**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(60% banking clients)
Underperform/Sell*	14%	(52% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Important Global Disclosures

Credit Suisse's research reports are made available to clients through our proprietary research portal on CS PLUS. Credit Suisse research products may also be made available through third-party vendors or alternate electronic means as a convenience. Certain research products are only made available through CS PLUS. The services provided by Credit Suisse's analysts to clients may depend on a specific client's preferences regarding the frequency and manner of receiving communications, the client's risk profile and investment, the size and scope of the overall client relationship with the Firm, as well as legal and regulatory constraints. To access all of Credit Suisse's research that you are entitled to receive in the most timely manner, please contact your sales representative or go to https://plus.credit-suisse.com .

Credit Suisse's policy is to update research reports as it deems appropriate, based on developments with the subject company, the sector or the market that may have a material impact on the research views or opinions stated herein.

Credit Suisse's policy is only to publish investment research that is impartial, independent, clear, fair and not misleading. Important disclosures regarding companies or other issuers that are the subject of this report are available on Credit Suisse’s disclosure website at https://rave.credit-suisse.com/disclosures or by calling +1 (877) 291-2683.

This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

Hong Kong: Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an Australian financial services licence (AFSL) and is exempt from the requirement to hold an AFSL under the Corporations Act 2001 (the Act) under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Act). Research on Taiwanese securities produced by Credit Suisse AG, Taipei Securities Branch has been prepared by a registered Senior Business Person.

Australia (to the extent services are offered in Australia): Credit Suisse Securities (Europe) Limited ("CSSEL") and Credit Suisse International ("CSI") are authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority ("FCA") and the Prudential Regulation Authority under UK laws, which differ from Australian Laws. CSSEL and CSI do not hold an Australian Financial Services Licence ("AFSL") and are exempt from the requirement to hold an AFSL under the Corporations Act (Cth) 2001 ("Corporations Act") under Class Order 03/1099 published by the Australian Securities and Investments Commission ("ASIC"), in respect of the financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). This material is not for distribution to retail clients and is directed exclusively at Credit Suisse's professional clients and eligible counterparties as defined by the FCA, and wholesale clients as defined under section 761G of the Corporations Act. Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). Credit Suisse Securities (USA) LLC (CSSU) and Credit Suisse Asset Management LLC (CSAM LLC) are licensed and regulated by the Securities Exchange Commission of the United States under the laws of the United States, which differ from Australian laws. CSSU and CSAM LLC do not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1100 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act).

Malaysia: Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd, to whom they should direct any queries on +603 2723 2020.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Forward Power/Gas Curves – 09/07/17. Below, we provide estimated forward curves for power, heat rates, spark, dark, and quark spreads for peak, off-peak, and around-the-clock for various regions in the United States, broken down by each RTO/ISO in North America. In addition, we model forward gas, basis, as well as coal through the 2026 time frame.

Investors should use this link to open an Excel spreadsheet of various curves that can be used for power and utility models (click here to download our weekly price deck summary).

Forward Curve Weekly Highlights: Power and Heat Rates, for the week of 9/7 versus the prior week, **2018 national peak power prices** ($/MWh) were up 0.1% to $34.13 from $34.10 and around-the-clock power was down 0.2% to $29.50 from $29.55. Peak power in PJM was down 0.7% to $36.75 from $37.00; ERCOT was down 0.5% to $32.37 from $32.52; NE-ISO was down 0.7% to $44.25 from $44.58; NY-ISO was up 0.5% to $46.06 from $45.85; and MISO was down 0.7% to $34.45 from $34.70. **2018 peak heat rate (Btu/kWh) contractions:** 0.7% to 10,049 in NE-ISO, 0.7% to 11,870 in MISO. **2018 peak heat rate (Btu/kWh) expansions:** 0.6% to 10,930 in ERCOT, 0.5% to 11,548 in NYISO, 0.1% to 11,662 in PJM. See full price deck for additional details on various other curves and regions.

Forward Curve Weekly Highlights: Spark and Dark Spreads versus the prior week, **2018 Peak Spark Spreads** ($/MWh) in PJM were down 0.5% to $14.69 from $14.77; ERCOT was down 1.5% to $11.52 from $11.69; NE-ISO was down 2.3% to $13.43 from $13.75; NYISO was up 1.2% to $18.14 from $17.93; and MISO was down 1.7% to $14.14 from $14.38. **2018 Around-the-Clock Dark Spreads** ($/MWh) in PJM were down 1.1% to $24.68 from $24.96; ERCOT was down 0.3% to $20.33 from $20.39; NE-ISO was down 0.6% to $31.79 from $31.98; NYISO was down 0.5% to $32.12 from $32.28; and MISO was down 1.0% to $22.99 from $23.22.

Illustrative impact of marking our IPP and integrated utility models to the current forward curves versus published live estimates: We are adding VST into this weekly note (See our initiation HERE). PEG, FE, EXC, NRG, DYN, CPN and VST are lower overall. **See the next page for illustrative MtM implications on Guggenheim's IPP and Integrated Utility coverage throughout our forecast period.**

Natural Gas Storage Levels and Eastern Gas Basis Tracker, Gas in storage increased to 3,220 Bcf as of 09/01/2017 a weekly increase of 65 Bcf, resulting in storage 6.2 Bcf below one year ago, 0.5 Bcf above the five-year average for this week. Eastern gas basis (TETCO M3) is currently reflecting a discount to Henry Hub for 2017 and a premium from 2018 through 2020 (-$0.54/$0.11/$0.08/$0.06 for '17/'18/'19/'20), expanding since last week.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.	
Rating Category	Count	Percent	Count	Percent
Buy	189	60.19%	22	11.64%
Neutral	123	39.17%	11	8.94%
Sell	2	0.64%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Additional Information Available Upon Request

I certify that:
1) All views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers discussed; and
2) No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by me in this research report.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: September 8, 2017

Important Disclosure for International Clients
EEA – The securities and related financial instruments described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. For recipients in the EEA, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority. For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 ("the Act"), the content of this report has been approved by WFSIL a regulated person under the Act. WFSIL does not deal with retail clients as defined in the Markets in Financial Instruments Directive 2007. The FCA rules made under the Financial Services and Markets Act 2000 for the protection of retail clients will therefore not apply, nor will the Financial Services Compensation Scheme be available. This report is not intended for, and should not be relied upon by, retail clients.

Australia – Wells Fargo Securities, LLC is exempt from the requirements to hold an Australian financial services license in respect of the financial services it provides to wholesale clients in Australia. Wells Fargo Securities, LLC is regulated under U.S. laws which differ from Australian laws. Any offer or documentation provided to Australian recipients by Wells Fargo Securities, LLC in the course of providing the financial services will be prepared in accordance with the laws of the United States and not Australian laws.

Canada – This report is distributed in Canada by Wells Fargo Securities Canada, Ltd., a registered investment dealer in Canada and member of the Investment Industry Regulatory Organization of Canada (IIROC) and Canadian Investor Protection Fund (CIPF). Wells Fargo Securities, LLC's research analysts may participate in company events such as site visits but are generally prohibited from accepting payment or reimbursement by the subject companies for associated expenses unless pre-authorized by members of Research Management.

Hong Kong – This report is issued and distributed in Hong Kong by Wells Fargo Securities Asia Limited ("WFSAL"), a Hong Kong incorporated investment firm licensed and regulated by the Securities and Futures Commission of Hong Kong ("the SFC") to carry on types 1, 4, 6 and 9 regulated activities (as defined in the Securities and Futures Ordinance (Cap. 571 of The Laws of Hong Kong), "the SFO"). This report is not intended for, and should not be relied on by, any person other than professional investors (as defined in the SFO). Any securities and related financial instruments described herein are not intended for sale, nor will be sold, to any person other than professional investors (as defined in the SFO). The author or authors of this report is or are not licensed by the SFC. Professional investors who receive this report should direct any queries regarding its contents to Mark Jones at WFSAL (email: wfsalresearch@wellsfargo.com).

Japan – This report is distributed in Japan by Wells Fargo Securities (Japan) Co., Ltd, registered with the Kanto Local Finance Bureau to conduct broking and dealing of type 1 and type 2 financial instruments and agency or intermediary service for entry into investment advisory or discretionary investment contracts. This report is intended for distribution only to professional investors (Tokutei Toushika) and is not intended for, and should not be relied upon by, ordinary customers (Ippan Toushika).

The ratings stated on the document are not provided by rating agencies registered with the Financial Services Agency of Japan (JFSA) but by group companies of JFSA-registered rating agencies. These group companies may include Moody's Investors Services Inc., Standard & Poor's Rating Services and/or Fitch Ratings. Any decisions to invest in securities or transactions should be made after reviewing policies and methodologies used for assigning credit ratings and assumptions, significance and limitations of the credit ratings stated on the respective rating agencies' websites.

About Wells Fargo Securities

Wells Fargo Securities is the trade name for the capital markets and investment banking services of Wells Fargo & Company and its subsidiaries, including but not limited to Wells Fargo Securities, LLC, a U.S. broker-dealer registered with the U.S. Securities and Exchange Commission and a member of NYSE, FINRA, NFA and SIPC, Wells Fargo Prime Services, LLC, a member of FINRA, NFA and SIPC, Wells Fargo Securities Canada, Ltd., a member of IIROC and CIPF, Wells Fargo Bank, N.A. and Wells Fargo Securities International Limited, authorized and regulated by the Financial Conduct Authority.

This report is for your information only and is not an offer to sell, or a solicitation of an offer to buy, the securities or instruments named or described in this report. Interested parties are advised to contact the entity with which they deal, or the entity that provided this report to them, if they desire further information. The information in this report has been obtained or derived from sources believed by Wells Fargo Securities, LLC, to be reliable, but Wells Fargo Securities, LLC does not represent that this information is accurate or complete. Any opinions or estimates contained in this report represent the judgment of Wells Fargo Securities, LLC, at this time, and are subject to change without notice. All Wells Fargo Securities research reports published by its Global Research Department ("WFS Research") are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Additional distribution may be done by sales personnel via email, fax or regular mail. Clients may also receive our research via third party vendors. Not all research content is redistributed to our clients or available to third-party aggregators, nor is WFS Research responsible for the redistribution of our research by third party aggregators. IMPORTANT DISCLOSURES

Analyst's Certification

I, BMO CM Research, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA. These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosures

Distribution of Ratings (September 07, 2017)

Rating category	BMO rating	BMOCM US Universe*	BMOCM US IB Clients**	BMOCM US IB Clients***	BMOCM Universe****	BMOCM IB Clients*****	StarMine Universe
Buy	Outperform	46.2%	23.8%	60.0%	48.3%	60.2%	53.9%
Hold	Market Perform	50.7%	14.1%	39.0%	48.7%	38.6%	41.1%
Sell	Underperform	3.1%	5.9%	1.0%	3.0%	1.2%	5.0%

* Reflects rating distribution of all companies covered by BMO Capital Markets Corp. equity research analysts.

** Reflects rating distribution of all companies from which BMO Capital Markets Corp. has received compensation for Investment Banking services as percentage within ratings category.

*** Reflects rating distribution of all companies from which BMO Capital Markets Corp. has received compensation for Investment Banking services as percentage of Investment Banking clients.

**** Reflects rating distribution of all companies covered by BMO Capital Markets equity research analysts.

***** Reflects rating distribution of all companies from which BMO Capital Markets has received compensation for Investment Banking services as percentage of Investment Banking clients.

Ratings Key (as of October 2016)

We use the following ratings system definitions:
OP = Outperform - Forecast to outperform the analyst’s coverage universe on a total return basis;
Mkt = Market Perform - Forecast to perform roughly in line with the analyst’s coverage universe on a total return basis;
Und = Underperform - Forecast to underperform the analyst’s coverage universe on a total return basis;
(S) = Speculative investment;
Spd = Suspended - Coverage and rating suspended until coverage is reinstated;
NR = No Rated - No rating at this time; and
R = Restricted - Dissemination of research is currently restricted.

BMO Capital Markets' seven Top 15 lists guide investors to our best ideas according to different objectives (CDN Large Cap, CDN Small Cap, US Large Cap, US Small Cap, Income, CDN Quant, and US Quant have replaced the Top Pick rating).

Other Important Disclosures

For Important Disclosures on the stocks discussed in this report, please go to http://researchglobal.bmocapitalmarkets.com/Public/Company_Disclosure_Public.aspx or write to Editorial Department, BMO Capital Markets, 3 Times Square, New York, NY 10036 or Editorial Department, BMO Capital Markets, 1 First Canadian Place, Toronto, Ontario, M5X 1H3.

Dissemination of Research

Dissemination of BMO Capital Markets Equity Research is available via our website https://research-ca.bmocapitalmarkets.com/Public/Secure/Login.aspx? ReturnUrl=/Member/Home/ResearchHome.aspx. Institutional clients may also receive our research via Thomson Reuters, Bloomberg, FactSet, and Capital IQ. Research reports and other commentary are required to be simultaneously disseminated internally and externally to our clients.

~ Research distribution and approval times are provided on the cover of each report. Times are approximations as system and distribution processes are not exact and can vary based on the sender and recipients' services. Unless otherwise noted, times are Eastern Standard and when two times are provided, the approval time precedes the distribution time.

BMO Capital Markets may use proprietary models in the preparation of reports. Material information about such models may be obtained by contacting the research analyst directly. There is no planned frequency of updates to this report.

General Disclaimer

"BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale arm of Bank of Montreal and its subsidiaries BMO Nesbitt Burns Inc., BMO Capital Markets Limited in the U.K. and BMO Capital Markets Corp. in the U.S. BMO Nesbitt Burns Inc., BMO Capital Markets Limited and BMO Capital Markets Corp are affiliates. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. Nothing herein constitutes any investment, legal, tax or other advice nor is it to be relied on in any investment or decision. If you are in doubt about any of the contents of this document, the reader should obtain independent professional advice. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Andrew Breichmanas, Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To E.U. Residents: In an E.U. Member State this document is issued and distributed by BMO Capital Markets Limited which is authorised and regulated in the UK and operates in the E.U. on a passported basis. This document is only intended for Professional Clients, as defined in Annex II to "Markets in Financial Instruments Directive" 2004/39/EC ("MiFID").

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

These documents are provided to you on the express understanding that they must be held in complete confidence and not republished, retransmitted, distributed, disclosed, or otherwise made available, in whole or in part, directly or indirectly, in hard or soft copy, through any means, to any person, except with the prior written consent of BMO Capital Markets.

Power/Utilities Macro Trends Tracker: Flat Trends In Forward Spreads

Ali Agha
212-319-3920
ali.agha@suntrust.com

Roger Song
212-319-3918
roger.song@suntrust.com

What's Inside

Page 2 includes the Table of Contents for all the relevant macro trends that we track.

What's Incremental To Our View

This report includes our analysis of the key macro factors impacting the power/utility sector, including: forward power prices, spark spread, dark spread, and gas/coal spread trends; domestic electric consumption growth; and national weather patterns. Based on the latest peer group valuations, we are increasing our price targets on DUK and PNW.

IMPORTANT POINTS

- On-Peak spark spreads currently suggest an increase over the 2017-2020 period ($12.7/MWh - $15.7/MWh) but were flat versus the prior week.
- On-Peak dark spreads currently suggest an increase over the 2017-2020 period ($5.9/MWh - $7.7/MWh) but decreased 1% versus the prior week.
- Forward power prices were flat last week, versus a 1% decrease in forward gas prices and no change in forward coal prices.
- Domestic electric consumption decreased 9% for the week ended September 2 and has decreased 2% year to date.
- Cooling Degree Days for July/August 2017 were 6% above normal but 15% below last year.
- The STRH Power Index was flat for the week (versus -1% for the S&P 500) and has increased 14% year to date (versus +10% for the S&P 500).
- The STRH Power Index is trading at a P/E multiple of 17.7x our 2019 estimates (a 14% premium to historical levels); an EV/EBITDA multiple of 9.7x our 2019 estimates (a 12% premium); P/B multiple of 2.0x (a 21% premium); and a Treasury-dividend yield spread of -120 basis points (a 15% discount).
- Based on the latest peer group valuations, we make the following increases to our price targets: DUK to $91 from $90; PNW to $87 from $86.

Notes:
(A) Investment Rating: Buy (B) = the stock's total return is expected to outperform the S&P 500 over the next 12-18 months; Hold (H) = the stock's total return is expected to perform in line with the S&P 500 over the next 12-18 months; Sell (S) = the stock's total return is expected to underperform the S&P 500 over the next 12-18 months. Only stocks under coverage are assigned an investment rating.
(B) Near-term price target over the next 12 months.
(C) 2017 FCF is calculated as cash flow from operations minus capex.

VALUATION

AEP
Assuming a 19.5x P/E multiple (a 9% premium to the peer group to reflect the above average earnings growth profile) on our 2019 estimate of $4.11, we derive our price target of $80.

AES
Assuming an 11.4x P/E multiple (which would still imply a 10% “conglomerate” discount to the peer group) on our 2019 estimate of $1.32, we derive our price target of $15.

CMS
Assuming a 19.8x P/E multiple (a 10% premium to the peer group to reflect the above average growth outlook) on our 2019 estimate of $2.47, we derive our price target of $49.

CNP
Based on the market value of CNP’s ownership in ENBL, we derive an $8.1/share value. Factoring a 17.9x P/E multiple (in line with the peer group) on our 2019 Utility estimate of $1.09, we derive a $19.5/share value. Consequently, our sum of the parts price target is $28.

CPN
Based on the company's take out price, and our assumption that a higher bid will not emerge, we derive our price target of $15.

DUK
Assuming a 17.9x P/E multiple (in line with the peer group) on our 2019 estimate of $5.09, we derive our price target of $91.

DYN
Assuming an EV/EBITDA multiple of 7.8x (a 3% discount to the peer group to reflect the higher leverage at the company) on our 2019 EBITDA estimate of $1.30bn, coupled with implied net debt of $8.26bn (which factors in all the announced asset sales), we derive our price target of $11.

EIX
Assuming a 19.2x P/E multiple (a 7% premium to the peer group to reflect the company’s above average earnings and dividend growth profile) on our 2019 estimate of $4.69, we derive our price target of $90.

EXC
Assuming a 14.8x P/E multiple (in line with the peer group) on our 2019 estimate of $2.75, we derive our price target of $41.

GXP
Assuming a 17.4x P/E multiple (a 2% discount to the peer group to reflect the uncertainties around the final merger approval) on our 2019 estimate of $1.80, we derive our price target of $32.

NRG

Based on the current market value of NRG's ownership in NYLD, we derive a $5/share equity value. Applying a 9.0x EV/EBITDA multiple (a 10% premium to the current peer average to reflect the potential upside from the successful execution of the Transformation Plan) to our residual NRG 2019 EBITDA estimate of $1.90 billion, coupled with implied residual Net Debt of $11.4 billion, we derive an $18/share value for the residual NRG. Consequently, our price target is $23.

PNM

Assuming an 18.1x P/E multiple (in line with the small cap peer group) on our 2019 estimate of $2.03, we derive our price target of $37.

PNW

Assuming a P/E multiple of 18.4x (in line with other small / mid cap peers) on our 2019 estimate of $4.71, we derive our price target of $87.

SO

Assuming a 16.5x P/E multiple (a 5% discount to the large cap peer group, reflecting ongoing uncertainty around the Vogtle project) on our 2019 estimate of $3.15, we derive our price target of $52.

XEL

Assuming a 18.0x P/E (in line with the peer group) on our 2019 EPS estimate of $2.60, we derive our price target of $47.

RISKS

AEP

- Final resolution of pending regulatory issues.
- Future earnings power post merchant exit
- Impact of proposed and future EPA regulations.

AES

- Potential regulatory/economic changes in key international markets.
- Investor sentiment regarding emerging/international markets.
- Successful execution of portfolio restructuring strategy.

CMS

- Outlook for Retail Open Access in Michigan.
- Change in the regulatory regime.
- Load growth trends.

CNP

- Macro trends and growth outlook for the MLP portfolio.
- Load growth trends in service territories.
- Ability to restructure MLP ownership position.

CPN
- Outlook for future spark spreads.
- Timing of additional EPA regulations.
- Electric load growth trends.

DUK
- O&M cost management.
- Future electric load growth trends.
- Impact of future regulatory initiatives.

DYN
- Outlook for forward commodity curves.
- Integration of the pending acquisitions.
- Final outcome of debt restructuring discussions.
- Implication of future EPA regulations.

EIX
- Capital investment and growth plans for non-utility operations.
- Final CPUC decision on applications to reopen SONGS retirement settlement.
- Outcome of pending and future regulatory cases.

EXC
- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

GXP
- Load growth outlook in service territories.
- Outcome of pending rate cases.
- Impact of higher property taxes and transmission costs.
- Completion of the WR acquisition.

NRG
- Execution of the Reset plan.
- Outlook for forward commodity curves.

PNM
- Final New Mexico PRC decision on the rate case settlement.
- Electric load growth trends in service territories.

PNW
- Impact of energy efficiency and distributed generation programs.
- Any regulatory changes regarding distributed generation
- Load growth outlook

SO

- Outlook for load growth.
- Dilution from additional equity issuance.
- Potential for further delays and cost increases at the large construction projects.
- Higher than expected accretion from AGL acquisition.

XEL

- Outcome of pending and future rate cases.
- Outlook for future capital expenditure (and rate base) growth.
- Load growth trends in service territories.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/11/2017):

Coverage Universe			Investment Banking Clients Past 12 Months		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	417	59.57%	Buy	130	31.18%
Hold/Neutral	279	39.86%	Hold/Neutral	58	20.79%
Sell/Reduce	4	0.57%	Sell/Reduce	1	25.00%

Morning Meeting Highlights

Eli Lilly and Company (LLY, $82.92, Buy) - ESMO - Abemaciclib MONARCH-3 Data Supports Shift to Greater Use of CDK4/6 Class - We're on ground at ESMO where MONARCH-3 (M3) interim ABEM & Cyramza RANGE data sets were conference highlights. ABEM M3 data was solid with median PFS not reached vs. PBO+LET at 14.7 months (HR = 0.54, p - **John Boris**

Merck & Co. Inc. (MRK, $64.32, Buy) - Keynote-021G Data Further Supports Keytruda's 1L NSCLC Position - We're on the ground at ESMO where MRK's KN-021G data for Keytruda + chemo combo showed an improved overall survival OS (HR improved to 0.59 from 0.69) after 4 mos. of follow-up. The median PFS implies 10 mos. with Keytruda+chemo vs. chemo alone. Updated KN-021G data increases confidence in Ph-3 KN-189 results, which are expected in 2H17. We believe MRK's 12-18 mo. lead supports Keytruda+Alimta uptake in 1L NSCLC. Other ESMO sessions on additional tumor types support Keytruda's label expansions & our '21E sales of $9.9B vs. Street's $9.7B. Reiterate Buy/$73PT on 17.7x '18E EPS, supported by DCF. - **John Boris**

Merck & Co. Inc. (MRK, $64.27, Buy) - ESMO–Keytruda data readouts establishing IO across a broad range of tumor types - MRK presented new data on Keytruda at ESMO across multiple tumor types in support of label expansion oppy's. Updated KN-021G data supports Keytruda's 1st mover adv. in 1L NSCLC adding confidence to KN-189 data in 2H17. KN-059 results de-risk Keytruda's gastric cancer approval on or before Sept. 22. Other Keytruda results in bladder, breast, carcinoid/pNET tumors & combo use with PARPs/IDOs/other MOAs are helping to establish the brand as the IO therapy of choice for Oncologists. We model Keytruda '21E sales at $9.9B vs. Street's $9.7B. Reiterate Buy/$73PT on 17.7x '18E EPS, supported by DCF. - **John Boris**

Exelixis, Inc. (EXEL, $25.97, Buy) - ESMO – Cabo & IO Data Clears 2L Kidney For Exelixis, and Potentially More - Exelixis' Cabozantinib failure and IO combo success in showing survival benefit in 1L kidney cancer is a near term negative for EXEL but long term positive in our view, and a buying opportunity on any weakness – (1) we see ESMO data as clearing the 1L/2L kidney landscape – IO could dominate 1L and cabo could dominate 2L kidney cancer, (2) IO should move to 1L (potentially restricted PD-L1 positive) giving cabo more room to grow in the 2L and a broad label – in our opinion, and (3) Cabo+IO combo provides optional 1L upside. Reiterate BUY rating and maintaining $33 PT. - **Peter Lawson**

MacroGenics, Inc. (MGNX, $18.94, Buy) - ESMO - Good AML Data, Positive for Platform and Focus - Upping PT - MacroGenics data highlights three important elements to help drive the stock higher; 1) very solid initial AML data show 6/14 patients responded (1 PR, 1 MLFS, 4 CR/CRi), 2) this data helps further

Lodging REITs - Hotel REITS - Insurance considerations in light of the hurricane activity

Restaurants - Restaurants - Commodities Call: Deflation Expected to Return in '18

Today's Events

9/11	Salesforce.com, inc. (CRM) - Dallas - Tillman
9/11	The Rubicon Project, Inc. (RUBI) - New York - Thornton
9/11	Textainer Group Holdings Ltd (TGH) - Boston - Mewhirter
9/11	Probiodrug AG (PBD.EN) - New York
9/11	Ki Bin Kim and Michael Lewis - Analyst Trip - Philadelphia

validate MacroGenics' DART platform, and 3) will help shift the company's strategic focus from a pipeline to AML focused. We are increasing the probability success for AML from 25% to 33%, raising our PT from $26 to $30, and reiterate our BUY rating. - **Peter Lawson**

Foundation Building Materials, Inc. (FBM, $13.48, Buy) - Could See Significant Catch Up With Group/Peer Rally - We remain Buy on FBM and see a particularly attractive entry point now based on: (1) Continued above GDP growth in residential and commercial activity. (2) Acquisition potential as the industry could consolidate at a faster pace than thought last year given recent deals. (3) A roughly 2x multiple gap from peer GMS, given its recent rally. We believe this gap is too large, even accounting for the controversial tax receivable agreement (TRA). A 25% move in the stock would put it back to the one turn discount including the TRA. Maintain Buy rating and $22 PT, applying 8.1x EV/EBITDA to our 2018E. - **Keith Hughes**

Cruise Lines - August Cruise Pricing Survey - Outlook Remains Solid - Better Sequentially - Overall industry-wide advertised pricing (US$) for future sailings in August (pre-recent hurricanes) was +6.8% Y/Y vs. +3.2% Y/Y in July, +5.6% in June, and +4.9% in May. - **C. Patrick Scholes**

Other Focus Items Today

Consumer

Cruise Lines - August Cruise Pricing Survey - Outlook Remains Solid - Better Sequentially - Overall industry-wide advertised pricing (US$) for future sailings in August (pre-recent hurricanes) was +6.8% Y/Y vs. +3.2% Y/Y in July, +5.6% in June, and +4.9% in May. - **C. Patrick Scholes**

Energizer Holdings, Inc. (ENR, $45.57, Buy) - Gauging the Hurricane Impact - Based on our analysis of ENR's historical benefits from US hurricanes, we believe there is at least $20M-$45M in sales or $0.03-$0.07 EPS upside (+7%-15%) to F4Q estimates from the impact of Hurricane Harvey and Hurricane Irma. Additionally, this should serve as a strong tailwind for ENR into FY18 as retailers have to replenish their shelves following the hurricanes in preparation for the upcoming holiday season. We reiterate our Buy rating and $60 price target (12x FY18 EBITDA vs. the peer average of 10x-14x). - **William Chappell, Jr.**

Restaurants - Restaurants - Commodities Call: Deflation Expected to Return in '18 - David Maloni (ARA Group, private), expects key restaurant commodities to be deflationary (hamburger) or flat (chicken breast) in '18, after much higher than expected inflation in '17. While favorable for margins, this could create top-line risk if it leads to continued deep value-oriented discounting and lower grocery pricing relative to restaurants. However, inflation in '17 appears to be shifting the restaurant industry away from deep discounting, and we do not expect relatively minor deflation to drive a reversal (est. '18 hamburger deflation of 5.9% vs. 23.5% in '16). - **Jake Bartlett**

The Kroger Co. (KR, $22.77, Hold) - 2Q In Line; Moves to Ramp Up Investments - KR shares are down about 10% today. While the 2Q release was in line (EPS of $0.39 matched the Street), KR took its long-term earnings growth target off the table. While the decision provides more flexibility to invest, either proactively or reactively, it inherently lessens visibility in the interim. We are maintaining estimates (at the low end of guidance) but trimming our PT to $24 from $28. Maintain Hold. - **David Magee**

Electric Power and Utilities

Electric Power and Utilities - Power/Utilities Macro Trends Tracker: Flat Trends In Forward Spreads - This report includes our analysis of the key macro factors impacting the power/ utility sector, including: forward power prices, spark spread, dark spread, and gas/coal spread trends; domestic electric consumption growth; and national weather patterns. Based on the latest peer group valuations, we are increasing our price targets on DUK and PNW. - **Ali Agha**

Financials

Associated Banc-Corp (ASB, $21.55, Hold) - Announces Acquisition of Wealth Management Firm - **Michael Young**

Pinnacle Financial Partners, Inc. (PNFP, $58.50, Buy) - Model Update - We have made some minor changes to our model. We are reiterating our Buy rating, our 2017/2018 EPS estimates of $3.54/$4.17 and our $73 price target (17.5x ’18 EPS) - **Jennifer Demba**

Ameris Bancorp (ABCB, $41.40, Buy) - Model Update - We have made some minor changes to our model. We are reiterating our Buy rating, our 2017/2018 EPS estimates of $2.55/$3.14 and our $55 price target (17.5x '18E EPS). - **Jennifer Demba**

Insurance - Post-Travel Comments / Workers’ Comp Update - The workers’ compensation line remains healthy, according to the latest industry data along with commentary during our trip with EIG management to visit investors in Boston and Baltimore, though declining loss costs and stepped-up competition are likely to restrain near-term premiums. This narrows the list of potential catalysts that could move the group valuations higher, though the attractive multiples at EIG (EIG, $40.00, Buy), AMSF (AMSF, $53.00, Buy), and AFSI (AFSI, $11.78, Buy) – all influenced by the industry trends discussed in this note – justify our current Buy ratings, we judge. - **Mark Hughes**

Triton International Limited (TRTN, $33.52, Buy) - Adjusting Estimates for Equity Offering; Maintain Buy and $40 PT - We maintain our Buy rating and $40 price target on TRTN shares following the completion of a $175 million equity offering, which we believe will "break even" on an EPS accretion basis in 2H18. Industry conditions remain highly favorable to lessors, and Triton is taking the opportunity to deploy capital at high (15%-20%)

ROE while other competitors are still on their heels. - **Douglas Mewhirter**

Healthcare

Eli Lilly and Company (LLY, $82.92, Buy) - ESMO - Abemaciclib MONARCH-3 Data Supports Shift to Greater Use of CDK4/6 Class - We’re on ground at ESMO where MONARCH-3 (M3) interim ABEM & Cyramza RANGE data sets were conference highlights. ABEM M3 data was solid with median PFS not reached vs. PBO+LET at 14.7 months (HR = 0.54, p - **John Boris**

Merck & Co. Inc. (MRK, $64.32, Buy) - Keynote-021G Data Further Supports Keytruda’s 1L NSCLC Position - We’re on the ground at ESMO where MRK’s KN-021G data for Keytruda + chemo combo showed an improved overall survival OS (HR improved to 0.59 from 0.69) after 4 mos. of follow-up. The median PFS implies 10 mos. with Keytruda+chemo vs. chemo alone. Updated KN-021G data increases confidence in Ph-3 KN-189 results, which are expected in 2H17. We believe MRK’s 12-18 mo. lead supports Keytruda+Alimta uptake in 1L NSCLC. Other ESMO sessions on additional tumor types support Keytruda’s label expansions & our ‘21E sales of $9.9B vs. Street’s $9.7B. Reiterate Buy/$73PT on 17.7x ’18E EPS, supported by DCF. - **John Boris**

Merck & Co. Inc. (MRK, $64.27, Buy) - ESMO–Keytruda data readouts establishing IO across a broad range of tumor types - MRK presented new data on Keytruda at ESMO across multiple tumor types in support of label expansion oppy’s. Updated KN-021G data supports Keytruda’s 1st mover adv. in 1L NSCLC adding confidence to KN-189 data in 2H17. KN-059 results de-risk Keytruda’s gastric cancer approval on or before Sept. 22. Other Keytruda results in bladder, breast, carcinoid/pNET tumors & combo use with PARPs/IDOs/other MOAs are helping to establish the brand as the IO therapy of choice for Oncologists. We model Keytruda ‘21E sales at $9.9B vs. Street’s $9.7B. Reiterate Buy/$73PT on 17.7x ’18E EPS, supported by DCF. - **John Boris**

Exelixis, Inc. (EXEL, $25.97, Buy) - ESMO – Cabo & IO Data Clears 2L Kidney For Exelixis, and Potentially More - Exelixis’ Cabozantinib failure and IO combo success in showing survival benefit in 1L kidney cancer is a near term negative for EXEL but long term positive in our view, and a buying opportunity on any weakness – (1) we see ESMO data as clearing the 1L/2L kidney landscape – IO could dominate 1L and cabo could dominate 2L kidney cancer, (2) IO should move to 1L (potentially restricted PD-L1 positive) giving cabo more room to grow in the 2L and a broad label – in our opinion, and (3) Cabo+IO combo provides optional 1L upside. Reiterate BUY rating and maintaining $33 PT. - **Peter Lawson**

MacroGenics, Inc. (MGNX, $18.94, Buy) - ESMO - Good AML Data, Positive for Platform and Focus - Upping PT - MacroGenics data highlights three important elements to help drive the stock higher; 1) very solid initial AML data show 6/14 patients responded (1 PR, 1 MLFS, 4 CR/CRi), 2) this data helps further validate MacroGenics' DART platform, and 3) will help shift the company's strategic focus from a pipeline to AML focused. We are increasing the probability success for AML from 25% to 33%, raising our PT from $26 to $30, and reiterate our BUY rating. - **Peter Lawson**

Biotech - Biotech- ESMO – Broad Use of PARPi and More Data on Newcomer - Incremental updates from the PARPi space showed – (1) TESARO's TSR-042 (anti-PD-1) had inline efficacy in 'basket' of solid tumors like Opdivo and Keytruda, the PARPi to be dosed at individual maximum dose & is effective disregard of age, (2) Astra's PARPi showed inline response in bulky disease patients, and (3) Beigene's PARPi showed encouraging early response and expanding into additional indications. Key PARPi catalysts include (1) TESARO's QUADRA data & BRAVO single arm breast cancer data in 2H17, and Pfizer's EMBRACA breast cancer data in 1Q18. - **Peter Lawson**

Clovis Oncology, Inc. (CLVS, $67.17, Buy) - ESMO – Investor & Physician Interest High at ESMO - While no new data, Clovis' Analyst/Investor event was very well attended in Madrid, Spain, around the ESMO conference. Dr. Iain McNeish (Institute of Cancer Sciences, University of Glasgow) helped clarify a liver issue raised by the paper discussant and reiterated the broad efficiency of Rubraca, Clovis' PARP inhibitor in all platinum sensitive patients (see our prior note: bit.ly/2vW2JU9). We expect sNDA filing by Oct end, U.S. approval by 2Q18 and EU approval by early 2H18. Reiterate our BUY rating and $105 PT. - **Peter Lawson**

Incyte Corporation (INCY, $129.46, Buy) - ESMO - Data Consistent With Abstract, KOL Discussion Encouraging - We are attending ESMO, where Incyte presented modestly updated data vs the abstract on Epacadostat + Keytruda in melanoma and held a follow-up call. Our key takes: 1) the presentation had 9 new patients vs the abstract with consistent efficacy, we believe with longer follow up additional PRs will likely convert to CRs, 2) KOL discussion and Q&A was positive, especially around PD-L1+ patients, and 3) Incyte will use the recent ~$650MN raise to be opportunistic on in-licenses and acquisitions. Overall we view the updates as incrementally positive. We reiterate our BUY rating and $155 PT. - **Peter Lawson**

Array BioPharma Inc. (ARRY, $10.98, Buy) - ESMO - CRC Triplet Data Impresses - We are attending ESMO where Array presented updated data in CRC and melanoma. Our key takes: 1) Discussion around the BEACON CRC trial data was very positive, KOLs especially like the durability of responses and await full Phase 3 data after full enrollment in 2018, 2) the discussion of the COLUMBUS melanoma trial was neutral, with the KOL wanting OS data (possibly in 1H18) before declaring Array's doublet data would influence standard of care, however we believe superior PFS and toxicity will drive uptake. Overall we are incrementally more positive on Array. We reiterate BUY and our $13 PT. - **Peter Lawson**

Biotech - Biotech- ESMO Highlighted Broad Use In Ovarian, and We'd Say Even Wider - The ovarian cancer discussant and Q&A session highlighted the broad use of Rubraca (and other PARPi). The discussant was impressed with the subset analysis originally presented in June and the updated KM curves. The Q&A also reiterated the relative similarity in PARPi on efficacy (although CLVS and TSRO have the most robust data), and differences in side effect profile. Importantly, the discussant highlighted the side effects, not as a negative but how to manage the side effects as he believed these drugs would be used over an extended period of time. Reiterate our BUY's on CLVS/TSRO. - **Peter Lawson**

Industrials

Foundation Building Materials, Inc. (FBM, $13.48, Buy) - Could See Significant Catch Up With Group/Peer Rally - We remain Buy on FBM and see a particularly attractive entry point now based on: (1) Continued above GDP growth in residential and commercial activity. (2) Acquisition potential as the industry could consolidate at a faster pace than thought last year given recent deals. (3) A roughly 2x multiple gap from peer GMS, given its recent rally. We believe this gap is too large, even accounting for the controversial tax receivable agreement (TRA). A 25% move in the stock would put it back to the one turn discount including the TRA. Maintain Buy rating and $22 PT, applying 8.1x EV/EBITDA to our 2018E. - **Keith Hughes**

Armstrong World Industries, Inc. (AWI, $49.95, Buy) - Review of Competitor Lawsuit - European competitor ROCK filed a anti-trust lawsuit last week against AWI alleging anti-competitive behavior in the US ceilings market. The main complaint seems to be the exclusive distribution of AWI that ROCK has not been able to penetrate. We believe the suit shows that ROCK is not quite the competitive threat near-term that many believe. Lawsuits of this type are always tough to judge but we would note that the spirit of the suit, in our view, is not the price collusion usually seen in these moves. Whatever the outcome, it will take sometime to resolve. - **Keith Hughes**

Building Products/Durable Goods - Mattress Update - Weak Labor Day and Mattress Firm Post TPX Break - Mattress industry demand over the Labor Day sales weekend (and as discussed on the LEG earnings warning) points to a continued weak industry versus other large ticket durables, in our view. In addition, a recent earnings release from Mattress Firm's owner SNH highlighted a noticeable move down in ticket that could have long-term impacts in the industry. The long-term impact of Irma remains to be seen, but most likely, more long-term gain/short-term pain will be felt. - **Keith Hughes**

IT Services

Korn/Ferry International (KFY, $35.82, Buy) - Questions for Management Post-Fiscal 1Q18 Results - **Tobey Sommer**

Real Estate Investment Trusts

Lodging REITs - Hotel REITS - Insurance considerations in light of the hurricane activity - In light of the growing concerns related to Hurricane Irma, we have spoken with our covered REITS and have provided some takeaways below: - **C. Patrick Scholes**

Sabra Health Care REIT, Inc. (SBRA, $22.78, Buy) - So Far, So Pleased - We are pleased with the comprehensive outlook provided by Sabra Health Care REIT regarding the repositioning and benefits of the Care Capital Properties (CCP) portfolio. With essentially all but one tenant expected to be repositioned by YE2017, Sabra will have a clean slate entering 2018. Add in incremental benefits from the Investment Grade rating and the accretion looks better than originally outlined. With $500M+ in 2017 investment activity guidance, 4Q should be quite active. Solid 2017-2018 guidance and a robust pipeline underpin our bullish outlook. Reiterate Buy. - **Eric Fleming**

TMT

Entertainment - STRH Digital Entertainment Weekly: ATVI, LGF, NFLX, P, Spotify - ATVI: Destiny 2 Metacritic score at 84 vs Destiny 1 at 76; Candy Crush Saga/Soda Saga the #1/#4 top grossing U.S. mobile gaming apps. NFLX: Won’t get future ‘Star Wars' or Marvel Films, but T-Mobile deal could add 1 million domestic subs. P: Spotify/Hulu partner on a $5 bundle for students. LGF.B: ‘Hitman’s Bodyguard’ Domestic box reached ~ $65m vs our $60m target. - **Matthew Thornton**

Analyst Certification

By issuing this research report, each SunTrust Robinson Humphrey, Inc. analyst named in this report hereby certifies that the recommendations and opinions expressed accurately reflect the research analyst's personal views about any and all of the subject securities or companies discussed herein and no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/11/2017):

Coverage Universe			Investment Banking Clients Past 12 Months		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	417	59.57%	Buy	130	31.18%
Hold/Neutral	279	39.86%	Hold/Neutral	58	20.79%
Sell/Reduce	4	0.57%	Sell/Reduce	1	25.00%

COMPANY UPDATE

Irma's Impact: Catastrophe Considerations

- *Our thoughts are with those affected by the rather dramatic hurricane season impacting vast areas of the Caribbean and the Southern US. Obviously, the situation remains fluid with the continuing devastation from current storms.*
- **Calibrating the Catastrophe:** With the severity of the recent storm season, this note aims to put some perspective around Emera exposure to the recent and ongoing events. On a simple summary basis, EMA's exposure consists of the following: two major Florida utilities (Tampa Electric and Peoples Gas) account for roughly US$6.8bn of rate base and Emera Caribbean of about US$1bn in assets. The Caribbean assets range from Dominica, Barbados, Grand Bahama and St. Lucia. About 48% of the balance sheet is exposed to the Caribbean and Florida.
- **Restoration Realizations:** Clearly, EMA's Florida Utilities form a significant part of the overall business as the TECO deal transformed the company. As discussed in this note, traditional utility doctrines usually permit for capital recovery associated with weather related events from acts of God. Yet, the regulatory approach can create mismatched timing in order to avoid rate shock. These issues should be in focus in the weeks and months ahead.
- **Investment thesis:** We continue to believe EMA's growth opportunities in the TECO asset base along with the Atlantic Canadian transmission projects will help re-rate the stock. The headwinds associated with near-term FX moves (a stronger CAD) and power markets look manageable.
- **Valuation:** We reiterate our Outperform rating and C$58 target price that are obtained from a P/E multiple of 20.6x on 2018 estimates; and, 3.75% dividend yield on 2017 dividend, respectively. EMA remains our preferred utility stock. Risk to our target and rating includes lower economic growth in US and Canada, increased interest rates and CAD strengthening.

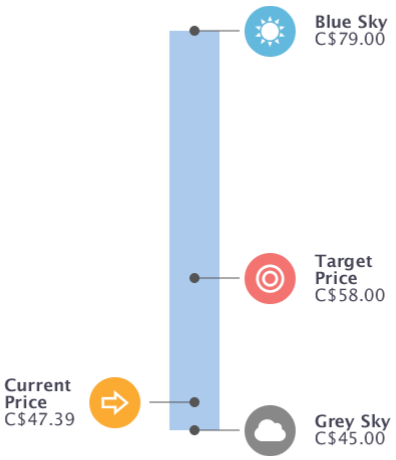
Company Background

Emera Inc., through its subsidiaries, engages in the generation, transmission, & distribution of electricity to various customers in North America. It generates electricity through coal, oil, natural gas, hydro, & wind energy sources.

Blue/Grey Sky Scenario



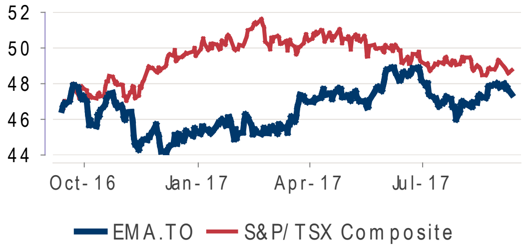
Our Blue Sky Scenario (C$)	**79.00**

Emera Inc.'s Blue Sky scenario includes rate base growth in its utilities in various regions (Canada, United States and Caribbean), stronger power pricing in the US Northeast to benefit its merchant power plants. We lower the yield valuation by 100 bps.

Our Grey Sky Scenario (C$)	**45.00**

Emera Inc.'s Grey Sky scenario includes lower rate base growth in its utilities in various regions (Canada, United States and Caribbean), weak power pricing in the US Northeast that does not benefit its merchant power plants. We increase the yield valuation by 100 bps.

Share price performance



On 11-Sep-2017 the S&P/TSX Composite closed at 15040.3
Daily Sep12, 2016 - Sep11, 2017, 09/12/16 = C$47.05

There are three parts to this note:

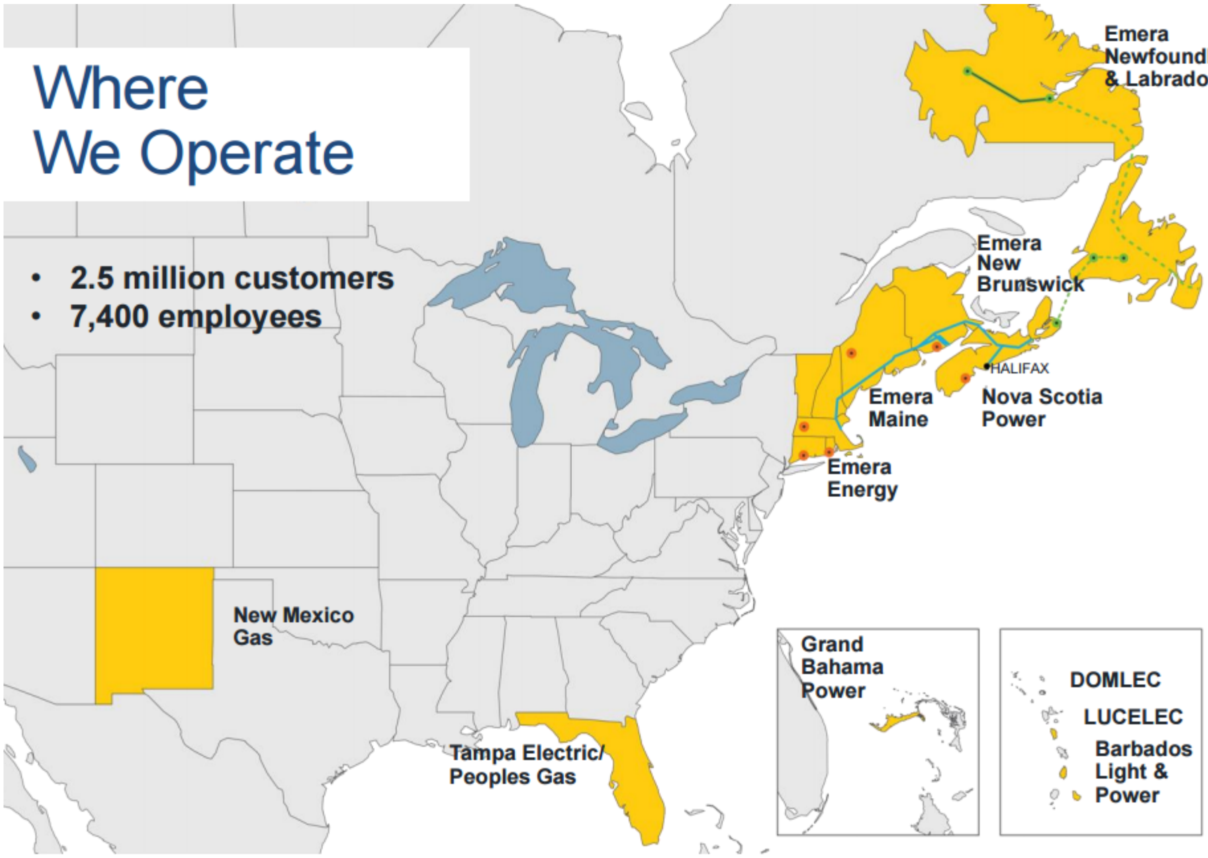
- Asset assessment;
- Regulatory Regimes; and,
- Valuation.

Each of these areas is addressed in more detail below.

Asset assessment

EMA's overall asset exposure appears in Figure 1.

Figure 1: EMA asset base



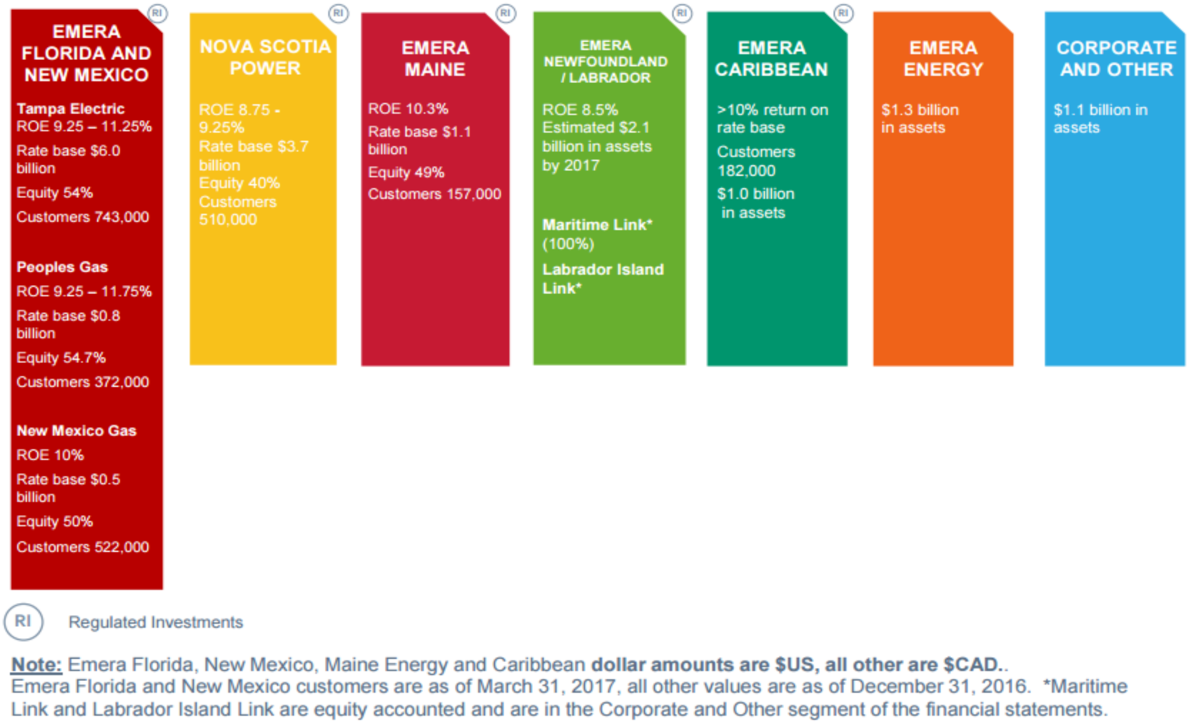
Source: Company data

More specifically, for the purposes of this note, the primary assets in focus are: Tampa Electric; Peoples Gas System; and Emera Caribbean. In relation to the Emera Caribbean (ECI) segment, we note the following details:

- ECI wholly-owns Barbados Light & Power Company Limited (BLPC);
- An 80.4% interest in Grand Bahama Power Company (GBPC);
- A 51.9% interest in Dominica Electricity Services Ltd (Domlec); and,
- A 19.1% interest in Lucelec (serving St. Lucia).

Figure 2 provides a bit more context by highlighting the underlying assets in each of the major segments.

Figure 2: EMA businesses



EMERA FLORIDA AND NEW MEXICO (RI)

Tampa Electric
ROE 9.25 – 11.25%
Rate base $6.0 billion
Equity 54%
Customers 743,000

Peoples Gas
ROE 9.25 – 11.75%
Rate base $0.8 billion
Equity 54.7%
Customers 372,000

New Mexico Gas
ROE 10%
Rate base $0.5 billion
Equity 50%
Customers 522,000

NOVA SCOTIA POWER (RI)

ROE 8.75 - 9.25%
Rate base $3.7 billion
Equity 40%
Customers 510,000

EMERA MAINE (RI)

ROE 10.3%
Rate base $1.1 billion
Equity 49%
Customers 157,000

EMERA NEWFOUNDLAND / LABRADOR (RI)

ROE 8.5%
Estimated $2.1 billion in assets by 2017

Maritime Link* (100%)

Labrador Island Link*

EMERA CARIBBEAN (RI)

>10% return on rate base
Customers 182,000
$1.0 billion in assets

EMERA ENERGY

$1.3 billion in assets

CORPORATE AND OTHER

$1.1 billion in assets

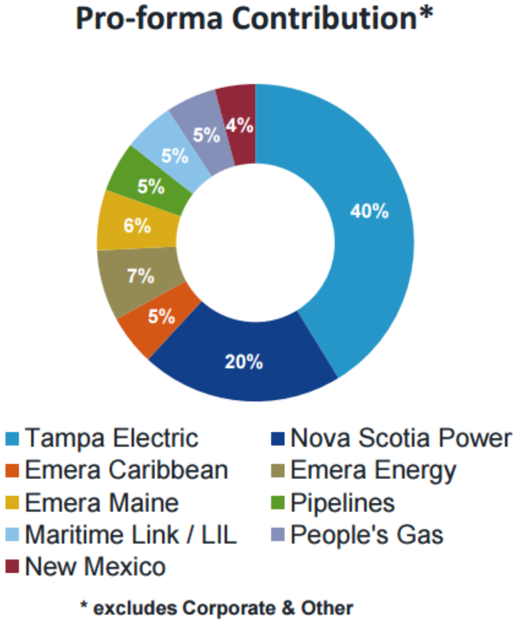
(RI) Regulated Investments

Note: Emera Florida, New Mexico, Maine Energy and Caribbean **dollar amounts are $US, all other are $CAD.**. Emera Florida and New Mexico customers are as of March 31, 2017, all other values are as of December 31, 2016. *Maritime Link and Labrador Island Link are equity accounted and are in the Corporate and Other segment of the financial statements.

Source: Company data

Most notably, the two major Florida utilities (Tampa Electric and Peoples Gas) account for roughly US$6.8bn of rate base and Emera Caribbean for approximately US$1bn in assets. Therefore, about 48% of the balance sheet is exposed to the Caribbean and Florida. On a pro-forma earnings contribution, Figure 3 provides some additional perspective.

Figure 3: EMA segment earnings contribution



- **Well above 75-85% target of regulated earnings**
- **Well-diversified geographically and by regulatory jurisdiction**
- **Portfolio now includes gas LDCs**
- **New utilities are in stronger economic growth markets and offer improved capital structures and higher allowed ROE's**
- **Quarterly earnings profile more consistent post TECO acquisition**

Source: Company data

For a variety of reasons, there is a degree of messiness in the EMA financials over the last 12 months (LTM). Yet, on an LTM basis, Figure 4 and Figure 5 help put the Florida and Caribbean businesses into a bit of context compared to the overall consolidated numbers.

Figure 4: Total LTM

Revenue	6,226.0
EBITDA	2,003.3
Net income	416.0

Source: Company data and the BLOOMBERG PROFESSIONAL ™service

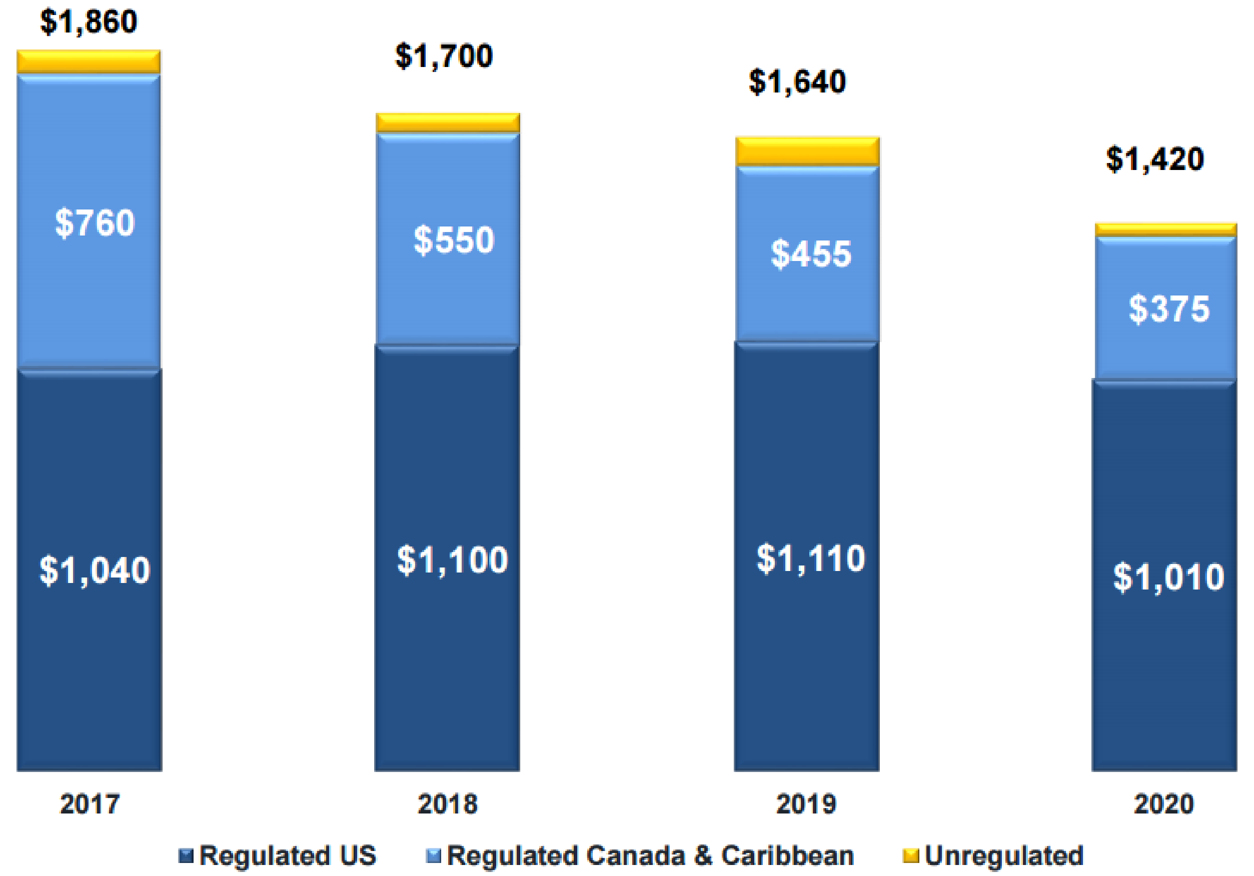
Figure 5: Segmented LTM

	FL & NM	Caribbean
Revenue	2,770.0	330.0
EBITDA - US	987.0	103.0
Net income -US	246.0	43.0

Source: Company data and the BLOOMBERG PROFESSIONAL ™service

Specifically, given the various storms' impact (most notably Irma), the capex numbers for EMA on a consolidated basis appear below, of which there should be particular focus on the Regulated US (which is overwhelmingly TECO).

Figure 6: Capital investment (millions)



Source: Company data

In light of the asset, customer and financial significance, EMA's main areas of focus with storms like Hurricane Irma are the two Florida-based utilities: TECO and PGS. At the time of writing this note, TECO may have escaped the worst case scenarios; however, a large number of customers are without power and restoration efforts are ongoing.

Regulatory Regimes

Critical regulatory compact

Versus much of the capital market, regulated utilities and assets have very specific fundamental nuances that revolve around their critical role for the functioning of society. Essentially, that critical role is underpinned by the notion of a "regulatory compact". Clearly, there are many specific nuances and differences to the application of regulatory principles between jurisdictions. Yet, there are some basic concepts that tend to exist. We address some of these issues in this section.

Very simply, utility assets tend to provide broad-based benefits for societal functioning. In the case of regulated electric and gas utilities in North America (and most jurisdictions), an extremely high capital intensity typically translates into the need for natural or near-natural monopolies to exist. Such an approach can deliver the most efficient capital allocation, but needs to be balanced to prevent the exercise of monopoly power. Accordingly, regulators are very cognizant of this delicate balancing act.

Balancing acts of God with rate shocks and restoration

In time of extreme exogenous events and effective *force majeure* arising from acts of God (in particular weather-related impacts), regulators routinely allow for rate base recovery. To avoid significant rate shock, a variety of smoothing mechanisms may be used, but the core principles of recovery effectively remain intact. Naturally, these recovery mechanisms are subject to reasonableness and prudency doctrines along with formal regulatory processes ahead of major capital spends. Given these fundamental views, EMA's path to regulatory recovery for storm-related damages should not be negatively affected for the underlying utilities. At this time, the sheer magnitude of the capital spending to restore utility service is a significant unknown. Therefore, amount of the future spend, regulatory mechanisms to be put place and the balancing act of utility and corporate holdco cash flows are critical to watch in the weeks, months and quarters ahead.

Valuation

The situation related to Hurricane Irma remains rather challenging and fluid, however, the worst case scenarios look to have been avoided. Very simply, Hurricane Irma weakened to a Category 1 hurricane from the prior 5. There are still challenges ahead for the TECO service territory and there are concerns for the safety of the community and surrounding areas. Winds and rains can be very damaging, however, storm surge and tidal impacts after major hurricanes may be even more destructive. The ultimate impact of these events will take time to fully appreciate and will create an aura of uncertainty associated with EMA in the near-term.

As per our typical practice, we use a variety of methodologies to consider share valuation. To continue this approach, we divided this section into several parts, including:

- Yield related analysis; and,
- Multiple methods.

These areas are addressed below.

Yield related analysis

Our yield-based approaches focus on three related areas: (a) dividend discount model; (b) the dividend yield; and, (c) a dividend yield spread.

Dividend discount model

A preferred approach

For a long time, we have advocated using the dividend discount model as a valuation tool. Very simply, there are many ways to consider yield-driven valuation, but we believe the dividend discount model is one of the preferred methodologies, in part, because of simplicity. Using standard Bloomberg figures, we considered the cost of equity and the potential dividend growth. A dividend discount model would be a useful valuation tool for yield-oriented vehicles such as EMA We used the following assumptions in our DDM:

- Current annual dividend: C$2.09/share;
- Cost of equity: 8.1% (Bloomberg); and,
- Growth rate: 8.0% (target annual dividend growth through 2020).

A dividend discount model would produce an absurd share price value of roughly C$2,090.

Clearly, a major downfall of the DDM is the hypersensitivity under certain assumptions. As a result, we generated the following range of valuations highlighted in Figure 7. A matrix approach may best be used to consider "normalized" growth rates and a cost of equity.

Figure 7: Share Value Under Different Dividend Discount Model Assumptions

	Cost of Equity									
Dividend Growth (%)	6.0%	6.5%	7.0%	7.5%	8.0%	8.5%	9.0%	9.5%	10.0%	10.5%

4.00%	104.50	83.60	69.67	59.71	52.25	46.44	41.80	38.00	34.83	32.15
4.50%	139.33	104.50	83.60	69.67	59.71	52.25	46.44	41.80	38.00	34.83
5.00%	209.00	139.33	104.50	83.60	69.67	59.71	52.25	46.44	41.80	38.00
5.50%	418.00	209.00	139.33	104.50	83.60	69.67	59.71	52.25	46.44	41.80
6.00%		418.00	209.00	139.33	104.50	83.60	69.67	59.71	52.25	46.44
6.50%			418.00	209.00	139.33	104.50	83.60	69.67	59.71	52.25
7.00%				418.00	209.00	139.33	104.50	83.60	69.67	59.71
7.50%					418.00	209.00	139.33	104.50	83.60	69.67
8.00%						418.00	209.00	139.33	104.50	83.60
8.50%							418.00	209.00	139.33	104.50
9.00%								418.00	209.00	139.33

Source: Company data, the BLOOMBERG PROFESSIONAL ™service and Credit Suisse estimates.

Another approach to considering the DDM valuation is using various inputs and solving for "k" meaning the required return. We employed this approach in past research (e.g., "Yearning for Yield: Valuing Canada's Dividend-Focused Stocks") and H's numbers now indicate the following:

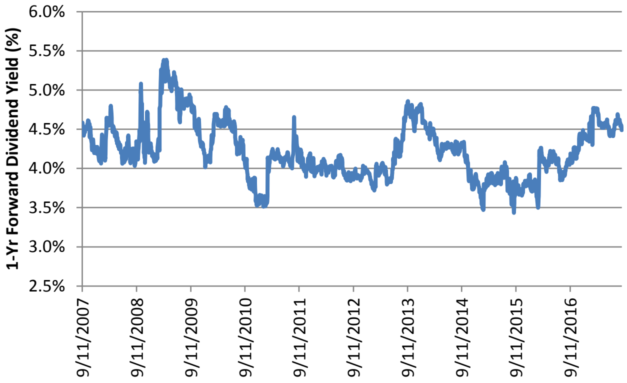
- Dividend: C$2.09/share;
- Share price: C$47.39;
- Growth rate: 8.0% (target annual dividend growth through 2020).

These figures solve for a "k" of 12.4% which is seemingly too high for a company having such a low risk profile – even with uncertainty associated with Hurricane Irma.

Dividend Yield

Figure 8 and Figure 9 show the historical 1-year and 2-year forward dividend yields for EMA.

Figure 8: Historical dividend yield (1-year forward)



Source: Thomson Reuters

Figure 9: Historical dividend yield (2-year forward)

Source: Thomson Reuters

Descriptive statistics for EMA's historical forward dividend yields are shown in Figure 10 .

Figure 10: Historical forward dividend yields descriptive statistics

	1-Yr Forward	2-Yr Forward

	5.25%	32.38	34.29	36.19	38.10	40.00	41.90	43.81	45.71	47.62	49.52
	5.50%	30.91	32.73	34.55	36.36	38.18	40.00	41.82	43.64	45.45	47.27
	5.75%	29.57	31.30	33.04	34.78	36.52	38.26	40.00	41.74	43.48	45.22
	6.00%	28.33	30.00	31.67	33.33	35.00	36.67	38.33	40.00	41.67	43.33

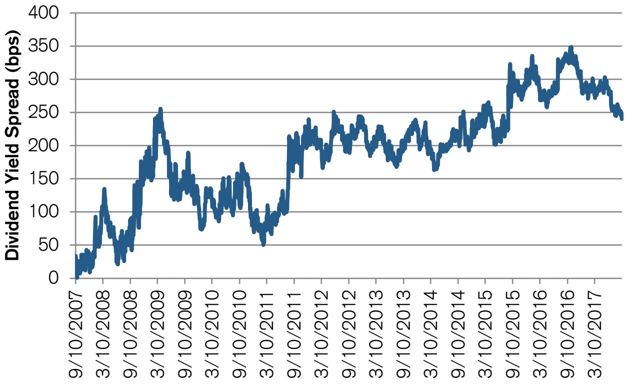
Source: Credit Suisse estimates.

Our C$58.00 target price is based upon an approximately 3.75% and 4.05% dividend yields on our estimated 2017 and 2018 dividends, respectively.

Dividend Yield Spread

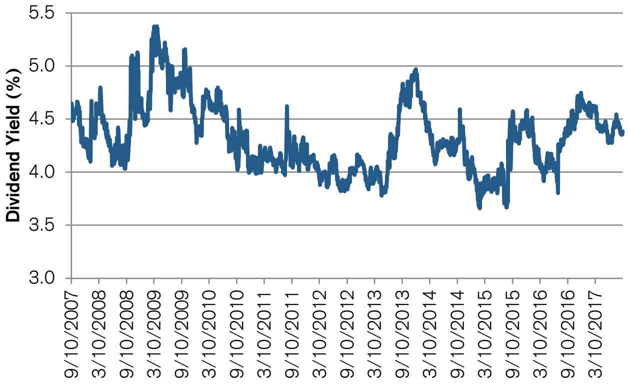
We believe that one should not solely rely upon distribution yield-based metrics. In our view, many yield-based metrics should be considered in the context of comparable nominal interest rates available in the marketplace. For a number of reasons, we have considered EMA's historical dividend yield against the Government of Canada 10-year bond yield on a spread basis. Figure 12 highlights this relationship.

Figure 12: Historical dividend yield spread



Source: the BLOOMBERG PROFESSIONAL ™service

Figure 13: Historical dividend yield



Source: the BLOOMBERG PROFESSIONAL ™service

Descriptive statistics for EMA's historical dividend yield spreads and yields are shown in Figure 14.

Figure 14: Historical dividend yield spread and yields descriptive statistics

	Yield Spread (bps)	Dividend Yield (%)
Mean	187	4.32
Median	200	4.29
Min	0	3.66
Max	349	5.38

Source: the BLOOMBERG PROFESSIONAL ™service

The yield spread relationship highlights the potential for meaningful sensitivity to interest rate movements. Many fundamental reasons exist for this relationship; however, we must note that interest rate-sensitive investments like EMA do not exhibit perfect correlations. Some near-term uncertainty has affected the valuation of many interest rate sensitive investment vehicles. Yet, in historical terms, the interest rate environment remains accommodative, which underpins many corporate valuations. We, therefore apply a 175 bps spread to a "normalized" Canadian 10-year bond yield assumption of 2.00% (we note the actual is 1.98% currently) to obtain our C$58 target price.

Multiple methods

Within this section, we explore two multiples to help provide valuation perspective for EMA. A considerable amount of reliance is placed on Thomson Reuters data. The multiples are:

- Price/earnings; and,
- EV/EBITDA.

Each of these areas appears below.

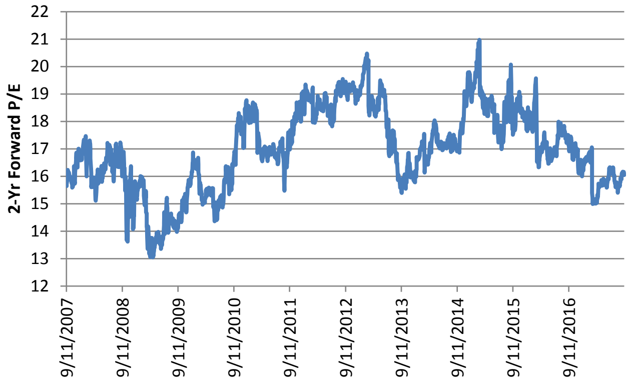
Price/earnings

For many industries P/E multiples are somewhat challenging, but they do provide a quick comparative with other sectors and the overall market on a simple basis. Figure 15 and Figure 16 provide a historical view for EMA's forward 1-year and 2-Year P/E multiples over the last 10 years.

Figure 15: Historical PE (1-year forward)

Source: Thomson Reuters

Figure 16: Historical PE (2-year forward)



Source: Thomson Reuters

Descriptive statistics for EMA's historical 1-year and 2-year forward P/E multiples are shown in Figure 17.

Figure 17: Historical forward P/E descriptive statistics

	1-Yr Forward	2-Yr Forward
Mean	17.9x	17.0x
Median	17.9x	17.0x
Min	13.4x	13.0x
Max	21.7x	21.0x

Source: Thomson One

For context our C$58 target price implies an approximate 20.6x multiple on our 2018 estimate. A valuation matrix appears in Figure 18.

Source: Company data and Credit Suisse estimates

Based on our analysis, our EV/EBITDA derived target is obtained from the application of a roughly 11.4x multiple to generate a C$58.00 target price on 2018e EBITDA.

Comparable considerations

For further comparative context, we provide a number of simple summary comp tables for the reasonably comparable universe. For clarity, the figures in each of the following comp tables (from Figure 23 to Figure 28) have been obtained from consensus data. Figure 23 starts with the broad based Canadian infrastructure names.

Valuation summary

In summary, we rate Emera with an Outperform rating and a C$58 target price. That target price is obtained from multiple valuation approaches that include:

- Dividend yield (2017 / 2018): 3.75% / 4.05%;
- Yield spread: 175 bps / 205 bps;
- P/E: 22.4x / 20.6x; and,
- EV/EBITDA: 11.3x / 11.4x.

On a forward looking basis, we continue to believe some upside potential exists for EMA's capital plan that could be helpful for valuation. Yet, as with several of the other Canadian peers, an M&A overhang can surround the stock. In light of the near-term uncertainty with the primarily the TECO asset base, we are less concerned about M&A in the near-term.

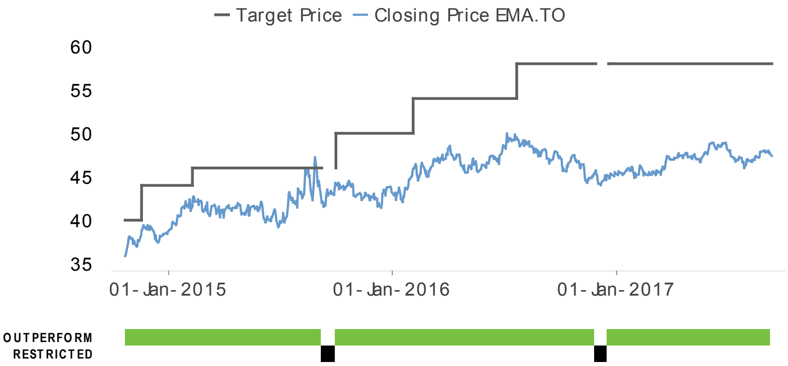
** Asterisk signifies initiation or assumption of coverage.*



The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	14%	(54% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Emera Inc. (EMA.TO)

Method: We obtain our Outperform rating and C$58 target price for Emera Inc. by using multiple valuation methodologies, but primarily relies upon a dividend yield and yield spread methodology. The implied dividend yield to our target is 3.75% and a roughly 175 bps yield spread on a 2.0% Canadian 10-year baseline assumption. We rate Emera Outperform due to a large set of organic growth following the closing of the TECO acquisition. Emera has no exposure to the oil and gas industry in Alberta.

Risk: There are a number of risks to Emera's achievement of our Outperform rating and C$58.00 target price: commodity prices; weather; environmental; regulatory; access to capital markets; and, interest rates. Moreover, one should never underestimate the power of the regulator in any regulated business. With a larger US asset base, any changes to CAD/USD could affect the performance. Cost overruns in major projects could also affect the stock.

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

See the Companies Mentioned section for full company names

Credit Suisse currently has, or had within the past 12 months, the following as investment banking client(s): EMA.TO, FTS.TO, CU.TO, ENF.TO, H.TO, GEI.TO, KML.TO, BEP_u.TO, ENB.TO, TRP.TO, KEY.TO, CPX.TO, TA.TO, PNW.N, EXC.N, NWE.N, NI.N, BKH.N, DUK.N, D.N, DTE.N, SO.N, CNP.N, ES.N, SR.N

Credit Suisse provided investment banking services to the subject company (EMA.TO, CU.TO, H.TO, KML.TO, BEP_u.TO, ENB.TO, TRP.TO, KEY.TO, EXC.N, NI.N, BKH.N, DUK.N, D.N, CNP.N, SR.N) within the past 12 months.

Credit Suisse currently has, or had within the past 12 months, the following issuer(s) as client(s), and the services provided were non-investment-banking, securities-related: BEP_u.TO, TRP.TO, NWE.N, D.N

Credit Suisse has managed or co-managed a public offering of securities for the subject company (EMA.TO, CU.TO, H.TO, KML.TO, ENB.TO, TRP.TO, NI.N, DUK.N, D.N, CNP.N) within the past 12 months.

Within the past 12 months, Credit Suisse has received compensation for investment banking services from the following issuer(s): EMA.TO, CU.TO, H.TO, KML.TO, BEP_u.TO, ENB.TO, TRP.TO, KEY.TO, EXC.N, NI.N, BKH.N, DUK.N, D.N, CNP.N, SR.N

Credit Suisse expects to receive or intends to seek investment banking related compensation from the subject company (EMA.TO, FTS.TO, CU.TO, ENF.TO, H.TO, GEI.TO, KML.TO, BEP_u.TO, ENB.TO, PPL.TO, TRP.TO, KEY.TO, CPX.TO, TA.TO, PNW.N, CMS.N, EXC.N, NWE.N, NI.N, BKH.N, DUK.N, D.N, DTE.N, ED.N, SO.N, CNP.N, ES.N, SR.N) within the next 3 months.

Within the last 12 months, Credit Suisse has received compensation for non-investment banking services or products from the following issuer(s): BEP_u.TO, TRP.TO, NWE.N, D.N

A member of the Credit Suisse Group is party to an agreement with, or may have provided services set out in sections A and B of Annex I of Directive 2014/65/EU of the European Parliament and Council ("MiFID Services") to, the subject issuer (EMA.TO, FTS.TO, CU.TO, ENF.TO, H.TO, GEI.TO, KML.TO, ENB.TO, PPL.TO, TRP.TO, KEY.TO, CPX.TO, TA.TO, NWE.N, NI.N, DUK.N, D.N, CNP.N, AWK.NZ, ES.N, SR.N) within the past 12 months.

As of the end of the preceding month, Credit Suisse beneficially own 1% or more of a class of common equity securities of (TA.TO).

To the extent this is a report authored in whole or in part by a non-U.S. analyst and is made available in the U.S., the following are important disclosures regarding any non-U.S. analyst contributors: The non-U.S. research analysts listed below (if any) are not registered/qualified as research analysts with FINRA. The non-U.S. research analysts listed below may not be associated persons of CSSU and therefore may not be subject to the FINRA 2241 and NYSE Rule 472 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Credit Suisse Securities (Canada), Inc. ....Andrew M. Kuske ; Paul Tan

Important disclosures regarding companies or other issuers that are the subject of this report are available on Credit Suisse's disclosure website at https://rave.credit-suisse.com/disclosures or by calling +1 (877) 291-2683.

This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

Hong Kong: Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an Australian financial services licence (AFSL) and is exempt from the requirement to hold an AFSL under the Corporations Act 2001 (the Act) under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Act). Research on Taiwanese securities produced by Credit Suisse AG, Taipei Securities Branch has been prepared by a registered Senior Business Person.

Australia (to the extent services are offered in Australia): Credit Suisse Securities (Europe) Limited (“CSSEL”) and Credit Suisse International (“CSI”) are authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority (“FCA”) and the Prudential Regulation Authority under UK laws, which differ from Australian Laws. CSSEL and CSI do not hold an Australian Financial Services Licence (“AFSL”) and are exempt from the requirement to hold an AFSL under the Corporations Act (Cth) 2001 (“Corporations Act”) under Class Order 03/1099 published by the Australian Securities and Investments Commission (“ASIC”), in respect of the financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). This material is not for distribution to retail clients and is directed exclusively at Credit Suisse's professional clients and eligible counterparties as defined by the FCA, and wholesale clients as defined under section 761G of the Corporations Act. Credit Suisse (Hong Kong) Limited (“CSHK”) is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). Credit Suisse Securities (USA) LLC (CSSU) and Credit Suisse Asset Management LLC (CSAM LLC) are licensed and regulated by the Securities Exchange Commission of the United States under the laws of the United States, which differ from Australian laws. CSSU and CSAM LLC do not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1100 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act).

Malaysia: Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd, to whom they should direct any queries on +603 2723 2020.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the “FAA”), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority (“DFSA”). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

- *Our thoughts are with those affected by the rather dramatic hurricane season impacting vast areas of the Caribbean and the Southern US. Obviously, the situation remains fluid with the continuing devastation from current storms.*
- **Calibrating the Catastrophe:** With the severity of the recent storm season, this note aims to put some perspective around Fortis exposure to the recent and ongoing events. Obviously, we are not attempting to minimize the human element of the most recent storms. Yet, on a factual basis, Fortis has rather minor exposure to utilities in the Caribbean and no exposure in the southern US which can be contrasted to one of the company's closest peers: Emera (see the parallel note). On a country basis, the Fortis exposure comes from Belize, the Cayman Islands (via Caribbean Utilities) and Turks and Caicos. Of these areas, only Turks and Caicos was directly impacted which looks to account for approximately 2% of overall FTS earnings.
- **Currency and Capital**: We continue to focus on the robust FTS capital plan that is almost exclusively focused on regulated assets and the conversion of that plan into dividend growth. Moreover, despite the recent CAD run, we favour USD earners like FTS versus more domestic CAD exposed names.
- **Investment thesis:** We view Fortis as a skilled acquirer of assets that deliver a reliable and reasonable organic growth. The organic growth translates into guided 6% average annual dividend growth through 2021 which may have upside from larger scale projects that have yet to be officially sanctioned.
- **Valuation:** Our C$46 target and Neutral rating are based on a yield of 3.52% and a yield spread of roughly 152 bps on a 2.0% Canadian 10-year. We maintain our Neutral rating. Risk to our target and rating includes lower economic growth in US and Canada, increased interest rates and CAD strengthening.

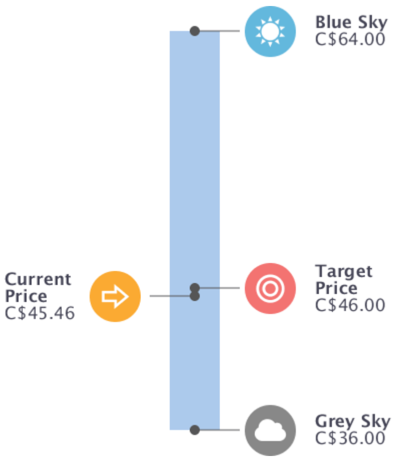
Company Background

Fortis Inc. is the largest investor-owned distribution utility in Canada, serving approximately 2,100,000 gas and electricity customers. Its regulated holdings include electric distribution utilities located in Canada, Belize, and the Cayman Islands.

Blue/Grey Sky Scenario



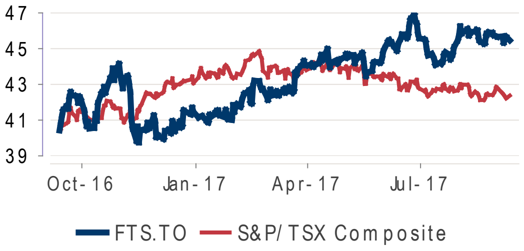
Our Blue Sky Scenario (C$)	**64.00**

Fortis Inc.'s Blue Sky scenario includes rate base growth in its utilities in various regions (Canada, United States and Caribbean), lower risk free ratess and stronger US dollar. We lower the yield valuation by 100 bps.

Our Grey Sky Scenario (C$)	**36.00**

Fortis Inc.'s Grey Sky scenario includes lower rate base growth in its utilities in various regions (Canada, United States and Caribbean), higher risk free rates and a weaker US dollar. We increase the yield valuation by 100 bps.

Share price performance



On 11-Sep-2017 the S&P/TSX Composite closed at 15040.3
Daily Sep12, 2016 - Sep11, 2017, 09/12/16 = C$41.05

There are three parts to this note:

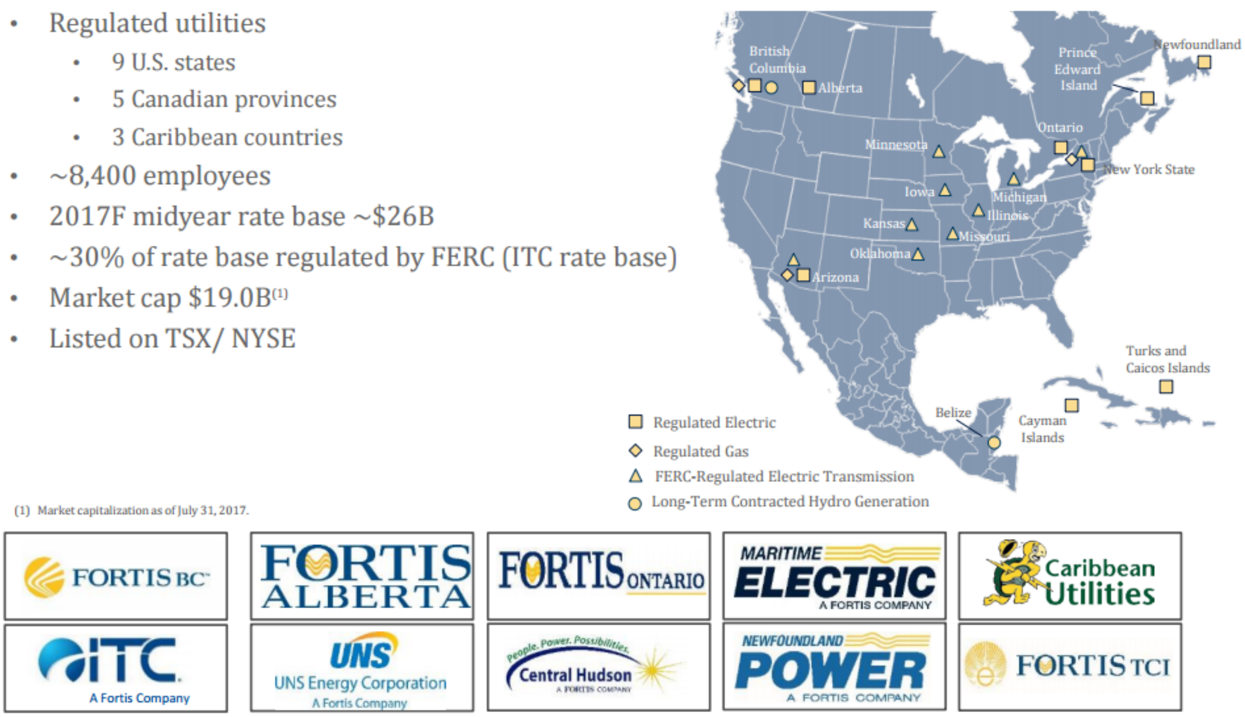
- Asset assessment;
- Regulatory Regimes; and,
- Valuation.

Each of these areas is addressed in more detail below.

Asset assessment

At this stage in time, the Fortis asset exposure to the Caribbean is rather small as partially illustrated by Figure 1.

Figure 1: FTS asset base



- Regulated utilities
  - 9 U.S. states
  - 5 Canadian provinces
  - 3 Caribbean countries
- ~8,400 employees
- 2017F midyear rate base ~$26B
- ~30% of rate base regulated by FERC (ITC rate base)
- Market cap $19.0B(1)
- Listed on TSX/ NYSE

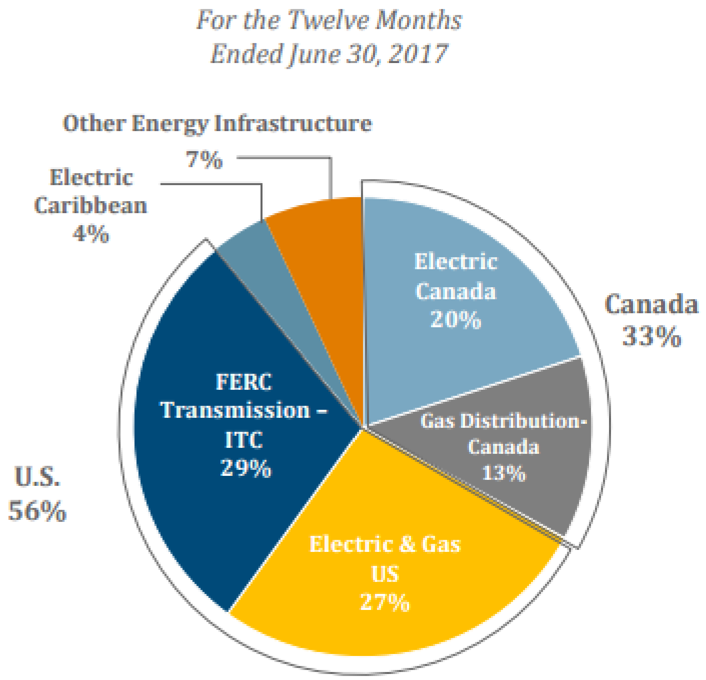
(1) Market capitalization as of July 31, 2017.

☐ Regulated Electric
◇ Regulated Gas
△ FERC-Regulated Electric Transmission
○ Long-Term Contracted Hydro Generation

Source: Company data

The assets in Belize and Turk and Caicos Islands are balanced by a 60% position in the publicly traded Caribbean Utilities (CUPu.TO) which has exposure in the Cayman Islands. As per FTS disclosures, Caribbean utilities are only a small part of the overall enterprise totaling only ~4% as per Figure 2.

Figure 2: Pro forma net earnings



Source: Company data

Looking at the last twelve months or revenues, EBITDA and earnings, compare the rough amounts for the Caribbean exposure to the overall entity in Figure 3 and Figure 4.

Figure 3: FTS LTM financial (millions)

Revenue	7,893.0
EBITDA	3,144.0
Net income	938.0

Source: Bloomberg

Figure 4: FTS Caribbean LTM financial (millions)

Revenue	305.0
EBITDA	122.0
Net earnings	54.0

Source: Bloomberg

From FTS, Figure 5 provides another perspective in this exposure with a bit of a regulatory backdrop for the Caribbean utility segment.

Figure 5: Caribbean regulated electric utilities

	Caribbean Utilities	Fortis Turks & Caicos
Type of utility	Electricity	Electricity
Regulator	Electricity Regulatory Authority	Government of the Turks and Caicos Islands
Regulatory model	Cost of service with historical test year	Cost of service with historical test year
2017 Formula	6.75-8.75% Return on Assets	15-17.50% Return on Assets
2017F Midyear Rate Base	\$0.6B	\$0.4B
5-Year CAGR on Midyear Rate Base (2)	3.0%	4.8%
2016 Assets % of total regulated assets (3)	2%	1%
2016 Earnings	\$20M	\$18M
2016 Earnings % of total regulated pro forma net earnings	2%	2%

(1) Fortis has an approximate 60% controlling interest in Caribbean Utilities Company, Ltd. Excludes earnings from Fortis' 33% ownership interest totaling \$8 million, or 1% of total regulated operating earnings.
(2) 5-Year CAGR on midyear rate base includes 2016 actuals to 2021 forecast.
(3) Includes goodwill.

Source: Company data

At time of writing this report, we note that only Fortis Turks & Caicos (FortisTCI) in the FTS portfolio of companies was notably affected by the current series of storms. On September 8th, FTS provided a full statement in a press release and following commentary came from the CEO of the FortisTCI. Naturally, we do not look to diminish the human element of the storms. Yet, on a financial basis, the impact is not overly meaningful.

Regulatory Regimes

Versus much of the capital market, regulated utilities and assets very specific fundamental nuances that revolve around their critical role for the functioning of society. Essentially, that critical role is underpinned by the notion of a "regulatory compact". Clearly, there are many specific nuances and differences to the application of regulatory principles between jurisdictions. Yet, there are some basic concepts that tend to exist. We address some of these issues in this section.

Critical regulatory compact

Very simply, utility assets tend to provide broad-based benefits for societal functioning. In the case of regulated electric and gas utilities in North America (and most jurisdictions), an extremely high capital intensity typically translates into the need for natural or near-natural monopolies to exist. Such an approach can deliver the most efficient capital allocation, but needs to be balanced to prevent the exercise of monopoly power. Accordingly, regulators are very cognizant of this delicate balancing act.

Balancing acts of God with rate shocks and restoration

In time of extreme exogenous events and effective *force majeure* arising from acts of God (in particular weather related impacts), regulators routinely allow for rate base recovery. To avoid significant rate shock, a variety of smoothing mechanisms may be used, but the core principles of recovery effectively remain intact. Naturally, these recovery mechanisms are subject to reasonableness and prudency doctrines along with formal regulatory processes ahead of major capital spends. Given these fundamental views, FTS's path to regulatory recovery for storm related damages should not be negatively affected for the underlying utilities. At this time, the sheer magnitude of the capital spending to restore utility service is a significant unknown. Therefore, amount of the future spend, regulatory mechanisms to be put place and the balancing act of utility and corporate holdco cash flows are critical to watch in the weeks, months and quarters ahead. As outlined above, these figures are not meaningful to the overall FTS enterprise.

Valuation

Based on the above, FTS is not overly impacted by the recent set of storms. In any event, we believe it useful to revisit historical valuation with a series of valuation charts appearing in this section. Accordingly, as per our typical practice, we use a variety of methodologies to consider share valuation. Continuing this approach, we divided this section into several parts, including:

- Yield related analysis; and,
- Multiple methods.

These areas are addressed below.

Yield related analysis

Our yield-based approaches focus on three related areas: (a) dividend discount model; (b) the dividend yield; and, (c) a dividend yield spread.

Dividend discount model

A preferred approach

For a long time, we have advocated using the dividend discount model as a valuation tool. Very simply, there are many ways to consider yield-driven valuation, but we believe the dividend discount model is one of the preferred methodologies, in part, because of simplicity. Using standard Bloomberg figures, we considered the cost of equity and the potential dividend growth. A dividend discount model would be a useful valuation tool for yield-oriented vehicles such as FTS We used the following assumptions in our DDM:

- Current annual dividend: C$1.60/share;
- Cost of equity: 10.2% (Bloomberg); and,
- Growth rate: 6.0% (target annual dividend growth through 2021).

A dividend discount model would produce share price value of roughly C$38.

Clearly, a major downfall of the DDM is the hypersensitivity under certain assumptions. As a result, we generated the following range of valuations highlighted in Figure 6. A matrix approach may best be used to consider "normalized" growth rates and a cost of equity.

Figure 6: Share Value Under Different Dividend Discount Model Assumptions

		Cost of Equity (%)									
		7.0%	7.50%	8.0%	8.5%	9.0%	9.5%	10.0%	10.5%	11.0%	11.5%
Dividend Growth	1.0%	26.67	24.62	22.86	21.33	20.00	18.82	17.78	16.84	16.00	15.24

Source: Company data, Bloomberg and Credit Suisse estimates.

Another approach to considering the DDM valuation is using various inputs and solving for "k" meaning the required return. We employed this approach in past research (e.g., "Yearning for Yield: Valuing Canada's Dividend-Focused Stocks") and FTS's numbers now indicate the following:

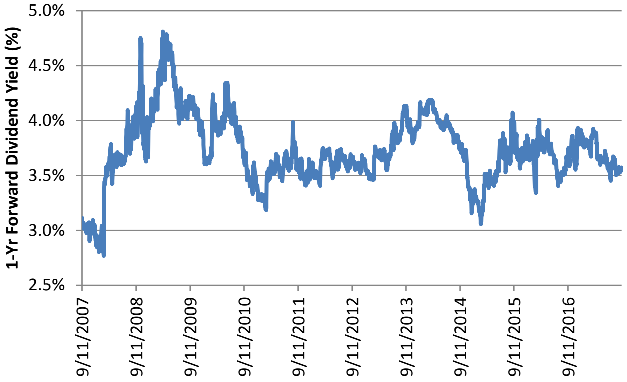
- Dividend: C$1.60/share;
- Share price: C$45.46; and,
- Growth rate: 6.0% (average annual dividend growth through 2021).

These figures solve for a "k" of 9.5% which is seemingly too high for a company having such a low risk profile and growth rate.

Dividend Yield

Figure 7 and Figure 8 shows the historical 1-year and 2-year forward dividend yields for FTS.

Figure 7: Historical dividend yield (1-year forward)



Source: Thomson Reuters

Figure 8: Historical dividend yield (2-year forward)

Source: Thomson Reuters

Descriptive statistics for FTS's historical forward dividend yields are shown in Figure 9.

Figure 9: Historical forward dividend yields descriptive statistics

	1-Yr Forward	2-Yr Forward
Mean	3.73%	3.95%
Median	3.69%	3.94%
Min	2.77%	3.61%
Max	4.81%	4.39%

Source: Thomson One

The dividend yield valuation sensitivity is very evident in the matrix at Figure 10.

Figure 10: Share Value Based on Various Dividends at Various Yields

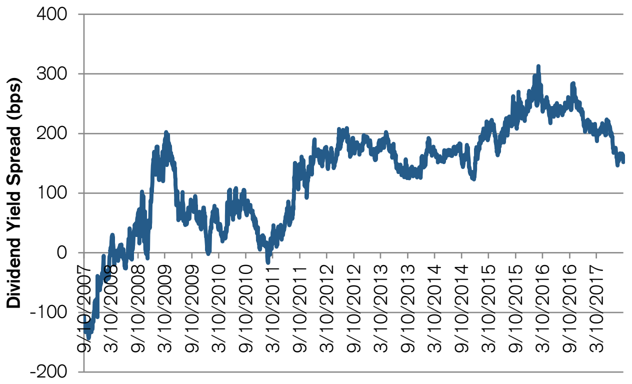
Source: Credit Suisse estimates.

Our C$46.00 target price is based upon an approximately 3.52% and 3.75% dividend yields on our estimated 2017 and 2018 dividends, respectively.

Dividend Yield Spread

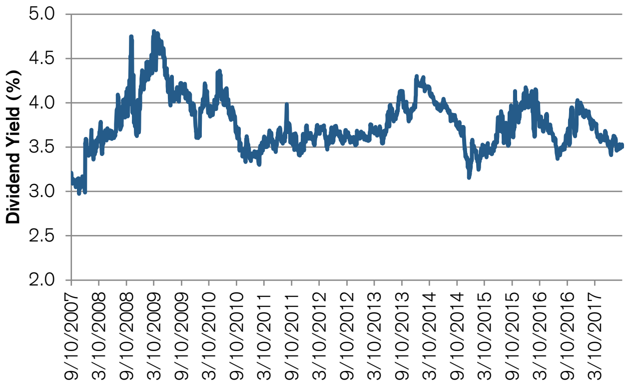
We believe that one should not solely rely upon distribution yield-based metrics. In our view, many yield-based metrics should be considered in the context of comparable nominal interest rates available in the marketplace. For a number of reasons, we have considered FTS's historical dividend yield against the Government of Canada 10-year bond yield on a spread basis Figure 11 highlights this relationship.

Figure 11: Historical dividend yield spread



Source: the BLOOMBERG PROFESSIONAL ™service

Figure 12: Historical dividend yield



Source: the BLOOMBERG PROFESSIONAL ™service

Descriptive statistics for FTS's historical dividend yield spreads and yields are shown in Figure 13.

Figure 13: Historical dividend yield spread and yields descriptive statistics

	Yield Spread (bps)	Dividend Yield (%)
Mean	131	3.76
Median	157	3.70
Min	(143)	2.97
Max	313	4.81

Source: the BLOOMBERG PROFESSIONAL ™service

The yield spread relationship highlights the potential for meaningful sensitivity to interest rate movements. Many fundamental reasons exist for this relationship; however, we must note that interest rate-sensitive investments like FTS do not exhibit perfect correlations. Some near-term uncertainty has affected the valuation of many interest rate sensitive investment vehicles. Yet, in historical terms, the interest rate environment remains accommodative, which underpins many corporate valuations. We, therefore apply a 152 bps spread to a "normalized" Canadian 10-year bond yield assumption of 2.00% (we note the actual is 1.98% currently) to obtain our C$46 target price.

Multiple methods

Within this section, we explore two multiples to help provide valuation perspective for FTS. A considerable amount of reliance is placed on Thomson Reuters data. The multiples are:

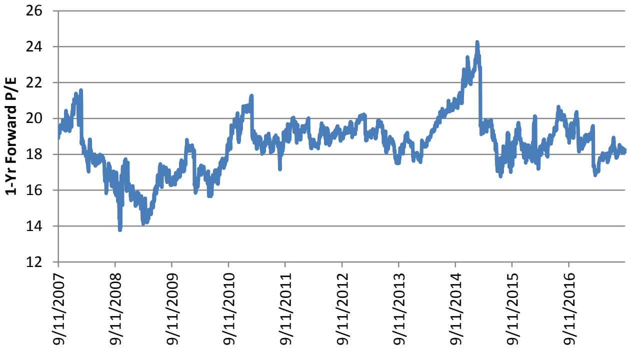
- Price/earnings; and,
- EV/EBITDA.

Each of these areas appears below.

Price/earnings

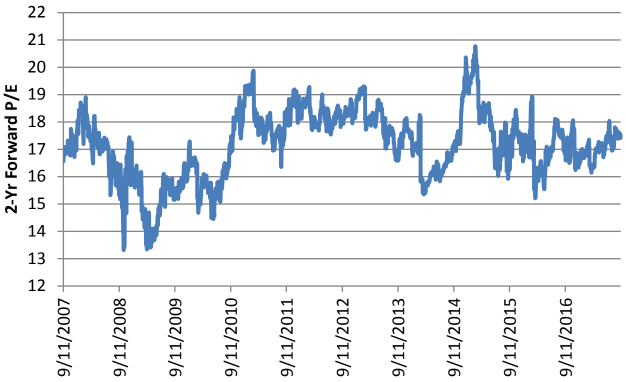
For many industries P/E multiples are somewhat challenging, but they do provide a quick comparative with other sectors and the overall market on a simple basis. Given the relative degree of consistency with regulated asset bases, there is greater merit in P/E multiples for more pure utilities versus some of the pipeline and other infrastructure stocks under our coverage. Figure 14 and Figure 15 provide a historical view for FTS's forward 1-year and 2-Year P/E multiples over the last 10 years.

Figure 14: Historical PE (1-year forward)



Source: Thomson Reuters

Figure 15: Historical PE (2-year forward)



Source: Thomson Reuters

Descriptive statistics for FTS's historical 1-year and 2-year forward P/E multiples are shown in Figure 16.

Figure 16: Historical forward P/E descriptive statistics

	1-Yr Forward	2-Yr Forward
Mean	18.6x	17.2x
Median	18.7x	17.3x
Min	13.8x	13.3x
Max	24.3x	20.8x

Source: Thomson One

For context our C$46 target price implies an approximate 18.0x multiple on our 2018 estimate of C$2.56. A valuation matrix appears in Figure 17.

Source: Company data and Credit Suisse estimates

Based on our analysis, our EV/EBITDA derived target is obtained from the application of a roughly 11.4x multiple to generate a C$46.00 target price on 2018e EBITDA.

Comparable considerations

For further comparative context, we provide a number of simple summary comp tables for the reasonably comparable universe. For clarity, the figures in each of the following comp tables (from Figure 22 to Figure 27) have been obtained from consensus data. Figure 22 starts with the broad based Canadian infrastructure names.

Figure 23 focuses solely on the truly comparable Canadian utility companies – which is a rather small universe. Notably, aside from Canadian Utilities, each of Algonquin, Emera, Fortis and Hydro One have engaged in US targeted M&A as part of a growth strategy.

Source: Credit Suisse RAVE, I/B/E/S

Valuation summary

In summary, we rate Fortis Inc. with a Neutral rating and a C$46 target price. That target price is obtained from multiple valuation approaches that include:

- Dividend yield (2017 / 2018): 3.52% / 3.75%;
- Yield spread: 152 bps / 175 bps;
- P/E: 18.8x / 18.0x; and,
- EV/EBITDA: 12.0x / 11.4x.

On a forward looking basis, we continue to believe some upside potential exists for FTS's capital plan that could be helpful for valuation. Yet, as with several of the other Canadian peers, an M&A overhang can surround the stock. In light of FTS's relative degree of size, we are less concerned about M&A at this time and focus more on the upcoming investor day and Edison Electric Institute Conference appearance.

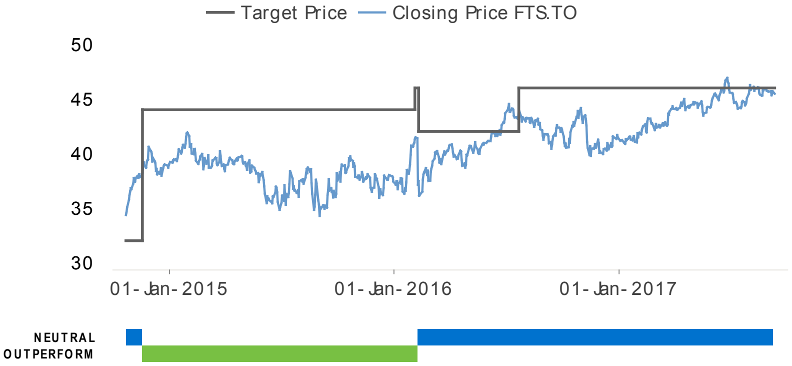
Analyst Certification

I, Andrew M. Kuske, certify that (1) the views expressed in this report accurately reflect my personal views about all of the subject companies and securities and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

3-Year Price and Rating History for Fortis Inc. (FTS.TO)

FTS.TO	Closing Price	Target Price	
Date	(C$)	(C$)	Rating
22-Oct-14	34.34	32.00	N
18-Nov-14	38.17	44.00	O
04-Feb-16	41.32	46.00	
10-Feb-16	37.47	42.00	N
22-Jul-16	44.03	46.00	

** Asterisk signifies initiation or assumption of coverage.*



The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	14%	(54% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Important Global Disclosures

Credit Suisse's research reports are made available to clients through our proprietary research portal on CS PLUS. Credit Suisse research products may also be made available through third-party vendors or alternate electronic means as a convenience. Certain research products are only made available through CS PLUS. The services provided by Credit Suisse's analysts to clients may depend on a specific client's preferences regarding the frequency and manner of receiving communications, the client's risk profile and investment, the size and scope of the overall client relationship with the Firm, as well as legal and regulatory constraints. To access all of Credit Suisse's research that you are entitled to receive in the most timely manner, please contact your sales representative or go to https://plus.credit-suisse.com .

Credit Suisse's policy is to update research reports as it deems appropriate, based on developments with the subject company, the sector or the market that may have a material impact on the research views or opinions stated herein.

Credit Suisse's policy is only to publish investment research that is impartial, independent, clear, fair and not misleading. For more detail please refer to Credit Suisse's Policies for Managing Conflicts of Interest in connection with Investment Research: https://www.credit-suisse.com/sites/disclaimers-ib/en/managing-conflicts.html .

Credit Suisse does not provide any tax advice. Any statement herein regarding any US federal tax is not intended or written to be used, and cannot be used, by any taxpayer for the purposes of avoiding any penalties.

Credit Suisse has decided not to enter into business relationships with companies that Credit Suisse has determined to be involved in the development, manufacture, or acquisition of anti-personnel mines and cluster munitions. For Credit Suisse's position on the issue, please see https://www.credit-suisse.com/media/assets/corporate/docs/about-us/responsibility/banking/policy-summaries-en.pdf .

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Fortis Inc. (FTS.TO)

Method: We obtain our Neutral rating and C$46 target price for Fortis Inc. by using a 3.52% estimated yield and an estimated 152 bps spread over a 2.00% Canadian 10-year bond. We rate Fortis Neutral as the total return we project is in line with our coverage.

Risk: Risks to Fortis' achievement of our Neutral rating and C$46 target price are: commodity prices; weather; environmental; regulatory; access to capital markets; and, interest rates. Moreover, one should never underestimate the power of the regulator in any regulated business. Fortis faces a number of risks including: the integration efforts associated with past acquisitions; construction and capital project management issues; and, potential changes to US taxes that may impact cross-border financing structures.

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

See the Companies Mentioned section for full company names

Credit Suisse currently has, or had within the past 12 months, the following as investment banking client(s): FTS.TO, CU.TO, ENF.TO, H.TO, GEI.TO, KML.TO, BEP_u.TO, ENB.TO, EMA.TO, TRP.TO, KEY.TO, CPX.TO, TA.TO, PNW.N, EXC.N, NWE.N, NI.N, BKH.N, DUK.N, D.N, DTE.N, SO.N, CNP.N, ES.N, SR.N

Credit Suisse provided investment banking services to the subject company (CU.TO, H.TO, KML.TO, BEP_u.TO, ENB.TO, EMA.TO, TRP.TO, KEY.TO, EXC.N, NI.N, BKH.N, DUK.N, D.N, CNP.N, SR.N) within the past 12 months.

Credit Suisse currently has, or had within the past 12 months, the following issuer(s) as client(s), and the services provided were non-investment-banking, securities-related: BEP_u.TO, TRP.TO, NWE.N, D.N

This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

Additional Regional Disclaimers

Hong Kong: Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an Australian financial services licence (AFSL) and is exempt from the requirement to hold an AFSL under the Corporations Act 2001 (the Act) under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Act). Research on Taiwanese securities produced by Credit Suisse AG, Taipei Securities Branch has been prepared by a registered Senior Business Person.

Australia (to the extent services are offered in Australia): Credit Suisse Securities (Europe) Limited ("CSSEL") and Credit Suisse International ("CSI") are authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority ("FCA") and the Prudential Regulation Authority under UK laws, which differ from Australian Laws. CSSEL and CSI do not hold an Australian Financial Services Licence ("AFSL") and are exempt from the requirement to hold an AFSL under the Corporations Act (Cth) 2001 ("Corporations Act") under Class Order 03/1099 published by the Australian Securities and Investments Commission ("ASIC"), in respect of the financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). This material is not for distribution to retail clients and is directed exclusively at Credit Suisse's professional clients and eligible counterparties as defined by the FCA, and wholesale clients as defined under section 761G of the Corporations Act. Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). Credit Suisse Securities (USA) LLC (CSSU) and Credit Suisse Asset Management LLC (CSAM LLC) are licensed and regulated by the Securities Exchange Commission of the United States under the laws of the United States, which differ from Australian laws. CSSU and CSAM LLC do not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1100 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act).

Malaysia: Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd, to whom they should direct any queries on +603 2723 2020.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

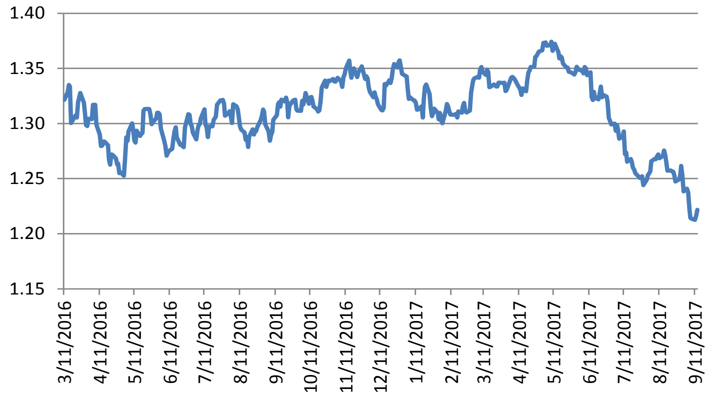
FX Fixations: A Dollar (CAD) Dilemma?

- **Running of the Bulls:** Our foreign exchange team recently revised several forecasts in "FX Compass: Nowhere to hide". We specifically focus on the USD/CAD which is now at 1.22 and the FX team calls for 1.20 and 1.15 over 3 months and 12 months, respectively (previously 1.22 and 1.32). A few reasons underpin the change in view, including: strong economic data, Bank of Canada's faster than anticipated rate increases; and more limited concerns over new trade issues with the US. Figure 1 provides perspective on USD/CAD over the last 18 months. From our equities vantage point, this FX bias creates a dollar dilemma that is briefly discussed below.

Figure 1: CAD



Source: the BLOOMBERG PROFESSIONAL™ service

- **M&A action**: As per past notes (e.g. Favouring Fundamental Foreign Exposure", "Timing A Canadian Commodity Centric Shift" and "Foreign Exchange Fluctuations"), the CAD swings require trading agility. A strong CAD favours domestic oriented businesses – especially for foreigners. Yet, domestic names tend not to be the most US acquisitive. Simply, a stronger CAD makes the financing of US assets less expensive. With a dearth of realistic nearer-term potential Canadian domiciled assets, an elevated CAD may help support the economics of further US focused M&A. Beyond the currency, a swing factor is the potential for US tax reform to meaningfully impact cross-border deals which looks more distant at this time.
- **Selected stocks:** Largely domestic stocks include: CU, ENF, GEI, H (albeit acquiring Avista), KEY, KML and PPL. Two utility stocks have significant USD exposure: EMA (~75% of earnings) and FTS (~60% of earnings) and are among the acquisitive players. Others include the Brookfield Group (with multiple currency pairs of exposure), ENB, and TRP.

Very simply, this note addresses the skew of Canadian-led M&A into the US (especially in the utility sector) along with a selection of comparative tables. Figure 2 starts with a perspective on a number of past North American utility transactions.

Active M&A

Note: *Unaffected price. (WR-GXP): Although approved by the Boards of each company, Kansas regulators rejected the transaction as too highly levered. The companies are now seeking approval to merge as equals without a premium. Source: Company data, Credit Suisse estimates

Specifically, in relation to the Canadian-led transactions, the following bullets highlight the USD/CAD value at the time of deal announcement:

- Hydro One-Avista (July 19th): 1.2598;
- Fortis-ITC (February 9th, 2016): 1.3828;
- Algonquin-Empire (February 9th, 2016): 1.3828;
- Emera-TECO Energy (September 4th, 2015): 1.3257; and,
- Fortis-UNS Energy (December 11th, 2013): 1.059.

Rise of the loonie

As shown above, four of the five deals were done at weaker currency levels than exist today. Only FTS-UNS stands out with the CAD being significantly stronger at that time. Obviously, FX is a minor reason behind M&A; however, the current rise of the loonie may provide a positive tailwind for deal economics.

For further comparative context, we provide a number of simple summary comp tables for the reasonably comparable universe. For clarity, the figures in each of the following comp tables (from Figure 3 to Figure 9) have been obtained from consensus data. Figure 3 starts with the broad based Canadian infrastructure names.

A tale of two pipes

In general, the largest transactions by Canadians were in the energy infrastructure space with Enbridge Inc.'s (ENB) purchase of Spectra Energy (SE) and TransCanada's (TRP) Columbia Pipeline Group purchase being at the top and near-the-top of deal tables. From our view, ENB is focused on delivering synergies from the SE deal, executing the capital program along with addressing the real and perceived structural issues from the larger organization. For these reasons, we do not view ENB as being a high probability candidate for incremental M&A. TransCanada's Columbia related transactions were smaller and very successful from a stock re-rating perspective. Despite that success, we see no urgency in TRP looking to execute additional M&A; however, the market looks open and opportunism may be possible in selected circumstances.

To provide some context on the US energy infrastructure landscape, we focus on the US MLP universe as appears in Figure 4.

Figure 4: US MLP comparables

Disclosure Appendix

Analyst Certification

I, Andrew M. Kuske, certify that (1) the views expressed in this report accurately reflect my personal views about all of the subject companies and securities and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	14%	(53% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Important Global Disclosures

Credit Suisse's research reports are made available to clients through our proprietary research portal on CS PLUS. Credit Suisse research products may also be made available through third-party vendors or alternate electronic means as a convenience. Certain research products are only made available through CS PLUS. The services provided by Credit Suisse's analysts to clients may depend on a specific client's preferences regarding the frequency and manner of receiving communications, the client's risk profile and investment, the size and scope of the overall client relationship with the Firm, as well as legal and regulatory constraints. To access all of Credit Suisse's research that you are entitled to receive in the most timely manner, please contact your sales representative or go to https://plus.credit-suisse.com .

Credit Suisse's policy is to update research reports as it deems appropriate, based on developments with the subject company, the sector or the market that may have a material impact on the research views or opinions stated herein.

Credit Suisse's policy is only to publish investment research that is impartial, independent, clear, fair and not misleading. To the extent this is a report authored in whole or in part by a non-U.S. analyst and is made available in the U.S., the following are important disclosures regarding any non-U.S. analyst contributors: The non-U.S. research analysts listed below (if any) are not registered/qualified as research analysts with FINRA. The non-U.S. research analysts listed below may not be associated persons of CSSU and therefore may not be subject to the FINRA 2241 and NYSE Rule 472 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Credit Suisse Securities (Canada), Inc. ....Andrew M. Kuske ; Paul Tan

This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Bright Light – 14 September 2017

Our fortnightly Bright Light compiles the latest research reports published by the Global Utilities Team, our high conviction stock ideas, valuation tools and key market performance data.

Report of the week: DONG Energy - Pausing for breath on a fair valuation

Mark Freshney downgrades DONG to Neutral (from Outperform). Click here

- **Downgrade to Neutral:** DONG is up c65% in GBP terms in the 15 months since its IPO. The shares now reflect the full value of the existing assets and the construction pipeline until 2020. It will be more difficult to generate value post-2020 given increasing competition. Mark increases his 2017E and 18E EBITDA forecasts by c4% and c8% as he brings forward farm-down profits.
- **Investment Overview**: **(1) Close to pricing-in future growth projects:** The existing pipeline is generating c43-112% value accretion on the capital spend, as project-level nominal IRRs are 11-18%. But the cost of offshore wind has now come down, tendering is driving returns closer to WACC and DONG's competitive advantage will eventually be eroded; **(2) Political risk perception ignored:** Existing CfDs (in DONG's case priced at £140-150/MWh for 15yrs) have an NPV of c£600 per household, yet costs have fallen. While support is subject to change-in-law provisions, Mark thinks the risk will not go away given the government review of costs; and **(3) cDKK20-40bn excess cash across 2020-25E unlikely to generate large value:** DONG has indicated it may have excess capital. Mark thinks it could either increase the annual build-out to c1.35GW p.a. (from c0.9GW) or raise the dividend by c50%, which would only take it in-line with the sector by 2023E.
- **Catalysts and Risks:** He expects the farm-down of Walney to take place at c£2bn (c£6.1m/MW), and to be the high-water mark for prices of farm-down multiples given its exceptional IRR. He expects to hear on capital deployment by early 2019.
- **Valuation:** The 2017E dividend yield is c2.0% in 2018E, rising to c3.3% by 2023E, on his 10% p.a. growth forecast. The shares discount an equity IRR of c7.2%; in-line with his assumptions. He would need to make ambitious assumptions about 2020-30E (1.35GW p.a., c25% market share and c20% value-accretion) to get to his blue sky upside case of DKK 415/share.

Recent Research

Europe

Gas Natural Fenosa
Underperform
TP €19.2

- **Stefano Bezzato** updates his estimates for **Gas Natural Fenosa** (€20, TP €19.2, U/P) to reflect the disposal of a 20% stake in gas distribution network in Spain. He increases his TP to €19.2 (from €19) with the positive impact of the €1.5bn net debt reduction more than offsetting the 3% dilution at the EPS level from 2018E. He thinks investors wait for more clarity on the use of the proceeds, with possible new acquisitions perceived as a risk. A business plan update would be welcome, also to provide clarity on the 2018E targets, as the current 2018E net income target of €1.6bn looks increasingly challenging (CSe €1.38bn, Reuters consensus €1.45bn). Click here

National Grid
Underperform
TP 850p

- **Mark Freshney** reiterates his Underperform rating for **Global Utilities Conviction Stock National Grid** (956p, TP 850p, U/P). OFGEM indicated that it remains committed to competitive tendering, and is proposing new structures for the Hinkley Point C capex. While the amount to be tendered is small (c£0.66bn), it reinforces falling returns and his view that asset base growth will be lower than NG's c5-7% aspiration. He forecasts c5% p.a. asset base growth over 2017-22E. Growth >5% is needed to offset falling returns at the EPS level and sustain the dividend growth. Click here

North America

Southern Company
Neutral
TP US$50

- **Michael Weinstein** comments on **Southern Company** (US$49.4, TP US$50, N) as the company recommend continued construction of Vogtle Units 3 and 4. The new target in-service dates for Units 3/4 are 29 months delayed from the prior schedule to Nov 2021/Nov 2022, respectively. Main risks include major project execution risk with variable cost contracts and regulator acceptance of the additional costs and delays (and possible future 2021+ writedowns of disallowed capex). Click here

Exelon
Outperform
TP US$43

- **Michael** raises his TP for **Global Utilities Conviction Stock Exelon** (US$37.8, TP US$43, O/P) U$1 to US$43 and maintains his Outperform with no changes to estimates. The increase reflects partial credit for the potential uplift in energy gross margin, resulting from expected price formation reform in PJM in 2018 where the energy market could be restructured to provide more support for 'inflexible' baseload generation. Click here

Spire
Neutral
TP US$73

- **Michael** comments on **Spire** (US$74.9, TP US$73, N) following the Missouri Public Service Commission Staff's recommendation for rate increases far below the requests filed by SR. He views this as the lowest possible outcome, about US$0.14 EPS below his currently modeled assumptions. He expects the final outcome/settlement to be better. Click here

Dominion Energy
Outperform
TP US$83

- **Michael** reviews **Dominion Energy**'s (US$78.1, TP US$83, O/P) capital plan after 2020. With the current 5-year capital plan through 2020 focused on discrete large project investments, the company intends to transition to a more programmatic approach with longterm investment programs under various forms of tracked/rider recovery post-2020. Click here

Eversource Energy
Neutral
TP US$60

- **Michael** comments on the New Hampshire Site Evaluation Committee's vote to postpone their final decision on **Eversource Energy**'s (US$62.4, TP US$60, N) Northern Pass Transmission project for another six months to the end of March 2018. He does not see it as a surprise. His estimates and TP remain unchanged. He assumes a 50% probability of NPT success in his valuation worth c$2/sh (3% of valuation), although the lack of a sizeable replacement project could lead to a re-rating of the equity value without a stock repurchase plan given this single project is responsible for nearly 2% of ES's 5%-7% long-term EPS growth projection. Click here

Keyera Corp.
Neutral
TP C$38

- **Andrew Kuske** updates his estimates for **Keyera Corp.** (C$36.7, TP C$38, N), following the Q2 results and some structural adjustments to the business modeling for KEY that focus upon reduced marketing margins. The company continues to grow an integrated asset network in Western Canada. The core infrastructure assets provide connectivity and, a degree of stability given the competitive positioning. Click here

Brookfield Group

- Following a report published by CS Brazilian strategy team on the potential significant number of asset and company privatizations in the future in Brazil (click here), **Andrew** comments on **Brookfield Group**. In his view, as partly highlighted by CS Strategy team, this round of possible Brazilian privatizations may provide opportunities for the broader Brookfield Group. He believes that Brookfield focus should be directed to the major public LPs aside from **Brookfield Property Partners** (US$23.5, not covered). Click here

Latin America

Equatorial Energia
Outperform
TP R$62

- **Vinicius Canheu** comments on **Equatorial Energia** (R$63.9, TP R$62, O/P), as the company announced the acquisition of a 51% stake in Intesa, a transmission company, for R$273m. This deal is very small and unlikely to make any significant difference in Equatorial's valuation. He sees it as an opportunistic deal looking to extend EQTL's presence in the transmission segment with the addition of an operational asset to its newly created division. Click here

Asia

China Utilities Sector

- Given the on-going shift of policies, **Dave Dai** believes that **the China utilities** space continues to see earnings divergence. New energy/environmental space (waste & water, nuclear, solar, gas and T&D) saw stronger growth than the traditional ones (such as IPPs and hydro). Beyond the results season, he reorganises his recommendations into two groups: Structural and event-driven camp. Gas and environment remain his structural picks, with the former benefiting from continuing volume recovery and the latter on strong capacity growth. For A-shares, he also likes structural winners in solar mono-wafers and power distribution. For the event-driven group, he likes coal-fired IPPs with likely normalising coal prices in 2H17 and potential tariff hike in January 2018. Wind farms should also benefit from policy clarity on green certificates before the year end. Both the sectors are below book. Click here
- **Dave** comments on the local news saying that NEA recently issued a consultation paper proposing tax and fee cuts for renewables (wind, solar, hydro, biomass, etc.), such as extension of VAT rebate policies, land cost savings and lower borrowing costs. He expects hydro to be one of the biggest beneficiaries of the proposed VAT cuts, implying an average of 6-7% FY17-18E earnings upside for companies under our coverage. Solar power may also see small benefits from the proposed two-year VAT rebate extension. Other policies like lower land taxes and preferential borrowing costs (10% below benchmark) should benefit most renewables companies (wind, solar and biomass). Click here

Longyuan Power
Outperform
TP HK$7.6

- **Dave** comments on **Longyuan Power**'s (HK$6, TP HK$7.6, O/P) wind output in August 2017 that grew 23% y-y (13% y-y in 8M17), further improving from 18% in July and 11% in 1H17. Despite weak wind resources, curtailment rate continued to improve, which is positive. In his view, current valuation for wind sector is very attractive at 0.6x FY18E P/B. He remains positive on wind operators as event-driven camp. Click here

Huaneng Renewables Corporation
Outperform
TP HK$3.6

- **Dave** comments on **Huaneng Renewables Corporation** 's (HK$2.5, TP HK$3.6, O/P) reporting its August wind output growth of 15% y-y (+13% y-y in 8M17), further improving from 2% in July and 14% in 1H17 despite weak wind resources. Despite curtailment ease, he attributes sector's YTD weakness to the uncertainties of green certificate pricing (affecting tariffs of future projects). However, he expects more clarity of green certificate rules before the scheduled mandatory trading in 2018, including renewables quotas (quantify demand size) and floor prices (to reduce tariff downside and protect investment incentives). Click here

China Oil & Gas Sector

- **Horace Tse** comments on the **China Oil & Gas Sector**, as China's NDRC announced the implementation of c15% cut on midstream transmission tariff. Non-residential city-gate gas prices are cut by Rmb0.1/cm (c5%) as a result. For city-gas operators, he expects cost savings to be passed on to consumers to boost demand. He stays positive on city-gas operators, which could see relieved margin pressure after the 1H17 drop and cheaper gas prices should also help promote gas demand further. For **Kunlun** (HK$7.4, TP HK$5.5, N) it's better than his estimates, as it suggests a c20% cut for S-J pipeline. He factors this in and raises 2017-19 EPS by 14-16% and revises up his TP to HK$5.5 (from HK$5.2). Click here

Australia / New Zealand

AGL Energy
Neutral
TP A$23.25

- **Peter Wilson** comments on the commitment by **AGL Energy** (A$24.07, TP A$23.25, N) to revert with an alternate plan to the Government's preference of keeping Liddell operating beyond its 2022 end of life. He notes that the process is now slightly accelerated and much more politicised, as the company had earlier committed to provide a plan at their investor day. As AGL acknowledges, the market may need some generation capacity, however the most efficient way to deliver this is unlikely to be coal fired given the additional wind and solar will dramatically alter the operating profile. He feels that keeping Liddell in normal operation would depress prices and reduce the value of the company's other generation assets. Click here

Closing prices as of 13th September 2017

Global Utilities Conviction List

MOST PREFERRED STOCKS	Currency	TP	Last close	Upside	Inclusion date	Price on inclusion	Performance since inclusion (vs. MSCI World Utilities)*	YTD performance (vs. MSCI World Utilities)*	Investment rationale
Cheung Kong Infrastructure	HKD	84.0	69.4	21%	8 May 2017	67.4	(5%)	(5%)	The three reasons for choosing the stock as our sector top-pick are: (i) lowest earnings exposure to Hong Kong, (ii) continuing overseas expansion and the acquisition momentum as exhibited by the recent bid for DUET group, and (iii) the recent correction in the share price. **Our latest research:** Cheung Kong Infrastructure - Further overseas expansion; proposing to buy 35% stake in European energy service provider
Enel	EUR	5.70	5.16	10%	21 Feb 2017	4.01	31%	22%	Enel's growth prospects remain at the top end of the sector, with an 11% net income CAGR in 2016-19E (excluding the impact of minority buyouts/share buybacks), more than double the average of the sector. We recall that in the latest plan Enel targeted €16.2bn 2018E EBITDA and €17.2bn EBITDA in 2019E. We see upside risk on the company's targets driven by regulation in Latin America and efficiency in the network/supply business. We do not see any rationale to the stock's discount to the sector, given its superior growth prospects, improved track record and restructuring progress. We expect an acceleration in minority buyouts in Q4, following the recent announcement of the corporate reorganization in Chile. Trading at 12.6x 2018E P/E (integrated peers 14.0x, sector 14.9x) and 7.0x 2018E EV/EBITDA (integrated peers 8.2x, sector 9.0x), we believe the current price provides an attractive entry point. **Our latest research:** Enel - Unjustified discount
Powergrid Corporation	INR	250	214	17%	8 May 2017	210	(5%)	7%	We reiterate an Outperform rating on attractive valuation and steady medium-term growth of 10% CAGR over FY17-22E despite potential returns cut. PGCIL is trading at par with Asian utilities and is cheaper than European and US utilities. It has much stronger growth of 15% CAGR vs. low mid-single digit growth rates for others. P/B valuation is positively correlated with benign rates and general market valuation. **Our latest research:** Powergrid Corporation - Powergrid Corporation: 1Q results: Steady quarter; commissioning progress tad soft, can catch up during the year. Maintain Outperform
Exelon	USD	43.0	37.8	14%	7 Feb 2017	36.0	(11%)	(10%)	EXC remains our highest conviction top pick after incorporating the company-specific results for the PJM 2020/21 capacity auction; we increase our TP US$2, to US$42, on an increase in capacity revenues which we account for within our capacity payments NPV in our sum of the parts valuation. Risks to our call include ExGen power price/commodity exposure, nuclear operator risk, and PHI regulatory risks. **Our latest research:** Exelon Corporation - Highlighting Potential from Energy Reforms

LEAST PREFERRED STOCKS	Currency	TP	Last close	Downside	Inclusion date	Price on inclusion	Performance since inclusion (vs. MSCI World Utilities)*	YTD performance (vs. MSCI World Utilities)*	Investment rationale
Hong Kong Electric	HKD	5.30	7.13	(26%)	21 Feb 2017	6.72	(9%)	(6%)	The stock faces uncertainties in regulated return negotiation and debt re-financing. 100% of its earnings are exposed to regulatory uncertainty in Hong Kong. We also highlight that re-financing risk remains in 2017. The company expects there could be increase in total finance costs after debt refinancing in 2017, if there are further US interest rate hikes. We estimate that a 25bp effective interest rate increase would lower the company's FY17E EPS by 2.5%. **Our latest research:** Hong Kong Electric Investments: 1H17 distributed income flat despite asset growth; prefer CKI for strong growth
CGN Power	HKD	1.65	2.22	(26%)	21 Feb 2017	2.37	(21%)	(13%)	The stock is the most expensive vs. H-share power peers trading on 1.6x FY17E P/B. We are less convinced that the management target operations for the Taishan units for 2H17/1H18 will be met on time as no fueling license has been granted. We also feel that utilisation and tariff risks are key downsides for the stock. **Our latest research:** CGN Power - 1H17 results in line with output momentum but tariff overhang in 2H17
National Grid	GBp	850	956	(11%)	14 Jan 2015	908	(26%)	(10%)	Concerns core to our Underperform thesis are based upon lower asset base growth. We also believe the company is at peak returns and earns a c12% all-in return on equity. We see most of the £4bn capex comes from the US (7% p.a. rate base growth), where returns are lower than in the UK (5% p.a. RAB growth). We note that the stock is sensitive to the recent rise in bond yields (we estimate each +/-50bps on discount rates is +/-6% on our TP) and this has driven the shares over the past year. We see a lack of short-term catalysts. The stock trades on a c46% premium to combined RAB and ratebase. **Our latest research:** National Grid - Risk of competitive tendering comes back

Recent Rating Changes

Company	Old rating	New rating	Change	Change on	Currency	TP	Last close	Country	Rationale for change
DONG Energy	Outperform	**Neutral**	▼	22 Aug	DKK	335	332	Denmark	DONG is up c65% in GBP terms in the 15 months since its IPO. The shares now reflect the full value of the existing assets and the construction pipeline until 2020. It will be more difficult to generate value post-2020 given increasing competition. We increase our 2017E and 18E EBITDA forecasts by c4% and c8% as we bring forward farm-down profits. The 2017E dividend yield is c2.0% in 2018E, rising to c3.3% by 2023E, on our 10% p.a. growth forecast. The shares discount an equity IRR of c7.2%; in-line with our assumptions.

First NZ Capital Disclosure Appendix

Important Global Disclosures

Nevill Gluyas and Gregory Main each certify, with respect to the companies or securities that the individual analyzes, that (1) the views expressed in this report accurately reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including FNZC's total revenues, a portion of which are generated by FNZC's investment banking activities.

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, First NZ Capital's policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	23%	(0% banking clients)
Neutral/Hold*	54%	(0% banking clients)
Underperform/Sell*	19%	(0% banking clients)
Restricted	4%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Important Global Disclosures

Credit Suisse's research reports are made available to clients through our proprietary research portal on CS PLUS. Credit Suisse research products may also be made available through third-party vendors or alternate electronic means as a convenience. Certain research products are only made available through CS PLUS. The services provided by Credit Suisse's analysts to clients may depend on a specific client's preferences regarding the frequency and manner of receiving communications, the client's risk profile and investment, the size and scope of the overall client relationship with the Firm, as well as legal and regulatory constraints. To access all of Credit Suisse's research that you are entitled to receive in the most timely manner, please contact your sales representative or go to https://plus.credit-suisse.com .

Credit Suisse's policy is to update research reports as it deems appropriate, based on developments with the subject company, the sector or the market that may have a material impact on the research views or opinions stated herein.

Credit Suisse's policy is only to publish investment research that is impartial, independent, clear, fair and not misleading. For more detail please refer to Credit Suisse's Policies for Managing Conflicts of Interest in connection with Investment Research: https://www.credit-suisse.com/sites/disclaimers-ib/en/managing-conflicts.html .

Credit Suisse does not provide any tax advice. Any statement herein regarding any US federal tax is not intended or written to be used, and cannot be used, by any taxpayer for the purposes of avoiding any penalties.

To the extent this is a report authored in whole or in part by a non-U.S. analyst and is made available in the U.S., the following are important disclosures regarding any non-U.S. analyst contributors: The non-U.S. research analysts listed below (if any) are not registered/qualified as research analysts with FINRA. The non-U.S. research analysts listed below may not be associated persons of CSSU and therefore may not be subject to the FINRA 2241 and NYSE Rule 472 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

First NZ Capital ....Nevill Gluyas ; Gregory Main

The analyst(s) involved in the preparation of this report may participate in events hosted by the subject company, including site visits. First NZ Capital does not accept or permit analysts to accept payment or reimbursement for travel expenses associated with these events.

Credit Suisse Disclosure Appendix

Analyst Certification

Vincent Gilles, Wanda Wierzbicka, CFA, Stefano Bezzato, Mark Freshney, Guy MacKenzie, CFA, Andrew M. Kuske, Vinicius Canheu, CFA, Dave Dai, CFA, Lokesh Garg, Fahd Niaz, CFA, Gerald Wong, CFA, A-Hyung Cho, Mark Samter, Peter Wilson, Ari Jahja, Vanessa Quiroga, CFA, Paul Tan, Ray Kim, Gary Zhou, CFA and Michael Weinstein each certify, with respect to the companies or securities that the individual analyzes, that (1) the views expressed in this report accurately reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	14%	(53% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Important disclosures regarding companies or other issuers that are the subject of this report are available on Credit Suisse's disclosure website at https://rave.credit-suisse.com/disclosures or by calling +1 (877) 291-2683.

This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

Additional Regional Disclaimers

Hong Kong: Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an Australian financial services licence (AFSL) and is exempt from the requirement to hold an AFSL under the Corporations Act 2001 (the Act) under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Act). Research on Taiwanese securities produced by Credit Suisse AG, Taipei Securities Branch has been prepared by a registered Senior Business Person.

Australia (to the extent services are offered in Australia): Credit Suisse Securities (Europe) Limited ("CSSEL") and Credit Suisse International ("CSI") are authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority ("FCA") and the Prudential Regulation Authority under UK laws, which differ from Australian Laws. CSSEL and CSI do not hold an Australian Financial Services Licence ("AFSL") and are exempt from the requirement to hold an AFSL under the Corporations Act (Cth) 2001 ("Corporations Act") under Class Order 03/1099 published by the Australian Securities and Investments Commission ("ASIC"), in respect of the financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). This material is not for distribution to retail clients and is directed exclusively at Credit Suisse's professional clients and eligible counterparties as defined by the FCA, and wholesale clients as defined under section 761G of the Corporations Act. Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). Credit Suisse Securities (USA) LLC (CSSU) and Credit Suisse Asset Management LLC (CSAM LLC) are licensed and regulated by the Securities Exchange Commission of the United States under the laws of the United States, which differ from Australian laws. CSSU and CSAM LLC do not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1100 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act).

Malaysia: Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd, to whom they should direct any queries on +603 2723 2020.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Analyst Note 14 Sep 2017

U.S. utilities' valuations reached a 14-month high this week when the median price/fair value ratio hit 1.17 for the 40 U.S. utilities in Morningstar's coverage.

This is the highest median P/FV ratio for U.S. utilities since the all-time peak of 1.21 in July 2016. Other valuation metrics such as price/earnings (22) and price/book (2.1) for U.S. utilities also hit 2017 highs this week and are approaching peak levels from mid-2016. Morningstar's U.S. Utilities Sector Total Return Index also hit an all-time high, up 15% year to date including dividends. This outpaces the S&P 500 (up 13%) and all sectors except healthcare and technology year to date.

Even though utilities' valuations appear exceedingly rich on an absolute basis, the sector's yield paradox--as we call it--continues to give bullish signs. Impressive dividend growth has kept the sector's average yield near 3.5% even with the runup in utilities' stock prices. This is a historically attractive yield premium to market interest rates. During the past 30 years, utilities' average dividend yields have been in line with 10-year U.S. Treasury yields, which held near 2.1% this week. If this historical relationship holds, utilities could have another leg of upside. Alternatively, the sector shouldn't suffer much on an absolute basis if interest rates rise.

We are reaffirming our fair value estimates and moat and moat trend ratings for all the U.S. utilities we cover. Our top picks are utilities like Dominion Energy and Duke Energy, which have transparent, high-quality growth investment opportunities but trade at average sector multiples. They also include utilities facing risks that the market is overly discounting. These include Scana and Southern, which are facing new nuclear project cost overruns, and FirstEnergy, whose nonregulated FirstEnergy Solutions subsidiary faces bankruptcy.

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

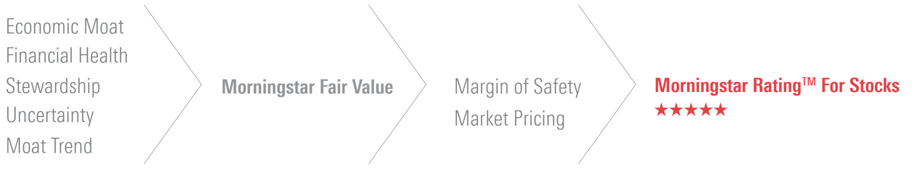
The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Morningstar Research Methodology for Valuing Companies



Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

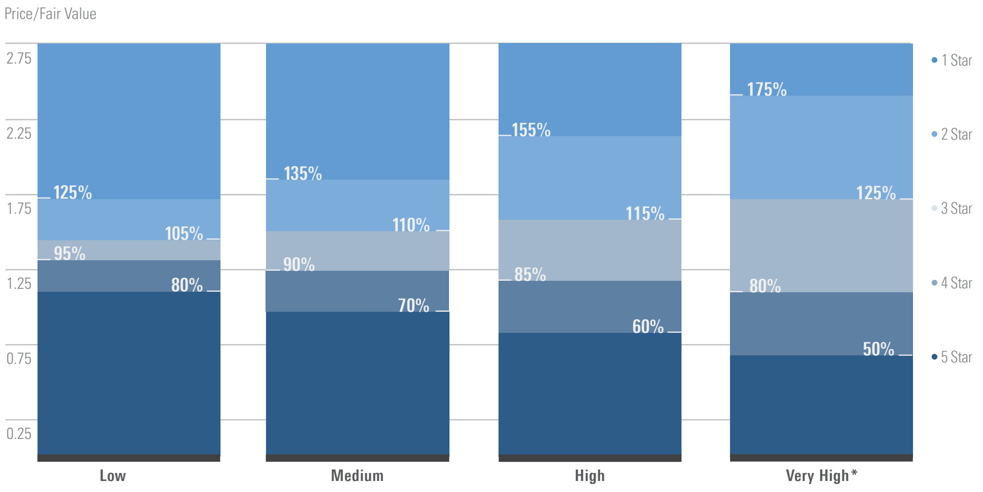
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Utilities' Valuations Reach Another Peak, but Yield Paradox Persists

Investment Thesis

Travis Miller, Strategist, 06 September 2017

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future. But Exelon has shown its political clout recently, winning subsidies in key states to keep its nuclear fleet mostly in tact.

However, Exelon's growth engine is its regulated gas and electric distribution utilities. Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think at least five of Exelon's plants remain uneconomic without state subsidies that face stiff legal and regulatory challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2019, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Strategist, 14 September 2017

U.S. utilities' valuations reached a 14-month high this week when the median price/fair value ratio hit 1.17 for the 40 U.S. utilities in Morningstar's coverage.

This is the highest median P/FV ratio for U.S. utilities since the all-time peak of 1.21 in July 2016. Other valuation metrics such as price/earnings (22) and price/book (2.1) for U.S. utilities also hit 2017 highs this week and are approaching peak levels from mid-2016. Morningstar's U.S. Utilities Sector Total Return Index also hit an all-time high, up 15% year to date including dividends. This outpaces the S&P 500 (up 13%) and all sectors except healthcare and technology year to date.

Even though utilities' valuations appear exceedingly rich on an absolute basis, the sector's yield paradox--as we call it--continues to give bullish signs. Impressive dividend growth has kept the sector's average yield near 3.5% even with the runup in utilities' stock prices. This is a historically attractive yield premium to market interest rates. During the past 30 years, utilities' average dividend yields have been in line with 10-year U.S. Treasury yields, which held near 2.1% this week. If this historical relationship holds, utilities could have another leg of upside. Alternatively, the sector shouldn't suffer much on an absolute basis if interest rates rise.

We are reaffirming our fair value estimates and moat and moat trend ratings for all the U.S. utilities we cover. Our top picks are utilities like Dominion Energy and Duke Energy, which have transparent, high-quality growth investment opportunities but trade at average sector multiples. They also include utilities facing risks that the market is overly discounting. These include Scana and Southern, which are facing new nuclear project cost overruns, and FirstEnergy, whose nonregulated FirstEnergy Solutions subsidiary faces bankruptcy.

Economic Moat

Travis Miller, Strategist, 06 September 2017

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Strategist, 06 September 2017

We are raising our fair value estimate to $33 per share from $32 per share after incorporating time-value appreciation since our last update and year-to-date results in line with our expectations.

On a consolidated basis, our midcycle earnings estimate is now $3.40 per share after adding the New York and Illinois zero emissions credits. Our midcycle EBITDA estimate at Exelon Generation is $2.7 billion, up from trough EBITDA in 2019 when weak power prices and at least two nuclear plant closures will hurt earnings at Exelon Generation. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.50/mmbtu gas basis in the mid-Atlantic region and market heat rates 15% above current 2018 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 6% consolidated annual earnings growth through 2020. Our forecasts show Exelon's regulated utilities contributing two thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2020 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. We remove the Oyster Creek (N.J.) and Three Mile Island (Pa.) plants in 2019 per Exelon's current plants. TMI failed to clear the last three PJM capacity auctions but could survive if Pennsylvania passes legislation that would subsidize the state's nuclear plants. Nuclear subsidy legislation in Pennsylvania could have a slight positive impact on our fair value estimate.

At the retail business, we assume 20% long-term normalized gross margins and volumes that grow to 245 terawatt hours by 2020.

We assume a 9% cost of equity and a 6.6% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Strategist, 06 September 2017

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Strategist, 06 September 2017

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the lives of its distressed nuclear plants. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 2.6 million shares and vested options as of January 2017.

Executive Order Reviewing Clean Power Plan Has Little Effect on Utilities

Andrew Bischof, CFA, CPA, Sr. Eq. Analyst, 28 March 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities we cover after President Donald Trump signed an executive order to review the previous administration's Clean Power Plan. Further efforts by the Environmental Protection Agency will be needed to revoke the current regulation.

During the Trump administration, we expect state renewable portfolio standards, or RPS, will keep U.S. renewable energy growth in line with that achieved during the Obama presidency. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use within the next eight years from 15% now, based solely on existing state RPS. More than half of that renewable energy growth will come by 2020 to hit mandates in large states such as Colorado, New Jersey, and Pennsylvania. Supportive tax policy, pro-manufacturing initiatives, and companies trying to reduce their carbon footprint represent upside to our base forecast.

Furthermore, we expect gas generation efficiency improvements and low-cost gas to continue making it difficult for aging coal generators to compete. A typical natural gas-fired combined-cycle power plant produces less than 50% of the carbon emissions of a coal-fired plant. Our forecasts show renewable energy and gas generation growth should keep carbon emissions falling toward targets in the U.S. Clean Power Plan and the Paris Agreement, despite Trump's efforts. We forecast that U.S. carbon emissions will fall 28% from 2005 levels by 2020 based on our forecast for RPS-related renewable energy growth displacing fossil fuel generation

Best positioned are large-cap utilities with good regulatory relationships. Dominion Resources, Duke Energy, American Electric Power, and Southern Co. have billions of dollars to invest in gas and electric infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

Power Conference Takeaways: No End to Renewable Energy and Infrastructure Growth

Travis Miller, Strategist, 19 April 2017

We are reaffirming our fair value estimates, moat ratings and moat trends for all U.S. utilities after Morningstar analysts attended and presented at two recent power industry conferences.

The key theme at both conferences was how utilities should navigate the transition to a cleaner, smarter electricity system. Our most conservative forecasts for the next eight years show U.S. renewable energy capacity doubling, gas continuing to steal power generation market share from coal, and carbon emissions falling near Obama administration-era targets. Consensus is building that President Donald Trump's policies will not disrupt--and could even promote--a move toward lower-carbon generation through state renewable portfolio standards, low-cost gas, and favorable tax policy.

We think valuations across the sector are stretched, but utilities that can navigate the regulatory processes to address grid modernization and infrastructure siting are best-positioned to protect or widen their economic moats. We forecast annual earnings and dividend growth hitting 8% for some utilities with constructive state regulatory relationships supporting investment in renewable energy, transmission, natural gas-fired generation and distribution. A few well-positioned U.S. utilities include Dominion Resources, Duke Energy, American Electric Power, Southern Co., NextEra Energy, Edison International, and Xcel Energy.

Grid modernization is critical to enabling more consumer energy choice, a trend we anticipate during the next decade. First-movers could benefit from investment and new business opportunities while laggards could face falling central-network load and earnings.

Easing siting constraints is one way we think the Trump administration can promote investment. We think more gas pipelines, grid expansion and system integration are essential to achieving state renewable energy goals and grid modernization.

Exelon's Core Growth Intact as We Await Initial Decisions in Nuclear Subsidy Challenges

Travis Miller, Strategist, 03 May 2017

We are reaffirming our $32 per share fair value estimate, narrow moat and stable moat trend for Exelon after the company announced earning $0.65 per share on an adjusted basis during the first quarter of 2017, down from $0.68 per share in the first quarter of 2016. Earnings are tracking in line with our 2017 full-year estimate, and management reaffirmed its $2.50-$2.80 per share guidance range.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed with Exelon's ability remain the world's premier nuclear operator. The fleet realized a 94% capacity factor in the quarter despite three refueling outages. This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations.

Legal developments this month related to New York and Illinois nuclear subsidies, or Zero Emissions Credits, could have a material impact on our earnings and fair value estimates. We assume legal and regulatory challenges ultimately will be successful and do not include the subsidies in our long-term projections.

We found it telling that management pledged to bid the subsidized units into capacity markets on an economic basis, a response to challengers who suggest subsidized plants would distort market bidding. However, presumably, economic bidding of subsidized units could result in higher capacity prices that would be a huge benefit for the rest of Exelon's fleet. This appears to be a win-win strategy for Exelon if the legal challenges are not successful.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020.

PJM Capacity Auction Results: Surprisingly, No Surprises

Travis Miller, Strategist, 24 May 2017

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for all utilities that participated in the 2020-21 mid-Atlantic capacity auction last week. Clearing prices were in line with our expectations and market expectations, a rarity during the 14 years that the region's grid operator, PJM, has conducted the base residual auctions.

As we expected, Exelon announced that two of its distressed nuclear plants, Quad Cities (Illinois) and Three Mile Island (Pennsylvania), did not clear. This typically would lead to plant retirements, but new Illinois state law grants subsidies for Quad Cities starting June 1 that will keep it running, at least until regulators and courts rule on challenges to the state's zero emission credits. We are awaiting a decision from the District Court in Northern Illinois on an injunction request after oral arguments Nat 22. Pennsylvania is debating similar subsidies. Ultimately, we think the subsidies will be ruled illegal and both plants will close.

Presumably, Quad Cities' nonclearing offer was one reason ComEd zone prices cleared highest of all zones at $188.12 per megawatt-day. This is a big lift for its four larger nuclear plants in the zone. One year of strong pricing doesn't have a material impact on our fair value estimate, but the clear is 45% higher than our long-term normalized estimate. If prices persist at this level it could offer 5%-10% upside to our $32 fair value estimate for Exelon.

Dynegy's 13.5 gigawatts of generation is worst off from a relatively low $76.53/MW-day RTO clear, down from $100/MW-day in the 2019-20 auction. Every $100/MW-day change in capacity prices represents roughly $500 million of pretax earnings in our forecast. For Calpine, its primary EMACC zone cleared at a premium $187.87/MW-day, but its PJM fleet represents only about 20% of its total fleet.

NRG Energy and Public Service Enterprise Group cleared capacity in line with our expectations.

Exelon's Three Mile Island Closure Pressures Pennsylvania Lawmakers

Travis Miller, Strategist, 30 May 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced it plans to close the Three Mile Island nuclear plant in Pennsylvania in 2019. We already assumed the plant would close in 2019, so the announcement has no impact on our fair value estimate. We continue to forecast mostly flat generation gross margin at least through 2020.

Although we agree with Exelon that Three Mile Island is probably struggling to meet its cost of capital, we think this announcement is a clear political move to force Pennsylvania policy makers to decide whether to subsidize distressed nuclear generators. Three Mile Island has not cleared the last three mid-Atlantic base capacity auctions, and it was widely anticipated the plant would close in 2019 absent state subsidies.

If Exelon is able to win political support for subsidies, we think regulators and the courts ultimately will find the subsidies illegal based on recent precedent rulings. Subsidies in Pennsylvania would probably be similar to so-called zero emission credits in New York and Illinois, which are supporting three of Exelon's plants that otherwise would have closed this year. We continue to believe Exelon's three distressed nuclear plants in those states ultimately will close when the subsidies are declared illegal, although that could be a multiyear process.

We also expect the courts will require Exelon to refund cash payments it is collecting in New York as of April 1 and starting June 1 in Illinois, pending a ruling from a federal court judge on an injunction filing. Policy-making at the Federal Energy Regulatory Commission and the Illinois injunction ruling are key mile markers. If the subsidies survive legal and regulatory challenges, it could raise our fair value estimate by $2-$3 per share.

Trump's Announcement to Exit Paris Agreement Has Little Effect on Utilities

Andrew Bischof, CFA, CPA, Sr. Eq. Analyst, 02 June 2017

We are maintaining our fair value estimates, moat ratings, and moat trend ratings for all utilities after President Trump announced plans to exit the Paris Climate Agreement.

Despite the withdrawal, we continue to forecast U.S. renewable energy capacity doubling during the next eight years. State renewable portfolio standards, or RPS, and other local policies remain the industry's primary growth driver, not federal environmental policy. Our analysis indicates that renewable energy, including hydro, will grow to meet nearly 20% of U.S. electricity use by 2025, up from 15% now, based solely on existing state RPS.

We think Trump's move to abandon the U.S. Clean Power Plan and Paris Agreement could even embolden states to strengthen renewable energy standards, offering upside to our forecasts. Supportive tax policy and pro-manufacturing initiatives also offer upside. And corporate renewable energy purchases should continue to grow as businesses realize the economic and public perception benefits. Thus, we are not surprised that many business leaders denounced Trump's decision.

We also forecast carbon emissions from the power generation sector will keep falling toward Paris Agreement targets given the growth in renewable energy and gas generation. Low natural gas prices and turbine efficiency improvements are forcing coal plant shutdowns and reduced run times for competing coal generators, which emit twice as much carbon as an equivalent gas plant.

Utilities operating in states with constructive regulation and environmental policy support could realize 7%-9% annual earnings and dividend growth the next three to five years. Best positioned are utilities like Dominion Energy, Duke Energy, American Electric Power, and CMS Energy that are investing billions of dollars in new infrastructure. NextEra Energy and Xcel Energy should widen their lead as the top U.S. renewable energy companies.

U.S. Nuclear: Down but Not Out

Travis Miller, Strategist, 27 July 2017

We are reaffirming our fair value estimates, moat and moat trend ratings for all U.S. utilities with nuclear exposure after analyzing the economics, regulation, and sustainability attributes of nuclear generation in the U.S.

Nuclear power is at an inflection point in the U.S., with a wide gap developing between the anti-nuclear and pro-nuclear factions. This is a critical debate. The 99 nuclear units in the U.S. provide 20% of the nation’s electricity and meet essential reliability needs for major cities. Competition from cheap natural gas generation and renewable energy are pinching profits now, but we think a long-term perspective is important.

Our forecast for flat or growing U.S. nuclear capacity is more bullish than most forecasts. In particular, we think the U.S. could add as much as 5% net new nuclear capacity by 2040 primarily due to nuclear uprates. Most market forecasts assume natural gas is the marginal generation source, but our calculations show nuclear uprates have similar economic returns and less long-term capital reinvestment risk. We think nuclear has a more favorable environmental, social, and governance, or ESG, profile than most other nonrenewable energy sources. Its low carbon-emissions profile and reliability make it a critical contributor to meeting state and federal environmental policy goals.

We think the best opportunity for investors is to take advantage of the market's concerns about spiraling new-build nuclear costs and regulatory risk. Scana and Southern Company trade at steep discounts to peers even after adjusting for their new-build project risks. Among existing plant owners, only one utility has maintained a big bet on nuclear: Exelon. The stock looks pricey now, but its scale and political clout as the largest U.S. operator give it more option upside than any U.S. utility. We also think top-tier nuclear operators such as Exelon and Xcel Energy should earn premium valuations for their positive ESG characteristics.

With Nuclear Subsidy Debate Past, Exelon Hits Core Growth Expectations

Travis Miller, Strategist, 02 August 2017

We are reaffirming our $32 fair value estimate and narrow moat and stable moat trend ratings for Exelon after the company announced earnings per share of $0.54 on an adjusted basis during the second quarter of 2017, down from $0.65 in the second quarter of 2016. Earnings are tracking in line with our full-year estimate, and management reaffirmed its $2.50-$2.80 EPS guidance range.

Exelon achieved two key court victories in July affirming the legality of nuclear subsidies it began receiving this year in New York and Illinois. We think this is just the start of the legal and regulatory debate. We do not include the five subsidized plants in our long-term forecast, but including them would not have a sizable impact on our fair value estimate because the subsidies limit their value upside and downside.

As expected, Exelon's wholesale generation fleet continues to be a drag on earnings with lower energy, hedge, and capacity prices. We continue to forecast mostly flat generation gross margin at least through 2020. However, we continue to be impressed by Exelon's ability remain the world's premier nuclear operator. The fleet realized a 91% capacity factor in the quarter despite six refueling outages.

This operational excellence ensures investors realize all upside that might develop in the Eastern U.S. energy markets and gives Exelon leverage in regulatory negotiations. Its next area of focus is in Pennsylvania, where it has committed to close its Three Mile Island nuclear plant by September 2019 unless it receives subsidies. We assume TMI closes as scheduled.

Exelon's regulated utilities continue to perform well and are on track to support our 5% consolidated earnings growth forecast through 2020. Management reported the utilities' returns on equity are near 10% with upside potential at the Pepco Holdings utilities. This return is better than many of Exelon's peers'.

Utilities' Valuations Reach Another Peak, but Yield Paradox Persists

Travis Miller, Strategist, 14 September 2017

U.S. utilities' valuations reached a 14-month high this week when the median price/fair value ratio hit 1.17 for the 40 U.S. utilities in Morningstar's coverage.

This is the highest median P/FV ratio for U.S. utilities since the all-time peak of 1.21 in July 2016. Other valuation metrics such as price/earnings (22) and price/book (2.1) for U.S. utilities also hit 2017 highs this week and are approaching peak levels from mid-2016. Morningstar's U.S. Utilities Sector Total Return Index also hit an all-time high, up 15% year to date including dividends. This outpaces the S&P 500 (up 13%) and all sectors except healthcare and technology year to date.

Even though utilities' valuations appear exceedingly rich on an absolute basis, the sector's yield paradox--as we call it--continues to give bullish signs. Impressive dividend growth has kept the sector's average yield near 3.5% even with the runup in utilities' stock prices. This is a historically attractive yield premium to market interest rates. During the past 30 years, utilities' average dividend yields have been in line with 10-year U.S. Treasury yields, which held near 2.1% this week. If this historical relationship holds, utilities could have another leg of upside. Alternatively, the sector shouldn't suffer much on an absolute basis if interest rates rise.

We are reaffirming our fair value estimates and moat and moat trend ratings for all the U.S. utilities we cover. Our top picks are utilities like Dominion Energy and Duke Energy, which have transparent, high-quality growth investment opportunities but trade at average sector multiples. They also include utilities facing risks that the market is overly discounting. These include Scana and Southern, which are facing new nuclear project cost overruns, and FirstEnergy, whose nonregulated FirstEnergy Solutions subsidiary faces bankruptcy.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

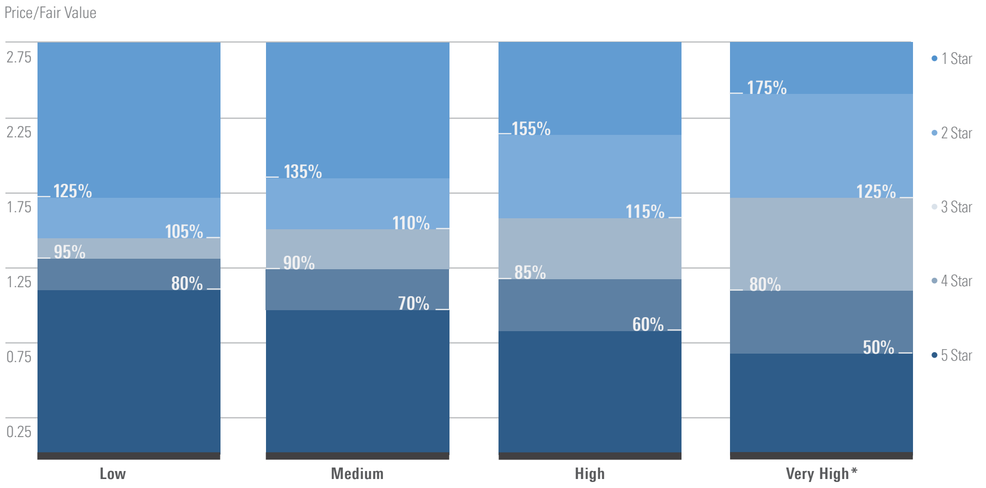
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- **Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- **Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- **None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- **One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- **Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- **Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- **Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- **Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

Things We've Learned This Week

Our Take: Utilities continue to bleed off in September some of the outperformance seen this past summer, with 120 bps underperformance vs the S&P 500 in the past week alone. We continue to see the sector as fairly valued (about 2% expensive) based on the CS forecast for a 2.8% 10-year bond yield by yearend. As DUK, SO, NEE, and other utilities dig out from Hurricane Irma, we see most storm damage recoverable through a mix of storm reserves (DUK has $60M remaining in Florida and another $22M in the Carolinas) and cost deferrals for future ratecases. Any incremental ratebase spend would depend on whether utilities seek to accelerate or add to existing capital plans as a result of the storm.

- **D received a favorable decision** from the VA Supreme Court this week on the dismissal of challenges to the state's legislative freeze on biennial rate reviews through the end of the decade. Looking forward, we await the commissioning of the Cove Point LNG export terminal in Nov, which is expected to help add as much as $600M-$800M of incremental EBITDA in 2018 and beyond, allowing the company to pay down $3B-$4B of debt over the next few years.
- **SR received a poor (but expected) Staff recommendation** for its ongoing ratecase this week. We view Staff's position in-line with our low-end expectation for ~$0.15 at risk in the case, although we also expect any settled or litigated outcome to be materially better than Staff.
- **Investor interest (calls, model requests, etc…)** has picked up for D (Outperform) and SO (Neutral), both leaning to the long side. BKH (Outperform) interest has also picked up after recent underperformance heading into the Oct analyst day. As such, we see skew toward positive (neutral at least) surprise vs expectations for BKH, with no change to its previously articulated 2018 timeframe for a Mancos disposition (we think little chance for a COSG program). We also expect an extension of the company's capex projection to 2021, if only in broad strokes (no segment breakout).
- **EEI Financial Conference 2017 Meetings Signup Now Open**: Please join us in Orlando 11/5-11/7 as we host 24 management meetings and a takeaways dinner on 11/7: *WEC, NI, BKH, AVA, ED, DUK (dinner), DTE, AEP, EXC, NEE, NWE, ES, EIX, D, SRE, CMS, CNP, PNW, XEL, PPL, PEG, PCG, SO, ETR.*

Source: Company data, Credit Suisse estimates

- **Hurricane Irma Aftermath.** Earlier this week, Hurricane Irma rampaged through Florida and Georgia leaving a path of destruction behind. Electric utilities affected include Florida Power & Light Co. (FPL), a subsidiary of NextEra Energy (NEE), Duke Energy Florida (DEF), Tampa Electric Co. (TECO), a subsidiary of Emera Inc., and Georgia Power (GP), a subsidiary of Southern Co. (SO). As of Sept 14th, FPL reported that less than 1.4M of its 4.9M customers were without power and has restored power to over 3M customers. DEF reported that less than 176K of its 1.8M customers were without power and has restored power to over 824K customers. TECO reported 90K of its 730K customers were without power and has restored power to 335K customers. Georgia Power reported that 155K customers were without power and has restored power to 830K customers.

  FPL expects restoration of the eastern portion of its service area by Sept 17th and of the western portion by Sept 22nd. DEF expects restoration of the western portion of its service by Sept 15th and restoration of the central and northern portions by Sept 17th. TECO expects restoration to all customers by Sept 17th. Georgia Power states that it “will take numerous days in some areas of the state to get power restored."

Although electric utilities in affected areas have suffered heavy infrastructure damage primarily to (transmission/distribution lines), gas utilities have emerged relatively unscathed with minimal infrastructure damage.

While power is expected to be fully restored over the course of days, rebuilding infrastructure in areas that were heavily affected will be a more drawn out process. The CEO of FPL stated that over the next few months the utility is planning to rebuild infrastructure with additional storm hardening and will upgrade its system with additional smart grid equipment.

- **DUK: Storm reserves help offset repairs.** While it’s still too early to determine the financial extent of Irma damages, it may be useful to recall that Hurricane Matthew in 2016 resulted in outages for 1.7M customers in Florida and the Carolinas and about $140M deferred repair costs (for which the pending DEP rate request includes $30M/yr recovery of $116M). The company currently has $60M remaining in customer-funded storm reserves in Florida plus another $22M in the Carolinas. Generally, storm reserves are used to offset operating expense repair work, while any capital replacement is accomplished with debt and equity. Utilities may petition regulators for replenishment (the current reserves were established under a prior rate settlement). Any amount of incremental capital spending and ratebase would depend on whether the company chose to accelerate existing capital plans or needs to replace major equipment outside of existing plans.
- **SO says no; Kemper decision postponed again.** After receiving a settlement proposal in late August, SO has again failed to reach an agreement with the Mississippi Public Service Commission (PSC) over the Kemper facility. As a result, the PSC announced that their final decision regarding how much customers should pay for the Kemper facility has been postponed to January 2018. SO stated that accepting the settlement would harm both the company financially as well as its ability to service customers.
    - **Mississippi Staff on Kemper Settlement Proposal: 'You can do with less'.** On August 21st, SO filed its settlement proposal for the Kemper facility, continuing collection of $126M annually under existing rates to recover the CCGT component, reflecting a 9.413% ROE. However, the Mississippi Public Service Commission (PSC) Staff recommended (in a separate filing) lowering the annual revenue requirement for the CCGT to $122M, representing a 9.225% ROE. The gasification portion for Kemper has now been completely written off, with $1B of equity announced for 2017, while settlement discussions are expected to provide clarity on future cancellation costs (estimated at $100M-$200M) and the recovery of ~$500M combined cycle investment not already in rates. SO also contended that it would have been able to justify a $209M revenue requirement, but limited it to $126M to be consistent with the PSC's request (June 21st) to not increase customer rates. In the filing, SO stated "Far from offering certainty or a path to rebuilding MPC's financial strength, these offers would have required significant additional write-offs in excess of the approximately $6B already written off by the Company, and would have created a continuous, annual financial drain on the MPC that is simply not consistent with the terms and spirit of the Commissioners or the statutory requirement that rates be 'just and reasonable'". The next step in the process will be for the PSC to review SO's proposed settlement and to order a status conference.
- **Appalachian power rider denied.** VA regulators turned down AEP subsidiary Appalachian Power Co.’s request for a voluntary renewable energy rider, Rider REO, due to concerns regarding proposed pricing design and cost recovery. Rider REO would give customers the option to pay to receive all power from renewable energy resources. Intervenors argued the rider would lead to significantly higher charges for

resources already included in the standard tariff for participating customers. The charges would be $15 per MWh more than the cost of PPAs for renewable energy. Due to these concerns, the application was denied by regulators.

- **Now you permit, now you don't - Mountain Valley Pipeline.** Recall that **ED** owns 12.5% equity interest in this proposed project. The West Virginia Department of Environmental Protection (DEP) retracted a Clean Water Act Permit for EQR Midstream's Mountain Valley natural gas pipeline. The DEP had previously granted the permit for the pipeline on March 28th. The DEP stated that its "decision will allow the agency to reevaluate the complete application to whether the state's certification is in compliance with Section 401 of the federal Clean Water Act." In particular, the agency is evaluating the pipeline's potential to discharge waste into waterways.
    - ***From our 6/30 weekly*: Progress on Pipeline Construction – FERC EIS for Mountain Valley Pipeline.** FERC staff issued their final environmental impact statement (EIS) for the Mountain Valley Pipeline (MVP) this week, affirming that the project could move forward without significant impact to the environment. Opponents of MVP have said they believe the pipeline will harm water supplies and that the review relied too much on consultants who were biased in favor of the project. The largest owner of the project is EQT Midstream (45.5% owner) who will also act as the pipeline's operator. Project owners are still targeting a late 2018 in-service date, and the project will need to be issued a certificate of construction which will require a quorum at FERC.
    - ***From our 4/4 ED note*: Proposed Mountain Valley Pipeline.** In Jan 2016, ED acquired a 12.5% equity interest in the proposed Mountain Valley Pipeline. If approved, the 300-mile pipeline (2 MMDt/day) would connect Equitrans (EQT) pipeline in northwestern West Virginia to Columbia Gas Transmission and Transco pipelines through to Virginia with a target in-service date of 4Q18. Total cost is projected to be $3.0B-$3.5B, with ED having already contributed $41M through Sept 2016. Key shippers include EQT Energy, NextEra Midstream, Con Edison 4 April 2017 Consolidated Edison (ED) 4 (CECONY/O&R), WGL Midstream, Vega Energy, Roanoke Gas. The Federal Energy Regulatory Commission (FERC) issued a Draft Environmental Impact Statement in Sept 2016 with final approvals remain pending. On March 31, FERC announced a 3-month delay for their review.
- **Hydro-Québec offers a hand to NY.** Recall in June, the NY governor's office issued a request for proposals (RFP) to build renewable energy projects that will generate 2.5 MWh/year to help the state meet its climate and renewable energy targets. In response, Hydro-Québec (HQ) submitted two proposals, an 80 MW upgrade of the Cedars Rapid Transmission intertie between Quebec's power grid with NYISO's network and an offer to deliver 5.8-8.3 TWh/year "over a major new or expanded interconnection into New York from Québec". HQ's proposals would help address NYISO's transmission congestion issue.
- **CNP Arkansas ratecase settlement.** On Sept 6th, the Arkansas Public Service Commission (PSC) issued an order adopting a settlement in CenterPoint Energy Resources' ratecase. The settlement authorized a $7.6M rate increase at a 9.5% ROE, 31.02% equity ratio, and $699.1M ratebase using test year ending Sept. 30, 2018. CNP initially requested a $9.1M rate increase at a 9.5% ROE, 31.56% equity ratio, and $705M ratebase.
- **Washington Gas ratecase settlement.** On Sept 8th, the Virginia State Corporation Commission (SCC) issued an order adopting a settlement in Washington Gas Light Co.'s gas ratecase. The settlement authorized a $34M rate increase and a 52.337% equity ratio. The agreement is silent to other traditional ratecase parameters, but specifies that a 9.5% ROE is to be used "in any application or filing, other than for a

change in base rates." Washington Gas Light initially requested a $45.6M rate increase at a 10.25% ROE, 57.55% equity ratio, and $925.4M ratebase. The SCC rejected provisions outlining programs designed to expand the availability of natural gas service to unserved areas, in particular the targeted conversion program (deemed not in public interest) and the contribution payment plan (requires additional customer protections).

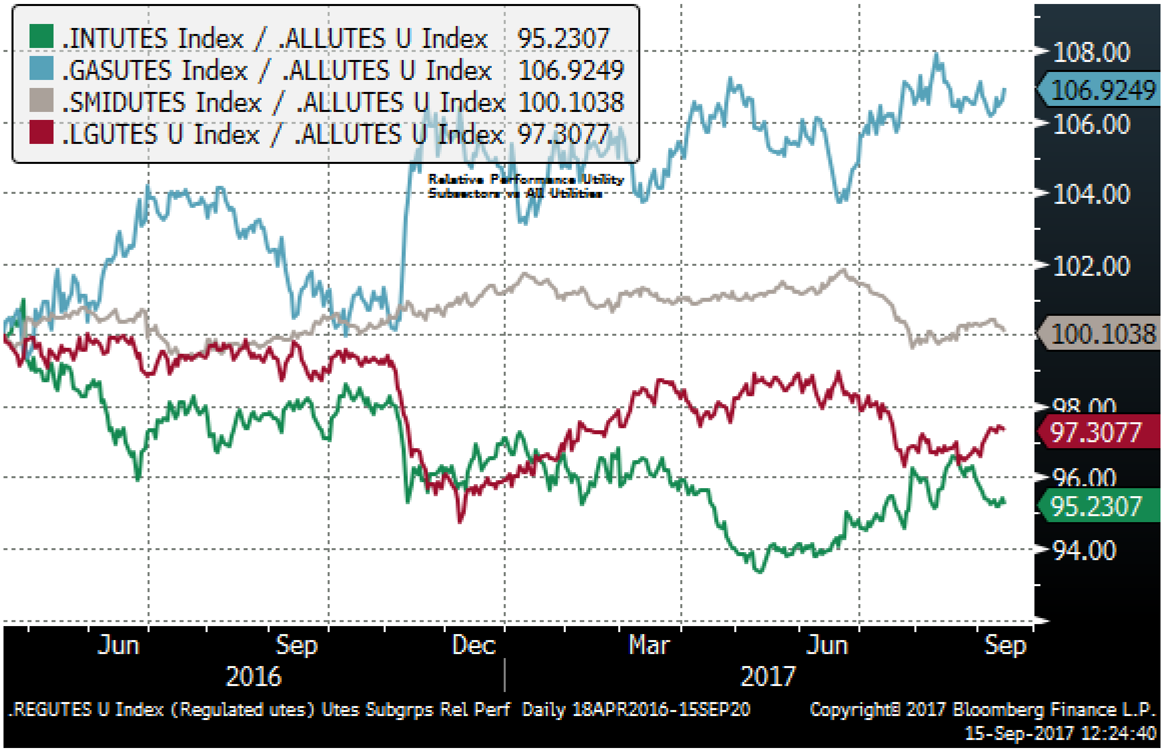
- **Southern Connecticut Gas ratecase settlement.** On Sept 5th, the Connecticut Public Utilities Regulatory Authority (PURA), the Office of Consumer Counsel, and the Southern Connecticut Gas Co. (a subsidiary of Avangrid Inc.) filed a settlement in the company's pending rate case. The settlement authorized a three step $11.6M rate increase at a 9.25% ROE. The first, second, and third step rates increases are respectively: $1.9M at a 9.25% ROE, 52.42% equity ratio, and a $540.2M rate base / incremental $4.7M at a 9.25% ROE, 52.4% equity ratio, and a $577.1M rate base / incremental $5M at a 9.25% ROE, 52.19% equity ratio, and a $624.6M rate base. The step rate increases are proposed to become effective Jan. 1st 2018, 2019, and 2020 respectively. Southern Connecticut Gas initially requested a $19.2M rate increase at a 9.95% ROE.
- **Cleaning up California Peak Demand.** Senate Bill 338, introduced as the Clean Peak Reliability Requirement, has been sent to the Governor Brown for approval following approval in the California Senate and Assembly. The bill would require utilities to alter their integrated resource planning (IRP) process to "consider the role of existing renewable generation, grid operational efficiencies, energy storage, and distributed energy resources" in meeting peak demand. The bill was introduced due to concerns regarding the "duck curve" representing the timing imbalance between solar generation midday and peak demand in the evening.
- **HydroOne & Avista file merger application.** Following HydroOne's proposed acquisition announcement in July, the companies have filed applications for approval of the merger to state utility commissions as well as FERC, seeking approval by Aug 14, 2018.
- **Utilities underperforming in September after a strong July/Aug.** Group performance vs the S&P 500 appears to have waned this month as the 10-Year Treasury yield picked up 15 bps in what has been a longer-term downward trend since March. Even at record high P/Es, the utility sector continues to trade in strong correlation to the 10-year bond. We illustrate in the correlation tables below that historical association would suggest that the sector is **still about 2% expensive** at the current 4% premium P/E vs the S&P 500 based on the CS forecast for a 2.8% yield by yearend. **The premium suggests defensive posturing, buttressed by a low-yield environment.**

Figure 2: 10-Year Treasury Yield vs. Utilities / SPX Relative Performance

Source: the BLOOMBERG PROFESSIONAL™ service

The subsector breakout below shows that the Integrated names exposed to weakening and backwardated commodity pricing have weakened in recent weeks with investors preferring small/mid-cap regulated utilities instead. Meanwhile, gas utilities have plateaued this month after strong outperformance over the summer.

Figure 3: Utility Subsector Relative Performance



Source: the BLOOMBERG PROFESSIONAL™ service

Yield spreads stay steady after all. The spread between dividend yields and 10-year bond yields remains around 117 bps despite a temporary dip earlier this month to ~130 bps. Historically (pre-2008), this spread has been closer to zero, so the spread continues to suggest defensive yield support for utility sector P/Es. There is usually a high degree of correlation between the 10-year yield and the premium/discount P/E that utilities trade at vs. the S&P 500. This spread acts as a sort of shock absorber, reducing the “control” rates should have over utility valuation if rates begin to rise sustainably. As the Fed gets closer to finalizing its tightening cycle over the next couple of years, longer-duration bond yields should begin to rise as the yield curve steepens. Once over ~4% yield for the 10-Year, we would expect a return to a more historically “normal” relationship between utility equities and bonds (i.e., no spread between the 10-year and dividend yields and utilities trading at about 70%-80% of the S&P 500 forward P/E).

Figure 4: Spread Between Utility Dividend Yield and 10-Year Treasury Bond Yield

Source: the BLOOMBERG PROFESSIONAL™ service

For now, historical correlation as illustrated below suggests utilities are about 2% overvalued at a 4% relative premium forward P/E vs the S&P 500 based on the CS forecast for a 2.8% 10-year yield by yearend 2017. Note the weaker correlation for 2013 – 2017 vs. stronger correlation from 2010 – 2013, a phenomenon that we attribute, in part, to the spread between bond yields and dividend yields that has persisted through the recent period of unusually low interest rates.

The next two charts illustrate the increasing correlation between utility stock movements since 1990 (an average of each stock's correlation vs the group average daily movement), even while annualized volatility has remained fairly steady aside from recessionary spikes in 2001-2003 and 2007-2010. We see this largely as a symptom of increased programmatic trading and the popularity of Exchange Traded Funds (ETFs), with higher correlations making it tougher on market/beta-neutral strategies typically run by sector-focused hedge funds.

Recent Excerpts:

- **D: The Freeze Stays Frozen:** On 9/14, the Virginia Supreme Court dismissed consumer group arguments 6-1 that had sought to declare unconstitutional the suspension of biennial reviews for Appalachian Power (AEP's APCO) and Virginia Power (D's VEPCO) through 2020 and 2021, respectively. Although we have noted that this was the most likely outcome, the decision had been watched closely by investors and eliminates a risk that the effective rate freeze established by the state legislature might have been reversed.
    - The relevant passage from the Virginia constitution of 1971 is "***Subject to such criteria and other requirements as may be prescribed by law***, the [State Corporation] Commission shall have the power and be charged with the duty of regulating the rates, charges, and services and, except as may be otherwise authorized by the Constitution or by general law, the facilities of railroad, telephone, gas, and electric companies." Va. Const. art. IX, § 2." The court cited precedent cases and agreed that the suspension is a constitutional exercise of the legislature's right to set "requirements" for rate regulation. Furthermore, the court also noted that a finding of violation would require the law to be "plainly repugnant to Article IX", and that the statute suspending biennial reviews is not.
- **SR: A Shot Across the Bow, but Expected. A poor Staff recommendation but in-line with overall expectations:** On 9/8, the Missouri Public Service Commission (PSC) Staff recommended rate increases far below the requests filed by SR for its former Laclede and MGE gas utility subsidiaries. We view this as the lowest possible outcome, about $0.14 EPS below our currently modeled assumptions. This remains in-line with our prior expectation for about $0.15 EPS at risk (see our 4/11 note). We expect the final outcome/settlement to be better.
    - **Staff ROE and equity are low, but matches SR's $2B ratebase.** The recommended 9.25% ROE and 48.84% equity ratio is based on lower risk for gas utilities (vs the recent KCP&L 9.5% decision) and a lower consolidated capital structure. However, these negative attributes are partially offset by Staff's near-concurrence with SR's request for a combined $2B ratebase. Staff recommended a combined $21M base rate increase (which includes a transfer and reset of $49M ISRS rider revenues into base) on a combined $1.961B ratebase for test year ending 12/2016. This compares to the company's initial request for a $108M increase based on 10.35% ROE and 57.2% utility equity ratio on $2.024B ratebase. We expect this to be updated in mid-Oct to include the impact of an incremental $170M debt that will bring the equity layer down to ~54%. **Our estimates are currently based** on only $1.72B of ratebase but at a higher 10% ROE and 55.5% equity ratio, which is about $0.14 higher than Staff.
    - **Expect a settled outcome later this year.** The procedural schedule calls for a March 2018 decision, notably after Commissioner Stoll's term ends in Dec and a new Republican and possibly Chairman is appointed. SR is seeking a settled outcome later this year that is likely better than Staff.

Last Week's Things We've Learned This Week (9/1): Our Take: As we watch Hurricane Irma approach Florida, it would appear that the Carolinas are likely to escape serious harm. Nevertheless, we recall that DUK's $25B grid modernization plan includes a 10-year, $13B Power Forward Carolinas utility investment initiative, with $4.9B of undergrounding and $3.5B of storm hardening (DUK has been making storm hardening investments in Florida for years). When this was initially proposed earlier this year (citing the impact from last year's Hurricane Matthew), we noted caution around these programs given PEG's experience in NJ with regulator pushback after Hurricane Sandy. However, we tend to think that on the margin, this Hurricane season is likely to help the company gain buy-in for such long-term plans. See our Feb 20th note "Stronger 5-Year Plan Bears Watching" and May 10th note "Carolinas on their Minds" for more detail.

The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.
Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.
Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	14%	(53% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Black Hills Corp (BKH.N)

Method: We arrive at our $75 price target using a sum of the parts valuation methodology; applying multiples specific to the individual businesses that BKH operates in. We apply a 2019 P/E multiple of 17.0x to the electric utility business, the group average which we feel is warranted given the company's growth prospects and solid base of utility earnings and capex spend under trackers and riders; we apply a 1.0x discount to the Colorado electric business to reflect the unfavorable regulatory environment in the state. We apply a 20.0x 2019 P/E multiple to the gas utility, a 1.0x premium to the group given the solid base of utility earnings and capex spend under trackers and riders. We then apply a 16.5x 2019 P/E multiple to the power generation and coal mining segments, we arrive at this multiple by applying a discount of 0.5x to our average 2019 P/E multiple of 17.0x. We then use a weighted probability methodology to value the E&P business, applying an 80% chance the assets are sold and not assuming that the assets are placed into the cost of service gas program, we apply a 50% discount to our PDP calculation to value the reserves in the event of a sale of the assets. Our Outperform rating reflects a forecasted total return higher than the group average.

Risk: We believe there are several risks to our $75 target price and Outperform rating on BKH: (a) earnings dependent on regulatory relationships, we would highlight the rehearing of the Pueblo CT rate increase (b) success at the utilities in finding the next newbuild cycle (c) Power Price Sensitivity - within its utilities, off-system sales, and merchant generator operations, earnings are tied to power demand and commodity prices (d) unknown environmental compliance (e) ability for management to successfully execute on their Cost of Service Gas plan across the 5 regulatory jurisdictions, (f) ability to monetize the proven reserves.

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Dominion Energy (D.N)

Method: Our $83 TP for D is based on the sum of the part methodology in which we apply a P/E multiple to the 2019 estimates for the utilities segments while use an EV/ EBITDA multiple approach to value the non-utilities segments. We use a 17x P/E multiple for the electric utilities and an 20x P/E multiple for the gas distribution segment. A 1.0x P/E premium to the group's average of 17x was applied to the electric utilities to reflect the suspension of rate review until 2022 in VA while a group's average P/E multiple is applied to the gas distribution segment accounting for the business' in-line growth potential with peers. A 7.5x EV/EBITDA multiple is applied to the Merchant Generation's 2019 EBITDA to derive the value of the business and an EV/ EBITDA multiple of 8.0x is used to derive the value of the gas transmission and storage business. An incremental value of DM to D is calculated by comparing the value of the gas distribution segment and the discounted value of payments received from DM. Our Outperform rating reflects a forecasted total return greater than the group average.

Risk: Risks to our $83 target price and Outperform rating for Dominion are 1) execution risk of Cove Point, Atlantic Coast Pipeline and the Greensville Generation project, which represent major capital projects for the company 2) removal of the D's rate freeze in Virginia 3) regulatory risk, 4)legislative risk 5) commodity price risk and power market/power price risk 6) interest rate risk 7) derivative risk, 8) load growth risk 9) weather risk, 10) environmental and climate change risk, 11) physical infrastructure and cyber security risk, and 12) execution risk on the major ongoing capital projects.

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Southern Company (SO.N)

Method: We derived our $50 TP for SO using a SOTP methodology. For the regulated utilities segments, we value the segments separately by applying a group P/E target multiple to the segment's 2019 earnings to derive the segment's value while taking into account the risks in these segments through giving a discount to the group multiple. The peer group average P/E multiples are 17x and 20x for the electric and gas utilities respectively. Given the regulatory risks related to the large capital project construction in Mississippi and Georgia we apply a 0.5x discount for Mississippi, 0.5x for Georgia, and 0.5x for Alabama and Florida. The regulated electric and gas utilities account for about ~80% of SO's total value. We use an EV/ EBITDA multiple approach to value Southern Power segment whose earnings is derived from long-term PPAs of contracted merchant assets. An EV/ EBITDA multiple of 10x is applied to the segment's 2019 EBITDA to derived the total value of the segment. We used a peer group average EV/EBITDA of 9.5 to value the gas midstream segment and used a 12x P/E to derive the value of the gas marketing segment. Our Neutral rating reflects a forecasted total return in-line than the group average.

Risk: Risks to our $50 target price and Neutral rating SO are: 1) further cost overruns and construction delays at Kemper, 2) Vogtle construction execution risk, 3) potentially lower ROEs out of ratecase filings across the Gas LDCs, Mississippi Power, and Gulf Power, along with general business risks in the utility industry: 1) regulatory risk, 2) legislative risk, 3) commodity price risk, 4) interest rate risk, 4) derivative risk, 6) load growth risk, 7) weather risk, 8) environmental and climate change risk, 9) physical infrastructure and cyber security risk

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

CSSU and CSAM LLC do not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1100 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act).

Malaysia: Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd, to whom they should direct any queries on +603 2723 2020.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Forward Power/Gas Curves – 09/14/17. Below, we provide estimated forward curves for power, heat rates, spark, dark, and quark spreads for peak, off-peak, and around-the-clock for various regions in the United States, broken down by each RTO/ISO in North America. In addition, we model forward gas, basis, as well as coal through the 2026 time frame.

Investors should use this link to open an Excel spreadsheet of various curves that can be used for power and utility models (click here to download our weekly price deck summary).

Forward Curve Weekly Highlights: Power and Heat Rates, for the week of 9/14 versus the prior week, **2018 national peak power prices** ($/MWh) were up 0.7% to $34.38 from $34.13 and around-the-clock power was up 0.8% to $29.72 from $29.50. Peak power in PJM was up 1.0% to $37.13 from $36.75; ERCOT was down 1.2% to $32.14 from $32.52; NE-ISO was up 0.4% to $44.45 from $44.25; NY-ISO was down 0.2% to $45.98 from $46.06; and MISO was up 0.7% to $34.68 from $34.45. **2018 peak heat rate (Btu/kWh) contractions:** 2.3% to 10,679 in ERCOT, 0.8% to 11,451 in NYISO, 0.7% to 11,792 in MISO, 0.2% to 10,030 in NE-ISO. **2018 peak heat rate (Btu/kWh) expansions:** 0.1% to 11,671 in PJM. See full price deck for additional details on various other curves and regions.

Forward Curve Weekly Highlights: Spark and Dark Spreads versus the prior week, **2018 Peak Spark Spreads** ($/MWh) in PJM were up 1.1% to $14.86 from $14.69; ERCOT was down 5.3% to $11.08 from $11.69; NE-ISO was up 0.1% to $13.44 from $13.43; NYISO was down 1.5% to $17.87 from $18.14; and MISO was down 0.3% to $14.09 from $14.14. **2018 Around-the-Clock Dark Spreads** ($/MWh) in PJM were up 1.2% to $24.97 from $24.68; ERCOT was down 0.6% to $20.27 from $20.39; NE-ISO was up 0.4% to $31.90 from $31.79; NYISO was down 0.3% to $32.01 from $32.12; and MISO was down 0.1% to $22.98 from $22.99.

Illustrative impact of marking our IPP and integrated utility models to the current forward curves versus published live estimates: PEG, FE, EXC, NRG, DYN, CPN and VST are lower overall. **See the next page for illustrative MtM implications on Guggenheim's IPP and Integrated Utility coverage throughout our forecast period.**

Natural Gas Storage Levels and Eastern Gas Basis Tracker, Gas in storage increased to 3,311 Bcf as of 09/08/2017 a weekly increase of 91 Bcf, resulting in storage 5.1 Bcf below one year ago, 1.3 Bcf above the five-year average for this week. Eastern gas basis (TETCO M3) is currently reflecting a discount to Henry Hub for 2017 and a premium from 2018 through 2020 (-$0.68/$0.10/$0.07/$0.06 for '17/'18/'19/'20), expanding since last week.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.	
Rating Category	Count	Percent	Count	Percent
Buy	190	60.70%	20	10.53%
Neutral	121	38.66%	11	9.09%

What if tax reform actually moved?

Jonathan Arnold
Research Analyst

Tax back on the agenda in DC; dusting off DB tax reform calibrator work

With tax reform back under discussion in Washington in recent days, we revisit our work on the topic from earlier in the year and provide a brief investor refresher on the key issues along with some potential utility tax reform trade ideas. While passing something on tax is widely seen as a must-do for Republicans ahead of next year's mid-term elections, investors may reasonably question whether anything meaningful can actually get done in DC with the current political backdrop. Attention is currently focused on passing a budget resolution that would open the door to passing tax reform via "reconciliation", i.e.requiring only 51 Senate votes. Recent reports have suggested the Trump Administration may reveal its detailed tax reform plan as soon as next week, although prior announcements have tended to come up short on detail.

We see tax reform as a relative fundamental and trading negative for utilities

While the devil would be in the details, at a high level we see tax reform as a relative fundamental headwind for utilities. Whereas most non-utility businesses would see higher earnings on a lower corporate tax rate, regulated utilities would not since tax is a component of their cost of service and a lower rate would be passed back to consumers through lower utility bills. While an industrial might see the benefit of lower taxes "competed away" over time, for utilities the benefit would be "regulated away" - potentially immediately. In addition to the fundamental angle, there is also a negative asset allocation angle given utilities' bond proxy status. To the extent passing tax reform added fuel to the "reflation trade" we would expect utility stocks to be relative losers vs. other sectors.

DB Utilities tax reform trade ideas

Underweight S&P Utilities relative to S&P 500. Tax reform a relative fundamental negative with utility earnings benefiting less than market average. Reflation trade and resulting higher rates a potential catalyst for utility underperformance.

Overweight Buy-rated hybrids PEG and EXC. Both have meaningful earnings outside of utilities and are therefore positively exposed to lower tax rate. Border tax no longer being considered, removing potential nuclear fuel cost drag.

Cautious FE, WEC, ETR. Relative losers with high parent leverage and limited earnings outside of utility. Negative exposure to lower tax rate and potential loss of interest deductibility. Merchant losses (FE) an incremental headwind.

Investor focus on growth, tax reform could spark another pull back in sector

US utilities are currently trading near all-time P/E multiple highs (18.3x 12m forward P/E vs. peaks a little closer to 19x and a 5-year average of 16.2x). This in large part reflects stubbornly low bond yields with 10-Year Treasury yields lately testing post-election lows in the low-2% range. Conventional wisdom would suggest that progress on tax reform would be met with increased investor confidence around economic growth and higher rates and potentially provide a catalyst for a correction in utility valuations. Looking back to the period following the November election, we saw utility indices underperform by 500-600bps through year-end (see Figure 1). The group then continued to lag through most of the first quarter as tax reform was in-focus (see Figure 2) until sentiment around legislative activity waned with the stalling of the healthcare bill and subsequent sharp decline in both bond yields and inflation expectations. While the ensuing utility rally has been somewhat on-again, off-again, investors bullish on prospects for tax reform and implications for growth should be approaching utilities with caution. Since the start of September in fact utilities have given up 140bp of relative performance while 10-Year yields have been more or less unchanged. Whether or not this is an early sign of tax reform moving back into focus remains to be seen and we continue to see the derivative implications for yields as the primary driver of the group's relative fortunes.

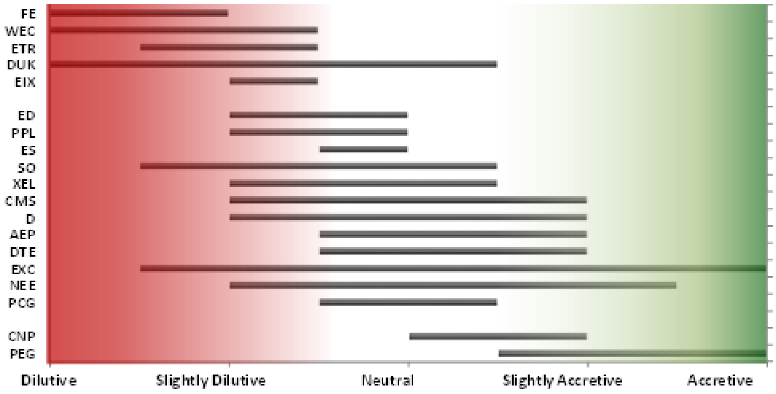
Note: Company docs include Investor Relations presentations and press releases

See our March tax note for detailed discussion and relative company exposures

Readers may recall our March 2017 piece on tax reform with company-by-company exposure analysis (DB Tax Reform Calibrator). While our report was based on specific book-end proposals being discussed at the time, the ultimate elements of any package remain unknown. In the meantime our piece remains a helpful reference for investors as tax reform discussions get under way and we will likely update the specifics after more formal proposals are introduced. The summary graphic from our Calibrator note is reproduced below and was intended to highlight relative propensity for EPS dilution or accretion on a wide range of tax reform scenarios. In addition the width of each company's bar highlighted relative differences in the range of outcomes for each name. As discussed at the time, we grouped our utility coverage into three buckets: (1) likely laggards; (2) somewhere in between; and (3) likely winners. Our likely laggards group of FE, WEC, ETR, DUK and EIX mostly comprised names with larger than average parent leverage likely to be more costly on an after-tax basis with a lower tax rate and potential loss of interest deductibility. At the other end of the spectrum we showed PEG and CNP as the two names from our coverage most likely to see earnings accretion under most scenarios. In terms of notable changes since we ran this analysis in March, the most tangible may be the border adjustment tax (BAT) which no longer appears to be part of the discussion. This was mainly an exposure for nuclear fuel in non-regulated entities and as such would raise the low end of the spectrum for EXC as well as PEG. Our March analysis also assumed a 15% tax rate scenario under the Administration Plan at the time. To the extent pay-for requirements mean having to settle for a somewhat higher rate - as has been widely suggested of late - this would trim the accretion end of the spectrum for those with significant non-utility profits, namely PEG, CNP, NEE and EXC.

Figure 3: DB Summary of Potential Impacts of Tax Reform - March 2017



Source: Deutsche Bank

Note to online readers: please open the attached document to view the charts referenced herein, as well as our updated analysis on the 7 hot-button issues in the tax code for electric utilities on the following pages.

What are the key tax reform issues to watch for utilities?

Tax reform is a simple header for a complex, interconnected set of proposed changes to the tax code. Investor-owned regulated utilities have an added level of complexity as their business model essentially represents a sort-of public-private grand bargain with the utility allowed to earn a set rate of return, premised on a regulator-directed shadow accounting framework, which may differ slightly depending on the state involved. One key premise of these frameworks is a revenue requirement that covers the utility for its expected costs of doing business, plus a fair return. Under this framework, utilities collect revenue for book accounting taxes, whether or not they pay them today, under the premise that they'll eventually be paid at some point in the future. Therefore, if tax expense is lower, revenue should decline commensurately, albeit not necessarily right away depending on timing of the regulatory rate adjustment cycle. For this reason, utilities are unlike other sectors where revenue is more a function of what the market will bear, and profit is the difference between a market driven revenue and expense. If expenses (such as tax expense) decline, most companies will have higher profits. For regulated utilities, revenues will be adjusted lower to hit the unchanged targeted return on equity or profit. On top of that, most larger investor-owned utilities own non-regulated businesses alongside their regulated utility and/or have often significant amounts of debt at the parent level that would be subject to the more normal tax rules - i.e. a lower rate is better if they are collectively profit-making, a higher (deduction) rate is better if they are collectively loss-making.

Calculating the tax expense that gets recovered in rates is not straight forward and several key elements like interest deductibility, capital expenditure expensing, deductions for state and local taxes and the regulatory treatment of deferred taxes (e.g. normalization rules) could materially swing whether and to what extent utilities benefit or are harmed by tax reform. We discuss the current variables to watch during the legislative negotiations in more detail below:

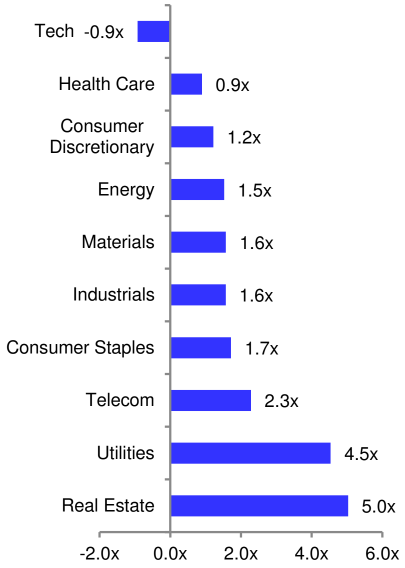
Lower corporate tax rate: As discussed above, for the average fully regulated utility, simply lowering the corporate tax rate will result in lower revenue collections from customers given the reduction in the cost of service. Earnings are unaffected given the lower tax charge. That said, cash flow is reduced – particularly if the utility is already in an NOL position as many have tended to be recently due to multiple years of bonus deprecation and heavy capital spending. This is different from the average US corporate where lowering the tax rate would increase earnings all else equal. For some utilities the tax revenue requirement would be trued-up in near real time (e.g. for those with FERC formula transmission rates) whereas for others the rate adjustment might not occur until the next rate case, which could be soon or several years in the future. That said, other parameters such as return caps could come into play and prior experience from the tax cuts in the 1980s would point to state-level generic proceedings to change the tax gross-up of rates across the board.

Utility managements generally support lowering the corporate tax rate on the basis that this would benefit their customers in the form of lower rates and theoretically gives them more headroom on a longer-term basis to ramp up spending on infrastructure (a longer-term positive for EPS). Also, those utilities with large and (importantly) profitable non-utility businesses and/or limited debt at the parent look to be relatively better off all else equal. On the flip side, those facing the biggest challenge will be holding companies with significant parent leverage, limited profits outside the utility and where parent credit metrics leave little cushion if the utility cash flows end up being curtailed due to reduced cost of service (lower revenues) and an NOL position (no cash tax offset).

Eliminating interest expense deductibility: As one of the largest non-financial users of debt financing across the economy, utilities are publicly supportive of the ability to deduct interest expense in operating profit before calculating tax expense. If tax reform were to remove this key deduction, the effective rate utilities (and their customers) faced would be higher, potentially offsetting some or all of the rate relief associated with lower rates. More importantly for investors, eliminating interest deductibility will negatively impact earnings for utility holding companies with substantial parent leverage. This would also call into question the already questionable logic of recent high premium debt-financed M&A deals.

While this issue was seen to have faded earlier in the year, rules around "reconciliation" mean that lowering the tax rate may have to be paid for with elimination of other "loopholes". Deductions for charitable giving and mortgage interest seem unlikely candidates while removing deductions for state and local taxes as some in the Administration would like may be hard to do against opposition from large delegations in high-tax states such as New York and California. Political reality may therefore put interest deductibility in the firing line, a move which has been aggressively opposed by utilities on the basis that it would raise utility bills and the cost of infrastructure financing. Companies we have spoken with seem reasonably confident that the industry's lobbying efforts may be rewarded with a carve-out, or alternatively that non-deductibility should only apply to prospective debt issuances, although we note the inherent conflict here with the desire for tax code simplification. How such a carve-out would work in practice and what portion of revenues (or some other measure) might have to be regulated in order for an entity to qualify would be key uncertainties and potential risk factors for the few genuine hybrid names remaining (EXC, NEE, PEG). All told, losing the deduction would be particularly impactful for those with large parent leverage (equivalent to reducing the tax shield to zero).

Figure 4: Net Debt to EBITDA by S&P Sector (ex-Financials)



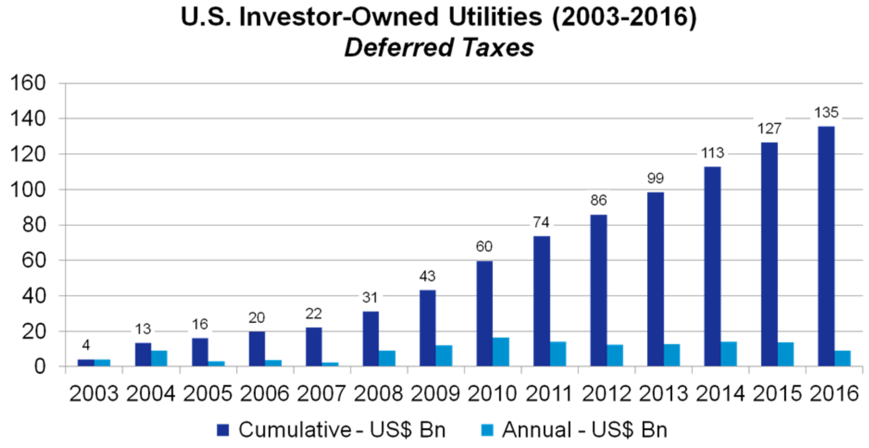
Source: Deutsche Bank, Factset

Eliminating state and local tax deductibility: Similar to interest expense, state and local taxes, including property taxes, are currently generally deductible for federal tax purposes. Several federal tax reform proposals have discussed eliminating that deduction. For regulated utilities, this would raise the amount needed to collect in rates from ratepayers, all else equal, but not change net income. Importantly, as state and local taxes vary significantly nationwide, impacts on utility customers would likely vary drastically. Northeast and west coast utility customers would likely see the largest impacts due to high state income tax rates coupled with high property tax assessments, while utility customers in Florida, for example, which has no state income taxes, would be relatively better off. As with the personal income tax debate, such discrepancies and the large congressional delegations of some high-tax states such as New York and California may make such a change challenging to implement in practice.

Full expensing of capital investments: Another component of a potential tax package may be immediate expensing of capital investments as opposed to expensing over asset life through depreciation. It remains to be seen whether this would be required or optional, and whether it would be combined with the elimination of the interest deduction. As with the current 50% bonus deprecation, expensing of capital investments would mean a reduction to the earning rate base which is adjusted for the deferred tax benefit (i.e. free federal financing). While most utilities are in favor publicly as it lowers customer bills all else equal, full capital expensing (also referred to as 100% bonus depreciation) is a negative for longer-term earnings growth for regulated utilities as the tax benefit lowers utility earnings through a reduction to rate base. In commentary earlier in the year most utilities have presented asset expensing as largely manageable from an earnings perspective given expectations that a lower tax rate and potential for higher capital investment would provide sufficient offsets. The good news for those utilities already in an NOL position is that the rate base offset would not get any larger – assuming it is already "maxed out" – although it would take longer to work off and with 100% expensing it would effectively be permanent. On the other hand for those (few) utilities still paying some cash taxes this change would potentially mean an incremental earnings power headwind versus today.

Deferred tax adjustment, normalization risk: Most utilities, like most corporates, have substantial deferred tax liabilities (DTL) from prior investments owing to the mismatch in taxes expensed for book accounting purposes with cash taxes paid to the IRS. This is typically due to miscellaneous deductions that the corporates avail themselves of like accelerated depreciation. A change in the corporate tax rate reduces this future liability. Financially speaking the deferred tax liability acts like an interest-free loan from the government and lowering the future tax rate amounts to forgiving a portion of the loan. For the typical corporate this results in a one-time income statement gain. For utilities, which have been collecting taxes from customers at the higher current rate, a reduction in the tax rate theoretically triggers a substantial and immediate refund liability. The last time this was an issue, in the 1986 tax cuts, the tax legislation specifically directed state utility regulators to "normalize" this refund or spread it over a longer period – typically the life of the underlying assets. Most utilities seem confident that this language will be repeated in any 2017/2018 tax reform package and/or their states would choose to have this normalized anyway. That said, if normalization is not mandated, it could mean an immediate, potentially multi-billion-dollar refund that the utility would need to give its ratepayers, a potentially large political score for regulators/local politicians. On the positive side, any refund of the DTL, whether upfront or over time, results in higher rate base and earnings for the utility.

Figure 5: Deferred tax liabilities for utilities



Source: Deutsche Bank, EEI

Border Adjustment Tax (BAT): The BAT idea which was discussed earlier in the year would have had negative consequences for merchant nuclear generators (particularly EXC) which purchase fuel components internationally. Vocal opposition - notably from large retailers - seems to have rendered this idea a non-starter politically and it appears to no longer be under disucssion.

Dividends: In addition to the corporate tax items discussed above, utilities and their shareholders are very focused on the tax treatment of qualified dividends. Currently, qualified dividends are taxed at between 0% and 20% depending on the tax bracket, on an equal footing to capital gains. Utilities are concerned that reforms to the personal tax code could remove the preferential treatment dividends receive today. This treatment is an important consideration for income-focused investors when choosing between utility stock dividends, which curry a maximum 20% federal tax rate and bond interest, which is taxed up to 39.6%. Similarly, if tax reform manifests such that there was no longer parity between dividend tax rate and capital gains tax rate, with capital gains taxed at a lower rate, it could lead money to move from dividend focused sectors like utilities and REITS to more growth and capital appreciation-focused sectors like technology.

Appendix 1

Important Disclosures

*Other information available upon request

*Prices are current as of the end of the previous trading session unless otherwise indicated and are sourced from local exchanges via Reuters, Bloomberg, and other vendors. Other information is sourced from Deutsche Bank, subject companies, and other sources. For disclosures pertaining to recommendations or estimates made on securities other than the primary subject of this research, please see the most recently published company report or visit our global disclosure look-up page on our website at http://gm.db.com/ger/disclosure/DisclosureDirectory.eqsr. Aside from within this report, important conflict disclosures can also be found at https://gm/db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

Analyst Certification

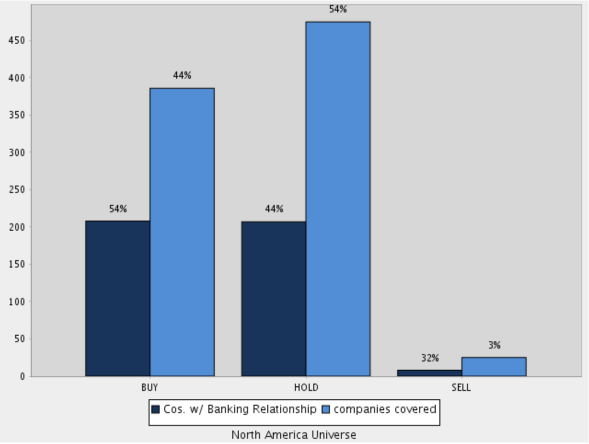
The views expressed in this report accurately reflect the personal views of the undersigned lead analyst about the subject issuers and the securities of those issuers. In addition, the undersigned lead analyst has not and will not receive any compensation for providing a specific recommendation or view in this report. Jonathan Arnold, Caroline Bone

Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Equity rating dispersion and banking relationships



Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of these websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst ' s judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: September 15, 2017

43% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Outperform.	Wells Fargo Securities, LLC has provided investment banking services for 46% of its Equity Research Outperform-rated companies.
55% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Market Perform.	Wells Fargo Securities, LLC has provided investment banking services for 33% of its Equity Research Market Perform-rated companies.
2% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underperform.	Wells Fargo Securities, LLC has provided investment banking services for 26% of its Equity Research Underperform-rated companies.

Important Disclosure for International Clients
EEA – The securities and related financial instruments described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. For recipients in the EEA, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority. For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 ("the Act"), the content of this report has been approved by WFSIL a regulated person under the Act. WFSIL does not deal with retail clients as defined in the Markets in Financial Instruments Directive 2007. The FCA rules made under the Financial Services and Markets Act 2000 for the protection of retail clients will therefore not apply, nor will the Financial Services Compensation Scheme be available. This report is not intended for, and should not be relied upon by, retail clients.

Australia – Wells Fargo Securities, LLC is exempt from the requirements to hold an Australian financial services license in respect of the financial services it provides to wholesale clients in Australia. WATTS COOKING? Weekly

WATTS On Your Mind

This past week, many conversations revolved around SO and the future treatment of the Vogtle construction project. Many investors have focused on the possibility that Southern's utility, Georgia Power (GP), could monetize the Toshiba guarantee ($3.7 billion overall, of which $1.7 billion is committed to GP). A key debate is whether the proceeds can be used to offset the equity needs that Southern has due to the re-capitalization of its Mississippi utility, Mississippi Power. While the Georgia commission could order proceeds to be used as a rate refund, we sense that most investors believe that a successful monetization would help Southern's balance sheet. Sentiment among a broad group of investors is turning more positive on SO.

We have also received a number of inquiries regarding how to be positioned for the remainder of 2017. We believe that sentiment is shifting toward an achievable tax reform (possibly on the back of a DACA compromise). This would favor the broader market relative to utilities, making the group less attractive in the coming months. This would hurt the more defensive names like ED but have a lesser effect on hybrid names like EXC. However, we would not be surprised to see a switch back to a more defensive positioning around the end of the year. Our more bearish view on utilities over the next few months is predicated on no major macro event that throws the financial market into a tizzy, which brings us to the next section.

WATTS On Our Mind

N. Korea concerns as felt from the south. (From Insoo): My recent vacation took me to South Korea, a periodic journey to visit family. During my time there, I was able to observe and feel how South Koreans were dealing with recent North Korean tensions. My past numerous trips to my birth country have led me to the conclusion that the U.S. media outlets historically place more emotional gravity on North Korean news than its South Korean counterparts; in addition, residents of South Korea typically dismiss these periodic threats with no impact to their daily lives. While I largely felt a similar sense of business-as-usual during this visit as well, I did notice that people I interacted with did seem a bit more on edge, a departure from previous experiences. We could very well see this current situation tempered down as well; however, the sense I got from the trip is that perhaps this time it is just that much more serious, which could potentially extend its impact on the global markets more than it's currently pricing in.

WATTS On Our Mind

VA Supreme Court upholds 2015 biennial review law. On Thursday, the Virginia Supreme Court upheld (on a 6-1 vote) a state law that suspended biennial base rate reviews for Dominion (D) subsidiary VEPCO until 2021 and AEP subsidiary Appalachian Power (APCO) until 2020. In 2015 the state law originally passed the House 72-24 and the Senate 32-6. **Our view: We believe this decision provides rate clarity around VEPCO and APCO through the end of the decade without the potential overhang of a biennial review.**

AZ commissioner Doug Little to resign. On September 13, Arizona Corporation Commission (ACC) commissioner Doug Little (R) announced his resignation and is set to join the U.S. Department of Energy (DOE) effective October 2. Although Arizona selects commissioners through a general election process, the governor appoints mid-term replacements for a term expiring at the next election. Governor Ducey (R) has not named a successor at this time. **Our view: We expect the governor to appoint another Republican to fill the vacancy, maintaining the all-Republican ACC. For Pinnacle West (PNW), we see little near-term impact from this change given the recent completion of its rate case; however, given Commissioner Little's push for increasing renewable mandates for Arizona (30% by 2030 proposed, up from current 15% by 2025 mandate), we could see somewhat of a moderation of this agenda.**

Required disclosures

Conflicts disclosures

This product constitutes a compendium report (covers six or more subject companies). As such, RBC Capital Markets chooses to provide specific disclosures for the subject companies by reference. To access conflict of interest and other disclosures for the subject companies, clients should refer to https://www.rbccm.com/GLDisclosure/PublicWeb/DisclosureLookup.aspx?entityId=1. These disclosures are also available by sending a written request to RBC Capital Markets Research Publishing, P.O. Box 50, 200 Bay Street, Royal Bank Plaza, 29th Floor, South Tower, Toronto, Ontario M5J 2W7 or an email to rbcinsight@rbccm.com.

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors, including total revenues of the member companies of RBC Capital Markets and its affiliates, a portion of which are or have been generated by investment banking activities of the member companies of RBC Capital Markets and its affiliates.

Distribution of ratings

For the purpose of ratings distributions, regulatory rules require member firms to assign ratings to one of three rating categories - Buy, Hold/Neutral, or Sell - regardless of a firm's own rating categories. Although RBC Capital Markets' ratings of Top Pick(TP)/ Outperform (O), Sector Perform (SP), and Underperform (U) most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of ratings
RBC Capital Markets, Equity Research
As of 30-Jun-2017

			Investment Banking Serv./Past 12 Mos.	
Rating	**Count**	**Percent**	**Count**	**Percent**
BUY [Top Pick & Outperform]	**826**	**52.01**	**293**	**35.47**
HOLD [Sector Perform]	**657**	**41.37**	**144**	**21.92**
SELL [Underperform]	**105**	**6.61**	**7**	**6.67**

Conflicts policy

RBC Capital Markets Policy for Managing Conflicts of Interest in Relation to Investment Research is available from us on request. To access our current policy, clients should refer to
https://www.rbccm.com/global/file-414164.pdf
or send a request to RBC Capital Markets Research Publishing, P.O. Box 50, 200 Bay Street, Royal Bank Plaza, 29th Floor, South Tower, Toronto, Ontario M5J 2W7. We reserve the right to amend or supplement this policy at any time.

Dissemination of research and short-term trade ideas

RBC Capital Markets endeavors to make all reasonable efforts to provide research simultaneously to all eligible clients, having regard to local time zones in overseas jurisdictions. RBC Capital Markets' equity research is posted to our proprietary website to ensure eligible clients receive coverage initiations and changes in ratings, targets and opinions in a timely manner. Additional distribution may be done by the sales personnel via email, fax, or other electronic means, or regular mail. Clients may also receive our research via third party vendors. RBC Capital Markets also provides eligible clients with access to SPARC on the Firms proprietary INSIGHT website, via email and via third-party vendors. SPARC contains market color and commentary regarding subject companies on which the Firm currently provides equity research coverage. Research Analysts may, from time to time, include short-term trade ideas in research reports and / or in SPARC. A short-term trade idea offers a short-term view on how a security may trade, based on market and trading events, and the resulting trading opportunity that may be available. A short-term trade idea may differ from the price targets and recommendations in our published research reports reflecting the research analyst's views of the longer-term (one year) prospects of the subject company, as a result of the differing time horizons, methodologies and/or other factors. Thus, it is possible that a subject company's common equity that is considered a long-term 'Sector Perform' or even an 'Underperform' might present a short-term buying opportunity as a result of temporary selling pressure in the market; conversely, a subject company's common equity rated a long-term 'Outperform' could be considered susceptible to a short-term downward price correction. Short-term trade ideas are not ratings, nor are they part of any ratings system, and the firm generally does not intend, nor undertakes any obligation, to maintain or update short-term trade ideas. Short-term trade ideas may not be suitable for all investors and have not been tailored to individual investor circumstances and objectives, and investors should make their own independent decisions regarding any securities or strategies discussed herein. Please contact your investment advisor or institutional salesperson for more information regarding RBC Capital Markets' research.

Analyst certification

All of the views expressed in this report accurately reflect the personal views of the responsible analyst(s) about any and all of the subject securities or issuers. No part of the compensation of the responsible analyst(s) named herein is, or will be, directly or indirectly, related to the specific recommendations or views expressed by the responsible analyst(s) in this report.

Third-party-disclaimers

The Global Industry Classification Standard (“GICS”) was developed by and is the exclusive property and a service mark of MSCI Inc. (“MSCI”) and Standard & Poor’s Financial Services LLC (“S&P”) and is licensed for use by RBC. Neither MSCI, S&P, nor any other party involved in making or compiling the GICS or any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability and fitness for a particular purpose with respect to any of such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P, any of their affiliates or any third party involved in making or compiling the GICS or any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

References herein to “LIBOR”, “LIBO Rate”, “L” or other LIBOR abbreviations means the London interbank offered rate as administered by ICE Benchmark Administration (or any other person that takes over the administration of such rate).

Disclaimer

RBC Capital Markets is the business name used by certain branches and subsidiaries of the Royal Bank of Canada, including RBC Dominion Securities Inc., RBC Capital Markets, LLC, RBC Europe Limited, Royal Bank of Canada, Hong Kong Branch and Royal Bank of Canada, Sydney Branch. The information contained in this report has been compiled by RBC Capital Markets from sources believed to be reliable, but no representation or warranty, express or implied, is made by Royal Bank of Canada, RBC Capital Markets, its affiliates or any other person as to its accuracy, completeness or correctness. All opinions and estimates contained in this report constitute RBC Capital Markets' judgement as of the date of this report, are subject to change without notice and are provided in good faith but without legal responsibility. Nothing in this report constitutes legal, accounting or tax advice or individually tailored investment advice. This material is prepared for general circulation to clients and has been prepared without regard to the individual financial circumstances and objectives of persons who receive it. The investments or services contained in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about the suitability of such investments or services. This report is not an offer to sell or a solicitation of an offer to buy any securities. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. RBC Capital Markets research analyst compensation is based in part on the overall profitability of RBC Capital Markets, which includes profits attributable to investment banking revenues. Every province in Canada, state in the U.S., and most countries throughout the world have their own laws regulating the types of securities and other investment products which may be offered to their residents, as well as the process for doing so. As a result, the securities discussed in this report may not be eligible for sale in some jurisdictions. RBC Capital Markets may be restricted from publishing research reports, from time to time, due to regulatory restrictions and/ or internal compliance policies. If this is the case, the latest published research reports available to clients may not reflect recent material changes in the applicable industry and/or applicable subject companies. RBC Capital Markets research reports are current only as of the date set forth on the research reports. This report is not, and under no circumstances should be construed as, a solicitation to act as securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction. To the full extent permitted by law neither RBC Capital Markets nor any of its affiliates, nor any other person, accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or the information contained herein. No matter contained in this document may be reproduced or copied by any means without the prior consent of RBC Capital Markets.

Additional information is available on request.

To U.S. Residents:

This publication has been approved by RBC Capital Markets, LLC (member FINRA, NYSE, SIPC), which is a U.S. registered broker-dealer and which accepts responsibility for this report and its dissemination in the United States. Any U.S. recipient of this report that is not a registered broker-dealer or a bank acting in a broker or dealer capacity and that wishes further information regarding, or to effect any transaction in, any of the securities discussed in this report, should contact and place orders with RBC Capital Markets, LLC.

To Canadian Residents:

This publication has been approved by RBC Dominion Securities Inc.(member IIROC). Any Canadian recipient of this report that is not a Designated Institution in Ontario, an Accredited Investor in British Columbia or Alberta or a Sophisticated Purchaser in Quebec (or similar permitted purchaser in any other province) and that wishes further information regarding, or to effect any transaction in, any of the securities discussed in this report should contact and place orders with RBC Dominion Securities Inc., which, without in any way limiting the foregoing, accepts responsibility for this report and its dissemination in Canada.

To U.K. Residents:

This publication has been approved by RBC Europe Limited ('RBCEL') which is authorized by the Prudential Regulation Authority and regulated by the Financial Conduct Authority ('FCA') and the Prudential Regulation Authority, in connection with its distribution in the United Kingdom. This material is not for general distribution in the United Kingdom to retail clients, as defined under the rules of the FCA. However, targeted distribution may be made to selected retail clients of RBC and its affiliates. RBCEL accepts responsibility for this report and its dissemination in the United Kingdom.

To German Residents:

This material is distributed in Germany by RBC Europe Limited, Frankfurt Branch which is regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin).

To Persons Receiving This Advice in Australia:

This material has been distributed in Australia by Royal Bank of Canada - Sydney Branch (ABN 86 076 940 880, AFSL No. 246521). This material has been prepared for general circulation and does not take into account the objectives, financial situation or needs of any recipient. Accordingly, any recipient should, before acting on this material, consider the appropriateness of this material having regard to their objectives, financial situation and needs. If this material relates to the acquisition or possible acquisition of a particular financial product, a recipient in Australia should obtain any relevant disclosure document prepared in respect of that product and consider that document before making any decision about whether to acquire the product. This research report is not for retail investors as defined in section 761G of the Corporations Act.

To Hong Kong Residents:

This publication is distributed in Hong Kong by Royal Bank of Canada, Hong Kong Branch, which is regulated by the Hong Kong Monetary Authority and the Securities and Futures Commission ('SFC'), RBC Investment Services (Asia) Limited and RBC Investment Management (Asia) Limited, both entities are regulated by the SFC. Financial Services provided to Australia: Financial services may be provided in Australia in accordance with applicable law. Financial services provided by the Royal Bank of Canada, Hong Kong Branch are provided pursuant to the Royal Bank of Canada's Australian Financial Services Licence ('AFSL') (No. 246521.)

To Singapore Residents:

This publication is distributed in Singapore by the Royal Bank of Canada, Singapore Branch, a registered entity granted offshore bank licence by the Monetary Authority of Singapore. This material has been prepared for general circulation and does not take into account the objectives, financial situation, or needs of any recipient. You are advised to seek independent advice from a financial adviser before purchasing any product. If you do not obtain independent advice, you should consider whether the product is suitable for you. Past performance is not indicative of future performance. If you have any questions related to this publication, please contact the Royal Bank of Canada, Singapore Branch. Royal Bank of Canada, Singapore Branch accepts responsibility for this report and its dissemination in Singapore.

To Japanese Residents:

Unless otherwise exempted by Japanese law, this publication is distributed in Japan by or through RBC Capital Markets (Japan) Ltd. which is a Financial Instruments Firm registered with the Kanto Local Financial Bureau (Registered number 203) and a member of the Japan Securities Dealers Association ("JSDA").

What's Inside

Page 2 includes the Table of Contents for all the relevant macro trends that we track.

What's Incremental To Our View

This report includes our analysis of the key macro factors impacting the power/ utility sector, including: forward power prices, spark spread, dark spread, and gas/coal spread trends; domestic electric consumption growth; and national weather patterns. Based on the latest peer group valuations, we are changing our price targets on CNP, PNW, and SO.

IMPORTANT POINTS

- On-Peak spark spreads currently suggest an increase over the 2017-2020 period ($12.7/MWh - $15.8/MWh) but were flat versus the prior week.
- On-Peak dark spreads currently suggest an increase over the 2017-2020 period ($5.9/MWh - $7.7/MWh) but increased 2% versus the prior week.
- Forward power prices increased 1% last week, versus a 1% increase in forward gas prices and a 1% increase in forward coal prices.
- Domestic electric consumption decreased 12% for the week ended September 9 and has decreased 2% year to date.
- The STRH Power Index was flat for the week (versus +2% for the S&P 500) and has increased 14% year to date (versus +12% for the S&P 500).
- The STRH Power Index is trading at a P/E multiple of 17.6x our 2019 estimates (a 13% premium to historical levels); an EV/EBITDA multiple of 9.7x our 2019 estimates (an 11% premium); P/B multiple of 2.0x (a 20% premium); and a Treasury-dividend yield spread of -108 basis points (an 11% discount).
- Based on the latest peer group valuations, we make the following changes to our price targets: CNP is increased to $29 from $28; PNW is decreased to $86 from $87; SO is increased to $53 from $52.

Notes:
(A) Investment Rating: Buy (B) = the stock's total return is expected to outperform the S&P 500 over the next 12-18 months; Hold (H) = the stock's total return is expected to perform in line with the S&P 500 over the next 12-18 months; Sell (S) = the stock's total return is expected to underperform the S&P 500 over the next 12-18 months. Only stocks under coverage are assigned an investment rating.
(B) Near-term price target over the next 12 months.
(C) 2017 FCF is calculated as cash flow from operations minus capex.

VALUATION

AEP
Assuming a 19.5x P/E multiple (a 9% premium to the peer group to reflect the above average earnings growth profile) on our 2019 estimate of $4.11, we derive our price target of $80.

AES
Assuming an 11.4x P/E multiple (which would still imply a 10% "conglomerate" discount to the peer group) on our 2019 estimate of $1.32, we derive our price target of $15.

CMS
Assuming a 19.8x P/E multiple (a 10% premium to the peer group to reflect the above average growth outlook) on our 2019 estimate of $2.47, we derive our price target of $49.

CNP
Based on the market value of CNP's ownership in ENBL, we derive an $8/share value. Factoring a 19.0x P/E multiple (a 5% premium to the peer group to reflect its above average growth profile) on our 2019 Utility estimate of $1.09, we derive a $21/share value. Consequently, our sum of the parts price target is $29.

CPN
Based on the company's take out price, and our assumption that a higher bid will not emerge, we derive our price target of $15.

DUK
Assuming a 17.9x P/E multiple (in line with the peer group) on our 2019 estimate of $5.09, we derive our price target of $91.

DYN
Assuming an EV/EBITDA multiple of 7.8x (a 3% discount to the peer group to reflect the higher leverage at the company) on our 2019 EBITDA estimate of $1.30bn, coupled with implied net debt of $8.26bn (which factors in all the announced asset sales), we derive our price target of $11.

EIX
Assuming a 19.2x P/E multiple (a 7% premium to the peer group to reflect the company's above average earnings and dividend growth profile) on our 2019 estimate of $4.69, we derive our price target of $90.

EXC
Assuming a 14.8x P/E multiple (in line with the peer group) on our 2019 estimate of $2.75, we derive our price target of $41.

GXP
Assuming a 17.4x P/E multiple (a 2% discount to the peer group to reflect the uncertainties around the final merger approval) on our 2019 estimate of $1.80, we derive our price target of $32.

NRG
Based on the current market value of NRG's ownership in NYLD, we derive a $5/share equity value. Applying a 9.0x EV/EBITDA multiple (a 10% premium to the current peer average to reflect the potential upside from the successful execution of the Transformation Plan) to our residual NRG 2019 EBITDA estimate of $1.90 billion, coupled with implied residual Net Debt of $11.4 billion, we derive an $18/share value for the residual NRG. Consequently, our price target is $23.

PNM
Assuming an 18.1x P/E multiple (in line with the small cap peer group) on our 2019 estimate of $2.03, we derive our price target of $37.

PNW
Assuming a P/E multiple of 18.3x (in line with other small / mid cap peers) on our 2019 estimate of $4.71, we derive our price target of $86.

SO
Assuming a 16.9x P/E multiple (a 5% discount to the large cap peer group, reflecting ongoing uncertainty around the Vogtle project) on our 2019 estimate of $3.15, we derive our price target of $53.

XEL
Assuming a 18.0x P/E (in line with the peer group) on our 2019 EPS estimate of $2.60, we derive our price target of $47.

RISKS

AEP

- Final resolution of pending regulatory issues.
- Future earnings power post merchant exit
- Impact of proposed and future EPA regulations.

AES

- Potential regulatory/economic changes in key international markets.
- Investor sentiment regarding emerging/international markets.
- Successful execution of portfolio restructuring strategy.

CMS

- Outlook for Retail Open Access in Michigan.
- Change in the regulatory regime.
- Load growth trends.

CNP

- Macro trends and growth outlook for the MLP portfolio.
- Load growth trends in service territories.
- Ability to restructure MLP ownership position.

CPN
- Outlook for future spark spreads.
- Timing of additional EPA regulations.
- Electric load growth trends.

DUK
- O&M cost management.
- Future electric load growth trends.
- Impact of future regulatory initiatives.

DYN
- Outlook for forward commodity curves.
- Integration of the pending acquisitions.
- Final outcome of debt restructuring discussions.
- Implication of future EPA regulations.

EIX
- Capital investment and growth plans for non-utility operations.
- Final CPUC decision on applications to reopen SONGS retirement settlement.
- Outcome of pending and future regulatory cases.

EXC
- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

GXP
- Load growth outlook in service territories.
- Outcome of pending rate cases.
- Impact of higher property taxes and transmission costs.
- Completion of the WR acquisition.

NRG
- Execution of the Reset plan.
- Outlook for forward commodity curves.

PNM
- Final New Mexico PRC decision on the rate case settlement.
- Electric load growth trends in service territories.

PNW
- Impact of energy efficiency and distributed generation programs.
- Any regulatory changes regarding distributed generation
- Load growth outlook

SO

- Outlook for load growth.
- Dilution from additional equity issuance.
- Potential for further delays and cost increases at the large construction projects.
- Higher than expected accretion from AGL acquisition.

XEL

- Outcome of pending and future rate cases.
- Outlook for future capital expenditure (and rate base) growth.
- Load growth trends in service territories.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/18/2017):

Coverage Universe			Investment Banking Clients Past 12 Months		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	419	59.86%	Buy	129	30.79%
Hold/Neutral	277	39.57%	Hold/Neutral	58	20.94%
Sell/Reduce	4	0.57%	Sell/Reduce	1	25.00%

Morning Meeting Highlights

Platform Specialty Products (PAH, $11.18, Buy) - IPO Could Unlock Value, Lessen Debt Overhang. Upgrade to Buy - PAH plans to IPO the Ag segment in mid-2018. We view the planned separation positively, as we believe there are minimal synergies between Ag and Performance Solutions. PAH trades at 9.4x 2018E EBITDA vs an average of 10.7x for pure play specialty chemical peers. An IPO of Ag, coupled with an equity issuance, could well result in the shrinkage of PAH's valuation discount, which we believe is driven by the company's conglomerate structure and high leverage (6.2x). We upgrade to Buy and raise our PT to $15 (34% upside). - **James Sheehan**

Orbital ATK, Inc. (OA, $110.04, Buy) - Space Race...Northop Nearing Deal to Buy Orbital ATK; Likely Price of $135-$145 - **Michael Ciarmoli**

Ring Energy, Inc. (REI, $13.02, Buy) - Recent Central Platform Basin Asset Sale Highlights Ring's NAV - **Neal Dingmann**

Burlington Stores, Inc. (BURL, $90.13, Buy) - Inventory Availability Better Than its Ever Been - We recently traveled with BURL VP & Treasurer Bob LaPenta and VP, Investor Relations David Glick. We were encouraged by meetings and remain confident in NT and LT growth prospects. We believe BURL is uniquely positioned given: ongoing product improvements with robust inventory availability; continued margin expansion on better buys, lower markdowns and category expansion; significant store growth opportunity; a unique customer base; and high amount of cash/debit transactions (~60%) - which provides a moat against Amazon. Reiterate Buy, $109 PT (23.4x fwd ests. vs. 19.8x avg). - **Pamela Quintiliano**

Oxford Industries, Inc. (OXM, $60.32, Buy) - On-Track for OM Improvements - We recently had the opportunity to travel with OXM CFO Scott Grassmyer and VP, Capital Markets/Treasurer Anne Shoemaker. In conjunction, we toured the recently opened Tommy (Plano, TX) and Lilly (Dallas, TX) stores. This trip was esp. timely given exposure to TX (7.7% base, Houston area 2.9%) and FL (14.4% base). The majority of stores are in operation, but we're monitoring how long it will take for the customer to return. We believe initial impact was limited as 3Q is so small. Significant LT top- and bottom-line opportunity remains. Reiterate Buy, $66 PT (16.6x fwd. ests. vs. 17.2x avg.) - **Pamela Quintiliano**

Banking - Regional and Community Banks - Notes from Texas Bank Summit - We met with management at Buy rated HTH, LTXB, PB, and TCBI, as well as Hold rated BOKF, CMA, GNBC, and IBKC in Dallas last week. Our meetings affirmed our Bullish thesis on the Texas banks. The general key takeaways are below. We revised estimates for some of our banks due to Hurricane Harvey impacts (see note). - **Jennifer Demba**

Other Focus Items Today

Consumer

Burlington Stores, Inc. (BURL, $90.13, Buy) - Inventory Availability Better Than its Ever Been - We recently traveled with BURL VP & Treasurer Bob LaPenta and VP, Investor Relations David Glick. We were encouraged by meetings and remain confident in NT and LT growth prospects. We believe BURL is uniquely positioned given: ongoing product improvements with robust inventory availability; continued margin expansion on better buys, lower markdowns and category expansion; significant store growth opportunity; a unique customer base; and high amount of cash/debit transactions (~60%) - which provides a moat against Amazon. Reiterate Buy, $109 PT (23.4x fwd ests. vs. 19.8x avg). - **Pamela Quintiliano**

Oxford Industries, Inc. (OXM, $60.32, Buy) - On-Track for OM Improvements - We recently had the opportunity to travel with OXM CFO Scott Grassmyer and VP, Capital Markets/Treasurer Anne Shoemaker. In conjunction, we toured the recently opened Tommy (Plano, TX) and Lilly (Dallas, TX) stores. This trip was esp. timely given exposure to TX (7.7% base, Houston area 2.9%) and FL (14.4% base). The majority of stores are in operation, but we're monitoring how long it will take for the customer to return. We believe initial impact was limited as 3Q is so small. Significant LT top- and bottom-line opportunity remains. Reiterate Buy, $66 PT (16.6x fwd. ests. vs. 17.2x avg.) - **Pamela Quintiliano**

At Home Group, Inc. (HOME, $22.01, Buy) - Take Advantage of Pullback - The bifurcation of retail valuations continues, so it is important, in our opinion, to take advantage of pullbacks to buy the quality names. HOME is showing good operational momentum and has a solid growth outlook; the recent pullback is opportunistic, in our view. - **David Magee**

Newell Brands Inc. (NWL, $43.27, Buy) - Lowering Estimates for Resin Impact - Based on the company’s comments at an investor conference last week that commodity headwinds will likely persist into FY18 and its decision to increase brand investments, we are lowering our FY18 EPS estimate to $3.36, from $3.51. We note that our FY17 EPS estimate remains unchanged. We are maintaining our Buy rating and $60 price target which equates to 18x our FY18 EPS estimate (low end of peers). - **William Chappell, Jr.**

Electric Power and Utilities

Electric Power and Utilities - Power/Utilities Macro Trends Tracker: Modest Increase In Forward Dark Spreads - This report includes our analysis of the key macro factors impacting the power/utility sector, including: forward power prices, spark spread, dark spread, and gas/coal spread trends; domestic electric consumption growth; and national weather patterns.

Based on the latest peer group valuations, we are changing our price targets on CNP, PNW, and SO. - Ali Agha

Energy

Ring Energy, Inc. (REI, $13.02, Buy) - Recent Central Platform Basin Asset Sale Highlights Ring's NAV - **Neal Dingmann**

Resolute Energy Corporation (REN, $27.57, Buy) - Non-Core Sale Price as Expected; Sets up for Stronger Permian Growth - **Neal Dingmann**

Financials

Banking - Regional and Community Banks - Notes from Texas Bank Summit - We met with management at Buy rated HTH, LTXB, PB, and TCBI, as well as Hold rated BOKF, CMA, GNBC, and IBKC in Dallas last week. Our meetings affirmed our Bullish thesis on the Texas banks. The general key takeaways are below. We revised estimates for some of our banks due to Hurricane Harvey impacts (see note). - **Jennifer Demba**

Community Banks - Revising Estimates for Impact from Hurricane Harvey - Following several disclosures by companies and updates on conditions in Houston, we are updating our models for Buy rated HTH and LTXB, and Hold rated GNBC and IBTX to reflect the impact from Hurricane Harvey on the Houston market. Details of the revisions are below. - **Michael Young**

Associated Banc-Corp (ASB, $22.80, Hold) - Updating Model for the Whitnell Acquisition - Last week, ASB announced the acquisition of Whitnell & Co., a wealth management firm with ~$1 billion in AUM, based in Oak Brook, Illinois. According to management, the acquisition is expected to increase both ASB's assets under management and related run-rate revenue by more than 10%, or $6+ million annually. As such, we believe the acquisition should be $0.01 accretive to 2018 EPS and adjust our 2018 EPS estimate to $1.58 from $1.57. - **Michael Young**

Regional Banks - Regional Banks - Revising Estimates for Increase in September MBA Forecast - We are revising our models for Buy rated MBFI, and UMPQ, and Hold rated WTFC to reflect a more optimistic mortgage volume outlook (2% higher industry volume now expected in 2017). The EPS benefit is minor representing less than a 1% change in our estimates. Details of the revisions are below. - **Michael Young**

Charles Schwab Corporation (SCHW, $39.99, Buy) - Solid DARTs and Interest-Earning Asset Growth in August; Reiterate Buy - We reiterate our Buy rating following Schwab's monthly and weekly metrics report, which featured solid DARTs, improved client inflows and better than expected interest-earning asset growth. We are raising our 2017/2018 EPS estimates to $1.63/ $1.95 from $1.62/$1.93 due to revisions to our underlying assumptions detailed below. We maintain our $47 PT, which equals 29x 2017E EPS and 24x 2018E EPS, consistent with

SCHW's 5-year average (28x) and a premium to peers (19x). - **Douglas Mewhirter**

E*TRADE Financial Corporation (ETFC, $40.72, Buy) - August Metrics Feature Strong Customer Asset Growth; Reiterate Buy - We reiterate our Buy rating following E*TRADE's August monthly metrics report, which featured strong customer asset growth and better than expected DARTs. We are refining our 2017/2018 EPS estimates to $2.27/$2.53 from $2.28/$2.55, which reflects a higher commission revenue forecast, offset by a higher interest expense forecast, which is in turn driven by a correction to our cost of debt calculation from the company's recent debt refinancing. We reiterate our $50 PT, which equals 22x 2017E EPS, but only 20x 2018E EPS, compared to a 10-year median of 21x. - **Douglas Mewhirter**

Healthcare

Laboratory Corporation of America (LH, $153.58, Buy) - Model Update - Upping Estimates to Reflect The Chiltern Acquisition - **David MacDonald**

Quality Systems, Inc. (QSII, $15.98, Hold) - Back to the Future; Maintain Hold - We attended QSII's investor day and observed product demos of the recently acquired EagleDream and Entrada. Our impressions of the acquired assets were positive, and we expect QSII to drive incremental adoption of these offerings within its client base. We think the improving trend in client retention along with the opportunity to cross sell Entrada and EagleDream has the potential to reverse 7 consecutive quarters of y/y bookings declines. However, the turnaround story keeps reverting back to looking at the future--which remains murky, in our view. Limited upside to our PT keeps us at a Hold. - **Sandy Draper**

WebMD Health Corp (WBMD, $66.47, NA) - Dropping coverage of WebMD Health Corp - **Sandy Draper**

Mirati Therapeutics (MRTX, $4.75, Buy) - Two Teaser Pieces of Data, Hint at Further Upside - Following positive data tonight, we spoke with management to get a better handle on their results. Mirati’s sitravatinib+IO combo data showed encouraging initial responses in lung cancer patients that have failed immunotherapy. In addition, as a monotherapy, sitravatinib provided a deep partial response (77% tumor reduction) in lung cancer patient harboring CBL mutation (~1.5% of NSCLC patients) – which could also be helpful to another ~1000 patients with cancer of unknown origin that have no viable options. This data and additional data by YE help us reiterating our $13 PT and a BUY rating. - **Peter Lawson**

Industrials

Platform Specialty Products (PAH, $11.18, Buy) - IPO Could Unlock Value, Lessen Debt Overhang. Upgrade to Buy - PAH plans to IPO the Ag segment in mid-2018. We view the planned separation positively, as we believe there are minimal synergies between Ag and Performance Solutions. PAH trades at 9.4x 2018E EBITDA vs an average of 10.7x for pure play specialty chemical peers. An IPO of Ag, coupled with an equity issuance, could well result in the shrinkage of PAH's valuation discount, which we believe is driven by the company's conglomerate structure and high leverage (6.2x). We upgrade to Buy and raise our PT to $15 (34% upside). - **James Sheehan**

Orbital ATK, Inc. (OA, $110.04, Buy) - Space Race...Northop Nearing Deal to Buy Orbital ATK; Likely Price of $135-$145 - **Michael Ciarmoli**

Real Estate Investment Trusts

Lodging REITs - How Safe are Those Hotel REIT Common Dividends? - Considering the gradual and continued downward trends in RevPAR growth alongside REIT headwind of rising labor costs, we examine one of the key drivers that make these stocks relatively attractive for some investors: Common dividends that are yielding 4-6%. - **C. Patrick Scholes**

REITs - REITs - Adjusting Estimates Post Earnings - We are updating our earnings estimates for DDR, FRT, GGP, KIM, LPT, MAC, SRC and GPT based on second quarter results, earnings conference call commentary and adjusted revenue growth and expense assumptions. Furthermore, we are increasing our price target for LPT to $43 from $41 and for SRC to $8.50 from $7.50 while lowering our price target for MAC to $59 from $63. - **Ki Bin Kim**

TMT

Entertainment - STRH Digital Entertainment Weekly: ATVI, LGF, NFLX, P, Spotify - ATVI: Destiny 2 digital datapoints positive, physical mixed. P: SIRI CEO comments positive. LGF.A/B: 'American Assassin' ahead at the box office. NFLX: Expanded Orange distribution deal a positive. - **Matthew Thornton**

Application Software - Tillman's Software Monday Morning Missives - **Terry Tillman**

Workiva, Inc. (WK, $19.55, Buy) - Attractive Undervalued SaaS Business; Growth Could Re-Accelerate in 2018 - Following conversations with management and meetings with investors, we believe the company has a well thought out strategy that should lead to accelerating revenue growth driven by investments in the Wdesk platform to achieve enterprise-wide adoption coupled with steady growth coming from existing use cases including SEC, SOX, XBRL, corporate governance, etc. We believe the stock is significantly undervalued at 3.5x EV/'18E sales, especially with potential for growth re-acceleration and increased free cash flow generation expected in 2018. - **Terry Tillman**

Tech, Semis, Components and Distributors - Semiconductor Cycle Path - Proprietary Macro Indicator Remains Strong - Consumer sentiment momentum (our proprietary 5-month leading indicator for semiconductor industry growth) remained strong in September at +4.5%. Our other demand indicators are also mostly constructive: inventory momentum supports a gradual growth fade, cycle altitude/duration is at least benign for stocks, and while absolute valuation looks stretched, semis do not look expensive relative to the broader S&P, in our view. The constructive macro supports our more cyclically exposed long ideas: CY, AVGO, MSCC, and ADI. From a structural growth standpoint we like NVDA. - **William Stein**

Analyst Certification

By issuing this research report, each SunTrust Robinson Humphrey, Inc. analyst named in this report hereby certifies that the recommendations and opinions expressed accurately reflect the research analyst's personal views about any and all of the subject securities or companies discussed herein and no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/18/2017):

Coverage Universe			**Investment Banking Clients Past 12 Months**		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**

Itron, Inc.

ITRI - We Expect Swift Closing of SSNI Deal; Updating Estimates; Raising PT to $85.

September 20, 2017

Incorporating SSNI acquisition into our estimates - raising PT to $85. To follow up on our initial thoughts on the ITRI/SSNI acquisition, we now update our ITRI model to reflect the impact of the deal starting in 2018. Given the non-controversial nature of the deal and its simple structure (all-cash, with financing in place), we expect it to close swiftly and on track by early 2018.

Updating our model: We model the combined entity eventually achieving $50m in cost synergies (per management guidance); however, we expect that realization of cost synergies will be gradual and that the full impact will be evident in starting in 2019. We assume that the majority of synergies will be realized in the Sales and G&A categories (we model 50%), with some modest accretion to gross profit (we model 5%).

Updating valuation: Since ITRI is tapping a faster-growing revenue stream with its acquisition of SSNI, we expect its multiple to re-rate accordingly. Prior to the announcement, SSNI was trading at 15x our 2018 EV/EBITDA forecast (acquired at 20x) and ITRI was trading at ~9.8x. Considering the new sales mix, and the fact that we expect ITRI to extract higher value from SSNI's technology due to its larger platform, we are increasing our target multiple for ITRI to 13x EV/EBITDA from 11x and **on our updated 2018 EBITDA estimate of $311m, our PT increases to $85 from $81.**

We expect that strong FCF profile will support rapid deleveraging: Immediately following the closing of the transaction, ITRI plans to take on an additional $830m of debt, pushing its leverage to 3x EBITDA. However, given the company's projected FCF profile, we model this figure to fall to 1.9x by the end of 2019.

Revenue synergies potential is significant but need more color before we can quantify it. As we have previously written, we view the SSNI deal as attractive on a stand-alone basis, because we think ITRI is getting solid growth at an attractive valuation. Itron is paying less than 15x EV/EBITDA on our 2019 EBITDA estimate of $51m, which combined with $50m in cost synergies is a much lower multiple. We also note that SSNI's revenue is substantially derisked given its $1.2B backlog, which includes such reputable clients as EXC (ComEd) and ED. That said, the potential for revenue synergies with ITRI intrigues us even more. SSNI has made a significant push into the indusrial/energy IOT, and has been in the process of deploying interesting pilot platforms using its technology. With the full force of ITRI's cash flows and reach behind it, we think the combined entity has significant revenue synergies potential. We will look for more guidance from the management team on the company's growth strategy - which we expect after the closing of the transaction.

(See page 2 for pro-forma analysis summary)

ITRI BUY

COMPANY UPDATE

SHARE PRICE $76.10
PRICE TARGET $85.00

EBITDA($M) (FY Dec)	1Q	2Q	3Q	4Q	FY
2016	40	52	63	54	209
EV/EBITDA					17.0x
2017	45	60	73E	72E	250E
EV/EBITDA					14.2x
2018	55E	66E	88E	103E	311E
Prior	*61E*	*58E*	*82E*	*82E*	*283E*
EV/EBITDA					11.4x

Market Data	
52-Week Range	$51.55 - $77.40
Market Cap (M)	$2,993
Enterprise Value (M)	$3,560
Dividend	$0.00
ADV (3 mo; 000)	178
Long Term Debt (M)	$974
Net Debt (M)	$566

We expect accretion to become evident by 2019

We see the deal as accretive to both EPS and EBITDA despite higher leverage – however we model the accretion gradually though 2018 as we don't expect ITRI to achieve full cost synergies on day one. We also assume that ITRI will use its FCF to develer, repaying ~$360m in debt through the end of 2019.

Valuation

We value Itron based on projected 2018 adj. EBITDA of $311m, which includes the projected impact of the pending SSNI acquisition, and our target EV/EBITDA multiple of 13x. Our target multiple reflects a higher growth profile that we expect the company to achieve following the acquisition of SSNI and is 2x below the peer-group average 15x trading multiple – reflecting lower margins and ROIC in Itron's core business. Our valuation translates into an $85 12- month PT.

Figure 1. ITRI Valuation Summary

(mm ex. per share data)	2018E
Adj. EBITDA	$311.2
Target Multimple	13.0x
EV	4,045.1
less Net Debt	(704.4)
Equity Value	3,340.7
Shares Outstanding	39.3
Equity Value per Share	$85.00

Source: Guggenheim Securities, LLC

Risks

ITRI faces multiple risks including: Technology obsoleting risk; litigation risk related to the company's IP; execution risk related to various AMI deployment projects that the company is conducting; regulatory risk as the company's customers operate in a heavily regulated environment; and sovereign, regulatory and FX risks associated with the company's activities outside of the U.S. In addition, ITRI is facing deal execution and integration risks related to its pending acquisition of SSNI. Should the impact of any of these risks be greater than anticipated, the stock could underperform relative to our rating and PT.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Diversified Utilities / IPPs

Attractive Value in a Sector with Few Bargains

We are revisiting the remaining diversified utilities: EXC, PEG, FE, and ETR. We think underperformance relative to regulated peers will reverse, and see a constructive backdrop driven by attractive valuations, market reforms, and merchant exits for FE and ETR. Upgrading PEG to OW and ETR to EW.

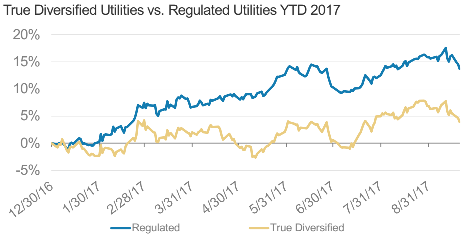
Diversified Utilities / IPPs

North America

IndustryView	**Attractive**

Diversified Utilities Have Underperformed Regulated Peers by ~10% Year-to-Date



The remaining diversified utilities (EXC, PEG, FE, and ETR) offer attractive valuations in a sector with few bargains. Year-to-date, these four diversified utilities have underperformed regulated peers by ~10%. This divergent trend within utilities was driven by: 1) company-specific issues, including concerns about liabilities from an over-leveraged merchant generation business at FE, nuclear cost escalation at ETR, and rate case risk at PEG. EXC has outperformed diversified peers on the back of several regulatory wins. 2) Low commodity prices and long-term risks associated with merchant power. As we revisit the stocks here, we see attractive valuations across the group and generally prefer diversified utilities to more expensive regulated peers. We see both stock-specific and macro catalysts over the next 6-12 months that we expect to help boost sentiment on the group and drive relative outperformance versus regulated peers. We are upgrading PEG to OW (Public Service Enterprise Group Inc: Many Ways to Win; Upgrading to OW), and prefer it to EXC through year-end; we are upgrading ETR to EW. Lastly, we reiterate our OW rating on FE and remain EW EXC.

- **PEG: Upgrading from EW to OW, $53 PT (unchanged).** We see attractive growth at a compelling valuation, with several ways to win, including the potential extension of capital programs, "utility of the future" investments, nuclear support, and power price changes. As a result, we are increasing our estimates and upgrading to OW.

- **FE: Remain OW, $40 PT (unchanged).** We believe continued progress in exiting the merchant business will narrow the large (~26%) valuation discount relative to peers. The stock is reflecting negative $8-9/share, or a $3.9b liability, for exiting its merchant power business, while we calculate a much smaller $1/share total drag, or $500m liability from exiting. We think consensus is overestimating the nuclear liability and underestimating the large tax benefits from exiting.

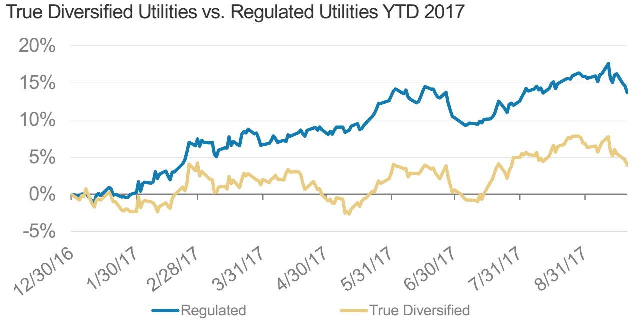
- **ETR: Upgrading from UW to EW, $82 PT (down from $84).** We conducted an in-depth review of the company's Arkansas nuclear cost filing, and though we still see risk that shareholders will be partially responsible for increased nuclear spending, this risk appears to be priced in at current levels. Following this year's 400bp underperformance, the stock reflects a more balanced risk-reward. Our $82 PT implies 5% upside and the 4.4% dividend yield offers a 9.4% total return.

- **EXC: Remain EW, $40 PT (unchanged).** Strong utility growth, but recent declines in forward prices push our estimates below consensus. We believe EXC is close to fairly valued at current levels, with few catalysts ahead; we prefer PEG and reiterate our Equal-weight rating.

Power price reform could benefit EXC and PEG. We expect FERC and RTOs to address power market design changes that are constructive for baseload generation under guidance from the recently released Department of Energy study on electricity markets (details here). Overall, we think the most impactful changes could be around price formation: allowing for inflexible power plants to set prices and potentially eliminating negative price offers from subsidized renewables. Each $1/MWh uplift to prices from market design changes would increase PEG's EPS by $0.07 (~2.5%) and EXC's by $0.13 (~5%), making them key beneficiaries.

Our Pitch: Attractive Valuation in a Sector with Few Bargains: Prefer Diversified Utes to Regulated Peers

Exhibit 1: Diversified Utilities Have Underperformed Regulated Peers by ~10% Year-to-Date



Source: Morgan Stanley Research. Note: Baskets are market-cap-weighted across constituents

The remaining diversified utilities (EXC, PEG, FE and ETR) offer attractive valuations in a sector with few bargains. Year-to-date, these four diversified utilities have underperformed regulated peers by ~10%. This divergent trend within utilities was driven by: 1) Company-specific issues, including concerns about liabilities from an over-leveraged merchant generation business at FE, nuclear cost escalation at ETR, and rate case risk at PEG. EXC has outperformed diversified peers on the back of several regulatory wins. 2) Low commodity prices and long-term risks associated with merchant power. As we revisit the stocks here, we see attractive valuations across the group and generally prefer diversified utilities to more expensive regulated peers. We see both stock-specific and macro catalysts over the next 6-12 months that we expect to help boost sentiment on the group and drive relative outperformance versus regulated peers. We are upgrading PEG to OW (Public Service Enterprise Group Inc: Many Ways to Win; Upgrading to OW), and prefer it to EXC through year-end; we are upgrading ETR to EW. Lastly, we reiterate our OW rating on FE and remain EW EXC.

- **PEG: Attractive growth at a compelling valuation, upgrading to Overweight.** PSEG (PEG) has underperformed regulated peers and its closest comp, EXC, year-to-date due to concerns around low commodities prices and power market regulatory risks, perceived lack of near-term catalysts, and uncertainty relating to the upcoming distribution rate case in New Jersey. However, the relative underperformance in the stock has far exceeded commodity price moves or the impact of any likely rate case risks. PEG's merchant business, PSEG Power, now screens cheaper than pure-play independent power producers despite having investment-grade credit metrics and a highly profitable generation platform. PEG has also continued to increase its potential utility investments, and there are several regulatory initiatives in NJ that could improve clarity on and recovery of capital spend going forward. We see a lot to like about the story, with many potential upside catalysts over the next year supporting an attractive risk-reward. We are upgrading to Overweight, with our $53 price target (unchanged) implying ~17% upside.

- **FE: Many pathways to recovering a significant portion of the current ~26% discount; remain OW.** We reiterate our OW rating on FirstEnergy (FE) as we believe continued progress in exiting the merchant business will narrow the large (~26%) valuation discount relative to peers. The stock is reflecting negative $8-9/share, or a $3.9b liability, for exiting its merchant power business, while we calculate a much smaller $1/share total drag or $500m liability from exiting. We think consensus is overestimating the nuclear liability (especially after we hosted a call with FE's chief nuclear officer; see that note here) and underestimating the large tax benefits from exiting.

- **ETR: Pricing in a bearish earnings outlook; upgrading to EW on more balanced risk-reward.** We are upgrading Entergy (ETR) from UW to EW given our view that the stock now reflects a bearish outcome for nuclear cost recovery (our Base Case) and a more balanced risk-reward following this year's underperformance. Though we still see risk that shareholders will be partially responsible for the company's increased nuclear spending in light of ETR's challenged nuclear operating history, this risk appears to be priced in at current levels. Our $82 PT implies 5% upside and the 4.4% dividend yield offers a 9.4% total return. Though we see modest upside potential, the lack of clarity on longer-term utility earnings power will likely remain an overhang.

- **EXC: Compelling strategy and execution, but limited upside at current levels; reiterate Equal-weight.** We continue to view EXC's business strategy as compelling, with strong growth driven by ROE improvements, a largely tracked capital spending program, and cash flow from ExGen. However, with the company deep into its ROE improvement path at the PHI utilities, potential incremental state nuclear support programs far down the road, and recent declines in forward prices pushing our estimates below consensus, we believe EXC is close to fairly valued at current levels, with only modest ~7% upside to our unchanged $40 PT. With few major catalysts ahead, we see a balanced risk-reward at current levels and remain comfortable with our Equal-weight rating.

Power price reform could benefit EXC and PEG. There are numerous pressures facing merchant power companies (subsidized nuclear generation, increasingly cheap renewables, weak power demand growth, and cheap natural gas). That being said, we believe potential upcoming market design changes, spearheaded by Regional Transmission Organizations (RTOs), skew to the positive relative to the highly bearish outlook reflected in the merchant power stocks. We expect FERC to largely be supportive of market design changes that are constructive for baseload generation under guidance from the recently released Department of Energy study on electricity markets (details here). Overall, we thing the most impactful changes could be around price formation: allowing for inflexible power plants to set prices and potentially eliminating negative price offers from subsidized renewables.

PJM is leading the charge on price formation. On June 15, PJM published a brief white paper exploring potential power price reform initiatives. PJM is focused on two key issues:

1. **Power price reform:** changing the way power prices are calculated to reflect the true marginal cost. Currently, inflexible resources often cannot reflect power prices.

2. **Impacts of negative offers:** addressing the issues associated with generation that offers into the market at negative prices, such as subsidized renewables.

Price reform could increase energy prices while decreasing capacity over the long term, benefitting baseload resources such as nuclear and CCGTs. Each $1/MWh uplift to prices from market design changes would increase PEG's EPS by $0.07 (~2.5%) and EXC's by $0.13 (~5%), making them key beneficiaries.

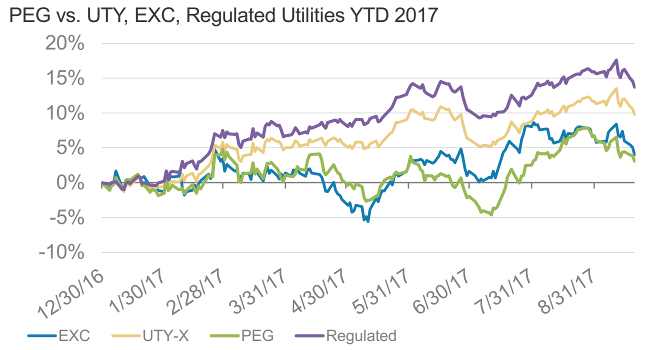
PEG: Attractive Growth + Upside at a Compelling Valuation

Exhibit 10: PEG Has Underperformed the UTY by ~7% YTD

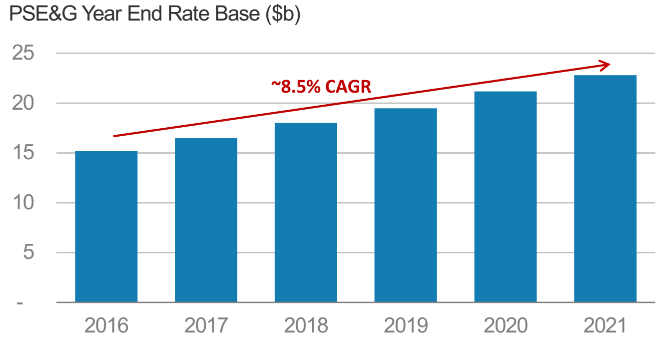


Source: Morgan Stanley Research. "Regulated" represents a market cap weighted basket of regulated utilities under coverage.

See our complete upgrade note Public Service Enterprise Group Inc: Many Ways to Win; Upgrading to OW.

Many ways to win, upgrading PEG to Overweight. PSEG (PEG) is a clean, well-run company with a high growth utility (PSE&G) and quality merchant power business (Power). After underperforming peers by ~7% year-to-date, the valuation screens attractive with a risk-reward profile skewed heavily to the upside. The current stock price reflects very limited value for PSEG Power despite its strong investment grade credit metrics at an unmatched ~25% free cash flow yield. Furthermore, we see several catalysts over the next year across both business segments that could further de-risk the story and/or increase earnings. These upsides are not yet in our or consensus estimates, and we see success on any as additive to an already attractive story and valuation. We are upgrading to Overweight, with our $53 price target (unchanged) implying ~17% upside. Compared to our other Overweights, PEG offers a relatively low-risk value play within the utility sector — one with catalysts ahead.

Exhibit 11: We Forecast A ~8.5% Rate Base CAGR 2016-21

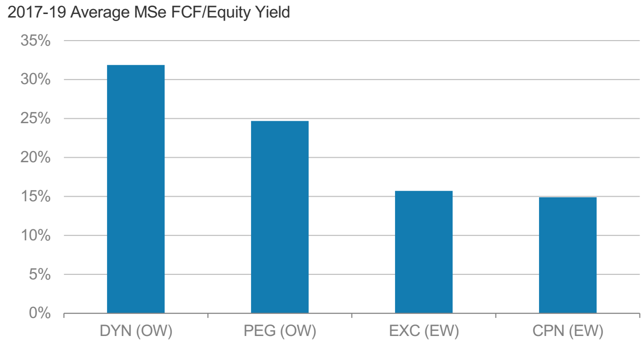


Source: Morgan Stanley Research

Best-in-class ~9% utility growth, supported by merchant free cash flow and robust $13.8b infrastructure investment plan. Our estimates assume that the Gas System Modernization Program (GSMP), which involves upgrading cast iron and unprotected steel mains, is extended and accelerated by $300m over the new 5-year window. We believe concerns around the upcoming November 2017 distribution rate case are overdone, and expect a constructive outcome likely via a settlement (rather than a fully litigated case). While our forecast assumes ROEs are reduced from 10.3% to 9.75%, the EPS impact is modest at $0.06. Outside of the rate case, we see several initiatives in New Jersey that could improve clarity and recovery mechanisms for future capital spending. These initiatives include the New Jersey Infrastructure Investment Program (IIP) and the Electric System Modernization Program (ESMP), as well as the potential extension of existing capital programs.

PSEG's merchant business, PSEG Power, now trades at a ~25% free cash flow to equity yield despite a high quality asset base and limited debt. PSEG Power owns and operates one of the highest quality generation businesses in the sector, and it is one of the largest owners of new and efficient combined cycle gas plants. We believe premium energy and capacity prices within PSEG Power's eastern PJM footprint are sustainable, positioning the business well relative to peers located further west where barriers to entry are lower. Furthermore, a declining capex profile supports robust and growing cash flow generation over the next several years. We estimate PEG's current stock price implies only ~$2b of equity value for PSEG Power, implying a 22-27% free cash flow to equity yield. Lastly, PSEG Power's strong balance sheet at 2-3x Net Debt/EBITDA mitigates leverage concerns and allows this cash to be redeployed for growth at the utility

Exhibit 12: PEG's FCF/Equity Yield of ~25% Is Well Above Most Peers Despite Having the Strongest Credit Metrics



Source: Morgan Stanley Research

business (rather than for less accretive debt reduction).

Many upside drivers, with several constructive regulatory initiatives pending. Our revised EPS estimates are now in-line with consensus, versus below previously. However, we see several potential positive drivers over the next year which could drive our estimates higher, including:

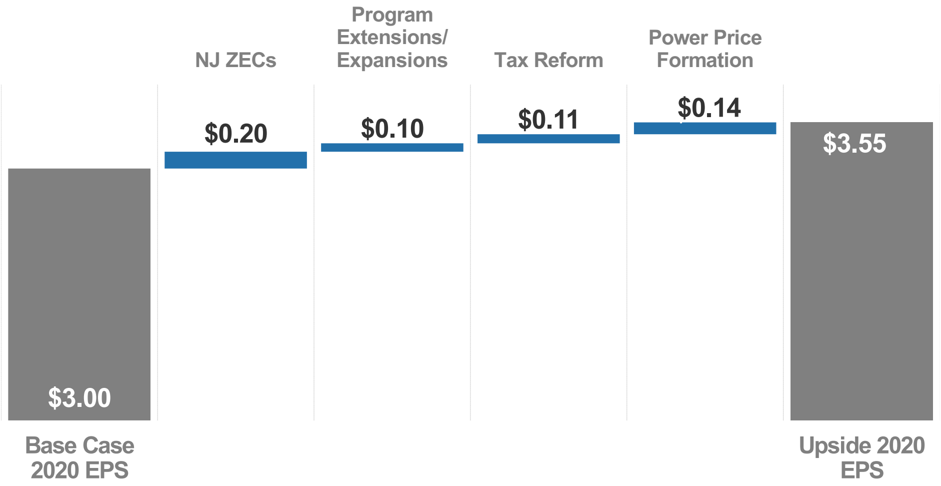
1. **Higher utility capex and extension of growth plan.** To date, we estimate PEG has identified ~$1.12b of potential upside investments above what management disclosed at the March 2017 Analyst Day. While our estimates do not yet reflect this additional upside, we estimate it could drive an incremental ~$0.10 of EPS by 2020, supporting either a higher growth rate or an extension of existing growth plans. Overall, we see the potential for PEG to extend the current growth rate into the mid-2020's, if not longer. Furthermore, several constructive regulatory initiatives in New Jersey could improve clarity on long-term capital spending and recovery. Lastly, we do not expect the distribution rate case to be a material event for the stock and see likely clarity in 1H18 as a positive catalyst for the stock.

2. **Introduction of Zero Emissions Credits (ZECs) and/or carbon pricing in NJ.** Following in the footsteps of recently approved zero emissions support payments for nuclear in New York and Illinois, PSEG is now engaged in similar discussions in New Jersey. Hypothetically, we estimate that a zero emissions credit (ZEC) in New Jersey, if similar to that in NY and Illinois, could increase EPS at PSEG Power by $0.20-0.40 depending on the structure (such as inclusion of a financial need clause or bill impact caps). We believe it is likely NJ will rejoin the Regional Greenhouse Gas Initiative, a carbon cap-and-trade program, which could be modest benefit to PSEG Power. Lastly, execution on additional cost improvements at the nuclear business could also improve profitability and cash flow, but we do not yet factor either of these upside drivers into our estimates.

3. **Changes to price formation in competitive power markets.** We expect FERC and RTOs to address power market design changes that are constructive for baseload generation under guidance from the recently released Department of Energy study on electricity markets (details here). Overall, we think the most impactful changes could be around price formation: allowing for inflexible power plants to set prices and potentially eliminating negative price offers from subsidized renewables. Each $1/MWh uplift to prices from market design changes would increase PSEG Power's EPS by $0.07, making it a key beneficiary. In our Bull Case, we assume power price reform drives $2/MWh of around-the-clock price uplift, equating to $0.14 of incremental EPS.

4. **Lower corporate taxes under federal tax reform.** PEG's profitable merchant business and low leverage make it one of the largest beneficiaries of any reduction in corporate tax rates within the utility sector.

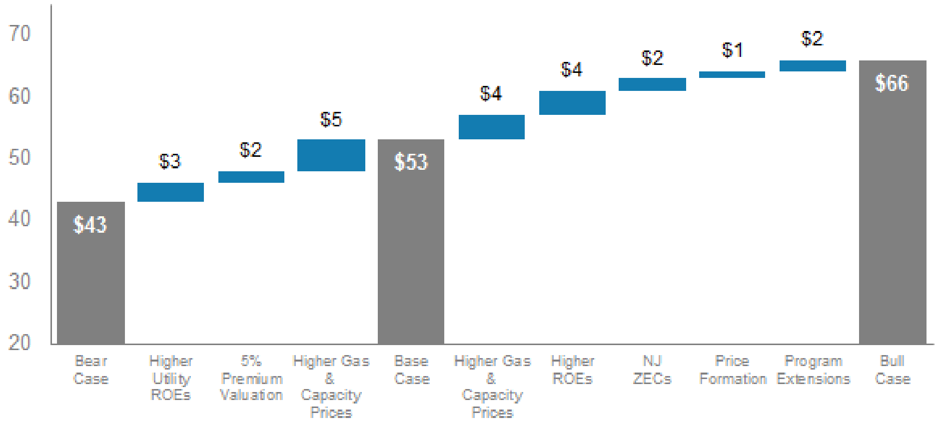
Exhibit 13: Nearly $0.60 of Potential EPS Upside By 2020, Not Yet in Estimates



Source: Morgan Stanley Research

We see an attractive risk-reward at current levels with our $53 price target representing ~17% upside. Our $53 valuation reflects ~$42 per share for PSE&G, the utility, and ~$11 per share for the merchant business, PSEG Power. We use a DCF valuation for PSEG Power, and an implied 5% premium 19.2x 2019 P/E multiple for the PSE&G. We expect PSE&G to achieve the high end of its 7-9% growth guidance, and see potential capital spend that could further extend or increase this growth rate, which is attractive relative to the 4-5% peer group average. We believe PSEG Power is one of the best run merchant generation businesses in the industry with a high quality asset base, currently at a compelling valuation. Our DCF-driven $11 valuation for the business implies a ~10% target 2019-21 free cash flow yield and a ~6.5x EV/EBITDA multiple on our 2018 estimate. While our forecasts do not reflect any improvement in commodities prices, we are closely watching the potential for ZECs in NJ or broader changes to power price formation. Overall, we see compelling value with several upside opportunities across PEG's business lines, driving our upgrade to Overweight.

Exhibit 14: PEG Bull-to-Bear Case Value Walk



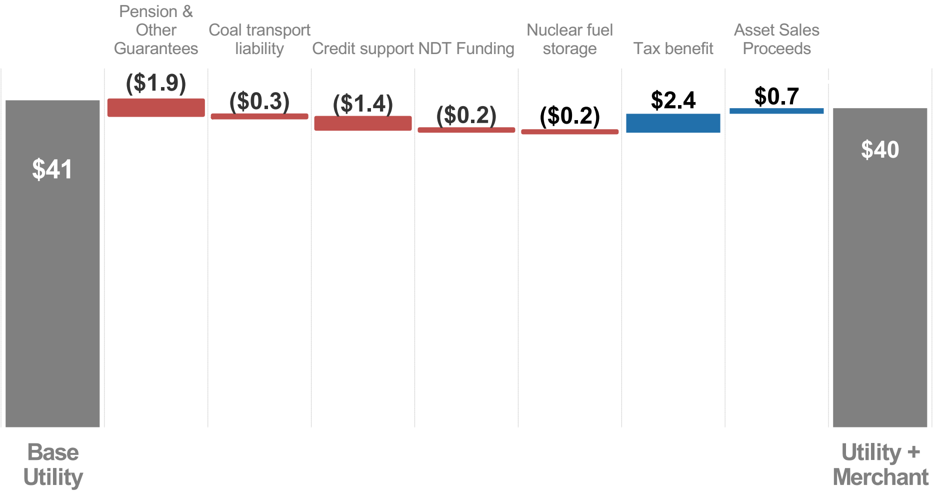
Source: Morgan Stanley Research

FE: Many Pathways to Recovering a Significant Portion of the Current ~26% Discount

We reiterate our OW rating on FirstEnergy (FE) as we believe continued progress in exiting the merchant business will narrow the large (~26%) valuation discount relative to peers. The stock is reflecting negative $8-9/share, or a $3.9b liability, for exiting its merchant power business, while we calculate a much smaller $1/share total drag, or $500m liability, from exiting. We think consensus is overestimating the nuclear liability (especially after we hosted a call with FE's chief nuclear officer; see that note here) and underestimating the large tax benefits from exiting.

Significant valuation disconnect in FE shares. The stock is reflecting negative $8-9/share, or a $3.9b liability, for exiting its merchant power business. We're expecting this subsidiary to file for chapter 11 and we calculate a much smaller $1/share total drag or $500m from exiting. We think consensus is overestimating the nuclear liability (especially after we hosted a call with FE's chief nuclear officer) and underestimating the tax benefits from exiting. Below we provide our valuation rationale, and we believe continued progress in exiting the merchant business will narrow the large valuation discount relative to peers.

Exhibit 15: FirstEnergy Valuation Walk



Source: Morgan Stanley Research. NDT = Nuclear Decommissioning Trust

Regulatory pursuits unlikely to alter the company's exit of the merchant business. Some investors had been concerned that the DOE study (released in late August) would cause FE to delay a decision on exiting this business, but we believe that is unlikely given there is nothing sufficiently large, concrete and certain in this DOE study that would result in the FE merchant business becoming solvent, in our view. The company has also pursued nuclear support payments in OH; recent comments from Ohio Governor Kasich, in which he stated his lack of support for payments to owners of struggling nuclear plants in order to keep the plants operational, further increases the likelihood that FE will take concrete steps to exit the generation business in our view.

High quality regulated utility subsidiaries. We believe the utility businesses are higher quality than appreciated, driven by constructive rate case settlements in PA, OH, and NJ, and higher than appreciated earnings power and growth. We estimate core utility value of $41 per share.

Several catalysts ahead. Bond payments due in late 2017 and early 2018 ($48m due in December, $99m due in April) could serve as catalysts in the company's ongoing discussions with bondholders, providing a potential incentive for the company to work out a settlement prior to making these payments. We believe FE would significantly prefer a settlement over a Chapter 11 process since this route would likely be much less time consuming and result in lower legal fees. Also in early 2018, the WV Commission is scheduled to potentially approve the addition of the Pleasants plant to rate base, with interim regulatory dates also in October. This transaction would bring in $195m of proceeds.

ETR: Pricing In a Bearish Earnings Outlook; Upgrading to EW on More Balanced Risk-Reward

We are upgrading Entergy (ETR) from UW to EW given our view that the stock now reflects a bearish outcome for nuclear cost recovery (our Base Case) and a more balanced risk-reward following this year's underperformance. Though we still see risk that shareholders will be partially responsible for the company's increased nuclear spending in light of ETR's challenged nuclear operating history, this risk appears to be priced in at current levels. Our $82 PT implies 5% upside and the 4.4% dividend yield offers a 9.4% total return. Though we see modest upside potential, the lack of clarity on longer-term utility earnings power will likely remain an overhang.

ETR shares have underperformed peers by ~400bps YTD and now price in weak utility EPS growth through 2019. We have been concerned that ETR's elevated nuclear spending in response to challenged operating performance would ultimately be split between shareholders and customers and result in a $0.28 earnings hit in 2019 relative to guidance. At this point however, ETR stock reflects an even greater level of disallowance, exceeding our conservative assumptions. Upon revisiting these rate proceedings, we also acknowledge that the company presented a reasonable case to the Arkansas commission that could justify a higher level of recovery than we incorporate. Though we remain concerned about the company's ability to recoup a portion of these costs, shares now adequately reflect this risk.

The utilities have achieved several recent regulatory wins... Entergy has received regulatory approval for its Advanced Metering Infrastructure (AMI) plans in LA and MI (with a settlement also filed in AK), and approvals of the Lake Charles CCGT in LA and Montgomery Power Station CCGT in TX. These approvals provide greater certainty around ETR's capex outlook and rate base growth opportunity for its utilities. Texas approvals this year for transmission and distribution revenue increases also provide incremental clarity for 2018 earnings.

...Though a few big ticket items remain, particularly approval of the company's 2018 formula rate request in AK (~$7b rate base), 3-year extension of LA's formula rate plan (~$8.5b rate base), and SERI ROE challenge ($1.25b rate base).

What would make us more constructive? Resolution of regulatory overhangs. Given the size of its LA and AK rate bases and important regulatory decisions ahead, we think the stock will remain under pressure before achieving further clarity around the recovery potential of nuclear costs and the future regulatory structure in LA. Clarity here would resolve overhangs that have deterred investors from stepping in despite the stock appearing inexpensive relative to peers, and further de-risk the utility earnings outlook.

Our $82 PT implies 4% upside. We apply a DDM-driven 5% discount 17.4x P/E to our 2019 Utility, Parent & Other EPS estimate of $4.71, resulting in a utility value of $82/share. We believe a discount is warranted due to below average earnings growth and risk around sales growth and recovery of nuclear costs. We utilize a DCF to value the merchant business, EWC, resulting in <$0.50/share. We note that mots of our EWC value comes from existing cash on the balance sheet as the business is cash flow negative in 2017-20 by our estimates.

ETR - Key Stock Drivers

Though we see a more balanced risk-reward in ETR stock, several regulatory overhangs and the prospect for disappointing load growth keep us on the sidelines. We revisit the company's Arkansas nuclear cost recovery filings from the 2018 FRP and find few specific red flags, suggesting recovery could be more constructive than our 50% assumption. However, O&M costs have risen since the previous filing, ETR provides little benchmarking vs. peers, and the commission may resist the ongoing customer rate increases required. We also see several other regulatory items that will be overhangs on the stock in the medium-term, including ETR's application to extend the LA formula rate plan for three years (40% of total rate base) and the SERI ROE review. Finally, we continue to see potential for disappointing load growth relative to ETR's outlook.

Arkansas nuclear costs. In July 2017 Entergy filed its Formula Rate Plan (FRP) with the Arkansas Public Service Commission, requesting a 9.75% ROE and $130m in total revenue. As part of the request, ETR provided additional information related to its increased nuclear costs that were scrutinized in the 2017 FRP, as well as a detailed breakdown of additional 2018 nuclear O&M and capex. At issue is whether this spending is part of normal ongoing nuclear operations that have simply built up over time, or if ETR's challenged operating history of its plants (it is the only operator with plants classified in Column 4 by the NRC, indicating a failure to meet safety and operational requirements) has caused the heightened spending at the plants.

We reviewed ETR's request in Arkansas in detail, and on the whole found many of their arguments to be reasonable in terms of the costs and improvements necessary to ensure strong nuclear operating performance. Below is a breakdown of the nuclear capex and O&M investments ETR has proposed for recovery in the 2018 FRP.

Capital projects ($166m):

1. Required to comply with regulatory standards - $34m
2. Needed for safe and reliable near-term operation (prior to 2023) - $84m
3. Needed to support operation to end of operating life (beyond 2023) - $47m
4. Other - $1m

ETR's proposed capital projects comprise ~100 separate projects, with the largest a $12m project. Many of the projects include replacement of old or obsolete equipment, as well as some enhancements and upgrades to improve safety and reliability of the plant. Entergy maintains this spending is driven by the age of the units (given they are approximately at the end of their original operating license periods), to resolve issues identified by the company and by NRC inspectors in 2015-2016, and to position the plant for improved operations longer-term. The company notes that it had historically sought to minimize costs and invested in the plant on a more reactionary basis, but now needs to adjust its approach to improve operations for the longer-term (through the ~20 years remaining on the plant's extended operating licenses). Of the requested capex, we think there is some risk to the bucket of investments intended for longer-term operations ($47m of capital outlined above), particularly around the timing of this spending given they are oriented to resolve longer-term issues.

O&M ($40.8m increase in expenses):

1. Payroll - $13m
2. Engineering program and other training - $8m
3. Design and licensing - $8m
4. Plant improvement and maintenance - $8m
5. Support services - $2m
6. Other - $2m

Exhibit 16: Entergy Arkansas Nuclear Staffing Increases

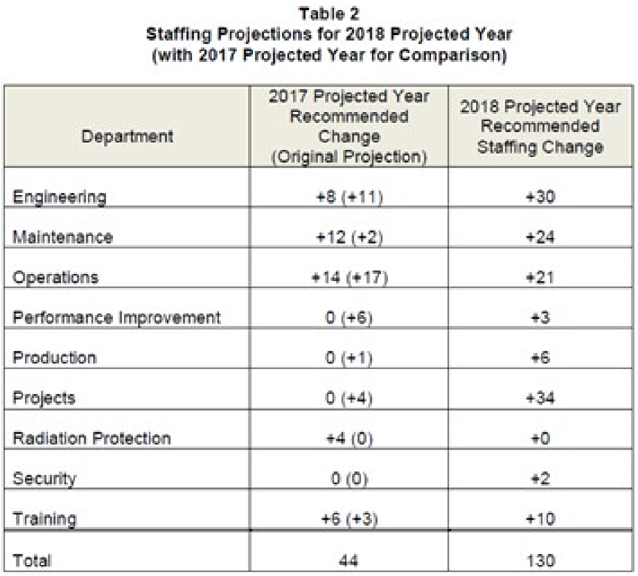


Table 2
Staffing Projections for 2018 Projected Year
(with 2017 Projected Year for Comparison)

Department	2017 Projected Year Recommended Change (Original Projection)	2018 Projected Year Recommended Staffing Change
Engineering	+8 (+11)	+30
Maintenance	+12 (+2)	+24
Operations	+14 (+17)	+21
Performance Improvement	0 (+6)	+3
Production	0 (+1)	+6
Projects	0 (+4)	+34
Radiation Protection	+4 (0)	+0
Security	0 (0)	+2
Training	+6 (+3)	+10
Total	44	130

Source: Company data

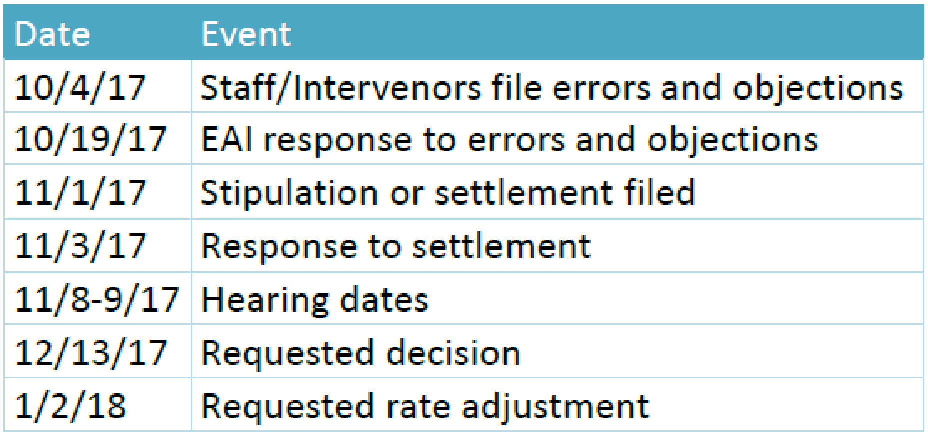
The increase in O&M expenses is intended to improve engineering programs, enhance training, create a more robust maintenance function, cut down backlogs of design changes, update processes/procedures, and improve management oversight. Staffing levels were a major focus, as the company intends to significantly increase headcount at the plant to position it for better performance and implement industry best practices. The company is adding 130 positions with the majority in special projects, engineering, maintenance, and operations. Headcount increases are coming in response to the increased workload from heightened maintenance and other operating activities detailed above, as well as training, balancing employee workloads, and adding management and supervisory positions. The special projects workforce increases will support planning, coordination, scheduling, and supervision of larger plant projects. We think the number of additional personnel and scale of the increase (+20% over the previous two years) may raise questions from the commission.

Nuclear costs requested for 2018 are still significant and will likely invite additional scrutiny. In ETR's 2017 FRP (approved earlier this year) the Arkansas commission requested additional information on O&M spending levels of ~$20m (including a +44 increase in headcount) and capex of $286m ($89m for 2016, $197m for 2017). In the 2018 FRP, ETR is requesting an additional $41m O&M (including a +130 incremental increase in headcount) and $166m in capex related to its nuclear spending plans. This is a big step-up particularly in O&M from the prior year and capex levels remain elevated. This level of spending also contributed to a total revenue request of $130m, which far exceeds the +4% rate increase cap in AK that is triggered at $71m and implies further rate inflation for customers in the coming years as ETR seeks to recoup the spending in subsequent FRP filings. This rate pressure (on top of weak load growth discussed below) may deter the commission from approving the full investment levels requested by ETR.

Lack of benchmarking vs. peers may be a point of contention. While the company in its filings emphasizes that the nuclear investments it is pursuing are not in response to the NRC Column 4 designation and would have been necessary whenever they were identified, we think the commission will be interested in how the plant O&M, staffing, and capex levels benchmark against peers. Entergy provided no explicit benchmarking to other utilities in its testimony. We think this could be an area of further investigation and pushback from the commission, and if the company is shown to be operating at higher headcount and O&M level or if its equipment replacement programs are more aggressive than peers, we think cost recovery would be at greater risk.

Intervenor and staff filings on October 4 will be an important signpost to evaluate the level of scrutiny on nuclear costs embedded in the 2018 FRP, and a final decision has been requested by December 13.

Exhibit 17: Key dates to track



Date	Event
10/4/17	Staff/Intervenors file errors and objections
10/19/17	EAI response to errors and objections
11/1/17	Stipulation or settlement filed
11/3/17	Response to settlement
11/8-9/17	Hearing dates
12/13/17	Requested decision
1/2/18	Requested rate adjustment

Source: Company data

Other regulatory risks ahead: FRP extension in Louisiana, and ROE complaint at SERI. Entergy is requesting a three-year extension of its formula rate plan in LA to cover the 2017-19 test years, and as part of this request is seeking a forward-looking mechanism for MISO investment in the state. The company is also seeking a reset in the allowed ROE midpoint back to 9.95%, a narrowing of the sharing bands, to +/- 40bps rather than +/- 80bps, and earlier recovery (forward-looking rates) for MISO transmission capex and expenses. The outcome of this case is a significant driver of earnings power for ETR since it could impact three years of returns on the ~$8.5b LA rate base, which represents ~40% of the company's total rate base.

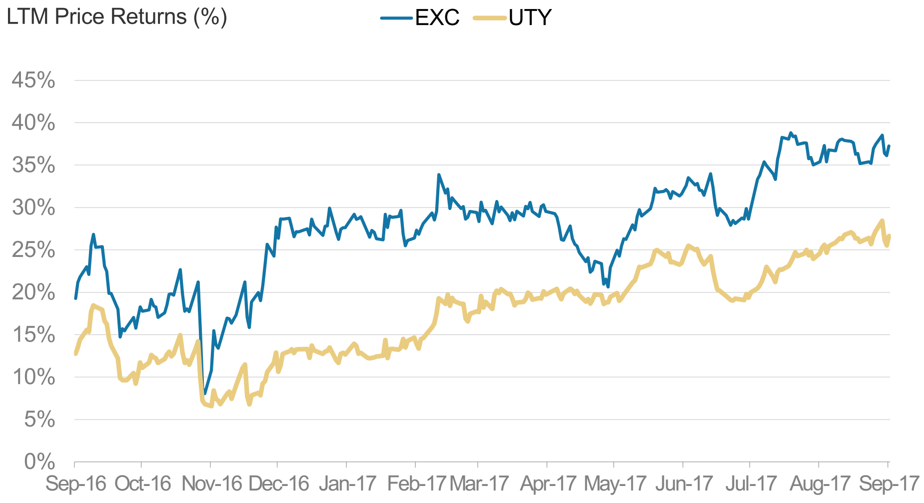
In addition, an ROE complaint was filed against ETR's SERI subsidiary in January. The rate base in question is $1.25b, and each 1% decline in the ROE (currently a 10.94% authorized level) would result in a $0.05 EPS impact by our estimates.

Sales growth has modestly disappointed thus far in 2017, growing 1.2% vs. guidance of 1.4%. Residential and commercial sales declined by 0.4% in 1H17 (vs. guidance of 0.2% growth) and industrial sales grew by 3.4% (vs. guidance of ~3% growth). Based on our deep dive analysis of electricity demand trends, we believe this is a structural headwind, not a short-term trend that will reverse. Our 2017-20 expectation of ~0.9% growth annually is ~40% below management's guidance. While some of the earnings headwind from lower sales will be recoverable via formula rate plans in Arkansas and Mississippi, we believe most of ETR's forecasted growth stems from Louisiana. This trend may put pressure on out-year growth because 1. A portion of growth spending is related to the expectation for higher demand, and may not be needed if sales disappoint to the downside; and 2. Lower sales would drive the need for higher customer rates to recover investments. We believe regulators in ETR's utility jurisdictions are very focused on keeping rates low, and are concerned that there may be pushback to growth plans and recovery of nuclear costs should sales growth miss expectations (which we see as a key risk).

EXC: Compelling Strategy and Execution, but Limited Upside at Current Levels; Reiterate Equal-weight

EXC continues to offer strong growth and a solid business strategy, but we see limited upside from current levels with few catalysts ahead; reiterate Equal-weight. EXC offers a compelling business strategy, with strong growth driven by ROE improvements, a largely tracked capital spending program, and cash flow from ExGen. To date we believe the company has executed well on achieving nuclear support for its challenged assets in several jurisdictions and on improving earned returns at the acquired PHI utilities. However, with EXC outperforming the broader utility group by ~7% over the last twelve months (while outperforming its remaining diversified peers by a similar margin), we see limited upside from current levels. Having received clarity on the majority of planned rate proceedings at the PHI utilities, and with potential incremental state nuclear support programs far down the road, EXC has few major catalysts ahead. EXC is also one of the most sensitive companies in our coverage to recent declines long-term natural gas and power forwards given its large baseload nuclear fleet, with the latest contractions driving us ~$0.15 below consensus estimates 2018-20. While we continue to see modest ~7% upside to our unchanged $40 price target, we see a balanced risk-reward going forward and remain comfortable with our Equal-weight rating.

Exhibit 18: EXC Has Outperformed the Broader Utility Group Over the Last 12 Months



Source: Bloomberg, Morgan Stanley Research

Strong execution on improving Pepco ROEs, but only modest upside left with majority of regulatory activity behind us. EXC has continued to make strong progress on executing its planned ROE improvements at the Pepco Holdings (PHI) utilities acquired in March 2016, following a number of regulatory wins. The company is now deep into its initiative to improve regulatory lag at the PHI utilities, having received material clarity in the majority of its planned rate proceedings (the company has said it would go through 2 rate case cycles across the PHI utilities), with visibility in 7 out of its 11 filings so far. While we believe this clarity helps alleviate concerns around execution risk and view it as indicative of the EXC's ability to work productively with regulators, we see only modest headroom for further PHI ROE improvement with the bulk of the company's rate proceedings behind us. Though much of EXC's growth story has been predicated on the successful execution of ROE improvements at the PHI utilities, we do note that we still see relatively attractive growth at legacy utilities driven by a comprehensive >$20b capital investment plan backed by strong recovery mechanisms which we believe will allow EXC to continue to earn compelling returns.

Below is a summary of recent rate outcomes at PHI that helped the company execute on ROE improvements at the PHI utilities:

1. On August 24, 2017, the New Jersey Board of Public Utilities (NJBPU) approved a settlement filed by Atlantic City Electric (ACE) and BPU staff a week prior. The settlement called for a ~$45m rate increase and a 9.75% ROE, in-line with recent New Jersey ROE outcomes. The authorized revenue increase represented ~57% of ACE's requested ~$79.4m increase.

2. On November 15, 2016,regulators issued a final order in Potomac Electric Power's Maryland rate case, authorizing a rate increase of ~$52.5m and ROE of 9.55%, relative to the staff recommended increase of ~$54.8m and ROE of 9.57%. The authorized revenue increase reflects ~51% of the Potomac's revised rate request of ~$102.8m

3. On February 15, 2017,the Maryland Public Service Commission issued a final order authorizing a rate increase of ~$38.3m and an ROE of 9.60% in Delmarva Power & Light's (DPL) electric rate case. The authorized revenue increase recommendation reflects ~67% of DPL's revised request of ~$57m.

4. On May 23, 2017,the Delaware Public Service Commission adopted a settlement in DPL's Delaware electric rate case, with the settlement filed with the PSC two months prior. The agreement called for a ~$31.5m rate increase and a 9.70% ROE, in-line with past decisions in the jurisdiction. The authorized revenue increase represented ~52% of DPL's revised rate request of ~$60.2m.

5. On June 6, 2017,the Delaware Public Service Commission adopted a settlement in DPL's Delaware gas rate case, with the settlement filed with the PSC two months prior. The agreement called for a ~$4.9m rate increase and a 9.70% ROE. The authorized revenue increase represented ~22% of DPL's revised rate request of ~$22.2m.

6. On July 24, 2017,regulators issued a final order in Potomac Electric Power's District of Columbia (D.C.) rate case, authorizing a rate increase of ~$36.9m and ROE of 9.5%, relative to the Office of People's Counsel's recommended increase of ~$25.9m and ROE of 8.60%. The authorized revenue increase reflects ~48% of the Potomac's revised rate request of ~$77.5m.

7. On June 30, 2017,the Maryland Public Service Commission staff recommended a rate increase of ~$24.9m and an ROE of 9.39% in Potomac Electric Power's 2nd Maryland electric rate case. The staff recommendation reflects ~36% of Potomac's request of ~$68.6m.

What's left to watch for on the regulatory front?:

1. A final decision on Potomac's 2nd Maryland electric rate case. The company expects

a final order by 10/20/17.

2. Clarity in ACE's 2nd New Jersey electric rate case. At the end of March, the company requested a $70.2m increase, with a 10.10% ROE. The company expects to receive an order by 1Q18.

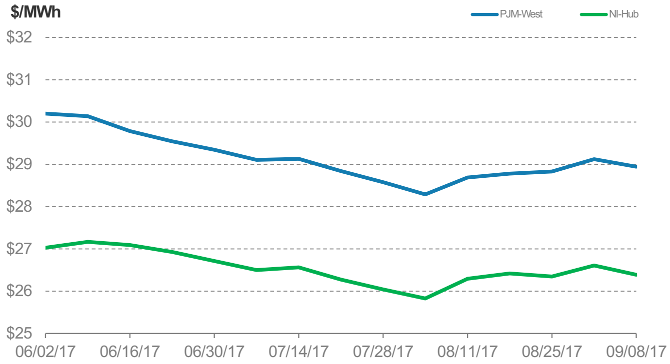
3. Clarity in DPL's Delaware electric & gas rate cases. In mid-August, the company requested a $37.3m increase in aggregate, with a 10.10% ROE.

4. Clarity in DPL's 2nd Maryland electric rate case. In early-September, the company modified its rate request to reflect ~$23.3m increase, with a 10.10% ROE. The company expects to receive an order by 2/14/18.

At the legacy utilities, a final order in ComEd's formula rate filing is all that is left on the regulatory agenda. On June 27, the Illinois commission staff recommended an increase of ~$99.1m (~99% of ComEd's supported revenue increase).

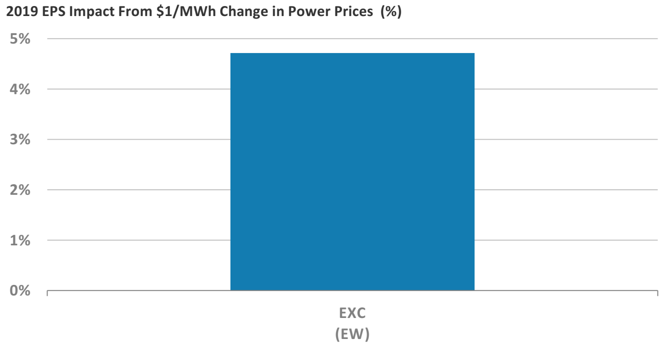
Legal resiliency of nuclear support programs positive, but declining forward commodity prices push us below consensus. While we continue to view Exelon's merchant business, ExGen, as an attractive source of investment grade cash flow that can be plowed back into utility spending, we see a number of dynamics that limit potential upside. On the positive side, we believe the recent dismissals of the federal level challenges to the NY and IL state Zero Emission Credit (ZEC) payments, which support EXC's at risk nuclear facilities, creates more certainty around future cash flows, and makes us confident that EXC will prevail in the ongoing appeals processes and the remaining NY state level case. However, we have also seen similar programs for nuclear assets in other states, such as Ohio, Connecticut and, Pennsylvania receive a fair amount of political pushback or get pushed further back in the legislative timeline. As such, we remain cautious around ascribing value to any potential ZEC programs outside of New York and Illinois. Furthermore, Given its large nuclear fleet, EXC's merchant business is one of the most levered to fluctuations in gas and power prices within our coverage universe. Over the last 3 months, forward spark spreads have fallen 5%-10% across PJM and the Northeast. As a result, our latest estimates have fallen ~$0.15 below 2018-20 consensus.

Exhibit 19: Forward Power Prices Have Fallen Across PJM, the Midwest and the Northeast Over the Last 3 Months



Source: Morgan Stanley Research

Exhibit 20: EXC's EPS Is Sensitive to Fluctuations in Long-Term Power Prices



Source: Morgan Stanley Research, Thomson One

We see a balanced risk-reward at current levels with few major catalysts ahead, and remain comfortable with our Equal-weight rating. After EXC's strong performance over

LTM, we see ~7% upside to our unchanged $40 PT. We continue to view EXC's business strategy as compelling, with attractive growth driven by strong, largely tracked capital spending program, benefits from recent regulatory wins, and utility investable cash flow from its large merchant segment. However, with the company deep into its ROE improvement path at the PHI utilities, potential incremental state nuclear support programs far down the road, and recent declines in forward prices pushing our estimates below consensus, we believe EXC is close to fairly valued at current levels. With few major catalysts ahead, we see a balanced risk-reward at current levels and remain comfortable with our equal-weight rating.

Changes to power price formation in competitive power markets could make use more constructive. Following the DOE's recent review of electricity market structures (as discussed here), we expect to see market design reform across competitive power markets. We believe potential changes in price formation (allowing for inflexible power plants to set prices and potentially eliminating negative price offers from subsidized renewables) would have a positive read across for power prices and ExGen margins, and would likely drive the stock and our estimates higher. We estimate each $1/MWh uplift to prices from market design changes would increase ExGen's EPS by $0.13, making it a key beneficiary.

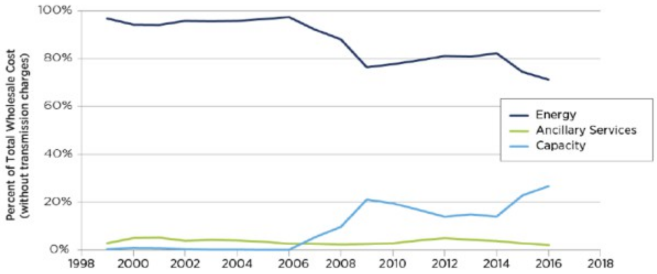
Assessing Power Market Changes: Outlook Skewed Positively for Merchants

There are numerous pressures facing merchant power companies (subsidized nuclear generation, increasingly cheap renewables, weak power demand growth, and cheap natural gas). That being said, we believe potential upcoming market design changes, spearheaded by Regional Transmission Organizations (RTOs), skew to the positive relative to the highly bearish outlook reflected in the merchant power stocks. We expect FERC to largely be supportive of market design changes that are constructive for baseload generation under guidance from the recently released Department of Energy study on electricity markets (details here). Overall, we thing the most impactful changes could be around price formation: allowing for inflexible power plants to set prices and potentially eliminating negative price offers from subsidized renewables.

PJM is leading the charge on price formation. On June 15, PJM published a brief white paper exploring potential power price reform initiatives. PJM is focused on two key issues:

1. **Power price reform:** changing the way power prices are calculated to reflect the true marginal cost. Currently, inflexible resources often cannot reflect power prices.
2. **Impacts of negative offers:** addressing the issues associated with generation that offers into the market at negative prices, such as subsidized renewables.

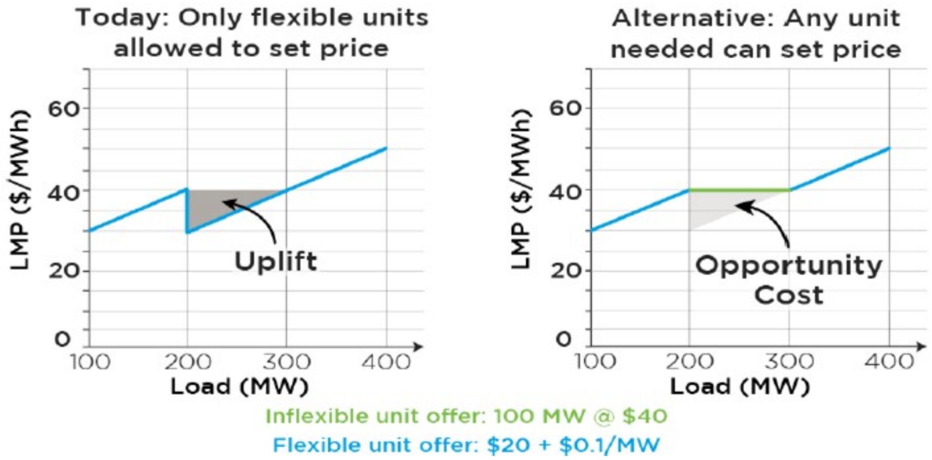
Exhibit 21: Capacity Has Been Increasing As a % of Market Costs, With Energy Declining



Source: PJM

Price reform could increase energy prices while decrease capacity over the long term, benefitting baseload resources such as nuclear and CCGTs. Over the past several years PJM energy market returns for power generation have been falling, resulting in a shift to the capacity market for a greater portion of revenue. PJM is concerned that this shift could lead to a market bias which favors lower capital cost (and lower fixed cost) resources. Interestingly, the decline in energy prices is driven in part by issues with the way power prices are calculated. Currently, the marginal power plan does not always set power prices. By design, only the output from power plant that is above a predetermined minimum generation level can set prices. As a result, an inflexible unit with one output level (such as a peaker) cannot set power prices. Instead, the inflexible unit would receive an out of market payment to make it whole if it were called to run and power prices were below its variable cost. As a result, market prices can be artificially lower than they should be - effectively failing to send the proper price signals. Instead allowing all units to set prices would result in prices more consistently increasing at higher demand levels, leading to more predictable and rational price signals.

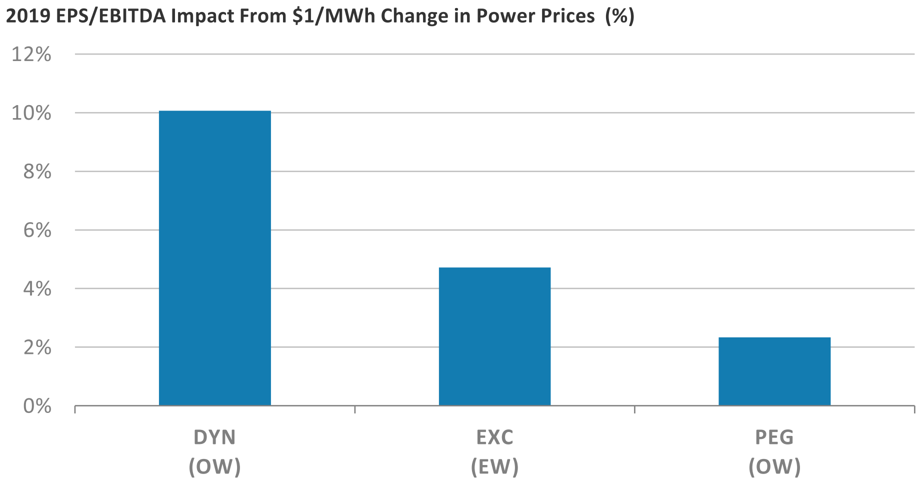
Exhibit 22: PJM Proposal Would Allow Inflexible Resources to Set Price, Driving More Rational Price Signals



Source: PJM

How much would price reform impact prices? Still unclear. PJM plans to release a study over the next few months calculating the impacts of proposed price reform measures on wholesale markets. Over the long term, we would expect the proposals to increase energy prices with an offsetting decrease in capacity prices. This would result in a net margin benefit to higher capacity factor resources (such as nuclear), and a hit to peakers and intermediate gas/coal. Since capacity prices are now locked in through mid 2021, a near term change to price formation could result in an increase in energy revenues with no offsetting decrease on the capacity price — benefitting all market participants.

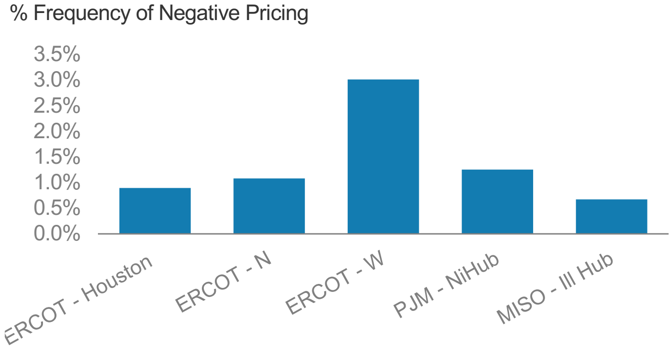
Exhibit 23: EPS/EBITDA Uplift Per $1/MWh Increase in Power Prices



Source: Morgan Stanley Research

PJMs intention to address negative offers would confer only marginal price uplift at the ISO level on our math. PJM also demonstrated interest in addressing "negative energy market offers from wind generation and the negative impact this has on all resources by distorting price and eroding revenue streams." However, as shown below, removing negative real-time hourly power prices, only shows a modest price uplift of $0.01-0.18, depending on the hub in question. This is largely due to the relatively small frequency in which negative pricing actually occurs, which is between 0.5% and 3% of the time. That being said, the frequency and the subsequent price impact could become more pronounced as renewables build out continues. Furthermore, although we found minimal impact at the ISO and trading hub level, there could be much more meaningful price uplift at the plant level in locations with transmission constraints.

Exhibit 24: The Frequency of Negative Price Hours Is Low...



Source: Morgan Stanley Research, ERCOT, PJM

Exhibit 25: ...Leading to a Minimal Impact on Power Prices When Zeroing Negative Price Hours

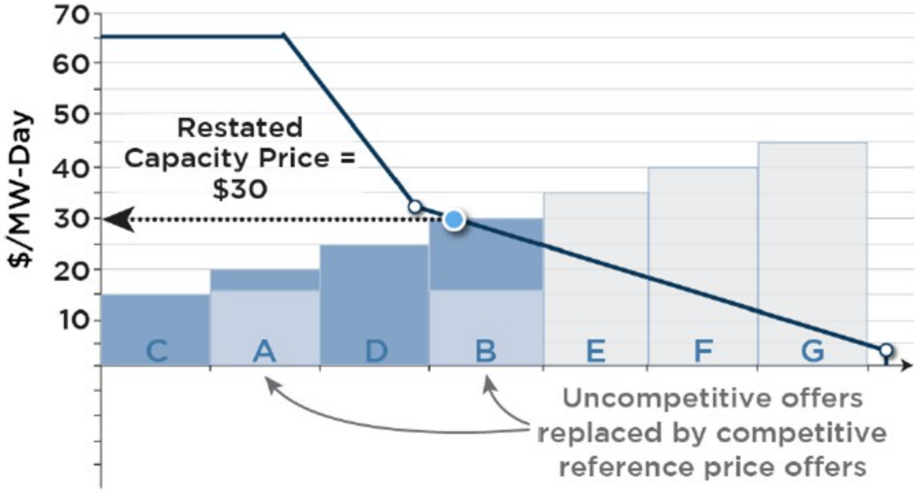
	Average Hourly RT Price ($/MWh)		
Region	**Unadjusted**	**Adjusted**	**Delta**
ERCOT - Houston	$25.37	$25.38	$0.01
ERCOT - N	$22.81	$22.83	$0.02
ERCOT - W	$22.31	$22.37	$0.06
PJM - NiHub	$26.85	$27.03	$0.18
MISO - Ill Hub	$26.13	$26.23	$0.10

Source: Morgan Stanley Research, ERCOT, PJM

Other Potential Reforms:

We believe PJM has a reasonable (but far from assured) probability of success in implementing its proposed constructive capacity market fixes. PJM has also released a capacity market repricing proposal aimed at maintaining the integrity of competitive markets while also achieving state policy goals. The goal of the proposal is to ensure that out-of-market subsidies, such as those recently awarded to some nuclear plants, do not artificially depress market prices. PJM's filing, available here, lays out options for a "two-stage" capacity auction. Stage one would determine the amount of capacity needed including subsidized plants, in order to prevent over-procuring capacity. Stage two would calculate an effective capacity price by increasing any subsidized offers to predetermined "competitive" levels and rerunning the auction. We see this proposal as a constructive step in the right direction to address the potential negative capacity price impacts related to incremental out-of-market subsidies. From here, it will be evaluated in the PJM stakeholder process through the Capacity Construct/Public Policy Senior Task Force (CCPPSTF).

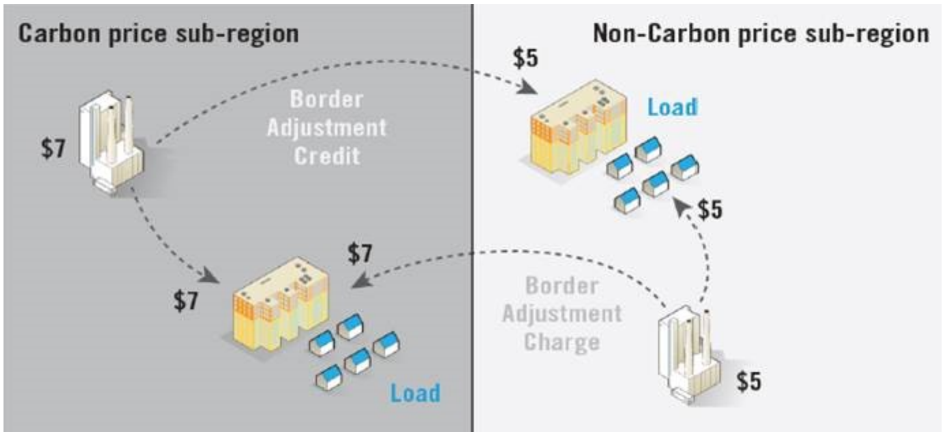
Exhibit 26: PJM's Capacity Market Proposal Would Recalculate Auction Prices Excluding the Impact of Subsidies



Source: PJM, Morgan Stanley Research

Using energy markets to advance state carbon emissions goals is a more sustainable solution in our view, rather than implementing accommodative tweaks to prevent price suppression, but we view this as low probability given lack of widespread support for carbon regulation and pricing. In coordination with its accommodative capacity market mitigation proposal, PJM also submitted a market based framework to advance state-level zero emissions objectives. The clearest way to preserve nuclear generation, in our view, is through accurately pricing the cost of carbon into wholesale power markets. However, given differing state-level perspectives on carbon pricing, implementing such measures across the entire market area would likely be challenging. Instead, PJM proposed a carbon pricing framework that would allow some states to participate while preventing "leakage" of generation into/from states that don't. "Leakage" of carbon pricing could occur in two ways: 1. When power from a plant not paying a carbon price is imported into a state or region with carbon pricing; and 2. When power from a plant paying a carbon price is exported into a state with no carbon pricing. To address these issues, PJM is proposing a border adjustment mechanism to appropriately adjust the pricing of imports into and exports from a state or region with a carbon regime. We believe such a mechanism could improve the function of the current Regional Greenhouse Gas Initiative (RGGI), and potentially facilitate its expansion, or the expansion of a similar program, in parts of PJM.

Exhibit 27: Carbon Price Mechanism: Designed to Address Regions Choosing Not to Have a Carbon price



Source: PJM

ISO-New England (ISO-NE) capacity market reforms focus on new subsidized resources. While PJM has focused on subsidies for existing generation, ISO-NE has proposed capacity reforms to mitigate the price suppression associated with state level subsidies for new generation, such as renewables. The proposal would separate the capacity auctions into two stages. Stage one would be the same as the current forward capacity auctions (FCAs) and would continue to apply minimum offer price rules (MOPR) to new resource offers. Stage two would allow capacity with price-based retirement offers to transfer their obligations to subsidized resources. If a transfer occurs, the existing resource would retire and could capture a margin in doing so — the goal being to prevent oversupply in the market. If no transfer occurs, new subsidized resources would not receive a capacity payment.

Tax Reform

We expect tax reform to be a key focus in the fourth quarter, and expect a reduction in federal corporate tax rates to be the most likely outcome. Diversified utilities are beneficiaries of lower taxes, as it would improve earnings and cash flow for the unregulated businesses of many stocks in the group. This contrasts to regulated utility peers which are unlikely to see a sustainable positive benefit from lower taxes.

Key elements of Republican tax reform proposals. We focus on one of the key elements of Republican tax reform proposals that would have important implications for utilities and merchant power companies: A reduction in the corporate income tax rate from 35% to 25% (the specific rate varies across the proposals). Based on our dialogue with numerous parties, we believe a reduction in the corporate tax rate has the highest chance of being passed, while other reform elements - expensing all capex and eliminating the interest deduction - are likely to face heightened pushback from lawmakers given the widespread ramifications these policies would have across numerous industries.

Diversified utilities are generally positioned favorably relative to regulated utilities in a tax reform scenario. By our estimates, for a hypothetical regulated utility with an NOL that would shield the utility from paying taxes for 3 years, a reduction in the tax rate would reduce cash flows during the NOL usage period by 10% (as the tax benefits are passed through to utility customers) while the annual earnings growth would rise by 1%. On the other hand, profitable unregulated operations will benefit directly from the decrease in the corporate tax rate and this benefit does not get passed through to customers. Several business model qualities maximize these benefits for a diversified utility: 1) A high percentage of (positive) unregulated earnings, 2) small or nonexistent NOL positions, and 3) minimal non-utility debt. Companies with large unregulated losses, high parent interest expenses, and a large existing NOL benefit less or in some cases are worse off from the tax reform proposals.

Diversified utility company impacts: In the following table we examine the potential impact of tax reform proposals on the diversified utilities under our coverage. This shows the EPS and FFO impact from a reduction in corporate tax rates from 35% to 25%, the most likely scenario in our view. We believe tax reform will come back into focus in 4Q17, with PEG being the biggest beneficiary.

Exhibit 28: PEG the Greatest Beneficiary from Potential Tax Reform of the Diversified Utility Group

	More Likely: Reduction in Corporate Tax Rate From 35% to 25%	
Company	2020 EPS (%)	2020 FFO Reduction (%) if Customer Rates Are Lowered
PEG	3.75%	2.07%
EXC	-1.20%	4.10%
ETR	-2.99%	-1.08%
FE	-3.09%	-1.44%

Source: Morgan Stanley Research

2020 EPS (%): Represents change from implementing 10% reduction in Corporate Tax Rate only

2020 FFO Reduction (%) - Lowered Customer Rates: Accounts for the cash impact from reduced utility customer rates from lower taxes, as well as the cash impact of the consolidated EPS change. Lower tax rates will reduce pre-tax income for regulated utilities. If the utility is in an NOL position (hence not a cash taxpayer) this will also reduce cash flow. This assumes that the benefit of lower taxes is passed through to customers, which may not necessarily be the case given various rate case stay out provisions among US utilities.

Positively Impacted:

1. PSEG (PEG) - Low levels of debt, meaningful non-utility earnings contribution from PSEG Power, and existing cash tax appetite make PEG a likely potential beneficiary of the House tax reform plan. If the corporate tax rate were to be reduced from 35% to 25%, this alone would be ~3.8% accretive to PEG earnings, and FFO would increase by ~2% on our estimates.

Negatively Impacted:

1. FirstEnergy (FE) - High levels of parent debt, as well as a sizeable NOL which becomes less valuable if corporate tax rates are reduced. A reduction in the corporate tax rate would result in a 3% decrease in EPS and ~1.5% reduction in FFO. We note that this analysis considers the tax reform impact on FE parent only, as we assume FE will exit the merchant business.

2. Entergy (ETR) - Above-average parent earnings drag. Entergy Wholesale Commodities (EWC), the unregulated business, is not included in the analysis as ETR is shutting down most of its unregulated fleet. A reduction in the corporate tax rate would result in a 3% decrease in EPS and 1% reduction in FFO.

3. **Exelon (EXC) -** Negative impact from material amount of non-utility debt, though partially offset from meaningful unregulated earnings contributions resulting from large merchant segment (ExGen). A reduction in the corporate tax rate would result in a ~1.2% decrease in EPS and a ~4% positive impact to FFO.

Estimates & Rating Summary

Exhibit 29: Morgan Stanley Estimates and Ratings - Diversified Utilities

Company	Ticker	Rating	Market Price	Old PT	New PT	Cap (mil)		EPS / EBITDA		
								2017e	2018e	2019e
Entergy Corp.	ETR	EW	$78.05	$84	$82	$14,012	*EPS - Prior*	$4.54	$5.18	$5.31
							EPS - Current	$6.70	$5.14	$5.15
							Consensus	$6.38	$4.91	$4.98
Exelon Corp.	EXC	EW	$37.28	$40	$40	$35,792	*EPS - Prior*	$2.66	$2.70	$2.66
							EPS - Current	$2.66	$2.70	$2.66
							Consensus	$2.69	$2.86	$2.80
FirstEnergy	FE	OW	$31.37	$40	$40	$13,938	*EPS - Prior*	$2.84	$2.52	$2.27

Valuation Methodology & Risks

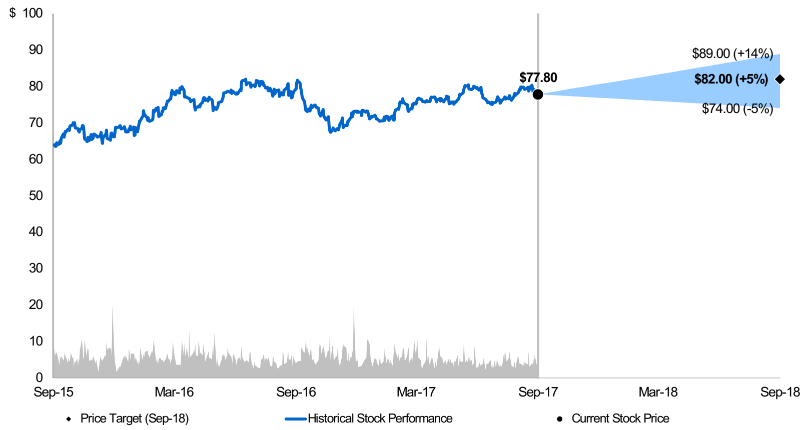
Exhibit 30: Diversified Utilities & IPP Valuation Methodology and Risk to Price Target Summary

Company	Ticker	Valuation Methodology	Risks
American Electric Power	AEP	We value AEP via a SOTP. We value the regulated utility by applying the regulated group P/E multiple to 2019 Utility EPS and a DCF analysis for the merchant business. For our DCF we use a 6.9% WACC, 3% Risk-Free Rate, and 1.5% Terminal Growth Rate.	1) Failure to execute on growth endevours; 2) Weaker than expected sales growth; 3) Execution of long-term contracts at the merchant business
Dominion Resources	D	We value D via a SOTP. We value the regulated utility by applying a 5% premium regulated group P/E multiple to 2019 Utility EPS to account for above average growth, a DCF analysis for the merchant business, and an EV / EBITDA multiple on the gas business. For our DCF we use a 6.8% WACC, 3% Risk-Free Rate, and 1.5% Terminal Growth Rate.	1) Gas and power price changes for merchant power; 2) DOE/FERC approval delays; and 3) Midstream gas market deterioration in OH/PA, which could negatively impact producer servicing contracts for the Blue Racer JV, 4) recovery in power demand growth, 5) Cove Point and Atlantic Coast Pipeline project execution.
Entergy Corp.	ETR	We value ETR via a SOTP. We value the regulated utility by applying the regulated group P/E multiple to 2019 Utility EPS and a DCF analysis for the merchant business. For our DCF we use a 9% WACC and 3% Risk-Free Rate.	1) Indian Point is forced to shut down by NY State; 2) Load growth does not materialize; 3) Low Marcellus/Utica gas prices spread to NY and New England
Exelon Corp.	EXC	Derived from our base case and driven by a 5% premium P/E compared to the regulated group average, and a DCF analysis for Generation and Energy Supply (ExGen). For our DCF we use an 8.2% WACC, 3% risk-free rate, and 1.5% terminal growth rate for ExGen (ex-ZECs benefit), with a 6.3% discount rate on the ZEC cashflows.	1) Natural gas and power prices decline further. EXC is the most sensitive diversified utility to natural gas prices on our math; 2) Additional states implementing carbon cap and trade programs. Additional carbon regulation would benefit EXC's large nuclear fleet
FirstEnergy	FE	Derived from our base case and driven by a 2019e P/E for utilities and DCF analysis for merchant power and retail assuming a spin-merger of the merchant business, using a ~6.9% WACC	1) Changes in gas and power prices could affect EPS meaningfully; every $1/mmBtu move in gas impacts open EPS by ~15-20%; 2) Potential for management to remain committed to owning merchant generation, which could trigger larger equity issuance needs than currently disclosed
NextEra Energy	NEE	Derived from base case and driven by 2019 P/E for utilities, cash distribution DDM analysis with target equity yield for contracted assets, and DCF analysis for merchant power. We apply a 6% terminal yield for the yieldco and 9% FCF/Equity yield for yieldco dropdown eligible assets. We apply 5% terminal yield for IDRs and a 10% FCF/Equity yield for remaining merchant assets.	1) Weak utility sales growth; 2) Failure to complete utility / renewables growth projects; 3) NEP underperforms due to deteriorating market for yield / growth
Public Service Enterprise Group	PEG	We value PEG via a SOTP. We value the regulated utility by applying the regulated group P/E multiple to 2019 Utility EPS and use a DCF analysis for the merchant business. For our DCF we use a 7.2% WACC, 3% Risk-Free Rate, and 1.5% Terminal Growth Rate.	1) Higher energy and capacity could be a positive for shares as the company's Power business is levered to commodities; 2) Strategic activity is not reflected in our valuation or estimates. But unregulated M&A has shown to be a positive in the sector due to considerable cost synergies

Source: Morgan Stanley Research .

ETR Risk-Reward

Weak nuclear cost recovery now priced in, with regulatory overhangs the key risks from here



Source: Thomson Reuters, Morgan Stanley Research

Price Target $82

Utilities/Parent: ~9.4% ROE; DDM-driven 5% discount applied to regulated group average P/EEWC (merchant power): $2.75 LT Gas; minimal cash flow after pension needs.

Bull $89

17.4x Utility/Parent EPS of $5.12 +$0.25 EWC

Utilities/Parent: ~10.2% earned ROE, full nuclear cost recovery; DDM-driven 5% discount applied to regulated group average P/E
EWC (merchant power): $3.50 LT Gas; Minimal value after pension needs

---

Base $82

17.4x Utility/Parent EPS of $4.71 +$0.2 EWC

Utilities/Parent: ~9.4% ROE; DDM-driven 5% discount applied to regulated group average P/E; 50% of nuclear costs recovered
EWC (merchant power): $2.75 LT Gas; minimal cash flow after pension needs.

Bear $72

16.5x Utility/Parent EPS of $4.36 +$0 EWC

Utilities/Parent: ~8.5% ROE; DDM-driven 10% discount applied to regulated group average P/E
EWC (merchant power): $2.25 LT Gas; balance sheet cash just covers pension needs after NOL.

Investment Thesis

- **High likelihood that nuclear costs will be partially borne by shareholders, in our view.** We believe ETR is unlikely to fully recover incremental nuclear spending in customer rates - the prudence of these costs has not yet been determined, and we expect heightened regulatory scrutiny due to ETR's track record of challenged nuclear operational performance. We therefore think there is high risk that incremental spending will be partially borne by shareholders.
- **Further downside to load growth puts long-term capital plans at risk.** We see downside risk to ETR's ~1.5% sales growth forecast based on structural headwinds identified in our deep dive analysis of electricity demand trends. Our 2017-20 expectation of ~0.9% growth annually is ~40% below management's guidance. While some of the earnings headwind from lower sales will be recoverable via formula rate plans in Arkansas and Mississippi, we believe the trend will put pressure on out-year growth.
- **Several major regulatory uncertainties remain overhangs,** particularly approval of the company's 2018 formula rate request in AK (~$7b rate base), 3-year extension of LA's formula rate plan (~$8.5b rate base), and SERI ROE challenge ($1.25b rate base). Given the size of its LA and AK rate bases and important regulatory decisions ahead, we think the stock will remain under pressure before achieving further clarity around the recovery potential of nuclear costs and the future regulatory structure in LA.

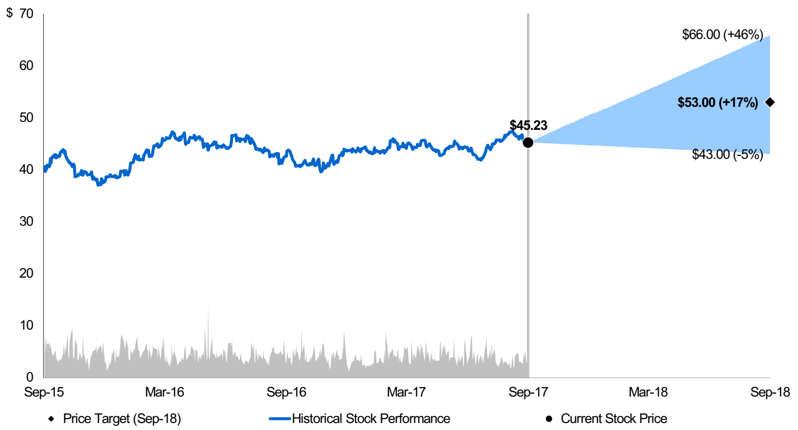
- **Our $82 PT implies 4% upside.** The stock now reflects a bearish outcome for nuclear cost recovery and a more balanced risk-reward. We apply a DDM-driven 5% discount 17.4x P/E to our 2019 Utility, Parent & Other EPS estimate of $4.71, resulting in a utility value of $82/share. We believe a discount is warranted due to below average earnings growth and risk around sales growth and recovery of nuclear costs. We utilize a DCF to value the merchant business, EWC, resulting in <$0.50/share.

Risks to Achieving Price Target

- Rebound in load growth in ETR's utility jurisdictions
- Favorable regulatory treatment of nuclear costs
- Extension of formula rate plan in Louisiana with supportive returns

PEG Risk-Reward

Attractive Risk-Reward Driven by Positive Leverage to Several Themes



Source: Morgan Stanley Research, Thomson Reuters

Price Target $53

Derived from our base case and driven by a 2019e P/E for utility (PSE&G) and a DCF analysis for merchant power (PSEG Power). Our DCF assumes an ~8% WACC and a 3x terminal debt/EBITDA.

Bull $66

$19/share Power

19.2x $2.45 2019e Utility EPS

Power ($19): $3.25 LT natural gas and market gas basis. $242/MW-day EMAAC capacity price, $248/MW-day PS capacity price. ~$100mil annual benefit from BGS auction. Power price reform increases margin by $2/MWh, NJ ZECs implemented and generate $0.20 of EPS.
Utility/Parent ($47): 12% earned ROE and a 5% P/E Premium to peers. Adds $0.09 to 2019 earnings at PSE&G from program extensions and increased capex.

Base $53

$11/share Power 19.2x $2.16 2019e Utility EPS

Power ($11): $2.75 LT natural gas and ($0.25) negative gas basis in PJM. $225/MW-day EMAAC and PS zone capacity prices. ~$100mil annual benefit from BGS auction.
Utility/Parent ($42): ~11% earned ROE with a ~51% equity ratio and a 5% premium valuation multiple to peers due to above average growth.

Bear $43

$6.50/share Power 18.3x $1.98 2019e Utility EPS

Power ($6): $2.25 LT natural gas with zero gas basis in PJM. $100/MW-day EMAAC/MAAC and $150/MW-day PS capacity prices. ~$100mil annual benefit from BGS auction.
Utility/Parent ($36): 10% earned ROE with a ~51% equity ratio and in-line valuation multiple with peers.

- **Above-average utility growth through 2021.** We estimate 8.5% year-end rate base growth and 7.2% EPS growth for PSE&G in 2016-2021 based on significant transmission investment opportunities that yield above-average returns, and robust distribution system modernization spending. We do not expect the November 2017 distribution rate case to have a meaningful earnings impact.
- **Beneficiary of potential power market reforms.** We expect FERC and RTOs to address power market design changes that are constructive for baseload generation under guidance from the recently released Department of Energy study on electricity markets (details here). Each $1/MWh uplift to prices from market design changes would increase Power's EPS by $0.07, making it a key beneficiary.
- **Potential tax reform should boost earnings and cash flow**. Low levels of debt, meaningful non-utility earnings contribution from PSEG Power, and existing cash tax appetite make PEG a likely beneficiary of tax reform. If the corporate tax rate were to be reduced from 35% to 25%, this alone would be ~4% accretive to PEG earnings, and FFO would increase by ~2% on our estimates.
- **Power's valuation screens attractive, with an implied long-term capacity price of only $25/MW-d and a free cash flow to equity yield of ~25%.** We estimate that Power represents only ~10% of PEG's current market cap, implying an attractive valuation for the business. In order to make Power fairly valued at current levels, we estimate long-term PJM capacity would need to average $25/MW-d, a level we see as unrealistically bearish.

Potential Catalysts

- Changes in gas & power prices
- May 2018 PJM capacity auction.
- Tax reform. Lower corporate tax rates would benefit PEG.

- Use of balance sheet capacity through M&A or other growth investments
- Rate case submission in 2017

Risks to Achieving Price Target

- Decline in energy or capacity prices as the company's Power business is levered to commodity prices.
- Compression in utility multiples due to rising interest rates
- Unfavorable regulatory outcome in the 2017 rate case.

Morgan Stanley & Co. LLC ("Morgan Stanley") is acting as financial advisor to ENGIE in relation to the proposed sale of ENGIE's United States Fossil Portfolio to the JV to be formed between Dynegy, Inc. and Energy Capital Partners, as announced on 25 February 2016. ENGIE has agreed to pay fees to Morgan Stanley for its financial services. Please refer to the notes at the end of the report.

Morgan Stanley is engaged to provide financial advisory services to NRG Energy, Inc. ("NRG") relating to asset sales as part of their overall strategic alternatives process, as announced on July 12, 2017. There is no guarantee that any transaction will ultimately be consummated. NRG has agreed to pay fees to Morgan Stanley for its services. Please refer to the notes at the end of this report.

Analyst Certification

The following analysts hereby certify that their views about the companies and their securities discussed in this report are accurately expressed and that they have not received and will not receive direct or indirect compensation in exchange for expressing specific recommendations or views in this report: Stephen C Byrd; Devin McDermott.

Unless otherwise stated, the individuals listed on the cover page of this report are research analysts.

Global Research Conflict Management Policy

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflictpolicies.

Important US Regulatory Disclosures on Subject Companies

As of August 31, 2017, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: Dynegy Inc., NextEra Energy Inc.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of AES Corp., American Electric Power Co, Dominion Resources Inc, Dynegy Inc., Exelon Corp, FirstEnergy Corp, NextEra Energy Inc.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Exelon Corp, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, Exelon Corp, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, Exelon Corp, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, Exelon Corp, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, Exelon Corp, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Morgan Stanley & Co. LLC makes a market in the securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Entergy Corp, Exelon Corp, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of August 31, 2017)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with NASD and NYSE requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	COVERAGE UNIVERSE		INVESTMENT BANKING CLIENTS (IBC)			OTHER MATERIAL INVESTMENT SERVICES CLIENTS (MISC)	
STOCK RATING CATEGORY	COUNT	% OF TOTAL	COUNT	% OF TOTAL IBC	% OF RATING CATEGORY	COUNT	% OF TOTAL OTHER MISC
Overweight/Buy	**1164**	**36%**	**306**	**41%**	**26%**	**555**	**37%**
Equal-weight/Hold	**1425**	**44%**	**349**	**46%**	**24%**	**701**	**46%**
Not-Rated/Hold	**61**	**2%**	**6**	**1%**	**10%**	**10**	**1%**
Underweight/Sell	**606**	**19%**	**91**	**12%**	**15%**	**242**	**16%**
TOTAL	**3,256**		**752**			**1508**	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding the relationship between the companies that are the subject of Morgan Stanley Research and Morgan Stanley Smith Barney LLC or Morgan Stanley or any of their affiliates, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to www.morganstanley.com/researchdisclosures.

Each Morgan Stanley Equity Research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the Equity Research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley & Co. International PLC and its affiliates have a significant financial interest in the debt securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, Exelon Corp, FirstEnergy Corp, Public Service Enterprise Group Inc.

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (http://www.morganstanley.com/terms.html). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (http://www.morganstanley.com/terms.html). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html).

If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important US Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Forward Power/Gas Curves – 09/21/17. Below, we provide estimated forward curves for power, heat rates, spark, dark, and quark spreads for peak, off-peak, and around-the-clock for various regions in the United States, broken down by each RTO/ISO in North America. In addition, we model forward gas, basis, as well as coal through the 2026 time frame.

Investors should use this link to open an Excel spreadsheet of various curves that can be used for power and utility models (click here to download our weekly price deck summary).

Forward Curve Weekly Highlights: Power and Heat Rates, for the week of 9/21 versus the prior week, **2018 national peak power prices** ($/MWh) were down 0.4% to $34.25 from $34.38 and around-the-clock power was down 0.4% to $29.59 from $29.72. Peak power in PJM was down 0.2% to $37.04 from $37.13; ERCOT was down 0.8% to $31.89 from $32.14; NE-ISO was down 0.5% to $44.20 from $44.45; NY-ISO was down 0.4% to $45.80 from $45.98; and MISO was down 0.3% to $34.59 from $34.68. **2018 peak heat rate (Btu/kWh) contractions**: 0.1% to 10,021 in NE-ISO. **2018 peak heat rate (Btu/kWh) expansions**: 2.3% to 12,063 in MISO, 1.2% to 10,804 in ERCOT, 0.8% to 11,758 in PJM, 0.4% to 11,496 in NYISO. See full price deck for additional details on various other curves and regions.

Forward Curve Weekly Highlights: Spark and Dark Spreads versus the prior week, **2018 Peak Spark Spreads** ($/MWh) in PJM were up 0.9% to $14.99 from $14.86; ERCOT was up 1.4% to $11.23 from $11.08; NE-ISO was down 0.8% to $13.33 from $13.43; NYISO was up 0.2% to $17.91 from $17.87; and MISO was up 3.0% to $14.52 from $14.09. **2018 Around-the-Clock Dark Spreads** ($/MWh) in PJM were down 0.2% to $24.92 from $24.97; ERCOT was down 1.3% to $20.01 from $20.27; NE-ISO was down 0.7% to $31.69 from $31.90; NYISO was down 1.0% to $31.68 from $32.01; and MISO was down 0.8% to $22.80 from $22.98.

Illustrative impact of marking our IPP and integrated utility models to the current forward curves versus published live estimates: PEG, FE, EXC, NRG, DYN, CPN and VST are lower overall. **See the next page for illustrative MtM implications on Guggenheim's IPP and Integrated Utility coverage throughout our forecast period.**

Natural Gas Storage Levels and Eastern Gas Basis Tracker, Gas in storage increased to 3,408 Bcf as of 09/15/2017 a weekly increase of 97 Bcf, resulting in storage 3.8 Bcf below one year ago, 2.0 Bcf above the five-year average for this week. Eastern gas basis (TETCO M3) is currently reflecting a discount to Henry Hub for 2017 and a premium from 2018 through 2020 (-$0.62/$0.11/$0.07/$0.07 for '17/'18/'19/'20), contracting since last week.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.	
Rating Category	Count	Percent	Count	Percent
Buy	189	60.58%	20	10.58%
Neutral	121	38.78%	11	9.09%
Sell	2	0.64%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the “Order”), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as “relevant persons”). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: September 22, 2017

43% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Outperform.	Wells Fargo Securities, LLC has provided investment banking services for 46% of its Equity Research Outperform-rated companies.
54% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Market Perform.	Wells Fargo Securities, LLC has provided investment banking services for 33% of its Equity Research Market Perform-rated companies.
2% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underperform.	Wells Fargo Securities, LLC has provided investment banking services for 29% of its Equity Research Underperform-rated companies.

Important Disclosure for International Clients

EEA – The securities and related financial instruments described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. For recipients in the EEA, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority. For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 ("the Act"), the content of this report has been approved by WFSIL a regulated person under the Act. WFSIL does not deal with retail clients as defined in the Markets in Financial Instruments Directive 2007. The FCA rules made under the Financial Services and Markets Act 2000 for the protection of retail clients will therefore not apply, nor will the Financial Services Compensation Scheme be available. This report is not intended for, and should not be relied upon by, retail clients.

Australia – Wells Fargo Securities, LLC is exempt from the requirements to hold an Australian financial services license in respect of the financial services it provides to wholesale clients in Australia. Wells Fargo Securities, LLC is regulated under U.S. laws which differ from Australian laws. Any offer or documentation provided to Australian recipients by Wells Fargo Securities, LLC in the course of providing the financial services will be prepared in accordance with the laws of the United States and not Australian laws.

Canada – This report is distributed in Canada by Wells Fargo Securities Canada, Ltd., a registered investment dealer in Canada and member of the Investment Industry Regulatory Organization of Canada (IIROC) and Canadian Investor Protection Fund (CIPF). Wells Fargo Securities, LLC's research analysts may participate in company events such as site visits but are generally prohibited from accepting payment or reimbursement by the subject companies for associated expenses unless pre-authorized by members of Research Management.

Hong Kong – This report is issued and distributed in Hong Kong by Wells Fargo Securities Asia Limited ("WFSAL"), a Hong Kong incorporated investment firm licensed and regulated by the Securities and Futures Commission of Hong Kong ("the SFC") to carry on types 1, 4, 6 and 9 regulated activities (as defined in the Securities and Futures Ordinance (Cap. 571 of The Laws of Hong Kong), "the SFO"). This report is not intended for, and should not be relied on by, any person other than professional investors (as defined in the SFO). Any securities and related financial instruments described herein are not intended for sale, nor will be sold, to any person other than professional investors (as defined in the SFO). Things We've Learned This Week

Feedback from our initiations of VST and PNW: On VST (Outperform; TP $20), investors are focused on a potential deal with DYN. In a companion note, we enhance our analysis based on a more forward 2020 earnings in order to capture two factors: (1) falling capacity revenues at DYN, and (2) DYN's PRIDE program savings, for which the company guides to $200M in 2017/18. We continue to illustrate that significant synergies/savings >$200M would need to be generated to accrete $1-$2/sh value for VST at typical control premiums, which VST management considers to be in the range of 25%-30% vs an "unaffected" stock price. Furthermore, VST's balance sheet would quickly shift from the best to among the most levered IPPs, although cash from operations and asset sales could presumably repair that back to a targeted ~3.0x in a few years (leaving room for additional opportunities). Our understanding is that management sees potential value in a transaction, while private equity (PE) on the Board has been more cautious and less eager to stretch the balance sheet (placing lower-tier debt even more at risk) on a possibly risky expansion outside of Texas so soon after emerging from bankruptcy. On the other hand, the increased liquidity for shares of a combined company might be attractive to PE with 8-10 year vintages coming due soon. In our view, a merger with DYN poses significant risks with years to recover the balance sheet, although we would acknowledge VST's experienced management team. We also estimate DYN's NOLs could add up to another $2 of present value, but the ability to preserve benefits in a transaction is unclear at this time.

On PNW (Neutral; TP $90), investors are watching for 2018 guidance. As many saw last year's 2017 guidance initiation as a disappointment, there is some concern given PNW currently trades at a 4% premium 2019 P/E, with little upside to our $90 Target Price. We expect to provide a more granular view of 2018 guidance with our forthcoming 3Q earnings preview.

Other stocks of interest lately: We sense increasing long interest from investors in SO (Neutral; TP $50) ahead of the first expected $300M payment from Toshiba in Oct. The possibility of SO eventually presenting a comprehensive grid modernization plan (as peers DUK and D have done) has drawn some interest. CMS (Outperform; TP $50) received a negative order on securitization of a payment to Entergy for the Palisades contract, but we see minimal impact to valuation ahead of Monday's analyst day.

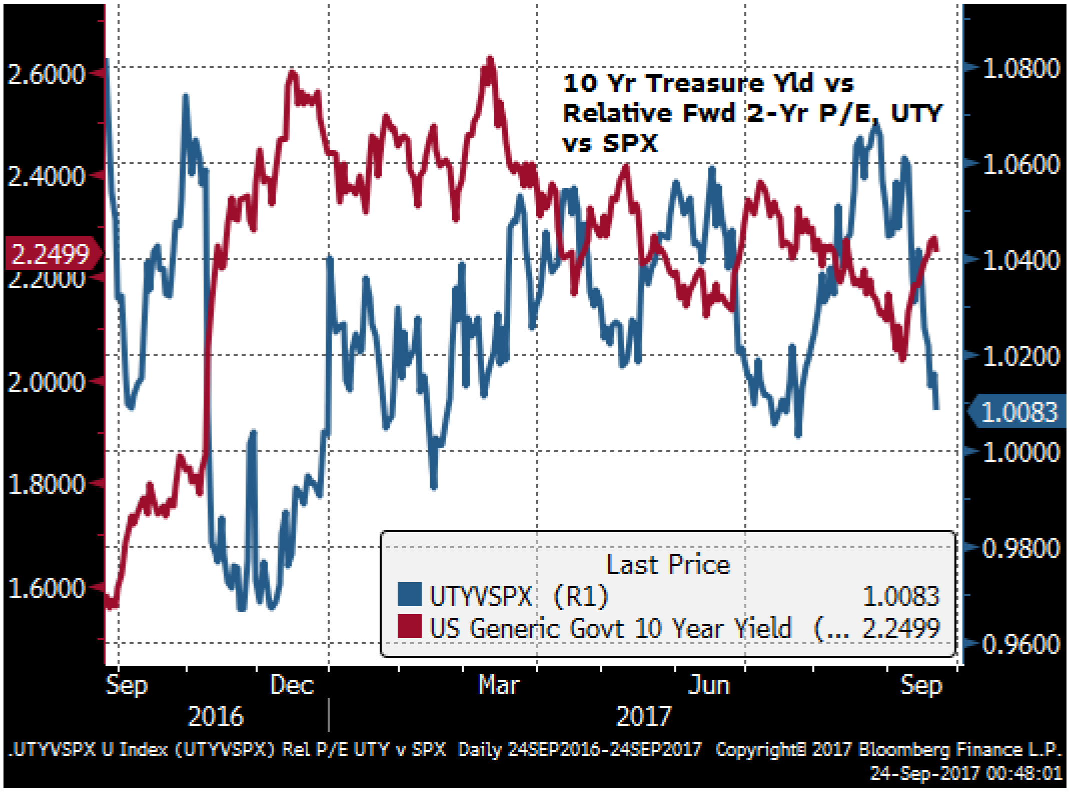
- **FOMC September Meeting.** Credit Suisse US Economics Team Takeaway/Excerpts from their 9/20 note:
  - "US Economics Comment: FOMC – Untroubled by low inflation, Fed is set to hike rates in December. The Federal Open Market Committee kept rates unchanged at their September meeting, but announced that they would begin implementing their balance sheet normalization program in October"
  - "The steadiness of near-term rate projections suggests that the committee remains determined to hike rates once more this year despite some deterioration in the inflation outlook. We continue to expect another rate hike in December and two more in 2018."
- **Utilities still underperforming in September after strong July/Aug.** Group performance vs the S&P 500 appears to have waned this month as the 10-Year Treasury yield picked up 15 bps in what has been a longer-term downward trend since March. Even at record high P/Es, the utility sector continues to trade in strong correlation to the 10-year bond. We illustrate in the correlation tables below that historical association would suggest that the sector is now **about 1% cheap** at the current 1% premium P/E vs the S&P

500 based on the CS forecast for a 2.8% yield by yearend. **Despite the downdraft in recent weeks, we continue to see the sector as more or less fairly valued vs the broader market, buttressed by a low-yield environment.**

Figure 2: 10-Year Treasury Yield vs. Utilities / SPX Relative Performance



Source: the BLOOMBERG PROFESSIONAL™ service

- **Hasta la vista, NEE Termination Fee Terminated**. On Sept. 19th, federal bankruptcy court judge Christopher Sontchi ruled that he made an error in approving the $275M termination fee associated with NextEra Energy's (NEE) failed acquisition of Energy Future Holding's (EFH) Oncor business. Judge Sontchi stated that he "would not have approved" the fee if he knew NEE could collect despite regulator's objections to the deal and as a result would reconsider the breakup fee order. With the court ruling dismissing the breakup fee, creditors of EFH may collect more money.
  - ***From our 9/8 weekly*: Third time's the charm, now can I get an Oncor?** Sempra Energy's (SRE) $9.45B cash bid to acquire Energy Future Holdings (EFH) and its 80% ownership interest in Dallas-area utility Oncor has taken the first step forward, receiving approval from bankruptcy court. The $9.45B offer will be financed with $3B of debt issued by a new holding company to ringfence Oncor from EFH's bankruptcy, with the remaining $6.45B funded 60% by SRE and 40% from currently undisclosed third party investors. This structure would give SRE an initial 48% ownership and the third party investors a 32% ownership, with SRE ultimately purchasing the 32% ownership. The next step is approval by the Public Utility Commission of Texas (PUCT), with Oncor and SRE expected to file a joint application in October.

Recall that the previous two offers made by Hunt Consolidated and NextEra Energy (NEE) fell through due to PUCT concerns regarding commitments related to infrastructure improvements and customer benefits, retention of existing strict ringfencing provisions, and independence of the utility over dividend payments, investment decision, and board members. In contrast, SRE indicated a commitment to meeting these conditions that had led to the demise of the previous transactions.

- **So it continues.** SCG was issued a subpoena to hand over documents related to the VC Summer expansion by the US District Attorney's Office for the District of South Carolina after an audit report released to Governor McMaster raised questions on how long SCG and Santee Cooper knew about issues with the plant.
    - **Newly released audit report bears more woes for VC Summer owners.** An audit report prepared in February 2016, which owners SCG and Santee Cooper previously claimed they did not have access to, was released to South Carolina Governor McMaster on Labor Day. The report warned that the development of the two reactors was not likely to be successful, highlighting multiple problems, including lack of a detailed construction schedule, the reactor design being "often not constructible", and contractor Westinghouse not being "commercially motivated" to finish the project. The report came ~1.5 years before the project was scrapped in late July 2017, and three months before regulators were asked for an $800M increase for the budget.
- **DUK charging up with plans to build first utility-scale and ratebased battery storage projects.** On Sept 21st, Duke Energy (DUK) announced plans to spend $30M by early 2019 to install North Carolina's two largest and first utility-scale battery storage systems. The battery storage projects will also be the first to be included in any utilities' rate base. The planned 9MW system in Asheville and 4MW system in Madison County (with a solar facility in conjunction under consideration) will be the first of several that DUK has planned from 2019-2021. Further details will be available when DUK files with the state utility commission in early 2018. The projects are expected to come online in 2019 as part of the company's $1B Western Carolinas Modernization Plan, which includes a $750M 560MW natural gas plant in Asheville to replace an existing coal plant. The systems will be utilized to serve remote areas, where extra resources are needed to support existing infrastructure, by providing improved grid reliability, through frequency regulation and other grid support services.
- **New bottle, new wine.** Media reports that the EPA might replace, instead of repealing, the clean power plan (CPP) with new rules with less stringent carbon emission requirements. The new direction is likely driven by fossil fuel businesses that prefer regulatory certainty for prices of carbon and emission levels, and also to legal and populistic support for emission reductions.
- **Calpine acquisition heads to FERC.** Energy Capital Partners (ECP) and Calpine Corp. filed an application with FERC on Sept 15th seeking approval for the $5.6B cash acquisition. FERC is asked to approve the proposal by mid-January 2018.
- **FERC Almost a Full House – McIntrye and Glick advance.** On Sept 19th, the Senate Energy and Natural Resources Committee approved the President's two FERC nominees, Kevin McIntrye (R) and Richard Glick (D). The nominees will next the full Senate for a confirmation vote. McIntrye is

expected to be named FERC's chairman if he is confirmed, replacing commissioner Neil Chatterjee (R), who is currently serving as chairman. Robert Powelson (R) was confirmed last month joining Chatterjee and Cheryl LaFleur (D). McIntrye and Glick are expected to be confirmed in the full Senate.

  - ***From our 8/11 weekly*: Officially In – Chatterjee and Powelson officially sworn in to FERC.** On Tuesday (8/8), Neil Chatterjee was officially sworn in to FERC to fill previous Commissioner Tony Clark's seat for a term expiring on June 30, 2021. Robert Powelson was officially sworn in on Thursday (8/10) and his term. Powelson stated "I start on Monday [8/14]…There are $80B of projects that need to be reviewed. The agency basically grounded to a halt."
  - ***From our 8/4 weekly*: Turn the music up – The pipeline party is back on.** On August 3rd the Senate confirmed Neil Chatterjee (R) and Robert Powelson (R) to FERC, restoring a quorum. The two remaining FERC nominations, for Richard Glick (D) and Kevin McIntyre (R), were moved to the Senate on August 2nd, the Senate Energy and Natural Resources committee will hold a hearing on the nominations on September 7th. This news comes as a relief to utilities with key pending pipeline approvals at FERC (within our coverage) – **D, DTE, DUK, SO, SR**.

- **PCG and nuclear supporters clash over plant closure plan.** Earlier this summer, Pacific Gas and Electric (PCG) announced its plan to close the 2240-MW Diablo Canyon nuclear plant after 2025, citing cost as the main factor, intending to replace it with a combination of renewables and energy efficiency. Among those against the plan include local mayors within the county the plant is located in and nuclear supporters, such as the Environmental Progress group. On Sept 15th, Environmental Progress filed for rejection of the plan with the California Public Utilities Commission (CPUC), claiming that PCG overestimated costs of complying with the state's once-through-cooling (OTC) regulations. PCG has stated that "there is no merit to Environmental Progress' claims regarding" cost estimates, and will file reply comments by Sept 26th.
- **NEER transmission transfer with FERC approval.** On Sept. 20th, FERC approved a request by NextEra Energy Resources (NEER) to sell its stake in a 240-kV 46-mile Sagebrush transmission line in California to Terra-Gen Power Holdings. Following the sale, Terra-Gen will own a combined ~75% interest in the transmission line, which connects several generators to the Edison International subsidiary, Southern California Edison's (SCE) transmission system.
- **El Paso Electric ratecase settlement.** On Sept 20th, the city of El Paso approved a settlement in the El Paso Electric's (EE) pending rate case before the Public Utility Commission of Texas (PUCT). The settlement authorized a $14.5M rate increase at a 9.65% ROE, a provision for recovery of ~$3M in ratecase costs through a separate surcharge over a three-year period, and recovery of $2.1M annually of nuclear decommissioning funding. The settlement also includes baseline revenue requirements for T&D allowing EE to file with the PUCT to adjust rates periodically. The terms also specify that residential customers with distributed generation that request interconnection after the PUC issues a final order for the ratecase must pay a fixed monthly charge of $30. EE initially requested a $42.5M rate increase at a 10.5% ROE, 48.35% equity ratio, and a $1.694B ratebase.
- **Columbia Gas of Maryland ratecase approved.** On Sept 19th, the Maryland Public Service Commission (PSC) approved a rate settlement for Columbia

Gas of Maryland (CGM), a subsidiary of NiSource (NI), authorizing a $2.4M rate increase at a 9.7% ROE. CGM initially filed for a $6M rate increase at a 10.9% ROE, 52.37% equity ratio, and a $97.7M ratebase.

- **Avista Corp. ratecase approved.** On Sept 20th, the Oregon Public Utility Commission (PUC) authorized a $3.5M rate increase at a 9.4% ROE, 50% equity ratio, and a $229.9M ratebase for Avista after adopting a settlement. The settlement specifies that the rates will be increased for residential and general service customers only. Avista initially filed for an $8.5M rate increase at a 9.9% ROE, 50% equity ratio, and a $243.4M rate base.
- **Portland General Electric ratecase settlement.** On Sept. 18th, the Oregon Public Utility Commission (PUC) staff and Portland General Electric (POR) reached a settlement in the company's pending rate case. The settlement authorized a $32M rate increase at a 9.5% ROE, 50% equity ratio, and a $4.506B ratebase. POR initially filed for a $99.9M rate increase, at a 9.75% ROE, 50% equity ratio, and a $4.594B ratebase.
- **Subsector relative performance.** The subsector breakout below shows that the Integrated names exposed to weakening and backwardated commodity pricing have weakened in recent weeks with investors preferring small/mid-cap regulated utilities instead. Meanwhile, gas utilities have plateaued this month after strong outperformance over the summer.

Figure 3: Utility Subsector Relative Performance

Source: the BLOOMBERG PROFESSIONAL™ service

Yield spreads stay steady after all. The spread between dividend yields and 10-year bond yields remains around 121 bps despite a temporary dip earlier this month to ~130 bps. Historically (pre-2008), this spread has been closer to zero, so the spread continues to suggest defensive yield support for utility sector P/Es. There is usually a high degree of correlation between the 10-year yield and the premium/discount P/E that utilities trade at vs. the S&P 500. This spread acts as a sort of shock absorber, reducing the "control" rates should have over utility valuation if rates begin to rise sustainably. As the Fed gets closer to finalizing its tightening cycle over the next couple of years, longer-duration bond yields should begin to rise as the yield curve steepens. Once over ~4% yield for the 10-Year, we would expect a return to a more historically "normal" relationship between utility equities and bonds (i.e., no spread between the 10-year and dividend yields and utilities trading at about 70%-80% of the S&P 500 forward P/E).

Figure 4: Spread Between Utility Dividend Yield and 10-Year Treasury Bond Yield

Source: the BLOOMBERG PROFESSIONAL™ service

For now, historical correlation as illustrated below suggests utilities are about 1% undervalued at a 1% relative premium forward P/E vs the S&P 500 based on the CS forecast for a 2.8% 10-year yield by yearend 2017. Note the weaker 0.07 correlation for 2013 – 2017 vs. 0.7 stronger correlation from 2010 – 2013, a phenomenon that we attribute, in part, to the spread between bond yields and dividend yields that has persisted through the recent period of unusually low interest rates.

Source: the BLOOMBERG PROFESSIONAL™ service

The next two charts illustrate the increasing correlation between utility stock movements since 1990 (an average of each stock's correlation vs the group average daily movement), even while annualized volatility has remained fairly steady aside from recessionary spikes in 2001-2003 and 2007-2010. We see this largely as a symptom of increased programmatic trading and the popularity of Exchange Traded Funds (ETFs), with higher correlations making it tougher on market/beta-neutral strategies typically run by sector-focused hedge funds.

Recent Excerpts:

- **CMS: Palisades Remains Perched**: **Early shutdown for Palisades nuclear apparently thwarted. The** MI PSC issued a final order for only $136.7M vs CMS's request for securitization of $184.6M (including $172M payment to Palisades' owner ETR) for the early termination of the Palisades purchase power contract (PPA) that currently goes through May 2022. At this time, we do not believe that this will satisfy CMS, with the status quo for continuation of the PPA through 2022 the most likely outcome. While Staff opposed the full $172M payment on various grounds including estimates of cost savings and concerns over fuel diversity and reliability, both the Attorney General and consumer advocacy group, ABATE, supported CMS's request. It is unclear what recourse for appeal may exist at this time, but we note that Entergy is facing a 9/30 refueling decision. Our estimates and TP remain unchanged at this time.
    - **See minimal pressure to the upside for the 10-year capital forecast.** The current capital forecast through 2027 remains $18B, with $7B of possible upside, including gas infrastructure ($500M), grid modernization ($750M), and replacements for Palisades/MCV PPAs (~$3.5B). An early 2018 retirement of Palisades may have accelerated ~$500M of ratebase opportunity (e.g. possible ratebasing of DIG); a delay of four years would reduce valuation by $0.40, however, we did not give any credit for acceleration in our current target price. Rather, our $50 TP assumes 20% probability of $7B upside spread through 2027. Also we note that future capacity contract opportunities for DIG may lie in the $4.50-7.50/kW-mo range, or about $55M-$75M/yr for ~600-700 MW of uncontracted capacity after 2019
- **VST: Power to the People; Initiate at Outperform:** **Retail + Wholesale works in Texas:** We initiate unregulated power generator and retailer VST at Outperform with a $20 Target Price and 12% upside. Although some of VST's coal-fired power plants have been struggling with weak pricing in the fully deregulated Texas electricity market, we see the business as favorably balanced and supported by a high-margin retailing business that sells direct to residential and commercial consumers. VST also has the strongest balance sheet among its peers, which enables it to take advantage of cyclical acquisition opportunities and positions it well to transform away from struggling coal-fired facilities and toward a more gas-fired and solar portfolio.
    - **TXU Energy Provides a Steady Retail Hedge for Luminant's Plants:** With less than 1% residential customer attrition, VST's retail business provides one to three years of reliable high-margin hedging for a power fleet that was largely tailor engineered for its customers under its predecessor utility. We estimate >$20/MWh residential margins and >$10 commercial margins targeting ~$800M/yr retail EBITDA. While we see pressure on Luminant's merchant EBITDA from an oversupplied ERCOT market, our analysis shows retiring some of VST's coal plants could improve around-the-clock (ATC) energy pricing by ~3% or $0.60-0.70/MWh, allowing the company to offset lost EBITDA with only ~$200M-$450M of new gas-fired assets.
    - **Catalysts and Risks:** Catalysts include the EPA BART pollution control rules by Sep 30, the Operations Performance Initiative report in Oct, the coal retirement decision by year-end, and possible dividends/buybacks in 2018. Risks include

    environmental regulation, power/fuel price volatility, retail churn and credit.

    - **Valuation:** Our Target Price of $20 is based on a SOTP analysis with 7.5x 2019E EV/EBITDA for the merchant portfolio and a higher 8.0x multiple for retail results given low attrition and ability to reduce financial risk by matching physical load with physical generation. Our '17/'18/'19 EBITDA estimates are in line with consensus of $1.41B/$1.39B/$1.37B.

- PNW: The Desert Rose Blooms, but Fairly Priced: **We initiate PNW with a Neutral rating and a $90 target price,** implying ~4% total return, mostly from the dividend yield. The company is in a solid position to continue above-average 6%-7% ratebase growth through the early 2020s after receiving approval for a multi-party rate settlement in August. However, load and revenue growth remain suppressed as much as -1.5% from energy efficiency and distributed generation, with EPS and dividend growth of ~5% in-line with industry averages. We view PNW as fully valued after nearly 20% peer outperformance since mid-2015 on both expectations for a favorable rate settlement and M&A target eligibility as a single-state SMID-cap.
    - **Ratebase growth increasingly driven with grid modernization.** The current capex plan through 2019 is boosted with spending on pollution controls for the Four Corners coal plant and Ocotillo peaker plant modernization. However, it also includes a ramp-up of transmission and distribution grid modernization that we expect will continue past 2019, maintaining 6%-7% going forward. There is also opportunity to spend more on ratebased generation under multiple exceptions to the rate settlement moratorium on such projects through 2021 (and a need to replace the Navajo station as well as build more peakers in the early 2020s).
    - **Catalysts and Risks:** 2018 guidance – 3Q17 earnings call; All-Source RFP winners announced – year-end 2017; regulator evaluation of resource plan complete – Feb 2018; roll forward to 2020 capex plan – 4Q17 earnings call. Risks include regulatory risk in ongoing dockets and the outcome of Commissioner Burns' various legal challenges to the rate settlement, possible expansion of renewable portfolio standards (upside), outcome of AZ Supreme CT case for the Navajo reg asset, financing risk, and operating risk.
    - **Valuation:** Our $90 target price is based on a 1.5x premium to the average peer 2019E P/E, based on a continued favorable regulatory environment.

Last Week's Things We've Learned This Week (9/15)**: Our Take:** Utilities continue to bleed off in September some of the outperformance seen this past summer, with 120 bps underperformance vs the S&P 500 in the past week alone. We continue to see the sector as fairly valued (about 2% expensive) based on the CS forecast for a 2.8% 10-year bond yield by yearend. As DUK, SO, NEE, and other utilities dig out from Hurricane Irma, we see most storm damage recoverable through a mix of storm reserves (DUK has $60M remaining in Florida and another $22M in the Carolinas) and cost deferrals for future ratecases. Any incremental ratebase spend would depend on whether utilities seek to accelerate or add to existing capital plans as a result of the storm.

Disclosure Appendix

Analyst Certification

I, Michael Weinstein, certify that (1) the views expressed in this report accurately reflect my personal views about all of the subject companies and securities and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.
The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.
**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	41%	(59% banking clients)
Underperform/Sell*	13%	(53% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Important disclosures regarding companies or other issuers that are the subject of this report are available on Credit Suisse's disclosure website at https://rave.credit-suisse.com/disclosures or by calling +1 (877) 291-2683.

This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates. The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

WATTS COOKING? Weekly

WATTS On Your Mind

This past week, the weakness in the 10-year Treasury was a dominant piece of conversation. It reminded investors just how correlated utilities of all stripe are to bond yields. The most defensive names led the way (CMS, ED, XEL). As the 10-year Treasury has moved from 2.05% to 2.25% since Sept. 8, the XLU has underperformed the SPX by 550 basis points (bps). Most investors saw the movement as appropriate given the overwhelming belief that utilities were overvalued. What is puzzling to some investors is whether the next step taken will be up or down. In a context of escalating hostilities with North Korea, going defensive seems to be the right approach. While no one is assuming a war, some believe that, with the pullback, utilities have become a more affordable protection.

With the somewhat surreal string of natural disasters (Hurricanes Irma and Maria, Mexico City earthquake) causing havoc in the Caribbean, some investors this week wondered what level of impact the damage to Puerto Rico (PR), Dominican Republic (DR), and Mexico may have on AES. Our conversation with the company suggests that it's much too early to tell, although it will mostly be due to lost electricity sales (as AES has appropriate insurance). In Mexico, we note that AES's plants are not located near Mexico City (the are in Tamuin and Merida, both 300+ miles away), so we do not expect much, if any, impact there. PR and DR comprised around 40% of revenues for the Mexico, Central America, and the Caribbean (MCAC) segment in 2016. Assuming this percentage translates into earnings contribution, and with MCAC contributing 32% of consolidated earnings in 2016, this roughly implies $0.03 of EPS contribution from PR/DR per quarter. This seems to be a manageable amount in the scenario that AES's operations are shut down in these countries for three months (as some reports are forecasting for PR), although we certainly hope for a speedy recovery for all affected.

WATTS On Our Mind

Tax reform remains on our mind as a defining near-term catalyst for the group. During the AGA mini-forum last week in New York, former Whip Eric Cantor stated that he believes a tax package will occur, though the scope of the reform might be more modest. That has been our view and the reason for our more cautious stance on utilities for the next two months. However, a number of seemingly contradictory fiscal priorities have emerged that do not bode as well for a smooth passage as we were thinking. Maybe utilities will rally sooner that we thought.

WATTS On The ShUFL

Our ShUFL line-up is unchanged.

Shelby's Utility Focus List (ShUFL)

WATTS on Our Mind

EIX held a call to provide an update on Edison Energy Group (EEG). EIX expects the segment, which is at a -$0.08 EPS run rate, to be breakeven by the end of 2019 (assuming it sells off SoCore, which is half of the segment's EPS drag). EEG aims to service large C&I customers in energy-intensive industries with engineering, renewable advisory, and supply and commodity hedging strategy/procurement. EIX estimates a TAM of $7–9B and potential capital deployment opportunity of $1B over the next 10 years. **Our view: While we would have liked to hear more progress on the SoCore sale, EIX does seem to be forward-thinking (and well positioned coming from a decoupled state) in developing an advisory business.**

DYN closed on the Dighton and Milford asset sales. The $119M transaction for the 310MW CCGTs in ISO-NE announced in July will go toward reducing DYN's debt load. **Our view: the deal closed very quickly, but due to the depressed sale price ($384/kW based on summer ratings) and lofty net leverage, we remain cautious.**

US ITC votes to proceed with the Suniva Section 201 trade case. The US International Trade Commission has unanimously voted (4-0) in favor of proceeding with the Section 201 trade case. This case was filed by Suniva and SolarWorld, which argued that cheap solar imports have stymied competition. The next step in this process will entail the commissioners determining what measures to recommend to the White House. President Trump is expected to formalize these recommendations (perhaps in the form of tariffs, price floors, etc.) in January 2018. **Our view: If trade penalties are ultimately imposed, we may see a slowdown in some solar development. However, we believe many of the larger developers have already secured solar panels for existing projects. We would expect any future projects to have PPAs that incorporate the higher panel prices. The ruling is likely to be more troubling for rooftop solar companies.**

Required disclosures

Conflicts disclosures

This product constitutes a compendium report (covers six or more subject companies). As such, RBC Capital Markets chooses to provide specific disclosures for the subject companies by reference. To access conflict of interest and other disclosures for the subject companies, clients should refer to https://www.rbccm.com/GLDisclosure/PublicWeb/DisclosureLookup.aspx?entityId=1. These disclosures are also available by sending a written request to RBC Capital Markets Research Publishing, P.O. Box 50, 200 Bay Street, Royal Bank Plaza, 29th Floor, South Tower, Toronto, Ontario M5J 2W7 or an email to rbcinsight@rbccm.com.

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors, including total revenues of the member companies of RBC Capital Markets and its affiliates, a portion of which are or have been generated by investment banking activities of the member companies of RBC Capital Markets and its affiliates.

Distribution of ratings

For the purpose of ratings distributions, regulatory rules require member firms to assign ratings to one of three rating categories - Buy, Hold/Neutral, or Sell - regardless of a firm's own rating categories. Although RBC Capital Markets' ratings of Top Pick(TP)/Outperform (O), Sector Perform (SP), and Underperform (U) most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis (as described above).

Distribution of ratings
RBC Capital Markets, Equity Research
As of 30-Jun-2017

			Investment Banking Serv./Past 12 Mos.	
Rating	**Count**	**Percent**	**Count**	**Percent**
BUY [Top Pick & Outperform]	**826**	**52.01**	**293**	**35.47**
HOLD [Sector Perform]	**657**	**41.37**	**144**	**21.92**
SELL [Underperform]	**105**	**6.61**	**7**	**6.67**

Conflicts policy

RBC Capital Markets Policy for Managing Conflicts of Interest in Relation to Investment Research is available from us on request. To access our current policy, clients should refer to
https://www.rbccm.com/global/file-414164.pdf
or send a request to RBC Capital Markets Research Publishing, P.O. Box 50, 200 Bay Street, Royal Bank Plaza, 29th Floor, South Tower, Toronto, Ontario M5J 2W7. We reserve the right to amend or supplement this policy at any time.

Dissemination of research and short-term trade ideas

RBC Capital Markets endeavors to make all reasonable efforts to provide research simultaneously to all eligible clients, having regard to local time zones in overseas jurisdictions. RBC Capital Markets' equity research is posted to our proprietary website to ensure eligible clients receive coverage initiations and changes in ratings, targets and opinions in a timely manner. Additional distribution may be done by the sales personnel via email, fax, or other electronic means, or regular mail. Clients may also receive our research via third party vendors. RBC Capital Markets also provides eligible clients with access to SPARC on the Firms proprietary INSIGHT website, via email and via third-party vendors. SPARC contains market color and commentary regarding subject companies on which the Firm currently provides equity research coverage. Research Analysts may, from time to time, include short-term trade ideas in research reports and / or in SPARC. A short-term trade idea offers a short-term view on how a security may trade, based on market and trading events, and the resulting trading opportunity that may be available. A short-term trade idea may differ from the price targets and recommendations in our published research reports reflecting the research analyst's views of the longer-term (one year) prospects of the subject company, as a result of the differing time horizons, methodologies and/or other factors. Thus, it is possible that a subject company's common equity that is considered a long-term 'Sector Perform' or even an 'Underperform' might present a short-term buying opportunity as a result of temporary selling pressure in the market; conversely, a subject company's common equity rated a long-term 'Outperform' could be considered susceptible

to a short-term downward price correction. Short-term trade ideas are not ratings, nor are they part of any ratings system, and the firm generally does not intend, nor undertakes any obligation, to maintain or update short-term trade ideas. Short-term trade ideas may not be suitable for all investors and have not been tailored to individual investor circumstances and objectives, and investors should make their own independent decisions regarding any securities or strategies discussed herein. Please contact your investment advisor or institutional salesperson for more information regarding RBC Capital Markets' research.
For a list of all recommendations on the company that were disseminated during the prior 12-month period, please click on the following link: https://rbcnew.bluematrix.com/sellside/MAR.action
The 12 month history of SPARCs can be viewed at https://www.rbcinsight.com/CM/Login.

Analyst certification

All of the views expressed in this report accurately reflect the personal views of the responsible analyst(s) about any and all of the subject securities or issuers. No part of the compensation of the responsible analyst(s) named herein is, or will be, directly or indirectly, related to the specific recommendations or views expressed by the responsible analyst(s) in this report.

Third-party-disclaimers

The Global Industry Classification Standard (“GICS”) was developed by and is the exclusive property and a service mark of MSCI Inc. (“MSCI”) and Standard & Poor’s Financial Services LLC (“S&P”) and is licensed for use by RBC. Neither MSCI, S&P, nor any other party involved in making or compiling the GICS or any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability and fitness for a particular purpose with respect to any of such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P, any of their affiliates or any third party involved in making or compiling the GICS or any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

References herein to “LIBOR”, “LIBO Rate”, “L” or other LIBOR abbreviations means the London interbank offered rate as administered by ICE Benchmark Administration (or any other person that takes over the administration of such rate).

Disclaimer

RBC Capital Markets is the business name used by certain branches and subsidiaries of the Royal Bank of Canada, including RBC Dominion Securities Inc., RBC Capital Markets, LLC, RBC Europe Limited, Royal Bank of Canada, Hong Kong Branch and Royal Bank of Canada, Sydney Branch. The information contained in this report has been compiled by RBC Capital Markets from sources believed to be reliable, but no representation or warranty, express or implied, is made by Royal Bank of Canada, RBC Capital Markets, its affiliates or any other person as to its accuracy, completeness or correctness. All opinions and estimates contained in this report constitute RBC Capital Markets' judgement as of the date of this report, are subject to change without notice and are provided in good faith but without legal responsibility. Nothing in this report constitutes legal, accounting or tax advice or individually tailored investment advice. This material is prepared for general circulation to clients and has been prepared without regard to the individual financial circumstances and objectives of persons who receive it. The investments or services contained in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about the suitability of such investments or services. This report is not an offer to sell or a solicitation of an offer to buy any securities. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. RBC Capital Markets research analyst compensation is based in part on the overall profitability of RBC Capital Markets, which includes profits attributable to investment banking revenues. Every province in Canada, state in the U.S., and most countries throughout the world have their own laws regulating the types of securities and other investment products which may be offered to their residents, as well as the process for doing so. As a result, the securities discussed in this report may not be eligible for sale in some jurisdictions. RBC Capital Markets may be restricted from publishing research reports, from time to time, due to regulatory restrictions and/ or internal compliance policies. If this is the case, the latest published research reports available to clients may not reflect recent material changes in the applicable industry and/or applicable subject companies. RBC Capital Markets research reports are current only as of the date set forth on the research reports. This report is not, and under no circumstances should be construed as, a solicitation to act as securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction. To the full extent permitted by law neither RBC Capital Markets nor any of its affiliates, nor any other person, accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or the information contained herein. No matter contained in this document may be reproduced or copied by any means without the prior consent of RBC Capital Markets.

Additional information is available on request.

To U.S. Residents:
This publication has been approved by RBC Capital Markets, LLC (member FINRA, NYSE, SIPC), which is a U.S. registered broker-dealer and which accepts responsibility for this report and its dissemination in the United States. Any U.S. recipient of this report that is not a registered broker-dealer or a bank acting in a broker or dealer capacity and that wishes further information regarding, or to effect any transaction in, any of the securities discussed in this report, should contact and place orders with RBC Capital Markets, LLC.
To Canadian Residents:
This publication has been approved by RBC Dominion Securities Inc.(member IIROC). Any Canadian recipient of this report that is not a Designated Institution in Ontario, an Accredited Investor in British Columbia or Alberta or a Sophisticated Purchaser in Quebec (or similar permitted purchaser in any other province) and that wishes further information regarding, or to effect any transaction in, any of the securities discussed in this report should contact and place orders with RBC Dominion Securities Inc., which, without in any way limiting the foregoing, accepts responsibility for this report and its dissemination in Canada.
To U.K. Residents:
This publication has been approved by RBC Europe Limited ('RBCEL') which is authorized by the Prudential Regulation Authority and regulated by the Financial Conduct Authority ('FCA') and the Prudential Regulation Authority, in connection with its distribution in the United Kingdom. This material is not for general

distribution in the United Kingdom to retail clients, as defined under the rules of the FCA. However, targeted distribution may be made to selected retail clients of RBC and its affiliates. RBCEL accepts responsibility for this report and its dissemination in the United Kingdom.

To German Residents:

This material is distributed in Germany by RBC Europe Limited, Frankfurt Branch which is regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin).

To Persons Receiving This Advice in Australia:

This material has been distributed in Australia by Royal Bank of Canada - Sydney Branch (ABN 86 076 940 880, AFSL No. 246521). This material has been prepared for general circulation and does not take into account the objectives, financial situation or needs of any recipient. Accordingly, any recipient should, before acting on this material, consider the appropriateness of this material having regard to their objectives, financial situation and needs. If this material relates to the acquisition or possible acquisition of a particular financial product, a recipient in Australia should obtain any relevant disclosure document prepared in respect of that product and consider that document before making any decision about whether to acquire the product. This research report is not for retail investors as defined in section 761G of the Corporations Act.

To Hong Kong Residents:

This publication is distributed in Hong Kong by Royal Bank of Canada, Hong Kong Branch, which is regulated by the Hong Kong Monetary Authority and the Securities and Futures Commission ('SFC'), RBC Investment Services (Asia) Limited and RBC Investment Management (Asia) Limited, both entities are regulated by the SFC. Financial Services provided to Australia: Financial services may be provided in Australia in accordance with applicable law. Financial services provided by the Royal Bank of Canada, Hong Kong Branch are provided pursuant to the Royal Bank of Canada's Australian Financial Services Licence ('AFSL') (No. 246521.)

To Singapore Residents:

This publication is distributed in Singapore by the Royal Bank of Canada, Singapore Branch, a registered entity granted offshore bank licence by the Monetary Authority of Singapore. This material has been prepared for general circulation and does not take into account the objectives, financial situation, or needs of any recipient. You are advised to seek independent advice from a financial adviser before purchasing any product. If you do not obtain independent advice, you should consider whether the product is suitable for you. Past performance is not indicative of future performance. If you have any questions related to this publication, please contact the Royal Bank of Canada, Singapore Branch. Royal Bank of Canada, Singapore Branch accepts responsibility for this report and its dissemination in Singapore.

To Japanese Residents:

Unless otherwise exempted by Japanese law, this publication is distributed in Japan by or through RBC Capital Markets (Japan) Ltd. which is a Financial Instruments Firm registered with the Kanto Local Financial Bureau (Registered number 203) and a member of the Japan Securities Dealers Association ("JSDA").

Power/Utilities Macro Trends Tracker: Decline In Forward Spreads

roger.song@suntrust.com

What's Inside

Page 2 includes the Table of Contents for all the relevant macro trends that we track.

What's Incremental To Our View

This report includes our analysis of the key macro factors impacting the power/utility sector, including: forward power prices, spark spread, dark spread, and gas/coal spread trends; domestic electric consumption growth; and national weather patterns. Based on the latest peer group valuations, we are decreasing our price targets on CMS, DUK, GXP, PNM, PNW, SO, and XEL.

IMPORTANT POINTS

- On-Peak spark spreads currently suggest an increase over the 2017-2020 period ($12.9/MWh - $15.4/MWh) but decreased 1% versus the prior week.

- On-Peak dark spreads currently suggest an increase over the 2017-2020 period ($5.7/MWh - $6.0/MWh) but decreased 7% versus the prior week.

- Forward power prices were flat last week, versus no change in forward gas prices and a 5% increase in forward coal prices.

- Domestic electric consumption decreased 7% for the week ended September 16 and has decreased 2% year to date.

- The STRH Power Index decreased 3% for the week (versus flat for the S&P 500) and has increased 11% year to date (versus +12% for the S&P 500).

- The STRH Power Index is trading at a P/E multiple of 17.1x our 2019 estimates (a 10% premium to historical levels); an EV/EBITDA multiple of 9.5x our 2019 estimates (a 9% premium); P/B multiple of 2.0x (a 17% premium); and a Treasury-dividend yield spread of -112 basis points (a 12% discount).

- Based on the latest peer group valuations, we make the following decreases to our price targets: CMS to $47 from $49; DUK to $88 from $91; GXP to $31 from $32; PNM to $36 from $37; PNW to $84 from $86; SO to $51 from $53; XEL to $46 from $47.

Notes:
(A) Investment Rating: Buy (B) = the stock's total return is expected to outperform the S&P 500 over the next 12-18 months; Hold (H) = the stock's total return is expected to perform in line with the S&P 500 over the next 12-18 months; Sell (S) = the stock's total return is expected to underperform the S&P 500 over the next 12-18 months. Only stocks under coverage are assigned an investment rating.
(B) Near-term price target over the next 12 months.
(C) 2017 FCF is calculated as cash flow from operations minus capex.

VALUATION

AEP
Assuming a 19.5x P/E multiple (a 9% premium to the peer group to reflect the above average earnings growth profile) on our 2019 estimate of $4.11, we derive our price target of $80.

AES
Assuming an 11.4x P/E multiple (which would still imply a 10% “conglomerate” discount to the peer group) on our 2019 estimate of $1.32, we derive our price target of $15.

CMS
Assuming a 19.3x P/E multiple (a 10% premium to the peer group to reflect the above average growth outlook) on our 2019 estimate of $2.47, we derive our price target of $47.

CNP
Based on the market value of CNP’s ownership in ENBL, we derive an $8/share value. Factoring an 18.9x P/E multiple (which represents the blended peer group average based on the company’s electric and gas utility earnings mix) on our 2019 Utility estimate of $1.09, we derive a $21/share value. Consequently, our sum of the parts price target is $29.

CPN
Based on the company's take out price, and our assumption that a higher bid will not emerge, we derive our price target of $15.

DUK
Assuming a 17.5x P/E multiple (in line with other large cap peers) on our 2019 estimate of $5.09, we derive our price target of $88.

DYN
Assuming an EV/EBITDA multiple of 7.8x (a 3% discount to the peer group to reflect the higher leverage at the company) on our 2019 EBITDA estimate of $1.30bn, coupled with implied net debt of $8.26bn (which factors in all the announced asset sales), we derive our price target of $11.

EIX
Assuming a 19.2x P/E multiple (a 7% premium to the peer group to reflect the company’s above average earnings and dividend growth profile) on our 2019 estimate of $4.69, we derive our price target of $90.

EXC
Assuming a 14.8x P/E multiple (in line with the peer group) on our 2019 estimate of $2.75, we derive our price target of $41.

GXP
Assuming a 17.2x P/E multiple (a 2% discount to the peer group to reflect some uncertainty in the regulatory approval process for the merger) on our 2019 estimate of $1.80, we derive our price target of $31.

NRG
Based on the current market value of NRG's ownership in NYLD, we derive a $5/share equity value. Applying a 9.0x EV/EBITDA multiple (a 10% premium to the current peer average to reflect the potential upside from the successful execution of the Transformation Plan) to our residual NRG 2019 EBITDA estimate of $1.90 billion, coupled with implied residual Net Debt of $11.4 billion, we derive an $18/share value for the residual NRG. Consequently, our price target is $23.

PNM
Assuming a 17.8x P/E multiple (in line with the small cap peer group) on our 2019 estimate of $2.03, we derive our price target of $36.

PNW
Assuming a P/E multiple of 17.8x (in line with other small / mid cap peers) on our 2019 estimate of $4.71, we derive our price target of $84.

SO
Assuming a 16.6x P/E multiple (a 5% discount to the large cap peer group, reflecting ongoing uncertainty around the Vogtle project) on our 2019 estimate of $3.15, we derive our price target of $51.

XEL
Assuming a 17.5x P/E (in line with the peer group) on our 2019 EPS estimate of $2.60, we derive our price target of $46.

RISKS

AEP
- Final resolution of pending regulatory issues.
- Future earnings power post merchant exit
- Impact of proposed and future EPA regulations.

AES
- Potential regulatory/economic changes in key international markets.
- Investor sentiment regarding emerging/international markets.
- Successful execution of portfolio restructuring strategy.

CMS
- Outlook for Retail Open Access in Michigan.
- Change in the regulatory regime.
- Load growth trends.

CNP
- Macro trends and growth outlook for the MLP portfolio.
- Load growth trends in service territories.
- Ability to restructure MLP ownership position.

CPN
- Outlook for future spark spreads.
- Timing of additional EPA regulations.
- Electric load growth trends.

DUK
- O&M cost management.
- Future electric load growth trends.
- Impact of future regulatory initiatives.

DYN
- Outlook for forward commodity curves.
- Integration of the pending acquisitions.
- Final outcome of debt restructuring discussions.
- Implication of future EPA regulations.

EIX
- Capital investment and growth plans for non-utility operations.
- Final CPUC decision on applications to reopen SONGS retirement settlement.
- Outcome of pending and future regulatory cases.

EXC
- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

GXP
- Load growth outlook in service territories.
- Outcome of pending rate cases.
- Impact of higher property taxes and transmission costs.
- Completion of the WR acquisition.

NRG
- Execution of the Reset plan.
- Outlook for forward commodity curves.

PNM
- Final New Mexico PRC decision on the rate case settlement.
- Electric load growth trends in service territories.

PNW
- Impact of energy efficiency and distributed generation programs.
- Any regulatory changes regarding distributed generation
- Load growth outlook

SO
- Outlook for load growth.
- Dilution from additional equity issuance.
- Potential for further delays and cost increases at the large construction projects.
- Higher than expected accretion from AGL acquisition.

XEL
- Outcome of pending and future rate cases.
- Outlook for future capital expenditure (and rate base) growth.
- Load growth trends in service territories.

Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/25/2017):

Morning Meeting Highlights

SunTrust Robinson Humphrey Lodging Speaker Series Conference Call today at 11: a.m. with CBRE Hotels' Americas Research

2018 Outlook: Asset Valuations, Labor Costs, and RevPAR

Hear from one of the leading hotel consultancies on the latest lodging trends—from the top line to the bottom line and the latest on hotel transactions activity.

CBRE Hotels' Americas Research offers a unique perspective with an 80-year history of analyzing hotel financial statements as well as insights through their related brokerage and appraisal services.

Topics to be covered include: Occupancy, ADR, and RevPAR forecasts for 2017 and 2018 by segment and market, Cap Rate and hotel transactions trends, and a special focus on the emerging topic of rising labor costs.

Led by
R. Mark Woodworth, Senior Managing Director, CBRE Hotels' Americas Research

Jamie Lane, Senior Economist, CBRE Hotels' Americas Research

C. Patrick Scholes, Senior Analyst, SunTrust Robinson Humphrey

Sectors
Lodging and Lodging REITs

International: 1-203-369-3270
Available through 10/5

Chesapeake Energy (CHK, $4.22, Buy) - Powder River Presentation Highlights Notable Progress and Upside - Chesapeake presented at the SunTrust Robinson Humphrey Power River Basin (PRB) Summit last week. Highlights included a new positive Turner well, full development company operations in the Turner and Sussex formations, along with a long-term production forecast for Chesapeake in the play to rival its Eagle Ford in a few years. Though Chesapeake still has a number of quarters before likely achieving FCF neutrality, the PRB provides a highly economic play for the company along with the Eagle Ford and Mid Continent; all which can help drive materially higher upcoming earnings. - Neal Dingmann

9/25	11AM ET Conference Call with CBRE Hotels' Americas Research - Scholes

Banking - Regional and Community Banks - Regional and Community Banks - Desperately Seeking Deposits - Banks with high loan/deposit ratios and strong loan growth like STRH covered companies ABCB, ASB, CADE, CATY, GNBC, LTXB, OZRK and PACW are seeking incrementally more core funding via an acquisition. Starting on page 4, we highlight about 100 of the most core deposit heavy $1 billion-$5 billion asset franchises. Banks with the most balance sheet liquidity and best core funding are Buy rated STBZ and non-covered companies like CVCY, HTBK, FNRN, CCBG and BMRC. Franchises like these should get higher valuation levels as deposit costs increase for the industry. - **Jennifer Demba**

Self Storage REITs - REITs - The "Ki" to Self-Storage - In September 2017, net rents decreased by -2.6% YoY (-2.4% street rates, promotions +0.2% higher), which was slightly weaker than August's trend of -0.8% YoY. As we stated last month, although August was improved from previous months' trends of -3% to -5% YoY, one month does not make a trend. - **Ki Bin Kim**

Application Software - Tillman's Software Monday Morning Missives - **Terry Tillman**

Clinical Labs - Diagnostic Labs (LH, DGX) Comments On Proposed Clinical Lab Fee Schedule Rates - **David MacDonald**

Other Focus Items Today

Consumer

Leisure Products - August U.S. Golf equipment sales up 4% (ELY/GOLF) - **Michael Swartz**

Electric Power and Utilities

Electric Power and Utilities - Power/Utilities Macro Trends Tracker: Decline In Forward Spreads - This report includes our analysis of the key macro factors impacting the power/utility sector, including: forward power prices, spark spread, dark spread, and gas/coal spread trends; domestic electric consumption growth; and national weather patterns. Based on the latest peer group valuations, we are decreasing our price targets on CMS, DUK, GXP, PNM, PNW, SO, and XEL. - **Ali Agha**

Energy

Chesapeake Energy (CHK, $4.22, Buy) - Powder River Presentation Highlights Notable Progress and Upside - Chesapeake presented at the SunTrust Robinson Humphrey Power River Basin (PRB) Summit last week. Highlights included a new positive Turner well, full development company operations in the Turner and Sussex formations, along with a long-term production forecast for Chesapeake in the play to rival its Eagle Ford in a few years. Though Chesapeake still has a number of quarters before likely achieving FCF neutrality, the PRB provides a highly economic play for the company along with the Eagle

Ford and Mid Continent; all which can help drive materially higher upcoming earnings. - **Neal Dingmann**

Financials

Banking - Regional and Community Banks - Regional and Community Banks - Desperately Seeking Deposits - Banks with high loan/deposit ratios and strong loan growth like STRH covered companies ABCB, ASB, CADE, CATY, GNBC, LTXB, OZRK and PACW are seeking incrementally more core funding via an acquisition. Starting on page 4, we highlight about 100 of the most core deposit heavy $1 billion-$5 billion asset franchises. Banks with the most balance sheet liquidity and best core funding are Buy rated STBZ and non-covered companies like CVCY, HTBK, FNRN, CCBG and BMRC. Franchises like these should get higher valuation levels as deposit costs increase for the industry. - **Jennifer Demba**

Healthcare

Clinical Labs - Diagnostic Labs (LH, DGX) Comments On Proposed Clinical Lab Fee Schedule Rates - **David MacDonald**

Spark Therapeutics (ONCE, $85.15, Buy) - Strength Should Continue; Raising PT To $95 - ONCE has outperformed the biotech sector YTD, mainly driven by a continued stream of positive data from the hemophilia programs. We expect the strong trend to continue in 4Q17 and into 2018, with upcoming milestones likely providing strong momentum for the stock. We expect favorable votes on Luxturna at the FDA AdCom on 10/12, and expect improved efficacy data from SPK-8011, after the dose escalation in the ongoing Phase I/II study, to be reported in December at ASH. After adjusting discount period in our valuation matrices, we raise PT to $95 from $85 and reiterate Buy rating on ONCE shares. - **Edward Nash**

Bristol-Myers Squibb Company (BMY, $63.36, Hold) - Opdivo granted FDA approval & 1st mover advantage in 2L Hepatocellular Cancer - As we expected, Opdivo received FDA approval in 2L hepatocellular carcinoma (HCC or liver cancer) based on Ph-1/2 Checkmate-040 trial results. The HCC approval provides a small commercial opp'y (orphan indication) & 1st-mover adv. As oncologists gain experience using Opdivo in 2L liver cancer (vs. Bayer's Stivarga), it positions Opdivo well to move up into the 1L setting (vs. Nexavar) with Checkmate-459 data expected in 2H17. We model Opdivo '21E sales at $7.7B vs. the Street's $7.8B. BMY's IO+IO strategy hinges on CM-227 interim 4Q17/top-line data 1Q18. Reiterate Hold/$55PT on 17.5x '18E EPS. - **John Boris**

Merck & Co. Inc. (MRK, $65.60, Buy) - Keytruda granted FDA approval in 2L+ Gastric Cancer - As we expected, Keytruda secured FDA approval in 2L+ Gastric Cancer (PD-L1+ pts) based on KN-059 results presented at ESMO. MRK has 1st-mover adv. in the US gastric cancer mkt (26K/11K incidence/mortality), while BMY/Ono's Opdivo secured approval from the MHLW in Japan (38K/16K). We expect rapid adoption of Keytruda in 2L+ gastric patients. MRK is also pursuing Keytruda +/- chemo in 1L gastric cancer in KN-061, with readout expected in 2H19. Keytruda label expansions & data readouts support our ‘21E sales at $9.9B vs. the Street’s $9.7B. Reiterate Buy/$73PT on 17.7x ’18E EPS, supported by DCF. - **John Boris**

Editas Medicine (EDIT, $23.16, Hold) - On The Road - Positive Reception, Awaiting Clinical Data - We hosted a series of investor meetings with Editas’ management - Charlie Albright (CSO), and Mark Mullikin (IR). We liked management's tighter focus on two areas: (1) gene editing in the eye, and (2) ex-vivo cellular gene editing. While we are very positive on the influence that gene editing will likely have on many genetic mutation-based diseases, we need to get a step closer to human data before we can get more constructive on the name - but key events to watch are natural history data in mid-2018 and early Phase 1 data by YE18. Reiterate our HOLD rating and $17 PT (DCF/NPV). - **Peter Lawson**

Orthofix International N.V. (OFIX, $47.76, Buy) - Management Meeting Highlights - We traveled with OFIX management yesterday and they reiterated their commitment to the 4 key franchises, 5%+ organic growth over the mid-term and 300 BPS of adjusted EBITDA improvement over the next three years. Management continues to believe that a down-classification of the BioStim indication by the FDA is highly unlikely, and that even it were to occur, that the commercial impact would be negligible. - **Bruce Nudell**

Industrials

Mohawk Industries, Inc. (MHK, $254.11, Buy) - Reiterate Buy Rating On Weakness - **Keith Hughes**

Real Estate Investment Trusts

Self Storage REITs - REITs - The "Ki" to Self-Storage - In September 2017, net rents decreased by -2.6% YoY (-2.4% street rates, promotions +0.2% higher), which was slightly weaker than August’s trend of -0.8% YoY. As we stated last month, although August was improved from previous months’ trends of -3% to -5% YoY, one month does not make a trend. - **Ki Bin Kim**

TMT

Application Software - Tillman's Software Monday Morning Missives - **Terry Tillman**

Entertainment - STRH Digital Entertainment Weekly: ATVI, LGF, NFLX, P, Roku, Spotify - P: SIRI completes investment, Maffei named P Chairman. LGF: ‘Outlander’ viewership could bode well for Starz subs. ATVI: Destiny 2 tops UK chart for 2nd consecutive week while Overwatch League sells final 3 teams for inaugural season set to begin 1/10 (preseason 12/6). We hosted investor meetings last week with NFLX, ATVI, EA, LGF, P, and others (LINK 1, LINK 2). - **Matthew Thornton**

Analyst Certification

By issuing this research report, each SunTrust Robinson Humphrey, Inc. analyst named in this report hereby certifies that the recommendations and opinions expressed accurately reflect the research analyst's personal views about any and all of the subject securities or companies discussed herein and no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.

Charts indicating changes in ratings can be found in recent notes and/or reports at our website or by contacting SunTrust Robinson Humphrey. Please see our disclosures page for more complete information at https://suntrust.bluematrix.com/sellside/Disclosures.action.

STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock's total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock's total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock's total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH's rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:

B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

The prior rating system until Oct. 7, 2016:

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 09/25/2017):

Coverage Universe			**Investment Banking Clients Past 12 Months**		
Rating	**Count**	**Percent**	**Rating**	**Count**	**Percent**
Buy	420	59.91%	Buy	132	31.43%
Hold/Neutral	277	39.51%	Hold/Neutral	62	22.38%
Sell/Reduce	4	0.57%	Sell/Reduce	1	25.00%

Our fortnightly Bright Light compiles the latest research reports published by the Global Utilities Team, our high conviction stock ideas, valuation tools and key market performance data.

Report of the week: UK Utilities – Feedback from the Credit Suisse UK utility day

Mark Freshney and Guy MacKenzie run through the key themes and their take on the session-specific feedback from the seventh annual UK utility day held on 21st September. Click here

- **Widespread acceptance on political risk:** It is almost exactly four years since the Labour party proposed a policy of freezing domestic energy prices. At the event, both companies and investors finally seemed to accept that utilities must try to help vulnerable customers and that the issue of energy prices will not recede any time soon. It was 40 minutes into the SSE session before the first question on retail exposure. Normally, retail exposure is a key topic for debate throughout investor meetings. The fact there is more acceptance leads them to believe a lot of the negativity is priced-in to the shares.
- **'Legitimacy of returns' in regulated networks:** The term came up in three of the sessions. Companies must not only work to earn their returns (e.g. c14% post-tax nominal returns on regulated equity) but they must also justify the profits they make to the public. They state that they have not yet seen regulated grids forgo revenue, but they think it might be possible that companies volunteer to do so. While the final determination for water is not until December 2019 and energy December 2020, it appears returns will in any event be lower at the next price controls.
- **Companies more focused on growth capex than at any time since 2013:** SSE and Drax appeared to be bullish on growth options. Companies are also focused on growth outside of the UK, with SSE mentioning Arklow (c500MW of offshore wind in Ireland) and NG seeing that c50% of its regulated equity could be outside of the UK in the 2020s. There is much debate about exactly where increased grid spend derived from electric vehicles and decarbonisation of heating will occur (e.g. transmission or distribution). Competitive tendering in networks could mean spend and economics are not captured by incumbents.

On Thursday 21st September we hosted our seventh annual UK utility day in London. In attendance were Executives from the utilities, representatives from both OFGEM and OFWAT and c16 investors. In this note, we run through the key themes and our take on the session-specific feedback.

The major themes from the day:

Widespread acceptance on political risk: It is almost exactly four years since the Labour party proposed a policy of freezing domestic energy prices. At our event, both companies and investors finally seemed to accept that utilities must try to help vulnerable customers and that the issue of energy prices will not recede any time soon. It was 40 minutes into the SSE session before the first question on retail exposure. Normally, retail exposure is a key topic for debate throughout investor meetings. The fact there is more acceptance leads us to believe a lot of the negativity is priced-in to the shares.

'Legitimacy of returns' in regulated networks: The term came up in three of the sessions. Companies must not only work to earn their returns (e.g. c14% post-tax nominal returns on regulated equity) but they must also justify the profits they make to the public. We have not yet seen regulated grids forgo revenue (and we doubt regulators would re-open price controls), but we think it might be possible that companies volunteer to do so. While the final determination for water is not until December 2019 and energy December 2020, it appears returns will in any event be lower at the next price controls.

Companies more focused on growth capex than at any time since 2013: SSE and Drax appeared to be bullish on growth options. Companies are also focused on growth outside of the UK, with SSE mentioning Arklow (c500MW of offshore wind in Ireland) and NG seeing that c50% of its regulated equity could be outside of the UK in the 2020s. There is much debate about exactly where increased grid spend derived from electric vehicles and decarbonisation of heating will occur (e.g. transmission or distribution). Competitive tendering in networks could mean spend and economics are not captured by incumbents.

Figure 1: Summary of our stock views

y/e Mar 2019 (FY +1)	SSE	DRX*	CNA*	DONG*	SVT	UU	NG	PNN
CS rating	O/P	O/P	N	N	N	U/P	U/P	U/P

Recent Research

Europe

Fortum
Neutral
TP €14.2

- **Vincent Gilles** comments on the potential acquisition of a 46.6% stake in **Uniper** (€23.2, TP €20, O/P) by **Fortum** (€16.7, TP €14.2, N) in early 2018. He estimates the positive EPS impact to be c30% for 2018E assuming that Fortum takes over 100% of Uniper in early 2018 and assuming no synergies, no change in tax positions and no disposals. He states that the deal could be positive for Fortum as it could boost EPS growth and reduce exposure to the Scandinavian power market. Click here
- **Vincent** analyses the agreement signed by **Fortum** (€16.7, TP €14.2, N) with **e.on** (€9.4, TP €8.4, N) to buy a 46.6% stake in **Uniper** (€23.2, TP €20, O/P). Fortum plans to launch a voluntary public takeover offer to all Uniper shareholders at €22ps in early 2018, unchanged from the previous announcement. The deal will be financed with existing cash and committed credit facilities and is subject to regulatory approval. He reiterates his view that not only Fortum would prefer controlling Uniper but also may find itself above 50% anyway. Click here

Uniper
Outperform
TP €20

- **Vincent** writes about the potential impact on **Uniper** (€23.2, TP €20, O/P) from the announcement by **Fortum** (€16.7, TP €14.2, N) on a possible acquisition of a stake in Uniper at €22ps. He believes that the share price of Uniper will stay slightly below the targeted €22 to allow for the value of time and a potential failure of the deal to complete. He does not assume investors to anticipate an increase of the offer. In his view, Fortum will have agreed the €22 price with **e.on** (€9.4 TP €8.4, N) already giving it close to full control without paying more. Click here

National Grid
Underperform
TP 860p

- **Mark Freshney** reiterates his Underperform rating for **Global Utilities Conviction Stock** **National Grid** (925p, TP 860p, U/P). NG earlier this month held an investor day on its New York business and gave 4-year targets. He increases his 4-year US EBIT growth CAGR from c7% to c10% as a result. He increases long-term US$:GBP rate to 1.33 (from 1.27); in-line with in-house assumptions. This results in changes in his FYmar18E and FYmar19E EPS forecasts by <c1%. He reiterates his Underperform rating as he sees premium to combined RAB and rate base still at elevated levels and he believes that UK allowed returns will fall even before the next price controls. Click here

SSE
Outperform
TP 1,500p

- **Mark Freshney** reviews the 1HFY18 pre-close statement of **SSE** (1,394p, TP 1,500p, O/P), whose first half profit makes c26% of his full-year estimate. He estimates that the retail business comes mostly for free at the current share price and notes that SSE has one of the most attractive dividend yields in the sector. The transmission business is subject to negative revenue adjustments in 2017/18, which he claims is a fact well-known. He also highlights the quality of investment pipelines of the company which generates >c10% project-level IRRs on onshore and offshore wind and >c8% on networks, versus a WACC of c5-6%. He maintains his Outperform rating and TP. Click here

Suez
Underperform
TP €13.1

- **Guy MacKenzie** downgrades **Suez** (€15.2, €13.1, U/P) to Underperform (from Neutral) as he sees unrealistic growth expectations priced in. He cuts his 2017-20E EPS estimates by c17-25% on FX, lower waste and water margins, a higher tax rate, and GE Water deal timing. He sees risk of higher landfill taxes in France in the near term, reducing operational leverage and driving margin pressure and also accounts for only minimal EBIT benefits by any cyclical recovery in France. He also notes the negative translation exposure the company has on account of having c50% of its EBIT outside the Eurozone. He does not expect dividend growth before 2022E and lowers his TP to €13.1 (from €14.5). Click here

North America

Pinnacle West Capital
Neutral
TP US$90

- **Michael Weinstein** initiates coverage of **Pinnacle West Capital** (US$84.8, TP US$90, N) with a Neutral rating and a TP of US$90 implying c4% total return, mostly from the dividend yield. He believes that the company is in a solid position to continue above-average 6%-7% ratebase growth through the early 2020s after receiving approval for a multi-party rate settlement in August. Nonetheless, he notes that load and revenue growth remain suppressed as much as -1.5% from energy efficiency and distributed generation. He views the stock as fully valued after nearly 20% peer outperformance since mid-2015 on both expectations for a favorable rate settlement and M&A target eligibility as a single-state SMID-cap. Click here

Vistra Energy
Outperform
TP US$20

- **Michael** initiates coverage of unregulated power generator and retailer **Vistra Energy** (US$18.7, TP US$20, O/P) at Outperform with a TP of US$20. He sees the business as favorably balanced and supported by a high-margin retail business despite some of its coal-fired power plants struggling with weak pricing in the fully deregulated Texas electricity market. He states that the company also has the strongest balance sheet among its peers, which enables it to take advantage of cyclical acquisition opportunities and positions it well to transform away from struggling coal-fired facilities and toward a more gas-fired and solar portfolio. Click here
- **Michael** shares feedback from his initiation of **Vistra Energy** (US$18.7, TP US$20, O/P) mostly focused on his opinion and analysis of a potential **Dynegy** (US9.9, not covered) acquisition. While he understands that management may see potential value in a combination, he continues to see this as challenging to accrete value, despite VST's stated preference for a sizable portfolio that could bring "influence" to new markets. He states that private equity on the Board may be more cautious and less eager to stretch the balance sheet on a possibly risky expansion outside of Texas so soon after emerging from bankruptcy. Click here

CMS Energy
Outperform
TP US$50

- **Michael** gives an update on **CMS Energy**'s (US$46.2, TP US$50, O/P) request for securitization of US$184.6m for the early termination of the Palisades purchase power contract that currently goes through May 2022. The Michigan Public Service Commission issued a final order for only US$136.7m. He does not believe that this will satisfy the company. He estimates that an early 2018 retirement of Palisades may have accelerated cUS$500m of ratebase opportunity and a delay of four years would reduce valuation by US$0.40ps. Click here

Dominion Energy
Outperform
TP US$83

- **Michael** comments on **Dominion Energy** (US$76.8, TP US$83, O/P) as the Virginia Supreme Court dismissed consumer group arguments that had sought to declare unconstitutional the suspension of biennial reviews for Appalachian Power and Virginia Power through 2020 and 2021, respectively. Although he notes that this was the most likely outcome, the decision had been watched closely by investors and eliminates a risk that the effective rate freeze established by the state legislature might have been reversed. Click here

Brookfield Infrastructure Partners
Neutral
TP US$44

- **Andrew Kuske** reinstates his coverage on **Brookfield Infrastructure Partners** (US$43, TP US$44, N) with a Neutral rating and a US$44 TP (both unchanged from prior). He believes that the company's organic growth capital is biased upwards and the M&A environment also look more positive than in the recent past. He continues to believe that its organic asset base growth underpins an attractive network story. Click here

Azure Power Global
Outperform
TP US$21

- **Maheep Mandloi** writes about the media reports saying that **Azure Power Global** (US$15.9, TP US$21, O/P) has won a 260MW project in Gujarat which increases its contracted portfolio by 24% to 1,329MW. He feels that the lower PPA price of INR2.67/kWh reflects the company's ability to outbid competitors by leveraging its lower cost of capital, post the recent US$500m green bond. He calculates unlevered project returns of c11%, below the mid-high teens seen for prior bids, but c350bps above its post-tax blended cost of capital. He keeps his estimates unchanged as his current estimates already factor in additional project development. Click here

Latin America

Cesp
Neutral
TP R$20

- **Vinicius Canheu** comments on the suspension of the privatization auction of **Cesp** (R$14.5, TP R$20, N) by the Sao Paulo State's Privatization Council. The company cited obtaining extra time to assess potential adjustments to the auction structure as the main reason behind this move. He expects a negative reaction by the market as the company's lower relative attractiveness is again brought to the spotlight. Click here

Brazilian Utilities

- **Vinicius** provides details on the auction of **Cemig's** (R$7.9, Restricted) expired plants for a total concession fee of R$12.1bn. **SPIC** (not listed), **Engie Brasil** (R$35.9, TP R$34, U/P) and **Enel Brasil** (not listed) won lots with the JV between Cemig and Vale not placing any bids. Engie Brasil won the Jaguara (424MW) and Miranda (408MW) plants. For them, the company will pay a total concession fee of R$3.5bn. He commends Engie Brasil's strategy and estimates positive NPV impact of c3.5% on the current market cap, depending on the leverage structure used. Click here

Asia

China Gas Holdings
Outperform
TP HK$16.5

- **Dave Dai** assesses the announcement made by **China Gas Holdings** (HK$22.6, TP HK$16.5, O/P) on the clean energy strategic cooperation framework agreements signed with ten cities in the Beijing-Tianjin-Hebei region regarding coal-to-gas conversion. The company has signed contracts to convert 2.1m rural households from coal to natural gas in Northern China and has completed the connection work for 0.6m households among them by the end of August 2017. These updates support his positive view on the company's rural gas potential and the company is on track to achieve its guidance of 0.8m rural gas connections in FY18E, in his view. Click here

China Solar Sector

- **Gary Zhou** comments on the recent 3-14% rally seen by the H-share solar companies. He believes they are catching up after the strong MTD performance of their A-share peers. He states that investor interest is rising amid the installation momentum in China/US this year. He is cautious on the Chinese ground-mounted solar farm operators due to subsidy delay and expanding low-tariff bidding. He prefers **LONGi** (Rmb27.2, Rmb33, O/P) as it is less affected by short-term uncertainties. Click here
- **Gary** writes a thematic note on the demand momentum in the **China Solar Sector**. He says that China added 38GW of solar capacity in 8M17 and believes that the demand momentum has improved not only in the near term, but also the long term which has led to his more positive view on upstream manufacturers. He expects the momentum to last and expects total new additions to reach 48GW in 2017. He believes that rush demand could remain intact in 4Q17 given the likely subsidy cut for distributed solar. He raises his TP for **Xinyi Solar** (HK$2.8, TP HK$2.7, N) and **LONGi Green Energy** (Rmb27.2, TP Rmb33, O/P) and raises **GCL-Poly** (HK$1.1, TP HK$1.4, O/P) to Outperform (from Neutral). Click here

India Utilities Sector

- **Lokesh Garg** thinks that spike in exchange prices in India reflects the shallowness of the market rather than change in demand-supply balance. He believes that the increase in demand is just c5% of the overall power market and is prima-facie seasonal. He notes that overall power market remains strongly in surplus, with all India plant load factors still well below 60%. He expects load factor to remain below 70% till FY22E on current dynamics. Click here
- **Lokesh** shares his thoughts on the recent household electrification scheme announced by the Indian government. He feels that the scheme is complementary to other schemes including the state wise comprehensive "24x7 power for all" initiative and

notes that it envisages free connections to below-poverty-line households. He believes that the impact on total power demand may not be material (2-3% range) given that unelectrified consumers are likely to be marginal consumers. Distribution infrastructure and metering investment is key, in his view. Click here

Banpu Power
Neutral
TP Bt29

- **Thaniya Kevalee** downgrades **Banpu Power** (Bt22.6, TP Bt29, N) to Neutral (from Outperform) with unchanged TP of Bt29. The stock is up 30% since its IPO and outperformed the SET index by 18% since its stock market debut. The stock offers another c7% potential upside to his target price while its ability to secure new projects with decent return could enhance the upside over the longer term. He cuts his earnings estimates for 2018-19 by 7-9% to reflect the likely delay in SLG project and a slightly higher coal price assumption. He also trims earnings expectations on Japan Solar based on the latest guidance. Click here

Australia / New Zealand

APA Group
Underperform
TP A$7.8

- **Peter Wilson** trims his TP for **APA Group** (A$8.3, TP A$7.8, U/P) from A$8.45 due to the change in arbitration rules. He shows that where revenues are sufficiently high to allow for accelerated capital recovery, arbitration will result in lower asset values at the conclusion of existing contracts and hence lower present values. He reiterates his Underperform rating. Click here

Australian Integrated Utilities

- **Peter Wilson** believes that the **Australian Integrated Utilities** sector is at the point of peak risk due to a collective failure by the domestic gas and electricity industry to anticipate and address market shortages. He also adds that the apparent risk is likely to be higher than realised and expects it to be an opportunity for investors. He states that the downside risk is contained from the moves to restrict LNG exports and to re-regulate retail electricity prices in Victoria. He upgrades **AGL Energy's** (A$23.2, TP A$27, O/P) to Outperform (from Neutral) as its market power remains intact and is arguably enhanced in the long run. Click here

Closing prices as of 27th September 2017

Global Utilities Conviction List

MOST PREFERRED STOCKS	Currency	TP	Last close	Upside	Inclusion date	Price on inclusion	Performance since inclusion (vs. MSCI World Utilities)*	YTD performance (vs. MSCI World Utilities)*	Investment rationale
Cheung Kong Infrastructure	HKD	84.0	67.3	25%	8 May 2017	67.4	(5%)	(6%)	The three reasons for choosing the stock as our sector top-pick are: (i) lowest earnings exposure to Hong Kong, (ii) continuing overseas expansion and the acquisition momentum as exhibited by the recent bid for DUET group, and (iii) the recent correction in the share price. **Our latest research:** Cheung Kong Infrastructure - Further overseas expansion; proposing to buy 35% stake in European energy service provider
Enel	EUR	5.70	5.11	12%	21 Feb 2017	4.01	31%	22%	Enel's growth prospects remain at the top end of the sector, with an 11% net income CAGR in 2016-19E (excluding the impact of minority buyouts/share buybacks), more than double the average of the sector. We recall that in the latest plan Enel targeted €16.2bn 2018E EBITDA and €17.2bn EBITDA in 2019E. We see upside risk on the company's targets driven by regulation in Latin America and efficiency in the network/supply business. We do not see any rationale to the stock's discount to the sector, given its superior growth prospects, improved track record and restructuring progress. We expect an acceleration in minority buyouts in Q4, following the recent announcement of the corporate reorganization in Chile. Trading at 12.5x 2018E P/E (integrated peers 13.8x, sector 14.8x) and 7.0x 2018E EV/EBITDA (integrated peers 8.2x, sector 9.0x), we believe the current price provides an attractive entry point. **Our latest research:** Enel - Unjustified discount
Powergrid Corporation	INR	250	207	21%	8 May 2017	210	(8%)	3%	We reiterate an Outperform rating on attractive valuation and steady medium-term growth of 10% CAGR over FY17-22E despite potential returns cut. PGCIL is trading at par with Asian utilities and is cheaper than European and US utilities. It has much stronger growth of 15% CAGR vs. low mid-single digit growth rates for others. P/B valuation is positively correlated with benign rates and general market valuation. **Our latest research:** Powergrid Corporation - Powergrid Corporation: 1Q results: Steady quarter; commissioning progress tad soft, can catch up during the year. Maintain Outperform
Exelon	USD	43.0	37.2	16%	7 Feb 2017	36.0	(10%)	(9%)	EXC remains our highest conviction top pick after incorporating the company-specific results for the PJM 2020/21 capacity auction; we increase our TP US$2, to US$42, on an increase in capacity revenues which we account for within our capacity payments NPV in our sum of the parts valuation. Risks to our call include ExGen power price/commodity exposure, nuclear operator risk, and PHI regulatory risks. **Our latest research:** Exelon Corporation - Highlighting Potential from Energy Reforms

LEAST PREFERRED STOCKS	Currency	TP	Last close	Downside	Inclusion date	Price on inclusion	Performance since inclusion (vs. MSCI World Utilities)*	YTD performance (vs. MSCI World Utilities)*	Investment rationale
Hong Kong Electric	HKD	5.30	7.18	(26%)	21 Feb 2017	6.72	(5%)	(2%)	The stock faces uncertainties in regulated return negotiation and debt re-financing. 100% of its earnings are exposed to regulatory uncertainty in Hong Kong. We also highlight that re-financing risk remains in 2017. The company expects there could be increase in total finance costs after debt refinancing in 2017, if there are further US interest rate hikes. We estimate that a 25bp effective interest rate increase would lower the company's FY17E EPS by 2.5%. **Our latest research:** Hong Kong Electric Investments: 1H17 distributed income flat despite asset growth; prefer CKI for strong growth
CGN Power	HKD	1.65	2.17	(24%)	21 Feb 2017	2.37	(20%)	(13%)	The stock is the most expensive vs. H-share power peers trading on 1.6x FY17E P/B. We are less convinced that the management target operations for the Taishan units for 2H17/1H18 will be met on time as no fueling license has been granted. We also feel that utilisation and tariff risks are key downsides for the stock. **Our latest research:** CGN Power - 1H17 results in line with output momentum but tariff overhang in 2H17
National Grid	GBp	860	925	(7%)	14 Jan 2015	908	(25%)	(9%)	Concerns core to our Underperform thesis are based upon lower asset base growth. We also believe the company is at peak returns and earns a c12% all-in return on equity. We see most of the £4bn capex comes from the US (7% p.a. rate base growth), where returns are lower than in the UK (5% p.a. RAB growth). We note that the stock is sensitive to the recent rise in bond yields (we estimate each +/-50bps on discount rates is +/-6% on our TP) and this has driven the shares over the past year. We see a lack of short-term catalysts. The stock trades on a c46% premium to combined RAB and ratebase. **Our latest research:** National Grid - US business strong. But UK remains weak.

*Source: Credit Suisse Research, Thomson Reuters, * - USD terms; All MOST PREFERRED STOCKS are Outperform rated and all LEAST PREFERRED STOCKS are Underperform rated. Data as of 27th September 2017*

Recent Rating Changes

Company	Old rating	New rating	Change	Change on	Currency	TP	Last close	Country	Rationale for change
Banpu Power	Outperform	**Neutral**	▼	18 Sep	THB	29.0	26.3	Thailand	The company's share price has risen 30% since its IPO and outperformed the SET index by 18%. With Hongsa overcoming the technical issue we feel very comfortable about current and future performance of BPP's existing operations. Nonetheless, we see some challenges for BPP's expansion target. We cut our earnings estimates for 2018-19 by 7-9% to reflect the likely delay in SLG project and a slightly higher coal price assumption and downgrade to Neutral.
Suez	Neutral	**Underperform**	▼	20 Sep	EUR	13.1	15.2	France	We cut our 2017-20E EPS forecasts c17-25% on FX, lower waste and water margins, a higher tax rate, and GE Water deal timing. Our TP in turn falls c10% to €13.1/share (from €14.5), offset by a roll-forward to 2018E. We see unrealistic growth expectations priced in. Performance ytd appears to be driven by expectations of upside leverage to a cyclical recovery in France, but we estimate every 1% increase in French waste tonnage only benefits EBIT by c1%. Downgrade to Underperform.
AGL Energy	Neutral	**Outperform**	▲	27 Sep	AUD	27.0	23.2	Australia	We upgrade the stock to Outperform with TP increased to A$27/sh. With limited change to market structure, the drivers of above consensus FY17-20 growth are already in place and visible. We are 7.5% above consensus FY20 EBITDA, the electricity price recovery adds to confidence. We increase NPAT by 6.5% in FY20, primarily due to Coopers Gap, FY17 and FY18 are unchanged. Our target price represents approximately 9.0x forward EBITDA, at the top end of the 8.0-9.0x typical range but below recent peaks.
GCL-Poly Energy	Neutral	**Outperform**	▲	27 Sep	HKD	1.40	1.09	China	We upgrade GCL from Neutral to Outperform supported by near-term earnings recovery in 2H17E due to higher multi-Si wafer price and improved demand outlook in the long run. With better demand, we now expect less ASP impact on multi-Si wafer from expanding competing mono-Si products and raise our 2017-19E wafer ASP assumptions by 2-6% for GCL. We see upside on consensus FY17E earnings (Rmb2bn) which are yet to reflect the 2H17 wafer price recovery, in our view. We increase FY17-19E EPS by 21-44% mainly due to 2-6% higher wafer ASP.

First NZ Capital Disclosure Appendix

Important Global Disclosures

Nevill Gluyas and Gregory Main each certify, with respect to the companies or securities that the individual analyzes, that (1) the views expressed in this report accurately reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including FNZC's total revenues, a portion of which are generated by FNZC's investment banking activities.

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, First NZ Capital's policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	23%	(0% banking clients)
Neutral/Hold*	51%	(0% banking clients)
Underperform/Sell*	20%	(0% banking clients)
Restricted	6%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Important Global Disclosures

Credit Suisse's research reports are made available to clients through our proprietary research portal on CS PLUS. Credit Suisse research products may also be made available through third-party vendors or alternate electronic means as a convenience. Certain research products are only made available through CS PLUS. The services provided by Credit Suisse's analysts to clients may depend on a specific client's preferences regarding the frequency and manner of receiving communications, the client's risk profile and investment, the size and scope of the overall client relationship with the Firm, as well as legal and regulatory constraints. To access all of Credit Suisse's research that you are entitled to receive in the most timely manner, please contact your sales representative or go to https://plus.credit-suisse.com .

Credit Suisse's policy is to update research reports as it deems appropriate, based on developments with the subject company, the sector or the market that may have a material impact on the research views or opinions stated herein.

Credit Suisse's policy is only to publish investment research that is impartial, independent, clear, fair and not misleading. This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

Additional Regional Disclaimers

Hong Kong: Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an Australian financial services licence (AFSL) and is exempt from the requirement to hold an AFSL under the Corporations Act 2001 (the Act) under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Act). Research on Taiwanese securities produced by Credit Suisse AG, Taipei Securities Branch has been prepared by a registered Senior Business Person.

Australia (to the extent services are offered in Australia): Credit Suisse Securities (Europe) Limited ("CSSEL") and Credit Suisse International ("CSI") are authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority ("FCA") and the Prudential Regulation Authority under UK laws, which differ from Australian Laws. CSSEL and CSI do not hold an Australian Financial Services Licence ("AFSL") and are exempt from the requirement to hold an AFSL under the Corporations Act (Cth) 2001 ("Corporations Act") under Class Order 03/1099 published by the Australian Securities and Investments Commission ("ASIC"), in respect of the financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). This material is not for distribution to retail clients and is directed exclusively at Credit Suisse's professional clients and eligible counterparties as defined by the FCA, and wholesale clients as defined under section 761G of the Corporations Act. Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1103 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act). Credit Suisse Securities (USA) LLC (CSSU) and Credit Suisse Asset Management LLC (CSAM LLC) are licensed and regulated by the Securities Exchange Commission of the United States under the laws of the United States, which differ from Australian laws. CSSU and CSAM LLC do not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act under Class Order 03/1100 published by the ASIC in respect of financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act).

Malaysia: Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd, to whom they should direct any queries on +603 2723 2020.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that. No information or communication provided herein or otherwise is intended to be, or should be construed as, a recommendation within the meaning of the US Department of Labor's final regulation defining "investment advice" for purposes of the Employee Retirement Income Security Act of 1974, as amended and Section 4975 of the Internal Revenue Code of 1986, as amended, and the information provided herein is intended to be general information, and should not be construed as, providing investment advice (impartial or otherwise).

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

WELLS FARGO SECURITIES

Between The Lines: Wells Fargo Utility Monthly

Utilities

- **Utilities Fall Into Fall.** The S&P Utilities (-2.7%) meaningfully underperformed the S&P 500 (+2.1%) on a total return basis during September in response to the reflation trade (the 10-yr Treasury increased 20 bp to 2.33%) as well as the Trump administration's pivot towards federal tax reform. The pain was felt rather broadly across utility sub-sectors – water +0.4% was the exception – though some of the larger cap, liquid electric names in which generalists typically seek refuge (AEP, DUK & ED) fared modestly worse (-4-5%). Within our coverage, CTWS (+9.3%), CWT (+1.9%) & SO (+1.8%) led the way while SCG (-18.9%), PNW (-6.0%) & FE (-5.4%) lagged.

- **Utilities Appear Fully Valued.** The forward P/E is 107% of the S&P 500, above the 103% 10-yr median, and on an absolute basis the 20.4X forward P/E remains rich to the 10-yr median of 15.9X. More importantly, utilities screen modestly expensive versus interest rates.

- **Hurricanes Highlight Investment Needs.** Utilities were in the spotlight this month as weather-induced outages swept the Texas/Gulf area and the Southeast. By and large, the sector appears to have risen to the occasion as we heard glowing reviews of restoration efforts from regulators and other stakeholders at the FRI Public Utility Symposium. Based on comments at FRI, remarks by Southeast utilities (NEE & SO) and our discussions with CNP, Harvey and Irma highlighted the value of technology investments (customer communication, communications from smart meters and transformers, etc.) and the value of grid resiliency/hardening programs. We expect the hurricanes will lend further credence to distribution programs and smart grid initiatives that utilities are pursuing nationwide. In terms of the direct financial fallout on local IOUs, we expect related operating expenses will be capitalized as a regulatory asset for future recovery and costs to rebuild/replace damaged equipment can typically be securitized if necessary.

- **Renewable Accord Continues.** On 9/25, AEE unveiled an IRP that includes adding 700 MW of wind by 2020, making the company the latest in a string of utilities looking to shift generation mixes towards renewables (and away from fossil fuels). AEE joins AEP's "Wind Catcher" project (announced 7/26), XEL's broad "Steel for Fuel" strategy and more recent "Colorado Energy Plan" (announced 8/29), and AQN's 500-800 MW wind proposal for Empire District Electric (8/11 earnings call). The flurry of announcements appear to be spurred by the increasing economic competitiveness of wind due to significant technology advancements in recent years, along with the extension of renewable tax credits which allow utilities to book 100% of the PTC through 2020 under the safe harbor provision. This allows utilities to undertake significant investment programs (AEE's proposal totals $1B) without putting significant upward pressure on rates (AEE expects the plan to meet MO's RES requirement to have <1% annual impact on rates over a 10-year period). We continue to view renewables as an attractive capex driver for regulated utilities and merchant developers (NEE, PEGI, AGR) alike – and we're interested to see the interplay of the two (utility ownership versus PPAs) in the coming years.

Required Disclosures

This is a compendium report, to view current important disclosures and other certain content related to the securities recommended in this publication, please go to https://www.wellsfargoresearch.com/Disclosures or send an email to: equityresearch1@wellsfargo.com or a written request to Wells Fargo Securities Research Publications, 7 St. Paul Street, Baltimore, MD 21202.

Additional Information Available Upon Request

I certify that:
1) All views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers discussed; and
2) No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by me in this research report.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: September 29, 2017

44% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Outperform.	Wells Fargo Securities, LLC has provided investment banking services for 47% of its Equity Research Outperform-rated companies.
54% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Market Perform.	Wells Fargo Securities, LLC has provided investment banking services for 33% of its Equity Research Market Perform-rated companies.
2% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underperform.	Wells Fargo Securities, LLC has provided investment banking services for 29% of its Equity Research Underperform-rated companies.

Important Disclosure for International Clients
EEA – The securities and related financial instruments described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. For recipients in the EEA, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority. For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 ("the Act"), the content of this report has been approved by WFSIL a regulated person under the Act. WFSIL does not deal with retail clients as defined in the Markets in Financial Instruments Directive 2007. The FCA rules made under the Financial Services and Markets Act 2000 for the protection of retail clients will therefore not apply, nor will the Financial Services Compensation Scheme be available. This report is not intended for, and should not be relied upon by, retail clients.

Australia – Wells Fargo Securities, LLC is exempt from the requirements to hold an Australian financial services license in respect of the financial services it provides to wholesale clients in Australia. Wells Fargo Securities, LLC is regulated under U.S. laws which differ from Australian laws. Any offer or documentation provided to Australian recipients by Wells Fargo Securities, LLC in the course of providing the financial services will be prepared in accordance with the laws of the United States and not Australian laws.

Canada – This report is distributed in Canada by Wells Fargo Securities Canada, Ltd., a registered investment dealer in Canada and member of the Investment Industry Regulatory Organization of Canada (IIROC) and Canadian Investor Protection Fund (CIPF). Wells Fargo Securities, LLC's research analysts may participate in company events such as site visits but are generally prohibited from accepting payment or reimbursement by the subject companies for associated expenses unless pre-authorized by members of Research Management.

Hong Kong – This report is issued and distributed in Hong Kong by Wells Fargo Securities Asia Limited ("WFSAL"), a Hong Kong incorporated investment firm licensed and regulated by the Securities and Futures Commission of Hong Kong ("the SFC") to carry on types 1, 4, 6 and 9 regulated activities (as defined in the Securities and Futures Ordinance (Cap. 571 of The Laws of Hong Kong), "the SFO"). This report is not intended for, and should not be relied on by, any person other than professional investors (as defined in the SFO). Any securities and related financial instruments described herein are not intended for sale, nor will be sold, to any person other than professional investors (as defined in the SFO). The author or authors of this report is or are not licensed by the SFC. DOE takes baseload study and runs with it; puts ball in FERC's court

This morning, the Department of Energy (DOE) followed up its recent baseload study, with a bold call for fast-tracked action from the FERC and its approved Regional Transmission Organizations (RTOs) and Independent System Operators (ISOs). Based on an initial reading of the materials and the scope of the underlying FERC docket (RM17-3) where this is being proposed, our understanding is that this action would apply to all of the regional competitive power markets with the exception of ERCOT (Texas). The basic premise from DOE would be to support unregulated power plants with on site fuel (defined as 90-day supply) that improve grid reliability and resiliency. This seems intended as a legally defensible way to support challenged coal and nuclear units operating in competitive markets. While the Administration's focus on this issue has been no secret, the scope, timing and format of this proposal is much bolder than most in the industry have been expecting - FE being the notable exception.

Plan sounds like de facto re-regulation of baseload coal and nuclear

Essentially, DOE is looking to have the FERC, via the RTOs and ISOs, guarantee that coal and nuclear plants do not continue retiring due to economic pressures. This would be accomplished by ensuring that such units' contributions to system "resiliency" are "fully valued" which DOE describes as an "urgent objective" while citing the Polar Vortex along with Superstorm Sandy and the three major hurricanes of recent weeks in support of its call to action. Per DOE, the FERC has developed a "vast record" on price formation matters "but has not done enough to address the crisis at hand". DOE's proposed rule would have the organized markets establish tariffs allowing in-scope units to recover "costs and a fair rate of return". This would seem to move towards applying Reliability-Must-Run (RMR) type arrangements across the board rather than only where dictated by critical locational needs. More broadly though, DOE's language really sounds like a de facto FERC-authorized re-regulation of coal and nuclear in competitive markets - a truly dramatic change to the status quo if actually implemented via the RTOs.

Invoking Section 403 authority and an extremely aggressive timeline

Procedurally, DOE indicates that it is invoking the Secretary of Energy's authority under Section 403 of its organizing statute. As described by DOE, their Notice of Proposed Rulemaking (NOPR) filed in ongoing FERC docket RM17-3 is requiring the FERC to take final action within 60 days of the NOPR being published in the Federal Register. Alternatively, DOE urges the FERC to issue its NOPR as an "interim final rule, effective immediately, with provision for later modifications after consideration of public comments". These timelines are clearly aggressive by normal standards and it certainly remains to be seen whether this construct can move anything like as fast as the DOE is demanding. We would also anticipate push-back on both the legal basis and timing front although at this early stage those battle lines have yet to be drawn.

Baseload owners obvious beneficiaries but existential threat to markets

Our initial reaction is that this could be a major subsidy to competitive power companies with struggling coal and nuclear plants (DYN, EXC, PEG, NRG, FE, ETR, D, GenOn and Talen to name a few). For those such as EXC, PEG and FE which have been pushing for state level clean energy subsidies for nuclear it provides a potentially more permanent solution. This said, the proposal also raises considerable existential questions for competitive power markets as we currently know them, with two out of the three primary fuels potentially getting a separate set of rules which presumably would have significant implications for future supply and demand balances.

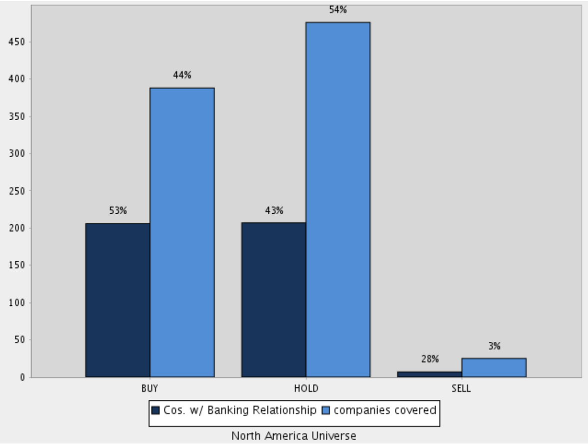
Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Equity rating dispersion and banking relationships



Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of these websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst ' s judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

DoE Gets Pushy

DOE today (9/29) proposed that FERC issue a final rule requiring RTOs and ISOs develop and implement new market rules that accurately compensate “fuel-secure” generation resources necessary to maintain grid “reliability and resiliency.” DoE’s proposal would allow for a loosely defined “recovery of costs” of primarily nuclear and coal generation not regulated by states. The timing (just one month after 8/23 DOE grid study), and prescription (seeking full cost recovery) in today's order come as a surprise to the market. However, we ultimately expect FERC to act independently of DOE's proposal and order regional grid operators to conduct more detailed studies to be followed by FERC orders under Section 206 in 2H 2018. **Bottom line – despite the requested short-fused 60-day deadline, we believe that the proposal is unspecific enough to be interpreted in-line with current expectations** as we outlined in our 9/7 note “EXC: Highlighting Potential from Energy Reforms”. The 45 day comment period and 60 days to act is simply too fast to come up with a reasonable solution to complex problems with energy market design that have been existed and been worked on for nearly two decades.

- **FERC is still an independent authority.** DOE's use of Section 403 requires FERC to act upon the rule within a "reasonable time limit". While the FERC has to “consider and take final action” within 60 days, this would appear to allow FERC to interpret “action” as an order to regional grid operators to submit more detailed proposals.
- **Seeking cost recovery on selected technologies.** Under DoE’s proposal, eligible units are defined as those that provide essential energy and ancillary reliability services (i.e. reliable capacity/generation, frequency and voltage support) with 90 days of fuel supply on site (most coal piles are 30-60 days currently). This highly narrow definition appears to limit eligible technologies to coal, nuclear, or energy storage (when coupled with other technologies). Renewables and gas power plants might also qualify, but that is likely subject to interpretation.
- **EPSA opposed.** The Electric Power Supply Association’s first take is that the proposal is “ill-advised in key respects.” It would leave out non-coal/nuclear assets from a scheme to “essentially re-regulate wholesale markets…This requires sufficient time for full public debate including a much longer public comment and review period than DOE has proposed. Failure to do so simply invites multiple legal challenges down the road.”
- **Why the forceful stance?** We note that the proposal comes on the heels of the Trump Administration’s recent refusal grant Murray Energy’s request to use DoE’s emergency authority under Sect 202 of the Federal Power Act to prevent further coal plant retirements.

Companies Mentioned *(Price as of 29-Sep-2017)*

Exelon Corporation (EXC.N, $37.67)

Disclosure Appendix

Analyst Certification

Michael Weinstein and Maheep Mandloi each certify, with respect to the companies or securities that the individual analyzes, that (1) the views expressed in this report accurately reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(58% banking clients)
Underperform/Sell*	13%	(54% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Important Global Disclosures

Credit Suisse's research reports are made available to clients through our proprietary research portal on CS PLUS. Credit Suisse research products may also be made available through third-party vendors or alternate electronic means as a convenience. Certain research products are only made available through CS PLUS. The services provided by Credit Suisse's analysts to clients may depend on a specific client's preferences regarding the frequency and manner of receiving communications, the client's risk profile and investment, the size and scope of the overall client relationship with the Firm, as well as legal and regulatory constraints. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that. No information or communication provided herein or otherwise is intended to be, or should be construed as, a recommendation within the meaning of the US Department of Labor's final regulation defining "investment advice" for purposes of the Employee Retirement Income Security Act of 1974, as amended and Section 4975 of the Internal Revenue Code of 1986, as amended, and the information provided herein is intended to be general information, and should not be construed as, providing investment advice (impartial or otherwise).

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Additional Information Available Upon Request

I certify that:
1) All views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers discussed; and
2) No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by me in this research report.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: September 29, 2017

2% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underperform.	Wells Fargo Securities, LLC has provided investment banking services for 29% of its Equity Research Underperform-rated companies.

Important Disclosure for International Clients
EEA – The securities and related financial instruments described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. For recipients in the EEA, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority. For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 ("the Act"), the content of this report has been approved by WFSIL a regulated person under the Act. WFSIL does not deal with retail clients as defined in the Markets in Financial Instruments Directive 2007. The FCA rules made under the Financial Services and Markets Act 2000 for the protection of retail clients will therefore not apply, nor will the Financial Services Compensation Scheme be available. This report is not intended for, and should not be relied upon by, retail clients.

Australia – Wells Fargo Securities, LLC is exempt from the requirements to hold an Australian financial services license in respect of the financial services it provides to wholesale clients in Australia. Wells Fargo Securities, LLC is regulated under U.S. laws which differ from Australian laws. Any offer or documentation provided to Australian recipients by Wells Fargo Securities, LLC in the course of providing the financial services will be prepared in accordance with the laws of the United States and not Australian laws.

Canada – This report is distributed in Canada by Wells Fargo Securities Canada, Ltd., a registered investment dealer in Canada and member of the Investment Industry Regulatory Organization of Canada (IIROC) and Canadian Investor Protection Fund (CIPF). Wells Fargo Securities, LLC's research analysts may participate in company events such as site visits but are generally prohibited from accepting payment or reimbursement by the subject companies for associated expenses unless pre-authorized by members of Research Management.

Hong Kong – This report is issued and distributed in Hong Kong by Wells Fargo Securities Asia Limited ("WFSAL"), a Hong Kong incorporated investment firm licensed and regulated by the Securities and Futures Commission of Hong Kong ("the SFC") to carry on types 1, 4, 6 and 9 regulated activities (as defined in the Securities and Futures Ordinance (Cap. 571 of The Laws of Hong Kong), "the SFO"). This report is not intended for, and should not be relied on by, any person other than professional investors (as defined in the SFO). Any securities and related financial instruments described herein are not intended for sale, nor will be sold, to any person other than professional investors (as defined in the SFO). The author or authors of this report is or are not licensed by the SFC. Professional investors who receive this report should direct any queries regarding its contents to Mark Jones at WFSAL (email: wfsalresearch@wellsfargo.com).

Japan – This report is distributed in Japan by Wells Fargo Securities (Japan) Co., Ltd, registered with the Kanto Local Finance Bureau to conduct broking and dealing of type 1 and type 2 financial instruments and agency or intermediary service for entry into investment advisory or discretionary investment contracts. This report is intended for distribution only to professional investors (Tokutei Toushika) and is not intended for, and should not be relied upon by, ordinary customers (Ippan Toushika).

The ratings stated on the document are not provided by rating agencies registered with the Financial Services Agency of Japan (JFSA) but by group companies of JFSA-registered rating agencies. These group companies may include Moody's Investors Services Inc., Standard & Poor's Rating Services and/or Fitch Ratings. Any decisions to invest in securities or transactions should be made after reviewing policies and methodologies used for assigning credit ratings and assumptions, significance and limitations of the credit ratings stated on the respective rating agencies' websites.

About Wells Fargo Securities

Wells Fargo Securities is the trade name for the capital markets and investment banking services of Wells Fargo & Company and its subsidiaries, including but not limited to Wells Fargo Securities, LLC, a U.S. broker-dealer registered with the U.S. Securities and Exchange Commission and a member of NYSE, FINRA, NFA and SIPC, Wells Fargo Prime Services, LLC, a member of FINRA, NFA and SIPC, Wells Fargo Securities Canada, Ltd., a member of IIROC and CIPF, Wells Fargo Bank, N.A. and Wells Fargo Securities International Limited, authorized and regulated by the Financial Conduct Authority.

This report is for your information only and is not an offer to sell, or a solicitation of an offer to buy, the securities or instruments named or described in this report. Interested parties are advised to contact the entity with which they deal, or the entity that provided this report to them, if they desire further information. The information in this report has been obtained or derived from sources believed by Wells Fargo Securities, LLC, to be reliable, but Wells Fargo Securities, LLC does not represent that this information is accurate or complete. Any opinions or estimates contained in this report represent the judgment of Wells Fargo Securities, LLC, at this time, and are subject to change without notice. All Wells Fargo Securities research reports published by its Global Research Department ("WFS Research") are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Additional distribution may be done by sales personnel via email, fax or regular mail. Clients may also receive our research via third party vendors. Not all research content is redistributed to our clients or available to third-party aggregators, nor is WFS Research responsible for the redistribution of our research by third party aggregators. For research or other data available on a particular security, please contact your sales representative or go to http://www.wellsfargoresearch.com. For the purposes of the U.K. Financial Conduct Authority's rules, this report constitutes impartial investment research. Each of Wells Fargo Securities, LLC and Wells Fargo Securities International Limited is a separate legal entity and distinct from affiliated banks.

Forward Power/Gas Curves – 09/28/17. Below, we provide estimated forward curves for power, heat rates, spark, dark, and quark spreads for peak, off-peak, and around-the-clock for various regions in the United States, broken down by each RTO/ISO in North America. In addition, we model forward gas, basis, as well as coal through the 2026 time frame.

Investors should use this link to open an Excel spreadsheet of various curves that can be used for power and utility models (click here to download our weekly price deck summary).

Forward Curve Weekly Highlights: Power and Heat Rates, for the week of 9/28 versus the prior week, **2018 national peak power prices** ($/MWh) were down 0.1% to $34.23 from $34.25 and around-the-clock power was down 0.1% to $29.58 from $29.59. Peak power in PJM was up 0.8% to $37.35 from $37.04; ERCOT was down 0.1% to $31.85 from $31.89; NE-ISO was down 0.1% to $44.19 from $44.20; NY-ISO was down 0.1% to $45.77 from $45.80; and MISO was up 0.5% to $34.78 from $34.59. **2018 peak heat rate (Btu/kWh) contractions**: 0.9% to 10,710 in ERCOT, 0.3% to 9,990 in NE-ISO. **2018 peak heat rate (Btu/kWh) expansions**: 1.5% to 11,673 in NYISO, 0.9% to 11,866 in PJM, 0.9% to 12,170 in MISO. See full price deck for additional details on various other curves and regions.

Forward Curve Weekly Highlights: Spark and Dark Spreads versus the prior week, **2018 Peak Spark Spreads** ($/MWh) in PJM were up 2.2% to $15.32 from $14.99; ERCOT was down 1.7% to $11.03 from $11.23; NE-ISO was down 0.7% to $13.23 from $13.33; NYISO was up 2.3% to $18.32 from $17.91; and MISO was up 1.7% to $14.77 from $14.52. **2018 Around-the-Clock Dark Spreads** ($/MWh) in PJM were up 0.7% to $25.10 from $24.92; ERCOT was up 0.2% to $20.05 from $20.01; NE-ISO was up 0.1% to $31.73 from $31.69; NYISO was down 0.3% to $31.58 from $31.68; and MISO was up 1.2% to $23.08 from $22.80.

Illustrative impact of marking our IPP and integrated utility models to the current forward curves versus published live estimates: PEG, FE, EXC, NRG, DYN and CPN are lower overall and VST is higher. **See the next page for illustrative MtM implications on Guggenheim's IPP and Integrated Utility coverage throughout our forecast period.**

Natural Gas Storage Levels and Eastern Gas Basis Tracker, Gas in storage increased to 3,466 Bcf as of 09/22/2017 a weekly increase of 58 Bcf, resulting in storage 3.5 Bcf below one year ago, 1.2 Bcf above the five-year average for this week. Eastern gas basis (TETCO M3) is currently reflecting a discount to Henry Hub for 2017 and a premium from 2018 through 2020 (-$0.17/$0.09/$0.05/$0.04 for '17/'18/'19/'20), contracting since last week.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

Buy	191	60.63%	22	11.52%
Neutral	122	38.73%	11	9.02%
Sell	2	0.63%	0	0.00%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Ratings Key (as of October 2016)

We use the following ratings system definitions:
OP = Outperform - Forecast to outperform the analyst's coverage universe on a total return basis;
Mkt = Market Perform - Forecast to perform roughly in line with the analyst's coverage universe on a total return basis;
Und = Underperform - Forecast to underperform the analyst's coverage universe on a total return basis;
(S) = Speculative investment;
Spd = Suspended - Coverage and rating suspended until coverage is reinstated;
NR = No Rated - No rating at this time; and
R = Restricted - Dissemination of research is currently restricted.

BMO Capital Markets' seven Top 15 lists guide investors to our best ideas according to different objectives (CDN Large Cap, CDN Small Cap, US Large Cap, US Small Cap, Income, CDN Quant, and US Quant have replaced the Top Pick rating).

Highlighting Potential from Energy Reforms

Our Take: We're raising our target price for EXC $1 to $43 and maintain Outperform with no changes to estimates at this time. The increase reflects partial credit for the potential uplift in energy gross margin resulting from expected price formation reform in PJM in 2018 where the energy market could be restructured to provide more support for 'inflexible' baseload generation.

- **"Soft" Section 206 changes could come in 2018.** As previously noted, we expect the 8/23 release of DoE's long-awaited grid reliability study to be the catalyst for FERC to issue a notification this Fall to all regional transmission operators (RTOs) to study problems with energy market designs across the country, with an eye toward avoiding undesirable early retirements of baseload resources. The RTO studies could then result in proposal filings with FERC around Feb/Mar 2018 followed by orders under Section 206 from FERC to make changes sometime thereafter. Sometimes referred to as a "soft 206", this could result in implementation without a full stakeholder review (in PJM, this would otherwise require a tough 66% assent). As such, we are looking closely to PJM's recent white paper review of energy market price formation at PJM, recommends more support for "inflexible" generation (including nuclear) that is harmed by ramped (lower) marginal pricing as well as negative pricing at night that results from nighttime oversupply of power coming from tax-advantaged wind turbines.

- **Our calculations** estimate potential off-peak price uplift ~$1.20-$4.30/MWh across PJMW and NI Hub, resulting in up to $210M-$370M incremental open (unhedged) EBITDA or about $0.15-$0.25 EPS.

- **Valuation and Risks.** Raising TP $1 to $43 to reflect a 50% probability of energy price reform uplift at a 7.5x 2019E EV/EBITDA multiple. Risks include ExGen commodity exposure and nuclear operator risk; regulatory outcomes.

DISCLOSURE APPENDIX AT THE BACK OF THIS REPORT CONTAINS IMPORTANT DISCLOSURES, ANALYST CERTIFICATIONS, LEGAL ENTITY DISCLOSURE AND THE STATUS OF NON-US ANALYSTS. US Disclosure: Credit Suisse does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

- **Recall that on June 15th, PJM proposed energy market reforms to support "inflexible" baseload resources and address negative nodal pricing.** One proposal is to create more value for large baseload units that have little/no ramping capability by allowing them to set local marginal pricing (LMP) even when they are forced to flood the system with a chunk of MWhs upon activation (under current rules, their dispatch would immediately suppress the price that triggered their activation in the first place). Simultaneously, the value of flexibility would be enhanced through additional reforms, such as the development of a load-following product to compensate flexible resources forced to ramp up or down uneconomically. A second proposal would seek to end the prevalence of off-peak negative LMP pricing that comes from wind generation subsidized by federal wind production tax credits. These negative LMPs erode the value of revenue streams for baseload, particularly nuclear, and PJM suggests further stakeholder/regulator discussion on ways to address the problem. This may include more price-setting eligibility for inflexible resources as well as possibly some kind of floor price for marginal nodal energy.
- **Our calculations below show PJM energy price formation reform could raise off peak prices ~$1.20-$4.30/MWh across PJMW and NI Hub, although on-peak prices would likely remain mostly unchanged.** In Figures 5 and 6 below, we illustrate that allowing inflexible resources such as baseload nuclear and coal to set off-peak prices could eliminate negative night-time pricing and improve average off-peak prices in PJMW by ~$1.20-$2.70/MWh. Figures 7 and 8 show that off-peak prices in NI Hub could increase by $2.30-$4.30/MWh.
- **Our analysis below assumes that PJM will set a floor for marginal heat rates** to eliminate the negative pricing and suppressed positive pricing sometimes seen when in-merit tax-subsidized wind generation must be curtailed to allow out-of-merit baseload (particularly inflexible nuclear) to continue running, especially at night. Mechanically, we assume a system where energy prices are reset higher in the hours where implied market heat rates fall below a threshold level. We illustrate three scenarios: 4, 5 or 6 MMBtu/MWh. Our guiding assumption is that prices below the threshold are reset higher to a new reference level determined by a hypothetical 7 MMBtu/MWh heat rate.
- **We calculate a $130M - $370M improvement in EBITDA or $0.09 - $0.25 EPS uplift in 2019 coming from energy price formation reform.** The range depends on the heat rate floor level chosen under our hypothetical reform assumptions. In Figures 1, and 2 below, we demonstrate a range of potential impacts on ExGen's 2018 and 2019 EBITDA and EPS resulting from ~$1.30-$4.30/MWh uplift in off peak energy prices. The impact on 2018 ($61M-105M EBITDA and $0.04-0.07 EPS) is somewhat muted due to higher hedging percentages, while more upside can be realized in lesser-hedged 2019 ($129M-$225M and $0.09-$0.15 EPS). Note that we also assume that hedging is skewed heavier (60%) toward on-peak hours, where there's more liquidity, a factor that helps push ExGen's margins higher for off-peak improvements. Finally, in Figure 3 below, we illustrate the effect on open unhedged EBITDA (for 2019), with as much as $366M upside or $0.25 EPS.

Source: Company data, Credit Suisse estimates

- ***From our 8/27 weekly:*** **As expected, the DOE Grid Reliability Report supports baseload coal and nuclear. Next step: FERC changes to energy market structures.** On August 23, the DOE issued its long-awaited grid reliability study. Recall that back in April, Energy Secretary Perry ordered DOE staff to conduct a study evaluating the reliability of the nation's electric grid, pertaining to his concerns regarding closures of baseload power plants, particularly coal and nuclear. He had also warned that the DOE would overrule state renewable energy policies (such as renewable mandates) on the grounds of national security if reliability was found to be threatened.

  However, the study found that persistently low natural gas prices to be the greatest driver of baseload power plant retirements, followed by flat power demand, with increased costs from environmental regulations and the additions of renewables to the grid as lesser drivers. In addition, the study concluded that renewables are not a threat to grid reliability to the surprise of many utility and developer executives and other analysts. Many utility executives had feared that the study might preempt state policies, particularly hard-won financial supports for struggling nuclear fleets if the opposite conclusion had been reached. However, the study concluded that "ultimately, the continued closure of traditional baseload power plants calls for a comprehensive strategy for long-term reliability and resilience." **Perhaps most important, the study also suggested that existing market designs may not be able to address further challenges in the future and recommended that FERC expedite its study of wholesale power market structures to improve energy price formation and create fuel-neutral markets that compensate attributes that boost grid reliability.** The DOE also encouraged the EPA "to allow coal-fired power plants to improve efficiency and reliability without triggering new regulatory approvals and associated costs" as well as target an R&D portfolio to help those plants boost efficiency and that federal agencies accelerate and cut the costs of permitting for grid infrastructure for nuclear, hydropower, and coal generation.

  - ***From our 8/20 weekly*:** FERC support for baseload. Federal Energy Regulatory Commission (FERC) incoming commissioner Neil Chatterjee said on **FERC's podcast** that all generation facilities, especially coal and nuclear, need to be "properly compensated to recognize the value they provide to the system". We expect FERC to order RTOs to submit energy market reform proposals later this year.
  - ***From our 8/3 EXC report "ZECs in Hand; Looking for Market Reforms*: FERC action expected next.** The DoE release could be a catalyst for FERC to issue a notification this fall (once a quorum is in place) to all regional transmission operators (RTOs) to study problems with energy market designs across the country with an eye toward avoiding undesirable early retirements of baseload resources.
  - **"Soft" Section 206 changes could come in 2018.** The RTO studies could then result in proposal filings with FERC around Feb/Mar 2018 followed by orders under Section 206 from FERC to make changes sometime thereafter. Sometimes referred to as a "soft 206", this could result in implementation without a full stakeholder review. (In PJM, this would require 66% assent, a tough hurdle.)

- **For PJM, a focus on energy markets.** EXC has previously noted that it would be premature for RTOs to focus on capacity markets and MOPR (minimum offer price rule) extensions when the need to "fix" energy markets and fair energy price formation should be a much higher priority. As such, the company is more focused on PJM's whitepaper reviews of energy market price formation at PJM that among its conclusions, recommends more support for "inflexible" generation (including nuclear) that is harmed by ramped (lower) marginal pricing as well as negative energy pricing at night that results from nighttime oversupply of power coming from tax-advantaged wind turbines. On the capacity side, EXC's look at PJM's initial proposals for a two-stage capacity auction would appear to indicate that only Quad Cities would fail to clear, likely resulting in higher capacity prices for the remaining fleet. See 6/16 Goals Achievable Even Through ZEC Appeals, for full details.

- **Valuation.** Our valuation for EXC as shown in Figure 4 increased to $43 (from $42) after accounting for the average potential EBITDA upside of ~$286M (Figure 3). We assumed a 50% probability that EXC will realize this benefit giving rise to ~$1/sh incremental valuation based on a 7.5x multiple or ~15% upside vs current share price.

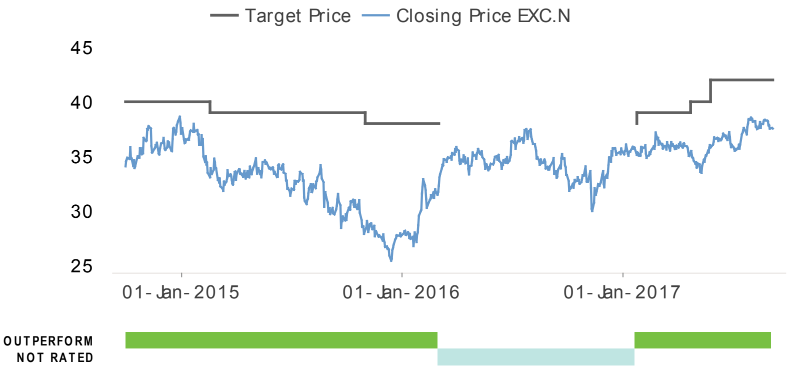
26-May-17	35.82	42.00	

** Asterisk signifies initiation or assumption of coverage.*



The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.
Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.
Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(64% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	14%	(53% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Exelon Corporation (EXC.N)

Method: To arrive at our $43 target price for EXC we use a sum of the parts valuation methodology valuing each of the business segments separately. To value the utilities we use a peer average 2019 P/E multiple of 17x discounted to reflect the respective risks at each of the utilities. To value the generation business we apply a 7.5x EV/EBITDA multiple under our embedded power price scenarios. The values of ZECs and capacity payments are removed from EBITDA estimates and valued separately. Our Outperform rating for EXC reflects a forecasted total return greater than the group average.

Risk: Risks to our $43 price target and Outperform rating for EXC are 1) regulatory risk--PHI ratecase risk, 2) legislative risk, 3) commodity and power and capacity price risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk, 7) weather risk, 8) environmental and climate change risk, and 9) physical infrastructure and cybersecurity risk.

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

UAE: This information is being distributed by Credit Suisse AG (DIFC Branch), duly licensed and regulated by the Dubai Financial Services Authority ("DFSA"). Related financial services or products are only made available to Professional Clients or Market Counterparties, as defined by the DFSA, and are not intended for any other persons. Credit Suisse AG (DIFC Branch) is located on Level 9 East, The Gate Building, DIFC, Dubai, United Arab Emirates.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that.

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates six utilities in Pennsylvania, Illinois, New Jersey, DC, Delaware, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Atlantic City Electric, BGE, ComEd, Delmarva Power, PECO, and Pepco. Exelon Generation operates the largest nuclear fleet in the United States, with plants concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Buy (1).

Our rating is not only based on the IL and NY ZECs but we believe that other states will follow suit in providing support for nuclear plants and that will further improve EXC's financial strength and valuation. We like this regulated utility's robust growth profile of 6-8% through 2020E.

Valuation

We value EXC using a sum-of-the-parts approach to get to our $45 price target. We value ExGen at ~$3/share and believe ExGen’s core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The legacy utility business is valued at $27/share based on a 18.0x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent net debt and add $12/share for ZECs to get to our rounded PT of $45/share.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the risks get rejected after further legal challenge then the stock has downside as some value of ZEC is already in the stock price

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by “AC” in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2017	**Buy**	**Hold**	**Sell**	**Buy**	**Hold**	**Sell**
Citi Research Global Fundamental Coverage	48%	38%	13%	3%	96%	1%
% of companies in each rating category that are investment banking clients	63%	65%	56%	60%	64%	58%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q3 2017 Buy 32% (70%), Hold 44% (64%), Sell 24% (58%); Q2 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (57%); Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc.

takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Quick thoughts from Wells Fargo Securities, LLC Utility & Infrastructure Team:

Utilities

Northeast Marketing Beat (Akers/Kalton) - Last week, we met with investors in Boston and NYC. The hot topics were fairly consistent across the 20+ meetings and, notably, did not include the potential impacts of tax reform. (1) DOE Study - though not without some skepticism of the ultimate outcome/impact of the grid study, the development has certainly revived interest in the integrated names (EXC/PEG/FE within our coverage); we sensed optimism heading into EEI. (2) Value Plays - there was a lot of discussion around the deep discount stocks including FE, SCG and, a little less so, ETR. Investors are sharpening their pencils on FE with many seeing value, but not all ready to step in at this stage of the bankruptcy process. Shifting to SCG, most investors expect the nuclear debacle to ultimately be resolved on reasonable terms relative to what's currently embedded in the stock - that said, the potential for things to get worse before they get better, along with concerns regarding potential revelations from the FBI investigation, are making SCG untouchable right now for many, in our view. ETR represents a more traditional risk/reward play, in our view - investors appear to be slowly coming on board (helped by the recent Arkansas Staff recommendation), though concerns about potential unregulated nuclear liabilities and operational risks at the regulated nuclear fleet continue to hold some back. (3) GXP/WR - investors appear to be largely on board with the long-term MOE (merger of equals) outlook, though we sense that full buy-in will require some positive regulatory data points as we're on the front end of the merger proceedings and rate cases. (4) SRE - while no one appears overly enthused by the $6B of planned equity, we believe that longer-term oriented investors like the addition of Oncor and are attracted to the post-Cameron story; hedge funds are generally not on board given the equity overhang and the potential for additional LNG construction delays. (5) CNP - investors generally view CNP's exit of the ENBL position positively, but are grappling with the potential for a deal (swap of ENBL shares with another larger midstream company) that would likely be dilutive near-term (albeit supportive of the long-term growth outlook). (6) OGE - picking up on the CNP discussion, some view a potential ENBL deal as a positive read-through to OGE (address the overhang on ENBL shares and possibly drive operational improvements), though longer-term concerns on Oklahoma regulation persist. (7) Major Projects - there are mixed opinions on Wind Catcher (AEP) and we sense that investors need to see positive movement before buying-into the upside; sentiments were a bit worse on Northern Pass (ES) with investors poking holes in the growth outlook.

Great Plains Energy (GXP/Outperform) / Westar Energy (WR/Outperform) (Akers) - Late last week GXP/WR, Staff and other key parties filed joint procedural schedules with the Kansas Corporation Commission (KCC) and Missouri Public Service Commission (MPSC). In Kansas, Staff/intervenor testimony is due 1/29/18 with a

3/7/18 settlement deadline and a final decision due 5/29/18. We note that the final order falls within Kansas' 300 day statutory requirement date of 6/21/18. In Missouri, Staff/intervenor testimony is due 1/16/18 with hearings scheduled for mid-March and a final order due 5/9/18. Though not particularly surprising, we are pleased that parties were able to reach agreements on the procedural schedules that keep the deal on track for a 1H2018 close. As a reminder, shareholder approval is needed with votes set to take place next month on 11/21. We remain confident that the deal will be approved on reasonable terms as the MOE appears to address concerns outlined in the KCC's order denying the original acquisition proposal. We reiterate our Outperform ratings.

Wells Fargo Securities, LLC or its affiliates has a significant financial interest in American Electric Power Company, Inc., CenterPoint Energy, Inc., Enable Midstream Partners, LP, Entergy Corporation, Eversource Energy, Exelon Corporation, FirstEnergy Corp., Great Plains Energy Incorporated, OGE Energy Corp., Public Service Enterprise Group Incorporated, SCANA Corporation, Sempra Energy, Westar Energy, Inc..

EXC: Risks include commodity price sensitivity and unfavorable regulatory/policy developments.
PEG: Risks to our valuation include earnings sensitivity to commodity prices, operational risks and unfavorable regulatory/political developments.
FE: Risks to our valuation include (1) unexpected costs associated with separation from merchant, (2) EPS risk related to potential corporate tax reform and (3) regulatory risk.
SCG: Primary risks include regulatory and abandonment plan execution as it relates to the halted new nuclear construction project.
ETR: Risks to our target include possible adverse regulatory outcomes, greater negative value for EWC than projected and potential EPS exposure to federal tax reform.
GXP: Key risks include regulatory (approval process and 2018 rate case filings) and execution (synergies, etc.) risks in conjunction with the pending merger.
WR: Key risks include regulatory (approval process and 2018 rate case filings) and execution (synergies, etc.) risks in conjunction with the pending merger.
SRE: Risks include negative regulatory outcomes, failure to execute on growth projects, potential Aliso-related liabilities, and commodity/currrency risks.
CNP: Risks include negative regulatory developments, lower than expected sales growth in Houston, and commodity risks at Enable.
OGE: Risks include negative regulatory developments, weaker than expected sales/cost controls, and midstream commodity risks.
ENBL: Risks to the units trading below our target include re-contracting at unfavorable terms, execution risk related to organic projects, volumetric risk, rising interest rates and potential partial sale of the General Partner.
AEP: Risks to our valuation include unfavorable regulatory decisions, strategic endeavors that increase the risk profile and ineffectual cost management.
ES: Risks to our price target include major projects delays/cancellations along with unfavorable regulatory developments.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC’s research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING

O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING

V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: October 16, 2017

44% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Outperform.	Wells Fargo Securities, LLC has provided investment banking services for 46% of its Outperform-rated companies.
54% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Market Perform.	Wells Fargo Securities, LLC has provided investment banking services for 31% of its Market Perform-rated companies.
2% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underperform.	Wells Fargo Securities, LLC has provided investment banking services for 25% of its Underperform-rated companies.

Each of Wells Fargo Securities, LLC and Wells Fargo Securities International Limited is a separate legal entity and distinct from affiliated banks.

Exelon

Excellent prospects – Reinstate Buy, $43 PO

Bank of America Merrill Lynch

Reinstating Coverage: BUY | PO: 43.00 USD | Price: 39.57 USD

Equity | 23 October 2017

Reinstating coverage on EXC with a Buy rating & $43 PO

We are reinstating coverage on Exelon Corp (EXC) with a Buy rating and a $43 price objective, which we derive using a SOTP. We see the shares as favorably positioned to benefit from sustained ROE improvement trends as the company continues to execute on its rate case cycle and see clear opportunity to increase dividend growth from its current 2.5%, closer to average peers at 5% as early next year. We finally see material upside at ExGen as the entity continues to execute on its leverage targets and could well benefit from the potential market reforms and further propagation of nuclear energy credit legislations. Deployment of cash flow at ExGen or to accelerate deleveraging broadly and/or additional utility spend remains an understand aspect. We see a critical driver to EXC as tied to finding and executing on yet further spend opportunities.

Delivering on PHI ROE at utilities, along with more CapEx

Improving earned ROEs at EXC's subsidiary Pepco (PHI) remains an essential component of utility growth, with the cycle of rate case well under way. Further upside to the regulated segment includes smart grid CapEx (at ComEd) and further cost management initiatives, providing a use of additional ExGen FCF. Execution at the regulated businesses remains the core focus, albeit with our estimates above the mid-point of guidance, we see it as tracking nicely.

Tailwinds at ExGen

We believe the Street is not giving ExGen enough credit for its FCF yield, leverage position, and superior prospects. We see the subsidiary poised to exceed its leverage target while retaining the ability to significantly contribute to parent dividends, and potential upside from capital deployment. We highlight additional tailwinds such as the prospects of power market reforms as well as potential affirmation of the nuclear subsidies beyond IL and NY. We note that Exelon has hired restructuring advisors for its Texas subsidiary given the potential bankruptcy of this non-recourse entity, which should only serve to highlight its truly recourse obligations; similarly investors should carefully deconstruct ExGen to adjust for its highly leveraged renewables, also consolidated onto the balance sheet. Broadly, capital allocation across EXC beyond just DPS growth remains quite real.

Company Sector

Electric Utilities

Company Description

Exelon Corp (EXC) is an integrated electric and gas utility that operates four utilities in Pennsylvania, Illinois, DC, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Commonwealth Edison Company (ComEd) in IL, PECO Energy Company (PECO) in PA, PEPCO in MD/DC, and Baltimore Gas & Electric (BGE) in MD. Exelon Generation operates the largest nuclear fleet in the United States, with plants in the Midwest and Mid-Atlantic regions.

Investment Rationale

We see a clear opportunity in shares given prospects of power market reforms and continued appreciation for capital deployment at ExGen as well as yet further affirmation of nuclear ZECs. Additionally, we perceive steady execution on the utilities should continue to yield positive benefits, with management seemingly heading towards the upper end of its regulated guidance range already. Finally, we see a clear line of sight for increased dividend payout.

Stock Data

Q2	0.65A	0.53A
Q3	0.91A	0.85A
Q4	0.44A	0.64E

Executive summary

What we think of the shares

We see a clear opportunity in shares as prospects of power market reforms and continued appreciation for capital deployment at ExGen are front and center heading into the Edison Electric Institute (EEI) conference in November (albeit a roll forward to 2021 power disclosures will be omitted pending a full update of the plant with 4Q).

Nuclear upside and power reforms are finally real

We believe shares could benefit from further affirmation of nuclear Zero Emission Credits (ZECs) that explicitly value carbon benefits from Exelon's nuclear portfolio, providing incremental cash flow; while successful in affirming prospects for these programs this last summer (NY and IL), we see states such as NJ as poised to evaluate their own programs (all the more emboldened by the legal statute affirmation of the two parallel states). Timing is potentially as soon as this year, but more likely pushed into next. Additionally, we perceive steady execution on the utilities should continue to yield positive benefits, with management seemingly heading toward the upper end of its regulated guidance range already. After years of waiting, nuclear subsidies and power market reforms on price formation appear set to happen within a year's time.

Deleveraging ExGen and cleaning up the balance sheet

We believe further corporate actions could also help illustrate value as well as further highlighting of the renewable debt and EBITDA (it already sold at double-digit EV/EBITDA multiple a 49% stake in this segment earlier this year) – more to sales to come here too, as its Antelope Valley (AVSR) solar project is dropped in 2019. And, a shift in dividend strategy is afoot and could double the DPS growth rate from 2.5% to 5% at a minimum, if not more, as it re-evaluates its cash flow position with ExGen rapidly below its 3x debt/EBITDA target (already there with healthy margin at 2.5x exclusive of non-recourse project contributions).

The retail question remains paramount—can it benefit from NRG/VST halo?

While we appreciate the investor concerns around the relative opacity of its retail business – the primary cash generator at its non-regulated ExGen business – management could adopt some incremental discussion points in an attempt to garner the similar uplift thus far realized by its close peers NRG Energy (NRG) and Vistra Energy (VST), both of which have outperformed EXC in dramatic fashion of late as investor comfort on their more residential retail has grown. The two IPPs have been addressing head-on investor discussion around the appropriate multiple for a principally residential retail business. While rates are quite high for these customers, the limited customer migration seen for both of these companies continues to drive increasing confidence in the resilience of this business.

What's different about Exelon's business is the relative opacity of what constituents are held within its retail business. While it is principally commercial and industrial (C&I) – and hence a lower margin, but much higher volume business than its other peers, it does not have the same risk of customer migration to competitors offering better rates. Net-net, we continue to apply a reduced EV/EBITDA multiple on this segment, but see a clear upward bias in our multiple to 8x should investors follow the NRG/VST example – potentially triggered by any further elaboration of the constituent pieces within the ExGen retail business. The retail business involves the sale of electricity to retail end-users (as opposed to in the wholesale market), including residential, commercial and industrial customers. The retail business also engages in the sale of natural gas.

More retirements – nuclear is the Achilles heel

Ultimately, there are ongoing concerns on the viability of its nuclear business – and this is real. We expect incremental retirements will remain a reality and long-term decommissioning will prove a lingering question for shares. In the longer term, we see the entirety of the nuclear portfolio as an eventual liability with gradual decommissioning and shutdown of the portfolio upon current license expiration. We don't expect *any* merchant plants will seek a subsequent license extension to 80 years given the costs entailed. The positive emphasis here is just how little management derives from the nuclear business overall producing a breakeven to negative FCF profile across the entirety of this business (Midwest and East) – and as such, limited SOP value. As management winds down its nuclear business – and divests its remaining (saleable) merchant power assets, it will gradually trend toward a largely/fully regulated profile. Considering remaining nuclear plants will all require longer-term subsidies, we expect management will position these as contracted and not merchant, and therefore argue for a higher multiple of cash flows.

Despite these concerns, shares are clearly discounted, and we ascribe limited value to this segment in our SOTP.

ROE improvements at PHI are underway

Executing on the ROE improvement strategy at PHI remains key to the regulated story, the bulk of the value reflected in EXC shares at this point, in our view. With the utility successfully navigating so far through its second cycle of rate cases, we are confident EXC will meaningfully improve its subsidiary's historically depressed earned ROEs. *Additionally, the fact that certain commissioners have already noticed operational improvements since EXC's involvement gives us greater confidence in a positive outcome, addressing a chronic challenge for Pepco prior to its acquisition*. The main question then becomes the extent to which the historical overearning at PECO can revert; as seen below, our model assumes the 275 bps of earned ROE improvement at Pepco (PHI) by 2020, which is partly offset by a 170 bps reduction in Earned ROE at PECO.

Table 1: Earned vs Authorized ROEs

Upside to the regulated business? Smart grid and further cost cuts

Smart grid and micro-grid deployment (we highlight the $4 Mn Bronzeville project recently completed in Chicago) could provide sizable CapEx upside over time, while other cost management initiatives could further increase customers' ability to absorb additional CapEx. We believe a scaling of a smartgrid exercise along its largely executed smartmeter installation programs could well be the next stage of CapEx for Exelon Utilities as well as several other industry peers. A core question within this effort is how to justify the spending on a specific segment of the service territory – and improving their resilience – while still socializing these costs across all customers.

The longer-term question for EXC's utility strategy remains whether it will need to shift externally once more to source additional ratebase growth investment opportunities as it seeks to deploy the bulk of its organic cash flow toward regulated opportunities and dilute the size of its merchant operations. Management cautions that any further utility acquisitions would necessarily need to resemble Baltimore Gas and Electric (BGE) or PHI, both of which had previously failed to earn their authorized ROEs rather than acquiring a utility at a premium to ratebase without an ability to make up this premium.

We see meaningful dividend growth upside

We expect an update on the current dividend strategy (2.5% annual growth through 2018) by early next year as the board of directors opens the discussion in September. As we estimate the regulated EPS will grow at a 7.0% CAGR through 2021as PHI ROEs continue to improve, and expect ExGen to keep generating robust cash flows (our model assumes $650 Mn/year of dividends to the parent), we see a tangible path to increased dividend growth. We estimate EXC could double its current annual DPS growth target to 5.0% and still maintain a utility payout ratio close to 80%, which would put the company closer to par with its diversified peers (see below).

The bigger question on the dividend comes from ExGen

While management's focus of late has been to bring the dividend back in line with a payout ratio from solely the utilities, we see the next step-up as focused on how to strategically view cash flows generated by the ExGen side of the business. The question is whether investors will ascribe value to the signaling benefits of on ongoing dividend derived from it. While management points to peers with high dividend yields as a cautious datapoint, there is clear latitude to employing at least some of the substantial FCF latitude today toward a more explicit dividend policy (even if just a baseline that doesn't grow). We expect management will pass on this concept, opting to keep the dividend solely predicated on the utilities, but there should be little hesitance in raising the DPS growth rate off today's 2.5% levels back to closer to utility growth rates of 2%. Further afield, the question is whether a variable dividend of any sorts would provide any value.

ExGen is undervalued vs peers

We believe ExGen is undervalued vs peers. We see the fleet as essentially a combination of nuclear generation, which benefits from EXC's operational excellence for these types of assets, as well as a substantial retail footprint (Constellation is one of the largest electricity retailers in the country, with the retail business showing a very high free cash flow conversion profile).

Taking our estimated value of $33/sh for the utility, we note the market is currently valuing ExGen at an implied 5.8x multiple to our 2020E adjusted open EBITDA estimate, vs 8.1x for peers. We note that this is despite ExGen having a superior net leverage profile and in line free cash flow yield.

Table 2: ExGen Implied EV/EBITDA Multiple

ExGen Implied EV/EBITDA Multiple			
Current EXC Stock Price ($/Sh)			$39.77
Less: Estimated Value of Utility			$33.38

Source: BofA Merrill Lynch Global Research estimates

Excess capital helps deleveraging and could lead to upside

With the utility growing at a healthy rate (we project a 7% CAGR from 2016-2021) and ExGen generating large sums of surplus cash (we expect a cumulative ~$3.5 Bn of cash within 2017-2021 after accounting for $650 Mn/year of dividends), Exelon is finding itself in the comfortable position of having to allocate excess capital. The company could then explore various value-enhancing options, including raising its dividend, repaying debt at ExGen and/or the HoldCo, or opportunistic M&A similar to PHI, which would allow Exelon to backfill some of the later years CapEx.

As mentioned previously, we expect EXC to be able to raise its annual dividend growth target up to 5.0% relying only on utility growth; the question then becomes what to do with all the ExGen excess cash. Paying down ExGen debt appears to be the most obvious answer given the company's commitment to reduce leverage at the power producer to 3.0x and the sector's overall focus on balance sheet management. Moreover, from a purely mathematical standpoint, it would make more sense to pay down the ExGen debt over the parent debt. Indeed, reducing IPP leverage directly accrues to valuation as investors tend to use an EV/EBITDA approach while favoring a P/E methodology for parent drag, which simply capitalizes interest. Our model assumes the ~$3.5 Bn of excess ExGen cash is applied toward reducing the power producer's debt.

Where is debt paydown more "valuable"?

While technically fungible to paydown debt at either the holding company or at ExGen, our valuation approach (along with that of many investors and sell-side peers) appears to value the ExGen business as a traditional merchant power business by applying an EV/EBITDA and then netting out the debt at this segment. By contrast, we have typically opted to view the interest at the parent as tied to regulated operations, particularly seeing that the bulk of it was issued in conjunction with executing on its Pepco transaction. As such, we apply a P/E multiple to the interest expense at the holding company, essentially providing substantially less value to paydown at this level. Similarly, we perceive the rating agencies as quite focused on maintaining 35%+ or better FFO/debt at this segment.

Management appears to be pursuing a debt reduction strategy in parallel still at the holding company (HoldCo), focused on its $900 Mn 2018 maturity as the first example.

There is a (slight) chance for credit improvement too

Given the debt paydown targets at hand, management appears keen to improve its consolidated credit metrics, with the segment improving to BBB+ and in turn the consolidated rating to BBB at the HoldCo level (given the direct linkage between subsidiary ratings and the rating at the parent).

Regulatory matters add some uncertainty

With many investors left asking for more off the staid DOE report on the state of the grid issued this summer, we note several parallel efforts as still ongoing at the PJM and FERC level that could still drive reform. In particular, we see nascent efforts kickstarted earlier this year to evaluate strategies to address baseload plants as quite likely to succeed. Additionally, we perceive a clear sense of support from the latest FERC commissioners, where we believe the *quiet* implementation of the DOE grid studies' ambitions could yet be under way via the issuance of a directive out of FERC to the ISOs to review their tariffs. This approach could conceivably take a roundabout approach to avoid triggering a full stakeholder review process before the ISOs as well as provide ISOs the option as to whether they believe they believe their current processes comply (leaving MISO latitude to affirm its processes with regulated utilities are sufficient, while providing PJM the necessary latitude to swiftly implement long-desired reforms). What are these reforms? They can be categorized in two buckets:

1. **Energy price formation:** This appears to be principally focused on off-peak hours, limiting the negative impact from renewables on baseload assets. Expectations here appear to pin this as at least worth $2/MWh or more.

2. **Fuel resiliency.** These reforms would appear to focus on wintertime gas availability across the PJM footprint as the increasing prevalence of gas plants all linked to the same pipeline systems is reflected in capacity margin requirements.

What does a lack of a MOPR mean? A key uncertainty in policy debate

With the courts having struck down the Minimum Offer Price Rule (MOPR) mechanism in competitive power, the question is whether and how such a mechanism will be implemented once more. With several key stakeholders such as PJM's market monitor loudly advocating for a shift toward a more inclusive application of these capacity bidding rules, this could expand to affect existing assets including Dominion's generation in Virginia. At the minimum, we expect this to prove a protracted controversial subject. We see this as essentially only upside to the markets today, with the MOPR as implemented previously effectively having failed to limit any new generation from clearing the capacity auction. The MOPR is designed to prevent new resources to bid below-cost in the PJM capacity auction which would affect clearing prices negatively.

Will ZECs spread to other states? Not immediately

With the company having essentially won the legal fight in NY and IL, the question remains whether similar types of nuclear subsidies as the Zero Emission Credits (ZECs) could see the day in neighboring states, namely NJ and PA. While the current administration in NJ appears supportive of the state's nuclear assets (Salem, which is co-owned with PSEG, will be EXC's only nuke in the state after Oyster Creek is retired in 2019), it remains unlikely whether a legislature could come to fruition prior to the gubernatorial election in November given how polarizing the issue could prove. Having said that, a rule in PA is unlikely to precede NJ and might found more challenging given the likely more vigorous opposition notably from the natural gas and coal industries, the divided political landscape (Democratic governor but Republican-controlled General Assembly), as well as the need to deal with a multitude of parties on the power side (EXC, First Energy, PSEG, Riverstone, etc.). To summarize, we believe any ZEC-like legislation will probably not materialize until at least next year, with NJ likely leading the way. ZECs are payments to certain nuclear plants in IL and NY designed to ensure the long-term profitability of nuclear facilities.

See less confidence on a ZEC program in Pennsylvania

We perceive less likelihood for a Nuclear ZEC program in PA given the difficulties in aligning the various energy interests in the state, specifically getting both the coal interests (who are themselves keen to receive form of compensation) as well as the oil & gas interests, keen to expand the potential for gas generation in the state. As such, we see a growing likelihood for Three Mile Island (TMI) plant to formally close after its latest refueling is completed in early 2019 (potentially delaying its final refueling cycle from Fall 2018). Additionally, we see both Beaver Valley units as substantially at risk as soon as its next outage cycle given the substantial cash flow deficits projected; the question is just how and whether management will be able to buy back its capacity obligations.

New Jersey could be next to provide nuclear support

Meanwhile, we understand PSEG continues to pursue reforms in NJ, particularly under a new administration next year; the current Christie Administration is in its last months. We note the presence of a nuclear plant in NJ Senate President Steve Sweeney's district would appear to only further provide a sense of urgency to aiding the plants. While they remain among the most profitable versus peer plants, PSEG has steadily advocated that on a fully allocated basis the plants are at best breakeven (we see them slightly positive), but more importantly that they fail to earn near an adequate cost of capital to continue to invest to maintain these units.

The nuclear effort could be part of a wider discussion in the state on energy market reforms, as candidates in the election cycle have cited their interest in rejoining the Regional Greenhouse Gas Initiative (RGGI) carbon market in the Northeast as well as wider renewable energy mandates. Comprehensive energy reform appears a real possibility in the state with multiple beneficiaries.

Asset sales: don't expect much besides ExGen TX

As we expect the entity to continue generating negative EBITDA/FCF in the near future (see below), and with the term loan maturing in 2021, the necessity of selling or restructuring ExGen TX becomes a more and more pressing matter. We note the sale process is well under way with second-round bids due early September and with the company hoping to announce a bidder by 3Q. We highlight the term loan is currently trading at $0.65 on the dollar, which suggests a valuation of $130/kW on the entire portfolio or $370/kW for the CCGTs assuming no value for the gas peakers. A sale of the distressed entity would bear not any impact on either ExGen or EXC given the non-recourse nature of the debt, nor will it affect the new TX CCGTs given how the shared services agreement was written. A sale would not impact our valuation, as we are already excluding the entity; but, nonetheless, it would contribute to ExGen's deleveraging.

Table 5: ExGen TX Projections

ExGen TX Projections	2017E	2018E	2019E	2020E	2021E

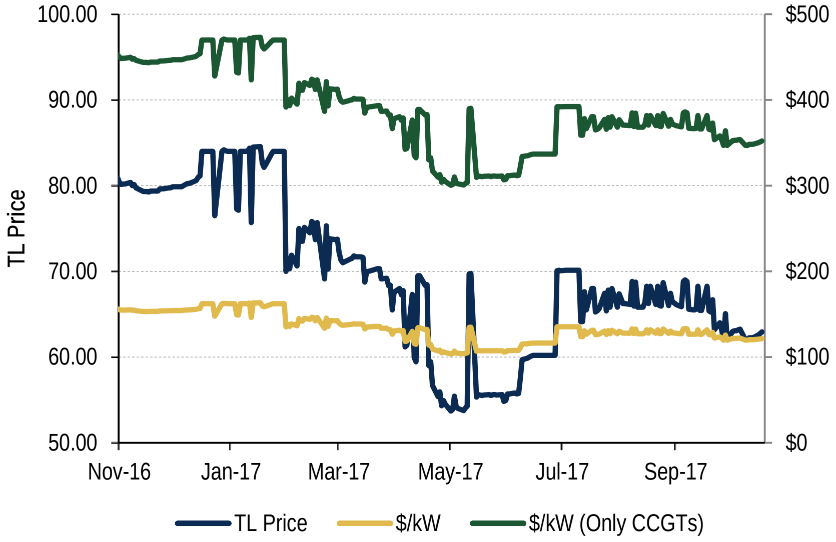
Chart 2: ExGen TX TL Price



Source: Bloomberg

Renewable JV: A *small* very defined selldown

Beyond ExGen TX, we do not expect much more in the form of asset sales. We believe the renewable JV recently formed with John Hancock was more of a valuation arbitrage rather than a long-term drop-down platform. We perceive the only assets left to drop include AVSR (post-ITC recapture) in 2019 as well as the Albany biomass plant in Georgia. We anticipate EXC will retain a 51% ownership interest, as it appears keen to maintain some semblance of a renewable energy company to complement its efforts on the nuclear energy front to garner carbon value.

That said, we wouldn't doubt a further scaling back of its renewable development business in an effort to pursue additional cost cuts – effectively ensuring the only real 'droppable' assets into this new JV structure would be from its more modestly sized C&I efforts tied to its retail business (investment here is around $100-200 Mn/yr).

We expect management increasingly to identify explicitly the debt and EBITDA attributable to this JV as it seeks to fine-tine investor valuations given the substantial de-leveraging on an overall basis achieved by deconsolidating both the earnings and debt (leverage is >8x EBITDA).

New Texas CCGTs: no Sale for Now

Additionally, we do not expect monetizing the new TX CCGTs (Wolf Hollow II and Colorado Bend II, which came online this summer) to be a close priority unless the company can recoup its construction costs ($700/kW), which seems far-fetched given the current state of the market (Vistra purchased Odessa for less than $350/kW, Panda Temple Unit 2 is valued at $430/kW using the current market value of the term loan as a proxy). Moreover, as the potential retirement of Vistra's older coal plants in the near future would improve market fundamentals, the timing of a sale does not make sense right now, especially since the plants are generating positive returns, albeit lower than initially planned. Bottom line, management intends to maintain this power market exposure given the clear prospects for market improvement and its view of limited value embedded in the market place.

Mystic: staying the course here too

Following the recent aborted sale auction (according to SparkSpread, EXC was taking final bids for the 1.7 GW Massachusetts-located CCGT in December 2016), we do not expect the company to actively continue to market Mystic.

Valuation: $43 PO

Our $43 price objective is derived using a SOTP approach, with the regulated utilities and parent segment valued on a 2019E EPS basis, and the generation segment valued on a 2020E EBITDA basis. We use a *2020* valuation year as it coincides with the latest PJM capacity auction year, which sets the reference year given the substantial exposure across the IPP sector to these revenues.

Regulated utilities

Execution story as implement BGE playback at POM

Our 18.0x base P/E multiple is based on the average 2019E P/E for regulated utilities. We apply a 1.0x premium to ComEd to account for formulaic rates and decoupling on the distribution business which aids in earnings predictability. We also apply a 1.0x premium to PECO to reflect its superior regulatory environment and consistent ROE overearning. We apply an in-line utility multiple on Pepco, effectively giving credence to management's hopes of improving the overall earned ROEs. While successful on improving its earned utilities at the BGE segment, we believe investors could still be discounting their ability to do the same at POM.

Note on ExGen valuation

We highlight we break down ExGen 2020E open EBITDA by segment and by fuel as we assign discounts/premiums to our Base 8.0x IPP multiple to reflect fuel-specific characteristics and our views on the different segments. Specifically:

- We assign a 2.0x discount to the retail business given that its favorable cash flow conversion is dimmed by its relative opacity. We continue to believe the lack of transparency of this business even relative to peers NRG and VST will continue to garner a discounted multiple.

- We exclude ExGen Texas from our analysis given the distressed and non-recourse nature of the debt.

- We reflect a premium multiple to the renewables JV EBITDA and call out the debt in our liabilities section for this non-recourse subsidiary. We caution investors that ascribing *only* a consolidated 7-8x EV/EBITDA multiple on the renewables business would implicitly ascribe a net negative value given the substantial leverage more than offsets the ascribed equity value. Recall EXC was recently able to divest a stake in these businesses at a clearly double-digit EV/EBITDA multiple (10x+).

  Nuclear valuation increasingly has garnered attention for the equity given the potential for positive EBITDA but negative FCF for the plants with meaningful maintenance CapEx. Even ascribing a reduced EV/EBITDA multiple to the segment to reflect the limited value of these units results in limited changes to our consolidated valuation given the limited EBITDA remaining.

  We believe there is legitimate concern in the long term around how much value remains in the merchant nuclear portfolio units but note the largely funded decommissioning (NDT) funds for retirement purposes and the clear potential positive cash flow from implementing new ZEC like programs in NJ and PA alike, alongside reforms aimed at improving the prospects for these units.

- We take the present value of the cumulative ZEC payments in IL and NY as opposed to capitalizing them, given the finite nature of the current rules. We use an 8% discount rate.

Exhibit 2: EXC SOTP yields a $43/sh valuation

EPS estimates

We include below our EPS projections by segment. We highlight our utility EPS remains at or slightly above midpoint guidance as the utility continues to deliver on its ROE improvement strategy at PHI. Our consolidated EPS is above Consensus in 2018 and 2019 likely due to our ExGen estimates, which remain sensitive to power markets.

Table 6: EBITDA estimates; Utility EPS in line with guidance

Retail remains the concern still for investors

We believe retail margins and their sustainability remains a clear focus for the company and investors alike. Management stresses margins have seen near record sustainability at $2-4/MWh, while maintaining excellent customer statistics around its C&I business including 28% market share on new wins (24-25% overall), 78% customer renewal, and 28-month average contract duration.

Business overview

Exelon Corp (EXC) is an integrated electric and gas utility that operates four utilities in Pennsylvania, Illinois, DC, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Commonwealth Edison Company (ComEd) in IL, PECO Energy Company (PECO) in PA, PEPCO in MD/DC, and Baltimore Gas & Electric (BGE) in MD. Exelon Generation operates the largest nuclear fleet in the United States, with plants in the Midwest and Mid-Atlantic regions.

Capital structure

Exelon corporate debt capital structure

We include below EXC's corporate debt capital structure, which is composed of senior unsecured notes. The key question for management will be just how it positions debt paydown as it takes a view toward Holding company borrowings relative to paying down additional debt at ExGen.

Table 7: EXC Corporate Capital Structure

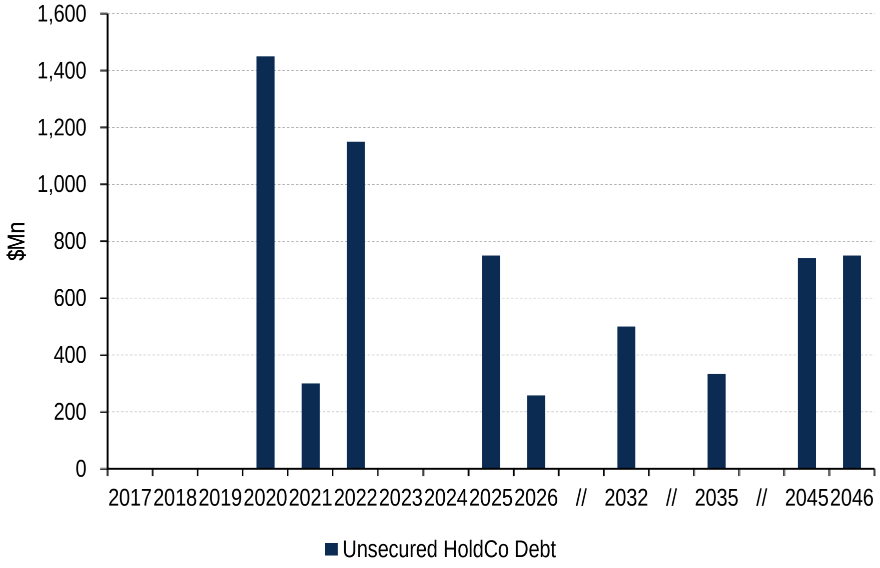
Exelon corporate debt maturity wall

We include below the company's corporate debt maturity wall and note the upcoming maturities in 2020, with $900 Mn and $550 Mn due in June and December, respectively.

Chart 3: EXC Corporate Debt Maturity Wall



Source: Company filings

ExGen capital structure

We include below ExGen's capital structure as of 6/30/17. We highlight the low leverage vs peers even prior to the large estimated future debt repayments (we project repayments of ~$3.5 Bn in the 2017-2021 timeframe). We finally point to the low yields particularly for the short and medium-dated maturities (2-3% average for the 2019-2022 maturities vs average peer of 4-6% for comparable issues), which seem to indicate a disconnect between how equity and fixed income investors view and value the entity.

Management review and biographies

We see the latest shift in strategy toward regulated utilities in recent periods as the appropriate strategy to diversify its substantial holdings in power assets. Management has been quiet to acknowledge the shift toward a more full regulated profile, as it seeks to dilute down the size of its merchant portfolio through utility acquisitions as well as selling/levering up remaining merchant assets. Given the latest set of plant retirements in ERCOT, another opening for plant transactions at higher multiples could yet be available for its two recently in-service CCGT assets.

We believe the challenges and set of circumstances that led toward the company's dividend cut in recent years have evolved into a new appreciation for the challenges of merchant power. We anticipate management will continue to take a conservative approach to its dividend policy.

We note an unusually qualified board of directors for the company, although the sector knowledge still did not prevent the company from steering clear of merchant power woes in recent years. We believe the DPS cut in recent years from $2.10 had a substantial impact on the company's view of merchant prospects as well as its own risk tolerance.

Chris Crane, president and CEO

Christopher (Chris) Crane has been the chief executive officer and president of Exelon Corporation since March 12, 2012 and September 23, 2008 respectively. He has been in the nuclear industry, in progressively more responsible leadership roles, for nearly 25 years. He served as the President of Exelon Generation Company, LLC since June 18, 2009 until 2013 and its chief operating officer from September 6, 2007 to May 2010. He served as the chief operating officer of Exelon Corp. from September 23, 2008 to April 28, 2011. He served as the president and chief executive officer of AmerGen and Constellation Energy Group, Inc. He joined Exelon in 1998. He studied electrical technology at New Hampshire Technical College, as well as at Harvard Business School's Advanced Management Program. He has a Senior Reactor Operator Certification.

Jack Thayer, CFO

Jonathan (Jack) Thayer has been the chief financial officer at Exelon Corporation since March 12, 2012 and has been its senior executive vice president since 2012. He served as the chief financial officer and senior vice president of Constellation Energy Group, Inc. from October 2008 to 2012. Thayer joined Chicago-based Exelon Corporation in January 2012. He served as an executive vice president of Exelon Corporation since March 12, 2012. He has a bachelor's degree in history from Middlebury College and a MBA from Harvard University.

NRG	NRG Energy	
VST	Vistra Energy	
CPN	Calpine Corp.	
DYN	Dynegy Inc.	
Power markets		
ISO	Independent System Operator	Independent entity responsible for operating competitive wholesale electricity markets and ensuring grid reliability
RTO	Regional Transmission Operator	See ISO
PJM	PJM Interconnection LLC	ISO covering all or parts of DE, IL, IN, KY, MD, MI, NJ, NC, OH, PA, TN, VA, WV, and DC
ERCOT	Energy Reliability Council Of Texas	ISO covering 90% of Texas' electricity load
ISO-NE	ISO New England	ISO covering CT, ME, MA, NH, RH, and VT
NYISO	New York ISO	ISO covering New York State
MISO	Midcontinent ISO	ISO covering the Midwest region of the US, all or parts of AR, MS, LA, and TX, as well as Manitoba, Canada
CAISO	California ISO	ISO covering California
Other terms		
CCGT	Combined Cycle Gas Turbine	Power plant using both a gas and steam turbine; more efficient than simple cycle technology such as CT or ST
CT	Combustion Turbine	Power plant using a combustion turbine as an electric generator
ST	Steam Turbine	Power plant using a steam turbine as an electric generator
MWh	Megawatt-hour	Unit equivalent to one million watts produced for one hour
GWh	Gigawatt-hour	Unit equivalent to one billion watts produced for one hour
Btu	British Thermal Unit	Energy unit; amount of energy require to raise the temperature of one pound of water by one degree Fahrenheit

Price objective basis & risk

Exelon (EXC)

Our $43 PO is based on a Sum-Of-The-Part valuation (SOTP) of the Utility and Generation segments.

Our Utility valuation is based on applying a P/E multiple to our EPS estimates. Our base P/E multiple is based on the average 2019E P/E for large-cap regulated utilities. We apply an in-line multiple for Pepco and BGE. We apply a 1.0x premium to ComEd to account for formulaic rates and decoupling on the distribution business which aids in earnings predictability. We also apply a 1.0x premium to PECO to reflect its superior regulatory environment and consistent ROE overearning.

Our Generation valuation is based on a 2020E SOTP. We start with our EBITDA estimates at each segment and capitalize them at an 8.0x base multiple (based on the long-term average forward EV/EBITDA in the sector) to which we apply a premium/discount based on our views of the specific region and portfolio.

Upside/Downside risks: 1) the company may or may not experience adverse regulatory rulings in its future rate cases, 2) Rate making mechanisms may or may not change in the future, 3) the company may or may not experience an increase in the price of key inputs such as natural gas and coal 4) the company may or may not experience a decrease in wholesale power prices 5) the company may or may not have to deal with stricter environmental or safety regulations 6) the company may or may not be able to access capital markets, 7) the company's operations could be materially impacted by weather events.

iQmethod SM is the set of BofA Merrill Lynch standard measures that serve to maintain global consistency under three broad headings: Business Performance, Quality of Earnings, and validations. The key features of iQmethod are: A consistently structured, detailed, and transparent methodology. Guidelines to maximize the effectiveness of the comparative valuation process, and to identify some common pitfalls.

iQdatabase ® is our real-time global research database that is sourced directly from our equity analysts' earnings models and includes forecasted as well as historical data for income statements, balance sheets, and cash flow statements for companies covered by BofA Merrill Lynch.

iQprofile SM, *iQmethod* SM are service marks of Bank of America Corporation. *iQdatabase* ® is a registered service mark of Bank of America Corporation.

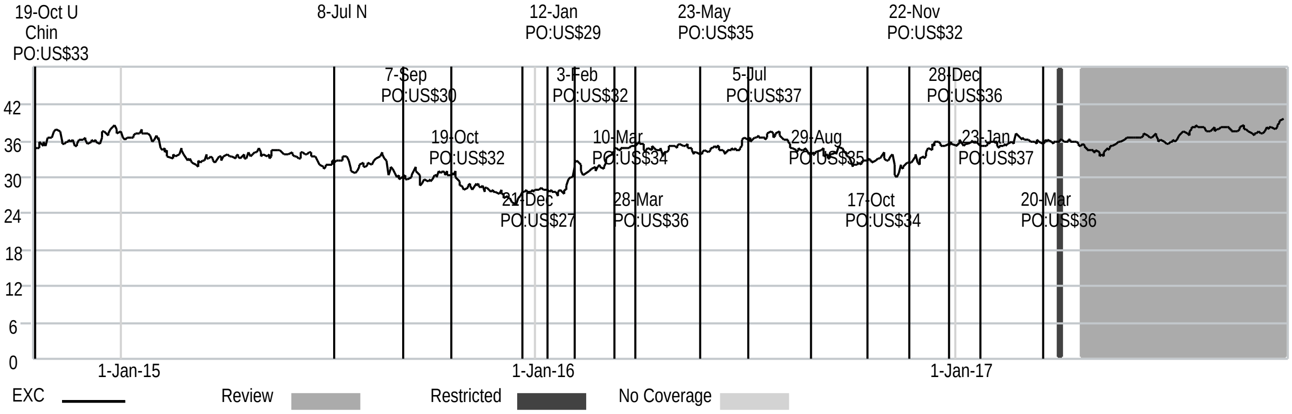
EXC Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of September 30, 2017 or such later date as indicated.

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2017)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	49	50.00%	Buy	32	65.31%
Hold	24	24.49%	Hold	16	66.67%
Sell	25	25.51%	Sell	12	48.00%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2017)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1513	51.82%	Buy	956	63.19%
Hold	646	22.12%	Hold	396	61.30%
Sell	761	26.06%	Sell	359	47.17%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

Price charts for the securities referenced in this research report are available at http://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
MLPF&S or one of its affiliates acts as a market maker for the equity securities recommended in the report: Exelon Corp.
MLPF&S or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Exelon Corp.
The issuer is or was, within the last 12 months, an investment banking client of MLPF&S and/or one or more of its affiliates: Exelon Corp.
MLPF&S or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Exelon Corp.
The issuer is or was, within the last 12 months, a non-securities business client of MLPF&S and/or one or more of its affiliates: Exelon Corp.
MLPF&S or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Exelon Corp.
MLPF&S or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Exelon Corp.
MLPF&S or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Exelon Corp.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of MLPF&S and/or one or more of its affiliates: Exelon Corp.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.

Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.

The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

"BofA Merrill Lynch" includes Merrill Lynch, Pierce, Fenner & Smith Incorporated ("MLPF&S") and its affiliates. Investors should contact their BofA Merrill Lynch representative or Merrill Lynch Global Wealth Management financial advisor if they have questions concerning this report. "BofA Merrill Lynch" and "Merrill Lynch" are each global brands for BofA Merrill Lynch Global Research.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This research report provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This report and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.

Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented in this report. Such ideas or recommendations reflect the different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this report.

In the event that the recipient received this report pursuant to a contract between the recipient and MLPF&S for the provision of research services for a separate fee, and in connection therewith MLPF&S may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom MLPF&S has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by MLPF&S). If such recipient uses the services of MLPF&S in connection with the sale or purchase of a security referred to herein, MLPF&S may act as principal for its own account or as agent for another person. MLPF&S is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities mentioned in this report.

Alert

November 2, 2017

Energy: Electric Utilities

NYSE: EXC

Exelon Corporation

EXC - ALERT: 3Q17 Results Slightly Miss; Guidance Narrowed

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

We expect a slightly negative response to a slight miss and lower ExGen margin commentary, partly offset by maintaining the 2017 guidance midpoint, despite $0.09 of ZEC earnings moving from 2017 to 2018.

November 1, 2017 Close: $40.15

3Q17 Ongoing EPS: $0.85 vs. $0.91 in 3Q16 / Consensus of $0.86 / KBCM of $0.88

Initial Take: We expect a slightly negative response to a slight miss and lower ExGen margin commentary, partly offset by maintaining the 2017 guidance midpoint, despite $0.09 of ZEC earnings moving from 2017 to 2018.

2017 KBCM EPS Estimate: $2.70 (Consensus: $2.69)

2018 KBCM EPS Estimate: $2.90 (Consensus: $2.87)

Guidance: Exelon narrowed its 2017 EPS guidance to $2.55-$2.75 from $2.50-$2.80; the revised guidance reflects a delay in Illinois ZEC revenue (shifting $0.09 from 2017 into 2018).

Highlights:

- Results were slightly below our estimate as ExGen results came in lower than we had expected and milder weather had a greater impact at the Utilities.
- TTM Consolidated Earned ROE came in at 9.5% vs. 9.7% sequentially.
- EXC reported EPS of $0.85 vs. $0.91 in 3Q16 as primary drivers include: weaker results at ExGen (-$0.05), lower ComEd (-$0.01), lower PECO (-$0.01), and Corp. (-$0.01), partly offset by BGE (+$0.01) and PHI (+$0.01).
- Generation segment ongoing earnings fell to $0.36 vs. $0.41 as poor market conditions (-$0.19) were partially offset by ZEC revenue (+$0.08) and capacity pricing (+$0.05). We note rounding differences.
- ComEd ongoing results were $0.19 vs. $0.20 as rate base (+$0.01) and Treasuries/ROE (+$0.01) were offset by weather (-$0.03).
  - Weather-normalized electric sales fell 1.3%
- PECO ongoing results were $0.12 vs. $0.13 from weather (-$0.02) and a tax repair (+$0.01).
  - Weather-normalized electric sales were flat, while weather-normalized gas sales decreased 14.5%.
- BGE earnings increased to $0.07 vs. $0.06 due to increased transmission rates (+$0.01).
  - Weather-normalized electric sales fell 4.0% and gas fell 14.3%.
- PHI earned $0.15 vs. $0.14 in the quarter from increased distribution rates (+$0.03), slightly offset by weather (-$0.01) and other (-$0.01).
  - Weather-normalized electric sales fell 1.7% at Pepco, increased 1.2% at DPL electric, fell 2.0% at DPL gas, and fell 7.8% at ACE.
- HoldCo reported a loss of $0.04 vs. a loss of $0.03 due to higher income taxes (-$0.01).

10:00 A.M. ET Conference Call #: (800) 690-3108 ID#: 44852720

We will be focused on:

- View of the market for the Generation segment and Potential Subsidies
- Commentary on mitigating regulatory lag across regulated jurisdictions
- Capital Opportunities
- Deleveraging Efforts

For analyst certification and important disclosures, please refer to the Disclosure Appendix.

Disclosure Appendix

Exelon Corporation - EXC

We have managed or co-managed a public offering of securities for Exelon Corporation within the past 12 months.

Exelon Corporation is an investment banking client of ours.

We have received compensation for investment banking services from Exelon Corporation during the past 12 months.

We expect to receive or intend to seek compensation for investment banking services from Exelon Corporation within the next three months.

During the past 12 months, Exelon Corporation has been a client of the firm or its affiliates for non-securities related services.

As of the date of this report, we make a market in Exelon Corporation.

Reg A/C Certification

The research analyst(s) responsible for the preparation of this research report certifies that:(1) all the views expressed in this research report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers; and (2) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst(s) in this research report.

Other Disclosures

KeyBanc Capital Markets is a trade name under which corporate and investment banking products and services of KeyCorp and its subsidiaries, KeyBanc Capital Markets Inc., Member NYSE/FINRA/SIPC (“KBCMI”), and KeyBank National Association (“KeyBank N.A.”), are marketed.

KeyBanc Capital Markets Inc. (“KBCMI”) does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report has been prepared by KBCMI. The material contained herein is based on data from sources considered to be reliable; however, KBCMI does not guarantee or warrant the accuracy or completeness of the information. It is published for informational purposes only and should not be used as the primary basis of investment decisions. Neither the information nor any opinion expressed constitutes an offer, or the solicitation of an offer, to buy or sell any security. The opinions and estimates expressed reflect the current judgment of KBCMI and are subject to change without notice. This report may contain forward-looking statements, which involve risk and uncertainty. Actual results may differ significantly from the forward-looking statements. This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the specific needs of any person or entity.

No portion of an analyst’s compensation is based on a specific banking transaction; however, part of his/her compensation may be based upon overall firm revenue and profitability, of which investment banking is a component. Individuals associated with KBCMI (other than the research analyst(s) listed on page 1 of this research report) may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(A), financial interest, if any, by any research analysts listed on page 1 of this report will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosure Appendix. KBCMI itself may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(F), if KBCMI, or its affiliates, beneficially own 1% or more of any class of common equity securities in the subject company(ies) in this research report, it will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosures Appendix. This communication is intended solely for use by KBCMI clients. The recipient agrees not to forward or copy the information to any other person without the express written consent of KBCMI.

Thank you, Mr. Secretary

Value play on PJM pricing reforms and utility discount remains

EXC has outperformed the average regulated utility YTD with recent relative gains coming in the wake of the US DOE releasing its proposed NOPR or grid resiliency rule in September, which effectively would result in re-regulation for merchant coal and nuclear plants able to show 90 days of fuel supply. As they reminded us today, EXC concur with DOE's decision to act but are supporting more market-based solutions. We continue to see EXC stock as a good way to play the overall power market reform theme with tangible upside leverage to planned energy price formation reforms in PJM alongside fast-growing regulated T&D utility businesses and an ongoing debt reduction play at the Genco/HoldCo. We reiterate our Buy and $41 price target while noting further upside potential from either marking our below-market regulated multiple to market ($2/sh) or baking in $3/MWh of hoped-for PJM price formation ($3/sh).

ExGen gross margin down on more challenging retail conditions

EXC introduced some unexpected changes to their 2018 and 2019 gross margin forecasts for ExGen this quarter, with 2018 and 2019 down $50M and $200M, respectively. Within these adjustments, EXC reduced their forecast for "Power New Business / To Go" margin in 2017, 2018, and 2019 by $50M, $100M, and $100M, respectively. The reductions reflect pressure the Constellation business is seeing on wholesale margins and commercial & industrial retail growth from "aggressive bidding" by competitors. Per EXC, the competition is not appropriately pricing in risk following a bout of mild weather and minimal volatility. As a result, where EXC previously assumed 80% renewal rates for existing customers they are now seeing levels in the low 70% range. They also have lowered 2018 and 2019 gross margin by $100M each to reflect lower energy (basis differentials in PJM east) and capacity prices (MISO and NY). In 2018, these changes were mostly offset by the delay in IL ZEC revenue collection for the June 2017 to December 2017 period ($150M) from 2017 into 2018. And for 2019 EXC noted that roughly half of the energy price decline has been recovered, with the price increases seen since the slide deck was priced based on end-September numbers.

Cost reduction plans offset lower ExGen gross margin

Offsetting the negative from reduced margin expectations, EXC announced plans to cut ExGen O&M by $250M by 2020. This is in addition to the reductions to O&M from the sale/bankruptcy of the ExGen Texas Portfolio assets and the closure of Three Mile Island that were discussed earlier this year. Accounting for these changes allows us to keep our 2018E and 2019E EPS of $2.85 and $2.65, which

continue to assume growth at the utility consistent with prior 6-8%/yr targets and unchanged Generation forecasts, with lower gross margin offset by lower O&M. For 2017, guidance was narrowed to $2.55-$2.75 from $2.50-$2.80. Meanwhile, we are trimming our estimate by a nickel to $2.65 due mostly to the negative impact to generation earnings from delaying the IL ZEC revenue collection into next year ($0.09/sh in total).

Looking for upside from PJM price formation changes

EXC discussed what they believe could be a two-step process for the FERC to address the grid resiliency challenges identified by the DOE in its Section 403 filing in September. They believe the FERC could direct PJM to take action on deficiencies in energy price formation in power markets which they believe could add $2-$5/MWh to current power price curves, as a first step, and that PJM could implement these changes by mid-2018. As a second step, the FERC could then take more time to carefully evaluate potential market reforms to ensure power supply resiliency. This was not particularly surprising and aligns fairly well with our view that DOE is primarily looking to prompt action from the FERC and RTOs.

Potential acceleration in dividend growth on the horizon

Based on management's comments earlier in the year and on today's call we believe investors should be looking for EXC to provide a new multi-year dividend growth target early in 2018. EXC's current 2.5% per year dividend growth runs only through 2018 and did not push back on suggestions that they are in a better position now to deliver dividend growth closer to regulated peers. Factors cited included continued growth at the regulated utilities, strong free cash flow generation and debt reduction at ExGen as well as having a more stable merchant generation with the introduction of ZECs in IL and NY. Plans are likely to be reviewed with the Board as part of the long-term planning process in Q1 and announced thereafter. This year we will also have to wait for the Q4 call for 2018 EPS guidance and 2020 gross margin forecasts, which EXC has historically provided at the EEI conference.

Q3 result relatively in line, stronger PHI results offset ExGen

EXC reported Q3 operating EPS of $0.85 in line with our estimate and a penny below consensus. Versus DB, ExGen results were weaker than expected with mild weather weighing on volumes and pricing. This was offset by stronger than expected performance at the Pepco utilities, while the legacy EXC utilities performed in line with our estimates. Despite weak weather in Q3 and the delay into 2018 of Illinois ZEC earnings, EXC still is tracking toward the midpoint of original 2017 EPS guidance.

Forecasts and ratios

Year End Dec 31	2016A	2017E	2018E
FY EPS (USD)	2.68	2.65	2.85
OLD FY EPS (USD)	2.68	2.70	2.85
% Change	0.0%	-2.0%	-0.0%

Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst ' s judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options”, at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

Exelon

Regaining its Income Orientation

Bank of America Merrill Lynch

Reiterate Rating: BUY | PO: 43.00 USD | Price: 40.72 USD

Equity | 03 November 2017

Maintaining midpoint EPS guidance despite challenges

Exelon Corp (EXC) reported 3Q17 results in line with our estimate at $0.85 down from $0.91 YoY as the increase in regulated rates was offset by weather items at ComEd and PECO and challenging market conditions in the power space. We further note that EXC narrowed the EPS guidance range for the full year to $2.55-$2.75 while maintaining the midpoint at $2.65, despite the delayed payment of the IL ZEC which shifted $0.09 of EPS from 2017 to 2018. We continue to see the shares favorably positioned as EXC continues to execute on the regulated ROE improvements and we emphasize ExGen's cash flow resiliency (particularly vs. IPP peers which have been more affected by the mild summer weather) bode well for the next update in 4Q.

Poised to raise dividend growth rate in early 2018

We estimate an increase in the target DPS growth rate is even more likely into early '18. We stress the continuous ROE improvements and the high EPS growth rate at the Utilities (we estimate about 7.0% CAGR through 2021), as well as the increased stability of the Generation cash flows thanks to the nuclear credits in NY/IL can support a raise in the target DPS growth rate from 2.5% currently to a level closer to peers (in the 5-6% range). We note management appears candid about the issue and recognizes that the potential growth for the dividend is now well anchored. We believe the board could announce an increase by early next year.

Pressures emerge in retail sector; cost cuts are offset

We highlight Exelon reduced its retail guidance by $100 Mn in 2018 and 2019 as the company sees slower-than-expected growth at the C&I business due to lower C&I renewal rates (from 80% previously to the low 70% range) which has been driving flat volumes YoY, while the intensifying competition in the space has put downward pressure on margins (although we note the company continues to observe C&I margins in the $2-4/MWh range). We see the guidance reduction as a cautious datapoint for NRG's retail margin enhancement endeavors but particularly for DYN as its retail business already operates under tight margins.

Company Sector

Electric Utilities

Company Description

Exelon Corp (EXC) is an integrated electric and gas utility that operates four utilities in Pennsylvania, Illinois, DC, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Commonwealth Edison Company (ComEd) in IL, PECO Energy Company (PECO) in PA, PEPCO in MD/DC, and Baltimore Gas & Electric (BGE) in MD. Exelon Generation operates the largest nuclear fleet in the United States, with plants in the Midwest and Mid-Atlantic regions.

Investment Rationale

We see a clear opportunity in shares given prospects of power market reforms and continued appreciation for capital deployment at ExGen as well as yet further affirmation of nuclear ZECs. Additionally, we perceive steady execution on the utilities should continue to yield positive benefits, with management seemingly heading towards the upper end of its regulated guidance range already. Finally, we see a clear line of sight for increased dividend growth rate.

We see clear latitude to increase the DPS growth rate

We estimate the company has clear latitude to raise its DPS growth target beyond the current 2.5% level and note the outpacing growth in Utility EPS would result in a declining payout ratio should EXC leave its target unchanged. We estimate *the company could double its DPS growth rate to 5.0% while maintaining a Utility payout of about 80%*, which would put the company closer to par with its diversified peers at 5.7%.

ExGen: lowering guidance for 2018/2019

The company *lowered its gross margin guidance for ExGen in 2018 and 2019 by $50 Mn and $200 Mn*, respectively. The decrease was mainly driven by lower assumptions for MISO and NY capacity prices ($100 Mn impact) as well as the reduction in retail margin previously mentioned ($100 Mn impact), partially offset by higher hedge values. We emphasize the expected decrease in gross margin should be *mitigated on the EBITDA side as management released another round of O&M cost cuts with run-rate savings of $250 Mn by 2020*. We note the cost cuts will be realized mainly on the nukes as well as on the retail part of the business, and help mitigate the expected decline in C&I growth.

Allocation of capital remains the key question at ExGen

The company estimates that ExGen will generate an estimated $6.8 Bn of cumulative FCF over 2017-2020, of which $3 Bn is expected to be applied towards ExGen and HoldCo debt reduction, with the remainder being utilized to fund ExGen's committed growth CapEx ($1.3 Bn) as well as Utility growth (~2.5 Bn).

Which debt paydown is more "valuable"?

While technically fungible to pay down debt at either the holding company or at ExGen, our valuation approach (along with that of many investors and sell-side peers) appears to value the ExGen business as a traditional merchant power business by applying an EV/EBITDA and then netting out the debt at this segment. By contrast, we have typically opted to view the interest at the parent as tied to regulated operations, particularly seeing that the bulk of it was issued in conjunction with executing on its Pepco transaction. As such, we apply a P/E multiple to the interest expense at the holding company, essentially providing substantially less value to paydown at this level. Similarly, we perceive the rating agencies as quite focused on maintaining 35%+ or better FFO/debt at this segment.

Table 1: FCF yield shows more stability than peers

ExGen FCF Yield	2017E	2018E	2019E	2020E	2021E

Source: BofA Merrill Lynch Global Research estimates

We continue to see tailwinds for the Power business

Despite the lower guidance, we continue to see multiple avenues of upside for the Power business. Specifically, we highlight nuclear support legislations could potentially spread to other states beyond NY and IL; we highlight the positive momentum following the recent passage of the Millstone bill in CT, and note the company indicated constructive discussions in PA and NJ.

Furthermore, we see potential for increased volatility and probability of scarcity pricing in ERCOT next summer following the announcements of around 4.7 GW of plant retirements, which would benefit the company's new CCGTs.

Finally, we note ExGen could stand to benefit from the potential PJM market reforms. Given the company's 135 TWh of generation within PJM and assuming a $2-5/MWh uplift, we could see margins potentially increase by $270-$675 Mn. We emphasize such benefit would only accrue as the existing hedges roll off, and note the company believe that the uplift would likely decrease any further potential ZEC payments on a dollar-for-dollar basis.

We include recent relevant notes below:

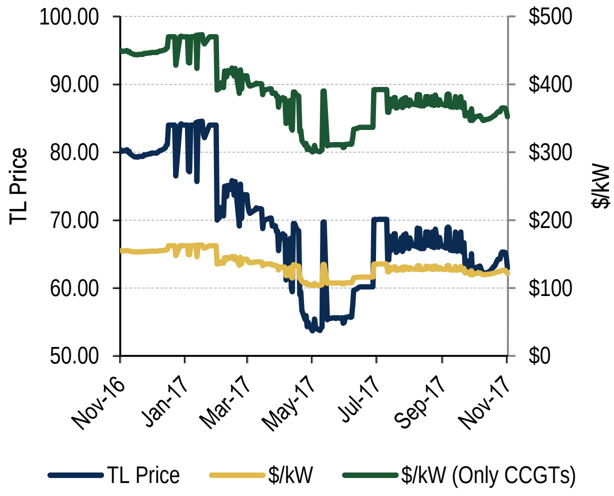
Expect a wind down of ExGen TX in the near future

We note Exelon had reached an agreement with the lenders earlier this year to pursue a sale of the ExGen TX assets. After removing the assets from its guidance at the 2Q call, the company expects ExGen TX to declare bankruptcy from now through the end of the year due to the large amount of negative FCF generated by the portfolio. We emphasize *Exelon does not expect to make any significant payments* as part of the reorganization process due to the non-recourse nature of the subsidiary. We emphasize the market value of the term loan implies around $350/kW valuation on the two CCGTs (Wolf Hollow and Colorado Bend), close to what VST paid for the recent acquisition of Odessa.

Chart 1: ExGen TX TL-B due 2021 is trading in the low 60s



Source: Bloomberg

(yet more) cost cuts: benefiting the story too

We see the latest cost cuts as coming at an appropriate time to offset the otherwise troubling headwinds at the retail segment. We note the $250 Mn/year of run-rate benefits by 2020 are derived principally from the nuclear business as well as the Constellation retail platform itself.

Progress continues at state-level for ZECs despite limited discussion

While the subject of state-level nuclear support was non-existent on the call, we perceive progress as continuing into year-end. While legislative success in NJ is unlikely until there is resolution on pending FERC and PJM efforts, we still see this as a possible real eventuality under any wider comprehensive energy reform in the state.

Updated EPS estimates

We include below our updated EPS estimates to reflect the latest disclosures. While we did not change our Utility estimates, we lowered our ExGen estimates to reflect the pressures on the retail business which was offset by further O&M cost cuts as well as the uptick in power prices of late. Specifically, we highlight our 2017E EPS estimate for ExGen decreased by $0.03 to $1.05 and is now at the midpoint of updated guidance of $1.00-$1.10/sh. Overall, we continue to project a full year 2017E EPS around the midpoint of guidance at $2.64 vs. $2.65.

Table 2: Updated EPS Estimates

Capital deployment remains the upside on the story

Among the more critical updates into 4Q reporting will be the use of the projected FCF. We anticipate management could well be poised to discuss more specifics around debt reduction at both ExGen and the parent. With ExGen Texas likely one by 4Q and clear indications of just what is recourse at the ExGen segment, we believe the balance sheet it will become increasingly apparent at just how underlevered its prospects are.

Updated valuation: Maintaining $43 PO

We are maintaining our $43 price objective which remains based on a SOTP approach. Our regulated utility estimates remain unchanged, while we lowered our ExGen estimates to reflect the dimmer outlook on the C&I side of the retail business, which was offset by the cost cuts just announced as well as the higher hedge value. We stress the difficulties encountered by the C&I segment highlight the challenges associated with lower margin businesses within the Retail sector and explain the lower multiple assigned to EXC's retail business (6.0x) vs. other peers such as VST or NRG at 8.0x and 7.0x, respectively.

Exhibit 2: EXC SOTP yields a $43/sh valuation

Price objective basis & risk

Exelon (EXC)

Our $43 PO is based on a Sum-Of-The-Part valuation (SOTP) of the Utility and Generation segments.

Our Utility valuation is based on applying a P/E multiple to our EPS estimates. Our base P/E multiple is based on the average 2019E P/E for large-cap regulated utilities. We apply an in-line multiple for Pepco and BGE. We apply a 1.0x premium to ComEd to account for formulaic rates and decoupling on the distribution business which aids in earnings predictability. We also apply a 1.0x premium to PECO to reflect its superior regulatory environment and consistent ROE overearning.

Our Generation valuation is based on a 2020E SOTP. We start with our EBITDA estimates at each segment and capitalize them at an 8.0x base multiple (based on the long-term average forward EV/EBITDA in the sector) to which we apply a premium/discount based on our views of the specific region and portfolio.

Upside/Downside risks: 1) the company may or may not experience adverse regulatory rulings in its future rate cases, 2) Rate making mechanisms may or may not change in the future, 3) the company may or may not experience an increase in the price of key inputs such as natural gas and coal 4) the company may or may not experience a decrease in wholesale power prices 5) the company may or may not have to deal with stricter environmental or safety regulations 6) the company may or may not be able to access capital markets, 7) the company's operations could be materially impacted by weather events.

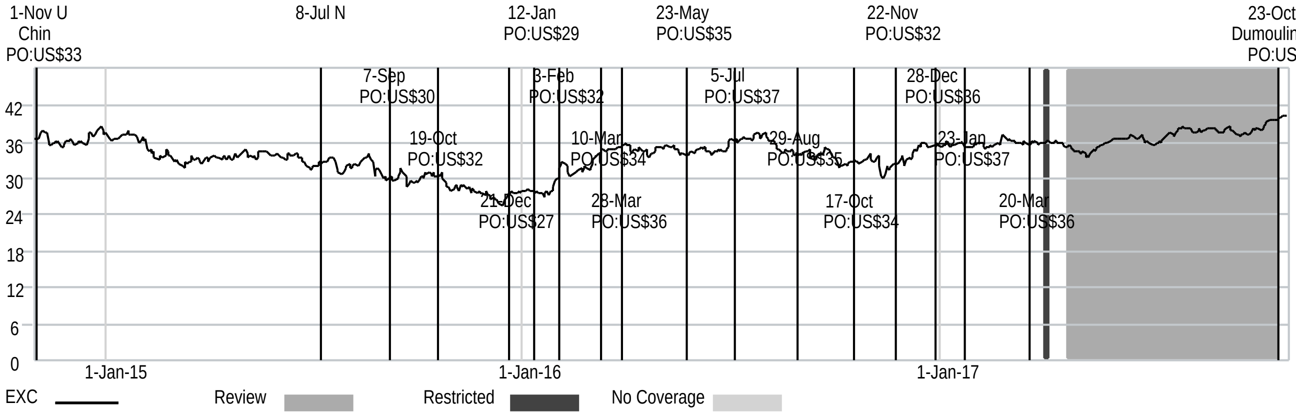
EXC Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of September 30, 2017 or such later date as indicated.

Equity Investment Rating Distribution: Alternative Energy Group (as of 30 Sep 2017)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	3	42.86%	Buy	3	100.00%
Hold	3	42.86%	Hold	2	66.67%
Sell	1	14.29%	Sell	1	100.00%

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2017)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	49	50.00%	Buy	32	65.31%
Hold	24	24.49%	Hold	16	66.67%
Sell	25	25.51%	Sell	12	48.00%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2017)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1513	51.82%	Buy	956	63.19%
Hold	646	22.12%	Hold	396	61.30%
Sell	761	26.06%	Sell	359	47.17%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

Price charts for the securities referenced in this research report are available at http://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
MLPF&S or one of its affiliates acts as a market maker for the equity securities recommended in the report: Exelon Corp.
MLPF&S or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Exelon Corp.
The issuer is or was, within the last 12 months, an investment banking client of MLPF&S and/or one or more of its affiliates: Exelon Corp.
MLPF&S or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Exelon Corp.
The issuer is or was, within the last 12 months, a non-securities business client of MLPF&S and/or one or more of its affiliates: Exelon Corp.
MLPF&S or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Exelon Corp.
MLPF&S or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Exelon Corp.
MLPF&S or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Exelon Corp.

The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of MLPF&S and/or one or more of its affiliates: Exelon Corp.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.
"BofA Merrill Lynch" includes Merrill Lynch, Pierce, Fenner & Smith Incorporated ("MLPF&S") and its affiliates. Investors should contact their BofA Merrill Lynch representative or Merrill Lynch Global Wealth Management financial advisor if they have questions concerning this report. "BofA Merrill Lynch" and "Merrill Lynch" are each global brands for BofA Merrill Lynch Global Research.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.
This research report provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This report and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.
Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented in this report. Such ideas or recommendations reflect the different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this report.

In the event that the recipient received this report pursuant to a contract between the recipient and MLPF&S for the provision of research services for a separate fee, and in connection therewith MLPF&S may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom MLPF&S has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by MLPF&S). If such recipient uses the services of MLPF&S in connection with the sale or purchase of a security referred to herein, MLPF&S may act as principal for its own account or as agent for another person. MLPF&S is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities mentioned in this report.

Diversified Utilities
North America │ United States

Exelon Corp (EXC)

Results: Keep Eye on Prize: Market Reform & ZECs.

- **Citi's Take — Results slightly below than expectations.** EXC reported consolidated operational Q'3 EPS of $0.85/share vs. our expectations of $0.89/share and consensus estimates of $0.86/share. ExGen's operating EPS came in at $0.36/share vs. our estimates of $0.39/share. Lower gross margins at Constellation drove the weaker results than expected. Regulated utilities came in at $0.49/share in-line with our estimates.
- **FY2017 guidance narrowed due to ZEC's timing.** The company narrowed FY2017 guidance range to $2.55-$2.75/share from $2.50-$2.80/share vs. our estimates of $2.73/share. Delay in Illinois ZEC revenue recognition drove the shift of $0.09/share into 2018. Company clarified that timing of revenue recognition wouldn't impact the cash flows or valuation.
- **Cost savings of $250m at ExGen offset market weakness.** Management introduced a cost savings program of $250m - expected to be achieved in 3 years. This helps offset lower gross margins of ~$200m in 2018/2019 though improving curves have already offset $50m and return of volatility would help further.
- **Buy EXC for the Prize – Market Reforms and ZECs:** Given, the company is already meeting its financial goals and credit metric targets, potential benefit from price formation, additional ZECs or market resiliency payments will all accrue as additional sources of value and capital allocation opportunities for EXC. Price formation of an additional $2-$5/share in PJM could be worth ~$270m-$675m of additional EBITDA. If reinvested in the utility platform, this could unlock even more value. Tax reform would help EXC 'retain' a lot more of these ExGen cash flows as well. We think investors should keep their eyes on this significant prize at EXC.
- **Implications — We Eye the Prize and Reiterate our Buy rating.** Regulated Utility has a strong growth profile with ~7% CAGR through 2020 and benefits from cash from ExGen. We think price reform and further support for nuclear is coming and reiterate our Buy rating and $45/share price target.

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $45 price target. We value ExGen at ~$3/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The legacy utility business is valued at $27/share based on a 18.0x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent net debt and add $12/share for ZECs to get to our rounded PT of $45/share.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the risks get rejected after further legal challenge then the stock has downside as some value of ZEC is already in the stock price

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations

published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2017	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	48%	38%	13%	3%	96%	1%
% of companies in each rating category that are investment banking clients	63%	65%	56%	60%	64%	58%

Guide to Citi Research Fundamental Research Investment Ratings:

Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.

Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.

Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch Upside/Downside calls:

Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES

Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA; Eitan Buchbinder, CFA

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q3 2017 Buy 32% (70%), Hold 44% (64%), Sell 24% (58%); Q2 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (57%); Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm’s global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm’s proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author’s previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Revising 2017-19 Estimates

What's Incremental To Our View

Based on revised assumptions, we have reduced our 2017 and 2019 estimates but increased our 2018 estimate.

IMPORTANT POINTS

- EXC reported 3Q results of $0.85 vs $0.91, below our estimate of $0.88 and consensus of $0.86. The shortfall (vs our estimate) was primarily due to the impact of mild weather.

- Based on the following key assumptions: latest forward commodity curves, updated hedge disclosure, revised timing of Illinois ZEC payments (which will now be booked from January 2018 vs our previous assumption of June 2017), lower Retail marketing volume, and revised cost assumptions (we have factored in 75% of management's incremental cost reduction targets over 2018-2020), we make the following adjustments to our estimates: 2017 is reduced to $2.65 from $2.70, 2018 is increased to $2.88 from $2.83, and 2019 is reduced to $2.73 from $2.75. Our preliminary 2020 estimate is $2.83.

- Assuming a 15.6x P/E multiple (in line with the peer group) on our 2019 estimate of $2.73, we derive our price target of $43. We reiterate our **Buy** recommendation.

- We have included our revised 2017-19 earnings and cash flow models in this report.

Buy

Price Target: $43.00
Prior: $43.00

Δ Key Drivers

- *Latest forward commodity curves and hedge disclosures*
- *Revised timing of ZEC payments*
- *Lower Retail marketing volume*
- *Revised cost assumptions*

Note

1) Rate Base - Com Ed: $10.6bn in 2015, $11.9bn in 2016, $13.2bn in 2017E, $14.0bn in 2018E, $14.8bn in 2019E; PECO: $6.0bn in 2015, $6.2bn in 2016, $6.6bn in 2017E, $7.0bn in 2018E, $7.4bn in 2019E;
BGE: $5.0bn in 2015, $5.3bn in 2016, $5.7bn in 2017E, $6.1bn in 2018E, $6.5bn in 2019E; PEPCO: $8.3bn in 2016, $8.9bn in 2017E, $9.4bn in 2018E, $9.9bn in 2019E.

2) Earned ROE - Com Ed: 8.0% in 2015, 8.8% in 2016, 9.3% in 2017, 9.4% in 2018, 9.5% in 2019; PECO: 11.7% in 2015, 13.3% in 2016, 12.1% in 2017, 12.2% in 2018, 12.1% in 2019;
BGE: 10.7% in 2015, 10.5% in 2016, 9.7% in 2017, 10.3% in 2018, 10.3% in 2019; PEPCO: 5.5% in 2016, 7.4% in 2017, 7.7% in 2018, 7.8% in 2019.

3) We assume the Illinois legislature's changes to Com Ed formula rates represent $0.02 of earnings in 2013 and $0.04 of annual earnings from 2014 onwards.

4) We assume that the DOE nuclear disposal fee is removed from May 2014; represents $0.06 of earnings in 2014 and $0.11 annually thereafter.

5) We have included the impact of the $1.15bn Equity Units (2.5% interest rate) from mid 2014 and assume conversion to equity (33m shares) on 6/1/17.

6) We have factored in the impact of the $6.8bn PEPCO acquisition from Q2 2016 (including the settlement of the 57.5m share forward equity sale on 7/14/15).

7) We assume the New York ZEC payments and the acquisition of the Fitzpatrick plant (838mw , nuclear $110m price) from Q2 2017.

8) We have factored the IL ZEC payments for Clinton (1069mw) and Quad City (1403mw) from 6/1/17.

9) Total ZEC payments represent $500m / year of pre tax income (from 2018 onwards).

10) We assume retirement of TMI (September 2019), Oyster Creek (December 2019), and exit from EGTP (2018 onwards).

11) We have factored in 75% of management's cost reduction targets over the 2018-2020 period.

12) Forward curves as of 11/1/17.

Sources: Company reports and SunTrust Robinson Humphrey estimates.

Company Description

Exelon, a utility services holding company, operates through its principal subsidiaries: Generation, ComEd, PECO, and BGE. Generation's business consists of its owned and contracted electric generating facilities, its wholesale energy marketing operations and its competitive retail supply operations. ComEd's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of distribution and transmission services to retail customers in northern Illinois, including the City of Chicago. PECO's energy delivery business consists of the purchase and regulated retail sale of electricity and the provision of transmission and distribution services to retail customers in southeastern Pennsylvania, including the City of Philadelphia, as well as the purchase and regulated retail sale of natural gas and the provision of distribution services to retail customers in the Pennsylvania counties surrounding the City of Philadelphia. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of 10 counties in central Maryland.

Investment Thesis

Discounted valuation, and potential for earnings upside (from recently completed Pepco acquisition and changes to the nuclear portfolio), provide an attractive return opportunity, in our opinion.

Valuation and Risks

VALUATION

Assuming a 15.6x P/E multiple (in line with the peer group) on our 2019 estimate of $2.73, we derive our price target of $43.

RISKS

- Outlook for forward power prices.
- Timing of upcoming EPA regulations.
- Outcome of pending and future rate cases.

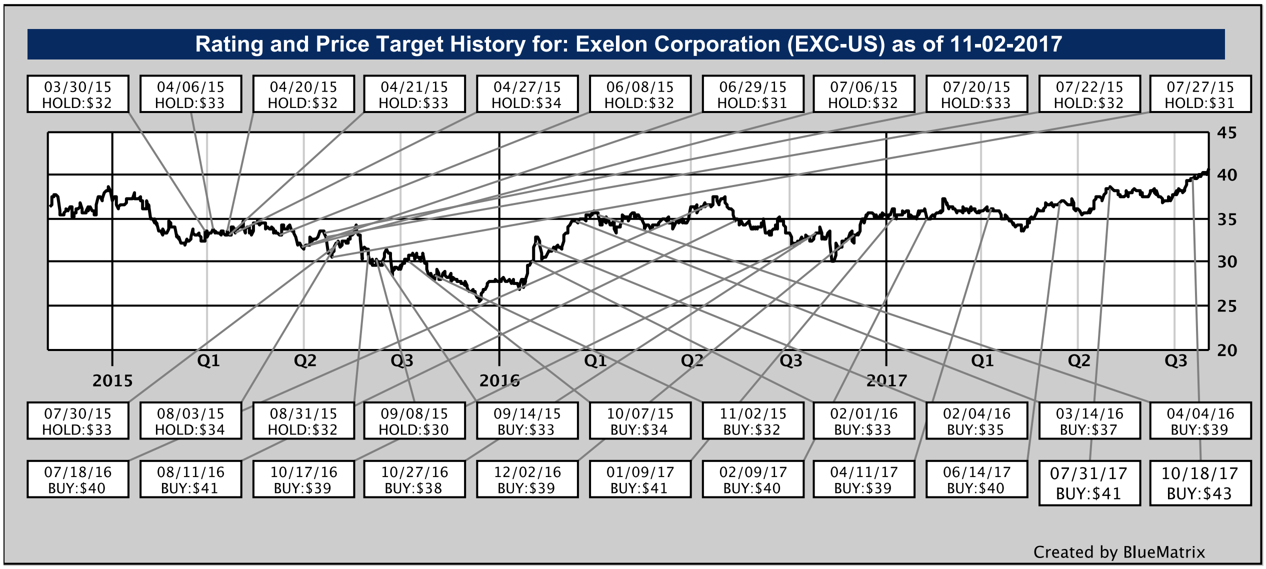
Analyst Certification

I, Ali Agha , hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

Required Disclosures

Analyst compensation is based upon stock price performance, quality of analysis, communication skills, and the overall revenue and profitability of the firm, including investment banking revenue.

As a matter of policy and practice, the firm prohibits the offering of favorable research, a specific research rating or a specific target price as consideration or inducement for the receipt of business or compensation. In addition, associated persons preparing research reports are prohibited from owning securities in the subject companies.



STRH Ratings System for Equity Securities

Dissemination of Research

SunTrust Robinson Humphrey (STRH) seeks to make all reasonable efforts to provide research reports simultaneously to all eligible clients. Reports are available as published in the restricted access area of our website to all eligible clients who have requested a password. Institutional investors, corporates, and members of the Press may also receive our research via third party vendors including: Thomson Reuters, Bloomberg, FactSet, and S&P Capital IQ. Additional distribution may be done by sales personnel via email, fax, or other electronic means, or regular mail.

For access to third party vendors or our Research website: https://suntrustlibrary.bluematrix.com/client/library.jsp

Please email the Research Department at STRHEquityResearchDepartment@SunTrust.com or contact your STRH sales representative.

The rating system effective as of Oct. 7, 2016:

STRH Rating System for Equity Securities

SunTrust Robinson Humphrey (STRH) rates individual equities using a three-tiered system. Each stock is rated relative to the broader market (generally the S&P 500) over the next 12-18 months (unless otherwise indicated).

Buy (B) – the stock’s total return is expected to outperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Hold (H) – the stock’s total return is expected to perform in line with the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Sell (S) – the stock’s total return is expected to underperform the S&P 500 or relevant benchmark over the next 12-18 months (unless otherwise indicated)

Not Rated (NR) – STRH does not have an investment rating or opinion on the stock

Coverage Suspended (CS) – indicates that STRH’s rating and/or target price have been temporarily suspended due to applicable regulations and/or STRH Management discretion. The previously published rating and target price should not be relied upon

STRH analysts have a price target on the stocks that they cover, unless otherwise indicated. The price target represents that analyst's expectation of where the stock will trade in the next 12-18 months (unless otherwise indicated). If an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of STRH Research Management not to assign a target price; likewise certain stocks that trade under $5 may

exhibit volatility whereby assigning a price target would be unhelpful to making an investment decision. As such, with Research Management's approval, an analyst may refrain from assigning a target to a sub-$5 stock.

Legend for Rating and Price Target History Charts:
B = Buy
H = Hold
S = Sell
D = Drop Coverage
CS = Coverage Suspended
NR = Not Rated
I = Initiate Coverage
T = Transfer Coverage

<u>The prior rating system until Oct. 7, 2016:</u>

3 designations based on total returns* within a 12-month period**
· Buy – total return ≥ 15% (10% for low-Beta securities)***
· Reduce – total return ≤ negative 10% (5% for low Beta securities)
· Neutral – total return is within the bounds above
· NR – NOT RATED, STRH does not provide equity research coverage
· CS – Coverage Suspended
*Total return (price appreciation + dividends); **Price targets are within a 12-month period, unless otherwise noted; ***Low Beta defined as securities with an average Beta of 0.8 or less, using Bloomberg's 5-year average

SunTrust Robinson Humphrey ratings distribution (as of 11/03/2017):

2017 EEI Conference Takeaways

Reconfirmed Buys on EXC, ETR; HoldCo debt Problems Persist.

Praful Mehta AC

- **We hosted more than twenty 1x1 meetings with management teams and three corporate dinners at the EEI conference in Orlando, FL.**
- **Tax Reform – Uncertainty on Parent Interest Deduction for now.** Most management teams thought, as currently drafted, interest at the parent level may not be tax deductible. Most teams, though, expected the language to get ‘cleaned up’ to allow for deductibility. Note that impact, if language isn’t cleaned up, is meaningful for companies with high holdco debt like DUK and SO with EPS dilution in the 5-7% range. See Figure 2.
- **Tax Reform – Lower Tax Rate Negatively Impacts HoldCo EPS.** Even if holdco interest deductibility is allowed, a lower tax rate lowers the tax shield on parent debt. This results in dilution for companies with high holdco leverage like DUK and SO in the 2-3% range. See Figure 3.
- **Reevaluation of DTL balance would have negative cash flow impact.** Reduction of tax rate would require Deferred Tax Liability (DTL) reevaluation and refund to rate payers. Refund would be “normalized” through average asset life and impact cash flows on annual basis. This impact would hurt credit metrics with annual cash flow ranging from ~$70m to ~$200m. See Figure 5.
- **EXC Big Winner: Price Formation – the logical step forward.** We think this will likely be the first action taken by FERC/PJM by mid-2018. Applying the suggested price formation changes to historical prices suggest a $2-5/MWh impact to LMP. This could increase EXC’s EBITDA by $270m-$675m. This incremental EBITDA, could be used to bolster dividend and reinvest in the utility business.
- **ETR Story continues to reflect transformation.** ETR management continues to improve both operations and regulatory relationships and is on track for the wind-down of EWC. Next event to watch: FRP decision in AR in 4Q17.
- **FES bankruptcy filing likely April 2018. DOE push on any form of re-regulation will take time.** While price formation is expected in 2018, we don’t think re-regulating coal/nuclear assets moves forward by April 2018 – the time when $600m of FES debt matures. We think FES will file for bankruptcy protection and that restructuring process can complicate and delay the FE pure-play growth story.
- **ES Growth story now includes water acquisitions. NPT critical and management reflected confidence.** Management reflected a lot of confidence on the approvals for NPT. Next event to watch is the NHPUC approval and presidential permit. The increasing focus on the water business and the potential for distressed acquisitions could suggest a potential weakness in organic growth.
- **PG&E – SDG&E outcome could be the leading indicator.** The outcome of the SDG&E case for an expense memorandum account related to 2007 Southern California wildfires would be a leading indicator for how regulators want to tackle inverse condemnation. While it is logical for regulators to allow utilities to recover costs in excess of insurance from customers, the outcome is far from certain. The CPUC has the case on the agenda for its November 30th meeting, although it has already been delayed several times. The exact language of the decision will give us insight into CPUC’s thinking on recovery.

See Appendix A-1 for Analyst Certification, Important Disclosures and non-US research analyst disclosures.

Key Takeaways from EEI Meetings

- **Notes below highlight the key INCREMENTAL takeaways on each company's story from EEI.**

Figure 1. Summary of INCREMENTAL takeaways from EEI meetings.

Comp.	Positives	Concerns	Key Near Term Events
ES	• Increasing confidence on NPT • Capital plan to be finalized in Feb. with potential additional capex of up to ~$525m	• Looking at distressed water acquisitions for growth suggests some weakness on organic growth • NPT approval critical to story	• NPT - Presidential permit Q4 '17 • NPT - NHPUC approval; MA RFP proposal selections on January 25th • Rate cases for NSTAR, WMECO decision expected in 4Q17
ETR	• 'New ETR' thesis reconfirmed given regulatory outcome and management focus on execution	• No new concerns	• The APSC decision in Q'4 2017 • Column 4 exit for ANO in Jul 2018 and Pilgrim in Spring 2019
ED	• Continue to be impressed with disciplined management team	• PTC could impact renewables pipeline though minimal impact to story	• New York TransCo decision expected in 1Q18
D	• Millstone - Plan to work with and disclose information to regulators • ATP and Cove Point on track	• No new concerns	• VEPCO rider adjustments expected in 1H18 • Cove point in-service expected 4Q17
DUK	• Ample opportunities to deploy capital on grid mod initiatives	• Ongoing concern on DEP rate case with ~$400m ask vs. ~$2m staff recommendation driven by contested ROE, cap structure & coal ash recovery	• Hearing for DEP rate case to begin on 11/20/2017
AEP	• Wind catcher OK under PTC changes • Confidence on wind catcher approvals given benefits	• No new concerns	• Wind Catcher decision 1Q18 • Decisions on rate cases: TX – 4Q17; PSO – 1Q18; KYP – 1Q17; Michigan – 2Q17; Indiana – 3Q18
PEG	• Higher confidence on price formation changes: + ~$2-4/MWh on 60TWh • ZECs argument stays robust though timing likely 2018 • Well positioned on tax reform	• No new concerns	• FERC's response to DOE NOPR on Dec 11th • NJ Distribution Rate Case filing on Dec 1st, 2017
EIX	• Constructive efforts together with other utilities on inverse condemnation	• SONGs, GRC uncertainty in near term shadow strong growth story	• GRC final decision expected in 2018 • Songs party memorandums preliminarily due Nov. 30th
EXC	• Higher confidence on price formation changes: + ~$2-4/MWh on 125TWh • One of the best positioned utilities on tax reform • Steady improvements at utilities	• No new concerns	• FERC's response to DOE NOPR on Dec 11th • Decision on rate cases: ComEd 4Q17, Delmarva MD and DE in 2Q/3Q17; Delmarva DE Gas 3Q17
FE	• Improved growth profile at utilities business • PJM price formation reform could help with FES restructuring	• Given FES April maturity, we think filing for bankruptcy is most likely outcome	• FES maturity Apr 1st, 2017 • FERC's response to DOE NOPR on Dec 11th
PCG	• PCG does have robust vegetation maintenance program • All CA utilities coming together on inverse condemnation in SDG&E case	• Cal fire investigation could take 12-15 months and likely limited clarity till that point	• SDG&E fire case will be a leading indicator; on CPUC's Nov 30th agenda

Source: Citi Research

- **Interest deductibility at HoldCo is unclear.** In the current version of the tax bill, it is unclear if interest rate deductibility at the parent level would be disallowed. We expect there would be many changes in the bill before it passes the congress and house; however it still creates substantial risk to the entire industry. DUK and SO dilution could be in the 5-7% range.

Figure 2. HoldCo Interest Deductibility Impact on EPS

Elimination of HoldCo Int. Deductability	Units	D	DUK	SO	PCG	ED	AEP	PEG	EIX	ES	EXC	ETR	FE
HoldCo Int. Expense	$m	$945	$681	$435	$10	$88	$50	$81	$15	$66	$340	$90	$249
Tax Rate	%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%
Interest Tax Shield	$m	($331)	($238)	($152)	($4)	($31)	($18)	($28)	($5)	($23)	($119)	($31)	($87)
Shares Outstanding	m	631	704	1,003	519	310	492	507	326	317	962	180	480
Int. Tax shield per share	$/share	($0.52)	($0.34)	($0.15)	($0.01)	($0.10)	($0.04)	($0.06)	($0.02)	($0.07)	($0.12)	($0.17)	($0.18)
2018 EPS	$/share	$4.04	$4.78	$3.04	$3.79	$4.27	$3.89	$3.03	$4.32	$3.30	$2.84	$4.77	$2.54
Dilution if Int. Tax Shield Disallowed	%	NA	(7.1%)	(5.0%)	(0.2%)	(2.3%)	(0.9%)	NA	(0.4%)	(2.2%)	NA	(3.6%)	(7.1%)

Source: Citi Research

We have indicated "NA" for D, EXC, PEG as the parent interest deductibility could be supported by EBITDA of non-utility business. Non-utility businesses would also be winners with a lower of the tax rate. DUK interest expense at parent based on interest expense noted in 2016 10K for 'other segment' less 'eliminations'. ED interest expense at parent based on Citi assumed 4.5% rate.

- **Lower Tax Rate Negatively Impacts HoldCo EPS Anyway.** Lower tax rate would reduce parent interest tax shield and result in dilution. In the table below we highlight the impact if the rate is reduced from 35% to 20%. DUK and SO dilution is in the 2-3% range.

Figure 3. Reduction of Tax Rate Impact on EPS

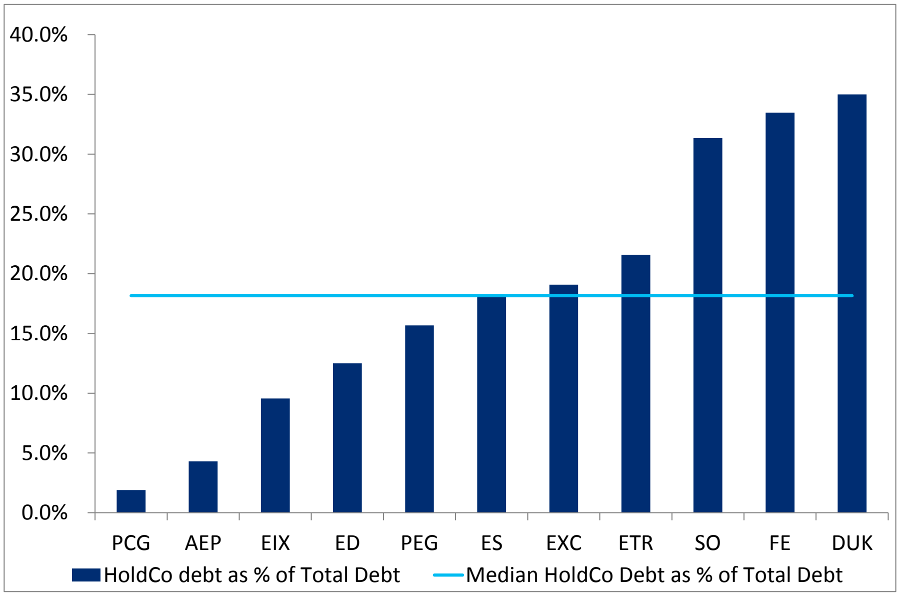
Lower Tax Rate	Units	D	DUK	SO	PCG	ED	AEP	PEG	EIX	ES	EXC	ETR	FE
HoldCo Int. Expense	$m	$945	$681	$435	$10	$88	$50	$81	$15	$66	$340	$90	$249
Change in Tax Rate	%	(15.0%)	(15.0%)	(15.0%)	(15.0%)	(15.0%)	(15.0%)	(15.0%)	(15.0%)	(15.0%)	(15.0%)	(15.0%)	(15.0%)
Lower Int. Tax Shield	$m	($142)	($102)	($65)	($2)	($13)	($8)	($12)	($2)	($10)	($51)	($13)	($37)
Shares Outstanding	m	631	704	1,003	519	310	492	507	326	317	962	180	480
Int. Tax shield per share	$/share	($0.22)	($0.15)	($0.06)	($0.00)	($0.04)	($0.02)	($0.02)	($0.01)	($0.03)	($0.05)	($0.07)	($0.08)
2018 EPS	$/share	$4	$5	$3	$4	$4	$4	$3	$4	$3	$3	$5	$3
Dilution due to lower tax rate	%	NA	(3.0%)	(2.1%)	(0.1%)	(1.0%)	(0.4%)	NA	(0.2%)	(1.0%)	NA	(1.6%)	(3.1%)

Source: Citi Research

We have indicated "NA" for D, EXC, PEG as the benefits of the tax savings at the unregulated business will more than outweigh the reduction in tax shield of parent interest associated with a reduction in tax rate from 35% to 20%.

- **Parent debt is in focus.** Given the negative impacts on parent interest expense below, we highlight the companies with the highest parent debt as a percentage of total debt as of 6/30/2017. Note, Dominion's parent debt supports significant other Energy and midstream businesses and therefore isn't included in the table below.

Figure 4. HoldCo Debt as a % of Total Debt



Source: Citi Research

DUK parent debt based on 2017 guidance of 35% applied to debt as of 6/30/2017.

- **DTL Reevaluation would impact cash flows over the long-term.** Reduction in tax rates (from 35% to 20%) would require the re-evaluation of Deferred Tax Liability (DTL) balances at regulated utilities. The change in DTL would be returned to rate payers through average useful life of assets. This amount would have cash flow impact but no income statement impact unless it triggers an equity issuance. Management talked about different ways to mitigate this impact but we think this impact is mostly going under the radar for now. We think there could be a negative credit impact (FFO/Debt) with cash out flow ranging from ~$70m to ~$200m as show in the table below.

Figure 5. Annual Cash Impact of DTL reevaluation

DTL Reevaluation	Units	D	DUK	SO	PCG	ED	AEP	PEG	EIX	ES	EXC	ETR	FE
DTL Balance (12/31/2016)	$m	$8,602	$14,155	$14,092	$10,213	$10,205	$8,758	$4,983	$8,327	$5,607	$13,774	$6,363	$7,088
Current Tax Rate	%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%	35.0%
Pre-Tax DTL	$m	$24,577	$40,443	$40,263	$29,180	$29,157	$25,023	$14,237	$23,791	$16,020	$39,354	$18,180	$20,251

Ann. Cash Impact of DTL Reevaluation	$m	($123)	($202)	($201)	($146)	($146)	($125)	($71)	($119)	($80)	($197)	($91)	($101)

Source: Citi Research

DTL balance reflects 2016 10k DTL related to PP&E. Citi assumption of 30 year asset life.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

IMPORTANT DISCLOSURES

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Sempra Energy

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Entergy Corp

A Supervisory Analyst has a position that may be considered material to that individual in the securities of Dominion Resources. Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Dominion Resources Inc

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Edison International

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Eversource Energy

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of NextEra Energy Inc

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Consolidated Edison Inc

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Public Service Enterprise Group Inc

A Supervisory Analyst has a position that may be considered material to that individual in the securities of American Electric Power Co Inc Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of American Electric Power Company Inc

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Southern Co

A Supervisory Analyst has a position that may be considered material to that individual in the securities of Duke Energy Corp. Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Duke Energy Corp

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of PG&E Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Sempra Energy, Entergy Corporation, Dominion Energy Inc, Exelon Corp, Edison International, Eversource Energy, Consolidated Edison, Inc., Public Service Enterprise Group Inc, American Electric Power Co Inc, Southern Co, Duke Energy Corp, PG&E Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Sempra Energy, Entergy Corporation, Dominion Energy Inc, Exelon Corp, Edison International, Eversource Energy, NextEra Energy, Consolidated Edison, Inc., Public Service Enterprise Group Inc, American Electric Power Co Inc, Southern Co, Duke Energy Corp, PG&E Corp.

Citigroup Global Markets Inc. or its affiliates expects to receive or intends to seek, within the next three months, compensation for investment banking services from Sempra Energy, Edison International, NextEra Energy, Southern Co.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Sempra Energy, Entergy Corporation, Dominion Energy Inc, Exelon Corp, Edison International, Eversource Energy, NextEra Energy, Consolidated Edison, Inc., Public Service Enterprise Group Inc, American Electric Power Co Inc, Southern Co, Duke Energy Corp, PG&E Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): NextEra Energy, Dominion Energy Inc, American Electric Power Co Inc, Sempra Energy, Entergy Corporation, Exelon Corp, Edison International, Eversource Energy, Consolidated Edison, Inc., Public Service Enterprise Group Inc, Southern Co, Duke Energy Corp, PG&E Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Sempra Energy, Entergy Corporation, Dominion Energy Inc, Exelon Corp, Edison International, Eversource Energy, NextEra Energy, Consolidated Edison, Inc., Public Service Enterprise Group Inc, American Electric Power Co Inc, Southern Co, Duke Energy Corp, PG&E Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Sempra Energy, Entergy Corporation, Dominion Energy Inc, Exelon Corp, Edison International, Eversource Energy, NextEra Energy, Consolidated Edison, Inc., Public Service Enterprise Group Inc, American Electric Power Co Inc, Southern Co, Duke Energy Corp, PG&E Corp.

Citigroup Global Markets Inc. or an affiliate received compensation in the past 12 months from Entergy Corporation, NextEra Energy, Duke Energy Corp, Dominion Energy Inc, American Electric Power Co Inc.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Sempra Energy, Entergy Corporation, Dominion Energy Inc, Exelon Corp, Edison International, Eversource Energy, Consolidated Edison, Inc., Public Service Enterprise Group Inc, American Electric Power Co Inc, Southern Co, Duke Energy Corp, PG&E Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

The Firm is a market maker in the publicly traded equity securities of Duke Energy Corp.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2017	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	48%	38%	13%	3%	96%	1%
% of companies in each rating category that are investment banking clients	63%	65%	56%	60%	64%	58%

Guide to Citi Research Fundamental Research Investment Ratings:

Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.

Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.

Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch Upside/Downside calls:

Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA; Eitan Buchbinder, CFA; Faisel Khan, CFA

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day’s market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author’s previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to “Buy”,”Hold”,”Sell” at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q3 2017 Buy 32% (70%), Hold 44% (64%), Sell 24% (58%); Q2 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (57%); Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm’s global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm’s proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author’s previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

(all figures in USD unless noted)

Exelon Corp

Still a value name, despite recent strength

Event

- EXC remains our top pick for diversified utilities given its attractive valuation and upside to estimates for both regulated utilities and merchant power.
- We met with EXC's management during the EEI conference in Orlando.

Impact

- **Strong utility growth with upside potential:** EXC expects a 6-8% EPS CAGR through 2020 for its regulated utilities less parent. The growth is a function of a 6.5% rate base CAGR and improving realized ROEs for Pepco (PHI). Out of the US$9bn rate base growth for EXC's regulated utilities between 2017 and 2020, ~75% will be recovered through formula rates and/or tracker mechanisms. While the company has kept its regulated earnings ranges unchanged through 2020, PHI seems to be improving its realized ROEs slightly faster than originally expected. We also see upside to EXC's regulated utility capex along with grid modernization initiatives, especially outside of IL.
- **Regulatory support for ExGen:** Forward power/gas curves look undeniably weak, but we are encouraged by growing state and federal support for baseload power plants such as EXC's nukes. Last week, FERC Commissioner Chatterjee mentioned that the Commission won't delay its response to the DOE NOPR. FERC seems likely to endorse a temporary support for the most challenged coal/ nuclear assets, before regional power markets (PJM in particular) implement their price formation reforms. While ExGen is unlikely to benefit from this interim step (with the Three Mile Island nuke in PA still likely to close, in our opinion), the FERC ruling by December 12 should instruct PJM to implement power market changes by the summer of 2018. Our earnings estimates do not reflect this likely benefit to ExGen's fleet, which could exceed US$400m (EBITDA) on an annualized basis. That could provide an almost 20% increase in our 2020 EBITDA estimate for ExGen, though we recognize that the pick-up in energy prices could weigh on future capacity prices in PJM. Separately, we have not given up on some legislative support for PEG's and EXC's nukes in NJ, though a proposed change in the Speaker of the NJ Assembly could delay the process.

Earnings and target price revision

- We have updated our earnings estimates to reflect a delay in IL ZECs from 2017 to 2018, changes in forward power/gas curves, lower O&M expenses at ExGen, and lower retail volumes at Constellation. Our new '17/'18/'19/'20 EPS estimates are US$2.65/2.90/2.88/2.78 vs. US$2.70/2.85/2.82/2.64, respectively. We have raised our TP to US$44 (from US$41) in recognition of higher projected earnings and meaningful upside potential to both regulated earnings and merchant power results. Please review our SOP valuations based on base and upside cases (Figs. 1 and 2).

Price catalyst

- 12-month price target: US$44.00 based on a Sum of Parts methodology.
- Catalyst: FERC's response to DOE's NOPR (December 12th); potential state support for nuclear plants in NJ (December/January).

Action and recommendation

- We reiterate our Outperform rating.

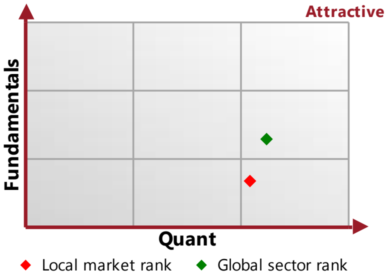
Macquarie Quant View

The quant model currently holds a reasonably positive view on Exelon Corp. The strongest style exposure is Price Momentum, indicating this stock has had strong medium to long term returns which often persist into the future. The weakest style exposure is Quality, indicating this stock is likely to have a weaker and less stable underlying earnings stream.

111/435

Global rank in Utilities

% of BUY recommendations	79% (15/19)
Number of Price Target downgrades	0
Number of Price Target upgrades	10

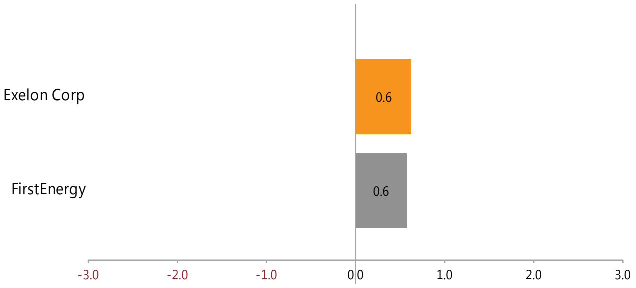


Displays where the company's ranked based on the fundamental consensus Price Target and Macquarie's Quantitative Alpha model.

Two rankings: Local market (United States) and Global sector (Utilities)

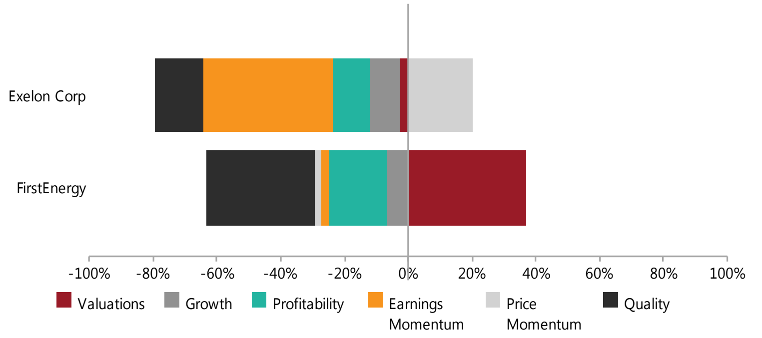
Macquarie Alpha Model ranking

A list of comparable companies and their Macquarie Alpha model score (higher is better).



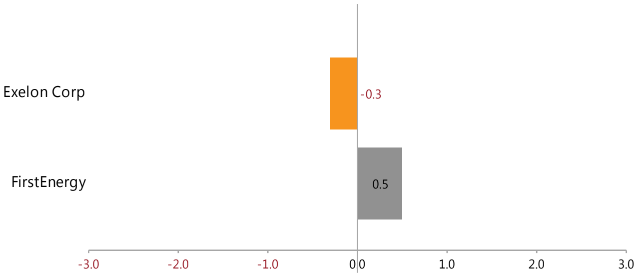
Factors driving the Alpha Model

For the comparable firms this chart shows the key underlying styles and their contribution to the current overall Alpha score.



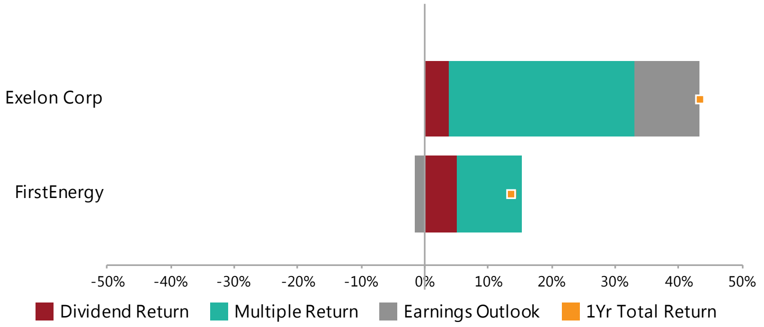
Macquarie Earnings Sentiment Indicator

The Macquarie Sentiment Indicator is an enhanced earnings revisions signal that favours analysts who have more timely and higher conviction revisions. Current score shown below.



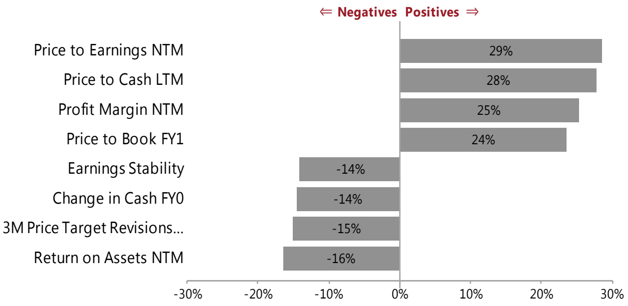
Drivers of Stock Return

Breakdown of 1 year total return (local currency) into returns from dividends, changes in forward earnings estimates and the resulting change in earnings multiple.



What drove this Company in the last 5 years

Which factor score has had the greatest correlation with the company's returns over the last 5 years.



How it looks on the Alpha model

A more granular view of the underlying style scores that drive the alpha (higher is better) and the percentile rank relative to the sector and market.

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie – South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 30 September 2017

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	50.38%	56.22%	40.70%	46.21%	63.85%	41.61%	(for global coverage by Macquarie, 4.18% of stocks followed are investment banking clients)
Neutral	37.50%	28.16%	43.02%	47.52%	30.00%	39.51%	(for global coverage by Macquarie, 2.68% of stocks followed are investment banking clients)
Underperform	12.12%	15.62%	16.28%	6.27%	6.15%	18.88%	(for global coverage by Macquarie, 1.08% of stocks followed are investment banking clients)

- **Our Take: Following the release of PJM's proposal for energy market reform, we are reaffirming our optimism on the potential energy gross margin uplift for EXC under the extended LMP framework.** We are maintaining our $43 TP for EXC with an Outperform rating. As noted in our 9/7 note "Highlighting Potential from Energy Reforms", our valuation for EXC reflects partial credit given to the potential uplift in energy gross margin that the company now expects to be effective in PJM in mid-2018 where the energy market would be restructured to provide more support for 'inflexible' baseload generation.
- **PJM making progress toward an improved energy market** with its proposed enhancements to energy price formation report released on Nov 15th. Besides providing more details and supports for an energy market where prices reflect more accurately the real costs of serving load, PJM's proposal also presents the simulation impacts of the new rules on energy and capacity prices. PJM's simulation results suggest that the total payment increases by 2%-5% with the uplift in energy price partially offset by lower capacity prices.
- PJM's simulated $3.60 higher energy pricing minus some reduced capacity revenue is consistent with our prior estimate of $1-$4 around-the-clock uplift that could add about $200m-$400m EBITDA to EXC, or $0.15-$0.25 in EPS. We assign 50% credit to that outcome which adds $1 to our $43 target price. Implementation of PJM's proposal would add an incremental $1 to our valuation. We continue to see energy price reforms as among the most investable themes in the space now (see our most recent weekly note for more commentary – 11/10 Things We've Learned This Week).

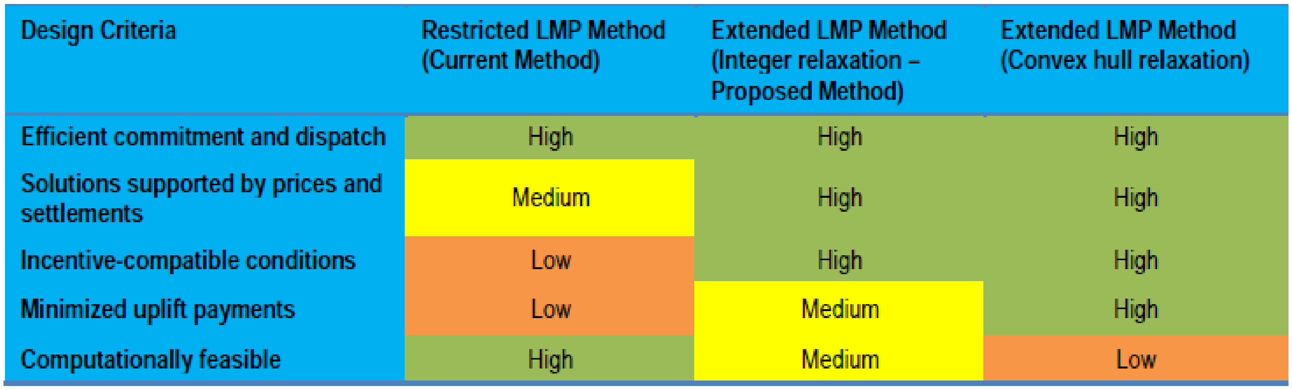
- **Improved energy prices with an extended LMP method similar to what was implemented in MISO in 2015.** Essentially, PJM's proposal would allow needed, but "inflexible" units to set marginal pricing without the current problem of reducing LMP to zero by flooding a node with unnecessary MWs that these units can't turn off. This problem has always required undesirable uplift payments that have distorted the market and reduced the incentive to build more flexible units. In recent commentary, PJM had been criticized for considering a new marginal price calculation method called "convex hull relaxation" because it is widely considered too computationally complex to implement practically (but would allow inflexible units to set appropriately higher marginal pricing). However, PJM has instead opted to go with an easier approximation of the method called "integer relaxation", which essentially means allowing an inflexible unit to set marginal pricing using only a portion of its supply (i.e., less than 100% or an integer less than 1) (Figure 1).

  Furthermore, PJM is continuing to consider compensation schemes to incent more "load following" generation that would, over time, reduce the system's dependence on inflexible units in the first place.

  PJM is also proposing compensation for a new 30-minute reserve service in order to reduce/eliminate current shortage conditions that may occur with 10-minute reserves.

Figure 1: Alternative LMP Pricing Methods



Design Criteria	Restricted LMP Method (Current Method)	Extended LMP Method (Integer relaxation – Proposed Method)	Extended LMP Method (Convex hull relaxation)
Efficient commitment and dispatch	High	High	High
Solutions supported by prices and settlements	Medium	High	High
Incentive-compatible conditions	Low	High	High
Minimized uplift payments	Low	Medium	High
Computationally feasible	High	Medium	Low

Source: PJM

- **FERC contemplating interim measures to support at-risk coal and nuclear**. In an interview with Utility Dive, the FERC acting chairman, Nell Chatterjee, indicated that FERC is looking at short-term solution, i.e. a Section 206 order under the Federal Power Act, which will direct ISOs/ RTOs to provide temporary relief for power plants that are at risk of retiring before FERC can fully evaluate the DOE's NOPR and reaches a longer-term solution for reliability and resiliency.
- **DOE playing defense following backlash.** Following widespread criticism and pushback from energy industry associations, FERC itself, industrial energy consumers and many others, Energy Secretary Perry defended his agency's Notice of Proposed Rulemaking (NOPR). Secretary Perry responded to the criticism by dismissing concerns over market impact, stating "there is no free market in the energy industry". On Oct. 10th, a revised proposal was filed, such that the cost recover rule would only apply to power plants in regions with active "energy and capacity markets".

  The House Energy and Commerce subcommittee vice chairman Pete Olson (R-TX) noted FERC Commissioner Powelson's comments and expressed concern that the proposal would hurt consumers, driving up power prices by "picking winners and losers" for power generation. An analysis by consultancy ICF estimated the DOE proposal would cost ratepayers $800M to $3.8M annually through 2030.

During testimony before the subcommittee on Oct. 12th, Secretary Perry further defended his plan stating costs are "secondary to ensuring grid resiliency" in emergencies. One question the secretary faced was whether it would be more effective to improve grid infrastructure rather than to support specific types of generation, citing a Rhodium study that showed only 0.0007% of major electricity disruptions from 2012-2016 were a result of fuel supply problems. Secretary Perry stated that although the DOE has not considered "better options" and that his proposal is not the "be all, end all" but rather a way of "getting the conversation going."

- ***From our 10/6 weekly*: FERC, industry push back on DoE.** As we noted in our ***9/29 note: DoE Gets Pushy,*** the US DoE proposed rulemaking to fast-track support for unregulated coal and nuclear baseload has proven highly controversial and unlikely to alter an ongoing energy market reform process expected to play out over the next 12-18 months (see our 9/7 note). Fourteen energy industry associations filed a motion with FERC to extend deadlines, stating that "all [industry experts] demonstrate that no emergency exists that would justify such an action." Furthermore, on Oct. 4th, FERC Commissioner Powelson stated that FERC "will not destroy the marketplace", while emphasizing FERC's status as an independent agency: "FERC does not do politics." Commissioner LaFleur endorsed these views.
- ***From our 8/27 weekly*: As expected, DOE Grid Reliability Report supports baseload coal and nuclear. Next step: FERC changes to energy market structures.** On August 23, the DOE issued its long-awaited grid reliability study. Recall that back in April, Energy Secretary Perry ordered DOE staff to conduct a study evaluating the reliability of the nation's electric grid, pertaining to his concerns regarding closures of baseload power plants, particularly coal and nuclear. He had also warned that the DOE would overrule state renewable energy policies (such as renewable mandates) on the grounds of national security if reliability was found to be threatened. However, the study found that persistently low natural gas prices to be the greatest driver of baseload power plant retirements, followed by flat power demand, with increased costs from environmental regulations and the additions of renewables to the grid as lesser drivers. In addition, the study concluded that renewables are not a threat to grid reliability to the surprise of many utility and developer executives and other analysts. Many utility executives had feared that the study might preempt state policies, particularly hard-won financial supports for struggling nuclear fleets if the opposite conclusion had been reached. However, the study concluded that "ultimately, the continued closure of traditional baseload power plants calls for a comprehensive strategy for long-term reliability and resilience." **Perhaps most important**, the study also suggested that existing market designs may not be able to address further challenges in the future and **recommended that FERC expedite its study of wholesale power market structures** to improve energy price formation and create fuel-neutral markets that compensate attributes that boost grid reliability. The DOE also encouraged the EPA "to allow coal-fired power plants to improve efficiency and reliability without triggering new regulatory approvals and associated costs" as well as target an R&D portfolio to help those plants boost efficiency and that federal agencies accelerate and cut the costs of permitting for grid infrastructure for nuclear, hydropower, and coal generation.

The analyst(s) responsible for preparing this research report received Compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.
Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.
Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	44%	(65% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	13%	(53% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Exelon Corporation (EXC.N)

Method: Our $43 target price and Outperform rating for EXC are based on a sum of the parts. To value the utilities we use a peer average 2019 P/E multiple of 17.5x discounted to reflect the respective risks at each of the utilities. To value the generation business we apply a 7.5x EV/EBITDA multiple under our embedded power price scenarios. The values of ZECs and capacity payments are removed from EBITDA estimates and valued separately. We rate EXC Outperform as we forecast its total return to exceed the group average.

Risk: Risks to our $43 target price and Outperform rating for EXC are 1) regulatory risk--PHI ratecase risk, 2) legislative risk, 3) commodity and power and capacity price risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk, 7) weather risk, 8) environmental and climate change risk, and 9) physical infrastructure and cybersecurity risk.

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Reaffirm PJM Energy Reform Uplift

- Our Take: Following the release of PJM's proposal for energy market reform, we are reaffirming our optimism on the potential energy gross margin uplift for EXC under the extended LMP framework. We are maintaining our $43 TP for EXC with an Outperform rating. As noted in our 9/7 note "Highlighting Potential from Energy Reforms", our valuation for EXC reflects partial credit given to the potential uplift in energy gross margin that the company now expects to be effective in PJM in mid-2018 where the energy market would be restructured to provide more support for 'inflexible' baseload generation.
- PJM making progress toward an improved energy market with its proposed enhancements to energy price formation report released on Nov 15th. Besides providing more details and supports for an energy market where prices reflect more accurately the real costs of serving load, PJM's proposal also presents the simulation impacts of the new rules on energy and capacity prices. PJM's simulation results suggest that the total payment increases by 2%-5% with the uplift in energy price partially offset by lower capacity prices.
- PJM's simulated $3.60 higher energy pricing minus some reduced capacity revenue is consistent with our prior estimate of $1-$4 around-the-clock uplift that could add about $200m-$400m EBITDA to EXC, or $0.15-$0.25 in EPS. We assign 50% credit to that outcome which adds $1 to our $43 target price. Implementation of PJM's proposal would add an incremental $1 to our valuation. We continue to see energy price reforms as among the most investable themes in the space now (see our most recent weekly note for more commentary - 11/10 Things We've Learned This Week).

Synchrony Financial (SYF)	**OUTPERFORM**		**M. Orenbuch**
CP: US$ 32.53	**TP: US$ 41**	**CAP: US$ 25457.7m**	**212 538 6795**

Acquisition Of Paypal's Portfolio: Will Add To EPS In 2019, Increase Price Target To $41 (from $39); Lowering Estimates

- Earlier today, it was announced that SYF is going to acquire $6.8 Bn in receivables (link), which consist of Paypal's U.S. consumer credit receivables portfolio (currently $5.8 Bn and will include loans originated between now and closing) and participation interests in receivables held by third parties ($1 Bn). Transaction is expected to close in 3Q18. At closing, SYF will also become the sole underwriter of Paypal online consumer financing program in the U.S. for 10 years - SYF had previously managed the Paypal credit card program. Paypal will also become one of the top 5 retail partners at SYF at closing (we believe most likely will replace Gap). The company also noted that ROA from this portfolio acquisition (adjusted for initial allowance build, pre-funding and onboarding costs) is consistent with the existing business. Given that e-retailers segment of the retail card business has been growing almost twice as fast as the overall SYF's business and our expectation that at closing the portfolio acquired will account for more than 7% of existing receivables base, we believe the transaction will be ~5-6% accretive to SYF 2019 EPS (we expect some catch up reserve build for the acquired portfolio in 2019) and 8-9% thereafter.
- Investment conclusion. Post today's announcement, we adjust our estimates accordingly to reflect initial up-front costs, catch up reserve build as well as accretion to loan balance starting from 3Q18 due to the acquired portfolio. We lower our 2017/2018 EPS to $2.62/$3.04 (old: $2.65/$3.28). We raise our target price to $41 (old: $39), implying shares can trade at ~13x our 2018 estimate. Risks to our estimates include higher reserve build and worse credit quality than our estimates.

[Full Note]

Best Buy (BBY) **NEUTRAL** **S. Sigman**
CP: US$ 57.30 **TP: US$ 60** **CAP: US$ 17143.3m** **212 538 8043**

Good Underlying Trends, but Sentiment Battle to Continue; Lowering Estimates Slightly

- BBY's Q3 included in line sales, but slightly lower EPS (adjusted for the tax benefit), and lower EPS guidance for Q4, sending the stock down today. The underlying trend actually appears healthy and there is the potential for upside to Q4, as we discuss below. But, a few factors keep us on the sidelines; First, the market had already expected comps upside in Q4 vs. prior guidance; Second, the stock tends to not trade well into year-end; Third, there are difficult product and market share comparisons ahead; Fourth we don't see the same level of upward EPS revisions over the next twelve months - that had served as the catalyst for valuation and stock upside this past year. Trimming '17 EPS to $3.98 from $4.04/ '18 to 4.27 from $4.29.
- EPS for Q3 was in line at $0.78 (+29% y/y), with a ~$0.02 benefit from a lower tax rate vs. consensus, while comps were in line (US +4.5%, in line with expectations). Excluding that, EPS would have come in lower, though it was also negatively impacted by -140 bps impact to comps from shift in mobile and hurricane (-120 bps mobile = ~$0.03 by our math, and 15-20 bps hurricane = $0.03). Gross margin was slightly lower, partially offset by SG&A.
- Guidance for Q4 is below at $1.98-1.99 vs CS $2.02/ consensus $2.03; Comps guidance is in line (+1-3% vs. 1.8% expectations), but EPS guidance comes in lower due to investments, lower profit share ($0.04) which didn't seem fully accounted for in consensus, and a net -$0.02 from tax rate/ share count (-$0.04 from tax rate, partially offset by +$0.02 from shares).
- BBY will need to deliver upside Q4; Comps guidance of 1-3%, on top of -0.9% in 4Q16 (and -1.7% in 4Q15), implies a sharp deceleration on a one, two and three year basis. Further, guidance implies minimal growth in the base business, assuming it recoups some lost sales from a year ago (~$350 mn) and from Q3 ($100 mn). That seems conservative based on trends in other categories (comps +5.3% ex mobile/computing, accelerating from Q2).

[Full Note]

Spire Inc. (SR) **NEUTRAL** **M. Weinstein**
CP: US$ 78.20 **TP: US$ 77** **CAP: US$ 3774.1m** **212 325 0897**

Moving Along in Missouri; Raising Target Price to $77 (from $73)

- Our Take: SR delivered a good quarter reporting 4FQ17 EPS of -$0.22 vs cons. -$0.26 or FY17 at $3.57 vs guidance of $3.50-$3.60. Management reiterated LT annual earnings growth target of 4% - 6% and expects to provide formal FY2018 earnings guidance following the completion of the MO ratecase (likely ~2FQ18). SR continues to make progress on its STL pipeline and reaffirmed its 5-year capex plan of $2.3B for 2017-2021. Maintain Neutral rating and raise our TP to $77 (from $73) to reflect a higher 2019 P/E multiple.
- STL pipeline on track with a target in-service date in FY19 (Nov 2018). The total investment on the pipeline remains at $190M-210M. During the quarter (Sep 29th), STL received a favorable environmental assessment from FERC while final approval is still expected by calendar year-end 2017.
- MO ratecase progressing toward public hearings in Dec 2017. SR filed its true-up testimony in late October reflecting a higher ratebase of $2.1B vs $2B previously and a lower equity ratio of 54% (from 57%) due to the $170M first mortgage bond issuance in mid-Sep. Discussions are underway for various parties in the case to clarify their positions and identify common grounds with more updates on this process to come in Jan/ Feb 2018. Our estimates are currently based on $2.1B of ratebase at a 9.75% ROE (vs 9.25% for Staff) and 54% equity.
- RSE filings made with the APSC on Oct 28th to present the FY18 budgets for Spire Alabama and Spire Gulf. The filings are being reviewed with new rates expected to be effective Dec 1st.
- Estimates and Valuation. Our estimates for 2018-20 remain at $3.72, $3.89, and $4.07 respectively. Our TP increased $4 to $77 reflecting a higher 2019 P/E multiple. Risks include ROE risk related to the upcoming Missouri General Rate Case at Laclede Gas and MGE.

[Full Note]

NOW Inc. (DNOW) **NEUTRAL** **A. Buscaglia**
CP: US$ 10.25 **TP: US$ 12** **CAP: US$ 1105m** **212 325 5870**

CFO Transitioning Roles

- CFO Molinaro Transitioning Roles; New CFO Announced: DNOW announced today its current CFO, Dan Molinaro, will transition to a new role as Executive VP assisting with treasury, investor relations and employee benefits matters, effective February 16, 2018. David Cherechinsky, currently VP - Corporate Controller and Chief Accounting Officer, will succeed Mr. Molinaro as of the effective date. Mr. Molinaro has been DNOW's CFO since the company's spin-off from National Oilwell Varco (NOV) in May 2014 and had a very impressive fifty years of combined experience with DNOW and NOV, having served most recently at NOV as VP and Treasurer. We wish Mr. Molinaro all the best in his new role.
- New CFO Background: David Cherechinsky brings a wealth of experience to the CFO role and has been serving as DNOW's Chief Accounting Officer since the spin-off in May 2014. Prior to the spin-off, Mr. Cherechinsky served a number of roles at NOV, most recently as Senior VP - Finance for NOV's Distribution & Transmission business segment. He has 28 years of combined experience with DNOW/NOV, having started with NOV in January 1989.

[Full Note]

Scorpio Tankers Inc. (STNG)	**OUTPERFORM [V]**		**G. Lewis**
CP: US$ 3.39	**TP: US$ 6**	**CAP: US$ 949.9m**	**212 325 6418**

Lackluster Rates Point To A Challenging Q4; Lowering Estimates and Target Price to $6 (from $7)

- No Surprises. As expected Q3 earnings were worse than Q2 with STNG posting an adjusted EPS loss of $0.15 below Consensus/CS (-$0.12). STNG's LR2 and MR fleets both averaged $13k/d in Q3 which was expected given management guided to 90% of its Q3 MR days booked at ~$13k/d and 87% of its Q3 LR2 days booked at ~$14k/d. With Q4 booked days looking a lot like Q3 we expect STNG to post another loss in Q4. We lower our 2017 EPS estimate to a -$0.41 (from -$0.18), below consensus of -$0.27. We are lowering our 2018 EPS estimates to $0.80 (from $0.91). We maintain our Outperform, but lower our TP to $6 (from $7) which is 8x our 2018 EBITDA. Risks include oil prices, ton-miles, and refinery disruptions.
- Stuck in the Mud. Product tanker rates continue to disappoint with MR rates averaging roughly $11-12k/d QTD in-line with both the Q3 and YTD average. LR2s have shown some positive momentum averaging $14k/d QTD up from $13k/d in Q3 and the YTD average of $12k/d. STNG has already booked 55% of its MR days at $11.8k/d and 60% of its LR2 at $16.5k/d for Q4 versus current MR/LR2 rates at $13k/$12k/d. Q4 looks like another throw away.
- Going Big. Post the Navig8 acquisition which closed in September, STNG has a balanced fleet with 57 Handy/MRs and 50 LR1/LR2s. We expect STNG to generate roughly 55% of 2018 revenues with its LR fleet and 45% from its Handy/MR fleet. We like the tilt towards larger vessels given our expectation of increasing ton-miles as more product volumes flow to Asia from both Middle East and the Atlantic basin.
- Balance Sheet. Net Debt stands at $2.6B with cash at $207M (including restricted cash), up from $1.7B in net in Q2 due to the Navig8 acquisition. Net debt to capital is 59% (51% in Q2). Post Navig8 we expect STNG to focus on paying down debt in the near/medium term. We expect net debt to EBITDA to finish 2018 at 4x (down from 7x following the Navig8 acquisition).

Oilfield Services & Equipment	**J. Wicklund**
Things We've Learned This Week	**214 979 4111**

- Don't Count Your Chickens. On Wednesday, Reuters reported SLB said Ecuador's ministry of finance failed to make a $350M payment (of $850M owed) to SLB. Unfortunately, this follows heightened investor scrutiny of SLB's SPM business and the company's comments on the 3Q17 call that resolution of the "current and future payment situation in Ecuador" pointed to the company's improving ability to manage counterparty risk. We think this latest development will add fuel to the fire of investor consternation over the risk profile of SLB's growing SPM business.
- Downgrade. Following its Q3 results and profit warning, we downgraded TRE.MC to Underperform on November 10. Although the multiples may screen cheap and such warnings have often provided decent entry points to TRE.MC in the past, we see fundamentals undermined. In particular, we are concerned that should the financial close at Duqm and Sitra slip meaningfully to the right, the revised guidance may turn out to be optimistic. Until TRE returns to positive operational momentum, we think the marginal buyer may be hard to attract. We discuss this and more in the note: TRE: 2018 has a project gap.
- Next Stop-Offshore Mexico. A total of 29 operators have started or completed the pre-qualification process for the upcoming offshore bidding round in Mexico, Round 2.4, which will be held on January 31, 2018. Operators undergoing the prequalification process include: BP, BHP, CVX, XOM, STO, TOT, HES, RDS, and Repsol. Given the high interest in the auction, the Mexico National Hydrocarbons Commission (CNH) pushed out several prequalification deadlines by ~2 weeks. The prequalification deadline is currently set for December 18 with the final list of participants set to be released on December 21. Following the recent offshore bidding round in Brazil (see our note Gradually Awakening the Giant for more) Mexico will be the next offshore bidding round in focus.
- Maersk Saga Continues. Maersk appears to be on track to exit offshore drilling with the Maersk parent company (AP Moeller Maersk) classifying the drilling business as discontinued operations aiming to have a long-term solution for the business within the next 12 months. The drilling business is one of three that Maersk classified as discontinued operators along with the Tanker business (sold to Maersk family) and the Maersk oil businesses. On the 3Q17 earnings call, management declined to comment on the potential for a deal with RDC. We believe the easiest path, and there is no easy path given the size of Maersk, would be to cut the drilling business up into two or three pieces. See our note Offshore Drillers: More Shoes to Drop for more.

Healthcare	**A. Rice**
ACA Enrollment Tracker; Week 2: Exchange Enrollment Tops Last OEPs Comparable Period	**212 325 8134**

- Launching ACA Enrollment Tracker. We are launching our ACA enrollment tracker for the 2018 open enrollment period. This report evaluates the enrollment data released by CMS for the ACA market.
- Cumulative 2018 Exchange Enrollment at Roughly 1.5 mln. On November 15th, CMS released its Week Two Enrollment Snapshot report. As in past years, enrollment weeks are measured Sunday through Saturday. Recall that last year, CMS released biweekly enrollment reports; however, due to the shortened time frame of this OEP, CMS will be releasing weekly reports. CMS has also not released state-by-state data for FFM thus far. Roughly 876.8K individuals enrolled from Nov 5-11, bringing the total enrollment from Weeks 1-2 to 1.478 mln. By way of background, S&P has projected there will be 10.6-11.4 mln enrollees on public exchanges by the end of 2018 OEP (a 7-13% Y/Y decrease), which would represent a 0.3-1.1 mln increase versus the March 15, 2017 effectuated exchange enrolment of 10.3 mln.
- New Consumers Breakdown. Of the roughly 1.5 mln individuals selecting plans on FFM for the first two weeks of the open enrollment period (OEP), there were 345.7K new consumers and 1.133 mln individuals that renewed coverage. The roughly 23.4% of new plan selections during the first two weeks of 2018 OEP compares to the roughly 24.4% and 34.5% for the first two week period in 2017 OEP and 2016 OEP, respectively.

Disclosure Appendix

Important Global Disclosures

The analysts identified in this report each certify, with respect to the companies or securities that the individual analyzes, that (1) the views expressed in this report accurately reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including Credit Suisse's total revenues, a portion of which are generated by Credit Suisse's investment banking activities.

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O): The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N): The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U): The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American, Japanese, and non-Japan Asia stocks, ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark; Australia, New Zealand are, and prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, 12-month rolling yield is incorporated in the absolute total return calculation and a 15% and a 7.5% threshold replace the 10-15% level in the Outperform and Underperform stock rating definitions, respectively. The 15% and 7.5% thresholds replace the +10-15% and -10-15% levels in the Neutral stock rating definition, respectively. Prior to 10th December 2012, Japanese ratings were are based on a stock's total return relative to the average total return of the relevant country or regional benchmark.*

Restricted (R): In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight: The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight: The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight: The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Rating Distribution*		
Outperform/Buy*	44%	(65% banking clients)
Neutral/Hold*	40%	(59% banking clients)
Underperform/Sell*	13%	(54% banking clients)
Restricted	2%	

**For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Credit Suisse's research reports are made available to clients through our proprietary research portal on CS PLUS. Credit Suisse research products may also be made available through third-party vendors or alternate electronic means as a convenience. Certain research products are only made available through CS PLUS. The services provided by Credit Suisse's analysts to clients may depend on a specific client's preferences regarding the frequency and manner of receiving communications, the client's risk profile and investment, the size and scope of the overall client relationship with the Firm, as well as legal and regulatory constraints. Reports written by Taiwan-based analysts on non-Taiwan listed companies are not considered recommendations to buy or sell securities under Taiwan Stock Exchange Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers.

To the extent this is a report authored in whole or in part by a non-U.S. analyst and is made available in the U.S., the following are important disclosures regarding any non-U.S. analyst contributors:
The non-U.S. research analysts listed below (if any) are not registered/qualified as research analysts with FINRA. The non-U.S. research analysts listed below may not be associated persons of CSSU and therefore may not be subject to the NASD Rule 2711 and NYSE Rule 472 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Important Credit Suisse HOLT Disclosures

With respect to the analysis in this report based on the Credit Suisse HOLT methodology, Credit Suisse certifies that (1) the views expressed in this report accurately reflect the Credit Suisse HOLT methodology and (2) no part of the Firm's compensation was, is, or will be directly related to the specific views disclosed in this report.

The Credit Suisse HOLT methodology does not assign ratings to a security. It is an analytical tool that involves use of a set of proprietary quantitative algorithms and warranted value calculations, collectively called the Credit Suisse HOLT valuation model, that are consistently applied to all the companies included in its database. Third-party data (including consensus earnings estimates) are systematically translated into a number of default variables and incorporated into the algorithms available in the Credit Suisse HOLT valuation model. The source financial statement, pricing, and earnings data provided by outside data vendors are subject to quality control and may also be adjusted to more closely measure the underlying economics of firm performance. These adjustments provide consistency when analyzing a single company across time, or analyzing multiple companies across industries or national borders. The default scenario that is produced by the Credit Suisse HOLT valuation model establishes the baseline valuation for a security, and a user then may adjust the default variables to produce alternative scenarios, any of which could occur. Additional information about the Credit Suisse HOLT methodology is available on request.

The Credit Suisse HOLT methodology does not assign a price target to a security. The default scenario that is produced by the Credit Suisse HOLT valuation model establishes a warranted price for a security, and as the third-party data are updated, the warranted price may also change. The default variables may also be adjusted to produce alternative warranted prices, any of which could occur.

CFROI®, HOLT, HOLTfolio, HOLTSelect, ValueSearch, AggreGator, Signal Flag and "Powered by HOLT" are trademarks or service marks or registered trademarks or registered service marks of Credit Suisse or its affiliates in the United States and other countries. HOLT is a corporate performance and valuation advisory service of Credit Suisse.

Additional information about the Credit Suisse HOLT methodology is available on request.

CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-US customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. US customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the US.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that. No information or communication provided herein or otherwise is intended to be, or should be construed as, a recommendation within the meaning of the US Department of Labor's final regulation defining "investment advice" for purposes of the Employee Retirement Income Security Act of 1974, as amended and Section 4975 of the Internal Revenue Code of 1986, as amended, and the information provided herein is intended to be general information, and should not be construed as, providing investment advice (impartial or otherwise).

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

Exelon Corporation (EXC)

Very Unattractive

NYSE - Utilities

Investment Recommendation

- We strongly recommend investors sell EXC.
- EXC earns our Very Unattractive rating. See Investment Rating Details below.
- A Very Unattractive rating means this stock has far more downside risk than upside potential.
- EXC ranks in the 3rd percentile of the 3000+ stocks we cover.
- Ranks 75th out of 76 Utilities Sector stocks.

Price 11/17/2017:	$41.26
Economic Book Value per share	$4.73

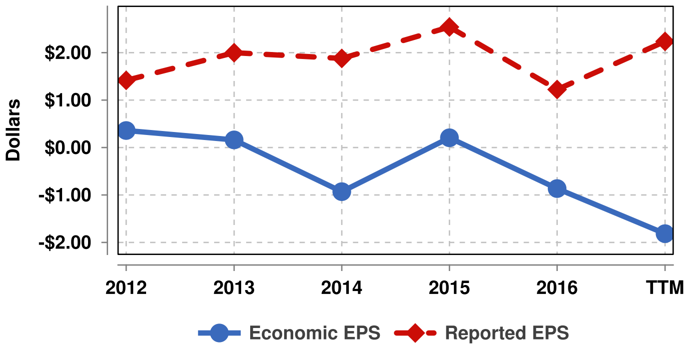
Accounting vs Economic Earnings



Earnings & Valuation Diligence Summary

- EXC's accounting earnings overstate its economic earnings.
- For EXC, we made 36 income statement and balance sheet adjustments to convert accounting earnings to economic earnings in FY16 for a total value of $30,235 million.
- We made 5 adjustments equal to $64,090 million in our DCF valuation of the stock.
- EXC ranks 2,717 of all the companies we cover for the number of earnings adjustments and 2,729 for the number of valuation adjustments.
- See Appendix 1 for details on our calculations of key metrics and Appendices 2 and 3 for details on our adjustments.

Stock Rating Methodology

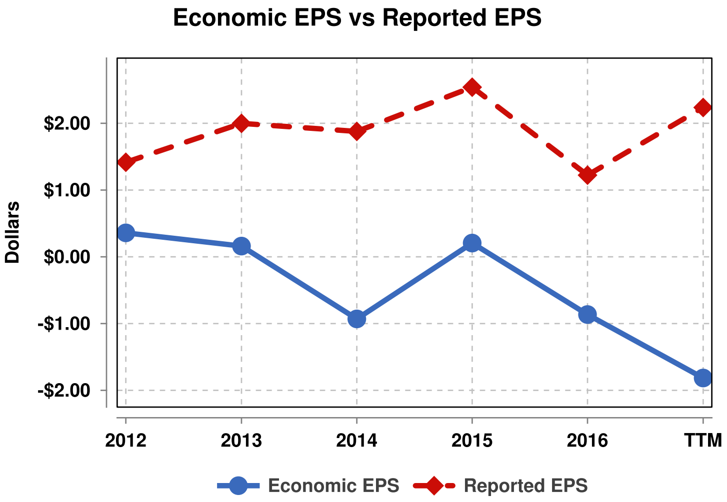
Economic vs Reported Earnings

Economic Earnings are Unattractive

Economic Earnings are almost always meaningfully different than reported earnings. We believe Economic Earnings provide a truer measure of profitability and shareholder value creation than reported earnings because they have been adjusted to remove over twenty accounting distortions.

The majority of data required to reverse accounting distortions is available only in the Footnotes and MD&A, which we analyze rigorously. Our core competency is gathering and analyzing all relevant financial data from filings so that we can deliver earnings analysis that best represents the true profitability of businesses.

Economic Earnings per share (EEPS) for EXC for the trailing twelve months are ($1.82) compared to reported earnings per share of $2.24 and earn an Unattractive rating. See Appendix 1 for a detailed reconciliation.



Return on Invested Capital (ROIC)

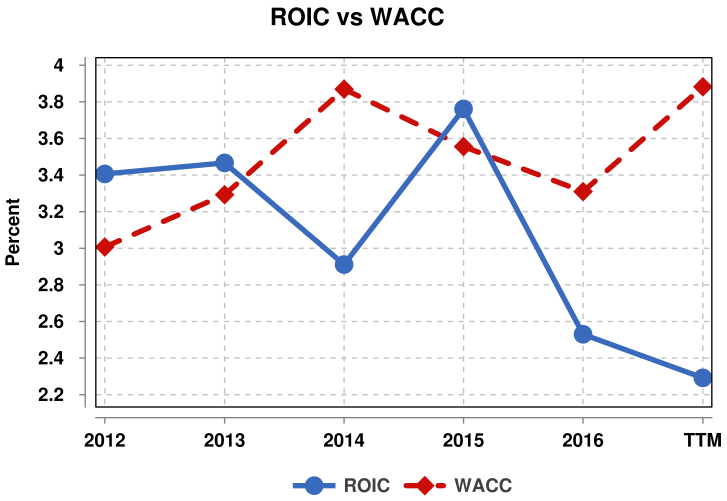
ROIC is Very Unattractive

ROIC measures a company's return on all cash invested in the business. It is the truest measure of profitability. Stock valuations are more highly correlated to ROIC than any other metric.

Weighted-Average Cost of Capital (WACC) is the average of debt and equity capital costs that all publicly traded companies with debt and equity stakeholders incur as a cost of operating.

Companies must earn an ROIC greater than WACC to generate positive economic earnings and create value for shareholders.

EXC's ROIC of 2.3% for the trailing twelve months earns a Very Unattractive rating. ROIC is calculated as NOPAT of $2,639 million divided by Average Invested Capital of $115,166 million. See Appendix 1 for a detailed reconciliation.



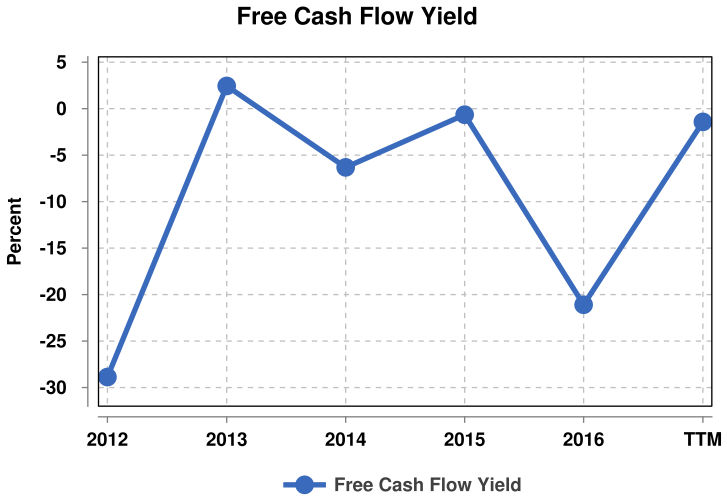
Free Cash Flow Yield (FCF Yield)

Free Cash Flow Yield is Unattractive

Free Cash Flow reflects the amount of cash free for distribution to all stakeholders (including debt & equity). FCF Yield divides free cash flow by enterprise value.

Using Free Cash Flow Yield to pick stocks is not a new strategy. However, our strategy yields superior results because we use a better measure of Free Cash Flow. In the same way our Economic EPS are better measures of profitability than reported EPS, our measure of Free Cash Flow is better than traditional accounting-based Free Cash Flow.

EXC's FCF is ($1,466) million for the trailing twelve months and its current Enterprise Value is $103,081 million. FCF Yield is (1.4%) and earns an Unattractive rating. See Appendix 1 for a detailed reconciliation.



Price-to-EBV Ratio

Price-to-EBV Ratio is Very Unattractive

Price-to-Economic Book Value (EBV) measures the difference between the market's expectations for future profits and the no-growth value of the stock.

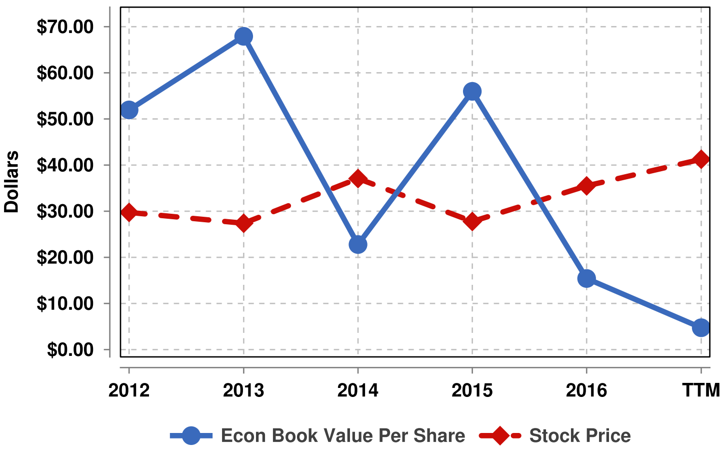
EBV measures the no-growth value of the company based on the company's current Net Operating Profit After Tax (NOPAT).

When prices are higher than EBV, the market predicts the NOPAT of the company will increase and expectations for profit growth are reflected in the stock. If the stock price equals EBV, the market predicts NOPAT will remain the same and there are no expectations for profit growth reflected in the stock. When stock prices are lower than EBV, the market predicts NOPAT will decrease and expectations for permanent profit decline are reflected in the stock.

In general, we like to buy stocks with low expectations for profit growth and sell/short stocks with high expectations for profit growth.

EXC's current Price-to-EBV per share is 8.7 and earns a Very Unattractive rating. EXC's stock price is $41.26 and its EBV per share for the trailing twelve months is $4.73. See Appendix 1 for a detailed reconciliation.

Stock Price vs Economic Book Value (EBV) Per Share



Growth Appreciation Period

The Growth Appreciation Period is Unattractive

The market-implied duration of profit growth or GAP measures the number of years the company must maintain an edge over its competitors by earning ROIC greater than the weighted-average cost of capital on new investments.

We believe EXC embeds an Unattractive level of market expectations because there is a large difference between the expected financial performance implied by its market price and the company's historical performance.

At EXC's current stock price of $41.26, the market is expecting revenue to grow at 2.7% for the next 20 years. Over this period, EXC is also expected to generate an average Economic Earnings Margin of (0.7%).

These results are derived using our dynamic discounted cash flow model.

Performance Hurdles	Historical Performance			Market Expectations
	5 Yr	3Yr	Last FY	Default based on current price
Stock Price	$29.74	$37.08	$35.49	**$41.26**
Revenue CAGR	7.5%	6.9%	9.4%	**2.7%**
ROIC - WACC	(0.9%)	(0.6%)	(1.6%)	**(0.7%)**
Growth Appreciation Period	-	-	-	**20 years**

Protecting You From Misleading Accounting Loopholes

Our experts know where the (accounting) bodies are buried. Since 1996, we have combed through 70,000+ corporate filings. We know how to find what companies may try to hide. We protect clients from the constantly changing landscape of accounting loopholes and hidden items buried deep in footnotes, the Management Discussion & Analysis ("MD&A") and other disclosures. Our experts review thousands of pages of corporate disclosures and filings to ensure that you have the best possible research on earnings quality and valuation.

Values in millions	2012	2013	2014	2015	2016

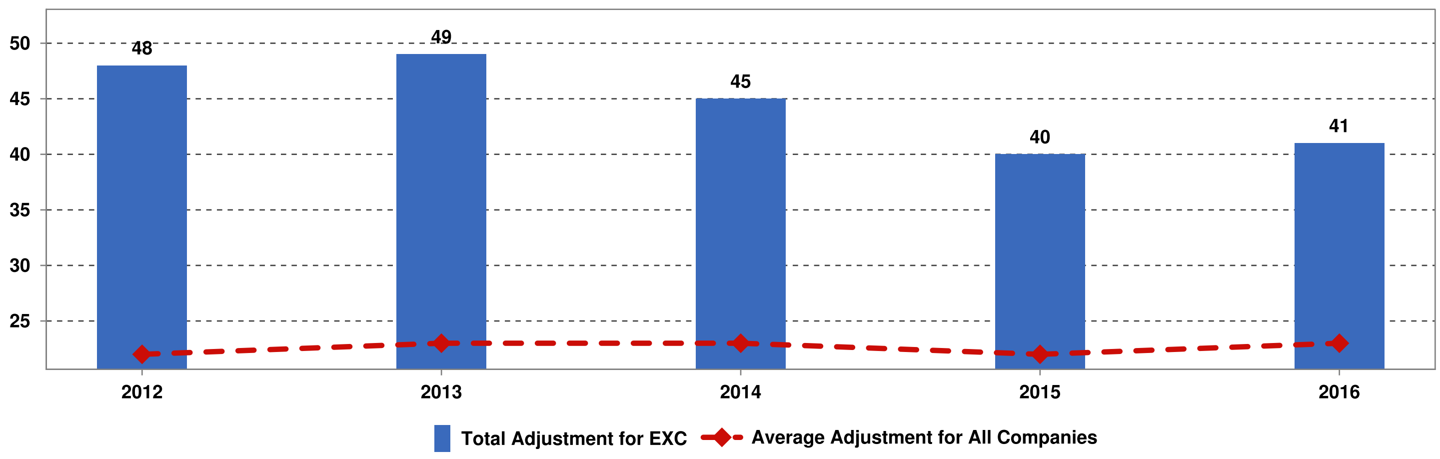
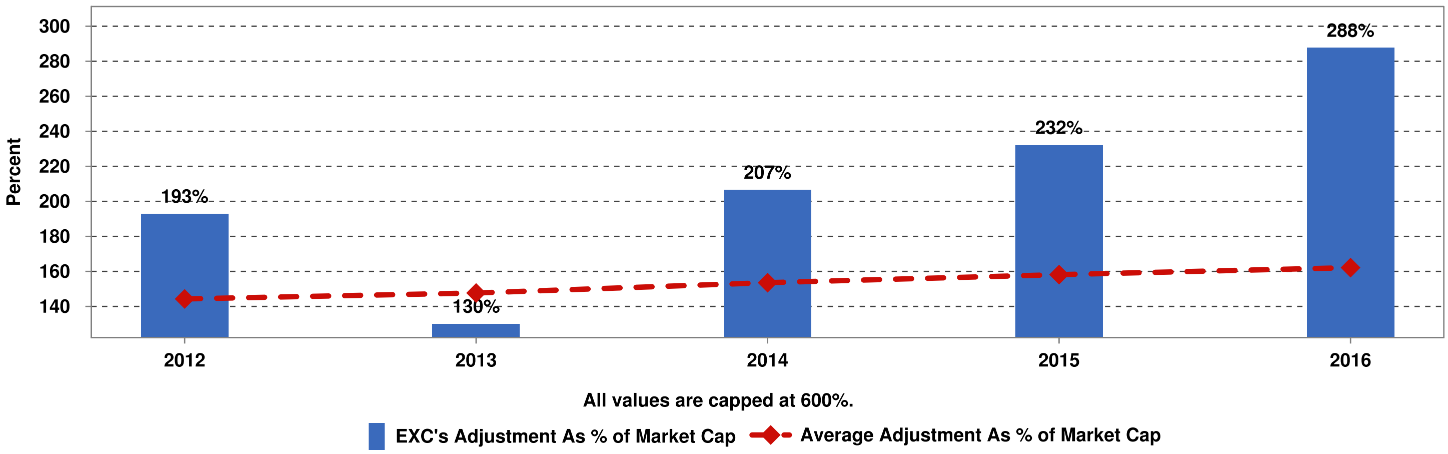
Total Value of Adjustments as % of market cap	193%	130%	207%	232%	288%
Average for all companies	144%	148%	154%	158%	162%

Number of Adjustments



$ Value of Adjustments As % of Market Cap



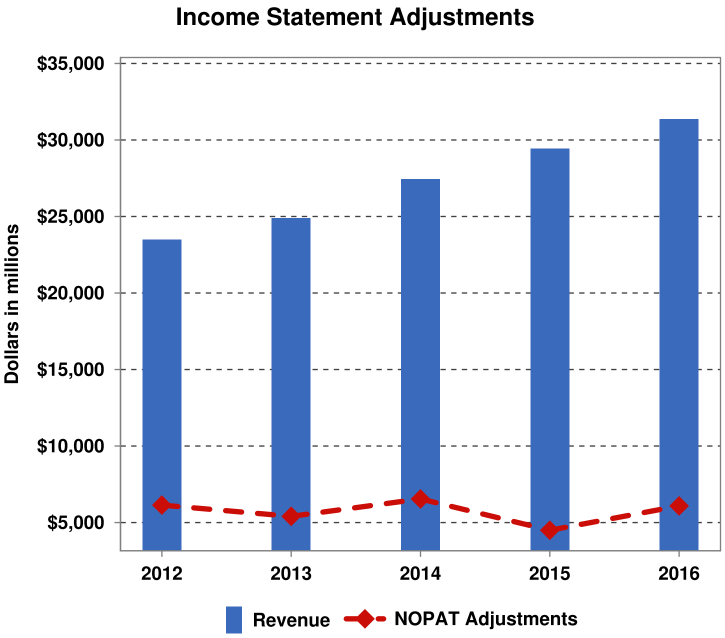
Income Statement Adjustments

We made 20 adjustments to convert Exelon Corporation's reported 2016 earnings to NOPAT, for a net impact of $1,459 million. We net 4 income adjustments of $2,314 million against 16 expense adjustments of $3,772 million.

23% of companies require more adjustments to reported earnings as a percent of revenue than EXC to calculate NOPAT.

The most notable accounting distortion to reported Net Income for EXC in 2016 is $244 million (1% of revenue) of non-operating expenses hidden in operating line items. Non-operating expenses are unusual charges that don't appear on the income statement because they are bundled in other line items. Without carefully studying the footnotes, investors would miss these non-operating expenses located in operating line items.

Our adjustments to reported earnings enable us to calculate an accurate NOPAT, a key component of our ROIC and economics earnings calculations. There are, in general, 9 types of adjustments that we make to convert reported net income to NOPAT. NOPAT is the after-tax operating cash generated by the business, excluding unusual items, financing costs and other non-cash items.



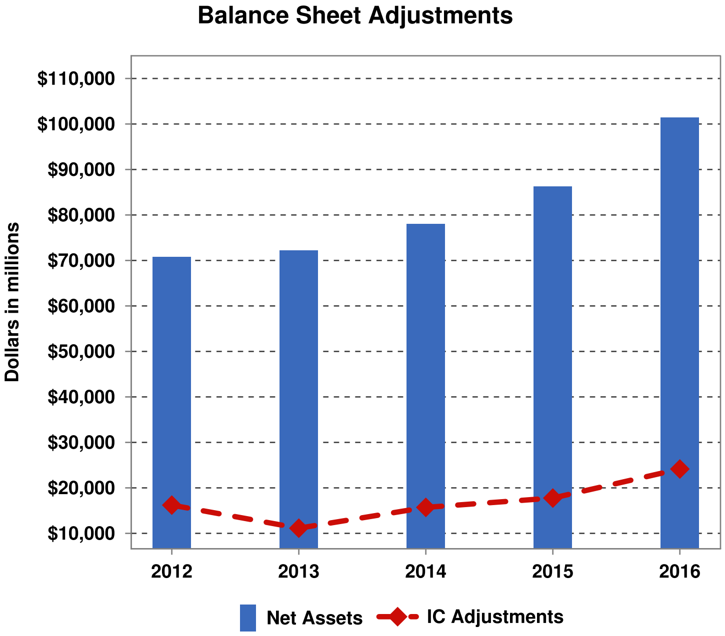
Balance Sheet Adjustments

We made 16 adjustments to convert Exelon Corporation's reported 2016 net assets to Invested Capital, for a net impact of $1,027 million. We net 3 asset decrease adjustments of $11,561 million against 13 increase adjustments of $12,588 million.

75% of companies require more adjustments than EXC to calculate Invested Capital.

The most notable accounting distortion to reported net assets for EXC in 2016 is $4,659 million in adjustments for asset write downs, which is 5% of reported net assets. Write-downs allow management to erase assets from the balance sheet, which inflates any return on asset/capital metric. Therefore, we add back asset write-downs (after tax) to our measure of invested capital.

Our adjustments to reported net assets enable us to calculate an accurate Invested Capital, a key component of our ROIC and economics earnings calculations. There are, in general, 12 types of adjustment that we make to convert reported net assets to Invested Capital. Invested Capital is the sum of all cash that has been invested in a company over its life without regard to financing form or accounting name.

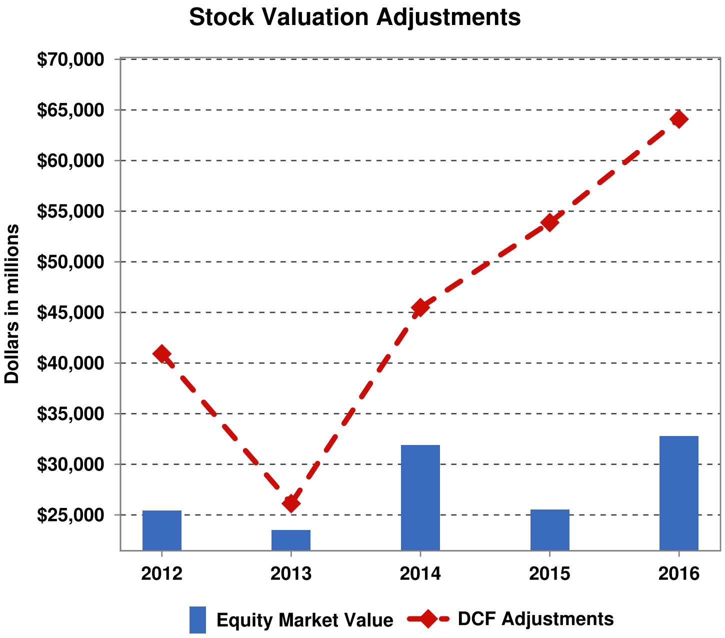


Stock Valuation Adjustments

We made 6 adjustments for a net impact of $63,437 million to our DCF model for Exelon Corporation in the trailing twelve months. 5 adjustments decrease value by $64,873 million and 1 adjustment increases value by $1,436 million.

11% of companies require more adjustments as a percent of market value to calculate valuation metrics.

The most notable accounting distortion to these valuation metrics for EXC in the trailing twelve months was the net deferred tax liability. We adjusted shareholder value by $19,250 million, which is 49% of the firm's market value. We subtract net deferred tax liabilities (DTLs minus DTAs) from our calculation of shareholder value as they are real future cash obligations that limit the amount of money available for distribution to shareholders.



Our valuation adjustments protect clients from unknowns that could blow stocks up. These adjustments enable us to derive more accurate calculations for Economic Book Value, Enterprise Value and our Discounted Cash Flow Model. There are, in general, 10 types of adjustments that we apply to our valuation metrics.

Appendix 1: Key Metrics & Calculations

This appendix provides reconciliations of the calculations we use in our stock ratings. The Education section of our website offers full details on all our calculations and ratings methodolgies.

Appendix 2: Adjustments for our Discounted Cash Flow Model, Economic Book Value, and Enterprise Value Calculations

We use a dynamic discounted cash flow (DCF) model to quantify the market expectations for future cash flows in stock prices. This approach, also known as "expectations investing" or "reverse DCF", is the most transparent and objective approach to valuing stocks. More in our DCF model video tutorial.

Appendix 3: Adjustments for Economic Earnings

Reported earnings don't tell the whole truth of a company's profits. We scour the footnotes and fine print so clients have the whole truth. Full details on our adjustment methodologies are here. See our Company Models tutorials to learn how you can modify adjustments and see where we find them in SEC filings.

Appendix 4: Explanation of New Constructs' Stock Ratings

Ratings

In-depth risk/reward analysis underpins our stock rating. Our stock rating methodology grades every stock according to what we believe are the 5 most important criteria for assessing the quality of a stock. Each grade reflects the balance of potential risk and reward of buying that stock. Our analysis results in the 5 ratings described below. Very Attractive and Attractive correspond to a "Buy" rating, Very Unattractive and Unattractive correspond to a "Sell" rating, while Neutral corresponds to a "Hold" rating.

Risk/Reward Rating	Quality of Earnings		Valuation		
	Economic vs Reported EPS	Return on Invested Capital (ROIC)	FCF Yield	Price-to-EBV Ratio	Growth Appreciation Period
Very Unattractive	Misleading Trend	Bottom Quintile	< -5%	> 3.5 or -1 < 0	> 50
Unattractive	False Positive	4th Quintile	-5% < -1%	2.4 < 3.5 or < -1	20 < 50
Neutral	Neutral EE	3rd Quintile	-1% < 3%	1.6 < 2.4	10 < 20
Attractive	Positive EE	2nd Quintile	3% < 10%	1.1 < 1.6	3 < 10
Very Attractive	Rising EE	Top Quintile	> 10%	0 < 1.1	0 < 3

Ratings

Economic earnings and return on capital metrics are significantly more accurate when as-reported financial statements have been adjusted to reverse accounting distortions and Red Flags. The majority of the data required to reverse accounting distortions is available only in the Notes to the Financial Statements, which we analyze rigorously. Our core competency is gathering and analyzing all relevant financial data (from the Financial Statements and Notes) so that we can deliver earnings analysis that best represents the true profitability of businesses. See the figure below for a list of the Red Flag adjustments we make to a company's reported GAAP profits in order to reverse accounting distortions and arrive at a better measure of a firm's profits.

Accounting Issues and Red Flags that Distort GAAP

- Employee Stock Options
- Pension Over/Under Funding
- Excess Cash
- Restructuring Charges
- Pooling Goodwill
- Minority Interests
- Discontinued Operations
- Preferred Stock
- Mid-Year Acquisitions
- Off-Balance-Sheet Financing
- LIFO Reserve
- Unrealized Gains/Losses
- Goodwill Amortization
- Unconsolidated Subsidiaries
- Capitalized Expenses
- Deferred Compensation
- Net Deferred tax Assets and Liabilities

New Constructs® - Research to Fulfill the Fiduciary Duty of Care

Ratings & screeners on 3000 stocks, 450 ETFs and 7000 mutual funds help you make prudent investment decisions.

New Constructs leverages the latest in machine learning to analyze structured and unstructured financial data with unrivaled speed and accuracy. The firm's forensic accounting experts work alongside engineers to develop proprietary NLP libraries and financial models. Our investment ratings are based on the best fundamental data in the business for stocks, ETFs and mutual funds. Clients include many of the top hedge funds, mutual funds and wealth management firms. David Trainer, the firm's CEO, is regularly featured in the media as a thought leader on the fiduciary duty of care, earnings quality, valuation and investment strategy.

To fulfill the Duty of Care, research should be:

1. **Comprehensive** - All relevant publicly-available (e.g. 10-Ks and 10-Qs) information has been diligently reviewed, including footnotes and the management discussion & analysis (MD&A).
2. **Un-conflicted** - Clients deserve unbiased research.
3. **Transparent** - Advisors should be able to show how the analysis was performed and the data behind it.
4. **Relevant** - Empirical evidence must provide tangible, quantifiable correlation to stock, ETF or mutual fund performance.

Value Investing 2.0: Diligence Matters: Technology is Key to Value Investing with Scale

Accounting data is only the beginning of fundamental research. It must be translated into economic earnings to truly understand profitability and valuation. This translation requires deep analysis of footnotes and the MD&A, a process that our robo-analyst technology empowers us to perform for thousands of stocks, ETFs and mutual funds.

DISCLOSURES

New Constructs®, LLC (together with any subsidiaries and/or affiliates, 'New Constructs') is an independent organization with no management ties to the companies it covers. None of the members of New Constructs' management team or the management team of any New Constructs' affiliate holds a seat on the Board of Directors of any of the companies New Constructs covers. New Constructs does not perform any investment or merchant banking functions and does not operate a trading desk.

New Constructs' Stock Ownership Policy prevents any of its employees or managers from engaging in Insider Trading and restricts any trading whereby an employee may exploit inside information regarding our stock research. In addition, employees and managers of the company are bound by a code of ethics that restricts them from purchasing or selling a security that they know or should have known was under consideration for inclusion in a New Constructs report nor may they purchase or sell a security for the first 15 days after New Constructs issues a report on that security.

Tax Reform – Watch for Credit Impact

EXC, PEG win while DUK, SO, FE see tightening metrics

Praful Mehta AC
+1-212-816-5431
mehta.praful@citi.com

Tulkin Niyazov, CFA
tulkin.niyazov@citi.com

Eitan Buchbinder, CFA
eitan.buchbinder@citi.com

- **EXC, PEG Winners at generation business - translates to ~1.0x higher EBITDA multiple:** EXC and PEG have taxable income of ~$1.1B and $0.7B at their generation businesses. With a lower tax rate of 15%, they would save $174m and $106m on their cash taxes, effectively increasing their free cash flow (FCF) conversion. This increased conversion means ~1.0x higher EBITDA multiple which would mean ~$2/share of value. Note that they would retain more cash from ZECs/price formation further increasing benefits of tax reform. See Figure 3.
- **DUK, SO, FE impacted by lower earnings and weaker credit:** While utility subsidiaries are primarily earnings neutral from tax reform, the negative cash flow impacts could be meaningful. Cash and credit pressures will come from deferred tax liability refund, lower parent interest tax shield and lower tax shield from bonus depreciation. We currently estimate DUK, SO, FE's FFO/Debt metrics would decline by 1.5%, 1.4%, and 1.1% with these cash impacts holding other factors constant. We acknowledge that all companies will find ways to mitigate some of these impacts. As bill cushion opens doors for further capex, cash flow and credit may constrain some utilities' growth.
- **EPS Impacts: lost tax shield at Parent, rate base changes with DTL:** With a lower tax rate, the interest tax shield at the parent reduces increasing drag of parent losses. As the DTL get revalued and credited to customers, the rate base will grow, helping to improve earnings. The impact of the lower tax shield at the parent level translates to 2-3% EPS dilution impact on EPS for DUK, SO, and FE, respectively.
- **Cash Flow Impact 1: Deferred Tax Liability Credit to customers:** With a lower tax rate, the DTL at each utility will be revalued at the 20% rate. The reduction in the DTL will be refunded to customers over asset life. Assuming a 30yr life, we expect this impact to be ~$200m for DUK, SO and EXC. See Figure 1.
- **Cash Flow Impact 2: Tax shield related to bonus depreciation reduces by 15%.** Utilities have been collecting taxes from customers based on straight line depreciation and paying minimal cash taxes thanks to bonus depreciation. The difference between tax and book depreciation, times the tax rate was the cash flow benefit utilities were enjoying. Now, with a lower tax rate, this cash tax saving will go down by 15% times the difference in tax and book depreciation. It is worth ~$477m and ~$464m at SO and DUK. See Figure 1.
- **Cash Flow Impact 3: Parent debt tax shield reduction:** A lower tax rate lowers the tax shield on parent debt. This results in dilution for companies with high holdco leverage and also lost cash flows of about ~$65m and ~$102m at SO and DUK.
- **Cash Flow Impact 4: Positive - lower cash taxes at generation businesses:** Lower tax rates would benefit merchant generation businesses at hybrids utilities such as EXC and PEG. Impact of cash savings would be ~$174m and ~$106m, respectively and is worth about ~1.0x in EBITDA multiple.
- **Net Impact on FFO/Debt:** Most utilities FFO/Debt metrics weaken by about 1-2% when we incorporate all impacts above. We also highlight current and proforma FFO/Debt metrics and how that compares vs target metrics.

Cash Flow Impact of Tax Reform Quantified

- We expect the tax reform to have neutral impact on utility subsidiaries earnings. However, the negative cash flow impact related to deferred tax liability refund, lower parent tax shield and the lower tax shield from bonus depreciation will likely put meaningful pressure on credit metrics of utilities like DUK, SO and FE. Impact of cash flows is summarized below:

Figure 1. Cash Flow Impact of Tax Reform

Source: Citi Research

Tax collection from customers = Difference between tax and book depreciation at regulated utility x 15%. The 15% represents the difference between 35% and 20% tax rate.

We have assumed Refund to customers would be implemented over the 30 years. DTL balance reflect 2016 10k DTL related to PP&E.

Unregulated businesses at EXC, PEG and D have EBTs of $1161m, $706m, and $697m, respectively.

Target FFO/Debt: For PEG, 18% is based on management's target guidance of high teens. For ETR, we used the average of company guided range of 13-23%. AEP, DUK, EXC, SO based on management's guidance on target FFO/Debt. D, ED, ES, EIX, FE and PCG target metrics based on minimum level of FFO/Debt noted by rating agencies before a potential downgrade.

- **Lower Tax Rate Negatively Impacts HoldCo EPS Anyway.** Lower tax rate would reduce parent interest tax shield and result in dilution. In the Figure below we highlight the impact if the rate is reduced from 35% to 20%. DUK and SO dilution is in the 2-3% range. Please see following note for details: 2017 EEI Conference Takeaways: Reconfirmed Buys on EXC, ETR; HoldCo debt Problems Persist.

Figure 2. Reduction of Tax Rate Impact on EPS

Lower Tax Rate	Units	D	DUK	SO	PCG	ED	AEP	PEG	EIX	ES	EXC	ETR	FE

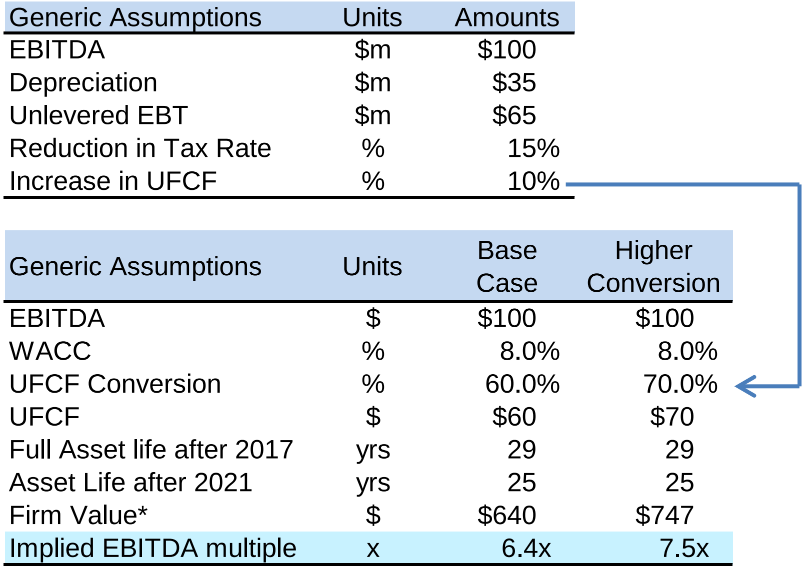
Source: Citi Research

We have indicated "NA" for D, EXC, PEG as the benefits of the tax savings at the unregulated business will more than outweigh the reduction in tax shield of parent interest associated with a reduction in tax rate from 35% to 20%.

- **EXC, PEG winners at generation business. Translates to ~1.0x higher EBITDA multiple.** EXC and PEG have taxable income of ~$1.1B and $0.7B at their generation businesses. With a lower tax rate of 15%, they would save $174m and $106m on their cash taxes effectively increasing their free cash flow

(FCF) conversion. This increased conversion means ~1.0x higher EBITDA multiple which would mean $2/share of value. The Figure below shows a generic EBTIDA multiple model including the benefits of lower taxes:

Figure 3. Generation EBITDA Multiple Math



Generic Assumptions	Units	Amounts
EBITDA	$m	$100
Depreciation	$m	$35
Unlevered EBT	$m	$65
Reduction in Tax Rate	%	15%
Increase in UFCF	%	10%

Generic Assumptions	Units	Base Case	Higher Conversion
EBITDA	$	$100	$100
WACC	%	8.0%	8.0%
UFCF Conversion	%	60.0%	70.0%
UFCF	$	$60	$70
Full Asset life after 2017	yrs	29	29
Asset Life after 2021	yrs	25	25
Firm Value*	$	$640	$747
Implied EBITDA multiple	x	6.4x	7.5x

Entergy Corporation

(ETR.N; US$85.52; 1; 01 Dec 17; 16:00)

Valuation

Our target price is $91/share. Our valuation is based on a sum-of-the-parts valuation with the utility business valued at $98/share, EWC valued at $4/share, and the negative impact of parent and other valued at $(12)/share.

Risks

Commodity risk – Forward natural gas prices can have a significant effect on the nuclear merchant financial outlook and per share value. This is because natural gas prices are the marginal fuel for deregulated power generation. We currently assume a long-term gas price based on the current forward curve. If natural gas and power prices were to rise significantly, this could have positive implications for ETR shares.

Nuclear operations – The State of New York will continue to have Entergy shut down the Indian Point plant. A shutdown could be incrementally negative for shares. Conversely, if Entergy is successful in renewing the licenses for the plant, shares could rise materially above our target price.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

If the impact on the company from any of these factors proves to be greater/less than we anticipate, we believe the stock will likely have difficulty achieving our target price or could outperform it.

Exelon Corp

(EXC.N; US$41.83; 1; 01 Dec 17; 16:00)

Valuation

We value EXC using a sum-of-the-parts approach to get to our $45 price target. We value ExGen at ~$3/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The legacy utility business is valued at $27/share based on a 18.0x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent net debt and add $12/share for ZECs to get to our rounded PT of $45/share.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the risks get rejected after further legal challenge then the stock has downside as some value of ZEC is already in the stock price

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Entergy Corporation, Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Entergy Corporation, Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Entergy Corporation, Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Entergy Corporation, Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Entergy Corporation, Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Entergy Corporation, Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation in the past 12 months from Entergy Corporation.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Entergy Corporation, Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2017	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	48%	38%	13%	3%	96%	1%
% of companies in each rating category that are investment banking clients	63%	65%	56%	60%	64%	58%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the

market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES

Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov, CFA; Eitan Buchbinder, CFA

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q3 2017 Buy 32% (70%), Hold 44% (64%), Sell 24% (58%); Q2 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (57%); Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Important Disclosures for Bell Potter Customers: Bell Potter is making this Product available to its clients pursuant to an agreement with Citigroup Global Markets Australia Pty Limited. Neither Citigroup Global Markets Australia Pty Limited nor any of its affiliates has made any determination as to the suitability of the information provided herein and clients should consult with their Bell Potter financial advisor before making any investment decision.

We remain Sell rated on EXC, a relative call among Diversified Utilities and still prefer stocks like NEE, FE and PEG compared to EXC. That said, we recognize a host of events will occur in the coming weeks that could impact EXC's shares:

- **EXC would likely benefit from any significant changes supporting baseload technology in merchant power markets driven by the Federal Energy Regulatory Commission (FERC) given that first indications from the FERC's initial response to the DOE are expected on December 11th.** The FERC, in its Notice of Proposed Rulemaking process, seeks to evaluate changes to regional power markets – in order to ensure grid reliability – with many of the potential outcomes discussed by companies and investors focused on mechanisms that provide more revenue to coal and nuclear plants.
    - **We note, however, significant opposition** during the official comment process emerged from multiple areas, including (1) customer groups – consumer and industrial – concerned about the price impact, (2) regional grid operators like PJM, which highlighted that their systems did not incur reliability issues over the past few years, despite retirements of baseload plants, (3) multiple industry trade groups, including the various energy related ones which are concerned that power market changes would benefit coal/nuclear plants to the detriment of gas-fired ones, and (4) environmental groups focused on emissions impacts.
    - **The outcome could lead to a complex multi-month, or even longer, review and implementation process**. Concerns exist regarding the impact on competitive power markets and the need for significant changes to how markets pay generators for various services. We partially expect the FERC to seek more detail, over the coming months, from the various regional transmission operators (RTOs) and independent system operators (ISOs) on how best to change power markets. We note PJM – the nation's largest grid operator – already released a version of its proposed power market design changes, which it estimated would impact power prices by only a few percent.
- **Risks still exist regarding Zero Emissions Credits (ZECs) for EXC's nuclear power plants; Jan 3rd remains the next key date**. In 2017, federal district courts in both New York and Illinois upheld challenges to regulations

implementing ZECs, a payment for environmental attributes that EXC's nuclear plants in these markets receive, starting in 2017. We note both cases remain on appeal at the US Circuit Court of Appeals level – with oral argument in the Illinois case set for January 3rd and a date for argument in the New York one coming soon. We do not expect a ruling until mid-2018, but view this as risk to the EXC story given losing these ZECs and retiring the plants would weigh on EPS by $0.25-$0.30.

- **PJM details should emerge in late December and in early February which we view as likely a positive for PEG, neutral or even a slight negative for others**. PJM will issue two sets of data ahead of its May 2018 capacity auctions that impact revenues from 2021-2022 – (1) the final demand forecast in late December and (2) the annual planning parameters in early February 2018.
    - ☐ **Demand may prove a tad bearish system wide, including in areas where EXC owns significant capacity**. We note the preliminary peak demand 2021 forecast details implied a slightly lower forecast across PJM, compared to the 2017 forecast – this impacts the amount of generation (MWs) PJM will procure in the May 2018 auctions. We note the biggest changes occur in a few service territories, including (1) SWMAAC (DC, Baltimore, etc.), down roughly 2% on a YoY basis, and (2) EMAAC, down over 1.5% versus last year – EXC's eastern nuclear fleet in PJM operates primarily in these zones. These could, barring significant retirement announcements in the next month, negatively impact supply/demand fundamentals shown in the February planning parameter details.
    - ☐ ...**and while even the PS zone saw a reduction of power demand expectations, removal of the Con Edison (ED, Sell) "wheel" may tighten that market**. In the preliminary demand detail, the PSE&G zone showed the biggest decline – by almost 2.5% – in forecast demand. However, we view the cancellation of the "wheel" across the Con Edison system – where power could flow from New York into upper New Jersey and into the PSE&G zone – as reducing supply in that zone. Thus, while demand may come in lower, supply may decline as well (by almost 1 GW) – a positive for Buy-rated PEG, an owner of capacity in this zone.
    - ☐ **In summary, we view the PJM demand detail and planning parameter data as neutral to slightly bearish** for most generators, including EXC – barring an uptick in retirement announcements in the coming weeks.

We remain Sell rated and base our $36, 12-month target price for EXC on a 2019 sum of the parts analysis. Key risks include power prices, rate base growth, O&M cost management and regulation.

Disclosure Appendix

Reg AC

We, Michael Lapides, David Fishman, Siddharth Verma, Jack Pearl and Sarah Davis, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy focused on the generation of long-term alpha through identifying high quality industry leaders. The GS SUSTAIN 50 list includes leaders we believe to be well positioned to deliver long-term outperformance through superior returns on capital, sustainable competitive advantage and effective management of ESG risks vs. global industry peers. Candidates are selected largely on a combination of quantifiable analysis of these three aspects of corporate performance.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 4 (1) (d) and Article 6 (2) of the European Commission Directive 2003/125/EC is available at http://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular analyst's coverage group may vary as determined by the regional Investment Review Committee. Additionally, each Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Ombudsman Goldman Sachs Brazil: 0800 727 5764 and / or ouvidoriagoldmansachs@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Ouvidoria Goldman Sachs Brasil: 0800 727 5764 e/ou ouvidoriagoldmansachs@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by either Goldman Sachs Canada Inc. or Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to http://360.gs.com.

Disclosure information is also available at http://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

What's New?

EIX – CAL FIRE investigation expands to include possible role of EIX facilities
SRE – FERC approves acquisition of Energy Future Holdings/Oncor
SCG – Santee Cooper Chairman not going quietly
FERC – Commissioner highlights importance of LT resilience study over interim solutions
FERC – Government Accountability Office finds more action needed to improve capacity market
PEG – NJ governor considers nuclear subsidy bill
PJM – FERC rejects proposed MOPR revisions
NEE – Judge rejects bid for $275mm break-up fee
NEE/ED – Environmental group pushes back on VA water permit for MVP
ES – EDF served with a letter to cease and desist false claims around ES gas procurement
EXC – Completes internal transfer of Fitzpatrick

EIX – CAL FIRE investigation expands to include possible role of EIX facilities

- In a press release, EIX disclosed CAL FIRE investigations now include locations beyond those identified last week as the apparent origin of the wildfires.
- EIX noted they believe the investigations now include the possible role of their facilities.
- The company continues to cooperate with the investigations.

Guggenheim takeaway: *An unfortunate development, particularly as we noted many analysts/investors were defending EIX as fires emerged in their service territory last week… When shares were down 11% intra-day last week (vs. UTY -1.1%), recovering from their -13% low on the news of these wild fires in EIX's southern California service territory, we noted (see our recent EIX note HERE) that anyone arguing that this sell-off was excessive was egregiously over-simplifying the situation, and that analysts/investors defending the stock before the company had even conducted its own damage assessment may likely be reaching to catch a falling knife. As it stands, utilities can be held liable for damages in these events, irrespective and exclusive of cause, and at the end of the day may not see commensurate rate relief for costs incurred beyond their insured coverage (as was the case for SRE recently, see HERE); that said, based on these circumstances, and coupled with the increasing frequency and disruption of these events, the insurance market has been challenging for utilities in CA to say the least, and we've only seen signs pointing to tighter conditions ahead (see HERE for an ex parte communication filed by SRE on the CA insurance market following their disappointing decision)…*

SRE – FERC approves acquisition of Energy Future Holdings/Oncor

- FERC approved SRE's proposed acquisition of Energy Future Holdings, the indirect owner of ~80% of Oncor.

Guggenheim takeaway: *In line with expectations. Remaining regulatory approvals include the PUCT, expected by April 2018, and further approvals by the U.S. Bankruptcy Court. See our note HERE, for more takeaways around the proposed Oncor transaction.*

SCG – Santee Cooper Chairman not going quietly

- According to local reports, the chairman of Santee Cooper will not step down unless the governor of S.C. stops accusing the state-owned utility of lying to lawmakers.

Guggenheim takeaway: *The saga continues… Santee Cooper has been on the defensive with SCG since they decided to abandon construction of new nuclear reactors at V.C.*

Summer, and while we can appreciate heightened emotions that likely come with such wide-spread scrutiny from every angle, it isn't clear to us what the chairman might hope to accomplish here – At the end of the day Santee Cooper is engaged in a sale process initiated by the Governor and other state policy-makers, and this just might not be the time or place to stand ground; and regardless of whether or not there's a position to defend here, political stakeholders are likely looking for names they can hold accountable for their constituents… And as a reminder, we believe a sale of Santee Cooper would likely have to be a package deal with SCG to make the math work – For a deep-dive on the evolving saga around V.C. Summer for both Santee Cooper and SCG in South Carolina, and our mosaic theory supporting the possibility of a resolution by way of M&A in a package deal with Santee Cooper and SCG, see our recent upgrade of SCG HERE.

FERC – Commissioner highlights importance of LT resilience study over interim solutions

- FERC Commissioner Neil Chatterjee pulled back on his proposal for payments for coal and nuclear plants as interim solutions to solve the grid resilience issue, saying that longer-term assessment of grid resilience is more important.

Guggenheim takeaway: *It seems like Chatterjee has softened his position on the interim solution that he strongly proposed, although not a surprise to us as the five-member FERC is trying to reach consensus with respect to the commission's response to the DOE NOPR, which was highlighted during our recently hosted client conference call with EPSA CEO – a notice of inquiry (NOI) from FERC to the RTOs could be the likely outcome, with possibility to see something stronger like a show cause proposal here. For additional takeaways from our conference call with the CEO of EPSA, see our note HERE.*

FERC – Government Accountability Office finds more action needed to improve capacity market

- The U.S. Government Accountability Office released a report indicating that FERC needs to do more to evaluate the performance of capacity markets and pursue changes with the information gathered.

Guggenheim takeaway: *No surprise of the findings from the governing agency, especially given the issues that various capacity markets have been facing – could further facilitate proposals of improvements to the capacity market construct.*

PEG – NJ governor considers nuclear subsidy bill

- NJ governor Chris Christie said he is considering supporting a nuclear subsidy bill to be introduced in the lame duck session, although highlighted that it won't be "irresponsible."
- The comment received opposition from NRG, EPSA as well as Natural Resources Defense Counsil.
- As a reminder, NJ legislature hosted a hearing to discuss nuclear legislation earlier this month and PEG delivered a very consistent message that the company doesn't need legislation to guarantee payments but to provide a "Safety Net" through multiple steps of verification.

Guggenheim takeaway: *We shall wait and see as the lame duck session ends in January. NJ could eventually introduce nuclear legislation to keep the nuclear plants online sooner or later, in our view, especially with PEG's political assets in the state and the ambitious clean energy agenda with the incoming Murphy administration. It's a tight lame duck session to get something done by now and January but we believe the CEO of PEG will eventually get something over the finish line.*

PJM – FERC rejects proposed MOPR revisions

- FERC rejected proposed revisions to the PJM's MOPR, which would replace the unit-specific review process with two broad, categorical self-supply and competitive entry exemptions, which apply to (1) utilities that operate under long-standing self-supply models and (2) competitive units that receive no out-of-market funding, as well as state-sponsored units selected through a "competitive and nondiscriminatory" procurement process.
- As a reminder, the U.S. Court of Appeals D.C. Circuit ruled that FERC overstepped its jurisdiction when conditionally accepted revisions of PJM's MOPR while requesting PJM to retain the existing unit-specific exemption process.

Guggenheim takeaway: *The purpose of PJM's proposal was to address many of PJM generators' complaint that the unit-specific review lacked transparency and potentially allowed new market entrants to submit below-cost bids that depressed PJM's capacity market clearing prices (i.e. entities in bankruptcy). As a reminder, PJM's proposed revisions of the rule passed the Markets and Reliability Committee and the Membership Committee with nearly 90% support back in 2012. That said, the new rule would provide certainty and transparency in the MOPR exception process, although we would not expect material impact to PJM capacity auction as there was no request for unit-specific exemptions in the previous three auctions.*

NEE – Judge rejects bid for $275mm break-up fee

- A bankruptcy judge rejected NEE's attempt to halt a decision over the $275mm break-up fee for its failed effort to acquire Energy Future Holdings.

Guggenheim takeaway: *NEE might walk away from TX empty handed, although their mind is already in Carolina in our view - For a walk-through of our mosaic theory supporting resolution of the V.C. Summer situation in South Carolina by way of M&A, where we believe NEE (or any prospective acquirer for that matter) may ultimately need a package deal with Santee Cooper and SCG in order to effectuate a transaction with a politically palatable rate impact, see HERE.*

NEE/ED – Environmental group pushes back on VA water permit for MVP

- Attorneys for a number of environmental groups have asked the U.S. Court of Appeals to review the VA decision to issue a water quality permit.

Guggenheim takeaway: *Not likely to gain much traction as the VA DEQ held public meetings and thoroughly vetted the project before issuing the water permit.*

ES – EDF served with a letter to cease and desist false claims around ES gas procurement

- EDF was put on notice by ES, as the company issued a Cease & Desist letter suggesting that it will pursue legal action if EDF doesn't halt false and defamatory statements regarding ES's gas procurement practices.

Guggenheim takeaway: *A bold remedy for bold accusations… As a reminder, EDF claimed ES intentionally withheld natural gas pipeline capacity at the expense of its customers; ES adamantly refuted these claims with support from other industry participants since EDF published a report with these suggestions earlier in the year.*

EXC – Completes internal transfer of Fitzpatrick

- EXC notified FERC that the internal restructuring transaction of James A. Fitzpatrick nuclear plant has completed.

Guggenheim takeaway: *No surprise as the transfer was approved by FERC back in October and see our note HERE for additional takeaway on the transaction.*

(1) Regulated utilities deliver power to end-use customers via regulated transmission & distribution (T&D) infrastructure; vertically integrated utilities with regulated or mostly contracted generation are also included.

(2) Integrated utilities own and operate regulated T&D franchises, as well as un-regulated power generation with commodity exposure.

(3) IPPs operate merchant (i.e., un-regulated, non-utility) power plants that compete to sell power in wholesale markets or through retail marketing businesses.

(4) Local Gas Distribution Companies (LDCs), as well as diversified utilities with a business mix largely comprised of gas infrastructure and related activities (i.e., LDC franchises, interstate pipelines, and/or other gas midstream activities).

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Model Update

- Estimate Change

- We have updated our model for 3Q financial results, hedge profile, seasonality, and latest management guidance. Our model uses power curves as of 9/01/2017. We have incorporated the cost saving initiatives on the generation side, which were partially offset by reduction in gross margins. Our updated consolidated EPS estimates are $2.64, $2.77, and $3.06 for 2017, 2018, and 2019, respectively. We extended our model to 2021 from 2019.

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates six utilities in Pennsylvania, Illinois, New Jersey, DC, Delaware, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Atlantic City Electric, BGE, ComEd, Delmarva Power, PECO, and Pepco. Exelon Generation operates the largest nuclear fleet in the United States, with plants concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Buy (1).

Our rating is not only based on the IL and NY ZECs but we believe that other states will follow suit in providing support for nuclear plants and that will further improve EXC's financial strength and valuation. We like this regulated utility's robust growth profile of 6-8% through 2020E.

Valuation

We value EXC using a sum-of-the-parts approach to get to our $45 price target. We value ExGen at ~$3/share and believe ExGen’s core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple and WACC of 8.5%. The legacy utility business is valued at $28/share based on a 18.5x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent net debt and add $12/share for ZECs to get to our rounded PT of $45/share.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the risks get rejected after further legal challenge then the stock has downside as some value of ZEC is already in the stock price

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by “AC” in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Rating/target price changes above reflect Eastern Time

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of Exelon Corp.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

% of companies in each rating category that are investment banking clients	63%	65%	56%	60%	64%	58%

Guide to Citi Research Fundamental Research Investment Ratings:

Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.

Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.

Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch Upside/Downside calls:

Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES

Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q3 2017 Buy 32% (70%), Hold 44% (64%), Sell 24% (58%); Q2 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (57%); Q1 2017 Buy 32% (70%), Hold 45% (63%), Sell 24% (56%); Q4 2016 Buy 31% (71%), Hold 45% (64%), Sell 24% (58%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc.

takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Investor meetings focus on taxes and the FERC

On Tuesday and Wednesday, we hosted Exelon CEO Chris Crane and CFO Jack Thayer for investor meetings in NYC and Boston. With tax reform and potential regulatory changes emanating from the FERC on the horizon, it was a good time to catch up with management. We believe EXC is well positioned to benefit from both tax reform and potential action by the FERC on the US Department of Energy's (DOE's) grid resiliency proposal as well as further nuclear support measures coming from the states. Further, we believe the company is executing well on above-average growth plans at the utility, including narrowing the gap between earned and authorized returns at the recently acquired Pepco Holdings utilities, and deleveraging at ExGen. While the stock is trading close to our current $41 PT, we note that we have yet to factor in upside from tax reform changes, PJM energy price formation reforms, or the potential passage of nuclear-friendly legislation in New Jersey which is under discussion in the current lame duck session. Further, our valuation will also benefit when we roll forward to 2020 from 2019, capturing another year of above-average growth at the utilities.

Tax changes likely material positive for EXC

With the US Congress expected to pass a revised tax code as soon as next week, impacts of anticipated changes were a key focus. Overall, EXC is well positioned versus most utility peers given their large and profitable merchant generation business, which will benefit from a lower corporate tax rate (~20% versus 27-28% otherwise expected for 2019/2020) and 100% bonus depreciation. These changes will favorably impact both EPS and cash flows at ExGen. At the utilities, tax reform should be a cash negative with the regulated utility industry giving up bonus depreciation and flowing the majority of excess deferred taxes back to customers over time. However, utility EPS should benefit with upside to ratebase stemming from the loss of bonus depreciation and the roll back of deferred tax. Further, EXC's goal of narrowing the gap between earned and authorized returns at the PHI utilities should be easier to achieve with a lower tax rate and the return of deferred tax balances providing some headroom on customer rates. From an interest expense perspective, EXC also believes they will not lose the ability to deduct non-utility interest expense due to their falling below both 30% EBIT or EBITDA on a consolidated basis. On net CFO Thayer sees the cash flow accretion at the competitive business to exceed cash flow dilution on the regulated side and therefore keeping de-leveraging plans on track. The company expects to quantify impacts in new disclosure when, and if, a new tax law passes. While many have

expected the changes to be positive for EXC for some time, we believe more granular disclosures could be a positive catalyst.

Investment Tax Credit bill introduced for nuclear plants in House

On a related topic, we also learned that a bill had been introduced in the House earlier this week that would benefit US nuclear power plant owners. Representative Patrick Meehan (R-PA) introduced HR 4614 which would establish a 30% Investment Tax Credit for nuclear power plants, if passed. A bipartisan group from states with nuclear power co-sponsored the legislation. While the bill may face long odds it is designed to include nuclear in the tax extenders discussion and level the playing field versus other fuel types. In essence it would allow nuclear generators to claim the ITC on fuel and other capital expenditures related to their operating nuclear plants. This could be a more material benefit to the extent that industry efforts to extend nuclear plant lives another 20 years (from 60 to 80) come to fruition. Per CEO Crane half of Exelon’s current nuclear units could be candidates for such extensions down the road.

NJ legislation faces challenging but not impossible timetable

While NJ-based PEG, EXC's closest hybrid peer, is taking the lead on pushing through new state legislation in New Jersey to support the state’s nuclear power plants EXC are closely watching developments in the state. As a reminder, the company owns the Oyster Creek nuclear facility, although this is scheduled to close in late 2019, and co-owns Salem with PEG. Lame-duck NJ Governor Christie has stated publicly that he is willing to sign a bill to support NJ nuclear plants as long as there are no further subsidies added for renewables. While a hearing was held on the concept early last week, an actual bill has yet to be introduced and there is limited time before the lame duck session ends (January 9). While passing a bill in the limited time available is clearly a challenge, EXC were encouraged by the support from key stakeholders (notably labor interests) and noted the important election boost received by Senate President Sweeney in whose district the state’s nuclear units are located. They also noted the differences in the NJ political landscape versus Illinois with much of the process likely to be conducted out of the public view between the key players in the state legislature.

FERC and the most likely response to the DOE NOPR

We initially had expected to be hosting this non-deal roadshow the day after the FERC was expected to rule on the Department of Energy's section 403 notice of proposed rulemaking on grid resiliency. As a reminder, the DOE in October put forth a proposal which calls for cost plus rates (defacto re-regulation) for all plants with 90 days of on site fuel (i.e coal and nuclear plants). Despite coming from the Secretary of Energy, the proposed rule has no force unless adopted by the FERC, which was requested within 60 days (by December 11 initially). However, late last week, the new Trump-appointed Chairman of the FERC asked for a 30-day extension, noting that both he and Commissioner Glick had only recently been sworn in and needed more time to review the many comments that had been filed on the proposal. Secretary Perry reluctantly granted the extension, and action is now expected in early January (1/10).

EXC's expectations regarding how the FERC will react to the NOPR remain relatively unchanged from the views expressed at the EEI Financial Conference in early November. The company expects the FERC to direct near-term changes to the RTOs and also commence a longer-term investigation into resiliency and what can be done to make the grid more resilient. This near-term action could include a directive to PJM to move forward with energy price formation reforms already under discussion, allowing the proposal to move forward without a stakeholder vote. Assuming EXC is correct about what the FERC will do, this would theoretically put PJM in position to file a Section 206 (or something of that nature) on price formation reforms by April or May, which would then likely start a 60-90 day clock for review at the FERC. All together, these reforms could take effect as soon as Q3-18. As a reminder, EXC has endorsed the view that price formation reforms would add $2-$5/MWh to around-the-clock prices in PJM.

In terms of a longer-term investigation into resiliency, EXC believes this could take years to play out and will require better defining resiliency and establishing a design basis. They also would expect this to be highly controversial and gain the attention of powerful lobbies in DC.

Some signs that retail pressures have at least stabilized

On the 3Q call Exelon lowered their gross margin outlook in the Power New Business To Go category by $100M for both 2018 and 2019. This was attributed to aggressive pricing by competitors pressuring realized margins in the supply business to below EXC's target $2-$4/MWh range and pushing renewal rates from close to 80% to the low 70s range and new business win rates down from the 30s into the 20s. At the time management was asked whether they felt they had been sufficiently conservative in reflecting such pressures and were confident that they had. In our meetings this confidence was reiterated with EXC also noting that warm weather late in 3Q had created some helpful volatility in PJM prices since when there have been some signs that the competitive landscape has at least stopped deteriorating with some encouraging signs in terms of recent business wins.

Next steps? Dividend announcement, Q4 disclosures

Outside developments related to the FERC and potential tax related changes, we also expect new disclosures from the company on the Q4 call on ExGen gross margin, including a roll out to 2020, and updated thoughts on dividend growth beyond 2018. EXC have indicated that investors should expect another multi-year growth commitment with a rate more competitive with sector average growth. We also expect 2018 guidance and likely more specifics on the impacts of tax reform.

Equity Rating Key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.
Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than six months. In addition to SOLAR ideas, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst ’ s judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding organizational arrangements and information barriers we have established to prevent and avoid conflicts of interest with respect to our research are available on our website under Disclaimer, found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. The index fixings may – by construction – lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited – up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Deutsche Bank is not acting as a financial adviser, consultant or fiduciary to you or any of your agents with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice, and is not acting as an impartial adviser. Information contained herein is being provided on the basis that the recipient will make an independent assessment of the merits of any investment decision, and is not meant for retirement accounts or for any specific person or account type. The information we provide is directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if you or your agent are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important risk and conflict disclosures can also be found at https://gm.db.com on each company ’ s research page and under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

Energy Research
Power, Utilities & Alternative Energy
Initiating Coverage

Exelon Corporation

Exelon Corporation - Initiating Coverage - Underperform

Summary

We initiate coverage of Exelon Corporation (EXC) with an Underperform rating and a $36.00 per share, 12-month price target. Our rating reflects an expected earnings decline at its ExGen subsidiary due to weak forward gas and power prices, as well as the high amount of parent-level debt.

Key Points

We initiate coverage on Exelon Corp. with an Underperform rating and a $36.00 price target. Our Underperform rating reflects the following key points:

- **Mizuho is projecting a 5-year CAGR in earnings of 2.4% through 2021.** Growth in the earnings of the Utility, Parent and Other is expected to be largely offset by an earnings decline at ExGen. A key risk is the weak commodity outlook. Additionally, Mizuho believes the company's retail supply business, should be valued at a lower multiple.

- **Although ExGen is expected to benefit from proposed New Jersey legislation to implement a ZEC, as well as the potential for PJM Market Reform, we believe it is already priced into the stock.** Our estimates incorporate an uplift to EBITDA of $11.50 per MWh from NJ ZECs, which we expect to pass as law by the end of the lame duck session, and give a 50% probability of PJM Reform in the valuation.

- **Mizuho estimates a relative high level of parent debt as a percent of total debt of 20% in 2021. Mizuho estimates a FFO/Debt ratio of 17% 2020, which screens average relative to regulated companies and weak relative to companies with riskier commodity businesses.**

- **Strengths include:** (i) strong 4-year utility rate base growth of 6.5% as a result of increased capex; (ii) the potential to increase dividend growth above 2.5% beginning in 2022, assuming a 70% target payout for UPO; (iii) tax reform benefits, including increased earnings at ExGen resulting from a lower tax rate, and deferred tax cash benefit associated with the extension of bonus depreciation; (iv) the opportunity to pay down debt following bankruptcy of EGTP and targeted debt pay down of $3.0 billion at ExGen.

Valuation: We are initiating our consolidated 2017-21 estimates for EXC as $2.66, $3.06, $2.84, $2.68, and $3.03 respectively. We derive a price target of $36.00/share using sum of the parts analysis. Based on yesterday's closing price of $40.81, Mizuho estimates price depreciation potential of 11.8% and total return potential of (8.58)%, including the company's current yield of 3.21%.

PLEASE REFER TO PAGE 14 OF THIS REPORT FOR IMPORTANT DISCLOSURE AND ANALYST CERTIFICATION INFORMATION. Mizuho Securities USA LLC does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Company Description

Exelon Corporation (EXC) is a utility holding company, established in 1999, that is engaged in the energy generation and energy delivery business. Exelon has six regulated utility subsidiaries including, Commonwealth Edison (CWE), PECO Energy (PECO), Baltimore Gas & Electric Company (BGE), Potomac Electric Power Company (PEPCo), Delmarva Power & Light Company (DPL) and Atlantic City Electric Company (ACE). Collectively, the subsidiaries provide electric and gas service to distribution customers in Illinois, Pennsylvania, Maryland, Delaware, New Jersey and Washington DC.

Exelon's unregulated subsidiary, Exelon Generation (ExGen), owns and operates more than 30,000 megawatts of generation including roughly 18,000 megawatts of nuclear plants. Roughly 75% of the company's generation is located in the Com Ed and PJM East zones of the PJM Regional Transmission Organization. ExGen is also engaged in the retail energy supply business providing electricity and gas to customers throughout the US.

Investment Thesis

Using a sum of the parts analysis on 2020 results we derive a price target of $36.00 per share. Based on the December 14, 2017 closing price of $40.81, this represents price depreciation potential of 11.8% and total negative return potential of 8.58% including the company's current yield of 3.21%. Our price target is derived as follows:

We value the regulated electric distribution and transmission 2020 earnings of $1.77 using a P/E multiple of 17.6 times, equivalent to the electric group average multiple, resulting in a price target of $31.50

We value the regulated gas distribution 2020 earnings of $0.33 using a P/E multiple of 20.3 times, equivalent to the gas group average multiple, resulting in a price target of $7.00.

We value ExGen 2020 generation EBITDA less maintenance capex of $814 million (including a $236 million from market reform at a 50% probability weighting) at a 7.0 times EV/EBITDA multiple resulting in a price target of ($1.00).

We value ExGen retail 2020 EBITDA of $998 million at a 5 times EV/EBITDA multiple resulting in a price target of $5.50.

Adjusting for unallocated debt reduces our price target by $8.00, while adjusting for a current 3% trading premium (calculated on our current coverage universe) adds another $1.00 to our price target. This adjustment results in a net $7.00 reduction to our price target.

Consistent with our methodology our price targets are dynamic changing with the group average P/E multiples and EV/EBITDA multiples recalculated daily.

Acquisitions

- On March 23, 2016, Exelon completed a merger with Pepco Holdings Inc., (PHI) for total consideration of approximately $7.1 billion. The merger brought together EXC's existing three electric and gas utilities (BGE, ComEd, and PECO) and Pepco's three electric and gas utilities (ACE, DPL, and PEPCo). The transaction was approved by FERC, and all five state utility commissions. Pursuant to the orders approving the mergers, Exelon made $168 million of equity contributions in the second quarter of 2016 to PHI subsidiaries to fund the after tax amounts of bill credits and customer base rate credit commitments. Exelon also committed to develop 37 MW's of new generation in Maryland, Delaware and Washington DC. Exelon reported $4.0 billion of goodwill associated with the purchase which has been assigned to PHI utility subsidiaries as follows: PEPCo, $1.7 billion; DPL, $1.1 billion; and ACE, $1.2 billion.
- On September 1, 2016, ExGen acquired the competitive retail energy supply business of Consolidated Edison Solutions, Inc., for a purchase price of $257 million, including net working capital of $204 million.
- On March 31, 2017 ExGen acquired the 838 MW single unit Fitzpatrick Nuclear Plant from Entergy for a total purchase price of $289 million, including $179 million of cost reimbursement to Entergy primarily for operating and maintenance costs associated with refueling and operating the plant past the middle of 2016.

Divestitures & Bankruptcy Filings

On May 2, 2017, ExGen Texas Power LLC., (EGTP) entered into a consent agreement with its lenders to draw on its bank facility and initiate an orderly sales process to sell its portfolio of five Texas generating plants. As of September 30, 2017 certain EGTP assets were classified as "held for sale". On November 7, 2017, EGTP filed voluntary petitions under Chapter 11 of the US Bankruptcy Code. Prior to the filing, ExGen negotiated an agreement with EGTP's lenders that, pending a competitive bidding process and receipt of the necessary approvals, would allow ExGen to continue to own and operate the Handley Plant in exchange for $60 million. Second, the lenders have agreed to exchange the debt for equity in EGTP's four remaining plants, effectively assuming control.

On June 16, 2016, ExGen initiated the sale of its upstream business segment by executing a forbearance agreement with lenders. By December 2016, ExGen sold substantially all of the upstream assets.

On April 21, 2016, ExGen completed the sale of its retired New Boston generating site resulting in a pre-tax gain of $32 million.

Regulatory Matters

Illinois

On April 13, 2017, CWE filed its annual distribution performance based formula rate with the Illinois Commerce Commission (ICC) pursuant to the 2011 Energy Infrastructure Modernization Act (EIMA), requesting a $96 million increase in annual rates. A final order is due from the ICC in December 2017, and establishes the revenue requirement for the company in 2018. The revenue requirement is based on actual costs in 2016 and projected capital spending in 2017. Additionally, rates are trued up to actual costs incurred in 2016. The revenue requirement in 2017 is based on a return on equity of 8.4%, reflecting the average 30 year treasury rate plus 580 basis points.

In December 2016, the Illinois Commerce Commission (ICC) issued a final order approving the 2016 formula rate including an annual rate increase of $126 million.

Pennsylvania

In December 2015, the Pennsylvania Public Utilities Commission (PPUC) approved a settlement in PECO's distribution rate case implementing an annual increase in rates of $127 million, effective in January 2016. No overall ROE was specified in the settlement. PECO had requested an annual rate increase of $190 million predicated on a requested ROE of 10.95%.

In February 2012, Pennsylvania adopted a law providing the PPUC with authority to approve the implementation of a distribution system improvement charge (DISC) providing that the utility has an approved long term infrastructure improvement plan approved by the Commission. In October 2015, the PPUC approved PECO's electric plan to spend $275 million over a five year period. PECO's modified gas infrastructure improvement plan was approved by the PPUC in June 2017, authorizing spending of $762 million over a ten year period through 2022.

Maryland

On March 24, 2017, PEPCo filed an application with the Maryland Public Service Commission (MPSC) seeking to increase its annual distribution rates by $67 million (as modified in August) predicated on a return on equity of 10.1%. In October 2017, the MPSC approved a $32 million increase predicated on a ROE of 9.5%, with new rates effective in November 2017.

In July 2017, DPL filed a request with the MPSC to increase annual rates by $22 million (updated September) predicated on a 10.1% return on equity. The company is expecting a final rate order in the first quarter of 2018.

The MPSC had previously approved a $38 million annual increase for DPL in February 2017 predicated on a 9.6% ROE.

Delaware

In August 2017, DPL filed a request with the Delaware Public Service Commission (DPSC) to increase annual electric and gas rates by $31 million (updated October) and $13 million, respectively, predicated on a 10.1% ROE. A final rate order is expected by year end 2018 pursuant to recent changes to the procedural calendar. In October 2017, the DPSC staff and Public Advocate filed a motion to dismiss the electric filing on procedural grounds. The DPSC rejected the motion, but the schedule was pushed out to accommodate due process objections.

In May 2017, the DPSC approved a $31.5 million annual electric rate increase and in June a $4.9 million natural gas increase, both predicated on a 9.7% ROE. Both increases had been agreed to under settlement agreements with the DPSC staff and the Division of Public Advocate. The company had originally requested a $63 million electric rate increase and a $22 million gas increase.

The District of Columbia

In July 2017, the District of Columbia Public Service Commission (DCPSC) approved a $37 million annual increase in DPL rates predicated on a 9.5% ROE. New rates became effective in August 2017. DPL had originally requested a $77 million increase predicated on a 10.6% ROE.

The DCPSC has authorized a joint project to spend $500 million ($250 million to be funded by PEPCo) to underground transmission lines over a six year period. PEPCo’s spending on the project including a return will be recoverable through a volumetric surcharge on electric bills.

New Jersey

In September 2017, the New Jersey Board of Public Utilities (NJBPU) approved a settlement agreement providing ACE with a $43 million increase in annual sales, with new rates effective in October 2017.

Effective June 2017, ACE reduced rates by $32 million to reflect savings realized under contracts with non-utility generators.

Zero Emission Credits (ZEC’s)

New York

In August 2016, the New York Public Service Commission (NYPSC) issued an order establishing the Clean Energy Standard (CES) targeted at preserving the environmental attributes of nuclear generation in the state, thus authorizing the state nuclear subsidy. As a result, the New York State Energy Research and Development Authority (NYSERDA) will centrally procure ZEC’s from eligible plants under a 12 year contract, to be administered in 6 two year tranches, extending from April 2017 to March 2029. The ZEC price for the first tranche has been set at $17.48 per MWh. Following the first tranche the price will be updated bi-annually. Each load serving entity (LSE) will be obligated to purchase an amount of ZEC’s equivalent to its load ratio share of the total electric energy in the New York control area. Cost recovery from customers will be incorporated into the commodity charges on customer bills. The NYPSC initially identified the Fitzpatrick, Ginna and Nine Mile Point nuclear facilities (all partly owned and operated by Exelon) as eligible for the ZEC program.

The New York ZEC program was challenged in US Federal District Court with plaintiffs arguing that the program interferes with FERC jurisdiction on wholesale rates. The District Court dismissed the case on July 25, 2017, with a judgment in favor of New York. Plaintiffs have subsequently appealed the case to the US Court of Appeals for the Second Circuit. Plaintiff filed its opening brief in October and reply briefs were filed on December 1. The next step in the trial is oral arguments.

Illinois

On December 7, 2016, Illinois adopted a new law providing compensation for certain Illinois nuclear plants including Clinton and Quad Cities owned and operated by Exelon, effective June 1, 2017. The Zero Emission Credit standard compensation for nuclear plants extends over a 10 year period expiring May 31, 2027. The ZEC price will be based on the current social cost of carbon as determined by the Federal Government and is initially established at $16.50 per MWh. However, an initial limit on annual collections of $235 million effectively reduces the ZEC price to $11.75 per MWh. The ZEC price is also subject to adjustments based on escalation and pricing adjustment mechanisms designed to mitigate ZEC pricing based on market based increases in energy and capacity prices. Illinois load serving entities will be required to purchase from eligible nuclear facilities an amount of ZEC’s equal to 16% of the amount of electricity delivered in 2014. LSE’s will be permitted to recover the cost of ZEC’s from customers through a rate rider mechanism with a true up provision. CWE’s share of ZEC costs in the first year is approximately $170 million.

In February 2017, two separate parties filed a legal challenge to the Illinois ZEC program in Federal District Court alleging that the state program interfered with the FERC jurisdiction over wholesale rates. The Federal District Court dismissed the suits on July 14, 2017. On July 17, 2017 the plaintiffs appealed the decision to the Seventh Circuit Appeals Court, which consolidated the two cases. Initial briefs were filed in August, Exelon’s briefs were filed in October and reply briefs were filed on December 12. The next step in the proceeding is oral arguments.

New Jersey

Proposed legislation was introduced during the lame duck session to provide ZEC support to nuclear plants located in the state of New Jersey. The proposal would include a ZEC for Exelon’s 50% ownership interest in the Salem Nuclear Plant.

Potential Early Nuclear Plant Retirements: ExGen announced that it will permanently cease generation operations at its Three Mile Island Plant in Pennsylvania on or about September 2019. The current NRC license for the plant expires in 2034. ExGen filed a deactivation notice with PJM on May 30, 2017 and notification to the NRC on June 20, 2017. PJM subsequently approved the proposed deactivation. The plant did not clear in the May 2017 PJM capacity auction for the 2020-2021 planning period. This represents the third consecutive year that the plant failed to clear the auction. The plant is currently committed to operate through May 2019.

Like-Kind Exchange

On September 19, 2016, the Internal Revenue Service rejected Exelon's position on its 1999 income tax return to defer under the like-kind exchange provisions of the IRS code, $1.2 billion of tax gain on the sale of CWE's fossil generation assets. A tax court also held Exelon responsible for penalty payments of $106 million and interest payments of $86 million. Exelon appealed the IRS decision to the US Court of Appeals for the Seventh Circuit.

Exelon expects to pay the $1.3 billion related to the like-kind exchange in the fourth quarter of 2017. While Exelon will receive a tax benefit of roughly $350 million associated with the deduction of the interest, Exelon has a net operating loss carryforward and thus does not expect to realize the cash benefit until 2018. After taking into consideration the interest deduction tax benefits, the total estimated net cash outflow is expected to be approximately $950 million, of which $300 million is expected to be at CWE. Of the amounts payable, Exelon deposited $1.25 billion with the IRS in October 2016. The remaining amounts due will be paid by the company in the fourth quarter of 2017.

Strengths

1) ***Utility Rate Base Growth:*** The principal driver of growth at the utility is increased capital spending resulting in higher rate base. Exelon is projecting 4-year utility rate base growth of 6.5% through 2020. Our forecast incorporates reasonable rate outcomes at Exelon's operating utilities over the forecast period. Capital Allocation: Exelon's capital allocation is focused on utility growth, dividend growth and debt repayment. Exelon projects that it will invest more than $20 billion at its utilities between 2017 and 2020 to improve system reliability. Roughly 70% of this projected spending level is recoverable contemporaneously under FERC formula rates, CWE's formula rate plan or capital riders.

2) ***Targeted Debt Pay Down:*** Exelon is targeting the repayment of $3.0 billion of debt at its ExGen subsidiary. Also, following the bankruptcy of EGTP, $666 million of EGTP debt will be deconsolidated from ExGen's balance sheet. Our forecast model projects FFO/Debt adjusted for pension was 17% at the end of 2016 and is projected to be 18% in 2021. Our FFO/Debt calculations differ from those calculated by the company because Mizuho excludes nuclear fuel amortization from FFO. Nuclear fuel amortization is estimated by the company to be $1.1 billion in 2017. We exclude this from our calculation, as there is typically an off-setting capital expenditure for fuel purchases. The company is targeting FFO/debt levels of 18%-20%. We are forecasting ExGen Debt to EBITDA of 2.9 times at the end of 2016 declining to 2.6 times in 2021. This is consistent with ExGen's target level of no more than 3 times.

3) ***Potential Uplift from Nuclear Subsidy Payments and PJM Market Reform:*** ExGen is expected to benefit from proposed New Jersey legislation to implement a ZEC. Mizuho is expecting the possible passage of a law by the end of the lame duck session which ends on January 8, 2018. We have already included an $11.50 per MWh uplift in Exelon's 50% ownership interest in the Salem nuclear plant. Additionally, FERC is considering market reform measures that could add between $2.00 and $5.00 per MWh to base load prices in PJM. Exelon has endorsed the mid-point of this range to calculate a potential benefit. It has also identified 135 Terawatt- hours that will benefit from this pricing uplift. We have not factored this potential EBITDA uplift of roughly $500 million into our estimates at this point in time. The FERC was expected to render a decision on this proposal at its open meeting on December 11, but implemented a 30 day delay, to allow recently appointed commissioners the opportunity to familiarize themselves with the issues.

4) ***Uplift from Tax Reform:*** Our forecast includes potential benefits from tax reform legislation proposals. Among the benefits to the company would be an increase in ExGen earnings resulting from a lower tax rate. Additionally, there would be a deferred tax cash benefit associated with an extension of bonus depreciation calculated at a 100% rate starting in 2018. Partly offsetting this would be increased losses at Exelon parent based on a lower tax shield of parent interest expense. For the most part Mizuho’s valuation would not change materially as we value ExGen on an EV/EBITDA basis versus P/E.

5) ***Potential to Accelerate Dividend Growth:*** In practice, Exelon's utility subsidiaries pay out 70% of their earnings to help fund the Exelon dividend and holding company interest expense. Exelon's Board of Directors has approved a policy of 2.5% dividend growth through 2018. Management is working with the Board of Directors and plans to provide an update on a multi-year outlook as part of its planning and budgeting process currently underway. Based on our Utility, Parent and Other (UPO) estimates the payout on UPO operations will decline from 80.5% in 2017 to 69% in 2021, reflecting the higher growth rate of UPO earnings. Assuming a 70% target payout for UPO provides the company with flexibility to increase the dividend growth above 2.5% beginning in 2022.

Risks

1) ***Weak Consolidated Growth:*** Mizuho is projecting 5-year compound annual growth in earnings of 2.4% through 2021. Growth in the earnings of the utility less Holdco is expected to be largely offset by an earnings decline at ExGen. The projected earnings decline at ExGen reflects current weak forward gas and power prices (updated as of September 30) and the run off of in the money hedges partly offset by higher expected ZEC and capacity payments.

2) ***PHI Subsidiary Risk:*** Exelon is currently under-earning at its PHI subsidiaries, in our assessment. Exelon has filed numerous rate cases in these jurisdictions since the merger closed in early 2016 and we assume that Exelon will continue to file rate requests in the future. Although our forecast model includes improvements in earned ROE's at all of its PHI subsidiaries over the forecast period, the subsidiaries will likely be subject to regulatory risk at both the state and federal level. Exelon has outstanding rate filings today at its CWE and DPL subsidiaries.

3) ***Commodity Exposure:*** ExGen is exposed to changes in the commodity prices for gas and power. It is also exposed to changes in the auction price for capacity in annual auctions conducted by PJM. The next PJM capacity auction is scheduled to begin in May 2018. ExGen also derives a significant amount of its EBITDA from its retail supply business. Wholesale margins in these businesses have come under pressure recently, approaching the low end of a $2.00-$4.00 historical range. Partly offsetting this negative trend in ExGen margins is cost cutting initiatives put forward by the company. On its third quarter earnings call, ExGen identified $250 million of savings in its businesses between now and 2020. The weakening commodity outlook for gas, power and retail supply is reflected in our forecast for declining margins and EBITDA in Power.

4) ***High Parent Debt:*** Parent debt as a percent of total debt is high relative to peers. We estimate parent debt to be roughly 23% in 2016, declining in our forecast to 20% in 2021. The lower level projected in the out year of our forecast is consistent with Moody's rating practice of applying a one notch rating adjustment for the holding company. Parent debt represents a drag in Mizuho's valuation approach and, under tax reform. will potentially reduce the level of tax shield with respect to holding company losses.

Management

Chris Crane, President and Chief Executive Officer

Crane is president and chief executive officer of Chicago-based Exelon Corporation. Crane previously served as president and chief operating officer of Exelon Corporation. He joined Exelon (then ComEd) in 1998, and was named chief nuclear officer in 2004. Crane assumed responsibility for Exelon's fossil, hydro and renewables facilities, in addition to the nuclear fleet, in 2007. Crane was named president of Exelon Generation in 2008, with added responsibility for Power Team, Exelon's former wholesale power trading and competitive retail organization (now part of Constellation). Prior to joining Exelon, Crane served as Browns Ferry site vice president for Tennessee Valley Authority, and worked in new plant start-up at the Comanche Peak Nuclear Power Plant in Texas and Palo Verde Nuclear Generating Station in Arizona.

Jonathan (Jack) W. Thayer, Senior Executive Vice President and Chief Financial Officer

Jonathan (Jack) W. Thayer joined Exelon Corporation in January 2012 and serves as senior executive vice president and chief financial officer. Additionally, in his role, Thayer leads the treasury function in developing and implementing financing plans as well as the investor relations department. Prior to joining Exelon, Thayer was appointed Senior Vice President and Chief Financial Officer of Constellation Energy in October 2008. Thayer joined Constellation Energy in 2003, serving as Director, Investor Relations. In 2004, he was appointed Vice President and Managing Director, Corporate Strategy & Development. He was appointed Treasurer in August 2008. Prior to joining Constellation Energy, Thayer held financial positions at Deutsche Bank Securities Inc. and SBC Warburg Dillon Read Inc., primarily focusing on mergers and acquisitions and financing transactions in the health care services, medical technology, biotechnology, and pharmaceuticals industries.

Estimates & Earnings Forecast

We are initiating our 2017-2021 estimates for EXC Consolidated as $2.66, $3.06, $2.84, $2.68, and $3.03 respectively. **We are initiating our 2017-2021 Utility, Parent and Other estimates as $1.61, $1.67, $1.77, $1.90 and $2.06, respectively.** Our consolidated 2018 and 2021 estimates are significantly above consensus due in part to tax reform and commodity price assumptions for ExGen which are based on September 30,2017 forward prices. Our estimates also include assumed passage of ZEC's legislation in New Jersey during the lame duck session. We do not include any potential benefit from market reform to our EPS estimates.

Mizuho is projecting UPO 3-year compound annual earnings growth of 5.8% through 2020, which is at the low end of the company's 6%-8% targeted growth for the period 2017-20. Mizuho is forecasting 6.4% growth in UPO rate base which in turn, is the major driver of UPO earnings growth. Our rate base forecast is in line with the company's projected growth rate of 6.5%. UPO funding for its capital spending in part is derived from surplus cash flow generated by ExGen during the forecast period. Surplus cash from ExGen is also used in our forecast to reduce the level of parent debt. Parent losses are flat to declining in our forecast model.

ExGen earnings are projected to decline 8.5% over the four-year period 2021. The principal driver of the earnings decline is the roll off of in-the-money hedges and lower commodity prices for electricity and gas partly offset by increased contribution from ZEC and capacity payments and lower operating and maintenance costs. The company announced a $250 million cost saving initiative on its 3Q17 earnings call which will be fully realized in 2020. ExGen surplus cash can help fund utility rate base investment and debt repayment and be a driver of future dividend growth

Company Models

In the pages that follow, we highlight our detailed consolidated financial model, including both historical and projections for income statement, cash flow and balance sheet for Exelon from 2014 to 2020. To derive the consolidated results, we modeled full financials for each operating subsidiary. Clients that would like the full models may obtain them through their MSUSA representative or from the authors.

Price Target Calculation and Key Risks

Price Target Calculations: Using a sum of the parts analysis on 2020 results we derive a price target of $36.00 per share. Our price target is derived as follows: (i) we value the regulated electric distribution and transmission 2020 earnings of $1.77 using a P/E multiple of 17.6 times, equivalent to the electric group average multiple, resulting in a price target of $31.50; (ii) we value the regulated gas distribution 2020 earnings of $0.33 using a P/E multiple of 20.3 times, equivalent to the gas group average multiple, resulting in a price target of $7.00; (iii) we value ExGen 2020 generation EBITDA less maintenance capex of $814 million (including a $236 million from market reform at a 50% probability weighting) at a 7.0 times EV/EBITDA multiple resulting in a price target of ($1.00); (iv) we value ExGen retail 2020 EBITDA of $998 million at a 5 times EV/EBITDA multiple resulting in a price target of $5.50; (v) adjusting for unallocated debt reduces our price target by $8.00, while adjusting for a current 3% trading premium (calculated on our current coverage universe) adds another $1.00 to our price target. This adjustment results in a net $7.00 reduction to our price target. Consistent with our methodology our price targets are dynamic changing with the group average P/E multiples and EV/EBITDA multiples recalculated daily.

Key Risks: Weak commodity outlook, general economic conditions, changes in state and/or Federal regulation, weather, ongoing business operational risk, broader macroeconomic conditions, and interest rate movements are among the key risks to our rating and expected stock performance.

IMPORTANT DISCLOSURES

The disclosures for the subject companies of this report as well as the disclosures for Mizuho Securities USA LLC entire coverage universe can be found at https://msusa.bluematrix.com/sellside/Disclosures.action or obtained by contacting EQSupervisoryAnalystUS@us.mizuho-sc.com or via postal mail at Equity Research Editorial Department, Mizuho Securities USA LLC, 320 Park Avenue, 12th Floor, New York NY, 10022.

Investment Risks and Valuation Methods can be located in the following section of this research report - Price Target Calculation and Key Risks.

Ownership Disclosures and Material Conflicts of Interest or Position as Officer or Director

Receipt of Compensation

Mizuho Securities USA LLC and or its affiliates makes a market in the following securities: Exelon Corporation
The compensation of the research analyst writing this report, in whole or part, is based on MSUSA's annual revenue and earnings and is not directly related to any specific investment banking compensation. MSUSA's internal policies and procedures prohibit research analysts from receiving compensation from companies covered in the research reports.

Regulation Analyst Certification (AC)

I, Paul Fremont, hereby certify that the views expressed in this research report accurately reflect my personal views about any and all the subject companies. No part of my compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

Rating Definitions

Mizuho Securities USA investment ratings are based on the following definitions: Anticipated share price change is based on a 12-month time frame. Return expectation is based on the stock’s total return. For disclosure purposes (for purposes of the FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Buy, Neutral, and Underperform. (effective July 10, 2017).

Buy: Stock's total return is expected to appreciate above the average total return of the analyst's industry coverage universe, on a risk-adjusted basis, over the next 12 months.

Neutral: Stock's total return is expected to be within the average total return of the analyst's industry coverage universe, on a risk-adjusted basis, over the next 12 months.

Underperform: Stock's total return is expected to depreciate below the average total return of the analyst's industry coverage universe, on a risk-adjusted basis, over the next 12 months.

RS: Rating Suspended - rating and price objective temporarily suspended.

NR: No Rating - not covered, and therefore not assigned a rating.

Mizuho Securities USA LLC investment ratings are based on the following definitions. Anticipated share price change is based on a 6- to 12-month time frame. Return expectation excludes dividends (prior to July 10, 2017).

Buy:	Stocks for which the anticipated share price appreciation exceeds 10%.
Neutral:	Stocks for which the anticipated share price appreciation is within 10% of the share price.
Underperform:	Stocks for which the anticipated share price falls by 10% or more.
RS:	Rating Suspended - rating and price objective temporarily suspended.
NR:	No Rating - not covered, and therefore not assigned a rating.

Rating Distribution

(As of 12/14)	**% of coverage**	**IB service past 12 mo**
Buy (Buy)	44.55%	48.15%
Hold (Neutral)	50.17%	43.42%
Sell (Underperform)	5.28%	50.00%

For disclosure purposes only (NYSE and FINRA ratings distribution requirements), our Buy, Neutral and Underperform ratings are displayed as Buy, Hold and Sell, respectively.

The Guggenheim Daily Transmission: SO, D, ES, AEP, NJ Nuclear, PEG, NJR, SJI, AWK, EXC, FE, Tax

Scroll down for Guggenheim's Non-Deal Roadshow Schedule

What's New?

SO – Reports indicate that payments to contractors working on Plant Vogtle have halted
D – ACP receives National Park Service construction permit
D – DEEP and PURA hold public meetings on Millstone
D – Cove Point tested and ready for service
ES – Requests to delay rate implementation to Feb
AEP – Reaches agreement to transfer operational control of ~2.5GW of generation
ES – Mass. Labor union supports Northern Pass in MA Clean Energy RFP
NJ Nuclear – EPSA expresses concerns on nuclear bill
PEG/NJR/SJI/AWK/EXC/FE – NJ BPU adopts rules to minimize regulatory lag
EXC – Pepco files rate case in D.C.
Tax – Senate rejects three provisions, forcing House to vote again
Tax – NJ BPU proposes rule on consolidated tax adjustment

SO – Reports indicate that payments to contractors working on Plant Vogtle have halted

- According to reports, payments to contractors working on Plant Vogtle have halted.

***Guggenheim takeaway:** Potentially coming to a halt ahead of the commission's vote tomorrow on whether or not they go along with SO's recommendation to proceed with construction.*

D – ACP receives National Park Service construction permit

- The U.S. National Park Service approved permits for ACP.

***Guggenheim takeaway:** Another approval under the belt with a few more administrative tasks outstanding. ACP will likely be able to begin pre-construction activity contingent upon receiving a Historical Preservation permit and a notice of intent from FERC to allow for tree-felling. Given most of the pipelines route is located away from bodies of water, the tree-felling activity can be done without the state-level water quality permits that remain outstanding and would allow the in-service date to remain on track.*

D – DEEP and PURA hold public meetings on Millstone

- DEEP and PURA held public meetings on the Millstone Power plant.

***Guggenheim takeaway:** Lots of puts and takes, but most of the discussions/opinions have already been spelled out by all parties involved in the past. Additional public hearings will be held today and the DEEP and PURA will consider stakeholders' comments, so stay tuned.*

D – Cove Point tested and ready for service

- Cove Point has been tested and ready for service, expecting to be fully operational in early 2018.

***Guggenheim takeaway:** Project is nearing the finish line. **We expect we could see drops into the MLP earlier than anticipated, potentially in 1Q18** with a mix of equity and debt at the DM level. Once commissioning is complete, Cove Point will begin shipping LNG and can begin accruing revenue and billing off-takers.*

AEP – Reaches agreement to transfer operational control of ~2.5GW of generation

- AEP reached an agreement to transfer control of operations the 1.8GW Cardinal station, 200MW Greenville station and the 510MW Robert P. Mone station to Buckeye Power.
- AEP will still own 590MW of Cardinal unit 1.

Guggenheim takeaway: *AEP shed most of its merchant power generation interests over the past couple of years, transforming the business into a fully-regulated story, and has been shedding what remains of their merchant power facilities/activities.*

ES – Mass. Labor union supports Northern Pass in MA Clean Energy RFP

- The International Brotherhood of Electrical Workers announced their support of Northern Pass in the MA Clean Energy RFP

Guggenheim takeaway: *Not a surprise to see labor workers that are employed by ES support the project. MA is expected to announce a winner of its clean energy RFP soon, so stay tuned.*

NJ Nuclear – EPSA expresses concerns on nuclear bill

- EPSA expressed concern on the newly introduced bill to compensate nuclear plants in NJ, indicating that there is no rush to pass the legislation as the plants are not in imminent danger.

Guggenheim takeaway: *We certainly did not expect the bill to pass without a fight. NJ Senate Environment and Energy and the Assembly Telecommunications and Utility committees will host another joint hearing to discuss issues around the nuclear legislature, see link HERE for live broadcast at 10 am.*

PEG/NJR/SJI/AWK/EXC/FE – NJ BPU adopts rules to minimize regulatory lag

- NJ Board of Public Utilities voted to approve two new rules that are intended to address regulatory lag, including an Infrastructure Improvement Plan process to expedite recovery of new investment and the implementation of interim rates during a pending rate case.

Guggenheim takeaway: *Constructive data point as regulatory lag has been a persistent issue for some of the NJ utilities; we see the new rule as potentially accelerating infrastructure investments in the state. As a reminder, PEG expects to file a rate case on 2/1/2018, pursuing recovery of distribution investment and storm related costs since the last rate case in 2010 as well as more constructive rate mechanism including decoupling, interim rates, etc.*

EXC – Pepco files rate case in D.C.

- Pepco, EXC's subsidiary, filed an application with the D.C. Public Service Commission, requesting $66mm electric rate increase premised on a 10.1% ROE.
- As a reminder, D.C. PSC authorized 9.5% ROE in the prior rate case.

Guggenheim takeaway: *EXC keeps the momentum going with very good traction in achieving 8-9% ROE at former Pepco utilities by 2020, in our view, with serial rate filings to shore up regulatory lag, and ultimately could deliver better than expected accretion from the acquisition. As a reminder, the Chairwoman who was against the merger will end her term in 2018, at which point the governor, who was supportive of the merger (and who also appointed the current two Commissioners), will appoint a new Chair.*

Tax – Senate rejects three provisions, forcing House to vote again

- After the House approved the tax bill, the Senate rejected three provisions during its deliberations stating the bill violated the Byrd rule, forcing the House to hold another vote.

Guggenheim takeaway: *A setback but we don't believe policy-makers carried tax reform this far to let it fail – We continue to expect a final bill on the president's desk soon. Stay tuned…*

Tax – NJ BPU proposes rule on consolidated tax adjustment

- The NJ BPU proposed a rule that would codify a generic order from 2014 regarding consolidated tax adjustments.

Guggenheim takeaway: *As a reminder, an appeals court previously remanded the issue, and with a new governor taking over in NJ, we'll have to wait and see if the latest proposal becomes final.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

The Guggenheim Daily Transmission: PCG, DYN, EXC, FERC, EPA

Scroll down for Guggenheim's Non-Deal Roadshow Schedule

What's New?

PCG – Rating agencies put PCG on review for downgrade
DYN – Response to comments on MISO Zone 4 resource adequacy issues
EXC – Started pilot program on electric vehicles
FERC – Proposes new standards for cybersecurity reporting
EPA – State attorneys general file suit on smog pollution control

PCG – Rating agencies put PCG on review for downgrade

- Moody's placed the ratings and outlooks of both PCG and its utility PG&E on review for downgrade, highlighting the suspension of dividends as “materially credit negative”.
- S&P Global Ratings also placed ratings on both entities on CreditWatch negative with negative implications, stating that the suspension of the dividend reduces access to equity capital and thus financial flexibility, despite helping to build cash reserves and equity cushion.
- Fitch Ratings has yet to take an action, although indicated that cash retention from the dividend suspension will be somewhat offset by cost of capital concerns due to pressure on shares.

Guggenheim takeaway: *We wouldn’t imagine PCG was intending to protect bondholders with their decision to suspend the dividend, as it effectively closes access to public equity without really resolving anything for bondholders, or at all really. We suspect PCG might have wanted to telegraph a message to powers that be in CA to animate some sense of urgency around the issue of inverse condemnation, although management emphasized it was not a strategic decision when we caught up shortly after the dividend announcement, and we wouldn’t expect that message to be received well in CA either, as investor interests simply aren’t a priority in CA. At the end of the day, we still question how PCG found itself faced with such a major decision around its dividend, frankly, regardless of nuances in CA’s utility dividend rules, without any developments worth disclosing around CalFire investigations or their potential role in the wildfires.*

DYN – Response to comments on MISO Zone 4 resource adequacy issues

- DYN submitted a response to comments from other participants on MISO Zone 4 resource adequacy issues post the initial workshop, including issues related to MISO/OMS load and capacity forecast in the 2017 survey, at-risk status of DYN’s downstate generating units, timing of action considering the proposed VST/DYN merger as well as FERC response to DOE NOPR, amongst other items.
- DYN suggested a second workshop on 1/16/2018 as requested by the Staff.

Guggenheim takeaway: *DYN continues to push for reforms in MISO Zone 4 to address the resource adequacy issues. The ICC is expected to produce a final report for presentation to the governor and General Assembly in February 2018. The results should provide an important catalyst for DYN’s legislation that would create a regional capacity market administered by the Illinois Power Agency. Stay tuned…*

EXC – Started pilot program on electric vehicles

- Commonwealth Edison, an EXC subsidiary, started a pilot program to study energy use of electric vehicles.

Guggenheim takeaway: *Not likely a very material driver at least in the NT.*

FERC – Proposes new standards for cybersecurity reporting

- FERC proposed a revised Critical Infrastructure Protection (CIP) Reliability Standard to improve mandatory reporting of cybersecurity incidents.

Guggenheim takeaway: *FERC is proactively taking actions to address the cybersecurity issues that could potentially harm the reliability of the electric system.*

EPA – State attorneys general file suit on smog pollution control

- The attorneys general of NY, CT, DE, MD, MA, PA, RI and VT filed suit against the EPA as the agency failed to require 9 additional upwind states to join the "Ozone Transport Region" to control smog pollution.

Guggenheim takeaway: *Policy makers at the state level have continued to push their clean energy agendas with a lack of leadership regarding clean energy policy at the federal level.*

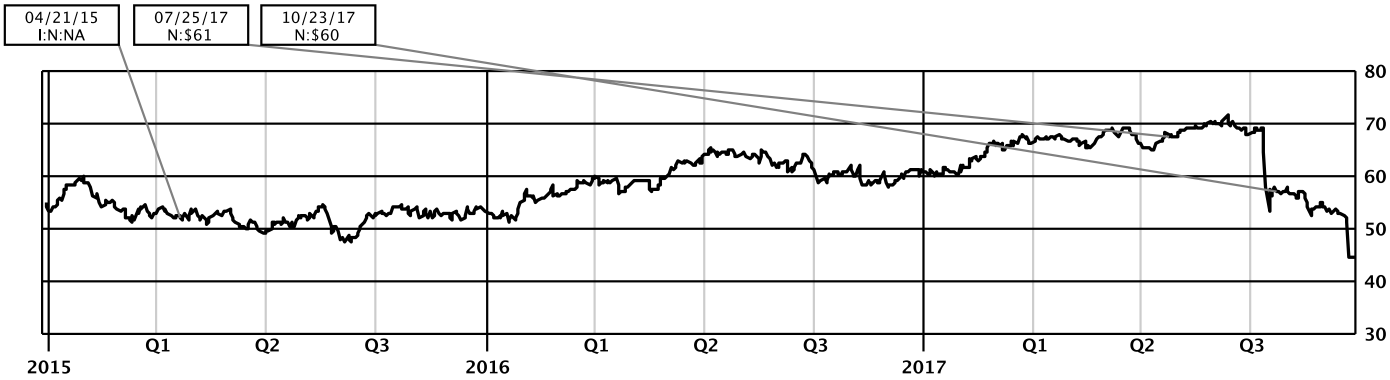
Rating and Price Target History for: PG&E Corporation (PCG) as of 12-27-2017



Created by BlueMatrix

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Prior to 12/8/14, Guggenheim Securities, LLC’s BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

RATINGS DISTRIBUTIONS FOR GUGGENHEIM SECURITIES:

			IB Serv./ Past 12Mos.	
Rating Category	**Count**	**Percent**	**Count**	**Percent**
BUY	205	60.12%	25	12.20%
NEUTRAL	135	39.59%	14	10.37%

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

Phillip S. Barnett

Q. SDR-ROR-11 If applicable, please supply a listing of all common equity infusions from the parent to the Company over the past five years. In each case, identity date and dollar amount.

A. SDR-ROR-11 Not applicable. No common equity infusions from the parent to the Company were made over the past five years.

SDR-ROR-12
Page 1 of 1
Scott A. Bailey

Q. SDR-ROR-12 If applicable, please identify the Company's common dividend payments to its parent for each of the last five years.

A. SDR-ROR-12 PECO's dividends on common stock paid to its parent for the last five years are as follows:

2013 - $ 331,000,000
2014 - $ 320,000,000
2015 - $ 278,000,000
2016 - $ 277,160,000
2017 - $ 288,000,000

Q. SDR-ROR-13	Please provide the latest year-by-year financial projections for the Company for the next five years. Also, please indicate the date these projections were prepared; whether approved by management; and whether the projections have been submitted to bond rating agencies. (Information should be treated in a confidential manner.)
A. SDR-ROR-13	Refer to Public Attachment SDR-ROR-13(a) for the 2018 - 2019 projections that the Company finalized in January 2018, which were approved by management**.** These projections were provided to the rating agencies in February 2018. **CONFIDENTIAL ATTACHMENT SDR-ROR-13(a) IS CONFIDENTIAL IN REGARD TO THE LATEST YEAR-BY-YEAR FINANCIAL PROJECTIONS FOR THE COMPANY FOR 2020 THROUGH 2022 AND IS SUBMITTED ONLY IN THE NON-PUBLIC VERSION OF THIS RESPONSE FILED WITH THE COMMISSION.**

Q. SDR-ROR-14 Please provide the Company's five-year construction budget.

A. SDR-ROR-14 Refer to the table below for 2018 through 2019 construction budget for electric distribution and an allocated portion of common plant:

	Capital Budget	
2018	$	474,830,730
2019	$	534,926,314
2020		
2021	**CONFIDENTIAL**	
2022		

The information for 2020-2022 is **CONFIDENTIAL AND IS SUBMITTED ONLY IN THE CONFIDENTIAL NON-PUBLIC VERSION FILED WITH THE COMMISSION.**

Q. SDR-ROR-15 Please identify the Company's and, if applicable, its parent's capital structure targets (percentages of capital types). Provide the complete basis for the capital structure targets.

A. SDR-ROR-15 The Company's long term capitalization target is 53% in order to support the Company's strong investment grade credit rating and ability to issue debt even during difficult capital market conditions.

Exelon Corporation's capital structure is not the basis for the Company's claim and is therefore not applicable.

Q. SDR-ROR-16 For each month, of the most recent 24 months, please supply the Company's

a) short-term debt balance;
b) short-term debt interest rate;
c) balance of construction work in progress; and
d) balance of construction work in progress which is eligible for AFUDC accrual.

A. SDR-ROR-16

a) Refer to Attachment SDR-ROR-16(a).
b) Refer to Attachment SDR-ROR-16(b).
c) Refer to Attachment SDR-ROR-16(c).
d) Refer to Attachment SDR-ROR-16(d).

Q. SDR-ROR-17 If applicable, please provide the currently authorized returns on equity for each of the parent's utility subsidiaries of the same industry type as the Company. In each case identify the approximate date when the current return on equity was approved by the state commission.

A. SDR-ROR-17 In addition to PECO Energy Company, Exelon Corporation has five other subsidiaries that are electric distribution companies: Commonwealth Edison Company (ComEd) located in Northern Illinois, Baltimore Gas and Electric Company (BGE) located in Maryland, Atlantic City Electric located in Southern New Jersey, Delmarva Power located in Delaware and Maryland, and Pepco located in Washington, D.C. and Maryland.

Section 16-108.5 of the Illinois Public Utilities Act (Act) authorizes ComEd to determine its electric delivery service charges through the application of a formula rate that operates in a standardized manner with annual updates using information published by ComEd in accordance with various federal and state reporting requirements. Pursuant to the Act, ComEd's authorized rate of return on common equity for electric delivery service is set statutorily at the average of the monthly average 30-year Treasury yields plus 580 basis points.

The currently authorized electric distribution rate of return on common equity for BGE is 9.75%, which was determined in a base rate proceeding for which the final order was issued on June 3, 2016.

The currently authorized electric distribution rate of return on common equity for Atlantic City Electric is 9.60%, which was determined in a base rate proceeding for which the final order was issued on September 22, 2017.

The currently authorized electric distribution rate of return on common equity for Delmarva Power - Delaware is 9.70%, which was determined in a base rate proceeding for which the final. order was issued on May 23, 2017.

The last base rate proceeding for Delmarva Power – Maryland was resolved by settlement. The settlement agreement was approved on February 9, 2018 and is silent with respect to the rate of return that the approved base rates will provide Delmarva Power an opportunity to earn.

The currently authorized electric distribution rate of return on common equity for PEPCO - Maryland is 9.50%, which was determined in a base rate proceeding for which the final order was issued on October 20, 2017.

The currently authorized electric distribution rate of return on common equity for PEPCO – District of Columbia is 9.50%, which was determined in a base rate proceeding for which the final order was issued on July 25, 2017.

Q. SDR-ROR-18 Has the Utility reacquired or repurchased any debt within the last five years? If so, provide a summary of each gain or loss on reacquired debt, the date on which the utility commenced amortization of such a gain or loss, the regulatory commission decision addressing the treatment of such gain or loss on reacquired debt, if any, on interest expense.

A. SDR-ROR-18 No.

Q. SDR-ROR-19 Fully identify all debt (other than instruments in public markets) owed to all shareholders, corporate officers, or members of the board of directors, its affiliates, parent company, or subsidiaries.

A. SDR-ROR-19 PECO Energy Capital Corp (PECC), PECO Energy Capital Trust III (PECO Trust III), and PECO Energy Capital Trust IV (PECO Trust IV) are non-consolidated subsidiaries of PECO that have issued preferred securities and lent the proceeds to PECO.

As of December 31, 2017, PECO's long-term debt owed to affiliates consisted of the following:

Description	**Interest Rate**	**Maturity Date**	**Debt Outstanding**
PECO Trust III Subordinated Debentures	Variable	On Demand	$805,206
PECO Trust III Subordinated Debentures	7.380%	4/6/2028	80,520,619
PECO Trust IV Subordinated Debentures	5.750%	6/15/2033	103,092,784
		Total	$184,418,609

Q. SDR-ROR-20 Provide a summary statement of all stock dividends, splits, or par value changes during the two (2) calendar periods preceding the rate case filing.

A. SDR-ROR-20 During the calendar years 2017 and 2016, there were the following:

2017

	Common Stock Dividends Declared ($ millions)	**Preferred Stock Dividends Declared ($ millions)**	**Stock Splits**	**Par Value Changes**
Exelon Corporation	$1,243	None **	None	None
PECO Energy Company	$288	None	None	None

2016

	Common Stock Dividends Declared ($ millions)	**Preferred Stock Dividends Declared ($ millions)**	**Stock Splits**	**Par Value Changes**
Exelon Corporation	$1,172	$8	None	None
PECO Energy Company	$277	None	None	None

**During Q3 2016, BGE redeemed all of its outstanding preferred shares. As there were no preferred shares outstanding at Exelon Corporation during 2017, no preferred stock dividends were declared or paid in 2017.

Q. SDR-ROR-21 If a claim of the filing utility is based on utilization of the capital structure or capital costs of the parent company and system – consolidated, the reasons for this claim must be fully stated and supported.

A. SDR-ROR-21 The Company has not proposed the use of the capital structure or capital costs of the parent company or system – consolidated -- in this filing.

Q. SDR-ROR-22 To the extent not provided in SDR-ROR-13, supply projected capital requirements and sources of the filing utility, its parent and system--consolidated--for the test year and each of three (3) comparable future years.

A. SDR-ROR-22 Refer to Attachment III-F-2(a) for the Company’s projected capital requirements and sources. Forward-looking data for Parent and System consolidated are not applicable.

Q. SDR-ROR-23 To the extent not provided elsewhere, supply financial data of Company and/or parent for the last (5) years.

a. Times interest earned ratio – pre and post tax basis.
b. Preferred stock dividend coverage ratio – post tax basis.
c. Times fixed charges earned ratio – pre tax basis.
d. Dividend payout ratio.
e. AFUDC as a percent of earnings available for common equity.
f. Construction work in progress as a percent of net utility plant.
g. Effective income tax rate.
h. Internal cash generations as a percent of total capital requirements.

A. SDR-ROR-23

a. Times interest earned ratio – pre and post tax basis:

Pre-tax basis

PECO Energy Consolidated (SEC)	
2013	9.67
2014	8.98
2015	9.46
2016	9.41
2017	8.73

Post-tax basis

PECO Energy Consolidated (SEC)	
2013	8.29
2014	8.72
2015	8.94
2016	8.77
2017	7.99

b. Preferred stock dividend coverage ratio – post-tax basis:

PECO Energy Consolidated (SEC) [in millions]	
2013	395*
2014	N/A - No preferred stock
2015	N/A - No preferred stock
2016	N/A - No preferred stock
2017	N/A - No preferred stock

* Preferred stock redeemed in 2013

c. Times fixed charges earned ratio – pre-tax basis

PECO Energy Consolidated (SEC)	
2013	5.6
2014	5.0
2015	5.4
2016	5.6
2017	5.1

d. Dividend payout ratio:

PECO Energy Consolidated (SEC)	
2013	85%
2014	91%
2015	74%
2016	63%
2017	66%

e. AFUDC as a percent of earnings available for common equity:

PECO Energy Consolidated (SEC)	
2013	1.55%
2014	2.27%
2015	1.85%
2016	2.51%
2017	2.77%

f. Construction work in progress as a percent of net utility plant:

PECO Energy Consolidated (FERC - Electric Only)	
2013	1.70%
2014	2.66%
2015	2.52%
2016	2.85%
2017	3.20%

g. Effective income tax rate:

PECO Energy Consolidated (SEC)	
2013	29.1%
2014	24.5%
2015	27.4%
2016	25.4%
2017	19.3%

h. Internal cash generations as a percent of total capital requirements:

PECO Energy Consolidated (SEC)	
2013	77.8%
2014	67.8%
2015	86.4%
2016	83.7%
2017	69.0%

Q. SDR-RR-1 Please provide a detailed breakdown of other operating revenues (non-KWh sales) by source for the preceding three calendar years and each month of the current year to date (showing a year to date total). Update this information as additional months' data become available.

A. SDR-RR-1

Other Operating Revenues - Electric
12 months ended Dec 31

		2015	**2016**	**2017**
450	Forfeited Discounts	12,784,445	11,991,591	11,698,752
451	Misc Service Revenues	4,496,511	4,824,201	5,040,073
453	Sales of water and water power	-	-	-
454	Rents from Electric Property	28,278,387	26,724,608	25,586,905
455	Intd Rents	-	-	-
456	Other electric revenues	(17,869,270)	(16,431,292)	(11,377,709)
456.1	Revenues from Transmission of Electricity of Others	179,608,908	175,895,682	183,177,041
	Total Other Operating Revenues	**207,298,981**	**203,004,790**	**214,125,062**

		January 2018
450	Forfeited Discounts	843,743
451	Misc Service Revenues	201,187
453	Sales of water and water power	-
454	Rents from Electric Property	2,169,574
455	Intd Rents	-
456	Other electric revenues	530,437
456.1	Revenues from Transmission of Electricity of Others	16,500,129
	Total Other Operating Revenues	**20,245,070**

Forfeited Discounts (Account 450) are late payment charges on customer billings. Miscellaneous Service revenues (Account 451) primarily consist of connection charges, fees for theft of services and returned check charges.

Pursuant to the Commission's Final Order in PECO's restructuring proceeding, PECO is authorized to recover in distribution rates each year an amount to be added to the decommissioning trusts for nuclear power plants PECO formerly owned in order to fully fund the cost of decommissioning by the time those plants are retired. Pursuant to the Commission's authorization for PECO to transfer its ownership interest in its formerly-owned nuclear power plants to Exelon Generation Company, LLC (Generation), the amounts it recovers annually in distribution rates are transferred to Generation for deposit in the applicable decommissioning trusts. PECO records the amounts it recovers to fund the decommissioning trusts in electric operating revenue Accounts 440, 442, 444, and 446. PECO records the remittances of those funds to Generation by charging Account 456 – Other electric revenues. The remittances are offset, only in part, by other electric revenues collected for make-ready work and for miscellaneous PJM revenues that PECO receives for being a transmission owner, which is why Account 456 shows a debit (negative) balance for each of the full calendar years of 2015, 2016 and 2017.

Q. SDR-RR-2 Please provide all workpapers and supporting documentation showing the development of the future test year revenues. Explain how the number of customers and usage per customer were derived.

A. SDR-RR-2 Refer to Exhibit BSY-1, with respect to the fully projected future test year, Exhibit BSY-2, with respect to the future test year, and PECO Statement No. 3, the direct testimony of Benjamin S. Yin. See also PECO Statement No. 2, the direct testimony of Phillip S. Barnett.

Q. SDR-RR-3 If not provided in response to the previous question, please identify the growth in the number of customers by rate schedule for the preceding three calendar years.

A. SDR-RR-3 Refer to the schedule below.

PECO Energy Company
Customer Numbers as of December 31

Year	Month	R	CAP	RH	GS	POL	PD	HT	SL	EP	Total*
2015	12	1,135,435	144,960	163,943	149,201	2,722	475	2,616	9,800	5	1,606,435

Q. SDR-TAX-1 Please provide the most recent actual property tax assessments and rates for each taxing jurisdiction whose annual assessment is $20,000 or more.

A. SDR-TAX-1 See Confidential Attachment SDR-TAX-1(a) for the most recent assessments and rates for each taxing jurisdiction.

See Confidential Attachment SDR-TAX-1(b) for the latest Pennsylvania Utility Realty Tax Act (PURTA) tax return.

THE ATTACHMENTS ARE CONFIDENTIAL AND ARE SUBMITTED ONLY IN THE NON-PUBLIC VERSION OF THIS RESPONSE FILED WITH THE COMMISSION.

Q. SDR-TAX-2 Please indicate whether FTY taxes include any assessments or refunds related to prior period taxes. Indicate the amount, the dates covered by the assessment or refund and the period in which the related income or expense was included, and the date the assessment or refund was reflected on the Company’s books.

Explain whether reserves had been established prior to being billed for any assessment or any account receivable had been recorded prior to the Company’s receiving a refund.

A. SDR-TAX-2 The fully projected future test year and future test year tax claims do not include any assessments or refunds related to prior period taxes. Reserves and accounts receivable have been established and recorded on PECO Energy Company’s financial statements according to Generally Accepted Accounting Principles (GAAP). The reserves and accounts receivables are not reflected in fully projected future test year or future test year taxes.

Q. SDR-TAX-3 Has the Company applied for or is it attempting to negotiate refunds from federal, local, or state taxing authorities? If so, please provide a full explanation and quantify the possible refund or abatement in question. Provide similar information if additional assessments are anticipated.

A. SDR-TAX-3 Exelon’s 2010 federal income tax return included requests for changing PECO’s method of accounting for repairs and maintenance costs as well as for retirements. The Section 481(a) adjustments for repairs and for retirements, the 2010 deduction for repairs, and the 2010 adjustment to depreciation were based on the best information available to PECO for the preparation of its federal income tax return. Subsequent to Exelon filing its federal consolidated tax return for the 2010 tax year, PECO refined its computations for these Section 481(a) adjustments and the 2010 deductions for repairs, retirements, and the related depreciation. As a result, an affirmative adjustment was submitted to accurately reflect these deductions for Exelon’s 2010 federal consolidated tax return. The amount of the Federal income tax refund related to this adjustment is approximately $13.9 million. Exelon’s Federal audit cycle for tax year 2010 was in 2017. The related audit adjustment for state purposes has been submitted to the state, and settlement is expected in 2018. The state income tax refund would be approximately $3.4 million after accounting for the Federal tax benefit.

Q. SDR-TAX-4 Please provide workpapers and supporting documentation showing the derivation of the future test year level of each tax other than income taxes reflected in the Company's filing.

A. SDR-TAX-4 Refer to Exhibit BSY-1, Schedule D-16, pages 1-3, for 2019,and Exhibit BSY-2, Schedule D-16, pages 1-3, for 2018.

Q. SDR-TAX-5 Please provide a breakdown by source or timing difference of the deferred income tax balances which have not been included in rate base.

A. SDR-TAX-5 Refer to Attachment SDR-TAX-5(a) for the breakdown.

Q. SDR-TAX-6 Please provide all workpapers and supporting documentation for the consolidated tax savings adjustment reflected in the Company’s filing.

A. SDR-TAX-6 Refer to PECO Exhibits BSY-1 and BSY-2, Schedule D-18 and PECO Statement No. 3, the direct testimony of Benjamin S. Yin.

Q. SDR-TAX-7 To the extent not provided for in DFR 11.D-23 please provide a copy of the corporate federal tax returns and supporting schedules for the preceding three years and, if applicable, a copy of the calculation workpapers for the Company's consolidated tax savings adjustment.

A. SDR-TAX-7 Refer to Confidential Attachments SDR-TAX-7(a), SDR-TAX-7(b), and SDR-TAX- 7(c) for the Exelon Corporation corporate Federal income tax returns for the preceding three years, 2014, 2015, and 2016, respectively.

Refer to PECO Exhibit SY-1, Schedule D-18, for the workpapers supporting the calculation of what the consolidated tax savings adjustment would have been in the absence of Section 1301.1(a) of the Public Utility Code.

THE ATTACHMENTS ARE CONFIDENTIAL AND ARE SUBMITTED ONLY IN THE NON-PUBLIC VERSION OF THIS RESPONSE FILED WITH THE COMMISSION.

Q. SDR-TAX-8 Supply a schedule detailing the actual tax liability for a five-year period ending with the historic test year for each of the following taxes. Include the dates and amount of all payments made to satisfy the respective tax liabilities.

a. PA Capital Stock Tax
b. PA Corporate Net Income Tax
c. PA Gross Receipts Tax
d. PA Public Utility Realty Tax

A. SDR-TAX-8 Refer to Attachment SDR-TAX-8(a).

NOTE 1: Pennsylvania Capital Stock has been phased out after 12/31/15.

Q. SDR-TAX-9 Provide complete copies of the most recently filed PA Corporate Net Income and PA Capital Stock Tax Reports. Include a copy of the official settlement and a copy of the Federal Form 1120 as submitted to the Department of Revenue.

A. SDR-TAX-9 Refer to Confidential Attachment SDR-TAX-9(a) for a copy of the PA 2016 RCT-101, including the Federal Form 1120. The PA Capital Stock Tax has been eliminated effective January 1, 2016. We have not received an official settlement from PA for 2016.

THE ATTACHMENT IS CONFIDENTIAL AND IS SUBMITTED ONLY IN THE NON-PUBLIC VERSION OF THIS RESPONSE FILED WITH THE COMMISSION.

Q. SDR-TAX-10 Provide copies of the most recently filed PA Gross Receipts Tax and PA Public Utility Realty Tax Reports with copies of the official settlements.

A. SDR-TAX-10 Refer to Confidential Attachments SDR-TAX-10(a) and Attachment SDR-TAX-10(b) for copies of the most recent PA Gross Receipt Tax filing and PA Public Utility Realty Tax Reports.

THE ATTACHMENTS ARE CONFIDENTIAL AND ARE SUBMITTED ONLY IN THE NON-PUBLIC VERSION OF THIS RESPONSE FILED WITH THE COMMISSION.
