please see page 4 for rating definitions, important disclosures and required analyst certifications. All estimates/forecasts are as of 05/03/17 unless otherwise stated. 05/03/17 14:51:21 ET

Wells Fargo Securities, LLC does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of the report and investors should consider this report as only a single factor in making their investment decision.

ZEC – Zero-Emission Credit
DOE – Department of Energy

Company Description:

Exelon Corporation was formed in October 2000 through the merger of Unicom, which was the parent company of Commonwealth Edison (ComEd) and PECO Energy (PECO). The company's business segments include independent power production (Exelon Generation) and Energy Delivery (ComEd and PECO). Exelon Generation owns approximately 25,000 MW of unregulated electric generating capacity, primarily located in Illinois and Pennsylvania. The company's 17,000 MW nuclear fleet is the largest in the nation. Generation currently accounts for approximately 70% of EXC's overall earnings. The Energy Delivery businesses serve roughly 3.8 million electric distribution customers in Northern Illinois (ComEd) and approximately 1.6 million electric and 0.5 million natural gas distribution customers in Southeastern Pennsylvania (PECO).

Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING

1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING

O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING

V = A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: May 3, 2017

Energy: Electric Utilities

Earnings Recap

Exelon Corporation

EXC: 1Q17 Shows Execution on Improving ROE

We remain buyers of EXC and are affirming our **Overweight** rating and $41 price target as the regulated utilities execute on reducing regulatory lag, and as we view the current $2.00-$3.00 value ascribed to ExGen as overly discounted.

Key Investment Points

1Q17 Earnings Results: EXC reported 1Q17 EPS of $0.65 vs. $0.68 in 1Q16 (Consensus of $0.63) as primary drivers include: weaker results at ExGen (-$0.16) and increased expense at the HoldCo (-$0.02), slightly offset by results at ComEd (+$0.03); BGE (+$0.03); PHI (+$0.09); with PECO results remaining flat YOY. EXC affirmed 2017 EPS guidance of $2.50-$2.80 and initiated 2Q17 guidance of $0.45-$0.55.

Regulated Utilities: With targeted 6.5% rate-base growth powering utility EPS growth of 6-8% annually from 2017-2020, we view the regulated segment as well positioned to benefit from improvement in ROEs at the legacy utilities, as well as from operational improvement at Pepco (PHI). At PHI, the first cycle of rate case proceedings is wrapping up, where the second cycle is starting to ramp up. Although we will likely see a little volatility quarter to quarter around earned returns due to timing of rate cases, the positive longer term trend remains on track (9-10% ROE by 2019 at PHI). With continued execution of improving earned ROEs, we look forward to 2018 as an opportune time for the board to give a longer term view of the div./div. growth rate (current 2.5% annual increases).

ExGen: Mgmt. feels confident in its ability to overcome the current challenges to the NY and IL ZECs. The 2018/2019 gross margin saw a $50 million hit each year around lower pricing on open positions; however, mgmt. feels good with falling a little behind its ratable hedging policy as market pricing comes around. In the PJM auction, mgmt. remained committed to a responsible bidding practice, but gave little color around expectations. Lastly, ExGen remains committed to its deleveraging goals as the renewable JV remains on track; despite pulling away from a Mystic sale for now (revisit annually).

DOE Review Sounds Messy...for Now: Currently, the DOE review sounds like a somewhat uncoordinated process, but will likely improve over the coming months as stakeholders determine what issues are most and least important and as technical conferences provide some overarching themes and answer some unfinished business.

2017/2018 Estimates: We are reaffirming our 2017 and 2018 EPS estimates at $2.70 and $2.90, and introducing our 2Q17 EPS estimate at $0.54. We have updated our SOTP valuation on shares of EXC and are affirming our $41 PT and **Overweight** rating.

Valuation

Based upon our 2018 estimate of $2.90, shares of EXC trade at a P/E ratio of 11.9x (based on last nights close), a meaningful discount to larger-cap utilities trading at 18.1x. We view this discount as excessive and are affirming our **Overweight** rating. We are using a SOTP analysis to arrive at our $41 price target as we believe the regulated entity should trade at a modest premium to large-cap, regulated peers. Based on our regulated 2018 EPS estimate of $1.74 and a modest premium to the current group multiple of 18.1x, we value the regulated part of the business at $32 per share. Similarly, based on our $3.276 billion 2018 EBITDA estimate at ExGen and applying a 15% discount to IPP peers of 7.2x EV/EBITDA, we value the unregulated segment at $9 per share. We view our $41 price target as reasonable given its well-performing Regulated Segment and recent legislative actions at ExGen.

Investment Risks

We believe the primary risks facing EXC that could impede shares from reaching our price target include any deterioration of regulatory relationships in the jurisdictions where EXC has regulated operations, any further weakening of commodity pricing, any potential changes in policy toward nuclear plants, or from any adverse outcomes to capacity auctions.

Valuation Refresh

Below, we provide our analysis in how shares are being valued today on a SOTP basis:

1Q17 Earnings Details

Exelon affirmed 2017 EPS guidance of $2.50-$2.80 and initiated 2Q17 guidance of $0.45-$0.55 (vs. $0.65).

- EXC will no longer be pursuing sales of Mystic 8 & 9 assets, but remains committed to Debt/EBITDA and debt reduction commentary from the 4Q call.
- Relative to our estimate, O&M timing benefited the quarter.
- EXC reported EPS of $0.65 vs. $0.68 in 1Q16 as primary drivers include: weaker results at ExGen (-$0.16) and increased expense at the HoldCo (-$0.02), slightly offset by results at ComEd (+$0.03); BGE (+$0.03); PHI (+$0.09); and PECO results were flat YOY.
- Generation segment ongoing earnings fell ($172 million vs. $315 million) due to higher nuclear outage days and a weakened commodity environment.
- ComEd ongoing results rose $31 million ($141 million vs. $110 million), due to formula rates. Under IL legislation, ComEd implemented weather decoupling in 2017.
- PECO ongoing results increased $3 million ($129 million vs. $126 million), primarily due to favorable weather and increased electric distribution revenue from the Jan. 1 rate increase, partially offset by higher uncollectibles.
  - Heating Degree days were down 2% YOY and were 15.4% below normal.
  - Electric and gas deliveries were relatively flat.
  - Weather-normalized electric sales fell 1%, while weather-normalized gas sales were essentially unchanged.
- BGE earnings increased $26 million ($126 million vs. $100 million) due to June 2016 rates and lower storm activity, partly offset by higher AMI amortization.
- BGE has revenue decoupling, so weather minimally impacts earnings.
- PHI earned $81 million vs. $2 million in the quarter, as EXC owned PHI for the full quarter after the acquisition closed in March 2016.

Rating System

Overweight - We expect the stock to outperform the analyst's coverage sector over the coming 6-12 months.

Sector Weight - We expect the stock to perform in line with the analyst's coverage sector over the coming 6-12 months.

Underweight - We expect the stock to underperform the analyst's coverage sector over the coming 6-12 months.

Other Disclosures

KeyBanc Capital Markets is a trade name under which corporate and investment banking products and services of KeyCorp and its subsidiaries, KeyBanc Capital Markets Inc., Member NYSE/FINRA/SIPC (“KBCMI”), and KeyBank National Association (“KeyBank N.A.”), are marketed. Pacific Crest Securities is a division of KeyBanc Capital Markets Inc.

KeyBanc Capital Markets Inc. (“KBCMI”) does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report has been prepared by KBCMI. The material contained herein is based on data from sources considered to be reliable; however, KBCMI does not guarantee or warrant the accuracy or completeness of the information. It is published for informational purposes only and should not be used as the primary basis of investment decisions. Neither the information nor any opinion expressed constitutes an offer, or the solicitation of an offer, to buy or sell any security. The opinions and estimates expressed reflect the current judgment of KBCMI and are subject to change without notice. This report may contain forward-looking statements, which involve risk and uncertainty. Actual results may differ significantly from the forward-looking statements. This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the specific needs of any person or entity.

No portion of an analyst’s compensation is based on a specific banking transaction; however, part of his/her compensation may be based upon overall firm revenue and profitability, of which investment banking is a component. Individuals associated with KBCMI (other than the research analyst(s) listed on page 1 of this research report) may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(A), financial interest, if any, by any research analysts listed on page 1 of this report will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosure Appendix. KBCMI itself may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(F), if KBCMI, or its affiliates, beneficially own 1% or more of any class of common equity securities in the subject company(ies) in this research report, it will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosures Appendix. This communication is intended solely for use by KBCMI clients. The recipient agrees not to forward or copy the information to any other person without the express written consent of KBCMI.

Exelon Corporation

EXC - ALERT: 1Q17 Earnings Results Ahead of Views

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

Key Investment Points

May 2, 2017 Close: $34.46

1Q17 Ongoing EPS: $0.65 vs. $0.68 in 1Q16/Consensus of $0.63/KBCM of $0.61

Initial Take: We expect a neutral response as the EPS beat is offset by slightly weaker 2018/2019 gross margin.

2017 KBCM EPS Estimate: $2.70 (Consensus: $2.66)

2018 KBCM EPS Estimate: $2.90 (Consensus: $2.88)

Guidance: Exelon affirmed 2017 EPS guidance of $2.50-$2.80 and initiated 2Q17 guidance of $0.45-$0.55 (vs. $0.65)

Highlights:

- EXC will no longer be pursuing sales of Mystic 8 & 9 assets, however remains committed to Debt/EBITDA and debt reduction commentary from 4Q call.
- Relative to our estimate, O&M timing benefited the quarter.
- EXC reported EPS of $0.65 vs. $0.68 in 1Q16 as primary drivers include: weaker results at ExGen (-$0.16) and increased expense at the HoldCo (-$0.02), slightly offset by results at ComEd (+$0.03); BGE (+$0.03); PHI (+$0.09); and PECO results were flat YOY.
- Generation segment ongoing earnings fell ($172 million vs. $315 million) due to higher nuclear outage days and a weakened commodity environment.
- ComEd ongoing results rose $31 million ($141 million vs. $110 million), due to formula rates.
  - Under IL legislation, ComEd implemented weather decoupling in 2017.
- PECO ongoing results increased $3 million ($129 million vs. $126 million), primarily due to favorable weather and increased electric distribution revenue from the Jan. 1 rate increase, partially offset by higher uncollectibles.
  - Heating Degree days were down 2% YOY and were 15.4% below normal.
  - Electric and gas deliveries were relatively flat.
  - Weather-normalized electric sales fell 1%, while weather-normalized gas sales were essentially unchanged.
- BGE earnings increased $26 million ($126 million vs. $100 million) due to June 2016 rates and lower storm activity, partly offset by higher AMI amortization.
  - BGE has revenue decoupling, so weather minimally impacts earnings.
- PHI earned $81 million vs. $2 million in the quarter, as EXC owned PHI for the full quarter.

11:00 A.M. ET Conference Call #: (800) 690-3108 ID#: 44444489

We will be focused on:

- View of the market for the Generation segment
- Nuclear subsidies
- Efforts aimed at reducing PHI regulatory lag
- Sales trend and economic commentary
- Update on ConEd Solutions Business

Disclosure Appendix

Rating System

Overweight - We expect the stock to outperform the analyst's coverage sector over the coming 6-12 months.

Sector Weight - We expect the stock to perform in line with the analyst's coverage sector over the coming 6-12 months.

Underweight - We expect the stock to underperform the analyst's coverage sector over the coming 6-12 months.

Other Disclosures

KeyBanc Capital Markets is a trade name under which corporate and investment banking products and services of KeyCorp and its subsidiaries, KeyBanc Capital Markets Inc., Member NYSE/FINRA/SIPC (“KBCMI”), and KeyBank National Association (“KeyBank N.A.”), are marketed. Pacific Crest Securities is a division of KeyBanc Capital Markets Inc.

KeyBanc Capital Markets Inc. (“KBCMI”) does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report has been prepared by KBCMI. The material contained herein is based on data from sources considered to be reliable; however, KBCMI does not guarantee or warrant the accuracy or completeness of the information. It is published for informational purposes only and should not be used as the primary basis of investment decisions. Neither the information nor any opinion expressed constitutes an offer, or the solicitation of an offer, to buy or sell any security. The opinions and estimates expressed reflect the current judgment of KBCMI and are subject to change without notice. This report may contain forward-looking statements, which involve risk and uncertainty. Actual results may differ significantly from the forward-looking statements. This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the specific needs of any person or entity.

No portion of an analyst’s compensation is based on a specific banking transaction; however, part of his/her compensation may be based upon overall firm revenue and profitability, of which investment banking is a component. Individuals associated with KBCMI (other than the research analyst(s) listed on page 1 of this research report) may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(A), financial interest, if any, by any research analysts listed on page 1 of this report will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosure Appendix. KBCMI itself may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(F), if KBCMI, or its affiliates, beneficially own 1% or more of any class of common equity securities in the subject company(ies) in this research report, it will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosures Appendix. This communication is intended solely for use by KBCMI clients. The recipient agrees not to forward or copy the information to any other person without the express written consent of KBCMI.

EXC – Strong 1Q and Guidance Reaffirmed, Consistent Message

May 3, 2017

EXC beats; guidance reaffirmed. EXC reported operating earnings of $0.65 vs. Guggenheim estimate of $0.60, consensus estimate of $0.62; arrived at the top end of Q1 guidance range of $0.55-0.65; strong performance was primarily driven by timing of O&M and fewer refueling outage days at nuclear plants, partially offset by lower power prices and milder winter weather – 2017 guidance reiterated within the range of $2.50-$2.80 and 6-8% utility growth trajectory remains intact vs. Guggenheim EPS '17 estimate of $2.72 and 6% for LT earnings growth – we remain conservative and for now exclude ZEC accretion (~$0.25) from our estimates. Management also provided Q2 EPS guidance range of $0.45-$0.55, in line with Guggenheim estimate of $0.54. **Results constructive and very much supportive of our recent Mgmt. roadshow - see note HERE for additional thoughts.** Reiterate BUY – shares remain materially undervalued on any metric, in our view, esp. when utilizing our SOP analysis which includes a DCF of ExGen cash flows on the current forwards.

New York ZECs further along; could set a precedent in Illinois. New York Federal Court proceeded with hearings on oral arguments from EXC on its motion to dismiss in late March, although the judge did not provide a specific timeline for deadline of the issue. That said, the motion to dismiss is more like a jump ball, and in any case, EXC expects appeals will start at the Appellate Court of New York and potentially go all the way through to the Supreme Court – we believe investors should temper expectations with the current motion to dismiss process. Success in NY could be a read through to IL given that they are essentially the exact same case. Note - we are increasingly feeling more confident with building in the accretion and valuation upside into our estimates following our recent meetings with subject matter experts including Commissioners – just waiting for more clarity on the case in New York. As a reminder, EXC will continue to earn ZEC revenue, which is nonrefundable beginning April 1 in NY and has filed tariffs to begin collecting ZEC payments in IL on June 1.

Dividend plan set through 2018; Mgmt. likely to take a harder look at potential growth next year. Dividend growth is currently set up at 2.5%, below peers and EXC's own regulated EPS growth of 6-8%. As we highlighted recently, we believe constructive PJM auction results and ZECs process could go a long way in providing the much needed confidence to revisit dividend policy. In our view, mgmt. could revisit the dividend with board as early as 2018 – we don't expect a modest bump as any change in policy would likely be more material. Note, visibility with EXC continues to improve even outside of ZECs – utility is well on its way of fully covering the dividend and HoldCo interest expense over the next couple of years. Following this, EXC could be in a good position to re-deploy ExGen FCF in other value enhancing ways.

Not ready for retail expansion but margins remain sticky with few competitors in the market. Management indicated that they would remain disciplined with acquisitive opportunities while monitoring the trend of the market closely. Retail margins for C&I remain in the range of $2-$4 (EXC now has 29% market share for C&I). Mgmt. acknowledged that there are signs of a formation of an oligopoly with consolidation and the recent asset sales in the industry – we may actually start seeing margins improving with fewer participants.

Near completion of Round I of PHI rate proceedings with constructive outcomes; Kicking off Round II – good start. EXC continued its effort in closing the gap between earned and allowed ROEs at PHI with another round of rate case filings in 2017, after settling several rate cases in 2016 with fairly constructive outcomes and only one rate proceeding (i.e. PEPCO rate case in D.C.) remains open in the first round (we keep our expectation low for a constructive D.C. outcome). **Management remains confident that lags should be mitigated with two rate cycles - we model diminishing lag through 2020.** As a reminder, current active rate cases include: (1) Washington D.C.: $78mm revised electric distribution revenue ask at PEPCO with 8.6% ROE – final decision due 07/2017; we would highlight our expectations are low for DC rate outcome as this same Chairwoman was against the merger (DC only 6% of rate base); (2) Delaware: $32mm electric revenue increase settlement, with 9.7% ROE, and $5mm gas revenue increase settlement, with 9.7% ROE, filed at DPL – decision by 05/2017; (3) Maryland: $69mm electric distribution revenue ask at PEPCO with 10.1% ROE – final decision due 09/2017. (4) Illinois: $100mm FRP filing at ComEd with 8.4% ROE – final decision due 12/2017. (5) New Jersey: $70mm electric revenue ask at ACE with 10.1% ROE – final decision due 12/2017.

On asset level – closure with Mystic strategy; further details provided around TX CCGTs. Potential sale of the Mystic assets in Boston is now off the table given, in our view, the likely difficulty for a new buyer of re-negotiating and emulating the current constructive LNG fuel supply contract that EXC signed with provider; we do not expect this to have any impact on EXC's commitment on debt reduction – this sale was purely incremental. Management also expect to bring on-line the two fast-start CCGT plants (Colorado Bend and Wolf Hollow) in Texas in May and June of 2017 and indicated their intent to divest the two plants through separate processes - have reached agreement with lenders to pursue a potential sale. Sale of TX fast start CCGTs the right move given EXC focus on growing regulated and/or contracted revenues streams.

Valuation

Our $42 price target is based on a sum-of-the-parts analysis. We assign ~$17/share for ExGen using a 7.4x weighted average EV/EBITDA applied to ExGen's various assets. We assign $30/share for the regulated utilities combined based on our 2018E EPS of $1.79 applied to a 17.0x regulated utility multiple. Subtracting out ~$5 in parent drag, we arrive at our 12-month price target.

Risks

Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM.

The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

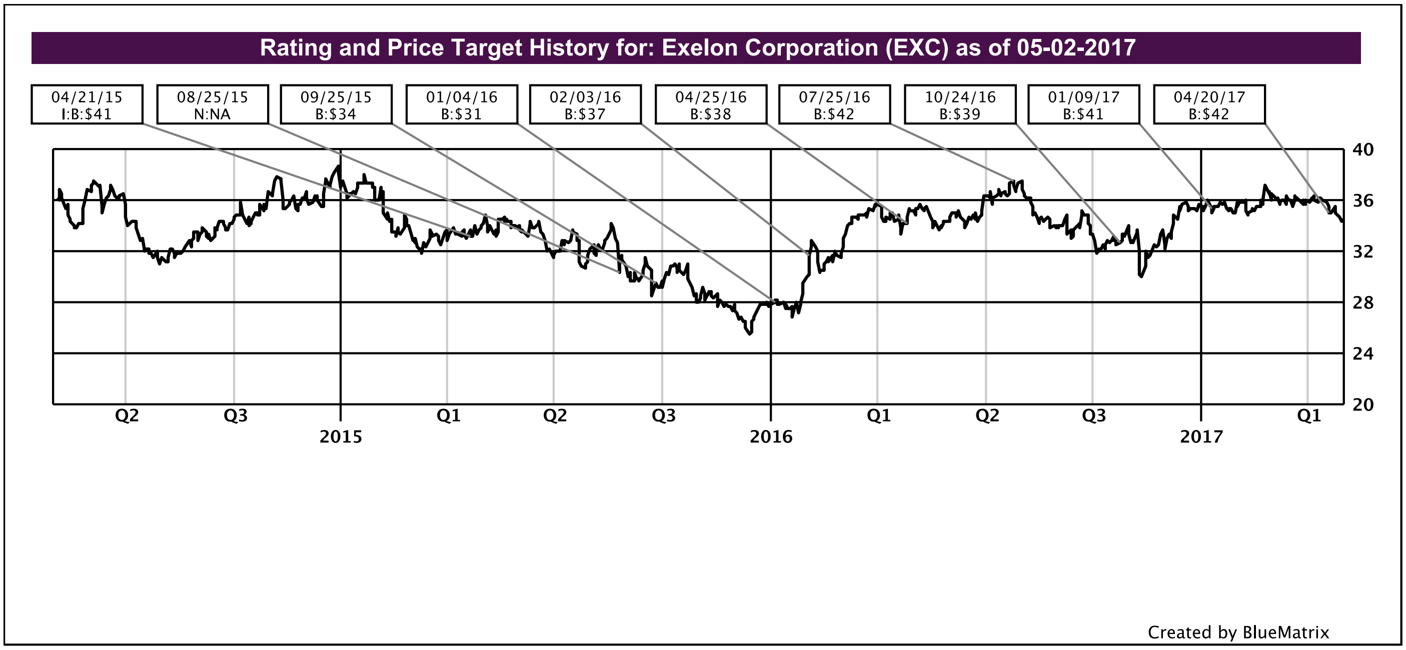
By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.



Rating and Price Target History for: Exelon Corporation (EXC) as of 05-02-2017

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

EXC on Track to Meet 2017 Expectations

Bottom Line: EXC reported 1Q17 operating EPS generally as expected and in line with consensus. Utility-related earnings benefited mainly from rate relief, while ExGen earnings declined by almost 50%, primarily reflecting declining market conditions. EXC's merchant generation remains a drag on consolidated growth compared to utility growth expectations of 6-8%. Management reaffirmed its 2017 EPS guidance of $2.50-2.80, with all business segment contributions unchanged from prior disclosures. We find EXC shares fairly valued trading at a discount to its peers.

Key Points

1Q17 adjusted EPS of $0.65, at the high end of EXC's expectations, but modestly lower than the $0.68 earned in 1Q16. EPS benefited this quarter largely from incremental rate relief at its utility businesses and the March 2016 acquisition of PHI, offset by increased planned outages and declining market conditions adversely impacting ExGen. Utility earnings were $0.52 in 1Q17, including $0.09 from the PHI acquisition vs. $0.37 a year ago, with virtually no PHI contribution; ExGen earned $0.18 compared to $0.34.

2017 EPS guidance maintained at $2.50-2.80, with no change to segment contributions. EXC's utilities are expected to earn $1.55-1.95/share in 2017, supported by rate base growth of 8.5% over 2016 levels; ExGen's EPS guidance range is $1.05-1.15 (down from $1.27 in 2016) as lower energy prices are only partially offset by New York and Illinois ZECs. As of 3/31/17, ExGen's 2017 gross margin is unchanged from YE16, but is $50 million lower for both 2018 and 2019. EXC expects a favorable resolution of pending ZEC lawsuits in NY and IL, although timing remains unclear.

Portfolio update. EXC recently agreed to sell part of its renewables portfolio, or 1,296 MW, to John Hancock for $400 million pretax, with options to drop additional assets into this newly formed JV. Proceeds will be applied to ExGen debt reduction. Also, EXC reached an agreement with lenders to pursue the sale of 3,476 MW of economically challenged gas plants in Texas, but is no longer pursuing the sale of Mystic 8 & 9 in Massachusetts.

Maintaining EPS estimates and price target. We find EXC shares fairly valued trading at a discount to its peers, as the merchant generation business continues to weigh on EXCs valuation. Our price target remains $37.

Key Changes

EPS: 2016 adjusted as reported; model will be updated post 10K filing.

Our Thesis

We believe EXC will continue to face headwinds at its competitive mainly nuclear generation business stemming from continued weak power and natural gas prices, rising O&M costs, and challenges from renewable generation, partially offset by ZEC subsidies. Growth at its regulated business could somewhat mitigate the pressures at the competitive business.

New Scenarios

Valuation

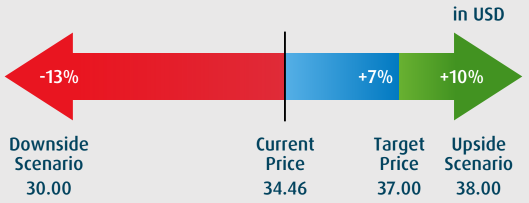
We find EXC shares fairly valued and see few catalysts that would propel earnings or the stock at this time, although proceeds from asset sales would be a near-term positive. Power prices are weak and are likely to remain so for some time. We expect Exelon to trade in a relatively narrow range, recognizing that downside risk is limited, in our opinion, unless power prices further deteriorate.

Upside Scenario $38.00

In a declining interest rate environment, we could see P/E multiples expand. This, together with a rising power and natural gas price environment, which could lead to EV/EBITDA multiple expansion to 8.4x, would equate to a share price of $38.

Downside Scenario $30.00

In a rapidly rising interest rate environment, we could see P/E multiples contract. This, together with a declining power and natural gas price environment, which could lead to EV/EBITDA multiple contraction to 7.2x, would equate to a share price of $30.



Company Description

Exelon is the largest competitive U.S. power generator, with ~32,700 MW of owned capacity. Its Constellation business unit provides energy products and services to business, public, and residential sector customers. Exelon's utilities deliver electricity and natural gas to 10 million customers in Delaware, DC, Illinois, Maryland, New Jersey, and Pennsylvania.

Company Models

Key Takeaways From the Conference Call

EPS Estimates

Exelon reaffirmed its 2017 EPS operating guidance of $2.50-2.80, with the utilities accounting for $1.55-1.95 ($1.61 in 2016), ExGen at $1.05-1.15 ($1.27 in 2016), and Parent/Other, a loss of $0.20 (-$0.19 in 2016).

Key 2017 utility drivers include a full-year contribution from PHI (a $0.09 contributor in 1Q17), rate-base growth and rate relief, offset by higher O&M, as well as higher depreciation expenses (new investment).

ExGen earnings guidance reflects the impact of hedging at lower energy prices, somewhat offset by partial-year revenues from the New York (April 1, 2017) and Illinois (June 1, 2017) ZEC programs; contributions from the recently acquired FitzPatrick plant (March 2017); as well as the new Texas CCGTs (2,200 MW) expected to enter commercial operation this summer.

We are making no change to our 2017 and 2018 EPS estimates of $2.70 and $2.80 at this time; we are initiating a 2019 estimate of $2.75, with declines at ExGen again offsetting utility growth.

Utility Update

- EXC continues to make headway towards improving ROEs. It has completed rate cases for Delmarva in Maryland and Delaware with authorized ROEs of 9.6% (MD) and 9.7% (DE). Pepco's DC filing is expected to be completed by July 25, 2017, while filings in MD and NJ are expected to be finalized in 4Q17 and 1Q18, respectively. A final decision on ComEd's Illinois case is expected in 4Q17. In total, EXC has ~$312 million of potential increased revenue pending decisions.
- Total utility rate base growth is projected at 6.5% through 2020. About 75% of rate-base spending is recoverable through formulaic mechanisms and more than 70% of rate base is decoupled, providing earnings visibility.

ExGen Update

- As of March 31, 2017, total gross margin for 2017 is unchanged from EXC's YE16 disclosures at $8.15 billion, but lower by $50 million to $8.25 billion in 2018 and $7.85 billion in 2019. Retail margins remain steady in the $2-4/MWH range.

- EXC's FFO/debt is projected at 21% for 2017, with a goal of 18-20% over the next several years. ExGen's debt/EBITDA ratio should approximate 3.2x in 2017, declining to 3.0x by 2020.

- ExGen is expected to generate ~$7 billion of free cash flow 2017-2020.
  - ExGen's free cash flow, along with proceeds from asset sales/dropdowns will be used to pay down more than $3 billion of debt through 2020.

Update on Portfolio Rationalization

- EXC recently agreed to sell part of its renewables portfolio, or 1,296 MW, to John Hancock for $400 million pretax, representing an EV/EBITDA greater than 10x. It retains the option of dropping additional assets into this newly formed JV. Proceeds will be applied to ExGen debt reduction. Including allocated debt, the total JV enterprise value is ~$1.7 billion. The JV will allow EXC to accelerate its debt reduction goals without undermining its commitment to renewables.

- Although PJM lowered its demand forecast and there continues to be a rash of new gas-fired generation being built, EXC believes that tightening CETL for the ComEd and EMAAC LDAs could result in a more constrained market and therefore, these zones could price separately in the auction later this month.

- EXC reached an agreement with lenders to pursue the sale of 3,476 MW of economically challenged gas-fired CCGTs and simple cycle plants in Texas that are struggling to generate adequate cash flows. The company has reached an agreement with its lenders to pursue the sale of these assets.
  - EXC's two new CCGT units in Texas, totaling 2,200 MW are on budget and on schedule for completion by this summer; these assets are not part of the aforementioned agreement to pursue a sale.

- EXC is no longer pursuing the sale of Mystic 8 & 9 at this time, primarily due to a fuel supply agreement. However, this decision will not impact EXC's commitments on debt/EBITDA and debt reduction goals.

- The acquisition of the FitzPatrick nuclear plant from Entergy was completed on March 31, 2017 for $110 million. The FitzPatrick plant will generate some $0.08-0.10 per share of Zero Emission Credits (ZECs) and $350 million in after tax cash on an annualized basis through 2020.

IMPORTANT DISCLOSURES

Analyst's Certification

I, Michael S. Worms, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA. These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosures

Disclosure 10: A research analyst, associate, or any person (or their household members) directly involved in the preparation of this research report has a financial interest in securities of Exelon.

Methodology and Risks to Price Target/Valuation for Exelon (EXC-NYSE)

Methodology: Our valuation is based on a combination of our 2018 adjusted EBITDA estimate with an 8x EV/EBITDA multiple and a 17x 2018E P/E multiple.

Risks: A material decline in power prices and/or a change in the regulatory environment.

Ratings Key (as of October 2016)

We use the following ratings system definitions:
OP = Outperform - Forecast to outperform the analyst's coverage universe on a total return basis;
Mkt = Market Perform - Forecast to perform roughly in line with the analyst's coverage universe on a total return basis;
Und = Underperform - Forecast to underperform the analyst's coverage universe on a total return basis;
(S) = Speculative investment;
Spd = Suspended - Coverage and rating suspended until coverage is reinstated;
NR = No Rated - No rating at this time; and
R = Restricted - Dissemination of research is currently restricted.

BMO Capital Markets' seven Top 15 lists guide investors to our best ideas according to different objectives (CDN Large Cap, CDN Small Cap, US Large Cap, US Small Cap, Income, CDN Quant, and US Quant have replaced the Top Pick rating).

Valuation and risks: We value EXC using a SOTP framework in which we value the utilities at 16.9x on average. This represents a modest premium to our regulated target of 16.5x reflecting better than average growth prospects offset by some lingering uncertainty over whether EXC can close the gap between POM's earned and authorized returns. We value the generation and retail businesses using a 7.0x EV/EBITDA multiple applied to our 2019 estimate. This above-average multiple for a merchant business reflects longer-term visibility provided by capacity and ZEC revenues and a stronger credit profile than IPP peers. Downside risks include lower-than-expected forward power prices, successful legal challenges of nuclear subsidies in New York or Illinois, falling short of targeted de-levering at ExGen and targeted ROE and operational improvements at the underperforming POM utilities.

Solid quarter but call focus on developing baseload subsidy discussions

EXC beat our Q1 estimate by $0.03 (5%) with segments also in line. Guidance for 2017 was reiterated at $2.50-$2.80 along with ExGen's 3.0x debt:EBITDA target. With limited news, much of the call focused on topical federal and state initiatives to support baseload generation including the recently launched DOE study and FERC's technical conference earlier this week. As the leading nuclear owner in competitive markets EXC is well positioned to benefit from building momentum on this front, with Zero Emissions Credits already being collected in New York and set to begin this fall in Illinois. While the stock has lagged of late along with forward curves, we remain buyers of EXC's solid regulated growth, committed use of cash flow to de-lever at Ex-Gen with potential for further policy-related catalysts. Reiterate Buy, estimates, and $41 price target.

Earnings off $0.04 vs. 1Q16 but ahead of DBe and consensus

Q1 earnings came in right at the top end of EXC's $0.55-$0.65 guidance, ahead of our $0.62E and $0.63 consensus. The combined utilities delivered $0.52 up from $0.37 with the addition of Pepco (PHI) adding $0.09 to the regulated mix. ComEd was $0.02 light versus DBe on lower than expected rate base earnings growth. BGE came in $0.02 ahead with a penny more uplift from higher distribution rates, while PECO and PHI were both a penny better than forecast. ExGen's quarter was down $0.16 at $0.18 but in line with DBe with lower pricing (-$0.06) and higher plant outages (-$0.04) the primary factors. HoldCo drag was $0.05 for the quarter and down $0.02 reflecting financing costs and absence of a 1Q16 gain.

Gathering momentum to support baseload power likely bodes well for EXC

As other merchant generators have done on Q1 calls, EXC highlighted DOE Secretary Perry's recent letter calling for a study on the importance of baseload generation to grid reliability and resiliency. Results of the study and recommendations on how best to move forward are due out of the DOE in mid-June. EXC acknowledged that DOE may be somewhat limited in terms of specific actions but are clearly hopeful the department will set a constructive tone for new legislation or rule changes at the FERC or NRC. Management also referenced the potential use by the DOE of Section 202 of the Federal Power Act to secure baseload resources, but we'd note that the DOE has only invoked Section 202 a few times and then only in emergency situations involving an immediate threat to reliability. Separately, the FERC held a technical conference earlier this week, where potential market reforms to address the state subsidy movement were discussed, one of which would be putting a price on carbon. While parties are far from agreeing on appropriate solutions, there seems to be a growing sense of inevitability that something needs to be done to address the lack of market pricing to appropriately value baseload plant attributes including fuel diversity, resiliency and environmental benefits. It's clearly too early to know for sure how these various efforts will develop, but EXC seems particularly well positioned to benefit from market reforms, particularly if the once unthinkable (and still hard to imagine) federal carbon price regime were to materialize at some point.

EGTP sale expected to be accretive to EPS and debt:EBITDA

On the call, EXC discussed a recent agreement with holders of $650M worth of distressed non-recourse project debt associated with a ~3,500 MW portfolio gas-fired generation in Texas. Per the agreement, EXC will sell the plants on behalf of the bond holders, with the exit expected to be accretive to EPS and debt:EBITDA metrics in 2018. While the ultimate EBITDA contribution is unclear, we are doubtful that these plants are contributing meaningfully in out years and do not expect the exit to have a significant impact on our valuation or price target.

Moving forward with regulated strategy

We found EXC's tone on the regulated utility strategy and anticipated rate case filings to be in line with prior commentary. The company expects to deliver an EPS CAGR of roughly 6-8% at the utilities through 2020. With rate base growth seen in the 6.5% ballpark, this will require closing the gap between the legacy Pepco Holdings utilities' earned and authorized returns through rate relief. EXC targets a 9-10% ROE at these subsidiaries in 2019 after the completion of a second round of rate cases post acquisition close. These have commenced in some jurisdictions with the rest of the filings expected by the end of the year or early next.

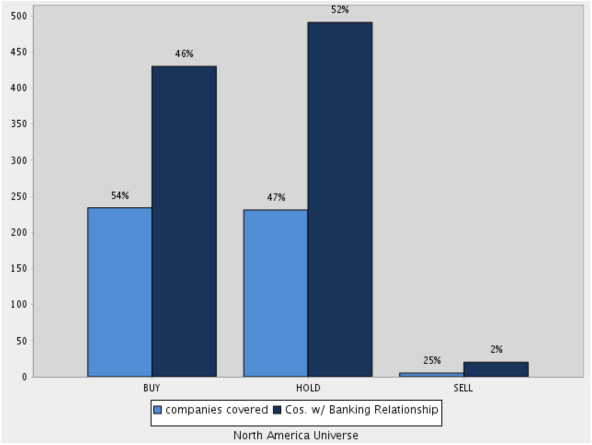
Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Equity rating dispersion and banking relationships



Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss.

The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

Exelon Corp (EXC): 1Q17 beat on better ExGen margins; 2017 guidance reiterated

Sentiment Indicator : neutral

Produced by Tucker, Shelby (RBC Capital Markets, LLC) on Wednesday, May 03, 2017, 09:05 AM ET

Disseminated on Wednesday, May 03, 2017, 09:09 AM ET

Our View: Modest beat on better ExGen margins and expense control. We expect questions on the call to focus on: 1) details on the reason for deciding to no longer sell Mystic 8 & 9; 2) the company's involvement and discussions regarding potential nuclear subsidies in Pennsylvania; and 3) strategic thoughts at ExGen with the recent renewables JV and the anticipated use of proceeds from future Texas gas asset sale.

Exelon Corp (EXC; $34.46; Outperform; $40 PT) reported 1Q17 adjusted earnings of $0.65 per share, $0.04 above our estimate of $0.61 per share, above consensus of $0.63 per share, and at the top end of management's guidance of $0.55-$0.65 per share. The result also compares to 1Q16 results of $0.68 per share. Management reiterated their 2017 adjusted EPS guidance of $2.50-$2.80; our estimate is $2.64 versus consensus of $2.66. They also guided 2Q17 adjusted EPS at $0.45-$0.55. The following highlight some of the key EPS drivers of the quarter on a year-over-year (YoY) basis versus our estimates:

- **ExGen market conditions:** -$0.03, $0.05 better.
- **Nuclear volume:**- -$0.02, $0.01 worse.
- **ExGen capacity revenue:** -$0.03, in line.
- **Weather:** $0.01, $0.01 better.
- **BGE rates:** $0.02, in line.
- **ComEd rates/investment:** $0.03, $0.01 better.
- **PHI earnings contribution:** $0.06, $0.03 worse.
- **On-going O&M expense:** $0.01, $0.02 better.
- **Planned nuclear refueling outage:** -$0.02, in line.
- **Depreciation expense:** -$0.02, in line.
- **Interest expense:** -$0.02, in line.

Moderate decrease in ExGen gross margin forecasts. Total gross margins for 2017-2019 stand at $8.15 billion, $8.25 billion, and $7.85 billion, respectively, $50 million lower each for 2018 and 2019. The change in margins is due to lower open gross margins, with the business remaining behind ratable in its hedging program.

PHI earned ROEs continuing to improve. As of March 31, the three Pepco utilities (ACE, Delmarva, Pepco) recorded trailing 12-month earned ROEs of 6.5%, 7.2%, and 8.3%. This is up from 5.6%, 6.3%, and 7.5%, respectively, as of December 31, 2016. Both Pepco and ACE have another round of rate cases currently filed, with decisions expected in 4Q17 and 1Q18, respectively.

No longer looking to sell Mystic 8 & 9. As of the 4Q16 earnings call, management had still intended to sell the ~2,000 MW facility in Middlesex, MA and were in the process of evaluating all offers, although the delay in finalizing a sale caused some concern for investors. Our model incorporated a sale in 3Q17 for $600/kW, with the $1.2 billion in sales proceeds used to pay down ExGen/HoldCo debt. The 1Q17 slide deck reiterated the company's goal to reduce debt and improve debt/EBITDA metrics.

Conference call at 11 AM ET. The dial-in number is (800) 690-3108, with pass code 44444489.

Model Update

Overweight

EXC, EXC US

Price: $33.98

▼ **Price Target: $40.00**
Previous: $41.00

We are updating our model to incorporate our newly revised assumptions after EXC reported Q117 earnings. We are revising our December 2017 price target downward to $40 from $41, primarily reflecting a lower regulated peer multiple relative to our prior update.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $40.00)*

Investment Thesis

ExGen continues to generate strong cash flow even in a challenging commodity environment, allowing it to fund a top-tier utility growth story and a growing dividend. While the legal standing of ZECs remains a concern, a final litigated decision at NY may come as early as Q3 and would at least bring a greater degree of clarity for the fate of IL ZECs. Given EXC's prior success of lag catchup at BGE, we believe EXC is well positioned to increase ROEs at Pepco as the company prepares for a second round of rate case filings. An announcement of the sale of the renewables or ExGen Texas CCGT assets could also accelerate the ExGen deleveraging process.

Valuation

We are lowering our December 2017 price target to $40/share from $41/share. Our valuation is based on a sum-of-the-parts analysis using our 2019 forecasts. We use an average 19.6x P/E multiple for the regulated utility and corporate business segments. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. The downward revision in our price target is driven by a lower regulated peer multiple relative to our prior estimate.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company's earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Algonquin Corp. (AQN.TO), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. Box 51907, Riyadh 11553, Kingdom of Saudi Arabia. **Dubai**: JPMorgan Chase Bank, N.A., Dubai Branch is regulated by the Dubai Financial Services Authority (DFSA) and its registered address is Dubai International Financial Centre - Building 3, Level 7, PO Box 506551, Dubai, UAE.

Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. Further information about J.P. Morgan's conflict of interest policy and a description of the effective internal organisations and administrative arrangements set up for the prevention and avoidance of conflicts of interest is set out at the following link https://www.jpmorgan.com/jpmpdf/1320678075935.pdf. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch which is regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. **Japan:** There is a risk that a loss may occur due to a change in the price of the shares in the case of share trading, and that a loss may occur due to the exchange rate in the case of foreign share trading. In the case of share trading, JPMorgan Securities Japan Co., Ltd., will be receiving a brokerage fee and consumption tax (shouhizei) calculated by multiplying the executed price by the commission rate which was individually agreed between JPMorgan Securities Japan Co., Ltd., and the customer in advance. Financial Instruments Firms: JPMorgan Securities Japan Co., Ltd., Kanto Local Finance Bureau (kinsho) No. 82 Participating Association / Japan Securities Dealers Association, The Financial Futures Association of Japan, Type II Financial Instruments Firms Association and Japan Investment Advisers Association. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com.sg. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: This material is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited. According to Paragraph 2, Article 7-1 of Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers (as amended or supplemented) and/or other applicable laws or regulations, please note that the recipient of this material is not permitted to engage in any activities in connection with the material which may give rise to conflicts of interests, unless otherwise disclosed in the "Important Disclosures" in this material. **India:** For private circulation only, not for sale. **Pakistan:** For private circulation only, not for sale. **New Zealand:** This material is issued and distributed by JPMSAL in New Zealand only to persons whose principal business is the investment of money or who, in the course of and for the purposes of their business, habitually invest money. JPMSAL does not issue or distribute this material to members of "the public" as determined in accordance with section 3 of the Securities Act 1978. The recipient of this material must not distribute it to any third party or outside New Zealand without the prior written consent of JPMSAL. **Canada:** The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed judgment upon these materials, the information contained herein or the merits of the securities described herein, and any representation to the contrary is an offence. **Dubai:** This report has been issued to persons regarded as professional clients as defined under the DFSA rules. **Brazil**: Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. The recipient of this report must make its own independent decisions regarding any securities or financial instruments mentioned herein. JPMS distributes in the U.S. research published by non-U.S. affiliates and accepts responsibility for its contents. Periodic updates may be provided on companies/industries based on company specific developments or announcements, market conditions or any other publicly available information. Clients should contact analysts and execute transactions through a J.P. Morgan subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

TOP PICK Exelon Corp.

Execution Drives the Upside

Reiterating Overweight Rating and $43 PT: We are reiterating our Overweight rating and our $43 PT. For 1Q17 the company reported Adj. Operating EPS of $0.65 vs. $0.68 last year, guidance of $0.55-$0.65, and consensus of $0.62.

Focus on 2020 Power Earnings Degradation Misplaced: On the earnings call investors expressed some concerns around an earnings cliff in 2020 related to lower year on year quark spreads on the forward curve and likely lower year on year capacity prices pending the outcome of the upcoming capacity auction in May. We believe these concerns are overblown as natural gas prices have shown resilience given exports to Mexico, LNG capacity, and takeaway capacity from the Marcellus and Utica taking shape. Power prices have yet to respond given a lack of liquidity three years out in the forward curve. If gas prices hold, we expect power to trade higher and spreads to widen as liquidity improves. On the capacity side a significant proportion of Exelon's MWs are in the ComEd region which broke out in the '18/19 and '19/20 capacity years and is expected to break out in the upcoming '20/21 auction. If pricing hits expectations there will be very little degradation in capacity revenues for the 2020 calendar year in ComEd. EMAAC should also break out and while it would likely do so at lower pricing Exelon is better positioned that other names to capacity pricing.

Utility Story Underappreciated: We believe investors are not focused on truly appreciating the excellence management applies to regulated utility franchises. The operational metrics for the recently acquired Pepco utilities are ahead of our expectations and regulatory recovery across two rate case cycles drives returns significantly higher toward allowed levels of 10%. This is the same path management took with BG&E and they are proving they can do it again. Our estimate of EPS power excluding ExGen in 2020 is $2.00/share which at the current 16x multiple is a $32/share indicative valuation, which in turn implies investors are only paying $2/share for the ExGen business. As a reminder the ExGen business is projected to be a 3.0x Debt/EBITDA at that time and offers significant upside to a power market recovery.

Price (03-May-2017)	USD 33.98
Price Target	USD 43.00

Why Overweight? We believe that that utility growth of 7-9% is achievable and will be funded by cash flow from the generation company even with the current forward curves. Any additional legislation similar to the CES in New York or the inclusion of the CES in our numbers is upside to our estimates.

Upside case **USD 49.00**

Our upside case assumes the impact of the zero emission credits in New York for the genco and assumes a 10% premium for the utility valuation given the above average growth.

Downside case **USD 33.00**

Our downside case assumes a 10% discount for the utility and a 4x EBITDA at the genco based on current forwards, with no consideration of the CES or FitzPatrick acquisition

Upside/Downside scenarios

Note: FY End Dec

Key Ongoing Items Update

Zero Emission Credits (ZECs) Legal Challenges

New York

The legal process around the lawsuit against the ZECs in New York continues to move forward and the motion to dismiss was held on March 29. Currently we are awaiting the decision on the motion to dismiss from the Judge and there is no statutory time limit or schedule for that decision. The decision on the motion to dismiss will determine the next steps and whether, if dismissed there is an appeal, or if the case moves forward to a trial this summer and fall. There is no stay ordered by the courts and the ZEC program in New York went into effect on April 1 2017.

Illinois

Plaintiffs filed for a preliminary injunction to the Illinois ZEC program on March 31 and a subsequent motion to dismiss was filed on April 10. The Judge in Illinois issued a preliminary injunction while a full briefing is received by the court. Plaintiffs filed their responses on April 24 and defendant replies are due by May 15. The judge will inform parties of his intentions regarding the case on May 22, and baring any action by the courts by way of a permanent injunction or stay order, the Illinois ZEC program would become effective on June 1.

PJM Capacity Market Auction

This year's Reliability Pricing Model (RPM) capacity auction in the PJM market will open for bidding on May 10 and bidding will close on May 16. Auction results will be posted on the PJM website on May 23. Management expressed on the call that the move in this year's auction to a 100% capacity performance standard could lead to bidding behavior more in line with long term economic realities for plants in the market. Further, the tightening CETL ratios in the final PJM planning parameters indicate to management that ComEd and EMAAC regions remain likely to break out from the rest of pool and price as more constrained markets. Offsetting these positive drivers is the lower PJM demand forecast and the potential for higher new build bidding in.

We certainly share the view that ComEd is likely to break out and our estimate for pricing is \$170-\$210/MW-day with a mid-point of \$190/MW-day. We also believe at least PS North is likely to break out with pricing \$120-\$160/MW-day with a mid-point expectation of \$140/MW-day. This is versus our RTO expectation of \$85 - \$135/MW-day with a mid-point of \$110/MW-day. While the updated planning parameters showed a tightening for the EMAAC region as well, whether or not that region breaks out will largely depend, in our view as to whether summer demand response resources can aggregate with winter resources to continue to bid in under capacity performance. Importantly if the winter resource that is aggregated is outside of EMAAC and in RTO the demand response and winter resource move to RTO, which could lead EMAAC to break out and also potentially push down RTO pricing all else equal. If the aggregated winter resource is in the EMAAC region then the bid would remain in EMAAC and that region breaking out would be less likely.

Recent Key Transactions

Exelon Generation Renewables Joint Venture

This transaction was executed with John Hancock for \$400 million in pre-tax proceeds for 1,296MWs of renewable generation capacity. The sale price represented a greater that 10x EV/EBITDA multiple. Exelon retains the right to drop further projects into the JV and any proceeds from these drop downs will be used to accelerate the deleveraging of the balance sheet at ExGen toward the 3.0x Debt/EBITDA target. Management indicated during Q&A

on the call that the most likely candidates for drop down to the JV would be the AVRS solar facility in 2019 once tax credits expire and the Albany Green Energy biomass wood burning facility which comes online around the end of 2017 and would likely be a drop down in 2018.

FitzPatrick Nuclear Station

The acquisition of the FitzPatrick Nuclear station from Entergy was completed on March 31 2017 and will contribute to earnings going forward. The plant constitutes 838 MWs of nuclear capacity and is receiving payments as of April 1 under the New York ZEC program discussed above.

Mystic 8 & 9

Management indicated on the call that they are no longer pursuing the sale of these assets, which has no impact on the commitments to ExGen debt reduction to the 3.0x Debt/EBITDA goal. Management also indicated that they could revisit the process for Mystic at some future time and as with all assets in the portfolio, continually evaluate strategic options.

ExGen Texas Power

ExGen Texas Power has 3,476MWs of conventional power plants in the ERCOT market that are all natural gas fired CCGTs or simple cycle peaking turbines. The plants are currently economically challenged given the downturn in ERCOT power prices given the lack of uneconomic plants retiring in the market and the lack of hot summer weather driving scarcity pricing. The portfolio currently has $650 million of debt at a non-recourse level and Exelon has indicated that they will not be supporting the assets with additional equity. An agreement in principal has been reached with the lenders to pursue a potential sale of the assets, which would reduce ExGen leverage all else equal by 0.1x. We believe any sale contemplated by Exelon would need to be at a price that would be EPS accretive.

B: An employee or non-executive director of Barclays Bank PLC and/or an affiliate is a director of this issuer.

CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by this issuer.

CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by this issuer.

D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

E: Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer within the next 3 months.

FA: Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with US regulations.

FB: Barclays Bank PLC and/or an affiliate beneficially owns a long position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

FC: Barclays Bank PLC and/or an affiliate beneficially owns a short position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

GD: One of the analysts on the fundamental credit coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

GE: One of the analysts on the fundamental equity coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

H: This issuer beneficially owns more than 5% of any class of common equity securities of Barclays PLC.

I: Barclays Bank PLC and/or an affiliate is party to an agreement with this issuer for the provision of financial services to Barclays Bank PLC and/or an affiliate.

J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities of this issuer and/or in any related derivatives.

K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from this issuer within the past 12 months.

IMPORTANT DISCLOSURES CONTINUED

L: This issuer is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

M: This issuer is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

N: This issuer is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.

O: Not in use.

P: A partner, director or officer of Barclays Capital Canada Inc. has, during the preceding 12 months, provided services to the subject company for remuneration, other than normal course investment advisory or trade execution services.

Q: Barclays Bank PLC and/or an affiliate is a Corporate Broker to this issuer.

R: Barclays Capital Canada Inc. and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

S: This issuer is a Corporate Broker to Barclays PLC.

T: Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.

U: The equity securities of this Canadian issuer include subordinate voting restricted shares.

V: The equity securities of this Canadian issuer include non-voting restricted shares.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

AES Corp. (AES)
American Electric Power (AEP)
Aqua America (WTR)
Brookfield Renewable Energy Partners LP (BEP)
Calpine Corp. (CPN)
CenterPoint Energy Inc. (CNP)
Consolidated Edison (ED)
Duke Energy (DUK)
Alliant Energy (LNT)
American States Water Company (AWR)
Brookfield Infrastructure Partners LP (BIP)
Brookfield Renewable Energy Partners LP (BEP_u.TO)
Canadian Utilities Ltd. (CU.TO)
CMS Energy (CMS)
Dominion Resources (D)
Dynegy Inc. (DYN)
Ameren Corp. (AEE)
American Water Works (AWK)
Brookfield Infrastructure Partners LP (BIP_u.TO)
California Water Service Group (CWT)
Caribbean Utilities Ltd. (CUPu.TO)
Connecticut Water Service Inc. (CTWS)
DTE Energy (DTE)
Edison International (EIX)

Distribution of Ratings:

Barclays Equity Research has 1786 companies under coverage.

42% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 52% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 36% of companies with this rating are investment banking clients of the Firm; 60% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

A: Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of Exelon Corp. in the previous 12 months.

CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by Exelon Corp..

CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by Exelon Corp..

D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from Exelon Corp. in the past 12 months.

J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by Exelon Corp. and/or in any related derivatives.

K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from Exelon Corp. within the past 12 months.

L: Exelon Corp. is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

M: Exelon Corp. is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our current $43 price target is premised upon a 2019 group average multiple of 16.8x applied to the utility net parent earnings of $1.81 resulting in $31 of utility value. Exgen is valued at 6.6x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, the combined value is $43.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Investment Thesis

Travis Miller, Strategist, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

Economic Moat

Travis Miller, Strategist, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle

Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move

so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Travis Miller, Strategist, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities

Travis Miller, Strategist, 09 November 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth

Travis Miller, Strategist, 14 November 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Travis Miller, Strategist, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Strategist, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

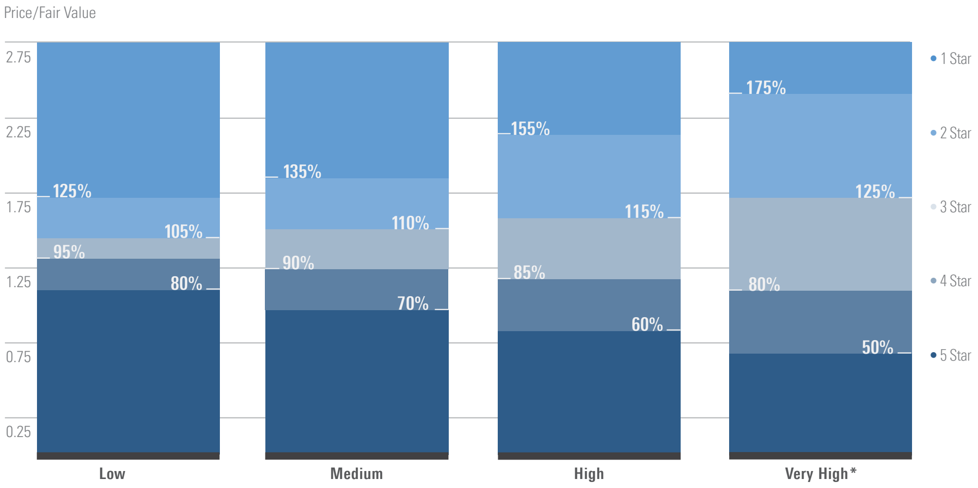
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ►**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ►**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ►**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ►**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ►**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ►**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ►**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ►**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

4 May 2017
Macquarie Capital (USA) Inc.

Exelon Corp

Drama-filled May

Event

- While we are optimistic about capacity clearing prices for EXC's zones (COMED and EMAAC), we recognize that PJM capacity auctions are difficult to call, and that investors tend to limit their exposure to PJM-sensitive power names, such as EXC, ahead of them. Add to that upcoming updates on legal challenges to subsidies for some of EXC's nuclear plants in IL and NY, and we can partly justify a weak reaction of the stock to strong 1Q17 updates. We reiterate our Outperform rating as we look toward the summer.
- EXC reported 1Q17 adjusted EPS of US$0.65 beating consensus/our expectations of US$0.62/0.60. The timing of O&M expenses more than offset weak weather at regulated utilities, while hedges supported ExGen's earnings. Management reaffirmed '17 adjusted EPS guidance range of US$2.50-2.80.

Impact

- **PJM capacity auction – COMED/EMAAC zones:** The upcoming capacity auction will be the first following the award of state subsidies, zero emission credits (ZECs), to EXC's Quad Cities nuclear plant (1,400MW) in PJM's portion of IL (COMED zone). Given legal challenges to the IL ZECs and the fact that EXC owns close to 9,000MW in other power plants in the COMED zone, we expect EXC not to include the subsidies in its PJM capacity bids. As a result, we expect the COMED zone to clear between US$180-200/MW-day. We expect the EMAAC zone to separate as well, though the pricing premium for this zone over the RTO price is less clear—we assume US$150/MW-day.
- **Legal challenges to IL/NY ZECs:** On March 29th, a judge in New York Federal Court heard oral arguments on EXC's motion to dismiss legal challenges to ZECs for EXC's nuclear plants in upstate NY. There is no real deadline for the judge to issue her order in this case, but we hope it happens in May. In IL, there are two legal challenges to state's ZECs for Quad Cities and Clinton nuclear plants—both cases are in front of the same judge. The judge should determine if the lawsuits can move forward on May 22nd. EXC plans to start recognizing ZEC revenues in NY on April 1 and IL-July 1. The ZEC collections will not be subject to refund in if it the current (or future) legal challenges are successful.

Earnings and target price revision

- We have updated our estimates to reflect changes in fwd power/gas curves and EXC's power hedges. Our new '17/'18/'19 EPS estimates are US$2.70/2.94/2.87 vs US$2.70/2.98/2.88 previously. Our US$41 TP remains unchanged.

Price catalyst

- 12-month price target: US$41.00 based on a Sum of Parts methodology.
- Catalyst: IL judge's decision on EXC's motion to dismiss legal challenges to IL ZECs (mid-May), results of PJM capacity auction (May 23rd), NY judge's decision on the dismissal of legal challenges to NY ZECs

Action and recommendation

- We reiterate Outperform and EXC remains our top pick for diversified utilities.

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie – South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 31 March 2017

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	47.26%	55.50%	38.46%	45.47%	59.09%	48.21%	(for global coverage by Macquarie, 8.20% of stocks followed are investment banking clients)
Neutral	38.01%	29.31%	42.86%	48.77%	37.88%	36.79%	(for global coverage by Macquarie, 8.25% of stocks followed are investment banking clients)
Underperform	14.73%	15.19%	18.68%	5.76%	3.03%	15.00%	(for global coverage by Macquarie, 8.00% of stocks followed are investment banking clients)

Analyst Note 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Morningstar Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

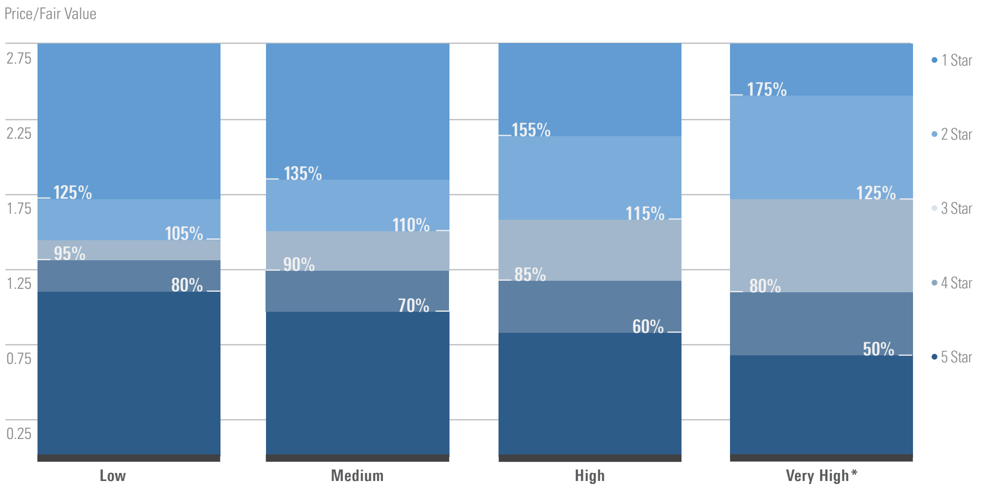
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★

We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★

Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc.performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the

suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. The Equity Research Group encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, Inc., or the Equity Research Group guarantees the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst, Morningstar, Inc. or the Equity Research Group. In Territories where a Distributor distributes our report, the Distributor is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

• No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.• Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.

• Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.

• Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.

• Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the

previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Scotia Howard Weil

COMPANY UPDATE

Wednesday, May 3, 2017

Exelon Corporation

Reports 1Q17 Earnings

QUICK TAKE: Adjusted earnings at the top end of the prior guidance range should be supportive to the stock. Ongoing legal challenges to the new ZEC policies in New York and Illinois are likely to continue to weigh on the name, but there is potential future upside in the base generation business as the company remains relatively under-hedged for 2018 based on its assessment of market opportunities.

KEY POINTS

1Q17 Results: EXC reported adjusted earnings of $0.65/share, at the top end of the prior guidance range and above our estimate and the Street consensus of $0.62/share and $0.63/share, respectively. Results were down as expected on a year-over-year basis given the out-sized contributions from Generation in 1Q16. The beat versus our model was driven by results at the utility companies as the timing of O&M costs offset unfavorably warm weather.

Guidance Updates: The company reiterated FY17 earnings guidance of $2.50 to $2.80/share, bracketing our estimate of $2.65/share and the Street consensus of $2.66/share. 2Q17 adjusted earnings are expected to fall between $0.45 and $0.55/share, down about $0.15/share on a year-over-year basis at the midpoint and below our current estimate of $0.61/share and consensus at $0.59/share.

ZEC Legal Challenges Ongoing: We expect a fair amount of discussion on the call regarding these court proceedings. The hearing to dismiss the challenges in New York was held at the end of 1Q, with no timeline for a final ruling; rates went into effect on April 1. Preliminary injunction filings and a motion to dismiss were made in Illinois since the end of the quarter. Additional responses are due by May 15, with an update from the judge expected about a week following. Illinois law becomes effective on June 1, 2017.

Company Overview

Company Description

Exelon Corporation is a diversified power utility company with operations throughout the United States, operating generation, transmission, and distribution assets in both merchant and regulated markets. The Generation segment operates a large regional and fuel-diversified competitive electricity business, including the largest nuclear power generation fleet in the country. The company owns regulated utilities ComEd, BGE, PECO, and Pepco Holdings, which provide electric transmission and distribution services to customers within their designated service areas.

Risks

Risk Factors Which May Impede the Achievement of the Price Target: (1) Industry fundamentals with respect to customer demand or product/service pricing could change and adversely impact expected revenues and earnings; (2) issues relating to major competitor or market shares or new product expectations could change investor attitudes toward the sector or the company; (3) Unforeseen developments with respect to the management, financial condition or accounting policies or practices could alter the prospective valuation; or (4) external factors that affect the U.S. economy, interest rates, the U.S. dollar or major segments of the economy could alter investor confidence and investment prospects.

Key Risks: Regulatory factors, interest rates, commodity prices, operational factors, including running fleet of nuclear power reactors

Definition of Scotia Howard Weil Equity Research Ratings & Risk Rankings

We have a four-tiered rating system, with ratings of Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

The rating assigned to each security covered in this report is based on the Scotiabank, Global Banking and Markets research analyst's 12-month view on the security. Analysts may sometimes express to traders, salespeople and certain clients their shorter-term views on these securities that differ from their 12-month view due to several factors, including but not limited to the inherent volatility of the marketplace.

Ratings

Focus Stock (FS)
The stock represents an analyst's best idea(s); stocks in this category are expected to significantly outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Outperform (SO)
The stock is expected to outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Perform (SP)
The stock is expected to perform approximately in line with the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Underperform (SU)
The stock is expected to underperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Other Ratings

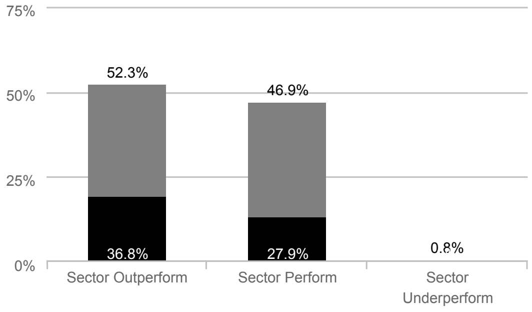
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Ranking
As of June 22, 2015, Scotiabank, Global Banking and Markets discontinued its Low, Medium, and High risk rankings. The Speculative risk ranking reflects exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, and exceptionally high stock volatility. The Director of Research and the Supervisory Analyst jointly make the final determination of the Speculative risk ranking.

Scotia Howard Weil Equity Research Ratings Distribution*

Distribution by Ratings and Equity and Equity-Related Financings*



▨ Percentage of companies covered by Scotia Howard Weil within each rating category.

For the purposes of the ratings distribution disclosure FINRA requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to strong buy, buy, neutral and sell ratings, respectively.

General Disclosures

This research report was prepared by employees of Scotia Howard Weil, a division of Scotia Capital (USA) Inc. who have the title of Research Analyst. Scotia Capital (USA) Inc., an SEC registered broker-dealer and a member of FINRA and the NYSE, is wholly owned by Scotia Capital Inc., a Canadian Investment Dealer, and indirectly owned by The Bank of Nova Scotia. Scotiabank, together with "Global Banking and Markets," is a marketing name for the global corporate and investment banking and capital markets businesses of The Bank of Nova Scotia and certain of its affiliates in the countries where they operate, including Scotia Capital (USA) Inc.

All other trademarks are acknowledged as belonging to their respective owners and the display of such trademarks is for informational purposes only.

The frequency of reports is determined by the analyst on a case-by-case basis, driven by external market factors and issuer announcements. Analysts will endeavor to review and publish such estimates and recommendations as soon as possible after the release of material information by the issuer or the occurrence of other relevant events. This will typically involve, at a minimum, a summary of quarterly earnings releases.

In addition to Scotia Howard Weil Research, Scotiabank publishes and distributes Scotiabank Global Banking and Markets Equity Research (“Scotiabank Research”), which is a separate research publication. Scotia Howard Weil Research Analysts and Scotiabank Research Analysts are independent from one another and their respective coverage of issuers is different. In addition, because they are independent from one another, Scotia Howard Weil Research Analysts and Scotiabank Research Analysts may have different opinions on the short-term and long-term outlooks of local and global markets and economies.

This report is provided to you for informational purposes only. This report is not, and is not to be construed as, an offer to sell or solicitation of an offer to buy any securities and/or commodity futures contracts.

The securities mentioned in this report may neither be suitable for all investors nor eligible for sale in some jurisdictions where the report is distributed.

Diversified Utilities
North America │ United States

Exelon Corp (EXC)

Results: ZECs Continues to Drive Story.

- **Citi's Take — Results are in line with our estimates.** EXC reported 1Q17 consolidated operating EPS of $0.65/share vs. Citi estimates of $0.61/share. The company reaffirmed full-year guidance range of $2.50-$2.80/share vs. Citi estimates of $2.63/share. Management introduced Q2 guidance range of $0.45-$0.55/share vs. Citi forecasts of $0.48/share.
- **ZECs Rejected = Credit and Valuation negative.** Without ZECs, we think the nuclear plants in NY, IL (and potentially plants in NJ, PA) will be forced to retire. NY and IL ZECs are worth ~$330m/year of post-tax cash flows. Loss of this cash flow will weaken the deleveraging story and the funding plan for utility growth. Note that some of this lost cash flow will be offset by shutting down uneconomic units. From a valuation perspective, the NY and IL ZECs are worth $3/share of value.
- **ZECs Approved = Could show the way to PA and NJ.** A positive decision in NY and IL could mean that plants in PA and the NJ could also get the approval for ZECs over time. Every 1,000MW of generation receiving ZECs equates to ~$80m of annual cash flows and ~$1/share of equity value.
- **Key catalysts and timing.** Given the importance of ZECs to the EXC story, we are tracking the following catalysts: A) Outcome of motion to dismiss in NY ZEC challenge - no defined timeline B) Decision by IL judge on May 22nd with respect to motion to dismiss. C) Progress by PEG on NJ Nuclear units D) Other discussion by FERC and PJM on market design and structure.
- **Implications — On the Fence on ZECs, Retain our neutral rating.** We continue to struggle with the question on ZECs and whether they will pass the legal test. We think the execution on the utility side has been good and in line with our expectations. Management has stayed disciplined on the deleveraging path at ExGen and we like the Texas sale and the Renewable JV. However, in the end, ZECs are what drives this story. For now we retain our neutral rating.

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $35 price target. We value ExGen at ~$6/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The utilities business is valued at $24/share based on a 17.5x terminal PE multiple. We also add $7/share value provided by PEPCO. We back out $5/share for the parent net debt and add $3/share for ZECs (IL and NY)

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 31 Mar 2017	**Buy**	**Hold**	**Sell**	**Buy**	**Hold**	**Sell**
Citi Research Global Fundamental Coverage	47%	39%	14%	1%	98%	1%
% of companies in each rating category that are investment banking clients	64%	63%	61%	61%	64%	47%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%); Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc.

takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

EQUITY RESEARCH AMERICAS

Exelon (EXC)

Texas Unload'em

BUY
Price target $39.50
Price $33.98^

Key Takeaway

EXC reported in-line quarterly numbers that on a y-o-y comparison were impacted by a lower ExGen contribution. The company announced plans to sell a fleet of economically challenged assets in Texas but reversed course with its plan to sell the ISO-NE Mystic plant. Mgmt is keeping a larger amount of mid-west generation output open given the lack of improvement in power prices even though nat gas has rebounded.

We believe the challenges to the NY and IL ZECs will be denied providing EXC with approximately $0.30 of "regulated-like" earnings. Over the next two months we are expecting the court challenges to both the Illinois and New York ZEC programs to be resolved. The company began collecting ZEC revenue in NY back in April and pending a court order will start collecting Illinois ZECs in June.

Management announced plans to sell 3,476 MW of ERCOT capacity due to the challenging Texas power markets. The portfolio consists of CCGTs and simple cycle steamers that are economically challenged due to suppressed power prices in ERCOT. These assets have $650 million of non-recourse project level debt and struggle to generate adequate cash flows.

ExGen is currently behind its ratable hedging program in 2018 and 2019 due to the expectation that power prices will increase. The majority of the open position is in the Midwest and is due to management's view of the upside that exists at NIHub and other regions. The company highlighted that forward natural gas prices are over $1/mmBtu greater than last year yet power prices are only about $1/MWh higher.

Into the Mystic – Exelon announced that they are no longer pursuing a sale of the Mystic 8&9 CCGT located in Massachusetts. The 1,414 MW plant runs on LNG and management stated that there were issues with the fuel supply contract that complicated the sale process. This decision will have no impact on earnings or cash flow guidance.

Valuation/Risks

Our $39.50 price target is based on P/E analysis. Taking our 2019 EPS estimate of $2.80 in conjunction with a P/E group average multiple of 14.1x results in a price target of $39.50. Based on yesterday's closing price of $33.98, this would result in a 12-month price appreciation potential of 16.2% and total return potential of 20.1% including the current yield of 3.9%. **Risks** include exposure to change in the commodity prices and regulatory issues associated with the company's regulated subsidiaries.

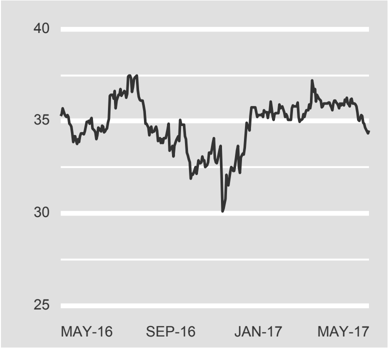
Price Performance



^Prior trading day's closing price unless otherwise noted.

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation.

Exelon operating EPS was $0.65 on a diluted basis, versus $0.68 for the same period a year ago, our estimate of $0.65, and Consensus of $0.63. The year-over-year decline was related to lower earnings at ExGen related to reduced capacity and energy prices.

Texas Unload'em - Exelon announced that it was selling the ExGen Texas Power (EGTP) fleet of 3,476 MW located in ERCOT. The portfolio consists of CCGTs and simple cycle steamers that are economically challenged due to suppressed power prices in ERCOT. These assets have $650 million of non-recourse project level debt which is currently trading at a discount to face value. This portfolio does not contain two new state-of-the-art CCGTs that Exelon is building in Texas.

Mystic Sale Cancelled – Exelon announced that they are no longer pursuing a sale of the Mystic 8&9 CCGT located in Massachusetts. The 1,414 MW plant runs on LNG and management stated that there were issues with the fuel supply contract that complicated the sale process. This decision will have no impact on earnings or cash flow guidance.

Management affirmed 2017 guidance of $2.50-$2.80 which compares to Consensus of $2.66 and our estimate of $2.60. For 2Q17 management is guiding to $0.45-$0.55. Earnings include both the NY and IL ZEC programs (reversal of the Quad Cities and Clinton closure), Fitzpatrick ownership, and a full year of PHI contribution.

Springtime for Fitzpatrick. On March 31 Exelon closed on the acquisition of the 838 MW Fitzpatrick nuclear plant.

ZEC Update –
New York – Opposition to the program filed a motion to dismiss on March 29. The parties are currently awaiting a decision with no defined timeline although the program went effective on April 1, 2017.

Illinois – On May 22 the judge presiding over the proceeding will inform the parties of his intentions regarding the challenges to the ZEC program. The program will be effective on June 1, 2017.

Maryland PSC authorizes Delmarva 67% of its requested rate increase. In February the MD PSC issued an order granting the utility a $38.3 million rate increase based on a 9.6% ROE. This compares to the company's revised filing of a $57.0 million rate increase on a 10.6% ROE. The PSC staff has recommended a $41.5 million increase on a 9.48% ROE and the Office of People's Counsel (OPC) recommends a $26.3 million increase based on an 8.6% ROE. On January 4 the PULJ recommended a $34.1 million rate increase based on a 9.48% ROE.

In March parties filed a settlement in Delmarva's Delaware electric rate case. The settlement calls for a $31.5 million rate increase but is silent on ROE but will utilize a 9.7% ROE for AFUDC purposes. The company filed for a $62.8 million rate increase based on a 10.6% ROE and that compares to a Staff recommendation of a $9.5 million rate increase based on a 9.2% ROE. A final order is expected in May 2017.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Atlantic City Electric filed for new rates with the NJBPU. Back in March ACE filed for a $70.2 million rate increase based on a 10.1% ROE and a $1,371 million rate base. The drivers for the rate filing are increased capital investment and declining customer usage. A final decision is expected in December 2017

1Q17 operating EPS excludes $0.42 (GAAP earnings $1.07) of non-recurring items as follows: a $0.24 bargain purchase gain associated with the acquisition of the Fitzpatrick nuclear plant, a $0.15 gain related to merger commitments, a $0.10 gain due to unrealized NDT gains, a $0.04 loss related to CENG non-controlling interest, a $0.03 market to market loss associated with the impact of economic hedging activities, a $0.03 loss related to merger and integration costs, a $0.02 gain due to the reassessment of state deferred income taxes, and a $0.01 gain associated with tax settlements. 1Q16 operating EPS excludes $0.49 (GAAP earnings of $0.19) of non-recurring items primarily due to merger commitments.

Commonwealth Edison (CWE) earnings improved by $0.03 to $0.15 due to new T&D rates. Gross margin increased 8.1% to $964 million reflecting increased electric distribution and transmission earnings. Retail sales decreased 1.8% and on a weather-adjusted basis were down 0.4%. Beginning in 2017 ComEd's customer rates are adjusted to eliminate the impact weather has on earnings.

Operating income increased 18.0% to $314 million due to greater gross margin reflecting the impact of new rates and additional capital investment. Operating and maintenance expense increased nominally to $370 million and depreciation expense grew by 10.1% to $208 million due to greater net plant. Earnings grew by28.2% to $141 million driven by greater operating income partly offset by higher tax expense. The effective tax rate for the quarter was 39.5% versus 40.2% last year.

PECO earnings were unchanged at $0.14. Gross margin declined by 2.1% to $509 million due to the negative impact mild weather had on retail sales. Electric sales versus 1Q16 declined 0.6% and on a weather-adjusted basis down by 1.0%. Gas sales grew by 0.3% as compared to 1Q16 but were down 0.4% on a weather-adjusted basis. Heating degree days declined 2.0% versus the same period a year ago and 15.4% relative to normal.

Operating Income decreased by 2.0% to $195 million due to lower gross margin and higher depreciation expense. Depreciation expense grew by $6.0% to $71 million but was offset by a 3.3% to $205 million reduction in O&M expense. Earnings increased by 2.4% to $129 million due to lower tax expense. The effective tax rate during the quarter was 22.3% versus 25.9% last year.

BGE earnings improved by $0.03 to $0.14 due to a new rate plan. The principal driver of the year-over-year change were new rates effective June 2016. Gross margin grew by 8.1% to $601 million based on higher rates.

Operating income increased 21.1% to $230 million driven by greater gross margin and reduced O&M expense. O&M expense declined 9.0% to $181 million due to decreased storm costs. Depreciation expense rose 17.4% to $128 million driven by increased amortization due to the initiation of cost recovery of the AMI programs. Earnings increased 26.0% to $126 million due to greater operating margin. The effective tax rate during the quarter was 39.1% versus 40.1% last year.

PHI earnings added $0.09 to the quarterly improvement with little contribution in 2016. 1Q16 results have only 8 days of PHI contribution. For 2017 guidance is $0.30-$0.40.

Earnings at Exelon Generation decreased by $0.16 to $0.18 during the quarter mainly due to greater nuclear outage days (1Q17: 103 days vs. 1Q16: 80 days). Gross margin declined by 1.6% to $2,141 million which was driven by lower energy and capacity prices. Due to an increase in outage days nuclear generation decreased 2.9% to 43.5 million MMh with NY nuclear production declining 8.9% and Mid-Atlantic/Mid-West output decreasing 9.9%. Operating income was reduced by 43.4% to $256 million driven by greater operating expenses. As a result of the increased outage days O&M expense rose by 10.1% to $1,442 million while depreciation expense grew by 3.8% to $300 million due to increased nuclear decommissioning amortization. Property taxes increased 14.4% to $143 million. Net income decreased by 45.4% to $172 million driven by lower operating income partially offset by reduced tax expense. The effective tax rate during the quarter was 30.1% versus 28.7% last year.

The company's Other business segment declined by $0.03 to a loss of ($0.05) driven by greater interest and Other expenses.

We are maintaining our 2017 EPS estimate of $2.60 which compares to guidance of $2.50-$2.80. Earnings include both the NY and IL ZEC programs, Fitzpatrick ownership, and a full year of PHI contribution. Management affirmed segment guidance of: ComEd $0.60-$0.70, PECO $0.40-$0.50, BGE $0.25-$0.35, PHI $0.30-$0.40, ExGen $1.05-$1.15, and parent drag of $0.10-$0.30.

We are maintaining our 2018-19 EPS estimates of $2.85 and $2.80, respectively.

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

Analyst Certification:

I, Anthony C. Crowdell, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

I, Benjamin Budish, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

As is the case with all Jefferies employees, the analyst(s) responsible for the coverage of the financial instruments discussed in this report receives compensation based in part on the overall performance of the firm, including investment banking income. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for

inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

Investment Thesis 06 Dec 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges 03 May 2017
We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

Valuation, Growth and Profitability 06 Dec 2016
We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

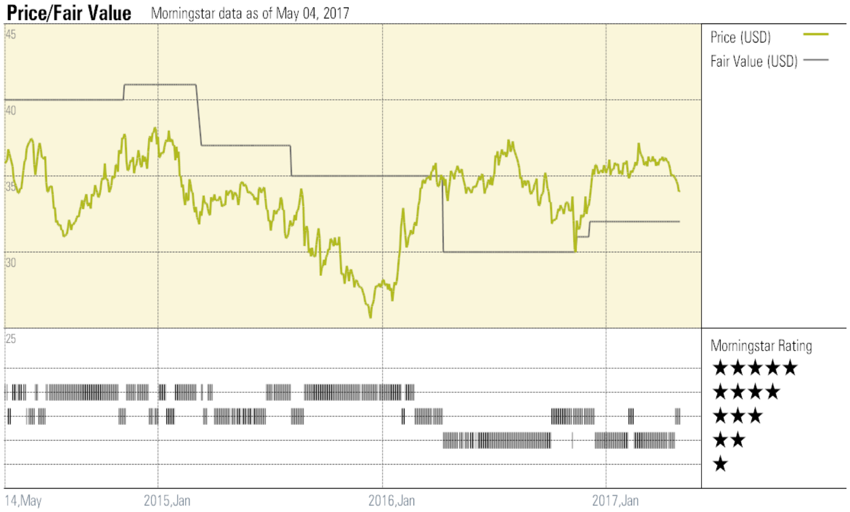
We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of

Exelon Corp EXC (NYSE) | ★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
34.05 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated



Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $650 million change in EBITDA. Our fair value estimate would change by $5 per share. On a mark-to-market basis as of mid-November, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 4 percentage points to near the industry average, it would change our fair value estimate by $1 per share. If Exelon does not retire the Clinton, Quad Cities, and Three Mile Island plants, it would add $2 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. About 70% of the $11 billion of rate base growth in 2016-20 will have rate trackers or formula rates, minimizing regulatory lag. Exelon faces the biggest challenge boosting Pepco's earned returns some 400 basis points to approach its allowed returns. Rate cases in 2016-17 should give it a good start.

In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.

- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.

- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.

- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.

- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets as it tries to smooth cash flow at its generation unit. As power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.We see no immediate credit concerns based on current energy market conditions. We project Exelon's consolidated EBITDA/interest coverage will remain above 5 times and leverage will remain below 5 times debt/EBITDA at least through 2019. Even those these ratios are weaker following the Pepco acquisition, we think this is acceptable given the higher share of regulated earnings.Only about one-quarter of Exelon's consolidated debt is directly tied to its generation segment. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing its near-term maturities. Management has committed to reducing Exelon Generation debt by $3 billion during the next five years and use the remaining cash to fund the regulated utilities' growth.We also think management can meet its 2.5% dividend growth goal through 2018 with relative ease. However, this is rather unimpressive compared with most of its peers that we think can grow their dividends at least twice as fast.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm might have to make modest cash contributions. Plant closures also could increase cash decommission costs.

Enterprise Risk

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's

largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management 06 Dec 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth 19 Apr 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Our full report, "Trump Can't Thwart Green Progress," is available on Morningstar Select Investment Research.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities 28 Mar 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

For more information on our outlook for renewable growth and carbon emissions, see our most recent report "Trump Can't Thwart Green Progress" on Morningstar Select Investment Research.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes 08 Feb 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow

Exelon Corp EXC (NYSE) | ★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
34.05 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth 14 Nov 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Our fundamental U.S. electricity demand forecast is detailed in the Utilities Observer we published in May, "U.S. Electricity Demand Outlook: Energy Efficiency Is No Death Knell." Our fundamental EV forecast is detailed in the Electric Vehicles Observer published Nov. 14.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities 09 Nov 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

Exelon Corp EXC (NYSE) | ★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
34.05 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns 08 Nov 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

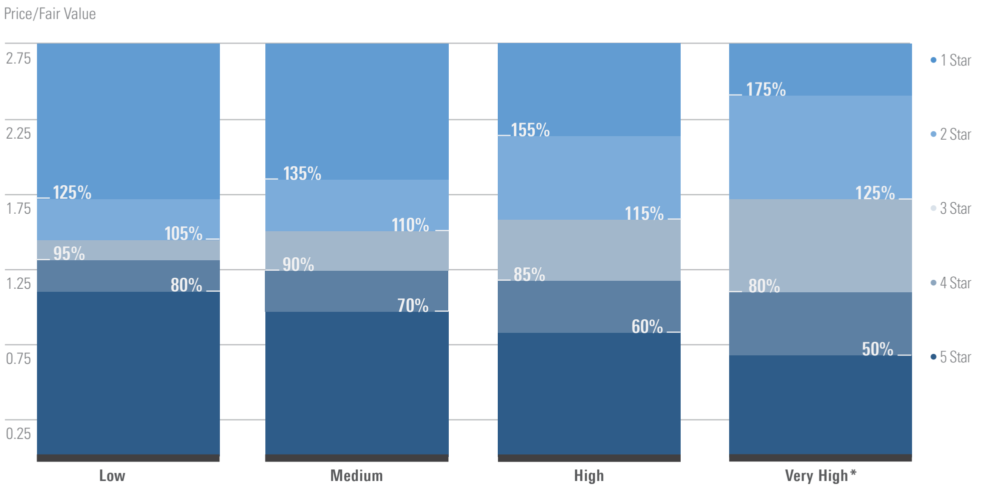
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Q1 EPS Strong, FY ’17 Guidance Confirmed; Post ’19 Outlook Is Debate Hindering Stock Price

Stock Looks Cheap. Rating Outperform, Target $39.

EXC reported 1Q17 adjusted EPS of $0.65 vs. consensus $0.63 (and $0.68 in 1Q16), which was at the high end of their $0.55 - $0.65 guidance range. Although the largest driver of the YoY decline was ExGen (at -$0.16), this was driven by factors contemplated in guidance. In fact, ExGen’s performance both at wholesale (fewer unplanned outages, better planned outage performance) and at retail from strong Constellation execution was a factor driving earnings to the top end of the range. Unfavorable weather at the utilities was overcome in part by O&M timing. Guidance for 2Q17 was initiated at $0.45-$0.55, which looked a bit light to consensus $0.59.

The FY’17 outlook was affirmed at $2.50 - $2.80. Going forward, the utility outlook was unchanged. While the ExGen outlook looked $0.03 - $0.04 worse in ’18 / ’19 on 3/31/17 forward curves forwards have clawed back a portion of that since the end of March, and thus the outlook is effectively also unchanged. There were a number of “puts and takes” that occurred in the quarter on the commercial side, but the bottom line is that power new business executions and hedges limited the impact of degradation in forward curves between 12/31/16 and 3/31/17 to $50mm in each of ’18 / ’19, and commodity moves since then have essentially closed that gap. Expected generation output is essentially unchanged prospectively with the overall hedge position for ’17-’19 now slightly higher at 98.5% / 61.5% / 31.5% from 92.5% / 57.5% / 29.5%, the company remaining behind ratable (especially at NI Hub) based on their view that an improving supply / demand outlook is not appropriately reflected in the forward curves. Their point of view is not in guidance, but a $1/MWh increase in power prices across their major markets would drive an increase in ’19 gross margin of ~$116mm (1.5% of current expected ’19 GM). They remain committed to reducing leverage at ExGen from 3.3X Debt/EBITDA today to 3X, then using cash flow in excess of that required to pay the EXC dividend and fund utility capital expenditures to shift to pay down parent debt rather than ExGen debt.

Why is EXC down 8.6% from 2/24/17 high of $37.18 and down 3.3% YTD? Over the same time frames our regulated coverage universe is up 1.6% and up 7.8% respectively. We see a combination of issues. First is risk aversion on the pricing outcome of the upcoming PJM capacity auction (after the ISO-NE and MISO disappointments), despite indications that pricing in EMAAC and ComEd may be more robust than RTO (which is where EXC has the majority of its exposure). Our views on PJM capacity pricing can be found in our last merchant note here. Legal action in NY and IL to challenge ZEC revenues could also be successful and we think is a factor as well. The legal basis for ZECs seems sound but it remains a risk and could impact ’19 EPS by +/-$0.25/share if 100% successful in rolling back those programs. Still, with ExGen trading at only 2.3X ’19 EPS on a SOTP basis the exposure seems small at this point if they lose on this front. Furthermore, on the Q1 call EXC indicated the Mystic sale process has been halted, indicated issues surfaced with regard to its LNG fuel supply agreement (although we do not see that a central issue). We also believe that investor concern about 2020 earnings power has been a real factor, despite the long time horizon, since power prices out the forward curve would drive a significant decline in ExGen earnings assuming our base case on capacity pricing. We do not have a formal 2020 EPS forecast for EXC, but a combination of lower energy and capacity pricing could be a significant headwind. Taking in to account 6-8% growth at the core utilities, consolidated EPS could fall as much as $0.15-$0.20 if current forwards were realized. But just a $1/MWh improvement in power price at their given sensitivities is $0.09/share. So it doesn’t take much to start valuing EXC more highly on 2020 forward curves, at least in our view.

We maintain our ’17-’19 EPS forecast of $2.65 / $2.85 / $2.85 on updated 4/26/17 curves. EXC is committed to 2.5% dividend growth through 2018 but are confident the financial profile supports at least that level of growth through 2020. We think the assumptions driving EXC’s view of the earnings growth drivers in its core utilities business and ExGen as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management are still wholly credible. The core utilities are forecast to grow rate base at 6.5% from ’17-20 with earnings growth of 6-8% (down from 7-9% from ’16-’20 solely due to a higher ’17 base, the ’20 forecast is up a nickel). We see a turnaround at PHI similar to the one EXC engineered at BGE after the CEG acquisition as feasible, with annual rate cases at most of the PHI companies (the first “wave” of these largely resolved) and the ability to harvest operating synergies. So, there is line of sight for EPS at EXC’s utilities (ex-parent overheads) growing from $1.59 in FY ’17 to ~$2.00 in 2020, consistent with our prior expectations. From a cash flow perspective we see ExGen organically producing ~$5.9bn of free cash flow through FY’19, >67% of the $8.75bn they are targeting through 2020 with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. That is also without the $400mm from the renewables JV which puts them at 72%. The sale price of that 49% stake implies there may be up to an $85mm degradation in EBITDA but at >10X EV/EBITDA that is not only a good transaction multiple but it is also very accretive as ExGen is trading at an implied 3.7X. Assuming they can sell their impaired TX assets (the EGTP portfolio) that will be another $650mm in debt that comes off the books and should be accretive to credit metrics.

Our price target remains $39, maintaining Outperform rating. Our forecast for utility EPS contribution minus parent overheads is $1.59/share in ’17 which by 2019 we expect to be ~ $1.85 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to +/-2.00/share. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth ~$31.75/share (17.2X ’19 EPS). That implies ExGen is worth only ~$2.25/share today, which is around 2.3X ’19 EPS or 3.7X ’19 EV/EBITDA and a levered free cash flow yield to the EV of 13% with debt/EBITDA at YE ’19 of ~3.0X. They are taking all the cash flow from that lower multiple part of the business and either returning it to shareholders or investing in the higher multiple utility business. Overall, EXC is trading at +/-11.9X FY ’19 earnings while pure regulated names are at +/-17.2X. The EXC dividend yield is 40bps above that of the regulated peer group at ~3.86%. While the dividend growth commitment of 2.5% annually through at least 2018 is lower than that articulated by purely regulated peers and some risks to ExGen revenues are palpable, we think that the overall valuation gap, given our view of the value of the businesses and capital allocation plan, is too high. At $39/share our target price implies a valuation for ExGen of 5.85X ‘19 EV/EBITDA and a levered free cash flow yield of ~10%. The consolidated P/E would still be only 13.6X ’19 EPS.

What’s next at ExGen? The PJM capacity auction window opens on 5/10/17 and closes on 5/16/17, with results to be posted on 5/23/17. The sales process for Mystic units 8 and 9 in ISO-NE (1,415 MW) is no longer being pursued, while the acquisition of Fitzpatrick (838 MW) from ETR closed on 3/31/17 as planned. The new Wolf Hollow and Colorado Bend CCGTs (2,200 MW) in ERCOT will go full COD as planned in 2Q17. ExGen’s announced 3/31/17 sale its 49% share of the renewables JV should close in late 2Q17 or early 3Q17, subject to FERC and PUCT approval. The sale process for the economically-challenged EGTP portfolio of CCGTs and NG peakers (3,398 MW) in ERCOT is just underway, with an agreement possible by late 3Q17 or early 4Q17. There is no timetable for a decision on the motion to dismiss the legal challenges to NY’s ZEC program, which went into effect on 4/1/17. In IL, plaintiffs on 3/31/17 filed a preliminary injunction for the ZES program (which is effective on 6/1/17), with EXC intervening and filing a motion to dismiss on 4/10/17. The judge is expected to rule on the injunction on 5/22/17.

What's next at the utilities? On 3/8/17 and 4/6/17, DPL entered into settlement agreements in its DE electric and gas rate cases for $32mm and $4.9mm, respectively, both based on a 9.7% ROE (they had requested $81.7mm in aggregate based on a 10.60% ROE) with DPSC approval expected in 2Q17. A DCPSC in Pepco's electric distribution rate case (in which they filed on 6/30/16 for a $76.8mm increase premised on 10.60% ROE) is expected by 7/25/17. A MDPSC decision in Pepco's electric distribution rate case (in which they filed on 3/24/17 for a $69mm increase premised on 10.10% ROE) is expected in 4Q17. A NJBPU decision in ACE's electric distribution rate case (in which they filed on 3/30/17 for a $70mm increase premised on 10.10% ROE) is expected in 1H18.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions would be accretive but a significantly lower PJM capacity auction price would be negative.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform – the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line – the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform – the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and

trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long – the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short – the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position – the stock is not included in the model portfolio.
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal 100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

This report is provided for informational purposes only. It is not to be construed as an offer to buy or sell or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy in any jurisdiction. The information and opinions in this report were prepared by registered employees of Evercore ISI. The information herein is believed by Evercore ISI to be reliable and has been obtained from public sources believed to be reliable, but Evercore ISI makes no representation as to the accuracy or completeness of such information. Opinions, estimates and projections in this report constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Evercore and are subject to change without notice. In addition, opinions, estimates and projections in this report may differ from or be contrary to those expressed by other business areas or groups of Evercore and its affiliates. Evercore ISI has no obligation to update, modify or amend this report or to otherwise notify a reader thereof in the event that any matter stated herein, or any opinion, projection, forecast or estimate set forth herein, changes or subsequently becomes inaccurate. Facts and views in Evercore ISI research reports and notes have not been reviewed by, and may not reflect information known to, professionals in other Evercore affiliates or business areas, including investment banking personnel.

Evercore ISI does not provide individually tailored investment advice in research reports. This report has been prepared without regard to the particular investments and circumstances of the recipient. The financial instruments discussed in this report may not suitable for all investors and investors must make their own investment decisions using their own independent advisors as they believe necessary and based upon their specific financial situations and investment objectives. Securities and other financial instruments discussed in this report, or recommended or offered by Evercore ISI, are not insured by the Federal Deposit Insurance Corporation and are not deposits of or other obligations of any insured depository institution. If a financial instrument is denominated in a currency other than an investor’s currency, a change in exchange rates may adversely affect the price or value of, or the income derived from the financial instrument, and such investor effectively assumes such currency risk. In addition, income from an investment may fluctuate and the price or value of financial instruments described in this report, either directly or indirectly, may rise or fall. Estimates of future performance are based on assumptions that may not be realized. Furthermore, past performance is not necessarily indicative of future performance.

Evercore ISI salespeople, traders and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed in this research. Our asset management affiliates and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

Electronic research is simultaneously available to all clients. This report is provided to Evercore ISI clients and may not be redistributed, retransmitted or disclosed, in whole or in part, or in any form or manner, without the express written consent of Evercore ISI. Receipt and review of this research report constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion or information contained in this report (including any investment recommendations, estimates or target prices) without first obtaining express permission from Evercore ISI.

This report is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.

For investors in the UK: In making this report available, Evercore makes no recommendation to buy, sell or otherwise deal in any securities or investments whatsoever and you should neither rely or act upon, directly or indirectly, any of the information contained in this report in respect of any such investment activity. This report is being directed at or distributed to, (a) persons who fall within the definition of Investment Professionals (set out in Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the “Order”)); (b) persons falling within the definition of high net worth companies, unincorporated associations, etc. (set out in Article 49(2) of the Order); (c) other persons to whom it may otherwise lawfully be communicated (all such persons together being referred to as “relevant persons”). This report must not be acted on or relied on by persons who are not relevant persons.

In compliance with the European Securities and Markets Authority's Market Abuse Regulation, a list of all Evercore ISI recommendations disseminated in the preceding 12 months for the subject companies herein, may be found at the following site: https://evercore.bluematrix.com/sellside/MAR.action.

COMPANY UPDATE
May 4, 2017

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

Raising 2017-19 Estimates

What's Incremental To Our View

Factoring in updated hedge disclosures and current forward commodity curves, we have raised our 2017-19 estimates.

IMPORTANT POINTS

- EXC reported 1Q results of $0.65 vs $0.68, in line with our estimate of $0.65 and modestly above consensus of $0.63. Relative to our assumptions, modestly higher Com Ed results were offset by higher Corporate expense.

- Factoring in latest hedges disclosures and current forward commodity curves, we make the following increases to our estimates: 2017 to $2.67 from $2.65; 2018 to $2.88 from $2.82; and 2019 to $2.73 from $2.68.

- On the regulatory / legal front we will closely track the legal challenges to EXC's ZEC payments in New York and Illinois. The first key milestone is the New York ruling on the motion to dismiss (although there is no definitive timeline for the decision). According to our calculations, the ZEC payments represent approximately $0.35 of annual earnings for the company, and are essentially getting no value in EXC's current stock price.

- EXC appears attractively priced at an 11%-13% P/E multiple discount to the peer group (based on our 2018-19 estimates). Assuming a P/E multiple of 14.2x (in line with the peer group) on our 2019 estimate of $2.73, we derive our price target of $39. We reiterate our **Buy** rating.

- We have included our revised 2017-19 earnings and cash flow models in this report.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a P/E multiple of 14.2x (in line with the peer group) on our 2019 estimate of $2.73, we derive our price target of $39.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock’s total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock’s total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock’s total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH’s rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may

exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 05/04/2017):

United States: Utilities

Equity Research

A post-earnings wrap for PPL (Sell) and EXC (Neutral)

We incorporate EPS changes for Neutral-rated EXC and Sell-rated PPL; increase PPL price target by $1 to $35

We update EXC following 1Q2017 earnings, changing our 2017E-2019E EPS from $2.59/$2.71/$2.69 to $2.56/$2.75/$2.77, reflecting changes to (1) hedging prices and expected output at EXC's merchant generation segment Exelon Generation (ExGen), (2) regulated rate cases at the PHI utilities, (3) operating expenses, and (4) financing assumptions.

EXC trades at 13.3x/12.4x/12.3x on 2017E-2019E EPS, a discount relative to Diversified Utilities with Merchant Generation peer averages of 13.7x/13.0x/12.3x. We remain Neutral on EXC as we believe legal challenges to Zero Emissions Credit (ZEC) programs in IL and NY represent headline risk for EXC, potentially putting $0.25-0.30 of EPS at risk, and we note our estimates remain 4%-5% below consensus already for 2017/2018, less so (by 1%) in 2019.

We derive our unchanged 12-month price target of $36 using a SOTP methodology applying P/E multiples on the regulated segments and an EV multiple on EXC's generation business. Key risks for EXC include power prices, litigation and regulation.

While still Sell-rated, we become slightly more positive on PPL, as we raise 2018-19 EPS estimates by 1%-2% after 1Q2017 earnings. We revise estimates to reflect changes for (1) operating costs, (2) financing, (3) rate case outcomes / timing, (4) currency hedging and (5) capital spending. We note that PPL recently reached a rate case settlement agreement in KY – awaiting Kentucky PSC approvals – which allows a revenue increase starting in July 2017, but excludes approximately $320mm in advanced metering spend, which PPL originally requested. We reduce our capital spending forecast, which lowers rate base. Our 2017-2019 EPS estimates change from $2.22/$2.33/$2.37 to $2.20/$2.38/$2.40.

We value PPL on a sum-of-the-parts basis by applying a 16.75x group P/E multiple to the US operations, a 10.5x EV/EBITDA multiple on open UK EBITDA, and adding the value of PPL's currency hedges. We increase our 12-month price target from $34 to $35, on higher estimates. However, we remain Sell-rated as we see total return potential of -6%, below large-cap Regulated Utilities average of -1%. Key risks for PPL include currency, load growth, regulation, capital spending and cost management.

We, Michael Lapides, Daniel Yu, CFA, David Fishman, Dylan Campbell and Siddharth Verma, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a security by comparing key attributes of that security to its conviction sector and the market. The four key attributes depicted are: growth, returns, multiple and an integrated IP score. Growth returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe. The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

Growth is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** Multiple is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Integrated IP score** is a composite of Growth, Return and Multiple scores.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Disclosures

Coverage group(s) of stocks by primary analyst(s)

Michael Lapides: America-Diversified Utilities, America-Independent Power Producers, America-Regulated Utilities.

America-Diversified Utilities: Centerpoint Energy Inc., Dominion Resources Inc., Entergy Corp., Exelon Corp., FirstEnergy Corp., NextEra Energy Inc., Public Service Enterprise Group, Sempra Energy.

America-Independent Power Producers: Calpine Corp., Dynegy Inc., NextEra Energy Partners, NRG Energy Inc., NRG Yield Inc..

America-Regulated Utilities: Ameren Corp., American Electric Power, American Water Works, Consolidated Edison Inc., Duke Energy Corp., Edison International, Eversource Energy, Great Plains Energy Inc., NiSource Inc., PG&E Corp., Pinnacle West Capital Corp., Portland General Electric Co., PPL Corp., SCANA Corp., Southern Co., WEC Energy Group, Westar Energy Inc..

Company-specific regulatory disclosures

The following disclosures relate to relationships between The Goldman Sachs Group, Inc. (with its affiliates, "Goldman Sachs") and companies covered by the Global Investment Research Division of Goldman Sachs and referred to in this research.

Goldman Sachs has received compensation for investment banking services in the past 12 months: Exelon Corp. ($34.05) and PPL Corp. ($38.44)

Goldman Sachs expects to receive or intends to seek compensation for investment banking services in the next 3 months: Exelon Corp. ($34.05) and PPL Corp. ($38.44)

Goldman Sachs had an investment banking services client relationship during the past 12 months with: Exelon Corp. ($34.05) and PPL Corp. ($38.44)

Goldman Sachs had a non-investment banking securities-related services client relationship during the past 12 months with: Exelon Corp. ($34.05) and PPL Corp. ($38.44)

Goldman Sachs had a non-securities services client relationship during the past 12 months with: Exelon Corp. ($34.05) and PPL Corp. ($38.44)

Goldman Sachs makes a market in the securities or derivatives thereof: Exelon Corp. ($34.05) and PPL Corp. ($38.44)

Goldman Sachs is a specialist in the relevant securities and will at any given time have an inventory position, "long" or "short," and may be on the opposite side of orders executed on the relevant exchange: PPL Corp. ($38.44)

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	33%	53%	14%	63%	57%	50%

As of April 1, 2017, Goldman Sachs Global Investment Research had investment ratings on 2,857 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and views and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/125/EC is available at http://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms

Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Additionally, the regional Investment Review Committees each manage regional Conviction lists which represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return. Addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if

appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data available on a particular security, please contact your sales representative or go to http://360.gs.com.

Disclosure information is also available at http://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

J.P. Morgan Securities LLC

Given power sector underperformance QTD we are examining worst-case scenario implied valuations for EXC and PEG. Using open 2019 energy prices, no nuclear support, and flat $100/MWd PJM capacity pricing across all regions, we see shares implying 7.5x and 4.9x EBITDA for EXC and PEG, respectively. Full ZEC credit of $3/share on an NPV basis would bring EXC's multiple to 5.3x. Federal courts may rule shortly on ZEC challenge dismissal motions, and it remains to be seen whether nuclear support effort will gain traction in NJ or PA down the road. However, we would be comfortable owning both names given low relative valuation despite PJM auction uncertainty and ZEC legal risk, and we are reiterating our OW ratings.

- **EXC and PCG imply 7.5x and 4.9 open run-rate 2019 EBITDA, respectively.** Our bear-case scenario uses no nuclear ZEC payments, fully open 2019 energy prices, and a $100/MWd PJM price for all regions for simplification. Values use 2019E utility EPS, with PEG's higher growth partially explaining the differential between companies versus 2017 multiples. For context, IPPs currently trade at 8-9x fully-loaded 2017E EBITDA. Power prices and heat rates have slipped YTD, and power remains backwardated into 2019. Our fully open estimates imply debt/EBITDA of 5.9x for EXC and 6.4x for PEG by year-end 2019, high but not unreasonable leverage given the continued ability for the entities to generate FCF even in this scenario.
- **Comfortable going into PJM results next week.** We forecast $100-120 for RTO and $175-225 for EMACC, but we also see potential for ComEd, DPL-South, and BGE to separate. A $25/MWd price change across all regions would translate into 2.5% and 2.1% share price impacts for EXC and PEG, respectively, assuming full 6.0x EBITDA credit. We feel weaker parameters versus last year and the wildcard of full CP and the accompanying changes to bidding behavior are creating an especially hesitant investor mindset going into this year's results. Results are due after the close on May 23.
- **ZEC legal success means $3/share EXC value.** Estimated NPV of full after-tax cash flows from ZECs is $3.0/share for EXC, assuming the alternative shutdown of these units would be a cash flow neutral event. Approximately two-thirds is from NY and one-third from IL, and full credit for this would bring the implied ExGen segment valuation in the current stock price to 5.3x fully open 2019 EBITDA at $100/MWd, according to our calculations.
- **IL, NY dismissal rulings could come soon, CP challenge likely won't impact 2020-21 PJM results:** Decisions on motions to dismiss could come at any time for the NY ZEC case and are expected on 5/22 for the IL ZEC case. EXC expects a challenger appeal in the event the company is successful in the NY dismissal. Separately, the DC Circuit Court has not yet issued a ruling on the Capacity Performance challenge to FERC, likely allowing for this year's auction to proceed as scheduled with full CP.

Source: J.P. Morgan estimates, Bloomberg, company documents.

* Rows 12-15 all values represent 2019 numbers for EXC and 2017 numbers for PEG.

(A) EXC's EBITDA derivation uses 2019 ExGen gross margin guidance provided in Q117; assumes 2017 Other Income & TOTI are straight-lined through 2019 and 2019 O&M is reduced by $125m versus 2017 as per guidance.

(A) Uses PEG 2017 EBITDA guidance provided in Q416, Forward Curve was benchmarked to Feb 9, 2017.

(B) EXC provides 2019 Capacity & ZEC contribution; $677m is JPME's estimate for PEG's 2017 capacity payments.

(C) EXC provides 2019 MTM of hedges; Assumes PEG's 2017 MTM of hedges are in the money by $7/MWh.

(D) Represents the impact of a reduction in spark spreads from 2017 through 2019 for PEG's current portfolio of merchant generation. 2017's forward curve is benchmarked to February 9, 2017 and 2019 is benchmarked to May 15, 2017.

(E) Represents JPMe EBITDA contributions from investments in Keys, Sewaren, and Bridgeport, energy only.

(F) Assume no LDA breaks out and every LDA clears at same clearing price.

Investment Thesis, Valuation and Risks

Public Service Enterprise Group *(Overweight; Price Target: $49.00)*

Investment Thesis

PEG is recycling cash from its power business to allow for one of the strongest utility rate base and earnings growth stories among US regulated peers. Capital is deployed into low-lag transmission and distribution investments with little regulatory risk. The power segment is experiencing declining earnings due to weak commodity and capacity prices, but we feel this is more than priced into shares at their current level.

Valuation

We are lowering our December 2017 price target to $49 from $50 prior on a sum-of-the-parts valuation using our 2019 forecasts. The Utilities segment uses a 20.2 P/E multiple valuation, a premium to the pure regulated peer average, and the Corporate segment uses an in-line 19.2 as lower risk and lower lag transmission growth should be offset by higher regulatory risk and lower rate base growth in the New Jersey distribution businesses. The downward revision in our price target primarily reflects a lower regulated peer multiple relative to our prior update.

Risks to Rating and Price Target

- Despite entering into forward sales and hedges to lock in prices for the forward three-year period, PEG is still exposed to volatility in short- and long-term power and natural gas prices. Potential changes to forward commodity and capacity prices within the PJM, ISO-NE, and NY-ISO markets may have a material negative impact on the company’s outer-year earnings potential and could impact our estimates.

- PEG is near the height of its capital spending program exposing its future earnings to project execution- and cost inflation-related risks. At times, inclusion of these investments in rate base could also face the risk of a cost prudency review by the Board of Public Utilities of New Jersey. Difficulty in project execution or cost inflation could add downside risk to our earnings expectations.

- PSE&G’s regulated earnings are subject to federal and state regulations. Any meaningful negative change to the regulatory constructs from NJ’s BPU and FERC may cause future earnings to differ materially from current expectations. Such changes could result from vagaries in political, consumer, or general regulatory sentiment.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $39.00)*

Investment Thesis

ExGen continues to generate strong cash flow even in a challenging commodity environment, allowing it to fund a top-tier utility growth story and a growing dividend. While the legal standing of ZECs remains a concern, a final litigated decision at NY may come as early as Q3 and would at least bring a greater degree of clarity for the fate of IL ZECs. Given EXC's prior success of lag catchup at BGE, we believe EXC is well positioned to increase ROEs at Pepco as the company prepares for a second round of rate case filings.

Valuation

We are lowering our December 2017 price target to $39/share from $40/share. Our valuation is based on a sum-of-the-parts analysis using our 2019 forecasts. We use an average 19.6x P/E multiple for the regulated utility and corporate business segments. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. A 50% risked value of IL and NY is also included in our price target. The downward revision in our price target is driven by a lower regulated peer multiple relative to our prior estimate.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company's earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock’s expected total return is compared to the expected total return of a benchmark country market index, not to those analysts’ coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst’s coverage universe can be found on J.P. Morgan’s research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Algonquin Corp. (AQN.TO), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), Dominion Energy Inc (D), Duke Energy Corp. (DUK), Emera Inc. (EMA.TO), Entergy Corp. (ETR), Exelon Corp. (EXC), FirstEnergy (FE), Fortis Inc. Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. Further information about J.P. Morgan's conflict of interest policy and a description of the effective internal organisations and administrative arrangements set up for the prevention and avoidance of conflicts of interest is set out at the following link https://www.jpmorgan.com/jpmpdf/1320678075935.pdf. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch which is regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. **Japan:** There is a risk that a loss may occur due to a change in the price of the shares in the case of share trading, and that a loss may occur due to the exchange rate in the case of foreign share trading. In the case of share trading, JPMorgan Securities Japan Co., Ltd., will be receiving a brokerage fee and consumption tax (shouhizei) calculated by multiplying the executed price by the commission rate which was individually agreed between JPMorgan Securities Japan Co., Ltd., and the customer in advance. Financial Instruments Firms: JPMorgan Securities Japan Co., Ltd., Kanto Local Finance Bureau (kinsho) No. 82 Participating Association / Japan Securities Dealers Association, The Financial Futures Association of Japan, Type II Financial Instruments Firms Association and Japan Investment Advisers Association. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com.sg. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of

the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: This material is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited. According to Paragraph 2, Article 7-1 of Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers (as amended or supplemented) and/or other applicable laws or regulations, please note that the recipient of this material is not permitted to engage in any activities in connection with the material which may give rise to conflicts of interests, unless otherwise disclosed in the “Important Disclosures” in this material. **India:** For private circulation only, not for sale. **Pakistan:** For private circulation only, not for sale. **New Zealand:** This material is issued and distributed by JPMSAL in New Zealand only to persons whose principal business is the investment of money or who, in the course of and for the purposes of their business, habitually invest money. JPMSAL does not issue or distribute this material to members of "the public" as determined in accordance with section 3 of the Securities Act 1978. The recipient of this material must not distribute it to any third party or outside New Zealand without the prior written consent of JPMSAL. **Canada:** The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed judgment upon these materials, the information contained herein or the merits of the securities described herein, and any representation to the contrary is an offence. **Dubai:** This report has been issued to persons regarded as professional clients as defined under the DFSA rules. **Brazil**: Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. The recipient of this report must make its own independent decisions regarding any securities or financial instruments mentioned herein. JPMS distributes in the U.S. research published by non-U.S. affiliates and accepts responsibility for its contents. Periodic updates may be provided on companies/industries based on company specific developments or announcements, market conditions or any other publicly available information. Clients should contact analysts and execute transactions through a J.P. Morgan subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

TOP PICK Exelon Corp.

Turning Point

We are Reiterating our Overweight Rating and $43 PT: We are updating our eps estimates to $2.68/$2.83/$2.80 from $2.70/$2.89/$2.81 for ‘17/18/19 respectively and publishing a ’20 estimate of $2.91. Exelon remains our Top Pick as shares offer 23.4% upside potential to our PT with a 3.8% dividend yield, the growth of which will rerate in 2019/20 and be fully supported by non-power related earnings.

Core Story Driven by Pepco Regulatory Recovery: Exelon’s core story remains driven by the regulatory recovery at Pepco across two rate case cycles. The company delivered TTM returns of 6.5%/7.2%/8.2% vs allowed levels of 10%/9.9%/9.7%.. The second round of rate case filings has commenced with decisions expected for Pepco DC in July , Pepco MD in 4Q17, ComEd in 4Q17, and ACE in 1Q18. These drive our utility eps from $1.44/share in 2016 to $1.94/share in 2020. On a stand-alone basis our utility and parent only (UPO) eps of $1.82/share at a 10% premium to an indicative 16x multiple yields an indicative valuation of $32/share for UPO, meaning the indicative embedded value of the power business is only $3/share.

Power Assets Undervalued into Positive Catalysts, Lower Volatility Upside Exposure: This power valuation is significantly below mid-cycle valuations of $15/share and our LT asset value of $20/share and the one-turn discount to mid-cycle of $12/share embedded in our price target. It implies an EV/EBITDA multiple of 4.1x on 2018 well below where CPN (6.3x), DYN (5.9x), and NRG (7.3x) trade despite the fact they are IPPs with significantly higher volatility to EBITDA and valuation from power and capacity market exposure. Upside is driven by full recognition of value of the utility recovery story, and by a revaluation of the power business that will find sponsorship amid a calendar that is catalyst constructive through the end of the year. Catalysts include an advantaged outcome in ComEd in the PJM capacity auction (May 23), Zero Emission Credit programs that likely hold up in court in NY and IL (by year end), and market reform white papers from the FERC and the RTOs around changes to better account for subsidies to renewable resources and state credit programs (this summer).

Why Overweight? We believe that that utility growth of 7-9% is achievable and will be funded by cash flow from the generation company even with the current forward curves. Any additional legislation similar to the CES in New York or the inclusion of the CES in our numbers is upside to our estimates.

Upside case USD 48.00

Our upside case assumes the impact of the zero emission credits in New York for the genco and assumes a 10% premium for the utility valuation given the above average growth.

Downside case USD 32.00

Our downside case assumes a 10% discount for the utility and a 4x EBITDA at the genco based on current forwards, with no consideration of the CES or FitzPatrick acquisition

Upside/Downside scenarios

Note: FY End Dec

Upside from Power Valuation with Constructive Catalysts

Core Utility Story Provides Downside Protection and Stability

We believe the utility core story dives a base case for Exelon's valuation that limits downside in the shares from these levels. We have confidence in Exelon management's ability to deliver higher earned returns near allowed levels at the acquired Pepco utilities. This drives utility-only earnings growth significantly through 2020 in line with Exelon's guidance. The foundation for our confidence in the regulatory recovery at Pepco driving utility earnings growth comes from the history of this management team and their previous ability to drive regulatory recovery after the acquisition of Constellation Energy in 2012.

Our overall regulatory rankings of various state jurisdictions demonstrate that positive customer service outcomes lead to better quality and more constructive regulatory outcomes. Once begun this leads to a feedback loop cycle where more constructive regulation drives the ability to improve customer service, which in turn drives more constructive regulation.

FIGURE 1

JD Power Customer Service Ranking Equates to Regulatory Ranking, ROE, and Valuation

State Regulator Ranking Quartiles	Average JD Power Ranking *(out of 1,000)*	Price/ Book	Earned ROE
1st Quartile	676	2.13x	11.9%
2nd Quartile	664	1.83x	10.3%
3rd Quartile	673	1.60x	9.4%
4th Quartile	639	1.60x	9.2%

Source: JD Power & Associates, S&P Market Intelligence, Barclays Research Estimates

As noted above we have confidence in the ability of management to drive a regulatory and operational recovery story at the Pepco utilities given their history of successfully executing the regulatory recovery story at Baltimore Gas & Electric (BGE) after the Constellation Energy merger in 2012. In the roughly four years from the merger through Q1 2017, BGE has gone from 2nd – 4th quartile in most operational/customer metrics to 1st quartile in all but two. We believe management is ahead of expectations related to the operational and customer improvements at the Pepco utilities as in one year they have gone from 2nd – 4th quartile (or off the scale for customer service) to 1st quartile in four metrics, 2nd quartile in two and 3rd quartile in only one (outage frequency). This still leaves room for improvement but is a significant accomplishment in only a year that should lead to more constructive regulatory outcomes.

FIGURE 2

Operational Metrics by Quartile for BGE and PHI at Merger and at 1Q 2017

Operations	BGE		PHI	
Metric	At Merger (2012)	Q1 2017	Pre Merger (2015)	Q1 2017
OSHA Recordable Rate	2nd	2nd	2nd	2nd
2.5 Beta SAIFI (Outage Frequency)	3rd	1st	3rd	3rd
2.5 Beta CAIDI (Outage Duration)	4th	1st	2nd	1st
Customer Satisfaction	4th	1st	N/A	2nd
Service Level % of Calls Answered in <30 sec	2nd	2nd	4th	1st
Abandon Rate	3rd	1st	3rd	1st
Percent of Calls Responded to in <1 Hour	2nd	1st	2nd	1st

Source: EXC Presentations, Barclays Research Estimates.

This improvement in overall operations and customer service, while leaving room for improvement, particularly in outage frequency, should lead to more constructive regulatory outcomes as customer complaints go down. This will allow Exelon the opportunity to earn returns closer to allowed levels over time, similar to what happened at BGE from 2012 – 2015. Over that four year time frame the gap between allowed and earned returns at BGE went from a 568bp under earning position to an 89bp over earning position.

FIGURE 3

Allowed vs. Earned ROEs at Baltimore Gas & Electric

BGE	Allowed	Earned	Gap
2011	9.78%	6.70%	-3.08%
2012	9.78%	4.10%	-5.68%
2013	9.71%	8.60%	-1.11%
2014	9.71%	8.10%	-1.61%
2015	9.71%	10.60%	0.89%
Change	-0.07%	3.90%	3.97%

NOTE: Exelon merger closed in 2012

Source: EXC 2015 Analyst Day Presentation, S&P Market Intelligence, Barclays Research Estimates

With the improvement in operational and customer service metrics leading the way the Pepco utilities appear to be on a similar path. While the ROE gap has only closed between 70bp and 146bps at the various Pepco utilities. That is significant progress in only a year's time and constitutes between a 20-45% narrowing of the starting gap in 2015. As management continues to execute on operational and customer service improvement we see further improvement in earned ROEs toward or potentially even at or slightly above those allowed.

FIGURE 4

Earned and Allowed ROE Gap at Pepco Utilities 2016 vs. 2015

PEPCO	2015 Allowed	2015 Earned	Gap	2016 Allowed	2016 Earned	Gap	Chg
ACE	9.75%	4.79%	-4.96%	10.00%	6.50%	-3.50%	1.46%
Delmarva	9.75%	6.38%	-3.38%	9.90%	7.20%	-2.70%	0.68%
Pepco	9.51%	6.80%	-2.71%	9.70%	8.20%	-1.50%	1.21%

Source: EXC Presentations, S&P Market Intelligence, Barclays Research Estimates.

The dynamic of management repeating a strategy they have executed so successfully in the past gives us confidence in our utility and parent only (UPO) earnings per share estimate in

2020 of $1.82/share. If the management team executes as expected we would value UPO earnings in 2020 at a 10% premium to the average regulated utility given the constructive regulatory environment which at an indicative multiple of 16x would lead to a UPO valuation of $32/share. This would imply then that at the current share price investors are only paying $3/share for the competitive generation business. We feel this leaves little downside in the name, and significant upside potential should the generation business rerate toward more normalized valuation levels.

The one risk we see to this valuation view is if management fails to execute on the regulated utility recovery story. We believe in addition to the ongoing rate cases in various jurisdictions that the one thing investors should watch for red flags is the operational and customer service metrics at Pepco. Any slippage in quartile performance would likely imply poor execution by management and would in our view lead to less constructive regulatory outcomes and an inability to close the earned to allowed return gap.

Several Catalysts Should Demonstrate Value of the Power Business

We believe that the power business at $3/share is significantly undervalued in Exelon's current share price, and the current calendar through the end of the year offers positive catalysts to rerate the valuation of the business. We are reiterating Exelon as our Top Pick and are at what we believe is a turning point for share performance. We believe that not only will continued management execution of the regulated utility recovery story give investors comfort that there is a valuation floor under the stock, but that the power business will move toward normalized valuations across the balance of the year, based upon four distinct catalysts:

(1) The PJM Capacity Auction on May 23

The PJM reliability pricing model capacity auction for the '20/21 capacity year was completed on Tuesday May 16 and results will be posted on the PJM website on Tuesday May 23, likely not until after the close. Our prediction on price leans bullish versus last year, but we see particular resilience and potential for upside to prices in the ComEd and EMAAC/PS North zones. As a reminder this is the first auction under the PJM's 100% capacity performance standard which should move prices higher all else equal. Offsetting this is a lower demand forecast and the potential for new build, energy efficiency, and demand response resources to bid in.

In particular another market change this year, where demand response (DR) and energy efficiency (EE) resources if seasonal must pair with winter resources to create a synthetic annualized capacity bid. An important distinction within this rule is that the bid will clear in the region of the paired resource. In other words, in regions with more constrained DR and EE, those resources may shift bids into RTO. This will increase relative capacity prices in ComEd and in particular EMAAC and lower prices in RTO all else equal. Below are our current predictions for the auction, and dependent upon ultimate bidding behavior around DR EMAAAC could price in line with our expectation for PS North.

FIGURE 5

(2) A Constructive Resolution to the Zero Emission Credit (ZEC) Programs in NY and IL.

The ZEC programs in both New York and Illinois that pay a price for the non-carbon full baseload characteristics of nuclear power have come under court challenges by other independent power producers. We continue to believe that the ZECs, in some form will be upheld by the courts and the FERC as not tied to wholesale market prices, and allowable for a state to employ, somewhat equivalent to a Renewable Energy Credit (REC), or a property tax credit for a particular generation source.

New York

The ZECs were approved by the New York Public Service Commission (NY PSC) under dockets 15-E-0302 and 16-E-0270. The ZEC program would allow for 12-year payments of ZECs in two six year tranches , the first of which began on April 1 2017. The ZEC price, premised on the avoided cost of carbon dioxide emissions would start at a rate of $17.48/MWh for the first tranche and increase up to $29.15/MWh for the second tranche. The ZEC payments would be adjusted lower if the wholesale price of power exceeded $39/MWh on a around the clock basis in the New York power pool zone in which the nuclear plants are located. Exelon has indicated that without the ZEC program both the Fitzpatrick and Nine Mile in upstate New York would be retired in 2017.

The Electric Power Supply Association, the Coalition for Competitive Electricity, Dynegy Inc., and NRG Energy all filed in Federal Court (Case: 1:16-cv-08164) that the ZEC program was pre-empted by Federal Law and infringed on FERC's jurisdiction of the wholesale power markets and violated the commerce clause by not allowing out of state generators to participate in the ZEC program. The plaintiffs point to the recent U.S. Supreme Court decision *Hughes v. Talen Energy* (Case 14-614) where the SCOTUS ruled that Maryland could not subsidize new construction of instate power plants because the subsidy program adjusted the interstate wholesale rate which violated FERC's authority under the Federal Power Act (FPA).

Exelon argues, rightly, in our view, that the ZECs are allowable under the FPA as the FPA gives states authority over the management of their electric grids and generation fleets while seeding authority to the FERC only for wholesale market rates. We believe that the ZEC program does not violate the commerce clause as out of state nuclear plants could rightfully petition the NY PSC to participate if they could demonstrate a definitive intertie to the New York market and a purchased power agreement with New York based load. In our view the ZEC program falls within a state's right to control aspects of its own generation fleet similar to RECs and any other potential state incentive program such as property tax incentives.

The Federal Court in New York held hearings on Exelon's filed motion to dismiss on March 29 2017. This was a quick timeline versus that typically seen in federal court cases for a hearing. Upon listening to the hearing we believe that the defendants arguments were more solid. The one place where we believe that the ZEC could be rightfully challenged is it's used of the $39/MWh wholesale price to lower the payments could be seen as tethering the ZEC to the wholesale market. Even if it is seen that way by the court, it is a more difficult claim that this harms the plaintiffs as it would only lead to a reduction in ZEC payments.

We believe the hearings as well as without the motion to dismiss Exelon indicated a trial schedule for late summer/fall 2017 was likely on their year-end 2016 earnings call, is indicatory that the judge in this case schedules procedural items in cases before her in a timely fashion. We find it potentially indicative that we are still awaiting a decision from the court on the dismissal motion. We believe that there is some validity to the thought process that the longer it takes for a order for the motion to dismiss, for which there is no statutory deadline, the more likely it is that the judge is crafting a lengthy and careful order to dismiss the case that will be more likely to hold up upon the inevitable appeal. Even if the court decides upon a full trial in the plaintiffs favor, the worst case scenario in our view would be a rewrite of the ZECs by the NY PSC to remove the $39/MWh price at which payments are reduced. In our view, the New York State General Assembly could potentially be a greater risk to the ZEC program if enough downstate legislators can build enough of a coalition to override the NY PSCs ability to implement them. So far, this does not seem to us to be the case, but it remains worth watching.

Illinois

The state of Illinois also instituted a ZEC program similar to New York's. Plaintiffs in that case filed for a preliminary injunction on March 31 2017 and a motion to dismiss was filed by Exelon on April 10 2017 (Case No. 17-cv-01164). The plaintiffs in the Illinois case include Dynegy Inc., Eastern Generation LLC, NRG Energy, Calpine Corp., and the Electric Power Supply Association. The ZECs in Illinois work via the Illinois Power Agency (IPA) being authorized by the Illinois Commerce Commission (ICC) to obtain ZECs for the electric utilities which serve load in the state – Exelon subsidiary ComEd and Ameren Illinois, a subsidiary of Ameren Corp. The plaintiffs argue, similar to the New York case that the ZECs are structured so that they can only be procured from Exelon's Quad Cities and Clinton power plants, and violated FERCs authority over wholesale rates under the FPA. Technically the ZEC is open to all nuclear facilities tied to the ComEd and Ameren Illinois grid's but the plaintiffs argue that the bidding criteria have "rigged" the ZEC procurement so that only Quad Cities and Clinton will be selected by the IPA as the ZEC sources. In the motion to dismiss the defendants argue that the ZECs do not violate FERCs authority over wholesale rates, and like RECs or property tax incentives fall within the authority of a state to incentivize environmental attributes relating to the generation and retail sale of electricity within its borders.

Plaintiffs filed their responses to the motion to dismiss on April 24 2017 and defendants filed their responses in early May. The judge will inform parties of his intentions, to presumably either dismiss the lawsuit or schedule a trial on May 22 2017. Without a stay issued by the court, which we think is unlikely, the Illinois law will become effective on June 1 2017.

(3) White Papers from the DOE and FERC on Market Changes to Deal with Subsidies

New Secretary of Energy Rick Perry has commissioned a study from the Department of Energy on Baseload Power Energy Resources. This study is focused on the long term reliability of the electric grid and will analyze market distorting subsidies that boost one form of energy over the other. The Department of Energy is also expressing a national security concern over fuel diversity. The study was commissioned on April 19 and is expected to be published in 60 days, by June 19. While the DOE has no direct authority over the wholesale power markets, we see the study as a use of the "bully-pulpit" by the administration to push FERC and the regional independent system operators, like PJM and ISO-New England to take action.

In a separate but commensurate process, the PJM is working on a white paper due in 30-60 days around how to deal with state incentives like the ZECs in Illinois within a multi-state competitive market place like PJM and avoid potential distortions in open auctions for capacity pricing under the reliability pricing model (RPM).

In the Energy markets the idea that currently seems to be gaining the most traction is to not allow subsidized resources to set the market clearing price. This would not allow for those resources to not sell into the market and would not allow wholesale markets to clear at some imputed marginal cost absent those resources. Rather, it would set a minimum required wholesale market price for electricity. This would avoid renewable resources, particularly wind pricing electricity negatively essentially due to subsidies in overnight hours when the wind blows and electric demand is not high. While a set minimum price could, and in our view is likely to be, still below the marginal cost of dispatch for other baseload resources, a minimum price of even \$5 - \$10/MWh would increase around the clock pricing and afford non-subsidized baseload resources improved economics. This would allow for support of fuel diversity and limit the potential for intermittent resources to threaten the stability of the grid, or drive non-intermittent unsubsidized resources into retirement that the grid needs to avoid supply scarcity and brownout or blackouts when the wind doesn't blow or the sun doesn't shine.

For capacity two potential market changes are gaining traction in PJM. The first would set a required minimum offer price rule (MOPR) for each distinct resource type in the capacity auction subject to attributes such as intermittency or baseload and level of subsidies or state level incentives. While this has gained some traction there has been some stakeholder pushback around the potential complexity and non-free market basis of such an auction process.

The second idea that has gained traction in the PJM working groups is to employ a two stage auction process. The first auction would be for all resources and load in the market and then those resources would be removed from a stage 2 auction, potentially along with regulated resources and load. This would set one capacity price that cleared resources would receive in the stage 1 auction and a higher capacity price that non-subsidized resources would clear in a stage 2 auction.

Exelon's fleet would on net be advantages by these potential market changes. Since nuclear is an around the clock baseload resource, those plants would benefit from receiving at least some positive compensation for wind heavy overnight hours rather than experiencing hours of negative pricing resulting from wind subsidies. Even if the minimum price is below the plant's marginal cost, the differential would mitigate negative overnight margins and the plant's total margin would improve. In the capacity markets, while ZEC resources would receive a lower, or potentially no price for their capacity, the ZEC payments would fulfil that role, and the balance of Exelon's fleet would benefit from higher capacity pricing that reflected the true cost of capacity without the distortion from state incentives.

(4) Rerating of Power valuations as the IPPs engage in strategic activity

Lastly, we believe sentiment toward the power exposed stocks has changed significantly with the recent reports in the press around different strategic processes underway for the Independent Power Producers (IPPs). Activist shareholders are in charge of a strategic review committee on NRG Energy's Board of Directors that is set to release their recommendations on or before August 15 (see our note *NRG/DYN: Elliot International discloses position in NRG; DYN refinances at lower cost for longer term*, published January 17 2017). Calpine Corp. has reportedly retained Lazard to explore a sale of the company to private equity (see our report *CPN: Reported to Be Exploring a Sale*, published May 12 2017) and, finally Dynegy has reportedly been approached by Vistra Energy about a takeover (see our note *DYN: Vistra Reportedly Makes a Takeover Approach*, published May 19 2017).

Each of these IPP stocks has outperformed the XLE significantly since these announcements as shown in the chart below. Taken together we believe that this has turned the sentiment toward the power exposed names and along with the positive catalyst set for power, and in particular for Exelon's ExGen business, should rerate the valuation of that power subsidiary with Exelon's stock price from currently levels of $3/share to the level of $10/share as incorporated within our $43 price target.

FIGURE 6

IPP Performance vs. the XLE Index Post Strategic Announcements/Press Reports

	1/13/2017	5/19/2017	Chg

ANALYST(S) CERTIFICATION(S):

We, Daniel Ford, CFA and Ross A. Fowler, CFA, hereby certify (1) that the views expressed in this research report accurately reflect our personal views about any or all of the subject securities or issuers referred to in this research report and (2) no part of our compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this research report.

IMPORTANT DISCLOSURES

Barclays Research is a part of the Investment Bank of Barclays Bank PLC and its affiliates (collectively and each individually, "Barclays").

Availability of Disclosures:

Where any companies are the subject of this research report, for current important disclosures regarding those companies please refer to https://publicresearch.barclays.com or alternatively send a written request to: Barclays Research Compliance, 745 Seventh Avenue, 13th Floor, New York, NY 10019 or call +1-212-526-1072.

The analysts responsible for preparing this research report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by investment banking activities, the profitability and revenues of the Markets business and the potential interest of the firm's investing clients in research with respect to the asset class covered by the analyst.

All authors contributing to this research report are Research Analysts unless otherwise indicated.

The publication date at the top of the report reflects the local time where the report was produced and may differ from the release date provided in GMT.

Analysts regularly conduct site visits to view the material operations of covered companies, but Barclays policy prohibits them from accepting payment or reimbursement by any covered company of their travel expenses for such visits.

In order to access Barclays Statement regarding Research Dissemination Policies and Procedures, please refer to https://publicresearch.barcap.com/static/S_ResearchDissemination.html. In order to access Barclays Research Conflict Management Policy Statement, please refer to: https://publicresearch.barcap.com/static/S_ConflictManagement.html.

The Investment Bank's Research Department produces various types of research including, but not limited to, fundamental analysis, equity-linked analysis, quantitative analysis, and trade ideas. Recommendations contained in one type of research product may differ from recommendations contained in other types of research, whether as a result of differing time horizons, methodologies, or otherwise.

V: The equity securities of this Canadian issuer include non-voting restricted shares.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

AES Corp. (AES)	Alliant Energy (LNT)	Ameren Corp. (AEE)
American Electric Power (AEP)	American States Water Company (AWR)	American Water Works (AWK)
Aqua America (WTR)	Brookfield Infrastructure Partners LP (BIP)	Brookfield Infrastructure Partners LP (BIP_u.TO)
Brookfield Renewable Energy Partners LP (BEP)	Brookfield Renewable Energy Partners LP (BEP_u.TO)	California Water Service Group (CWT)

Distribution of Ratings:

Barclays Equity Research has 1776 companies under coverage.

42% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 52% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

16% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 38% of companies with this rating are investment banking clients of the Firm; 61% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Explanation of other types of investment recommendations produced by Barclays Equity Research:

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

Disclosure of previous investment recommendations produced by Barclays Equity Research:

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/ResearchInvestmentRecommendations*.

N: Dynegy Inc. is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our $14 price target is premised upon a 7.1x EV/EBITDA mid-cycle multiple, and our 2019E EBITDA of $1.532 billion net of debt of $8.521 billion, environmental capex of $0.4 billion, and a NPV of NOLs of $0.3 billion. We use shares outstanding of 161.08 million.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Dynegy Inc. is an independent power company with a 50% natural gas 50% coal fired fleet diversified across MISO, PJM, New England, and New York. Risks to performance include natural gas, coal, and power prices, as well as annually set capacity prices in PJM and MISO. Risks to our valuation also include the ENGIE asset acquisition not closing as expected.

M: Exelon Corp. is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our current $43 price target is premised upon a 2019 group average multiple of 16.8x applied to the utility net parent earnings of $1.81 resulting in $31 of utility value. Exgen is valued at 6.6x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, the combined value is $43.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

Nothing herein should be considered investment advice as defined in the Israeli Regulation of Investment Advisory, Investment Marketing and Portfolio Management Law, 1995 (“Advisory Law”). This document is being made to eligible clients (as defined under the Advisory Law) only. Barclays Israeli branch previously held an investment marketing license with the Israel Securities Authority but it cancelled such license on 30/11/2014 as it solely provides its services to eligible clients pursuant to available exemptions under the Advisory Law, therefore a license with the Israel Securities Authority is not required. Accordingly, Barclays does not maintain an insurance coverage pursuant to the Advisory Law.

Barclays Bank PLC in the Dubai International Financial Centre (Registered No. 0060) is regulated by the Dubai Financial Services Authority (DFSA). Principal place of business in the Dubai International Financial Centre: The Gate Village, Building 4, Level 4, PO Box 506504, Dubai, United Arab Emirates. Barclays Bank PLC-DIFC Branch, may only undertake the financial services activities that fall within the scope of its existing DFSA licence. Related financial products or services are only available to Professional Clients, as defined by the Dubai Financial Services Authority.

Barclays Bank PLC in the UAE is regulated by the Central Bank of the UAE and is licensed to conduct business activities as a branch of a commercial bank incorporated outside the UAE in Dubai (Licence No.: 13/1844/2008, Registered Office: Building No. 6, Burj Dubai Business Hub, Sheikh Zayed Road, Dubai City) and Abu Dhabi (Licence No.: 13/952/2008, Registered Office: Al Jazira Towers, Hamdan Street, PO Box 2734, Abu Dhabi).

Barclays Bank PLC in the Qatar Financial Centre (Registered No. 00018) is authorised by the Qatar Financial Centre Regulatory Authority (QFCRA). Barclays Bank PLC-QFC Branch may only undertake the regulated activities that fall within the scope of its existing QFCRA licence. Principal place of business in Qatar: Qatar Financial Centre, Office 1002, 10th Floor, QFC Tower, Diplomatic Area, West Bay, PO Box 15891, Doha, Qatar. Related financial products or services are only available to Business Customers as defined by the Qatar Financial Centre Regulatory Authority.

This material is distributed in the UAE (including the Dubai International Financial Centre) and Qatar by Barclays Bank PLC.

This material is not intended for investors who are not Qualified Investors according to the laws of the Russian Federation as it might contain information about or description of the features of financial instruments not admitted for public offering and/or circulation in the Russian Federation and thus not eligible for non-Qualified Investors. If you are not a Qualified Investor according to the laws of the Russian Federation, please dispose of any copy of this material in your possession.

This material is distributed in Singapore by the Singapore branch of Barclays Bank PLC, a bank licensed in Singapore by the Monetary Authority of Singapore. For matters in connection with this report, recipients in Singapore may contact the Singapore branch of Barclays Bank PLC, whose registered address is 10 Marina Boulevard, #23-01 Marina Bay Financial Centre Tower 2, Singapore 018983.

This material is distributed to persons in Australia by either Barclays Bank plc , Barclays Capital Inc., Barclays Capital Securities Limited or Barclays Capital Asia Limited. None of Barclays Bank plc, nor any of the other referenced Barclays group entities, hold an Australian financial services licence and instead they each rely on an exemption from the requirement to hold such a licence. This material is intended to only be distributed to “wholesale clients” as defined by the Australian Corporations Act 2001.

Analyst Note 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

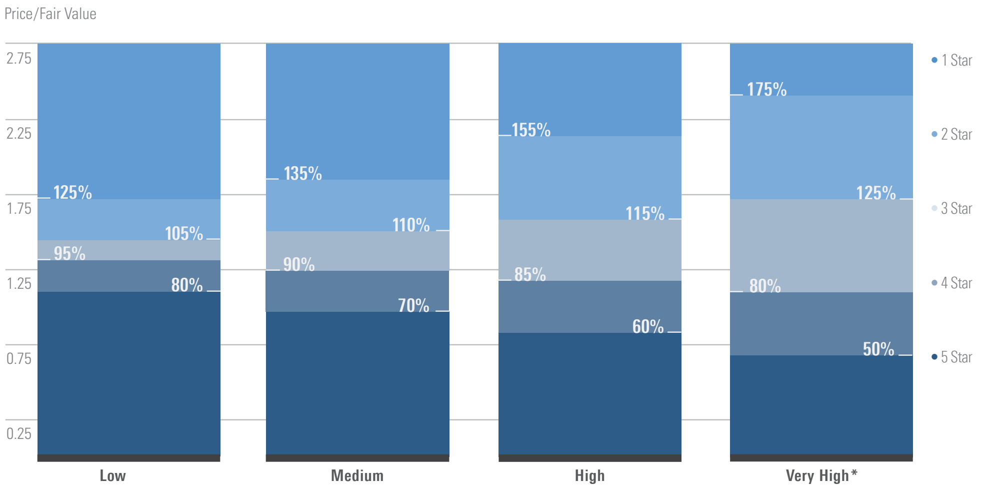
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Shift in DR Pushes RTO Pricing Lower than Expected and EMAAC Higher than Expected

RTO Clears Low, EMAAC Clears High, ComEd in Line. Last night the PJM released the Capacity Auction results for the 2020/2021 capacity auction year. Results were mixed depending upon the locational deliverability area (LDA) of PJM. EMAAC was the clear surprise versus our expectations clearing at $187.87/MW-day and DEOK also broke out unexpectedly clearing at $130/MW-day. ComEd was essentially in-line at $188.12/MW-day while MAAC also broke out versus RTO at $86.04/MW-day. RTO was disappointing versus expectations at $76.53/MW-day. Normally we would anticipate that MAAC would tend to clear with EMAAC with such a high premium to RTO, however, 57% of the uprates and new build were bid in to MAAC (1,613MWs of the 2,824MWs).

New Build and DR Both Lower. We are encouraged that both new capacity fell year on year from 5,374MWs in last year's auction to 2,824MWs in this year's auction. Showing some discipline to new build of resources at lower capacity and energy prices. Further, demand response fell from 10,348MW to 7,820MWs around the shift to 100% capacity performance and energy efficiency stayed essentially flat at 1,710MWs versus 1,515 MWs last year. Of the demand response that cleared 7,532MWs (96% of the total) cleared as a annual capacity performance based product, meaning the majority of that paired with a winter peaking resource. Bidding behavior of DR was one reason that EMAAC cleared higher than anticipated and RTO cleared lower. ComEd also saw a slight increase in % of total market DR cleared but still came in around expectations at $188.12/MW-day. Overall bidding behavior forces MAAC (ex the new build impact) and EMAAC higher as EMAAC saw 275MWs in generation increases versus 2269MWs of generation decreases while RTO saw 4,258MWs of increases versus only 3,016MWs of decreases. The table below shows the capacity year auction results for the '18/19, '19/20, and '20/21 capacity years and the resulting capacity price for the 2019 and 2020 calendar years.

Figure 1
PJM Reliability Pricing Model (RPM) Capacity Auction Results

$/MW-day	2018/2019	2019/2020	2020/2021	2019	2020	Change
RTO	$ 164.77	$ 100.00	$ 76.53	$ 137.78	$ 90.22	$ (47.56)
EMAAC	$ 225.42	$ 119.77	$ 188.87	$ 181.40	$ 148.56	$ (32.84)
MAAC	$ 164.77	$ 100.00	$ 86.04	$ 137.78	$ 94.18	$ (43.60)

DEOK	$ 164.77	$ 100.00	$ 130.00	$ 137.78	$ 112.50	$ (25.28)
COMED	$ 215.00	$ 202.77	$ 188.12	$ 209.90	$ 196.67	$ (13.23)

NOTE: Capacity Auction Results are for a given capacity year, the 2019 and 2020 columns convert this into a calendar year basis

Source: PJM, Barclays Research Estimates

Exposures Vary by Company Dependent Upon Location of Fleets. While capacity pricing results were lower on a calendar year basis across the board, versus our capacity pricing expectations for the auction we believe that companies with exposures to EMAAC and ComEd: CPN (OW $18 PT) EXC (OW $43 PT), and PEG (EW $47 PT) will be positively impacted versus expectations, while DYN (OW, $14 PT) will be less negatively impacted than anticipated as the assets in the fleet acquired from Duke Energy in 2015 will clear to the DEOK region which broke out at $130/MW-day. Companies with more exposure to RTO excluding DEOK, FE (OW, $36 PT) and NRG (OW, $20 PT) were impacted more negatively than expected. NRG stand alone could not be impacted as much pending the resolution of the GenOn restructuring agreement and bankruptcy.

NOTES:

MWs Cleared by Region uses the CP MWs Cleared in the 2019/2020 Auction last year as a proxy until company's release the MWs they cleared in this auction

Estimated EBITDA change is the estimated change from the calendar 2019 capacity price to the calendar 2020 capacity price using MW proxy as noted

2019E EBITDA is the Barclays estimated EBITDA for 2019 for the company indicated (For FE, EXC, and PEG it includes the regulated utilities) for scale of impact

Expected change uses our predicted prices of $110/MW-day for RTO/DEOK, $140/MW-day for EMAAC, and $200/MW-day for ComEd

Analyst(s) Certification(s):

We, Daniel Ford, CFA, Ross A. Fowler, CFA and Gregg Orrill, hereby certify (1) that the views expressed in this research report accurately reflect our personal views about any or all of the subject securities or issuers referred to in this research report and (2) no part of our compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this research report.

Important Disclosures:

Barclays Capital Inc. and/or one of its affiliates does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Barclays Research is a part of the Investment Bank of Barclays Bank PLC and its affiliates (collectively and each individually, "Barclays").

Availability of Disclosures:

Where any companies are the subject of this research report, for current important disclosures regarding those companies please refer to https://publicresearch.barclays.com or alternatively send a written request to: Barclays Research Compliance, 745 Seventh Avenue, 13th Floor, New York, NY 10019 or call +1-212-526-1072.
The analysts responsible for preparing this research report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by investment banking activities, the profitability and revenues of the Markets business and the potential interest of the firm's investing clients in research with respect to the asset class covered by the analyst.
All authors contributing to this research report are Research Analysts unless otherwise indicated.
The publication date at the top of the report reflects the local time where the report was produced and may differ from the release date provided in GMT.

Analysts regularly conduct site visits to view the material operations of covered companies, but Barclays policy prohibits them from accepting payment or reimbursement by any covered company of their travel expenses for such visits.
In order to access Barclays Statement regarding Research Dissemination Policies and Procedures, please refer to https://publicresearch.barcap.com/static/S_ResearchDissemination.html. In order to access Barclays Research Conflict Management Policy Statement, please refer to: https://publicresearch.barcap.com/static/S_ConflictManagement.html.
The Investment Bank’s Research Department produces various types of research including, but not limited to, fundamental analysis, equity-linked analysis, quantitative analysis, and trade ideas. Recommendations contained in one type of research product may differ from recommendations contained in other types of research, whether as a result of differing time horizons, methodologies, or otherwise.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Mentioned Stocks (Ticker, Date, Price)

Calpine Corp. (CPN, 23-May-2017, USD 13.11), Overweight/Neutral, A/CD/CE/D/J/K/L/M

Dynegy Inc. (DYN, 23-May-2017, USD 8.18), Overweight/Neutral, A/CD/CE/D/E/J/K/L/M/N

Valuation Methodology: Our $14 price target is premised upon a 7.1x EV/EBITDA mid-cycle multiple, and our 2019E EBITDA of $1.532 billion net of debt of $8.521 billion, environmental capex of $0.4 billion, and a NPV of NOLs of $0.3 billion. We use shares outstanding of 161.08 million.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Dynegy Inc. is an

independent power company with a 50% natural gas 50% coal fired fleet diversified across MISO, PJM, New England, and New York. Risks to performance include natural gas, coal, and power prices, as well as annually set capacity prices in PJM and MISO. Risks to our valuation also include the ENGIE asset acquisition not closing as expected.

Exelon Corp. (EXC, 23-May-2017, USD 35.37), Overweight/Neutral, A/CD/CE/D/J/K/L/M

Valuation Methodology: Our current $43 price target is premised upon a 2019 group average multiple of 16.8x applied to the utility net parent earnings of $1.81 resulting in $31 of utility value. Exgen is valued at 6.6x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, the combined value is $43.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

U: The equity securities of this Canadian issuer include subordinate voting restricted shares.
V: The equity securities of this Canadian issuer include non-voting restricted shares.

Guide to the Barclays Fundamental Equity Research Rating System:
Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry ("the industry coverage universe"). To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.
In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Distribution of Ratings:

Barclays Equity Research has 1780 companies under coverage.

42% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 52% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this

rating have received financial services from the Firm.
15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 38% of companies with this rating are investment banking clients of the Firm; 60% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:
Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:
Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).
To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Explanation of other types of investment recommendations produced by Barclays Equity Research:
Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

Disclosure of previous investment recommendations produced by Barclays Equity Research:
Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to https://live.barcap.com/go/research/ResearchInvestmentRecommendations.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

PJM Capacity Auction Results: Surprisingly, No Surprises

Investment Thesis

Travis Miller, Strategist, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Strategist, 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

Exelon Corp EXC (XNYS)

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Economic Moat

Travis Miller, Strategist, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Travis Miller, Strategist, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Strategist, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state

renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite

three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

PJM Capacity Auction Results: Surprisingly, No Surprises

Travis Miller, Strategist, 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

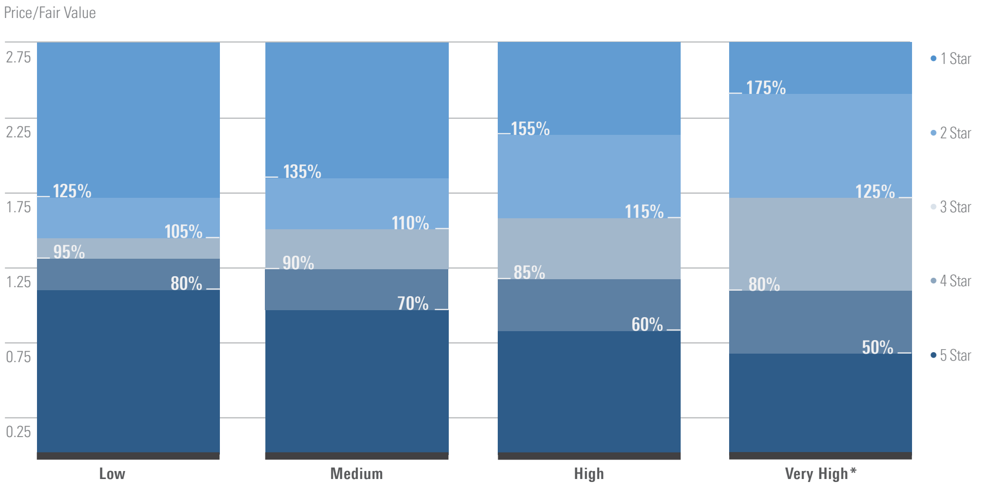
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ►**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ►**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ►**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ►**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ►**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ►**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ►**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ►**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

Company specific PJM results; positive on CPN, less so for DYN

We make modest revisions to estimates for companies with PJM exposure, given updated disclosures provided post PJM's auctions

The nation's largest power market, PJM released details from its annual capacity auction earlier this week. As highlighted in our 5/24/2017 report, *City lights price brighter; the rest of PJM prices poorly as expected*, we saw weak YoY pricing in the largest zones – RTO and MAAC – while PJM saw stronger results in the EMAAC and ComEd zones.

We now see a picture more in focus as most companies, within our coverage, released the amount of their PJM capacity that cleared in the auction. Our initial expectations hold as (1) PEG and CPN with larger EMAAC exposure should benefit, but (2) DYN and FE would face headwinds given exposure to the RTO zone.

Results positive for CPN in 2020, slightly less than expected for PEG

Results for CPN continue to appear strong with capacity cleared increasing by 733 MWs YoY – we raise estimates slightly. We lower slightly for PEG given less capacity cleared than expected – PEG cleared roughly 1,100 fewer MWs on a YoY basis.

We reduce slightly for NRG and DYN…

NRG results appear marginally weaker versus our initial post auction expectations given slightly fewer MWs cleared in the ComEd zone – potentially due to a small coal plant on PJM's deactivation list that likely did not clear, offset mostly by more capacity clearing in the EMAAC zone from NRG's coal/gas plants in Delaware.

We reaffirm our initial expectations for DYN – but lower estimates further given less capacity cleared than we previously modeled. On a YoY basis and updated for plants acquired since the last auction, we note DYN cleared 1.4 GW's less relative to last year's auction.

Disclosure Appendix

Reg AC

We, Michael Lapides, Daniel Yu, CFA, David Fishman, Dylan Campbell and Siddharth Verma, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a security by comparing key attributes of that security to its conviction sector and the market. The four key attributes depicted are: growth, returns, multiple and an integrated IP score. Growth returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe. The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

Growth is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** Multiple is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Integrated IP score** is a composite of Growth, Return and Multiple scores.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/125/EC is available at http://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Additionally, the regional Investment Review Committees each manage regional Conviction lists which represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return. Addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data available on a particular security, please contact your sales representative or go to http://360.gs.com.

Disclosure information is also available at http://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

COMPANY UPDATE

Tuesday, May 30, 2017

Exelon Corporation

Announces Plans to Close TMI

QUICK TAKE: The company's decision to close its Three Mile Island nuclear plant was anticipated given it failed to clear the most recent PJM auction and has been among the under-performing facilities in EXC's nuclear fleet. We view the announcement as a slight positive for the stock as the decision either eventually removes a relatively weak asset from the company's portfolio, or incentivizes incremental support from the state.

KEY POINTS

Announcement Details: EXC plans to close its Three Mile Island nuclear plant by September 30, 2019 as the facility has earned decreasing revenues as wholesale power prices remain low and it has failed to clear recent capacity auctions. The company will recognize a number of non-recurring costs associated with the decision, including:

- Inventory and supplies reserve adjustments, employee costs, and work-in-progress impairments between $65 million and $110 million in 2Q17 (cash costs between $40 million and $70 million). An additional $25 million per year in similar expenses could be incurred during 2018 and 2019.

- Accelerated depreciation and amortization expenses of about $1 billion between 2017 and 2019.

- A potential shortfall in associated nuclear decommissioning trust fund investments. EXC has two years following the closing of the plant to submit a decommissioning activities report; as of now, the most costly alternatives could require about $35 million in parent company guarantees and the plant could incur up to $145 million in spent fuel and site restoration costs during the 10-year period following permanent shutdown.

Company Overview

Company Description

Exelon Corporation is a diversified power utility company with operations throughout the United States, operating generation, transmission, and distribution assets in both merchant and regulated markets. The Generation segment operates a large regional and fuel-diversified competitive electricity business, including the largest nuclear power generation fleet in the country. The company owns regulated utilities ComEd, BGE, PECO, and Pepco Holdings, which provide electric transmission and distribution services to customers within their designated service areas.

Risks

Risk factors that may impede the achievement of the price target: (1) Industry fundamentals with respect to customer demand or product/service pricing could change and adversely impact expected revenues and earnings; (2) issues relating to major competitor or market shares or new product expectations could change investor attitudes toward the sector or the company; (3) unforeseen developments with respect to the management, financial condition or accounting policies or practices could alter the prospective valuation; or (4) external factors that affect the U.S. economy, interest rates, the U.S. dollar or major segments of the economy could alter investor confidence and investment prospects.

Key Risks: Regulatory factors, interest rates, commodity prices, operational factors, including running fleet of nuclear power reactors

Definition of Scotia Howard Weil Equity Research Ratings & Risk Rankings

We have a four-tiered rating system, with ratings of Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

The rating assigned to each security covered in this report is based on the Scotiabank, Global Banking and Markets research analyst's 12-month view on the security. Analysts may sometimes express to traders, salespeople and certain clients their shorter-term views on these securities that differ from their 12-month view due to several factors, including but not limited to the inherent volatility of the marketplace.

Ratings

Focus Stock (FS)
The stock represents an analyst's best idea(s); stocks in this category are expected to significantly outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Outperform (SO)
The stock is expected to outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Perform (SP)
The stock is expected to perform approximately in line with the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Underperform (SU)
The stock is expected to underperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Other Ratings

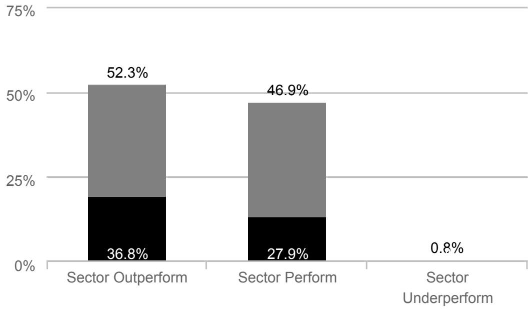
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Ranking
As of June 22, 2015, Scotiabank, Global Banking and Markets discontinued its Low, Medium, and High risk rankings. The Speculative risk ranking reflects exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, and exceptionally high stock volatility. The Director of Research and the Supervisory Analyst jointly make the final determination of the Speculative risk ranking.

Scotia Howard Weil Equity Research Ratings Distribution*

Distribution by Ratings and Equity and Equity-Related Financings*



▨ Percentage of companies covered by Scotia Howard Weil within each rating category.

■ Percentage of companies within each rating category for which Scotia Howard Weil has undertaken an underwriting liability or has provided advice for a fee within the last 12 months.

* As of April 30, 2017. Source: Scotia Howard Weil.

For the purposes of the ratings distribution disclosure FINRA requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to strong buy, buy, neutral and sell ratings, respectively.

General Disclosures

This research report was prepared by employees of Scotia Howard Weil, a division of Scotia Capital (USA) Inc. who have the title of Research Analyst. Scotia Capital (USA) Inc., an SEC registered broker-dealer and a member of FINRA and the NYSE, is wholly owned by Scotia Capital Inc., a Canadian Investment Dealer, and indirectly owned by The Bank of Nova Scotia. Scotiabank, together with "Global Banking and Markets," is a marketing name for the global corporate and investment banking and capital markets businesses of The Bank of Nova Scotia and certain of its affiliates in the countries where they operate, including Scotia Capital (USA) Inc.

All other trademarks are acknowledged as belonging to their respective owners and the display of such trademarks is for informational purposes only.

The frequency of reports is determined by the analyst on a case-by-case basis, driven by external market factors and issuer announcements. Analysts will endeavor to review and publish such estimates and recommendations as soon as possible after the release of material information by the issuer or the occurrence of other relevant events. This will typically involve, at a minimum, a summary of quarterly earnings releases.

In addition to Scotia Howard Weil Research, Scotiabank publishes and distributes Scotiabank Global Banking and Markets Equity Research (“Scotiabank Research”), which is a separate research publication. Scotia Howard Weil Research Analysts and Scotiabank Research Analysts are independent from one another and their respective coverage of issuers is different. In addition, because they are independent from one another, Scotia Howard Weil Research Analysts and Scotiabank Research Analysts may have different opinions on the short-term and long-term outlooks of local and global markets and economies.

This report is provided to you for informational purposes only. This report is not, and is not to be construed as, an offer to sell or solicitation of an offer to buy any securities and/or commodity futures contracts.

The securities mentioned in this report may neither be suitable for all investors nor eligible for sale in some jurisdictions where the report is distributed.

The information and opinions contained herein have been compiled or arrived at from sources believed reliable; however, Scotia Howard Weil makes no representation or warranty, express or implied, as to their accuracy or completeness.

Scotia Howard Weil has policies designed to make best efforts to ensure that the information contained in this report is current as of the date of this report, unless otherwise specified.

Any prices that are stated in this report are for informational purposes only. Scotia Howard Weil makes no representation that any transaction may be or could have been effected at those prices.

Any opinions expressed herein are those of the author(s) and are subject to change without notice and may differ or be contrary from the opinions expressed by other departments of Scotia Howard Weil or any of its affiliates.

Neither Scotia Howard Weil nor its affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

Scotiabank Inverlat, S.A., Scotia Inverlat Casa de Bolsa, S.A. de C.V., and Scotia Derivados, S.A. de C.V., are each authorized and regulated by the Mexican financial authorities.

Exelon Corporation

EXC – No Surprise: TMI Closure Announced; The Right Path to Take But Ball Is in PA's Court

May 30, 2017

EXC announced this morning that it would retire the Three Mile Island (TMI) nuclear plant on or about 9/30/2019, after the plant failed to clear the PJM base residual capacity auction for the third consecutive time this year. EXC plans to cancel a scheduled fuel purchase and planned outage in 2019 but expects to continue to operate the plant until 3Q2019 but shutdown could come sooner. As our TMI model displays below, plant generates negative cash flows before even accounting for allocated corporate overhead costs and interest expense drag.

No surprise here and will not "kick the can down the road"- The announced early retirement of TMI is the right path to take, in our view. We are not surprised by the announcement given that the plant **(1)** has been generating negative cash flow for the past five years due primarily to low wholesale power prices, there is no economic incentive to continue running a plant that's losing money – see our model below; **(2)** sits on top of Marcellus shale gas so we do not expect energy markets to recover as long as gas is cheap; **(3)** has relatively high operating costs as a single-unit site built in the 70s and; **(4)** failed to clear the PJM capacity auction three years in a row including the recently concluded 2020/2021 planning year auction so TMI hasn't had much help from capacity revenues.

We have seen this before - Now the ball is in PA's hand. Management indicated that it would like to see some kind of zero-emission credits from federal or state policies to value nuclear energy attributes for reduction of air pollution as well as contribution of baseload generation to grid reliability and resiliency – **any Federal policy moves likely too late to save TMI; salvaging the plant must come from PA.** We have highlighted in the past that any specific incentive to reflect zero emission generating sources like nuclear might face stronger headwinds than in IL and NY given the relatively powerful oil and gas lobby, **but that said**, PA regulators are also very well aware of the importance of nuclear "baseload" generation. We hosted commissioner meetings (See note HERE) with former PA commissioner, soon expected to be FERC Commissioner Robert Powelson, where he acknowledged the concerns on nuclear price formation in PA and went a step further to address that nuclear power is needed as part of the energy mix during the FERC nominee confirmation hearings last week. We also note that PA legislators have already formed a **bipartisan nuclear caucus** to advance discussions on the future of nuclear power and potential legislature, which may come to a head later this year. PJM also came out offering its help for the state to maintain zero-emission resources without disrupting the competitive marketplace. That said, EXC will not "kick the can down the road": policy must begin to form in PA in '17 or latest Q1 2018 to save TMI.

Key Assumptions	
Capacity	829 MW
Capacity factor	97%
Non-fuel variable O&M *($/MWh)*	$3.81
Fuel expense *($/MWh)*	$8.37

2019	0.75E	0.63E	0.98E	0.44E	2.80E
P/E					12.8x

Market Data	
Price	$35.82
52-Week Range	$29.82 - $37.70
Market Cap (M)	$33,161
Dividend	$1.28
Dividend Yield	3.6%
ADV (3 mo; 000)	5,112

What if the legislature did not go through? EXC would continue its current plan of shutting down the plant on or about 9/30/2019 and expect to take $65-110mm of one-time charges in 2017 – we would expect EXC to benefit financially in the LT given less O&M expenses and maintenance/outage spending due to the closure of the plant so accretion from plant closure should improve in time.

Valuation

Our $42 price target is based on a sum-of-the-parts analysis. We assign ~$17/share for ExGen using a 7.4x weighted average EV/EBITDA applied to ExGen's various assets. We assign $30/share for the regulated utilities combined based on our 2018E EPS of $1.79 applied to a 17.0x regulated utility multiple. Subtracting out ~$5 in parent drag, we arrive at our 12-month price target.

Risks

Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM.

The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

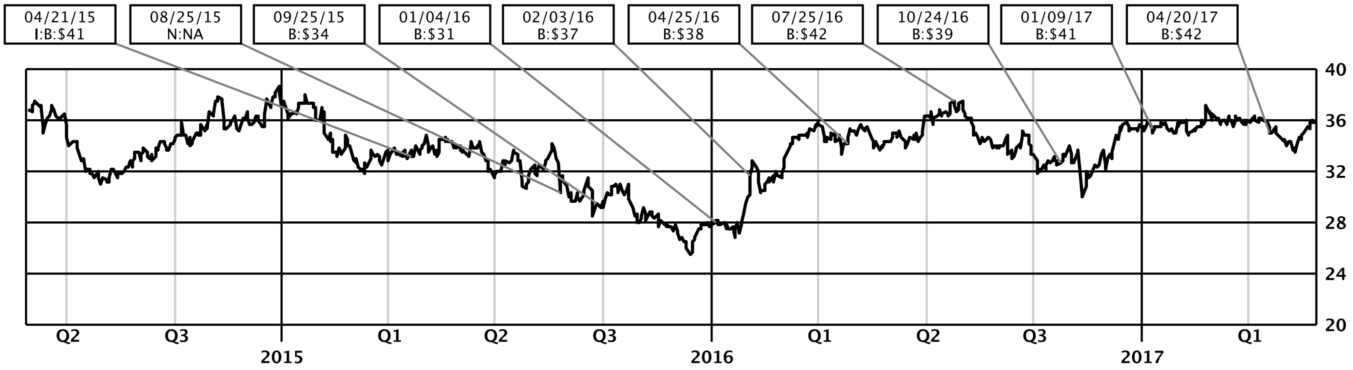
IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: Exelon Corporation (EXC) as of 05-29-2017



Created by BlueMatrix

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers

Investment Thesis

Travis Miller, Strategist, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Strategist, 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Economic Moat

Travis Miller, Strategist, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★ 31 May 2017 22:28, UTC	36.31 USD 31 May 2017	32.00 USD 07 Dec 2016 02:29, UTC	1.13	3.58 31 May 2017	3.61 31 May 2017	33.63 31 May 2017	Utilities - Diversified	Standard

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets. Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Travis Miller, Strategist, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Strategist, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state

renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite

three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

PJM Capacity Auction Results: Surprisingly, No Surprises

Travis Miller, Strategist, 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers

Travis Miller, Strategist, 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

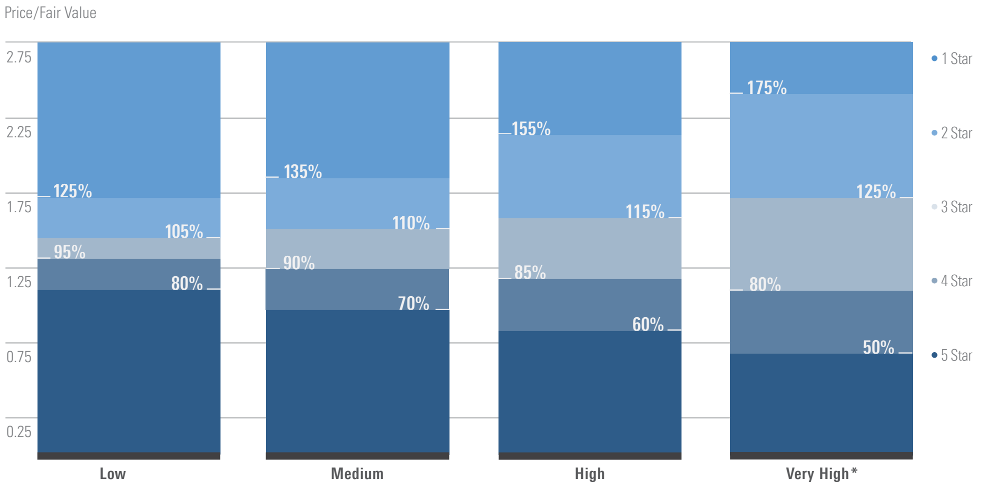
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- **Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- **Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- **None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- **One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- **Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- **Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- **Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- **Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, Inc., or the Equity Research Group guarantees the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst, Morningstar, Inc. or the Equity Research Group. In Territories where a Distributor distributes our report, the Distributor is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

- No interests are held by the analyst with respect to the security subject of this investment research report. – Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.

- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.

- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.

- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

- Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which the Equity Research Group currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities covered, including their fair value estimate, please contact your local office.

For Recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products. To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at http://www.morningstar.com.au/fsg.pdf .

Analyst Note 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

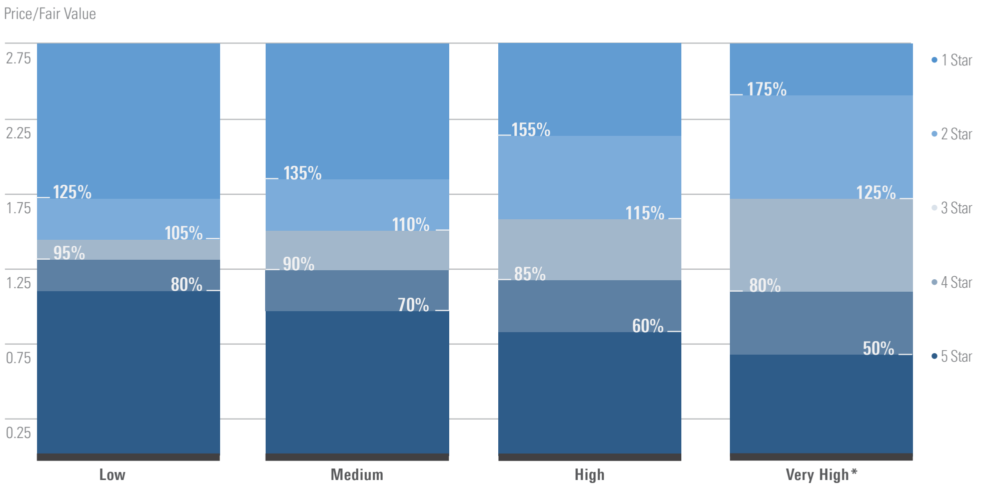
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Three Mile Island Shutdown Decision Modestly Bolsters Post-'19 Financial Profile

Rating Outperform, Target $39

Today EXC announced it would retire the 837 MW Three Mile Island (TMI) nuclear plant in Middletown, PA by 9/30/19. A higher cost, single unit facility that had not cleared any of the PJM base residual capacity auctions since the CP transitional auction for the '17/'18 delivery year back in 2015 (though it cleared the incremental '18/'19 auction), the plant has for a while been "on the bubble" for premature retirement (its operating license doesn't expire until 2034). A deactivation notice for TMI will be filed with PJM and the NRC in the next 30 days. It is not clear whether anything can be instituted in the state to "save" the plant. There has been movement regarding nuclear unit revenue support in PA - which is one of the largest generators of nuclear power in the country – with the state General Assembly on 3/16/17 announcing the formation of the Nuclear Energy Caucus to consider such issues, but specific legislation or programs have yet to materialize. The current legislative session ends on 6/30/17. EXC retains the ability to reverse the deactivation up to the shutdown date provided they have adequate lead time to make refueling and maintenance arrangements for 4Q19. Assuming TMI is retired, EXC will still own 3,618 MW of nuclear capacity in PA between Limerick and Peach Bottom, both dual-unit facilities (the latter which EXC operates, but co-owns with PEG).

The shutdown of TMI would be modestly accretive to cash flow and EPS after potential decommissioning costs. We estimate the plant is currently a $0.02-$0.05 drag on annual earnings through 2019, and a roughly $50mm drag on cash flow annually over the same period (it looks best in 2018 on both counts due to capacity revenue and the absence of a refueling outage). On a run-rate basis at current curves *before* decommissioning costs, we think EXC would realize a >$0.05 EPS benefit beginning 2020, and $50-$60mm improvement in annual free cash flow. Estimated decommissioning costs for TMI will be adjusted later in 2Q17 after a new study is completed, but under the most expensive / immediate decommissioning option currently ExGen may incur spent fuel management and site restoration costs of up to $145mm net of taxes over 10 years. That would reduce our estimated effective EPS and cash flow benefits to $0.04-$0.05 and $35-$45mm, respectively. Other potential requirements associated with the shutdown look manageable as well - EXC estimates the accelerated retirement could result in additional parent guarantees of up to $35mm needed for radiological decommissioning given the current size of the NDT fund under the most expensive decommissioning approach. One time charges of $65-$110mm will occur in '17, and up to $25mm in each of '18 and '19 (total employee-related cash costs associated with these charges are expected to be $40-$70mm).

We maintain our ’17-’19 EPS forecast of $2.65 / $2.85 / $2.85 on 5/24/17 power curves. EXC is committed to 2.5% dividend growth through 2018 but are confident the financial profile supports at least that level of growth through 2020. We think the assumptions driving EXC’s view of the earnings growth drivers in its core utilities business and ExGen as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management are still wholly credible. The core utilities are forecast to grow rate base at 6.5% from ’17-20 with earnings growth of 6-8% (down from 7-9% from ’16-’20 solely due to a higher ’17 base, the ’20 forecast is up a nickel). We see a turnaround at PHI similar to the one EXC engineered at BGE after the CEG acquisition as feasible, with annual rate cases at most of the PHI companies (the first “wave” of these largely resolved) and the ability to harvest operating synergies. So, there is line of sight for EPS at EXC’s utilities (ex-parent overheads) growing from $1.59 in FY ’17 to ~$2.00 in 2020. From a cash flow perspective we see ExGen organically producing ~$5.8bn of free cash flow through FY’19, >66% of the $8.75bn they are targeting through 2020 with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. That is also without the $400mm from the renewables JV which puts them at 71%. The sale price of that 49% stake implies there may be up to an $85mm degradation in EBITDA but at >10X EV/EBITDA that is not only a good transaction multiple but it is also very accretive as ExGen is trading at an implied 3.9X. Assuming they can sell their impaired TX assets (the EGTP portfolio) that will be another $650mm in debt that comes off the books and should be accretive to credit metrics.

EXC fared OK vs. expectations in the ‘20/’21 PJM capacity auction. Our base case expectations for EMAAC and ComEd leading up the auction were $160/MW-d and $180/MW-d respectively, and those zones ended up clearing higher at $187.87/MW-d and $188.12/MW-d. EXC disclosed that an additional 1,150 MW of nuclear capacity cleared at ComEd in the auction YoY, however as they also said that Quad Cities didn't clear (again) the balance presumably came from Byron. We estimated Byron cleared about 20% of its available capacity last year, and thus estimate closer to 70% this year. We think it is justifiable Quad Cities was not offered more aggressively in the auction, as the plant has yet to formally receive the ZEC contract and associated revenues. Our full discussion of the last PJM capacity auction can be found here.

Our price target remains $39; maintaining Outperform rating. Our forecast for utility EPS contribution minus parent overheads is $1.59/share in ’17 which by 2019 we expect to be ~ $1.85 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to +/-$2.00/share. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth ~$33.15/share (17.8X ’19 EPS). That implies ExGen is worth only ~$2.90/share today, which is around 2.9X ’19 EPS or 3.9X ’19 EV/EBITDA and a levered free cash flow yield to the EV of 12% with debt/EBITDA at YE ’19 of ~3.0X. They are taking all the cash flow from that lower multiple part of the business and either returning it to shareholders or investing in the higher multiple utility business. Overall, EXC is trading at +/-12.7X FY ’19 earnings while pure regulated names are at +/-17.8X. The EXC dividend yield is 30bps above that of the regulated peer group at ~3.6%. While the dividend growth commitment of 2.5% annually through at least 2018 is lower than that articulated by purely regulated peers and some risks to ExGen revenues are palpable, we think that the overall valuation gap, given our view of the value of the businesses and capital allocation plan, is too high. At $39/share our target price implies a valuation for ExGen of 5.85X ‘19 EV/EBITDA and a levered free cash flow yield of ~9%. The consolidated P/E would still be only 13.7X ’19 EPS.

EXC reported 1Q17 adjusted EPS of $0.65 vs. consensus $0.63 (and $0.68 in 1Q16), which was at the high end of their $0.55 - $0.65 guidance range. Although the largest driver of the YoY decline was ExGen (at -$0.16), this was driven by factors contemplated in guidance. In fact, ExGen’s performance both at wholesale (fewer unplanned outages, better planned outage performance) and at retail from strong Constellation execution was a factor driving earnings to the top end of the range. Unfavorable weather at the utilities was overcome in part by O&M timing. Guidance for 2Q17 was initiated at $0.45-$0.55, which looked a bit light to consensus $0.59.

The FY’17 outlook was affirmed at $2.50 - $2.80. Going forward, the utility outlook was unchanged. While the ExGen outlook looked $0.03 - $0.04 worse in ’18 / ’19 on 3/31/17 forward curves forwards have clawed back a portion of that since the end of March, and thus the outlook is effectively also unchanged. There were a number of “puts and takes” that occurred in the quarter on the commercial side, but the bottom line is that power new business executions and hedges limited the impact of degradation in forward curves between 12/31/16 and 3/31/17 to $50mm in each of ’18 / ’19, and commodity moves since then have essentially closed that gap. Expected generation output is essentially unchanged prospectively with the overall hedge position for ’17-’19 now slightly higher at 98.5% / 61.5% / 31.5% from 92.5% / 57.5% / 29.5%, the company remaining behind ratable (especially at NI Hub) based on their view that an improving supply / demand outlook is not appropriately reflected in the forward curves. Their point of view is not in guidance, but a $1/MWh increase in power prices across their major markets would drive an increase in ’19 gross margin of ~$116mm (1.5% of current expected ’19 GM). They remain committed to reducing leverage at ExGen from 3.3X Debt/EBITDA today to 3X, then using cash flow in excess of that required to pay the EXC dividend and fund utility capital expenditures to pay down parent debt rather than ExGen debt.

Since hitting $33.50 on 5/11/17, the stock has climbed nearly 8%. Valuation got extremely compressed and risk aversion on the pricing outcome of the last PJM capacity auction (after the ISO-NE and MISO disappointments) proved misplaced. As we discussed earlier the EMAAC and ComEd zones (where EXC has the majority of its exposure) both priced better than expectations. That being said legal action in NY and IL to challenge ZEC revenues could be successful and we think that remains a factor still impacting valuation. The legal basis for ZECs seems sound but it remains a risk and could impact ’19 EPS by +/-$0.25/share if 100% successful in rolling back those programs. Still, with ExGen trading at only 2.9X ’19 EPS on a SOTP basis the exposure seems small at this point if they lose on this front. Generally we also think that investor concern about 2020 earnings power has been a real factor, despite the long time horizon, since power prices out the forward curve would drive a significant decline in ExGen earnings. We do not have a formal 2020 EPS forecast for EXC. We now know the capacity revenue delta and include the TMI shut-down benefit. Those factors mitigate lower energy pricing that could be a significant headwind. Taking in to account 6-8% growth at the core utilities, consolidated EPS could fall as much as $0.15/share if current forwards were realized. But just a $1/MWh improvement in power price at their given sensitivities is $0.09/share. So it doesn’t take much to start valuing EXC more highly on 2020 forward curves, at least in our view.

What’s next at ExGen? The new Wolf Hollow and Colorado Bend CCGTs (2,200 MW) in ERCOT will go full COD as planned in 2Q17. ExGen’s announced 3/31/17 sale its 49% share of the renewables JV should close in late 2Q17 or early 3Q17, subject to FERC and PUCT approval. The sale process for the economically-challenged EGTP portfolio of CCGTs and NG peakers (3,398 MW) in ERCOT is underway, with an agreement possible by late 3Q17 or early 4Q17. There is no timetable for a decision on the motion to dismiss the legal challenges to NY’s ZEC program, which went into effect on 4/1/17. In IL, plaintiffs on 3/31/17 filed a preliminary injunction for the ZES program (which is effective on 6/1/17), with EXC intervening and filing a motion to dismiss on 4/10/17. The judge is expected to rule on the motion to dismiss in the coming weeks before addressing the injunction sought by the plaintiffs, but like NY there is no timetable.

What’s next at the utilities? On 3/8/17 and 4/6/17, DPL entered into settlement agreements in its DE electric and gas rate cases for $32mm and $4.9mm, respectively, both based on a 9.7% ROE (they had requested $81.7mm in aggregate based on a 10.60% ROE) with DPSC approval expected in 2Q17. A DCPSC in Pepco’s electric distribution rate case (in which they filed on 6/30/16 for a $76.8mm increase premised on 10.60% ROE) is expected by 7/25/17. A MDPSC decision in Pepco’s electric distribution rate case (in which they filed on 3/24/17 for a $69mm increase premised on 10.10% ROE) is expected in 4Q17. A NJBPU decision in ACE’s electric distribution rate case (in which they filed on 3/30/17 for a $70mm increase premised on 10.10% ROE) is expected in 1H18.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming capacity auctions would be accretive but a significantly lower capacity auction price would be negative.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform – the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line – the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform – the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and

trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long – the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short – the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position – the stock is not included in the model portfolio.
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal 100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Investment Thesis 06 Dec 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Valuation, Growth and Profitability 06 Dec 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the

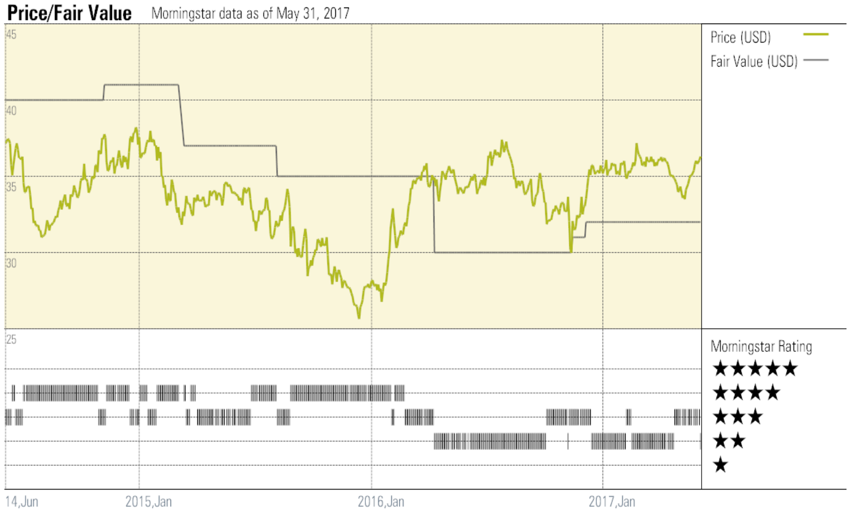
Price/Fair Value Morningstar data as of May 31, 2017



near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $650 million change in EBITDA. Our fair value estimate would change by $5 per share. On a mark-to-market basis as of mid-November, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 4 percentage points to near the industry average, it would change our fair value estimate by $1 per share. If Exelon does not retire the Clinton, Quad Cities, and Three Mile Island plants, it would add $2 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. About 70% of the $11 billion of rate base growth in 2016-20 will have rate trackers or formula rates, minimizing regulatory lag. Exelon faces the biggest challenge boosting Pepco's earned returns some 400 basis points to approach its allowed returns. Rate cases in 2016-17 should give it a good start.

In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

Exelon Corp EXC (NYSE) | ★★

Morningstar Analysis

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.

- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.

- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.

- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.

- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets as it tries to smooth cash flow at its generation unit. As power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.We see no immediate credit concerns based on current energy market conditions. We project Exelon's consolidated EBITDA/interest coverage will remain above 5 times and leverage will remain below 5 times debt/EBITDA at least through 2019. Even those these ratios are weaker following the Pepco acquisition, we think this is acceptable given the higher share of regulated earnings.Only about one-quarter of Exelon's consolidated debt is directly tied to its generation segment. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing its near-term maturities. Management has committed to reducing Exelon Generation debt by $3 billion during the next five years and use the remaining cash to fund the regulated utilities' growth.We also think management can meet its 2.5% dividend growth goal through 2018 with relative ease. However, this is rather unimpressive compared with most of its peers that we think can grow their dividends at least twice as fast.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm might have to make modest cash contributions. Plant closures also could increase cash decommission costs.

Enterprise Risk

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
36.31 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management 06 Dec 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes

PJM Capacity Auction Results: Surprisingly, No Surprises 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet. NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth 19 Apr 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Our full report, "Trump Can't Thwart Green Progress," is available on Morningstar Select Investment Research.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities 28 Mar 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Exelon Corp EXC (NYSE) | ★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
36.31 USD	32.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

For more information on our outlook for renewable growth and carbon emissions, see our most recent report "Trump Can't Thwart Green Progress" on Morningstar Select Investment Research.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes 08 Feb 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50%

Exelon Corp EXC (NYSE) | ★★

Analyst Notes

probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ▸**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ▸**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ▸**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ▸**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ▸**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

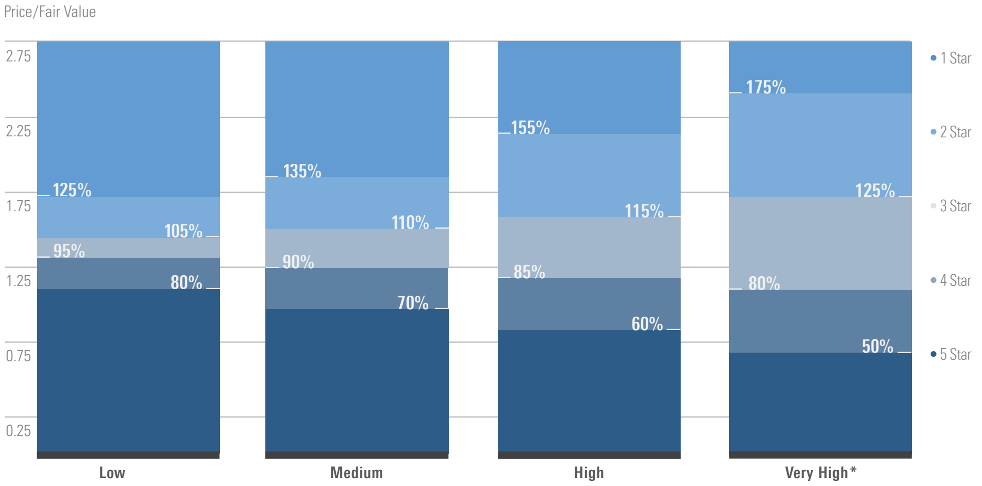
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★

We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★

Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Analyst Note 02 Jun 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities after President Trump announced plans to exit the Paris Climate Agreement.

Despite the withdrawal, we continue to forecast U.S. renewable energy capacity doubling during the next eight years. State renewable portfolio standards, or RPS, and other local policies remain the industry's primary growth driver, not federal environmental policy. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use by 2025, up from 15% now, based solely on existing state RPS.

We think Trump's move to abandon the U.S. Clean Power Plan and Paris Agreement could even embolden states to strengthen renewable energy standards, offering upside to our forecasts. Supportive tax policy and pro-manufacturing initiatives also offer upside. And corporate renewable energy purchases should continue to grow as businesses realize the economic and public perception benefits. Thus, we are not surprised that many business leaders denounced Trump's decision.

We also forecast carbon emissions from the power generation sector will keep falling toward Paris Agreement targets given the growth in renewable energy and gas generation. Low natural gas prices and turbine efficiency improvements are forcing coal plant shutdowns and reduced run times for competing coal generators, which emit twice as much carbon as an equivalent gas plant.

Utilities operating in states with constructive regulation and environmental policy support could realize 7%-9% annual earnings and dividend growth the next three to five years. Best positioned are utilities like Dominion Energy, Duke Energy, American Electric Power, and CMS Energy that are

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

investing billions of dollars in new infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Our full report, "Trump Can't Thwart Green Progress," is available on Morningstar Select Investment Research.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

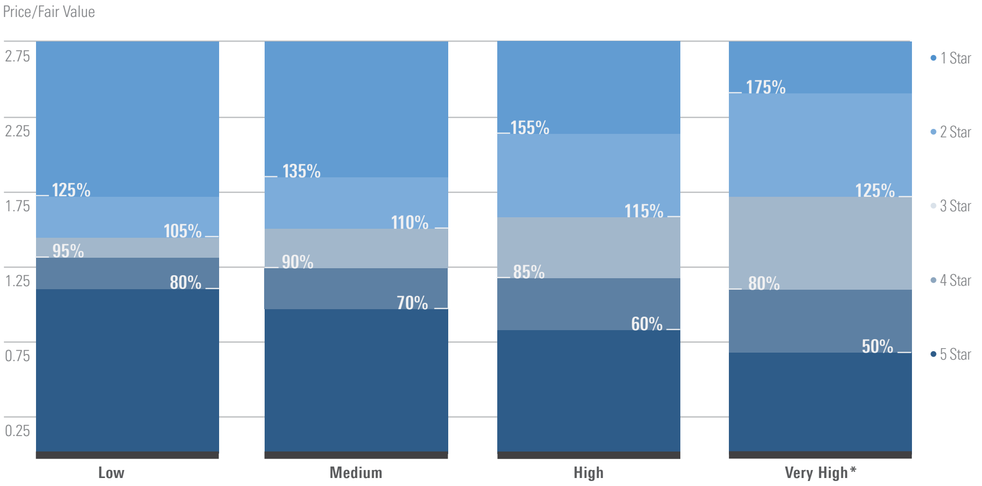
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc.performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the

suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. The Equity Research Group encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Trump's Announcement to Exit Paris Agreement Has Little Effect on Utilities

Investment Thesis

Travis Miller, Strategist, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Andrew Bischof, CFA, Sr. Eq. Analyst, 02 June 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities after President Trump announced plans to exit the Paris Climate Agreement.

Despite the withdrawal, we continue to forecast U.S. renewable energy capacity doubling during the next eight years. State renewable portfolio standards, or RPS, and other local policies remain the industry's primary growth driver, not federal environmental policy. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use by 2025, up from 15% now, based solely on existing state RPS.

We think Trump's move to abandon the U.S. Clean Power Plan and Paris Agreement could even embolden states to strengthen renewable energy standards, offering upside to our forecasts. Supportive tax policy and pro-manufacturing initiatives also offer upside. And corporate renewable energy purchases should continue to grow as businesses realize the economic and public perception benefits. Thus, we are not surprised that many business leaders denounced Trump's decision.

We also forecast carbon emissions from the power generation sector will keep falling toward Paris Agreement targets given the growth in renewable energy and gas generation. Low natural gas prices and turbine efficiency improvements are forcing coal plant shutdowns and reduced run times for competing coal generators, which emit twice as much carbon as an equivalent gas plant.

Utilities operating in states with constructive regulation and environmental policy support could realize 7%-9% annual earnings and dividend growth the next three to five years. Best positioned are utilities like Dominion Energy, Duke Energy, American Electric Power, and CMS Energy

that are investing billions of dollars in new infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Economic Moat

Travis Miller, Strategist, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle

Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move

so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Travis Miller, Strategist, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Exelon Generation Moving Toward Growth After Regulatory, Operational Successes

Travis Miller, Strategist, 08 February 2017

We are reaffirming our $32 per share fair value, narrow moat and stable moat trend for Exelon after the company announced earning $2.68 per share in 2016, slightly ahead of our estimate.

We are reaffirming our forecasts for 2017 and beyond. Our $2.62 per-share earnings estimate for 2017 is near the midpoint of the $2.50-$2.80 per share guidance range management initiated. We do not include the impact from Exelon's proposed acquisition of Entergy's FitzPatrick nuclear plant in New York, but we expect it would have a small positive impact on earnings if the deal closes as proposed in 2017. We don't expect it to have a material impact on our fair value estimate.

We think the next opportunity for regulatory upside is in Pennsylvania where Exelon has three nuclear plants. This includes Three Mile Island, which we think is at risk of closing as soon as 2018.

We continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized all-time records for capacity factor (94.6%) and generation in 2016. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

In a good sign that Exelon's earnings have stabilized, the board raised the dividend 3% for 2017 to $1.31 per share annualized, slightly ahead of management's 2.5% growth target and our estimate. If the company pays this rate all year, it will be Exelon's first full year of dividend growth since it cut the dividend 41% in mid-2013. Exelon's 50% payout ratio based on our 2017 earnings estimate remains near the bottom of the sector, giving it some cushion if power markets or regulation become headwinds.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state

renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite

three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

PJM Capacity Auction Results: Surprisingly, No Surprises

Travis Miller, Strategist, 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers

Travis Miller, Strategist, 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Trump's Announcement to Exit Paris Agreement Has Little Effect on Utilities

Andrew Bischof, CFA, Sr. Eq. Analyst, 02 June 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities after President Trump announced plans to exit the Paris Climate Agreement.

Despite the withdrawal, we continue to forecast U.S. renewable energy capacity doubling during the next eight years. State renewable portfolio standards, or RPS, and other local policies remain the industry's primary growth driver, not federal environmental policy. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use by 2025, up from 15% now, based solely on existing state RPS.

We think Trump's move to abandon the U.S. Clean Power Plan and Paris Agreement could even embolden states to strengthen renewable energy standards, offering upside to our forecasts. Supportive tax policy and pro-manufacturing initiatives also offer upside. And corporate renewable energy purchases should continue to grow as businesses realize the economic and public perception benefits. Thus, we are not surprised that many business leaders denounced Trump's decision.

We also forecast carbon emissions from the power generation sector will keep falling toward Paris Agreement targets given the growth in renewable energy and gas generation. Low natural gas prices and turbine efficiency improvements are forcing coal plant shutdowns and reduced run times for competing coal generators, which emit twice as much carbon as an equivalent gas plant.

Utilities operating in states with constructive regulation and environmental policy support could realize 7%-9% annual earnings and dividend growth the next three to five years. Best positioned are utilities like Dominion Energy, Duke Energy, American Electric Power, and CMS Energy that are investing billions of dollars in new infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

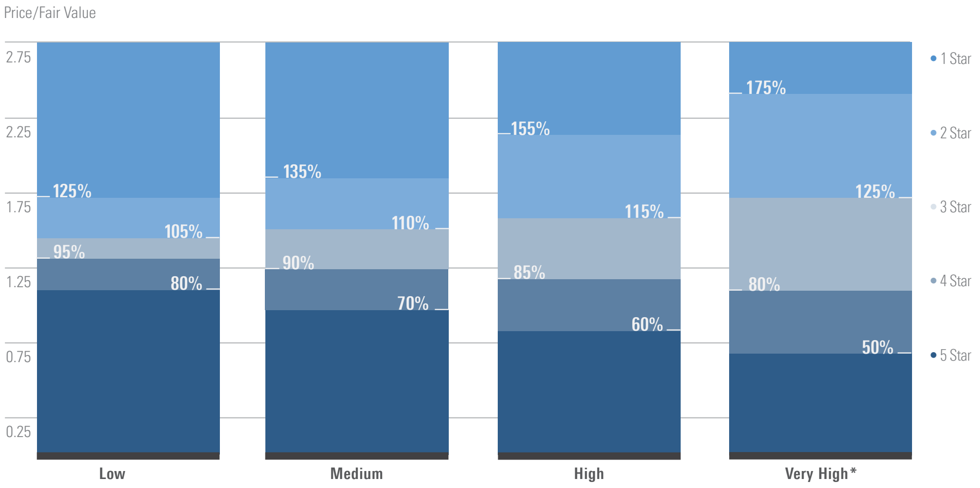
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ►**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ►**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ►**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ►**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ►**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ►**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ►**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ►**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

Price/Fair Value Morningstar data as of Jun 01, 2017

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. The Equity Research Group encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an

investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, Inc., or the Equity Research Group guarantees the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst, Morningstar, Inc. or the Equity Research Group. In Territories where a Distributor distributes our report, the Distributor is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

- No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.

- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.

- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.

- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

- Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which the Equity Research Group currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities covered, including their fair value estimate, please contact your local office.

For Recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products. To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at http://www.morningstar.com.au/fsg.pdf .

For recipients in Singapore: For Institutional Investor audiences only. Recipients of this report should contact their financial adviser in Singapore in relation to this report. Morningstar, Inc., and its affiliates, relies on certain exemptions (Financial Advisers Regulations, Section 32B and 32C) to provide its investment research to recipients in Singapore.

COMPANY UPDATE
June 14, 2017

SunTrust Robinson Humphrey

Exelon Corporation (EXC)

Merchant Assets Significantly Undervalued In Current Stock Price

What's Incremental To Our View

Our key takeaway from the reception we hosted for EXC's CFO yesterday is that there are several scenarios that could lead to the overall improvement in the stock's current valuation. Based on the latest forward commodity curves, we have raised our 2018-19 estimates. Factoring in our higher estimates, we have increased our price target to $40 from $39.

IMPORTANT POINTS

Yesterday evening, we hosted a reception for Jack Thayer (CFO) of EXC. Key takeaways:

- **We expect clarity on the path forward on the Zero Emission Credit (ZEC) payments in the next few months.** While both the states of Illinois and New York have incorporated ZEC payments to prevent specific EXC nuclear plants from shutting down, the payments have been legally challenged by the IPP industry. We expect the New York court to be the first to rule on the motion to dismiss the case. We make the following observations on the outcome: (1) if the New York court agrees to EXC's arguments to dismiss the case, it would set a strong precedence for Illinois and be viewed favorably by the market; and (2) if the court decides to proceed with the case, the legal process will likely last through 2020, by which time EXC would have completed its targeted $3.0 billion Merchant / Parent debt reduction (since there is no claw back on the ZEC payments). Separately, there is activity in the New Jersey and Pennsylvania legislatures to also look at similar programs to support nuclear plants. We calculate that the New York and Illinois ZEC payments represent $0.34 of annual earnings for EXC (from 2018 onwards), and the company is getting minimal / no value for these earnings in the current stock valuation.

- **We believe EXC's merchant assets are significantly undervalued.** Assuming an average Regulated Utility P/E multiple for EXC's utility earnings, we derive an implied EV/EBITDA multiple of 5.1x-5.8x for EXC's merchant assets (based on our 2018-19 estimates), which is a 31%-37% discount to publicly traded merchant power stocks. We expect management to proactively address this valuation discrepancy over the next 12-18 months, with some of the potential actions including: (1) allocating a portion of the merchant free cash flow for share buybacks; and (2) selling a stake in the business. On a related matter, we expect the sale of the legacy Texas assets (3398mw) to be finalized over the next 10-12 weeks. While we are not anticipating any additional cash proceeds for the company from this sale (since proceeds will be utilized for debt paydown), the elimination of these assets should be earnings accretive.

BGE: $5.0bn in 2015, $5.3bn in 2016, $5.7bn in 2017E, $6.1bn in 2018E, $6.5bn in 2019E; PEPCO: $8.3bn in 2016, $8.9bn in 2017E, $9.4bn in 2018E, $9.9bn in 2019E.

2) Earned ROE - Com Ed: 8.0% in 2015, 8.8% in 2016, 9.3% in 2017, 9.4% in 2018, 9.5% in 2019; PECO: 11.7% in 2015, 13.3% in 2016, 12.1% in 2017, 12.2% in 2018, 12.1% in 2019;
BGE: 10.7% in 2015, 10.5% in 2016, 9.7% in 2017, 10.3% in 2018, 10.3% in 2019; PEPCO: 5.5% in 2016, 7.4% in 2017, 7.7% in 2018, 8.0% in 2019.

3) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

4) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

5) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

6) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

7) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw, nuclear $110m price) from Q2 2017.

8) We have factored the IL ZEC payments for Clinton (1069mw) and Quad City (1403mw) from 6/1/17.

9) Total ZEC payments represent $500m / year of pre tax income (from 2018 onwards).

10) Forward curves as of 6/12/17.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a 14.5x P/E multiple (in line with the peer group) on our 2019 estimate of $2.78, we derive our price target of $40.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

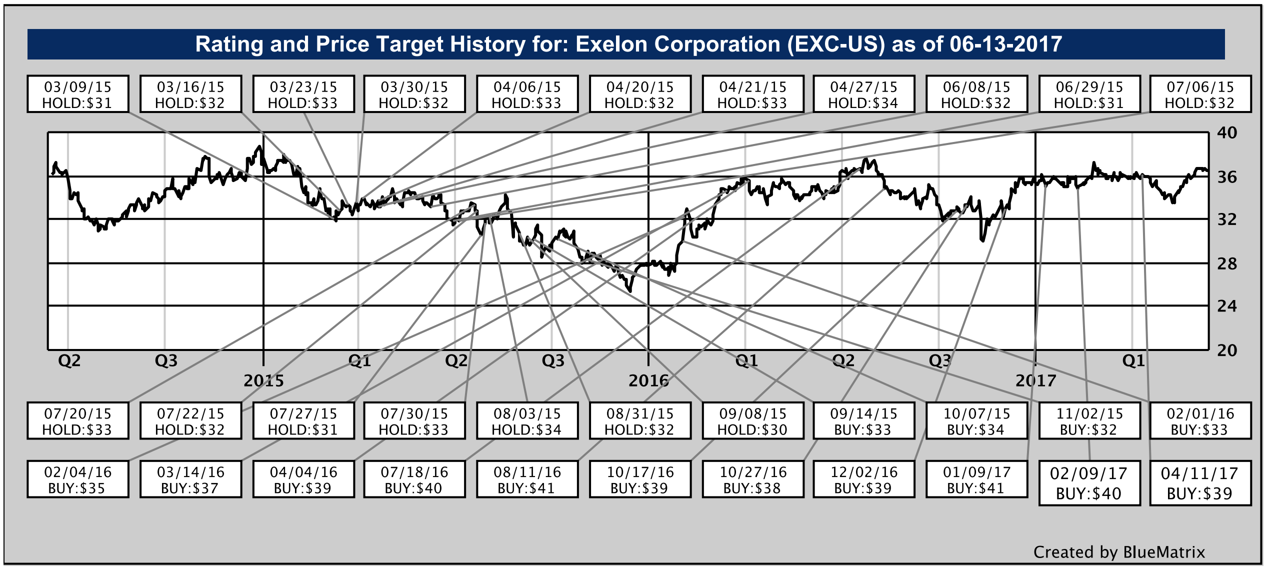
Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.



STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may

exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 06/14/2017):

TOP PICK Exelon Corp. / FirstEnergy Corp.

The Merchant Nuclear Backdrop Improves

Stock Rating/Industry View: Overweight/Neutral
Price Target: USD 43.00
Price (15-Jun-2017): USD 36.82
Potential Upside/Downside: 17%
Tickers: EXC

Stock Rating/Industry View: Overweight/Neutral
Price Target: USD 36.00
Price (15-Jun-2017): USD 29.79
Potential Upside/Downside: 21%
Tickers: FE

Policy Improvements Emerging on Three Fronts

Federal Courts, PJM Whitepapers, and DOE Study. Policy improvements for merchant nuclear are emerging on three fronts. First, we are awaiting outcomes in Federal courts in the zero emission credit (ZEC) lawsuits in New York and Illinois. Second, carbon pricing and capacity price formation whitepapers from PJM suggest potential policy improvements. And third, the coming grid reliability study from the U.S. Department of Energy to be released on June 26. The PJM whitepapers can be found here: http://pjm.com/~/media/library/reports-notices/special-reports/20170612-context-for-pjm-market-design-proposals-responding-to-state-public-policy-initiatives.ashx. Should any of these efforts result in policy implementation the largest owners of merchant nuclear assets are Exelon (EXC, OW, $43 PT), Public Service Enterprise Group (PEG, EW, $49 PT), and First Energy Corp. (FE, OW, $36 PT).

ZEC Rulings – Still to Come from New York

Longer Timeline Could Suggest More than Just Moving Forward with the Trial As Is. We are still waiting for a written ruling from the Federal Court judge in New York (Southern District case 1:16-cv-8164) regarding the case to dismiss Zero Emission Credit legislation. We believe that the length of time it is taking to write this order may indicate a positive outcome for EXC. The two most likely results in our view would be either a careful and thorough order to dismiss or a rendering that would narrow the scope of the complaint to carry forward to trial. We expect the order any time now. A separate order in Illinois (Northern District case 1:17 cv 01164) is due in the next 6 weeks.

PJM Whitepapers Constructive; DOE Whitepaper to Come on June 26

Pricing Carbon in PJM? Two anticipated PJM whitepapers were published Wednesday. We view both as positive steps forward for price formation in the energy and capacity markets that would adjust for subsidized assets. The first was on zero emission objectives within PJM and indicated that a carbon price would be the best way forward. The carbon pricing model in the PJM whitepaper has the following proposed framework. Any state or regional carbon price would (1) Apply to carbon emitting suppliers on a per-ton basis and be reflected in offers; (2) be revealed in wholesale market prices; (3) Alter economic dispatch; (4) Improve competitiveness of non-emitters of carbon; and (5) provide a revenue stream to participating states based on unit specific carbon emissions.

One of the largest problems with the Regional Greenhouse Gas Initiative (RGGI) of which Delaware and Maryland within the PJM are already participating, is price leakage to and from other states without a carbon pricing regime. PJM proposes to fix this issue by having an adjustment credit for power transmitted between the carbon states and the non-carbon states and adjustment charge for power from the non-carbon region to the carbon region. It would be easier to accomplish these border adjustments if the states participating in a carbon regime were contiguous although this would not be required. While legally PJM believes states can implement their own carbon policy and PJM can administer it outside of federal jurisdiction from the Federal Energy Regulatory Commission (FERC), the border adjustments may fall within FERC jurisdiction over wholesale rates. Regardless, any incremental price on carbon would be beneficial for nuclear fleets. Each $1/ton of carbon price would roughly equate to $0.30/MWh upside to around the clock power prices in wind heavy regions and $0.80/MWh in regions where coal would set the marginal price of electricity off-peak.

Addressing Subsidies in Capacity Markets. PJM also released a whitepaper proposing a two-stage capacity auction to compensate unsubsidized generation from resources with “actionable” subsidies from the auction. In the proposed process bidders would make offers into a single capacity market auction. Then the price determination would be split into two stages. The first stage would determine which resources receive a capacity commitment and produce a suppressed capacity price. The second stage would then recalculate capacity prices by removing resources with actionable subsidies. These resources would then be replaced with reference price offers that would represent a competitive offer from a unit of that type and vintage sans subsidies. PJM would credit all cleared resources and charge all demand the restated capacity price from the second stage unless a state directed PJM to pay those particular subsidies resources less.

While PJM might be able to get through these changes to the market in time for the 2021/22 auction in May 2018 similar to the streamlined process for implementation of the capacity performance standard, the most difficult part of the proposal may be that it only triggers repricing for certain actionable subsidies but not other non-actionable subsidies. This might lead to a reduction in capacity prices in certain sub-regions in PJM in scenarios where states heavily subsidize new build via non-actionable subsidy items. The white paper defines actionable subsidies as ones that: (1) are not part of a federal subsidy program; (2) directly focus on supply side participation; (3) impact more that 1,000MWs of subsidies unforced capacity of resource class in PJM, and (4) is greater than 1% of the actual or anticipated market revenues.

Energy Market Whitepapers to Come. PJM and DOE are also set to issue whitepapers on grid stability and the importance of diversity of supply and the impact of subsidies on both. The DOE whitepaper is set to be published on June 26 and the PJM whitepaper will likely be published along the same timeframe. The most likely proposal to address market subsidies that create scenarios for negative off-peak pricing when demand is low is to set a minimum price for electricity per hour as some positive level. While unlikely to be the marginal cost of the clearing unit without subsidies, even some floor level would be beneficial to around the clock pricing. Now, when subsidized wind blows when demand is low, overnight electricity can price negatively in those hours. For baseload resources like nuclear that run on an around the clock basis this significantly reduces off-peak and around the clock average pricing and revenues.

Mentioned Stocks (Ticker, Date, Price)

Exelon Corp. (EXC, 15-Jun-2017, USD 36.82), Overweight/Neutral, A/CD/CE/D/J/K/L/M

Valuation Methodology: Our current $43 price target is premised upon a 2019 group average multiple of 16.8x applied to the utility net parent earnings of $1.81 resulting in $31 of utility value. Exgen is valued at 6.6x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, the combined value is $43.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

U: The equity securities of this Canadian issuer include subordinate voting restricted shares.
V: The equity securities of this Canadian issuer include non-voting restricted shares.

Guide to the Barclays Fundamental Equity Research Rating System:
Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry ("the industry coverage universe"). To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.
In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Distribution of Ratings:

Barclays Equity Research has 1782 companies under coverage.

42% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 52% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.
15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 37% of companies with this rating are investment banking clients of the Firm; 60% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:
Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:
Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).
To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Explanation of other types of investment recommendations produced by Barclays Equity Research:
Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

Disclaimer:
This publication has been produced by the Investment Bank of Barclays Bank PLC and/or one or more of its affiliates (collectively and each individually, "Barclays"). It has been distributed by one or more Barclays legal entities that are a part of the Investment Bank as provided below. It is provided to our clients for information purposes only, and Barclays makes no express or implied warranties, and expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to any data included in this publication. To the extent that this publication states on the front page that it is intended for institutional investors and is not subject to all of the independence and disclosure standards applicable to debt research reports prepared for retail investors under U.S. FINRA Rule 2242, it is an “institutional debt research report” and distribution to retail investors is strictly prohibited. Barclays also distributes such institutional debt research reports to various issuers, regulatory and academic organisations for informational purposes and not for the purpose of making investment decisions regarding any debt securities. Any such recipients that do not want to continue receiving Barclays institutional debt research reports should contact debtresearch@barclays.com. Barclays will not treat unauthorized recipients of this report as its clients and accepts no liability for use by them of the contents which may not be suitable for their personal use. Prices shown are indicative and Barclays is not offering to buy or sell or soliciting offers to buy or sell any financial instrument.

Without limiting any of the foregoing and to the extent permitted by law, in no event shall Barclays, nor any affiliate, nor any of their respective officers, directors, partners, or employees have any liability for (a) any special, punitive, indirect, or consequential damages; or (b) any lost profits, lost revenue, loss of anticipated savings or loss of opportunity or other financial loss, even if notified of the possibility of such damages, arising from any use of this publication or its contents.

Other than disclosures relating to Barclays, the information contained in this publication has been obtained from sources that Barclays Research believes to be reliable, but Barclays does not represent or warrant that it is accurate or complete. Barclays is not responsible for, and makes no warranties whatsoever as to, the information or opinions contained in any written, electronic, audio or video presentations of third parties that are accessible via a direct hyperlink in this publication or via a hyperlink to a third-party web site ('Third-Party Content'). Any such Third-Party Content has not been adopted or endorsed by Barclays, does not represent the views or opinions of Barclays, and is not incorporated by reference into this publication. Third-Party Content is provided for information purposes only and Barclays has not independently verified its accuracy or completeness.

The views in this publication are those of the author(s) and are subject to change, and Barclays has no obligation to update its opinions or the information in this publication. If this publication contains recommendations, those recommendations reflect solely and exclusively those of the authoring analyst(s), and such opinions were prepared independently of any other interests, including those of Barclays and/or its affiliates. This publication does not constitute personal investment advice or take into account the individual financial circumstances or objectives of the clients who receive it. The securities discussed herein may not be suitable for all investors. Barclays recommends that investors independently evaluate each issuer, security or instrument discussed herein and consult any independent advisors they believe necessary. The value of and income from any investment may fluctuate from day to day as a result of changes in relevant economic markets (including changes in market liquidity). The information herein is not intended to predict actual results, which may differ substantially from those reflected. Past performance is not necessarily indicative of future results.

Nothing herein should be considered investment advice as defined in the Israeli Regulation of Investment Advisory, Investment Marketing and Portfolio Management Law, 1995 (“Advisory Law”). This document is being made to eligible clients (as defined under the Advisory Law) only. Barclays Israeli branch previously held an investment marketing license with the Israel Securities Authority but it cancelled such license on 30/11/2014 as it solely provides its services to eligible clients pursuant to available exemptions under the Advisory Law, therefore a license with the Israel Securities Authority is not required. Accordingly, Barclays does not maintain an insurance coverage pursuant to the Advisory Law.

Barclays Bank PLC in the Dubai International Financial Centre (Registered No. 0060) is regulated by the Dubai Financial Services Authority (DFSA). Principal place of business in the Dubai International Financial Centre: The Gate Village, Building 4, Level 4, PO Box 506504, Dubai, United Arab Emirates. Barclays Bank PLC-DIFC Branch, may only undertake the financial services activities that fall within the scope of its existing DFSA licence. Related financial products or services are only available to Professional Clients, as defined by the Dubai Financial Services Authority.

Barclays Bank PLC in the UAE is regulated by the Central Bank of the UAE and is licensed to conduct business activities as a branch of a commercial bank incorporated outside the UAE in Dubai (Licence No.: 13/1844/2008, Registered Office: Building No. 6, Burj Dubai Business Hub, Sheikh Zayed Road, Dubai City) and Abu Dhabi (Licence No.: 13/952/2008, Registered Office: Al Jazira Towers, Hamdan Street, PO Box 2734, Abu Dhabi).

Barclays Bank PLC in the Qatar Financial Centre (Registered No. 00018) is authorised by the Qatar Financial Centre Regulatory Authority (QFCRA). Barclays Bank PLC-QFC Branch may only undertake the regulated activities that fall within the scope of its existing QFCRA licence. Principal place of business in Qatar: Qatar Financial Centre, Office 1002, 10th Floor, QFC Tower, Diplomatic Area, West Bay, PO Box 15891, Doha, Qatar. Related financial products or services are only available to Business Customers as defined by the Qatar Financial Centre Regulatory Authority.

This material is distributed in the UAE (including the Dubai International Financial Centre) and Qatar by Barclays Bank PLC.

This material is not intended for investors who are not Qualified Investors according to the laws of the Russian Federation as it might contain information about or description of the features of financial instruments not admitted for public offering and/or circulation in the Russian Federation and thus not eligible for non-Qualified Investors. If you are not a Qualified Investor according to the laws of the Russian Federation, please dispose of any copy of this material in your possession.

This material is distributed in Singapore by the Singapore branch of Barclays Bank PLC, a bank licensed in Singapore by the Monetary Authority of Singapore. For matters in connection with this report, recipients in Singapore may contact the Singapore branch of Barclays Bank PLC, whose registered address is 10 Marina Boulevard, #23-01 Marina Bay Financial Centre Tower 2, Singapore 018983.

This material is distributed to persons in Australia by either Barclays Bank plc , Barclays Capital Inc., Barclays Capital Securities Limited or Barclays Capital Asia Limited. None of Barclays Bank plc, nor any of the other referenced Barclays group entities, hold an Australian financial services licence and instead they each rely on an exemption from the requirement to hold such a licence. This material is intended to only be distributed to “wholesale clients” as defined by the Australian Corporations Act 2001.

IRS Circular 230 Prepared Materials Disclaimer: Barclays does not provide tax advice and nothing contained herein should be construed to be tax advice. Please be advised that any discussion of U.S. tax matters contained herein (including any attachments) (i) is not intended or written to be used, and cannot be used, by you for the purpose of avoiding U.S. tax-related penalties; and (ii) was written to support the promotion or marketing of the transactions or other matters addressed herein. Accordingly, you should seek advice based on your particular circumstances from an independent tax advisor.

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates six utilities in Pennsylvania, Illinois, New Jersey, DC, Delaware, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Atlantic City Electric, BGE, ComEd, Delmarva Power, PECO, and Pepco. Exelon Generation operates the largest nuclear fleet in the United States, with plants concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Neutral (2). Our rating is based on concerns around the management team’s strategic vision and execution, downside concerns around the economics of Exelon’s nuclear fleet with low unlevered free cash flow conversion (UFCF) of ~35%. We do like regulated utility's robust growth profile of 6-8% through 2020.

Valuation

We value EXC using a sum-of-the-parts approach to get to our $36 price target. We value ExGen at ~$5/share and believe ExGen’s core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The legacy utility business is valued at $25/share based on a 17.5x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $4/share for the parent net debt and add $3/share for ZECs (IL and NY) to get to our rounded PT of $36/share.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Rating/target price changes above reflect Eastern Time

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the "Firm"), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.   Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Global Fundamental Coverage	47%	39%	13%	2%	97%	1%
% of companies in each rating category that are investment banking clients	64%	64%	58%	57%	64%	51%

Guide to Citi Research Fundamental Research Investment Ratings:

Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.

Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.

Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:

Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES

Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to “Buy”,”Hold”,”Sell” at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%); Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc.

takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Important Disclosures for Bell Potter Customers: Bell Potter is making this Product available to its clients pursuant to an agreement with Citigroup Global Markets Australia Pty Limited. Neither Citigroup Global Markets Australia Pty Limited nor any of its affiliates has made any determination as to the suitability of the information provided herein and clients should consult with their Bell Potter financial advisor before making any investment decision.
