A large portion of the available FCF generated by ExGen will now go to shoring up Pepco and funding its capital program. We forecast roughly $3.2bn in available cash generated by EXC's merchant business, in line with company aspirations, although perhaps tempered by the necessity of maintaining some level of counterparty cash collateral (which was about $1.25bn as of YE'15). Had the deal ultimately been rejected, EXC would have proceeded with its plan of retiring $1.875bn in debt while executing a ~$2bn buy back of the 57.5mm equity shares issued to fund the transaction. On a pro-forma basis much of that cash flow will now be directed at POM. From YE'11 through YE '15 POM's debt/cap ratio rose from 52% to 59%. At YE '15, POM was carrying ~ $1.0bn of short term debt on its parent balance sheet in excess of the operating company debt of its subsidiary companies. EXC will refinance that debt balance and when we combine our EXC and POM forecasts we see a significant portion of EXC's cash flow going to fund POM's capital program.

Our FY'16-'18 EPS forecast is now $2.60 / $2.65 / $2.70, and our target price is now $37.50 up from $35. Our FY'16 estimate is just above the midpoint of the company's articulated $2.40-$2.70 guidance as of its last earnings call. Our prior EPS forecast was $2.56 / $2.66 / $2.82. We use forward curves as of 3/23/16. Our estimates have been updated to reflect current financing assumptions for EXC including an additional $1bn of debt to refinance POM's STD balance, and equity dilution in FY '17 from 32.9mm shares issued when a convertible bond matures. Our share count forecast is consistent with the forecast EXC laid out in its 2015 EEI analyst presentation. Our accretion estimate from POM in FY '18 is $0.10, +/-$0.05 lower than our prior forecast. We expect over time that EXC will make meaningful progress toward diminishing regulatory lag at PHI but that could take several years. While the merger has been undergoing regulatory review, POM had not sought rate relief in any of its jurisdictions (DC, DE, MD, NJ) up until it filed for rates for Atlantic City Electric on 3/22/16.

EXC shares are up 27% YTD, making it the best performing utility in both our regulated and diversified coverage universes. We are resisting the urge to "take profits"… We are concerned that after such a significant move to the upside EXC shares could consolidate, especially with the potential for the next few catalysts to be negative (the pending LT contract decisions in OH for FE and AEP and the potential for PJM capacity auction to price lower in May). However, on the flip side of that equation EXC has significant operating and financial leverage should natural gas price fundamentals continue to improve. Our EVRISI Energy team believes natural gas will trend to $3/MMbtu by FY '17 and reach $3.25 in FY '18. While that doesn't sound like a lot, a $0.50 increase in natural gas prices would increase ExGen EBITDA in FY '18 by +/-$400mm above our current forecast of $3bn in FY '18 which is derived from current forward curves.

…Because the stock does not look expensive. On a consolidated basis EXC currently trades at 13X our FY '18 estimate of $2.75 and a 3.6% yield. They are committed to dividend growth of 2.5% annually through FY '18. Our regulated universe trades today at 16.5X estimated '18 EPS with a 3.4% yield (albeit with better dividend growth). Taking apart EXC in the wake of the POM deal we think its regulated business is worth +/-$27/share, assuming the utility business (including POM net of all parent financing costs) contributes $1.70 of EPS in '18 and deserves a 16X P/E. That is a half a multiple point below current average valuations for the peer group for a utility portfolio with the opportunity for sustained EPS growth from rising earned ROEs at three of its for subsidiaries (BGE, ComED and POM). That means ExGen is trading at $8.25 a share or roughly $8bn of equity value on '18 pro forma shares. (a ~5.7x EV/EBITDA multiple on our '18 estimates and a debt/EBITDA multiple of +/-3x). Our target price assumes an EV/EBITDA multiple just a half a turn higher at 6.5X which we think is reasonable looking at ExGen's free cash flow profile, cost of capital, and the useful life of its assets. In the alternative, with no multiple expansion at the current valuation natural gas prices in 2018 would need to rise to a hair north of $3/MMBtu. If the forward curve for gas were to rise to $3.25/MMBtu over the next 12 months, and ExGen's valuation expanded to 6.5X, all things equal the stock could rise to $40. On the flip side, at 15X '18 EPS, assuming a $0.50/MMBtu decline in natural gas in FY '18 and no multiple expansion at ExGen we see downside back to $32/share.

What's next? EXC and POM announced they had completed the merger transaction shortly after the D.C. decision, with integration now "well underway". We expect filings for base rate reviews in essentially all of the POM jurisdictions (as we said above Atlantic City Electric has already filed). However, they are likely not to receive new revenues until sometime in 2H17. EXC continues working with stakeholders and legislators in Illinois on a plan that will support its distressed nuclear assets in that state, intent on delivering an agreeable package to the legislature in the next few months. The Public Utility Commission of Ohio is expected to rule shortly on FE and AEP's requests for contracts for portions of their merchant generation fleets. The PJM '19/'20 BRA begins on 5/11/16 and results will be posted on 5/24/16. The MD PSC is expected to issue a final order on the pending BGE electric and gas distribution rate case by 6/3/16. Possible action by NY that might create zero emissions credits to subside nuclear generation like Ginna can be beneficial to margins out the curve, though by the company's admission the state would have to move relatively quickly for it to be meaningful beyond expiration of its RSSA.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of legislation to bolster the revenue stream of the Illinois nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in Illinois to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulartory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

This report must not be acted on or relied on by persons who are not relevant persons.

Exelon Corp.

EXC: Exelon completes Pepco acquisition quickly after unexpected DC PSC approval

Company Update

28 March 2016

Reaffirming ratings after Exelon closes Pepco acquisition

Hours after unexpectedly receiving the final required approval, on March 23rd Exelon and Pepco Holdings closed their April 2014 merger agreement whereby Exelon acquired Pepco for $27.25 per share in cash. We reaffirm our ratings including our Overweight on Exelon Corp.'s senior notes and Exelon Generation's senior notes (Chart 1). We are dropping coverage of two bonds no longer in our investment grade corporate bond index: Commonwealth Edison's 5.875% FMBs of 2033 and 5.90% FMBs of 2036. We do not have ratings on Pepco Holdings or any of its subsidiaries.

Corp. notes revert to credit spreads from 101%-of-par price

We expect three series of Exelon Corporation's senior notes totaling ~$1.88 billion (3.95% of 2025, 4.95% of 2035 and 5.10% of 2045), issued to finance part of the Pepco acquisition, to return to trading on a credit spread basis, as all three had recently been anchored to the special mandatory redemption price of 101% of par in the event the merger did not close by June 30, 2016.

Some POM shareholders gain ~25% in less than 3 hours

As the last remaining hurdle to the companies' completion of their merger, the District of Columbia Public Service Commission ("DC PSC") had rejected the change-of-control merger application on August 25, 2015 and then rejected a merger settlement agreement on February 26, 2016. Subsequent public statements by various parties to that settlement agreement suggested that each party's self-interests might cause the deal to unravel. In the seven days prior to the DC PSC's March 23rd meeting, Pepco's stock price averaged ~$22.00/share, and in the four-plus hours ahead of the DC PSC's approval of the merger, it averaged ~$21.75/share. Consequently, anyone who bought Pepco stock on March 23rd ahead of the ~1:50pm DC PSC decision and held through the end of the day earned a return of approximately 25%.

Addition of regulated utilities improves business profile

One of the benefits of the Pepco acquisition is to increase and further diversify Exelon's regulated electric and gas utility portfolio, resulting in a modest improvement in its business risk profile. In 2015, Exelon's three utilities contributed 52% of EBITDA, marginally greater than Exelon Generation's 48% (Exhibit 2); pro-forma for the Pepco acquisition, Exelon's six utilities would have contributed 59% of EBITDA, noticeably greater than Exelon Generation's 41% (Exhibit 3).

Transaction provides two dividend-related benefits

We view Exelon's acquisition of Pepco as having two benefits with respect to common stock dividends. First, Exelon's dividend to shareholders can rely more on the earnings and dividend capability of its regulated utilities and less on its merchant energy business. On a 2015 net income basis, Exelon paid out 99% of its three utilities' net income to its shareholders (excluding the common stock issued to finance the Pepco acquisition); pro-forma to reflect the Pepco acquisition, Exelon would have paid out 83% of its six utilities' net income (Table 2 on page 4). Similarly, on a 2015 dividends paid

(continued on following page)

basis, Exelon paid out nearly 150% of the dividends it received from its three regulated utilities; pro-forma to reflect the Pepco acquisition, Exelon would have paid out 116% of the dividends it would have received from its six utilities (Table 2). The second dividend benefit of the Pepco acquisition is that the total common dividends Exelon is paying its shareholders following the Pepco acquisition is a smaller dollar amount than the combined amount Exelon and Pepco were paying their respective shareholders (Table 1). Even factoring in Exelon's equity units which must be settled by June 2017 and the approval of Exelon's board to raise the dividend by 2.5%, we expect that the combination of Pepco's high dividend payout ratio (96% over 2014-15) and Exelon's financing of the transaction saves approximately $100 million to $175 million per year of after-tax cash flow for each of the next several years relative to the two companies remaining separate companies.

Heightened focus on Pepco utilities' operations and service

Finally, we expect another benefit of the transaction would be an improvement of operations and quality of service at the three Pepco utilities as the Exelon management team applies its best practices.

Rating agencies' actions – Moody's

Moody's affirmed the ratings and stable outlook of Exelon Corporation and upgraded the bond rating and commercial paper rating of Pepco Holdings by one notch, to Baa2 and P-2, respectively, while revising Pepco's outlook to Stable from Developing. Moody's expects that Exelon's larger size and scale will bring additional resources and capital to help accelerate Pepco's investment plans across its three, low-business-risk transmission and distribution utilities. With Exelon's business shift more towards its regulated utilities, Moody's will now assess Exelon's credit profile under its Global Regulated Electric and Gas Utilities rating methodology, rather than its Unregulated Utilities and Power Companies rating methodology previously used. Moody's sees roughly $28 billion of regulated rate base at Exelon, which is higher than the combined ~$25 billion of debt at its regulated utilities (~$20 billion) and parent holding company ($5 billion).

Rating agencies' actions – Standard & Poor's

Standard & Poor's stated that Exelon's ratings and stable outlook were unaffected by the announcement that the DC PSC had approved Exelon's application to acquire Pepco. While the transaction has led to an incremental increase in leverage, it now also provides a very stable source of cash flow. Standard & Poor's affirmed Pepco Holdings' ratings and stable outlook after the transaction closed; the rating agency expects Pepco's financial performance to be somewhat weak, but modestly improving, over the next 12 to 24 months.

Rating agencies' actions – Fitch

Fitch downgraded Exelon's debt ratings by one notch including its senior notes to BBB from BBB+ and removed the ratings from Rating Watch Negative where they had been placed in April 2014 following the Pepco merger agreement announcement. The outlook is now stable. The downgrades reflect the increased consolidated leverage that results from the Pepco acquisition and, to a lesser extent, the weak operating environment of its competitive generation business. The rise in leverage is softened by a modest reduction in business risk from the increase in regulated earnings, Fitch said.

In our IG bond index, EXC moves ahead of ED as largest T&D

With respect to the electric utility sub-sector of our investment grade corporate bond index, Exelon's acquisition of Pepco Holdings solidifies EXC's position as the third largest overall (Exhibit 4) at $22.9 billion (market value), providing some distance ahead of fourth-place D ($19.1 billion) while still smaller than only DUK ($30.6 billion) and BRKHEC ($27.0 billion). The $3.0 billion of pre-merger POM bonds that are now part of EXC moves EXC ahead of ED with the largest amount of transmission-and-distribution utility bonds, now at $12.0 billion, ahead of ED's $10.5 billion. Also, EXC has no integrated utilities, while the bonds of the ten largest utilities excluding EXC are predominantly issued by the integrated utilities, supplemented primarily by holding company debt.

Valuation & risk

Exelon Corp. (EXC)

We view Exelon Corporation credit spreads as attractive relative to other electric utility holding company bonds. In addition, Exelon's credit profile has improved slightly following its recent acquisition of Pepco Holdings' three regulated, transmission-and-distribution-only utilities. The utilities not only dilute Exelon Generation's proportion of Exelon's consolidated EBITDA, but also enable a broader and more diversified portfolio of regulated cash flows. Primary risks include a declining EBITDA profile at Exelon Generation as a result of persistently low power prices, or an increase of parent or consolidated leverage.

Baltimore (EXC)

We view Baltimore Gas & Electric as a low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. In addition, Baltimore Gas & Electric has had a ring fence to insulate its credit quality from affiliates. We view the primary risk to be a below-average regulatory environment in Maryland.

Commonwealth Edison (EXC)

We view Commonwealth Edison as a low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. We view the primary risk to be a below-average regulatory environment in Illinois due to past political interferences, but the environment has been much more stable and somewhat more supportive in recent years..

Exelon Generation Co (EXC)

We view Exelon Corporation and Exelon Generation credit spreads as attractive relative to peers with a large, low-emissions baseload generation portfolio, strong operating performance, substantial capacity revenues, ongoing hedging of commodity prices, the commitment to a strong balance sheet and liquidity, and the implicit support of a diversified, regulated utility portfolio. Risks are the rehearing of the Pepco Holdings merger application following the rejection by Washington DC regulators, low natural gas prices and quark spreads.

PECO Energy Co. (EXC)

We view PECO Energy as a high-quality, low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. We view the primary potential credit risk to be an action at or development by either its parent or its sister merchant generation business.

BofA Merrill Lynch Credit Opinion Key

BofA Merrill Lynch Global Research provides recommendations on an issuer's bonds (including corporate and sovereign external debt securities), capital securities, equity preferreds and CDS as described below. Convertible securities are not rated. An issuer level recommendation may also be provided for an issuer as explained below. BofA Merrill Lynch Global Research credit recommendations are assigned using a three-month time horizon.
Issuer Recommendations: If an issuer credit recommendation is provided, it is applicable to bonds and capital securities of the issuer except bonds and capital securities specifically referenced in the report with a different credit recommendation. Where there is no issuer credit recommendation, only individual bonds and capital securities with specific recommendations are covered. CDS and equity preferreds are rated separately and issuer recommendations do not apply to them.

BofA Merrill Lynch Global Research credit recommendations are assigned using a three-month time horizon:
Overweight: Spreads and /or excess returns are likely to outperform the relevant and comparable market over the next three months.
Marketweight: Spreads and/or excess returns are likely to perform in-line with the relevant and comparable market over the next three months.
Underweight: Spreads and/or excess returns are likely to underperform the relevant and comparable market over the next three months.

BofA Merrill Lynch Global Research uses the following rating system with respect to **Credit Default Swaps (CDS):**
Buy Protection: Buy CDS, therefore going short credit risk.

Neutral: No purchase or sale of CDS is recommended.
Sell Protection: Sell CDS, therefore going long credit risk.

Corporate Credit Issuer Investment Rating Distribution: Global Group (as of 31 Dec 2015)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	146	35.96%	Buy	130	89.04%
Hold	155	38.18%	Hold	137	88.39%
Sell	105	25.86%	Sell	91	86.67%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only corporate credit issuer recommendations. A corporate credit issuer rated Overweight is included as a Buy, a corporate credit issuer rated Marketweight is included as a Hold, and a corporate credit issuer rated Underweight is included as a Sell.

Credit Opinion History Tables for the securities referenced in this research report are available at http://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
MLPF&S or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Commonwealth Edison, Exelon Corp.
The issuer is or was, within the last 12 months, an investment banking client of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
The issuer is or was, within the last 12 months, a non-securities business client of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: Exelon Corp.
MLPF&S or one of its affiliates trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of this research report: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.
BofA Merrill Lynch Global Credit Research analysts regularly interact with sales and trading desk personnel in connection with their research, including to ascertain pricing and liquidity in the fixed income markets.

Other Important Disclosures

MLPF&S or one of its affiliates has a significant financial interest in the fixed income instruments of the issuer. If this report was issued on or after the 15th day of the month, it reflects a significant financial interest on the last day of the previous month. Reports issued before the 15th day of the month reflect a significant financial interest at the end of the second month preceding the report: Baltimore, Exelon Corp., Exelon Generation.

This report may refer to fixed income securities that may not be offered or sold in one or more states or jurisdictions. Readers of this report are advised that any discussion, recommendation or other mention of such securities is not a solicitation or offer to transact in such securities. Investors should contact their BofA Merrill Lynch representative or Merrill Lynch Financial Global Wealth Management financial advisor for information relating to fixed income securities
Rule 144A securities may be offered or sold only to persons in the U.S. who are Qualified Institutional Buyers within the meaning of Rule 144A under the Securities Act of 1933, as amended.
SECURITIES DISCUSSED HEREIN MAY BE RATED BELOW INVESTMENT GRADE AND SHOULD THEREFORE ONLY BE CONSIDERED FOR INCLUSION IN ACCOUNTS QUALIFIED FOR SPECULATIVE INVESTMENT.
Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
The securities discussed in this report may be traded over-the-counter. Retail sales and/or distribution of this report may be made only in states where these securities are exempt from registration or have been qualified for sale.
Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
This report, and the securities discussed herein, may not be eligible for distribution or sale in all countries or to certain categories of investors.
Information relating to Affiliates of MLPF&S and Distribution of Affiliate Research Reports:

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This research report provides general information only. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of any specific person. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.

Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

This report may contain a trading idea or recommendation which highlights a specific identified near-term catalyst or event impacting a security, issuer, industry sector or the market generally that presents a transaction opportunity, but does not have any impact on the analyst's particular "Overweight" or "Underweight" rating (which is based on a three month trade horizon). Trading ideas and recommendations may differ directionally from the analyst's rating on a security or issuer because they reflect the impact of a near-term catalyst or event.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented in this report. Such ideas or recommendations reflect the different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this report.

In the event that the recipient received this report pursuant to a contract between the recipient and MLPF&S for the provision of research services for a separate fee, and in connection therewith MLPF&S may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom MLPF&S has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by MLPF&S). MLPF&S is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities mentioned in this report.

Any unauthorized use or disclosure is prohibited. Receipt and review of this research report constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion, or information contained in this report (including any investment recommendations, estimates or price targets) without first obtaining express permission from an authorized officer of BofA Merrill Lynch.

Materials prepared by BofA Merrill Lynch Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Merrill Lynch, including investment banking personnel. BofA Merrill Lynch has established information barriers between BofA Merrill Lynch Global Research and certain business groups. As a result, BofA Merrill Lynch does not disclose certain client relationships with, or compensation received from, such issuers in research reports. To the extent this report discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this report. BofA Merrill Lynch Global Research personnel's knowledge of legal proceedings in which any BofA Merrill Lynch entity and/or its directors, officers and employees may be plaintiffs, issuers mentioned in this report is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Merrill Lynch in connection with the legal proceedings or matters relevant to such proceedings.

This report has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of MLPF&S, any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Merrill Lynch Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Merrill Lynch and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This report may contain links to third-party websites. BofA Merrill Lynch is not responsible for the content of any third-party website or any linked content contained in a third party website. Content contained on such third-party websites is not part of this report and is not incorporated by reference into this report. The inclusion of a link in this report does not imply any endorsement by or any affiliation with BofA Merrill Lynch. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Merrill Lynch is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of the report and are subject to change without notice. Prices also are subject to change without notice. BofA Merrill Lynch is under no obligation to update this report and BofA Merrill Lynch's ability to publish research on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Merrill Lynch will not update any fact, circumstance or opinion contained in this report.

Certain outstanding reports may contain discussions and/or investment opinions relating to securities, financial instruments and/or issuers that are no longer current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with MLPF&S or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Merrill Lynch nor any officer or employee of BofA Merrill Lynch accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this report or its contents.

North America Equity Research
28 March 2016

Exelon Corp.

Reiterating OW on Pro Forma EXC

Overweight

EXC, EXC US

Price: $35.16

▲ **Price Target: $39.00**
Previous: $36.00

We are refreshing our estimates following the close of the POM transaction and reiterating our OW rating. Exelon's pro forma balance sheet leaves a cushion for future dividend hikes, buybacks or asset purchases, even at current commodity prices. The current share price implies an ExGen Open EBITDA multiple of 5.2x 2018E and the segment contributes 37% of our $2.85 EPS estimate. We expect the company to host an analyst day in coming months with a focus on executing costs cuts, achieving rate timely relief at the Pepco utilities and future ExGen or other growth opportunities. Despite strong YTD performance, we do not yet see EXC shares as giving appropriate credit to ExGen commodity optionality, future balance sheet flexibility and earned ROE upside at the POM utilities.

- **Balance sheet leaves cushion for excess dividend growth or buybacks down the road:** The company's guided 2.5% dividend growth in each of the next 3 years leaves the payout at only 47% on our 2018E EPS, with consolidated net debt to cap of 49% and debt to EBITDA of 3.5x. The $1.33 dividend implies a 74% utility payout ratio in a year where ExGen's EPS contribution has declined 24% from 2015.
- **ExGen implied value 5.2x open 2018E EBITDA.** The segment's implied 4.5x 2018E EBITDA and 5.2x open EBITDA is based on the current stock price and current market commodity prices and is a discount to IPP peers and N-rated Public Service Enterprise Group (PEG). We do not assume a purchase of EDF's share of the CENG nuclear assets or any Illinois legislative relief.
- **Updating estimates, PT:** Our December 2016 PT is based on a SOTP and assigns $31/share to the pro forma utility assets and $8 to ExGen. We assume the $325MM of $300-350MM November 2015 guided cost cuts are achieved by 2018 and that all Pepco utilities file for rate relief this year, but do not include any incremental synergies from the transaction.

J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $39.00)*

Investment Thesis

Exelon's pro forma balance sheet leaves a cushion for future dividend hikes, buybacks or asset purchases, even at current commodity prices. The current share price implies an ExGen Open EBITDA multiple of 5.2x 2018E and the segment contributes 37% of our $2.85 EPS estimate. We expect the company to host an analyst day in coming months with a focus on executing costs cuts, achieving rate timely relief at the Pepco utilities and future ExGen or other growth opportunities. Despite strong YTD performance, we do not yet see EXC shares as giving appropriate credit to ExGen commodity optionality, future balance sheet flexibility and earned ROE upside at the POM utilities.

Valuation

We are raising our December 2016 price target to $39/share ($36 prior). Our valuation is based on a sum-of-the-parts analysis using our 2018 forecasts. We use an average 18.4x P/E multiple for the regulated utility and corporate business segments, a minor discount to regulated peers reflecting mildly challenging regulatory environments for the EXC utilities. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. The upward revision in our PT reflects higher regulated peer and unregulated generation multiple relative to our prior update, partly offset by lower expected EPS.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company's earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

What's New?

For current Guggenheim Utility Corporate Access Calendar, scroll to bottom.

Guggenheim initiates coverage of IPPs – Boom-Bust: Forget Mid Cycle – Focus on Asset Lives and Cash Flows….Launching on IPPs with Cautious Tone but See Opportunities

2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

EXC – BUY – DC Approves Acquisition; New Pro-Forma Estimates with POM Merged – EXC Remains Our Top Integrated Idea

Texas Showdown: Has the Wave of Coal Retirements Finally Reached Texas? Deep-Dive on How the Perfect Storm Plays Out

AEP/FE – Ohio Regulators Approve PPAs - Benefits AEP, FE - Merchants Likely Turn to FERC (see our note here)
GXP – Senate Committee approves MO energy legislation
AEP/DUK/EIX/ES/EXC/GXP – Grid Assurance filing receives positive order from FERC
NEE/DUK – FL Supreme Court sides with utilities regarding solar on the November ballot
NE-ISO – Solar expected to grow 30% in New England
ES – NH legislation would raise net metering cap by 50MW and require alternative tariffs
D – VEPCO's Greensville Power Station rider approved
EPA – EPA releases revised greenhouse gas permitting rules
MISO – FERC rejects MISO's proposed reforms to interconnection requests
ERCOT – Panda Power suing ERCOT

GXP – Senate Committee approves MO energy legislation

- The MO Senate Commerce, Consumer Protection, Energy and the Environment Committee voted to approve a modified version of SB 1028.
- The draft version of the bill includes comprehensive revisions to address regulatory lag and to allow for encouragement to invest in the state's infrastructure.
- Provisions include a "performance-based" ratemaking (PBR) framework, which would require the utility to make annual filings with the Commission to show how the utility has been tracking on five-year infrastructure investments.
- The ROE would be set at 9.45% and would be updated to reflect the change in the 30-year U.S. Treasury Bond yields for the year preceding the company's rate case filing.
- Provisions also include recovery of transmission costs for power sold into SPP.

Guggenheim takeaway: *As we highlighted in the past, we believe the energy legislation is key to GXP to reduce its regulatory lag and we believe momentum will continue for this legislation to be passed before the session ends on May 13. The MO House has had hearings on a similar bill HB 2816, and if that bill moves forward, both the House and Senate versions have to be reconciled and voted on.*

AEP/DUK/EIX/ES/EXC/GXP – Grid Assurance filing receives positive order from FERC

- FERC issued a positive order on the Grid Assurance program being developed by AEP, DUK, EIX, ES, EXC, and GXP.
- The order provides regulatory clarity that supports participation from transmission owners to strengthen grid resiliency.
- The order confirmed:
    - Prudence of subscriber contracts for spare service and equipment following a qualifying event;
    - Availability of single-issue ratemaking to recover costs; and
    - That affiliate rules are waived subject to certain conditions (e.g., submitting audited financials annually).

Guggenheim takeaway: *Grid Assurance plans to maintain spare equipment at strategically located warehouses and facilitate expedited equipment transportation to sites affected by qualifying events, which include physical attacks, cyberattacks, electromagnetic pulses, catastrophic events, solar storms, earthquakes, and severe weather. Grid Assurance requested FERC make determinations on several issues at the end of 2015; the JV indicated they continue to evaluate the order, and will seek additional clarity in 2Q16.*

NEE/DUK/SO/TE – FL Supreme Court approves utilities' solar ballot for November

- The Florida Supreme Court approved a ballot initiative pushed by the Consumers for Smart Solar, a utility-backed group.
- With the ballot, Floridians will vote to determine if the state constitution should be amended to preserve regulatory oversight over rooftop solar, and existing rules around a customer's ability to own or lease the equipment.

Guggenheim takeaway: *Opponents argue the ballot would essentially maintain the status-quo in Florida, which we actually believe is a fair description. Solar growth hasn't taken off in Florida as it has elsewhere because state law only allows utilities to sell electricity. While an effort to open the market to third-party leasing models was initiated in the state, utilities launched this effort and essentially took the momentum away. If there is an opportunity to develop solar in Florida, we believe utilities would be able to show the most compelling economics to the extent they have existing property for solar use and grid interconnections. We expect DUK, NEE, and SO would participate in a solar opportunity. We recently hosted investors in Florida and solar was a topic of discussion in meetings with NEE and FL commissioners. While the outlook for distributed solar is bleak in Florida, we believe large-scale development will be an opportunity for utilities in the state – for additional insight see our note.*

NE-ISO – 30% more solar capacity expected in New England

- The New England ISO increased its expectation for solar capacity by 30%.
- The ISO now expects to have 3.2GW of solar by the end of their 10-year planning horizon (2025).

Guggenheim takeaway: *Their expectation for 3.2GW in 2025 is 30% higher than the 2.4GW previously expected for 2024, driven by state and federal policy activity since their previous outlook (e.g., 30% ITC extension).*

ES – NH legislation would raise net metering cap by 50MW and require alternative tariffs

- New Hampshire policymakers are considering H.B. 1116, legislation that would increase the state's net-metering cap by 50MW, and require alternative tariffs to support net-metering.

Guggenheim takeaway: *Since ES reached its limit in NH, we have seen a recent push to increase the net-metering cap, including legislation passed by the house earlier this month to double NH's net-metering cap (to 100MW from 50MW).*

D – VEPCO's Greensville Power Station rider approved

- Virginia regulators approved VEPCO's (D's VA utility) proposed Greensville Power Station and related rider.
- The order authorizes a $40mm revenue requirement effective 4/1/16, which includes a 9.6% ROE on a $389mm ratebase for 2017, using a ~50/50% capital structure.
- VEPCO was originally seeking a $42mm revenue requirement, based on a 10% ROE (and essentially the same ratebase and capital structure that was approved).

Guggenheim takeaway: *Although D was originally seeking a 10% ROE for the 1.6GW CCGT, the authorized return is consistent with adjustments we recently highlighted to D's other asset-specific riders.*

EPA – EPA releases revised greenhouse gas permitting rules

- EPA submitted its revisions to greenhouse gas permitting programs to the Office of Management and Budget, which will have 90 days to review.
- The revisions establish a greenhouse gas emissions limit but do not require large-scale greenhouse gas polluters to install best available control technology (BACT).

Guggenheim takeaway: *The Court of Appeals directed EPA to take steps to revise its permitting program so that its sources are not required to acquire permits when greenhouse gases are the only pollutant emitted at the site. These limits note that greenhouse gases endanger public health and is part of the reasoning behind the Clean Power Plan.*

MISO – FERC rejects MISO's proposed reforms to interconnection requests

- FERC found that MISO's proposal to change the way it processes interconnection requests as incomplete and rejected the proposal.
- MISO said that the current process is too slow and that the existing process is creating a backlog of requests. Proposed reforms center on using milestone payments to ensure that projects that are not ready do not stay in the queue.
- FERC found that MISO's proposal failed to achieve balance between many factors and was unclear as to how the changes would impact ready projects as well as non-ready projects.
- FERC is already planning to hold a technical conference to consider interconnection procedures across all RTO/ISOs.

Guggenheim takeaway: *We believe MISO's interconnection changes could come out of FERC's technical conference. We believe a more streamlined interconnection process will benefit not only new wind generators but also solar* *and natural gas. The reforms that come out of this technical conference could improve the speed of getting new projects online, in our view.*

ERCOT – Panda Power suing ERCOT

- Panda Power is suing ERCOT for "misleading" reports that influenced the company's decision to invest over $2bn.
- Panda also argues that if the claims were not fraudulent or negligent, ERCOT should have disclosed their inaccuracies sooner.

Guggenheim takeaway:*ERCOT has avoided the wave of coal retirements experienced in other markets thus far, resulting in surplus generation capacity, and what we describe as a prisoner's dilemma – coal plants operating at a loss, holding out hoping competitors capitulate sooner, so they could benefit from the tighter market conditions that would result. We recently highlighted the situation in Texas, for additional takeaways see our deep dive where we model each coal plant in ERCOT – See note here.*

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For current Guggenheim Utility Corporate Access Calendar, scroll to bottom.

Guggenheim initiates coverage of IPPs – Boom-Bust: Forget Mid Cycle – Focus on Asset Lives and Cash Flows….Launching on IPPs with Cautious Tone but See Opportunities

2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

EXC – BUY – DC Approves Acquisition; New Pro-Forma Estimates with POM Merged – EXC Remains Our Top Integrated Idea

Texas Showdown: Has the Wave of Coal Retirements Finally Reached Texas? Deep-Dive on How the Perfect Storm Plays Out

AEP/FE – Ohio Regulators Approve PPAs - Benefits AEP, FE - Merchants Likely Turn to FERC (see our note here)

FE – West Virginia utilities propose second phase of energy efficiency plan
EXC – Two New England CTs get regulatory approval
TLN – TLN completes sale of two hydro plants
SO – Continuing to evaluate need for additional refractory work at Kemper
SO – FTC approves proposed acquisition of PowerSecure
NEE – Intervenors continue to oppose the proposed acquisition of HE

FE – West Virginia utilities propose second phase of energy efficiency plan

- FE's proposed energy efficiency plan would result in a 1% reduction in power usage and 21 MW of demand-reduction by mid-2018.
- The plan would begin January 1, 2017 and run through May 31, 2018. The cumulative 1% savings includes the savings accrued under the first phase of the plan.
- The program incudes a new residential energy efficiency program, continuation of the existing residential low-income program, and a continuation of the existing programs for commercial, government and industrial customers
- The plan is expected to save 59,616 MWhs and cost $9.9mm.

Guggenheim takeaway: *The plan proposed to allocate costs at the 60/40 split, in which sixty percent of costs are allocated to the plan's targeted customers, and the other forty percent are allocated to all customers. FE is not proposing to recover any lost revenue from this EE program. FE asks that the program be approved by October 1 for time to begin implementation. We believe EE programs will continue to expand in order to meet a State's EE goals.*

EXC – Two New England CTs get regulatory approval

-

EXC's two 100-MW Medway combustion turbines, which were selected in ISO-NE's ninth forward capacity auction, has secured regulatory approval from the MA Commission.

- MA Commission said in a final environmental impact report that the CTs comply with the state's environmental law and rules.
- EXC states that the plants may operate more frequently "for some periods of time" when ETR's Pilgrim nuclear plant retires.
- EXC notes that the CT can operate at 60% capacity factor without violating federal or state air quality rules.

Guggenheim takeaway: *We believe with the environmental regulatory approval secured, EXC's two CTs can be completed by June 1, 2018, when they must supply capacity to ISO-NE. We expect EXC to benefit from its fast ramp-up capabilities and higher operating hours due to Pilgrim's retirement, without violating air quality laws.*

TLN – TLN completes sale of two hydro plants

- TLN completed the sale of the Holtwood and Lake Wallenpaupack hydroelectric plants to a subsidiary of Brookfield Renewable Energy Partners L.P.
- The total purchase price was $860 million.
- Closing of the sale completes the asset divestitures in PJM to comply with FERC orders.
- The two hydro plants have a combined capacity of 292 MW.

Guggenheim takeaway: *As a reminder, TLN sold Ironwood and C.P Crane as well as its hydro portfolio to complete its divestiture plan. We expected TLN to complete its sale of these plants in 1Q16, and the combined ~$1.5B in proceeds will help TLN delever, in our view.*

SO – Continuing to evaluate need for additional refractory work at Kemper

- SO submitted its monthly status report on Kemper for the period through February 2016, which indicates the company was continuing to repair and modify refractory lining inside each of the gasifiers during March 2016, and evaluating the need for additional refractory work.
- Additional refractory work could further impact the cost estimate and projected in-service date for the Kemper IGCC.

Guggenheim takeaway: *After a $110mm cost increase disclosed earlier this year, the Kemper project appears to have remained at ~$6.6bn through February; still notably above the ~$2.9bn cap approved back in 2012. Assuming additional work doesn't further impact the schedule, Kemper is expected to be in-service 3Q16, and we look forward to closing the saga in Mississippi.*

SO – FTC approves proposed acquisition of PowerSecure

- The Federal Trade Commission (FTC) granted early termination of the Hart-Scott-Rodino waiting period for SO's proposed acquisition of PowerSecure (POWR, NC, $18.70).
- The proposed transaction still requires approval from POWR shareholders.

Guggenheim takeaway: *SO expects to close the transaction 2Q16, and we don't see any red flags. This isn't the first utility foray into a peripheral energy service business, although probably one of the larger ones at $431mm. That said, it's still not enough to move the needle for SO, in our view - a $0.4bn transaction is lost in rounding when combined with SO's $45bn market cap. Similar to other utility ventures behind-the-meter (e.g., AEP-Greensmith, EIX-EdisonEnergy), we* *believe SO is essentially buying a longer-term call option that could enable longer-term growth opportunities. Here it appears SO is buying an option that will lever them to demand for uninterruptible power (e.g., data centers); a thesis we can also appreciate after super-storm Sandy. SO provides reliability at socialized costs and likely sees an opportunity to unlock value from customer segments willing to pay more for premium/custom service (e.g., data centers).*

NEE – Intervenors continue to oppose the proposed acquisition of HE

- Local media notes most intervenors in the regulatory review of NEE's proposed acquisition of HE (NC, $32.84) continue to oppose the transaction.
- The article references briefings filed by 15 intervenors that continue to oppose the transaction, including Life of the Land, Puna Pono Alliance, The Alliance for Solar Choice, Friends of Lanai, County of Hawaii, Hawaii Solar Energy Association, County of Maui, state Department of Land and Natural Resources, SunEdison, Hawaii Gas, SunPower, Tawhiri Power, Ka Lei Maile Alii Hawaiian Civic Club, Sierra Club, Hawaii Chapter, and state Office of Planning.

***Guggenheim takeaway:** NEE, HE, and intervenors will have until May 2nd to file reply briefs, although we still don't believe NEE will remain committed to HE beyond June 2016 - at which point the regulatory approval clause in its merger agreement expires and, we believe, NEE likely pays the termination fee to walk away. With or without HE, our NEE investment thesis is intact, with several potential near-term catalysts, in our view.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, FirstEnergy Corp., NextEra Energy, Inc., Southern Company and Talen Energy Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

April 6, 2016

Exelon Corp

Increasing Regulated Earnings Drives Modest Upside; Resuming Coverage at EW

Industry View	Stock Rating	Price Target
In-Line	**Equal-weight**	**$38.00**

We see modest upside to our price target and view the closing of the POM deal as a positive for EXC shareholders. However, we are below consensus in 2018 due to lower merchant earnings; resuming coverage at Equal-weight.

Closing of Pepco acquisition provides meaningful accretion, increases Exelon's exposure to regulated cash flows, and removes a key overhang. On March 23, nearly two years after the deal was announced, EXC closed its acquisition of Pepco Holdings for ~$6.9b plus assumed debt. The deal was initially rejected by the District of Columbia Public Service Commission (DC PSC). The companies amended their proposal, and the DC PSC finally approved the acquisition. While EXC shares lagged peers on the day of the approval, we attribute this largely to short-term trading dynamics, and we view the closing of the deal as a positive for EXC shareholders.

However, our 2018 estimates are below consensus and near the bottom end of management's target assuming today's forward commodity prices. While we believe EXC's 2016 EPS may trend toward the top half or even above the current range, we are at the bottom end of management's 3-5% 2015-18 targeted net income CAGR. This is primarily due to our modeled EPS declines at ExGen, EXC's merchant power business, due to today's depressed gas and power forwards (we are ~$155m and ~$235m below the company's last disclosed 2017 / 2018 gross margin figures, respectively). While our 2017 EPS estimate is relatively in line, our 2018 estimate is ~9% below the Street. That said, our constructive gas and power views would represent upside to our estimates. We discuss key debates and drivers at ExGen in the body of this note.

Overall we see a balanced risk-reward at current levels with our revised $38 price target representing ~10% upside; resuming coverage at Equal-weight. Our $38 valuation reflects ~$25 per share for utilities and ~$13 per share for ExGen. We use a DCF valuation for the merchant business, ExGen, and a 2017 P/E multiple for the utilities (including Pepco). We see modest upside as EXC trades at one of the lowest P/E multiples among diversified utilities and would benefit under our constructive gas and power views. That said, the implied ExGen free cash flow yield is in the range of what we would expect for an Equal-weight stock, and we see downside to consensus. Overall, we see modest upside to our price target and view the risk-reward for EXC as balanced, driving our Equal-weight rating.

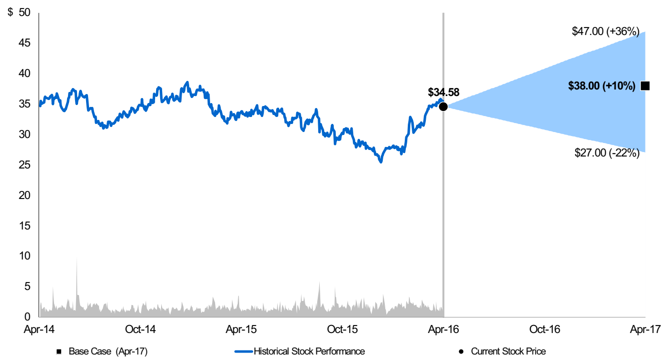
Morgan Stanley provided a fairness opinion to the Board of Directors of Pepco Holdings, Inc. ("Pepco") in relation to their definitive agreement to combine Pepco with Exelon Corporation, as announced on April 30, 2014. The proposed transaction is subject to the approval of Pepco shareholders, required regulatory approvals, and other customary closing conditions. This report and the information provided herein is not intended to (i) provide voting advice, (ii) serve as an endorsement of the proposed transaction, or (iii) result in the procurement, withholding or revocation of a proxy or any other action by a security holder. Pepco has agreed to pay fees to Morgan Stanley for its financial advisory services, including transaction fees. Please refer to the notes at the end of the report.

Risk Reward

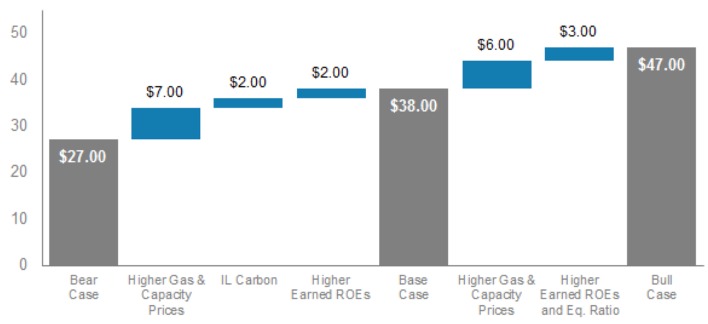
We See Modest Upside But a Balanced Risk-Reward for EXC Shares



Source: Morgan Stanley Research, Thomson Reuters

Price Target $38	Derived from our base case and driven by a 2017e P/E for utilities and a DCF analysis for generation and energy supply (ExGen). For our DCF we use a 7.7% WACC, 3% risk-free rate, and 2.0% terminal growth rate.
Bull $47 $19/share ExGen; 18x Utilities $1.58 EPS	**ExGen:** $4.25 LT natural gas with no basis adjustment, 10% higher MAAC and ComEd PJM capacity prices. Market forward heat rates, $5/ton carbon price in IL, $25/MWh Texas sparks. **Utilities/Parent:** 53% equity ratio and 10% earned ROE consistent with long-run targets per company analyst day
Base $38 $13/share ExGen; 18x Utilities / Parent $1.41 EPS	**ExGen:** $3.75 LT natural gas with ($0.75) Tetco M3 and ($0.30) Chicago gas basis, $175 and $220/MW-day MAAC and ComEd PJM capacity prices respectively. $5/ton carbon price in IL, $25/MWh Texas sparks. **Utilities/Parent:** 49% equity ratio and ~10% overall earned ROE
Bear $27 $4/share ExGen; 18x Utilities $1.29 EPS	**ExGen:** $3.50 LT natural gas with ($1.00) Tetco M3 and ($0.30) Chicago gas basis, $100/MW-day MAAC and ComEd PJM capacity prices. No carbon price, forward curve Texas sparks. **Utilities/Parent:** 50% equity ratio and 9% earned ROE

Exhibit 1: Bear-to-Bull Walk Highlights Sensitivity to Gas & Power Prices, Even After POM Deal



Source: Morgan Stanley Research

Investment Thesis

- **Overall we see a balanced risk-reward at current levels with our revised $38 price target representing ~10% upside; resuming coverage at Equal-weight.** Our $38 valuation reflects ~$25 per share for utilities and ~$13 per share for ExGen. We utilize a DCF valuation for the merchant business, ExGen, and a 2017 P/E multiple for the utilities (including Pepco). Overall we see a balanced risk-reward, with leverage to rising gas and capacity prices.
- **Closing of Pepco (POM) acquisition provides meaningful accretion, increases Exelon's (EXC) exposure to regulated cash flows, and removes a key overhang.** On March 23rd, nearly two years after the deal was originally announced, EXC announced the closing of it acquisition of Pepco Holdings for ~$6.9b plus assumed debt. While EXC actually lagged peers the day of the approval, we attribute this largely to short-term trading dynamics, and we view the closing of the deal as a positive for EXC shareholders.
- **Our 2018 estimates are below consensus and near the bottom end of management's target.** This is primarily due to our modeled EPS declines at ExGen, EXC's merchant power business. We see ~$0.23 downside to ExGen EPS in 2018 relative to the midpoint of 2016 guidance due to current depressed gas and power forwards. This offsets much of the growth and accretion we expect from the regulated utilities / POM, and drives our below-consensus estimates. While our 2017 EPS estimate is relatively in-line, our 2018 estimate is ~9% below the street.

Risks to Achieving Price Target

- Natural gas and power prices decline further. EXC is the most sensitive diversified utility to natural gas prices on our math.
- PJM capacity prices in the May '16 auction could be disappointing.
- Additional states implementing carbon cap and trade programs. Additional carbon regulation would benefit EXC's large nuclear fleet. However, we believe that under a widespread cap and trade program, carbon allowance costs in the US would be fairly low.

EXC: Resuming Coverage at Equal-weight

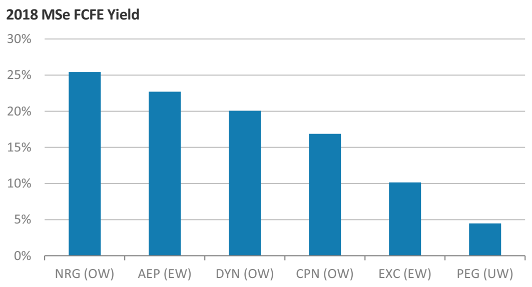
The Big Picture

Our 2018 consolidated EXC estimates are below consensus and toward the bottom end of management's target... EXC's 2016 EPS guidance of $2.40-2.70 excluded any benefit from Pepco and instead assumed that the equity and debt financing associated with the deal was unwound throughout the year, resulting in a $0.07 drag. Now that the deal has closed, we think it is likely EPS trends towards the top half or even above the current range. Longer-term, however, we are below consensus and near the bottom end of management's 3-5% 2015-18 targeted net income CAGR, primarily due to our modeled EPS declines at ExGen. Using the forward curve for gas and power as of 4/1/16, our ExGen 2017e and 2018e open gross margin estimates are ~$155m and ~$235m, respectively, below EXC's disclosure provided on the 4Q15 (which used forwards as of 12/31/15). This results in ~$0.23 downside to ExGen EPS in 2018 relative to the midpoint of 2016 guidance on our math, which offsets much of the growth and accretion we expect from the regulated utilities / POM. While our 2017 EPS estimate is relatively in-line with consensus, our 2018 estimate of $2.56 is ~9% below the Street. That said, our constructive gas and power views would represent upside to our estimates (we use the forward curve for our 2016-2018 estimates, and our own proprietary views for our terminal valuation assumptions).

... However, EXC stock looks modestly discounted at current levels even after YTD outperformance. EXC trades at one of the lowest P/E multiples amongst diversified utilities at just ~13x 2017e consensus EPS. Backing out our estimated ~$13 ExGen valuation, the underlying utility business trades at just ~15.9x EPS, an ~10% discount to peers. Additionally, the implied free cash flow yield of its generation business is modestly attractive at ~10%, and the stock appears to be pricing in a long-term gas prices of $3.00-3.25 on our math.

On net, our revised $38 price target represents modest upside (~10%), and we see a balanced risk-reward at current levels; resuming coverage at Equal-weight. Our $38 valuation reflects ~$25 per share for utilities and ~$13 per share for ExGen. We use a DCF valuation for the merchant business, ExGen, and a 2017 P/E multiple for the utilities (including Pepco). For ExGen, we assume $3.75/MMBtu long-run natural gas price along with an incremental $0.75 negative gas basis for PJM East/West and negative $0.30 for NI Hub, which results in a net ~$3.00 and $3.45 per mmBtu long term gas price assumption for Exelon’s PJM East and Illinois nuclear fleets, respectively. In Illinois, we incorporate ~$4/MWh of margin uplift from a Clean Energy Standard and longer term carbon regulation, based on a $5/ton carbon allowance price. On the capacity side, our assumed long-run ComEd and MAAC capacity prices are $220/MW-day and $175/MW-day, respectively. Our terminal power plus capacity price assumptions reflect new build levels for gas generation. Overall, we view the risk reward for EXC as balanced - while we see modest upside to our price target, we see downside to 2018 consensus estimates.

Exhibit 2: EXC's Generation Business is Trading at Modestly Attractive ~10% FCF-Equity Yield



Source: Morgan Stanley Research. Note, We Show DYN On This Chart, But Our Analysis Shows There Is No Gas Price Low Enough To Make The Stock "Fairly Valued" At Current Levels, Given DYN's Gas Heavy Asset Mix

Exhibit 3: EXC is Pricing in Long-Term Gas Prices of ~$3.00-$3.25

Legacy Utilities & Pepco - Latest Developments

Closing of Pepco acquisition provides meaningful accretion, increases EXC's exposure to regulated cash flows, and removes a key overhang. On March 23, nearly two years after the deal was announced, EXC closed its acquisition of Pepco Holdings for ~$6.9b plus assumed debt. The deal was initially rejected by the District of Columbia Public Service Commission (DC PSC); however, an amended proposal was finally approved by the commission. While EXC shares lagged peers the day of the approval, we attribute this largely to short-term trading dynamics (some had looked to get ahead of a large share buyback if the deal fell through). **We view the closing of the deal as a positive for EXC shareholders as it:**

1. **Provides meaningful accretion**. Our 2017 EPS estimate includes $0.08 of accretion from the Pepco acquisition, with this figure growing to $0.13 in 2018. While ROEs have deteriorated at each of Pepco's utilities on our math due to significant delays in the deal approval process and a lack of rate case filings, we expect Pepco and DPL to both file rate cases in the coming months (ACE has already filed). Additionally, though the delays and one-time concessions do modestly impact the economics of the transaction, the combination of new rate cases and synergies still leads to significant accretion on our math.
2. **Increases exposure to regulated earnings and cash flow,** with the dividend fully supported by regulated utility earnings post-deal. In 2013, EXC's earnings were derived ~56% from its merchant business, and 44% from its utilities, net of the parent drag. By 2018, we estimate ~58% of EPS will come from the utilities/parent, with the balance coming from the merchant business. As a result of the increasingly regulated profile, EXC's current $1.24 annual dividend per share and planned 2.5% annual increases through 2018 will be fully supported by regulated earnings on our math.
3. **Removes a key overhang.** Investor attention for months focused largely on the approval process for the deal. With this large uncertainty finally resolved, investors can focus back on the fundamentals of EXC's business. While appeals may be filed, we believe it is unlikely that the deal approval will be overturned. EXC's multiple should modestly improve with this large uncertainty out of the way, in our view.

That said, the impact of bonus depreciation at Pepco could be a negative dynamic that we have not yet factored in our estimates. EXC has not yet disclosed the impact of bonus depreciation on the Pepco utilities, though there will presumably be some sort of negative earnings impact. The company has indicated that will provide updated accretion forecasts post deal closing, so we think refreshed forecasts including the impact of bonus depreciation will likely be discussed on the 1Q16 call. We note however that there are a number of moving parts at play, so it is possible that increased synergies or earned ROE projections at the utility could offset any negative earnings impact from bonus depreciation.

At EXC's legacy utilities, it's largely business as usual. With PECO's rate case settled and approved, BGE and ComEd's rate filings are next on the agenda. BGE filed for new rates in November of last year, requesting a ~$121m increase for its electric business and a ~$80m increase for its gas business. EXC expects a decision in this case in June. Additionally, ComEd is expected to file its next formula rate filing this April. In terms of load, BGE and ComEd are relatively shielded via decoupling / ROE mechanisms, however PECO is somewhat exposed. PECO's load was slightly down in 2015, though EXC is forecasting a modest rebound to 0.4% in 2016, which could be a risk. Lastly, EXC's cost management initiatives should enhance results at these businesses in the near-term, with ~50% of corporate cost reductions (targeting ~$175m by 2018) to be allocated to the utilities. **Overall, we see a strong growth outlook at both the legacy regulated utilities and the Pepco utilities, and forecast 8.5-9.0% net income growth for the regulated businesses overall.**

ExGen - Latest Developments

Exelon is proactively taking steps to navigate low commodity prices at ExGen, the company's merchant power business. At the Edison Electric Institute (EEI) financial conference this past November, EXC outlined plans to cut ~$350m of costs out of the business, with ~$175m of the cost savings coming specifically from ExGen. Additionally, 50% of the remaining ~$175m of corporate shared services cost savings will be allocated to the merchant business. On net, these initiatives are expected to benefit EPS by $0.13-0.18 by 2018. In addition, the company has been more aggressive with its retail business, and recently stepped up its 2016e load serving expectations from 165 TWh to 210TWh. This strategy serves as a natural hedge for ExGen's generation fleet, and further helps shield the business from today's low commodity prices. **Still, though these measures are beneficial, we forecast declining earnings at the business at the current forward curve.**

We are below consensus largely due to our ExGen forecasts, however our constructive view on natural gas and power prices would represent upside to our estimates. Due to the company's large baseload / nuclear fleet, EXC's earnings are the most sensitive to gas prices in our coverage. Our 2016-2018 EXC estimates are based on the forward curve, but our proprietary 2017 and long-term gas price forecasts currently stand at $3.20/MMbtu and $3.75/MMbtu respectively (more constructive than consensus / the strip). We believe that the low prices for the current 2H16 strip should generate more gas power demand than is needed to solve the current inventory situation, particularly given our view for a more pronounced slowdown in supply and expanding exports. Regardless, 2017 should offer a fresh start after inventories normalize, and the 2017 strip understates the underlying shift in the US gas balance. Structural demand is still set to arrive, albeit at a slower pace, while a supply reacceleration should prove more difficult, particularly if oil prices remain low. See our recent **Coal, Gas & Power note** for more details. We estimate that every $0.50/mmBtu change in gas prices impacts EXC's EPS by ~10%, and thus EXC would be the largest beneficiary in our coverage should this view play out.

Exhibit 6: EXC Is The Most Sensitive to a $0.50/mmBtu Change in Natural Gas Prices

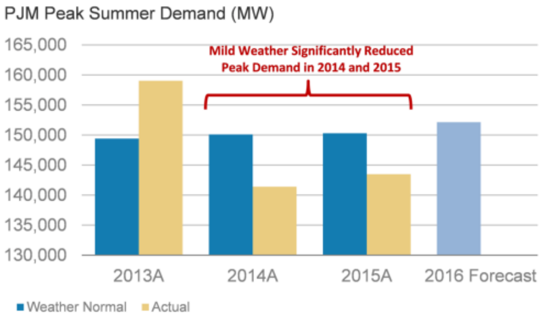
PJM Outlook

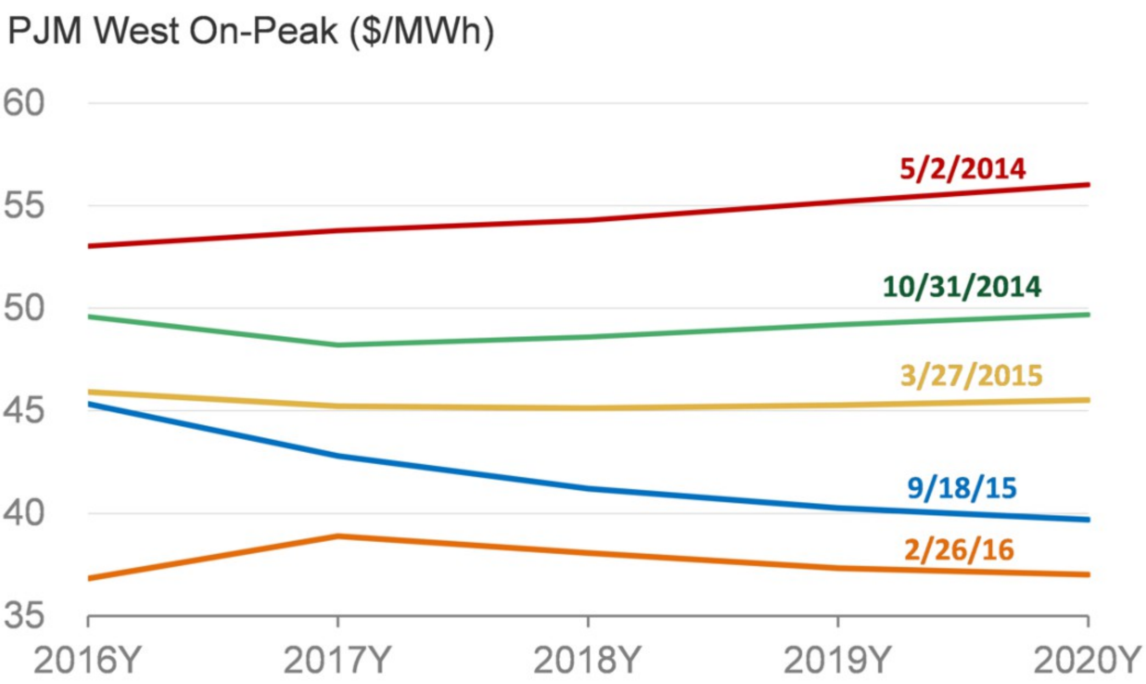
Exhibit 7: Mild Weather Significantly Reduced 2014 and 2015 Summer Peak Demand



Source: PJM, Morgan Stanley Research

Curve has modestly over-corrected to the downside in our view. After the polar vortex of 2014, which drove extreme volatility in spot PJM power prices, the forward curve rallied meaningfully, imbedding what was in our view an unsustainable risk premium given the low probability of the polar vortex events reoccurring again anytime soon. Furthermore, while a significant amount of coal plants retired over the last several years, these retirements are being offset by weak to negative peak demand growth and significant new build activity. These dynamics warrant some level of spark spread (gas plant margin) backwardation in the forward curve, in our view. However, after two mild summers and an extremely mild winter 2015-16, we now see limited volatility priced into the curve, creating an attractive risk-reward and potential upside in summer 2016, which would benefit EXC's PJM fleet.

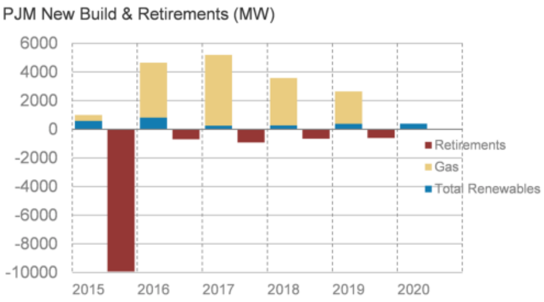
Exhibit 8: PJM Power Forwards Have Declined Meaningfully Over the Past ~1.5 Years



Source: Morgan Stanley Research

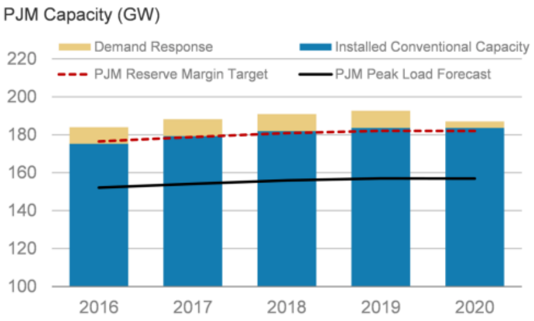
PJM reserve margins remain steady, despite new build activity. Since 2011, ~18.4 GW of coal generation has retired in the PJM market. These retirements were driven by environmental regulations and low natural gas prices, both of which challenged the economics of unregulated coal plants in the region. The market is currently in a build cycle to replace the lost generation. We estimate ~10 GW of new gas generation is currently under construction in the region, and expect a total of ~14.5 GW to enter operation over the 2016-20 period. ~66 GW of coal generation still remains in-service in the PJM market. We expect additional retirements as this fleet continues to age, supporting continued need for pricing to support new generation. The "excess" capacity in the PJM market is almost entirely demand response, rather than conventional generation, implying that reserve margins based on conventional power generation that is available annually are actually relatively lean, despite the new build activity.

Exhibit 9: PJM New Build and Retirements 2015-2020



Source: PJM, SNL, Morgan Stanley Research

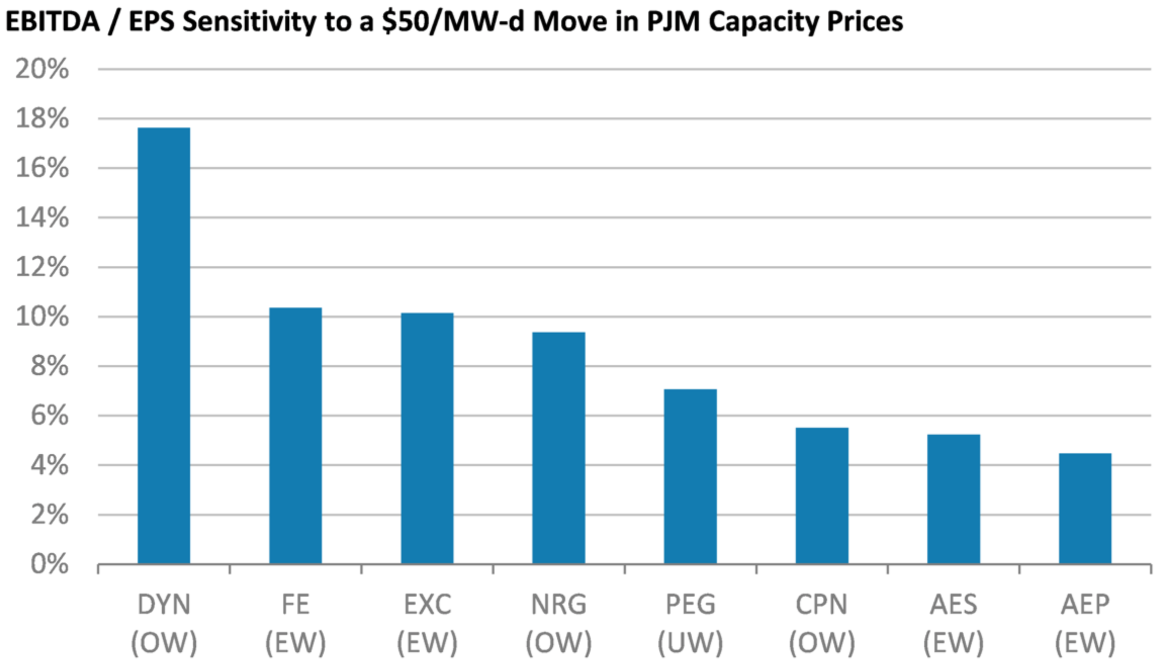
Exhibit 10: PJM Reserve Margins Remain Steady, at Roughly Target Levels Ex-Demand Response



Source: PJM, SNL, Morgan Stanley Research. Note: peak load is shown net of DR and EE, driving the 2016-18 increases.

While we see modest downside risk to this year's auction, strong long-term PJM capacity prices should benefit EXC. In addition to gas prices, EXC is also one of the most sensitive companies under coverage to PJM capacity prices, with every $50/MW-d move impacting the company's EPS by ~10%. While we have highlighted **bonus depreciation** and lower demand forecasts as risks to this year's 2019 / 2020 auction (results scheduled to be posted on 5/24/16), we believe that the outlook for next year's 2020 / 2021 auction (which occurs in 2017) and beyond is attractive. In the 2018 / 19 and 2019 / 20 auctions, 80% of all capacity procured will be Capacity Performance. In 2020 / 21, this target steps up to 100%, resulting in incremental CP demand of ~30 GW. There are simply not enough readily available advanced development projects to keep up with this level of new demand in such a short period of time, and as a result we believe it is highly unlikely that new generation would be able to keep up with this higher target even at higher prices. Instead, we expect less reliable and higher cost incumbent resources, those that did not clear at CP in the most recent auction, to set prices. This dynamic should continue to drive capacity prices meaningfully higher, and cause the market to decouple from the historic relationship with new build economics, in our view, potentially for a multi-year period. See our **2016 outlook** for more details and analysis.

Exhibit 11: EXC is One of The Most Sensitive Stocks Under Coverage to PJM Capacity Prices



Source: Morgan Stanley Research

Illinois Outlook

Carbon Regs vs. Nuke Retirements in IL: EXC Wins Either Way. Illinois' proposed Low Carbon Portfolio Standard (LCPS), designed to provided additional payments to low-carbon generation in the state (including nuclear plants), was not passed in 2015 as many expected. While we think it is likely that the LCPS or a comparable program will be addressed this time around in 2016, we see EXC as a net winner with our without the new rules. If no carbon program moves forward we expect EXC will shut 3-5 GW of at risk nuclear plants in the state (EXC has not yet made any decision on plant retirements). Either outcome - LCPS or nuclear shutdowns - will result in similar uplift to EXC's free cash flow and EPS on our math:

- **Scenario 1: Low Carbon Portfolio Standard.** The proposed LCPS would require IL utilities to purchase low carbon energy credits for ~70% of their electricity sales. Preliminary estimates show that the LCPS would generate ~$300m of incremental revenue for qualifying generating resources in the state. EXC's nukes generate ~90% of the qualifying low carbon energy.
- **Scenario 2: Nukes Retire.** If the LCPS does not move forward in IL, we believe EXC will retire 3-5 GW of at-risk nuclear power plants in the state. The retirements would eliminate $100-150m of annual cash flow drag and drive northern Illinois (NI Hub) power prices $2-4/MWh higher, by our estimates, adding $150-200m of margin to EXC's remaining plants in the region. The power price uplift, however, would likely take some time to materialize in forwards, making the benefit less immediate than LCPS.

Exhibit 12: We Estimate EXC's At-Risk IL Nuclear Plants Are a $0.10-$0.20 Drag on EPS

ERCOT Outlook

Current low prices are not sustainable in our view; risk-reward appears attractive. After seeing substantial declines in forward prices through 2015 and early 2016, Texas (ERCOT) power prices have reached unsustainable lows. We estimate that much of the ERCOT coal fleet is cash flow negative, with several plants at risk of retirement. Over the next several years there are several environmental regulations that will require large capital investment for some plants in the market, investments that are not feasible in the current commodity price environment. We believe it is not a question of ***if,*** but ***when*** coal generation will retire in the state. We expect this dynamic to result in tighter reserve margins and increased volatility, which is not currently priced into the forward curve. **Once the company's new build projects are completed, we estimate that every $5/MWh improvement in ERCOT spark spreads would impact EXC's open EPS by ~$0.06.**

Exhibit 13: Demand Growth And Coal Retirements Are Likely to Drive Tighter Market Conditions

Source: Morgan Stanley Research. Note: Reflects ~2 GW of retirements in 2017, and ~1 GW in 2019.

Analyst Certification

The following analysts hereby certify that their views about the companies and their securities discussed in this report are accurately expressed and that they have not received and will not receive direct or indirect compensation in exchange for expressing specific recommendations or views in this report: Stephen C Byrd; Devin McDermott.

Unless otherwise stated, the individuals listed on the cover page of this report are research analysts.

Global Research Conflict Management Policy

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflictpolicies.

Important US Regulatory Disclosures on Subject Companies

As of February 29, 2016, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: NextEra Energy Inc, NRG Energy Inc.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of AES Corp., Dominion Resources Inc, Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

An employee, director or consultant of Morgan Stanley is a director of AES Corp.. This person is not a research analyst or a member of a research analyst's household.

Morgan Stanley & Co. LLC makes a market in the securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of March 31, 2016)

For disclosure purposes only (in accordance with NASD and NYSE requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	COVERAGE UNIVERSE		INVESTMENT BANKING CLIENTS (IBC)		
STOCK RATING CATEGORY	COUNT	% OF TOTAL	COUNT	% OF TOTAL IBC	% OF RATING CATEGORY
Overweight/Buy	**1219**	**36%**	**305**	**41%**	**25%**
Equal-weight/Hold	**1405**	**41%**	**333**	**45%**	**24%**
Not-Rated/Hold	**81**	**2%**	**5**	**1%**	**6%**
Underweight/Sell	**691**	**20%**	**95**	**13%**	**14%**
TOTAL	**3,396**		**738**		

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding the relationship between the companies that are the subject of Morgan Stanley Research and Morgan Stanley Smith Barney LLC or Morgan Stanley or any of their affiliates, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to www.morganstanley.com/researchdisclosures.

Each Morgan Stanley Equity Research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the Equity Research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley & Co. International PLC and its affiliates have a significant financial interest in the debt securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- If gas and power prices remain low for many years, Exelon's move to invest in retail and regulated businesses will preserve value.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions dilute Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Cutting Midcycle Energy Prices; Fair Value Estimates for Power Producers to Fall 10%-40%

Travis Miller, Sector Director, 24 March 2016

Investment Thesis

As the largest nuclear power plant owner in the U.S., Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years. The drop in Eastern U.S. gas and coal prices have made those generation sources more competitive.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. The Pepco deal took nearly two years to close as Exelon waded through the regulatory approval process. Management's commitment to keep the deal alive shows its conviction in Exelon's strategic move to add more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings by 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. Excluding Pepco, we think the regulated utilities can increase earnings by 10% annually over the next three years.

Travis Miller, Sector Director, 06 April 2016

Analyst Note

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U.S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is $3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount. The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have 10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on

Economic Moat

Travis Miller, Sector Director, 24 March 2016

Considering Exelon's full suite of businesses, we think it earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 24 March 2016

We are reaffirming our $35 per share fair value estimate after Exelon closed its acquisition of Pepco Holdings at its $27.25 per share cash offer. We already included $1 per share of value dilution in our Exelon fair value estimate, based on the 30% premium that Exelon paid over our Pepco fair value estimate.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire, given that it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2016, excluding contributions from Pepco. On a midcycle basis, we assume Exelon earns $3.80 per share and Exelon Generation earns $3.9 billion EBITDA. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

Our midcycle earnings forecast at Exelon Generation is based on a $4 per thousand cubic feet midcycle Henry Hub gas price, a negative $0.60/mcf gas basis for PJM West, and heat rates across all regions 10% above current 2017 forward heat rates. At the retail business, we assume 8% long-term normalized gross margins and 1% annual volume growth beyond 2015.

We assume all three regulated utilities earn average 10% returns on equity starting in 2016.

We assume a 9% cost of equity and a 7.1% cost of capital. Our cost of equity assumption is in line with the 9% rate of return we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 24 March 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and mid-Atlantic. Even though sharp increases in power prices would result in an earnings windfall for Exelon, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely in the current environment, it could have a substantial negative impact on our fair value estimate. If market power prices are capped or regulated, Exelon loses its primary profit source.

As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. In the decade following deregulation, rate caps, and other regulations limited Exelon's profits. Those are gone, and lower power prices have eased concerns about reregulation. But we expect politicians and regulators will continue to monitor customers' utility bills and could intervene if power prices skyrocket.

Reregulation would also destroy Exelon's retail business. Although that business is still a relatively small source of consolidated earnings, it would eliminate Exelon's effective hedge against its generation fleet, potentially leading to more volatile earnings.

As Exelon's regulated utilities generate a greater share of earnings, investors will be made more acutely subject to the state and federal regulatory risk that all distribution and transmission utilities face. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth.

Management

Travis Miller, Sector Director, 24 March 2016

We assign Exelon's management team a Standard stewardship rating. Since Exelon's earnings are at the mercy of wholesale power market ups and downs, we don't see much link between Exelon's recent underperformance and management's capabilities.

President and CEO Chris Crane and executive chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on their efforts to gain support for the deal through nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

We're particularly impressed by management's nuclear fleet operations, the one thing it can control. Crane led the generation segment to world-class results in his five years as COO, and that performance has continued with Crane as CEO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80% range. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

The Constellation acquisition reshaped the board along with the executive suite. The postmerger addition of four former Constellation board members and the retirement of five legacy Exelon board members, including Rowe, leaves only two of the 16 members who were on the board when Exelon formed in 2000. In addition, Shattuck has become the largest insider shareholder. He owned 3.8 million shares or vested options as of January 2015.

Analyst Notes Archive

Cutting Midcycle Energy Prices; Fair Value Estimates for Power Producers to Fall 10%-40%

Travis Miller, Sector Director, 06 April 2016

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U.S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is $3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount. The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have 10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on all companies within the next week.

Exelon and Pepco Join to Sing a Duet: At Last

Travis Miller, Sector Director, 24 March 2016

We are reaffirming our $35 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after Washington, D.C., regulators approved its acquisition of Pepco with a 2-1 vote on Wednesday afternoon. The companies closed the acquisition following the vote, nearly two years after initially announcing the deal. Pepco stock will no longer trade as of March 24.

For Exelon, we have already incorporated $1 per share of value dilution into our fair value estimate, based on a 75% probability of the deal closing at Exelon's $27.25 per share cash offer. Using a 100% probability doesn't have a material impact on that dilution estimate.

We were confident that the management teams would negotiate until they received deal approval, even though the companies missed several self-imposed deadlines. The terms of the settlement in Washington, D.C., will benefit customers there, but they are too small to have a material impact on the $12 billion deal, including debt.

Reaffirming Outlook for Now, but Politics Could Yank Cord Out From Exelon-Pepco

Travis Miller, Sector Director, 02 March 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after fissures opened in the settlement negotiations related to Washington, D.C., regulatory approval for the companies' proposed merger. As of midday Wednesday, Pepco was trading at a 10% discount to our fair value estimate and a 15% discount to Exelon's $27.25 per share cash offer price, both of which we think offer good return opportunities.

Our Pepco fair value estimate continues to include a 75% probability that the settling parties--including D.C. Mayor Muriel Bowser's office, the D.C. regulatory staff, the lead consumer advocate group, and the companies--will reach an agreement regulators will approve. We think the companies remain committed to the deal and will accept any final settlement terms regulators approve. The key points of contention appear to involve less than $100 million, an immaterial impact on the $6.8 billion deal value.

However, we think the companies could be losing control over the outcome, and the deal could now be a proxy political fight among several D.C. entities. If we get more information that supports this theory, we would be inclined to cut our probability of the deal closing to 50%, leading to a $2 per share cut in Pepco's fair value estimate. We include $5 per share of incremental value in our fair value estimate for Pepco. A probability change is not likely to have a material impact on the $1 per share of value dilution we include in our Exelon fair value estimate related to the deal.

We continue to think Exelon management would be willing to go past its previously stated March 4 deadline if settlement negotiations move forward.

We are reaffirming our narrow moat and stable moat trend ratings for both companies.

The Never-Ending Exelon-Pepco Saga Gets Another Two Weeks of Life, but No Real Changes

Travis Miller, Sector Director, 29 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Washington, D.C., regulators again rejected Exelon's offer to acquire Pepco but left open an option for the companies to gain approval.

We still include $1 per share of value dilution in our fair value estimate for Exelon and $5 per share of incremental value for Pepco, based on a 75% probability that the companies will close the transaction at Exelon's $27.25 cash offer. We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Even though Washington, D.C., regulators formally rejected the deal, we think the companies are committed enough to closing the deal that there is a good likelihood they will accept the terms set by regulators. The terms sap additional value from shareholders to benefit customers through rate refunds and benefits, limiting cost reductions, returning merger synergies to customers, and limiting recovery for some costs. However, the D.C. service territory is not big enough for the incremental lost value to have an impact on our valuation of the deal. The terms also set strict ringfencing provisions, but those are typical and don't have any impact on our valuations.

Exelon management had said they would terminate the deal if regulators did not approve it by March 4, but we don't think that date is sacred any longer, as regulators have said the companies have until March 11.

Pepco Reports In-Line 2015 Earnings; Exelon Believes D.C. Will Approve Merger by March 4

Charles Fishman, Eq. Analyst, 22 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Pepco reported in-line 2015 earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining the approval of the District of Columbia Public Service Commission and being completed following an agreement with D.C. Mayor Muriel Bowser that sweetened the benefits for customers and provided other benefits to the district.

Pepco Holdings or Exelon may terminate the merger agreement if the D.C. commission fails to issue a final order approving the merger without condition or modification of the terms of the settlement agreement by March 4. Exelon has made clear that if the D.C. commission does not approve the deal by March 4, it will terminate the agreement. However, Exelon's CEO recently said he believes D.C. will approve the transaction at its next meeting before the termination date.

Pepco reported 2015 adjusted operating earnings of $1.28, in line with our estimate and up from $1.27 per share in 2014. Earnings were favorably affected by rate increases due to infrastructure investment, partially offset by higher operation and maintenance expenses.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Supreme Court Validates Our View That Carbon Regulation Remains Highly Uncertain

Travis Miller, Sector Director, 11 February 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities and coal miners after the U.S. Supreme Court's 5-4 decision to stay the Environmental Protection Agency's Clean Power Plan. This validates our view that it's too early, and the outcome too uncertain, to make any investment decisions based on the current terms of the CPP or any carbon regulation. We do not include any CPP-related impacts in our fair value estimates.

At a minimum, we expect that the decision will push implementation one or two years past the 2022-30 phase-down period and will embolden political opposition to carbon regulation. In addition, it means that a Supreme Court ruling against the CPP could actually reverse industry trends. When the Supreme Court struck down the EPA's MATS rule in June, the decision was largely moot because most power plants were proceeding to implement the rule or had already made plans to retire. The CPP timeline is so long that there is plenty of time for the courts or politicians to nullify it or make major revisions to it.

For most utilities, power and gas market economics and renewable energy policies remain the most important variables for investors to consider.

The Supreme Court's decision comes as good news for coal miners that haven't had any for some time. However, we don't view today's announcement as a panacea for the coal industry's woes, as natural gas remains at prices at which coal struggles to compete. However, our view that natural gas prices will rise in the coming years hasn't changed, so we maintain our fair value estimates for both Peabody and Cloud Peak. Peabody's high leverage means it has less time to wait--the basis for its extreme uncertainty rating.

Exelon Surprises With 2.5% Dividend Growth Target

Travis Miller, Sector Director, 03 February 2016

We are reaffirming our $35 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company reported earning $2.49 per share on an adjusted basis in 2015. This was in line with our estimate and within management's guidance range.

We think the biggest positive for shareholders was management's announcement that it plans to recommend to the board a 2.5% annual dividend increase for at least the next three years, likely starting in the second half of 2016. We had not expected a dividend increase until at least 2018, given our expected plateau in earnings the next three years.

If the board accepts this policy, we estimate Exelon's payout ratio will top 50% by 2018. This is at the high end of what we think is reasonable for Exelon's cash flow profile and debt load. We're not yet entirely convinced that management has added sufficient regulated distribution earnings and contracted generation revenue to decouple cash flows from volatile energy markets.

Management continues to evaluate the economic viability of at least three nuclear plants. We assume in our long-term forecasts that Exelon closes three plants representing 25% of its fleet capacity. We also expect a final Pepco merger decision by early March, in line with timeline indications from Washington, D.C., regulators. We continue to assume $1 per share of value dilution based on a 75% probability of the deal closing as proposed. We don't think ongoing legal challenges in other states will be an impediment.

We remain long-term bullish on fixed-price PJM power, especially in the East, where we expect gas prices to strengthen as takeaway capacity increases and demand remains more robust than other regions. This drives the bulk of the value upside as of early February. Our $8.4 billion midcycle gross margin outlook for Exelon Generation remains at the high end of management's 2018 outlook range.

Supreme Court Sides With Demand Response; No Fair Value Impacts

Andrew Bischof, CFA, Eq. Analyst, 25 January 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Management Meeting: Exelon Sticks to March 4 Drop-Dead Date for Pepco Deal

Travis Miller, Sector Director, 11 November 2015

We are reaffirming our $35 and $26 fair value estimates for Exelon and Pepco Holdings, respectively, after meeting with Exelon's senior management at the Edison Electric Institute Financial Conference in Hollywood, Florida. Our narrow moat and stable moat trend ratings for both companies are unchanged.

Management reiterated it will withdraw its offer to acquire Pepco if Washington, D.C., regulators do not approve the transaction by March 4, 2016. We continue to incorporate in our fair value estimates a 75% probability of the deal closing as proposed. D.C. regulators' written approval for rehearing suggested they expect to rule within that time frame. We expect Exelon will be able to close the deal immediately following approval.

The most-favored-states contingencies in other states' approvals would take effect after the deal closed and thus are not an impediment to the deal closing. Exelon would file with those states to offer customer benefits comparable with those offered in D.C. We don't expect this to be material to our assessment of the transaction or our fair value estimate for Exelon, which includes $1 per share of dilution from the deal.

Management pushed out the start of its full $0.15-$0.20 earnings per share run-rate accretion to 2019 from 2017 initially. Apart from the closing delay, management said the 2017-18 reduction was based on Pepco's reassessment of its near-term outlook for earned returns. At this point, most of the earnings accretion should come from the extra leverage Exelon will use. We expect it will take two to three years of operational improvements on Exelon's side before it can achieve more constructive regulatory outcomes.

Management estimated the deal could be $0.25 per share earnings-accretive by 2020 if Pepco can achieve a 9% earned return on equity. We think this is a stretch, but even an 8% achieved ROE could make the deal value-neutral relative to our previous stand-alone forecasts for Pepco.

Exelon Still Awaiting Power Market Upside and Pepco Acquisition Approvals

Travis Miller, Sector Director, 30 October 2015

We are reaffirming our $35 fair value estimate and narrow economic moat and stable moat trend ratings for Exelon after the firm reported adjusted earnings of $0.83 per share in the third quarter, up from $0.78 per share in the third quarter of 2014. Management raised its full-year earnings guidance range $0.05 per share to $2.40-$2.60, in line with our full-year outlook.

Management noted Exelon's retail-wholesale combination was a meaningful contributor to the higher quarterly and year-to-date earnings, amplified by last year's Integrys acquisition. We've long believed Exelon's retail-wholesale combination and scale can be value-accretive for shareholders, and it appears to be paying off, albeit at still a small level. Favorable weather for Exelon's regulated utilities was a key reason for higher earnings in the quarter. On a weather-normalized basis, we expect capital investment and recent rate activity in Pennsylvania and Maryland to be the key earnings growth driver in 2016-18.

Estimated 2015-17 gross margin for Exelon Generation climbed during the quarter primarily due to above-market hedges. Management now projects $7.8 billion gross margin in 2016 and 2017 with a 2017 upside near $9.0 billion based on hedging about half of its projected generation. We think this is a good position given our bullish power market outlook. Management also announced its intention to delay its nuclear plant retirement decision until next year. We continue to assume a high likelihood that it retires four plants by 2018 based on current market conditions.

Management now expects to close the Pepco acquisition in the first quarter of 2016. We continue to incorporate $1 per share fair value dilution. On Oct. 28, the D.C. commission accepted Exelon-Pepco's appeal and said it expects to make a decision in less than 150 days, suggesting mid-March.

Pepco Reports Third-Quarter Earnings; Acquisition by Exelon Likely to Close Early Next Year

Charles Fishman, Eq. Analyst, 26 October 2015

We are reiterating our $35 per share fair value estimate for Exelon and $26 fair value estimate for Pepco after Pepco reported third-quarter earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

Pepco reported operating earnings of $0.33 per share versus $0.46 in the same period last year. Earnings were negatively affected by higher operations and maintenance expense, implementation costs associated with a new customer information system, increased transmission revenue reserves related to a return on equity challenge and higher property taxes.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining approval of the Public Service Commission of the District of Columbia and being completed following the agreement with Washington, D.C., Mayor Muriel Bowser. We expect the D.C. commission to approve Exelon and Pepco's request to reopen the merger proceeding in their meeting on Oct. 28. Assuming the D.C. commission does reopen the proceeding, briefings would not be completed until late December. Therefore, we would not expect the merger to close until early 2016.

Although the merger appears to be on track in D.C., it is unclear whether the proceedings will be reopened in Delaware, New Jersey, and Maryland, jurisdictions that have already approved the transaction. The commitments Exelon made to these states to obtain approval are subject to most-favored-nation clauses and may need to be enhanced.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Morningstar Equity Research Methodology

Fundamental Analysis

At Morningstar, we believe buying shares of superior businesses at a discount and allowing them to compound over time is the surest way to create wealth in the stock market. The long-term fundamentals of businesses, such as cash flow, competition, economic cycles, and stewardship, are our primary focus. Occasionally, this approach causes our recommendations to appear out of step with the market, but willingness to be contrarian is an important source of outperformance and a benefit of Morningstar's independence. Our analysts conduct primary research to inform our views on each firm's moat, fair value and uncertainty.

Economic Moat

The economic moat concept is a cornerstone of Morningstar's investment philosophy and is used to distinguish high-quality companies with sustainable competitive advantages. An economic moat is a structural feature that allows a firm to sustain excess returns over a long period of time. Without a moat, a company's profits are more susceptible to competition. Companies with narrow moats are likely to achieve normalized excess returns beyond 10 years while wide-moat companies are likely to sustain excess returns beyond 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe lower-quality no-moat companies will see their returns gravitate toward the firm's cost of capital more quickly than companies with moats will. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

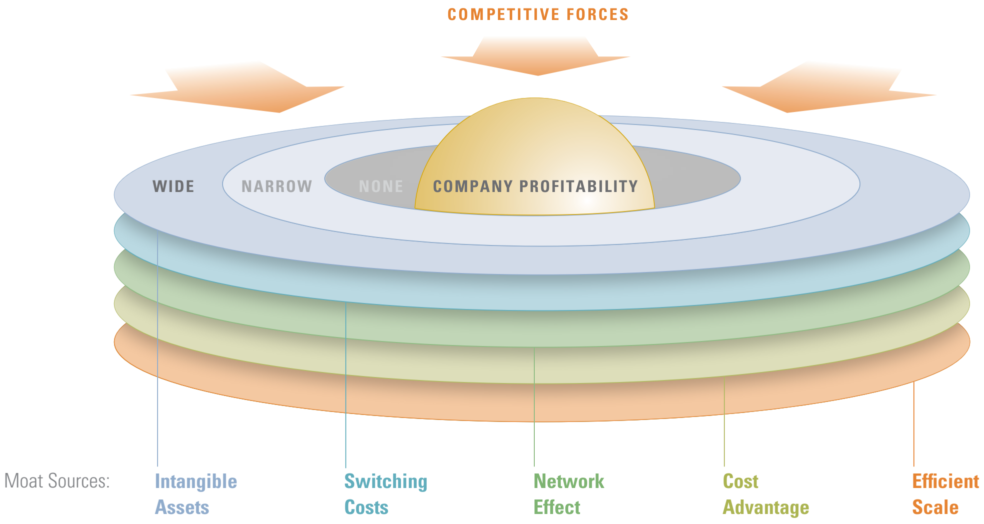
Fair Value Estimate

Our analyst-driven fair value estimate is based primarily on Morningstar's proprietary three-stage discounted cash flow model. We also use a variety of supplementary fundamental methods to triangulate a company's worth, such as sum-of-the-parts, multiples, and yields, among others. We're looking well beyond next quarter to determine the cash-generating ability of a company's assets because we believe the market price of a security will migrate toward the firm's intrinsic value over time. Economic moats are not only an important sorting mechanism for quality in our framework, but the designation also directly contributes to our estimate of a company's intrinsic value through sustained excess returns on invested capital.

Uncertainty Rating

The Morningstar Uncertainty Rating demonstrates our assessment of a firm's cash flow predictability, or valuation risk. From this rating, we determine appropriate margins of safety: The higher the uncertainty, the wider the margin of safety around our fair value estimate before our recommendations are triggered. Our uncertainty ratings are low, medium, high, very high, and extreme. With each uncertainty rating is a corresponding set of price/fair value ratios that drive our recommendations: Lower price/fair value ratios (<1.0) lead to positive recommendations, while higher price/fair value

Economic Moat



Morningstar Equity Research Methodology

ratios (>1.0) lead to negative recommendations. In very rare cases, the fair value estimate for a firm is so unpredictable that a margin of safety cannot be properly estimated. For these firms, we use a rating of extreme. Very high and extreme uncertainty companies tend to have higher risk and volatility.

Quantitatively Driven Valuations

To complement our analysts' work, we produce Quantitative Ratings for a much larger universe of companies. These ratings are generated by statistical models that are meant to divine the relationships between Morningstar's analyst-driven ratings and key financial data points. Consequently, our quantitative ratings are directly analogous to our analyst-driven ratings.

Quantitative Fair Value Estimate (QFVE): The QFVE is analogous to Morningstar's fair value estimate for stocks. It represents the per-share value of the equity of a company. The QFVE is displayed in the same currency as the company's last close price.

Valuation: The valuation is based on the ratio of a company's quantitative fair value estimate to its last close price.

Quantitative Uncertainty: This rating describes our level of uncertainty about the accuracy of our quantitative fair value estimate. In this way it is analogous to Morningstar's fair value uncertainty ratings.

Quantitative Economic Moat: The quantitative moat rating is analogous to Morningstar's analyst-driven economic moat rating in that both are meant to describe the strength of a firm's competitive position.

Understanding Differences Between Analyst and Quantitative Valuations

If our analyst-driven ratings did not sometimes differ from our quantitative ratings, there would be little value in producing both. Differences occur because our quantitative ratings are essentially a highly sophisticated analysis of the analyst-driven ratings of comparable companies. If a company is unique and has few comparable companies, the quantitative model will have more trouble assigning correct ratings, while an analyst will have an easier time recognizing the true characteristics of the company. On the other hand, the quantitative models incorporate new data efficiently and consistently. Empirically, we find quantitative ratings and analyst-driven ratings to be equally powerful predictors of future performance. When the analyst-driven rating and the quantitative rating agree, we find the ratings to be much more predictive than when they differ. In this way, they provide an excellent second opinion for each other. When the ratings differ, it may be wise to follow the analyst's rating for a truly unique company with its own special situation, and follow the quantitative rating when a company has several reasonable comparable companies and relevant information is flowing at a rapid pace.

Price/Fair Value Morningstar data as of Apr 05, 2016

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

-Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures.

If you wish to obtain further information regarding previous Reports and recommendations and our services, please contact your local Morningstar office.

Unless otherwise provided in a separate agreement, you may use this Report only in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of this document is Morningstar Inc. Redistribution, in any capacity, is prohibited without permission. The information, data, analyses and opinions presented herein do not constitute investment advice; are provided solely for informational purposes and therefore are not an offer to buy or sell a security; and are not warranted to be correct, complete or accurate, nor may they be construed as a representation regarding the legality of investing in the security/ies concerned, under the applicable investment or similar laws or regulations of any person or entity accessing this report. The opinions expressed are as of the date written and are subject to change without notice. Except as otherwise required by law, Morningstar, its affiliates, and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions or their use. You should seek the advice of your financial, legal, tax, business and/or other consultant, and read all relevant issue documents pertaining to the security/ies concerned, including without limitation, the detailed risks involved in the investment, before making an investment decision.

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. As the price / value / interest rate of a security fluctuates, the value of your investments in the said security, and in the income, if any, derived therefrom may go up or down.

For Recipients in Australia: This report has been authorized by the Head of Equity and Credit Research, Asia Pacific, Morningstar Australasia Pty Limited and is circulated pursuant to RG 79.26(f) as a full

restatement of an original report (by the named Morningstar analyst) which has already been broadly distributed. To the extent the report contains general advice it has been prepared without reference to your objectives, financial situation or needs. You should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at www.morningstar.com.au/fsg.pdf.

For Recipients in Hong Kong: The research is distributed by Morningstar Investment Management Asia Limited, which is regulated by the Hong Kong Securities and Futures Commission to provide services to professional investors only. Contents

Analyst Note 06 Apr 2016

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U. S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is $3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount . The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have 10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 22% of U.S. nuclear power and 4% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 150 terawatt hours of load. In March 2012, Exelon bought Constellation Energy for $7 billion.

growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on all companies within the next week.

Price/Fair Value Morningstar data as of Apr 05, 2016

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

-Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures.

If you wish to obtain further information regarding previous Reports and recommendations and our services, please contact your local Morningstar office.

Unless otherwise provided in a separate agreement, you may use this Report only in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of this document is Morningstar Inc. Redistribution, in any capacity, is prohibited without permission. The information, data, analyses and opinions presented herein do not constitute investment advice; are provided solely for informational purposes and therefore are not an offer to buy or sell a security; and are not warranted to be correct, complete or accurate, nor may they be construed as a representation regarding the legality of investing in the security/ies concerned, under the applicable investment or similar laws or regulations of any person or entity accessing this report. The opinions expressed are as of the date written and are subject to change without notice. Except as otherwise required by law, Morningstar, its affiliates, and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions or their use. You should seek the advice of your financial, legal, tax, business and/or other consultant, and read all relevant issue documents pertaining to the security/ies concerned, including without limitation, the detailed risks involved in the investment, before making an investment decision.

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. As the price / value / interest rate of a security fluctuates, the value of your investments in the said security, and in the income, if any, derived therefrom may go up or down.

For Recipients in Australia: This report has been authorized by the Head of Equity and Credit Research, Asia Pacific, Morningstar Australasia Pty Limited and is circulated pursuant to RG 79.26(f) as a full restatement of an original report (by the named Morningstar analyst) which has already been broadly distributed. To the extent the report contains general advice it has been prepared without reference to your objectives, financial situation or needs. You should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at www.morningstar.com.au/fsg.pdf.

For Recipients in Hong Kong: The research is distributed by Morningstar Investment Management Asia Limited, which is regulated by the Hong Kong Securities and Futures Commission to provide services to professional investors only. Neither Morningstar Investment Management Asia Limited, nor its representatives, are acting or will be deemed to be acting as an investment advisor to any recipients of this information unless expressly agreed to by Morningstar Investment Management Asia Limited. What's New?

For current Guggenheim Utility Corporate Access Calendar, scroll to bottom.

Guggenheim initiates coverage of IPPs – Boom-Bust: Forget Mid Cycle – Focus on Asset Lives and Cash Flows….Launching on IPPs with Cautious Tone but See Opportunities

2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

EXC – BUY – DC Approves Acquisition; New Pro-Forma Estimates with POM Merged – EXC Remains Our Top Integrated Idea

Texas Showdown: Has the Wave of Coal Retirements Finally Reached Texas? Deep-Dive on How the Perfect Storm Plays Out

AEP/FE – Ohio Regulators Approve PPAs - Benefits AEP, FE - Merchants Likely Turn to FERC (see our note here)

PNW/PCG – PCG joins PNW JV to pursue competitive transmission projects
EXC – MD passes green house gas law to cut emissions by 40%
SPP – Wind penetration record reached close to 50%
Gas – EIA report shows utilization of gas-fired plants surpassing coal for first time in 2015
NEE – Hawaii utilities envision LNG on path toward 100% renewables
CA – CA could face 2 weeks of blackouts without Aliso Canyon gas storage

PNW/PCG – PCE joins PNW JV to pursue competitive transmission projects

- PCG joined Transcanyon, a joint venture between PNW and Berkshire Hathaway Energy (BRK.A., NC, $212,990.00) to jointly pursue competitive transmission opportunities in CAISO.
- Transcanyon was formed in 2014 as an independent developer of electric transmission infrastructure with a focus on the Western United States.
- In 2015, PG&E was also selected by the CAISO to build, own and operate two new electric substations in California's Central Valley and the South Bay.

Guggenheim takeaway: *A partnership with an incumbent utility could benefit the JV in winning competitive transmission projects in CAISO, but as we have observed in the past, competitive bids have not been afforded to the incumbent utility (Delaney-Colorado, and Artificial Island).That said, we believe the partnership could provide incremental upside to PNW and PCG on any competitive projects won through the JV.*

EXC – MD passes green house gas law to cut emissions by 40%

- MD. Gov signed into law for the state to reduce greenhouse gas emissions by 40% below 2006 levels by 2030.

- The law is third to California and New York's executive-ordered cuts of 50% emissions reduction.
- MD claims that it is on track to meet its 25% reduction target by 2020.

Guggenheim takeaway: *Passing a more aggressive greenhouse gas reduction bill will increase investment in renewable generation in the state and is a positive for EXC, in our view. The push for renewables will also benefit transmission and infrastructure investment.*

SPP – Wind penetration record reached close to 50%

- SPP on April 5 stated it has set a new all-time wind penetration record.
- At 2:02 AM that day, the amount of generation from wind farms in the Great Plains States supplied 48.32% of the load in SPP, the highest ever for the RTO.
- It was also a new record for all North American ISOs and RTOs, even ERCOT, which has the highest installed wind capacity in the nation.

Guggenheim takeaway: *Wind generation in the Great Plains States has been setting records this year with high penetration in SPP. We expect this trend to continue and note that WR is developing ~500 MW of wind in KS because of favorable economics and high capacity factor for wind turbines.*

Gas – EIA report shows utilization of gas-fired plants surpassing coal for first time in 2015

- An EIA report shows utilization of gas-fired CCGTs reached an average capacity factor of 56.3%, surpassing coal plants (54.6%) for the first time last year.
- 10 years ago, about half of the U.S. coal fleet was operating at capacity factors above 70%.

Guggenheim takeaway: *Increasing utilization of gas-fired generation and the displacement of coal is a trend that has been in place for the past few years, driven by surging production of low-cost gas, CCGT technology improvement, and environmental regulations. Although coal is generally losing its appeal, we note it has managed to avoid the pressure in certain markets such as ERCOT – For additional insight on the potential wave of coal retirements that could hit ERCOT in the near future, see our note here.*

NEE – Hawaii utilities envision LNG on path toward 100% renewables

- Hawaiian Electric (HE, NC, $31.66) presented their vision for the state’s “100% renewable by 2045” aspiration to regulators, which would entail importing LNG in the meantime.
- The utility describes LNG as a near-term effort to establish a foundation for the 30-year energy plan.

Guggenheim takeaway: *HE has also previously indicated they would not pursue LNG until their proposed merger with NEE was approved. The opportunity to develop energy infrastructure of this nature was likely part of NEE’s strategic rationale for the acquisition, in addition to renewable and smart grid investment required to facilitate the state’s 100% renewable goal. Energy infrastructure work such as this entail significant resources and development experience, which NEE offers, but locals continue to oppose the transaction. We do not believe NEE will remain committed to HE beyond June 2016, at which point the regulatory approval clause in its merger agreement expires and NEE likely pays the termination fee to walk away.*

CA – CA could face 2 weeks of blackouts without Aliso Canyon gas storage

- An engineering study found that California could experience two weeks of blackouts this summer as access to gas supplies becomes challenging without the Aliso Canyon gas storage facility.
- Aliso Canyon experienced a prolonged and highly-publicized leak which depleted the facility to about 20% capacity.
- CAISO, along with state regulators, indicated the region would rely on other gas sources and demand-side management to manage supply and demand; they also noted if there were outages, they anticipate controlled outages limited to 1-2 hours.

Guggenheim takeaway: *Gas-fired generators likely face supply and demand challenges this summer as system operators will look to implement energy conservation measures and natural gas potentially becomes relatively scarce in certain areas.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

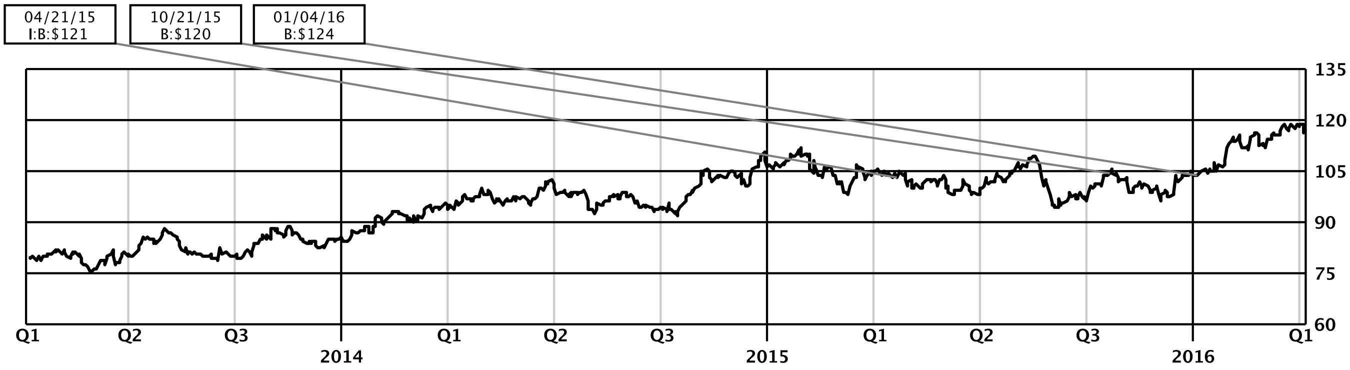
The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Guggenheim Securities, LLC together with its affiliates beneficially owns 1% (one percent) or more of a class of common equity securities of Pinnacle West Capital Corporation. If this report is issued on or after the 10th calendar day of the month, it reflects the ownership position as of the last day of the previous month. Reports issued before the 10th day of a month reflect the ownership position as of the end of the second month preceding the date of the report.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, NextEra Energy, Inc., PG&E Corporation and Pinnacle West Capital Corporation in the next 3 months.

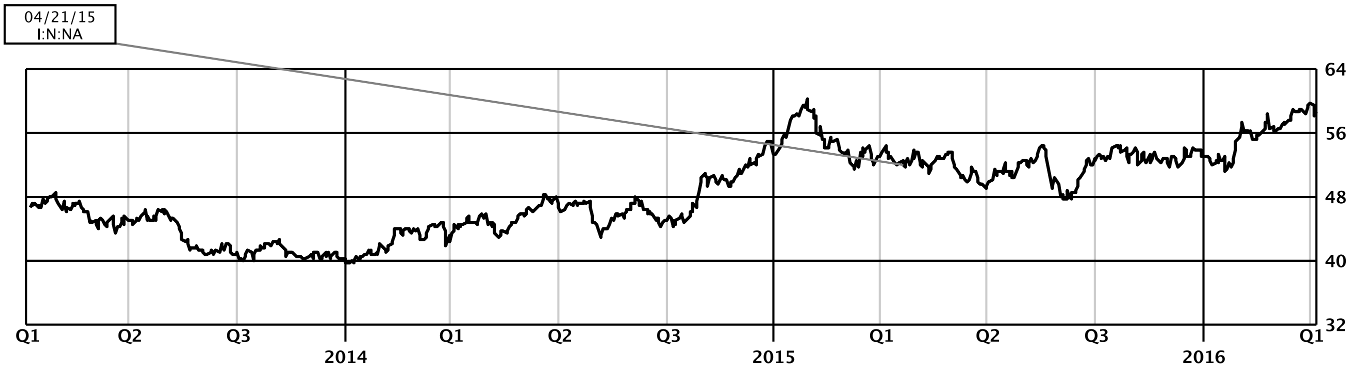
Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: NextEra Energy, Inc. (NEE) as of 04-06-2016



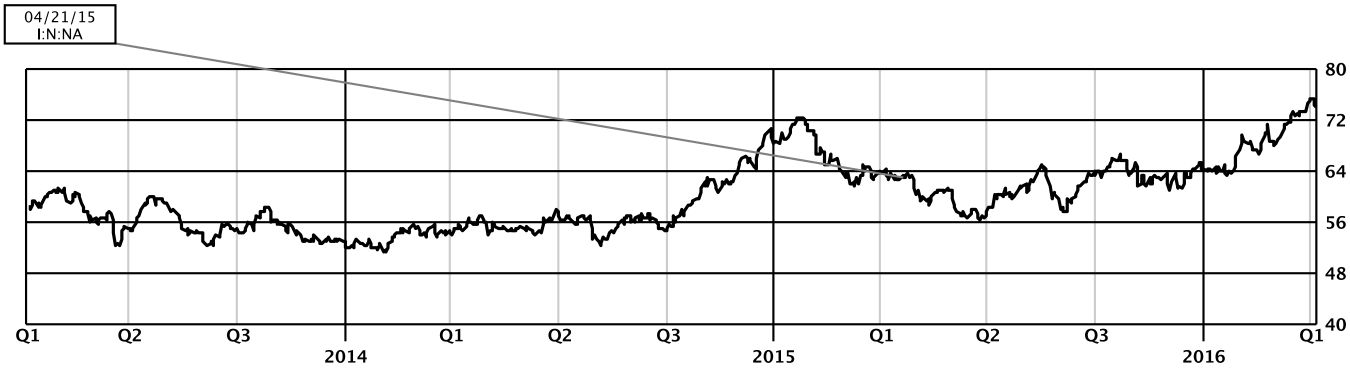
Created by BlueMatrix

Rating and Price Target History for: PG&E Corporation (PCG) as of 04-06-2016



Created by BlueMatrix

Rating and Price Target History for: Pinnacle West Capital Corporation (PNW) as of 04-06-2016



Created by BlueMatrix

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

COMPANY UPDATE

Exelon Corp. (EXC)

Neutral

Equity Research

Reinstating at Neutral, synergy & rate cases are possible catalysts

What's changed

We have removed the Not Rated designation from EXC following the closing of its acquisition of Pepco Holdings (POM), a regulated electric utility serving DC and parts of DE, MD and NJ. We reinstate coverage with a Neutral rating, a 12-month price target of $37, representing 11% total return. We also update our forecasts to incorporate POM's regulated segments and reduce capital allocation – primarily buybacks. Our new 2016E-2018E EPS forecasts of $2.52/$2.45/$2.42 (from $2.44, $2.64, $2.31) appear slightly below consensus of $2.52/$2.67/$2.83.

Implications

On a YTD basis, EXC outperformed the XLU by ~1200bps and S&P 500 by ~2450bps. Valuation and below-consensus forecasts drive our Neutral rating. The earnings mix for EXC should evolve as (1) POM increases exposure to regulated segments and (2) non-regulated earnings power declines by 35% from 2015 levels – we expect regulated earnings to grow from 49% in 2015 to 71% by 2018. While we forecast EPS declines at Exelon Generation given its strong sensitivity to future power, natural gas and PJM capacity pricing, cash flow there remains slightly positive – although our 2016-2018 free cash flow view of $2.6bn comes in below guidance of $3.2bn.

Updates on O&M savings potential – We forecast significant O&M cost management at the acquired segments of roughly $130mm from 2015 to 2018 and believe rate case filings for these utilities could serve as catalysts for EXC.

Valuation

Our 12-month price target of $37 is derived using a sum-of-the-parts valuation and applying a 16.5x 2017E P/E multiple on regulated EPS and a 6x EV multiple on non-regulated 2017E EBITDA. EXC trades at 2016E/17E/18E P/E of 13.7x/14.1x/14.3x, below peers at 14.3x/14.9x/14.8x.

Key risks

Natural gas prices, power prices, and state utility regulation.

PM Summary: Reinstate at Neutral, EPS growth appears lackluster and below consensus

We have removed the Not Rated (NR) designation from Exelon Corporation (EXC) following the closing of its acquisition of Pepco Holdings (POM), a regulated utility with operations in DC, DE, MD, and NJ. We reinstate with a Neutral rating and a 12-month price target of $37, representing a total return of 11%. Although EXC's acquisition of POM increases its focus on regulated operations, which should decrease commodity exposure and risk in our view, we reinstate with a Neutral rating given its relative valuation, recent outperformance and lack of material near-term catalysts.

We update our model to reflect the acquisition of POM. With the acquisition of POM and our expectations for a decline in EPS from EXC's non-regulated segment based on our forecasts for power prices and natural gas prices, we estimate a larger portion of EXC's earnings power will now come from regulated businesses. We incorporate POM as a consolidated segment of PHI (Pepco Holdings, Inc.) in our sum-of-the-parts analysis and we forecast regulated businesses should contribute 71% of EPS in 2018 versus roughly 49% in 2015.

- **Our 2016 EPS estimate is in-line with consensus and guidance adjusted for the POM acquisition, but our 2017-2018 estimates are below consensus.** Our new 2016E-2018E EPS forecasts of $2.52/$2.45/$2.42 (from $2.44, $2.64, $2.31) appear slightly below consensus of $2.52/$2.67/$2.83. Our estimates differ at the Exelon Generation (ExGen) segment where management has provided FCF guidance of ~$3,200mm for the 2016-2018 period vs. our estimate of ~$2,600mm. We attribute differing assumptions relating to power prices, natural gas prices, generation output and O&M for the variance.
- **We expect Exelon Generation (ExGen) to generate positive free cash flows in 2016-2018.** During the 2016-2018 period, we expect ExGen to generate positive free cash flows, even after taking into account guided growth capex. EXC reiterated its intention of using any positive free cash flow by (1) prioritizing investment at its regulated utilities, (2) investing in contracted assets, and/or (3) returning capital to capital providers.

We see 11% total return– slightly above peer group levels– but reinstate at Neutral on valuation and see better return potential elsewhere in utilities. While upside potential exists at EXC (as seen in our sum-of-the-parts analysis), even after outperforming the XLU and the S&P 500 by approximately 1200bps and 2450bps this year, respectively, we prefer large caps such as NEE, SRE, PCG and ETR that either trade at bigger discounts or offer better capital allocation/dividend growth potential.

Outperformance already occurred this year and consensus risk exists

EXC outperformed the XLU by approximately 1200bps and S&P 500 by approximately 2450bps and we believe limited upside remains. Valuation and below-consensus forecasts drive our Neutral rating. We forecast the regulated / non-regulated earnings mix to shift due to regulated utility EPS expanding from $1.21 in 2015 to $1.71 in 2018, representing a CAGR of 12%. Regulated earnings growth is driven by rate base growth supported by strong capital expenditures. Concurrently, we estimate ExGen's EPS contribution to decline from $1.40 in 2015 to $0.84 in 2018, representing a CAGR of (15%), based on our forecasts for power prices and natural gas prices. Given the growing regulated utilities and shrinking non-regulated business, we forecast the share of regulated earnings to increase from 49% in 2015 to 71% in 2018.

Headwinds may exist at both the regulated and non-regulated businesses. We incorporate $130mm in O&M cost savings at PHI in addition to the Cost Management Initiative that EXC has disclosed. Failing to achieve those cost savings may be a headwind to earnings. Rate case proceedings at the recently acquired PHI utilities have been on hold pending the merger resolution. Unfavorable rate cases in terms of revenue increases or timing may challenge earnings. At non-regulated ExGen, sustained low power prices and low demand may be headwinds as well.

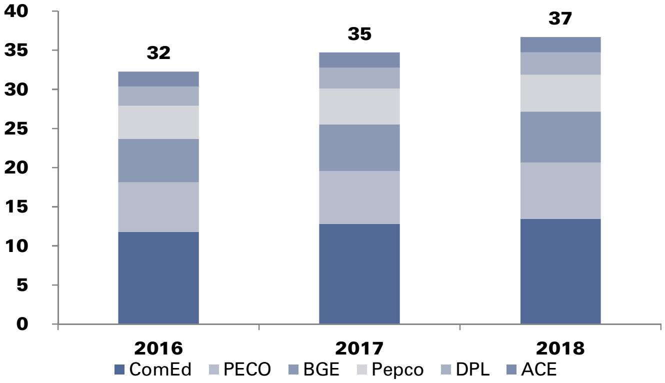
Exhibit 6: …driving rate base growth
EXC Regulated Utilities year-end rate base ($bn)



Source: Goldman Sachs Global Investment Research.

ExGen should create positive cash flow in the next few years, which could improve capital allocation over time or lead to higher regulated investment levels. We note that long-term EBITDA and EPS are sensitive to natural gas prices and PJM capacity prices, while continued O&M management also plays a factor. On a full company basis, EXC could become positive cash flow by 2018, largely coming from ExGen and from cost savings and rate increases at the regulated segments acquired from POM.

Exhibit 7: We expect EXC to generate positive free cash flow by 2018, which may be used for various capital allocation activities

Valuation on a sum-of-the-parts basis appears modestly compelling

We value EXC using a sum-of-the-parts methodology and reach a 12-month price target of $37 which represents 11% total return potential. We apply an in-line peer group P/E multiple of 16.5x to EXC's regulated segments' 2017 EPS and an EV/EBITDA multiple of 6.0x to the non-regulated Exelon Generation and Parent 2017 EBITDA. EXC is trading at 2016/17/18 P/E of 13.7x/14.1x/14.3x, currently below other Diversified Utilities with merchant generation exposure.

Exhibit 12: Our sum-of-the-parts analysis uses an in-line peer group multiple for the regulated businesses, resulting in a 12-month target price of $37

EXC Sum of the Parts Analysis

Regulated Utilities	**2017 EPS**

Primary catalysts and key risks ahead for EXC

We see a limited pool of company specific catalysts for EXC and a few sector-wide ones that we believe would impact the shares, including:

- **Updates on post-acquisition O&M synergies** – we assume $130mm in cost management or lower O&M at the POM segments, but increased cost management could serve as a positive for EXC's shares.
- **Insights into future rate case filings** and efforts to improve under-earning levels.
- **Updates on nuclear plant economics** and the potential need to retire existing units could serve as catalysts.
- **Broader power price and natural gas price movements,** as well as changes in future capacity prices in markets like PJM, could impact the shares of EXC and other Diversified Utilities with merchant generation as well as IPPs.

Primary risks for EXC include:

- **Rate case and general regulatory risks**– as we see a number of rate cases needed in several jurisdictions over the next two years.
- **Power demand levels**, given continued weakness in many of EXC's core markets.
- **Higher-than-expected post acquisition closing costs** impacting cash flow more than earnings levels.

Financial advisory disclosure

Goldman Sachs and/or one of its affiliates is acting as a financial advisor in connection with an announced strategic matter involving the following company or one of its affiliates: Exelon Corporation

Disclosure Appendix

Reg AC

We, Michael Lapides, Daniel Yu, CFA, David Fishman and Dylan Campbell, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Investment Profile

The Goldman Sachs Investment Profile provides investment context for a security by comparing key attributes of that security to its peer group and market. The four key attributes depicted are: growth, returns, multiple and volatility. Growth, returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe.

The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

Growth is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Volatility** is measured as trailing twelve-month volatility adjusted for dividends.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Disclosures

The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/125/EC is available at http://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms

Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Regional Conviction Buy and Sell lists represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return.

Return potential represents the price differential between the current share price and the price target expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them

may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data available on a particular security, please contact your sales representative or go to http://360.gs.com.

Disclosure information is also available at http://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

Contents

Investment Thesis 06 Oct 2015

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Valuation, Growth and Profitability 13 Apr 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

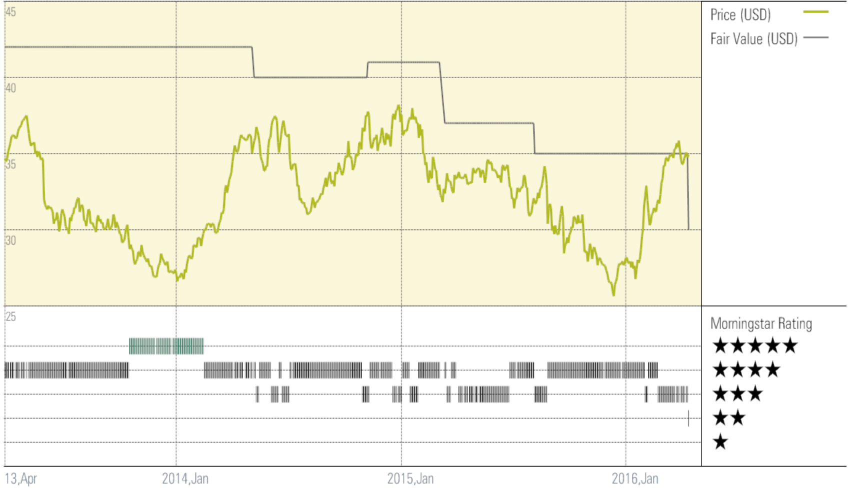
We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $500 million change in EBITDA. Our fair value estimate would change by $4 per share. On a mark-to-market basis as of mid-April, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 2 percentage points to near the industry average, it would change our fair value estimate by $3 per share. If Exelon does not retire the Clinton, Quad Cities, and Byron plants, it would add $3 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of

Price/Fair Value Morningstar data as of Apr 14, 2016



pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets. The 2007-08 commodity boom led management to raise the dividend and buy back stock. But as power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.The Pepco acquisition increases consolidated leverage, but most of that additional leverage will be debt at the regulated utilities. We don't expect a material change in parentco or Exelon Generation leverage.Based on current market conditions, we think Exelon will have sufficient cash coverage to keep its investment-grade credit rating and achieve management's recent pledge to increase the dividend at least 2.5% annually. Even through these lean years, we expect Exelon can generate at least $2 billion of cash flow after incorporating new financing and excluding discretionary growth investments. We project Exelon's consolidated EBITDA/interest coverage will remain near 6 times and leverage will remain below 4 times debt/EBITDA at least through 2018.More than half of Exelon's consolidated debt is secured at the regulated utilities, in line with its regulatory targets. Exelon Generation has an $805 million maturity in 2017 and $1.9 billion due in 2020. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing those maturities.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm could be forced to make contributions.

Enterprise Risk

Investors should pay the most attention to political

developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management 24 Mar 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes

Cutting Midcycle Energy Prices; Fair Value Estimates for Power Producers to Fall 10%-40% 06 Apr 2016

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U. S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is $3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount . The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have 10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on all companies within the next week.

Exelon and Pepco Join to Sing a Duet: At Last 24 Mar 2016

We are reaffirming our $35 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after Washington, D.C., regulators approved its acquisition of Pepco with a 2-1 vote on Wednesday afternoon. The companies closed the acquisition following the vote, nearly two years after initially announcing the deal. Pepco stock will no longer trade as of March 24.

For Exelon, we have already incorporated $1 per share of value dilution into our fair value estimate, based on a 75% probability of the deal closing at Exelon's $27.25 per share cash offer. Using a 100% probability doesn't have a material impact on that dilution estimate.

We were confident that the management teams would negotiate until they received deal approval, even though the companies missed several self-imposed deadlines. The terms of the settlement in Washington, D.C., will benefit customers there, but they are too small to have a material impact on the $12 billion deal, including debt.

Reaffirming Outlook for Now, but Politics Could Yank Cord Out From Exelon-Pepco 02 Mar 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after fissures opened in the settlement negotiations related to Washington, D.C., regulatory approval for the companies' proposed merger. As of midday Wednesday, Pepco was trading at a 10% discount to our fair value estimate and a 15% discount to Exelon's $27.25 per share cash offer price, both of which we think offer good return opportunities.

Our Pepco fair value estimate continues to include a 75% probability that the settling parties--including D.C. Mayor Muriel Bowser's office, the D.C. regulatory staff, the lead consumer advocate group, and the companies--will reach an agreement regulators will approve. We think the companies remain committed to the deal and will accept any final settlement terms regulators approve. The key points of contention appear to involve less than $100 million, an immaterial impact on the $6.8 billion deal value.

However, we think the companies could be losing control over the outcome, and the deal could now be a proxy political fight among several D.C. entities. If we get more information that supports this theory, we would be inclined to cut our probability of the deal closing to 50%, leading to a $2 per share cut in Pepco's fair value estimate. We include $5 per share of incremental value in our fair value estimate for Pepco. A probability change is not likely to have a material impact on the $1 per share of value dilution we include in our Exelon fair value estimate related to the deal.

We continue to think Exelon management would be willing to go past its previously stated March 4 deadline if settlement negotiations move forward.

We are reaffirming our narrow moat and stable moat trend ratings for both companies.

The Never-Ending Exelon-Pepco Saga Gets Another Two Weeks of Life, but No Real Changes 29 Feb 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Washington, D.C., regulators again rejected Exelon's offer to acquire Pepco but left open an option for the companies to gain approval.

We still include $1 per share of value dilution in our fair value estimate for Exelon and $5 per share of incremental value for Pepco, based on a 75% probability that the companies will close the transaction at Exelon's $27.25 cash offer. We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Even though Washington, D.C., regulators formally rejected the deal, we think the companies are committed enough to closing the deal that there is a good likelihood they will accept the terms set by regulators. The terms sap additional value from shareholders to benefit customers through rate refunds and benefits, limiting cost reductions, returning merger synergies to customers, and limiting recovery for some costs. However, the D.C. service territory is not big enough for the incremental lost value to have an impact on our valuation of the deal. The terms also set strict ringfencing provisions, but those are typical and don't have any impact on our valuations.

Exelon management had said they would terminate the deal if regulators did not approve it by March 4, but we don't think that date is sacred any longer, as regulators have said the companies have until March 11.

Pepco Reports In-Line 2015 Earnings; Exelon Believes D.C. Will Approve Merger by March 4 22 Feb 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Pepco reported in-line 2015 earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining the approval of the

Analyst Notes

District of Columbia Public Service Commission and being completed following an agreement with D.C. Mayor Muriel Bowser that sweetened the benefits for customers and provided other benefits to the district.

Pepco Holdings or Exelon may terminate the merger agreement if the D.C. commission fails to issue a final order approving the merger without condition or modification of the terms of the settlement agreement by March 4. Exelon has made clear that if the D.C. commission does not approve the deal by March 4, it will terminate the agreement. However, Exelon's CEO recently said he believes D.C. will approve the transaction at its next meeting before the termination date.

Pepco reported 2015 adjusted operating earnings of $1.28, in line with our estimate and up from $1.27 per share in 2014. Earnings were favorably affected by rate increases due to infrastructure investment, partially offset by higher operation and maintenance expenses.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Supreme Court Validates Our View That Carbon Regulation Remains Highly Uncertain 11 Feb 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities and coal miners after the U.S. Supreme Court's 5-4 decision to stay the Environmental Protection Agency's Clean Power Plan. This validates our view that it's too early, and the outcome too uncertain, to make any investment decisions based on the current terms of the CPP or any carbon regulation. We do not include any CPP-related impacts in our fair value estimates.

At a minimum, we expect that the decision will push implementation one or two years past the 2022-30 phase-down period and will embolden political opposition to carbon regulation. In addition, it means that a Supreme Court ruling against the CPP could actually reverse industry trends. When the Supreme Court struck down the EPA's MATS rule in June, the decision was largely moot because most power plants were proceeding to implement the rule or had already made plans to retire. The CPP timeline is so long that there is plenty of time for the courts or politicians to nullify it or make major revisions to it.

For most utilities, power and gas market economics and renewable energy policies remain the most important variables for investors to consider.

The Supreme Court's decision comes as good news for coal miners that haven't had any for some time. However, we don't view today's announcement as a panacea for the coal industry's woes, as natural gas remains at prices at which coal struggles to compete. However, our view that natural gas prices will rise in the coming years hasn't changed, so we maintain our fair value estimates for both Peabody and Cloud Peak. Peabody's high leverage means it has less time to wait--the basis for its extreme uncertainty rating.

Exelon Surprises With 2.5% Dividend Growth Target 03 Feb 2016

We are reaffirming our $35 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company reported earning $2.49 per share on an adjusted basis in 2015. This was in line with our estimate and within management's guidance range.

We think the biggest positive for shareholders was management's announcement that it plans to recommend to the board a 2.5% annual dividend increase for at least the next three years, likely starting in the second half of 2016. We had not expected a dividend increase until at least 2018, given our expected plateau in earnings the next three years.

If the board accepts this policy, we estimate Exelon's payout ratio will top 50% by 2018. This is at the high end of what we think is reasonable for Exelon's cash flow profile and debt load. We're not yet entirely convinced that management has added sufficient regulated distribution earnings and contracted generation revenue to decouple cash flows from volatile energy markets.

Management continues to evaluate the economic viability of at least three nuclear plants. We assume in our long-term forecasts that Exelon closes three plants representing 25% of its fleet capacity. We also expect a final Pepco merger decision by early March, in line with timeline indications from Washington, D.C., regulators. We continue to assume $1 per share of value dilution based on a 75% probability of the deal closing as proposed. We don't think ongoing legal challenges in other states will be an impediment.

We remain long-term bullish on fixed-price PJM power, especially in the East, where we expect gas prices to strengthen as takeaway capacity increases and demand remains more robust than other regions. This drives the bulk of the value upside as of early February. Our $8.4 billion midcycle gross margin outlook for Exelon Generation remains at the high end of management's 2018 outlook range.

Supreme Court Sides With Demand Response; No Fair Value Impacts 25 Jan 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Independent power producers and diversified utilities are trading at a significant discount to our fair value estimates, and the Supreme Court's ruling has no material impact on our long-term thesis. We believe the market reaction was overly pessimistic to the ruling and presents a buying opportunity for those with the appropriate risk appetite. We highlight Dynegy and Exelon as those with the most exposure to PJM. Calpine, FirstEnergy, NRG Energy, and Public Service Enterprise Group also have material levels of generation in PJM.

Management Meeting: Exelon Sticks to March 4 Drop-Dead Date for Pepco Deal 11 Nov 2015

We are reaffirming our $35 and $26 fair value estimates for Exelon and Pepco Holdings, respectively, after meeting with Exelon's senior management at the Edison Electric Institute Financial Conference in Hollywood, Florida. Our narrow moat and stable moat trend ratings for both companies are unchanged.

Management reiterated it will withdraw its offer to acquire Pepco if Washington, D.C., regulators do not approve the transaction by March 4, 2016. We continue to incorporate in our fair value estimates a 75% probability of the deal closing as proposed. D.C. regulators' written approval for rehearing suggested they expect to rule within that time frame. We expect Exelon will be able to close the deal immediately following approval.

The most-favored-states contingencies in other states' approvals would take effect after the deal closed and thus are not an impediment to the deal closing. Exelon would file with those states to offer customer benefits comparable with those offered in D.C. We don't expect this to be material to our assessment of the transaction or our fair value estimate for Exelon, which includes $1 per share of dilution from the deal.

Management pushed out the start of its full $0.15-$0.20 earnings per share run-rate accretion to 2019 from 2017 initially. Apart from the closing delay, management said the 2017-18 reduction was based on Pepco's reassessment of its near-term outlook for earned returns. At this point, most of the earnings accretion should come from the extra leverage Exelon will use. We expect it will take two to three years of operational improvements on Exelon's side before it can achieve more constructive regulatory outcomes.

Management estimated the deal could be $0.25 per share earnings-accretive by 2020 if Pepco can achieve a 9% earned return on equity. We think this is a stretch, but even an 8% achieved ROE could make the deal value-neutral relative to our previous stand-alone forecasts for Pepco.

Exelon Still Awaiting Power Market Upside and Pepco Acquisition Approvals 30 Oct 2015

We are reaffirming our $35 fair value estimate and narrow economic moat and stable moat trend ratings for Exelon after the firm reported adjusted earnings of $0.83 per share in the third quarter, up from $0.78 per share in the third quarter of 2014. Management raised its full-year earnings guidance range $0.05 per share to $2.40-$2.60, in line with our full-year outlook.

Management noted Exelon's retail-wholesale combination was a meaningful contributor to the higher quarterly and year-to-date earnings, amplified by last year's Integrys acquisition. We've long believed Exelon's retail-wholesale combination and scale can be value-accretive for shareholders, and it appears to be paying off, albeit at still a small level. Favorable weather for Exelon's regulated utilities was a key reason for higher earnings in the quarter. On a weather-normalized basis, we expect capital investment and recent rate activity in Pennsylvania and Maryland to be the key earnings growth driver in 2016-18.

Estimated 2015-17 gross margin for Exelon Generation climbed during the quarter primarily due to above-market hedges. Management now projects $7.8 billion gross margin in 2016 and 2017 with a 2017 upside near $9.0 billion based on hedging about half of its projected generation. We think this is a good position given our bullish power market outlook. Management also announced its intention to delay its nuclear plant retirement decision until next year. We continue to assume a high likelihood that it retires four plants by 2018 based on current market conditions.

Management now expects to close the Pepco acquisition in the first quarter of 2016. We continue to incorporate $1 per share fair value dilution. On Oct. 28, the D.C. commission accepted Exelon-Pepco's appeal and said it expects to make a decision in less than 150 days, suggesting mid-March.

Pepco Reports Third-Quarter Earnings; Acquisition by Exelon Likely to Close Early Next Year 26 Oct 2015

We are reiterating our $35 per share fair value estimate for Exelon and $26 fair value estimate for Pepco after Pepco reported third-quarter earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

Pepco reported operating earnings of $0.33 per share versus $0.46 in the same period last year. Earnings were negatively affected by higher operations and maintenance expense, implementation costs associated with a new customer information system, increased transmission revenue reserves related to a return on equity challenge and higher property taxes.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining approval of the Public Service Commission of the District of Columbia and being completed following the agreement with Washington, D.C., Mayor Muriel Bowser. We expect the D.C. commission to approve Exelon and Pepco's request to reopen the merger proceeding in their meeting on Oct. 28. Assuming the D.C. commission does reopen the proceeding, briefings would not be completed until late December. Therefore, we would not expect the merger to close until early 2016.

Although the merger appears to be on track in D.C., it is unclear whether the proceedings will be reopened in Delaware, New Jersey, and Maryland, jurisdictions that have already approved the transaction. The commitments Exelon made to these states to obtain approval are subject to most-favored-nation clauses and may need to be enhanced.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Research Methodology for Valuing Companies

Components of Our Methodology

- Economic Moat™ Rating
- Moat Trend™ Rating
- Moat Valuation
- Three-Stage Discounted Cash Flow
- Weighted Average Cost of Capital
- Fair Value Estimate
- Scenario Analysis
- Uncertainty Ratings
- Margin of Safety
- Consider Buying/Selling
- Stewardship Rating

We believe that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth. Four key components drive the Morningstar rating: our assessment of the firm's economic moat, our estimate of the stock's fair value, our uncertainty around that fair value estimate and the current market price. This process ultimately culminates in our single-point star rating. Underlying this rating is a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's equity analysts.

The concept of the Morningstar Economic Moat™ Rating plays a vital role not only in our qualitative assessment of a firm's investment potential, but also in our actual calculation of our fair value estimates. We assign three moat ratings—none, narrow, or wide—as well as the Morningstar Moat Trend™ Rating—positive, stable, or negative—to each company we cover. Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns on invested capital over at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. The assumptions that we make about a firm's economic moat play a vital role in determining the length of "economic outperformance" that we assume in the terminal sections of our valuation model. To assess the sustainability of excess profits, analysts perform ongoing assessments of what we call the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

At the heart of our valuation system is a detailed projection of a company's future cash flows. The first stage of our three-stage discounted cash flow model can last from 5 to 10 years and contains numerous detailed assumptions about various financial and operating items. The second stage of our model—where a firm's return on new invested capital (RONIC) and earnings growth rate implicitly fade until the perpetuity year—can last anywhere from one year (for companies with no economic moat) to 10-15 years (for wide-moat companies). In our third stage, we assume the firm's RONIC equals its weighted average cost of capital, and we calculate a continuing value using a standard perpetuity formula. In deciding on the rate at which to discount future cash flows, we use a building block approach,

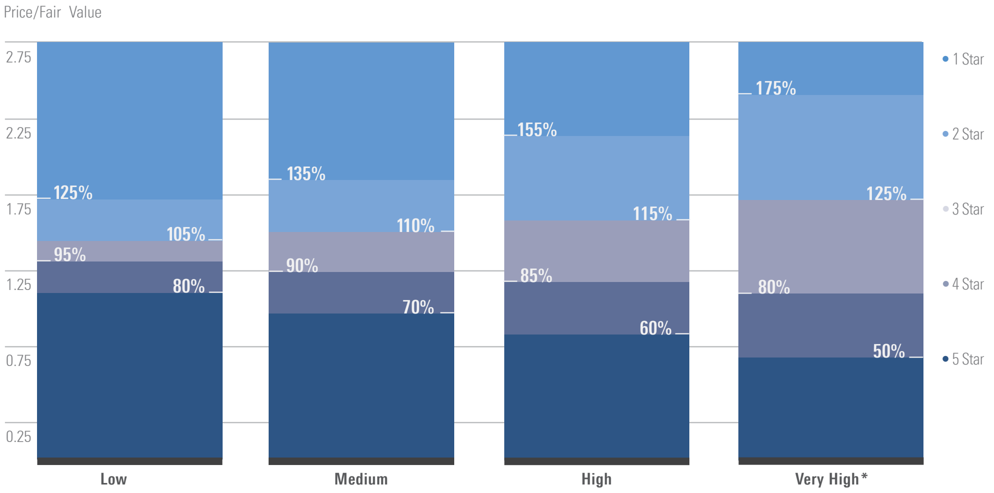
which takes into account expectations for market real return, inflation, country risk premia, corporate credit spread, and any additional systematic risk.

We also employ a number of other tools to augment our valuation process, including scenario analysis, where we assess the likelihood and performance of a business under different economic and firm-specific conditions. Our analysts model three scenarios for each company we cover, stress-testing the model and examining the distribution of resulting fair values.

The Morningstar Uncertainty Rating captures the range of likely potential fair values and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Our corporate Stewardship Rating represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Morningstar Margin of Safety and Star Rating Bands



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

EXC – Illinois policymakers warned of nuclear retirement risk again

- Local media reports that EXC notified the governor and other policy makers in Illinois of its intent to retire nuclear facilities if the state does not award financial support this year.
- EXC's CEO reportedly made personal visits to policy makers to deliver the message.

Guggenheim takeaway: *EXC wasn't able to influence desired policy support with this approach last year, when they threatened to retire nuclear plants unless legislation was enacted to provide $300mm of financial support through a surcharge on electric bills. The renewed effort only specifies the Clinton plant whereas they previously warned 3 plants would close without financial relief; and their efforts will still come under scrutiny in our view, but it will be interesting to see if the process unfolds differently this time – and if OH opened the flood gates to a wave of re-regulation efforts as competitive power markets remain depressed.*

EXC – Environmentalist coming to the support of nuclear in Illinois

- Group released open letter (HERE) in support of maintaining the viability of the state's merchant fleet.
- Support centers on potential legislation to help provide cash flows to Byron, Quad Cities and Clinton nuclear plants.
- Low Carbon Portfolio Standard remains open (SB1485, HB3293).
- Negotiations/conversations continue.

Guggenheim takeaway: *Ultimately, we should see some form of legislation. The state cannot afford to lose ~5GW of clean energy capacity – not only from a reliability standpoint but also from an environmental policy standpoint. EXC remains our top hybrid name for a multitude of factors including positive policy shifts towards U.S. nuclear. See here for our thoughts on U.S. nuclear. "While EXC deferred its decision to retire IL nukes (Quad Cities, Byron, and Clinton) for another year, we believe MISO capacity market reforms and carbon legislation are key items for sustaining these economically challenged plants. We note the Low Carbon Portfolio Standard will be back on the table in 2016 and is key to setting carbon prices as a bridge to Clean Power Plan compliance. While we believe the legislature will compromise on this plan, in our view execution is key in 2016."*

DTE – Michigan utilities jumping into the Ohio PPA storm

- Michigan DTE peer, non-covered CMS, trying to make case against restructuring and pointing to recent Ohio PPA approvals as case in point (see HERE).
- Message directed towards those looking to de-regulate the state – it doesn't work.
- Utilities have been pushing to close the Choice program and eliminate shopping altogether.
- Advocates for MI alternative suppliers highlight the Ohio PPA approvals will likely get voided at the Federal level.

Guggenheim takeaway: *Interesting angle presented by the MI utilities. Two items: (1) MI Energy policy is not a crucial driver of our thesis – it's a nice have but not a must have and (2) energy policy is likely moving forward with focus on Senate—we expect legislation this summer. See our note: HERE.*

ES – City of Berlin, NH reinforces support of Northern Pass

- City council voted to send a letter to Site Evaluation Committee supporting the Forward NH Fund, which is looking to spend ~$200mm on economic development, etc.
- See HERE.

Guggenheim takeaway: *This project will move forward and some delays could be possible but not probable. We assume $1.6bn CapEx on Northern Pass begins later this year, earning a 12.56% ROE during construction and 11.74% ROE once the project is in service, translating to $0.29 of EPS by 2018E.*

ED – NY tuning into CA with renewables?

- New York State Department of Public Service (DPS) issues white paper on renewable goal - SEE HERE.
- Quantifying impact of a 50% RPS standard by 2030 on retail rates as being modest ~1% or $1/month.

- Study cites low borrowing costs, gas prices, and tax credits as offsets to rate inflation.
- Nuclear included in this study.

Guggenheim takeaway: *It's too preliminary for NT stock-takeaways at this juncture—NY has a long way to go to become CA. The study highlights modest customer bill impact, but a lot of assumptions and variables drive that estimate; we expect some scrutiny of the analysis before plans begin to unfold. That said, LT renewable development opportunities could be meaningful throughout the state, and a case has been made for utilities to develop those projects based on cost structure advantages (e.g., cost of capital). The study suggests smaller-scale customer applications could drive half the renewable capacity deployed, but ED has constructive rate mechanisms to address cost recovery so sales erosion isn't really a concern for us. Ratebase growth still the NT driver, and fundamentally intact, in our view, considering replacement costs likely far exceed depreciated embedded costs. New renewables throughout NY also create transmission investment opportunities, as demand is concentrated in the southeastern corner of the state – ED's franchise.*

FE – Bruce Mansfield dispatching

- 2,490 MW coal plan in PA back online and generating MWs.
- Idled in February because of economic reason.

Guggenheim takeaway: *Back dispatching – doesn't appear plant was down too long in Q1 but could have some impact.*

PCG – San Bruno criminal trial beginning in two weeks

- Criminal trial starts in two weeks – April 26th will begin with Jury selection.
- PCG attorney pushed for more time to review documents.
- What's at stake: 13 criminal counts, including 12 allegations for violation of pipeline safety rules. PCG also faces obstruction of a National Transportation Safety Board probe into the explosion.
- PCG pleaded not guilty to all charges.

Guggenheim takeaway: *We don't believe the judge has patience for any additional motions that would push this trial out any further. As a reminder, the trial was originally slated to begin 03/08, was delayed to 03/22, and is now scheduled for 04/26. Issues the judge is referring to include requests from the prosecution for PCG's correspondence with attorneys, and PCG's requests to bar certain witnesses. Delays potentially give time for negative publicity to build before the trial, in our view. Potential penalties will be considered in a trial phase if PCG is found guilty.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

MISO Releases Results of 2016-2017 Capacity Auction

The Midcontinent Independent System Operator (MISO) released results of its fourth annual Planning Resource Auction (PRA), covering the 2016-2017 planning year from June 1, 2016, to May 31, 2017. The latest PRA, which procured 135,483 MW of capacity versus 136,359 MW last year, concluded with three different clearing prices across MISO's 10 zones: Zone 1 cleared at $19.72/MW-day, Zones 2-7 cleared at $72.00/MW-day, and Zones 8-10 cleared at $2.99/MW-day. For the most part, auction clearing prices came in significantly higher than consensus expectations.

Clearing prices for the 2016/17 PRA were markedly volatile in several zones versus last year; Zone 4 (central/southern Illinois) clearing price of $72.00/MW-day compared to $150.00/MW-day last year, while the clearing price for Zones 2, 3, 5, 6, and 7 of $72.00/MW-day compared to $3.48/MW-day in the 2015/16 PRA one year ago. See page 2 for a detailed breakdown of clearing prices by zone.

Driving this year's results were several factors, including less supply in the MISO Midwest region due to retirements (~2,900 MW across MISO) and capacity exports (5,420 MW). Ongoing changes in the fleet makeup of MISO resulted in several zones relying on imports from other zones to procure adequate capacity. For example, total system-wide imports for the 2016/17 PRA were 5,240 MW compared to 2,988 MW last year, with Zones 7 (Michigan) and 9 (Louisiana/northeast Texas) swinging from net exporters to net importers of capacity versus last year: Zone 7 imported 872 MW versus 837 MW of exports last year, and Zone 9 imported 2,202 MW compared to exports of 592 MW in the 2015/16 PRA. This year's clearing prices were also likely impacted by a series of FERC-mandated auction changes, the most notable of which affected the determination of the initial offer reference price level applicable in the auction, which is the basis for a general offer price cap. The FERC order reduced the initial reference level to $0/MW-day. As a result, any resource desiring to offer above the conduct threshold of 10% of Cost of New Entry had to obtain approval from the MISO Independent Market Monitor to support the offer.

Our View:

- We view the results as neutral given the sizeable swings in auction prices across most MISO zones year over year.
- According to statements from Dynegy (DYN, $15.52, Not Rated), none of the company's 2,197 MW of capacity that was bid into the 2016/17 auction cleared.
- Exelon (EXC, $34.67, Market Perform) stated that its 1,078 MW Clinton nuclear facility in Illinois cleared the auction, but continues to lose money. Management signaled that a decision will be forthcoming this year as to whether the plant will be shut down. The plant will remain operational, however, at least until May 31, 2017.

Please refer to pages 3 to 7 for Important Disclosures, including the Analyst's Certification.

Exhibit 1: 2016/2017 MISO Auction Clearing Price Overview

Zone	States	2016/17 Price ($/MW-day)	2015/16 Price ($/MW-day)	2014/15 Price ($/MW-day)
1	MN, MT, ND, SD, WI	**$19.72**	$3.48	$3.29

Conflict Statement

A general description of how BMO Financial Group identifies and manages conflicts of interest is contained in our public facing policy for managing conflicts of interest in connection with investment research which is available at http://researchglobal.bmocapitalmarkets.com/Public/Conflict_Statement_Public.aspx

General Disclaimer

"BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale arm of Bank of Montreal and its subsidiaries BMO Nesbitt Burns Inc., BMO Capital Markets Limited in the U.K. and BMO Capital Markets Corp. in the U.S. BMO Nesbitt Burns Inc., BMO Capital Markets Limited and BMO Capital Markets Corp are affiliates. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

MISO Auction Results Should Drive Retirement Decisions for DYN, EXC & Potential Market Reform Initiatives

On 4/14/16, MISO released the results of the 16/17 PRA, with the auction clearing at $72/MW-day for most of MISO Central/North and $2.99/MW-day for MISO South. In the carefully scrutinized Illinois Zone 4 (to which DYN and EXC are exposed), the $72/MW-day price represents a *52% drop* from the 15/16 PRA's contested $150/MW-day price last year, which itself was nearly 9X the $16.76/MW-day mark observed in the prior auction. For the other MISO Central/North zones, conversely, this year's $72/MW-day is *21X higher* than last year's $3.48/MW-day (the exception being the northernmost Zone 1 which cleared at $19.72/MW-day vs. last year's $3.48/MW-day). MISO South (AR, LA, MS, TX) cleared at $2.99/MW-day vs. $3.29/MW-day.

The auction results were a function of resource changes and parameter modifications made since the '15/'16 PRA, which include a much lower conduct threshold, expanded import capability into MISO zones generally decreasing local clearing requirements, and a reduction in transfer limits between MISO South and Central/North. The use of a new $0/MW-day initial reference level for the offer cap – instead of the past reference level which had been based on the opportunity cost of neighboring prices in PJM, or $155.79/MW-day as it was calculated in the '15/'16 PRA – ensured that the conduct threshold (the mitigation review trigger price) would be dramatically lowered in the auction. This threshold – a function of the reference level plus 10% of a zone's CONE – went from ~$180/MW-day in the prior PRA to ~$25/MW-day in this latest, the implication being that all resources desiring to offer above ~$25/MW-day would have to have received a facility-specific reference level based on a documented, defensible going forward cost to avoid potential mitigation (putting downward pressure on offers, one would surmise). Further, a revised means of calculating import limits into MISO zones had the effect of increasing import capability and reducing the threshold local clearing requirements for most zones. The transfer limit between MISO South and MISO "classic" was reduced to 876 MW from 1,000 MW. The ~135.5 GW of generation that cleared (-876 MW YoY) included 122,379 MW of conventional generation (-586 MW YoY), 3,462 MW of behind-the-meter generation (-524 MW YoY), 5,819 MW of demand resources (-119 MW YoY), and 3,823 MW of external resources (+354 MW YoY).

DYN offered 2,197 MW into the auction (including 870 MW from its IPH segment) but cleared nothing, while EXC's struggling Clinton nuclear plant again cleared as a price-taker. CMS offered and cleared 76 additional MW at its Dearborn Industrial Generation (DIG) merchant plant. In the prior auction when prices had been $150/MW-day in Zone 4, DYN's IPH segment cleared 1,864 MW, with its coal segment clearing 398 MW. Having no volumes clearing at the auction's $72/MW-day clearing price, DYN took care to note in its press release it had bid its megawatts at "cost, as approved by MISO's independent market monitor" in apparent reference to (and the results supportive of) its contention that it had offered appropriately in the last auction as well. Having aggressively diversified their fleet, the company will be less dependent on MISO outcomes going forward with its Atlas Power JV. We expect DYN to discuss its thought process with regard to its MISO assets on its Q1 earnings call. EXC's 1,069 MW Clinton nuclear unit again cleared the auction, ensuring its commitment to operation through 5/31/17 consistent with the company's decision to extend its retirement date last year. However, the plant continues to lose money and EXC noted that a combination of market and legislative reform will be needed to keep it viable beyond that. EXC reiterated it will come to a final decision on the plant before YE and we expect EXC to discuss its thought process on both Clinton and Quad Cities on their Q1 call. We expect them to reiterate their commitment to shutting those plants if they don't receive some financial relief. CMS indicated it had cleared another 76 MW (8%) at its 950 MW DIG plant in Zone 7, the $2.19/kW-m it will receive supportive of the company's ~$2-3/kW-m expectation for the plant (between its contracted and open positions) in 2016 and 2017. CMS had sold/contracted 75% of its available capacity (relative to the 950 MW total) as of the Q4'15 earnings call, indicating there remains a bit of price exposure in 2017 even with the new cleared volumes. The plant's capacity is 90% open beyond 2017, with CMS bullish on future price expectations for the zone as it sees the market continuing to tighten with impending capacity retirements.

What's next? MISO will release detailed auction results on 5/5/16 and offer data on 5/13/16. The FERC investigation into allegations of market manipulation in last year's PRA continues behind the scenes, with no clear timetable as to when the Commission might issue an order on the matter. MISO's proposal to reform its capacity market construct, the Competitive Retail Solution (CRS) introduced on 3/18/16, continues to be debated by stakeholders. The next significant stakeholder meeting will occur on 5/5/16, with the goal of filing changes with FERC by 7/1/16. Key features of the proposal include a separate forward three-year auction for deregulated zones (Zone 4) and a shift to a downward-sloping demand curve. MISO envisions a phase-in of some the market changes beginning in March 2017 with the 17/18 PRA, with the aforementioned three-year forward auction design to be introduced in Spring 2018.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Buy, Hold or Sell) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulartory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Evercore ISI ratings distribution (as of 04/17/2016)

Coverage Universe

Ratings	Count	Pct.
Buy	341	52%
Hold	283	43%
Sell	23	3%
Coverage Suspended	7	1%

Guggenheim initiates coverage of alternative energy - Alternative Energy: Basking in the Sun; Launching Sector Coverage

Guggenheim initiates coverage of IPPs – Boom-Bust: Forget Mid Cycle – Focus on Asset Lives and Cash Flows….Launching on IPPs with Cautious Tone but See Opportunities

2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking

EXC – BUY – DC Approves Acquisition; New Pro-Forma Estimates with POM Merged – EXC Remains Our Top Integrated Idea

Texas Showdown: Has the Wave of Coal Retirements Finally Reached Texas? Deep-Dive on How the Perfect Storm Plays Out

AEP/FE – Ohio Regulators Approve PPAs - Benefits AEP, FE - Merchants Likely Turn to FERC (see our note here)

ED – Management Roadshow: Rate Cases, M&A, Harlem, Gas Midstream, Transmission, Renewables on Forefront (see note HERE)
PNW – Arizona ACC getting tough on solar proceedings? Watch UNS
DUK – Electricity sales remain in the hands of the utilities in NC
EXC – More calls to save Clinton nuclear plan…only the beginning in Illinois
D/DUK/SO – Atlantic Coast Pipeline continues to move forward
D/DUK/SO – Forest Service issues permits for ACP surveys of recently proposed route
NEE – Re-zoning approved in Florida allows FP&L to develop 325MW solar facility

PNW – Arizona ACC getting tough on solar proceedings? Watch UNS

- Hearings continue in the UNS solar proceedings.
- UNS proposing 3-part rate design with mandatory demand charges and higher monthly minimum.
- Commissioner Burns wants more options presented for them to make an informed decision. He also thinks timing could be too tight to implement design changes.
- UNS looking to implement new rate in Q1 2017.

Guggenheim takeaway: *Everyone watching UNS as they are ahead of PNW with the solar proceedings. We get the sense that the language coming out of UNS is more noise; political posturing. We hosted several ACC members at Guggenheim for breakfast on a few occasions and didn't get a sense solar proceedings for PNW would be an issue (see our notes HERE and HERE). We believe the solar* *proceedings will likely be concluded in May for PNW right before they file a GRC in June.*

DUK – Electricity sales remain in the hands of the utilities in NC

- Utilities in NC will remain the only entities that can sell renewable energy.
- NC WARN attempted to test the law by installing solar panels on the roof of the Greensboro church (Faith Community Church) and sell power to them directly.
- This was rejected by the NC Utilities Commissions and the advocacy group was fined ~$60K, which it doesn't have to pay if it removes the panels and refund payments made by the Church.

Guggenheim takeaway: *No surprise here. Regulated states will always (in most instances) side with the monopoly utility. In instances when this hasn't happened, issues have arisen (i.e. AZ). We have hosted a lot of Commissioners over the past year and in most instances, Commissioners seem to want the utilities to step up on renewable spending, not third party suppliers (i.e. FL).*

EXC – More calls to save Clinton nuclear plan…only the beginning in Illinois

- State Rep. Bill Mitchell pushing for Illinois General Assembly to pass Bill to support de-regulated nuclear.
- EXC management has already held meetings with House Speaker Michael Madigan (D-Chicago) and Senate President John Cullerton (D-Chicago).
- Clinton cleared in the latest 2016/17 MISO Zone 4 auction but remains CF negative.
- Support centers on potential legislation to help provide cash flows to Byron, Quad Cities and Clinton nuclear plants.
- Low Carbon Portfolio Standard remains open (SB1485, HB3293).
- Negotiations/conversations continue.

Guggenheim takeaway: *Ultimately, we should see some form of legislation. The state cannot afford to lose ~5GW of clean energy capacity – not only from a reliability standpoint but also from an environmental policy standpoint. EXC remains our top hybrid name for a multitude of factors including positive policy shifts towards U.S. nuclear. See HERE for our thoughts on U.S. nuclear. "While EXC deferred its decision to retire IL nukes (Quad Cities, Byron, and Clinton) for another year, we believe MISO capacity market reforms and carbon legislation are key items for sustaining these economically challenged plants. We note the Low Carbon Portfolio Standard will be back on the table in 2016 and is key to setting carbon prices as a bridge to Clean Power Plan compliance. While we believe the legislature will compromise on this plan, in our view, execution is key in 2016.*

D/DUK/SO – Atlantic Coast Pipeline continues to move forward

- Dominion, the lead developer and majority owner of the Atlantic Coast Pipeline (ACP), filed responses to comments and data requests, addressing concerns around the environmental impact of the project.
- The responses filed by ACP developers (see HERE) include ~7,000 pages of information; addressing all FERC environmental information requests from December 2015 and January 2016.
- Next, the pipeline developers are looking to obtain a notice of schedule from FERC, which will provide a timeline for the remainder of the environmental review process.
- D expects to receive a certificate early next year, which would keep the project on-track toward a targeted in-service date in late 2018.

Guggenheim takeaway: *ACP continues to move forward addressing concerns from conservationists and environmental advocates that is typical for projects of this nature, using information obtained through survey activities such as those we highlight below. Despite recent route changes, developers continue to maintain course and expect the project to come on-line in 2018, in line with our expectations.*

D/DUK/SO – Forest Service issues permits for ACP surveys of recently proposed route

- The Forest Service issued temporary special use permits for developers of the Atlatic Coast Pipeline to survey portions of the recently proposed route in the George Washington and Monongahela national forests.
- The permits, which expire in 1 year, allow surveying activity along 14 miles of the George Washington National Forest and 5 miles of the Monongahela National Forest.

Guggenheim takeaway: *Despite relatively consistent headline noise from opponents, ACP developers have managed to survey most of the proposed route with permission from over 90% of the 2,800 landowners along the way; 500 of which have signed easements. Despite recent route changes, developers continue to maintain course and expect the project to come on-line in 2018, in line with our expectations.*

NEE – Re-zoning approved in Florida allows FP&L to develop 325MW solar facility

- County commissioners approved FP&L's application for re-zoning a 3,127-acre parcel that would allow the utility to develop a solar facility up to 325MW.
- The application originally requested approval for a solar facility and a gas-fired plant, however it was revised and limited to solar power production.

Guggenheim takeaway: *If NEE's Florida utility develops a 325MW solar project, it would be the largest in the southeast, however the company indicated it has to firm plans at this time. We recently hosted investors in Florida and solar was a topic of discussion in meetings with NEE and FL commissioners and while the outlook for distributed solar is bleak in the "sunshine state", we believe large-scale development will be an opportunity for utilities – for additional insight see our note.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Solar – NV regulators don't regret approving solar charges despite pushback
ETR/EXC – Discussion of nuclear subsidies continues in NY, except for Indian Point
ED – Rooftop solar customers now generate 100MW in NYC and Westchester County
AEP/FE – PPAs continue to draw fire; EL&PC argues PPAs limit retail choice
SO – First reactor coolant pump delivered to Vogtle expansion

Recent research highlights:

- ***Guggenheim initiates coverage of alternative energy -*** Alternative Energy: Basking in the Sun; Launching Sector Coverage
- ***Guggenheim initiates coverage of IPPs –*** Boom-Bust: Forget Mid Cycle – Focus on Asset Lives and Cash Flows….Launching on IPPs with Cautious Tone but See Opportunities
- **2016 Outlook:** Liking Utilities but Choose Wisely with a Return to Stock Picking
- **Texas Showdown:** Has the Wave of Coal Retirements Finally Reached Texas? Deep-Dive on How the Perfect Storm Plays Out
- **AEP/FE** – Ohio Regulators Approve PPAs - Benefits AEP, FE - Merchants Likely Turn to FERC
- **ED** – Management Roadshow: Rate Cases, M&A, Harlem, Gas Midstream, Transmission, Renewables on Forefront (see note HERE)

Solar – NV regulators don't regret approving solar charges despite pushback

- Local media published an interview with a Nevada regulator regarding the Commission's decision to increase bills for solar customers without grandfathering existing customers.
- The commissioner defended the decision based on their directive under SB 374, legislation directing the PUC to develop new rooftop solar rates that eliminate cost-shifting from solar customers to other customers.
- The NV decision intends to eliminate cost shifting by raising solar customer bills with higher fixed charges, coupled with lower credits provided for excess power generated.
- The commissioner denied allegations that utilities influenced the decision, noting the only people who tried to intimidate or influence the outcome were from the solar industry itself, which staged protests in front of the PUC

building, distributed home addresses, and filed public data requests before every agenda hearing.

- On solar growth falling to 90 new applications from 1,311 the prior month, the commissioner indicated growth was not expected to keep-pace at 400% increases witnessed in the 6 previous months, and notes the growing balance of credits implied by the incremental net metering customers. The commissioner described recent solar growth as a clamoring to very lucrative incentives, and suggested solar developers that left NV when incentives were reduced are to blame for lower solar growth.

Guggenheim takeaway: *The rate-design debate for solar customers has been charged in many states, however as a judicial body, NV commissioners are precluded from discussing open cases; so we are now beginning to see regulators defend decisions perceived to be utility-friendly as the case is closed. Solar advocates claim the PUC aimed to kill the solar industry – emphasized by SolarCity (SCTY, NC, $30.25) and SunRun (RUN, NC, $7.09) closing their doors in NV. The commissioner, on the other hand, notes this is one of the best rate-design proposals he's seen - which is why it received so much scrutiny. In AZ, we believe the three-part rate design could be accepted by the Commission for PNW's upcoming rate case, but it remains to be seen what the reaction from installers could be.*

ETR/EXC – Discussion of nuclear subsidies continues in NY, except for Indian Point

- EXC is threatening to retire nuclear plants (Nine Mile Point and R.E. Ginna) in uptate NY unless state regulators provide compensation; calling for subsidies allowing them to operate above market prices.
- ETR announced plans to retire its 851MW FitzPatrick plant in upstate NY last year, noting the facility is uneconomic.
- To support carbon reduction goals, the governor supports compensation for upstate nuclear via “zero-emissions credits”; the PSC would look to provide payments in the meantime, to maintain economic viability while the credit program is developed.
- ETR's 2GW Indian Point units 2 & 3 would not be eligible for the proposed credits, which the company argues is disingenuous.

Guggenheim takeaway: *Nuclear accounts for one-third of NY'S electric mix, so the governor acknowledges it is essential to carbon-reduction and energy policy, regulators recognize a NT life-line is more cost-effective than planning around retirement, and the NY-ISO recently cautioned losing ETR's 851MW Fitzpatrick facility would threaten state reliability – everyone appears to be on-board in support of nuclear, however ETR's Indian Point facility in lower NYS still lacks license renewals and is not eligible; the governor continues to target Indian Point for retirement under any circumstance. For additional thoughts on the viability of nuclear, see our note HERE.*

ED – Rooftop solar customers now generate 100MW in NYC and Westchester County

- ED announced customers with rooftop solar now generate 105MW of power in its New York City and Westchester County electric service territories.
- There was only 8.5MW of solar in New York City and Westchester at the end of 2010.

- ED notes the pace has accelerated dramatically since 2010; customers installed ~35MW in 2015 while there was only a total of 8.5MW in NYC and Westchester at the end of 2010.

***Guggenheim takeaway**: Smaller-scale customer applications could drive half the renewable capacity deployed to meet NY's 50% renewable aspiration according to a recent white paper published by the PSC (see HERE), but NY still has a long way to go before it looks like CA, and we don't see a NT threat from distributed resources. ED has constructive rate mechanisms to recover costs so sales erosion isn't really a concern for us - ratebase growth still the NT driver. While we often question how lower demand from DG might impact utility investment plans, ED's investment plans are intact, in our view, because they are driven by replacement, and considering replacement costs likely far exceed depreciated embedded costs in NYC. These were areas of interest in recent meetings we hosted with senior management; see our note HERE for additional takeaways.*

AEP/FE – PPAs continue to draw fire; EL&PC argues PPAs limit retail choice

- Environmental Law & Policy Center (EL&PC) filed comments on the FERC complaint looking to rescind AEP's waiver of affiliate power sales restrictions (EL16-33), specifically on AEP's position that their customers in Ohio are not "captive".
- The EL&PC argues the PPA limits retail choice since it imposes a non-bypassable rider on all customers; implying customers in Ohio would be captive, and Ohio would be limited to 70% retail choice while the remaining 30% services PPAs.

***Guggenheim takeaway:** We don't believe AEP and FE will lose the "captive customer" argument. Captive customers are defined as customers without the ability to shop for retail supply. Although the PPA does include an RSSA rider, this is a DISTRIBUTION CHARGE – distribution falls under state jurisdiction, not FERC jurisdiction. The distribution charge is non-bypassable, but it does not interfere with the definition of a "captive customer." For takeaways on the recently approved PPAs see our note HERE.*

SO – First reactor coolant pump delivered to Vogtle expansion

- SO announced its Georgia utility reached another Vogtle expansion milestone with the delivery of the first reactor coolant pump for the project.
- The 188-ton reactor coolant pump circulates hot water within the reactor and is the first to be delivered to any U.S. AP1000 project.
- Four reactor coolant pumps are needed for each unit.

***Guggenheim takeaway:** We continue to believe that Vogtle yields little concern from an investor standpoint given GA's stance surrounding nuclear and elected commission's vested interest. SO remains confident they can meet their current construction schedule – we think it's achievable but timing is close so execution is key.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Are Utilities Overheated or Are Their Yields too Good to Pass Up?

Travis Miller, Sector Director, 13 April 2016

Investment Thesis

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Travis Miller, Sector Director, 20 April 2016

Analyst Note

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Exelon Corp EXC (XNYS)

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to

$2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 24 March 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on

Analyst Notes Archive

Are Utilities Overheated or Are Their Yields too Good to Pass Up?

Travis Miller, Sector Director, 20 April 2016

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Cutting Midcycle Energy Prices; Fair Value Estimates for Power Producers to Fall 10%-40%

Travis Miller, Sector Director, 06 April 2016

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U.S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is $3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount. The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have 10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on all companies within the next week.

Exelon and Pepco Join to Sing a Duet: At Last

Travis Miller, Sector Director, 24 March 2016

We are reaffirming our $35 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after Washington, D.C., regulators approved its acquisition of Pepco with a 2-1 vote on Wednesday afternoon. The companies closed the acquisition following the vote, nearly two years after initially announcing the deal. Pepco stock will no longer trade as of March 24.

For Exelon, we have already incorporated $1 per share of value dilution into our fair value estimate, based on a 75% probability of the deal closing at Exelon's $27.25 per share cash offer. Using a 100% probability doesn't have a material impact on that dilution estimate.

We were confident that the management teams would negotiate until they received deal approval, even though the companies missed several self-imposed deadlines. The terms of the settlement in Washington, D.C., will benefit customers there, but they are too small to have a material impact on the $12 billion deal, including debt.

Reaffirming Outlook for Now, but Politics Could Yank Cord Out From Exelon-Pepco

Travis Miller, Sector Director, 02 March 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after fissures opened in the settlement negotiations related to Washington, D.C., regulatory approval for the companies' proposed merger. As of midday Wednesday, Pepco was trading at a 10% discount to our fair value estimate and a 15% discount to Exelon's $27.25 per share cash offer price, both of which we think offer good return opportunities.

Our Pepco fair value estimate continues to include a 75% probability that the settling parties--including D.C. Mayor Muriel Bowser's office, the D.C. regulatory staff, the lead consumer advocate group, and the companies--will reach an agreement regulators will approve. We think the companies remain committed to the deal and will accept any final settlement terms regulators approve. The key points of contention appear to involve less than $100 million, an immaterial impact on the $6.8 billion deal value.

However, we think the companies could be losing control over the outcome, and the deal could now be a proxy political fight among several D.C. entities. If we get more information that supports this theory, we would be inclined to cut our probability of the deal closing to 50%, leading to a $2 per share cut in Pepco's fair value estimate. We include $5 per share of incremental value in our fair value estimate for Pepco. A probability change is not likely to have a material impact on the $1 per share of value dilution we include in our Exelon fair value estimate related to the deal.

We continue to think Exelon management would be willing to go past its previously stated March 4 deadline if settlement negotiations move forward.

We are reaffirming our narrow moat and stable moat trend ratings for both companies.

The Never-Ending Exelon-Pepco Saga Gets Another Two Weeks of Life, but No Real Changes

Travis Miller, Sector Director, 29 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Washington, D.C., regulators again rejected Exelon's offer to acquire Pepco but left open an option for the companies to gain approval.

We still include $1 per share of value dilution in our fair value estimate for Exelon and $5 per share of incremental value for Pepco, based on a 75% probability that the companies will close the transaction at Exelon's $27.25 cash offer. We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Even though Washington, D.C., regulators formally rejected the deal, we think the companies are committed enough to closing the deal that there is a good likelihood they will accept the terms set by regulators. The terms sap additional value from shareholders to benefit customers through rate refunds and benefits, limiting cost reductions, returning merger synergies to customers, and limiting recovery for some costs. However, the D.C. service territory is not big enough for the incremental lost value to have an impact on our valuation of the deal. The terms also set strict ringfencing provisions, but those are typical and don't have any impact on our valuations.

Exelon management had said they would terminate the deal if regulators did not approve it by March 4, but we don't think that date is sacred any longer, as regulators have said the companies have until March 11.

Pepco Reports In-Line 2015 Earnings; Exelon Believes D.C. Will Approve Merger by March 4

Charles Fishman, Eq. Analyst, 22 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Pepco reported in-line 2015 earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining the approval of the District of Columbia Public Service Commission and being completed following an agreement with D.C. Mayor Muriel Bowser that sweetened the benefits for customers and provided other benefits to the district.

Pepco Holdings or Exelon may terminate the merger agreement if the D.C. commission fails to issue a final order approving the merger without condition or modification of the terms of the settlement agreement by March 4. Exelon has made clear that if the D.C. commission does not approve the deal by March 4, it will terminate the agreement. However, Exelon's CEO recently said he believes D.C. will approve the transaction at its next meeting before the termination date.

Pepco reported 2015 adjusted operating earnings of $1.28, in line with our estimate and up from $1.27 per share in 2014. Earnings were favorably affected by rate increases due to infrastructure investment, partially offset by higher operation and maintenance expenses.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Supreme Court Validates Our View That Carbon Regulation Remains Highly Uncertain

Travis Miller, Sector Director, 11 February 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities and coal miners after the U.S. Supreme Court's 5-4 decision to stay the Environmental Protection Agency's Clean Power Plan. This validates our view that it's too early, and the outcome too uncertain, to make any investment decisions based on the current terms of the CPP or any carbon regulation. We do not include any CPP-related impacts in our fair value estimates.

At a minimum, we expect that the decision will push implementation one or two years past the 2022-30 phase-down period and will embolden political opposition to carbon regulation. In addition, it means that a Supreme Court ruling against the CPP could actually reverse industry trends. When the Supreme Court struck down the EPA's MATS rule in June, the decision was largely moot because most power plants were proceeding to implement the rule or had already made plans to retire. The CPP timeline is so long that there is plenty of time for the courts or politicians to nullify it or make major revisions to it.

For most utilities, power and gas market economics and renewable energy policies remain the most important variables for investors to consider.

The Supreme Court's decision comes as good news for coal miners that haven't had any for some time. However, we don't view today's announcement as a panacea for the coal industry's woes, as natural gas remains at prices at which coal struggles to compete. However, our view that natural gas prices will rise in the coming years hasn't changed, so we maintain our fair value estimates for both Peabody and Cloud Peak. Peabody's high leverage means it has less time to wait--the basis for its extreme uncertainty rating.

Exelon Surprises With 2.5% Dividend Growth Target

Travis Miller, Sector Director, 03 February 2016

We are reaffirming our $35 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company reported earning $2.49 per share on an adjusted basis in 2015. This was in line with our estimate and within management's guidance range.

We think the biggest positive for shareholders was management's announcement that it plans to recommend to the board a 2.5% annual dividend increase for at least the next three years, likely starting in the second half of 2016. We had not expected a dividend increase until at least 2018, given our expected plateau in earnings the next three years.

If the board accepts this policy, we estimate Exelon's payout ratio will top 50% by 2018. This is at the high end of what we think is reasonable for Exelon's cash flow profile and debt load. We're not yet entirely convinced that management has added sufficient regulated distribution earnings and contracted generation revenue to decouple cash flows from volatile energy markets.

Management continues to evaluate the economic viability of at least three nuclear plants. We assume in our long-term forecasts that Exelon closes three plants representing 25% of its fleet capacity. We also expect a final Pepco merger decision by early March, in line with timeline indications from Washington, D.C., regulators. We continue to assume $1 per share of value dilution based on a 75% probability of the deal closing as proposed. We don't think ongoing legal challenges in other states will be an impediment.

We remain long-term bullish on fixed-price PJM power, especially in the East, where we expect gas prices to strengthen as takeaway capacity increases and demand remains more robust than other regions. This drives the bulk of the value upside as of early February. Our $8.4 billion midcycle gross margin outlook for Exelon Generation remains at the high end of management's 2018 outlook range.

Supreme Court Sides With Demand Response; No Fair Value Impacts

Andrew Bischof, CFA, Eq. Analyst, 25 January 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Management Meeting: Exelon Sticks to March 4 Drop-Dead Date for Pepco Deal

Travis Miller, Sector Director, 11 November 2015

We are reaffirming our $35 and $26 fair value estimates for Exelon and Pepco Holdings, respectively, after meeting with Exelon's senior management at the Edison Electric Institute Financial Conference in Hollywood, Florida. Our narrow moat and stable moat trend ratings for both companies are unchanged.

Management reiterated it will withdraw its offer to acquire Pepco if Washington, D.C., regulators do not approve the transaction by March 4, 2016. We continue to incorporate in our fair value estimates a 75% probability of the deal closing as proposed. D.C. regulators' written approval for rehearing suggested they expect to rule within that time frame. We expect Exelon will be able to close the deal immediately following approval.

The most-favored-states contingencies in other states' approvals would take effect after the deal closed and thus are not an impediment to the deal closing. Exelon would file with those states to offer customer benefits comparable with those offered in D.C. We don't expect this to be material to our assessment of the transaction or our fair value estimate for Exelon, which includes $1 per share of dilution from the deal.

Management pushed out the start of its full $0.15-$0.20 earnings per share run-rate accretion to 2019 from 2017 initially. Apart from the closing delay, management said the 2017-18 reduction was based on Pepco's reassessment of its near-term outlook for earned returns. At this point, most of the earnings accretion should come from the extra leverage Exelon will use. We expect it will

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★ 19 Apr 2016	34.80 USD 19 Apr 2016	30.00 USD	1.16	3.56 19 Apr 2016	3.56 19 Apr 2016	32.01 19 Apr 2016	Utilities - Diversified	Standard

take two to three years of operational improvements on Exelon's side before it can achieve more constructive regulatory outcomes.

Management estimated the deal could be $0.25 per share earnings-accretive by 2020 if Pepco can achieve a 9% earned return on equity. We think this is a stretch, but even an 8% achieved ROE could make the deal value-neutral relative to our previous stand-alone forecasts for Pepco.

Exelon Still Awaiting Power Market Upside and Pepco Acquisition Approvals

Travis Miller, Sector Director, 30 October 2015

We are reaffirming our $35 fair value estimate and narrow economic moat and stable moat trend ratings for Exelon after the firm reported adjusted earnings of $0.83 per share in the third quarter, up from $0.78 per share in the third quarter of 2014. Management raised its full-year earnings guidance range $0.05 per share to $2.40-$2.60, in line with our full-year outlook.

Management noted Exelon's retail-wholesale combination was a meaningful contributor to the higher quarterly and year-to-date earnings, amplified by last year's Integrys acquisition. We've long believed Exelon's retail-wholesale combination and scale can be value-accretive for shareholders, and it appears to be paying off, albeit at still a small level. Favorable weather for Exelon's regulated utilities was a key reason for higher earnings in the quarter. On a weather-normalized basis, we expect capital investment and recent rate activity in Pennsylvania and Maryland to be the key earnings growth driver in 2016-18.

Estimated 2015-17 gross margin for Exelon Generation climbed during the quarter primarily due to above-market hedges. Management now projects $7.8 billion gross margin in 2016 and 2017 with a 2017 upside near $9.0 billion based on hedging about half of its projected generation. We think this is a good position given our bullish power market outlook. Management also announced its intention to delay its nuclear plant retirement decision until next year. We continue to assume a high likelihood that it retires four plants by 2018 based on current market conditions.

Management now expects to close the Pepco acquisition in the first quarter of 2016. We continue to incorporate $1 per share fair value dilution. On Oct. 28, the D.C. commission accepted Exelon-Pepco's appeal and said it expects to make a decision in less than 150 days, suggesting mid-March.

Pepco Reports Third-Quarter Earnings; Acquisition by Exelon Likely to Close Early Next Year

Charles Fishman, Eq. Analyst, 26 October 2015

We are reiterating our $35 per share fair value estimate for Exelon and $26 fair value estimate for Pepco after Pepco reported third-quarter earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

Pepco reported operating earnings of $0.33 per share versus $0.46 in the same period last year. Earnings were negatively affected by higher operations and maintenance expense, implementation costs associated with a new customer information system, increased transmission revenue reserves related to a return on equity challenge and higher property taxes.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining approval of the Public Service Commission of the District of Columbia and being completed following the agreement with Washington, D.C., Mayor Muriel Bowser. We expect the D.C. commission to approve Exelon and Pepco's request to reopen the merger proceeding in their meeting on Oct. 28. Assuming the D.C. commission does reopen the proceeding, briefings would not be completed until late December. Therefore, we would not expect the merger to close until early 2016.

Although the merger appears to be on track in D.C., it is unclear whether the proceedings will be reopened in Delaware, New Jersey, and Maryland, jurisdictions that have already approved the transaction. The commitments Exelon made to these states to obtain approval are subject to most-favored-nation clauses and may need to be enhanced.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Morningstar Equity Research Methodology

Fundamental Analysis

At Morningstar, we believe buying shares of superior businesses at a discount and allowing them to compound over time is the surest way to create wealth in the stock market. The long-term fundamentals of businesses, such as cash flow, competition, economic cycles, and stewardship, are our primary focus. Occasionally, this approach causes our recommendations to appear out of step with the market, but willingness to be contrarian is an important source of outperformance and a benefit of Morningstar's independence. Our analysts conduct primary research to inform our views on each firm's moat, fair value and uncertainty.

Economic Moat

The economic moat concept is a cornerstone of Morningstar's investment philosophy and is used to distinguish high-quality companies with sustainable competitive advantages. An economic moat is a structural feature that allows a firm to sustain excess returns over a long period of time. Without a moat, a company's profits are more susceptible to competition. Companies with narrow moats are likely to achieve normalized excess returns beyond 10 years while wide-moat companies are likely to sustain excess returns beyond 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe lower-quality no-moat companies will see their returns gravitate toward the firm's cost of capital more quickly than companies with moats will. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

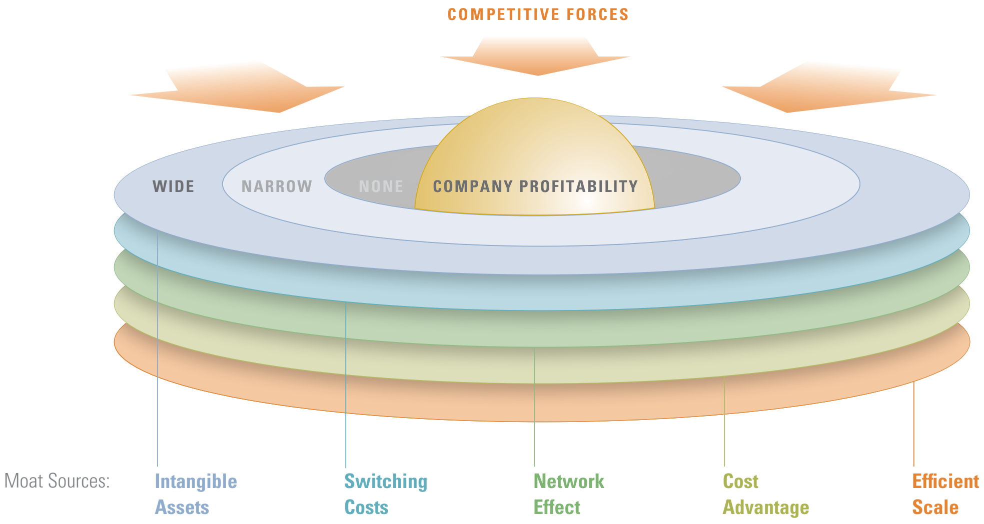
Fair Value Estimate

Our analyst-driven fair value estimate is based primarily on Morningstar's proprietary three-stage discounted cash flow model. We also use a variety of supplementary fundamental methods to triangulate a company's worth, such as sum-of-the-parts, multiples, and yields, among others. We're looking well beyond next quarter to determine the cash-generating ability of a company's assets because we believe the market price of a security will migrate toward the firm's intrinsic value over time. Economic moats are not only an important sorting mechanism for quality in our framework, but the designation also directly contributes to our estimate of a company's intrinsic value through sustained excess returns on invested capital.

Uncertainty Rating

The Morningstar Uncertainty Rating demonstrates our assessment of a firm's cash flow predictability, or valuation risk. From this rating, we determine appropriate margins of safety: The higher the uncertainty, the wider the margin of safety around our fair value estimate before our recommendations are triggered. Our uncertainty ratings are low, medium, high, very high, and extreme. With each uncertainty rating is a corresponding set of price/fair value ratios that drive our recommendations: Lower price/fair value ratios (<1.0) lead to positive recommendations, while higher price/fair value

Economic Moat



Morningstar Equity Research Methodology

ratios (>1.0) lead to negative recommendations. In very rare cases, the fair value estimate for a firm is so unpredictable that a margin of safety cannot be properly estimated. For these firms, we use a rating of extreme. Very high and extreme uncertainty companies tend to have higher risk and volatility.

Quantitatively Driven Valuations

To complement our analysts' work, we produce Quantitative Ratings for a much larger universe of companies. These ratings are generated by statistical models that are meant to divine the relationships between Morningstar's analyst-driven ratings and key financial data points. Consequently, our quantitative ratings are directly analogous to our analyst-driven ratings.

Quantitative Fair Value Estimate (QFVE): The QFVE is analogous to Morningstar's fair value estimate for stocks. It represents the per-share value of the equity of a company. The QFVE is displayed in the same currency as the company's last close price.

Valuation: The valuation is based on the ratio of a company's quantitative fair value estimate to its last close price.

Quantitative Uncertainty: This rating describes our level of uncertainty about the accuracy of our quantitative fair value estimate. In this way it is analogous to Morningstar's fair value uncertainty ratings.

Quantitative Economic Moat: The quantitative moat rating is analogous to Morningstar's analyst-driven economic moat rating in that both are meant to describe the strength of a firm's competitive position.

Understanding Differences Between Analyst and Quantitative Valuations

If our analyst-driven ratings did not sometimes differ from our quantitative ratings, there would be little value in producing both. Differences occur because our quantitative ratings are essentially a highly sophisticated analysis of the analyst-driven ratings of comparable companies. If a company is unique and has few comparable companies, the quantitative model will have more trouble assigning correct ratings, while an analyst will have an easier time recognizing the true characteristics of the company. On the other hand, the quantitative models incorporate new data efficiently and consistently. Empirically, we find quantitative ratings and analyst-driven ratings to be equally powerful predictors of future performance. When the analyst-driven rating and the quantitative rating agree, we find the ratings to be much more predictive than when they differ. In this way, they provide an excellent second opinion for each other. When the ratings differ, it may be wise to follow the analyst's rating for a truly unique company with its own special situation, and follow the quantitative rating when a company has several reasonable comparable companies and relevant information is flowing at a rapid pace.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

Price/Fair Value Morningstar data as of Apr 19, 2016

Analyst Note 20 Apr 2016

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Exelon Corp EXC (NYSE) | ★★

Last Price	Fair Value	Consider Buy	Consider Sell	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
34.80 USD	30.00 USD	21.00 USD	40.50 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Cheap debt, low commodity prices, and a renewed focus on regulated infrastructure investment have contributed to the sector's financial health. We project the median dividend payout ratio will fall below 60% during the next four years, down from mid-60% in past years. We also forecast median 5% annualized dividend growth during the next four years, up from 3% in recent years.

Duke Energy, the largest U.S. utility, is a Morningstar Best Idea and yields 4.1% as of April 20. We think the market has focused too much on the weak Latin American unit and pricey Piedmont Natural Gas acquisition. We believe investors should pay attention to Duke's strong management team that has long focused on regulated capital investment opportunities, supporting our 5.5% earnings growth estimate, divesting noncore no-moat assets, and driving efficiencies across all of its businesses.

In 2016-20, we anticipate Duke will invest $42 billion, of which nearly $30 billion is growth capital supporting our earnings growth estimate. We anticipate that Duke will be able to recover these costs through constructive regulatory outcomes. Adding Piedmont boosts its growth potential further.

We are hosting an investor call June 8 at 2 p.m. CST with Duke Energy CFO, Steve Young. Contact Andy Bischof at Andrew.bischof@morningstar.com or (312) 696-6433 if you would like to join.

Morningstar's Utilities Sector Outlook presentation for spring 2016 is now available.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

-Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures.

If you wish to obtain further information regarding previous Reports and recommendations and our services, please contact your local Morningstar office.

Unless otherwise provided in a separate agreement, you may use this Report only in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of this document is Morningstar Inc. Redistribution, in any capacity, is prohibited without permission. The information, data, analyses and opinions presented herein do not constitute investment advice; are provided solely for informational purposes and therefore are not an offer to buy or sell a security; and are not warranted to be correct, complete or accurate, nor may they be construed as a representation regarding the legality of investing in the security/ies concerned, under the applicable investment or similar laws or regulations of any person or entity accessing this report. The opinions expressed are as of the date written and are subject to change without notice. Except as otherwise required by law, Morningstar, its affiliates, and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions or their use. You should seek the advice of your financial, legal, tax, business and/or other consultant, and read all relevant issue documents pertaining to the security/ies concerned, including without limitation, the detailed risks involved in the investment, before making an investment decision.

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. As the price / value / interest rate of a security fluctuates, the value of your investments in the said security, and in the income, if any, derived therefrom may go up or down.

For Recipients in Australia: This report has been authorized by the Head of Equity and Credit Research, Asia Pacific, Morningstar Australasia Pty Limited and is circulated pursuant to RG 79.26(f) as a full restatement of an original report (by the named Morningstar analyst) which has already been broadly distributed. To the extent the report contains general advice it has been prepared without reference to your objectives, financial situation or needs. You should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at www.morningstar.com.au/fsg.pdf.

For Recipients in Hong Kong: The research is distributed by Morningstar Investment Management Asia Limited, which is regulated by the Hong Kong Securities and Futures Commission to provide services to professional investors only. Neither Morningstar Investment Management Asia Limited, nor its representatives, are acting or will be deemed to be acting as an investment advisor to any recipients of this information unless expressly agreed to by Morningstar Investment Management Asia Limited. What's New?

For current Guggenheim Utility Corporate Access Calendar, scroll to bottom.

AEP/FE – FERC authority affirmed with Supreme Court rejecting subsidized contracts in MD.
PCG – Judge limits evidence jury may hear in San Bruno trial.
D/DUK/SO – Atlantic Coast Pipeline continues to move forward.
ED – Utilities and solar companies file joint proposal to encourage more renewables.
EXC – MD rate case filed for Pepco.
GXP – MO H.B. 2689 moving forward.

Recent research highlights:

- ***Guggenheim initiates coverage of alternative energy -*** Alternative Energy: Basking in the Sun; Launching Sector Coverage
- ***Guggenheim initiates coverage of IPPs –*** Boom-Bust: Forget Mid Cycle – Focus on Asset Lives and Cash Flows….Launching on IPPs with Cautious Tone but See Opportunities
- **2016 Outlook:** Liking Utilities but Choose Wisely with a Return to Stock Picking
- **Texas Showdown:** Has the Wave of Coal Retirements Finally Reached Texas? Deep-Dive on How the Perfect Storm Plays Out
- **AEP/FE** – Ohio Regulators Approve PPAs - Benefits AEP, FE - Merchants Likely Turn to FERC
- **ED** – Management Roadshow: Rate Cases, M&A, Harlem, Gas Midstream, Transmission, Renewables on Forefront (see note HERE)

AEP/FE – Supreme Court strikes down MD contracts; NJ likely up next

- U.S. Supreme Court struck down the power plant subsidy law in Maryland for interference with FERC jurisdiction in wholesale power markets.
- We expect the same for NJ case.

Guggenheim takeaway: *Although Supreme Court support for the MD contracts would have been a net positive overall, the ruling doesn't have a direct read-through into the Ohio PPAs – the situations and structure of contracts are completely different. Justices' rationale for rejected the MD contract didn't give much color for the Ohio PPA requests. As we have highlighted before, we don't believe AEP and FE will lose the "captive customer" argument. Captive customers are defined as customers without the ability to shop for retail supply. Although the PPA does include an RSSA rider, this is a DISTRIBUTION CHARGE – distribution falls under state jurisdiction, not FERC jurisdiction. The distribution charge is non-*

bypassable, but it does not interfere with the definition of a "captive customer." For takeaways on the recently approved PPAs, see our note HERE.

PCG – Judge limits evidence jury may hear in San Bruno trial

- A judge ruled that jurors in PCG's criminal trial wil not hear graphic evidence, or view the damaged pipe itself.
- The judge barred evidence specific to fatalities, testimony from first responders, and prosecutor attempts to bring the 3,000-lb pipe to court as an exhibit.
- The judge also granted PCG's request to exclude evidence from the federal safety board and the California Public Utilities Commission (CPUC) that found the utility at fault for the explosion.

***Guggenheim takeaway:** Incrementally positive for PCG as the judge rules against prosecutors that were likely intending to focus juror attention on the aftermath of the explosion, rather than the cause. Cause shouldn't be relevant to the federal charges, and investigators that already found PCG at fault could influence jurors.*

D/DUK/SO – Atlantic Coast Pipeline continues to move forward

- Dominion, the lead developer and majority owner of the Atlantic Coast Pipeline (ACP), filed responses to comments and data requests, addressing concerns around the environmental impact of the project.
- The responses filed by ACP developers (see HERE) include ~7,000 pages of information; addressing all FERC environmental information requests from December 2015 and January 2016.
- Next, the pipeline developers are looking to obtain a notice of schedule from FERC, which will provide a timeline for the remainder of the environmental review process.
- D expects to receive a certificate early next year, which would keep the project on-track toward a targeted in-service date in late 2018.

***Guggenheim takeaway:** ACP continues to move forward addressing concerns from conservationists and environmental advocates that are typical for projects of this nature, using information obtained through survey activities such as those we highlight below. Despite recent route changes, developers continue to maintain course and expect the project to come on-line in 2018, in line with our expectations.*

ED – Utilities and solar companies file joint proposal to encourage more renewables

- 6 NY utilities and 3 solar companies formed a partnership to support more solar development in the state, while ensuring adequate funding available to maintain reliability.
- This week, the Partnership proposed a transition from the current net metering model to one that also addresses cost-sharing issues with solar.
- The filing recommends a payment from solar developers to the grid, while preserving utility bill savings for their customers.

***Guggenheim takeaway:** ED appears to be adapting to the ever-evolving regulatory climate in New York based on recent partnerships aligned with the state's energy agenda; although still not clear what the end-game is here – NT posturing for rate case? Going-along to get-along? Or simply fishing for a longer-term growth opportunity outside of a general rate case? We just hosted management for Roadshow – see our note:* **CLICK HERE TO ACCESS THIS REPORT**

EXC – EXC rate case filed for Pepco in MD

- Company ask of $127mm, 10.6% ROE.
- Opponents/interveners already complaining filing came too fast as merger just closed including the People's Counsel.
- Recovery for Smart Meter deployment among other items.

Guggenheim takeaway: *These rapid filings are very consistent with our merger closing note: Rate case filings for POM are where a lot of EXC organic growth opportunities will come from as the newly acquired utilities are major under-earners. See our note where we provide rate case assumptions for POM utilities here:* **CLICK HERE TO ACCESS THIS REPORT.**

GXP – Key MO legislation takes another step forward

- House votes 142 to 2 in favor of passing H.B. 2689.
- Bill now in front of Senate.
- In addition to helping to provide some reprieve to Noranda, Bill would push for comprehensive policy changes the in-state utilities are looking for including GXP.

Guggenheim takeaway: *This is the Bill everyone should follow as MO policy changes are crucial to our GXP thesis – seems like it's moving forward at a very healthy clip. As we highlighted in the past, we believe MO energy legislation is key to GXP to reduce its regulatory lag and we believe momentum will continue for this legislation to be passed before the session ends on May 13.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.	
Rating Category	Count	Percent	Count	Percent
Buy	153	60.47%	30	19.61%
Neutral	99	39.13%	1	1.01%
Sell	1	0.40%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For current Guggenheim Utility Corporate Access Calendar, scroll to bottom.

Transmission – Mexico continues to open up energy sector
Solar – Starting to make a dent in TX?
EXC – DC Office of the People's Counsel still pushing back on POM acquisition
CA Solar – CPUC votes to cap net metering credits for residential solar
ES – Office of Consumer Counsel finds CT electric customers overpaid $58mm in 2015
ES – Northern Pass progresses as gas pipeline is pulled
NEE – FL court rejects transmission elements of FP&L's Turkey Point nuclear plans
ETR/EXC – Study finds customer savings from nuclear subsidies

Recent research highlights:

- ***Guggenheim initiates coverage of alternative energy -*** Alternative Energy: Basking in the Sun; Launching Sector Coverage
- ***Guggenheim initiates coverage of IPPs –*** Boom-Bust: Forget Mid Cycle – Focus on Asset Lives and Cash Flows….Launching on IPPs with Cautious Tone but See Opportunities
- **2016 Outlook:** Liking Utilities but Choose Wisely with a Return to Stock Picking
- **Texas Showdown:** Has the Wave of Coal Retirements Finally Reached Texas? Deep-Dive on How the Perfect Storm Plays Out
- **AEP/FE** – Ohio Regulators Approve PPAs - Benefits AEP, FE - Merchants Likely Turn to FERC
- **ED** – Management Roadshow: Rate Cases, M&A, Harlem, Gas Midstream, Transmission, Renewables on Forefront (see note HERE)
- Quick Take: Supreme Court Decision on MD Provides Some Implicit Support for Ohio PPA Requests – Clearly Distinguishes the Two Contracts; Good Guidance if Ohio PPAs Appealed to Supreme Court

Transmission – Mexico continues to open up energy sector

- Mexico tendering first two high voltage transmission projects with funding coming from the private sector.
- The first is a ~$200mm line from Istmo de Tehuantepec in Oaxaca to central Mexico linked to wind generation.
- The second is a ~$215mm line from the state of Sonora to Baja California.
- Just the start – more opportunities are expected to open up.

***Guggenheim takeaway:** The energy/power sector in Mexico continues to open up for investment opportunities. Too early to tell if our U.S. utilities will get involved through their TransCo's and competitive transmission subs – presents some good opportunities especially for utilities in TX and CA.*

Solar – Starting to make a dent in TX?

- TX projected to build over 1,500MW of solar by YE – per grid operator.
- IA agreements signed – question remains financing.
- A lot of the build is in West TX where we have seen negative pricing at times.

***Guggenheim takeaway:** Solar still too small to make major dent as the State has almost 80,000MW of installed capacity. That said, it's something that needs to be monitored with the continuous drop in downstream/upstream costs for solar projects. Texas is a market where we could see material spark spread upside as coal retires in an energy-only market. As a reminder, we project ~8.6GW of coal retirements in the State. Excess solar growth could partially mitigate our coal retirement thesis/TX power market recovery – renewables have proven to be disruptive like in MISO and CAISO.*

EXC – DC Office of the People's Counsel still pushing back on POM acquisition

- Asking State regulators to reconsider the POM merger approval.
- Siting "errors of laws and facts."

***Guggenheim takeaway:** Worth a mention but this ship as sailed. All noise.*

CA Solar – CPUC votes to cap net metering credits for residential solar

- Cap applies to solar mixed with battery storage with 10 kW or less.
- Credits cease after certain production levels.
- The caps try and capture only solar generation and not the battery storage portion as some of the power stored in the battery could be sourced from the grid and not the homeowner roof.

***Guggenheim takeaway:** We don't expect this to hamper rooftop growth as a majority of homes do not have onsite battery storage. That said, policy in the State will continue to evolve as disruptive technologies like battery storage grow as a larger percentage of the energy mix. At this stage and for the next several years, we do not project battery storage, especially at the residential level, to display real economics.*

ES – Office of Consumer Counsel finds CT electric customers overpaid $58mm in 2015

- Local media highlighted a Connecticut Office of Consumer Counsel (OCC) report finding Connecticut electricity customers paid ~$58mm more than they should have in 2015.
- Connecticut Consumer Counsel pointed out higher prices in automatically renewed contracts could be to blame, as lower pricing expires after an initial contract period ends.

***Guggenheim takeaway:** The report highlights retail electric suppliers, which served 34% of ES customers last year; 64% of ES residential customers paid higher than standard rates.*

ES – Northern Pass progresses as gas pipeline is pulled

- Local media highlighted continued progress of Northern Pass Transmission (NPT) project, despite Kinder Morgan's (KMI, NC, $18.12) Northeast Energy Direct pipeline being suspended.
- The article suggests the KMI project competed with Northern Pass as an energy supply for New England.

Guggenheim takeaway: *While Northern Pass does continue to make progress, we believe the removal of KMI's gas pipeline project is a more direct positive read through to ES's Access Northeast Pipeline project.*

NEE – FL court rejects transmission elements of FP&L's Turkey Point nuclear plans

- A Florida state court rejected transmission elements of FP&L's plan for two 1,117-MW nuclear units at its Turkey Point facility.
- FPL reviewing the court's opinion and evaluating legal options; FPL gave no indication the ruling would impede the nuclear project's progress.

Guggenheim takeaway: *FPL has been planning the potential addition of two nuclear units at Turkey Point for several years, and while they continue to pursue licenses, they haven't committed to building the units. New units not likely without proper cost recovery, in our view.*

ETR/EXC – Study finds customer savings from nuclear subsidies

- A study done by the Brattle group finds subsidies proposed to support nuclear plants in up-state NY would produce cost savings that will enable an additional $3.2bn of annual GDP, and be more effective than renewable subsidies.
- A NY PSC analysis concluded the nuclear subsidies would cost the state $270mm; the Brattle report suggests preserving upstate nuclear plants would save ratepayers $10 billion through 2023.
- The report shows over 75% of expected avoided carbon emissions under the clean energy standard would come from subsidizing emissions-free generation at Ginna, Nine Mile Point, and FitzPatrick nuclear plants.

Guggenheim takeaway: *Nuclear accounts for one-third of NY'S electric mix, so the governor acknowledges it is essential to carbon-reduction and energy policy, regulators recognize a NT life-line is more cost-effective than planning around retirement, and the NY-ISO recently cautioned losing ETR's 851MW Fitzpatrick facility would threaten state reliability – everyone appears to be on-board in support of nuclear, however ETR's Indian Point facility in lower NYS is not included, and continues to be targeted by the governor for retirement under any circumstance. For additional thoughts on the viability of nuclear, see our note HERE.*

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Exelon Corporation

EXC: Clinton & Quad Cities Decision Imminent

Outperform

- **Summary.** We reiterate our Outperform rating and narrow our 12-18 month valuation range to $39-40/share from $39-41/share to reflect the impact of lower peer group multiples on our utility valuation. While we maintain our 16E EPS of $2.55, we lower our 17E & 18E EPS to/from $2.70/$2.75 & $2.90/$2.95 to reflect the impact of lower forward power prices on ExGen's outlook along with a one-time tax item that is expected to have a $0.06-0.08 negative impact on '18 EPS, partially offset by projected accretion from planned nuclear retirements. On the strategic front, the recent closing of the Pepco acquisition puts a longstanding issue to bed and helps provide clarity on the business mix and utility earnings outlook. In addition, the clear plan for the Clinton and Quad Cities nuclear plants helps ease any lingering concerns that management would continue to operate the facilities at losses.

- **Nuclear Update.** In conjunction with Q1'16 earnings, EXC laid out a clear strategy for the economically challenged Clinton & Quad Cities nuclear plants. EXC plans to retire the facilities on 6/1/17 & 6/1/18 in the absence of nuclear friendly state legislation (the IL session ends on 5/31/16) or, in the case of Quad Cities, if the plant does not clear the May 2016 PJM capacity auction for 2019/20. While we view the decision favorably and expect it to be $0.10+ accretive to annual EPS, it does not come as a surprise as management previously indicated a willingness to shut down the units in the absence of sufficient revenues (in one form or another). That being said, the retirements shine a spotlight on a risk to our positive thesis - the potential for continued deterioration in power market dynamics that result in much earlier than anticipated retirements for the rest of ExGen's nuclear fleet (2020's vs. 2030's). We view that scenario as unlikely - but ten years ago we also viewed the likelihood of nuclear retirements in the 2010's as unlikely.

- **Utility Growth.** EXC affirmed targeted annual net income growth of 7-9% during the period 2015-18 and (preliminarily) expects the Pepco acquisition to support the growth rate. Pepco's utilities offer substantial EPS growth prospects through both improving earned distribution ROEs and T&D rate base additions. That said, management has their work cut out for them as the distribution utilities are currently earning 4.5-7.5% ROEs (vs. allowed ROEs of 9.4-9.75%) in jurisdictions that are at best considered challenging. While EXC has embarked on the first round of rate filings, we fully expect it will be a multi-year process to bring the earned ROEs up to near the allowed levels.

Valuation Range: $39.00 to $40.00 from $39.00 to $41.00

Our $39-40/sh valuation range is premised on a sum-of-the-parts analysis (1) Utility & Parent value of $29/sh (based on a P/E multiple of 17.0-17.5X our 2018E of $1.65) and (2) $10-11/sh for ExGen using a DCF analysis. Risks include commodity price sensitivity and unfavorable regulatory/policy developments.

Investment Thesis:

Our Outperform rating is largely premised on our belief that the share price undervalues ExGen's nuclear fleet. Other positive features include above average utility rate base growth prospects and strong nuclear operational track record.

Please see page 4 for rating definitions, important disclosures and required analyst certifications

Company Description:

Exelon Corporation was formed in October 2000 through the merger of Unicom, which was the parent company of Commonwealth Edison (ComEd) and PECO Energy (PECO). The company's business segments include independent power production (Exelon Generation) and Energy Delivery (ComEd and PECO). Exelon Generation owns approximately 25,000 MW of unregulated electric generating capacity, primarily located in Illinois and Pennsylvania. The company's 17,000 MW nuclear fleet is the largest in the nation. Generation currently accounts for approximately 70% of EXC's overall earnings. The Energy Delivery businesses serve roughly 3.8 million electric distribution customers in Northern Illinois (ComEd) and approximately 1.6 million electric and 0.5 million natural gas distribution customers in Southeastern Pennsylvania (PECO).

Exelon Corporation (Sector Weight)

EXC - ALERT: 1Q16 Earnings Results in Line

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

Key Investment Points

May 5, 2016 Close: $35.38

1Q16 Ongoing EPS: $0.68 vs. $0.71 in 1Q15 / Consensus of $0.68/ KBCM of $0.63

Initial Take: We expect a neutral response as results were aligned with consensus expectations.

2016 KBCM EPS Estimate: $2.55 (Consensus: $2.53)

2017 KBCM EPS Estimate: $2.65 (Consensus: $2.64)

Guidance: EXC reaffirmed full-year EPS guidance in the range of $2.40-$2.70. However, Generation and HoldCo are now expected to be lower, offset by the addtion of $0.10 to $0.20 of Pepco earnings. Other changes are a higher share count and acquisition debt interest. EXC issued 2Q16 guidance of $0.50-$0.60 per share vs. $0.59 (consensus is at $0.55 for 2Q16).

Highlights:

- Results were in line with consensus expectations and above our estimate. Relative to our estimate, Generation results were higher than our forecast.
- EXC announced that it would close its Clinton and Quad Cities nuclear units absent Illinois legislation to support low-emitting generation.
- Generation segment ongoing earnings fell ($0.34 vs. $0.35 per share) due to lower pricing for energy and higher depreciation, partly offset by lower outage days.
  - EXC Generation is substantially hedged for 2016 at 96-99%, 69-72% hedged in 2017 and 37-40% hedged in 2018. 2017 and 2018 gross margin at ExGen fell $150 million and $200 million, respectively, since the 4Q15 slide deck.
- ComEd ongoing results rose ($0.12 vs. $0.11), driven by new rates partly offset by warmer weather. Heating degree days fell 20.2% compared to 1Q15 and were 8.3% below normal. Deliveries fell 4.3%. Weather normalized deliveries fell slightly.
- PECO ongoing results fell ($0.14 vs. $0.16), primarily due to weather partly offset by new rates. Electric deliveries fell 8.2% vs. 1Q15 and were essentially flat on a weather-normalized basis. Gas deliveries fell 20.1% (up 4% on a weather-normalized basis) on higher transport volumes. HDDs were down 27.2% vs. the prior year and were 13.7% below normal.
- BGE earnings fell ($0.11 vs. $0.12 in the prior year) due to increased storm costs. BGE has revenue decoupling, so weather minimally impacts earnings.
- PHI earned $2 million in the quarter, and was not in EXC's portfolio in 1Q15.

11:00 a.m. ET Conference Call #: (800) 690-3108 ID#: 97958832

We will be focused on:

- Nuclear plant subsidization.
- Commentary around POM acquisition and approvals.
- Cost cutting opportunities.
- Outlook for nuclear assets.

Disclosure Appendix

Exelon Corporation - EXC

We have managed or co-managed a public offering of securities for Exelon Corporation within the past 12 months.

Exelon Corporation is an investment banking client of ours.

We have received compensation for investment banking services from Exelon Corporation during the past 12 months.

We expect to receive or intend to seek compensation for investment banking services from Exelon Corporation within the next three months.

During the past 12 months, Exelon Corporation has been a client of the firm or its affiliates for non-securities related services.

As of the date of this report, we make a market in Exelon Corporation.

For the three-year history represented in this chart, this stock has been rated Sector Weight.

Overweight - We expect the stock to outperform the analyst's coverage sector over the coming 6-12 months.

Sector Weight - We expect the stock to perform in line with the analyst's coverage sector over the coming 6-12 months.

Underweight - We expect the stock to underperform the analyst's coverage sector over the coming 6-12 months.

Note: KeyBanc Capital Markets changed its rating system after market close on February 27, 2015. The previous ratings were Buy, Hold and Underweight. Additionally, Pacific Crest Securities changed its rating system to match KeyBanc Capital Markets' rating system after market close on April 10, 2015, in conjunction with the merger of the broker dealers. The previous ratings were Outperform, Sector Perform and Underperform.

Other Disclosures

KeyBanc Capital Markets is a trade name under which corporate and investment banking products and services of KeyCorp and its subsidiaries, KeyBanc Capital Markets Inc., Member NYSE/FINRA/SIPC ("KBCMI"), and KeyBank National Association ("KeyBank N.A."), are marketed. Pacific Crest Securities is a division of KeyBanc Capital Markets Inc.

KeyBanc Capital Markets Inc. ("KBCMI") does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report has been prepared by KBCMI. The material contained herein is based on data from sources considered to be reliable; however, KBCMI does not guarantee or warrant the accuracy or completeness of the information. It is published for informational purposes only and should not be used as the primary basis of investment decisions. Neither the information nor any opinion expressed constitutes an offer, or the solicitation of an offer, to buy or sell any security. The opinions and estimates expressed reflect the current judgment of KBCMI and are subject to change without notice. This report may contain forward-looking statements, which involve risk and uncertainty. Actual results may differ significantly from the forward-looking statements. This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the specific needs of any person or entity.

No portion of an analyst's compensation is based on a specific banking transaction; however, part of his/her compensation may be based upon overall firm revenue and profitability, of which investment banking is a component. Individuals associated with KBCMI (other than the research analyst(s) listed on page 1 of this research report) may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(A), financial interest, if any, by any research analysts listed on page 1 of this report will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosure Appendix. KBCMI itself may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(F), if KBCMI, or its affiliates, beneficially own 1% or more of any class of common equity securities in the subject company(ies) in this research report, it will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosures Appendix. This communication is intended solely for use by KBCMI clients. The recipient agrees not to forward or copy the information to any other person without the express written consent of KBCMI.

Diversified Utilities
North America │ United States

Exelon Corp (EXC)

It is still all about Gas, Carbon and Future of Nuclear

- **Citi's Take — Results in line.** Exelon reported 1Q16 adjusted operating EPS of $0.68/share vs Citi's projection of $0.93/share. Difference primarily driven by Citi's modeling of seasonality of ExGen. EXC reaffirmed 2016 guidance range of $2.40 - $2.70/share, in line with Citi's estimate of $2.59/share. Note that Citi's EPS estimates by subsidiary are also in line (see page 2).

- **Utilities on track. Valuation, cash flows, deleveraging really all hinges on views of ExGen.** Even though EXC has successfully increased the proportion of utility earnings, the swing factor on valuation and cash flows really comes down to ExGen. We are sure most models capture the utility growth rates that EXC points to (and so do ours). All the variability comes from valuation of ExGen.

- **ExGen challenges remain if gas stays at $3.00 long-term with no Carbon pricing.** While we aren't surprised with the potential retirement announcements (see our previously done analysis included on the next pages), we think challenges for the remaining nuclear fleet will remain given the average cash cost of generation of $30 - $35/MWh. With nuclear not really part of Hilary Clinton's current focus, we think risks remain on viability of nuclear and a carbon pricing regime.

- **We believe EXC has done well thanks to bullish gas views…but there are risks.** We think EXC, together with other IPPs, benefit form bullish 2017 gas price views. However, with higher gas comes incentive for new build for renewables and gas plants that will further eat into economics of nuclear long-term = lower multiple.

- **Key Takeaway – We retain our $27PT** given our view on gas (long-term $3), carbon (not in near – medium term) and nuclear asset life (~20yrs). See our detailed valuation buildup on the next page. Our detail report on EXC, including Pepco, is in our Feb 22nd report.

Byron, Clinton, Quad and Ginna Early Shutdown – Value Implications (from our Feb 22nd report)

We evaluated the financial impact of the early retirement of Clinton, Quad Cities and Ginna as EXC highlights these plants being at most risk related to an early retirement.

- **Byron** is a single unit with net operating capacity of 2347MW. The plant is already obligated to operate through May 2019. Exelon has decided to defer it decision on operations of its Byron plant and will offer it in the 2019/20 auction in May 2016.
- **Clinton** is a single unit plant located in Illinois with 1069MW net capacity. On October 29th, 2015, the company declared deferral of its decision related to future operations of the plant for one year. ExGen plans to bid the plant in MISO capacity auction for 2016/2017 Planning year.
- **Quad Cities** is a two unit plant located in Illinois with 1403MW net capacity. The plant cleared 2017/2018 PJM auction. EXC is planning to operate this unit till atleast May 2018. Exelon has decided to defer it decision on operations of its Quad Cities plant and will offer it in the 2019/20 auction in May 2016.
- **Ginna** is a single unit plant located in New York with 288MW net capacity. The plant is under PPA until March 31, 2017 and its currently under active consideration.

What about the Decommissioning Liabilities?
In case of early retirement, Clinton and Ginna don't meet the NRC minimum funding requirement due to early commencement of decommissioning and Quad Cities would also be at risk. This is because the funds don't get enough time to accrete in value to meet the liability. Given there are different approaches to decommissioning including SAFSTOR the actual liability isn't clear. However, EXC highlights that parental guarantees of $315, $260m and $65m may be needed for Clinton, Ginna and Quad Cities, respectively. ExGen also highlights that some portion of spent fuel management would need to be funded by Generation (Clinton: $165m; Ginna: $115). Given there is still meaningful uncertainty around the costs and type of decommissioning, we don't incorporate the potential additional liability in our analysis.

How much do you save by early decommissioning?
In the table below, we have quantified potential uplift in FCF and value, if these plants were to close in 2017. Our analysis suggests these plants are losing ~$60m of FCF every year and that shutting down these plants could unlock $560m in value.

Impact of early retirement

We do see $560m of uplift in value from early retirement related to elimination of the negative FCF of these plants. However, after you contrast this uplift with some of the potential decommissioning liabilities, we aren't certain the value uplift will be meaningful.

Pepco Overview and Valuation (from our Feb 22nd report)

POM is comprised of three electric T&D utilities: Potomac, Delmarva (DPL and Atlantic City Electric. In addition to electric, Delmarva has a small gas distribution business (we estimate ~290m in rate base at 2014 year end).

Historically, POM struggled to earn up to its allowed state distribution ROEs across all of its utilities, with ACE being the most visible under-earner. The company's relationships with regulators in DC and other jurisdictions have been historically challenging, and up until recently POM lacked contemporaneous recovery mechanisms that could help it eliminate persistent regulatory lag. As such, POM has been relying on annual ratecase filings, cost containing measures and lower investment levels (particularly at ACE) to offset negative impact of their regulatory construct.

Among POM's utilities, ACE has been particularly challenged due to well-advertised weakness in the underlying economy at Atlantic City. ACE has seen negative load growth and restrictive regulatory environment, which throttled its effective earned ROEs into low single digit range. The situation was partially mitigated by 2014-2015 change in tax treatment by the NJ BPU, however ROEs remained depressed.

Citi Projections

We do not expect POM's state earned ROEs to improve dramatically. EXC and POM did not agree to any rate case stay-outs as a part of their settlements, and we expect the strategy of annual rate case filings to continue. We note that POM's FERC rate base is earning formula rate returns, and we expect it to earn close to authorized across all periods. We expect state ROEs to stay flat. Given load growth profile (we assume 0.5% growth at DPL and Pepco and 0% at ACE) and considering projected cost-containment measures (we assume 0% O&M growth and 0.5% property tax creep), maintaining flat ROE will require annual rate increases across all three utilities. Our assumptions and model outputs with respect to POM are summarized in Figure below.

Figure 4. POM Model Assumptions and Outputs

	DPL	Pepco	ACE
Auth. ROE Auth. Equity Layer	9.70% 49.2%	9.40% 49.2%	8.75% 49.83%

Standalone Valuation

We believe POM’s equity is worth $5/share with EXC (assuming 926m shares of EXC after financing). On a standalone basis using POM’s share count, this value would be $19/share. We use the same DCF approach as with other regulated utilities with 15.5x terminal P/E multiple, which reflects a long-term growth rate of 3.5% which is in line with our view on growth of the average utility post 2019.

Figure 6. POM Standalone Valuation ($mm except per share data)

POM Utility Valuation	12/31/2016	12/31/2017	12/31/2018	12/31/2019
EBIT	$174	$866	$935	$992

Source: Citi Research

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates three

utilities in Pennsylvania, Illinois, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Commonwealth Edison Company (ComEd) in IL, PECO Energy Company (PECO) in PA, and Baltimore Gas & Electric in MD. Exelon Generation operates the largest nuclear fleet in the United States, with plants located concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Sell (3). Our rating is based on concerns around the management team’s strategic vision and execution, downside related to the Pepco transaction, concerns around the economics of Exelon’s nuclear fleet with low unlevered free cash flow conversion (UFCF) of ~45% and a weak utility business with below average growth of ~4% through 2019

Valuation

We value EXC using a sum-of-the-parts approach to get to our $27 target. We value ExGen at $10/share and believe ExGen’s core nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $18/share based on a 15x terminal PE multiple. We also add $5/share value provided by PepCo. We back out $6/share for the parent to get to our price target

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating		
Data current as of 31 Mar 2016	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	48%	39%	13%
% of companies in each rating category that are investment banking clients	65%	62%	62%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov; Jesse Chai

OTHER DISCLOSURES

The subject company's share price set out on the front page of this Product is quoted as at 06 May 2016 09:54 AM on the issuer's primary market.

Many European regulators require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

ADDITIONAL INFORMATION IS AVAILABLE UPON REQUEST

Exelon Corp (EXC): Mostly in-line 1Q16; 2016 guidance reaffirmed at $2.40-$2.70 now including Pepco

Sentiment Indicator : negative

Posted by Tucker, Shelby (RBC Capital Markets, LLC) on Friday, May 06, 2016, 09:23 AM ET

Our View: We expect the focus on today's call will be on the potential for the Clinton and Quad Cities closures; we await for updates on management's conversations with the Illinois legislators. Given the completion of the Pepco acquisition, we also expect management to provide updated guidance on their earnings growth rate from 2015-2018; the previous range was 3-5% annually. We expect the reduced 2017-2018 gross margin guidance for ExGen to pressure the stock somewhat today.

Exelon Corp (EXC; $35.38; Outperform; $34 price target) reported 1Q16 adjusted earnings of $0.68 per share, $0.02 above our estimate of $0.66 per share but in line with consensus. The result is below 1Q15 adjusted earnings of $0.71 per share. Management guided 2Q16 adjusted earnings of $0.50-$0.60 per share and reiterated their full-year guidance of $2.40-$2.70 per share, which now incorporates the Pepco acquisition. Our current estimate of $2.53 does not yet incorporate Pepco (PHI); we are unsure whether consensus of $2.53 does as well. The following highlight some of the key drivers of the quarter on a year-over-year (YoY) basis versus our estimates (although actuals impacted by PHI results from March 24 to March 31):

ExGen:

- Nuclear volume: $0.06, $0.04 better.
- Portfolio management/capacity revenue/CENG non-controlling int: -$0.02, $0.05 worse.

Utilities:

- Weather: -$0.06, $0.02 better.
- Rate cases/investments: $0.11, $0.06 better.

Expenses/Other

- O&M expense: -$0.02, $0.03 worse.
- Depreciation expense: -$0.05, $0.03 worse.
- Interest expense: -$0.02, $0.01 worse.
- Share count dilution: -$0.04, in-line.

Exelon Generation (ExGen) gross margins down in 2017 and 2018. 2016-2018 total gross margin estimates are now $7.8 billion, $7.7 billion, and $7.7 billion, respectively; this is a $150 million and $200 million decrease for 2017 and 2018 due to lower power prices since December 31, 2015. ExGen continues to remain behind ratable in hedging their power by around 5-8% given its belief of a fundamental upside in future power prices.

Plans to retire Clinton, Quad Cities nukes without support. Management plans to retire Clinton (1,069 MW) on June 1, 2017 and Quad Cities (1,403 MW) on June 1, 2018, respectively, without Illinois legislative support by the end of this spring session (May 31, 2016) and if Quad Cities does not clear in this month's 2019/2020 PJM capacity auction.

PHI inclusion increases bonus depreciation cash benefit, but lowers earnings. In addition to the earnings impact of -$0.09, -$0.11, and -$0.06 in 2016-2018 from bonus depreciation expected on a stand-alone basis, the PHI acquisition is expected to have an incremental earnings impact of (at midpoint) -$0.01, -$0.07, and -$0.005 for the three years. On the flip side, the company expects to see additional cash flow of (at midpoint) $75 million, $250 million, and $450 million. Consolidated tax rate is expected to increase up to 34% by 2018 but should revert to ~32% by 2019.

Conference call at 11 AM ET. The dial-in number is (800) 690-3108, with pass code 97958832.

Exelon Corp.

Putting Clinton and Quad Cities on the Clock

EXC has set closure dates for Clinton and Quad Cities: As a part of the Q1 earnings call, EXC stated that Clinton would close in June of 2017 and Quad Cities would close in June of 2018 unless adequate legislation passes in Illinois by May 31, 2016 and if Quad Cities does not clear the 2019/2020 RPM capacity auction.

Q1 earnings of $0.68 and 2016 guidance reaffirmed: EXC reported Q1 earnings of $0.68 in line with consensus. The company also reaffirmed 2016 guidance of $2.40-$2.70; however the guidance now includes contribution from the PHI acquisition and the associated financing, as well as updated Exelon Generation earnings.

As expected Exelon Generation gross margin was lower: 2016 gross margin remained unchanged, while 2017 gross margin was down by $150M and 2018 gross margin was down by $200M. The main driver was the significantly lower forward power curves on 3/31/16 as compared to those on 12/31/15. It should be noted that since the end of the quarter there has been a strong rebound in the forward curves.

We reiterate our Overweight rating and $39 price target: Our model has been updated based on company disclosures. It should be noted that we provide a table showing the impact of MTM moves, but do not incorporate them into our estimates on a quarterly basis given the continually changing forward curves. Our 2016 estimate remains unchanged at $2.55. Our updated 2017 and 2018 estimates are $2.68 and $2.78, respectively.

Price (05-May-2016)	USD 35.38
Price Target	**USD 39.00**

Why Overweight? We believe EXC has strong leverage to a rebound in demand or price in its markets that should be to its advantage if/when markets improve. That said, on current market forwards we do not see a bounce in margins, making the stock fairly valued versus its earnings opportunities over the next 2-3 years.

Upside case USD 44.00

Our upside case assumes a more bullish commodity outlook that results in margin expansion and corresponding increase in valuation by 10%.

Downside case USD 29.00

Our downside case assumes a $0.50 reduction in gas prices from the current forward curve, resulting in negative impacts to open EBTIDA and asset-based valuations, and the attribution of a discount due to challenged market location.

Upside/Downside scenarios

Note: FY End Dec

Clinton, Quad Cities and Illinois Legislation

Currently based on forward curves Clinton and Quad Cities are the only nuclear plants in Illinois losing money. From 2009-2015 these plants have lost more than $800M in cash flow on a pre-tax basis. The current expectations are for $140M of loss on a cash flow basis in 2017. Given that a path to profitability did not seem to exist in the current power markets, the decision has been made to shut down Clinton on June 1, 2017 and Quad Cities on June 1, 2018 if Illinois does not pass adequate legislation by May 31, 2016 and if Quad Cities does not clear the 19/20 PJM capacity auction in May.

The Illinois legislation that Exelon is trying to push is a bill introduced yesterday. The bill grew out of the coalition between Exelon Generation, ComEd, the Clean Jobs Coalition, and other stakeholders. The bill is called the Next Generation Energy Plan and the major provisions are as follows:

- Nearly doubles the energy efficiency programs to create $4.1B in energy savings.
- Commit $1B of funding for low-income assistance.
- Provide more than $140M per year in new funding for solar development.
- Strengthen and expand renewable portfolio standards.
- Introduce a Zero Emission Standard (this is where aid for at risk nuclear plants comes in).
- Reduce fixed charge on ComEd bills.
- Create thousands of new clean energy jobs.
- Enhance the reliability and security of the power grid.

The Zero Emission Standard would only compensate financially challenged plants after a full and complete review of costs by the ICC and the Illinois Power Agency. Apparently there would be a limit of 20Twhrs of production that could qualify. The financial support would provide for a full recovery of costs and risk capital. Currently only Clinton and Quad Cities are projected to need this support to continue operation.

Other At-Risk Nuclear Plants

Beyond Clinton and Quad Cities, there are other at risk nuclear plants in the fleet. In New York, Ginna and Nine Mile unit 1 have questionable economics. However; there may be a solution given the proposed clean energy standard in the state. This standard would provide a value on CO2 and as such provide a payment for non-carbon emitters. The next plants to consider are Oyster Creek, which has a known shut down date and Three Mile Island.

Exelon Generation

As expected gross margin was down as marked to the March 31, 2016 forward curves. The comparison of Gross margin from 12/31/15 to 3/31/16 are shown in Figure 1 on the next page. It should be noted that based on the recovery of forward curves since 3/31/16 that the gross margin is likely back to or above the levels disclosed in the Q4 2015 earnings deck.

FIGURE 1
Exelon Generation Gross Margin Comparison

	March 31, 2016			December 31, 2015			Difference		
Gross Margin Category ($Millions)	2016	2017	2018	2016	2017	2018	2016	2017	2018

Imputed Valuation Impact @ 6.5x EV/EBITDA							$0	($1.03)	($1.35)

Source: Company Filing, Barclays Research estimates

Updated Estimates

We have updated our earnings estimates, mainly on tax issues associated with the Domestic Production Activity Deduction (DPAD). As a result of bonus depreciation and net operating losses for the legacy PHI assets, the amount of DPAD that can be booked will be lower in 2017 through 2019 with the largest impact being in 2018. Although this works to lower the earnings contribution from Exelon Generation by $0.00-$0.08 depending on the year, the overall cash flow is $700-$850M higher for the period 2017-2019. The expectation is for the impact to the DPAD to normalize in 2019. The expected impact to earnings is 0-2 cents in 2017, 6-8 cents in 2018 and 0-1 cent in 2019. All of these impacts are a drag on earnings.

Our updated 2016/2017/2018 estimates are $2.55/$2.68/$2.78, respectively vs. our previous estimates of $2.55/$2.69/$2.82. Again the tax issue associated with DPAD drives the majority of this change. We did not update the forward curves and flow those changes to the as the forward curves are continually moving. The earnings and valuation impact of the forward curves are shown in Figure 1.

ANALYST(S) CERTIFICATION(S):

I, Daniel Ford, CFA, hereby certify (1) that the views expressed in this research report accurately reflect my personal views about any or all of the subject securities or issuers referred to in this research report and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this research report.

IMPORTANT DISCLOSURES

Barclays Research is a part of the Investment Bank of Barclays Bank PLC and its affiliates (collectively and each individually, "Barclays"). Where any companies are the subject of this research report, for current important disclosures regarding those companies please send a written request to: Barclays Research Compliance, 745 Seventh Avenue, 13th Floor, New York, NY 10019 or refer to http://publicresearch.barclays.com or call 212-526-1072.

The analysts responsible for preparing this research report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by investment banking activities.

Analysts regularly conduct site visits to view the material operations of covered companies, but Barclays policy prohibits them from accepting payment or reimbursement by any covered company of their travel expenses for such visits.

In order to access Barclays Statement regarding Research Dissemination Policies and Procedures, please refer to http://publicresearch.barcap.com/static/S_ResearchDissemination.html. In order to access Barclays Research Conflict Management Policy Statement, please refer to: http://publicresearch.barcap.com/static/S_ConflictManagement.html.

The Investment Bank's Research Department produces various types of research including, but not limited to, fundamental analysis, equity-linked analysis, quantitative analysis, and trade ideas. Recommendations contained in one type of research product may differ from recommendations contained in other types of research, whether as a result of differing time horizons, methodologies, or otherwise.

Primary Stocks (Ticker, Date, Price)

Exelon Corp. (EXC, 05-May-2016, USD 35.38), Overweight/Neutral, A/CD/CE/D/J/K/L/M

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

AES Corp. (AES)
Alliant Energy (LNT)
Ameren Corp. (AEE)
American Electric Power (AEP)
American States Water Company (AWR)
American Water Works (AWK)
Aqua America (WTR)
Brookfield Infrastructure Partners LP (BIP)
Brookfield Infrastructure Partners LP (BIP_u.TO)
Brookfield Renewable Energy Partners LP (BEP)
Brookfield Renewable Energy Partners LP (BEP_u.TO)
California Water Service Group (CWT)
Calpine Corp. (CPN)
Canadian Utilities Ltd. (CU.TO)
CenterPoint Energy Inc. (CNP)
CMS Energy (CMS)
Consolidated Edison (ED)
Dominion Resources (D)
DTE Energy (DTE)
Duke Energy (DUK)
Dynegy Inc. (DYN)

Distribution of Ratings:

Barclays Equity Research has 1818 companies under coverage.

41% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 60% of companies with this rating are investment banking clients of the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 50% of companies with this rating are investment banking clients of the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 45% of companies with this rating are investment banking clients of the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to http://publicresearch.barclays.com.

A: Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of Exelon Corp. in the previous 12 months.

CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by Exelon Corp..

CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by Exelon Corp..

D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from Exelon Corp. in the past 12 months.

J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by Exelon Corp. and/or in any related derivatives.

K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from Exelon Corp. within the past 12 months.

L: Exelon Corp. is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

M: Exelon Corp. is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our $39 price target is premised upon a 2018 group average multiple of 16.3x applied to the utility net parent earnings of $1.53 resulting in $25 of utility value. Exgen is valued at 6.5x 2018 EBTIDA netted against debt resulting in $14 of value for Exgen, The combined value is $39.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

Source: Morningstar

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Exelon Threatens to Close Clinton, Quad Cities Nuclear Plants...Again

Investment Thesis

Travis Miller, Sector Director, 06 October 2015

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Travis Miller, Sector Director, 06 May 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after management used its strongest language to-date regarding the fate of the beleaguered Clinton and Quad Cities nuclear plants, both in Illinois. Management said it will close the plants by 2017-18 but also said the decision depends on several developments. These are the same contingencies management has used for several years to justify postponing the plant closures.

We continue to assume Exelon closes Clinton, Quad Cities, and two other nuclear plants by 2020. But we think management remains hesitant to pull the cord. The plants could survive if Illinois politicians pass what effectively is a nuclear bailout bill; Clinton clears the Mid-Continent Independent System Operator's 2017-18 capacity auction next spring; or Quad Cities clears the mid-Atlantic capacity auction later this month. Quad Cities cleared last year's 2017-18 transitional capacity auction at $151.50 per megawatt-day but did not clear the 2018-19 auction at $215/MW-day. We expect similar clears in this year's 2019-20 auction.

Exelon earned $0.68 per share on an adjusted basis and reaffirmed its $2.40-$2.70 per share 2016 guidance, in line with our estimates. It continues running its nuclear fleet at world-class levels, achieving a 95.8% capacity factor in the quarter and proving it can capture the full upside if energy prices rebound. Exelon also filed rate cases at two of its newly acquired Pepco utilities, which should boost earnings and returns on the pricey acquisition if the utilities receive constructive decisions.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★ 05 May 2016	35.38 USD 05 May 2016	30.00 USD	1.18	3.50 05 May 2016	3.60 05 May 2016	32.55 05 May 2016	Utilities - Diversified	Standard

Close Competitors	Currency (Mil)	Market Cap	TTM Sales	Operating Margin	TTM/PE
Public Service Enterprise Group Inc PEG	USD	23,500	9,896	27.70	15.08
FirstEnergy Corp FE	USD	14,232	14,998	16.50	20.79
Entergy Corp ETR	USD	13,717	11,513	-2.60	0.00

increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 24 March 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Exelon Threatens to Close Clinton, Quad Cities Nuclear Plants...Again

Travis Miller, Sector Director, 06 May 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after management used its strongest language to-date regarding the fate of the beleaguered Clinton and Quad Cities nuclear plants, both in Illinois. Management said it will close the plants by 2017-18 but also said the decision depends on several developments. These are the same contingencies management has used for several years to justify postponing the plant closures.

We continue to assume Exelon closes Clinton, Quad Cities, and two other nuclear plants by 2020. But we think management remains hesitant to pull the cord. The plants could survive if Illinois politicians pass what effectively is a nuclear bailout bill; Clinton clears the Mid-Continent Independent System Operator's 2017-18 capacity auction next spring; or Quad Cities clears the mid-Atlantic capacity auction later this month. Quad Cities cleared last year's 2017-18 transitional capacity auction at $151.50 per megawatt-day but did not clear the 2018-19 auction at $215/MW-day. We expect similar clears in this year's 2019-20 auction.

Exelon earned $0.68 per share on an adjusted basis and reaffirmed its $2.40-$2.70 per share 2016 guidance, in line with our estimates. It continues running its nuclear fleet at world-class levels, achieving a 95.8% capacity factor in the quarter and proving it can capture the full upside if energy prices rebound. Exelon also filed rate cases at two of its newly acquired Pepco utilities, which should boost earnings and returns on the pricey acquisition if the utilities receive constructive decisions.

Are Utilities Overheated or Are Their Yields too Good to Pass Up?

Travis Miller, Sector Director, 20 April 2016

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Cutting Midcycle Energy Prices; Fair Value Estimates for Power Producers to Fall 10%-40%

Travis Miller, Sector Director, 06 April 2016

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U.S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is

$3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount. The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have 10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on all companies within the next week.

Exelon and Pepco Join to Sing a Duet: At Last

Travis Miller, Sector Director, 24 March 2016

We are reaffirming our $35 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after Washington, D.C., regulators approved its acquisition of Pepco with a 2-1 vote on Wednesday afternoon. The companies closed the acquisition following the vote, nearly two years after initially announcing the deal. Pepco stock will no longer trade as of March 24.

For Exelon, we have already incorporated $1 per share of value dilution into our fair value estimate, based on a 75% probability of the deal closing at Exelon's $27.25 per share cash offer. Using a 100% probability doesn't have a material impact on that dilution estimate.

We were confident that the management teams would negotiate until they received deal approval, even though the companies missed several self-imposed deadlines. The terms of the settlement in Washington, D.C., will benefit customers there, but they are too small to have a material impact on the $12 billion deal, including debt.

Reaffirming Outlook for Now, but Politics Could Yank Cord Out From Exelon-Pepco

Travis Miller, Sector Director, 02 March 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after fissures opened in the settlement negotiations related to Washington, D.C., regulatory approval for the companies' proposed merger. As of midday Wednesday, Pepco was trading at a 10% discount to our fair value estimate and a 15% discount to Exelon's $27.25 per share cash offer price, both of which we think offer good return opportunities.

Our Pepco fair value estimate continues to include a 75% probability that the settling parties--including D.C. Mayor Muriel Bowser's office, the D.C. regulatory staff, the lead consumer advocate group, and the companies--will reach an agreement regulators will approve. We think the companies remain committed to the deal and will accept any final settlement terms regulators approve. The key points of contention appear to involve less than $100 million, an immaterial impact on the $6.8 billion deal value.

However, we think the companies could be losing control over the outcome, and the deal could now be a proxy political fight among several D.C. entities. If we get more information that supports this theory, we would be inclined to cut our probability of the deal closing to 50%, leading to a $2 per share cut in Pepco's fair value estimate. We include $5 per share of incremental value in our fair value estimate for Pepco. A probability change is not likely to have a material impact on the $1 per share of value dilution we include in our Exelon fair value estimate related to the deal.

We continue to think Exelon management would be willing to go past its previously stated March 4 deadline if settlement negotiations move forward.

We are reaffirming our narrow moat and stable moat trend ratings for both companies.

The Never-Ending Exelon-Pepco Saga Gets Another Two Weeks of Life, but No Real Changes

Travis Miller, Sector Director, 29 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Washington, D.C., regulators again rejected Exelon's offer to acquire Pepco but left open an option for the companies to gain approval.

We still include $1 per share of value dilution in our fair value estimate for Exelon and $5 per share of incremental value for Pepco, based on a 75% probability that the companies will close the transaction at Exelon's $27.25 cash offer. We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Even though Washington, D.C., regulators formally rejected the deal, we think the companies are committed enough to closing the deal that there is a good likelihood they will accept the terms set by regulators. The terms sap additional value from shareholders to benefit customers through rate refunds and benefits, limiting cost reductions, returning merger synergies to customers, and limiting recovery for some costs. However, the D.C. service territory is not big enough for the incremental lost value to have an impact on our valuation of the deal. The terms also set strict ringfencing provisions, but those are typical and don't have any impact on our valuations.

Exelon management had said they would terminate the deal if regulators did not approve it by March 4, but we don't think that date is sacred any longer, as regulators have said the companies have until March 11.

Pepco Reports In-Line 2015 Earnings; Exelon Believes D.C. Will Approve Merger by March 4

Charles Fishman, Eq. Analyst, 22 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Pepco reported in-line 2015 earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining the approval of the District of Columbia Public Service Commission and being completed following an agreement with D.C. Mayor Muriel Bowser that sweetened the benefits for customers and provided other benefits to the district.

Pepco Holdings or Exelon may terminate the merger agreement if the D.C. commission fails to issue a final order approving the merger without condition or modification of the terms of the settlement agreement by March 4. Exelon has made clear that if the D.C. commission does not approve the deal by March 4, it will terminate the agreement. However, Exelon's CEO recently said he believes D.C. will approve the transaction at its next meeting before the termination date.

Pepco reported 2015 adjusted operating earnings of $1.28, in line with our estimate and up from $1.27 per share in 2014. Earnings were favorably affected by rate increases due to infrastructure investment, partially offset by higher operation and maintenance expenses.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Supreme Court Validates Our View That Carbon Regulation Remains Highly Uncertain

Travis Miller, Sector Director, 11 February 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities and coal miners after the U.S. Supreme Court's 5-4 decision to stay the Environmental Protection Agency's Clean Power Plan. This validates our view that it's too early, and the outcome too uncertain, to make any investment decisions based on the current terms of the CPP or any carbon regulation. We do not include any CPP-related impacts in our fair value estimates.

At a minimum, we expect that the decision will push implementation one or two years past the 2022-30 phase-down period and will embolden political opposition to carbon regulation. In addition, it means that a Supreme Court ruling against the CPP could actually reverse industry trends. When the Supreme Court struck down the EPA's MATS rule in June, the decision was largely moot because most power plants were proceeding to implement the rule or had already made plans to retire. The CPP timeline is so long that there is plenty of time for the courts or politicians to nullify it or make major revisions to it.

For most utilities, power and gas market economics and renewable energy policies remain the most important variables for investors to consider.

The Supreme Court's decision comes as good news for coal miners that haven't had any for some time. However, we don't view today's announcement as a panacea for the coal industry's woes, as natural gas remains at prices at which coal struggles to compete. However, our view that natural gas prices will rise in the coming years hasn't changed, so we maintain our fair value estimates for both Peabody and Cloud Peak. Peabody's high leverage means it has less time to wait--the basis for its extreme uncertainty rating.

Exelon Surprises With 2.5% Dividend Growth Target

Travis Miller, Sector Director, 03 February 2016

We are reaffirming our $35 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company reported earning $2.49 per share on an adjusted basis in 2015. This was in line with our estimate and within management's guidance range.

We think the biggest positive for shareholders was management's announcement that it plans to recommend to the board a 2.5% annual dividend increase for at least the next three years, likely starting in the second half of 2016. We had not expected a dividend increase until at least 2018, given our expected plateau in earnings the next three years.

If the board accepts this policy, we estimate Exelon's payout ratio will top 50% by 2018. This is at the high end of what we think is reasonable for Exelon's cash flow profile and debt load. We're not yet entirely convinced that management has added sufficient regulated distribution earnings and contracted generation revenue to decouple cash flows from volatile energy markets.

Management continues to evaluate the economic viability of at least three nuclear plants. We assume in our long-term forecasts that Exelon closes three plants representing 25% of its fleet capacity. We also expect a final Pepco merger decision by early March, in line with timeline indications from Washington, D.C., regulators. We continue to assume $1 per share of value dilution based on a 75% probability of the deal closing as proposed. We don't think ongoing legal challenges in other states will be an impediment.

We remain long-term bullish on fixed-price PJM power, especially in the East, where we expect gas prices to strengthen as takeaway capacity increases and demand remains more robust than other regions. This drives the bulk of the value upside as of early February. Our $8.4 billion midcycle gross margin outlook for Exelon Generation remains at the high end of management's 2018 outlook range.

Supreme Court Sides With Demand Response; No Fair Value Impacts

Andrew Bischof, CFA, Eq. Analyst, 25 January 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Management Meeting: Exelon Sticks to March 4 Drop-Dead Date for Pepco Deal

Travis Miller, Sector Director, 11 November 2015

We are reaffirming our $35 and $26 fair value estimates for Exelon and Pepco Holdings, respectively, after meeting with Exelon's senior management at the Edison Electric Institute Financial Conference in Hollywood, Florida. Our narrow moat and stable moat trend ratings for both companies are unchanged.

Management reiterated it will withdraw its offer to acquire Pepco if Washington, D.C., regulators do not approve the transaction by March 4, 2016. We continue to incorporate in our fair value estimates a 75% probability of the deal closing as proposed. D.C. regulators' written approval for rehearing suggested they expect to rule within that time frame. We expect Exelon will be able to close the deal immediately following approval.

The most-favored-states contingencies in other states' approvals would take effect after the deal closed and thus are not an impediment to the deal closing. Exelon would file with those states to offer customer benefits comparable with those offered in D.C. We don't expect this to be material to our assessment of the transaction or our fair value estimate for Exelon, which includes $1 per share of dilution from the deal.

Management pushed out the start of its full $0.15-$0.20 earnings per share run-rate accretion to 2019 from 2017 initially. Apart from the closing delay, management said the 2017-18 reduction was based on Pepco's reassessment of its near-term outlook for earned returns. At this point, most of the earnings accretion should come from the extra leverage Exelon will use. We expect it will take two to three years of operational improvements on Exelon's side before it can achieve more constructive regulatory outcomes.

Management estimated the deal could be $0.25 per share earnings-accretive by 2020 if Pepco can achieve a 9% earned return on equity. We think this is a stretch, but even an 8% achieved ROE could make the deal value-neutral relative to our previous stand-alone forecasts for Pepco.

Morningstar Equity Research Methodology

Fundamental Analysis

At Morningstar, we believe buying shares of superior businesses at a discount and allowing them to compound over time is the surest way to create wealth in the stock market. The long-term fundamentals of businesses, such as cash flow, competition, economic cycles, and stewardship, are our primary focus. Occasionally, this approach causes our recommendations to appear out of step with the market, but willingness to be contrarian is an important source of outperformance and a benefit of Morningstar's independence. Our analysts conduct primary research to inform our views on each firm's moat, fair value and uncertainty.

Economic Moat

The economic moat concept is a cornerstone of Morningstar's investment philosophy and is used to distinguish high-quality companies with sustainable competitive advantages. An economic moat is a structural feature that allows a firm to sustain excess returns over a long period of time. Without a moat, a company's profits are more susceptible to competition. Companies with narrow moats are likely to achieve normalized excess returns beyond 10 years while wide-moat companies are likely to sustain excess returns beyond 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe lower-quality no-moat companies will see their returns gravitate toward the firm's cost of capital more quickly than companies with moats will. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

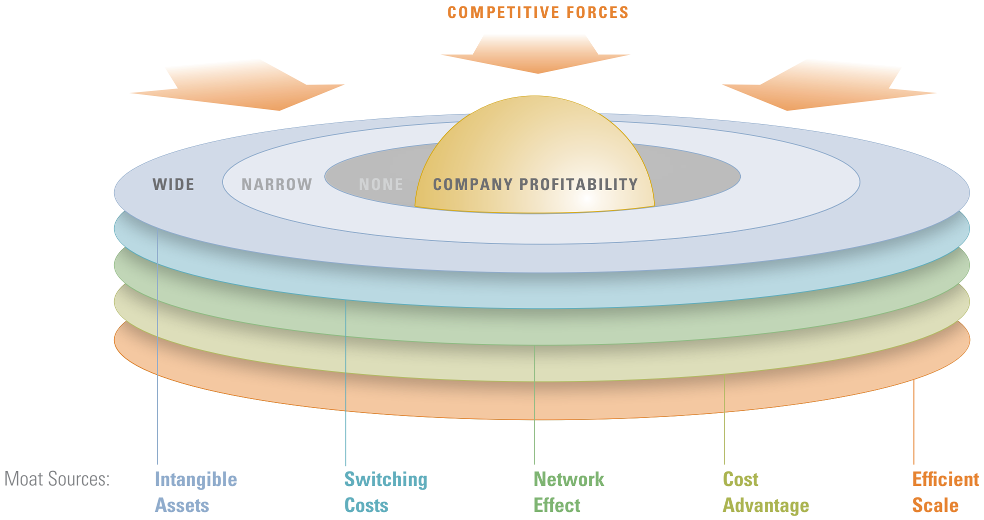
Fair Value Estimate

Our analyst-driven fair value estimate is based primarily on Morningstar's proprietary three-stage discounted cash flow model. We also use a variety of supplementary fundamental methods to triangulate a company's worth, such as sum-of-the-parts, multiples, and yields, among others. We're looking well beyond next quarter to determine the cash-generating ability of a company's assets because we believe the market price of a security will migrate toward the firm's intrinsic value over time. Economic moats are not only an important sorting mechanism for quality in our framework, but the designation also directly contributes to our estimate of a company's intrinsic value through sustained excess returns on invested capital.

Uncertainty Rating

The Morningstar Uncertainty Rating demonstrates our assessment of a firm's cash flow predictability, or valuation risk. From this rating, we determine appropriate margins of safety: The higher the uncertainty, the wider the margin of safety around our fair value estimate before our recommendations are triggered. Our uncertainty ratings are low, medium, high, very high, and extreme. With each uncertainty rating is a corresponding set of price/fair value ratios that drive our recommendations: Lower price/fair value ratios (<1.0) lead to positive recommendations, while higher price/fair value

Economic Moat



Morningstar Equity Research Methodology

ratios (>1.0) lead to negative recommendations. In very rare cases, the fair value estimate for a firm is so unpredictable that a margin of safety cannot be properly estimated. For these firms, we use a rating of extreme. Very high and extreme uncertainty companies tend to have higher risk and volatility.

Quantitatively Driven Valuations

To complement our analysts' work, we produce Quantitative Ratings for a much larger universe of companies. These ratings are generated by statistical models that are meant to divine the relationships between Morningstar's analyst-driven ratings and key financial data points. Consequently, our quantitative ratings are directly analogous to our analyst-driven ratings.

Quantitative Fair Value Estimate (QFVE): The QFVE is analogous to Morningstar's fair value estimate for stocks. It represents the per-share value of the equity of a company. The QFVE is displayed in the same currency as the company's last close price.

Valuation: The valuation is based on the ratio of a company's quantitative fair value estimate to its last close price.

Quantitative Uncertainty: This rating describes our level of uncertainty about the accuracy of our quantitative fair value estimate. In this way it is analogous to Morningstar's fair value uncertainty ratings.

Quantitative Economic Moat: The quantitative moat rating is analogous to Morningstar's analyst-driven economic moat rating in that both are meant to describe the strength of a firm's competitive position.

Understanding Differences Between Analyst and Quantitative Valuations

If our analyst-driven ratings did not sometimes differ from our quantitative ratings, there would be little value in producing both. Differences occur because our quantitative ratings are essentially a highly sophisticated analysis of the analyst-driven ratings of comparable companies. If a company is unique and has few comparable companies, the quantitative model will have more trouble assigning correct ratings, while an analyst will have an easier time recognizing the true characteristics of the company. On the other hand, the quantitative models incorporate new data efficiently and consistently. Empirically, we find quantitative ratings and analyst-driven ratings to be equally powerful predictors of future performance. When the analyst-driven rating and the quantitative rating agree, we find the ratings to be much more predictive than when they differ. In this way, they provide an excellent second opinion for each other. When the ratings differ, it may be wise to follow the analyst's rating for a truly unique company with its own special situation, and follow the quantitative rating when a company has several reasonable comparable companies and relevant information is flowing at a rapid pace.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts’ compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms’ length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Analyst Note 06 May 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after management used its strongest language to-date regarding the fate of the beleaguered Clinton and Quad Cities nuclear plants, both in Illinois. Management said it will close the plants by 2017-18 but also said the decision depends on several developments. These are the same contingencies management has used for several years to justify postponing the plant closures.

We continue to assume Exelon closes Clinton, Quad Cities, and two other nuclear plants by 2020. But we think management remains hesitant to pull the cord. The plants could survive if Illinois politicians pass what effectively is a nuclear bailout bill; Clinton clears the Mid-Continent Independent System Operator's 2017-18 capacity auction next spring; or Quad Cities clears the mid-Atlantic capacity auction later this month. Quad Cities cleared last year's 2017-18 transitional capacity auction at $151.50 per megawatt-day but did not clear the 2018-19 auction at $215/ MW-day. We expect similar clears in this year's 2019-20 auction.

Exelon earned $0.68 per share on an adjusted basis and reaffirmed its $2.40-$2.70 per share 2016 guidance, in line with our estimates. It continues running its nuclear fleet at world-class levels, achieving a 95.8% capacity factor in the quarter and proving it can capture the full upside if energy prices rebound. Exelon also filed rate cases at two of its newly acquired Pepco utilities, which should boost earnings and returns on the pricey acquisition if the utilities receive constructive decisions.

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

1Q16 EPS in Line; Intends to Retire Clinton and Quad Cities Absent IL Legislation

Event

Exelon reported 1Q16 operating EPS of $0.68, a 4% decline vs. 1Q15, but in line with consensus. EPS for EXC's three legacy utilities were lower by $0.02 in 1Q16 versus 1Q15 at $0.37, reflecting increased storm costs at BGE and mild winter weather at PECO and ComEd, partially offset by rate relief at ComEd. PHI's actual results for the period 3/24-3/31 were not a significant contributor to overall results. ExGen's 1Q16 EPS were largely unchanged at $0.34 ($0.35 in 1Q15). ExGen gross margin guidance for 2016 was unchanged at $7,800 million, while 2017/2018 guidance was revised lower by $150 million/$200 million, respectively, to $7,700 million in each year.

Impact & Analysis

Management reiterated 2016 EPS guidance at $2.40-2.70, reflecting financing associated with the acquisition of PHI and $0.10-0.20 of expected EPS contribution from PHI for the remainder of 2016. EXC intends to retire its Clinton (1,069 MW) and Quad Cities (1,403 MW) nuclear units in Illinois on 6/1/17 and 6/1/18, respectively, if Illinois does not pass adequate legislation by 5/31/16, and if Quad Cities does not clear the 2019/20 PJM capacity auction. All three of the PHI utilities intend to file rate cases this year: ACE filed its rate case with the NJBPU in March seeking an $84.4 million (6.3%) increase in rates and 10.6% ROE, and Pepco filed its rate case in Maryland seeking a $126.8 million (10.4%) increase in rates and 10.6% ROE. In addition, rate filings are expected by Pepco in Washington, DC, and DPL intends to file in Delaware and Maryland in 2Q16/3Q16. Final orders are expected from all PHI rate cases by year-end 2016/1Q2017.

Valuation & Recommendation

We are maintaining our 2016 and 2017 EPS estimates. We reaffirm our Market Perform rating and $36 SOTP price target, based on a 16x 2017E P/E for the regulated utilities and 8x 2017E EV/EBITDA multiple for ExGen.

1Q16 Recap

Exelon reported 1Q16 operating EPS of $0.68, a 4% decline vs. 1Q15, but in line with consensus. EPS for EXC's three legacy utilities were lower by $0.02 in 1Q16 versus 1Q15 at $0.37, reflecting increased storm costs at BGE and mild winter weather at PECO and ComEd, partially offset by rate relief at ComEd. PHI's actual results for the period 3/24-3/31 were not a significant contributor to overall results. ExGen's 1Q16 EPS were largely unchanged at $0.34 ($0.35 in 1Q15). ExGen gross margin guidance for 2016 was unchanged at $7,800 million, while 2017/2018 guidance was revised lower by $150 million/$200 million, respectively, to $7,700 million in each year.

Key Takeaways From the Conference Call

Acquisition of Pepco Holdings Inc. (PHI) Completed

Exelon completed the all-cash $7 billion acquisition of PHI on March 23. Approval of the merger was conditioned upon Exelon agreeing to certain commitments, aimed at providing benefits to PHI customers. As a result, EXC recorded a total pre-tax charge of $508 million ($394 million after-tax).

2016 Adjusted Operating EPS Guidance Reiterated at $2.40–2.70

Management reaffirmed 2016 adjusted operating EPS guidance at $2.40–2.70, reflecting an average share count of 926 million shares outstanding, interest on debt issued for the PHI transaction captured at the HoldCo and PHI's expected contribution to 2016 earnings for the remainder of the year.

Segment EPS guidance for 2016 is as follows:

- $1.20–1.30 for ExGen (down $0.05 from previous guidance of $1.25–1.35)
- $0.25–0.35 for BGE
- $0.10–0.20 for PHI
- $0.40–0.50 for PECO
- $0.50–0.60 for ComEd
- ($0.10)–(0.20) for the HoldCo

Management also reiterated its 7–9% 2015–2018 annual EPS growth expectations for the legacy EXC utilities and signaled that it expects earnings from the PHI utilities in 2017 and 2018 to be at least in line to possibly better than guidance given at EEI in November 2015. EXC's previous guidance for PHI accretion, on a base case scenario, was earnings neutral in 2017, $0.07–0.12/share in 2018 and $0.15–0.20/share in 2019.

Regulatory Round-up

Management indicated a final order in its BGE rate case is expected next month. In addition, ComEd filed its formula rate case in Illinois last month, seeking a $138 million rate increase. A final Illinois order is expected in December 2016.

All three PHI utilities - Pepco, Atlantic City Electric (ACE) and Delmarva Power and Light (DPL), have already or will file rate cases in their respective jurisdictions by the end of 3Q16. They have been out of rate cases for at least two years.

- Last month, Pepco filed a rate case in Maryland, seeking a $126.8 million (10.4%) increase in base rates and a 10.6% ROE. A final order is expected in December 2016. Pepco also intends to file a rate case in Washington, DC by the end of next quarter.
- In March, ACE filed its rate case with the New Jersey commission, seeking an $84.4 million (6.3%) increase in rates and 10.6% ROE. A final order from the NJBPU is expected in 1H2017.
- DPL intends to file rate cases in Delaware and Maryland in 2Q16 and 3Q16, respectively with final orders expected in 1Q2017.

Possible Early Retirement of Clinton and Quad Cities Nuclear Facilities

Management announced its intention to shut down the Clinton (1,069 MW/8,700 GWh of production in 2015) and Quad Cities (1,403 MW/11,700 GWh of 2015 production) nuclear facilities in Illinois on June 1, 2017 and June 1, 2018, respectively, if Illinois does not pass enabling legislation aimed at supporting nuclear generation by the end of the legislature's spring session on May 31, 2016 and, if Quad Cities does not clear PJM's upcoming 2019/20 capacity auction. According to EXC, the two aforementioned facilities have lost more than $800 million in cash flow on a pre-tax basis from 2009 through 2015.

Support for favorable legislation has been forthcoming from various parties, including climate scientists and other environmental groups. The proposed ZEC program, which functions much the same way as renewable energy credits (REC) do in the state's existing renewable portfolio standards (RPS) programs, is a payment mechanism for the state value of zero-emission credits from nuclear plants, which represent the delta between the needed revenues to operate the facilities and their respective operating costs. In short, where operating costs and associated risks for operating the plant are not covered by available market revenues, the ZEC program would provide relief for greenhouse gas avoidance.

Reliability Support Services Agreement (RSSA) Approved for Ginna Nuclear Plant

Last month, the Federal Energy Regulatory Commission (FERC) and New York Public Service Commission (NYPSC) approved an RSSA under which the Ginna nuclear plant would continue to operate through the term (March 31, 2017). ExGen recognized a one-time revenue adjustment of ~$101 million (included in 2016 guidance), representing the net cumulative previously unrecognized revenue retroactive from the April 1, 2015 effective date through March 31, 2016.

IMPORTANT DISCLOSURES

Analyst's Certification

I, Michael S. Worms, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA (exceptions: Alex Arfaei and Brodie Woods). These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the NASD Rule 2711 and NYSE Rule 472 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosure

Disclosure 10: A research analyst, associate, or any person (or their household members) directly involved in the preparation of this research report has a financial interest in securities of this issuer.

Methodology and Risks to Price Target/Valuation

Methodology: Our valuation is based on a combination of our 2017 adjusted EBITDA estimate with an 8x EV/EBITDA multiple and 16x 2017E P/E multiple.
Risks: A material decline in power prices and / or a change in the regulatory environment could affect our price target.

Rating and Sector Key (as of April 5, 2013):

We use the following ratings system definitions:
OP = Outperform - Forecast to outperform the analyst’s coverage universe on a total return basis
Mkt = Market Perform - Forecast to perform roughly in line with the analyst’s coverage universe on a total return basis
Und = Underperform - Forecast to underperform the analyst’s coverage universe on a total return basis
(S) = speculative investment;
NR = No rating at this time;
R = Restricted – Dissemination of research is currently restricted.

BMO Capital Markets' seven Top 15 lists guide investors to our best ideas according to different objectives (CDN Large Cap, CDN Small Cap, US Large Cap, US Small cap, Income, CDN Quant, and US Quant have replaced the Top Pick rating).

BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale arm of Bank of Montreal and its subsidiaries BMO Nesbitt Burns Inc., BMO Capital Markets Limited in the U.K. and BMO Capital Markets Corp. in the U.S. BMO Nesbitt Burns Inc., BMO Capital Markets Limited and BMO Capital Markets Corp are affiliates. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

Exelon (EXC)

Another Clinton Needs Money

BUY
Price target $40.00
(from $36.00)
Price $35.68

Key Takeaway

Exelon reported strong 1Q16 EPS of $0.68 that was inline with Consensus and slightly above our estimate. Results were negatively impacted by mild weather and increased storm costs at the regulated wires business. Since 2009 EXC has suffered $800M of cash flow losses at the Clinton and Quad Cities nuclear plants and if Illinois does not come up with a carbon initiative the company plans to close the plants in 2017-18.

Exelon operating EPS was $0.68 on a diluted basis, versus $0.71 for the same period a year ago, our estimate of $0.65, and Consensus of $0.68. The year-over-year decline was primarily driven by reduced earnings at the regulated utility business due to unfavorable weather.

Exelon affirmed its 2016 earnings guidance of $2.40-$2.70 (Street at $2.53) and 1Q16 guidance of $0.60-$0.70. Sector guidance is $1.25-$1.35 ExGen, $0.50-$0.60 ComEd, $0.40-$0.50 PECO and $0.25-$0.35 from BGE.

Next Stop...Philadelphia: In place of a 2Q16 earnings call management will host an analyst conference in Philadelphia on August 10.

More Bonus? As a result of the merger PHI had existing net operating losses (NOLs) and its impact from bonus depreciation transferred over to Exelon Generation. As a result the co. is forecasting a decrease in 2017 earnings by ($0.02)-($0.00), 2018 impact ($0.08)-($0.06) and 2019 impact of ($0.02)-($0.00). In 2019 the co. expects its tax rate to normalize to 32%.

Clinton and Quad Cities nuclear plants will retire unless Illinois passes carbon legislation by May 31, 2016 and Quad Cities clears the PJM auction. The company has decided to retire Clinton (1,069 MW), on June 1, 2017, unless Illinois passes its much awaited carbon reform. Additionally Exelon plans to retire Quad Cities (1,473 MW), on June 1, 2018 unless there is Illinois legislation and the plant must clear the 2019-20 PJM capacity auction.

Valuation/Risks

Our $40.00 price target is based on P/E analysis. Taking our 2017 EPS estimate of $2.70 in conjunction with a P/E group average multiple of 14.8x results in a price target of $40.00. Based on Friday's closing price of $35.68, this would result in a 12-month price appreciation potential of 12.4% and total return potential of 16.0% including the current yield of 3.6%. **Risks** –Risks include exposure to change in the commodity price for electricity associated with Exelon's merchant generation business, and regulatory issues associated with the company's regulated subsidiaries.

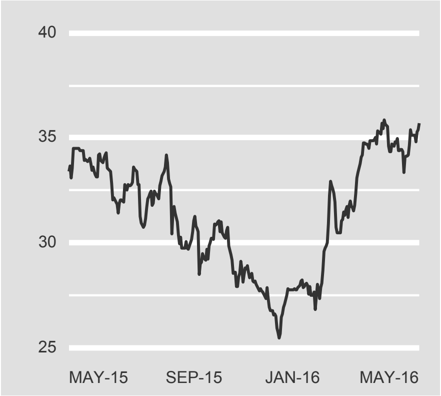
Price Performance



Scenarios

Target Investment Thesis

- Exelon should trade at a group average P/E multiple.
- Expected growth in regulated earnings and accretion from the Pepco acquisition.
- Company moves to a more regulated P/E valuation since the merger with Pepco.
- 2017 EPS $2.70; Target Multiple: 14.8x. Target Price $40.00.

Upside Scenario

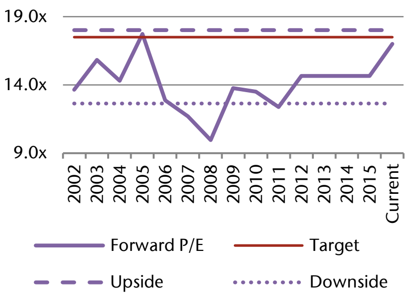
- Exelon Generation earnings increase due to improvement in gas and power prices.
- Power plant values increase due to growing short supply.
- Regulated business earns at or above its allowed ROE.
- Carbon regulation increases nuclear margins
- 2017 EPS $3.25; target multiple: 14.8x. Target Price $48.00

Downside Scenario

- Exelon EBITDA decreases due to declining gas and power prices.
- Power plant prices in the secondary market which are currently at less than replacement value move lower
- Reinvestment opportunities become more limited.
- Regulated utilities under-earn their allowed ROE.
- 2017 EPS: $2.25; Target Multiple: 14.8x Target Price: $33.50.

Long Term Analysis

1 Year Forward P/E



Long Term Financial Model Drivers

LT EBITDA CAGR	**(8.5%)**
LT EPS Growth	**4.6%**
FFO/Debt	**31%**
Equity Ratio	**52%**

Other Considerations

In Illinois, no progress has yet been made on the Lower Carbon Initiative, and Exelon plans on offering Quad Cities and Byron in the next capacity auction in May 2016.

Recommendation / Price Target

Ticker	**Rec.**	**PT**
EXC	**Buy**	**$40**
PEG	Hold	$47.50
ETR	Hold	$79
ED	Hold	$77
PPL	Buy	$41.50
FE	Buy	$35

Catalysts

- EPA new rules limiting carbon emissions expected to be finalized next year.
- PJM Capacity Auction.
- PECO Electric Rate Case.

Company Description

Exelon, incorporated in Pennsylvania in February 1999, is a utility services holding company engaged, through its principal subsidiary Generation, in the energy generation business, and through its principal subsidiaries Com Ed, PECO and BGE, in the energy delivery businesses discussed below. Exelon is headquartered in Chicago and trades on the NYSE under the ticker symbol EXC.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation.

Exelon operating EPS was $0.68 on a diluted basis, versus $0.71 for the same period a year ago, our estimate of $0.65, and Consensus of $0.68. The year-over-year decline was primarily driven by reduced earnings at the regulated utility business due to unfavorable weather.

Exelon affirmed its 2016 earnings guidance of $2.40-$2.70 (Street at $2.53) and 1Q16 guidance of $0.60-$0.70. Sector guidance is $1.25-$1.35 ExGen, $0.50-$0.60 ComEd, $0.40-$0.50 PECO and $0.25-$0.35 from BGE.

Guidance for 2Q16 is $0.50-$0.60 and for 2016 management is forecasting an average share count of 926 million.

More Bonus? As a result of the merger PHI had existing net operating losses (NOLs) and its impact from bonus depreciation transferred over to Exelon Generation. As a result the company is forecasting a decrease in 2017 earnings by ($0.02)-($0.00), 2018 impact ($0.08)-($0.06) and 2019 impact of ($0.02)-($0.00). In 2019 the company expects its tax rate to normalize to 32%.

Clinton and Quad Cities nuclear plants will retire unless Illinois passes carbon legislation by May 31, 2016 and Quad Cities clears the PJM auction. The company has decided to retire Clinton (1,069 MW), on June 1, 2017, unless Illinois passes its much awaited carbon reform. Additionally Exelon plans to retire Quad Cities (1,473 MW), on June 1, 2018 unless there is Illinois legislation providing relief to baseload nuclear plants and the plant must clear the 2019-20 PJM capacity auction. On the earnings call management stated that from 2009-2015 both these nuclear plants have sustained more than $800 million in cash flow losses as revenues are not covering cash operating expenses.

Busy 2016 regulatory calendar as all of PHI's businesses are in rate cases – With the completion of PHI the company has rate cases planed for Maryland (Pepco and Delmarva), DC (Pepco), Delaware (Delmarva), and New Jersey (Atlantic City).

PHI Merger – At the end of March Exelon closed the PHI merger and 1Q16 results contain 7 days of PHI benefit. Approval of the merger involved certain benefits to customers for which the company recorded a pre-tax charge of $508 million (or $394 million after-tax) during the quarter.

BGE Electric and Gas Distribution Rate Case – On November 6 BGE filed for an increase of $121 million and $79.5 million for the utility's electric and gas business, respectively. BGE requested an electric ROE of 10.6% and a gas ROE of 10.5%. A final order is expected in June 2016.

1Q16 operating EPS excludes $0.50 of non-recurring items as follows: a $0.42 charge from PHI merger commitments, a $0.03 unrealized gain related to nuclear decommissioning trust investments, a $0.07 market to market gain associated with the impact of economic hedging activities, a $0.08 loss related to merger and integration costs, a $0.08 loss from an asset impairment, a $0.01 loss associated with CENG non-controlling interest, a $0.01 loss due to a cost management program, and a $0.01 gain associated with the amortization of commodity contract intangibles. 1Q15 earnings exclude $0.09 of non-recurring loss primarily associated with asset impairment.

Commonwealth Edison (CWE) earnings improved by $0.01 to $0.12 on a year-over-year comparison. Increased capital investment was offset by unfavorable weather. Gross margin increased 5.0% to $901 million reflecting increased electric distribution earnings from the impact of greater capital investment and higher electric rates. Retail sales decreased 4.6%, or 0.5% on a weather-adjusted projection, during the quarter due to unfavorable weather. Heating degree days were down 20.2% relative to the same period last year and 8.3% below normal. The Company estimates the negative impact of weather relative to last year to be $0.01.

Operating income increased 15.9% to $269 million due to greater gross margin reflecting the impacts of increased capital investment. Operating and maintenance expense declined 2.0% to $368 million which was more than offset by an 8.0% to $189 million increase in depreciation expense due to greater net plant. Earnings increased 19.6% to $110 million driven primarily by higher gross margin, offset slightly by higher depreciation expense. The effective tax rate for the quarter was 41.2% versus 39.1% last year.

In December the Illinois Commerce Commission approved ComEd's $67 million rate reduction based on a 9.14% ROE and an allowed return on capital of 7.02%. New rates went into effect in January 2016.

PECO earnings decreased by $0.02 to $0.14 due to unfavorable weather. The principal driver for the year-over-year change was a reduction in heating degree days, which were down 27.2% versus the prior year and down 13.7% relative to normal. Gross margin declined 4.9% to $520 million reflecting unfavorable weather and lower volumes. Retail electric sales declined 8.2% but were up 0.3% on a weather adjusted basis. Gas sales declined 20.1% but experienced a 4.0% improvement on a weather adjusted basis. Heating degree days were down 27.2% versus the same period last year and 13.7% below normal. The company estimates the effect of weather to be negative $0.04.

Operating Income declined 11.6% to $198 million due to reduced gross margin partly offset by lower O&M expense. Operating and maintenance expense fell 3.2% to $213 million. Depreciation expense grew by 8.1% to $67 million driven by additional plant in service. Earnings declined 10% to $126 million due to lower operating income. The effective tax rate during the quarter was 25.4% versus 29.3% last year.

BGE earnings declined by $0.01 to $0.11 during the quarter. The principal drivers of the year-over-year change were increased storm costs that impacted the utility's service territory. Gross margin grew by 1.3% to $556 million based on higher rates.

Operating income decreased 7.8% to $189 million reflecting increased O&M expense. Operating and maintenance expense increased 10.5% to $200 million reflecting the impact of winter storms. Earnings declined 6.5% to $100 million due to lower operating margin. The effective tax rate during the quarter was 39.8% versus 40.9% last year.

Earnings at Exelon Generation decreased $0.01 to $0.34 during the quarter. The decline in earnings reflects lower realized energy prices in the Midwest, New York, and New England regions, partially offset by the timing of nuclear projects and increased capacity pricing. Also negatively impacting the quarter were higher nuclear decommissioning amortization and ongoing capital expenditures.

Anthony C. Crowdell, Equity Analyst, (212) 284-2563, acrowdell@jefferies.com

The company updated its open gross margin and hedging assumptions. Since the 4Q15 call 2016 total gross margin was unchanged while 2017-2018 gross margin decreased $150 million in 2017 and $200 million in 2018, all largely driven by a decline in PJM market prices that have declined $1.60-$2.10 since the beginning of the year. Management highlighted that since the beginning of 2Q16 power prices have started to improve making up for most of the degradation that was experienced in 1Q16.

The company's Other business segment improved by $0.01 to a loss of ($0.02).

We are maintaining our 2016 and 2017 EPS estimates of $2.50, and $2.70 respectively.

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

Exelon

Pepco accretion & cash flows highlight a positive quarterly release

Maintain Rating: NEUTRAL | PO: 36.00 USD | Price: 35.68 USD

Bank of America Merrill Lynch

Equity | 08 May 2016

Exelon reported 1Q16 EPS in line with consensus

On 5/6/16, Exelon reported 1Q16 EPS of $0.68, beating our estimate of $0.67 and matching Street estimates. The company reaffirmed its 2016 EPS guidance of $2.40-$2.70, yet this range was restructured with ExGen dropping $0.05 due to the dilutive impact of the Pepco transaction to merchant generation and weaker power prices. This was offset by $0.05 uplift from a combination of Holdco and the inclusion of Pepco.

State help needed to save certain nuclear assets

Exelon is seeking help from the Illinois legislature before the legislative session ends on 5/31/16. Exelon is seeking assistance primarily for Clinton and Quad Cities, mirroring a failed push last year for a surcharge that would have provided as much as $300 million in revenue to the nuclear fleet. While this year's financial aid target is less, we believe the legislation is still more likely to fail given partisan wrangling between the GOP-controlled governor's office and the Democratically-controlled legislature. The Illinois situation is in contrast to New York, where Exelon successfully attained FERC approval for a Reliability and Support Services Agreement in March of this year. In our view, Exelon's requests for state assistance reflects our view the merchant nuclear business should be valued at a multiple less than the group's historically average 8.0x EBITDA level, unless one takes an above-market view of natural gas prices.

Pepco closure brings guidance & cash flow relief

The successful closure of the Pepco merger prompted a revision to guidance. EPS guidance was unchanged at $2.40-2.70, but the segment mix within that guidance was adjusted in which Pepco added EPS while changes in forward commodity price offset that accretion. The revision means the Pepco deal may actually be neutral to accretive for 2016 rather than dilutive, and should be viewed as a marginal positive for EXC shares. In addition, legacy NOLs and bonus depreciation from the deal frees $700-850 million of additional cash flow for 2017-19. The positive impact of these items overshadows the quarterly results; we view this quarterly release in aggregate as a positive due mainly to the new Pepco disclosures.

Commodity prices rebound, brightening outlook

Forward commodity prices have rebounded (see Chart 3) to a meaningful degree. Exelon remains one of the most levered electric utility names (short of an independent power producer) to a rally in forward commodity prices. Our view on EXC shares generally does not take an out of market view on forward commodity prices, but our BofAML Commodities Research team is generally bullish on forward natural gas prices. The rally in forward commodity prices, coupled with Exelon's dividend increase on the 4Q15 call, and its completion of the Pepco merger, explain much of the shares' outperformance versus other utilities YTD.

We rate EXC shares Neutral

At this juncture, we believe EXC shares are fairly priced and reflect to a reasonable degree Pepco accretion, DPS growth of 2.5%, and a combination of healthy regulated utilities and a merchant nuclear fleet that is underearning returns. Key to the story will be the upcoming analyst day on 8/10/16. We maintain our Neutral EXC rating for now.

Price objective basis & risk

Exelon (EXC)

Our $36/share price objective for EXC shares is derived from our sum of the parts valuation model, where we assign approximately $9 of value to ExGen, ($3) for the parent, and approximately $30 of value to the regulated utility. We value integrated electric utilities, including Exelon, using a sum of the parts valuation model based on 2018E earnings and EBITDA. For Exelon specifically we use a target 7.2x EV/EBITDA multiple to value the deregulated generation segment, in line with peers. We apply a target 16.0 P/E multiple to value the regulated side of the business, which is a discount to regulated peers at 16.5x to reflect the generally below-average ROEs allowed by the state commissioners for the states in which Exelon has regulated operations.

Downside (upside) risks to our price objective are: 1) increasing (decreasing) of forward power prices driven by rising natural gas prices, heat rates, or Northeast and Midwest gas basis to Henry Hub, 2) regulatory outcomes as well as changes in nuclear regulation, 3) deterioration (improvements) in operating efficiency beyond our base scenario.

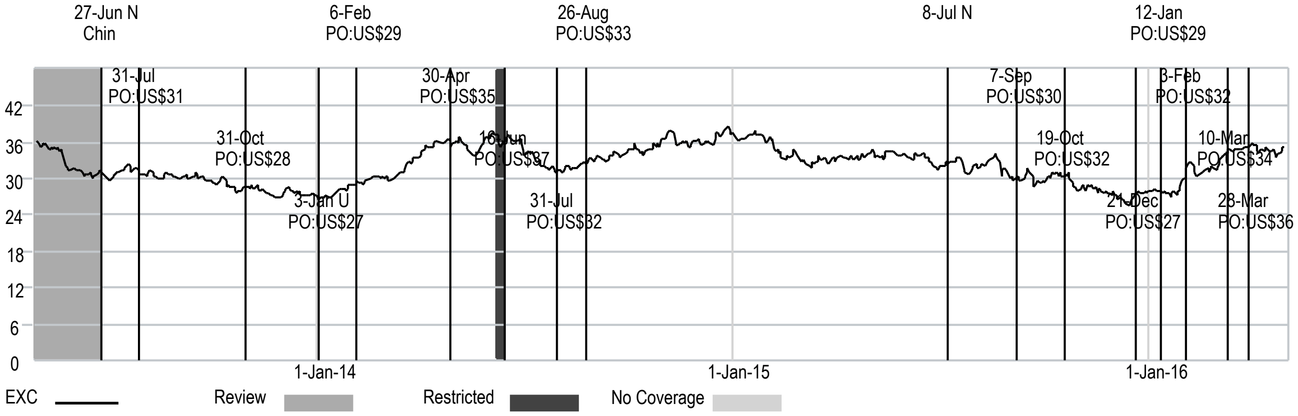
EXC Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of April 30, 2016 or such later date as indicated.

Equity Investment Rating Distribution: Utilities Group (as of 31 Mar 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	69	48.94%	Buy	56	81.16%
Hold	41	29.08%	Hold	32	78.05%
Sell	31	21.99%	Sell	20	64.52%

Equity Investment Rating Distribution: Global Group (as of 31 Mar 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1602	49.61%	Buy	1195	74.59%
Hold	754	23.35%	Hold	563	74.67%
Sell	873	27.04%	Sell	552	63.23%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

Price charts for the securities referenced in this research report are available at http://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
MLPF&S or one of its affiliates acts as a market maker for the equity securities recommended in the report: Exelon Corp.
MLPF&S or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Exelon Corp.
The issuer is or was, within the last 12 months, an investment banking client of MLPF&S and/or one or more of its affiliates: Exelon Corp.
MLPF&S or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Exelon Corp.
The issuer is or was, within the last 12 months, a non-securities business client of MLPF&S and/or one or more of its affiliates: Exelon Corp.
MLPF&S or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Exelon Corp.
MLPF&S or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Exelon Corp.
MLPF&S or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Exelon Corp.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of MLPF&S and/or one or more of its affiliates: Exelon Corp.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.

BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This research report provides general information only. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of any specific person. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.

Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented in this report. Such ideas or recommendations reflect the different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this report.

In the event that the recipient received this report pursuant to a contract between the recipient and MLPF&S for the provision of research services for a separate fee, and in connection therewith MLPF&S may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom MLPF&S has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by MLPF&S). MLPF&S is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities mentioned in this report.

Ultimatum game in Illinois

We're serious this time: Clinton and Quad Cities to (potentially) close

EXC had a solid Q1, but the key announcement was management's decision to shut down the Clinton and Quad Cities nuclear plants if the IL legislature does not pass supportive legislation by the end of this session (likely later this month or early June). Quad Cities may also remain open if it clears the upcoming PJM capacity auction. The ultimatum was read positively with either outcome (close or legislative support) likely accretive. We maintain our Hold and $36 PT seeing greater upside leverage in our IPP Buys. That said, EXC has a decent catalyst set going into summer with Illinois and an August Analyst Day.

New ZES-based legislation introduced in IL to save Clinton/Quad Cities

Late last week, legislation dubbed the Next Generation Energy Plan (NGEP) was introduced to the Illinois legislature. The NGEP includes a Zero Emission Standard overtly designed to support EXC's two most at-risk nuclear plants (Quad Cities in PJM and Clinton in MISO), new energy efficiency programs, low-income assistance, and an expanded RPS. The NGEP effectively combines three separate energy bills introduced last year. For EXC investors, the focus is the ZES, which is tailored to ensure that EXC is able to recover plant costs, including basis and unit-contingent risks, plus a yet to be determined return on investment. EXC's Friday announcement on Quad Cities and Clinton is clearly intended to spur action on the bill, and this time CEO Crane has Board authorization to move forward with early shut-downs if unsuccessful.

Clarity on proforma outlook, plant shutdown impacts expected at Analyst Day

EXC updated 2016 guidance to include POM (leaving the range unchanged from the prior $2.40-$2.70) but will not give more detailed guidance on the proforma outlook until the August Analyst Day. That said, management noted that the outlook for POM's utilities is consistent or better than what they had discussed at EEI in November. While this was a clear positive, it was later offset by CFO Thayer's commentary that utility net income growth would still be in the 7-9% range with POM. We (and at least some investors we spoke with) currently have the utility growing faster.

Maintaining $36 PT based on sum-of-the-parts (more details on page 4)

Downside risks are lower power and gas prices; degradation of earned utility ROEs; higher interest rates; higher-than-expected operating expenses; weaker retail margins; and a weaker-than-expected contribution from POM. Upside risks include higher gas and power prices, elimination of IL nuclear drag, lower interest rates, and a better-than-anticipated contribution from the POM utilities.

Company Profile

Exelon is a diversified utility with ownership of the largest nuclear fleet and retail services business in the U.S. and three regulated utilities serving Chicago, Philadelphia and Baltimore. EXC owns ~35,000MW of merchant generation capacity located primarily in the Midwest and Mid-Atlantic, with smaller gas-fired and nuclear assets in New England, New York, and Texas.

Source: Company data, Deutsche Bank estimates

Raising 2016 but leaving 17/18 unchanged… for now

We are raising our 2016E by $0.05 to $2.55 and are now at the midpoint of EXC's reaffirmed (but adjusted for POM) guidance range of $2.40-$2.70. Our POM estimate is toward the higher end of EXC's forecast for that segment, while our Corporate & Other drag estimate is at the lower end. Meanwhile our estimates for Exelon Generation (ExGen) and the EXC legacy utilities are now close to the midpoint of segment ranges.

For 2017 and 2018, we have not yet included any specific assumption on an earnings and cash flow benefit from the closure of Clinton and/or Quad Cities or uplift from the potential passage of new ZES legislation in IL. That said, we discuss the potential impact to our EPS forecast based on management's commentary that they expect the two plants to lose $140M in cash flow in 2017 (clarified later to mean FCF and not including any benefit from hedges) in the following section. We are effectively assuming some level of uplift vs. our prior estimates as we have decided not to lower them for the disclosure on the call that the combination with POM results in an incremental negative impact on ExGen EPS at the tax line. This results from increased tax benefits with POM (bonus depreciation and legacy NOLs) which further limit ExGen's ability to claim the Domestic Production Activities Deduction (DPAD). All else equal this is supposed to lower EPS by $0.06-$0.08/sh in 2018 but impacts normalize in 2019 assuming that EXC then becomes more of a cash taxpayer.

How much are Quad Cities and Clinton losing now?

Management provided some details to help investors figure out how much the Quad Cities and Clinton nuclear plants are losing now, but stopped short of providing specific net income impacts. First management pointed to "cash flow" loses of more than $800M from 2009-2015 on a pre-tax basis (note this calculation also excludes all hedge benefits). When pushed for clarity on the outlook for the future, management indicated that the plants would lose $140M in 2017 (also excludes any hedge value which EXC treats at the portfolio rather than plant level). This was also later clarified to be a free cash flow number (i.e. including capex). Estimating capital expenditures at the plants and D&A, we can take a stab at projected net losses. We calculate capex for the plants of just over $200M (this includes $126M for nuke fuel cost and the rest is base spending). We then calculate D&A using asset values included in the 10K (assuming 15-year service life) and then factor in nuclear fuel amortization. With these estimates we can then calculate a net income loss of about $165M as shown below. That said, there are fleet wide costs allocated to these plants so uplift from closure is probably less, and we intend to wait for more clarity from management before adjusting our estimates.

Figure 1: 2017 Net Income Estimate for Quad Cities, Clinton ($ in Millions)

Net Income	(166)	No hedge benefit
D&A	242	Estimated based on asset values, nuke fuel amortization
CFO	76	Back out capex from FCF
Capex	(216)	Nuke fuel and base capex assumption
FCF	(140)	EXC provided on Q1-16 call

Source: Deutsche Bank

Leverage comments point to lower ExGen EBITDA by 2020

EXC did not update the projected Debt to EBITDA ratio trajectory shown for ExGen in the Q4 earnings presentation, but in response to our question mgmt did comment on the proforma outlook now that POM has closed. The Q4 presentation assumed the POM deal did not close and showed ExGen Net Debt to EBITDA declining from 3.2x in 2016 to 2.3x by 2018 – at the time this was an important component of a well-received investor call. Management now expects the ExGen leverage ratio to decline to 2.7x over five years (i.e. by 2020) as EXC will be using more of the cash flow generated at ExGen to fund the larger regulated capex budget including the newly-acquired POM utilities. In addition there will also be a larger dividend payment to fund with POM closed (absent POM the shares issued for the deal would have been bought back) but this is in turn tempered by a more regulated business mix overall.

As well as the 2020 target of 2.7x Net Debt to EBITDA, CFO Thayer also articulated an expectation that ExGen debt would be reduced by $3B over this same time frame. With ExGen net debt of $8.6B at year-end 2015 this reduction would imply $5.6B by 2020. If we relate this to the 2020 Net Debt to EBITDA target of 2.7x, we calculate implied ExGen EBITDA in the low-$2B range which is well below the $3B+ we currently project for 2018. While 2020 PJM forward curves are hardly robust so far out, this implied forecast certainly suggests a fair degree of caution on EXC's part around the sustainability of either last year's capacity pricing, and/or longer-term power/gas prices. We expect further clarity on these longer-term numbers at the August Analyst Day.

Utility only growing 7-9% with POM?

EXC clarified on the call that they expect their utilities proforma for POM to grow net income by 7-9%. This is the growth that management had been expecting EXC's legacy utilities to achieve so we had expected a pick-up when adding POM's under-earning utilities as the ROE gap is closed. That said, mgmt was fairly clear on Friday's call that they see growth of 7-9% with POM in the mix as well. Currently, we assume the utilities grow about 10% on average from 2016 through 2018, and this assumption may have to be tempered post the Analyst Day.

Valuation

We value the utility segment by applying a 16.5x P/E multiple to our 2018 estimates for ComEd, PECO and the POM utilities, and an average 16x multiple for BG&E. We believe POM earnings merit a premium as we anticipate faster growth at this segment as EXC closes the gap between authorized and earned returns in 2018 and beyond. We also apply premiums to ComEd earnings given potential upside from higher interest rates as ComEd's ROE is set based on a formula incorporating the yield on the 30-year Treasury bond. We also give PECO a premium given a history of over-earning.

Meanwhile, we value ExGen by applying a 6.0x EV/EBITDA multiple to our 2018 estimate. Our 6.0x multiple is now relatively in line with our targeted EV/EBITDA multiple for merchant generators. On the one hand, we believe a modest discount is merited given ExGen's still more limited free cash flow generation than IPP peers given their capital-intensive nuke fleet. On the flipside, EXC's nuclear fleet merits some incremental value vs. IPPs given the potential for new revenue streams from clean energy standards (NY and IL) or a carbon trading scheme. EXC also has a stronger credit and leverage profile at ExGen than pure-play IPP peers.

Similar to our valuation methodologies for FirstEnergy and Entergy, we take a hybrid approach for the corporate / other segment. We derive a $33 price target when valuing the corporate segment EBITDA at a 6.0x EBITDA multiple and then subtracting corporate debt as a direct offset to equity value (effectively treating parent debt as being on the merchant business). In our other scenario we see a $38 price target valuing EXC's corporate earnings drag of $0.18/sh using our regulated distribution P/E multiple of 16x (treats parent debt as being on the utilities). Our $36 price target reflects a 50/50 weighting of these two book-end valuation approaches, which we believe is currently appropriate. As the regulated component grows, however, and if ExGen follows through on planned de-levering, arguably over time we could justify shifting our weighting towards the higher Valuation B scenario.

Figure 2: Exelon Sum-of-the-Parts Valuation

Source: Deutsche Bank

Risks

Downside risks include lower-than-expected forward power prices, worse-than-anticipated rate case outcomes, lower retail margins given heightened competition, higher interest rates, and a lower-than-expected contribution from POM. Upside risks include higher gas and power prices, lower interest rates, and a better-than-anticipated contribution from the POM utilities.

Equity rating key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.

Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Regulatory Disclosures

1.Important Additional Conflict Disclosures

Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

2.Short-Term Trade Ideas

Deutsche Bank equity research analysts sometimes have shorter-term trade ideas (known as SOLAR ideas) that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. These trade ideas can be found at the SOLAR link at http://gm.db.com.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt securities of the issuers it writes on.

Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. This report is provided for informational purposes only. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst’s judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA, NFA and SIPC. Analysts employed by non-US affiliates may not be associated persons of Deutsche Bank Securities Incorporated and therefore not subject to FINRA regulations concerning communications with subject companies, public appearances and securities held by analysts.

Germany: Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorized under German Banking Law and is subject to supervision by the European Central Bank and by BaFin, Germany's Federal Financial Supervisory Authority.

Imminent Decisions on Distressed Nukes are Welcome News for Investors

Rating Buy, Target to $38 from $37.50

EXC reported 1Q16 adjusted EPS of $0.68, down slightly from $0.71 in 1Q15 but right on consensus and near the top of its previously articulated $0.60 - $0.70 guidance range. FY'16 guidance was reaffirmed. At the utilities, unfavorable weather was a -$0.05 drag at PECO and ComEd YoY in the quarter, partially offset by increased electric distribution rates at the former (+$0.02) and higher earnings due to increased capital investment at the latter (+$0.02). BGE was -$0.01 lower YoY on higher storm costs. ExGen was -$0.01 lower YoY, primarily due to lower power prices in MISO, NYISO, and ISO-NE and higher depreciation costs due to increased nuclear decommissioning amortization and capex. Partial offsetting this were the timing of nuclear outages (19 fewer refueling days), higher capacity prices, and fewer plant outages not related to refueling (overall nuclear capacity factor was 95.8% 1Q16 vs. 92.7% in 1Q15). PHI results were included for the eight days from 3/24-3/31/16, but were not a significant driver of operating earnings (+$2mm). Adjusted earnings exclude $394mm in after-tax direct benefits paid to customers as part of EXC's acquisition of PHI, as well as -$0.03 of financing impacts associated with the acquisition. Adjusted EPS guidance for FY16 was reaffirmed at $2.40-$2.70 (our estimate is $2.60). ExGen's expected contribution to operating earnings was reduced -$0.05 from a range of $1.25-$1.35 to $1.20-$1.30 and parent drag was increased (-$0.10) on the allocation of debt issued for the PHI transaction, but these were offset by the inclusion of PHI operating earnings of +$0.15 at the midpoint of newly issued $0.10 - $0.20 guidance.

The fate of Clinton and Quad Cities will be determined soon - hinging on whether Illinois passes supportive legislation before the end of the current session and also, in the case of the latter, whether the units clear the upcoming PJM auction. On 5/5/16, Exelon announced the filing of a Next Generation Energy Plan with the state. The plan includes more aggressive energy efficiency programs, low-income assistance and solar funding, an expanded renewable portfolio standard, a reduction in fixed delivery charges for customers, and - most importantly for ExGen – would create a zero emission standard that would be financially supportive of units like the struggling Clinton and Quad reactors. Unlike the previously proposed Low Carbon Portfolio Standard, the zero emission standard would more judiciously allocate subsidies towards those plants truly "at-risk", which would be determined through a comprehensive review by the Illinois Commerce Commission and the Illinois Power Agency. EXC has asserted that legislation must be passed before the end of the session on 5/31/16 if the plants are to continue to operate, and Quad Cities must also clear the upcoming PJM BRA for '19/'20. That auction begins on 5/11/16, with results to be posted on 5/24/16. If these conditions do not occur, Clinton and Quad Cities will be closed on 5/31/17 and 5/31/18, respectively – consistent with their existing capacity market obligations. We expect that closing the plants would be earnings and cash flow accretive as EXC has indicated that in aggregate the plants have drained $800mm in cash from 2009 through 2015. However early retirement of these units would result in a funding shortfall relative to their NRC minimum nuclear decommissioning trust fund (NDTF) obligations. This could require additional parent guarantees (per EXC's worst case estimates as of the 10-K) of as much as $315mm for Clinton and $65mm for Quad Cities to allow ExGen to access its NDTF fund for *radiological* decommissioning costs. There may also be an additional $165mm and $180mm cost required for each of the facilities if they are not granted an exemption allowing them to use the NDTF for *spent fuel management* and *site-restoration* costs (with Quad Cities better positioned to receive the waiver). These fuel and site restorations costs would not need to be funded immediately and would be capable of being expensed over the next 10 years so wouldn't be a massive drag on cash. EXC will update the aforementioned cost estimates in its 10-Q filing this week.

Our '16 / '17 / '18 EPS forecast is now $2.60 / $2.70 / $2.75 – flat in '16 and '18 but up $0.05 in 2017 vs. our prior estimate on the latest company disclosures, hedging guidance, and fresher commodity curves. EXC reaffirmed net income guidance at its legacy utilities and its articulated 7-9% earnings growth rate for '15-'18, but lowered ExGen gross margin guidance for '17 / '18 by -$150mm / -$200mm using 3/31/16 forward pricing. Generation hedging for '16 / '17 / '18 increased to 97.5% / 70.5% / 38.5% from the 91.5% / 61.5% / 29.5%, with average power hedges at lower prices in MISO and PJM but generally higher in ERCOT, NYISO, and ISO-NE. Higher generation output is projected in 2016 relative to the last call, but with lower output projected in '17 and '18 primarily on tempered dispatch of its natural gas plants due to the run up in gas pricing. Our updated $2.60 / $2.70 / $2.75 forecast is based on higher 5/4/16 power curves and would have been higher given the commodity price improvement since 3/31/16 but for the inability of ExGen to take the Domestic Production Activities Deduction (DPAD) through 2018 stemming from additional NOLs and bonus depreciation from the acquired PHI utilities. EXC estimates ExGen's higher effective tax rate resulting from said inability to utilize DPAD is a -$0.01 / -$0.07 drag on '17 / '18 EPS (returning to normal by 2019). Still, the ~$775mm in additional cash flow ($0.80/share of cash on '18 pro forma shares) attributable to bonus D and NOLs at PHI will help supplement the FCF generated by ExGen.

Price target increased to $38.00 from $37.50, rating BUY. Taking apart EXC in the wake of the POM deal we think its regulated business is worth +/-$28/share, assuming the utility business (including POM net of all parent financing costs) contributes $1.70 of EPS in '18 and deserves a 16.5X P/E. That is on an average valuation multiple for the peer group currently for a utility portfolio at EXC with the opportunity for sustained EPS growth from rising earned ROEs at three of its four subsidiaries (BGE, ComEd and POM). That means ExGen is trading at $7.50 a share or roughly $7.5bn of equity value on '18 pro forma shares (a ~5.6x EV/EBITDA multiple on our '18 estimates and a debt/EBITDA multiple of +/-3X). Our target price of $38 assumes an EV/EBITDA multiple a little less than a turn higher at 6.5X which we think is reasonable looking at ExGen's free cash flow profile, cost of capital, and the useful life of its assets. If the forward curve for gas were to rise to $3.25/MMBtu over the next 12 months, and ExGen's valuation expanded to 6.5X, all things equal the stock could rise to $39. On the flip side, at 15X '18 EPS, assuming a $0.50/MMBtu decline in natural gas in FY '18 and no multiple expansion at ExGen we see downside to $32.50/share.

What's next? EXC is intent on shepherding its energy plan through the Illinois legislature before the session concludes at the end of this month, in the hopes that its passage will adequately support continued operation of Clinton and Quad Cities beyond 5/31/17 and 5/31/18, respectively. The PJM '19/'20 BRA begins on 5/11/16 and results will be posted on 5/24/16. The MD PSC is expected to issue a final order on the pending BGE electric and gas distribution rate case by 6/3/16. EXC plans to make rate filings in Pepco and Delmarva's DC, DE, and MD jurisdictions within the next few months, which would result in much-needed rate relief across all of the legacy PHI companies beginning next year. The IL PSC will issue a final order on ComEd's electric FRP by December, with a final order by the MD PSC on the electric distribution rate case PEPCO filed on 4/19/16 expected then as well. A NJBPU decision on the electric distribution rate filing ACE made on 3/22/16 is expected in 1H'17. Possible action by NY that might create zero emissions credits to subside nuclear generation like Ginna can be beneficial to margins out the curve, though by the company's admission the state would have to move relatively quickly for it to be meaningful beyond expiration of its RSSA after 3/31/17. EXC will be hosting an Analyst Day on 8/10/16 in Philadelphia.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of legislation to bolster the revenue stream of the Illinois nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in Illinois to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Buy, Hold or Sell) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%
Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

General Disclosures

This report is provided for informational purposes only. It is not to be construed as an offer to buy or sell or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy in any jurisdiction. The information and opinions in this report were prepared by registered employees of Evercore ISI. The information herein is believed by Evercore ISI to be reliable and has been obtained from public sources believed to be reliable, but Evercore ISI makes no representation as to the accuracy or completeness of such information. Opinions, estimates and projections in this report constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Evercore and are subject to change without notice. In addition, opinions, estimates and projections in this report may differ from or be contrary to those expressed by other business areas or groups of Evercore and its affiliates. Evercore ISI has no obligation to update, modify or amend this report or to otherwise notify a reader thereof in the event that any matter stated herein, or any opinion, projection, forecast or estimate set forth herein, changes or subsequently becomes inaccurate. Facts and views in Evercore ISI research reports and notes have not been reviewed by, and may not reflect information known to, professionals in other Evercore affiliates or business areas, including investment banking personnel.

Evercore ISI does not provide individually tailored investment advice in research reports. This report has been prepared without regard to the particular investments and circumstances of the recipient. The financial instruments discussed in this report may not suitable for all investors and investors must make their own investment decisions using their own independent advisors as they believe necessary and based upon their specific financial situations and investment objectives. Securities and other financial instruments discussed in this report, or recommended or offered by Evercore ISI, are not insured by the Federal Deposit Insurance Corporation and are not deposits of or other obligations of any insured depository institution. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the price or value of, or the income derived from the financial instrument, and such investor effectively assumes such currency risk. In addition, income from an investment may fluctuate and the price or value of financial instruments described in this report, either directly or indirectly, may rise or fall. Estimates of future performance are based on assumptions that may not be realized. Furthermore, past performance is not necessarily indicative of future performance.

Evercore ISI salespeople, traders and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed in this research. Our asset management affiliates and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

Electronic research is simultaneously available to all clients. This report is provided to Evercore ISI clients and may not be redistributed, retransmitted or disclosed, in whole or in part, or in any form or manner, without the express written consent of Evercore ISI. Receipt and review of this research report constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion or information contained in this report (including any investment recommendations, estimates or target prices) without first obtaining express permission from Evercore ISI.

This report is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.

For investors in the UK: In making this report available, Evercore makes no recommendation to buy, sell or otherwise deal in any securities or investments whatsoever and you should neither rely or act upon, directly or indirectly, any of the information contained in this report in respect of any such investment activity. This report is being directed at or distributed to, (a) persons who fall within the definition of Investment Professionals (set out in Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the “Order”)); (b) persons falling within the definition of high net worth companies, unincorporated associations, etc. (set out in Article 49(2) of the Order); (c) other persons to whom it may otherwise lawfully be communicated (all such persons together being referred to as “relevant persons”). This report must not be acted on or relied on by persons who are not relevant persons.

COMPANY UPDATE

Exelon Corporation (EXC)

SunTrust Robinson Humphrey

Raising 2016-17 Estimates, But Trimming 2018 Estimate

What's Incremental To Our View

Based on updated assumptions, we have raised our 2016-17 estimates but reduced our 2018 estimates. Separately, we identify $0.08-$0.12 of upside potential to our 2017-18 estimates. Our PT remains $39.

IMPORTANT POINTS

- EXC reported 1Q results of $0.68 vs $0.71, above our estimate of $0.64 but in line with consensus of $0.68. The positive variance (vs our estimate) was primarily driven by lower than expected operating costs at the Generation segment.

- Based on updated hedge disclosures, latest forward commodity curves, and revised tax rate assumptions, we have made the following changes to our full year estimates: 2016 is increased to $2.51 from $2.47; 2017 is increased to $2.63 from $2.62; and 2018 is reduced to $2.71 from $2.74.

- Our revised estimates could still have two sources of potential upside: (1) higher than expected contribution from the Pepco acquisition – based on timing of rate case filings and incremental cost reduction opportunities, we believe there could be $0.03-$0.05 of annual upside to our 2017-18 estimates; and (2) the final status of the Clinton (1069mw) and Quad Cities (1403mw) nuclear plants – management has indicated its decision to retire these two nuclear plants unless there is regulatory relief from Illinois, which could result in $0.05-$0.07 of incremental annual earnings.

- EXC trades at an 8% P/E multiple discount to the peer group (based on our 2018 estimates). In addition, our calculations suggest that, in the current stock price, EXC's merchant generation assets are being valued at a 23% EV/EBITDA multiple discount to the publicly traded merchant generation peer group (based on our 2018 estimates).

- Assuming a 14.3x P/E multiple on our 2018 estimate of $2.71 (in line with the peer group), we derive our price target of $39. We reiterate our **Buy** rating.

- We have included our revised 2016-18 earnings and cash flow models in this report.

Note

1) Our PECO Implied Margin ratios factor in the impact of Gas sales.

2) Rate Base - Com Ed: $10.8bn in 2015, $11.8bn in 2016E, $12.8bn in 2017E, $13.6bn in 2018E; PECO: $6.0bn in 2015, $6.5bn in 2016E, $6.9bn in 2017E, $7.3bn in 2018E;
BGE: $5.0bn in 2015, $5.3bn in 2016E, $5.9bn in 2017E, $6.4bn in 2018E; PEPCO: $8.8bn in 2016E and $9.7bn in 2017E, $10.2bn in 2018E.

3) Earned ROE - Com Ed: 8.0% in 2015, 8.3% in 2016, 8.2% in 2017, 8.3% in 2018; PECO: 11.7% in 2015, 11.5% in 2016, 11.3% in 2017, 11.2% in 2018;
BGE: 10.7% in 2015, 10.2% in 2016, 10.5% in 2017, 10.2% in 2018; PEPCO: 5.5% in 2016, 5.5% in 2017, 6.5% in 2018.

4) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

5) We assume EXC achieves its growth targets for Power and Non Power new business for 2016 onwards.

6) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

7) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

8) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

9) Forward curves as of 5/5/16.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Incremental earnings potential from eliminating losses at the nuclear plants, earnings accretion and strategic benefits of the POM acquisition, and a discounted stock valuation imply attractive total return prospects.

Valuation and Risks

VALUATION

Assuming a P/E multiple of 14.3x our 2018 estimate of $2.71 (in line with the peer group), we derive our price target of $39.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending regulatory issues

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

- **AEP/FE** – Ohio Regulators Approve PPAs - Benefits AEP, FE - Merchants Likely Turn to FERC
- **1Q16 Preview**: Can Utilities Maintain Altitude? For Now. Regulateds Getting Toppy with Power Looking More Troughy

Wind – IRS extends window for wind projects to qualify for tax credits

- The IRS extended the construction timeframe in which wind projects must be completed to qualify for tax credits.
- The safe harbor provision regarding the construction timeframe was extended to four years from two years.
- Congress extended production tax credits for wind in December 2015 for projects that began construction before 2020, but credits phase-down to 80%

for projects beginning construction in 2017, 60% in 2018, and 40% for projects beginning construction in 2019.

Guggenheim takeaway: *The ruling is likely to spur wind development activity for longer, potentially pushing the buildout further out; however, we see most of the NT impact accruing to equipment manufactures and early stage developers, with limited impact on wind-exposed names under our coverage. NEE is the largest wind developer in our coverage, although there has been growing activity from utilities such as DUK and SO. See our note HERE.*

SO – Settlement reached in NJ regarding acquisition of AGL Resources

- SO and AGL Resources (GAS, NC, $66.14) reached a settlement agreement with parties to the New Jersey regulatory proceeding evaluating their proposed acquisition.
- In addition to agreements regarding governance, ring-fencing, and employee/ community benefits, AGL's NJ customers would receive direct rate credits of $17.5mm; a rate case would be filed by September 1, 2016, and another filed within 3 years of a decision on the 2016 case.
- The rate filing would be premised on AGL's capital structure (excluding goodwill), ROE would not recognize a risk premium associated with SO, shared service costs would not exceed 2015 levels, and transaction cost savings would go to customers.
- Parties to the settlement include SO, AGL, the NJ Division of Rate Counsel, BPU staff and the NJ Large Energy Users Coalition.
- SO and AGL requested the NJ BPU approve the settlement at its 6/29/16 open meeting.

Guggenheim takeaway: *SO is one step closer to closing the acquisition with this settlement; requiring approval here in NJ, and in IL. SO expects to close the transaction in 2H16; we are optimistic it could close in 3Q16. We estimate this transaction could be 6-7% accretive in outer years. Still waiting on a procedural schedule for NJ. For our analysis on this transaction, see HERE.*

SO – $900mm equity offering to finance AGL acquisition is priced

- SO announced a $900mm offering of common shares to finance its acquisition of AGL Resources has been priced.
- Underwriters will sell 18.3mm shares in one or more transactions at market prices.
- The offering is expected to close 5/11/16.

Guggenheim takeaway: *Offering in line and expected. As we mention above, SO is one step closer to closing the acquisition with a settlement in NJ. SO expects to close the transaction in 2H16, and we are optimistic it could close in 3Q16. We estimate this transaction could be 6-7% accretive in outer years. For our analysis on this transaction, see HERE.*

.

SO – Acquiring majority interest in 102MW solar facility in CA

- SO announced plans to acquire a 51% interest in a 102MW solar project in CA.
- SO is acquiring the interest from SunPower (SPWR, NEUTRAL, $17.39).
- The facility will sell its output to PCG through a 20-year PPA.
- The project began construction last year and is expected to be in-service in October.

***Guggenheim takeaway:** Southern Power continues to grow and could, one day, be 15-20% of consolidated results IF management wants to grow the business this large – there are opportunities. With continued investment in renewables, Southern Power will continue to become a larger driver of the story, in our view. These assets are a good strategic fit within Southern Power.*

SO – Technical conference to address concern around SO market power

- FERC announced a technical conference to discuss issues related to market-based rate authorizations of SO subsidiaries.
- The announcement follows previous findings of SO subsidiaries failing to refute market-power concerns in several areas.
- Conference participants will look for improvements to the current auction and explore alternative methods of mitigation to address market-power concerns.
- The conference will be 5/23/16.

***Guggenheim takeaway:** Too early to really tell what this means. At this juncture, not a material concern for SO, in our view.*

PCG – ALJ recommends GT&S rate increase

- The ALJ issued a proposed decision in PCG's 2015 GT&S rate case, recommending a $394mm increase for 2015 (a net increase of $230mm after penalties), attrition rate increases of $238mm for 2016, and an incremental $126mm for 2017.
- The net increase for 2015 includes $164mm of penalties for Ex Parte violations.
- The recommendation is based on a $2.9bn ratebase and 10.4% ROE at 52% equity ratio.
- The PUC could issue a decision 6/9/16 at the earliest, while determination of CapEx subject to the $850mm San Bruno penalty is expected later this year.

***Guggenheim takeaway:** An ALJ recommendation brings PCG one step closer to a long-awaited resolution of the GT&S case – and some much needed guidance around growth and dividend. This could be the start of a much needed inflection point but let's see if something else doesn't crop up. PCG initiated the GT&S case in December 2013, initially requesting $555mm for 2015 based on a $3.56bn ratebase (revised later). Penalties mentioned above stem from a November 2014 order regarding Ex Parte communication violations, and a provision from the 2015 San Bruno order requiring PCG shareholders to fund $850mm of pipeline improvements in the still-pending GT&S case (at least $689mm of which will be CapEx precluded from rate base and therefore a return of and on investment).*

NEE – Renewed interest in sale of FL municipal utility

- Local media reports of renewed interest from the Vero Beach city council regarding a sale of the municipal utility to NEE.
- The city council reportedly authorized its electric counsel to coordinate a meeting with a municipal power utility, the utilities commission, and other county representatives.
- NEE's previous plans to acquire the municipal utility were side-tracked by wholesale power contracts with the city that couldn't be unraveled.

***Guggenheim takeaway:** Relatively small for NEE, but we have highlighted municipal utility acquisitions as a trend we believe will continue in the industry since we initiated coverage last year. The question is, can the electric utility business go the way of the water utility business as far as acquisitions in the muni sector – plenty of opportunities, in our view.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenues, which includes investment banking revenues.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgment. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conduct an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research.

Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results.

Investment Thesis

Travis Miller, Sector Director, 06 October 2015

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Andrew Bischof, CFA, Eq. Analyst, 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★ 12 May 2016	35.46 USD 12 May 2016	30.00 USD	1.18	3.52 12 May 2016	3.59 12 May 2016	31.46 12 May 2016	Utilities - Diversified	Standard

Close Competitors	Currency (Mil)	Market Cap	TTM Sales	Operating Margin	TTM/PE
Public Service Enterprise Group Inc PEG	USD	23,455	9,896	27.70	15.06
FirstEnergy Corp FE	USD	14,427	14,998	16.50	21.10
Entergy Corp ETR	USD	13,776	11,203	-3.07	0.00

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50%

higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 24 March 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder

among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results.

Andrew Bischof, CFA, Eq. Analyst, 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

Exelon Threatens to Close Clinton, Quad Cities Nuclear Plants...Again

Travis Miller, Sector Director, 06 May 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after management used its strongest language to-date regarding the fate of the beleaguered Clinton and Quad Cities nuclear plants, both in Illinois. Management said it will close the plants by 2017-18 but also said the decision depends on several developments. These are the same contingencies management has used for several years to justify postponing the plant closures.

We continue to assume Exelon closes Clinton, Quad Cities, and two other nuclear plants by 2020. But we think management remains hesitant to pull the cord. The plants could survive if Illinois politicians pass what effectively is a nuclear bailout bill; Clinton clears the Mid-Continent Independent System Operator's 2017-18 capacity auction next spring; or Quad Cities clears the mid-Atlantic capacity auction later this month. Quad Cities cleared last year's 2017-18 transitional capacity auction at $151.50 per megawatt-day but did not clear the 2018-19 auction at $215/MW-day. We expect similar clears in this year's 2019-20 auction.

Exelon earned $0.68 per share on an adjusted basis and reaffirmed its $2.40-$2.70 per share 2016 guidance, in line with our estimates. It continues running its nuclear fleet at world-class levels, achieving a 95.8% capacity factor in the quarter and proving it can capture the full upside if energy prices rebound. Exelon also filed rate cases at two of its newly acquired Pepco utilities, which should boost earnings and returns on the pricey acquisition if the utilities receive constructive decisions.

Are Utilities Overheated or Are Their Yields too Good to Pass Up?

Travis Miller, Sector Director, 20 April 2016

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Cutting Midcycle Energy Prices; Fair Value Estimates for Power Producers to Fall 10%-40%

Travis Miller, Sector Director, 06 April 2016

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U.S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is $3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount. The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have 10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on all companies within the next week.

Exelon and Pepco Join to Sing a Duet: At Last

Travis Miller, Sector Director, 24 March 2016

We are reaffirming our $35 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after Washington, D.C., regulators approved its acquisition of Pepco with a 2-1 vote on Wednesday afternoon. The companies closed the acquisition following the vote, nearly two years after initially announcing the deal. Pepco stock will no longer trade as of March 24.

For Exelon, we have already incorporated $1 per share of value dilution into our fair value estimate, based on a 75% probability of the deal closing at Exelon's $27.25 per share cash offer. Using a 100% probability doesn't have a material impact on that dilution estimate.

We were confident that the management teams would negotiate until they received deal approval, even though the companies missed several self-imposed deadlines. The terms of the settlement in Washington, D.C., will benefit customers there, but they are too small to have a material impact on the $12 billion deal, including debt.

Reaffirming Outlook for Now, but Politics Could Yank Cord Out From Exelon-Pepco

Travis Miller, Sector Director, 02 March 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after fissures opened in the settlement negotiations related to Washington, D.C., regulatory approval for the companies' proposed merger. As of midday Wednesday, Pepco was trading at a 10% discount to our fair value estimate and a 15% discount to Exelon's $27.25 per share cash offer price, both of which we think offer good return opportunities.

Our Pepco fair value estimate continues to include a 75% probability that the settling parties--including D.C. Mayor Muriel Bowser's office, the D.C. regulatory staff, the lead consumer advocate group, and the companies--will reach an agreement regulators will approve. We think the companies remain committed to the deal and will accept any final settlement terms regulators approve. The key points of contention appear to involve less than $100 million, an immaterial impact on the $6.8 billion deal value.

However, we think the companies could be losing control over the outcome, and the deal could now be a proxy political fight among several D.C. entities. If we get more information that supports this theory, we would be inclined to cut our probability of the deal closing to 50%, leading to a $2 per share cut in Pepco's fair value estimate. We include $5 per share of incremental value in our fair value estimate for Pepco. A probability change is not likely to have a material impact on the $1 per share of value dilution we include in our Exelon fair value estimate related to the deal.

We continue to think Exelon management would be willing to go past its previously stated March 4 deadline if settlement negotiations move forward.

We are reaffirming our narrow moat and stable moat trend ratings for both companies.

The Never-Ending Exelon-Pepco Saga Gets Another Two Weeks of Life, but No Real Changes

Travis Miller, Sector Director, 29 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Washington, D.C., regulators again rejected Exelon's offer to acquire Pepco but left open an option for the companies to gain approval.

We still include $1 per share of value dilution in our fair value estimate for Exelon and $5 per share of incremental value for Pepco, based on a 75% probability that the companies will close the transaction at Exelon's $27.25 cash offer. We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Even though Washington, D.C., regulators formally rejected the deal, we think the companies are committed enough to closing the deal that there is a good likelihood they will accept the terms set by regulators. The terms sap additional value from shareholders to benefit customers through rate refunds and benefits, limiting cost reductions, returning merger synergies to customers, and limiting recovery for some costs. However, the D.C. service territory is not big enough for the incremental lost value to have an impact on our valuation of the deal. The terms also set strict ringfencing provisions, but those are typical and don't have any impact on our valuations.

Exelon management had said they would terminate the deal if regulators did not approve it by March 4, but we don't think that date is sacred any longer, as regulators have said the companies have until March 11.

Pepco Reports In-Line 2015 Earnings; Exelon Believes D.C. Will Approve Merger by March 4

Charles Fishman, Eq. Analyst, 22 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Pepco reported in-line 2015 earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining the approval of the District of Columbia Public Service Commission and being completed following an agreement with D.C. Mayor Muriel Bowser that sweetened the benefits for customers and provided other benefits to the district.

Pepco Holdings or Exelon may terminate the merger agreement if the D.C. commission fails to issue a final order approving the merger without condition or modification of the terms of the settlement agreement by March 4. Exelon has made clear that if the D.C. commission does not approve the deal by March 4, it will terminate the agreement. However, Exelon's CEO recently said he believes D.C. will approve the transaction at its next meeting before the termination date.

Pepco reported 2015 adjusted operating earnings of $1.28, in line with our estimate and up from $1.27 per share in 2014. Earnings were favorably affected by rate increases due to infrastructure investment, partially offset by higher operation and maintenance expenses.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

Supreme Court Validates Our View That Carbon Regulation Remains Highly Uncertain

Travis Miller, Sector Director, 11 February 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities and coal miners after the U.S. Supreme Court's 5-4 decision to stay the Environmental Protection Agency's Clean Power Plan. This validates our view that it's too early, and the outcome too uncertain, to make any investment decisions based on the current terms of the CPP or any carbon regulation. We do not include any CPP-related impacts in our fair value estimates.

At a minimum, we expect that the decision will push implementation one or two years past the 2022-30 phase-down period and will embolden political opposition to carbon regulation. In addition, it means that a Supreme Court ruling against the CPP could actually reverse industry trends. When the Supreme Court struck down the EPA's MATS rule in June, the decision was largely moot because most power plants were proceeding to implement the rule or had already made plans to retire. The CPP timeline is so long that there is plenty of time for the courts or politicians to nullify it or make major revisions to it.

For most utilities, power and gas market economics and renewable energy policies remain the most important variables for investors to consider.

The Supreme Court's decision comes as good news for coal miners that haven't had any for some time. However, we don't view today's announcement as a panacea for the coal industry's woes, as natural gas remains at prices at which coal struggles to compete. However, our view that natural gas prices will rise in the coming years hasn't changed, so we maintain our fair value estimates for both Peabody and Cloud Peak. Peabody's high leverage means it has less time to wait--the basis for its extreme uncertainty rating.

Exelon Surprises With 2.5% Dividend Growth Target

Travis Miller, Sector Director, 03 February 2016

We are reaffirming our $35 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company reported earning $2.49 per share on an adjusted basis in 2015. This was in line with our estimate and within management's guidance range.

We think the biggest positive for shareholders was management's announcement that it plans to recommend to the board a 2.5% annual dividend increase for at least the next three years, likely starting in the second half of 2016. We had not expected a dividend increase until at least 2018, given our expected plateau in earnings the next three years.

If the board accepts this policy, we estimate Exelon's payout ratio will top 50% by 2018. This is at the high end of what we think is reasonable for Exelon's cash flow profile and debt load. We're not yet entirely convinced that management has added sufficient regulated distribution earnings and contracted generation revenue to decouple cash flows from volatile energy markets.

Management continues to evaluate the economic viability of at least three nuclear plants. We assume in our long-term forecasts that Exelon closes three plants representing 25% of its fleet capacity. We also expect a final Pepco merger decision by early March, in line with timeline indications from Washington, D.C., regulators. We continue to assume $1 per share of value dilution based on a 75% probability of the deal closing as proposed. We don't think ongoing legal challenges in other states will be an impediment.

We remain long-term bullish on fixed-price PJM power, especially in the East, where we expect gas prices to strengthen as takeaway capacity increases and demand remains more robust than other regions. This drives the bulk of the value upside as of early February. Our $8.4 billion midcycle gross margin outlook for Exelon Generation remains at the high end of management's 2018 outlook range.

Supreme Court Sides With Demand Response; No Fair Value Impacts

Andrew Bischof, CFA, Eq. Analyst, 25 January 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Morningstar Equity Research Methodology

Fundamental Analysis

At Morningstar, we believe buying shares of superior businesses at a discount and allowing them to compound over time is the surest way to create wealth in the stock market. The long-term fundamentals of businesses, such as cash flow, competition, economic cycles, and stewardship, are our primary focus. Occasionally, this approach causes our recommendations to appear out of step with the market, but willingness to be contrarian is an important source of outperformance and a benefit of Morningstar's independence. Our analysts conduct primary research to inform our views on each firm's moat, fair value and uncertainty.

Economic Moat

The economic moat concept is a cornerstone of Morningstar's investment philosophy and is used to distinguish high-quality companies with sustainable competitive advantages. An economic moat is a structural feature that allows a firm to sustain excess returns over a long period of time. Without a moat, a company's profits are more susceptible to competition. Companies with narrow moats are likely to achieve normalized excess returns beyond 10 years while wide-moat companies are likely to sustain excess returns beyond 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe lower-quality no-moat companies will see their returns gravitate toward the firm's cost of capital more quickly than companies with moats will. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

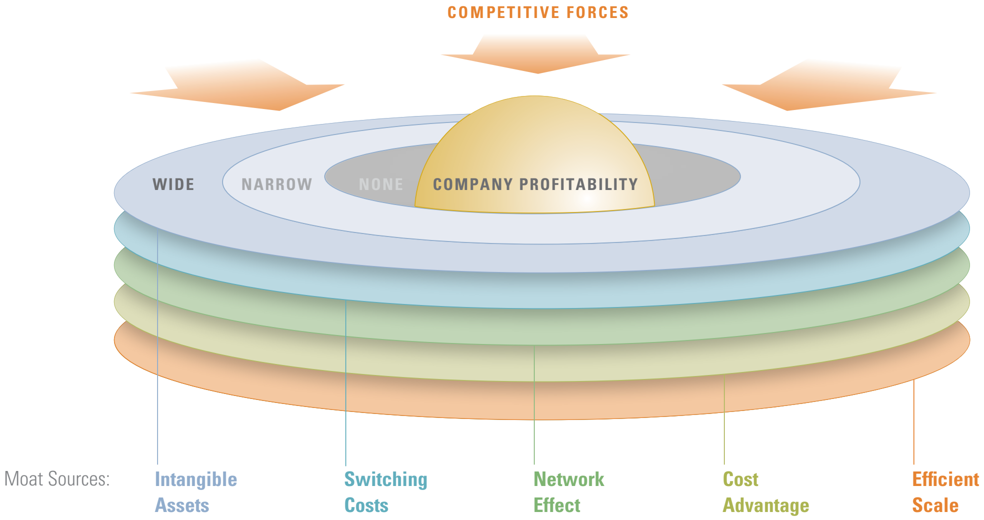
Fair Value Estimate

Our analyst-driven fair value estimate is based primarily on Morningstar's proprietary three-stage discounted cash flow model. We also use a variety of supplementary fundamental methods to triangulate a company's worth, such as sum-of-the-parts, multiples, and yields, among others. We're looking well beyond next quarter to determine the cash-generating ability of a company's assets because we believe the market price of a security will migrate toward the firm's intrinsic value over time. Economic moats are not only an important sorting mechanism for quality in our framework, but the designation also directly contributes to our estimate of a company's intrinsic value through sustained excess returns on invested capital.

Uncertainty Rating

The Morningstar Uncertainty Rating demonstrates our assessment of a firm's cash flow predictability, or valuation risk. From this rating, we determine appropriate margins of safety: The higher the uncertainty, the wider the margin of safety around our fair value estimate before our recommendations are triggered. Our uncertainty ratings are low, medium, high, very high, and extreme. With each uncertainty rating is a corresponding set of price/fair value ratios that drive our recommendations: Lower price/fair value ratios (<1.0) lead to positive recommendations, while higher price/fair value

Economic Moat



Morningstar Equity Research Methodology

ratios (>1.0) lead to negative recommendations. In very rare cases, the fair value estimate for a firm is so unpredictable that a margin of safety cannot be properly estimated. For these firms, we use a rating of extreme. Very high and extreme uncertainty companies tend to have higher risk and volatility.

Quantitatively Driven Valuations

To complement our analysts' work, we produce Quantitative Ratings for a much larger universe of companies. These ratings are generated by statistical models that are meant to divine the relationships between Morningstar's analyst-driven ratings and key financial data points. Consequently, our quantitative ratings are directly analogous to our analyst-driven ratings.

Quantitative Fair Value Estimate (QFVE): The QFVE is analogous to Morningstar's fair value estimate for stocks. It represents the per-share value of the equity of a company. The QFVE is displayed in the same currency as the company's last close price.

Valuation: The valuation is based on the ratio of a company's quantitative fair value estimate to its last close price.

Quantitative Uncertainty: This rating describes our level of uncertainty about the accuracy of our quantitative fair value estimate. In this way it is analogous to Morningstar's fair value uncertainty ratings.

Quantitative Economic Moat: The quantitative moat rating is analogous to Morningstar's analyst-driven economic moat rating in that both are meant to describe the strength of a firm's competitive position.

Understanding Differences Between Analyst and Quantitative Valuations

If our analyst-driven ratings did not sometimes differ from our quantitative ratings, there would be little value in producing both. Differences occur because our quantitative ratings are essentially a highly sophisticated analysis of the analyst-driven ratings of comparable companies. If a company is unique and has few comparable companies, the quantitative model will have more trouble assigning correct ratings, while an analyst will have an easier time recognizing the true characteristics of the company. On the other hand, the quantitative models incorporate new data efficiently and consistently. Empirically, we find quantitative ratings and analyst-driven ratings to be equally powerful predictors of future performance. When the analyst-driven rating and the quantitative rating agree, we find the ratings to be much more predictive than when they differ. In this way, they provide an excellent second opinion for each other. When the ratings differ, it may be wise to follow the analyst's rating for a truly unique company with its own special situation, and follow the quantitative rating when a company has several reasonable comparable companies and relevant information is flowing at a rapid pace.

Price/Fair Value Morningstar data as of May 12, 2016

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

-Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures.

Unless otherwise provided in a separate agreement, you may use this Report only in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of this document is Morningstar Inc. Redistribution, in any capacity, is prohibited without permission. The information, data, analyses and opinions presented herein do not constitute investment advice; are provided solely for informational purposes and therefore are not an offer to buy or sell a security; and are not warranted to be correct, complete or accurate, nor may they be construed as a representation regarding the legality of investing in the security/ies concerned, under the applicable investment or similar laws or regulations of any person or entity accessing this report. The opinions expressed are as of the date written and are subject to change without notice. Except as otherwise required by law, Morningstar, its affiliates, and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions or their use. You should seek the advice of your financial, legal, tax, business and/or other consultant, and read all relevant issue documents pertaining to the security/ies concerned, including without limitation, the detailed risks involved in the investment, before making an investment decision.

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. As the price / value / interest rate of a security fluctuates, the value of your investments in the said security, and in the income, if any, derived therefrom may go up or down.

Analyst Note 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

EXC/PEG: Power Operations Remain Undervalued

Sector Rating: Diversified Electric Utilities, Market Weight

				FY EPS				Valuation Range	
	Rating		Price	2016		2017			
Ticker	Curr.	Prior	05/18/16	Curr.	Prior	Curr.	Prior	Curr	Prior
Diversified Electric Utilities									
EXC	1	NC	$33.85	$2.55	NC	$2.70	NC	$42-43	$39-40
PEG	1	NC	44.33	2.85	NC	2.90	NC	$51-52	NC

Source: Company data and Wells Fargo Securities, LLC estimates 1= Outperform, 2 = Market Perform, 3 = Underperform, V = Volatile
⚑ = Company is on the Priority Stock List NA = Not Available, NC = No Change, NE = No Estimate, NM = Not Meaningful

- **Summary.** Despite the strong year-to-date relative performances of EXC & PEG, our valuation analyses indicate that the current share prices arguably reflect highly pessimistic outlooks for the companies' unregulated (merchant generation) operations. We conclude that EXC's and PEG's valuations imply EV/EBITDA multiples for the companies' unregulated operations of 5.0x and 3.6x, respectively--well below our estimated fair values of 7x (EXC) and 5x (PEG). We reiterate our Outperform ratings for both EXC & PEG. Our 12 month valuation range for EXC is $42-43/share (up from $39-40/share) and for PEG it remains $51-52/share.

- **Taking Stock of EXC & PEG.** Year to date, shares of EXC and PEG have materially outperformed the S&P Utilities providing investors total returns of 24% & 16%, respectively, versus the index up 11%. The strong relative performance coupled with the PJM Interconnection's upcoming capacity auction results for 2019/20 (due May 24) prompts us to critically evaluate our thought process toward the companies. Specifically, is there sufficient upside potential on a risk-adjusted basis to warrant sticking with our Outperform ratings? We conclude that there is.

- **Our Approach.** We consistently approach our valuation analyses of EXC and PEG by focusing on the following questions: (1) What is the implied equity value of the merchant generation operations based on the current share prices of the companies? (2) What do we perceive the value of the merchant operations to be based on reasonable discounted cash flow (DCF) analysis? (3) Is there a meaningful difference (positive or negative) between the implied value and our perceived value?

- **Valuation Methodology.** We performed sum-of-the-parts analyses for both EXC and PEG consisting of a P/E multiple analysis for the regulated operations and a DCF analysis for the unregulated operations. Our DCF analyses are based on what we consider to be reasonable assumptions (laid out in the note) for long-term power & capacity prices, ongoing capex and nuclear asset lives. Based on our calculations, EXC's and PEG's current share prices arguably reflect no meaningful cash flow contribution from the companies' nuclear fleets beyond 2030 – vs. operating licenses that run (on avg.) through 2040.

Taking Stock of EXC & PEG

Year to date, shares of EXC and PEG have outperformed the S&P Utility index providing investors total returns of 24% & 16%, respectively, versus the index up 11%. ***The strong relative performance coupled with the PJM Interconnection's (PJM's) upcoming capacity auction results for 2019/20 (due May 24) prompts us to critically evaluate our thought process toward the companies. Specifically, is there sufficient upside potential on a risk-adjusted basis to warrant sticking with our Outperform ratings? We conclude that there is.***

We consistently approach our valuation analyses of EXC and PEG by focusing on the following questions:

- What is the implied equity value of the merchant generation operations based on the current share prices of the companies?
- What do we perceive the value of the merchant operations to be based on reasonable discounted cash flow (DCF) analyses?
- Is there a meaningful difference (positive or negative) between the implied value and our perceived value?

While a DCF approach requires difficult assumptions around long-term power and capacity prices, we have been mindful to not stray too far from the forward curves as it relates to power prices. As for capacity prices, we have elected to assume a capacity price that represents a modest discount to the cost of new entry (CONE). ***Bottom line, our DCF analyses are not based on power prices that are $10/MWh (megawatt hour) higher than the current forward curves nor do we assume a long-term capacity price in excess of $250/MW-Day (megawatt day).*** We have long resisted the temptation to make bold power market calls.

EXC: Meaningful Upside Potential Remains – But Positive Thesis Depends on Longevity of Nuclear Fleet

We reiterate our Outperform rating and increase our 12-18 month valuation range for EXC to $42-43/share from $39-40/share. We continue to believe EXC shares offer investors an attractive risk/reward opportunity. Figure 1 lays out the primary features and considerations underlying our positive thesis.

Figure 1: EXC – Our Pros & Cons

EXC Outperform Thesis: Pros & Cons	
Features	**Considerations**
Core regulated utility operations	Challenging regulatory environments (MD, DC)
→ Account for 50-60% of annual EPS (incl. parent)	Active rate case cycle in Pepco jurisdictions
→ Strong 5-yr annual EPS growth potential of 7-9%	
Attractive 3.7% dividend yield & 2-3% annual growth	
Largest owner / operator of nuclear in U.S.	Increase in early shutdowns due to poor economics / other
	→ Oyster Creek ('19) & likely Clinton ('17) & Quad Cities ('18)
Implied ExGen EV/EBITDA multiple of ~5X	→ Risk of higher capex / shutdowns for structural problems
→ Valuation arguably reflects pessimistic outlook	
→ Our DCF analysis indicates ~7X multiple appropriate	
ExGen has strong financial profile	Capital allocation
→ FFO/Debt of 40%+	→ Disciplined approach for new ExGen opportunities?
→ Debt-to-EBITDA of 3X	
→ FCF of $1.6-2.0B annually (excl. growth capex)	
→ Intent to harvest ExGen cash to fund utility capex	

Source: Wells Fargo Securities, LLC estimates and Company Filings

Valuation

Our valuation range is based on a sum-of-the-parts analysis:

- **Utility / Parent** – we value Utility/Parent at $27/share under a P/E multiple analysis. We apply the Regulated Electric group's median 2017 P/E multiple of 17.0x to our 2018 EPS estimate of $1.58. We apply the group's 2017 multiple to our 2018 EPS estimate due to the forward looking nature of our valuation range. On a present value (PV) basis, we value Utility/Parent at $26/share by applying the 2018 peer group median multiple of 16.3x to our 2018 EPS estimate.

- **ExGen** – we value Exelon Generation (ExGen) at $16/share on a forward basis and at ~$14.50/share on a PV basis. Our analysis is based on a DCF analysis. Key assumptions:

    - $8.6B of unlevered free cash flow (FCF) during the period 2016-20E. Our outlook incorporates EXC's planned capex, which includes over $2B of growth capex.

    - Annual average unlevered FCF of $2.1B during the period 2021-2040E and, conservatively, no FCF after 2040. The time period reflects the weighted average remaining life of ExGen's nuclear fleet based on the existing license extension periods (we assume the LaSalle units receive 20-yr license extensions). Our post-2021 unlevered FCF excludes the Clinton, Quad Cities and Oyster Creek nuclear facilities, which we assume are shut down in 2017, 2018 & 2019, respectively.

    - Flat post-2020 around-the-clock (ATC) power prices of $30/MWh and $36/MWh for ExGen's Midwest and Mid-Atlantic fleets, respectively. This compares with current 2020 forward NiHub and PJM West ATC prices of $28/MWh and $33/MWh, respectively. In addition, we add an incremental $2-3/MWh marketing margin to the ATC price.

    - Average capacity prices of $200/MW-Day, which compares with 2018/19 capacity prices of $200+/MW-Day for the high majority of ExGen's PJM fleet.

    - Annual maintenance capex of ~$800MM, which is consistent with ExGen's base capex guidance during the period 2016-2018.

    - A discount rate of ~7% based on a calculated weighted average cost of capital (WACC). We assume 60%/40% equity/debt financing, a 10% cost of equity and a 4.5% pre-tax cost of debt. We also assume ExGen debt of $9B.

Our DCF analysis suggests that ExGen should trade at an EV/EBITDA multiple of ~7x versus the current market price implied EV/EBITDA of ~5x. Please refer to Figure 2 for the assumptions underlying our EV/EBITDA analysis along with key assumptions underlying our DCF and our PV share price analysis.

Figure 2: ExGen Appears Undervalued Under Our Valuation Analysis

ExGen EV/EBITDA Analysis		Notes
ExGen: DCF Present Value / Sh	**$14.49**	DCF analysis - key assumptions:
		(1) Unlevered FCF of $8.6B during 2016-20
		(2) Unlevered FCF of $2.1B annually 2021-2040
		(3) Post-2020 NiHub/PJM East power prices of $30 & $36/MWh
		(4) Post-2020, avg capacity price of $200-MW-day
		(5) Discount Rate of ~7% (WACC)

EBITDA - 2016E	$3,260	
Implied EV/EBITDA (X)	**5.0**	Multiple implied by EXC's current valuation

EXC Present Value Analysis		**Notes**
Utility / Parent PV	$25.81	
ExGen	$14.49	
Total PV	$40.30	
EXC Share Price	**$33.85**	Holding all other variables constant, the current valuation
% Discount	*16%*	reflects no ExGen unlevered FCF after 2030.

Source: Wells Fargo Securities, LLC estimates and Company Filings

While we believe our DCF analysis is predicated on reasonable assumptions, 2040 is a long way away and much can happen between now and then that could have both positive and negative impacts on our end result. That being said, in our view, EXC's current valuation reflects an overly pessimistic outlook for ExGen. Some food for thought:

- **Power Price Sensitivity** - Holding all other variables constant, we believe EXC's current valuation would be supported by $1.4B of unlevered FCF during the period 2021-2040E. Isolating for power prices, we estimate that this would require lower realized power prices of ~$8/MWh.

  Of course, a $700MM decrease in unlevered FCF relative to our $2.1B base case could be accomplished by a combination of factors including lower power *and* capacity prices, higher capex needs and/or earlier than anticipated plant shut downs.

- **Nuclear Life Sensitivity** – Holding all other variables constant, we estimate that EXC's current valuation effectively reflects the retirement of the nuclear fleet at year-end 2030. While we have seen a number of earlier than expected nuclear unit retirements due to economic reasons, we are not convinced that we will see the mass extinction of PJM's nuclear fleet within the next 10-15 years given (1) likely major reliability issues in such an event and (2) lack of other baseload options (aside from gas-fired combined cycle plants).

PEG: Steady as She Goes

We continue to hold PEG in high esteem largely due to management's clear strategic vision and highly disciplined approach to the merchant generation business. We believe new unregulated generation projects are only undertaken after undergoing a robust vetting process with a keen eye toward achieving satisfactory risk-adjusted returns. Since 2010, PSEG Power's development activities have been limited to the Keys Energy Center, a 755 MW combined cycle facility, the 540 MW Sewaren repowering project and the small New Haven peaking generation project.

In our view, PEG's management does an excellent job of (1) executing on strategic objectives, (2) managing variables where the company has the ability to exercise some level of control (i.e., regulatory relationships, operations & maintenance (O&M) costs, capital allocation decisions) and (3) de-risking the impact to shareholders of variables over which the company has little to no control (commodity price sensitivity). We also believe the company is not beholden to the integrated structure (utility + merchant generator) and is open to other structures if it is deemed to be in the best long-term interest of shareholders. Please refer to Figure 3 for pros and cons to our positive thesis.

Figure 3: PEG – Our Pros & Cons

PEG Outperform Thesis: Pros & Cons	
Features	**Considerations**
Best-in-class regulated utility (PSE&G) → Accounts for 60%+ of annual EPS → Strong annual EPS growth potential of 8%+ → Rider/tracker recovery for majority of growth capex → Constructive NJ & FERC regulatory environments	PSEG Power EPS volatility masks PSE&G EPS growth → Our 2016-20E consolidated EPS CAGR is 4%
Shareholder friendly management team	
Attractive 3.6% dividend yield & 5-6% annual growth	
Diversified & attractively located generation fleet	Potential new transmission could hurt generation margins Planned pipeline capacity expected to impact margins by '18 Nuclear related risks - unplanned outages / compliance costs
Strong financial profile → Estimated FFO/Debt of 23-25% ('17-20) → Debt-to-EBITDA of 3.0-3.5X ('17-20) → Use of PSEG FCF to fund PSE&G investment	
Implied PSEG Power EV/EBITDA multiple of ~3.5X → Valuation arguably reflects pessimistic outlook → Our DCF analysis indicates ~5X multiple appropriate	

Source: Wells Fargo Securities, LLC estimates and Company Filings

Valuation

Our $51-52/share valuation range is based on a sum-of-the-parts analysis:

- **PSE&G & Other (PSEG Enterprise/Other)** – we value PSE&G & Other at $40-41/share under a P/E multiple analysis. We apply a 7.5% premium to the Regulated Electric group's median 2017 P/E multiple of 17.0x to our 2018 EPS estimate of $2.21. We apply the group's 2017 multiple to our 2018 EPS estimate due to the forward looking nature of our valuation range. On a present value (PV) basis, we value PSE&G & Other at $39/share by applying a 7.5% premium to the 2018 peer group median multiple of 16.3x to our 2018 EPS estimate.

- **PSEG Power** – we value PSEG Power at $11/share on a forward basis and at $10/share on a PV basis. Our analysis is based on DCF analysis. Key assumptions:

  - $1.8B of unlevered free cash flow (FCF) during the period 2016-20E, which is based on our estimates and reflects growth investment related to the Keys Energy Center and Sewaren.

  - Annual average unlevered FCF of $0.8B during the period 2021-2030. Post-2030, we only assume cash flow contributions from PSEG Power's nuclear fleet and newer combined cycle facilities (Bethlehem, Keys and Sewaren). We assume the nuclear units plus combined cycle facilities account for ~$550MM of annual unlevered FCF and that this contribution gradually phases down in conjunction with the estimated lives of the facilities – the licenses for PSEG Power's nuclear units expire during the period 2033-2046.

  - Flat post-2020 around-the-clock (ATC) power prices of $36/MWh. This compares with current 2020 forward PJM East and PJM West ATC prices of $36/MWh and $33/MWh, respectively. In addition, we add an incremental $2-3/MWh margin to the ATC price.

  - Average capacity prices of $200/MW-Day, which compares with 2018/19 capacity prices of $200+/MW-Day for PSEG Power's PJM fleet.

  - Annual maintenance capex of ~$250-300MM, which is consistent with PSEG Power's base capex guidance during the period 2016-2018. We assume the base capex declines to ~$150MM annually post-2030, which is consistent with our assumption that PSEG Power's coal/oil/combustion turbine fleet is fully retired at year-end 2030.

  - A discount rate of ~6.5% based on a calculated weighted average cost of capital (WACC). We assume 60%/40% equity/debt financing, a 9% cost of equity and a 4.5% pre-tax cost of debt. We also assume PSEG Power debt of $2.2B.

  Our DCF analysis suggests that PSEG Power should trade at an EV/EBITDA multiple of ~5x versus the current market price implied EV/EBITDA of ~3.5x. Please refer to Figure 4 for the assumptions underlying our EV/EBITDA analysis along with key assumptions underlying our DCF and our PV share price analysis.

Figure 4: PEG Shares Remain Attractive Under Our Valuation Analysis

PSEG Power EV/EBITDA Analysis		**Notes**
PSEG Power: DCF Present Value / Sh	**$10.02**	DCF analysis assumptions: (1) Unlevered FCF of $1.8B during 2016-20 (2) Annual unlevered FCF of $0.8B annually 2021-2030 (3) Post-2030, unlevered FCF phases out with estimated end of lives for nuclear units and new combined cycle units (4) Discount Rate of ~6.5% (WACC)

EV/EBITDA of PSEG Power based on our DCF analysis		
Enterprise Value		
PSEG Power Debt	$2,237	
Equity	$5,081	$10.02 (PV / sh) X 507M shares outstanding
Total EV	$7,318

Rating Basis Information:

EXC Thesis: Our Outperform rating is largely premised on our belief that the share price undervalues ExGen's nuclear fleet. Other positive features include above average utility rate base growth prospects and strong nuclear operational track record.

PEG Thesis: We believe the current valuation offers investors a compelling risk/reward proposition. Features include a premier utility growth story, a well-positioned and diverse unregulated generation asset mix and a strong financial position, in our opinion.

Valuation Range Information:

EXC Basis and Risks: Our $42-43/sh valuation range is premised on a sum-of-the-parts analysis (1) Utility & Parent value of $27/sh (based on a P/E multiple of ~17.0X our 2018E of $1.58) and (2) $16/sh for ExGen using a DCF analysis. Risks include commodity price sensitivity and unfavorable regulatory/policy developments.

PEG Basis and Risks: Our valuation range is based on a sum-of-the-parts (we value PSE&G, Enterprise, & Other at $40-41/sh and Power at $11/sh) and residual income analysis. Risks to our valuation include earnings sensitivity to commodity prices, operational risks and unfavorable regulatory/political developments.

NEE/ED – New study estimates $8bn of secondary costs for Mountain Valley
NEE – Hunt withdraws request for TX PUC re-consideration of Oncor acquisition
EXC – IL lawmakers considering surcharge to support nuclear today

DUK – NC DEQ proposes intermediate risk for remaining coal ash basins, requests more time

- The North Carolina Department of Environmental Quality (NCDEQ) proposed "intermediate" risk rankings for remaining coal ash basins.
- Acknowledging their work was not complete, the NCDEQ also requested the Coal Ash Management Act (CAMA) be modified to allow its risk classifications to be re-considered.
- DUK is evaluating its options, but will seek to clarify CAMA within 60 days.

Guggenheim takeaway: *The NCDEQ released their proposed rankings yesterday to comply with their deadline, but acknowledges repairs are currently being made to some of the underlying basins, and requested the state general assembly modify CAMA so the risk classifications can be re-considered; creating an opportunity for DUK to potentially lower risk classifications, in our view. Without modifications to CAMA, the proposed risk rankings would be considered final, implying the state would have chosen a more expensive option; DUK notes the basins are operating safely and the additional scope of work would not have measurable environmental benefits. DUK's previous ~$4bn cost estimate was based on weighted average probabilities of risk classifications, and the additional work entailed with incremental intermediate rankings could increase that cost estimate to upwards of $10bn, or toward the high-end of DUK's previous $2-10bn range. In light of the additional cost and the short window of time for the general assembly to act, we would expect CAMA will be modified to allow more time for final recommendations; we would also expect an update on the earlier-end of the 60-day timeframe offered by DUK. We recently hosted investor meetings with DUK management, for additional takeaways see our note HERE.*

PPL – New Brexit poll shows majority want to stay

- A new poll conducted by Ipsos Mori shows 55% of respondents intend to vote to stay in the European Union, an 18-point lead over respondents intending to vote to leave.

Guggenheim takeaway: *Stay vote would be a positive for PPL, and it looks like the British are leaning incrementally more toward staying. Management believes the UK will ultimately vote to stay, and we agree based on simple logic: younger demographics lean toward exit while older lean to stay, and the latter generally has better attendance. PPL is managing the uncertainty by opportunistically positioning hedges to capture upside, which we believe is more suffice than over-reacting to potential downside. We believe UK's unique rate design also offsets risk as rates would adjust for the accompanying inflation. PPL will likely revisit hedges and update investors after the referendum. We recently hosted investor meetings with senior management where this was a key area of interest, for additional takeaways and our thoughts on valuing the UK segment, see our note HERE.*

EXC – Delmarva files for rate increases in Delaware; 11% electric and 13% gas increase

- Delmarva Power & Light filed for a $63mm electric rate increase (11%) and a $22mm gas rate increase (13%).
- The rate increase is premised upon a 10.6% ROE and 49.4% equity on a $846mm electric rate base and a $362mm gas rate base.

Guggenheim takeaway: *EXC will be seeking rate increases at recently-acquired Pepco utilities in order to achieve its targeted accretion. Management expects 7-9% regulated growth but we could see the top end achieved given better-than-expected opportunities at Pepco utilities – over 200-300bps of lag. As we have seen with EXC's past performance including cost reduction and attaining higher earned ROEs at BG&E, we expect improved earnings with POM – EXC has managed its legacy utilities well, so we believe material reduction in POM regulatory lag is a reality in time. We model rate cases at each utility with procedural cycles ranging between 9-12 months. Accretion steps up in 2017 – we continue to estimate $0.04, $0.11, and $0.12 for '16/'17/'18 – this will likely be upsized following the Analyst day. Outside of annual rate case filings, we expect POM to reduce regulatory drag through cost reductions (~40% is recovered by EXC), which should help improve consolidated earned ROE by ~1% starting in 2017, in our view. We model a weighted average ROE between distribution, transmission, and gas delivery for '16/'17/'18 of 5.7%, 6.0% and 7.0%, respectively. See our prior pro-forma analysis HERE.*

AEP/FE/EXC – PJM finds proposed $341mm transmission project offers most cost savings

- PJM staff made their final recommendation for a proposed $341mm transmission project to relieve congestion along the MD/PA border.
- The project would be developed by AEP, EXC, and FE.
- Staff found the proposed project provides the most savings in terms of production costs and PJM congestion.
- The PJM board will consider the project this summer.

Guggenheim takeaway: *Positive for would-be developers AEP, EXC, and FE; we continue to highlight examples of AEP's robust transmission development pipeline.*

ED – Distributed resources advancing toward wholesale market participation in NY

- FERC approved tariff revisions set to become effective later this year supporting participation from distributed resources in New York's wholesale power market.
- NYISO proposed tariff revisions earlier this year to allow customers with excess on-site generation to bid into their wholesale markets.

Guggenheim takeaway: *Efforts intended to remove obstacles or advance opportunities for distributed resources continue to gain momentum in NY, driven by the state's REV initiative. We don't see REV as a near-term concern. ED's revenue is decoupled from sales volume, so sales erosion from customer-sited resources isn't a near-term concern; long-term pressure on ratebase growth is limited because CapEx is largely driven by replacement or reliability (rather than capacity need). That said, an IPP in NY would not avoid the impact of lower volume and lower prices. We recently hosted investor meetings with senior management for ED, for additional takeaways see our note HERE.*

DUK – NY AG calls for FERC sanctions against Constitution developers related to permitting

- The New York Attorney General alleges Constitution pipeline developers carried out construction activities without proper permitting.
- The AG requests FERC sanction developers for activity such as clearing trees without necessary permits.

Guggenheim takeaway: *DUK's interest in the pipeline is through its pending acquisition of PNY (NC, $59.77). The pipeline was approved by federal regulators but met opposition from "fracktivists" in NY and was ultimately blocked. NOTE: Investors shouldn't look at the issues of this pipe and try and draw any correlations with other projects like PennEast or Access Northeast. This issue is very NY specific.*

NEE/ED – New study estimates $8bn of secondary costs for Mountain Valley

- Local media highlighted a study that estimates secondary costs of the Mountain Valley Pipeline (MVP) to be at least $8bn.
- The study defines secondary costs as those incurred by local residents, businesses, and governments; including lost property value, tourism, and timber production, amongst other things.
- The study was commissioned by a group called "Protect our Water, Heritage, Rights," which opposes the pipeline.

Guggenheim takeaway: *Developers estimate the pipeline will cost ~$3.5bn. Another study by the INGAA had contrary findings, concluding there is no measurable impact on the sales price of properties located along or in proximity to a natural gas pipeline. We wouldn't expect indirect costs such as these to be considered by FERC; project moving right along. Construction is expected to begin in late 2016, with in-service targeted for 4Q18; MVP contributes $0.08 of EPS to our 2018 NEE estimates, and $0.06 to our 2018 ED estimates.*

NEE – Hunt withdraws request for TX PUC re-consideration of Oncor acquisition

- The Hunt-led investor consortium looking to acquire Oncor electric withdrew their request for the Texas PUC to re-consider approval, and to dismiss the proceeding.
- If the investor group can salvage plans to acquire Oncor, Hunt indicated they would file a new request for approval.

- The TX PUC approved the Hunt-led investor consortium's proposed acquisition of Oncor in March, which entailed converting the utility into a REIT, however the commission postponed decisions around sharing of transaction cost savings.

Guggenheim takeaway: *While NEE has not come out and made a public comment that they are re-interested in the Oncor assets, it has been reported by Bloomberg. We think these assets are a great strategic fit for NEE; despite a potential equity raise, the transaction should be noticeably accretive – this should not present an overhang on NEE shares.*

EXC – IL lawmakers considering surcharge to support nuclear today

- IL lawmakers are considering a bill today that would allow EXC to implement a surcharge on customer bills to support nuclear plants in the state.

Guggenheim takeaway: *Ultimately, we should see some form of legislation and the clock is ticking. The state cannot afford to lose over ~3GW of clean energy capacity – not only from a reliability standpoint but also from an environmental policy standpoint. See our last thoughts on EXC nuclear rationalization* HERE*.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-

service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Exelon Corporation $33.99 (SP): Announces PJM Capacity Auction Results ***/ Jon Donnel (713) 393-4503 jonathand@howardweil.com***

Quick Take: The Company announced that its Quad Cities and Three Mile Island nuclear plants did not clear the PJM capacity auction for the delivery year 2019/2020, increasing the need for supportive legislation in Illinois to ensure that the Quad Cities and Clinton units can remain in operation. EXC continues to rally support for its preferred bill, but doubt remains it will be passed by the Company's deadline of the end of this month. Lower capacity clearing prices throughout the RTO relative to the prior auction is a negative for the stock, all else equal, but we believe EXC would benefit from either the passage of supportive legislation or the retirement of these nuclear units that have lost about $800 million over the past seven years. We believe the stock is fairly valued at current levels and **maintain our Sector Perform rating.**

PJM Auction Results: The PJM RTO announced clearing prices for its capacity auction for delivery year 2019/2020. Clearing prices decreased relative to results for the 2018/2019 auction across the entire RTO. EXC has indicated its Quad Cities and Three Mile Island nuclear units did not clear the current auction and therefore will not receive capacity revenues for the 2019/2020 delivery year. The Company had indicated on its recent conference call that Quad Cities and Clinton (that operates in the MISO RTO) would require incremental support from either the current auction or new legislation in order to remain in service. Please see our Takeaway Note dated May 9, 2016 for more details.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Contents

Analyst Note 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

ComEd zone cleared at $202.77/MW-day for CP and $182.77/MW-day for base, slightly below the strong 2018-19 results. Base capacity cleared in the Eastern Mid-Atlantic Area Council, or EMAAC, LDC cleared at CP clearing at $119.77/MW-day for CP and $99.77/MW-day for base generation, but well below last year's $210/MW-day for base

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Investment Thesis

Travis Miller, Sector Director, 06 October 2015

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Andrew Bischof, CFA, Eq. Analyst, 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★ 24 May 2016	33.99 USD 24 May 2016	30.00 USD	1.13	3.67 24 May 2016	3.74 24 May 2016	30.16 24 May 2016	Utilities - Diversified	Standard

Close Competitors	Currency (Mil)	Market Cap	TTM Sales	Operating Margin	TTM/PE
Public Service Enterprise Group Inc PEG	USD	22,767	9,896	27.70	14.62
FirstEnergy Corp FE	USD	13,629	14,998	16.50	19.92
Entergy Corp ETR	USD	13,241	11,203	-3.07	0.00

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50%

higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 24 March 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder

among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Supreme Court Sides With Demand Response; No Fair Value Impacts

Andrew Bischof, CFA, Eq. Analyst, 25 January 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Exelon Surprises With 2.5% Dividend Growth Target

Travis Miller, Sector Director, 03 February 2016

We are reaffirming our $35 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company reported earning $2.49 per share on an adjusted basis in 2015. This was in line with our estimate and within management's guidance range.

We think the biggest positive for shareholders was management's announcement that it plans to recommend to the board a 2.5% annual dividend increase for at least the next three years, likely starting in the second half of 2016. We had not expected a dividend increase until at least 2018, given our expected plateau in earnings the next three years.

If the board accepts this policy, we estimate Exelon's payout ratio will top 50% by 2018. This is at the high end of what we think is reasonable for Exelon's cash flow profile and debt load. We're not yet entirely convinced that management has added sufficient regulated distribution earnings and contracted generation revenue to decouple cash flows from volatile energy markets.

Management continues to evaluate the economic viability of at least three nuclear plants. We assume in our long-term forecasts that Exelon closes three plants representing 25% of its fleet capacity. We also expect a final Pepco merger decision by early March, in line with timeline indications from Washington, D.C., regulators. We continue to assume $1 per share of value dilution based on a 75% probability of the deal closing as proposed. We don't think ongoing legal challenges in other states will be an impediment.

We remain long-term bullish on fixed-price PJM power, especially in the East, where we expect gas prices to strengthen as takeaway capacity increases and demand remains more robust than other regions. This drives the bulk of the value upside as of early February. Our $8.4 billion midcycle gross margin outlook for Exelon Generation remains at the high end of management's 2018 outlook range.

Supreme Court Validates Our View That Carbon Regulation Remains Highly Uncertain

Travis Miller, Sector Director, 11 February 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities and coal miners after the U.S. Supreme Court's 5-4 decision to stay the Environmental Protection Agency's Clean Power Plan. This validates our view that it's too early, and the outcome too uncertain, to make any investment decisions based on the current terms of the CPP or any carbon regulation. We do not include any CPP-related impacts in our fair value estimates.

At a minimum, we expect that the decision will push implementation one or two years past the 2022-30 phase-down period and will embolden political opposition to carbon regulation. In addition, it means that a Supreme Court ruling against the CPP could actually reverse industry trends. When the Supreme Court struck down the EPA's MATS rule in June, the decision was largely moot because most power plants were proceeding to implement the rule or had already made plans to retire. The CPP timeline is so long that there is plenty of time for the courts or politicians to nullify it or make major revisions to it.

For most utilities, power and gas market economics and renewable energy policies remain the most important variables for investors to consider.

The Supreme Court's decision comes as good news for coal miners that haven't had any for some time. However, we don't view today's announcement as a panacea for the coal industry's woes, as natural gas remains at prices at which coal struggles to compete. However, our view that natural gas prices will rise in the coming years hasn't changed, so we maintain our fair value estimates for both Peabody and Cloud Peak. Peabody's high leverage means it has less time to wait--the basis for its extreme uncertainty rating.

Pepco Reports In-Line 2015 Earnings; Exelon Believes D.C. Will Approve Merger by March 4

Charles Fishman, Eq. Analyst, 22 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Pepco reported in-line 2015 earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining the approval of the District of Columbia Public Service Commission and being completed following an agreement with D.C. Mayor Muriel Bowser that sweetened the benefits for customers and provided other benefits to the district.

Pepco Holdings or Exelon may terminate the merger agreement if the D.C. commission fails to issue a final order approving the merger without condition or modification of the terms of the settlement agreement by March 4. Exelon has made clear that if the D.C. commission does not approve the deal by March 4, it will terminate the agreement. However, Exelon's CEO recently said he believes D.C. will approve the transaction at its next meeting before the termination date.

Pepco reported 2015 adjusted operating earnings of $1.28, in line with our estimate and up from $1.27 per share in 2014. Earnings were favorably affected by rate increases due to infrastructure investment, partially offset by higher operation and maintenance expenses.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

The Never-Ending Exelon-Pepco Saga Gets Another Two Weeks of Life, but No Real Changes

Travis Miller, Sector Director, 29 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Washington, D.C., regulators again rejected Exelon's offer to acquire Pepco but left open an option for the companies to gain approval.

We still include $1 per share of value dilution in our fair value estimate for Exelon and $5 per share of incremental value for Pepco, based on a 75% probability that the companies will close the transaction at Exelon's $27.25 cash offer. We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Even though Washington, D.C., regulators formally rejected the deal, we think the companies are committed enough to closing the deal that there is a good likelihood they will accept the terms set by regulators. The terms sap additional value from shareholders to benefit customers through rate refunds and benefits, limiting cost reductions, returning merger synergies to customers, and limiting recovery for some costs. However, the D.C. service territory is not big enough for the incremental lost value to have an impact on our valuation of the deal. The terms also set strict ringfencing provisions, but those are typical and don't have any impact on our valuations.

Exelon management had said they would terminate the deal if regulators did not approve it by March 4, but we don't think that date is sacred any longer, as regulators have said the companies have until March 11.

Reaffirming Outlook for Now, but Politics Could Yank Cord Out From Exelon-Pepco

Travis Miller, Sector Director, 02 March 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after fissures opened in the settlement negotiations related to Washington, D.C., regulatory approval for the companies' proposed merger. As of midday Wednesday, Pepco was trading at a 10% discount to our fair value estimate and a 15% discount to Exelon's $27.25 per share cash offer price, both of which we think offer good return opportunities.

Our Pepco fair value estimate continues to include a 75% probability that the settling parties--including D.C. Mayor Muriel Bowser's office, the D.C. regulatory staff, the lead consumer advocate group, and the companies--will reach an agreement regulators will approve. We think the companies remain committed to the deal and will accept any final settlement terms regulators approve. The key points of contention appear to involve less than $100 million, an immaterial impact on the $6.8 billion deal value.

However, we think the companies could be losing control over the outcome, and the deal could now be a proxy political fight among several D.C. entities. If we get more information that supports this theory, we would be inclined to cut our probability of the deal closing to 50%, leading to a $2 per share cut in Pepco's fair value estimate. We include $5 per share of incremental value in our fair value estimate for Pepco. A probability change is not likely to have a material impact on the $1 per share of value dilution we include in our Exelon fair value estimate related to the deal.

We continue to think Exelon management would be willing to go past its previously stated March 4 deadline if settlement negotiations move forward.

We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Exelon and Pepco Join to Sing a Duet: At Last

Travis Miller, Sector Director, 24 March 2016

We are reaffirming our $35 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after Washington, D.C., regulators approved its acquisition of Pepco with a 2-1 vote on Wednesday afternoon. The companies closed the acquisition following the vote, nearly two years after initially announcing the deal. Pepco stock will no longer trade as of March 24.

For Exelon, we have already incorporated $1 per share of value dilution into our fair value estimate, based on a 75% probability of the deal closing at Exelon's $27.25 per share cash offer. Using a 100% probability doesn't have a material impact on that dilution estimate.

We were confident that the management teams would negotiate until they received deal approval, even though the companies missed several self-imposed deadlines. The terms of the settlement in Washington, D.C., will benefit customers there, but they are too small to have a material impact on the $12 billion deal, including debt.

Cutting Midcycle Energy Prices; Fair Value Estimates for Power Producers to Fall 10%-40%

Travis Miller, Sector Director, 06 April 2016

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U.S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is $3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount. The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have

10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on all companies within the next week.

Are Utilities Overheated or Are Their Yields too Good to Pass Up?

Travis Miller, Sector Director, 20 April 2016

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Exelon Threatens to Close Clinton, Quad Cities Nuclear Plants...Again

Travis Miller, Sector Director, 06 May 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after management used its strongest language to-date regarding the fate of the beleaguered Clinton and Quad Cities nuclear plants, both in Illinois. Management said it will close the plants by 2017-18 but also said the decision depends on several developments. These are the same contingencies management has used for several years to justify postponing the plant closures.

We continue to assume Exelon closes Clinton, Quad Cities, and two other nuclear plants by 2020. But we think management remains hesitant to pull the cord. The plants could survive if Illinois politicians pass what effectively is a nuclear bailout bill; Clinton clears the Mid-Continent Independent System Operator's 2017-18 capacity auction next spring; or Quad Cities clears the mid-Atlantic capacity auction later this month. Quad Cities cleared last year's 2017-18 transitional capacity auction at $151.50 per megawatt-day but did not clear the 2018-19 auction at $215/MW-day. We expect similar clears in this year's 2019-20 auction.

Exelon earned $0.68 per share on an adjusted basis and reaffirmed its $2.40-$2.70 per share 2016 guidance, in line with our estimates. It continues running its nuclear fleet at world-class levels, achieving a 95.8% capacity factor in the quarter and proving it can capture the full upside if energy prices rebound. Exelon also filed rate cases at two of its newly acquired Pepco utilities, which should boost earnings and returns on the pricey acquisition if the utilities receive constructive decisions.

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results.

Andrew Bischof, CFA, Eq. Analyst, 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Andrew Bischof, CFA, Eq. Analyst, 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

Morningstar Equity Research Methodology

Fundamental Analysis

At Morningstar, we believe buying shares of superior businesses at a discount and allowing them to compound over time is the surest way to create wealth in the stock market. The long-term fundamentals of businesses, such as cash flow, competition, economic cycles, and stewardship, are our primary focus. Occasionally, this approach causes our recommendations to appear out of step with the market, but willingness to be contrarian is an important source of outperformance and a benefit of Morningstar's independence. Our analysts conduct primary research to inform our views on each firm's moat, fair value and uncertainty.

Economic Moat

The economic moat concept is a cornerstone of Morningstar's investment philosophy and is used to distinguish high-quality companies with sustainable competitive advantages. An economic moat is a structural feature that allows a firm to sustain excess returns over a long period of time. Without a moat, a company's profits are more susceptible to competition. Companies with narrow moats are likely to achieve normalized excess returns beyond 10 years while wide-moat companies are likely to sustain excess returns beyond 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe lower-quality no-moat companies will see their returns gravitate toward the firm's cost of capital more quickly than companies with moats will. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

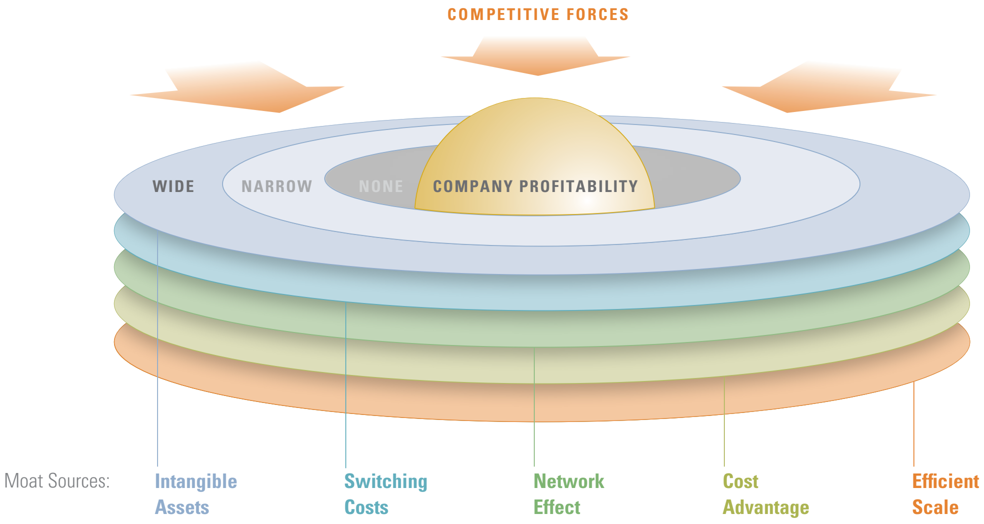
Fair Value Estimate

Our analyst-driven fair value estimate is based primarily on Morningstar's proprietary three-stage discounted cash flow model. We also use a variety of supplementary fundamental methods to triangulate a company's worth, such as sum-of-the-parts, multiples, and yields, among others. We're looking well beyond next quarter to determine the cash-generating ability of a company's assets because we believe the market price of a security will migrate toward the firm's intrinsic value over time. Economic moats are not only an important sorting mechanism for quality in our framework, but the designation also directly contributes to our estimate of a company's intrinsic value through sustained excess returns on invested capital.

Uncertainty Rating

The Morningstar Uncertainty Rating demonstrates our assessment of a firm's cash flow predictability, or valuation risk. From this rating, we determine appropriate margins of safety: The higher the uncertainty, the wider the margin of safety around our fair value estimate before our recommendations are triggered. Our uncertainty ratings are low, medium, high, very high, and extreme. With each uncertainty rating is a corresponding set of price/fair value ratios that drive our recommendations: Lower price/fair value ratios (<1.0) lead to positive recommendations, while higher price/fair value

Economic Moat



ratios (>1.0) lead to negative recommendations. In very rare cases, the fair value estimate for a firm is so unpredictable that a margin of safety cannot be properly estimated. For these firms, we use a rating of extreme. Very high and extreme uncertainty companies tend to have higher risk and volatility.

Quantitatively Driven Valuations

To complement our analysts' work, we produce Quantitative Ratings for a much larger universe of companies. These ratings are generated by statistical models that are meant to divine the relationships between Morningstar's analyst-driven ratings and key financial data points. Consequently, our quantitative ratings are directly analogous to our analyst-driven ratings.

Quantitative Fair Value Estimate (QFVE): The QFVE is analogous to Morningstar's fair value estimate for stocks. It represents the per-share value of the equity of a company. The QFVE is displayed in the same currency as the company's last close price.

Valuation: The valuation is based on the ratio of a company's quantitative fair value estimate to its last close price.

Quantitative Uncertainty: This rating describes our level of uncertainty about the accuracy of our quantitative fair value estimate. In this way it is analogous to Morningstar's fair value uncertainty ratings.

Quantitative Economic Moat: The quantitative moat rating is analogous to Morningstar's analyst-driven economic moat rating in that both are meant to describe the strength of a firm's competitive position.

Understanding Differences Between Analyst and Quantitative Valuations

If our analyst-driven ratings did not sometimes differ from our quantitative ratings, there would be little value in producing both. Differences occur because our quantitative ratings are essentially a highly sophisticated analysis of the analyst-driven ratings of comparable companies. If a company is unique and has few comparable companies, the quantitative model will have more trouble assigning correct ratings, while an analyst will have an easier time recognizing the true characteristics of the company. On the other hand, the quantitative models incorporate new data efficiently and consistently. Empirically, we find quantitative ratings and analyst-driven ratings to be equally powerful predictors of future performance. When the analyst-driven rating and the quantitative rating agree, we find the ratings to be much more predictive than when they differ. In this way, they provide an excellent second opinion for each other. When the ratings differ, it may be wise to follow the analyst's rating for a truly unique company with its own special situation, and follow the quantitative rating when a company has several reasonable comparable companies and relevant information is flowing at a rapid pace.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

-Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures.

If you wish to obtain further information regarding previous Reports and recommendations and our services, please contact your local Morningstar office.

Unless otherwise provided in a separate agreement, you may use this Report only in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of this document is Morningstar Inc. Redistribution, in any capacity, is prohibited without permission. The information, data, analyses and opinions presented herein do not constitute investment advice; are provided solely for informational purposes and therefore are not an offer to buy or sell a security; and are not warranted to be correct, complete or accurate, nor may they be construed as a representation regarding the legality of investing in the security/ies concerned, under the applicable investment or similar laws or regulations of any person or entity accessing this report. The opinions expressed are as of the date written and are subject to change without notice. Except as otherwise required by law, Morningstar, its affiliates, and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions or their use. You should seek the advice of your financial, legal, tax, business and/or other consultant, and read all relevant issue documents pertaining to the security/ies concerned, including without limitation, the detailed risks involved in the investment, before making an investment decision.

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. As the price / value / interest rate of a security fluctuates, the value of your investments in the said security, and in the income, if any, derived therefrom may go up or down.

For Recipients in Australia: This report has been authorized by the Head of Equity and Credit Research, Asia Pacific, Morningstar Australasia Pty Limited and is circulated pursuant to RG 79.26(f) as a full

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

PJM – Capacity auction clears 39% below last year's price
Weather – El Niño expected to change to La Niña by fall/winter
ES – Kinder Morgan officially pulls the plug on Northeast Energy Direct pipeline
CPN – Debt raised to re-finance
NEE – Media outlets suggest that Oncor back on as outlook for HE becomes less certain
PCG – Battle over what evidence may be subpoenaed in criminal trial continues
EXC – 1,500 supporters rally for Illinois energy legislation

PJM – Capacity auction clears 39% below last year's price

- PJM published 2019/2020 Reliability Pricing Model (RPM) Base Residual Auction (BRA) results.
- The clearing prices for resources in the rest of RTO were $100/MW-day; EMAAC, ComEd, and BGE were constrained with locational price adders of $19.77/MW-day, $102.77/MW-day and $0.30/MW-day, respectively.
- The clearing price for EMAAC was $119.77/MW-day, COMED was $202.77 / MW-day, and BGE was $100.30/MW-day.
- 22.4% reserve margin is 5.9% higher than the 16.5% target reserve margin; achieved at prices 33-60% of Net CONE, depending on the zone, while attracting over 5GW of new gas CCGTs.

Guggenheim takeaway: *Results came in below expectations except for ComEd. Capacity payments fell 39%; down from $164.77 in the rest of RTO, $225/MW-day in EMAAC and $215/MW-day in ComEd. We expect companies to report on the results this morning; net-net negative.*

Weather – El Niño expected to change to La Niña by fall/winter

- The current El Niño is expected by meteorologists to change to a La Niña this fall/winter.
- A La Niña with jet stream flows across the U.S. and Canada in the winter brings colder weather and fewer storms.

Guggenheim takeaway*: The current El Nino resulted in an abnormally mild winter, weighing on gas demand and utility earnings in 1Q16, is expected by meteorologists to change to a La Nina this fall/winter. A La Nina would support recovery of gas demand.*

ES – Kinder Morgan officially pulls the plug on Northeast Energy Direct pipeline

- Kinder Morgan (KMI, NC, $17.32) officially withdrew its FERC application for their proposed Northeast Energy Direct gas pipeline.

- KMI announced their intent to suspend the project in April.

Guggenheim takeaway: *We believe the removal of KMI's gas pipeline project is a positive readthrough to ES's Access Northeast Pipeline project.*

CPN – Debt raised to re-finance

- CPN announced plans to raise debt in order to pay off over $1bn of outstanding debt under its first-lien term loan facilities due in 2019 and 2020.
- The announcement indicated the company will offer $625mm of 2026 secured notes (upsized from $500mm) in a private placement and enter a new $500mm first-lien 2023 term loan.

Guggenheim takeaway: *Continued focus on strengthening the balance sheet. We view buybacks as increasingly attractive considering share price performance, but we support financial discipline in light of weak power market fundamentals and the structural changes taking place in the industry.*

NEE – Media outlets suggest that Oncor back on as outlook for HE becomes less certain

- Bloomberg reported that NEE's proposed acquisition of HE (NC, $32.85) is looking less likely as the company has a chance to acquire Oncor.

Guggenheim takeaway: *While NEE has not come out and made a public comment that they are re-interested in the Oncor assets, it has been increasingly reported in the press. We think these assets are a great strategic fit for NEE; despite a potential equity raise, the transaction should be noticeably accretive – this should not present an overhang on NEE shares.*

PCG – Battle over what evidence may be subpoenaed in criminal trial continues

- PCG and federal prosecutors both filed motions against one another regarding evidence that could be subpoenaed in the utility's criminal trial associated with the San Bruno explosion.
- PCG is looking to subpoena consultants used by the prosecution but government prosecutors argue some of their findings do not reflect the attorney general's conclusions and could be confusing.
- PCG argues prosecutors are looking for additional evidence from the company beyond the appropriate time-frame for evidence collection.

Guggenheim takeaway: *The battle over what evidence is appropriate has entailed enormous filings from both sides, continuously delaying the trial. Yesterday we highlighted PCG's first dividend increase since 2010, which we believe was a show of confidence from management in light of potential penalties the utility faces, and evidence the company is eager to put this trial in the rear view.*

EXC – 1,500 supporters rally for Illinois energy legislation

- EXC highlighted 1,500 Illinoisans that came out in support of the Next Generation Energy Plan, energy legislation currently pending before the state general assembly.
- The company noted supporters included community leaders, elected officials, nuclear plant employees, and business leaders.

Guggenheim takeaway: *Ultimately, we should see some form of legislation and the clock is ticking. The state cannot afford to lose over ~3GW of clean energy capacity – not only from a reliability standpoint but also from an environmental policy standpoint. See our last thoughts on EXC nuclear rationalization HERE.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

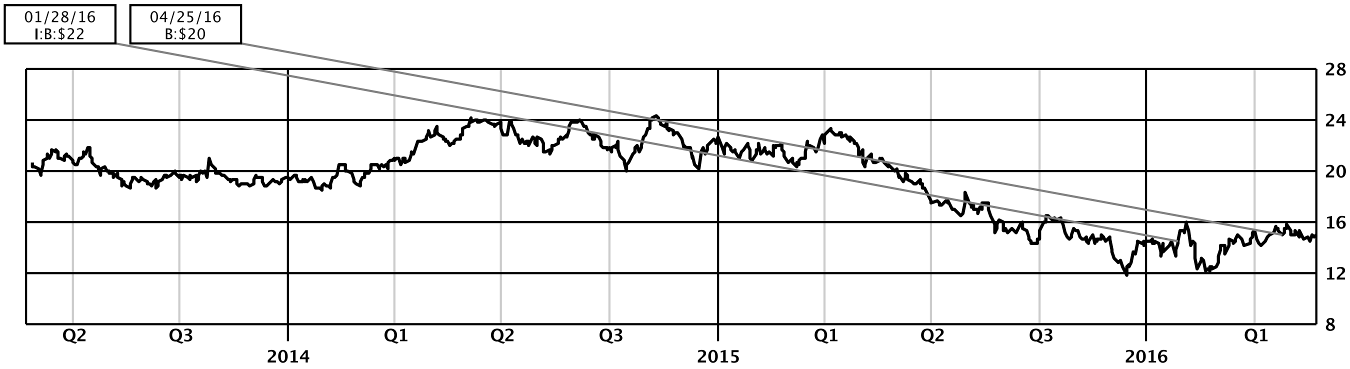
IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Calpine Corp., Eversource Energy, Exelon Corporation, NextEra Energy, Inc. and PG&E Corporation in the next 3 months.

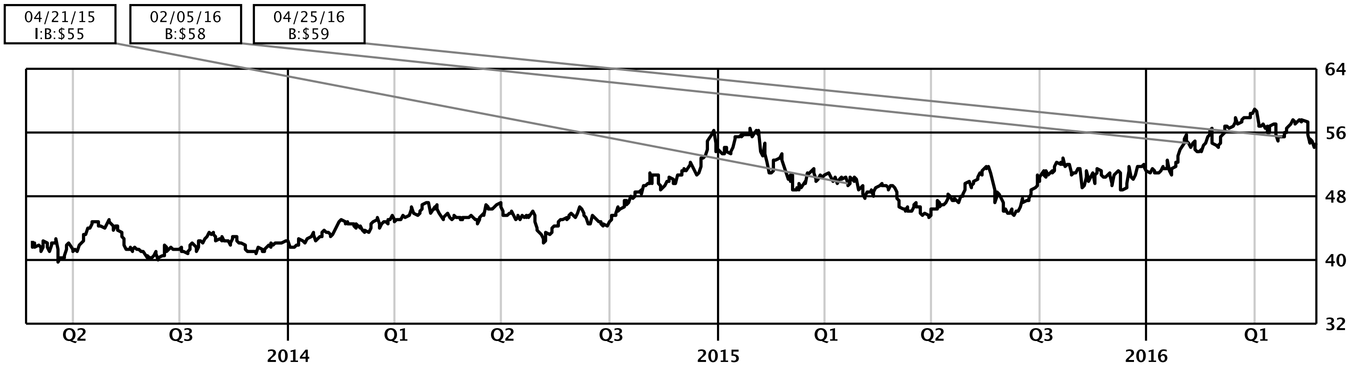
Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: Calpine Corp. (CPN) as of 05-24-2016



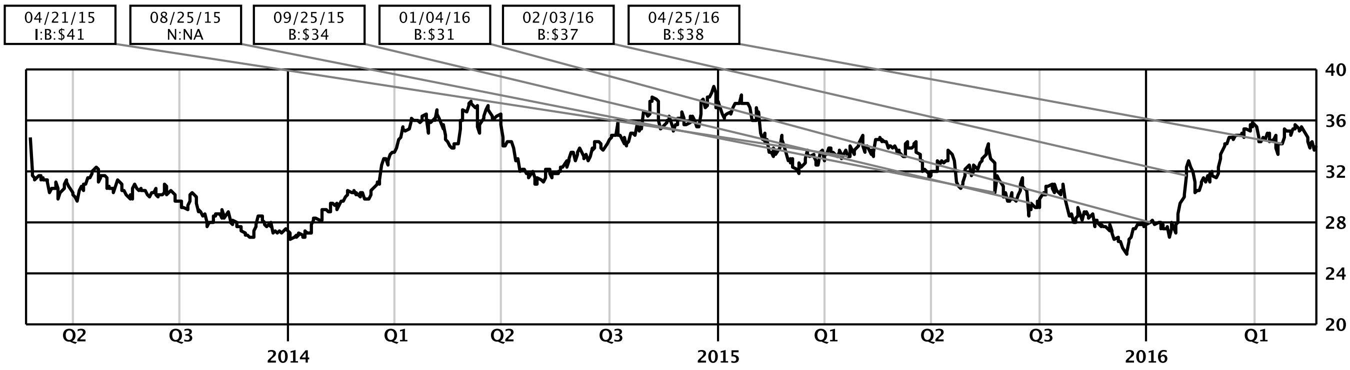
Created by BlueMatrix

Rating and Price Target History for: Eversource Energy (ES) as of 05-24-2016



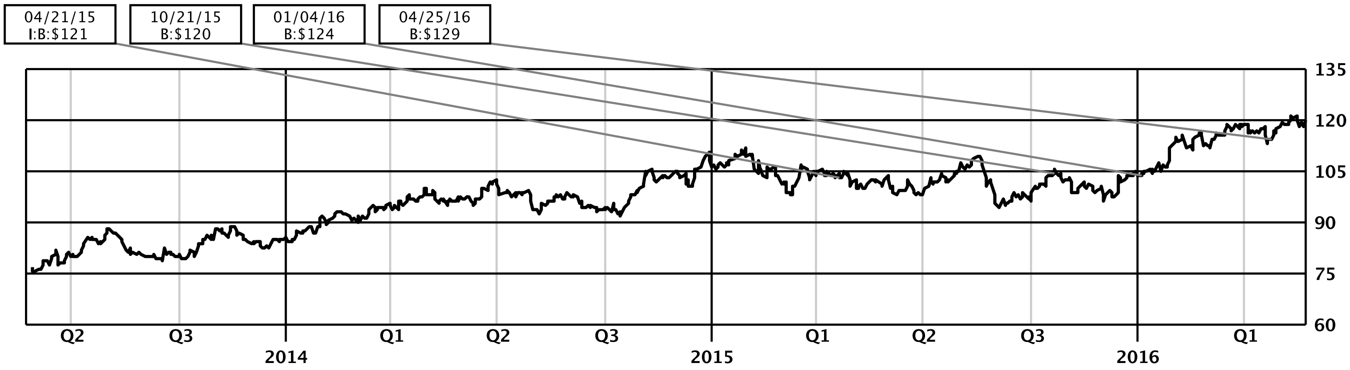
Created by BlueMatrix

Rating and Price Target History for: Exelon Corporation (EXC) as of 05-24-2016

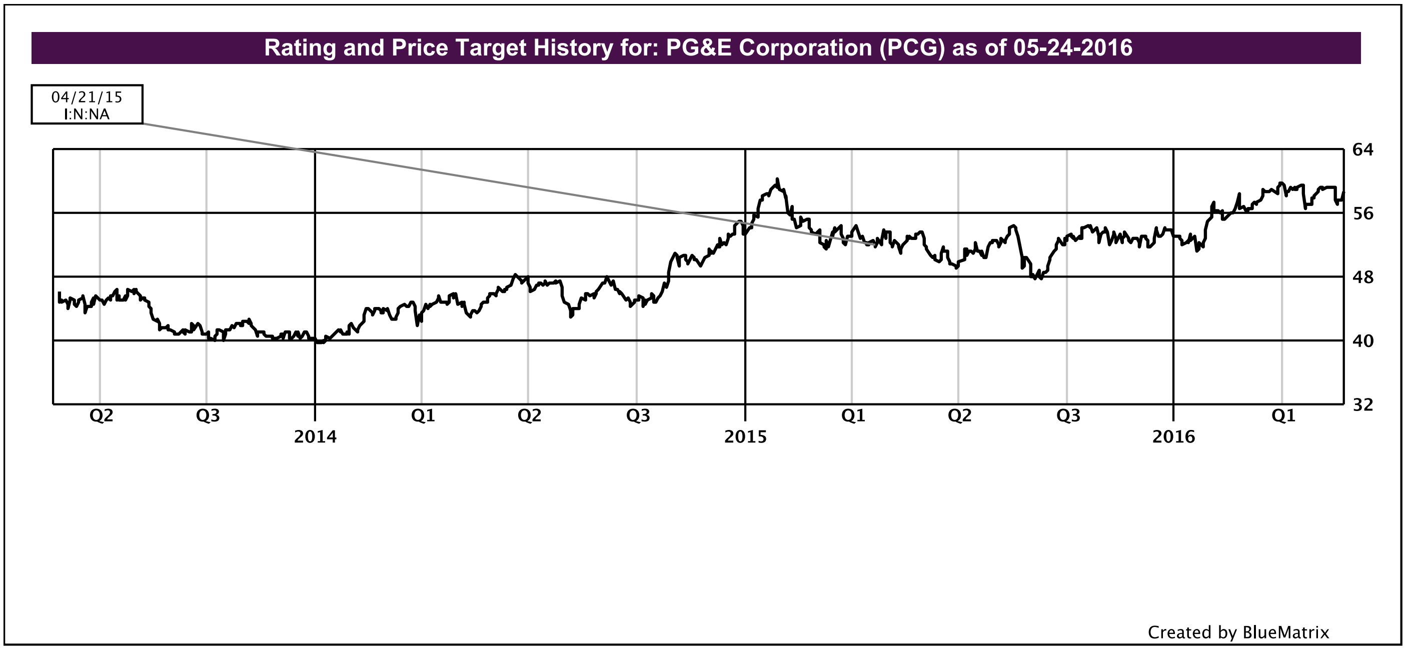


Created by BlueMatrix

Rating and Price Target History for: NextEra Energy, Inc. (NEE) as of 05-24-2016



Created by BlueMatrix



RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

DYN – Proposed legislation would move all of IL into PJM
PCG – Prosecutors accused of deception in criminal trial
DUK – Constitution sues NY DEC
EIX – CPUC approves storage procurement to relieve reliability concerns
EXC – 1,500 supporters rally for Illinois energy legislation

DYN – Proposed legislation would move all of IL into PJM

- DYN announced the Illinois Generation Reliability Act, legislation proposing to move all of Illinois into PJM.
- Illinois is currently divided between PJM and MISO.

Guggenheim takeaway: *DYN's proposal highlights the issue in Illinois where plants in the northern part of the state (EXC service territory) receive attractive capacity payments (COMED cleared at $202.77 for 2019/2020), while DYN's plants in southern Illinois participate in the less-attractive MISO wholesale market (MISO Zone 4). DYN recently indicated they would shut down 1.8GW in MISO, where several units did not clear the recent capacity auction because the price was too low and more retirements could be coming. We recently highlighted the potential saving grace for these plants would be if MISO Zone 4 joined PJM – see our note HERE. This obviously isn't a NT scenario given the need for a state legislative push absent a move from the transmission provider – not likely either.*

PCG – Prosecutors accused of lying in criminal trial

- Local media reports that PG&E is accusing federal prosecutors of lying and concealing evidence that federal investigators were part of a probe with direct access to utility records.
- PCG alleges this allowed prosecutors to obtain evidence without court approval and asked a federal judge to exclude a large amount of tainted evidence, and consider dismissing some or all of the 13 felony charges.

Guggenheim takeaway: *The battle over what evidence is appropriate has entailed enormous filings from both sides, continuously delaying the trial. We recently highlighted PCG's first dividend increase since 2010, which we believe was a show of confidence from management in light of potential penalties the utility faces, and evidence the company is eager to put this trial in the rear view.*

DUK – Constitution sues NY DEC

- Constitution pipeline sues the New York Department of Environmental Conservation (DEC) to separate its water quality certificate from other permit reviews.
- Constitution is challenging the water quality certificate denial separately in federal appeals court.

Guggenheim takeaway: *DUK's interest in the pipeline is through its pending acquisition of PNY (NC, $60.00). The pipeline was approved by federal regulators but met opposition from "fracktivists" in NY and was ultimately blocked. On a side note, this isn't an issue that should be a read-through to other pipeline projects as it was a very specific situation with NY.*

EIX – CPUC approves storage procurement to relieve reliability concerns

- The CPUC authorized EIX's southern California utility to expedite its purchase of energy storage in light of reliability concerns in areas impacted by the Aliso Canyon leak.

Guggenheim takeaway: *The CPUC action follows the Governor's declaration of emergency; we recently highlighted an engineering study that found CA could experience two weeks of blackouts this summer as access to gas supply becomes challenged without the Aliso Canyon gas storage facility.*

EXC – 1,500 supporters rally for Illinois energy legislation

- EXC highlighted 1,500 Illinoisans that came out in support of the Next Generation Energy Plan, energy legislation currently pending before the state general assembly.
- The company noted supporters included community leaders, elected officials, nuclear plant employees, and business leaders.

Guggenheim takeaway: *Ultimately, we should see some form of legislation and the clock is ticking. The state cannot afford to lose over ~3GW of clean energy capacity – not only from a reliability standpoint but also from an environmental policy standpoint. See our last thoughts on EXC nuclear rationalization HERE. What happens with EXC plants is a lateral to DYN.*

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market

risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Model Update

Overweight

EXC, EXC US

Price: $34.33

▼ **Price Target: $37.00**
Previous: $39.00

We are updating our model to incorporate our newly revised assumptions. We are lowering our 2016 PT from $39 to $37, which reflects a decrease in forward power prices and a slightly lower regulated peer multiple relative to our prior update.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $37.00)*

Investment Thesis

We expect the company to host an analyst day in coming months with a focus on executing costs cuts, achieving rate timely relief at the Pepco utilities and future ExGen or other growth opportunities. Despite strong YTD performance, we do not yet see EXC shares as giving appropriate credit to ExGen commodity optionality, future balance sheet flexibility and earned ROE upside at the POM utilities.

Valuation

We are lowering our December 2016 price target to $37/share ($39 prior). Our valuation is based on a sum-of-the-parts analysis using our 2018 forecasts. We use an average 18.5x P/E multiple for the regulated utility and corporate business segments, a minor premium to regulated peers reflecting a constructive regulatory construct at PECO partially offset by a mildly challenging regulatory environment at BGE. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. The downward revision in our PT reflects a decrease in forward power prices and a slightly lower regulated peer multiple relative to our prior update.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company’s earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock’s expected total return is compared to the expected total return of a benchmark country market index, not to those analysts’ coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst’s coverage universe can be found on J.P. Morgan’s research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), Dominion Resources (D), Duke Energy Corp. (DUK), Entergy Corp. (ETR), Exelon Corp. (EXC), FirstEnergy (FE), Great Plains Energy (GXP), Hawaiian Electric Industries Inc. (HE), ITC Holdings (ITC), NextEra Energy Inc. (NEE), Nextera Energy Partners (NEP), NiSource Inc. (NI), PG&E Corp. (PCG), Pattern Energy (PEGI), Piedmont Natural Gas Co. (PNY), Portland General Electric Co. (POR), Public Service Enterprise Group (PEG), Sempra Energy (SRE), Spire Inc (SR), Westar Energy Inc (WR), Xcel Energy (XEL)

J.P. Morgan Equity Research Ratings Distribution, as of April 1, 2016

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage	44%	44%	12%
IB clients*	53%	49%	34%
JPMS Equity Research Coverage	43%	48%	9%
IB clients*	71%	63%	49%

*Percentage of investment banking clients in each rating category.
For purposes only of FINRA/NYSE ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com.

Equity Analysts' Compensation: The equity research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch and J.P.Morgan Chase Bank, N.A., Frankfurt Branch which are regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. **Japan:** There is a risk that a loss may occur due to a change in the price of the shares in the case of share trading, and that a loss may occur due to the exchange rate in the case of foreign share trading. In the case of share trading, JPMorgan Securities Japan Co., Ltd., will be receiving a brokerage fee and consumption tax (shouhizei) calculated by multiplying the executed price by the commission rate which was individually agreed between JPMorgan Securities Japan Co., Ltd., and the customer in advance. Financial Instruments Firms: JPMorgan Securities Japan Co., Ltd., Kanto Local Finance Bureau (kinsho) No. 82 Participating Association / Japan Securities Dealers Association, The Financial Futures Association of Japan, Type II Financial Instruments Firms Association and Japan Investment Advisers Association. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com.sg. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: This material is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited. **India:** For private circulation only, not for sale. **Pakistan:** For private circulation only, not for sale. **New Zealand:** This material is issued and distributed by JPMSAL in New Zealand only to persons whose principal business is the investment of money or who, in the course of and for the purposes of their business, habitually invest money. JPMSAL does not issue or distribute this material to members of "the public" as determined in accordance with section 3 of the Securities Act 1978. The recipient of this material must not distribute it to any third party or outside New Zealand without the prior written consent of JPMSAL. **Canada:** The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed judgment upon these materials, the information contained herein or the merits of the securities described herein, and any representation to the contrary is an offence. **Dubai:** This report has been issued to persons regarded as professional clients as defined under the DFSA rules. **Brazil**: Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. The recipient of this report must make its own independent decisions regarding any securities or financial instruments mentioned herein. JPMS distributes in the U.S. research published by non-U.S. affiliates and accepts responsibility for its contents. Periodic updates may be provided on companies/industries based on company specific developments or announcements, market conditions or any other publicly available information. Clients should contact analysts and execute transactions through a J.P. Morgan subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

ED – Staff Recommends Electric Rate Increase and Gas Rate Decrease Based on 8.6% ROE
EXC – No Vote on Illinois Nuclear Legislation
DYN – Generation Reliability Act doesn't get a look in IL either
ES – Northern Pass recommends schedule for Site Evaluation Committee
ES – NH Court Rules in Favor of Northern Pass, Dismisses Forest Society Lawsuit
DUK – NC Passes Legislation Providing Flexibility for Decisions regarding Coal Ash Closures

ED – Staff Recommends Electric Rate Increase and Gas Rate Decrease Based on 8.6% ROE

- NY Public Service Commission (PSC) Staff filed their recommendation for a 1% electric rate increase and a 1.5% gas rate decrease for CECONY, premised upon an 8.6% ROE and 48% equity ratio on an average rate base of $18.7bn for electric and $4.8bn for gas (2017 test year).

- ED originally requested a $482mm electric rate increase (revised to $480mm) and a $154mm gas rate increase (revised to $159mm) premised upon a 9.75% ROE and 48% equity ratio on an $18.9bn electric ratebase and $4.8bn gas rate base (revised to $4.9bn).

- CECONY Electric's filing was driven by its $1.3bn plan to deploy 3.6mm smart meters beginning next year. CECONY Gas didn't really have an option other than filing as O&M increased with the uptick in gas leak and repair work following the Harlem explosion.

***Guggenheim takeaway:** Staff's 8.6% ROE recommendation came in noticeably below ED's 9.75% request, which is about where authorized electric returns have averaged so far this year (~9.73%), but slightly above the 8.3-8.4% suggested by the formulaic methodology employed in NY. Our current estimates assume an earned 9.0% ROE for all of CECONY combined (steam, gas, electric). We don't anticipate a contentious proceeding as the electric investment in smart meters facilitates the State's Reforming the Energy Vision (REV) objectives, and we don't see PSC disallowing gas expenditures in the rate case in the wake of the Harlem explosion—no linkage between the two items. For additional takeaways, see our note HERE.*

EXC – No Vote on Illinois Nuclear Legislation

- A bill intended to provide relief for nuclear plants in Illinois (Senate Bill 1585) didn't come to a vote as the state's legislative session came to a close yesterday.

- EXC indicated it would release an update on how the failure to pass this bill impacts the future of its Clinton and Quad Cities nuclear facilities in the next few days.

- EXC had said it would make a final decision to close Clinton in 2017 and Quad-Cities in 2018 if legislation wasn't passed by the end of the spring session.

Guggenheim takeaway: *Not very surprising considering the tight deadline, and likely still incrementally positive for EXC considering plants were operating at a loss. A positive lateral to DYN as well – could swing DYN's incremental 500MW shutdown that has yet to be announced; see our recent note HERE.*

DYN – Generation Reliability Act doesn't get a look in IL either

- The Illinois Generation Reliability Act proposed by DYN did not get attention as the state's legislative session came to an end yesterday.

- The proposed legislation would move all of Illinois into PJM; the state is currently divided between PJM and MISO.

Guggenheim takeaway: *DYN's proposal wasn't hinging on passing before the close of the legislative session as EXC's was, but it highlights the issue in Illinois where plants in the northern part of the state (EXC service territory) receive attractive capacity payments (COMED cleared at $202.77 for 2019/2020), while DYN's plants in southern Illinois participate in the less-attractive MISO wholesale market (MISO Zone 4). DYN recently indicated they would shut down 1.8GW in MISO, where several units did not clear the recent capacity auction because the price was too low and more retirements could be coming. We recently highlighted the potential saving grace for these plants would be if MISO Zone 4 joined PJM – see our note HERE. This obviously isn't a NT scenario given the need for a state legislative push absent a move from the transmission provider – also not likely.*

ES – Northern Pass recommends schedule for Site Evaluation Committee

- Northern Pass Transmission submitted a motion to the NH Site Evaluation Committee (SEC) seeking adoption of a procedural schedule that would lead to a written decision on by 6/30/17.

- At its 5/19/16 hearing, the SEC heard arguments from interveners to extend the timeframe for a decision on NPT's Application beyond 12/18/16, and ultimately determined they would extend the timeframe for a decision to 9/30/17.

Guggenheim takeaway: *We recently highlighted the disappointing news for ES when the SEC established a 9/30/17 deadline by which they must make a determination on the Northern Pass Transmission line; Eversource was hoping to have SEC approval by the end of this year in order to begin construction and have the project in-service in the first half of 2019. Northern Pass contributes $0.22 to our 2018 estimate; if the project is delayed three-quarters (approval in 3Q17 instead of 4Q16) we estimate $0.09 of EPS would be lost in 2018. The schedule proposed by Northern Pass attempts to strike a balance, we expect the SEC to issue a formal procedural schedule in the near future – ideally front-loaded.*

ES – NH Court Rules in Favor of Northern Pass, Dismisses Forest Society Lawsuit

- The New Hampshire Superior Court ruled in favor (see HERE) of Northern Pass and dismissed claims from the Forest Society that use of public highways was subject to its approval.

- Northern Pass proposes burying portions of the 192-mile transmission line along public roadways.

Guggenheim takeaway: *Good news for ES as the Forest Society would have made progress more difficult for Northern Pass, but all eyes on the NH SEC as we* *await a formal schedule for their review of the project – a front-loaded schedule, as we mention above, would be even better news.*

DUK – NC Passes Legislation Providing Flexibility for Decisions regarding Coal Ash Closures

- Senate Bill 71 passed in North Carolina, which re-constitutes the Coal Ash Management Commission to oversee basin closures and how customer bills will be impacted.
- The modified bill extends the period for review of proposed risk classifications for coal combustion residuals.

Guggenheim takeaway: *A win for North Carolina electric customers as the risk classifications recently proposed by the Department of Environmental Quality implied the state would have chosen a more expensive option. We recently highlighted the NCDEQ's rankings, which were proposed to comply with a deadline, but acknowledged repairs are currently being made to some of the underlying basins, and requested the state general assembly modify legislation so the risk classifications can be re-considered – the passing of the legislation creates an opportunity for DUK to potentially lower risk classifications, in our view. We recently hosted investor meetings with DUK management; for additional takeaways, see our note HERE.*

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market

risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Exelon Corp (EXC)

Alert: Value impact of retirements is Limited. However, implications for remaining nuclear fleet are more ominous.

- With no progress with the Illinois energy legislation, EXC will permanently shut down Clinton (June 1, 2017) and Quad Cities (June 1, 2018).
- Retirements not a surprise as we didn’t expect the Illinois legislation to go through. See our note on the expected impact on Feb 22, 2016.
- **Avoided negative FCF likely in the ~$50m range relative to our model**. Note that our model used a $3.00/MMBtu gas price. We had estimated the savings from the retirement of Byron, Clinton, Ginna and Quad Cities together to be approximately $67m/year.
- **Negative Cash Impact 1: Spent Fuel of $340m:** Without a NRC approval, EXC may have a cash outflow of $340m (post-tax) to pay for spent fuel. However, as this amount will be spent over the next 10yrs, the NPV impact on a per share basis isn’t significant.
- **Negative Cash Impact 2: If no SAFSTOR, decommissioning funding could be $450m.** With a shortfall in NDTF, EXC would need to provide a parent guarantee of $450m in total which will at some point translate to cash funding of the trust fund.
- **With avoided negative FCF offset by significant cash liabilities, we think net value impact of retirements is minimal.**
- **Key Question 1: Can the rest of EXC's nuclear fleet survive without carbon / regulatory support?** We think challenges remain for the rest of EXC's nuclear fleets given their average cash cost of generation in the $30 - $35/MWh range. With low long-term gas prices and increasing penetration of renewables, power and capacity markets will stay weak for some time. In such an environment, nuclear plants will continue to be challenged and we still don’t see any obvious path leading to support for existing nuclear plants. **We expect further retirements in the future.**
- **Key Question 2: Can ExGen's O&M come down proportionally with the reducing size of its fleet?** EXC benefited from synergies of operating a large nuclear fleet. As the size of the fleet shrinks, we expect the O&M / MWh to creep up. The centralized team needed to run all these nukes likely doesn’t reduce in line with its shrinking fleet.
- **Implication:** We stay concerned on the future of EXC's nuclear fleet. Think ExGen is over-levered and should be valued at a 5.5x EBITDA multiple given the low FCF conversion (~45%) and the relatively short (~15yr) economic asset life of its remaining nuclear fleet. **Reiterate our sell rating and $27 target price.**

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $27 target. We value ExGen at $10/share and believe ExGen's core nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $18/share based on a 15x terminal PE multiple. We also add $5/share value provided by PepCo. We back out $6/share for the parent to get to our price target

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analyst(s) primarily responsible for the preparation and content of this research report are named in bold text in the author block at the front of the product except for those sections where an analyst's name appears in bold alongside content which is attributable to that analyst. Each of these analyst(s) certify, with respect to the section(s) of the report for which they are responsible, that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc and its affiliates. No part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendation(s) or view(s) expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities

transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating		
Data current as of 31 Mar 2016	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	48%	39%	13%
% of companies in each rating category that are investment banking clients	65%	62%	62%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov; Jesse Chai

OTHER DISCLOSURES

The subject company's share price set out on the front page of this Product is quoted as at 01 June 2016 04:00 PM on the issuer's primary market.

Many European regulators require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm’s global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm’s proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author’s previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

FLASH NOTE

SECTOR: Power and Utilities

June 2, 2016

What's new? EXC (BUY, $34.41) announced plans to retire the Clinton and Quad Cities nuclear facilities in June 2017 and June 2018, respectively, resulting in one-time charges of $150-200mm in 2016. The announcement comes after Quad Cities failed to clear the 2019/2020 PJM auction, Clinton saw insufficient capacity prices clear in MISO, and legislation (Senate Bill 1585) intended to provide relief for nuclear plants stalled in Illinois. EXC previously indicated it would close Clinton in 2017 and Quad-Cities in 2018 if legislation didn't pass by the end of the spring session so shouldn't be a surprise. **The more rationalization of merchant assets, the better the market opportunity – IPPs, especially DYN (BUY, $19.74), are beneficiaries of this trend.**

Guggenheim's quick-take: We weren't expecting IL legislation to pass, so incrementally positive considering plants were operating at a loss. EXC didn't give policy makers much time, calling for action before the end of the spring session, so we aren't surprised it didn't come to a vote, and we expected these plants to close. The asset retirement dates are consistent with refueling outages and beyond any capacity commitments. **Both assets, as discussed in the past, aren't covering their operating costs, return on invested capital and generating negative cash flow – shutdown should be CF/EPS accretive.** As a reminder, the Plants have lost ~$100mm in CF/year since '09 and Management highlights negative CF of $140mm on '17 forwards ex basis and unit contingent risk – vs. our model of $155mm negative FCF using our 3/31 curves.

NY gaining traction quickly to save certain nuclear plants – outside of Clinton and Quad Cities move - Byron (Ill), Ginna (NY), Nine Mile (NY), Oyster Creek (NJ) and Three Mile Island (PA) are ones to watch with the remaining EXC fleet. NY looking to provide support for in-state nuclear including Ginna and Nine Mile plants (similar structure as LCPS in Illinois). As a reminder, the Clean Energy Standard proceeding in NY is considering expanding the state's large-scale renewable energy proceeding and designing a comprehensive program that would include compensation for all forms of non-emitting generation, such as nuclear. Nuclear accounts for one-third of NY's electric mix, so the governor acknowledges it is essential to carbon-reduction and energy policy, regulators recognize a NT life-line is more cost-effective than planning around retirement, and the NY-ISO recently cautioned losing ETR's (NEUTRAL, $76.63) 851MW Fitzpatrick facility would threaten state reliability – everyone appears to be on board in support of nuclear. For additional thoughts on the viability of nuclear, see our note HERE.

A positive lateral to DYN. As we highlighted in our DYN note (see HERE), **we were getting a sense the Clinton announcement was forthcoming and, now that it is confirmed, a net positive for DYN – could swing DYN's incremental 500MW shutdown that has yet to be announced.** As also highlighted in the note, Zone 4 changes in the next years' auction aren't expected to provide enough support to prompt a long-term decision on any assets including a coal plant - available capacity far exceeds local clearing requirements. Asset rationalization short of MISO joining PJM is the only real solution, in our view.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, Dynegy Inc. and Entergy Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Price Target: USD 39.00
Price (01-Jun-2016): USD 34.41
Potential Upside/Downside: 13%
Tickers: EXC

Exelon announces closure plans for Clinton and Quad Cities nuclear plants

Exelon had previously stated that without legislation in Illinois to compensate Clinton and Quad Cities for their emission free generation by May 31, the plants would be closed June of 2017 and June of 2018, respectively. The Illinois Spring legislative session came to an end with no vote on SB 1585, this lack of progress on the legislation has prompted Exelon to move forward with the plant closures. Although the possibility exists for this decision to be reversed, it would require enacted legislation prior to this fall, as September marks when Clinton would be de-designated in MISO beginning summer of 2017. Also within 30 days Exelon expects to make permanent shutdown notifications to the Nuclear Regulatory Commission (NRC).

Based upon the decision to close Clinton and Quad Cities, Exelon has stated it would do the following:

- Recognize a one-time charge of $150M-$200M relating to materials and suppose inventory reserve adjustment, employee related costs and CWIP impairment.
- Potentially recognize one-time charges in 2017 and 2018 up to $25M/year Accelerate approximately $2B of depreciation and amortization through the announced shutdown dates.
- Cancelling fuel purchases and outage planning.

What does plant closure ultimately mean?

As we have stated previously, either nuclear plant closure or subsidization is accretive to our estimates for earnings and cash flows for Exelon (exclusive of one-time charges). Per company reports Clinton and Quad Cities have lost a combined $800M over the past 7 years despite top level plant operation. The expectation was for $140M in pretax cash losses in 2017 for these plants. Given Quad Cities will continue to operate through June of 2018 and Clinton will operate through June 2017, the full accretion from this decision will not be realized until 2019. There will ultimately be discussions and noise surrounding the decision both politically and financially; however, the announcement today shows that Exelon is committed to making financially sound decisions no matter how difficult those decisions may be.

A quick note on decommissioning. There will likely be a lot of noise surrounding what the costs to Exelon may be for decommissioning Clinton an Quad Cities. Exelon has highlighted some potential shortfalls on minimum funding levels and potential need for parent guarantees. It should be noted that the ultimate shortfall and need for financial guarantees will be highly dependent upon which decommissioning option is selected. Our view is that SAFSTOR will be the ultimate choice which provides for a longer-time horizon prior to when significant decommissioning spending is required. This time frame allows large flexibility in reaching funding level thresholds. For a more detailed examination of decommissioning please see our note from last fall North America Power & Utilities: Nuclear Decommissioning a Question of Funding.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real

Investment Thesis

Travis Miller, Sector Director, 06 October 2015

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Travis Miller, Sector Director, 02 June 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Exelon Corp EXC (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 24 March 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Supreme Court Sides With Demand Response; No Fair Value Impacts

Andrew Bischof, CFA, Eq. Analyst, 25 January 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for U.S. power producers and diversified utilities after the U.S. Supreme Court issued a 6-2 decision effectively supporting the Federal Energy Regulatory Commission's Order No. 745.

The decision on its face appears to be a win for demand response providers and a loss for power producers such as NRG Energy, Dynegy, and Calpine. However, we think the actual impact on energy and capacity prices will be muted. Near-term capacity prices might go down, but energy prices should go up since demand response has much higher marginal costs than conventional generation. We expect the trade-off to be mostly neutral.

Despite the Supreme Court win, demand response faces other challenges. Mid-Atlantic grid operator PJM is implementing rule changes that hurt the economics of demand response and should boost margins for conventional generators. We expect little change in the amount of demand response that clears the 2019-20 base capacity auction and are maintaining our long-term outlook. Demand response participation might even drop if PJM continues to make rule changes recommended by the market monitor. This would be a benefit for conventional generators.

Ultimately we think demand response market saturation will be the limiting factor. As demand response gains market share, capacity values will go down. This will erode the profitability for new demand response entrants since demand response providers typically receive more than 90% of their revenue from capacity payments.

Exelon Surprises With 2.5% Dividend Growth Target

Travis Miller, Sector Director, 03 February 2016

We are reaffirming our $35 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company reported earning $2.49 per share on an adjusted basis in 2015. This was in line with our estimate and within management's guidance range.

We think the biggest positive for shareholders was management's announcement that it plans to recommend to the board a 2.5% annual dividend increase for at least the next three years, likely starting in the second half of 2016. We had not expected a dividend increase until at least 2018, given our expected plateau in earnings the next three years.

If the board accepts this policy, we estimate Exelon's payout ratio will top 50% by 2018. This is at the high end of what we think is reasonable for Exelon's cash flow profile and debt load. We're not yet entirely convinced that management has added sufficient regulated distribution earnings and contracted generation revenue to decouple cash flows from volatile energy markets.

Management continues to evaluate the economic viability of at least three nuclear plants. We assume in our long-term forecasts that Exelon closes three plants representing 25% of its fleet capacity. We also expect a final Pepco merger decision by early March, in line with timeline indications from Washington, D.C., regulators. We continue to assume $1 per share of value dilution based on a 75% probability of the deal closing as proposed. We don't think ongoing legal challenges in other states will be an impediment.

We remain long-term bullish on fixed-price PJM power, especially in the East, where we expect gas prices to strengthen as takeaway capacity increases and demand remains more robust than other regions. This drives the bulk of the value upside as of early February. Our $8.4 billion midcycle gross margin outlook for Exelon Generation remains at the high end of management's 2018 outlook range.

Supreme Court Validates Our View That Carbon Regulation Remains Highly Uncertain

Travis Miller, Sector Director, 11 February 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities and coal miners after the U.S. Supreme Court's 5-4 decision to stay the Environmental Protection Agency's Clean Power Plan. This validates our view that it's too early, and the outcome too uncertain, to make any investment decisions based on the current terms of the CPP or any carbon regulation. We do not include any CPP-related impacts in our fair value estimates.

At a minimum, we expect that the decision will push implementation one or two years past the 2022-30 phase-down period and will embolden political opposition to carbon regulation. In addition, it means that a Supreme Court ruling against the CPP could actually reverse industry trends. When the Supreme Court struck down the EPA's MATS rule in June, the decision was largely moot because most power plants were proceeding to implement the rule or had already made plans to retire. The CPP timeline is so long that there is plenty of time for the courts or politicians to nullify it or make major revisions to it.

For most utilities, power and gas market economics and renewable energy policies remain the most important variables for investors to consider.

The Supreme Court's decision comes as good news for coal miners that haven't had any for some time. However, we don't view today's announcement as a panacea for the coal industry's woes, as natural gas remains at prices at which coal struggles to compete. However, our view that natural gas prices will rise in the coming years hasn't changed, so we maintain our fair value estimates for both Peabody and Cloud Peak. Peabody's high leverage means it has less time to wait--the basis for its extreme uncertainty rating.

Pepco Reports In-Line 2015 Earnings; Exelon Believes D.C. Will Approve Merger by March 4

Charles Fishman, Eq. Analyst, 22 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Pepco reported in-line 2015 earnings. Our narrow moat and stable moat trend ratings are also unchanged for both companies.

We continue to believe Exelon's proposed acquisition of Pepco has a 75% chance of gaining the approval of the District of Columbia Public Service Commission and being completed following an agreement with D.C. Mayor Muriel Bowser that sweetened the benefits for customers and provided other benefits to the district.

Pepco Holdings or Exelon may terminate the merger agreement if the D.C. commission fails to issue a final order approving the merger without condition or modification of the terms of the settlement agreement by March 4. Exelon has made clear that if the D.C. commission does not approve the deal by March 4, it will terminate the agreement. However, Exelon's CEO recently said he believes D.C. will approve the transaction at its next meeting before the termination date.

Pepco reported 2015 adjusted operating earnings of $1.28, in line with our estimate and up from $1.27 per share in 2014. Earnings were favorably affected by rate increases due to infrastructure investment, partially offset by higher operation and maintenance expenses.

Our stand-alone fair value estimate for Pepco remains $21 per share, a 23% discount to Exelon's $27.25 cash offer. Despite this premium, the deal as proposed on a probability-adjusted basis is too small to have a material impact on our Exelon fair value estimate.

The Never-Ending Exelon-Pepco Saga Gets Another Two Weeks of Life, but No Real Changes

Travis Miller, Sector Director, 29 February 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after Washington, D.C., regulators again rejected Exelon's offer to acquire Pepco but left open an option for the companies to gain approval.

We still include $1 per share of value dilution in our fair value estimate for Exelon and $5 per share of incremental value for Pepco, based on a 75% probability that the companies will close the transaction at Exelon's $27.25 cash offer. We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Even though Washington, D.C., regulators formally rejected the deal, we think the companies are committed enough to closing the deal that there is a good likelihood they will accept the terms set by regulators. The terms sap additional value from shareholders to benefit customers through rate refunds and benefits, limiting cost reductions, returning merger synergies to customers, and limiting recovery for some costs. However, the D.C. service territory is not big enough for the incremental lost value to have an impact on our valuation of the deal. The terms also set strict ringfencing provisions, but those are typical and don't have any impact on our valuations.

Exelon management had said they would terminate the deal if regulators did not approve it by March 4, but we don't think that date is sacred any longer, as regulators have said the companies have until March 11.

Reaffirming Outlook for Now, but Politics Could Yank Cord Out From Exelon-Pepco

Travis Miller, Sector Director, 02 March 2016

We are reiterating our $26 fair value estimate for Pepco Holdings and $35 fair value estimate for Exelon after fissures opened in the settlement negotiations related to Washington, D.C., regulatory approval for the companies' proposed merger. As of midday Wednesday, Pepco was trading at a 10% discount to our fair value estimate and a 15% discount to Exelon's $27.25 per share cash offer price, both of which we think offer good return opportunities.

Our Pepco fair value estimate continues to include a 75% probability that the settling parties--including D.C. Mayor Muriel Bowser's office, the D.C. regulatory staff, the lead consumer advocate group, and the companies--will reach an agreement regulators will approve. We think the companies remain committed to the deal and will accept any final settlement terms regulators approve. The key points of contention appear to involve less than $100 million, an immaterial impact on the $6.8 billion deal value.

However, we think the companies could be losing control over the outcome, and the deal could now be a proxy political fight among several D.C. entities. If we get more information that supports this theory, we would be inclined to cut our probability of the deal closing to 50%, leading to a $2 per share cut in Pepco's fair value estimate. We include $5 per share of incremental value in our fair value estimate for Pepco. A probability change is not likely to have a material impact on the $1 per share of value dilution we include in our Exelon fair value estimate related to the deal.

We continue to think Exelon management would be willing to go past its previously stated March 4 deadline if settlement negotiations move forward.

We are reaffirming our narrow moat and stable moat trend ratings for both companies.

Exelon and Pepco Join to Sing a Duet: At Last

Travis Miller, Sector Director, 24 March 2016

We are reaffirming our $35 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after Washington, D.C., regulators approved its acquisition of Pepco with a 2-1 vote on Wednesday afternoon. The companies closed the acquisition following the vote, nearly two years after initially announcing the deal. Pepco stock will no longer trade as of March 24.

For Exelon, we have already incorporated $1 per share of value dilution into our fair value estimate, based on a 75% probability of the deal closing at Exelon's $27.25 per share cash offer. Using a 100% probability doesn't have a material impact on that dilution estimate.

We were confident that the management teams would negotiate until they received deal approval, even though the companies missed several self-imposed deadlines. The terms of the settlement in Washington, D.C., will benefit customers there, but they are too small to have a material impact on the $12 billion deal, including debt.

Cutting Midcycle Energy Prices; Fair Value Estimates for Power Producers to Fall 10%-40%

Travis Miller, Sector Director, 06 April 2016

We are cutting our midcycle assumptions for Brent oil, U.S. Henry Hub natural gas, and U.S. and European power prices. This will lead us to cut our fair value estimates 10%-40% for utilities with merchant power market exposure. We are maintaining our midcycle assumptions for coal, Eastern U.S. gas basis, and regional market heat rates.

Our new long-term marginal cost for U.S. natural gas is $3 per thousand cubic feet, down from $4/mcf. The cut is based on a more optimistic outlook for low-cost U.S. gas production primarily as a result of slowing declines in associated gas volumes, as well as improved productivity and resource potential from the Marcellus and Utica. We see more evidence that U.S. shale producers can survive at much lower prices than we previously assumed.

The midcycle gas price cut results in a similar cut to our midcycle U.S. power prices. Our benchmark PJM West around-the-clock midcycle price falls to $30.60 per megawatt hour from $43.35 when including our $0.60/mmBtu gas basis discount. The rest of our U.S. midcycle power prices fall 25%.

Power producers with large coal and nuclear fleets face the biggest fair value estimate cuts. These include Dynegy and NRG Energy. Diversified utilities with large coal and nuclear fleets such as Exelon and FirstEnergy could have

10%-20% fair value estimate cuts as we incorporate the new midcycle prices. Power producers with large gas generation fleets such as Calpine will experience smaller fair value estimate cuts because gas generation should benefit from lower costs and higher run times in our midcycle forecasts.

Our new Brent oil midcycle price is $60 per barrel, down from $70. The long-term structural issue facing crude markets is that the world needs some U.S. production growth, but not nearly as much as tight oil can supply. Our Brent oil price cut will lead us to cut our fair value estimate for Centrica.

We will be publishing updated reports and valuations on all companies within the next week.

Are Utilities Overheated or Are Their Yields too Good to Pass Up?

Travis Miller, Sector Director, 20 April 2016

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Exelon Threatens to Close Clinton, Quad Cities Nuclear Plants...Again

Travis Miller, Sector Director, 06 May 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after management used its strongest language to-date regarding the fate of the beleaguered Clinton and Quad Cities nuclear plants, both in Illinois. Management said it will close the plants by 2017-18 but also said the decision depends on several developments. These are the same contingencies management has used for several years to justify postponing the plant closures.

We continue to assume Exelon closes Clinton, Quad Cities, and two other nuclear plants by 2020. But we think management remains hesitant to pull the cord. The plants could survive if Illinois politicians pass what effectively is a nuclear bailout bill; Clinton clears the Mid-Continent Independent System Operator's 2017-18 capacity auction next spring; or Quad Cities clears the mid-Atlantic capacity auction later this month. Quad Cities cleared last year's 2017-18 transitional capacity auction at $151.50 per megawatt-day but did not clear the 2018-19 auction at $215/MW-day. We expect similar clears in this year's 2019-20 auction.

Exelon earned $0.68 per share on an adjusted basis and reaffirmed its $2.40-$2.70 per share 2016 guidance, in line with our estimates. It continues running its nuclear fleet at world-class levels, achieving a 95.8% capacity factor in the quarter and proving it can capture the full upside if energy prices rebound. Exelon also filed rate cases at two of its newly acquired Pepco utilities, which should boost earnings and returns on the pricey acquisition if the utilities receive constructive decisions.

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results.

Andrew Bischof, CFA, Eq. Analyst, 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Andrew Bischof, CFA, Eq. Analyst, 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real

Travis Miller, Sector Director, 02 June 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

Morningstar Equity Research Methodology

Fundamental Analysis

At Morningstar, we believe buying shares of superior businesses at a discount and allowing them to compound over time is the surest way to create wealth in the stock market. The long-term fundamentals of businesses, such as cash flow, competition, economic cycles, and stewardship, are our primary focus. Occasionally, this approach causes our recommendations to appear out of step with the market, but willingness to be contrarian is an important source of outperformance and a benefit of Morningstar's independence. Our analysts conduct primary research to inform our views on each firm's moat, fair value and uncertainty.

Economic Moat

The economic moat concept is a cornerstone of Morningstar's investment philosophy and is used to distinguish high-quality companies with sustainable competitive advantages. An economic moat is a structural feature that allows a firm to sustain excess returns over a long period of time. Without a moat, a company's profits are more susceptible to competition. Companies with narrow moats are likely to achieve normalized excess returns beyond 10 years while wide-moat companies are likely to sustain excess returns beyond 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe lower-quality no-moat companies will see their returns gravitate toward the firm's cost of capital more quickly than companies with moats will. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

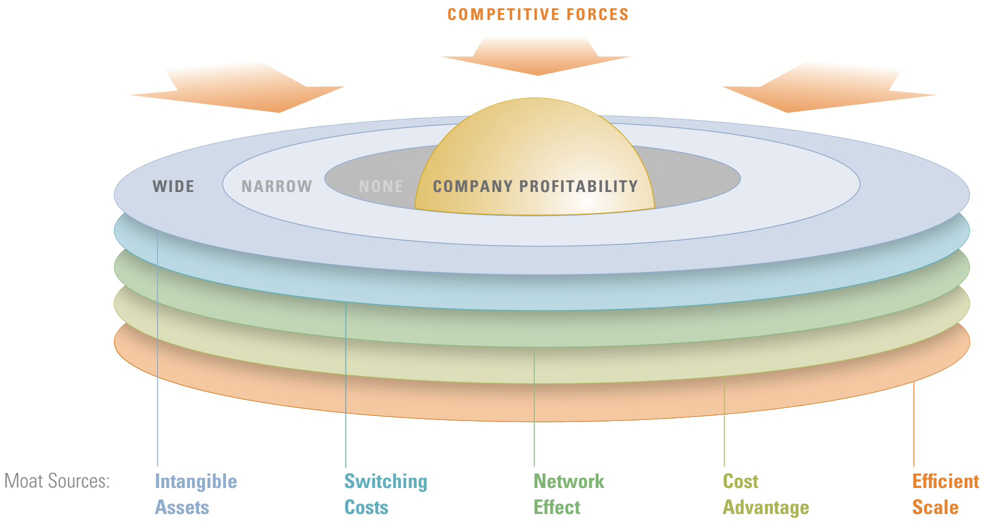
Fair Value Estimate

Our analyst-driven fair value estimate is based primarily on Morningstar's proprietary three-stage discounted cash flow model. We also use a variety of supplementary fundamental methods to triangulate a company's worth, such as sum-of-the-parts, multiples, and yields, among others. We're looking well beyond next quarter to determine the cash-generating ability of a company's assets because we believe the market price of a security will migrate toward the firm's intrinsic value over time. Economic moats are not only an important sorting mechanism for quality in our framework, but the designation also directly contributes to our estimate of a company's intrinsic value through sustained excess returns on invested capital.

Uncertainty Rating

The Morningstar Uncertainty Rating demonstrates our assessment of a firm's cash flow predictability, or valuation risk. From this rating, we determine appropriate margins of safety: The higher the uncertainty, the wider the margin of safety around our fair value estimate before our recommendations are triggered. Our uncertainty ratings are low, medium, high, very high, and extreme. With each uncertainty rating is a corresponding set of price/fair value ratios that drive our recommendations: Lower price/fair value ratios (<1.0) lead to positive recommendations, while higher price/fair value

Economic Moat



Morningstar Equity Research Methodology

ratios (>1.0) lead to negative recommendations. In very rare cases, the fair value estimate for a firm is so unpredictable that a margin of safety cannot be properly estimated. For these firms, we use a rating of extreme. Very high and extreme uncertainty companies tend to have higher risk and volatility.

Quantitatively Driven Valuations

To complement our analysts' work, we produce Quantitative Ratings for a much larger universe of companies. These ratings are generated by statistical models that are meant to divine the relationships between Morningstar's analyst-driven ratings and key financial data points. Consequently, our quantitative ratings are directly analogous to our analyst-driven ratings.

Quantitative Fair Value Estimate (QFVE): The QFVE is analogous to Morningstar's fair value estimate for stocks. It represents the per-share value of the equity of a company. The QFVE is displayed in the same currency as the company's last close price.

Valuation: The valuation is based on the ratio of a company's quantitative fair value estimate to its last close price.

Quantitative Uncertainty: This rating describes our level of uncertainty about the accuracy of our quantitative fair value estimate. In this way it is analogous to Morningstar's fair value uncertainty ratings.

Quantitative Economic Moat: The quantitative moat rating is analogous to Morningstar's analyst-driven economic moat rating in that both are meant to describe the strength of a firm's competitive position.

Understanding Differences Between Analyst and Quantitative Valuations

If our analyst-driven ratings did not sometimes differ from our quantitative ratings, there would be little value in producing both. Differences occur because our quantitative ratings are essentially a highly sophisticated analysis of the analyst-driven ratings of comparable companies. If a company is unique and has few comparable companies, the quantitative model will have more trouble assigning correct ratings, while an analyst will have an easier time recognizing the true characteristics of the company. On the other hand, the quantitative models incorporate new data efficiently and consistently. Empirically, we find quantitative ratings and analyst-driven ratings to be equally powerful predictors of future performance. When the analyst-driven rating and the quantitative rating agree, we find the ratings to be much more predictive than when they differ. In this way, they provide an excellent second opinion for each other. When the ratings differ, it may be wise to follow the analyst's rating for a truly unique company with its own special situation, and follow the quantitative rating when a company has several reasonable comparable companies and relevant information is flowing at a rapid pace.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

Analyst Note 02 Jun 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

auction.

Unless stated otherwise, this Research Report was prepared by the person(s) noted in their capacity as Equity Analysts employed by Morningstar, Inc., or one of its affiliates. This Report has not been made available to the issuer of the relevant financial products prior to publication.

The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic value. Five-star stocks sell for the biggest risk-adjusted discount whereas one-star stocks trade at premiums to their intrinsic value. Based on a fundamentally focused methodology and a robust, standardized set of procedures and core valuation tools used by Morningstar's Equity Analysts, four key components drive the Morningstar Rating: 1. Assessment of the firm's economic moat, 2. Estimate of the stock's fair value, 3. Uncertainty around that fair value estimate, and 4. Current market price. Further information on Morningstar's methodology is available from http://global.morningstar.com/equitydisclosures.

This Report is current as of the date on the Report until it is replaced, updated or withdrawn. This Report may be withdrawn or changed at any time as other information becomes available to us. This Report will be updated if events affecting the Report materially change.

Conflicts of Interest:

-No material interests are held by Morningstar or the Equity Analyst in the financial products that are the subject of the Reports.

-Equity Analysts are required to comply with the CFA Institute's Code of Ethics and Standards of Professional Conduct.

-Equity Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

-Equity Analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them. Morningstar will not receive any direct benefit from the publication of this Report.

- Morningstar does not receive commissions for providing research and does not charge companies to be rated.

-Equity Analysts use publicly available information.

-Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

-Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures.

If you wish to obtain further information regarding previous Reports and recommendations and our services, please contact your local Morningstar office.

Unless otherwise provided in a separate agreement, you may use this Report only in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of this document is Morningstar Inc. Redistribution, in any capacity, is prohibited without permission. The information, data, analyses and opinions presented herein do not constitute investment advice; are provided solely for informational purposes and therefore are not an offer to buy or sell a security; and are not warranted to be correct, complete or accurate, nor may they be construed as a representation regarding the legality of investing in the security/ies concerned, under the applicable investment or similar laws or regulations of any person or entity accessing this report. The opinions expressed are as of the date written and are subject to change without notice. Except as otherwise required by law, Morningstar, its affiliates, and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions or their use. You should seek the advice of your financial, legal, tax, business and/or other consultant, and read all relevant issue documents pertaining to the security/ies concerned, including without limitation, the detailed risks involved in the investment, before making an investment decision.

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. As the price / value / interest rate of a security fluctuates, the value of your investments in the said security, and in the income, if any, derived therefrom may go up or down.

Morningstar Investment Adviser India Private Limited is a wholly owned subsidiary of Morningstar Associates LLC, which is a part of the Morningstar Investment Management group of Morningstar, Inc., and Morningstar, Inc. is a leading provider of independent investment research that offers an extensive line of products and services for individual investors, financial advisors, asset managers, and retirement plan providers and sponsors. In India, Morningstar Investment Adviser India Private Limited has only one associate, viz., Morningstar India Private Limited, and this company predominantly carries on the business activities of providing data input, data transmission and other data related services, financial data analysis, software development etc.

The author/creator of this Investment Research ("Research Analyst") or his/her associates or his/her relatives does/do not have (i) any financial interest in the subject company; (ii) any actual/beneficial ownership of one per cent or more securities of the subject company, at the end of the month immediately preceding the date of publication of this Investment Research; and (iii) any other material conflict of interest at the time of publication of this Investment Research.

The Research Analyst or his/her associates or his/her relatives has/have not received any (i) compensation from the subject company in the past twelve months; (ii) compensation for products or services from the subject company in the past twelve months; and (iii) compensation or other material benefits from the subject company or third party in connection with this Investment Research. Also, the Research Analyst has not served as an officer, director or employee of the subject company.

The terms and conditions on which Morningstar Investment Adviser India Private Limited offers Investment Research to clients, varies from client to client, and are spelt out in detail in the respective client agreement.

The Guggenheim Daily Transmission

The Guggenheim Daily Transmission: PNW, EXC, NEE, SO, Solar, Renewables, Coal

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

PNW – AZ rate filing looks to overhaul rate design to support sustainable infrastructure investment (see note HERE)
Solar – GTM Research forecasts lower solar costs than DOE's 2020 goal
EXC – Plans for Illinois nuclear plants expected to be announced today
Renewables – EIA data shows renewables reached 10% of US power generation for first time
Coal – Bankrupt coal producer claims utilities breached supply contracts in bankruptcy court
NEE – Hawaii regulators aren't in a rush to meet merger agreement deadline
SO – Kemper monthly status report shows an additional $19mm through April 2016

PNW – AZ rate filing looks to overhaul rate design to support sustainable infrastructure investment

- PNW's Arizona utility, APS, filed a rate case (E-01345A-16-0036) seeking a net increase of $166mm to become effective 7/1/17 premised upon a 10.5% ROE and 55.8% equity ratio on a $6.8bn rate base in the ACC's jurisdiction (total rate base is $8bn).
- In addition to traditional utility investments and new investments to modernize the grid and facilitate clean energy, APS is looking to overhaul rate design to improve cost recovery and eliminate cross-subsidization between customer classes.
- APS is looking to better align rates with its cost of service by creating a new sub-category for customers with solar, and shift from volumetric rates based on customer usage to fixed rates based on peak demand and basic service costs incurred by all customers connected to its grid.
- APS is also looking to modify net metering rates to align with avoided costs rather than compensating excess generation at the full retail rate.

Guggenheim takeaway: *Rate case could provide upside to our numbers (see our note HERE). The filing is in line with our expectations, with inputs slightly higher than modeling assumptions driving our estimates and a heavy focus on rate design. Our current estimates assume a 10.1% allowed (vs 10.5% ask) on a $6.43bn YE ratebase ($6.77B ask) and revenue increase of $60mm (vs. $165.88mm ask). Rate base and revenue ask are higher than our estimates and so could provide upside. Rate filing not contentious – outside of rate design, filing not expected to be contentious. As a reminder, we have hosted events with various ACC commissioners over the past few months – for examples, see Power Breakfast: Guggenheim-Hosted Utility Commissioner Meetings and Power Breakfast Part Deux: Guggenheim-Hosted Utility Commissioner Meetings.*

Solar – GTM Research forecasts lower solar costs than DOE's 2020 goal

- GTM Research estimates utility-scale solar costs will decline 21% to $0.99/watt by 2020.
- Its cost estimate comes in just below the Department of Energy's (DOE) $1/watt goal established in 2011 through the SunShot initiative.
- The DOE estimated their $1/watt goal would allow solar to meet ~14% of U.S. power demand by 2030.

Guggenheim takeaway: *The estimate is in line with our $0.92-$1.65/watt estimate, which we discuss in detail in our LCOE analysis of various generation technologies (see HERE). While not yet competitive with combined-cycle gas turbines (we estimate $0.56-0.93/watt), utility-scale solar costs have continued to come down as utilities deploy low-cost capital in solar to meet state RPS goals and non-utility investors have developed innovative financing vehicles to lower their cost of capital in order to participate in the growth (i.e. tax equity, YieldCos).*

EXC – Plans for Illinois nuclear plants expected to be announced today

- Local media notes EXC is expected to announce the first steps toward closing its Clinton and Quad Cities nuclear facilities today.
- Expectations stem from legislation that would have provided relief for the plants, but did not come to a vote as the legislative session ended 5/31/16.
- EXC indicated they would retire the plants if the legislation was not passed before the end of this legislative session.

Guggenheim takeaway: *We weren't surprised the legislation stalled considering the tight deadline, but would still view this as incrementally positive for EXC as these plants were operating at a loss. Also a positive lateral to DYN – could swing DYN's incremental 500MW shutdown that has yet to be announced; see our recent note HERE.*

Renewables – EIA shows renewables reached 10% of U.S. power generation for first time

- According to data from the Energy Information Administration (EIA), renewables accounted for 10.6% of U.S. power generation in March, up from 7.7% in March 2015 and 2.6% ten years ago.

Guggenheim takeaway: *A major milestone for renewable generation, and as we mention above, we expect growth will likely continue as solar costs continue to decline and become increasingly competitive with conventional generation sources, and as utilities develop large-scale projects to support RPS goals in states with relatively low cost power (which makes the economics more challenging for developers).*

Coal – Bankrupt coal producer claims utilities breached supply contracts in bankruptcy court

- In its recent bankruptcy court proceeding, coal producer Peabody Energy (BTU, NC, $1.08) claimed PacifiCorp (BRK.B, NC, $142.44) and a PNW utility in Arizona (APS) breached a long-term coal supply contract by refusing to accept agreed-upon shipments of coal to the Cholla power plant that they jointly own.
- Peabody claims the utilities refused May and June coal shipments but accepted deliveries after the producer filed for bankruptcy protection in April.

Guggenheim takeaway: *The utilities didn't comment on their plant's availability or other issues that could have caused them to take less coal, but they have been looking to terminate the contract with Peabody – which should be expected from utilities and IPPs with out-of-the-money coal contracts in a depressed gas price environment.*

NEE – Hawaii regulators aren't in a rush to meet merger agreement deadline

- Local media reports that as the 6/3 deadline in the merger agreement between NEE and HE (NC, $32.64) approaches, regulators indicate they won't be rushed to make a decision regarding approval of the proposed transaction.
- HE indicated the process could continue beyond 6/3 without having to affirmatively extend the deadline; NEE reportedly declined to comment.

Guggenheim takeaway: *While the process could continue past 6/3, we think NEE simply pays the $90mm break-up fee and walks away from the uphill battle in Hawaii; potentially focusing its efforts back on Oncor in Texas as its arrangement with Hunt has been unwinding. We think these assets are a great strategic fit for NEE; despite a potential equity raise, the transaction should be noticeably accretive – this should not present an overhang on NEE shares.*

SO – Kemper monthly status report shows an additional $19mm through April 2016

- SO reported an incremental $19mm in the Kemper's monthly status report through April 2016 versus the previous month.

Guggenheim takeaway: *The first-of-its-kind project continues to cast uncertainty as we approach its estimated 3Q16 in-service date; hopefully the ultimate schedule remains in place and there isn't much room to incur incremental costs.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, NextEra Energy, Inc., Pinnacle West Capital Corporation and Southern Company in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market

risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

EXC - They weren't bluffing

This morning EXC announced that they would commence actions within 30 days to shut down the Quad Cities and Clinton nuclear plants on June 1, 2018 and June 1, 2017, respectively. EXC had said they would take these actions if the IL legislature did not pass supportive legislation by May 31. While some investors or legislators may have thought EXC was bluffing, management were clearly serious. That said, there is still a path for the plants to remain open if the legislature were to pass EXC's supported bill, the Next Generation Energy Plan, by the end of August. There are "no return" dates in MISO and PJM in September. In an 8K filing this morning, EXC discussed potential accounting repercussions associated with the plant closures. These include a $150M to $200M charge in June 2016, accelerated depreciation and nuclear fuel amortization given the shortened useful life, and asset retirement obligation and asset retirement cost considerations. The June 2016 charge and D&A implications will be excluded from EXC's operating earnings. The company is also likely to be required to make an incremental cash contribution to Clinton's nuclear decommissioning trust fund and also potentially Quad Cities', depending on the decommissioning methods approved by the NRC. In a worst case scenario, these contributions are estimated at $385M for Clinton and $65M for Quad Cities. Additional cash costs may also be incurred if the NRC does not authorize EXC to use the plants' NDTFs for non-radiological decommissioning costs. More precise financial impacts will be disclosed at the August Analyst Day. However, mgmt had noted on the Q1 call that the plants were projected to lose $140M in 2017 (free cash flow basis). As a result, we believe the closures would be accretive to EXC's EPS and value. Separately, we also believe the Clinton retirement should tighten MISO Zone 4 further, potentially benefitting DYN.

PCG – POD orders $24.3M penalty for Gas Distribution Recordkeeping OII

In late-2014, the CPUC opened this Order Instituting an Investigation (OII) into PG&E's gas distribution recordkeeping in response to a report by the Safety and Enforcement Division (SED) describing several gas distribution incidents in PCG's system from 2010-2014. The SED recommended a $112M penalty, while the City of Carmel recommended a $652M penalty. Yesterday's POD instead adopted a penalty of $24.3M on top of the $10.8M the company already paid for the City of Carmel explosion. The POD finds the fines appropriate for "systemic failures and isolated mistakes in an otherwise compliant system." In addition, the POD requires PCG and stakeholders to engage in a "meet and confer process" to remedy recordkeeping issues raised in the POD going forward. All told, we would view an outcome consistent with the POD as another step for Buy-rated PCG to put its challenging past behind it and move towards a group average valuation multiple or better.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

TLN – Being acquired by Riverstone
EXC – Early retirement of Clinton and Quad Cities announced (see our note HERE)
PCG – ALJ proposes $24mm penalty for gas distribution record keeping

TLN – Being acquired by Riverstone

- TLN announced it would be acquired by Riverstone Holdings, a private investment firm.
- All outstanding shares will be acquired for $14 per share in cash.
- The transaction has a total enterprise value of $5.2bn.
- Riverstone affiliates currently own ~35% of the outstanding shares.
- The agreement provides a "go-shop" period where TLN may actively solicit alternative proposals for 40 days, and continue discussions with qualifying offers for an additional 20 days.

Guggenheim takeaway: *Not a surprise. Not a lot of value for assets in public markets and management has signaled they would look to the private route if the spread between public and private markets continue. In our view, TLN is in better hands with private equity vs. public markets given asset quality, different return threshold, and longer time horizon to weather power market recovery. The TLN situation is an isolated situation, in our view.*

EXC – Early retirement of Clinton and Quad Cities announced (see our note HERE)

- EXC announced plans to retire the Clinton and Quad Cities nuclear facilities in June 2017 and June 2018, respectively, resulting in one-time charges of $150-200mm in 2016.
- The announcement comes after Quad Cities failed to clear the 2019/2020 PJM auction, Clinton saw insufficient capacity prices clear in MISO, and legislation (Senate Bill 1585) intended to provide relief for nuclear plants stalled in Illinois.
- EXC previously indicated it would close Clinton in 2017 and Quad-Cities in 2018 if legislation didn't pass by the end of the spring session so shouldn't be a surprise.

Guggenheim takeaway: *The more rationalization of merchant assets, the better the market opportunity – IPPs, especially DYN, are beneficiaries of this trend. We weren't expecting IL legislation to pass, so incrementally positive considering plants were operating at a loss. EXC didn't give policy makers much time, calling for action before the end of the spring session, so we aren't surprised it didn't come to a vote, and we expected these plants to close. The asset retirement dates are* *consistent with refueling outages and beyond any capacity commitments. Both assets, as discussed in the past, aren't covering their operating costs, return on invested capital and generating negative cash flow – shutdown should be CF/EPS accretive. As a reminder, the Plants have lost ~$100mm in CF/year since '09 and Management highlights negative CF of $140mm on '17 forwards ex basis and unit contingent risk – vs. our model of $155mm negative FCF using our 3/31 curves.*

PCG – ALJ proposes $24mm penalty for gas distribution record keeping

- The ALJ presiding over the CPUC's investigation into PG&E record-keeping practices found the utility failed to comply with record keeping laws and assessed a $24mm penalty.
- With the citation previously assessed for the Carmel incident, the total fine imposed is $35mm.
- Unless any party files an appeal of the POD or a CPUC commissioner requests a CPUC review of the POD within 30 days of the POD, the decision will become final.

Guggenheim takeaway: *The proposed fine came in a lot closer to PG&E's recommended cap of $34mm versus penalties recommended by the Safety Enforcement Decision totaling $112mm and up to $652mm recommended by the City of Carmel.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

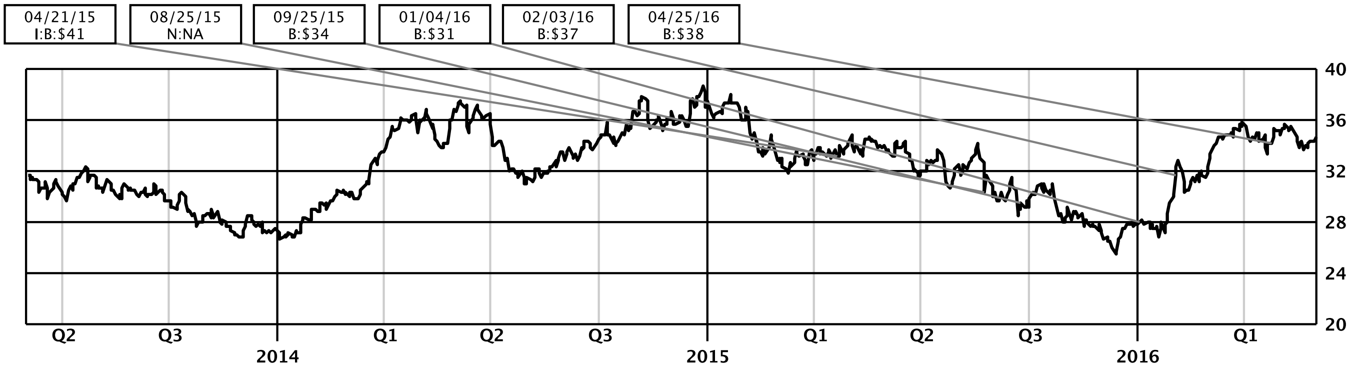
IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, Public Service Enterprise Group Inc. and Talen Energy Corporation in the next 3 months.

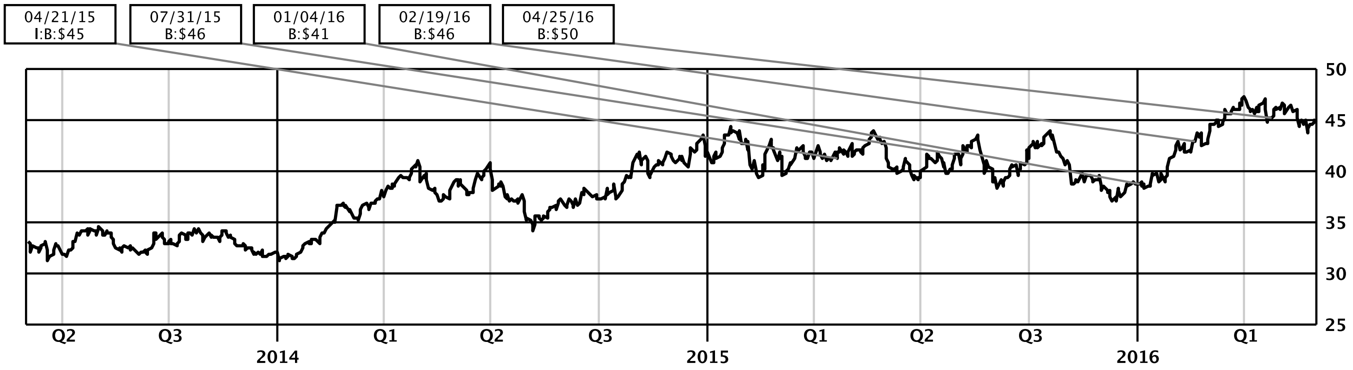
Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: Exelon Corporation (EXC) as of 06-02-2016

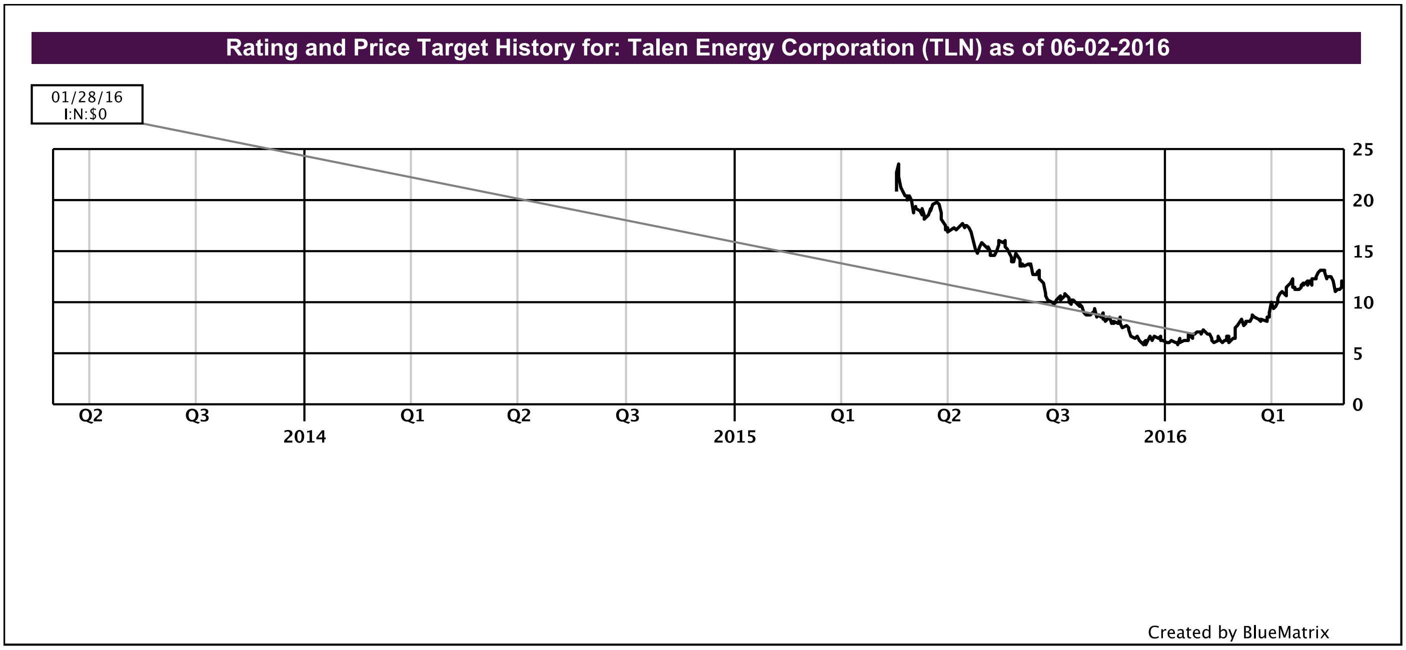


Created by BlueMatrix

Rating and Price Target History for: Public Service Enterprise Group Inc. (PEG) as of 06-02-2016



Created by BlueMatrix



RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RBC Insight

Exelon Corp (EXC) - Highlights from the RBC Global Energy and Power Executive Conference

Sentiment Indicator : neutral

Posted by Tucker, Shelby (RBC Capital Markets, LLC) on Monday, June 06, 2016, 17:10 PM ET

We met with Jack Thayer, SVP and CFO, and Dan Eggers, VP of IR. Below are our key takeaways from the breakout session:

- **Still possible for Illinois legislation on nukes, but Clinton/Quad Cities mostly a done deal.** The Illinois legislature's troubles passing the state budget played a big part in the nuclear legislation being delayed. Midwest ISO (MISO) has until September to decide whether it needs Clinton and Quad Cities for reliability purposes; if needed, Exelon would file for Reliability Must Run (RMR) permits. Even if the recent proposal to move MISO zone 4 into PJM is implemented, Clinton would require materially higher capacity revenues to cover its negative cash position (i.e. $150/MW-Day would only cover half of its negative cash flow). Management plans to provide details on potential earnings impacts of the plant closures at the upcoming Analyst Day on August 10 in Philadelphia.
- **PJM auction disappointed at EMAAC; expect rebound all-around next year.** While the COMED region continued to receive premium capacity pricing, management was surprised at the lower-than-expected premium received at the EMAAC zone, which they believe was largely due to bidding behavior. They still are not seeing the appropriate risk premium being bid in to reflect the more stringent requirements of Capacity Performance (CP), but they expect prices to rebound in the 2020/2021 auction as 100% of capacity becomes CP.

Company Name	Exchange	Ticker	Rating	Risk Qualifier	Price Target	Currency	Price	Price Date

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

NEE – Neither party terminates the deal; PUC chairman has hope for June decision
D/DUK/SO – Anti-trust complaint filed against Atlantic Coast Pipeline developers
EXC – Clinton and Quad Cities could be saved if IL passes energy bill by September
NEE – MA lawmakers criticize NH nuclear plant, urge NRC to close
ED – NY State Assembly passes bill for zero emissions by 2050
NRG – ERCOT awards RMR agreement for Greens Bayou

NEE – Neither party walks away from the deal; PUC chairman has hope for June decision

- Neither NEE or HE terminated their proposed merger despite the June 3rd deadline passing.
- NEE issued a statement noting the merger agreement didn't automatically terminate on June 3rd, and that action on the part of one of the parties is required to terminate the merger.
- The Chairman of the Hawaii PUC noted he is hopeful a decision will be issued in June.
- The PUC previously indicated its decision would be issued by written order and without a public meeting.

Guggenheim takeaway: *We still don't think regulators will approve the merger, still think NEE walks away soon.*

D/DUK/SO – Anti-trust complaint filed against Atlantic Coast Pipeline developers

- A retired antitrust attorney filed a complaint with the Federal Trade Commission alleging antitrust violations against Atlantic Coast Pipeline developers.
- They claim there is a conflict of interest with developers whose utility subsidiaries would be pipeline customers.

Guggenheim takeaway: *Competitive market participants have increasingly taken issue with affiliate transactions between a utility's regulated and unregulated subsidiaries; this complaint however, doesn't come from anyone with a competitive interest - likely just someone that doesn't want the project built. That said, utilities are becoming increasingly dependent on natural gas and will likely continue investing further upstream to access low-cost supply for their customers; whereas traditional pipeline developers may not see worthwhile opportunity in a depressed commodity price environment.*

EXC – Clinton and Quad Cities could be saved if IL passes energy bill by September

- Local media notes the recent decision to retire Clinton and Quad Cities could be reversed if Illinois lawmakers approve an energy reform bill by September.
- Company officials reportedly indicated the September deadline is based on when the utility must procure nuclear fuel for the reactor.

Guggenheim takeaway: *Potentially some hope but we weren't expecting the legislation to pass to begin with, considering the short timeframe. While the bill could gain traction with some more time, it will still have some hurdles to clear before a September refueling decision; the governor's potential veto, for example.*

NEE – MA lawmakers criticize NH nuclear plant, urge NRC to close

- Massachusetts lawmakers published a letter to the Nuclear Regulatory Commission (NRC) criticizing NEE's Seabrook nuclear plant in New Hampshire and calling for the facility to be closed.
- The letter notes degradation of concrete walls and criticizes the NRC for inadequate oversight.
- The NRC responded indicating they have been aware of the issue since 2012.

Guggenheim takeaway: *Not a new issue, as the NRC's response notes, but has delayed the renewal of Seabrook's operating license that runs through 2030.*

ED – NY State Assembly passes bill for zero emissions by 2050

- The NY State Assembly passed the New York State Climate and Community Protection Act, legislation looking to establish a zero-emission standard by 2050 for major sources of greenhouse gas emissions.

Guggenheim takeaway: *Quite a leap from an already lofty 50% renewable aspiration, but the bill has yet to see if a senator will step-up to sponsor it – and probably not likely, in our view, as the legislative session ends next week.*

NRG – ERCOT awards RMR agreement for Greens Bayou

- ERCOT entered a reliability-must-run agreement with NRG for its 371MW gas-fired Greens Bayou facility.
- The agreement follows NRG's recent notice of intent to suspend operations at the plant.
- The agreement is subject to approval from ERCOT's board of directors.

Guggenheim takeaway: *We have been highlighting challenging power market fundamentals in Texas but this is the first RMR contract we've seen surface here in quite a while. While ERCOT has to address immediate reliability concerns, and despite this being a gas plant, these contracts delay much-needed capacity rationalization that other market participants have been holding out for. We recently did a deep-dive analysis on the Texas power market, identifying over 8GW of coal-fired generation we believe will retire; of which we estimate 6.6GW is already operating out-of-the-money - likely holding out for capacity rationalization and tighter reserve margins that should follow (we estimate the remaining ~2GW would retire when faced with CapEx required to comply with regional haze). For additional takeaways on the situation in Texas, see our recent deep-dive analysis HERE.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-

service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

SO/AGL – Illinois regulators approve of merger
EXC – Seeks 2nd license renewal for PA nuke
EIA – U.S. retail residential power sales are anticipated to drop by 0.1% this summer

SO/AGL – Illinois regulators approve of merger

- The Illinois Commerce Commission unanimously approved SO's proposed acquisition of AGL (GAS, NC, $65.79), with all intervening parties in support of the previously announced settlement agreements.

Guggenheim takeaway: *SO is one step away from closing the acquisition with this settlement; requiring the last approval from NJ's BPU. SO expects to close the transaction in 2H16; we are optimistic it could close in 3Q16. We estimate this transaction could be 6-7% accretive in outer years. For our analysis on this transaction, see HERE*

EXC – Seeks 2nd license renewal for PA nuke

- EXC intends to ask federal regulators for a license renewal of the Peach Bottom nuclear plant in 2018, thereby allowing the facility to operate for 80 years, making the Pennsylvania facility only the second U.S. nuclear plant to announce it will reach for that milestone.

Guggenheim takeaway: Despite unsuccessful attempts to reform IL energy policy, resulting in EXC's recent announcement to retire Clinton and Quad Cities, hope for nuclear in states with carbon reduction aspirations such as PA - unclear to us how states reach carbon reduction goals without nuclear.

EIA – U.S. retail residential power sales are anticipated to drop slightly this year

- The EIA forecasts average U.S. electricity sales to the residential sectors are likely to be 1.6% lower than 2015. In 2016, retail sales of electricity to the commercial and industrial sectors are expected to rise by 0.5% and 0.2%, respectively, on the year.
- Total U.S. generation of electricity is likely to average 11,140 GWh per day for the year, down 0.5% from 2015 levels.

Guggenheim takeaway: No surprise coming off an abnormally mild winter caused by El Nino, which negatively impacted 1Q16 earnings comps for most utilities.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

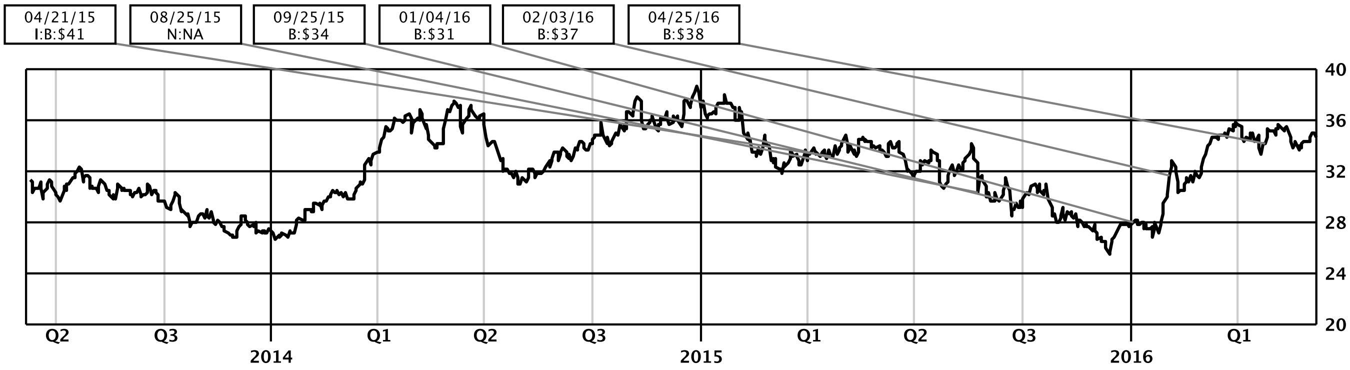
IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation and Southern Company in the next 3 months.

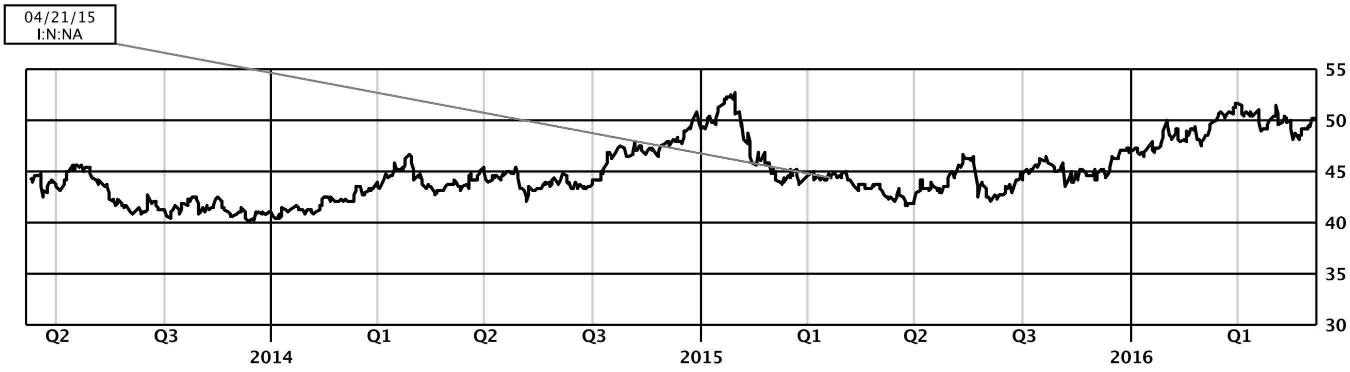
Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: Exelon Corporation (EXC) as of 06-07-2016



Created by BlueMatrix

Rating and Price Target History for: Southern Company (SO) as of 06-07-2016



Created by BlueMatrix

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

TE – NM hearing examiner supports EMA's proposed acquisition of TE
NEE/TE/DUK – FL Public Service Commission approves plan to cut electric utilities hedging
PPL/FE/EXC – PA utility regulators drop cap from net metering rule proposal
EXC – MD Public Service Commission orders cost disallowances on BGE's AMI program
ES – Hydro-Québec cheers advancement of MA energy bill

TE – NM hearing examiner supports EMA's proposed acquisition of TE

- The New Mexico Public Regulation Commission examiner recommends adoption of a Certification of Stipulation in support of EMA's acquisition, and states that it's in the public interest and has quantifiable and unquantifiable benefits to New Mexico Gas Co. customers.

Guggenheim takeaway: *This decision is in line and makes sense to us as concern over the merger by the NM Commission were addressed in Emera's integration plan, i.e., no change in number of employees, and rate freeze until 2018.*

NEE/TE/DUK/SO – FL Public Service Commission approves plan to cut electric utilities hedging

- The state Public Service Commission approved a plan by Florida's electric utilities to cut their hedging by 25 percent; rejecting calls by critics to end hedging altogether given nearly $6.6 billion in total losses since 2002, yet maintaining the option of revisiting the issue later in the year.

Guggenheim takeaway: *Utilities in Florida have traditionally defended hedging losses by emphasizing the programs are designed to reduce volatility, not prices. Most notably NEE, whose Florida utility (FP&L) has lost ~$4bn since they began their hedging program in 2002 -. Not material from an earnings standpoint but a data point.*

PPL – PA utility regulators drop cap from net metering rule proposal

- The Public Utility Commission voted 4-0 without comment to resubmit a proposed update of regulations covering alternative energy; dropping a section that would have capped net metering by electricity owners of solar and wind systems.

Guggenheim takeaway: *Not quite a battleground state in the net metering debate; rates are too low for economics to work without net metering, and solar penetration is too low for utilities to be concerned.*

EXC – MD Public Service Commission orders cost disallowances on BGE's AMI program

- The MDPSC issued a final rate order in BGE's 2015 electric and gas distribution rate case, granting an $89.5 million rate increase; yet precluding BGE from recovering through future electric and gas rates the full amount of costs incurred and invested in its AMI system.
- EXC will have an impairment charge in 2Q of $85 - $95 million for the AMI system cost disallowances and adjustments.

Guggenheim takeaway: *After tax, ~$59mm disallowance (midpoint of range) should translate to a ~$0.06/share charge. Non-operating so shouldn't impact core earnings.*

ES – MA House approves legislation requiring utility renewable procurement

- The Massachusetts House of Representatives approved H. 4385, a bill requiring utilities to procure hydro and wind.
- The legislation is now with the State Senate.

Guggenheim takeaway: *Although the NH SEC's review of ES's Northern Pass transmission line was recently delayed, this ruling is further evidence of policy support for the project, which would bring Canadian hydro into New England. A lot of mixed data points in New England but ultimately, we believe Eversouce should prevail.*

Key Research

1. FE – BUY – Mgmt. Meeting: It's All About Ohio; We Expect Equitable Outcome
2. PNW – NEUTRAL – Quick Take: AZ Rate Filing Looks to Overhaul Rate Design; Could Provide Upside to Our Estimates
3. EIX – NEUTRAL – Management Roadshow: Consistent Message, Block and Tackle with Upside Growth Potential
4. PPL – BUY – Management Roadshow – Low-Risk Growth Story; BREXIT/UK Concerns Manageable
5. SJI - Initiating with BUY Rating - Turnaround: It's All About Timing – Re-Based and "Regulated Growth" Outlook Piqued Our Interest
6. 2016 Outlook: Liking Utilities but Choose Wisely with a Return to Stock Picking
7. ED – Management Roadshow: Rate Cases, M&A, Harlem, Gas Midstream, Transmission, Renewables on Forefront
8. Texas Showdown: Has Wave of Coal Retirement Reached Texas?
9. EXC – BUY – DC Approves Acquisition; New Pro-Forma Estimates with POM
10. DYN – Upgrading to BUY - Atlas Holding DYN on its Shoulder: ENGIE Acquisition Transformational
11. DUK - BUY - Expected Earnings Dilution from LatAm Sale Offset by Value Accretion; Adjusting Estimates
12. D - BUY - STR Acquisition: Strategic Fit, Less Sticker Shock than Other Deals but More Value Driver for DM
13. AEP - BUY - Our Best Idea; Premium Utility Emerging from PPA Noise Stronger, More Regulated, and Ready to Grow
14. PNW - NEUTRAL - Management Meeting Takeaways: Rate Design; Solar Remains in Forefront; Potentially Higher CAPEX Outlook
15. EEI Full Recap
16. Power Breakfast: Guggenheim-Hosted Commissioner Meetings
17. Power Breakfast Part Deux: Guggenheim-Hosted Commissioner Meetings
18. NEE - BUY - Constructive Outlook on FL: Strategic Decisions, Less Contentious Rate Case & More Renewables Expected
19. PEG - BUY - Management Meeting Takeaways: Solid Regulated Growth, Making Some Moves in Power
20. Rising Rates? No Problem – Still Like Utilities, But Now Be More Selective Given Recent Performance
21. SO - NEUTRAL - Now Making the Correct Call on Gas? Great Call – We View Acquiring AGL as Best Strategic Move in Years
22. Evolving Economics of Power & Alternative Energy: Balance of "Power" Continues to Shift Toward Gas and Renewables

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-

service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

DYN – Buying out ECP; we liked the prior deal… we like it even more now
Fed – Officials opted not to raise the federal funds rate
CPP – U.S. House Speaker proposes legislation to dismantle wide range of federal regulations
NYISO – NYPA and NYSEG complete $120 million transmission project
EXC – NY PSC indicates possible closure of Nine Mile Point 1

DYN – Buying out ECP; we liked the prior deal… we like it even more now

- DYN eliminates the joint venture by acquiring ECP's 35% interest in the Atlas JV.
- Transaction calls for the remaining share of the upfront equity funding at closing, then pay a revised - discounted by 20% - floor price of $375mm post-closing; for a total transaction value of $750mm.
- Cost of the original buyout is lowered by $184mm.
- Financing will include $400mm tangible equity units, $2b term loan.
- ECP remains committed to the purchase of $150mm of DYN equity at $10.94/ share, becoming the largest shareholder of DYN.

Guggenheim takeaway: *We liked the prior deal…we like it even more now. Reminder – we upgraded shares on 2/29 following the ENGIE announcement. With yesterday's action, DYN has simplified the transformational ENGIE acquisition and took control of the entire fleet in a cash flow accretive and value enhancement manner while maintaining pre-existing credit rating metrics. Total purchase price of $3.675b, which includes $375mm to buy out ECP, equates to ~ $400Kw for 100% ownership of the entire fleet. More focusing on the remaining 35% piece announced today includes a negotiated floor price of $375mm (down from $519mm) and assuming ECP capital funding commitment of $415mm. For a more in depth view on this, see our note HERE.*

Fed – Officials opted not to raise the federal funds rate

- The Federal Open Market Committee kept the federal funds rates at 1/4 to 1/2 percent.
- Fewer Reserve officials expect the central bank to raise interest rates more than once this year, given a mixed picture of the economy (growth picking up and slowing job creation).
- The Fed continues to hold the position that rates are likely to rise at a "gradual" pace.

Guggenheim takeaway: *Since we launched on the sector, one of our primary thesis has been that we do not see material downside risk from tightening* *monetary policy given our view that rate increases would be gradual. This story remains the same and continues to play out as such; we will monitor the situation should producer and consumer price indexes signal higher than expected inflationary pressures. That said, we continue to have more Buys than Neutrals in the sector given our viewpoint that there is still some room to run for the regulated utilities. That said, we could be inching closer to the 9th inning given forward yield expectations and utility multiples. Where will incremental buyers go? Likely into more power levered names.*

CPP – House Speaker proposes legislation to dismantle wide range of federal regulations

- Proposal consists of bills that would dismantle many of President Obama's signature reforms, including those focused on the environment, labor and rules on financial institutions in place after the 2008 economic crisis.

Guggenheim takeaway: *Not a surprise coming from the Republicans, who claim regulatory overreach.*

NYISO – NYPA and NYSEG complete $120 million transmission project

- The New York Power Authority (NYPA) and New York State Electric & Gas (IBE-M, NC, $5.74) announced the completion of a $120mm transmission project enabling more electricity to flow from upstate to downstate NY.
- The Marcy South Compensation Project, is expected to provide ~440MW of additional transmission capacity, supporting the state's 50% renewable goal.

Guggenheim takeaway: *The State continues to take steps towards meeting its 50% renewable 40% carbon reduction aspirations.*

EXC – NY PSC indicates possible closure of Nine Mile Point 1

- In a filing for case 16-E-0270, EXC indicated it has not yet ordered fuel for Nine Mile Unit 1, as the company wants a pricing formula determined by the PSC by August 1.
- Refueling is scheduled March 2017.
- EXC notes it requires PSC approval of Clean Energy Standards (CES) and the submitted compensation program prior to making the investment.
- Refueling the unit would cost ~$55mm, and EXC believes the process could be compressed to 6 months (typically 9-12 months).

Guggenheim takeaway: *The more rationalization of merchant assets, the better for IPPs, particularly for BUY-rated DYN and NRG. As we've noted, nuclear retirements are often in line with refueling outages. We aren't calling the conclusion of proceedings, but the move makes sense to us and the process is likely on a shorter timeframe now. We do see more nuclear rationalization over the next couple of years.*

ANALYST CERTIFICATION

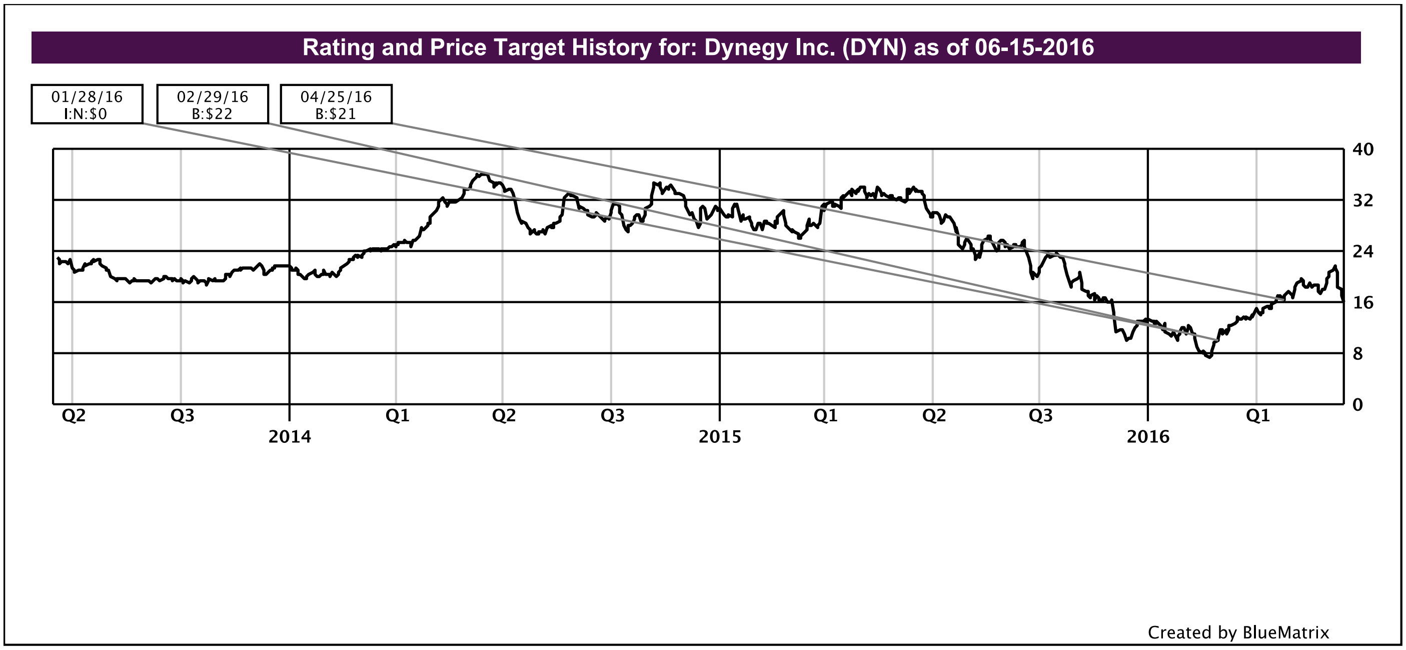
By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

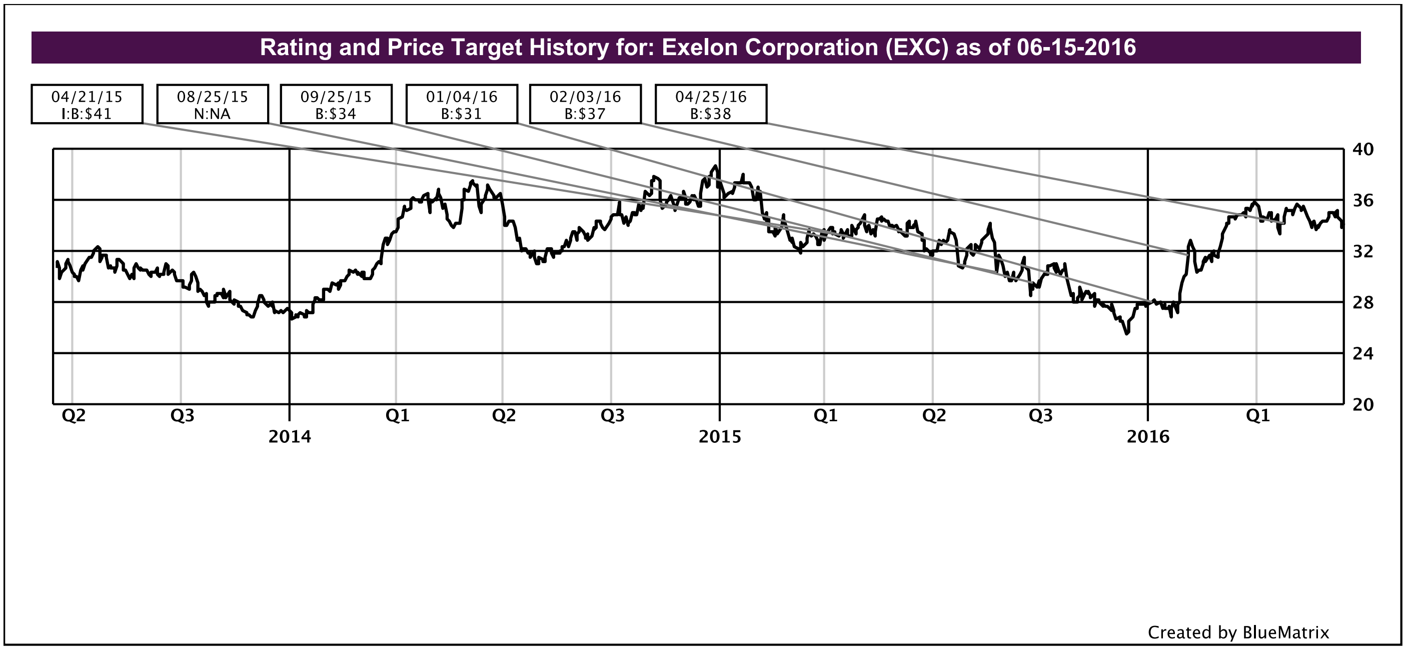
Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Dynegy Inc. and Exelon Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.



Rating and Price Target History for: Dynegy Inc. (DYN) as of 06-15-2016

Created by BlueMatrix



Rating and Price Target History for: Exelon Corporation (EXC) as of 06-15-2016

Created by BlueMatrix

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

EXC – Reclamation fund for the Clinton and Quad Cities nuclear facilities has shortfall
CAISO – California ISO declares Flex Alert for Southern California
NEE – FPL plans to buy interest in Indiantown Cogeneration for $451m
FE – IPPs protest FE Rider, call on FERC for further action

EXC – Reclamation fund for the Clinton and Quad Cities nuclear facilities has shortfall

- EXC may have to disburse up to an additional $790mm to restore the sites for the three reactors. (Quad Cities is a dual-unit station.)
- Clinton's restoration fund held $501mm, while the company estimates cost to restore the site is $997mm.
- Quad Cities restoration funds hold $833 million, yet there is no public disclosure of estimates for the site at this time.
- EXC had counted on the continued operation of the plants to help build the cleanup funds through investment gains.

Guggenheim takeaway: *The gap in cleanup funds is dependent on the funds realized returns and the period chosen for decommissioning. Both assets, as discussed in the past, weren't covering their operating costs, return on invested capital and generating negative cash flow – shutdown should be CF/EPS accretive. As a reminder, the Plants have lost ~$100mm in CF/year since '09 and management highlights negative CF of $140mm on '17 forwards ex basis and unit contingent risk – vs. our model of $155mm negative FCF using our 3/31 curves.*

CAISO – California ISO declares Flex Alert for Southern California

- The California Independent System Operator (ISO) issued a Flex Alert asking consumers to conserve energy to help prevent rotating power outages.
- Electricity demand is expected to rise during the heat wave on Monday and Tuesday, June 20 and 21, with forecasted system-wide energy use expected to exceed 46,000 MWs; a total slightly lower than the 2015 system peak of 47,358 MWs.
- With the shut-in of Aliso Canyon, following a massive leak at the underground storage facility in October, the grid is at risk.

Guggenheim takeaway: *Not surprising given the higher level of heating degree days, coupled with the limited operations of the Aliso Canyon storage facility. Key beneficiaries are BUY-rated CPN and NRG but weather impact needs to be sustainable.*

NEE – FPL plans to buy interest in Indiantown Cogeneration for $451m

- NEE's Florida Power & Light Co. (FPL) files petition with state's Public Service Commission (PSC) to approve purchase of coal-fired power plant located in Indiantown, FL for $451m, including debt.
- Seeking approval of the purchase by December, upon taking ownership from Calypso Energy, FPL plans to immediately reduce the plant's operations with the intention of phasing it out.

Guggenheim takeaway: *This directed rationalization, if approved by PSC, will be the 2nd coal power plant in two years FPL has bought to phase out. Not super material to the story.*

FE – IPPs protest FE Rider, call on FERC for further action

- Several groups, led by the Electric Power Supply Association (EPSA), submitted a protest against FE's Rider RRS.
- In addition, the group called on FERC to issue a further order to prevent FE from circumventing the Commission's affiliate restrictions.

Guggenheim takeaway: *They make some valid arguments in the filing as they did the first go-ahead; we think FE can get its proposal approved in OH, but it's unclear how it fares with FERC, as we were wrong the first time. For additional thoughts see our note HERE.*

ANALYST CERTIFICATION

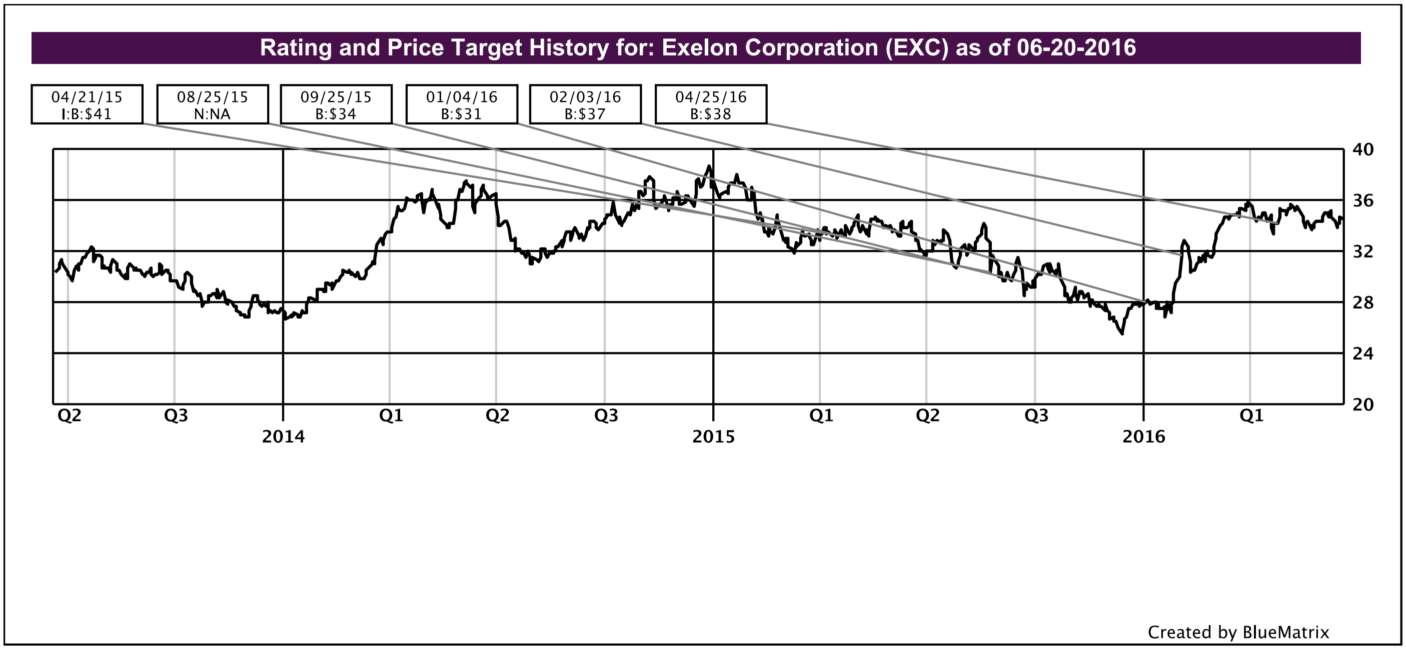
By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

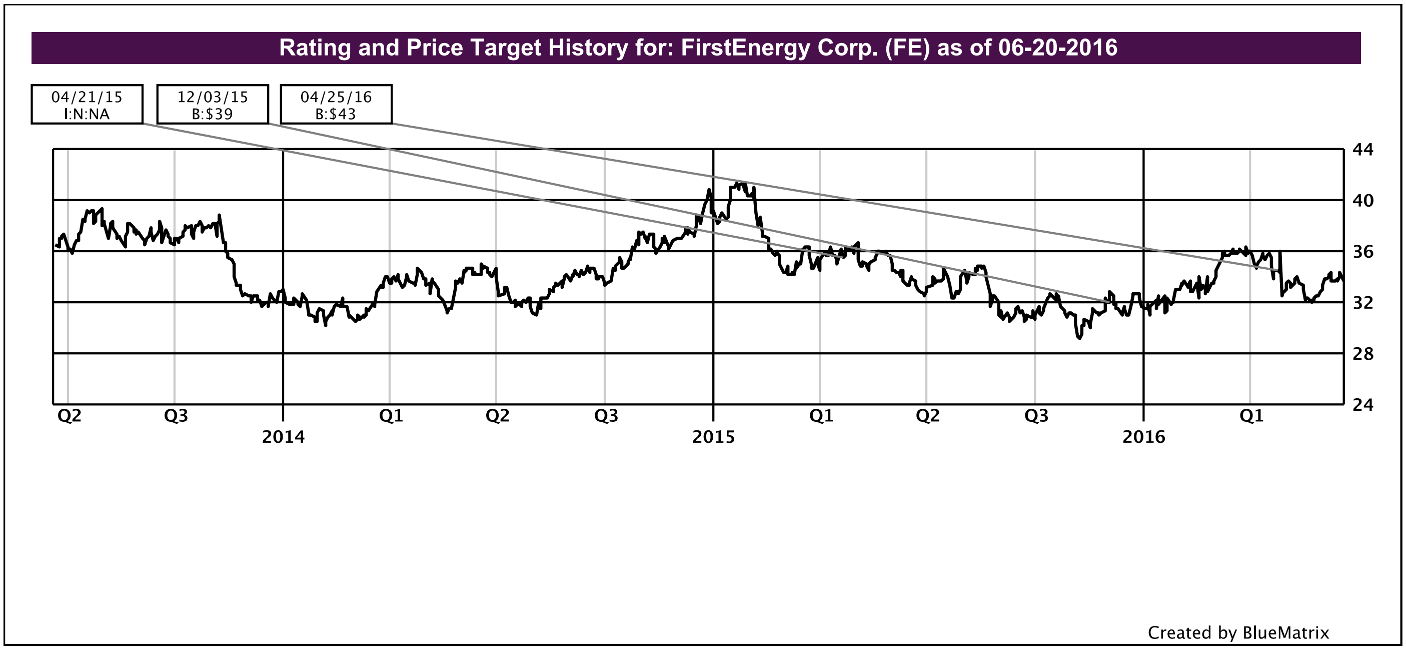
The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, FirstEnergy Corp. and NextEra Energy, Inc. in the next 3 months.

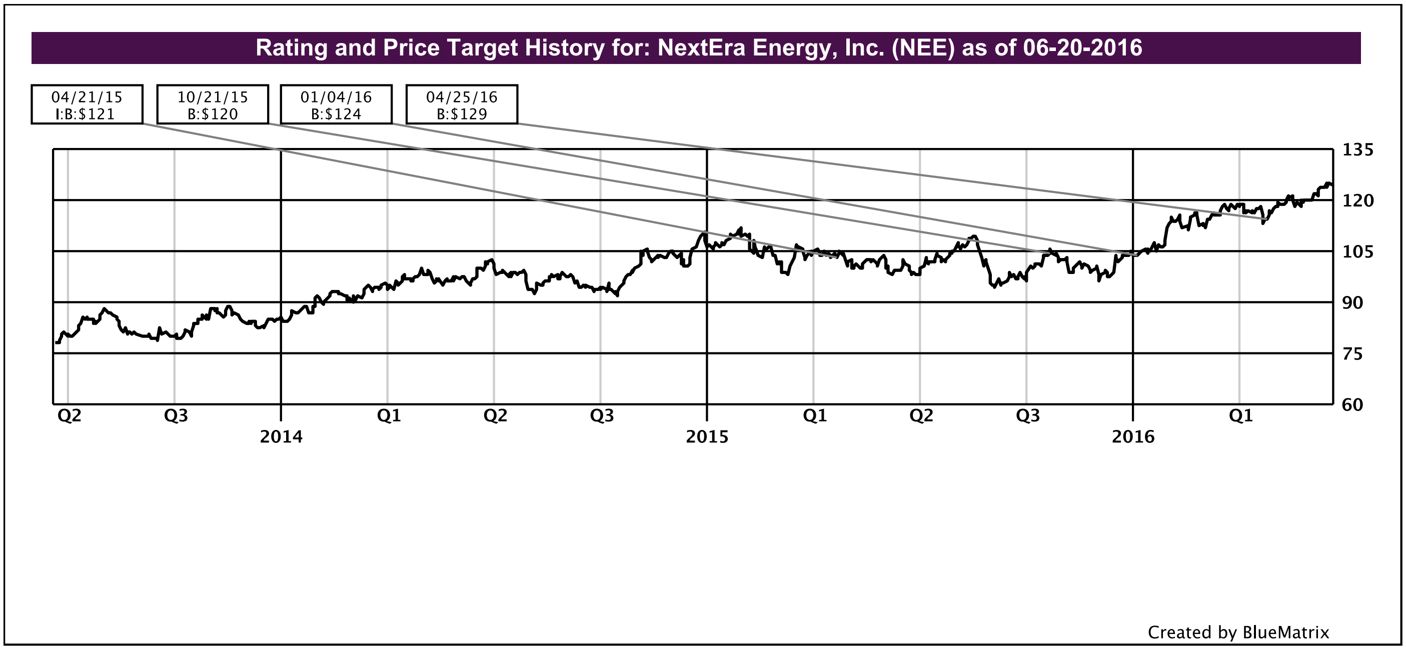
Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.



Rating and Price Target History for: Exelon Corporation (EXC) as of 06-20-2016



Rating and Price Target History for: FirstEnergy Corp. (FE) as of 06-20-2016



RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

PPL – Focus Beyond Brexit – Now is the Time to Own - (see note HERE)
ETR – Congressman calls for IP shutdown
EXC – NRC notified of Clinton and Quad Cities retirement plans
PCG – Federal expert testifies in San Bruno trial
TE – NM regulators approve Emera's merger and acquisition
PHMSA – Legislation grants new authority to federal regulator
CAISO - Senator warns FERC to look out for market manipulation
Solar – Renewed push for a referendum on net metering in NV

ETR – Congressman calls for IP2 shutdown

- A US congressman, along with the Hudson Riverkeeper President, has called for the immediate shutdown of Indian Point Unit 2.
- The congressman is calling for an analysis of the 227 bolts the were recently replaced.

***Guggenheim takeaway:** We recently highlighted ETR brining IP2 back online, although likely at the frustration of various nuclear opponents that have been petitioning the appeals court demanding answers to questions around issues with degrading bolts. We recently toured the plant and found operations to be top-notch.*

EXC – NRC notified of Clinton and Quad Cities retirement plans

- EXC notified the Nuclear Regulatory Commission (NRC) of plans to retire its Clinton (2017) and Quad Cities (2018) nuclear facilities in Illinois.
- EXC announced its intent to close the plants on 6/2/16.

***Guggenheim takeaway:** Both assets, as we've discussed in the past, weren't covering their operating costs, return on invested capital and generating negative cash flow – shutdown should be CF/EPS accretive. As a reminder, the Plants have lost ~$100mm in CF/year since '09 and management highlights negative CF of $140mm on '17 forwards ex basis and unit contingent risk – vs. our model of $155mm negative FCF using our 3/31 curves.*

PCG – Federal expert testifies in San Bruno trial

- A senior engineer with the Pipeline and Hazardous Materials Safety Administration (PHMSA) noted the law requires operators to review potential risks for pipelines in "high concentration areas" such as the San Bruno neighborhood.
- Testimony notes the pipeline safety code spells out what operators must do, but it allows for an engineer's judgment in prioritizing the greatest potential threats to the system.

Guggenheim takeaway: *PCG is not on trial for the cause of the explosion but whether or not it violated the Pipeline Safety Act and obstructed the investigation. That said, PCG recently announced its first dividend increase since 2010, which we believe was a show of confidence from management in light of potential penalties the utility faces, and evidence the company is eager to put this trial in the rear view.*

TE – NM regulators approve Emera's merger and acquisition

- The New Mexico Public Regulation Commission (NMPRC) has unanimously approved Emera Inc.'s (EMA, NC, C$46.80) $10.4b acquisition of TECO Energy.
- The transaction is expected to close on or about July 1st, 2016, following the filing of the NMPRC's written order;
- On or prior to closing, Emera will issue to holders of its 4% convertible unsecured subordinated debentures a final installment notice.

Guggenheim takeaway: *As expected the NM Commission has approved Emera's acquisition, likely due to a robust integration plan, which will accept all conditions TE agreed to when they acquired NMGC, e.g., no change in number of employees, rate freeze until 2018, and TE maintains ownership for at least ten years after closing.*

PHMSA – Legislation grants new authority to federal regulator

- President Obama signed The Pipeline Safety Act re-authorization, which passed both houses of Congress unanimously.
- The legislation gives the U.S. Pipeline and Hazardous Materials Safety Administration (PHMSA) emergency-order authority, allowing it to quickly instate nationwide regulations to address imminent safety concerns.
- The agency has 60 days to issue temporary rules and 9 months to write regulations governing the emergency-order process.

Guggenheim takeaway: *This legislation is partially the result of Sempra Energy's (SRE, NC, $109.53) multi-month Aliso Canyon natural gas storage leak; market participants will likely contribute to the development of standards for underground storage. The PHMSA will try to act quickly to improve oversight, but the agency must go through a lengthy rule-making process before issuing regulations.*

CAISO - Senator warns FERC to look out for market manipulation

- A US senator voiced concern that natural gas shortages and supply disruptions in Southern California would increase energy prices throughout the region.
- The senator further noted concern around generators and marketers engaging in "Enron-like" tactics at the expense of consumers.

Guggenheim takeaway: *Many policy makers have not forgotten the CA energy crisis from 2000/2001, and will be on the lookout for instances where consumers may have been exploited.*

Solar – Renewed push for a referendum on net metering in NV

- The Bring Back Solar Alliance submitted twice the 55,234 signatures needed to place a referendum to restore net metering on the November ballot.
- The alliance must still win appeal of a lower court decision disqualifying the ballot measure.

Guggenheim takeaway: *Not sure if this effort has legs yet, or if a referendum is a practical approach; legislature would have to amend existing law. Solar advocates claim the PUC aimed to kill the solar industry – emphasized by*

SolarCity (SCTY, BUY, $21.88) and SunRun (RUN, BUY, $5.90) closing their doors in NV. Commissioners, on the other hand, have noted satisfaction with their rate-design.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-

service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Electric Utilities
North America

The Best Safe Utilities

Alert: If safety you seek, seek out AEP, EIX, ES. Do not be tempted by hybrid utilities like EXC and FE.

Jesse Chai
jesse.chai@citi.com

- **With Brexit, interest rates likely stay lower for longer and safety of utilities will be sought.** However, the utility asset class is not uniform.
  - **Hybrid utilities (EXC, FE) are ones to avoid** given their unregulated generation businesses adds commodity price volatility to a utility story.
  - **Pure-play utilities are clearly the better choice.** Utilities with 100% regulated operations offer the most safety. However, important to find management teams that have a track record of sticking to their core business and not destroying value with poor M&A. Our top picks (AEP, EIX, ES) offer that combination.
- **Utilities not cheap on a fundamental valuation basis.** Our DCF suggests utilities are fully valued and that is why we don't have any Buys among pure-play utilities. However, we highlight our top relative picks at a time when safety is sought.
- **Transmission and Gas Infrastructure – businesses we like the most**. With declining load growth, we think transmission and gas infrastructure investments will have the least regulatory resistance. Again, all our top picks are levered to these.

Top Relative Picks: Utilities:

- **AEP:** We like the transmission growth story and the focus of management team to exit the generation business. *Risk:* If leveraged finance markets get impacted by Brexit, the sale price for its Ohio assets will be impacted negatively.
- **ES:** We like the strong growth story (5-7% LT EPS growth) with leverage to transmission and gas infrastructure. *Risk:* Delays in the approval of their Northern Pass transmission line will impact growth trajectory.
- **EIX:** Strong transmission and distribution growth story (7% rate base growth through 2017) in a relatively good regulatory construct. *Risk:* The re-opening of the SONGs settlement adds a near term overhang to the story.

Top Names to Avoid: Hybrid Utilities

- **FE:** Owns an unregulated coal and nuclear generation fleet in Ohio which is challenged by weak gas prices. They are effectively looking to re-regulate assets but have already been turned down once by FERC. If re-regulation doesn't go through, ~$1B equity issuance could be coming to support their credit rating. We think there is a high likelihood of this outcome and have a sell rating on the stock.
- **EXC:** Owns a large unregulated nuclear generation fleet that is struggling in a low power price environment. Have already announced retirements of some of their nuclear units and we think more to come. Pressures on the credit will continue to build and this is another story where we think the risks outweigh the safety.

Appendix A-1

Analyst Certification

The research analyst(s) primarily responsible for the preparation and content of this research report are named in bold text in the author block at the front of the product except for those sections where an analyst's name appears in bold alongside content which is attributable to that analyst. Each of these analyst(s) certify, with respect to the section(s) of the report for which they are responsible, that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc and its affiliates. No part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendation(s) or view(s) expressed by that research analyst in this report.

IMPORTANT DISCLOSURES

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Public Service Enterprise Group Inc

A Supervisory Analyst has a position that may be considered material to that individual in the securities of American Electric Power Co Inc Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of American Electric Power Company Inc

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Duke Energy Corp Citigroup Global Markets is acting as an advisor to Duke Energy in its sale of its Midwest Commercial Generation Business to Dynegy. A Supervisory Analyst has a position that may be considered material to that individual in the securities of Duke Energy Corp

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Dominion Resources Inc

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of FirstEnergy Corp

Citigroup Global Markets,Inc. is a sales agent in PG&E Corporation's continuous offering program. Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of PG&E Corp

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Edison International

(For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

The Firm is a market maker in the publicly traded equity securities of Duke Energy Corp.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating		
Data current as of 31 Mar 2016	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	48%	39%	13%
% of companies in each rating category that are investment banking clients	65%	62%	62%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov; Jesse Chai

OTHER DISCLOSURES

Many European regulators require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm’s global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm’s proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author’s previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.
Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.
Citi Research product may source data from dataCentral. dataCentral is a Citi Research proprietary database, which includes the Firm's estimates, data from company reports and feeds from Thomson Reuters. The printed and printable version of the research report may not include all the information (e.g., certain financial summary information and comparable company data) that is linked to the online version available on the Firm's proprietary electronic distribution platforms.

The research data in this report is not intended to be used for the purpose of (a) determining the price or amounts due in respect of one or more financial products or instruments and/or (b) measuring or comparing the performance of a financial product or a portfolio of financial instruments, and any such use is strictly prohibited without the prior written consent of Citi Research. Any unauthorized use, duplication, redistribution or disclosure of this report (the "Product"), including, but not limited to, redistribution of the Product by electronic mail, posting of the Product on a website or page, and/or providing to a third party a link to the Product, is prohibited by law and will result in prosecution. ES/NEE/PEG – NEE, PEG argue against New England utilities buying pipeline capacity
M&A – Macquarie is said to be weighing the sale of Duquesne
TLN – Takeover raises debt concerns
ETR – Flow of oil stopped at FitzPatrick
EXC – DC PSC examines impact of merger on standard offers service
SO – Georgia Power reaches IRP settlement entailing 1.2GW of renewables
ETR – Governor rejects Nuclear Society proposed lifeline to FitzPatrick via NYPA takeover

NEE – Media reports of a bid for Oncor amidst a process with several parties

- Bloomberg reported NEE is closest to reaching a deal to buy Energy Future Holdings Corp.'s Oncor Electric Delivery Co.
- At least seven companies reportedly expressed interest in the utility; it may be valued at $17B to $18B.
- Other suiters highlighted in the article include EIX and Berkshire (BRK.B, NC, $138.50).

Guggenheim takeaway: *We look to the bankruptcy proceeding as a catalyst for coal retirement in ERCOT as well as a potential new opportunity for NEE. While NEE has not come out and made a public comment that it is re-interested in the Oncor assets, it has been reported by Bloomberg. We think these assets are a great strategic fit for NEE; despite a potential equity raise, the transaction should be noticeably accretive – this should not present an overhang on NEE shares.*

ES/NEE/PEG – NEE, PEG argue against New England utilities buying pipeline capacity

- NEE and PEG filed a joint complaint against efforts underway in four New England states that would allow electric utilities to procure capacity on gas pipelines.
- The complaint takes aim at ES's Access Northeast Project, which will be funded in part by customers of ES's utility subsidiaries.

Guggenheim takeaway: *What's interesting to us is that NEE (FPL) has undertaken similar efforts in FL, essentially looking to put costs incurred to secure natural gas supplies into electric rates (ultimately rejected by State Supreme Court) BUT FL is a regulated state vs a de-regulated region like New England. We see arguments for both sides in New England but ultimately ES should prevail given region 's gas needs and ES's relationships with local constituencies. Tough call at this juncture but we remain on the approval camp given recent data points.*

M&A – Macquarie is said to be weighing the sale of Duquesne

- *SparkSpread* reports, *"Infra investor said to explore U.S. utility sale,"* the infrastructure arm of Macquarie is understood to be weighing the sale of Duquesne Light.
- Other shareholders include Singaporean sovereign wealth fund GIC (31%); IFM Investors (25.2%); and Australian pension funds First State Super (6.6%) and STC Funds (6.8%).

Guggenheim takeaway: *Considering the amount of participation in recent competitive processes for gas utility acquisitions, we would expect several large-cap regulated utilities to be interested.*

TLN – Takeover raises debt concerns

- Riverstone's plan to acquire the remaining 65% of TLN will cost about $1.2B, but most of that will come from Talen's cash reserves ($1B) and a new term loan ($250mm).
- Moody's Investors Service has the company under review for a potential downgrade due to the increased leverage and diminished financial flexibility.

Guggenheim takeaway: This news shouldn't be a surprise. *Not a lot of value for assets in public markets and management has signaled they would look to the private route if the spread between public and private markets continue, which they did. In our view, TLN is in better hands with private equity vs. public markets given asset quality, different return threshold, and longer time horizon to weather power market recovery. The TLN situation is an isolated situation, in our view.*

ETR – Flow of oil stopped at Fitzpatrick

- Personnel identified and stopped the source of oil released to the FitzPatrick plants discharge canal.
- The lubricating oil contains no PCBs, is non-radioactive, non-hazardous and has low potential health effects; ETR is taking all appropriate actions for cleanup.

Guggenheim takeaway: *As we have highlighted in our research, the State has been attempting to keep Fitzpatrick alive ever since ETR announced plans to retire the unit. Despite the NY Commissions proposed zero-carbon credit and the recent Senate bill to keep the plant operating, we believe that ETR is already on track to closing the plant. This ship has sailed.*

EXC – DC PSC examines impact of merger on standard service

- The District of Columbia Public Service Commission requested comments on maintaining the competiveness of default service, as EXC acquired the auction's program administrator.
- EXC subsidiaries were a "frequent winning bidder" in the administered auctions; the commission is aware interested parties may raise issues and seeks to address this in its review.
- Considering a shift from a sealed-bid format, to a descending clock auction; as well as the length of SOS contracts.

Guggenheim takeaway: *We don't anticipate any market manipulation to arise from a review, and always welcome any additional market transparency. Non-event for now.*

SO – Georgia Power reaches IRP settlement entailing 1.2GW of renewables

- Georgia Public Service Commission Staff and other intervenors agreed to a stipulation with SO where it's GA utility would develop 1.2GW of renewables by 2021 as part of its 2016 integrated resource plan.
- SO will issue two RFPs for utility-scale renewable (solar, wind or biomass): **(1)** 525 MW in 2018/2019; and **(2)** 525 MW in 2020/2021. SO also committed to procure 150 MW of DG by the end of 2018.
- The agreement would also allow SO to develop up to 200MW of projects that would not otherwise be feasible through a competitive bidding process.

Guggenheim takeaway: *Southern Power should win some of this, in our view.*

ETR – Governor rejects Nuclear Society proposed lifeline to FitzPatrick via NYPA takeover

- New York Gov. Andrew Cuomo rejected the idea that the New York Power Authority take back ownership of ETR's Fitzpatrick plant.

Guggenheim takeaway: *The Governor is advocating for a Clean Energy Standard that would recognize value of zero-emission nuclear capacity and ironically, been trying to save a nuclear plant in a relatively oversupplied zone in NY (Fitzpatrick) while trying to shut another plant in a constrained zone in NY (Indian Point).*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.

Buy	158	60.31%	28	17.72%
Neutral	104	39.69%	3	2.88%
Sell	0	0.00%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-

service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

ES – A signed PPA with Hydro-Quebec was filed with the NH PUC
SO – Progress update on Vogtle expansion
EXC – ComEd's request for transmission incentive is rejected by FERC
ES – Environmental group appeals the dismissal of its Northern Pass complaint
Renewables – North American countries agree to new regional climate pact
EIX/PCG – Reorganization of California regulation

ES – A signed PPA with Hydro-Quebec was filed with the NH PUC

- ES and Hydro-Québec filed with the New Hampshire Public Utilities Commission (NHPUC) its agreed upon 20-year power purchase agreement (PPA) to deliver hydro power via the Northern Pass Transmission project (NPT).
- PPA guarantees NH customers a proportional share of ISO-NE regional demand (9%) on Northern Pass.

***Guggenheim takeaway:** Constructive filing as it specifies NH's share of benefits from the project traversing its state, and as it addresses concern around NH's "fair share"; the NH SEC recently pushed back its date for a final decision to Sept. 30, 2017.*

SO – Progress update on Vogtle expansion

- The CA05 module was installed at Vogtle unit 4; this provides structural support and separates rooms in the containment building.

***Guggenheim takeaway:** An incremental positive; SO remains confident it can meet its current construction schedule – we think it's achievable but timing is close, so execution is key.*

EXC – ComEd's request for transmission incentive is rejected by FERC

- FERC refused to grant EXC's request for an abandoned plant incentive for its Loretto-Wilton Center Line.
- FERC noted the risk is faced by every entity developing a transmission facility in PJM.

***Guggenheim takeaway:** Disappointing but not a major upset.*

ES – Environmental group appeals the dismissal of its Northern Pass complaint

- The Society for the Protection of New Hampshire Forests appealed the dismissal of its complaint against ES's Northern Pass.
- The original suit, which sought to prevent the burial of lines in a highway right of way, will go before the New Hampshire Supreme Court.

Guggenheim takeaway: *We don't believe there will be progress for the Society given the legal precedents on right of ways; all eyes will focus on the NH SEC review of the project.*

Renewables – North American countries agree to new regional climate pact

- Reuters reports that the United States, Mexico and Canada agreed to produce 50% of their combined electricity by 2025 from clean energy sources (wind, solar, nuclear, and hydropower.)
- An official agreement, which builds on existing climate change efforts is set to be released at the North American Leader's Summit.
- The agreement includes provisions to ease the procurement of power across international borders.

Guggenheim takeaway: *Unclear if there is much incremental advancement of U.S. policy considering momentum already established by the EPA, but we would highlight nuclear is included in the pool of clean energy resources. We would also highlight support for cross-border transmission as an incremental positive for ES's Northern Pass transmission project (see above) to bring hydro from Canada into New England.*

EIX/PCG – Reorganization of California regulation

- The reform package includes a push for greater transparency and oversight at the California Public Utilities Commission, including more frequent online disclosure of communications between commissioners and those affected by their decisions.

Guggenheim takeaway: *We frequently highlight efforts underway in CA to reform utility regulation, making the state an increasingly challenging jurisdiction for utilities to navigate, and in turn, a less appealing place for investors to deploy capital.*
