ANALYST CERTIFICATION

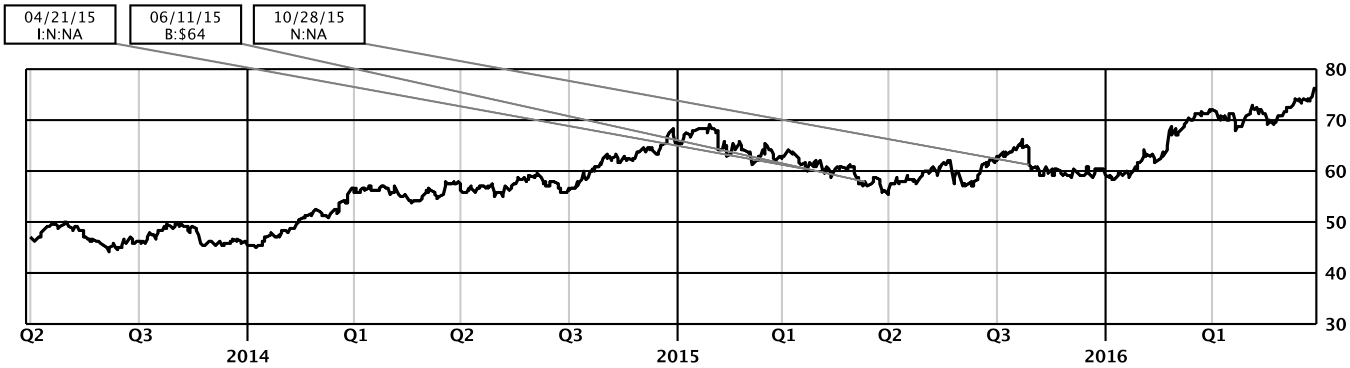
By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

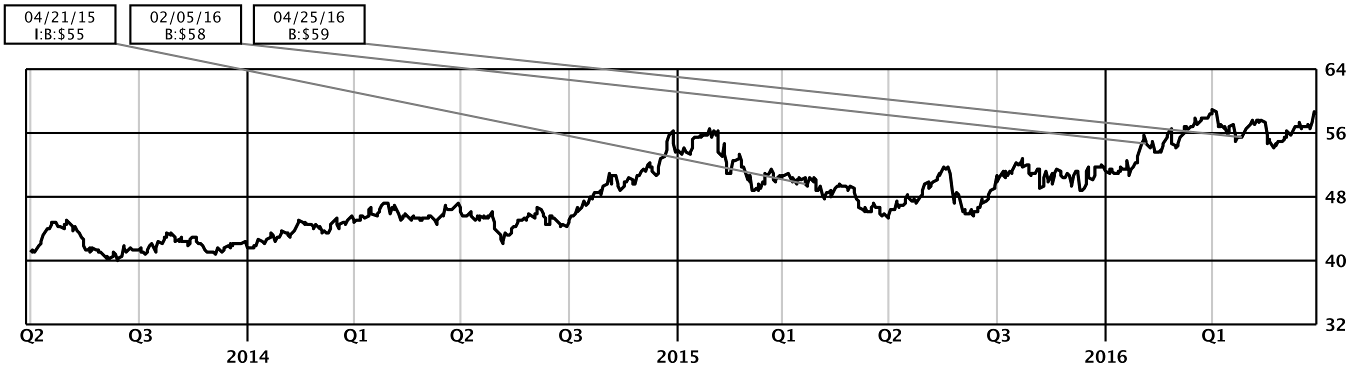
Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Edison International, Eversource Energy, Exelon Corporation, PG&E Corporation and Southern Company in the next 3 months.

Rating and Price Target History for: Edison International (EIX) as of 06-28-2016

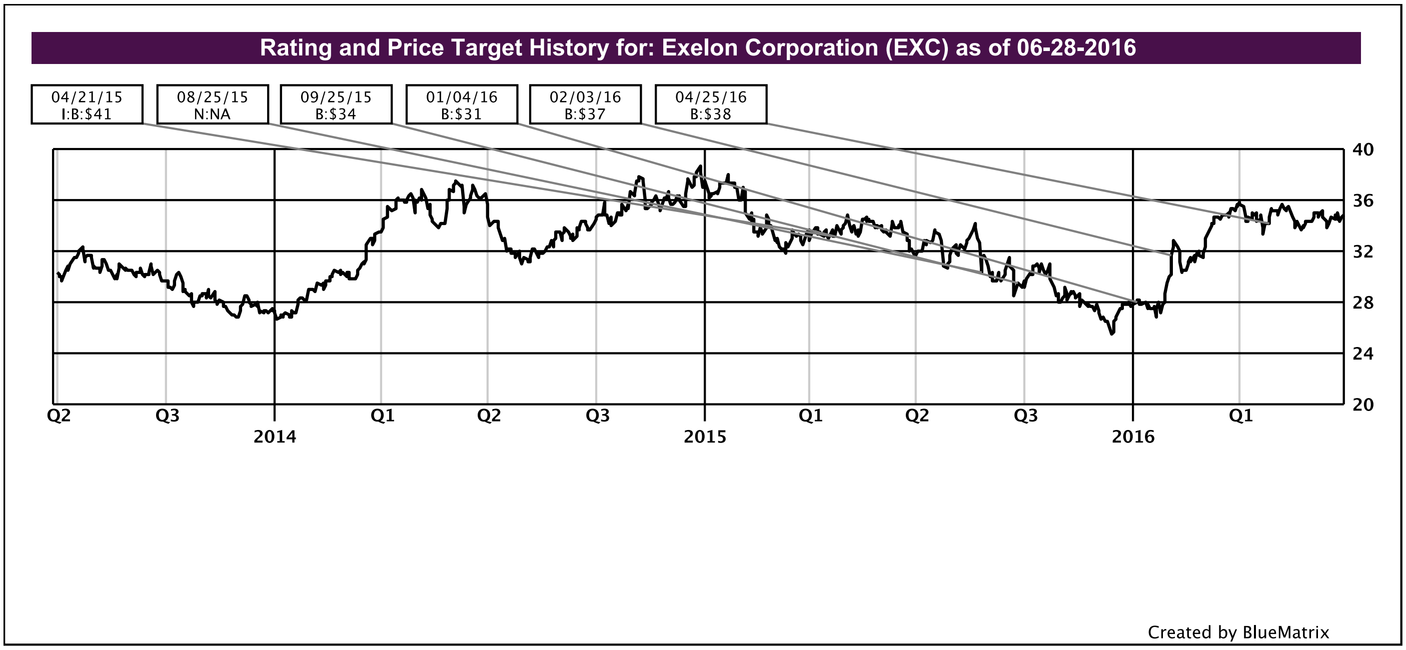


Created by BlueMatrix

Rating and Price Target History for: Eversource Energy (ES) as of 06-28-2016

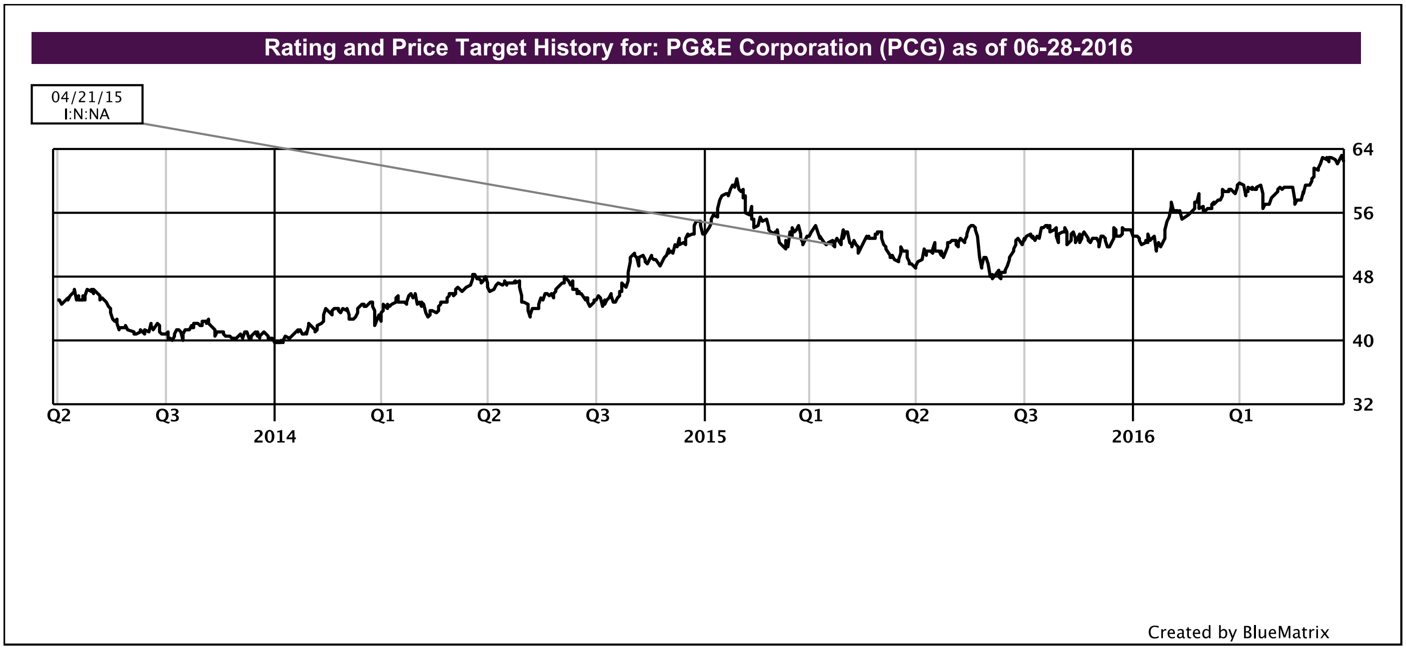


Created by BlueMatrix



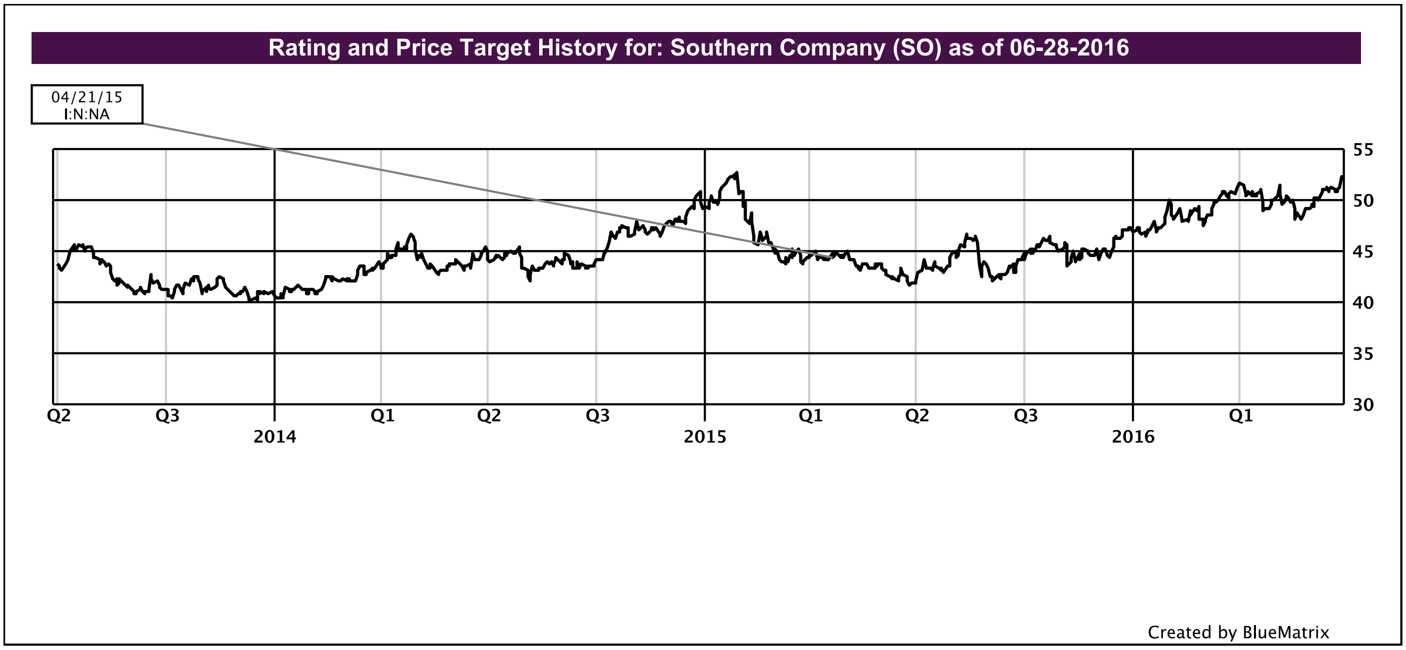
Rating and Price Target History for: Exelon Corporation (EXC) as of 06-28-2016

Created by BlueMatrix



Rating and Price Target History for: PG&E Corporation (PCG) as of 06-28-2016

Created by BlueMatrix



Rating and Price Target History for: Southern Company (SO) as of 06-28-2016

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

What's New?

For Guggenheim's Utility Corporate Access Calendar scroll to bottom.

ED/NEE – MVP delayed
NEE – Energy Future Holdings to update disclosure for Oncor
SO – New Jersey regulators provide final approval for merger with AGL
ES – Legislators to debate modified clean energy bill
EXC – DC Council increases renewables target to 50% by 2032
DUK – Indiana regulator approves $1.4 billion transmission plan
DUK – Taking more time to evaluate route for proposed pipeline
NEE – Governor appoints a new PUC commissioner; PUC chairman notes ruling is next week
DUK – NC Senate passes legislation that reopens coal ash evaluation

ED/NEE – MVP delayed

- FERC announced a final Environmental Impact Statement (EIS) for the Mountain Valley Pipeline wouldn't be available until March 2017.
- Commissioners would then have 90 days to approve the project.
- Mountain Valley Pipeline's initial schedule anticipated construction beginning by year end 2016.

Guggenheim takeaway: *Disappointing delay for the $3.5bn JV, but not a major impact for ED (12.5% stake) or NEE (35% stake).* MVP contributes $0.08 of EPS to our 2018 NEE estimates, and $0.06 to our 2018 ED estimates; this delay would put construction back to June 2017. A six month delay would defer ~$0.01 of EPS for ED, ~$0.02 for NEE – not major.

NEE – Energy Future Holdings to update disclosure for Oncor

- *Bloomberg* reports that Energy Future Holdings has until July 8th to file an amended plan and disclosure statement for Energy Future Intermediate Holding ("E-Side"); E-Side indirectly owns Oncor.
- On July 21st, there will be an approval hearing and the firm will seek court confirmation starting on September 26th.

Guggenheim takeaway: *This should provide guidance regarding the bankruptcy proceeding, which we have highlighted as a catalyst for coal retirement in ERCOT as well as a potential new opportunity for NEE. While NEE has not come out and made a public comment that it is re-interested in the Oncor assets, it has been reported by several sources, including Bloomberg, but not officially by NEE. We think these assets are a great strategic fit for NEE; despite a potential equity raise, the transaction should be noticeably accretive – this should not present an overhang on NEE shares.*

SO – New Jersey regulators provide approval for merger with AGL

- The New Jersey Board of Public Utilities (BPU) unanimously approved the merger of SO and AGL Resources (AGL, NC, $65.99); this ruling clears final regulatory hurdle.

- SO anticipates closure of the transaction on or around July 1st.

***Guggenheim takeaway:** We estimate 3-4% accretion to SO without assuming any synergies, see recent note, and deep-dive HERE). The acquisition gives them a stake in three major midstream developments: (1) 5% stake in the $5bn Atlantic Coast Pipeline, (2) Penneast, and (3) Prarie State… as well as better positioning to capture future midstream opportunities.*

ES – Legislators to debate modified clean energy bill

- MA senators plan to debate amendments to S.2372 today, a bill requiring electric utilities sign LT PPAs for hydroelectric and/or wind.

- The offshore wind targets shift from 1,200 MW to 2,000 MW by 2030 and exclusionary language towards Cape Wind's planned 468 MW Nantucket Sound was removed.

***Guggenheim takeaway:** Could support ES's Northern Pass project to bring hydro from Canada.*

EXC – DC Council increases renewables target to 50% by 2032

- The District of Columbia Council ratified B21-0650 increasing the territory's RPS 50% by 2032 with a 5% solar mandate vs. the prior RPS 20% renewable by 2020 and a 2.5% solar mandate by 2023.

- Institutes a compliance fee for violating the solar mandate: 50 cents/kWh of shortfall from 2016 through 2023, 40 cents/kWh in 2024 through 2028, 30 cents/kWh in 2029 through 2032, and 5 cents/kWh in 2033 and beyond.

***Guggenheim takeaway:** Worthwhile for EXC to support the policy initiative despite merchant generation in the vicinity, considering its shift to a more regulated business mix with the acquisition of Pepco and better cementing of relationships with regulators.*

DUK – Indiana regulator approves $1.4 billion transmission plan

- The Indiana Utility Regulatory Commission (IURC) approved the settlement agreement for DUK's seven-year, $1.4 billion grid modernization plan (allowed return on equity of 10.5%).

***Guggenheim takeaway:** Positive news for DUK. The 7-year plan allows 80% recovery of its investment through a tracker (remaining 20% deferred for review until DUK's next base rate case). Helps support growth trajectory.*

DUK – Taking more time to evaluate route for proposed pipeline

- DUK extends the review of two alternative routes to the proposed Central Corridor Gas Pipeline; application to the Ohio Power Siting Board originally delayed past July.

- Taking this step to "enable the company to meet with community leaders, elected officials and neighbors and review customer feedback on the project."

***Guggenheim takeaway:** Not a major driver for DUK, but considering opposition typically encountered with projects of this nature, we believe DUK is taking a prudent approach.*

NEE – Governor appoints a new PUC commissioner; PUC chairman notes ruling is next week

- The Chairman of the Hawaii Public Utilities Commission is leading the commission with a target deadline for the first week of July
- Hawaii Gov. David Ige appointed Tom Gorak, chief counsel for the state Public Utilities Commission, to serve as a PUC commissioner beginning Friday; term of Commissioner Michael Champley expires today.

Guggenheim takeaway: *We still don't think regulators will approve the merger; potentially freeing NEE resources to focus on an Oncor opportunity (mentioned above). It's time for NEE to walk and look elsewhere, in our view. We believe the market will perceive the potential news of NEE walking away as a constructive event.*

DUK – NC Senate passes legislation that reopens coal ash evaluation

- Senate passed H.B. 630, a compromise to legislation vetoed by Gov. McCrory in June.
- The modified bill extends the review period of proposed risk classifications for coal ash.
- In addition it promotes the reuse of coal ash for construction products via recycling.
- Duke Energy must submit its plans no later than Dec. 15 with the Department of Environmental Quality submitting a final decision no later than Jan. 15, 2017.

Guggenheim takeaway: *A welcome development for DUK, and constructive for all stakeholders, in our view – let's see if/how the governor responds.*

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

TACTICAL TRADING IDEA DISCLAIMER

Guggenheim Securities, LLC produces "Tactical Trade Ideas" that identify short-term, catalyst-driven trading opportunities impacting companies within the Firm's coverage universe. Tactical Trade Ideas may exist on companies in this report and may be contrary to the analyst's published rating.

2016 Analyst Day: Growth Outlook Intact at Utilities; Support for NY Nuclear Plants a Positive

Event

Exelon reaffirmed its regulated utility EPS growth expectations of 7%-9% from 2016-20 and rate base growth of 6.1%, reflecting a ~$25 billion capex program, although slightly reduced from prior expectations. Using the midpoint of its regulated utility EPS guidance ranges for 2016-20, the growth is more front end loaded through 2018. EXC's merchant generation business, ExGen, is expected to generate ~$8.2 billion in free cash flow that should result in ~$3 billion of reduced debt during that time period. Management is also committed to 2.5% dividend growth through 2018, with the possibility of increasing it beyond.

Impact & Analysis

EXC reiterated 2016 EPS guidance of $2.40-2.70. Meeting EXC's regulated earnings goals beyond 2016 depends on supportive and balanced rate relief for its PHI acquisition. Closing the gap between allowed and earned ROE will involve several iterations of rate requests, in our opinion. A new commissioner could be appointed to the DC commission that could possibly complicate things going forward. At ExGen, the approval by the NY PSC of the ZEC should add $0.08-$0.10 to EPS annually and $350 million in additional after tax cash that will improve profitability of its nuclear plants. The assumed acquisition of the FitzPatrick nuclear plant should add an additional $0.05 to EPS, while shutting two nuclear plants in Illinois could add $0.07 in 2019.

Valuation & Recommendation

We are increasing our 2017 and 2018 EPS estimates to $2.67 and $2.80 from $2.64 and $2.77, respectively, as we update our model for current forwards and hedging details, as well updated guidance given by management at the conference. Our SOTP target price remains at $38, reflective of an 18x P/E multiple on EXC's regulated 2017E EPS and 8x EV/EBITDA multiple on ExGen's 2017E EBITDA.

Please refer to pages 5 to 7 for Important Disclosures, including the Analyst's Certification. ~12:00 ET

Key Takeaways from the Conference

- Regulated EPS growth is forecast at 7%-9% over the 2016-20 period, although we note that growth is greater in the 2016-18 period and a bit lower in the outer years of the forecast.
  - Much of the growth is predicated on the assumption that EXC will be successful in closing the gap between earned and allowed ROEs, particularly at its recently acquired utilities from the Pepco Holdings transaction.
  - We note that there will likely be a new commissioner appointed to the Washington DC commission by Mayor Muriel Bowser. This could possibly complicate matters, since Mayor Bowser was opposed to the acquisition of Pepco.
- ExGen is expected to generate $8.2 billion in free cash flow over the 2016-20 period, with $2.3 billion used for growth capex; $2.7-$3.2 billion for utility investment; and $2.7-$3.2 billion for debt reduction at the subsidiary.
- Recent disclosures by EXC suggest a $100 million decline in ExGen's 2017 gross margin to $7,600 million from $7,700 million last quarter and a $200 million decrease in 2018 gross margin to $7,500 million from $7,700 million. These declines are largely reflective of a decrease in the value of mark-to-market hedges in both 2017 and 2018.
- Recently adopted Clean Energy Standard by the New York Public Service Commission, which includes the Zero Emission Credits (ZEC) should add $0.08-$0.10 per share to earnings annually from ExGen's existing New York nuclear plants and an additional $0.05 for the FitzPatrick nuclear plant that EXC has agreed to purchase from Entergy, which we assume will occur.
- The potential closure of the Clinton and Quad Cities nuclear plants in Illinois in June 2017 and June 2018, respectively, (assuming no enabling legislation occurs prior to those dates) could add $0.07 to EPS and $75 million in pre-tax cash flow in 2019.
- EXC's acquisition of the retail business from Consolidated Edison could add modestly to earnings going forward.
- EXC is targeting an 18%-20% FFO/debt ratio going forward and a 3.0x Debt/EBITDA for ExGen.
- EXC is committed to its 2.5% annual dividend increase through 2018, with the possibility of accelerating growth beyond 2018.

Earnings Estimates

We are adjusting our EPS estimates to incorporate the following:

- $100 million and $200 million decline in ExGen's gross margins for 2017 and 2018, respectively, reflecting a decrease in mark-to-market hedges in both years;
- The benefits derived from New York's ZEC program, which begins in April 2017 and is fully in place in 2018; and
- Modest benefit from the acquisition of the ConEd retail business.

Exhibit 1: EPS Breakdown by Business Segment

IMPORTANT DISCLOSURES

Analyst's Certification

I, Michael S. Worms, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA (exception: Brodie Woods). These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 and 2242 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosure

Disclosure 10: A research analyst, associate, or any person (or their household members) directly involved in the preparation of this research report has a financial interest in securities of this issuer.

Methodology and Risks to Price Target/Valuation

Methodology: Our valuation is based on a combination of our 2017 adjusted EBITDA estimate with an 8x EV/EBITDA multiple and 18x 2017E P/E multiple.
Risks: A material decline in power prices and / or a change in the regulatory environment could affect our price target.

BMO Capital Markets" is a trade name used by the BMO Investment Banking Group, which includes the wholesale arm of Bank of Montreal and its subsidiaries BMO Nesbitt Burns Inc., BMO Capital Markets Limited in the U.K. and BMO Capital Markets Corp. in the U.S. BMO Nesbitt Burns Inc., BMO Capital Markets Limited and BMO Capital Markets Corp are affiliates. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters
To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Alexander Pearce, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

Unauthorized reproduction, distribution, transmission or publication without the prior written consent of BMO Capital Markets is strictly prohibited.

Exelon Corp (EXC)

Alert: IPPs make credible challenge against ZECs. We remain skeptical that ZECs get implemented.

- **IPPs filed lawsuit in the US District Court for the Southern District of New York against ZECs on 10/19.** Some of the key points made are that ZECs intrude with FERC authority, will impact wholesale energy and capacity markets, will reverse retirement decisions and will result in captive retail customers bailing out specific power plants.

- **We agree – ZECs will definitely impact energy and capacity markets.** Keeping around nuclear generation that would otherwise have retired by giving them an out of market payment will clearly negatively impact power markets. We think both energy and capacity prices will be negatively impacted resulting in lower margins and cash flows of all the other market participants.

- **If States start choosing winners and losers, we don't have a functioning power market.** If every state starts choosing certain power plants, fuel types or owners to receive some form of out-of-market payment then power markets become irrelevant and it is time for re-regulation. We think re-regulation is too complicated a path to go down. So the only choice for regulators is to hold on to the integrity of power markets and the only way to do that is to not allow any such individual state-sponsored bailout programs, in our view. That is why we think the ZECs will not be implemented and aren't a part of our base case valuation or TP.

- **Whether nuclear is needed to meet environmental goals is not the right question.** The right question is who has authority to regulate wholesale power markets and that authority clearly rests with the FERC, in our view.

- **Is a federal nuclear bailout coming?** We don't see a federal carbon program on the horizon. While we expect Hilary Clinton to push renewables supported by natural gas generation, her agenda doesn't indicate explicit support for nuclear. The increasing penetration of renewables, in fact, will likely only make the market for nuclear more challenging given nuclear's high ($30-$35/MWh) cash cost of generation vs. renewables near zero marginal cost of generation.

- **Reiterate our Sell rating for EXC.** We continue to believe EXC's nuclear generation will face further weakening power prices and won't benefit from bailouts. Our rating on EXC is primarily drive by views on ExGen which is 25% of our PT. We value ExGen using a 5.5x terminal 2019 EBITDA multiple in our DCF. This multiple reflects a 15yr economic asset life of its remaining nuclear fleet. We struggle to see many scenarios where EXC's nuclear assets operate at current economics beyond 2034 (i.e. 15yrs after 2019).

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $27 target. We value ExGen at $6/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $21/share based on a 16x terminal PE multiple. We also add $6/share value provided by PEPCO. We back out $6/share for the parent to get to our price target

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Maxwell S Burke; Tulkin Niyazov, CFA; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day’s market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that were at the time investment banking clients shown in brackets) is as follows: Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%); Q1 2016 Buy 31% (67%), Hold 45% (63%), Sell 24% (61%); Q4 2015 Buy 31% (67%), Hold 45% (63%), Sell 24% (63%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Exelon Corp (EXC)

Alert: This Round Goes to EXC. IL Governor Support on SB 2814 gives EXC the Edge.

Sell	3
Price (30 Nov 16)	US$32.51
Target price	US$29.00
Expected share price return	-10.8%
Expected dividend yield	3.9%
Expected total return	-6.9%
Market Cap	US$30,016M

- **EXC reached agreement with Governor Rauner on SB 2814 – Significant Positive Development.** While the bill does need to go to the House and Senate for a vote on 12/1, the Governor's support is meaningful and, we think, significantly increases the chances of the bill being passed.
- **If the bill is passed, what next?** The Governor then has 60 days to sign the bill and given his support, we think he will likely sign the bill. We do, however, expect legal challenges after it is signed.
- **What are the implications for EXC? Is this a broader mandate to support nuclear generation across the U.S.?** Couple of factors gives us pause. IL is Exelon's home turf and even then it has taken a significant amount of effort to get the bill to this stage. We also heard a number of valid arguments against the bill in the Energy Committee session and believe this type of one-off effort will face opposition in every state. Finally, we expect IPPs like NRG, DYN and CPN to increase their efforts against such bills as it poses a threat to their business.
- **What is the economic impact for EXC?** From a value perspective, the IL bill could add about $1/share to our PT, all else equal. We calculate this value by first estimating the annual impact using the methodology noted in the bill. We then estimate the value by taking the NPV of ~130m/year of post-tax cash flows (~$200m/year pre-tax) over 10 years. Apart from the value impact, the cash flows would help EXC delever ExGen and the parent which is a meaningful benefit.
- **Competitive markets…well they aren't staying competitive anymore…**With individual states choosing winners and losers based on preferred technologies and justifying payments based on 'social cost of carbon' math, competitive markets are starting to break down. While a federal carbon trading program not on the horizon, IPPs unfortunately will continue to face efforts like this in different states.
- **What does this mean for IPPs?** Impact is clearly negative but estimating the full economic impact has a few dimensions:
  - Lower volatility: The business case for gas assets (and some coal assets) in a world with increasing renewables is to benefit from volatility events. If reserve margins are kept artificially high, probability of volatility events clearly reduces.
  - May delay renewable build out, but maybe not? If power prices don't increase with exit of nuclear, renewable developers may not find economics compelling. However, ITC/PTC may be incentive enough.
  - Impact on forward curves: This is the more immediate and obvious impact though it is unclear what is currently built into the forward curves. We will be able to evaluate this impact after the final decision on the bill.
  - Effectively, a decision on this bill could impact both forward EBITDA (based on forward curve impact) as well as the EBITDA multiple (based on the impact on future cash flows and economic asset life of coal and gas assets).

Exelon Corp

Valuation

We value EXC using a sum-of-the-parts approach to get to our $29 target. We value ExGen at $4/share and believe ExGen's core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $22/share based on a 17x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent to get to our price target

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon's earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon's generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen's credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of Exelon Corp

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the "Firm"), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2016	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	47%	39%	14%	0%	100%	0%
% of companies in each rating category that are investment banking clients	66%	61%	60%	0%	64%	0%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Maxwell S Burke; Tulkin Niyazov, CFA; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day’s market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that were at the time investment banking clients shown in brackets) is as follows: Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%); Q1 2016 Buy 31% (67%), Hold 45% (63%), Sell 24% (61%); Q4 2015 Buy 31% (67%), Hold 45% (63%), Sell 24% (63%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

EQUITY RESEARCH AMERICAS

Exelon (EXC)
Closing The Gap

BUY
Price target $40.00
Price $35.53^

Key Takeaway

EXC hosted an analyst meeting on Wednesday, highlighting the strong 7-9% EPS growth from its regulated utilities driven by rate increases at PHI which should close the under-earning gap. Mgmt believes that the build-out of the regulated business and $8.2B of FCF from ExGen will help narrow the valuation gap that currently exists on the stock. We continue to recommend EXC and view it as an execution story on management's ability to narrow the under-earning gap.

Exelon announced that it entered into an agreement with Entergy to acquire the Fitzpatrick nuclear plant in New York for $110 million. Once the transaction is approved the company estimates that the recently approved Zero Emission Credit (ZEC) will provide $0.08-$0.10 of annual earnings. The ZEC initiative nuclear plants will be paid at an initial two-year rate of $17.48/MWh before increasing to a rate of $29.15/MWh.

The dividend will be supported by the utilities and by the end of the forecast period expect a utility payout ratio of 77%. The company has affirmed its 2.5% dividend growth rate through 2018 and if that rate continues through 2020 Exelon's regulated utilities will have a payout ratio of 77%.

The company highlighted the strong 7-9% EPS growth through 2020 at the regulated utilities (including $0.15 of Parent losses) which are driven by rate increases at PHI. At PHI the company plans to file 6 distribution rate case filing and 3 transmission formula rate filings seeking $465 million of revenue increases. By 2020 EXC is forecasting earnings at Utility, Parent, and Other of $1.70-$2.00.

ExGen will be a cash machine generating $8.2 billion of free cash flow through 2020. Management highlighted the benefit of its large retail supply business that creates a natural hedge for its generating plants.

Valuation/Risks

Our $40.00 price target is based on P/E analysis. Taking our 2017 EPS estimate of $2.70 in conjunction with a P/E group average multiple of 14.8x results in a price target of $40.00. Based on yesterday's closing price of $34.81, this would result in a 12-month price appreciation potential of 14.9% and total return potential of 18.6% including the current yield of 3.7%. **Risks** –Risks include exposure to change in the commodity price for electricity associated with Exelon's merchant generation business, and regulatory issues associated with the company's regulated subsidiaries.

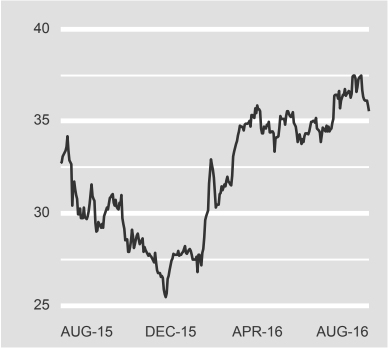
Price Performance



^Prior trading day's closing price unless otherwise noted.

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation.

Exelon operating EPS was $0.65 on a diluted basis, versus $0.59 for the same period a year ago, our estimate of $0.55, and Consensus of $0.56. The year-over-year improvement was driven by increased earnings at the regulated utilities offset by a slight decline at ExGen.

Exelon announced that it entered into an agreement with Entergy (ETR - $79.27; Hold) to acquire the Fitzpatrick nuclear plant in New York for $110 million. Once the transaction is approved the company estimates that the recently approved Zero Emission Credit (ZEC) will provide $0.08-$0.10 of annual earnings. The program spans from April 2017 to March 2029 and is split between six tranches. The ZEC initiative nuclear plants will be paid at an initial two-year rate of $17.48/MWh before increasing to a rate of $29.15/MWh.

Exelon's robust 7-9% EPS growth at the utility also includes $0.15/yr of Parent expenses.

The company highlighted the strong 7-9% EPS growth through 2020 at the regulated utilities (including $0.15 of Parent losses) which are driven by rate increases at PHI. At PHI the company plans to file 6 distribution rate case filing and 3 transmission formula rate filings seeking $465 million of revenue increases. The PHI utilities are currently earning an ROE between 4.75% and 7.4% and management believes that by 2020 all the companies should be earning within 100 bps of their allowed return. By 2020 Exelon is forecasting earnings at Utility, Parent, and Other of $1.70-$2.00.

Exelon is forecasting rate base growth of 6.1% through 2020. Management laid out its rate base growth forecast through 2020 and expects to grow rate base from current levels of $32.0 billion to $40.6 billion. 70% of the growth will come from investment that will be recovered via a tracker mechanism.

The dividend will be supported by the utilities and by the end of the forecast period expect a utility payout ratio of 77%. The company has affirmed its 2.5% dividend growth rate through 2018 and if that rate continues through 2020 Exelon's regulated utilities will have a payout ratio of 77%. This compares to a utility group average of 63%.

Exelon Generation will be a cash machine generating $8.2 billion of free cash flow through 2020. Management highlighted the benefit of its large retail supply business that creates a natural hedge for its generating plants. The company is forecasting $2.3 billion of growth CAPEX at ExGen and the remainder of the free cash flow will go to fund utility investment ($2.7-$3.2B) and ExGen debt reduction ($2.7-$3.2B). Excluded from this forecast is the NY ZEC program that would provide an incremental $750 million of free cash flow.

Exelon affirmed its 2016 earnings guidance of $2.40-$2.70 (Street at $2.54) and 3Q16 guidance of $0.65-$0.75. Sector guidance is $1.20-$1.30 ExGen, $0.50-$0.60 ComEd, $0.40-$0.50 PECO , $0.25-$0.35 from BGE and $0.10-$0.20 for PHI.

2Q16 operating EPS excludes $0.36 of non-recurring items as follows: a $0.20 market to market loss associated with the impact of economic hedging activities, a $0.14 charge due to the retirement and divestiture of the Clinton and Quad Cities nuclear power plants, a $0.03 gain associated with nuclear decommission trust, a $0.01 loss associated with the amortization of commodity contract intangibles, a $0.02 loss from an asset impairment, a $0.01 charge related to a cost management program, and a $0.01 loss due to CENG non-controlling interest. 2Q15 earnings exclude $0.15 of non-recurring gains primarily associated with mark-to-market gains.

Commonwealth Edison (CWE) earnings improved by $0.04 to $0.16 on a year-over-year comparison. Increased capital investment and favorable weather was slightly offset by a decline in ROE. Gross margin increased 8.6% to $948 million reflecting increased electric distribution earnings from the impact of greater capital investment. Retail sales decreased 4.3%, or 0.2% on a weather-adjusted projection, during the quarter due to beneficial weather. Heating degree days were up 10.1% relative to the same period last year and 1.3% below normal. Cooling degree days increased 69.6% versus 2Q15 and were up 33% versus normal. The Company estimates the beneficial impact of weather relative to last year to be $0.02.

Operating income increased 32.1% to $325 million due to greater gross margin reflecting the impact of increased capital investment. Operating and maintenance expense declined 3.0% to $368 million which was more than offset by a 7.3% to $190 million increase in depreciation expense due to greater net plant. Earnings increased 44.6% to $146 million driven primarily by higher operating income, offset by higher interest expense. The effective tax rate for the quarter was 38.4% versus 40.6% last year.

PECO earnings increased by $0.03 to $0.11 due to new electric rates. The principal driver for the year-over-year change was new electric rates which contributed $0.02 to the quarterly improvement. Gross margin grew by 5.4% to $447 million due to new electric rates at PECO. Electric sales versus 2Q15 declined 1.9% or increased 0.3% on a weather adjusted basis. Gas sales grew by 8.9% as compared to 2Q15 but were down 1.5% on a weather-adjusted basis. Heating degree days were up 42.1% versus the same period a year ago but in-line relative to normal. Cooling degree days were down 23.8% versus 2Q15 but up 12.4% relative to normal. Operating Income improved by 23.2% to $154 million due to greater gross margin. Operating and maintenance expense fell 1.6% to $188 million and depreciation expense declined by 2.9% to $67 million. Earnings increased by 42.3% to $101 million due to greater operating income and a tax adjustment related to an anticipated gas repairs tax return accounting method change. The effective tax rate during the quarter was 19.2% versus 27.6% last year.

BGE earnings declined by $0.02 to $0.03 during the quarter. The principal drivers of the year-over-year change were impairment charges resulting from certain disallowances in the June and July rate case orders. Gross margin grew by 7.7% to $419 million based on higher rates.

Operating income decreased 45.5% to $55 million reflecting increased O&M expense. Operating and maintenance expense increased 44.2% to $212 million reflecting the disallowances associated with BGE's smart grid initiative from the utility's rate case. Earnings declined 35.6% to $29 million due to lower operating margin. The effective tax rate during the quarter was 12.1% versus 42.3% last year.

PHI earnings added $0.06 to the quarterly improvement with no contribution in 2015. The company closed on the PHI transaction earlier this year and is guiding to 2016 EPS contribution of $0.10-$0.20.

Earnings at Exelon Generation decreased $0.01 to $0.35 during the quarter mainly due to an extended outage at Salem. Gross margin improved by 8.1% to $2,337 million which was driven by increased RNF due to the approval of the Ginna Reliability Support services Agreement. Partly offsetting the improvement in gross margin were lower energy prices. Nuclear generation decreased 3.1% to 42.453 million MMh with NY nuclear production declining 10.8% and Mid-Atlantic/Mid-West output decreasing 2.2%. Operating income increased 18.0% to $569 million driven by greater gross margin offset by higher O&M expense. O&M expense increased 4.2% to $1,356 million due to the timing and extended duration at the Salem nuclear power plant. Management estimates the Salem outage negatively impacted earnings by $0.05. Deprecation expense grew by 15.3% to $294 million due to increased nuclear decommissioning amortization. Net income rose by 6.1% to $328 million driven by greater operating income partially offset by lower Other income. Other income declined by 70.8% due to lower realized NDT gains. Dilution impacted the quarter by $0.03.

The company's Other business segment declined by $0.04 to a loss of ($0.06).

We are maintaining our 2016 and 2017 EPS estimates of $2.50, and $2.70 respectively.

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

Analyst Certification:

I, Anthony C. Crowdell, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

I, Benjamin Budish, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

As is the case with all Jefferies employees, the analyst(s) responsible for the coverage of the financial instruments discussed in this report receives compensation based in part on the overall performance of the firm, including investment banking income. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Investment Recommendation Record

(Article 3(1)e and Article 7 of MAR)

Recommendation Published	, 18:04 ET. August 11, 2016
Recommendation Distributed	, 00:00 ET. August 12, 2016

Company Specific Disclosures

Within the past twelve months, Jefferies LLC and/or its affiliates received compensation for products and services other than investment banking services from non-investment banking, securities related compensation for client services it provided to Entergy Corporation.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for

inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

Despite Strong YTD Performance Stock Still Has Some Upside; Rolling Out 2019 EPS Forecast

Rating Buy, Trimming Target to $39 from $40

We are rolling out our 2019 EPS forecast of $2.85. Our '16-'19 EPS forecast is now $2.65 / $2.60 / $2.80 / $2.85 vs. our prior forecast of $2.65 / $2.65 / $2.85 for '16-18. Our forecast is based on 12/7/16 forward power curves and incorporates the net benefit of continued operation of Clinton and Quad Cities following the approval of the ZES in Illinois. Our 2019 forecast is based on EPS of ~$1.85/share at the "utility-parent", up $0.15 or +/-8.5% (near the high end of their guidance) and $0.97/share at ExGen down +/-12% (falling from $1.10 for FY'18). We continue to view the assumptions EXC management outlined at their 8/10/16 analyst day regarding earnings growth drivers in its core utilities business and Exelon Generation (ExGen) as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals as wholly credible. The core utilities are forecast to grow rate base at 6% from '16-20, with earnings growth of 7-9% due to the assumption of improved earned ROE's at recently acquired POM. With the ACE rate case recently settled, rate cases pending at most of the PHI companies and the ability to harvest operating synergies we see a turnaround similar to the one EXC engineered at BGE after the CEG acquisition as feasible. So, there is line of sight for EPS at EXC's utilities (ex-parent overheads) growing from $1.38 in FY '16 to $1.85+ in 2020, consistent with our prior expectations, that has been modestly bolstered by the capital expenditures authorized in the recently passed IL Energy Future Jobs Bill. From a cash flow perspective we now see ExGen producing ~$4.9bn of free cash flow through FY'19, ~78% of the $6.3bn they are targeting through 2020 ($5.2bn base case plus $1.1bn at ExGen and repayment of a loan to their nuke JV partner EDF), with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. They are committed to 2.5% dividend growth through 2018 but are confident the financial profile supports at least that level of growth through 2020.That profile has been also been improved by the above mentioned IL legislation, offset by somewhat softer power forward curves. There are also the pending sales of the Mystic plant in ISO-NE and a 49% stake in its renewables JV, which we think could add as much as $1.9bn in cash to amortize debt if executed (by our estimate $1.25-1.5bn from Mystic, $300-400mm from the renewables sale). There would be a near-term reduction to EBITDA with those sales—especially at Mystic— but it appears front-loaded and we believe the sale prices for both portfolios will be well in excess of the implied EV/EBITDA multiple of 5.3X '19 at which ExGen is currently trading.

Trimming our price target to $39 from $40, maintaining BUY rating. Our forecast for utility EPS contribution minus parent overheads (+/-$0.15) is $1.38/share which by 2019 we expect to be ~$1.85 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to in excess of >$1.85/share. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth ~$29/share (15.75X ’19 EPS, a somewhat conservative multiple in our view). That implies ExGen is worth only ~ $6.60/share today, which is around 6.8X ’19 EPS or 5.3X ’19 EV/EBITDA and a levered free cash flow yield to EV of 13% with debt/EBITDA at YE ’19 of ~3.0X. They are taking all the cash flow from that lower multiple part of the business and either returning it to shareholders or investing in the higher multiple utility business. Overall, EXC is trading at +/-12.5X FY ’19 earnings while pure regulated names are at +/-15.5X. The EXC dividend yield is now in line with the regulated peer group at ~3.5%. While the dividend growth commitment of 2.5% annually through at least 2018 is lower than that articulated by purely regulated peers we think that the overall valuation gap, given our view of the value of the businesses and capital allocation plan, still remains too high. We have not factored into our forecast or valuation the positive benefit to EPS at ComEd from a higher earned ROE if interest rates continue to rise or lower pension costs at ExGen from a higher discount rate. We also don’t include the modest EPS benefit in ’19 and beyond vs. current forecast assumptions from a lower FIT rate at ExGen. From an absolute and relative perspective EXC is a winner vs most of the utility peer group in a “post Trump” scenario with higher interest rates and lower tax rates (see our recent note on tax issues here for more details) and investors retain a call option on Trump pro-nuclear energy policy and/or upside to economic growth from Federal economic stimulus.

What’s next? EXC has not provided a specific timetable on when the sale of the Mystic facility in ISO-NE, or the ~50% stake in its renewables JV, might close but we think a sales price for both could be forthcoming in Q1 ’17. The purchase of Fitzpatrick from EXC is expected to close before 4/1/17, after NRC approval in Q1’17. EXC will appeal the IRS’ assessed tax penalty for the 1999 gain on sale of fossil assets from ComEd in Q1’17, which could result in a refund of ~$200mm. A decision in DPL’s electric distribution rate case in MD (in which they are requesting $57.0mm based on a 10.60% ROE) is expected by 2/17/17. A decision in Pepco’s electric distribution rate case in DC (in which they are requesting an $82.1mm increase premised on 10.60% ROE) is expected by 7/25/17. A decision in Delmarva’s pending electric and gas distribution rate cases (in which they are requesting $84mm in aggregate based on a 10.60% ROE) is expected in Q3’17.

On 12/7/16, Governor Rauner signed the Energy Future Jobs Bill into law after it was pushed through both the House and Senate during the veto session earlier this month. Amongst other items, the main provisions of the bill provide up to $235mm in annual revenues that will keep ExGen’s Clinton and Quad Cities nuclear plants online through at least 5/31/27, while a robust energy efficiency implementation program will permit $400mm in annual spend at the ComEd utility. The nuclear plant revenues will be +/-$0.15/share accretive to EPS vs. the run-rate $0.07/share benefit ExGen would have realized were the plants instead retired on 6/1/17 and 6/1/18 as otherwise planned, while the latter adds $0.01/share to annual EPS earnings power, totaling $0.04 of EPS accretion by 2020. In sum, these provisions of the bill are worth $2.50/share to our valuation.

PJM’s preliminary load forecast is a headwind for the next capacity auction in May 2017 but we still expect pricing for the ’20 / ’21 delivery year to be supported by the move to 100% CP. The projected RTO peak load of 153,684 MW released on 12/14/16 is 3,272 MW lower (-2%) than the 156,956 MW of expected demand going into last year’s ’19 / ’20 auction In addition based on what cleared the last auction we have 5,530 MW of new supply in the form of generating capacity and uprates. On the flip side of the coin, offsets may include the loss of ~4,200 MW of DR in the transition to 100% capacity performance and ~16,800 MW of generation capacity that cleared as the base product. Additionally, for disciplined bidders at the margin both (a) the decline in energy market revenues in FY’16 and (b) rising financing costs with higher interest rates, incremental investments by generators, incremental cost allocation associated with potential non-performance penalties for those going from base to CP, and the lack of bonus depreciation should all be supportive of offer prices. EXC’s PJM generation is mostly located in EMAAC and ComEd.

ExGen’s ZES revenues in IL offer meaningful YoY earnings downside protection if ComEd capacity prices decline significantly in the upcoming PJM ’20/’21 BRA. And we do not believe such an outcome is likely. We have looked at possible clearing outcomes for EXC’s aggregate ~10,200 MW of nuclear capacity in the ComEd zone (Braidwood, Byron, Dresden, LaSalle, and Quad Cities) which priced at a premium in the last auction. For context, in the past year’s BRA for ’19/’20 delivery, Braidwood, Dresden, and LaSalle cleared 100% of their available UCAP (6,466 MW), while Byron cleared ~20% of its available 2,347 MW UCAP (459 MW), all at the CP product clearing price of $202.77/MW-d, bringing in $513mm in revenue. Quad Cities did not clear. In the attached *Exhibit 1*, we looked at a bull and bear case for the upcoming auction – in which we conservatively assume Quad Cities now offers in as a price taker under both scenarios but with different price outcomes (ComEd breaking out at last year’s price of $202.77/MW-d vs. collapsing to an assumed RTO price of $100/MW-d, equal to last year). We also assume different clearing outcomes on the part of Byron (clearing partially as per last year vs. not clearing). To be clear, we think the bear case in which prices at ComEd converge to last year's RTO price is highly unlikely because (a) even though the updated RTO peak load dropped by >3,000 MW, the ComEd peak load only dropped by 266 MW YoY, and so should still break out barring a sizable improvement in capacity deliverability to that LDA, and (b) even in such a case, were there convergence it would likely be at an RTO price marginally higher than '19/'20 given it would lead to selection of a more costly unit on the stack all things equal, on top of the move to 100% CP. On the other hand, our bull case assumption that Byron continues to clear 20% may be slightly aggressive given the addition of Quad Cities to the bottom of the stack. But you can see in Exhibit 1 that would only be a reduction of $33mm. So for EXC the risk/reward for the next PJM capacity auction looks pretty favorable if you think about the ZES revenue as a hedge.

Exhibit 1

Clearing Outcomes for EXC Nuclear Assets in ComEd in ’20 / ‘21 PJM BRA

’19 / ’20 BRA Actuals (ComEd @ $202.77/MW-d)

Byron partially cleared, Quad Cities did not clear.

Plant	UCAP Available (MW)	UCAP Cleared	UCAP Sold (MW)	Revenue ($)
Braidwood	2,349	100%	2,349	$ 173,851,956
Byron	2,347	**20%**	459	$ 33,971,072
Dresden	1,790	100%	1,790	$ 132,479,780
LaSalle	2,327	100%	2,327	$ 172,223,713
Quad Cities	1,403	**0%**	0	$ -
			ComEd Capacity Revenue:	**$ 512,526,521**

’20 / ’21 BRA Bear Case (ComEd @ ‘19/’20 RTO Price of $100/MW-d)

ComEd fails to break out, collapses to ’19 / ’20 RTO price. Quad Cities now clears, but Byron does not.

Plant	UCAP Available (MW)	UCAP Cleared	UCAP Sold (MW)	Revenue ($)
Braidwood	2,349	100%	2,349	$ 85,738,500
Byron	2,347	**0%**	0	$ -
Dresden	1,790	100%	1,790	$ 65,335,000
LaSalle	2,327	100%	2,327	$ 84,935,500
Quad Cities	1,403	**100%**	1,403	$ 51,209,500
			ComEd Capacity Revenue:	$ 287,218,500
			w/ ZES Revenues:	**$ 522,218,500**

’20 / ’21 BRA Bull Case (ComEd @ ‘19/’20 ComEd Price of $202.77/MW-d)

ComEd breaks out again at ’19 / ’20 ComEd price. Quad Cities now clears, Byron clears partially again.

Plant	UCAP Available (MW)	UCAP Cleared	UCAP Sold (MW)	Revenue ($)
Braidwood	2,349	100%	2,349	$ 173,851,956
Byron	2,347	**20%**	459	$ 33,971,072
Dresden	1,790	100%	1,790	$ 132,479,780
LaSalle	2,327	100%	2,327	$ 172,223,713
Quad Cities	1,403	**100%**	1,403	$ 103,837,503
			ComEd Capacity Revenue:	$ 616,364,024
			w/ ZES Revenues:	**$ 851,364,024**

Source: Evercore ISI Research

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions would be accretive but a significantly lower PJM capacity auction price would be negative.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Buy, Hold or Sell) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%

Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth

Investment Thesis

Travis Miller, Sector Director, 24 March 2016

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Travis Miller, Sector Director, 14 November 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to

$2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 13 April 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Andrew Bischof, CFA, Eq. Analyst, 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real

Travis Miller, Sector Director, 02 June 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

Travis Miller, Sector Director, 09 August 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Regulated Utilities Continue Driving Growth for Exelon

Travis Miller, Sector Director, 26 October 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Travis Miller, Sector Director, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities

Travis Miller, Sector Director, 09 November 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth

Travis Miller, Sector Director, 14 November 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

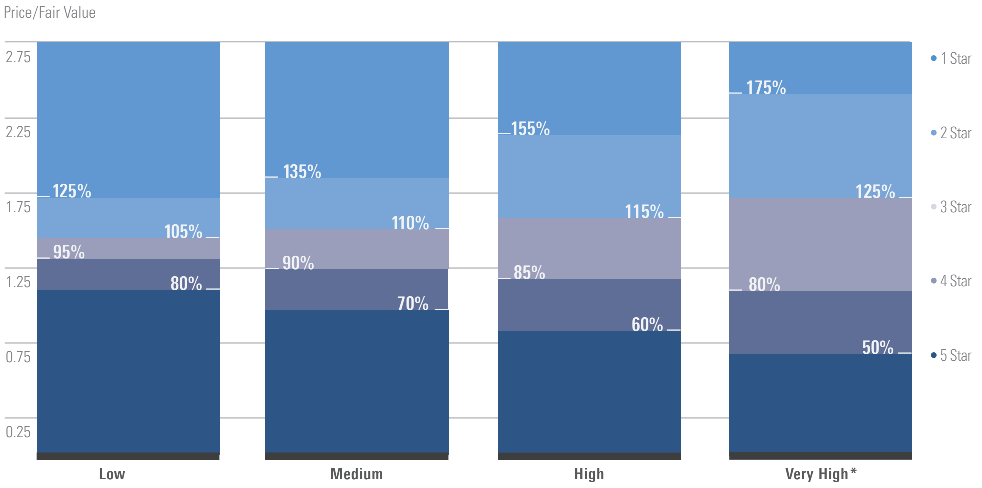
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- **Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- **Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- **None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- **One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- **Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- **Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- **Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- **Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Qualitative Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar. The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Morningstar commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

Morningstar believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources which we believe to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seek independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

General Disclosure (applicable to both Quantitative and Qualitative Research)

Exelon Corporation

EXC: Clear Strategic Vision - ExGen's Value Remains Murky

Outperform

Sector: Diversified Electric Utilities
Market Weight

- **Summary.** EXC's shares have had a muted response to the company's analyst day - since 8/9, shares are down nearly 4% vs. roughly flat for the S&P Utilities. From our perspective, the messaging and outlook were largely consistent with our expectations - though the post-2017 utility/parent EPS outlook was somewhat higher than our assumptions. And while we thought management provided a coherent, focused strategy, the outstanding issue remains the valuation of ExGen given the persistent fog that has engulfed the power markets. In our view, the bull case for EXC - and our positive thesis - is increasingly contingent on regulatory/legislative solutions that provide EXC's nuclear power plants with long-term economic incentives to remain in-service. After adjusting our model for EXC's disclosures our 16-18E EPS go to/from \$2.55/\$2.55, \$2.60/\$2.70 & \$2.73/\$2.80. We continue to think EXC's valuation reflects an overly pessimistic view for ExGen - arguably no unlevered FCF post-2030. We reiterate our Outperform rating and 12-18 month valuation range of \$43-44/share.
- **Utility Growth.** EXC targets a 7-9% EPS CAGR through 2020 for Utility/Parent driven by 6% rate base growth and an assumed improvement in earned ROEs as EXC brings best practices to the chronically underperforming PHI utilities. While management has their work cut out for them in the PHI jurisdictions (frequent rate cases and historically tough regulatory environments), we believe that EXC has the ability to achieve the growth target and point out that 70% of the rate base growth is derived from capex with formulaic or tracking type recovery mechanisms. Our 16-20E EPS for Utility/Parent are \$1.30, \$1.54, \$1.67, \$1.79 & \$1.88 – our 18-20E EPS are each approx. \$0.10 higher than our prior estimates.
- **ExGen - Disciplined Approach.** Management focused on ExGen's cash generation outlook and emphasized a highly disciplined approach to new unregulated opportunities. Based on the 6/30/16 forward power curves – prices are down \$2-4/megawatt hour since then - ExGen is forecasted to generate \$8.2B of FCF from '16-20. The guidance does not include up to (1) \$750M of incremental cash related to New York's proposed Zero Emission Credit (ZEC) program or (2) incremental cash flow from the pending acquisition of the 838 megawatt Fitzpatrick nuclear plant, which also qualifies for the ZEC program. EXC intends to use FCF to pay down ExGen debt (\$3B), help fund utility investment (\$3B) and fund modest ExGen growth capex (\$2B).

Valuation Range: \$43.00 to \$44.00
Our \$43-44/sh valuation range is premised on a sum-of-the-parts analysis (1) Utility & Parent value of \$28/sh (based on a P/E multiple of 18.5-19.0X our 2018E of \$1.58) and (2) \$15/sh for ExGen using a DCF analysis. Risks include commodity price sensitivity and unfavorable regulatory/policy developments.

Investment Thesis:
Our Outperform rating is largely premised on our belief that the share price undervalues ExGen's nuclear fleet. Other positive features include above average utility rate base growth prospects and strong nuclear operational track record.

Exhibits 1: Our Pros & Cons

EXC Outperform Thesis: Pros & Cons	
Features	**Considerations**
Core regulated utility operations	Challenging regulatory environments (MD, DC)
→ Account for 50-60% of annual EPS (incl. parent)	Active rate case cycle in Pepco jurisdictions
→ Strong 5-yr annual EPS growth potential of 7-9%	
Attractive 3.6% dividend yield & 2-3% annual growth	
Largest owner / operator of nuclear in U.S.	Increase in early shutdowns due to poor economics / other
	→ Oyster Creek ('19) & likely Clinton ('17) & Quad Cities ('18)
Implied ExGen EV/EBITDA multiple of ~5X	→ Risk of higher capex / shutdowns for structural problems
→ Valuation arguably reflects pessimistic outlook	
→ Our DCF analysis indicates ~6-7X multiple appropriate	
ExGen has strong financial profile	Capital allocation
→ FFO/Debt of 35-40%	→ Disciplined approach for new ExGen opportunities?
→ Debt-to-EBITDA of 3.5X	
→ FCF of $1.5B annually (excl. growth capex)	
→ Intent to harvest ExGen cash to fund utility capex	

Source: Wells Fargo Securities, LLC estimates and Company Filings

Exhibit 2: Shares Remain Attractive Under Our Valuation Analysis

ExGen EV/EBITDA Analysis		Notes
ExGen: DCF Present Value / Sh	**$11.30**	DCF analysis - key assumptions:
		(1) Unlevered FCF of $6.7B during 2016-20
		(2) Unlevered FCF of $1.8B annually 2021-2040
		(3) Post-2020 NiHub/PJM East power prices of $30 & $36/MWh
		(4) Post-2020, avg capacity price of $200-MW-day
		(5) Discount Rate of ~7% (WACC)

EV/EBITDA of ExGen based on our DCF analysis		
Enterprise Value		
ExGen Debt	$9,919	
Equity	$10,496	$11.30 (PV / sh) X 929M shares outstanding
Total EV	$20,415	
EBITDA - 2016E	$3,178	Includes Other Income
EV/EBITDA (X)	**6.4**	Compares with Regulated Utility 2016 median of ~9X

EV/EBITDA implied by current equity valuation		
Utility / Parent Value		
EPS - 2018E	$1.67	
Median 2018 Regulated P/E (X)	17.5	
Utility / Parent Valuation / Sh	$29.15	Median peer group P/E for 2018 X 18E EPS of $1.67
Implied Utility / Parent Equity Value	$27,078	
Total Market Capitalization	$32,338	
Implied ExGen Equity Value	$5,260	Market cap less implied Utility / Parent Value
ExGen Debt	$9,919	
Total ExGen Implied EV	$15,179	
EBITDA - 2016E	$3,178	
Implied EV/EBITDA (X)	**4.8**	Multiple implied by EXC's current valuation

EXC Present Value Analysis		Notes
Utility / Parent PV	$29.15	
ExGen	$11.30	
Total PV	$40.45	
EXC Share Price	**$34.81**	Holding all other variables constant, the current valuation
% Discount	*14%*	reflects no ExGen unlevered FCF after 2030.

Company Description:

Exelon Corporation was formed in October 2000 through the merger of Unicom, which was the parent company of Commonwealth Edison (ComEd) and PECO Energy (PECO). The company's business segments include independent power production (Exelon Generation) and Energy Delivery (ComEd and PECO). Exelon Generation owns approximately 25,000 MW of unregulated electric generating capacity, primarily located in Illinois and Pennsylvania. The company's 17,000 MW nuclear fleet is the largest in the nation. Generation currently accounts for approximately 70% of EXC's overall earnings. The Energy Delivery businesses serve roughly 3.8 million electric distribution customers in Northern Illinois (ComEd) and approximately 1.6 million electric and 0.5 million natural gas distribution customers in Southeastern Pennsylvania (PECO).

Exelon Corporation

EXC: Mixed Bag For EXC As Power Prices Temper Outlook

- **Summary.** Q3 positives: EXC raised ’16 EPS guidance by 4%, the PHI integration appears to be well underway and EXC continues to drive cost improvements. Q3 negatives: power prices continue to remain depressed pressuring open gross margins and ExGen’s longer-term earnings outlook. Our 16-18E EPS go to/from $2.65/$2.55, $2.62/$2.60 & $2.70/$2.73. The key rationales underlying our positive thesis remain largely unchanged. Namely, we believe Exelon Utilities has the potential to be one of the highest growth utilities in the industry and that the value of ExGen’s nuclear assets is not adequately reflected in the current valuation – noting that realization of this value will likely require either an improvement in power prices and/or additional regulatory or legislative actions that provide economic incentives for nuclear. We reiterate our Outperform rating and notch down our 12-18 month valuation range to $39-40/share from $42-43/share (primarily due to lower peer group multiples).
- **Power Market Dynamics.** On the Q3 call, management once again lamented that forward power curves do not reflect market fundamentals due to (1) market illiquidity beyond ’17 and (2) arguably irrational behavior on the part of some generation owners, which is distorting the market. We buy into the notion that a substantial amount of baseload coal (and nuclear) plants in the PJM Interconnection do not appear to be economically viable based on forward power and capacity prices and are likely to be retired over the next 3-5 years. That said, we think it is highly likely that some of the resistance to retiring these units reflects the owners’ belief that regulatory intervention - similar to the zero-emission credits (ZECs) in NY and the legislative action in IL (which is possible in November) – will provide an economic incentive to keep plants in-service. Thus, until there is more clarity on regulatory/legislative initiatives, we think many units will continue to be strung along. Ultimately, we strongly believe that potential economic incentives will be largely aimed at carbon-free resources - to the benefit of EXC.
- **Robust Regulatory Cycle.** PHI’s multi-year rate cycle got off to a successful start with the Q3 rate settlement and approval for Atlantic City Energy, which resulted in the implementation of a $45mm annual revenue increase roughly 6 months earlier than anticipated. PHI has 5 other base rate cases pending in what will likely be a 2-3 year process to bring PHI’s distribution ROEs closer to the allowed levels while at the same time recognizing new rate base. Our EPS outlook reflects a nearly 9% CAGR for Exelon Utilities during the period 2017-20 (off the 16E EPS base of $1.35), which is towards the top end of EXC’s 7-9% guidance.

Valuation Range: $39.00 to $40.00 from $42.00 to $43.00

Our $39-40/sh valuation range is premised on a sum-of-the-parts analysis (1) Utility & Parent value of $29/sh (based on a P/E multiple of 17.0-17.5X our 2018E of $1.69) and (2) $10-11/sh for ExGen using a DCF analysis. Risks include commodity price sensitivity and unfavorable regulatory/policy developments.

Investment Thesis:

Our Outperform rating is largely premised on our belief that the share price undervalues ExGen's nuclear fleet. Other positive features include above average utility rate base growth prospects and strong nuclear operational track record.

Please see page 4 for rating definitions, important disclosures and required analyst certifications

All estimates/forecasts are as of 10/26/16 unless otherwise stated.

Wells Fargo Securities, LLC does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of the report and investors should consider this report as only a single factor in making their investment decision.

Company Description:

Exelon Corporation was formed in October 2000 through the merger of Unicom, which was the parent company of Commonwealth Edison (ComEd) and PECO Energy (PECO). The company's business segments include independent power production (Exelon Generation) and Energy Delivery (ComEd and PECO). Exelon Generation owns approximately 25,000 MW of unregulated electric generating capacity, primarily located in Illinois and Pennsylvania. The company's 17,000 MW nuclear fleet is the largest in the nation. Generation currently accounts for approximately 70% of EXC's overall earnings. The Energy Delivery businesses serve roughly 3.8 million electric distribution customers in Northern Illinois (ComEd) and approximately 1.6 million electric and 0.5 million natural gas distribution customers in Southeastern Pennsylvania (PECO).

NYSE: EXC

Exelon Corporation

EXC - ALERT: 2Q16 Earnings Results Beat; Guidance Reaffirmed

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

Key Investment Points

August 8, 2016 Close: $36.11

2Q16 Ongoing EPS: $0.65 vs. $0.59 in 2Q15/Consensus of $0.56/KBCM of $0.58

Initial Take: We expect a positive response to the EPS beat and reaffirmed guidance.

2016 KBCM EPS Estimate: $2.55 (Consensus: $2.54)

2017 KBCM EPS Estimate: $2.65 (Consensus: $2.66)

Guidance: EXC reaffirmed full-year EPS guidance in the range of $2.40-$2.70. EXC issued 3Q16 guidance of $0.65-$0.75 per share.

Highlights:

- Relative to our estimate, the retroactive application of support payments for the Ginna nuclear plant drove the beat.
- Generation segment ongoing earnings increased ($328 million vs. $309 million) due to higher revenue under the reliability support services agreement at Ginna for retroactive periods, largely offset by an extended Salem outage, lower nuclear decommissioning trust gains, and increased nuclear decommissioning expense.
- ComEd ongoing results rose ($146 million vs. $101 million), driven by new rates and beneficial warmer weather.
  - Heating degree days increased 10.1% compared to 2Q15 and were 1.3% below normal.
  - Cooling Degree days were up 69.6% YOY and 33% above normal.
  - Deliveries increased 4.3%, while weather normalized deliveries were largely flat.
- PECO ongoing results increased ($101 million vs. $71 million), primarily due to increased electric distribution revenue pursuant to a rate increase and from an accounting method change.
  - Heating degree days increased 42.1% compared to 2Q15 and were 0.6% above normal.
  - Cooling Degree days were down 23.8% YOY and 12.4% above normal.
  - Electric deliveries fell 1.9% vs. 2Q15 and were essentially flat on a weather-normalized basis.
  - Gas deliveries increased 8.9% YOY and decreased 1.5% on a weather normalized basis due to lower use per customer.
- BGE earnings fell ($29 million vs. $45 million) due to disallowances in the June and July rate orders and increased underground conduit fees in Baltimore, partly offset by increased T&D revenue.
  - BGE has revenue decoupling, so weather minimally impacts earnings.
- PHI earned $53 million in the quarter.

There is no conference call with the EXC Analyst Day tomorrow.

For analyst certification and important disclosures, please refer to the Disclosure Appendix.

Disclosure Appendix

Exelon Corporation - EXC

Exelon Corporation is an investment banking client of ours.

We have received compensation for investment banking services from Exelon Corporation during the past 12 months.

NYSE: EXC

Exelon Corporation

EXC - ALERT: 3Q16 Earnings Results Show Strong Quarter; Guidance Raised

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

Key Investment Points

October 25, 2016 Close: $32.90

3Q16 Ongoing EPS: $0.91 vs. $0.83 in 3Q15/Consensus of $0.79/KBCM of $0.74

Initial Take: We expect a positive response to the EPS beat and increased 2016 EPS guidance.

2016 KBCM EPS Estimate: $2.55 (Consensus: $2.57)

2017 KBCM EPS Estimate: $2.65 (Consensus: $2.62)

Guidance: EXC increased full-year EPS guidance to a range of $2.55-$2.75 from a range of $2.40-$2.70. The two drivers of the revised 2016 EPS guidance come from Pepco and ComEd as segment expectations are for EPS of $0.15-$0.25 from $0.10-$0.20 and for EPS of $0.55-$0.65 from $0.50-$0.60.

Highlights:

- Relative to our estimate, weather and PHI results drove the beat.
- Generation segment ongoing earnings decreased $123 million ($376 million vs. $499 million) due to higher income taxes from a decrease in the domestic production activities deduction, decreased capacity prices, and increased nuclear decommissioning amortization expense.
- ComEd ongoing results rose $35 million ($186 million vs. $151 million), driven by favorable weather and higher electric T&D formula rates.
  - Cooling degree days increased 32.5% compared to 3Q15 and were 37% above normal.
  - Deliveries increased 7.0%, while weather normalized deliveries were largely flat.
- PECO ongoing results increased $32 million ($123 million vs. $91 million), primarily due to favorable weather and increased electric distribution revenue from the Jan. 1 rate increase.
  - Cooling Degree days were up 8.6% YOY and 38.6% above normal.
  - Electric deliveries increased 5.1% vs. 3Q15 and were essentially flat on a weather-normalized basis.
  - Gas deliveries decreased 2.6% YOY and decreased 3.0% on a weather normalized basis due to lower use per customer.
- BGE earnings increase $3 million ($55 million vs. $52 million) due to June 2016 rates and transmission revenue largely offset by increased amortization associated with the AMI program and by the increased underground conduit rental fees from the City of Baltimore.
  - BGE has revenue decoupling, so weather minimally impacts earnings.
- PHI earned $130 million in the quarter.

11:00 A.M. ET Conference Call #: (800) 690-3108 ID#: 97958834

We will be focused on:

- Commentary on Pepco and ComEd EPS guidance revisions
- View of the market for Generation segment
- Details on ETR nuclear assets as well as currently owned nuclear assets
- Sales trend and economic commentary
- Update on ConEd Solutions Business

Alert

December 2, 2016

Energy: Electric Utilities

NYSE: EXC

Exelon Corporation

EXC - ALERT: Nuclear Support Legislation Passes in Illinois

Paul T. Ridzon / (216) 689-0270 / pridzon@key.com
John Barta / (216) 689-3386 / john_j_barta@key.com

Key Investment Points

Last night, the Illinois legislature passed a bill to support Exelon's Quad Cities and Clinton nuclear plants. The bill also funds energy efficiency and renewables. The $235 million/year higher rates to support the plants will take effect in June 2017, rather than January, a move that reduced the number of votes required for the bill to pass (bills in the veto session need a supermajority to take effect immediately). Our sense is that investors were assuming the bill had a below average to even chance of passing. We expect a positive response to the passage and indications the governor will sign the legislation.

EXC had indicated that the two affected plants were losing money, as oversupply and increased renewables coming on line continued to pressure wholesale power pricing. The Company had planned to close the plants absent any legislative relief.

pridzon@key.com
John Barta / (216) 689-3386
john_j_barta@key.com

On August 10, 2016, EXC hosted an investor meeting in Philadelphia. Key takeaways were a renewed focus on regulated operations as a growth driver (funded in part with merchant cash flow) and a capitulation that power markets may remain weak for the foreseeable future. A key aspect of bridging 6.1% rate base growth and 7-9% regulated EPS growth is improving earned ROEs at the Pepco subs by filing rate cases over the coming years. In our view, investors are taking a wait-and-see approach, given a history of challenging regulation at these utilities.

Key Investment Points

Renewed Regulated Focus - EXC hosted an analyst day to provide a strategic update to investors. While no major announcements were made, we believe the focus of discussion shifted more toward growing earnings at the regulated utilities, stepping back from prior views around fundamentally mispriced power markets.

Regulated/Merchant Symbiosis – EXC looks for a regulated EPS CAGR of 7-9% through 2020. Merchant cash flow is expected to contribute to the $25 billion of cumulative regulated 2016-2020 capex, as well as pay down debt at Exelon Generation (ExGen). The strong consolidated balance sheet backstops ExGen's credit needs.

In Digestion Mode After Pepco Close – Management indicated that its near-term focus was the successful integration of the Pepco assets, incorporating best practices to bring down costs and fixing challenged regulatory relations to drive ROE closer to allowed levels (and set the stage for higher authorized returns). We would not look for incremental sizable acquisitions over the coming years, although we could see Constellation continue a strategy of rolling-up smaller retail suppliers.

Investor Reaction Muted – Shares have underperformed utility peers since the meeting. We believe investors' tepid reaction is driven by a few factors. No major new announcements were made at the conference. Success at fixing Pepco regulation will take a few years to manifest itself, and a rocky history is giving some investors pause. Lastly, commodity markets remain an unknown at ExGen as fundamentals remain challenged.

Upside Opportunities Exist - EXC's prospects could improve beyond those in EXC's base case outlook, including: improved natural gas pricing would benefit ExGen (but pressure overall rates at the utilities); legislation supporting low-carbon nukes in Illinois; approval of the Fitzpatrick sale.

Valuation

Based upon our 2017 estimate, shares of EXC stock recently traded ($35.30) at a P/E ratio of 13.3x, while larger cap commodity exposed peers trade at 16.1x. We note EXC has relatively higher commodity exposure than the average peer. We find shares modestly attractive, but remain **Sector Weight** on shares around commodity uncertainty.

Investment Risks

We believe the primary risks facing EXC are any deterioration of regulatory relationships in the jurisdictions where EXC has regulated operations, any further weakening of commodity pricing and any potential changes in policy toward reduced support of nuclear plants.

Analyst Day Highlights

As discussed, EXC hosted an analyst meeting in Philadelphia on August 10, 2016. Key meeting highlights are discussed below:

Spotlight on Regulated Operations - With the close of the Pepco deal, EXC appears to have shifted the investment thesis more toward the regulated operations. Previous discussion around upside related to mispriced commodity forwards was notably absent. A large part of the strategic value is that $8 billion+ of 2016-2020 ExGen cash flow will be used to fund utility capex, driving 6.1% rate base growth through 2020.

ExGen Cash Flow Earmarked - Through 2020, ExGen is expected to generate cumulative free cash of roughly $8.2 billion (at current market pricing). Of this, management indicated $2.3 billion will be reinvested at ExGen. $2.7 billion-$3.2 billion will be used to support the dividend and utility capex. Lastly, the remaining $2.7 billion-$3.2 billion will be used to retire ExGen debt. We note upside to the $8.2 billion of ExGen free cash if the New York zero emissions credit program is approved. EXC indicated that this would generate $750 million of additional cash flow. This additional cash would be used to reduce holding company debt and/or be redeployed at the regulated utilities.

Pepco Regulatory Turnaround Is Key to Thesis - EXC forecasts 7-9% utility EPS CAGR for the 2016-2020 period, based on 6.1% rate base growth. The difference between the two growth rates is driven primarily by improving weak earned ROE's at the Pepco subsidiaries. Because Pepco did not file any rate cases during the ~two-year merger approval process, the companies are experiencing lag. We estimate Pepco under-earned its authorized returns by over 340 bps in 2015 (on a rate base weighted average of the six utilities), with some utilities earning less than half their authorized returns. Since the close of the deal, EXC has initiated nine rate proceedings (six general rate cases and three formula rate plans). Aside from lag, POM has had issues with punitive authorized ROEs as a result of reliability issues. EXC intends to use its scale and experience to address reliability issues to improve relationships. Management acknowledged this could be a long process and expects to be very active in the Pepco regulatory arena for several years. Beyond 2020, with Pepco regulation addressed and fewer capex opportunities, EXC expects EPS CAGR to moderate to around 5%.

Illinois Legislative Efforts - EXC is focused on two key Illinois legislative efforts before year-end. We got the sense that management's primary focus is around extending and improving the Illinois formulaic rate construct beyond the 2019 expiration. EXC currently earns a debt return on pension assets, which drives a 50-60 bps drag on earned ROE relative to the assets earning at EXC's WACC. The other issue EXC would like to change in a new plan is the base of the formulaic ROE, which is viewed as punitive in the prolonged low interest rate cycle we have seen. The current formula to determine authorized ROE is the average 30-year treasury yield (for the rate year) plus 580 bps. The other legislative pursuit is the ongoing effort to protect the Clinton and Quad Cities nuclear plants from planned early retirement. With New York recently approving plans to subsidize upstate plants, EXC is hopeful the Illinois legislature will see the value of preserving the jobs, tax base and low carbon footprint that these plants offer. Absent supportive legislation, EXC has indicated it will not continue to lose money and will retire the plants at the end of the current fuel cycle. Closing these plants would eliminate $0.07 of earnings drag and add $75 million of pretax cash flow. Our read is that the legislature is focused on the state budget and has limited bandwidth to address other issues in the balance of the year.

Views on Potential Further M&A – EXC indicated that the focus through 2020 was executing on the current plan, and that incremental consolidation could prove to be an unwanted distraction. As such, we view any further near- to intermediate-term acquisitions as unlikely. One place we do envision EXC possibly doing smaller acquisitions is at the Constellation retail energy supply business. The competition was described as highly fragmented, and many competitors do not have the advantage of a diverse generation portfolio standing behind them with excess load to commit. Management views this as a meaningful competitive advantage that can immediately add value to acquisitions based on more traditional $/customer acquired valuation metric (with competitors having to procure supply in uncertain wholesale markets).

Business Separation Would Destroy Value – Management indicated that a business separation is given regular consideration. At this point in time, however, EXC believes such action would be value destructive. On the regulated side, multiple expansion would certainly occur. However, without the cash flow from the merchant side to support the dividend and capex well in excess depreciation, the necessary equity issuance would offset the valuation uplift. On the merchant side, the consolidated balance sheet supports the unregulated operation's credit needs around its sizable commodity positions, and credit for ExGen standalone would be much more expensive.

O&M Initiative Provides Tailwind - EXC looks to reduce consolidated O&M expense 1.1% annually through the planning period. O&M at ExGen is expected to decline 1.3% annually. Much of the savings at the utility is enabled through its investment initiatve, which will improve efficiency and productivity. If successfully executed, we estimate this will provide an incremental $0.06-$0.07 of EPS tailwind annually.

Dividend Discussion - EXC indicated it would grow the dividend at 2.5% through 2018 and that as the utility earnings grow at 7-9%, the payout ratio will drop. With an improved payout ratio, EXC indicated it could consider a higher dividend growth rate post 2018.

Disclosure Appendix

Exelon Corporation - EXC

Exelon Corporation is an investment banking client of ours.

We have received compensation for investment banking services from Exelon Corporation during the past 12 months.

We expect to receive or intend to seek compensation for investment banking services from Exelon Corporation within the next three months.

During the past 12 months, Exelon Corporation has been a client of the firm or its affiliates for non-securities related services.

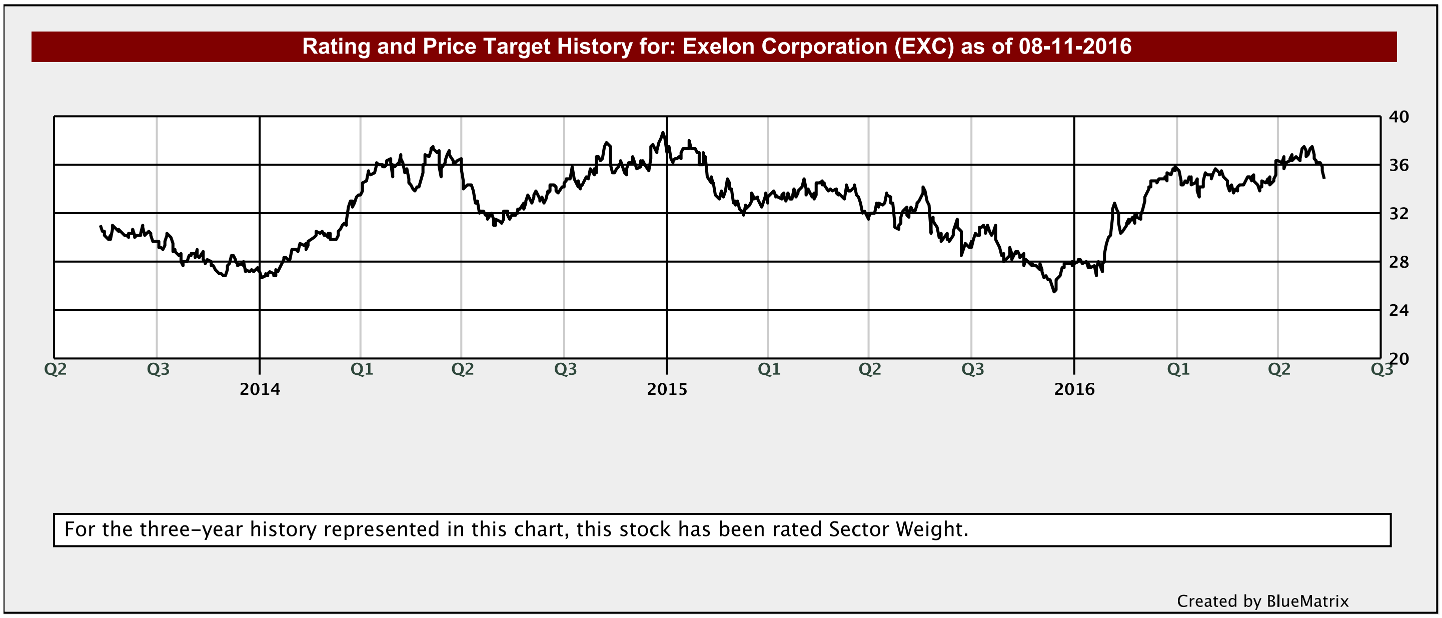
As of the date of this report, we make a market in Exelon Corporation.

For the three-year history represented in this chart, this stock has been rated Sector Weight.

Reg A/C Certification

The research analyst(s) responsible for the preparation of this research report certifies that:(1) all the views expressed in this research report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers; and (2) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst(s) in this research report.

Three-Year Rating and Price Target History



Rating and Price Target History for: Exelon Corporation (EXC) as of 08-11-2016

For the three-year history represented in this chart, this stock has been rated Sector Weight.

EXC - BUY - Illinois Energy Policy Proposal: Everything but the Kitchen Sink, but Likely Too much, Too late

November 16, 2016

Illinois Senate bill includes everything but the kitchen sink. Illinois Lawmakers introduced a long-awaited energy bill (see HERE) that includes a wide range of policy support for nuclear, coal, and renewables, as well as a variety of utility investment opportunities (e.g., energy efficiency, community solar, micro-grids). **Our quick-take: sounds great for EXC and partially for DYN (BUY, $9.01) , but while the variety of energy-related topics addressed likely won support from stakeholders along the way, it likely added too much complexity to a bill with a short window of opportunity.** The bill has to be passed in the veto session, which will require both house and senate approval; given the short veto session ahead, the fact that a majority (three-fifths) is needed to pass, and the sheer scope of issues addressed, it's difficult for us to see how this gets passed. **Key point – our BUY thesis on EXC and DYN are not predicated on passage of this legislation though it could provide upside.**

Clearly positive for EXC, in our view, as it's written… EXC announced plans to retire Clinton and Quad Cities in IL, expecting ~$0.07 EPS accretion from shutting down those two plants; whereas **we estimate ~$0.16-0.27 of accretion; $3-4/share in valuation uplift with the bill** based on our interpretation of the zero emission credits as its written. If the bill was approved, EXC would benefit from Zero Emission Credits similar to those being proposed in NY, albeit with a much smoother path to fruition in New York, in our view. We would also view this as EXC taking further advantage of opportunities to shed merchant nuclear exposure and lock-in long-term contracted cash flows as it did in NY – not any sort of renewed interest in merchant nuclear. That said, we believe the EXC story is still well cemented with or without this legislation. **See our Illinois Zero Emission Credit model on page 2 (full model available upon request).**

DYN would potentially be a beneficiary as well, but even a taller-order, in our view; but let's see how this plays out. DYN would also benefit from the bill as its written, to the extent its coal plants are compensated beyond just their costs, and get recognition for their capacity (the bill proposes 25% of retail load be met with "clean coal"). While the President-elect brings a more constructive back-drop for coal, and keeping DYN's plants operational are more important for certain stakeholders focused on jobs within their jurisdiction, it comes on top of an already tall order with a short window of opportunity, in our view, as we describe here.

But likely too many cooks in the kitchen as the sheer scope of issues covered may now be too complex to navigate policy approvals in such a short window of time – could provide a roadmap for next year but EXC won't wait. Even though the proposal is an amendment, the Bill will require both House and Senate approval, with each of them potentially looking for expert testimony before making a decision. **We also note that the policy window for this bill to pass is extremely limited given that Illinois' legislative veto session runs this week for three days (though tomorrow, 11/17) and for three days the week after Thanksgiving (11/29-12/1).** As a reminder, Illinois has not even been able to pass a 2016 budget, as the Republican Governor and Democratic legislature have been in a contentious standoff for months. As we mentioned in our previous note HERE, passing this energy bill soon is likely a long shot, in our view - history is not on their side.

Valuation

Our $39 price target is based on a sum-of-the-parts analysis. We assign ~$14/ share for ExGen using a 7x weighted average EV/EBITDA applied to ExGen's various assets. We assign $28/share for the regulated utilities combined based on our 2018E EPS of $1.78 applied to a 16x regulated utility multiple. Subtracting out ~$3 in parent drag.

Risks

Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM.

The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

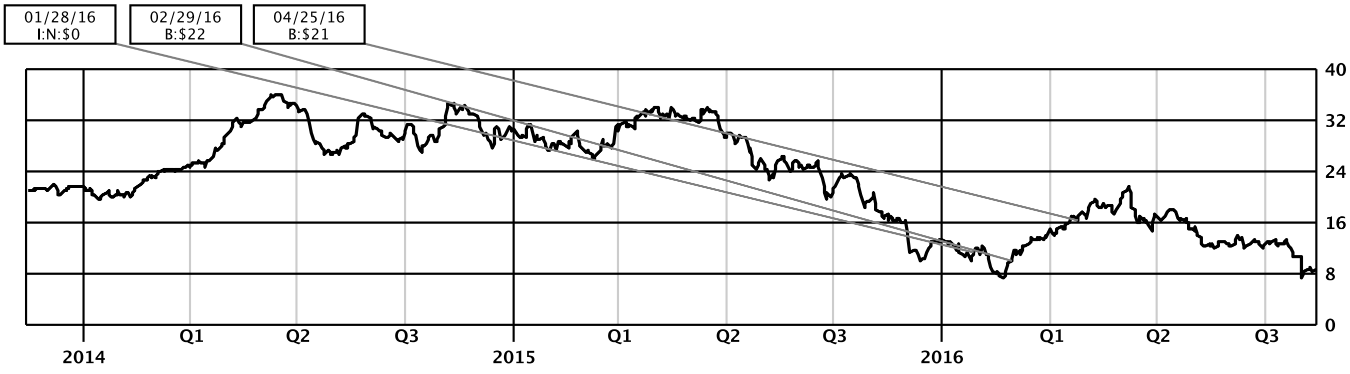
Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation and Dynegy Inc. in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: Exelon Corporation (EXC) as of 11-14-2016

Created by BlueMatrix

Rating and Price Target History for: Dynegy Inc. (DYN) as of 11-14-2016



Created by BlueMatrix

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

EXC – BUY – Solid Print and Several Items to Look Out For at EEI – Block-and-Tackle

October 26, 2016

NT Potential Catalysts: EEI should be somewhat less of a catalyst for EXC relative to other utilities as management held the analyst day recently, but it's a good opportunity to provide more updates on their LT plan – better discussions than in the past. Last chance for IL nuclear policy with two legislative sessions remaining – more discussions/updates expected at EEI conference; NY nuclear strategy update with potential for more synergies and cost savings; five rate proceedings expecting orders over 12 months at recently acquired PHI utilities and more to come in 2017; sustainability of the integrated model and potential actions to take; update on hedged position.

EXC reported strong results with 3Q16 adjusted earnings of $0.91 vs. our $0.77 estimate, consensus $0.79; company raised FY outlook to $2.75 from $2.55. EXC reported 3Q16 adjusted earnings of $0.91, $0.13 above our estimate of $0.77 despite lower capacity prices, driven by warm summer weather, strong performance from the ExGen and retail, and rate increases. Management raised their FY outlook to $2.75, and our updated estimates reflecting strong YTD performance remain in-line at $2.71.

NY nuclear strategy moving along despite IPP opposition in NY; aiming to close Fitzpatrick in 2Q17. See our prior thoughts HERE. EXC expects $0.08-0.10 of earnings uplift and $350mm of CF from the NY nuclear fleet as the state's Clean Energy Standard is implemented, and another $0.02-0.08 when Fitzpatrick is acquired from ETR (BUY, $72.48), which does NOT include synergies associated with the proximity of this plant with EXC's Nine Mile – synergies could be noticeable. Management discussed a suite of various cost savings initiatives (i.e., ranging from contractor hours/rates, centralized/shared costs, etc.,) which can add up. We anticipate more to come around synergies and cost reductions at Fitzpatrick as the process progresses, so potentially some incremental insight from EXC at EEI after having spent some time at the facility. We've highlighted opposition from IPPs, which we expected, although, in our view, such efforts were also anticipated by EXC, ETR, and ultimately the NY regulators that designed the nuclear subsidies within the state's clean energy standard – difficult for us to imagine a scenario where the Governor balks.

IL nuclear aiming to retire without policy support similar to NY. In IL EXC expects 2019 run rate of up to $0.07/share and $75mm CF (excluding decommissioning costs) associated with their intention of retiring Clinton and Quad Cities – EXC seems a little more constructive around the potential for supportive nuclear policy in IL, although still a long-shot, in our view, particularly as the policy window is closing with two remaining legislative veto sessions 11/15-11/17, and 11/29-12/1 – history is not on their side. **While EXC is growing a nuclear footprint in NY, the NY fleet is a contracted story now, with strong CF to support regulated infrastructure investment.**

Dividend Yield	3.9%
ADV (3 mo; 000)	4,700

One down, Five to go – Key NJ ratecase in the rearview, but EXC is still pursuing rate increases for five of the recently acquired PHI utilities. In 3Q16 EXC was authorized a $45mm revenue increase in NJ premised upon a 9.75% ROE, but more work to do with open proceedings in MD, IL, and DC for 5 of the other PHI utilities. Management is looking for more constructive authorized returns in 4 of the 5 jurisdictions (10.6% ROE) and expects orders over the next year for each open proceeding. The game plan always had two cycles, in order to earn their ROEs; MD is the main jurisdiction of concern, particularly for PepCo, although DE briefs haven't been as contentious. With some fresh faces at the PHI utilities filing rate cases, we see room for regulatory relationships to improve – any ability to find some rate relief (e.g., cost reductions) going into this proceedings would also strengthen their position.

Leaving a little room for power price upside next year. EXC is hedged 98-101% for 2016, 85-88% for 2017, and 54-57% for 2018; locked-in for now, but going into 2017 12-15% open, power position 7-10% behind ratable – representing upside exposure to constructive power price movement. Management noted a lot of their open position is in the Midwest, which is where EXC sees more of the upside especially on the heels of coal retirements. We would also note EXC operates a large retail business, which is essentially a natural hedge for merchant generation, and greater volumes have been being pushed through the retail business than through wholesale markets recently (e.g., recently acquiring ED's [NEUTRAL, $73.88] retail book); a natural hedge, and likely appealing economics as well considering many of EXC's peers have been taking the same approach (e.g., CPN's [BUY, $11.90] recent acquisition of Noble).

Valuation

Our $39 price target is based on a sum-of-the-parts analysis. We assign ~$14/share for ExGen using a 7x weighted average EV/EBITDA applied to ExGen's various assets. We assign $28/share for the regulated utilities combined based on our 2018E EPS of $1.78 applied to a 16x regulated utility multiple. Subtracting out ~$3 in parent drag.

Risks

Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM. The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from Exelon Corporation, Calpine Corp., Consolidated Edison, Inc. and Entergy Corporation in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATING DEFINITIONS

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 10% or minus 10% within a 12-month period. No price target is assigned.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Restricted - Describes issuers where, in conjunction with Guggenheim Securities, LLC engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Prior to 12/8/14, Guggenheim Securities, LLC's BUY, NEUTRAL, and SELL ratings definitions were as follows (no other ratings definitions were changed):

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 15% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 15% or more within a 12-month period.

Exelon Corp.

EXC: Coming Into Focus

Stock Rating/Industry View: Overweight/Neutral
Price Target: USD 41.00
Price (10-Aug-2016): USD 35.53
Potential Upside/Downside: 15%
Tickers: EXC

Analyst Day Provides Clarity on Utilities and Exelon Generation

Exelon held their analyst day and provided detail around the regulated growth plan as well as genco impacts of the New York zero-emission credit (ZEC) plan and the proposed closures of Clinton and Quad Cities. The regulated utility rate base growth is projected to be 6.1% through 2018, which should translate into 7-9% utility EPS growth based on rate base growth combined with closing the earned to allowed ROE gap. A good portion of the utility growth appears to be front-end loaded based on the projections provided by the company with a midpoint to midpoint uplift of 15% for 2017 over 2016. The 5 year $25B capital plan at the utility drives the rate base growth while closing the earned to allowed ROE gap at the utilities (in particular the legacy PHI utilities) pushes earnings higher, all while not requiring equity as the funding is supported by cash flows from the Exelon Generation. To that end the expectation is for Exelon Generation to provide $8.2B in free cash flow through 2020, with $2.7-$3.2 of this cash flow being allocated to utility investment. Additionally there is the expectation for $2.7-$3.2B of debt reduction at Exelon Generation bringing the Debt/EBITDA level down to 3.0x or lower. It is worth noting that the $8.2B is premised upon the closure of Quad Cities and Clinton, but does not include the approximately $750M of cash flow associated with the New York Clean Energy Standard and associated ZEC plan (including additional distributions from CENG related to completion of loan repayment and special distribution). Upon reaching 3.0x debt/EBITDA, the company can either further reduce Exelon Generation debt, reduce holding company debt, or if practical increase utility capex. None of the numbers provided included the potential impact of the recently announce agreement to acquire and operate the FitzPatrick nuclear plant, which would be additive to Exelon Generation earnings and cash flow. At this point in time we are reiterating our Overweight rating and $41 price target as we await the Q3 hedge disclosures, which will incorporate the ZEC plan. However, it should be noted that the increased cash flow from the ZEC plan and the proposed closure of Clinton and Quad Cities would likely be additive to our numbers in 2019 and beyond.

TOP PICK Exelon Corp.

EXC: Good and Getting Better

Stock Rating/Industry View: Overweight/Neutral
Price Target: USD 39.00
Price (26-Oct-2016): USD 33.26
Potential Upside/Downside: 17%
Tickers: EXC

Last potential negative catalyst now behind them – looking at positive calendar going forward

Exelon provided initial 2019 gross margin guidance and updated 2016-2018 gross margin for Exgen based on the forward curves as of September 30. Expectations were for weak numbers given the movement in forward curves. The numbers were indeed weaker than the analyst day numbers on a like for like basis; however there were a couple of big positives to take into consideration. First was the expected gross margin contributions from the New York Clean Energy Standard (CES). The second was the expected gross margin contribution from the acquisition of the FitzPatrick nuclear plant. The third was an enhanced expectation for Exgen O&M reductions beyond those laid out at the analyst day. The following table compares the numbers provided at the analyst day to the Q3 disclosures along with the offsets discussed. The key takeaway is that in 2016-2017 the adjusted gross margin improves from the analyst day given the CES, FitzPatrick, and O&M savings more than offset power price declines. For 2019 the adjusted gross margin is only $275M lower than 2018, better than we expected, and going forward we would expect future gross margin revisions to increase based on our internal expectations for natural gas, combined with opportunistic hedging from Exgen. We expect to see the FitzPatrick deal approved in mid to late November with the NYSERDA contracts to follow shortly thereafter.

	Analyst Day				Q3 Earning Disclosures				Difference			
(Values in $Millions)	2016	2017	2018	2019	2016	2017	2018	2019	2016	2017	2018	2019

Utilities showing strong results and rate relief progressing

The Q3 results exceeded consensus by $0.13 and the top end of EXC guidance by $0.16. These results were driven by stronger utility results based on weather, lack of storms and higher rate relief. Exelon increased 2016 guidance by $0.10 at the midpoint with ComEd and PHI each accounting for 5 cents. These increases are temporal based on weather and lack of storm costs, but the rate relief story is coming into focus. Atlantic City Electric received approval of their rate settlement resulting in a 45M revenue increase. The following table shows the ongoing rate cases. The rate relief is a critical component as improving the earned returns is what drives a 6.1% rate base growth into a 7-9% earnings growth for the utility segment.

	ACE Electric	PEPCO MD	ComEd	Delmarva MD	PEPCO DC	Delmarva Electric DE	Delmarva DE Gas	Total
Requested Revenue Requirement Increase	$45.0	$102.8	$132.0	$57.0	$82.1	$62.8	$21.5	$503.2
Requested ROE	9.75%	10.60%	8.64%	10.60%	10.60%	10.60%	10.60%	
Requested Equity Layer	49.48%	49.60%	46%	49.10%	49.14%	49.40%	49.40%	
Expected Regulatory Order Date	8/24/2016	11/15/2016	Dec-16	2/17/2017	7/25/2017	Q3 2017	Q3 2017	

Other points of interest

Aside from Exgen numbers and regulatory relief there were a few other items worth noting from the Q3 call release and call.

- Illinois Legislation – no certainty, but the door is open for a deal, owing to the temporary budget and educational funding issues not needing to be dealt with during the veto session. Again passage of a bill could pave the way to keep Quad Cities and Clinton operating if it provides appropriate financial incentives, but 2019 numbers improve by $0.07/share in EPS and by $75M for pretax cashflow if the plants close.

- Aside from the gross margin impact, the CES drives $0.08-$0.10 of EPS and $350M of additional after tax cash flow through 2020. FitzPatrick adds $0.02-$0.08 annually depending on refueling outages.

- Legal challenges to the CES have been filed and timing and outcome are uncertain, although Exelon reiterated confidence in their position. Assuming the FitzPatrick deal is approved Exelon will bear the legal burden associated with challenges to the CES once FitzPatrick is refueled in January 2017.

- Regarding the potential sale of the Mystic power plants in New England the company would not comment beyond to state that the plants are for sale.

We reiterate our Overweight rating and price target and continue to view EXC as a top pick in the sector.

Exelon Corp (EXC)

IL Bailout Bill Passed. Increasing PT to $31; Upgrading to Neutral.

- Estimate Change
- Target Price Change
- Rating Change

Neutral	2
from Sell	
Price (01 Dec 16)	US$32.17
Target price	US$31.00
from US$29.00	
Expected share price return	-3.6%
Expected dividend yield	4.0%
Expected total return	0.3%
Market Cap	US$29,702M

- The IL House and Senate passed SB 2814 bill to support Clinton and Quad Cities on 12/1/2016. This was the likely outcome after EXC got the Governor's support.

- **Increasing PT to $31 from $29. $1 for IL and $1 for Trump tax plan:** We value the IL bailout at $1/share based on post-tax cash flows of ~$125m/year over 10 years. With a potential reduction in the corporate tax rate looking imminent, we add $1/share on a probability adjusted basis for the Trump tax plan.
  - Assuming a 20% rate, ExGen valuation increases by ~$2-3/share given lower cash taxes. Exelon parent valuation drops by ~$0.50 - 1/share given the lower debt tax shield. Assuming limited impact on utility valuation, the net impact is $1.50 – 2/share. See Trump Tax Plan – Implications for IPPs
  - Note that NY ZECs add $2/share of value though we don't assign any value to them in our PT and continue to remain skeptical on the 'tethering' argument.
  - We think IL regulators may not have taken a lower tax rate into account when sizing the bailout. We don't assume the bailout is reduced if tax rate is lowered

- **Rationale for EXC upgrade to a Neutral.** Since earlier this year, EXC has underperformed the XLU by ~12%. Our primary Sell thesis was based on our view of ExGen's weakness. While ExGen weakness is only reconfirmed by the bailouts, external support from bailouts and lower taxes cushions challenges. Recent weakness in utilities has also brought down EXC's price more in line with our PT. The confluence of these factors results in our upgrade to Neutral.

- **Sum-of-parts PT of $31/share.** 2018 utility earnings are unchanged at $1.85/share, and based on our $30/share utility valuation, reflect a ~16x 2018 PE We value the parent at ($5)/share based on net debt at parent less the NPV of the debt tax shield and NOLs. We continue to value ExGen at $4/share. We value the IL ZEC at $1/share. Note that a applying a PE multiple to ZEC earnings significantly overstates ZEC value. We assign $1/share to Trump tax benefits.

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates three utilities in Pennsylvania, Illinois, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Commonwealth Edison Company (ComEd) in IL, PECO Energy Company (PECO) in PA, and Baltimore Gas & Electric in MD. Exelon Generation operates the largest nuclear fleet in the United States, with plants located concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Neutral (2). Our rating is based on concerns around the management team’s strategic vision and execution, downside related to the Pepco transaction, concerns around the economics of Exelon’s nuclear fleet with low unlevered free cash flow conversion (UFCF) of ~45% and a weak utility business with below average growth of ~4% through 2019

Valuation

We value EXC using a sum-of-the-parts approach to get to our $31 target. We value ExGen at $4/share and believe ExGen’s core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $22/share based on a 17x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent to get to our price target. We ascribe 1$ per share to the impact of Trump's tax plan and $1 per share due to IL ZEC.

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by “AC” in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2016	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	47%	39%	14%	0%	100%	0%
% of companies in each rating category that are investment banking clients	66%	61%	60%	0%	64%	0%

Guide to Citi Research Fundamental Research Investment Ratings:

Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.

Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.

Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:

Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term

total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Maxwell S Burke; Tulkin Niyazov, CFA; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that were at the time investment banking clients shown in brackets) is as follows: Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%); Q1 2016 Buy 31% (67%), Hold 45% (63%), Sell 24% (61%); Q4 2015 Buy 31% (67%), Hold 45% (63%), Sell 24% (63%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research

may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted. Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

Exelon Corp (EXC)

Model and Capacity Price Updates. Reiterate Sell and $27PT

- **Model updated for capacity auction results. ExGen continues to drag down Exelon Story.** Our primary updates to our model relate to the weakening EBITDA profile of ExGen which drops by ~$400m in 2019 following the results of the capacity auction and updated commodity curves as of 5/26/2019. We had laid out the impact of the capacity auction in a note following the auction. PJM Auctions – Weaker than Expected: Trigger for further retirements…and then an uptick in prices
- **PT stays at $27 given a more bullish view on growth and valuation of the utility businesses.** We have updated the terminal PE multiples of the utility business to 16.0x from 15.0x primarily driven by a more bullish view on growth of EXC's utilities post 2019. Note that following Brexit we do think interest rates do stay lower for longer. This view on interest rates translates to a lower WACC and, higher multiple for utilities. As interest rates show signs of life, this uplift from a lower WACC and higher multiple will reverse for all utilities.
- **Clinton and Quad Cities retirement is value neutral.** While ~$50m of negative FCF is saved from the retirement of these plants, the cost of decommissioning and spent fuel management will likely limit the economic benefit of retirement.
- **ExGen is still ~25% of EXC's price target.** While the Pepco transaction does increase the proportion of the utility business, we think the key driver of EXC's stock price and valuation is still the view on valuation of ExGen.
- **ExGen should be valued at 5.5x 2019 EBITDA.** We stay concerned on the future of EXC's nuclear fleet given the average cash cost of generation of $30 - $35/MWh. We think without external/political support or carbon pricing, more nuclear plants will retire over time. That is why we think ExGen should be valued at a 5.5x EBITDA multiple – it reflects the low unlevered FCF conversion (~45%) and the relatively short (~15yr) economic asset life of its remaining nuclear fleet.
- **Reiterate our Sell rating and $27 target price.** A challenged and over-levered nuclear fleet drives our valuation and PT.

Bridge to ExGen EBITDA

- Table below shows our EBITDA bridge. We have updated our model for power curves as of 5/26/2016, latest PJM capacity auction prices and for latest hedge profile.

- The company secured more hedges (on percentage basis), however on lower margins. Therefore, newly secured hedges had net negative contribution to energy margins.

- Our updated model reflects latest PJM auction results. Due to lower auction prices, our FY2019 capacity revenue decreased by ~$240mm.

- We have incorporated Quad Cities and Clinton nuclear power plant closures into our model. We estimate 2019 total generation will be reduced by 20TWh due to retirement of these plants. Our 2018 and 2019 O&M forecasts were reduced to reflect lower generation as well.

Source: Citi Research

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates three

utilities in Pennsylvania, Illinois, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Commonwealth Edison Company (ComEd) in IL, PECO Energy Company (PECO) in PA, and Baltimore Gas & Electric in MD. Exelon Generation operates the largest nuclear fleet in the United States, with plants located concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Sell (3). Our rating is based on concerns around the management team’s strategic vision and execution, downside related to the Pepco transaction, concerns around the economics of Exelon’s nuclear fleet with low unlevered free cash flow conversion (UFCF) of ~45% and a weak utility business with below average growth of ~4% through 2019

Valuation

We value EXC using a sum-of-the-parts approach to get to our $27 target. We value ExGen at $6/share and believe ExGen’s core nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $21/share based on a 16x terminal PE multiple. We also add $6/share value provided by PepCo. We back out $6/share for the parent to get to our price target

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from Exelon Corp.

Citigroup Global Markets Inc. or its affiliates expects to receive or intends to seek, within the next three months, compensation for investment banking services from Exelon Corp.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from Exelon Corp in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Exelon Corp.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Exelon Corp.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Exelon Corp. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating		
Data current as of 30 Jun 2016	**Buy**	**Hold**	**Sell**
Citi Research Global Fundamental Coverage	46%	40%	14%
% of companies in each rating category that are investment banking clients	66%	62%	60%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Tulkin Niyazov; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments quoted are as of the prior day's market close on the primary market for the instrument unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to “Buy”,”Hold”,”Sell” at the end of each quarter over the prior 12 months (with the % of these that were at the time investment banking clients shown in brackets) is as follows: Q2 2016 Buy 31% (45%), Hold 45% (40%), Sell 24% (38%); Q1 2016 Buy 31% (46%), Hold 45% (40%), Sell 24% (39%); Q4 2015 Buy 31% (45%), Hold 45% (39%), Sell 24% (40%); Q3 2015 Buy 32% (47%), Hold 44% (40%), Sell 24% (36%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm’s global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm’s proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author’s previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Exelon Corp (EXC)

Nuclear Bailout key Catalyst for EXC Story. We Remain Skeptical – Reiterate Sell Rating.

- Estimate Change
- Target Price Change

Sell	**3**
Price (28 Nov 16)	US$33.39
Target price	US$29.00
from US$27.00	
Expected share price return	-13.1%
Expected dividend yield	3.8%
Expected total return	**-9.3%**
Market Cap	US$30,828M

- **ExGen merchant valuation is $4/share. Bailouts in NY and IL worth an additional $3/share.** EXC valuation, on the margin, is primarily driven by views of ExGen and nuclear bailouts. We value ExGen at $4/share on a merchant basis and $7+/share if bailouts in NY, IL come through and set the precedent for more.
- **ExGen FCF decline through 2019 only part of the valuation story.** ExGen 2019 guidance for gross margin, at $6.8B, is ~$1B lower than 2016. Guidance on O&M and TOTI suggest an EBITDA of $2.3B in 2019. Citi estimates EBITDA, Unlevered FCF (UFCF) and FCF of $2.5B, $1.3B and $1.1B, respectively. While our 2019 estimates are in line with guidance, valuation is driven more by views after 2019.
- **Nuclear economics post 2019 key driver. Here is what a $4/share valuation implies post 2019.** Using 2019 FCF as an anchor, a $4/share implies either:
  - A. Nuclear assets have a 15yr life and UFCF grows at 4.9% p.a. post 2019 OR
  - B. Nuclear assets have a 20yr life and UFCF grows at 2.2% post 2019p.a.

  Without a bailout, we think there is more downside risk to the cash flow and asset life vs. what is implied by our $4/share valuation. Market power prices, especially off-peak, continue to decline given demand weakness and renewables impact.
- **Why are we skeptical on the bailout? Key IL catalyst coming.** *NY ZECs:* The fact that existing plant economics drive qualification to a ZEC program, in our view, 'tethers' ZECs to wholesale market. This goes against Hughes vs. Talen. *IL SB2814:* While the scramble to alter the bill on 11/22 may help, we think getting political resolution on a large and fluid bill between 11/29 and 12/1 may be a bridge too far.
- **Increasing PT to $29 driven by utility valuation increased to $22/share. Parent at $(5)/share.** With 2018 utility earnings of $1.85/share, our utility valuation translates to a ~16x 2018 PE and a post 2019 growth rate of ~5%. We value the parent at ($5)/share based on net debt at parent less the NPV of the debt tax shield and value of NOLs. We think a PE multiple understates negative value impact of parent debt given cheap revolver / CP debt is being paid down by cash from ExGen.

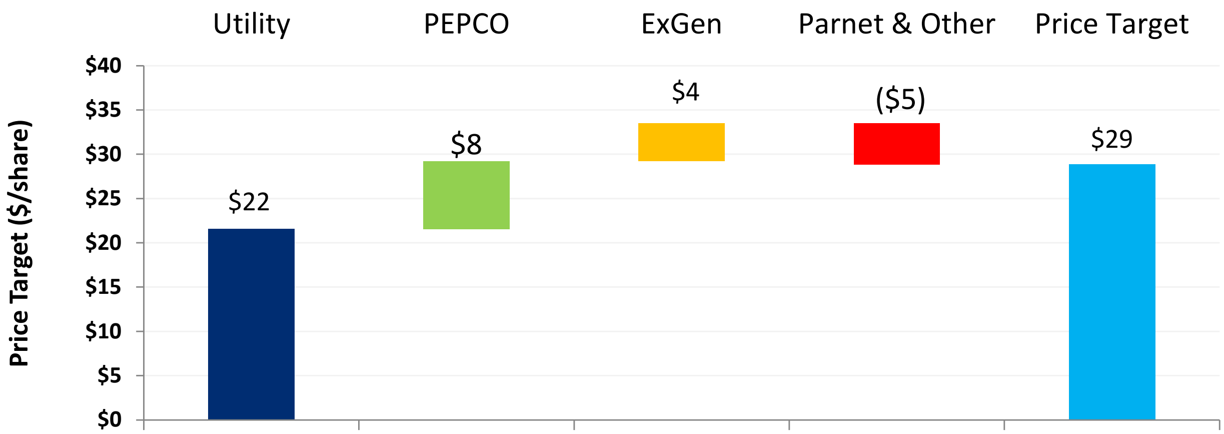
ExGen Valuation – Focus on 2019

Figure 1. SOTP Chart



Components	Utility	PEPCO	ExGen	Parent & Other	Price Target
Terminal Multiple	17.0x	17.0x	5.5x		
Discount Rate	6.5%	6.5%	8.5%		
Firm Value ($mm)	$34,241	$13,521	$14,104		$61,866
Net Debt ($mm)	(13,517)	(6,153)	(10,000)		(29,670)
Equity Value ($mm)	20,723	7,368	4,104	(4,453)	27,743
Share Price ($/share)	**$22**	**$8**	**$4**	**($5)**	**$29**

Source: Citi Research. We used 961m shares outstanding for this calculation. SOTP based on 6/30/2017.

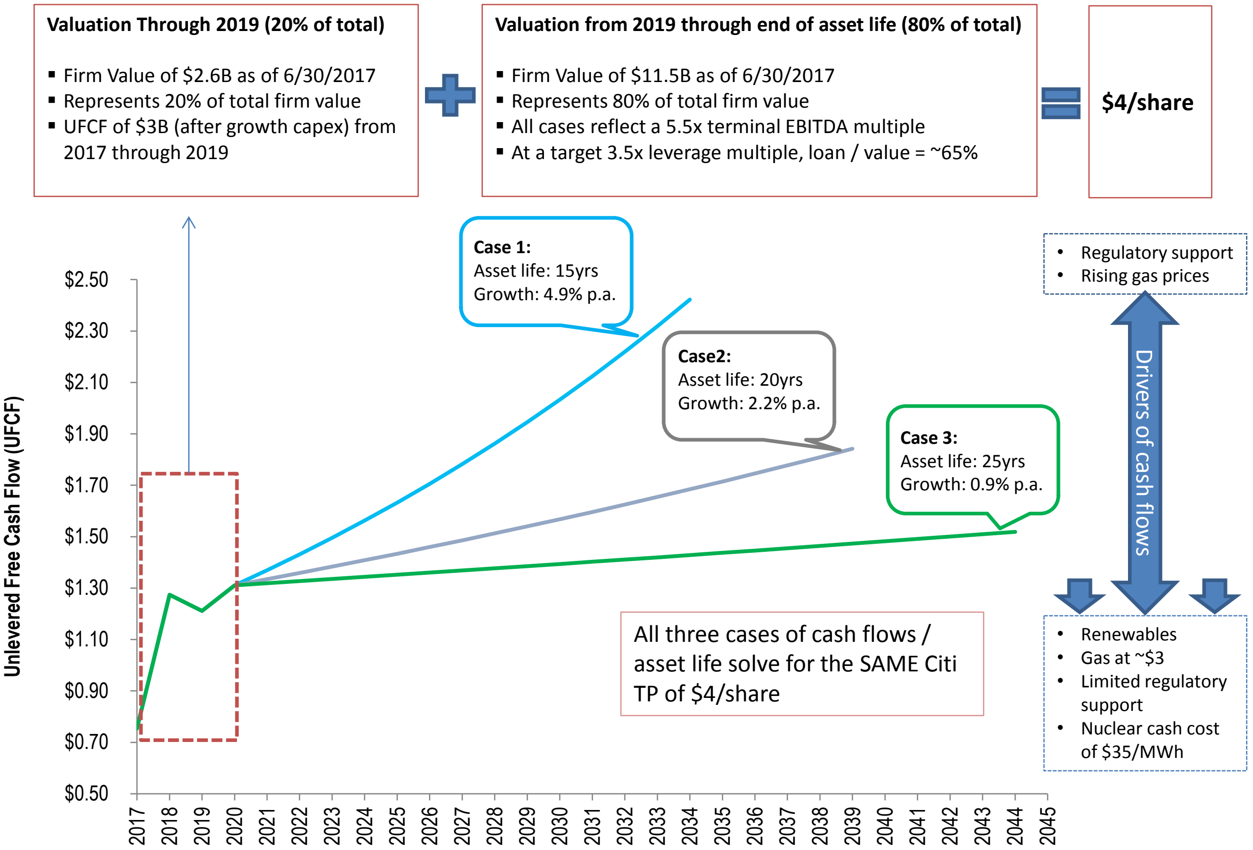
- We value legacy utility business on stand-alone basis using our standard bottoms up DCF approach. We ascribe terminal PE multiple and WACC of 17.0x and 6.5%, respectively, to both legacy utility business as well as PEPCO. Our terminal multiple predicated on long term growth rate of ~5% after 2019.

- We use our standard bottoms up DCF approach to value ExGen. We ascribe terminal EBITDA multiple of 5.5x. Our terminal EBITDA is a function of our views around asset life (~25yrs) and unlevered free cash flow conversion factor (45%).

- We value the parent at ($5)/share based on net debt at parent less the NPV of the debt tax shield and value of NOLs as of 6/30/2017. We value parent debt on standalone basis as it is not linked to utility business. Also, we don't use an earnings multiple as it artificially lowers the value of parent debt given low interest rates of revolver / CP. If Trump's tax plan plays out, this parent debt will get more expensive as the debt tax shield will reduce.

- We have updated our full-year 2016 consolidated operational eps estimates to reflect actual 3Q results, seasonality factor adjustments, power curve updates, the latest management guidance and etc.

Figure 2. ExGen Valuation – Visual Representation of ExGen Valuation. (details in figure 1)



Valuation Through 2019 (20% of total)

- Firm Value of $2.6B as of 6/30/2017
- Represents 20% of total firm value
- UFCF of $3B (after growth capex) from 2017 through 2019

Valuation from 2019 through end of asset life (80% of total)

- Firm Value of $11.5B as of 6/30/2017
- Represents 80% of total firm value
- All cases reflect a 5.5x terminal EBITDA multiple
- At a target 3.5x leverage multiple, loan / value = ~65%

$4/share

Case 1:
Asset life: 15yrs
Growth: 4.9% p.a.

Case2:
Asset life: 20yrs
Growth: 2.2% p.a.

Case 3:
Asset life: 25yrs
Growth: 0.9% p.a.

All three cases of cash flows / asset life solve for the SAME Citi TP of $4/share

- Regulatory support
- Rising gas prices

- Renewables
- Gas at ~$3
- Limited regulatory support
- Nuclear cash cost of $35/MWh

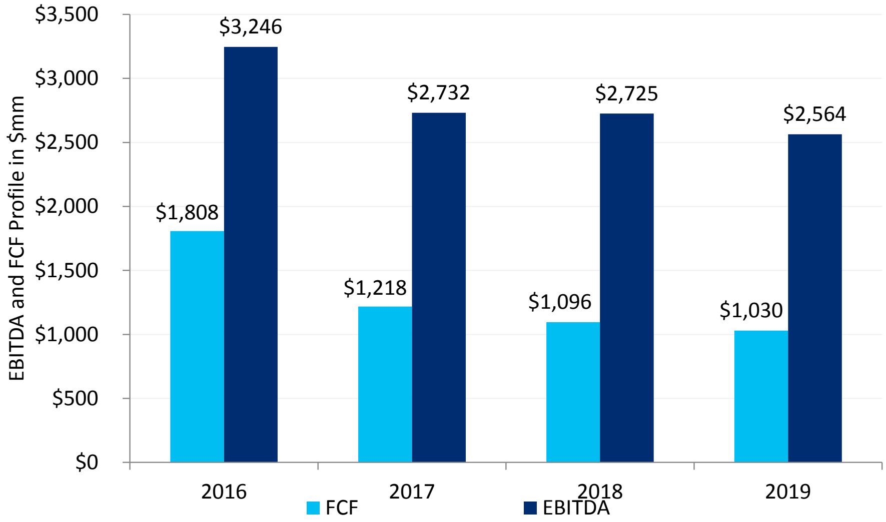
ExGen Updated Forecast and Valuation

- We have updated our model for the latest management guidance, hedge profile, power curves (as of 10/27/2016) and etc. We haven't incorporated FitzPatrick acquisition in our model as we don't believe ZECs will stand ongoing court challenges. Chart below shows our update EBITDA and FCF forecasts:

Figure 4. ExGen EBITDA and FCF estimates

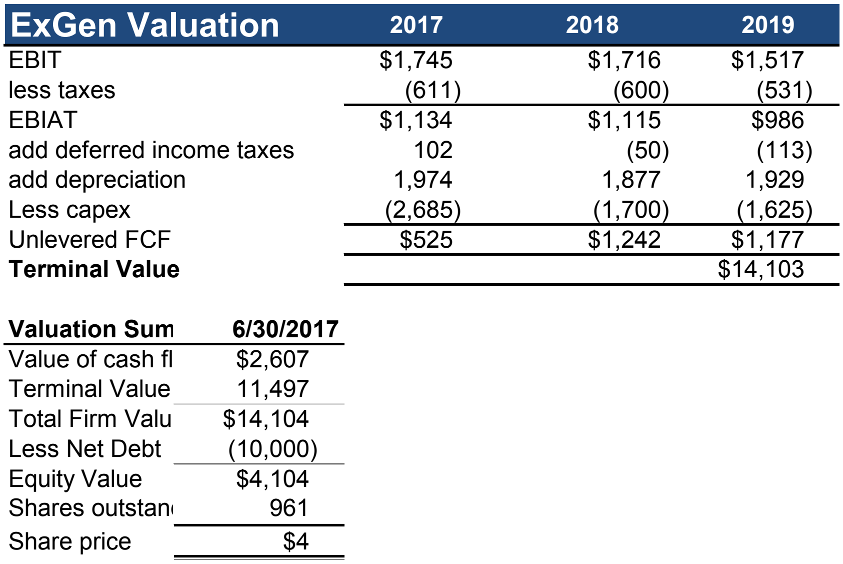


Source: Citi Research

Note that EBITDA above adds back $43m of leases that aren't added back in in figure 1 above.

- We are using our bottoms up DCF approach to value ExGen. We ascribed terminal EBITDA multiple of 5.5x, based on our views around ExGen's fleet asset life and Unlevered Free Cash Flow Conversion (UFCF) factor. We used WACC of 8.5%, which incorporates a risk profile of standard hybrid utility. The table below summarizes our DCF valuation.

Figure 5. DCF Output



ExGen Valuation	2017	2018	2019
EBIT	$1,745	$1,716	$1,517
less taxes	(611)	(600)	(531)

Share price	$4

Source: Citi Research

ZECs Not = RECs

- **IPPs filed lawsuit in the US District Court for the Southern District of New York against ZECs on 10/19.** Some of the key points made are that ZECs intrude with FERC authority, will impact wholesale energy and capacity markets, will reverse retirement decisions and will result in captive retail customers bailing out specific power plants.

- **ZECs not the same as RECs.** We think ZECs are different from RECs because the criteria to qualify for ZECs is that the plant isn't adequately compensated in the FERC regulated wholesale power markets. By making plant economics a criteria to qualify for ZECs (to keep plants like IP2/3 out), ZECs by definition are 'tethered' to power markets. The annual adders of ZECs are also tethered to capacity markets. This fact pattern goes against the Supreme Court ruling in Hughes vs. Talen and why we believe ZEC will be cancelled. This decision may finally end up with FERC.

- **Is a federal nuclear bailout coming?** We don’t see a Trump administration moving in that direction.

- **We estimate the value impact to be ~2/share.** We have calculated ZECs revenue based on six tranches, each of them effective for 2 years starting in 2Q17 and going through 1Q29. We model that NY plants (Nine Mile, Gina and Fitzpatrick) would generate around 16TWh annually. We have used WACC of 8.5% and Tax Rate of 35% to calculate the NPV of ZECs benefit at ~$1.7B.

IL SB 2814

- **Time constraints and continued opposition on SB 2814 drive our skepticism.** While meaningful changes made to the bill on Nov 22nd suggest a potential compromise and a positive step, the bill continues to face opposition. Recent reports lay out the large economic impact of the bill. Bridging these gaps to get the bill approved by December 1, we think, is challenging.

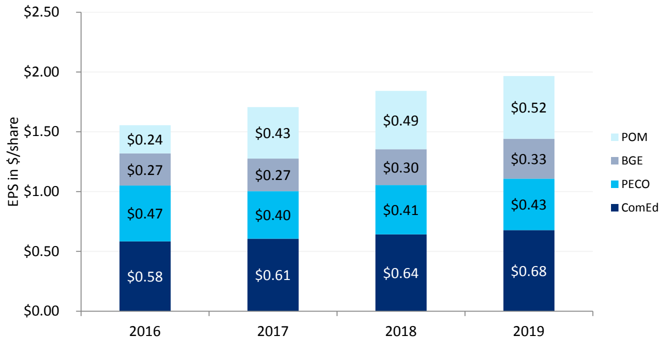
- **We estimate the value impact to be $1/share.** We model that IL nuclear plants (Quad Cities & Clinton) would generate around ~16TWh annually. Our analysis starts on 1Q17 and goes through 4Q29. We have used Social Carbon cost of $16.5/MWh and annual adjustments (as described in the bill) to calculate approximate annual revenue of ~$200mm. We applied WACC of 6.5% and Tax Rate of 35% to calculate the NPV of ZECs at ~$1.0B.

Updated Utility Forecast and Valuation.

- EXC is continuing to invest in utilities business. PHI had a solid contribution in 3Q16. A number of rate cases are filed and push to integrate and streamline PHI is on the way. ExGen is to fund the growth plans at utilities with close to ~$3B in commitments for next four years.

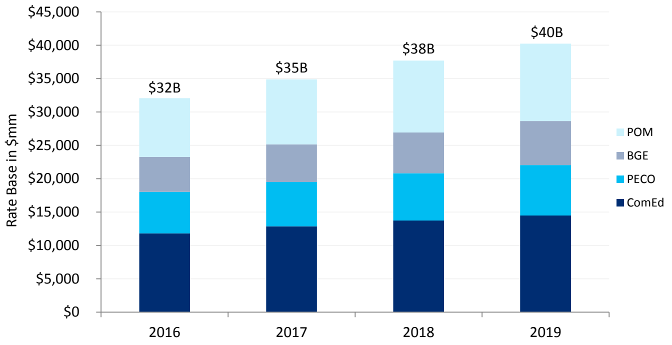
- We have updated our model for the latest financial results, management guidance, and rate case schedule. Charts below show our updated EPS profile and rate base projections at each utility sub.

Figure 6. EPS Profile of Utilities



Source: Citi Research

Figure 7. Rate Base Projections at Utilities



Source: Citi Research

- We are using our bottoms up DCF approach to value Utilities business. We ascribe terminal PE multiple of 17.0x to both legacy utilities as well as PHI. We also apply WACC of 6.5% to both regulated utilities. Our terminal PE multiple is based on long-term growth rate of ~5%. Chart below shows our DCF valuation output.

Figure 8. DCF Output – Legacy Utility

EXC Utility Valuation	2017	2018	2019
EBIT	$2,575	$2,755	$2,932
less taxes	(901)	(964)	(1,026)

Valuation of Parent & Other

- We value the parent at ($5)/share based on net debt at parent less the NPV of the debt tax shield and value of NOLs. As parent debt isn't really linked to utilities, we value this debt separate from our utility valuation. Also, we don't use an earnings multiple as it artificially lowers the value of parent debt given low interest rates of revolver / CP.

Exelon Corp

Company description

Exelon Corp (EXC) is an integrated electric and gas utility that operates three

utilities in Pennsylvania, Illinois, and Maryland and the largest deregulated nuclear fleet in the United States. Exelon's regulated businesses consist of Commonwealth Edison Company (ComEd) in IL, PECO Energy Company (PECO) in PA, and Baltimore Gas & Electric in MD. Exelon Generation operates the largest nuclear fleet in the United States, with plants located concentrated in the Midwest and the Mid-Atlantic regions.

Investment strategy

We rate the shares of Exelon Corp Sell (3). Our rating is based on concerns around the management team’s strategic vision and execution, downside related to the Pepco transaction, concerns around the economics of Exelon’s nuclear fleet with low unlevered free cash flow conversion (UFCF) of ~45% and a weak utility business with below average growth of ~4% through 2019

Valuation

We value EXC using a sum-of-the-parts approach to get to our $29 target. We value ExGen at $4/share and believe ExGen’s core coal and nuclear assets will continue to experience weak economics. Valuation is based on a 5.5x 2019 EBITDA multiple that is supported by an UFCF conversion of 45%. The utilities business is valued at $22/share based on a 17x terminal PE multiple. We also add $8/share value provided by PEPCO. We back out $5/share for the parent to get to our price target

Risks

Commodity price risk affecting merchant generation – If natural gas prices rise, wholesale power prices will likely rise, raising commodity margins.

Exelon is inherently a long natural gas position since natural gas generation sets the price of power in its key generation markets. If forward natural gas prices rise significantly from current prices, Exelon’s earnings will likely exceed our forecasts.

Regulatory risk – All regulated utilities are subject to state and federal regulatory agencies that can materially affect shareholder returns. Failure to obtain fair recovery for capital expenditures or increases in operating costs can diminish returns to shareholders and adversely affect the share price.

Credit rating – Exelon’s generation business is currently two notches above a high yield credit rating, but declining cash flows at the merchant business presents some risk of a possible credit rating downgrade barring deleveraging through an equity issuance, asset sale, or other means. If ExGen’s credit rating is lowered to high yield status, ExGen would likely have to increase their collateral and it could pressure hedging activities going forward, which would reduce our earnings outlook.

If the impact on the company from any of these factors proves to be more negative/positive than we anticipate, the stock will likely have difficulty achieving our financial and price targets.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

(For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and advices given herein are not part of investment advisory activity. Investment advisory services are provided by authorized institutions to persons and entities privately by considering their risk and return preferences. Whereas the comments and advices included herein are of general nature. Therefore, they may not fit to your financial situation and risk and return preferences. For this reason, making an investment decision only by relying on the information given herein may not give rise to results that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the “Firm”), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report.

Analysts’ compensation is determined by Citi Research management and Citigroup’s senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the “Firm”). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2016	**Buy**	**Hold**	**Sell**	**Buy**	**Hold**	**Sell**
Citi Research Global Fundamental Coverage	47%	39%	14%	0%	100%	0%
% of companies in each rating category that are investment banking clients	66%	61%	60%	0%	64%	0%

Guide to Citi Research Fundamental Research Investment Ratings:

Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.

Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.

Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation.

Catalyst Watch Upside/Downside calls:

Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term

total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES

Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Praful Mehta; Maxwell S Burke; Tulkin Niyazov, CFA; Jesse Chai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

European regulations require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research fundamental research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that were at the time investment banking clients shown in brackets) is as follows: Q3 2016 Buy 32% (68%), Hold 44% (64%), Sell 24% (61%); Q2 2016 Buy 31% (68%), Hold 45% (63%), Sell 24% (61%); Q1 2016 Buy 31% (67%), Hold 45% (63%), Sell 24% (61%); Q4 2015 Buy 31% (67%), Hold 45% (63%), Sell 24% (63%).

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research

may be periodically restricted from referencing certain issuers due to legal or policy reasons. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted. Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

Illinois Senate and House Pass SB2814

On December 1, the Illinois Senate and House of Representatives passed SB2814, which among other things provides zero emission credits. These credits will allow Quad Cities and Clinton to remain viable. The base expectation is that for these plants to remain in operation that the economics have to be at least as good as the economics for closing the plants combined with a risk premium associated with operating nuclear plants. There are many components to this bill that impact renewable energy, distribution utilities, energy efficiency and low income assistance. However, the most critical and followed issue in this bill was to provide zero emission credits to nuclear plants for 10 years. We expect EXC to comment on the specific impacts of this bill on the year end conference call. For now we see the passage of SB2814 as a positive and de-risking event for EXC.

Estimate Change / Estimates Change

Exelon Corporation

EXC: Strong 3Q Reported; Raising 2016 Estimate

EXC reported ongoing 3Q16 EPS of $0.91 vs. $0.83 in the prior-year period. Results were well above views. EXC raised 2016 guidance to $2.55-$2.75 from $2.40-$2.70, or $0.10 per share at the midpoints. We have raised our 2016 estimate to $2.65 per share from $2.55 following the strong 3Q results.

Key Investment Points

Strong Quarter Reported - On October 25, EXC reported 3Q16 GAAP EPS of $0.53 vs. $0.69. Excluding unusual items, ongoing earnings were $0.91 vs. $0.83, well above consensus expectations of $0.79 per share.

3Q Tailwinds - Results were driven by favorable weather, lower storm activity and favorable market conditions (hot weather and low market prices to serve contracted load) at Constellation.

Guidance Raised - Following the strength of the quarter, EXC raised and narrowed 2016 guidance to $2.55-$2.75 from $2.40-$2.70 per share. The higher earnings outlook is split evenly between the ComEd and PHI segments.

Estimate Raised - Given the strength of the quarter's results, we are raising our 2016 estimate to $2.65 from $2.55 per share.

Valuation

Based upon our 2017 estimate, shares of EXC stock trade at a P/E ratio of 12.6x, while larger-cap, commodity-exposed peers trade at 14.7x. We note EXC has relatively higher commodity exposure than the average peer. We find shares modestly attractive, but remain **Sector Weight** on shares around commodity uncertainty.

Investment Risks

We believe the primary risks facing EXC are any deterioration of regulatory relationships in the jurisdictions where EXC has regulated operations, any further weakening of commodity pricing and any potential changes in policy toward reduced support of nuclear plants.

The Details

On October 26, 2016, EXC reported 3Q16 GAAP EPS of $0.53 vs. $0.69 in the prior-year period. Absent unusual items, ongoing earnings were $0.91 vs. $0.83 per share. Results were well-above guidance of $0.65-$0.75 per share and consensus of $0.79. EXC indicated drivers for the quarter included hot weather at ComEd and PECO, O&M expense below budget due to reduced storm activity and favorable conditions at Constellation. PHI and BGE have decoupling mechanisms, which reduced the impact of hot weather at those subs. Constellation benefited from hot weather driving higher volumes and low market prices to source electricity to serve contracted load. EXC raised its 2016 guidance following the quarter's strength, to $2.55-$2.75 from $2.40-$2.70 per share. The $0.10 increase (at the midpoints) is split evenly between the ComEd and PHI utility outlooks. We have raised our 2016 estimate to $2.65 from $2.55.

3Q16 Highlights:

- Relative to our estimate, weather and lower O&M results drove the beat.
- Generation segment ongoing earnings decreased $123 million ($376 million vs. $499 million) due to higher income taxes from a decrease in the domestic production activities deduction, decreased capacity prices and increased nuclear decommissioning amortization expense.
- ComEd ongoing results rose $35 million ($186 million vs. $151 million), driven by favorable weather and higher electric T&D formula rates.
  - Cooling degree days increased 32.5% compared to 3Q15 and were 37% above normal.
  - Deliveries increased 7.0%, while weather normalized deliveries were largely flat.
- PECO ongoing results increased $32 million ($123 million vs. $91 million), primarily due to favorable weather and increased electric distribution revenue from the January 1 rate increase.
  - Cooling Degree days were up 8.6% YOY and 38.6% above normal.
  - Electric deliveries increased 5.1% vs. 3Q15 and were essentially flat on a weather-normalized basis.
  - Gas deliveries decreased 2.6% YOY and decreased 3.0% on a weather-normalized basis due to lower use per customer.
- BGE earnings increase $3 million ($55 million vs. $52 million) due to June 2016 rates and transmission revenue, largely offset by increased amortization associated with the AMI program and by the increased underground conduit rental fees from the City of Baltimore.
  - BGE has revenue decoupling, so weather minimally impacts earnings.
- PHI earned $130 million in the quarter.

Disclosure Appendix

Exelon Corporation - EXC

Exelon Corporation is an investment banking client of ours.

We expect to receive or intend to seek compensation for investment banking services from Exelon Corporation within the next three months.

During the past 12 months, Exelon Corporation has been a client of the firm or its affiliates for non-securities related services.

As of the date of this report, we make a market in Exelon Corporation.

For the three-year history represented in this chart, this stock has been rated Sector Weight.

Reg A/C Certification

The research analyst(s) responsible for the preparation of this research report certifies that:(1) all the views expressed in this research report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers; and (2) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst(s) in this research report.

Tax Court Rejects Exelon's Position on Like-Kind Exchange

On September 19, the Tax Court rejected Exelon's position in the like-kind exchange case and ruled that Exelon was not entitled to defer tax on the transaction. In addition, the Tax Court ruled that Exelon is liable for accuracy-related penalties. Consistent with previous disclosures, Exelon estimates that the potential tax and after tax interest, exclusive of penalties that could become payable, may be as much as $870M, of which $300M would be attributable to ComEd after consideration of Exelon's agreement to hold ComEd harmless. The $870M is comprised of $1,190M of tax and interest that could become payable in 2016, reduced by $320M of interest benefit that will be realized in subsequent taxable years. The key takeaway is that outside of the penalty, all amounts discussed were planned for and included in disclosures and the analyst day projections. The penalty is $190M comprised of $260M of penalties and interest reduced by $70M of tax benefits. In order to appeal the decision, Exelon would be required to either post a bond or pay the tax, penalties and interest for the tax years before the Court.

The quick background is that in 1999, Exelon took a position on its income tax return to defer approximately $1.2B of tax gain through the sale of ComEd's fossil generating assets. The gain was deferred by reinvesting a portion of the proceeds from the sale in qualifying replacement property under the like-kind exchange provisions of the IRS code. The like-kind exchange replacement property purchased by Exelon included interests in three municipally owned electric generation facilities which were properly leased back to the municipalities. The IRS disagreed with this position and the saga has been ongoing since 2005.

Exelon

Analyst Day Harps on Regulated Business; Story Takes on New Chapter with Pepco

Maintain Rating: NEUTRAL | PO: 37.00 USD | Price: 35.53 USD

Equity | 11 August 2016

Key takeaways

- Story has shifted gears from regulated future outlook to will Pepco execute on improved ROEs; tempered rate base outlook.
- ExGen sees benefit from approval of NY's ZECs, agreement to purchase FitzPatrick, and acquisition of ConEd's Retail Business
- Exelon announced 2Q16 earnings of $0.65, beating street estimates of $0.56; 2016 EPS midpoint guidance remains at $2.55.

Rate base light, but focus on earned ROEs

The rate base we estimated based on prior guidance from 2015 EEI for Pepco came in light at the analyst day. The company trimmed rate base expectations for Pepco of roughly $700M in 2018 from the last time presented at EEI due primarily to bonus D&A. Revised guidance also incorporated the reduction of $200M in unrecoverable capital/lower capex from the BGE rate case into rate base projections. The reduction lowers our regulated earning expectations by roughly $0.04 in 2018, bringing our prior estimate of $1.72 per share to a regulated+parent EPS for 2018 of $1.68 per share and roughly in line with the 2018 EPS midpoint guidance of $1.65 per share. Net result, we see the mild reduction in rate base as a marginal negative to the regulated business.

ExGen gets positive boosts from acquisitions and ZECs

ExGen saw incremental positives of an agreement on Fitzpatrick, purchase of ConEd Solutions Retail business, and NY PSC approval of ZECs. While FitzPatrick is largely thought to contribute negligible net income, the ZEC will contribute $0.06 of EPS. The Ginna and Nine Mile Point plants will also benefit from the ZEC program with a contribution of $0.09 as outlined in our prior note and affirmed by the company. The ZEC at Ginna will come on line as the RSSA rolls off, which we estimate contributes roughly $0.03 to ExGen in 2016. The ConEd Solutions business will provide 15TWh of retail hedging, but it is not expected to significantly contribute to earnings, so we assign $0.03 of accretion to the deal. As we lay out in Table 1, the net result is a $0.15 of uplift to help offset the ($0.20) of margin decline in power markets over the next two years and a dilutive impact of ($0.05). In total, the impacts on bridging the 2016 ExGen EPS midpoint guidance of $1.25 to 2018 EPS expectations lead us to $1.15 per share for ExGen. In our view, the recent events are a marginal positive for the ExGen business model.

Exelon story deepens roots in regulated; Maintain Neutral

Exelon has tightened up the story and laid out fundamental changes to support a more refined focus on the regulated businesses. The cash harvesting program from ExGen will lead to $8.2B of Free Cash Flow over the next five years will provide added flexibility to the continued build out of the regulated business. However, with the focus now on regulated, all eyes are now focused on the improvements in Pepco and whether the company can execute on improving ROEs; maintain Neutral rating on EXC shares.

Exelon: While Pepco saga continues, forward power prices continue to slide 10 March 2016

Other 2Q16 Takeaways

Exelon beats consensus on 2Q16 EPS; guidance affirmed

On 8/9/16, Exelon reported 2Q16 EPS of $0.65, beating our estimate and Street estimates of $0.56. The beat appears to largely be on quarterly allocation as 3Q16 guidance of $0.65-0.75 was roughly a dime lower than estimates. The company also reaffirmed its 2016 EPS guidance of $2.40-$2.70.

Exelon announces agreement to purchase FitzPatrick

Exelon announced on 8/9/16 a tentative deal for the 838 MW FitzPatrick nuclear plant. The proposed deal will pay Entergy $110M in cash and Exelon will provide $200-250M in recovery to Entergy for operations until the deal closes. Exelon will also invest roughly $300M into the plant for fuel and integration. Following the next refueling Exelon will start receiving all revenue streams for the plant. Based on the investment needs and payments to Entergy, the comparable transaction price is $560M and leads us to a price of $668/kW.

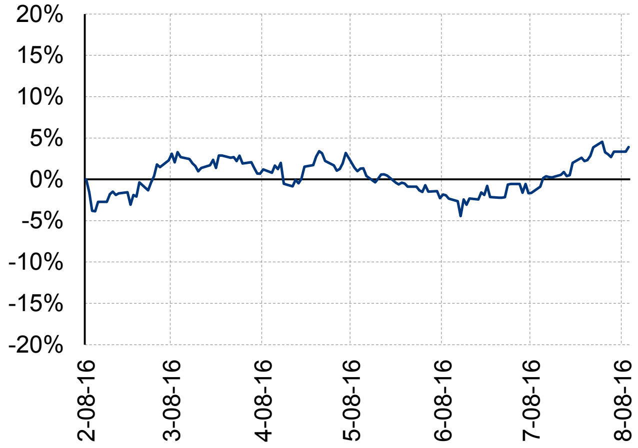
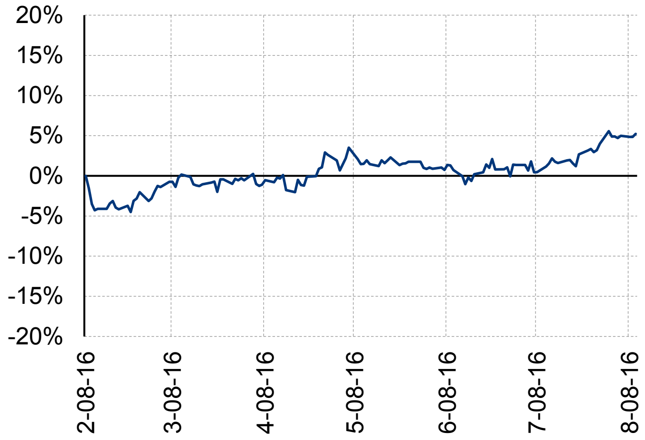
Relative Performance Charts

Chart 1: EXC relative performance vs. utilities group average



Source: BofA Merrill Lynch Global Research, Bloomberg

Chart 2: EXC relative performance vs. integrated electrics average



Source: BofA Merrill Lynch Global Research, Bloomberg

Price objective basis & risk

Exelon (EXC)

Our $37/share price objective for EXC shares is derived from our sum of the parts valuation model, where we assign approximately $8 of value to ExGen, ($3) for the parent, and approximately $32 of value to the regulated utility. We value integrated electric utilities, including Exelon, using a sum of the parts valuation model based on 2018E earnings and EBITDA. For Exelon specifically we use a target 7.2x EV/EBITDA multiple to value the deregulated generation segment, in line with peers. We apply a target 17.0 P/E multiple to value the regulated side of the business, which is a discount to regulated peers at 17.5x to reflect the generally below-average ROEs allowed by the state commissioners for the states in which Exelon has regulated operations.

Downside (upside) risks to our price objective are: 1) increasing (decreasing) of forward power prices driven by rising natural gas prices, heat rates, or Northeast and Midwest gas basis to Henry Hub, 2) regulatory outcomes as well as changes in nuclear regulation, 3) deterioration (improvements) in operating efficiency beyond our base scenario.

Equity Investment Rating Distribution: Global Group (as of 30 Jun 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1560	49.41%	Buy	1178	75.51%
Hold	729	23.09%	Hold	552	75.72%
Sell	868	27.49%	Sell	547	63.02%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

MLIBLMB and Merrill Lynch (Singapore) are regulated by MAS. Bank of America N.A., Australian Branch (ARBN 064 874 531), AFS License 412901 (BANA Australia) and Merrill Lynch Equities (Australia) Limited (ABN 65 006 276 795), AFS License 235132 (MLEA) distribute this report in Australia only to 'Wholesale' clients as defined by s.761G of the Corporations Act 2001. With the exception of BANA Australia, neither MLEA nor any of its affiliates involved in preparing this research report is an Authorised Deposit-Taking Institution under the Banking Act 1959 nor regulated by the Australian Prudential Regulation Authority. No approval is required for publication or distribution of this report in Brazil and its local distribution is by Merrill Lynch (Brazil) in accordance with applicable regulations. Merrill Lynch (DIFC) is authorized and regulated by the DFSA. Research reports prepared and issued by Merrill Lynch (DIFC) are done so in accordance with the requirements of the DFSA conduct of business rules. Bank of America Merrill Lynch International Limited, Frankfurt Branch (BAMLI Frankfurt) distributes this report in Germany and is regulated by BaFin.

This research report has been prepared and issued by MLPF&S and/or one or more of its non-US affiliates. MLPF&S is the distributor of this research report in the US and accepts full responsibility for research reports of its non-US affiliates distributed to MLPF&S clients in the US. Any US person receiving this research report and wishing to effect any transaction in any security discussed in the report should do so through MLPF&S and not such foreign affiliates. Hong Kong recipients of this research report should contact Merrill Lynch (Asia Pacific) Limited in respect of any matters relating to dealing in securities or provision of specific advice on securities. Singapore recipients of this research report should contact Merrill Lynch International Bank Limited (Merchant Bank) and/or Merrill Lynch (Singapore) Pte Ltd in respect of any matters arising from, or in connection with, this research report.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This research report provides general information only. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of any specific person. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.

Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented in this report. Such ideas or recommendations reflect the different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this report.

In the event that the recipient received this report pursuant to a contract between the recipient and MLPF&S for the provision of research services for a separate fee, and in connection therewith MLPF&S may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom MLPF&S has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by MLPF&S). MLPF&S is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities mentioned in this report.

Growth runway extended

Much to like in Philadelphia although investors still sold new on the day

EXC's long-awaited analyst day was mostly on target with top-tier utility EPS growth now seen out through 2020 and a commitment to de-levering competitive generation while closing money losing nuclear units if state subsidies are not secured. NY's Clean Energy Standard is an upside – potentially larger if EXC closes on ETR's FitzPatrick unit, but we do not yet include ZEC revenues in our numbers. We continue to see EXC as a cheap way to own high-quality regulated utility growth. EPS in our 2018 valuation year is unchanged, but we raise our target by $1 to $40 as we re-weight our SOTP to credit EXC's ongoing strategic shift towards regulated growth.

Same 7-9% utility growth, but now after dilution and extended to 2020

EXC now forecast L-T utility EPS growth of 7-9% through 2020 starting from a 2016 base adjusted to include a full year of recently acquired Pepco and parent drag. This compares to the prior 7-9% growth in utility net income through 2018 which excluded parent drag and dilution from convertibles issued to buy Pepco. All told, the new 7-9% is higher quality and longer-lived than before. Plus actual annual EPS ranges imply a 9% mid-point CAGR and the trajectory is front-end loaded. With rate base growing at ~6% much of the growth premium comes from raising returns at Pepco, a process expected to take two rate case cycles. EXC was somewhat light on specifics here, but the track record post prior mergers merits some benefit of the doubt in our view.

ExGen numbers complicated by assumed IL nuke shutdowns

Chances of IL passing a clean energy credit in the fall seem remote and EXC has quantified $0.07 of 2019 run-rate uplift from closing Clinton (2017) and Quad Cities (2018). Overall mgmt reaffirmed $3B of debt reduction for ExGen by 2020 and target 3x debt to EBITDA. We see potential for surplus cash vs. this target particularly with ZEC payments. This would be put towards reducing parent leverage but faster dividend growth also seems a possibility given the trajectory for utility coverage ratio (77% by 2020 vs. 98% in 2016).

Lower 2017E but 2018E unchanged; PT raised $1 on SOTP weighting

We leave 2016E unchanged at $2.55, lower 2017E from $2.65 to $2.55 and hold 2018E at $2.80 with the mix shifting towards utility. Value-wise we look at parent debt both capitalized as a drag to utility EPS ($41) and as a direct claim against equity ($37). With regulated growth the focus (80% of 5-year plan capex) and a disciplined ExGen financial plan, we shift our weighting from 50:50 to 75:25 which bumps our price target by $1 from $39 to $40. Downside risks include lower-than-expected forward power prices, worse-than-anticipated rate case outcomes.

Company Profile

Exelon is a diversified utility with ownership of the largest nuclear fleet and retail services business in the U.S. and three regulated utilities serving Chicago, Philadelphia and Baltimore. EXC owns ~35,000MW of merchant generation capacity located primarily in the Midwest and Mid-Atlantic, with smaller gas-fired and nuclear assets in New England, New York, and Texas.

Adjusting estimates for new disclosures

EXC released a lot of new information in a 170-page slide deck at their first Analyst Day following the Pepco Holdings acquisition. The slides included updated capital investment projections through 2020, rate base by utility, adjusted O&M forecasts, nuclear fuel spend (lowered for Clinton and Quad Cities retirements), and updated gross margin/hedges for the Generation business. While we have adjusted our model and estimates to reflect these new disclosures, the bottom line impacts are modest. As a reminder, we had incorporated Pepco into the model a while back.

Our 2016E of $2.55 remains unchanged at the midpoint of management's reaffirmed EPS guidance of $2.40-$2.70. Meanwhile, we are lowering our 2017E to $2.55 from $2.65. The reduction is primarily due to a lower forecast at Generation. Our prior forecast for Generation gross margin was about $150M too high, excluding the impacts of the Clinton nuclear plant closure ($100M in 2017). While closing Clinton and Quad Cities is expected to positively impact EPS by $0.07 by 2019, we don't believe the impact would be as favorable in 2017 or 2018. From our reading of the slides EXC is pointing to a gross margin decline of roughly $200M from 2016 to 2017 and for adjusted O&M to rise $25M implying a net reduction in year-over-year ExGen net income of ~$150M or $0.15/sh. That said, we also expect a higher tax rate, interest expense, D&A (even including the impact of Clinton shutting down), and higher shares outstanding to further weigh on YOY comps at this segment, getting us to our $1.05E for ExGen in 2017 vs. $1.26 in 2016. Note that the inclusion of Zero Emission Credit payments on EXC's existing upstate nuclear units and the purchase of FitzPatrick would fully offset this negative adjustment but we are not folding these in quite yet. Meanwhile, we have updated our utility estimates to reflect new rate base disclosures (higher at ComEd but lower at PHI) and management's guidance for HoldCo drag of $0.15/sh, but overall combined Utility and HoldCo projections for 2017 are unchanged at $1.50. We ended up at the midpoint of management's new guidance for these segments on a combined basis of $1.35-$1.65.

For 2018, we are leaving our EPS forecast of $2.80 unchanged. That said, we have lowered our Generation forecast by $0.04/sh but raised our Utility/HoldCo forecast by a similar amount. The reduction at Generation is also due to lower-than-anticipated gross margin, offset by lower O&M and D&A related to the closure of Clinton in 2017 and Quad Cities on June 1, 2018. Meanwhile we have raised our Utility/HoldCo to get us closer to the midpoint of EXC's range of $1.50-$1.80.

Upside likely from FitzPatrick deal/ZEC payments

As noted above, our updated forecasts still do not reflect uplift from the recently announced FitzPatrick acquisition or New York's establishment of a Clean Energy Standard and associated Zero Emissions Credit payments to upstate NY nuclear facilities. As a result, we see **upside of ~$0.15/sh in 2017 and 2018** should the FitzPatrick deal go through and assuming NY's Clean Energy Standard survives expected legal challenges.

On Tuesday, EXC announced a deal to acquire the 838 MW FitzPatrick nuclear plant from ETR for $110M or $131/kW. This headline number is before the cost of refueling the plant which we understand would be funded by EXC. The transaction is expected to close in Q2 2017 but requires sign off by the US DOJ, NRC, FERC, and NY Public Service Commission. While the deal arguably establishes a low value on a $/kW basis for a merchant nuclear plant, FitzPatrick's upstate New York location is really not a fair comparison with the average Exelon unit and Entergy is clearly highly motivated to exit remaining merchant positions where it can. The low headline print may also help EXC down the road given limited other comparables if and when EDF puts its share of CENG to EXC. On our numbers FitzPatrick should be at least a nickel accretive to EPS for Exelon including ZEC payments and depending on the net impact of taking on the decommissioning liability and trust fund.

For EXC's legacy upstate NY plants, which were acquired from Constellation in 2012, management indentified EPS uplift of $0.08-$0.10 per year associated with the Zero Emission Credit payments. While mgmt was vocal in expressing confidence that the ZEC methodology approved by the NY Public Service Commission will overcome expected legal challenges, EXC does not intend to include these payments in their gross margin disclosures until a necessary contract is signed with New York State Energy Research and Development Authority (NYSERDA). Given expected timing for this uplift will likely be included in the Q3 update and November EEI slide deck.

Do-or-die date for Clinton/Quad Cities approaching

EXC continues to press the Illinois legislature to pass supportive legislation in order to prevent the closure of the Clinton and Quad Cities nuclear plants. That said, no one we spoke with during Wednesday's event or the dinner the night before was confident that IL would take action before management reaches the point of no return on retiring these units, which EXC indicates is sometime in December. We would view shutdown or passage of supportive legislation (akin to the Clean Energy Standard in NY) as favorable outcomes for EXC. As management clarified, closing these money-losing plants should result in $0.07/sh of uplift to EPS by 2019 and it seems reasonable to expect at least as much in terms of uplift from legislation, although this could potentially occur before 2019.

Q2 earnings result

Ahead of the Analyst Day, EXC reported Q2 operating EPS of $0.65 vs. our $0.57E and $0.56 consensus. Results beat our estimate on better-than-anticipated performance at EXC's legacy regulated utilities (in part due to $0.03/sh of tax benefits) and at Generation (likely helped by impact of Ginna RSSA implementation retroactive to April 1, 2015). Results at POM and other were slightly weaker than we had anticipated.

Valuation

We value the utility segment by applying a 17.5x P/E multiple to our 2018 estimates for ComEd, PECO and the POM utilities, and an average 17x multiple for BG&E. We believe POM earnings merit a premium as we anticipate faster growth at this segment as EXC closes the gap between authorized and earned returns in 2018 and beyond. We also apply premiums to ComEd earnings given potential upside from higher interest rates as ComEd's ROE is set based on a formula incorporating the yield on the 30-year Treasury bond which remains close to multi-year lows. We also give PECO a premium given a history of over-earning and our expectations for this to continue.

Meanwhile, we value ExGen by applying a 6.5x EV/EBITDA multiple to our 2018 estimate. Our 6.5x multiple is now relatively in line with our targeted EV/EBITDA multiple for merchant generators. On the one hand, we believe a modest discount is merited given ExGen's still more limited free cash flow generation than IPP peers given their capital-intensive nuke fleet. On the flipside, EXC's nuclear fleet merits some incremental value vs. IPPs given the potential for new revenue streams from clean energy standards or a future carbon trading scheme. In addition, EXC also has a stronger credit and lower leverage profile at ExGen than pure-play IPP peers, with a plan to de-lever further over the coming years.

Similar to our valuation methodology for FirstEnergy, we take a hybrid approach for the corporate / other segment. We derive a $37 price target when valuing the corporate segment EBITDA at a 6.5x EBITDA multiple and then subtracting corporate debt as a direct offset to equity value (effectively treating parent debt as being on the merchant business). In our other scenario (Valuation B) we see a $41 price target valuing EXC's corporate earnings drag of $0.16/sh using our regulated distribution P/E multiple of 17.4x (treats parent debt as effectively being on the utilities).

Our $40 price target reflects a 25/75 weighting of these two book-end valuation approaches. We are now giving a higher weighting to Valuation B given EXC's increasing strategic focus on the regulated utilities and ongoing commitment to de-levering at ExGen.

Figure 1: Exelon Sum-of-the-Parts Valuation

Valuation A

Business Segment	Valuation Metric	2018E	Multiple	Value
ComEd	P/E	$0.61	17.5x	10,280
PECO	P/E	$0.45	17.5x	7,578
BG&E	P/E	$0.34	17.0x	5,632
POM	P/E	$0.40	17.5x	6,813
Utility Equity Value				**30,303**
Generation / Retail / Corp	EV/EBITDA	3,222	6.50x	20,940
Less: Generation Net Debt				(8,642)
Less: Corp Net Debt				(7,063)
Non-Utility Equity Value				**5,236**
Total Equity Value				**35,538**
Diluted Average Shares Outstanding (2018E)				967
Price Target ($/sh)				**37**

Valuation B

Business Segment	Valuation Metric	2018E	Multiple	Value
ComEd	P/E	$0.61	17.5x	10,280
PECO	P/E	$0.45	17.5x	7,578
BG&E	P/E	$0.34	17.0x	5,632
POM	P/E	$0.40	17.5x	6,813
Corp	P/E	($0.16)	17.4x	(2,620)
Utility & Corp. Equity Value				**27,683**
Generation / Retail	EV/EBITDA	3,176	6.50x	20,641
Less: Generation Net Debt (2018E)				(8,642)
Non-Utility Equity Value				**12,000**
Total Equity Value				**39,683**
Diluted Average Shares Outstanding (2018E)				967
Price Target ($/sh)				**41**

Source: Deutsche Bank

Risks

Downside risks include lower-than-expected forward power prices, worse-than-anticipated rate case outcomes, lower retail margins given heightened competition, higher interest rates, and a lower-than-expected contribution from POM.

Equity rating key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.

Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. These trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may have from time to time discussed with our clients, including Deutsche Bank salespersons and traders, or may discuss in this report or elsewhere, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects makes it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction.

Exelon

Illinois Legislature Passes Bill to Save the Nukes

Bank of America Merrill Lynch

Maintain Rating: NEUTRAL | PO: 32.00 USD | Price: 32.17 USD

Equity | 01 December 2016

Key takeaways

- Illinois passed a bill in support of Zero Emission Credits for Clinton and Quad Cities; we estimate a $0.15 benefit to ExGen.
- Expect legal challenges on the ZEC at both the Illinois Supreme Court and the FERC; PJM's BRA may now see new rules.
- Passage of the ZECs are a marginal positive for Exelon but legal challenges remain; maintain Neutral rating on EXC shares.

Illinois passes bill for zero emission credits

In the final hours on 12/1/16, Illinois legislatures in the House and Senate came together to pass SB 2814 with Governor Rauner expected to sign the bill into law. The bill provides several benefits to Exelon with the most prominent being the Zero Emission Credit (ZEC) program, which was designed to save Clinton and Quad Cities. The program will provide a cap to rate payers of $235M above current rates. However, NiHub power prices have deteriorated since the market index of power prices was set on 6/1/2016 and should lead to a large allocation of rate payers' bill towards ExGen. The structure of the ZEC payment is a function of Societal Cost of Carbon and is laid out in Table 1. The ZECs will run roughly for the next 10 years.

Based on our analysis of the ZEC, the program will add roughly $0.15 of EPS on 2019, based on a payment to generation that contributes $0.21 in 2019 as shown by our calculation in Table 1 while being reduced by roughly ($0.07) for the continued operation earnings drag of those plants as presented by the company at the Analyst Day. Overall, the passage of the legislation is a marginal positive for EXC shares.

Challenges await for Exelon on the ZEC program

The Illinois ZEC is likely to be challenged both at the FERC and Illinois Supreme Court. While the Illinois ZEC is structured in a similar manner as the NY ZEC program, the program is likely to see additional challenges, including an affiliate transaction challenge similar to that of FirstEnergy and AEP's PPAs that were successfully challenged at FERC. In our view, we believe there is higher probability that Illinois ZEC will be challenged and overturned based on the arguments that the impacts distort wholesale power markets. In addition, we now expect PJM to react to the subsidy to Quad Cities and will implement rules that will alter the PJM RPM Base Residual Auction in the ComEd zone.

Energy efficiency programs to now receive a return

The approximate $400M of spending on energy efficiency programs should improve ComEd's net income as the company can now capture a return on that spending. In our view, the increased returns for ComEd are a marginal positive for the regulated utility.

Exelon gets a win in Illinois; maintain Neutral rating

The win in Illinois marginally improves the outlook for ExGen, but we continue to see legal challenges as weighing on the stock for some time. We further see PJM power markets and capacity auctions (see our PJM note) as being a headwind for ExGen; maintain Neutral rating on EXC shares.

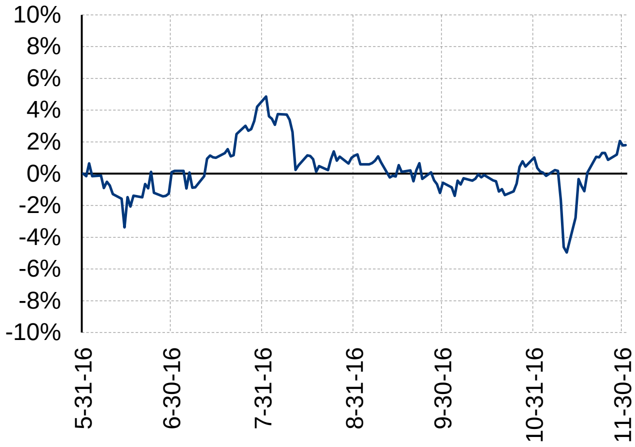
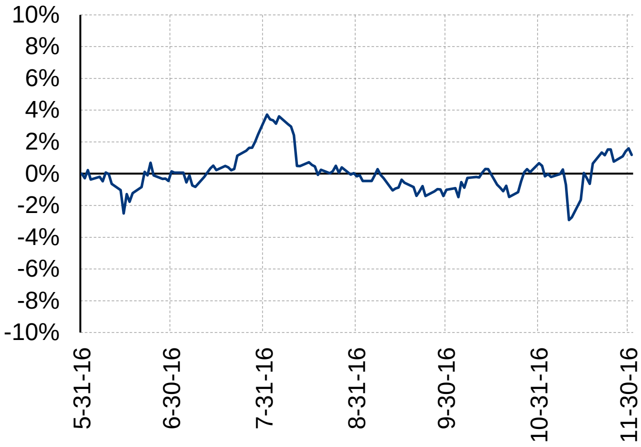
Relative Performance Charts

Chart 1: EXC relative performance vs. utilities group average



Source: BofA Merrill Lynch Global Research, Bloomberg

Chart 2: EXC relative performance vs. integrated electrics average



Source: BofA Merrill Lynch Global Research, Bloomberg

The indicators identified as Charts 1 and 2 above are intended to be an indicative metric only and may not be used for reference purposes or as a measure of performance for any financial instrument or contract, or otherwise relied upon by third parties for any other purpose, without the prior written consent of BofA Merrill Lynch Global Research. These indicators were not created to act as a benchmark.

Price objective basis & risk

Exelon (EXC)

Our $32/share price objective for EXC shares is derived from our sum of the parts valuation model, where we assign approximately $5 of value to ExGen, ($1) for the parent, and approximately $28 of value to the regulated utility. We value integrated electric utilities, including Exelon, using a sum of the parts valuation model based on 2019E earnings and EBITDA. For Exelon specifically we use a target 6.8x EV/EBITDA multiple to value the deregulated generation segment, in line with peers. We apply our discounted price target 13.5 P/E multiple with a 0.5x premium for favorable rate case outcomes to value the regulated side of the business.

Downside (upside) risks to our price objective are: 1) increasing (decreasing) of forward power prices driven by rising natural gas prices, heat rates, or Northeast and Midwest gas basis to Henry Hub, 2) regulatory outcomes as well as changes in nuclear regulation, 3) deterioration (improvements) in operating efficiency beyond our base scenario.

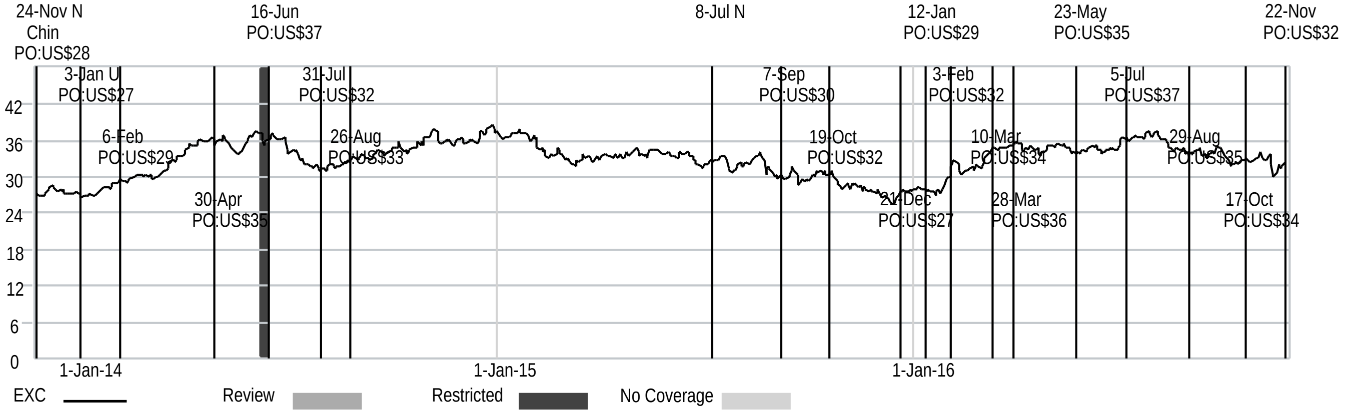
Analyst Certification

I, Brian Chin, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Disclosures

Important Disclosures

EXC Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of October 31, 2016 or such later date as indicated.

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	58	46.03%	Buy	45	77.59%
Hold	34	26.98%	Hold	29	85.29%
Sell	34	26.98%	Sell	20	58.82%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1553	49.44%	Buy	1130	72.76%
Hold	730	23.24%	Hold	538	73.70%
Sell	858	27.32%	Sell	514	59.91%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

Price charts for the securities referenced in this research report are available at http://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
MLPF&S or one of its affiliates acts as a market maker for the equity securities recommended in the report: Exelon Corp.
The issuer is or was, within the last 12 months, an investment banking client of MLPF&S and/or one or more of its affiliates: Exelon Corp.
MLPF&S or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Exelon Corp.
The issuer is or was, within the last 12 months, a non-securities business client of MLPF&S and/or one or more of its affiliates: Exelon Corp.
MLPF&S or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Exelon Corp.
MLPF&S or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Exelon Corp.
MLPF&S or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Exelon Corp.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of MLPF&S and/or one or more of its affiliates: Exelon Corp.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.

Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.

The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

"BofA Merrill Lynch" includes Merrill Lynch, Pierce, Fenner & Smith Incorporated ("MLPF&S") and its affiliates. Investors should contact their BofA Merrill Lynch representative or Merrill Lynch Global Wealth Management financial advisor if they have questions concerning this report. "BofA Merrill Lynch" and "Merrill Lynch" are each global brands for BofA Merrill Lynch Global Research.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This research report provides general information only. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of any specific person. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.

Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented in this report. Such ideas or recommendations reflect the different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this report.

In the event that the recipient received this report pursuant to a contract between the recipient and MLPF&S for the provision of research services for a separate fee, and in connection therewith MLPF&S may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom MLPF&S has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by MLPF&S). MLPF&S is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities mentioned in this report.

Receipt and review of this research report constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion, or information contained in this report (including any investment recommendations, estimates or price targets) without first obtaining expressed permission from an authorized officer of BofA Merrill Lynch.

Materials prepared by BofA Merrill Lynch Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Merrill Lynch, including investment banking personnel. BofA Merrill Lynch has established information barriers between BofA Merrill Lynch Global Research and certain business groups. As a result, BofA Merrill Lynch does not disclose certain client relationships with, or compensation received from, such issuers in research reports. To the extent this report discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this report. BofA Merrill Lynch Global Research personnel's knowledge of legal proceedings in which any BofA Merrill Lynch entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this report is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Merrill Lynch in connection with the legal proceedings or matters relevant to such proceedings.

This report has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of MLPF&S, any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Merrill Lynch Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Merrill Lynch and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This report may contain links to third-party websites. BofA Merrill Lynch is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this report and is not incorporated by reference into this report. The inclusion of a link in this report does not imply any endorsement by or any affiliation with BofA Merrill Lynch. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Merrill Lynch is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Merrill Lynch policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.

Certain outstanding reports may contain discussions and/or investment opinions relating to securities, financial instruments and/or issuers that are no longer current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with MLPF&S or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Merrill Lynch nor any officer or employee of BofA Merrill Lynch accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this report or its contents.

Illinois nuke talks gathering steam; endgame remains unclear

Timely Chicago visit focuses on legislative efforts to save EXC nukes

Yesterday in Chicago we met with EXC and ComEd senior mgmt as well as several stakeholders in discussions over proposed legislation supportive of EXC's at-risk nuclear plants (Clinton and Quad Cities) including Sen. Donne Trotter, the sponsor of the Next Generation Energy Plan bill (SB1585). Activity levels and optimism (from some at least) were higher than we thought - but the path remains challenging. In addition our EXC thesis is not premised on legislation and we continue to see the stock offering top-tier regulated growth at a discount, committed de-levering of the Genco and a potential kicker given nuke-favorable legislation in IL or elsewhere. Reiterate Buy and $38 PT.

Discussions ongoing, broader coalition; passing a bill remains a heavy lift

Back in the spring the IL legislature was unable to move a bill to sustain EXC’s at-risk nukes. Our sense post our trip is that momentum on a revised package is picking up ahead of the Nov/Dec Veto Session (begins 11/15). That said, passing a bill in the Veto Session remains very challenging given the need for a super-majority, competing budget issues and lack of clear indications of support from legislative leaders – notably Speaker Madigan and Gov. Rauner. As reported over the summer, a new package could include something for downstate coal plants, in addition to measures targeted at Clinton and Quad Cities along with renewables and changes to ComEd’s regulatory framework that support energy efficiency and microgrid investment. A revised bill is unlikely to emerge before the elections (11/8) with only a narrow window thereafter before the short Veto Session (only 6 days scheduled). Net/net we left Illinois convinced the issue will at least be taken up again with somewhat more momentum than we expected to find. That said, getting something passed and off the Governor’s desk by year-end remains a steep uphill battle.

NY ZEC faces legal challenge but FitzPatrick and program otherwise on track

On a separate but related front, yesterday power generators filed a complaint in US District Court alleging that the NY PSC discriminated against wholesale power markets and violated the Commerce Clause of the US Constitution in establishing a Zero Emissions Credit program to support EXC and ETR’s upstate NY nuclear plants. This was not a focal point of our trip but we note that EXC continues to believe that the ZEC program has strong legal standing and expected this challenge. Per EXC, the FitzPatrick deal and NY ZEC program continue to move forward, with final contracts with NYSERDA expected by mid-November. This is a bit delayed, but only modestly so. We note that our Buy rating, $38 target price and estimates do not include any assumed uplift for NY ZECs or Illinois legislation at this point.

Valuation and risks

Our Sum-of-the-Parts target includes ~$30 for the T&D utilities (17.4x blended P/E on 2018E, including POM) and ~$8 for Generation (6.5x EBITDA). Downside risks are lower power and gas prices; degradation of earned utility ROEs; higher interest rates; higher-than-expected operating expenses; weaker retail margins; and a weaker-than-expected contribution from POM.

Fight heats up in Illinois

Yesterday we hosted a client field trip to Chicago to visit senior management of Exelon and their Illinois-based utility, ComEd. We also met with key stakeholders involved in the state's ongoing energy policy debate, including Senator Donne Trotter, the sponsor of the Next Generation Energy Plan (SB 1585), introduced earlier this year; Howard Learner, the President and Executive Director of the Environmental Law & Policy Center; Alec Messina, Director of the IL Environmental Protection Agency and former policy advisor to Governor Rauner for energy and the environment; and Anthony Star, Director of the Illinois Power Agency. The main point of our visit was to learn more about ongoing discussions in the state over a potential new energy bill that would, among other things, support the continued operation of Exelon's Clinton and Quad Cities nuclear plants. Timing turned out to be opportune with the November Veto Session around the corner and Senator Trotter having publicly announced at an event on Tuesday his intent to re-introduce SB1585 in the Veto Session and expressing optimism that there would be sufficient consensus to move forward in both the House and Senate. The forum was sponsored by the Illinois AFL-CIO and included a "brief appearance" by House Speaker Michael Madigan. While some suggested this was a positive signal, Madigan's spokesman apparently indicated the speaker is waiting to see a final version before taking a position. Time will tell, but our overall view remains that the pathway to passing a bill is likely to be a challenging one given the particularly fractious state of the overall political dynamics in the state and lingering priorities.

Energy bill gaining momentum ahead of IL Veto Session

One thing that was clear from all the parties we met is that stakeholders continue to negotiate over a new energy bill, with a package likely to be introduced going into the Veto Session, which begins on November 15. The package clearly has not been finalized and EXC and others were unable to share much in the way of details. That said, it seems reasonable to assume any package would include a ZEC-like program designed to allow Clinton and Quad Cities to continue operating, provisions related to renewables and energy efficiency, some kind of help for downstate coal plants, which was not part of the original bill proposed earlier this year, and changes to ComEd's regulatory framework. While details remain sketchy consensus appears to be that the coalition of support includes one key consumer group (CUB) but not AARP. Labor interests and some (but again not all) environmental groups are also seen as on board with the AFL-CIO and University of Illinois' nuclear engineering department sponsoring a high profile event together earlier this week. State Attorney General Lisa Madigan has been vocally opposed, but relatively silent of late – and at least one observer we met with noted that it may be more challenging for her to build a coalition of opposition given some of the parties reported to be on board.

Reasons to think passage might have better chance

Investors may wonder why legislation would stand a chance of passing this time given that Exelon first initiated discussions over a bill to support its Illinois nuclear fleet back in 2014 and nothing has passed yet, even despite EXC's announced plans to close the Clinton and Quad Cities nuclear plants in 2017 and 2018 absent legislative action. The political environment in Illinois has not helped, with Republican Governor Rauner and Democrat House Speaker Michael Madigan openly at odds and according to press reports currently engaged in some particularly hostile proxy campaigning against each other in a number of the ongoing House and Senate election races. As a reminder, the IL legislature was unable to pass a state budget for 18 months and is now only operating on a temporary budget through year-end. That said, there are some valid reasons, in our view, to think the legislation may at least have a better chance this time around. First, the Governor and other parties, particularly labor and local legislators in the state clearly have an interest in preserving the jobs, environmental attributes, and tax revenues generated by the at-risk plants. Second, the parties are theoretically approaching the ‘do-or-die’ deadline, with Exelon saying the legislature’s final chance to pass a bill is at the Veto Session (clarified by management to indicate passage is required by year-end). Otherwise, it will too late to save Clinton and likely Quad Cities as well. Third, the argument was put forth that legislators haven’t been able to pass anything in a long time and will be eager to show their constituents that they can achieve something. In terms of actual votes, political observers note that other recent controversial votes have shown the margin of support in a Democrat party-line vote in the Senate to be more robust than in the House. That said, the same people see a better chance of some Republicans crossing the party divide after the election – particularly those representing downstate districts most impacted by threatened nuclear and coal plant closures. In summary, the optimistic view is that the Veto Session could be an ideal time for the legislature to act, with the elections behind them and the bill expected to have bipartisan support.

We are hopeful, but still skeptical

As noted, we are somewhat more optimistic about something happening later this year than we were this summer. That said, we continue to believe that any bill faces an uphill battle. After all, the political environment in Illinois remains challenged and it seems unlikely this will change that quickly after the November elections. Further, in order to pass in the Veto Session, the bill will require 3/5ths of the legislature’s support, although the possibility was raised in a few of our meetings that a short “lame duck” session could also be held in late December and early January where only a simple majority would be needed. This angle will be worth monitoring but remains a challenge in our view. In addition, it’s not clear Governor Rauner would actually sign the bill even if it makes it to his desk, having called prior iterations a bailout. And from a policy perspective, the strategy of bringing more parties into the support group may help with securing passage in the legislature, but adding further out-of-market subsidies for other asset classes does not seem like an obvious path to winning over a staunch free-market advocate such as Rauner. Finally, while a temporary budget is in place now, this is set to expire at year-end and may still make it tough for legislators to focus on an energy bill.

Illinois the focus but PA and NJ likely to follow

EXC management clearly focuses most on passage of a ZEC-like program in IL, but indicated their attention will turn to Pennsylvania and New Jersey afterwards. Other companies in our sector, FirstEnergy (FE) and PSEG (PEG) have also indicated an interest in pursuing a ZEC-like program in these states.

That said, we believe near-term developments remain unlikely, as discussions appear to be fairly preliminary. For EXC, a ZEC-like program may ensure continued operating of the Three Mile Island facility, which failed to clear the most recent PJM capacity auction and is also clearly at-risk for early closure.

Committed to hybrid structure

On a separate topic, EXC CEO Chris Crane reiterated comments he made at the August Analyst Day that the company remains committed to their hybrid structure (combination of regulated utility and merchant power businesses). EXC is increasingly unique, with many of the company's traditional hybrid peers, AEP, NEE, D, ETR, and FE, having already taken steps to transition to more of a pure-play regulated entity. Through at least 2020, management continues to see a strong rationale for keeping these businesses together, by leveraging free cash flow generated at the merchant power business to help finance above-average earnings growth at their regulated transmission and distribution utilities. This has long been a successful strategy pursued by Public Service Enterprise Group (PEG). Recall that EXC expects to deliver well above peer average utility EPS growth of 7-9% per year, supported by rate base growth of 6%, improved returns at the recently-acquired Pepco Holdings utilities, and the absence of equity financing. Management believes execution on this plan will help narrow the current discount weighing on EXC's stock. That said, beyond 2020, EXC may revisit their hybrid structure, particularly if they don't see the multiple expansion they expect and if the heavy capital spending and growth profile of the regulated business begins to fade.

Valuation

We value EXC's utility segment by applying a 17.5x P/E multiple (half-turn premium over our 17x target average) to our 2018 estimates for ComEd, PECO and the POM utilities, and an average multiple for BG&E. We believe POM earnings merit a premium as we anticipate faster growth at this segment as EXC closes the gap between authorized and earned returns in 2018 and beyond. We also apply premiums to ComEd earnings given potential upside from higher interest rates as ComEd's ROE is set based on an annual formula directly incorporating the yield on the 30-year Treasury bond which remains close to multi-year lows. We also give PECO a premium given a constructive regulatory backdrop and note EXC's history of over-earning as well assumed normalization of returns in management's growth rate projections.

On the merchant side we value ExGen by applying a 6.5x EV/EBITDA multiple to our 2018 estimate. Our 6.5x multiple is now relatively in line with our targeted EV/EBITDA multiple for merchant generators. On the one hand, we believe a modest discount is merited given ExGen's still more limited free cash flow generation than IPP peers given their capital-intensive nuke fleet. On the flipside, EXC's nuclear fleet merits some incremental value vs. IPPs given the potential for new revenue streams from clean energy standards or a future carbon trading scheme (finalized in NY though facing legal challenges and under consideration again in IL this fall). In addition, EXC also has a stronger credit and lower leverage profile at ExGen than pure-play IPP peers, with a strong commitment to de-lever further over the coming years.

Similar to our valuation methodology for FirstEnergy, we take a hybrid approach for the corporate / other segment. We derive a $35 price target when valuing the corporate segment EBITDA at a 6.5x EBITDA multiple and then subtracting corporate debt as a direct offset to equity value (effectively treating parent debt as being wholly on the merchant business). In our other scenario (Valuation B) we see a $40 price target valuing EXC's corporate earnings drag of $0.16/sh using our weighted average regulated distribution P/E multiple of 17.4x (treats parent debt as being on the utilities).

Our $38 price target reflects a 25/75 weighting of these two book-end valuation approaches. Since EXC's August analyst day we have been giving a higher weighting to Valuation B given EXC's increasing strategic focus on the regulated utilities and ongoing commitment to de-levering at ExGen.

Figure 1: EXC Sum-of-the-Parts Valuation

Valuation A

Business Segment	Valuation Metric	2018E	Multiple	Value
ComEd	P/E	$0.61	17.5x	10,280
PECO	P/E	$0.45	17.5x	7,578
BG&E	P/E	$0.34	17.0x	5,632
POM	P/E	$0.40	17.5x	6,813
Utility Equity Value				**30,303**
Generation / Retail / Corp	EV/EBITDA	3,087	6.50x	20,067
Less: Generation Net Debt				(9,142)
Less: Corp Net Debt				(7,713)

Equity rating key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.

Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash

flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options”, at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

Exelon

Nuclear credits to drive story through year end

Maintain Rating: NEUTRAL | PO: 34.00 USD | Price: 33.26 USD

Bank of America Merrill Lynch

Equity | 26 October 2016

Key takeaways

- Nuke credits in New York and Illinois should drive EXC into year end. We think NY ZECs survive, but Illinois is a long shot.
- O&M cuts in 2018/19 are good, but ExGen's open gross margin MTM was mixed.
- Maintain Neutral view on EXC. EEI Questions included in this note.

Nuke credits are possible positive upcoming catalysts

On 10/19/16, the Electric Power Supply Association filed a legal challenge in the Southern District Court of New York against the New York Zero Emissions Credit program. Our estimates include ~$0.10 EPS of ZECs. If 1) the court asks FERC and other regulatory agencies to opine (see Hughes v. Talen) and 2) Mrs. Clinton wins the presidency (her campaign platform explicitly promotes nuclear programs as a bridge to renewables), there is a reasonable probability the ZECs program will survive the challenge. This should be a positive catalyst for EXC. Separately, the Illinois legislature veto session could see a comprehensive energy package emerge that might similarly support nuclear. Our estimates do not include Illinois upside as we believe chances for a successful passage are modest at best.

Mixed ExGen gross margin update; O&M reductions a plus

Exelon rolled out its 2019 gross margin forecast of $7.3B (including CES and FitzPatrick), versus our forecast of $7.25B. 2017/18 gross margin forecasts of $7.8B and $7.65B were light relative to our $8.0B and $7.8B forecast, respectively, on a lighter than expected open gross margin. In our view, the sector's valuation rollover to 2019 by year end means the light 2017/18 outlook should not be construed as a material negative. ExGen O&M forecasts for 2018 and 2019 were lowered due to a variety of continued operating improvements and the shifting of capital away from growth to return-enhancing measures. Management struck a confident tone regarding those cost cuts, signaling these were goals with considerable line of sight.

Regulated results drive good quarter & 2016 guidance lift

Exelon reported adjusted EPS of $0.91 versus our and consensus expectations of $0.76 and $0.79, respectively. Relative to our forecast, regulated results from PHI (partly boosted by favorable weather) and deregulated Ex-Gen were positive surprises. 2016 guidance was lifted as we expected (see our 3Q Preview) to $2.55-2.75 from $2.40-2.70, reflecting a midpoint rise of $0.10 and better than forecast regulated results YTD.

Maintain Neutral; gas volatility remains a concern

We maintain our Neutral on EXC shares. Without a doubt, EXC's consolidated PE valuation (2017/18/19 at 12.7x/12.0x/13.1x) relative to integrated peers (2017/18/19 at 17.1x/16.3x/15.6x) appears inexpensive. However, Exelon's open earnings exposure to commodity price swings via ExGen remains high (+/- $1/mmbtu nat gas = EPS +/- $0.30) and also faces structural risk from falling renewable costs. Exelon's push towards a regulatory growth framework is compelling in our view, but its associated commodity exposure still prompts our remaining on the sidelines for now.

EEI Questions

Where does Illinois legislation stand to support Clinton and Quad Cities?

Closed door negotiations have suggested a potential bill could be proposed at the General Assembly's November veto session or possibly a "lame duck" session in January. How long does MISO take to provide authorization to shut down a resource? What is the protocol for withdrawing an application to retire an asset? Given the short time frame to save Clinton, we still believe the plant is very likely to be shut down, while Quad Cities could potentially be saved if the legislature were to act in the near future.

What is the potential for restructuring rates in ComEd through the legislature?

Do recent articles on the switching from a "pay-for-what-you-use system" to the inclusion of demand charges suggest ComEd is not recovering fast enough? Are there other opportunities that you see by trying to switch to the inclusion of demand charges?

Progress on ZEC-like programs in other jurisdictions?

PaPUC Commissioner Robert Powelson made comments on 10/4/16 with regards to Three Mile Island and Beaver Valley possibly not clearing in the next auction, do you see an opportunity in PA for a ZEC type program? Are you having discussions with any other jurisdictions and would you look to acquire other nuclear units if similar legislation was passed in other states?

Capacity market impact from ZEC-like structures?

What do you think about PJM's proposal to create a two stage adjustment mechanism for its capacity market in light of New York's ZEC program?

What are your views on PJM's next capacity auction?

Discussions with various stakeholders suggest that RTO prices will not rise significantly despite going to full CP, what is the company's view on PJM RPM? Do you see differences in ComEd versus the other regions?

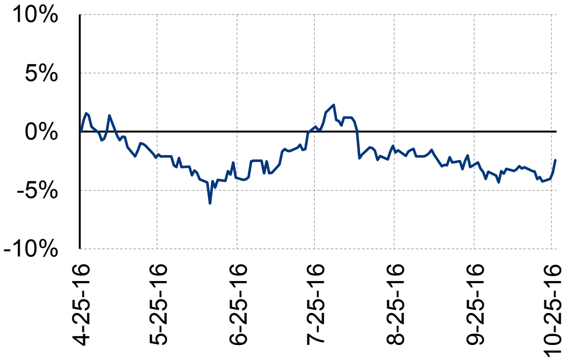
Consumer advocacy groups concerned about the Zero-Emission Credit program

How do you view the EPSA complaint and why did they go straight to the Southern District Court of New York rather than FERC? What clout do these consumer groups have towards potentially overturning the program? If Audrey Zibelman from the NYPSC is appointed by Clinton to FERC, what impact would that have?

Asset monetization status?

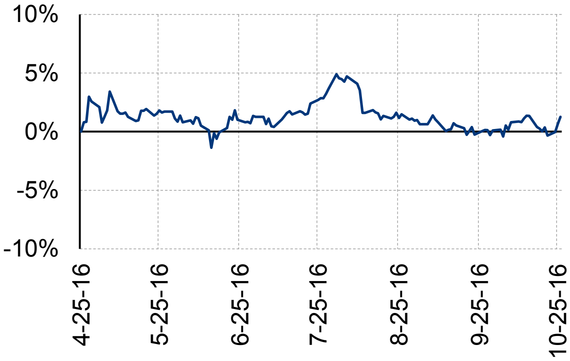
For Texas assets, what would be the rationale for monetizing or project financing those units? For what would the proceeds be used? Have recent events prompted greater consideration for these options than in the past? Where do we stand on Mystic and a potential sale?

Chart 1: EXC relative performance vs. utilities group average



Source: BofA Merrill Lynch Global Research, Bloomberg

Chart 2: EXC relative performance vs. integrated electrics average



Source: BofA Merrill Lynch Global Research, Bloomberg

Price objective basis & risk

Exelon (EXC)
Our $34/share price objective for EXC shares is derived from our sum of the parts valuation model, where we assign approximately $8 of value to ExGen, ($4) for the parent, and approximately $30 of value to the regulated utility. We value integrated electric utilities, including Exelon, using a sum of the parts valuation model based on 2018E earnings and EBITDA. For Exelon specifically we use a target 7.3x EV/EBITDA multiple to value the deregulated generation segment, in line with peers. We apply a peer average target 16.5 P/E multiple to value the regulated side of the business.

Downside (upside) risks to our price objective are: 1) increasing (decreasing) of forward power prices driven by rising natural gas prices, heat rates, or Northeast and Midwest gas basis to Henry Hub, 2) regulatory outcomes as well as changes in nuclear regulation, 3) deterioration (improvements) in operating efficiency beyond our base scenario.

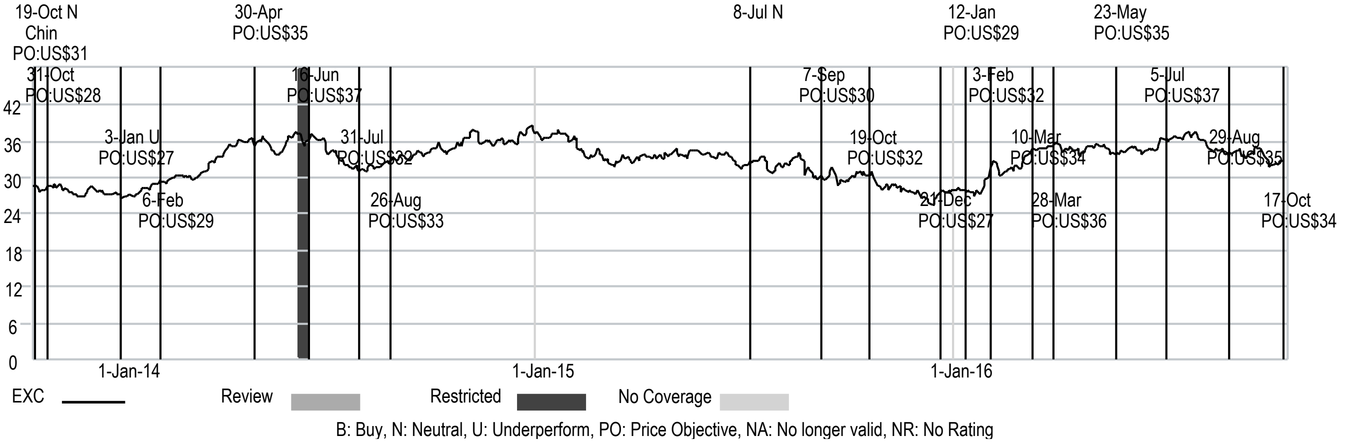
EXC Price Chart



The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of September 30, 2016 or such later date as indicated.

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	58	46.03%	Buy	45	77.59%
Hold	34	26.98%	Hold	29	85.29%
Sell	34	26.98%	Sell	20	58.82%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1553	49.44%	Buy	1130	72.76%
Hold	730	23.24%	Hold	538	73.70%
Sell	858	27.32%	Sell	514	59.91%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

EXC bounces with utility group and Illinois legislative progress

Exelon traded up 4.2% today, outperforming a utility bounce after lagging post-election on fears over clean energy thematics under Trump. As we have said, much of this agenda is in fact being advanced in the states and today's move was partly spurred by the latest iteration of state energy legislation in Illinois with a new bill emerging. Later this week we expect to see NY PSC approval of the FitzPatrick purchase and associated completion of NYSERDA contracts required to implement the state's ZEC program. We continue to view EXC as an undervalued play on superior regulated growth with potential for state legislative/regulatory catalysts in the nuclear business.

Coal angle and utility efficiency opportunity added to Illinois nuclear bill

As we heard on our trip to the state last month, in addition to Zero Emission Credits (ZECs) targeted at nuclear plants, the bill now also includes a mechanism to protect downstate coal plants owned by Dynegy (DYN) along with energy efficiency incentives that may provide additional earning opportunities for the utilities (EXC’s ComEd and Ameren). How this all plays out in the legislature remains the key question with only five scheduled days remaining in the Veto Session (Weds-Thurs this week and 11/29-12/1).

House now taking the lead; likely a positive signal although still a heavy lift

Local press has been quick to highlight erosion of support from environmental groups as a result of the coal provisions. Politically though, the fact that the bill was introduced in the House rather than the Senate might signal at least a tacit blessing from powerful House Speaker Madigan – a key ingredient for success. Rather than taking up the stalled Senate bill from the Spring session (SB 1585) the new bill (SB 2814) has been inserted into a shell previously passed by the Senate in April and currently sitting at the second reading stage in the House. The new House sponsor of SB 2814 is Rep. Robert Rita while the original sponsor is Senate President Pro Tem Don Harmon. The next step is a hearing before the House Energy Committee tomorrow (11/16) at 3pm ET. If passed by Committee the bill would go to the House Floor, after which we understand that the Senate would only have to vote once on the bill “as amended” since SB 2814 was already passed by them. Politically we believe the House was always likely to be the heavier lift so it may be that the key vote will not be the final one. As a reminder under Veto Session rules a 3/5 super-majority vote is required for passage by the legislature. After this the Governor has sixty days to sign or veto (if he does nothing the bill passes by default) and, in theory at least, the legislature could overturn a veto assuming they still had the required 3/5 majority. How this plays out considering gains made by Rauner’s Republican candidates in last week’s elections and a still openly frosty standoff between the Governor and legislative leaders over the state budget remains a wild card in our view. On balance though, we view the latest as constructive data points in what will still likely be a contentious process with an uncertain outcome. Please see inside for details on the new bill.

Valuation and risks

We value EXC's utilities at 17-17.5x 2018 EPS and its GenCo at 6.5x EBITDA. Risks are higher interest rates, lower commodity prices and unfavorable regulatory outcomes.

SB2814 — What's in this 446-page bill?

- The Illinois Power Agency (IPA), on behalf of electric utilities, will procure Zero Emission Credits (ZECs) up to 16.75% of Illinois' 2015 energy demand (which approximates the output of EXC's Clinton and Quad Cities).
- ZEC pricing will be $16.50/MWh (Social Cost of Carbon), adjusted annually for inflation. Beginning in 2023, ZECs will rise by $1/MWh per year. Additionally, if the market price for energy and capacity in Illinois rises beyond $31.40/MWh, the ZEC would be adjusted down accordingly. Interestingly the bill specifically keys off the federal agencies' August 2016 Technical Update – a provision likely designed to address the likelihood that this calculation might not be further updated under the incoming Trump administration.
- Winning bidders will be selected based on public interest criteria including limiting Illinois emissions which are incremental due to the procurement. Contracts will last for the useful life of the selected facilities. Clinton is licensed through 2026, Quad Cities licensed through 2032. There is also the potential for ZEC extensions if licenses are extended another 20 years by the NRC.
- IPA will procure capacity to satisfy Planning Reserve Margin Requirement for IL utilities with between 500,000 and 3M customers (i.e. Ameren Illinois). Contracts will be multi-year, with most between 4 and 6 years. The legislation also specifically excludes plants owned by munis or coops, or those with costs recovered through regulated rates in Illinois or another state. With few competing local merchant resources, DYN's coal plants should be well positioned in the procurement, which could provide LT earnings visibility.
- Introduces a long-term renewable resource procurement plan and sets up a competitive procurement process for RECs. The bill also creates the Illinois Solar for All program.
- Increases energy efficiency targets up to 23% cumulative persisting annual savings by 2030. Allows utilities to recover costs for prudently incurred expenditures for energy efficiency and demand response together with opportunities to earn on capital invested for efficiency.
- Provides for a transition in utility billing from a usage based model to peak-demand based rates. This measure, often opposed by the solar industry, ensures customers with solar still pay for their peak demand (when the sun sets), rather than their net usage.
- The bill encourages the development of 6 microgrid projects, 5 in ComEd territory at a cost up to $250M and 1 in AEE's territory for up to $60M.

Continued on next page

Potential legal and operational vulnerabilities

Following the Supreme Court's ruling in Hughes vs. Talen, the bill appears to be crafted to avoid impinging on wholesale power markets by directing specific bidding behavior. While the proposed legislation is clearly designed to support EXC's 2 challenged nuclear plants, Clinton and Quad Cities, as well as DYN's challenged Southern Illinois coal plants, for legal reasons neither party is explicitly guaranteed a contract. In fact, read broadly, the Illinois ZECs could be awarded to some of EXC's other nuclear plants should they choose to apply, or even an out-of-state challenged nuclear plant within the PJM or MISO footprint (such as FE's Davis-Besse). For the downstate capacity contracts, DYN is likely to have competition from EXC's Clinton nuclear plant, other in-state merchant generation (Rockland Capital owns several of these), demand response, new renewables, and perhaps even out of state resources that are able to secure firm transmission rights. The contracts could also potentially lure developers of new gas plants to locate projects in Southern Illinois.

Next Steps

There is a House hearing scheduled for 2pm CT tomorrow. Next, the House Committee would need to vote on the bill. If it passes, the bill would move to the House Floor for a vote. If it passes the House, the bill would go back to the IL Senate for a vote before heading to Governor Rauner's desk. The IL legislature's veto session is scheduled to end on December 1 although it is not inconceivable that additional regular session days might be added later in December or early January. While any such days – not being part of the Veto Session – would not require a 3/5 majority in the legislature, any measures so passed would take significantly longer to be fully adopted.

Reiterate Buy rating; $38 Price Target

We have a Buy rating on EXC as we view it as a rare way to obtain top-tier regulated utility growth (7-9% earnings CAGR) at a substantial discount. We also like the committed de-levering strategy at ExGen along with upside catalyst potential from ZECs in Illinois and New York (with clarity expected over the next three weeks or so). We value EXC's utilities at 17x-17.5x 2018E P/E, and ExGen at 6.5x EV/EBITDA. Corporate debt we weight 75% to a utility multiple on the interest drag and 25% as a direct claim against equity value. Reiterate Buy and $38 PT.

Equity rating key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield) , we recommend that investors buy the stock.

Sell: Based on a current 12-month view of total share-holder return, we recommend that investors sell the stock

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Newly issued research recommendations and target prices supersede previously published research.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. Trade ideas for equities can be found at the SOLAR link at http://gm.db.com. A SOLAR idea represents a high conviction belief by an analyst that a stock will outperform or underperform the market and/or sector delineated over a time frame of no less than two weeks. In addition to SOLAR ideas, the analysts named in this report may from time to time discuss with our clients, Deutsche Bank salespersons and Deutsche Bank traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if any opinion, forecast or estimate contained herein changes or subsequently becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst concerned or of the Research Department Management and as such the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Unless otherwise indicated, prices are current as of the end of the previous trading session, and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank, subject companies, and in some cases, other parties.

The Deutsche Bank Research Department is independent of other business areas divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research is available on our website under Disclaimer found on the Legal tab.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed rate instruments (thus receiving these cash

flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or the liquidation of positions), and settlement issues related to local clearing houses are also important risk factors to be considered. The sensitivity of fixed income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. It is important to note that the index fixings may -- by construction -- lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. It is also important to acknowledge that funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Naturally, options on swaps (swaptions) also bear the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including, among others, market, counterparty default and illiquidity risk. The appropriateness or otherwise of these products for use by investors is dependent on the investors' own circumstances including their tax position, their regulatory environment and the nature of their other assets and liabilities, and as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option investors must review the "Characteristics and Risks of Standardized Options", at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government imposed exchange controls which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

House Amendment 3, latest draft of Illinois legislation (SB 2814) introduced

With just three days (Tues-Thurs) remaining in the Illinois Veto Session the new draft suggests EXC's bill continues to be under serious consideration. For context, we see EXC as an undervalued play on superior regulated growth with potential for uplift from state legislative/regulatory initiatives targeted at challenged nuclear units, including IL. We also see hybrids like EXC as less exposed to uncertainties facing utilities around possible corporate tax reform.

Changes respond to concerns from solar interests, Governor's office

As we suspected they might be, some contentious pieces have been removed, namely the FRAP aimed at helping downstate coal plants along with demand charges and proposed net metering elimination. Three changes address criticisms voiced by Gov. Rauner's staff last week, notably demand charges, a longer commitment to keep subject nuclear plants in operation and the overall impact of the ZEC program on customer rates – now capped at a lower level. Procedurally the bill has been referred back to the House Energy Committee which will take it up at 10am ET Tuesday. Thereafter, it would move to the House floor and then the Senate, both of which require super-majority (3/5) votes. While the legislative process is inherently unpredictable and rife with political posturing, we see grounds for optimism in the latest machinations. First, the House continuing to take the initiative likely signals some level of blessing from Speaker Madigan. Second, it seems notable to us that Rauner's staff articulated specific concerns which now appear to have been addressed.

Notable changes in House Amendment 3

- Removes the so-called FRAP or Illinois Power Agency multi-year procurement of all required capacity in MISO Zone 4 (Southern Illinois). This could have given longer-term price visibility for DYN's coal plants.
- Removes proposed grid impact demand charge which opponents argued would have disadvantaged residential solar. The new draft also retains net energy metering up to 5% of peak load, another hot-button issue for solar.
- Lowers the cap on annual rate increases due to the ZEC program from 2.015% to 1.65% of 2009 rates, an effective 18% cut to the maximum level. We believe this change could reduce ZEC revenues by ~$50M/year.
- Significantly reduces scope of the proposed utility micro-grid pilot program from $310M to $70M.
- Grants the ICC powers to expedite implementation of the bill.
- Provides the AG, who the House Committee directed should be "at the table", access to confidential plant-level cost data regarding ZECs.

Tax Court orders EXC to pay taxes, interest on 1999 tax gain on sale

On Monday, the US Tax Court ruled in favor of the IRS concerning the agency's view that EXC owed taxes related to a $1.2B gain on sale of the IL-based fossil fleet in 1999. EXC deferred the tax gain through the reinvestment of proceeds in a "like-kind" exchange, in this case the purchase of three municipal-owned generation facilities which were subsequently leased back to the municipalities. The IRS did not believe this qualified as a "like-kind" exchange, making the gain taxable.

What does this mean from a financial perspective?

In addition to ordering EXC to pay taxes on the sale and related interest, which together amounts to $1.19B, the court has also levied a penalty of $260M. While an appeal to the 7th Circuit Court is possible, EXC would still have to post bond or pay the required tax, penalties and interest to do so. They would expect the net payment, including penalties, to be $1.06B after accounting for tax benefits associated with interest expense realized in subsequent years. From an earnings perspective, EXC had already fully reserved for the taxes and related interest (not the penalty). In terms of cash flow impacts, EXC had likely anticipated losing in the US Tax Court this year and has already assumed incremental debt financing in their 2016 plans to pay for the tax and interest component, although it wasn't clear until now that proceeds of planned issuances would be used to pay a large tax bill. EXC may also upsize any offerings to cover the penalty component if necessary.

Never say never; IL nuclear bill heads to Governor's desk

Veto Session winds up with Exelon's nuclear bill passing both houses

In a nail-biter of a process, late Thursday the Future Energy Jobs Bill (SB 2814) passed the Illinois legislature by comfortable margins. The bill still needs Governor Rauner's signature but this seems likely after numerous amendments addressing his concerns and a supportive post-vote statement. When we visited stakeholders in October we sensed renewed momentum and saw a chance, albeit still a long-shot, for a bill to pass in the Veto Session. This was far from assured though, particularly given the state's deep political divisions.

After week of drama, legislation receives broad bipartisan support

With Wednesday night's deal apparently falling apart Thursday morning, the final day of the session provided much drama and intrigue. In the end the House voted 63-38 with the Senate voting 32-18. While this met the three fifths threshold required for a bill to take immediate effect, a late amendment was added delaying implementation to June 1. This would have allowed for a lower threshold, perhaps a sign leaders were less than confident in the vote count as legislators began to head for the exits with the session wrapping up.

EXC better placed vs. tax reform uncertainties, rising interest rates

We view EXC as an undervalued play on superior regulated growth, committed de-levering at the GenCo and now upside for more challenged nuclear units in both NY and IL. Post the election surprise we also see EXC better positioned than pure regulated peers vs. uncertainty related to corporate tax reform thanks to a large and profitable non-regulated business, solid balance sheet and relatively modest parent drag. EXC also looks better situated than most utilities facing rising interest rates given 1) a hybrid structure making for less of a bond-proxy investment profile; 2) ComEd rates being directly pegged to 30-Year Treasury yields; and 3) a sizable non-utility pension obligation.

Illinois ZECs worth $235M or incremental $0.09 vs. shut-down scenario

As previously noted, the Illinois ZECs should add $0.09 of unregulated earnings to EXC by 2018, assuming as most expect, Quad Cities and Clinton are selected in the procurement process. These increased earnings and cash flows are expected to persist for at least 10 years, long enough for investors to capitalize this benefit in valuations. With the now passed Illinois uplift, on top of NY ZEC uplift and benefits from acquiring ETR's Fitzpatrick plant, ExGen's outlook now has several uplifts, none of which are yet reflected in our model. Even without these considerable benefits, we see EXC as undervalued and we reiterate our Buy and $38 price target. We value EXC's utilities at 17-17.5x 2018 EPS and the GenCo at 6.5x 2018E EBITDA. Risks are higher interest rates, lower commodity prices and unfavorable regulatory outcomes. Furthermore, support for challenged nuclear plants in NY and IL could provide a template for other states, particularly Pennsylvania, where the Three Mile Island plant has not cleared recent auctions.

Good way to own high-quality regulated utility growth at a discount

Following better-than-expected Q3 results (summer weather led to $0.13/sh beat vs. consensus) and FY guidance raise (now $2.55-$2.75 vs. $2.40-$2.70 previously), we are reiterating our $38 PT and Buy rating. We continue to see EXC as undervalued versus regulated peers (stock trades at 12.4x 2018E EPS vs. regulated avg of 16.6x) given above-average regulated earnings growth (7-9% CAGR) and potential for upside at the merchant nuclear business from pending catalysts in NY and IL (establishment of Zero Emissions Credit programs). With key updates (2019 gross margin) provided early, EXC also de-risked next month's EEI, where discussions can now focus more on strategy.

Highlights and takeaways:

- **Generation (ExGen) gross margin (GM) updates were weaker** than our model in 2017 and 2018 by ~$100M, but offset in 2018 by incremental O&M reductions now expected ($100M). Mgmt also noted that the margin outlook has ticked up $50M on commodity moves since the 9/30 mark. We are raising 2016E to $2.70 from $2.55 on strong Q3, lowering 2017E to $2.45 from $2.55 on weaker ExGen GM, and maintaining our 2018E at $2.70, with lower margin offset by O&M savings. Utility, Parent & Other forecasts are unchanged in 2017/2018 and are close to the midpoint of EXC's guidance ranges disclosed at the August Analyst Day.

- New 2019 gross margin, O&M disclosures imply down EPS in 2019. While we likely will not roll out 2019 estimates until later this year, **we see 2019E EPS in the $2.60 ballpark**, but with a greater weighting towards the higher-quality regulated component offset by lower ExGen.

- **We do not yet include upside from the NY ZEC program and/or FitzPatrick deal.** Per today's slides, these could add $0.10-$0.18/sh to our EPS ests. starting next year. ZEC contract signing is expected mid-November.

- Consistent with our Chicago field trip report last week, **EXC confirmed they are more optimistic on building support in Illinois to pass nuclear-friendly legislation** during the Nov/Dec Veto Session. This would allow the Quad Cities and Clinton nuclear plants to continue operating through the anticipated establishment of a ZEC program. That said, EXC also endorsed our view that this remains a heavy lift given the short Veto Session (6 days) and lack of clear support from either Speaker Madigan or Governor Rauner.

- **Potential for even more O&M cuts at ExGen?** As noted EXC further cut its ExGen O&M forecast by $100M in 2018 and $125M in 2019 and in Q&A sounded optimistic about opportunities for incremental gains to come.

Exelon Corp

Attractive Core Growth with Upside; Upgrading to OW

Stock Rating	Industry View	Price Target
Overweight	In-Line	$37.00

We see attractive growth at a compelling valuation, with several potential upside opportunities and meaningful headroom for ROE improvement at acquired utilities. As a result, we are increasing our estimates for EXC and upgrading to OW.

Attractive growth at a compelling valuation, with potential upside from state-level nuclear support, commodities prices, and lower corporate taxes. Exelon (EXC) has underperformed peers in recent months due to concerns around declines in gas and power prices, perceived execution risk on ROE improvement at the recently acquired Pepco utilities, and lower likelihood of federal carbon regulations post the results of the US presidential election. However, the move in the stock has far exceeded the slight fundamental decline in gas and power prices. EXC's merchant business, ExGen, now screens cheaper than pure-play independent power producers despite having investment-grade credit metrics and a highly profitable generation and marketing platform. EXC has also recently achieved additional clarity in several of its regulatory proceedings at Pepco, making us more confident that the company can execute on its growth plans. We see a lot to like about the story, with many potential upside catalysts supporting an attractive risk-reward. We are upgrading to Overweight, with our $37 price target (unchanged) implying ~17% upside.

- **Best-in-class 7-9% utility growth,** supported by merchant free cash flow and ROE improvements. EXC has received clarity in a number of its rate case proceedings at its Pepco utilities, reaching settlements or receiving constructive staff recommendations in 3 out of its 6 filings. We believe this clarity helps alleviate concerns around execution risk and view it as indicative of the company's ability to work productively with regulators to achieve its targeted 9% ROE by 2019.

- **ExGen now trades at a ~30% free cash flow to equity yield and a $2.10/mmBtu implied long-term gas price,** which we see as unrealistically low. Furthermore, the business has strong investment grade credit metrics, supporting financial flexibility. Presidential election concerns are overdone, as to-date all carbon initiatives have been carried out at the state level. We believe EXC's recent success in securing revenue for upstate New York nuclear plants to reflect the value of their zero emissions profile is

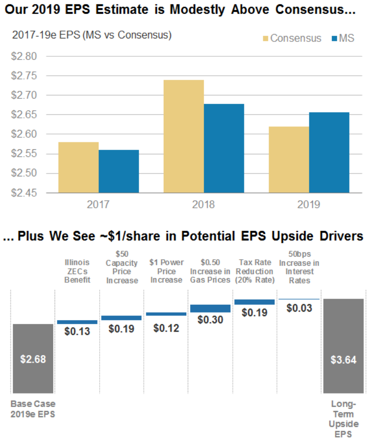
Exhibit 1:



Our 2019 EPS Estimate is Modestly Above Consensus...

... Plus We See ~$1/share in Potential EPS Upside Drivers

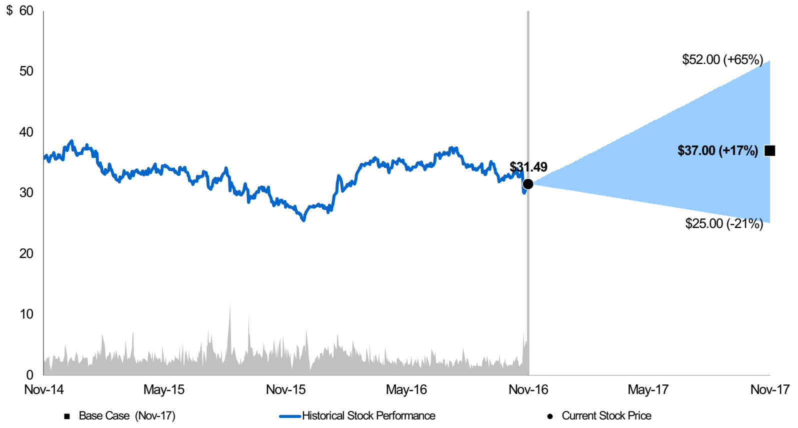
Source: Thomson Reuters, Morgan Stanley Research indicative of the company's ability to ensure market design elements properly value the industry-leading low-carbon profile of its power plant fleet. We see the potential for similar initiatives in Illinois and Pennsylvania over time.

- **Many upside drivers, with ~$1/share of EPS improvements (~37%) that could materialize over the next few years.** Positive drivers include legislative support for Illinois nuclear plants, lower corporate taxes under federal tax reform (driving higher earnings at EXC's unregulated businesses), higher commodities prices (capacity, gas and power), improving allowed returns at ComEd (EXC's largest utility), which automatically increase on a monthly basis with rising interest rates. We believe these upsides position EXC to outperform regulated utility peers as we move into 2017.

Overall, we see an attractive risk-reward at current levels with our $37 price target representing ~17% upside. Our $37 valuation reflects ~$27 per share for utilities and ~$10 per share for ExGen. We use a DCF valuation for the merchant business, ExGen, and an implied in-line 16.0x 2018 P/E multiple for the utilities (including Pepco). As EXC executes on its ROE improvement goals at Pepco, we believe a premium P/E could ultimately be warranted given the above average 7-9% earnings growth, which is attractive relative to the 4-5% peer group average. We believe ExGen is one of the best run merchant generation and marketing businesses in the industry, currently at a compelling valuation. Our DCF-driven $10 valuation for the business implies a ~15% target 2018-19 free cash flow yield and a ~6.5x EV/EBITDA multiple on our 2018 estimate. While our forecasts do not reflect any improvement in commodities prices, we are closely watching the recent rise in coal prices, which would drive higher power prices in the PJM (mid-Atlantic) market, and yesterday's 2-4% increase in forecasted peak demand in ERCOT (Texas), which supports tighter market conditions over the next few years. Overall, we see compelling value with several upside opportunities across EXC's business lines, driving our upgrade to Overweight.

Risk Reward

We See Attractive Risk-Reward with Compelling Upside for EXC



Source: Morgan Stanley Research, Thomson Reuters

Price Target **$37**

Derived from our base case and driven by a 2018e P/E for Utilities and a DCF analysis for Generation and Energy Supply (ExGen). For our DCF we use an 8.2% WACC, 3% risk-free rate, and 1.5% terminal growth rate.

Bull **$52**

$21.50/share ExGen; 16.8x Utilities / Parent $1.80 EPS

ExGen: $4.25 LT natural gas with no basis adjustment, $193 and $242/MW-day MAAC and ComEd PJM capacity prices respectively. Market forward heat rates, $5/ton carbon price in Illinois, $22/MWh Texas sparks.
Utilities/Parent: 5% premium P/E vs. regulated group average, 53% equity ratio and 10% earned ROE

Base **$37**

$10/share ExGen; 16x Utilities / Parent $1.68 EPS

ExGen: $3.75 LT natural gas with ($0.75) Tetco M3 and ($0.30) Chicago gas basis, $175 and $200/MW-day MAAC and ComEd PJM capacity prices respectively. No carbon price, $22/MWh Texas sparks.
Utilities/Parent: Regulated group average P/E, 50% equity ratio and ~10% overall earned ROE

Bear **$25**

$2/share ExGen; 15.2x Utilities / Parent $1.51 EPS

ExGen: $3.50 LT natural gas with ($1.00) Tetco M3 and ($0.30) Chicago gas basis, $100/MW-day MAAC and ComEd PJM capacity prices. No Carbon price, forward curve Texas sparks.
Utilities/Parent: 5% discount P/E vs. regulated group average, 50% equity ratio and 9% earned ROE

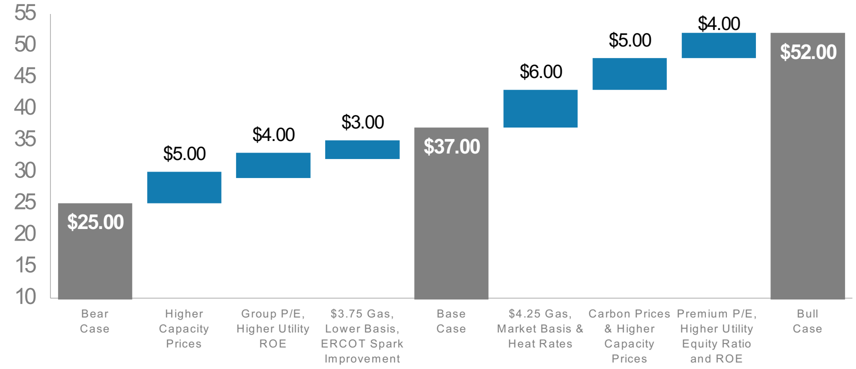
Investment Thesis

- **Merchant free cash flow, attractive investment opportunities, and ROE improvements at Pepco drive above average 7-9% utility growth**. We estimate nearly $9b of free cash flow before growth at ExGen 2016-20, including the benefit from New York's Zero Emission Credit Payments (ZECs) which we expect to fund regulated and unregulated growth as well as delevering. EXC's ~$25.2b regulated utility capital investment plan is over-half recovered through tracker mechanisms or formula rates. Above average growth is also supported by ROE improvements at the recently acquired Pepco utilities. Recent constructive regulatory outcomes and management's track record of improving operations at BG&E make us confident that EXC can improve earned ROEs at Pepco to ~9% by 2019.

- **ExGen now trades at a ~30% free cash flow to equity yield and a $2.10/mmBtu implied long-term gas price,** which we see as unrealistically low. Furthermore, the business has strong investment grade credit metrics, supporting financial flexibility. Presidential election concerns are overdone, as to-date all carbon initiatives have been carried out at the state level. We believe EXC's recent success in securing revenue for upstate New York nuclear plants to reflect the value of their zero emissions profile is indicative of the company's ability to ensure market design elements properly value the industry-leading low-carbon profile of its power plant fleet. We see the potential for similar initiatives in Illinois and Pennsylvania over time.

- **Our EPS estimates are roughly in line with consensus 2017-19 before accounting for any of the potential upside drivers**. We are in line with consensus 2017-19 (modestly below in 2018, above in 2019) without including any of the potential upside from carbon legislation in Illinois, and any reduction in the corporate tax rates resulting from federal tax reform initiatives.

Exhibit 2: EXC Bear-to-Bull Walk



Source: Morgan Stanley Research

Risks to Achieving Price Target

- Natural gas and power prices. EXC is the most sensitive diversified utility to natural gas prices on our math.
- Execution on improving ROEs at Pepco utilities
- Court ruling on legal challenge to NY ZECs
- May 2017 PJM capacity auction

Attractive Core Growth at a Compelling Valuation

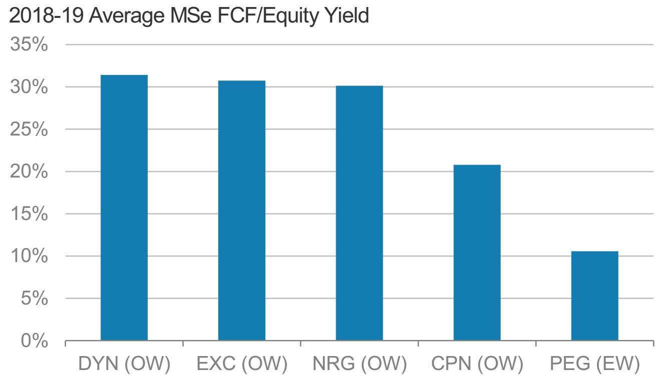
The Big Picture

Exelon (EXC) offers attractive growth at a compelling valuation, with potential upside from state-level nuclear support and lower corporate taxes. EXC has underperformed the utility index by ~200bps since its Analyst Day on August 10th. Drivers of the underperformance include declines in gas and power prices, concerns around execution risk on ROE improvement at the Pepco utilities, and most recently the presidential election results (perceived lower likelihood of federal carbon regulation, which would benefit EXC's merchant nuclear fleet). However, the move in the stock has far exceeded any change in gas and power prices, which only fell 1-3% over the period. ExGen, the company's merchant business, now screens cheaper than pure-play independent power producers despite having investment grade credit metrics and a highly profitable generation and marketing platform. At Pepco, EXC has already achieved several constructive rate outcomes since the Analyst Day, and we expect the company to be able to execute on its ~9% earned ROE target by 2019, anchoring a best in class 7-9% growth rate at the utilities. Furthermore, on carbon, most of the policy initiatives supporting nuclear plants are being carried out at the state level, and we do not expect that to change under a Trump presidency. Lastly, we think EXC's diversified business model sets it apart from peers in the current environment, and expect it to outperform fully regulated peers in a rising rate environment. Our $37 price target implies ~17% upside, and we see the potential for our estimates and valuation to move higher from carbon legislation in Illinois, and any reduction in the corporate tax rates resulting from federal tax reform initiatives.

Merchant free cash flow, attractive investment opportunities, and ROE improvements at Pepco drive above average 7-9% utility growth. We estimate nearly $9b of free cash flow before growth at ExGen 2016-20, including the benefit from New York's Zero Emission Credit payments (ZECs) which we expect to fund regulated and unregulated growth as well as delevering. Management is targeting a balanced approach to deploying this capital (~$2.3b for committed ExGen growth capex, $2.7-3.2b for utility investment, and $2.7-3.2b in ExGen debt reduction). This strong cash flow profile supports attractive utility investments without the need for external equity. 7-9% growth at the utilities is supported by ~6% rate base growth and ROE improvements at the recently acquired Pepco utilities. Recent constructive regulatory outcomes and management's track record of improving operations at BG&E make us confident that EXC can improve earned ROEs at Pepco to ~9% by 2019.

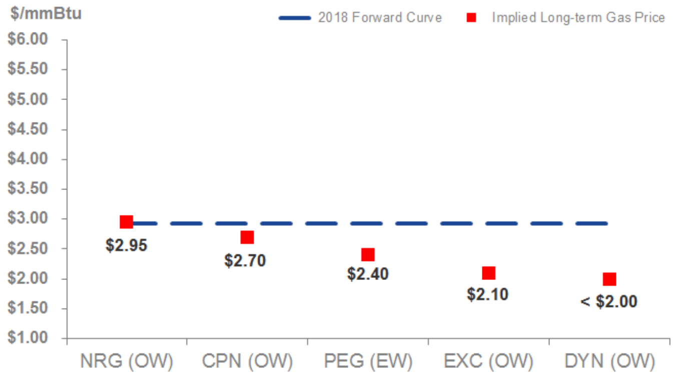
One of the best run merchant generation and marketing businesses in the industry, at a compelling valuation. EXC's current stock price implies a robust ~30% 2018-19 average free cash flow to equity yield at ExGen. In fact, in order for the business to be fairly valued at current levels, we estimate gas prices would need to fall to ~$2.10 in perpetuity (a very unlikely scenario, in our view), with no incremental state or federal support for carbon free generation. Unlike many of the pure-play merchant power companies, ExGen has investment grade credit metrics with ~30% FFO/debt, creating attractive financial flexibility. From a fundamental standpoint, we believe EXC's recent success in New York (securing revenue for upstate nuclear plants to reflect the value of their zero emissions profile) as indicative of the company's ability to ensure market design elements properly value the industry-leading low-carbon profile of its power plant fleet. We expect these zero emissions credits (ZECs) to withstand the pending legal challenge. While our estimates and valuation do not reflect any new carbon regulation or payment in other states, we do believe similar initiatives could be implemented in Illinois and Pennsylvania, further improving cash flow and stability of the business. While our forecasts do not reflect any improvement in commodities prices, we are closely watching the recent rise in coal prices, which would drive higher power prices in the PJM (mid-Atlantic) market, and yesterday's 2-4% increase in forecasted peak demand in ERCOT (Texas), which supports tighter market conditions over the next few years. Lastly, we remain constructive on PJM capacity prices in the upcoming May 2017 auction, another potential upside driver for ExGen.

Exhibit 3: EXC's Generation Business Is Trading at Attractive ~30% FCF-Equity Yield



Source: Morgan Stanley Research. Note, We Show DYN on This Chart, but Our Analysis Shows There Is No Gas Price Low Enough to Make the Stock "Fairly Valued" at Current Levels, Given DYN's Gas Heavy Asset Mix

Exhibit 4: EXC Is Pricing in a Long-Term Gas Price of ~$2.10



Source: Morgan Stanley Research. We Exclude FE And ETR Since the Stocks Currently Reflect $0 of Merchant Value, by Our Calculations.

Our $37 price target represents attractive 17% upside and we see a compelling risk-reward at current levels. Our $37 valuation reflects ~$27 per share for utilities and ~$10 per share for ExGen. We use a DCF valuation for the merchant business, ExGen, and an implied 16.0x 2018 P/E multiple for the utilities (including Pepco), in line with the regulated utility group average. For ExGen, we assume $3.75/MMBtu long-run natural gas price along with an incremental $0.75 negative gas basis for PJM East/West and negative $0.30 for NI Hub, which results in a net ~$3.00 and $3.45 per mmBtu long term gas price assumption for Exelon's PJM East and Illinois nuclear fleets, respectively. In Illinois, we currently do not reflect any uplift from a Clean Energy or Zero Emission Standard and longer term carbon regulation, and any implementation of such a program would represent upside to our price target. On the capacity side, our assumed long-run ComEd and MAAC capacity prices are $200/MW-day and $175/MW-day, respectively. Our terminal power plus capacity price assumptions reflect new build levels for gas generation. Overall, we view the risk-reward for EXC as attractive, and see meaningful potential upside to our estimates.

Several Upside Drivers Create Attractive Risk-Reward

Several upside drivers, including ZECs in IL and/or PA, PJM capacity prices, gas and power prices, and federal tax reform. In addition to what we see as a very attractive core story and valuation for EXC, we see several potential upside drivers which would be incremental to our and consensus estimates:

- **Illinois Zero Emissions Credits (ZECs):** During the Illinois legislature's mid-November veto-session , the house energy committee passed the "Future Energy Jobs Bill" which includes provisions to support at-risk nuclear plants through the form of Zero Emission Credit (ZEC) payment, similar to those seen in NY. If such payments were to be implemented, EXC would likely decide to cancel or delay the planned retirements of its Clinton and Quad Cities nuclear plants, which are currently set to retire in 2018 and 2019, respectively, due to poor market conditions. We estimate that the earnings benefit from the implementation of these ZECs payments would be ~$0.13, relative to retiring the plants.

- **PJM capacity prices**: we see upside in the 2020/2021 auction occurring in May 2017. The upside is driven by a normalization in new build economics (bonus depreciation and discounts on new gas turbines no longer a factor), as well as lower spark spreads, plus the benefit from a 100% phase in of capacity performance. In terms of zonal breakouts, we expect ComEd to continue to breakout at comparable levels to recent auctions (~$200/MW-d), and expect the strongest prices to be seen in EMAAC/PS (likely in excess of $200/MW-d). EXC is one of the most levered companies to an increase in capacity prices, with a ~$50/MW-day change in overall prices impacting earnings by ~$0.19. Looking at EMAAC specifically, each $50/MW-day change in prices will impact EPS by ~$0.09.

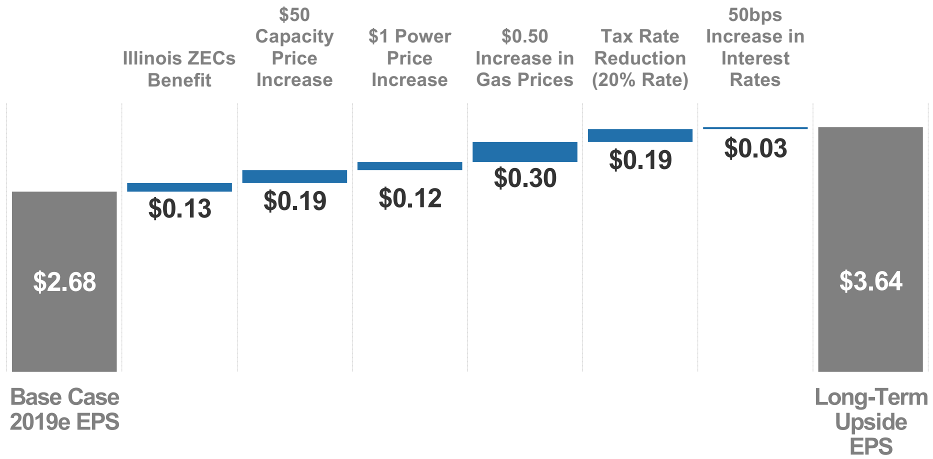
- **Gas and power prices**: While we do not incorporate any improvement in gas or power prices in our estimates, EXC would be one of the largest beneficiaries within our coverage of any increase. We believe the recent rally in coal prices could be supportive of PJM power, where coal power plants set prices ~50% of the time. Each $1/MWh improvement in power prices across all markets increases EXC's EPS by ~$0.12 (~5%), with a $0.50/mmBtu change in gas prices impacting EPS by ~$0.30 (10%) on an open basis.

- **Federal tax reform**: EXC's large unregulated business would be a beneficiary of any reduction in corporate tax rates. A key element of Republican tax reform proposals would reduce the corporate income tax rate from 35% to 15%, or 20%. While this tax reduction could negatively impact the cash flow of regulated utilities with large NOL balances (as we discuss in our Tax Reform deep dive), we calculate a positive ~$0.27 impact to 2018e EPS at EXC's ExGen merchant subsidiary. However, due to a reduction in the tax shield contributed by parent losses, there would be a partially offsetting ~$0.08 negative impact from a greater EPS drag at the parent.

- **Illinois ROEs**: Illinois is the only state in the US where allowed utility returns change in close to real-time with interest rates. EXC's largest electric utility, ComEd, is exposed to this regulatory mechanism. Allowed ROEs are calculated on a monthly basis based on the 30-year US Treasury yield + 580bps. Thus earnings at ComEd will increase with rising interest rates. This unique mechanism should help make EXC a relative outperformer within the utility sector in a rising rate environment, in our view. We estimate that a 50bps increase in rates would have a positive ~$0.03 impact to 2018e ComEd EPS.

- **Further capex potential at the utilities.** The utility capex profile provided by the company shows a deceleration later in the decade, but we believe it is very possible that the company will determine that additional investments are warranted and will provide value to customers, which could boost out-year spending. We have seen similar fact patterns at other utilities in the US, such as in California.

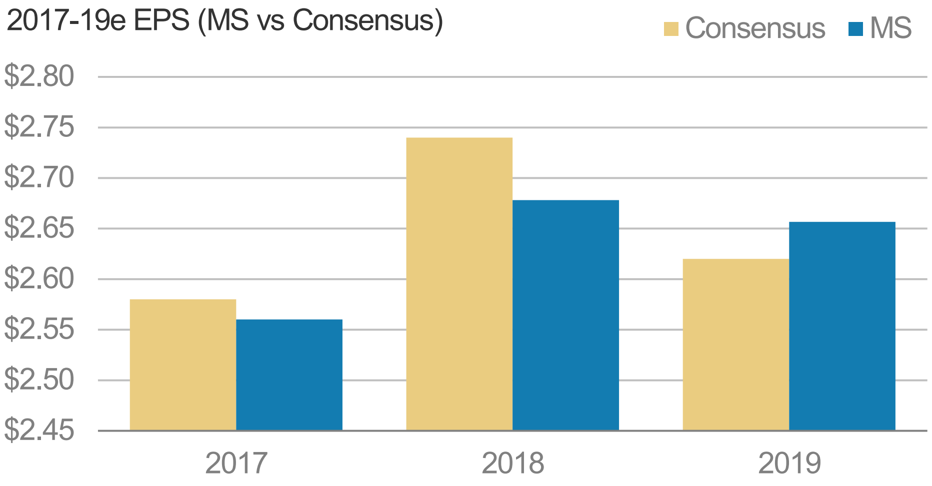
Exhibit 5: We See a Number of Potential Upside Drivers to Our Estimates



Morgan Stanley Research

Our EPS estimates are roughly in-line with consensus 2017-19 before accounting for any of the potential upside drivers… EXC's 2016 EPS guidance of $2.55-2.75 assumes a modest $0.15-0.25 contribution from Pepco. With Pepco having already contributed $0.20 YTD, we think it is likely EPS trends towards the upper end of the current range. Longer-term, we are roughly in-line with consensus without including any of the potential upside drivers discussed above (slightly below in 2018, above in 2019). Additionally, given recent regulatory wins seen across EXC's merchant and regulated businesses, we have increased confidence that EXC will be able to execute on its current growth strategy. As a result, we believe EXC will be able to earn attractive ROEs across its legacy utilities and we expect the company will be able to execute on its ~9% earned ROE target by 2019 for the acquired Pepco utilities.

Exhibit 6: Our 2019 EPS Estimate is Modestly Above Consensus Before Accounting For Any Potential Upside Drivers

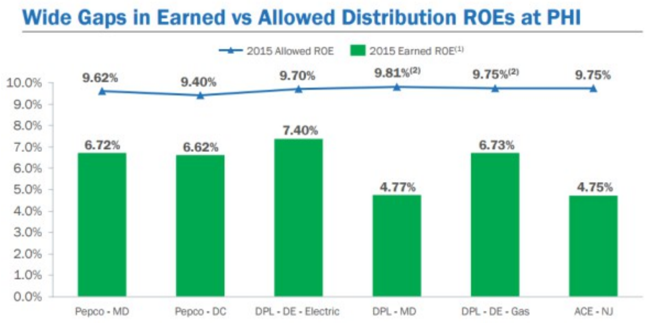


Thomson Reuters, Morgan Stanley Research

Legacy Utilities & Pepco - Attractive Core Regulated Growth

Strong growth at legacy utilities driven by comprehensive capital investment plan with strong recovery mechanisms and attractive ROE improvement opportunity at PHI utilities. EXC forecasts above-average 7-9% utility EPS growth through 2020 driven by a ~$25.2b capital investment plan focused primarily on T&D system upgrades over the same period. Out of the ~$25.2b, $9.7b is expected to be recovered through tracker mechanisms or formula rates, while $5.4b is expected to be recovered through FERC formula transmission rates, which we believe will allow EXC to achieve strong recovery and continue to earn compelling returns. While much of EXC's growth story is predicated on the successful execution of ROE improvements at its acquired Pepco utilities, recent regulatory wins at Pepco, and across the greater EXC complex, have made us more confident in the company's ability to achieve its targeted 9% ROE by 2019. Following the close of the Pepco acquisition on March 23rd, EXC filed for rate increases across all Pepco's jurisdictions. In recent months, EXC has received clarity in a number of these proceedings, reaching settlements or constructive staff recommendations in 3 out of its 6 filings. While management has said it will likely take multiple rate proceedings to reach the targeted ROE level, we believe this clarity helps alleviate some of the concerns around execution risk and view it as indicative of the company's ability to work productively with regulators to improve existing regulatory structures. We also note that management successfully executed on O&M cuts and ROE improvements at Baltimore Gas & Electric (BGE) following the close of the company's merger with Constellation Energy in 2012.

Exhibit 7: EXC Has Significant Room to Improve ROEs at Pepco, Which Has Historically Struggled to Reach Its Allowed Return



Source: EXC 2016 Analyst Day Presentation

EXC has significant room to improve ROEs at the acquired Pepco utilities, which under-earned their allowed ROE by ~3.5% on average in 2015. The company is targeting 9% ROEs across the Pepco utilities by 2019. We believe the company will reach its target and we forecast ~10% EPS CAGR at Pepco 2017-20 as a result of synergy realization, large capital plans with tracked spending and several planned rate cases. Some of Pepco's utility business units (driven by very different state-level regulatory environments) will be more challenging to improve than others, in our view. While we do not expect there will necessarily be a smooth, near-term, or linear path to success, we view Exelon's strong operational and regulatory track record as a key positive the company can bring to bear in improving Pepco and the company has recently received a number of rate outcomes that have increased our confidence in the company's willingness to work constructively with regulators in new jurisdictions:

1. On August 24, the New Jersey Board of Public Utilities (NJBPU) approved a settlement file by Atlantic City Electric (ACE) and BPU staff a week prior. The settlement called for a ~$45m rate increase and a 9.75% ROE, in-line with recent New Jersey ROE outcomes. The authorized revenue increase represented ~57% of ACE's requested ~$79.4m increase.

2. On September 28, the Maryland Public Service Commission staff issued a

recommended rate increase of ~$41.5m and an ROE of 9.48% in Delmarva Power & Light's (DPL) electric rate case. The staff recommendation reflects ~73% of DPL's revised request of ~$57m.

3. On November 15, regulators issued a final order in Potomac Electric Power's Maryland rate case, essentially in-line with (though slightly below) the staff recommendation, designating a rate increase of ~$52.5m and ROE of 9.55%, relative to the staff recommended increase of ~$54.8m and ROE of 9.57%. The authorized revenue increase reflects ~51% of the Potomac's revised rate request of ~$102.8m.

What's left to watch for on the regulatory front?:

1. A final decision on DPL's Maryland Rate Case. The company expects a final order by 2/17/17.
2. Clarity in DPL's Delaware electric & gas rate case. In mid-May, the company requested a ~$84.3m increase in aggregate, with a 10.60% ROE. The company expects to receive an order by 3Q17.
3. Clarity in Potomac Electric Power's D.C. rate case. In mid-October the company modified its rate increase request to reflect a ~$82.1m increase in aggregate, with a 10.60% ROE. The company expects to receive an order by 7/25/17.

At the legacy utilities, with PECO's and BGE's rate cases complete, a final order on ComEd's formula rate filing is all that is left on the regulatory agenda. On October 21, the ALJ in the ComEd proceeding recommended an increase of ~$130.8m (~96% of ComEd's supported revenue increase). In terms of load, BGE and ComEd are relatively shielded via decoupling / ROE mechanisms, however PECO is somewhat exposed. PECO's load was slightly down in 2015, though EXC is currently forecasting flat load for FY 16.

Source: Morgan Stanley Research

ExGen Offers Attractive Value

ExGen offers attractive cash flow and earnings with many potential upside drivers. Exelon's merchant business, ExGen, now trades at a very attractive ~30% 2018-19 free cash flow yield. In order to make ExGen "fairly valued" at current levels, we estimate that long-term gas prices would need to fall to ~$2.10/mmBtu, an unrealistically low level in our view. Management has proactively managed through the current commodity downturn by cutting costs out of the business and seeking carbon-based payments to preserve its financially challenged plants. Furthermore, ExGen's investment grade credit metrics set it apart from pure-play independent power producers, creating financial flexibility. Lastly, ExGen's generation plus retail combination reduces the volatility of the overall business while providing an attractive hedging avenue in light of illiquid financial markets for power. We see several upside drivers for the business, with more limited downside risks over the next few years. Potential catalysts include higher PJM capacity prices, upside to gas and power prices, and zero emissions payments in Illinois or other states.

Exhibit 10: Cost Cutting Initiatives Support Earnings and Cash Flow in the Current Low Commodity Price Environment

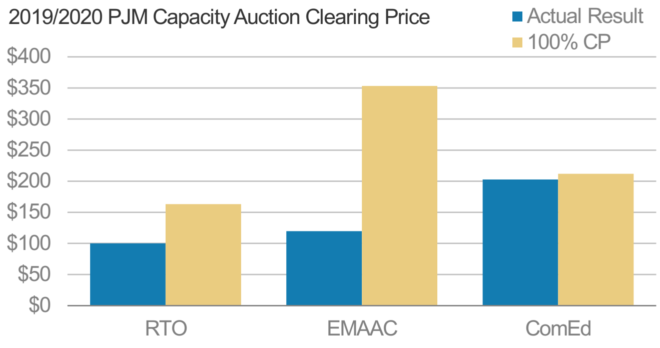
PJM Capacity: Constructive Setup into the May 2017 Auction

We expect PJM capacity prices to increase in the May 2017 auction (covering the 2020/21 delivery year), benefitting EXC. In the next PJM capacity auction Capacity Performance (CP), which imposes hefty penalties on poor performing generators, will increase to cover 100% of the market. Earlier this fall the Independent Market Monitor released a report on sensitivities and drivers for the 2019/20 Base Residual Capacity Auction, which occurred this past May. The report outlined what the auction price would have been if 100% capacity performance had been procured, and showed constructive prices. The auction would have cleared at $163/MW-day in RTO/MAAC, $212/MW-day in ComEd, and a significant breakout at $353/MW-day in EMAAC. While we do not expect auction prices to reach levels quite this high, we believe the analysis supports our

Exhibit 11: Market Monitor's analysis indicates constructive prices if 100% Capacity Performance was procured in the previous PJM auction



Source: PJM IMM

Exhibit 12: EXC has substantial leverage to an increase in PJM capacity prices...

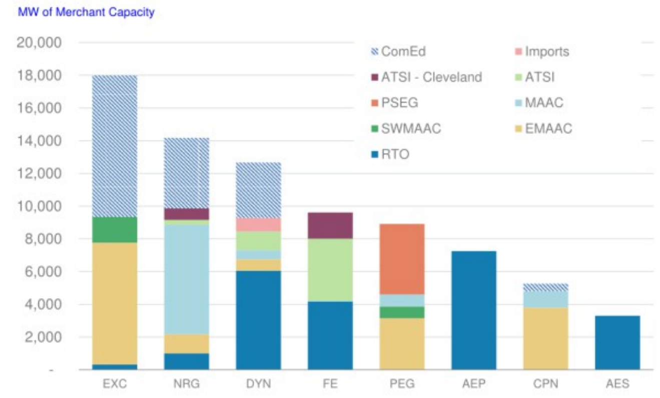
Exhibit 13: ...And is one of the Most Exposed to a potential EMAAC Breakout



Source: Morgan Stanley Research, Company Data

directional view that capacity prices should move higher in next year's auction, with the likelihood of a meaningful breakout in EMAAC.

The 2019/20 auction was negatively influenced by one-time items which go away. We continue to believe the 2019/20 auction was negatively impacted by one-time items including bonus depreciation and a meaningful reduction in PJM's demand forecast, and see upside in next auction from the removal of these one-time impacts and an increase in capacity performance procurement from 80% to 100%. EXC's PJM fleet has meaningful exposure to eastern PJM, making it a large beneficiary of potential EMAAC upside. While persistent new build has been a key headwind for the PJM market (both energy and capacity), our recent dialogue with private developers has indicated that financing incremental projects is becoming more challenging - we plan to monitor this trend closely over the coming months, as it could be positive for incumbent generation owners. Higher interest rates (driving higher financing costs), and lower spark spreads (down ~5% since the last auction) could also put upside pressure on capacity prices. Based on our recent conversations with investors, we believe price expectations for next year's 2020/21 PJM capacity auction are in the $120-140/MW-d range for RTO/MAAC with only a very modest breakout in EMAAC. We believe it is likely that EMAAC prices rise above $200/MW-day.

ERCOT: Higher Demand Tightens Market Without Retirements

ERCOT's draft load forecast points to much higher peak demand, driving tighter market conditions. Yesterday, ERCOT (the Texas power market) presented a new draft long-term load forecast at its Supply Analysis Working Group (SAWG). The revised forecast represents a ~2-4% increase in peak demand 2017-2020, resulting in much tighter expected reserve margins. Incorporating this revised peak demand, we now estimate reserve margins will fall below target levels (13.75%) by the 2018-19, before incorporating any unannounced retirements. We had previously estimated this would occur by 2021. While renewables are a headwind in ERCOT longer term, current low prices are not sustainable in our view. We believe the revised peak load forecast points to a nearer-term recovery than we had previously anticipated, and is constructive for EXC's ~2GW of new build combined cycle gas plants in the market. Lastly, we note that coal retirements remain a possibility over the next few years due to economic pressure in a low gas price environment, potentially accelerating market tightness even further**.** **Once the company's new build projects are completed, we estimate that every $5/MWh improvement in ERCOT spark spreads would impact EXC's open EPS by ~$0.05.**

Exhibit 14: ERCOT's New Draft Load Forecast Is 2-4% Higher...

Illinois Outlook

Introduction of NY style Zero Emission Credit Payments in Illinois represents attractive upside, though not currently baked into our estimates. During the Illinois legislature's mid-November veto-session , the house energy committee passed the "Future Energy Jobs Bill" which includes provisions to support at-risk nuclear plants through the form of Zero Emission Credit (ZEC) payment, similar to those seen in NY. If such payments were to be implemented, EXC would likely decide to cancel or delay the planned retirements of its Clinton and Quad Cities nuclear plants, which are currently set to retire year in 2018 and 2019, respectively, due to poor market conditions.

The current structure of the ZEC program laid out in bill would stipulates an initial flat payment of $16.50 per MWh produced, a level that was determined by factoring in the federally-determined Social Cost of Carbon. This figure would increase 3% annually until 2024, after which it would increase by $1/MWh annually. The program starts with an assumption that energy and capacity prices will be $31.40/MWh, but then adjusts the ZEC price if power and capacity prices total more than $31.40. This base price is reset annually, and going forward, if the energy and capacity price were to be greater than the baseline price, the ZEC price would be reduced to by the delta. The program also sets a cap on the potential increase to customer rates at 2.015%. We estimate that the earnings benefit from the implementation of these ZECs payments would be ~$0.20. This would represent ~$0.13 incremental benefit to our 2018e EPS estimate, after netting out the $0.07 benefit the company had disclosed resulting from the retirement of the IL nukes.

Timeline from here? Following the bill's approval by the house energy committee, the bill will continue to be refined before being put before a house vote, followed by a subsequent senate review and vote. Despite the approval, we noted that committee members indicated that the passage was primarily a procedural move to allow for continued negotiations on the bill, with several of the members who voted in favor of the bill suggesting amendments were needed and that they would not vote for the bill as it currently stands. Any additional amendment would be reconsidered by the energy committee before a final version is sent through to a house vote.

We note that in the past, opposition to similar energy initiatives has primarily come from the House, which could indicate there would be less push back at the Senate if the bill were to pass the House. However, given the requests for revisions which would then be reconsidered by the energy committee, the existing divides on a number of the reform's dynamics, and the current legislative focus on state budget issues we note that it could be difficult to successfully get a bill passed through both branches prior to the conclusion of the current veto session on December 1st.

Carbon Regs vs. Nuke Retirements in IL: EXC Wins Either Way. If the Future Energy Jobs Bill is not voted through to law, EXC will notify MISO of its intent to retire Clinton on December 1st. EXC currently plants to shut the Clinton and Quad cities nuclear facilities in 2017, and 2018 respectively. While we believe the implementation of New York style ZEC payments in Illinois would represent attractive upside to earnings, cash flow and valuation, we do not include any such benefit in our estimates. We believe EXC is a winner in either outcome, as EXC still receives attractive cash flow and EPS uplift as a result of the nuclear shutdowns. Our estimates currently reflect previous company guidance of run-rate savings of $0.07 of earnings and $75M in avoided pre-tax cash losses from retirement of Clinton and Quad Cities.

New York ZECs Likely Withstand Legal Challenge

Overview of the NY ZEC Order. On August 1, 2016, the NY Public Service Commission (PSC) issued an "Order Adopting a Clean Energy Standard" covering a number of initiatives, including a Zero Emissions Credit (ZEC) payment to four upstate nuclear power plants. The ZECs are scheduled to come into effect in April 2017. The magnitude of the ZEC payments covers a 12 year period of time, and is described in detail in Appendix E of the ZEC Order. The payment in the first tranche (covering the first 2 year period of time) is a flat $17.48 per MWh produced, a level that was determined by factoring in the federally-determined Social Cost of Carbon. For tranche 2, the program starts with an assumption that energy and capacity prices will be $39/MWh, but then makes an adjustment to the ZEC price if power and capacity prices total more than $39. For tranche 2 the adjusted Social Cost of Carbon is assumed to be $19.59 – which would be the ZEC price if the $39 energy and capacity price holds. If the energy and capacity price were to total $41/MWh, the ZEC price would be reduced to $17.59. If the energy and capacity price were to total $37/MWh, the ZEC price would still be $19.59. From tranches 2-6, the ZEC price can fluctuate, but there is an important element of this fluctuation from a legal and economic perspective: If market revenues were to fall significantly, the ZEC payment does not increase, whereas if market revenues were to increase significantly, the ZEC payment can fall to zero. We will discuss the potential legal ramifications of this provision within this section of our report.

Criteria for a nuclear plant to be eligible for the ZEC payments. In Appendix E of the ZEC Order, the NY PSC set forth the criteria for a nuclear plant to be eligible for the ZEC payments:

"(a) the verifiable historic contribution the facility has made to the clean energy resource mix consumed by retail consumers in New York State regardless of the location of the facility; (b) the degree to which energy, capacity and ancillary services revenues projected to be received by the facility are at a level that is insufficient to provide adequate compensation to preserve the zero-emission environmental values or attributes historically provided by the facility; (c) the costs and benefits of such a payment for zero-emissions attributes for the facility in relation to other clean energy alternatives for the benefit of the electric system, its customers and the environment; (d) the impacts of such costs on ratepayers; and (e) the public interest. Units in single ownership located in the same NYISO Zone and that share costs at the same site will be treated as a single facility for the determination. Therefore, Nine Mile Units 1 & 2 will be treated as a single facility, and Indian Point Units 2 and 3 will be treated as a single facility."

Most elements of the legal challenge, filed in the US District Court (Southern District of NY), are in our view not likely to convince a Court to overturn the Order, with one exception: the "financial need" criteria that nuclear plants must show before they can qualify for the ZEC payment. This element has a ~25% probability, in our view, of violating the restriction (as outlined in the *Hughes v. Talen* case) on State-level encouragement of clean generation that is "tethered" to the wholesale market. Because the showing of financial need that is a part of the ZEC Order is arguably related to the wholesale price of energy and capacity, it is possible that the US District Court will find that, because Indian Point has not been able to show financial need due to "a much higher level of market revenues," the ZEC Order is impermissibly tethered to the wholesale market. EPSA et al focused on this point in Paragraph 65 of its complaint, and in Paragraph 63, EPSA highlights the concerns with State-level efforts to subsidize generators where the subsidy is "tethered" to wholesale power and capacity prices. The Court may be persuaded by the argument that the ZEC payment, while not sized to explicitly "solve" for a certain nuclear plant avoiding economic shutdown, in substance resulted in that outcome due to the "financial need" provision of the ZEC Order.

The counterargument that NY can provide regarding "tethering" in the context of the "financial need" criteria: the State is entitled to encourage clean energy production from existing sources, and the State is arguably able, for existing generation, to factor in the incentives required to achieve the State's objective to reduce the overall, state-wide emissions profile. The concept would be: a State should focus its payments for zero carbon energy on the existing plants where the absence of support would result in a setback to the State's clean energy goals. The Court might distinguish between *existing* zero clean generation resources (where the payment can arguably factor in the level needed to ensure that the clean power output continues) and *new* generation (where the payment for renewable attributes is equal to the amount necessary to support construction of the project). In addition, NY can argue that the core of the concern with "tethering" as outlined in the Hughes v. Talen case is a concern with a State "fixing" the total revenue a generator is going to receive. Since the NY ZEC payment provided to generators is not tethered to wholesale prices (we discuss this in more detail in the next paragraph) and is instead based on the Social Cost of Carbon, in substance the payment is not linked to wholesale prices in the manner of a contract for differences that was rejected in the *Hughes v. Talen* case. As far as we are aware, this issue of "financial need" in the context of existing sources of clean generation is a subject of first impression for the courts, and as such it is unclear how a court will rule on the topic.

Even if this "financial need" element of the ZEC Order is held to be a violation of the "wholesale markets tethering" prohibition, this element could be eliminated and the overall Order would in our view likely withstand legal challenge. Indian Point would be the only nuclear plant impacted by this change, and if anything we see a silver lining associated with such a change, from the perspective of the nuclear plant owners: there could be a greater probability of a negotiated early shutdown date for Indian Point, given that the cash flows that Indian Point would receive would be enhanced by this change to the ZEC program. NY could condition the elimination of the "financial need" provision of the ZEC Order on an early shutdown of Indian Point, a plant that the State of NY has unsuccessfully sought to shut down for many years. The ZEC Order would in our view result in a positive cash flow position for Entergy's overall merchant generation business (whereas our current projections show zero net cash flow), which could be viewed as sufficiently valuable to serve as an incentive to accept an early shutdown date, perhaps in 5-8 years, in order to provide sufficient time to ensure replacement power sources and grid upgrades.

The elements of the complaint against the ZEC Order that we view as less persuasive, and why:

(i) *Argument:* the original NY PSC approach showed an intent to size the ZEC payment to specifically generate positive cash flow for nuclear plants. *Response:* the final NY PSC

Order based the payment on the Social Cost of Carbon, and it is always permitted for a State to change course in order to comply with the law. There is nothing invalid in our view with a State modifying its approach to ensure it does not run afoul of federal law.

(ii) *Argument:* the "Dormant Commerce Clause" principle that a State cannot discriminate against out-of-state generation. *Response:* out-of-state generators could qualify for the program. Even though in practice it might be challenging for an out-of-state nuclear generator to wheel power to NY, so long as the program could accept an out-of-state nuclear generator, we do not believe a challenge on this basis is persuasive.

(iii) *Argument:* the Order is also "tethered" to the wholesale market because the ZEC payment size falls if energy + capacity revenues exceeds certain levels. *Response:* this is a consumer protection feature to ensure customers don't pay excessively for the zero emissions attribute, and if energy/capacity prices fall greatly, the ZEC payment does not flex upward to cover this loss, a big distinction from the Hughes case. This provision could be viewed as "tethered" to the wholesale markets, but the type of "tethering" that appears to be the concern is the type of tethering that guarantees a fixed or favorable outcome for the generator; here, the ZEC can only flex downward, and it appears likely in our view that a court will distinguish this approach from the tethering designed to ensure a certain revenue level for a generator, as was the case in *Hughes v. Talen*.

(iv) *Argument:* the Order is discriminatory because it does not cover all existing clean generators such as hydro. *Response:* States are permitted to target their environmental programs to certain types of generation, for example by procuring only solar generation or only wind generation. We can think of many examples of States procuring only certain types of renewable generation, where other forms of generation are excluded.

Valuation Methodology and Risks to Price Targets

CPN.N

Valuation Methodology:

- We value CPN using a DCF analysis and assume a long-term natural gas price of $3.75/mmBtu and EMAAC capacity prices of $225/MW-day. We also assume Texas peak margins rise to $22/MWh longer-term, which is our estimate of replacement value for new generation in Texas. For our DCF we use a 6.8% WACC, 3% Risk-Free Rate, and 1.5% Terminal Growth Rate.

Risks:

- Market tightness in Texas is not realized due to weaker than expected load growth, increased renewables penetration, and/or additional construction of new conventional generation
- Further renewables penetration in California decreases long-run margin potential of CPN's gas-fired assets and its large Geysers geothermal asset

DYN.N

Valuation Methodology:

- We value DYN via a SOTP, assigning separate values for total GasCo, ENGIE, CoalCo, and IPH. We assume a long-term gas price of $3.75/mmBtu, long-run capacity prices in-line with recent results, and long-run total energy and capacity margins in-line with the replacement value for new generation in PJM and New England.

Risks:

- Changes in gas, power and capacity prices
- Additional environmental regulations driving higher coal capex requirements and/or shut-downs

NRG.N

Valuation Methodology:

- We value NRG using a DCF analysis and assume a long-term natural gas price of $3.75/mmBtu and EMAAC capacity prices of $225/MW-day. We also assume Texas peak margins rise to $22/MWh longer-term, which is our estimate of replacement value for new generation in Texas. For our DCF we use a 7.3% WACC, 3% Risk-Free Rate, and 1.5% Terminal Growth Rate.

Risks:

- Weak gas prices
- Lack of improvement in Texas power prices

- Execution risk on achieving operational merger synergies

PEG.N

Valuation Methodology:

- We value PEG via a SOTP. We value the regulated utility by applying the regulated group P/E multiple to 2018 Utility EPS and use a DCF analysis for the merchant business. For our DCF we use a 7.2% WACC, 3% Risk-Free Rate, and 1.5% Terminal Growth Rate.

Risks:

- Higher energy and capacity could be a positive for shares as the company's Power business is levered to commodities
- Strategic activity is not reflected in our valuation or estimates. But unregulated M&A has shown to be a positive in the sector due to considerable cost synergies

Disclosure Section

The information and opinions in Morgan Stanley Research were prepared by Morgan Stanley & Co. LLC, and/or Morgan Stanley C.T.V.M. S.A., and/or Morgan Stanley Mexico, Casa de Bolsa, S.A. de C.V., and/or Morgan Stanley Canada Limited. As used in this disclosure section, "Morgan Stanley" includes Morgan Stanley & Co. LLC, Morgan Stanley C.T.V.M. S.A., Morgan Stanley Mexico, Casa de Bolsa, S.A. de C.V., Morgan Stanley Canada Limited and their affiliates as necessary.

Unless otherwise stated, the individuals listed on the cover page of this report are research analysts.

Global Research Conflict Management Policy

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflictpolicies.

Important US Regulatory Disclosures on Subject Companies

As of October 31, 2016, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: NextEra Energy Inc.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

An employee, director or consultant of Morgan Stanley is a director of AES Corp.. This person is not a research analyst or a member of a research analyst's household.

Morgan Stanley & Co. LLC makes a market in the securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of October 31, 2016)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with NASD and NYSE requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	COVERAGE UNIVERSE		INVESTMENT BANKING CLIENTS (IBC)			OTHER MATERIAL INVESTMENT SERVICES CLIENTS (MISC)	
STOCK RATING CATEGORY	COUNT	% OF TOTAL	COUNT	% OF TOTAL IBC	% OF RATING CATEGORY	COUNT	% OF TOTAL OTHER MISC

TOTAL	**3,307**		**655**			**1576**	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.
In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.
Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.
Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Keeping the Lights On: Passage of Nuclear Illinois Support Represents Upside for EXC

Stock Rating	Industry View	Price Target
Overweight	In-Line	$37.00

Yesterday, the Illinois State Legislature voted to pass the "Future Energy Jobs Bill", which includes payment provisions to support at-risk nuclear plants. We view the passage of the bill as a positive for EXC and see incremental upside to our estimates.

Yesterday, the Illinois House and Senate voted to pass the "Future Energy Jobs Bill" (SB 2814) which includes provisions to provide support to at-risk nuclear plants through the form of Zero Emission Credit (ZEC) payment, similar to those seen in NY. We see this as a positive for EXC (OW) and believe the company will now likely decide to cancel or delay its planned retirements of its Clinton and Quad Cities nuclear plants, which were set to retire in 2017 and 2018, respectively, due to poor market conditions. Our estimates do not yet include any such benefit and we believe the implementation of ZEC payments in Illinois represents compelling incremental upside to earnings, cash flow and valuation. We estimate that the earnings benefit from the implementation of these ZECs payments would be ~$0.16. This would represent ~$0.09 incremental benefit to our 2018e EPS estimate, after netting out the $0.07 benefit the company had disclosed resulting from the retirement of the IL nukes.

Next Steps? After being passed by the house and senate, the bill will now have to be signed into law by the Governor. The final version of the bill states it will be effective 6 months after the Governor signs the bill. While the governor technically has 60 days to sign the bill, it seems likely the bill will be signed sooner rather than later given the Governor's publically expressed support for the legislation.

The structure of the ZEC program laid out in the passed bill had only minor changes to the original proposal. The new structure stipulates an initial flat payment of $16.50 per MWh produced, a level that was determined by factoring in the federally-determined Social Cost of Carbon. The annual step-up in this number is no longer included in the bill, with the original bill calling for annual increases of 3% annually until 2024, and $1/MWh annual increases thereafter. The program starts with an assumption that energy and capacity prices will be $31.40/MWh, but then adjusts the ZEC price if power and capacity prices total more than $31.40. Going forward, if the energy and capacity price were to be

Exelon Corp (EXC.N, EXC US)

Diversified Utilities / IPPs / United States of America

Stock Rating	**Overweight**
Industry View	**In-Line**
Price target	**$37.00**
Shr price, close (Dec 1, 2016)	$32.17
Mkt cap, curr (mm)	$29,757
52-Week Range	$37.70-25.09

greater than the baseline price, the ZEC price would be reduced to by the delta. The program's set cap on the potential increase to customer rates was also reduced from 2.015% to 1.65%. We estimate that the earnings benefit from these ZEC payments would be ~$0.16, modestly below the ~$0.20 benefit we estimated under the original structure. This would represent ~$0.09 incremental benefit to our 2018e EPS estimate, after netting out the $0.07 benefit the company had disclosed resulting from the retirement of the IL nukes.

With another constructive legislative outcome, we continue to see EXC as one of the best run merchant generation businesses in the industry. EXC has a well-deserved reputation for operational excellence at its ExGen merchant business. With the bill originally facing what was generally viewed by investors as a difficult path to passage after it was introduced, the outcome in Illinois reinforces our confidence in EXC's ability to ensure market design elements properly value the industry-leading low-carbon profile of its power plant fleet. Illinois represents the latest in a series of several recent constructive regulatory outcomes in both EXC's regulated segment, where it has received clarity in a meaningful portion of its Pepco rate cases, and its unregulated segment, where it also recently secured revenue for upstate NY nuclear plants to reflect the value of their zero emissions profile. We also believe the decision in Illinois reflects a positive read across in regards to the potential for other states such as Connecticut, Pennsylvania, New Jersey and Ohio, to pursue similar initiatives for nuclear support over time.

Valuation methodology: Our $37 price target is derived from our base case and driven by a 2018e P/E for Utilities and a DCF analysis for Generation and Energy Supply (ExGen). For our DCF we use an 8.2% WACC, 3% risk-free rate, and 1.5% terminal growth rate.

Risks to our price target include:

- Natural gas and power prices. EXC is the most sensitive diversified utility to natural gas prices on our math;

- Execution on improving ROEs at Pepco utilities;

- Court ruling on legal challenge to NY ZECs;

- May 2017 PJM capacity auction.

Global Research Conflict Management Policy

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflictpolicies.

Important US Regulatory Disclosures on Subject Companies

As of October 31, 2016, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: NextEra Energy Inc.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

An employee, director or consultant of Morgan Stanley is a director of AES Corp.. This person is not a research analyst or a member of a research analyst's household.

Morgan Stanley & Co. LLC makes a market in the securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of November 30, 2016)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with NASD and NYSE requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	COVERAGE UNIVERSE		INVESTMENT BANKING CLIENTS (IBC)			OTHER MATERIAL INVESTMENT SERVICES CLIENTS (MISC)	
STOCK RATING CATEGORY	COUNT	% OF TOTAL	COUNT	% OF TOTAL IBC	% OF RATING CATEGORY	COUNT	% OF TOTAL OTHER MISC
Overweight/Buy	**1154**	**35%**	**265**	**41%**	**23%**	**574**	**36%**
Equal-weight/Hold	**1432**	**43%**	**297**	**45%**	**21%**	**709**	**45%**
Not-Rated/Hold	**69**	**2%**	**8**	**1%**	**12%**	**9**	**1%**
Underweight/Sell	**666**	**20%**	**83**	**13%**	**12%**	**287**	**18%**
TOTAL	**3,321**		**653**			**1579**	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.
In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.
Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.
Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the

circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important US Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

UPDATE

August 11, 2016 04:01 AM GMT

Exelon Corp

Solid Strategy, With Upside Potential

Stock Rating	Industry View	Price Target
Equal-weight	In-Line	$38.00

EXC's investor day showed a thoughtful strategy for both the utility and merchant businesses, with potential upside from clean energy incentives and capital deployment. We remain Equal-weight.

A lot to like in terms of Exelon's strategy. We see the merits for EXC (but not necessarily other diversified utilities) of a combined merchant-utility business model. EXC laid out their strategy very clearly, and we see numerous strengths:

1. **The utility business will be able to deploy the strong cash flow from the merchant business.** From 2016-20, Exelon forecasts $8.2b in free cash flow, excluding the up to $750m from the NY Clean Energy Standard, which we expect will be approved. Management laid out a thoughtful, balanced approach to deploying this capital (~$2.3b for committed ExGen growth capex, $2.7-3.2b for utility investment, and $2.7-3.2b in ExGen debt reduction). We like this approach - it will maintain strong credit metrics while resulting in attractive EPS growth.

2. **Potential for above-average 7-9% EPS growth through 2020 at the utility business.** While this growth will require significant improvements in earned ROEs at the recently-acquired Pepco utility, we note management's track record in improving results at BG&E and see potential for a similar trajectory at Pepco. We do acknowledge that there is execution risk here, and we would like to see evidence of ability to achieve regulatory and operational successes before we would value this business at a premium to peers.

3. **Strong balance sheet.** We like the stable credit profile of the utility and the conservative leverage targets at ExGen. At ~30% FFO/debt at the merchant business, and given the hedge profile of this business, should generation market conditions deteriorate, which we do not expect, Exelon would have ample time and cash flow to further deleverage this business.

4. **One of the best run merchant generation and marketing businesses in the industry.** Exelon has a well-deserved reputation for operational excellence at this business unit. We also note Exelon's recent success in NY (securing revenue for upstate nuclear plants to reflect the value of their zero emissions profile) as indicative of the company's ability to ensure market design elements properly value the industry-leading low-

For analyst certification and other important disclosures, refer to the Disclosure Section, located at the end of this report.

carbon profile of its power plant fleet. We were especially intrigued by the potential for federal support for zero emissions power should Secretary Clinton be elected President (see our report here). FERC could utilize a number of mechanisms to provide value for zero emissions power, and we believe it is likely FERC has the legal authority to do so. If FERC decides to support zero emissions generation on a level playing field (i.e. all such generation receives the same incentive), we see EXC as the biggest winner from such an outcome.

Away from the policy side, we believe ExGen's combination of generation and retail marketing offers lower volatility of results and higher margin potential. Management of this business laid out several examples of the synergies from this combination, and we believe this is often under-appreciated by investors.

Given the above, what keeps us from being Overweight the stock? We see upside in the shares, and believe there are several avenues of additional growth. Developments we would like to see that would support an even more positive view of the stock would be:

1. **Execution of improvement strategy at Pepco.** Some of Pepco's utility business units (driven by very different state-level regulatory environments) will be more challenging to improve than others, in our view, and we would like to see some successes in improving this business. If we saw such successes, we would view the utility business as being superior to peers given the EPS growth potential. We do not expect there will be a smooth, near-term, or linear path to success, but we view Exelon's strong operational and regulatory track record as a key positive the company can bring to bear in improving Pepco.

2. **Further constructive developments in terms of properly valuing the zero emissions profile of Exelon's large fleet of nuclear plants.** We highlighted earlier in the note how FERC might be able and willing to provide support for clean energy sources on a level playing field, but it is also possible that at the federal level, emphasis is given to solar and/or wind. We note that Secretary Clinton's energy policy has a heavy emphasis on solar power, and the comments from Donald Trump are indicative of minimal to zero support for clean energy sources.

3. **Further capex potential at the utilities.** The utility capex profile provided by the company shows a deceleration later in the decade, but we believe it is very possible that the company will determine that additional investments are warranted and will provide value to customers, which could boost out-year spending. We have seen similar fact patterns at other utilities in the US, such as in California.

4. **A constructive outcome in the next PJM capacity auction.** We have previously discussed why we are relatively bullish on the May 2017 auction, and we may well see a helpful "back cast" from PJM later this year that will show the price increases that would have occurred if PJM had procured 100% Capacity Performance (CP) in the most recent auction, rather than the 80% procured this year (next year's auction will be the first 100% CP procurement). Exelon would be one of the biggest

beneficiaries of higher PJM capacity prices.

5. **Higher natural gas prices.** We recently updated our 2017 natural gas price forecast, and our forecast is meaningfully above the forward curve. Such a price move, which would result in higher power prices, would significantly benefit Exelon.

EXC.N

Valuation Methodology:

- Derived From Our Base Case And Driven By A 2017e P/E For Utilities And A DCF Analysis For Generation And Energy Supply (ExGen). For Our DCF We Use an 8% WACC, 3% Risk-Free Rate, And 1.5% Terminal Growth Rate.

Risks:

- Natural gas and power prices decline further. EXC is the most sensitive diversified utility to natural gas prices on our math
- PJM capacity prices in the May '16 auction could be disappointing
- Additional states implementing carbon cap and trade programs. Additional carbon regulation would benefit EXC's large nuclear fleet

Global Research Conflict Management Policy

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflictpolicies.

Important US Regulatory Disclosures on Subject Companies

As of July 29, 2016, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: NextEra Energy Inc, NRG Energy Inc.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of AES Corp., Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

An employee, director or consultant of Morgan Stanley is a director of AES Corp.. This person is not a research analyst or a member of a research analyst's household.

Morgan Stanley & Co. LLC makes a market in the securities of AES Corp., American Electric Power Co, Calpine Corp., Dominion Resources Inc, Dynegy Inc., Entergy Corp, **Exelon Corp**, FirstEnergy Corp, NextEra Energy Inc, NRG Energy Inc, Public Service Enterprise Group Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of July 31, 2016)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with NASD and NYSE requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	COVERAGE UNIVERSE		INVESTMENT BANKING CLIENTS (IBC)			OTHER MATERIAL INVESTMENT SERVICES CLIENTS (MISC)

TOTAL	**3,334**		**728**			**1595**	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Exelon Corp (EXC): Illinois legislature passes Future Energy Jobs Bill

Sentiment Indicator : positive

Produced by Tucker, Shelby (RBC Capital Markets, LLC) on Thursday, December 01, 2016, 20:27 PM ET
Disseminated on Thursday, December 01, 2016, 20:35 PM ET

Our View: We believe this is a big win for Exelon (EXC, $32.17; Outperform; $38 PT) to get the bill passed at the last hours of the 2016 veto session. While we do not know whether the governor has officially signed the bill as of this writing, our understanding is that he will sign the bill into law. This law would allow Exelon to continue to operate the Clinton and Quad Cities nuclear plants while receiving around $0.16/share of EPS boost. Our current 2016-2018 EPS estimates of $2.65, $2.63, and $2.86 currently do not incorporate this benefit, although they do include the benefit from New York's zero emission credits (ZECs). We expect the stock to outperform tomorrow.

This evening, the Illinois House and Senate both voted to pass Senate Bill (SB) 2814 - Future Energy Jobs Bill, with certain amendments. We note that the passage of the bill allows for Exelon's Clinton (1,078 MW) and Quad Cities (1,819 MW) to receive additional revenues and remain in operation.

Boost for ExGen. The bill, in short, allows Exelon Generation (ExGen) to earn up to $235 million (~$0.16/share in EPS) annually over the next 10 years via zero emission credits (ZECs) collected from ComEd and Ameren customers. The benefit is calculated by assigning a social cost of carbon of $16.50/MWh based on a baseline market power price of $31.40/MWh (as of May 31, 2016), with the carbon cost reduced as power prices rise above the baseline level. The $235 million is the maximum allowed benefit amount, even though the formulaic amount using $16.50/MWh on around 20,000 GWh of energy (16% of Comed/Ameren load supplied by Clinton/Quad Cities) results in a ~$330 million benefit.

Renewables/EE components. The bill retains the 25% by 2025 renewable portfolio standard (RPS) currently in place, with the utilities permitted to recover costs of renewable energy credits. In addition, the bill includes provisions to expand on energy efficiency measures while allowing for the utilities to recover the costs based on a formulaic rate of 580 basis points above the 30-year treasury yield (12-month average).

Exelon Corp (EXC): Strong 3Q16 beat, 2016 guidance raised a dime to $2.55-$2.75

Sentiment Indicator : positive

Produced by Tucker, Shelby (RBC Capital Markets, LLC) on Wednesday, October 26, 2016, 08:59 AM ET

Disseminated on Wednesday, October 26, 2016, 09:13 AM ET

Our View: Strong quarterly beat on better ExGen margins and Pepco (PHI) earnings contribution. We expect questions on the call to focus on the sources of the additional O&M savings identified, commentary on the CES program and Fitzpatrick acquisition in New York, and details on the various rate case proceedings for the PHI utilities.

Exelon Corp (EXC; $32.90; Outperform; $38 PT) reported 3Q16 operating earnings of $0.91 per share, $0.07 above our estimate of $0.84 per share and $0.12 above consensus of $0.79 per share. The result is also well above 3Q16 guidance of $0.65-$0.75 per share and 3Q15 earnings of $0.83 per share. Management raised their 2016 operating EPS guidance from $2.40-$2.70 ($2.55 midpoint) to $2.55-$2.75 ($2.65 midpoint); our current estimate is $2.60 versus consensus of $2.57. The following highlights some of the key drivers of the quarter on a year-over-year (YoY) basis versus our estimates:

Exelon Generation

- Nuclear volume/fuel: $0.00, $0.01 worse.
- Lower capacity revenue: -$0.02, $0.02 better.
- Market conditions/portfolio management: $0.03, $0.10 better.

Utilities

- PHI utilities - net earnings impact: $0.14, $0.06 better.
- Weather: $0.04, $0.02 worse.
- Higher PECO/ComEd/BGE rates/load: $0.05, $0.01 better.

Expenses/Other (excluding PHI impact):

- O&M expense: -$0.05, $0.03 worse.
- D&A expense: -$0.05, $0.02 worse.
- Interest expense: -$0.02, in-line.
- Share count dilution: -$0.01, in-line.
- Higher income taxes: -$0.04, $0.04 worse.

ExGen forward gross margins lower. As of September 30, ExGen's total gross margin estimate for 2016-2018 stands at $7.5 billion, $7.25 billion, and $6.8 billion, respectively, a change of $50 million, -$100 million, and -$250 million since the end of 2Q16. We note that power prices have improved since the end of 3Q16.

Additional O&M savings expected. Management now expects O&M to trend down at a 2.8% CAGR from 2016-2019, more than the 1.7% CAGR guided to during the August Analyst Day. The bulk of the additional savings is expected to be back-end loaded in 2018 and 2019 (down an additional $100 million and $125 million, respectively).

PHI, ComEd guidance raised. Management's $0.10 raise in the 2016 EPS guidance is allocated to the Pepco utilities (+$0.05 to $0.15-$0.25) and ComEd (+$0.05 to $0.55-$0.65).

Conference call at 11 AM ET. The dial-in number is (800) 690-3108, pass code 97958834.

(all figures in USD unless noted)

Exelon Corp

It's simply a good story all around

Event

- EXC offers an attractive ~9% EPS CAGR for 2016-20E for its regulated utilities less parent, with upside potential to both capex and realized ROEs, especially at Pepco, we believe. Thanks to exceptionally strong operations and retail/wholesale hedges, ExGen continues to deliver on earnings expectations while offering unmatched gas optionality. All of that is supported by a relatively strong balance sheet and a discounted valuation vs diversified utilities. We recognize that there are many moving parts at EXC at the moment, but those could be a source of continuous positive catalysts. We reiterate our Outperform rating and EXC remains our top pick among diversified utilities.
- Yesterday, EXC hosted its analyst day in Philadelphia.

Impact

- **Regulated utility growth:** We had hoped for a slight increase in EXC's 7-9% regulated EPS CAGR, even though we recognize that it is difficult in light of numerous pending rate cases at the recently acquired Pepco. Our estimates reflect a 10% EPS CAGR for EXC's regulated utilities less parent, but we see further upside to our estimates, especially in '19 and beyond, as we would expect EXC to find additional growth capex and further streamline Pepco's operations.
- **ExGen's moving parts:** With changes in forward power and gas curves, power hedges, the recent regulatory support for EXC's nuclear plants in NY, a pending acquisition of the Fitzpatrick nuclear plant in the state, and a recently acquired retail book from ConEd Solutions, it is not easy to project ExGen's net income. Add to that the high sensitivity of ExGen's earnings to changes in natural gas prices (especially in 2018 and beyond) and EDF's put option on three of ExGen's nuclear plants, and there is plenty to keep us busy for the next year or so.

Earnings and target price revision

- We have updated our earnings estimates to reflect YTD results, power hedges, most recent forward power/gas curves, subsidies for EXC's nuclear plants in NY, a pending purchase of the Fitzpatrick nuclear plant and a recently acquired retail book from ConEd Solutions. With limited insight into ExGen's costs pro forma in all of these transactions, we have embedded conservative EBITDA margin assumptions into our updated estimates. Our new '16/'17/'18/'19 EPS estimates are US$2.52/2.66/2.88/2.86 vs. US$2.59/2.63/2.73/2.68, respectively. With higher estimates, we have raised our TP to US$41 from US$40.

Price catalyst

- 12-month price target: US$41.00 based on a Sum of Parts methodology.
- Catalyst: Clarity on the regulatory support for NY nuclear plants and closing of the Fitzpatrick acquisition.

Action and recommendation

- We reiterate our Outperform rating.

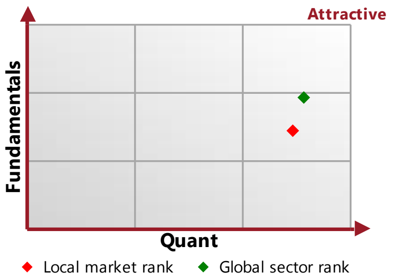
Macquarie Quant View

The quant model currently holds a reasonably positive view on Exelon Corp. The strongest style exposure is Earnings Momentum, indicating this stock has received earnings upgrades and is well liked by sell side analysts. The weakest style exposure is Growth, indicating this stock has weak historic and/or forecast growth. Growth metrics focus on both top and bottom line items.

64/439

Global rank in Utilities

% of BUY recommendations	57% (13/23)
Number of Price Target downgrades	0
Number of Price Target upgrades	13

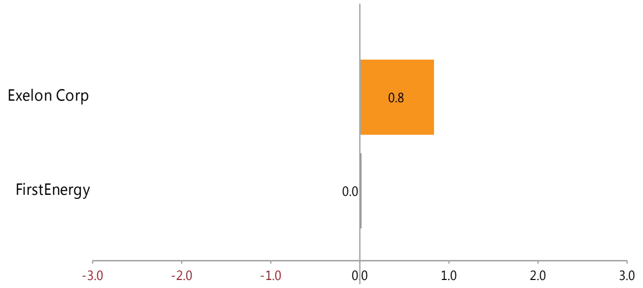


Displays where the company's ranked based on the fundamental consensus Price Target and Macquarie's Quantitative Alpha model.

Two rankings: Local market (United States) and Global sector (Utilities)

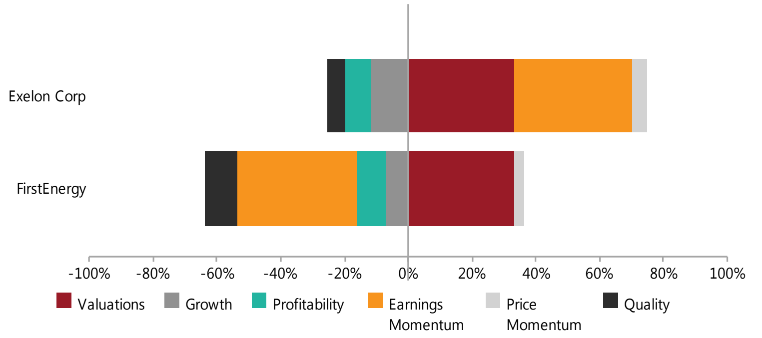
Macquarie Alpha Model ranking

A list of comparable companies and their Macquarie Alpha model score (higher is better).



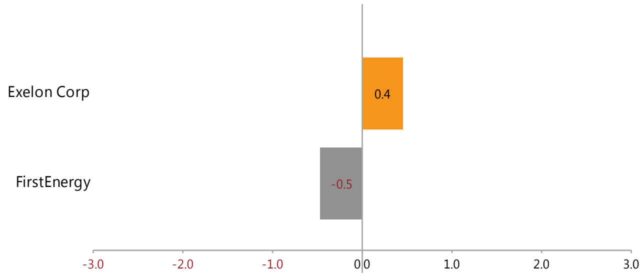
Factors driving the Alpha Model

For the comparable firms this chart shows the key underlying styles and their contribution to the current overall Alpha score.



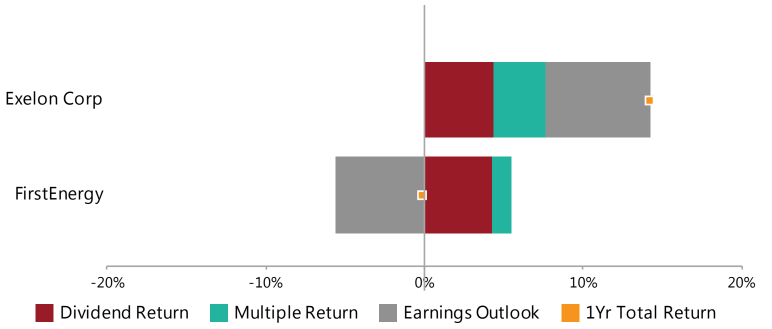
Macquarie Earnings Sentiment Indicator

The Macquarie Sentiment Indicator is an enhanced earnings revisions signal that favours analysts who have more timely and higher conviction revisions. Current score shown below.



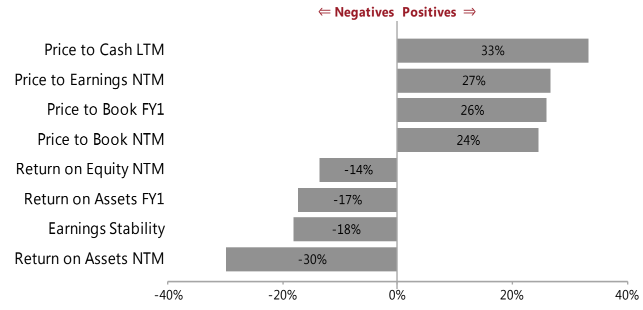
Drivers of Stock Return

Breakdown of 1 year total return (local currency) into returns from dividends, changes in forward earnings estimates and the resulting change in earnings multiple.



What drove this Company in the last 5 years

Which factor score has had the greatest correlation with the company's returns over the last 5 years.



How it looks on the Alpha model

A more granular view of the underlying style scores that drive the alpha (higher is better) and the percentile rank relative to the sector and market.

Recommendation definitions

Macquarie - Australia/New Zealand
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

Macquarie – Asia/Europe
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie – South Africa
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

Macquarie - Canada
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

Macquarie - USA
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

Volatility index definition*

This is calculated from the volatility of historical price movements.

Very high–highest risk – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

High – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

Medium – stock should be expected to move up or down at least 30–40% in a year.

Low–medium – stock should be expected to move up or down at least 25–30% in a year.

Low – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

Recommendations – 12 months
Note: Quant recommendations may differ from Fundamental Analyst recommendations

Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

EPS = adjusted net profit / efpowa*
ROA = adjusted ebit / average total assets
ROA Banks/Insurance = adjusted net profit /average total assets
ROE = adjusted net profit / average shareholders funds
Gross cashflow = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

Recommendation proportions – For quarter ending 30 June 2016

	AU/NZ	Asia	RSA	USA	CA	EUR	
Outperform	45.17%	56.00%	36.36%	43.16%	63.39%	45.91%	(for global coverage by Macquarie, 6.27% of stocks followed are investment banking clients)
Neutral	36.21%	28.59%	40.26%	50.38%	29.46%	36.96%	(for global coverage by Macquarie, 6.33% of stocks followed are investment banking clients)
Underperform	18.62%	15.41%	23.38%	6.46%	7.14%	17.12%	(for global coverage by Macquarie, 5.38% of stocks followed are investment banking clients)

Exelon Corp.

EXC: Nuclear values split between soft power prices and climate change concerns

Earnings Review

26 October 2016

Lowering long-dated Generation bonds to Marketweight

We are revising our rating on Exelon Generation's longer-dated bonds (maturing in 2039 and beyond) to Marketweight from Overweight while reiterating our Overweight rating on Exelon Generation's shorter-dated bonds with final maturities out to June 2022. Our rating change reflects prices slightly above par versus uncertainties regarding longer-term residual value of electricity generation assets in the U.S., given the negative economic impact on power prices ample and growing supplies of cheap shale gas, growing social and political calls for renewable energy resources, excess capacity, and *de minimus* growth of electricity demand in most markets. However, we view Exelon Generation's portfolio as being much better positioned than its competitive generation peers due to its huge fleet of baseload, low-emitting, high-performing nuclear plants, its renewables and its low exposure to fossil fuels. On the one hand, Exelon Generation is preparing to begin shutting down at year-end its Clinton and Quad Cities nuclear plants due to ongoing, large financial losses; on the other hand, New York State has awarded its up-state nuclear plants (which Exelon Generation owns or will buy from Entergy) hundreds of millions of dollars of Zero Emission Credits (ZECs). We maintain our Overweight on Exelon Corporation in light of its bonds trading slightly wide relative to most mid-BBB utility holding companies and management's strong commitment to a solid balance sheet and credit ratings. We consider Baltimore Gas & Electric, Commonwealth Edison and PECO Energy as core holdings for buy-and-hold accounts; our Marketweight rating reflects secondary trading levels in line with peers.

Better-than-expected 3Q leads to FY16 guidance raise

Exelon reported 3Q16 operating EPS of $0.91 ($841 million), beating consensus of $0.79 and up from $0.83 ($757 million) in 3Q15. Key drivers for the YOY improvement were the March 2016 acquisition of Pepco Holdings and favorable weather and higher rates at Commonwealth Edison and PECO Energy, partly offset by higher expense levels and lower capacity prices (Exhibit 2 at right). Exelon raised its FY16 adjusted operating earnings guidance range to $2.55-$2.75 from $2.40-$2.70.

2016 financing plans are mostly complete

Exelon's financing for 2016 is mostly complete, except that it may issue approximately $1 billion for the deposit with the IRS following that agency's recent adverse decision on the 1999 like-kind exchange; Exelon plans to contest the decision vigorously. Next year's potential debt refinancing opportunities include Exelon Corp.'s $550 million notes maturity on June 9th, Commonwealth Edison's $425 million first mortgage bonds maturity on September 15th, and Exelon Generation's $700 million senior notes maturity on October 1st. We also note that Exelon's outstanding corporate units ($1.15 billion face value), issued in 2014 to finance a portion of the Pepco Holdings acquisition, require the holders to purchase Exelon common stock on June 1, 2017.

Summary Profile

Description

Exelon Corporation is a utility service holding company engaged in the energy generation and energy delivery services. Exelon Generation is one of the largest U.S. competitive U.S. power generators with ~32,700 megawatts of owned capacity, including the largest nuclear fleet and a renewables portfolio. Exelon's Constellation business unit provides energy products and services to ~100,000 business and public sector customers and ~1 million residential customers. Exelon's utilities deliver electricity and natural gas to ~10 million customers in Delaware, the District of Columbia, Illinois, Maryland, New Jersey, and Pennsylvania through its Atlantic City Electric, BGE, ComEd, Delmarva Power, PECO and Pepco subsidiaries.

Significant Events

- August 8, 2016: Exelon Generation entered into series of agreements with Entergy Nuclear FitzPatrick LLC to acquire 838 MW FitzPatrick Nuclear Power Station for a cash purchase price of $110 million. Closing is expected in 2Q17.

- March 23, 2016: Exelon and Pepco Holdings close merger following approval by the Public Service Commission of the District of Columbia. In its order approving the merger, the DC PSC included conditions previously outlined in its February 26 order and certain new conditions, which the companies accepted. The merger brings together Exelon's three electric and gas utilities – BGE, ComEd, and PECO – and Pepco Holdings' three electric and gas utilities – Atlantic City Electric, Delmarva Power and Pepco.

Comparables

- Public Service Enterprise Group (PEG)
- NextEra Energy (NEE)
- Entergy (ETR)

Does not include the planned merger with Pepco Holdings. * Amortization of nuclear fuel has been netted against capital expenditures. Exelon and Constellation Energy Group merged on March 12, 2012; numbers prior to that date do not include results of Constellation Energy Group. Not all line items are shown. Source: Company reports, BofA Merrill Lynch Global Research.

Valuation & risk

Exelon Corp. (EXC)

We view Exelon Corporation credit spreads as attractive relative to other mid-BBB electric utility holding company bonds. In addition, Exelon's credit profile has improved slightly following its March 2016 acquisition of Pepco Holdings' three regulated, transmission-and-distribution-only utilities. The utilities not only dilute Exelon Generation's proportion of Exelon's consolidated EBITDA, but also enable a broader and more diversified portfolio of regulated cash flows. Management remains committed to a strong balance sheet and solid credit metrics. Primary risks include a declining EBITDA profile at Exelon Generation as a result of persistently low power prices, or an increase of parent or consolidated leverage.

Baltimore (EXC)

We view Baltimore Gas & Electric as a low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. In addition, Baltimore Gas & Electric has had a ring fence to insulate its credit quality from affiliates. We view secondary credit spreads as fairly valued relative to T&D peers. We view the primary risk to be a below-average regulatory environment in Maryland.

Commonwealth Edison (EXC)

We view Commonwealth Edison as a low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. We view credit spreads as fairly valued relative to other T&D utilities. We view the primary risk to be a below-average regulatory environment in Illinois due to past political interferences, but the environment has been much more stable and somewhat more supportive in recent years.

Exelon Generation Co (EXC)

We view Exelon Corporation and Exelon Generation credit spreads as attractive relative to peers with a large, low-emissions baseload generation portfolio, strong operating performance, substantial capacity revenues, ongoing hedging of commodity prices, the commitment to a strong balance sheet and liquidity, and the implicit support of a diversified, regulated utility portfolio. Risks include soft power prices due to ample supplies of cheap shale gas, and differing views on climate change and nuclear's role in the power markets in the future.

PECO Energy Co. (EXC)

We view PECO Energy as a high-quality, low-risk transmission-and-distribution-only regulated electric utility with stable cash flows and good cost recovery mechanisms. PECO Energy's secondary credit spreads are fair to tightly valued relative to its electric T&D peers. We view the primary potential credit risk to be an action at or development by either its parent or its sister merchant generation business.

Analyst Certification

I, Peter D. Quinn, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

BofA Merrill Lynch Credit Opinion Key

BofA Merrill Lynch Global Research provides recommendations on an issuer's bonds (including corporate and sovereign external debt securities), capital securities, equity preferreds and CDS as described below. Convertible securities are not rated. An issuer level recommendation may also be provided for an issuer as explained below. BofA Merrill Lynch Global Research credit recommendations are assigned using a three-month time horizon.
Issuer Recommendations: If an issuer credit recommendation is provided, it is applicable to bonds and capital securities of the issuer except bonds and capital securities specifically referenced in the report with a different credit recommendation. Where there is no issuer credit recommendation, only individual bonds and capital securities with specific recommendations are covered. CDS and equity preferreds are rated separately and issuer recommendations do not apply to them.

BofA Merrill Lynch Global Research credit recommendations are assigned using a three-month time horizon:
Overweight: Spreads and /or excess returns are likely to outperform the relevant and comparable market over the next three months.
Marketweight: Spreads and/or excess returns are likely to perform in-line with the relevant and comparable market over the next three months.
Underweight: Spreads and/or excess returns are likely to underperform the relevant and comparable market over the next three months.

BofA Merrill Lynch Global Research uses the following rating system with respect to **Credit Default Swaps (CDS):**
Buy Protection: Buy CDS, therefore going short credit risk.
Neutral: No purchase or sale of CDS is recommended.
Sell Protection: Sell CDS, therefore going long credit risk.

Corporate Credit Issuer Investment Rating Distribution: Global Group (as of 30 Sep 2016)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	154	37.65%	Buy	136	88.31%
Hold	178	43.52%	Hold	155	87.08%
Sell	77	18.83%	Sell	66	85.71%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only corporate credit issuer recommendations. A corporate credit issuer rated Overweight is included as a Buy, a corporate credit issuer rated Marketweight is included as a Hold, and a corporate credit issuer rated Underweight is included as a Sell.

Credit Opinion History Tables for the securities referenced in this research report are available at http://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
MLPF&S or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Baltimore, Commonwealth Edison.
The issuer is or was, within the last 12 months, an investment banking client of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
The issuer is or was, within the last 12 months, a non-securities business client of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
MLPF&S or one of its affiliates has a significant financial interest in the fixed income instruments of the issuer. If this report was issued on or after the 15th day of the month, it reflects a significant financial interest on the last day of the previous month. Reports issued before the 15th day of the month reflect a significant financial interest at the end of the second month preceding the report: Baltimore, Exelon Corp., Exelon Generation.
MLPF&S or one of its affiliates trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of this research report: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of MLPF&S and/or one or more of its affiliates: Baltimore, Commonwealth Edison, Exelon Corp., Exelon Generation, PECO Energy.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

BofA Merrill Lynch Global Credit Research analysts regularly interact with sales and trading desk personnel in connection with their research, including to ascertain pricing and liquidity in the fixed income markets.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.

Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.

The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

This report may refer to fixed income securities that may not be offered or sold in one or more states or jurisdictions. Readers of this report are advised that any discussion, recommendation or other mention of such securities is not a solicitation or offer to transact in such securities. Investors should contact their BofA Merrill Lynch representative or Merrill Lynch Financial Global Wealth Management financial advisor for information relating to fixed income securities

Rule 144A securities may be offered or sold only to persons in the U.S. who are Qualified Institutional Buyers within the meaning of Rule 144A under the Securities Act of 1933, as amended.

SECURITIES DISCUSSED HEREIN MAY BE RATED BELOW INVESTMENT GRADE AND SHOULD THEREFORE ONLY BE CONSIDERED FOR INCLUSION IN ACCOUNTS QUALIFIED FOR SPECULATIVE INVESTMENT.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.

The securities discussed in this report may be traded over-the-counter. Retail sales and/or distribution of this report may be made only in states where these securities are exempt from registration or have been qualified for sale.

Officers of MLPF&S or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

This report, and the securities discussed herein, may not be eligible for distribution or sale in all countries or to certain categories of investors.

Information relating to Affiliates of MLPF&S and Distribution of Affiliate Research Reports:

This research report has been prepared and issued by MLPF&S and/or one or more of its non-US affiliates. MLPF&S is the distributor of this research report in the US and accepts full responsibility for research reports of its non-US affiliates distributed to MLPF&S clients in the US. Any US person receiving this research report and wishing to effect any transaction in any security discussed in the report should do so through MLPF&S and not such foreign affiliates.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This research report provides general information only. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of any specific person. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this report.

Securities and other financial instruments discussed in this report, or recommended, offered or sold by Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

This report may contain a trading idea or recommendation which highlights a specific identified near-term catalyst or event impacting a security, issuer, industry sector or the market generally that presents a transaction opportunity, but does not have any impact on the analyst's particular "Overweight" or "Underweight" rating (which is based on a three month trade horizon). Trading ideas and recommendations may differ directionally from the analyst's rating on a security or issuer because they reflect the impact of a near-term catalyst or event.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned in this report. Investors in such securities and instruments effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom. BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at http://go.bofa.com/coi.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented in this report. Such ideas or recommendations reflect the different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this report.

In the event that the recipient received this report pursuant to a contract between the recipient and MLPF&S for the provision of research services for a separate fee, and in connection therewith MLPF&S may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom MLPF&S has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by MLPF&S). MLPF&S is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities mentioned in this report.

J.P. Morgan Securities LLC

The IL legislature voted to approve of the Future Energy Jobs Bill yesterday with final approval dependent on a likely signature from Gov. Rauner. If successful, EXC will have established a ZEC program in both NY and IL despite CPP uncertainty. The bill stems from EXC's multi-year effort to delay the shutdown of Quad Cities & Clinton and is estimated to raise annual EPS 3-8c net of the annual -7c of higher costs for keeping Quad & Clinton open. From our understanding, an IL approval stands on stronger legal footing relative to NY given the legislative pathway. Approval may facilitate an early 2017 ZEC-like pursuit in Pennsylvania which shares economic characteristics with NY & IL such as the amount of merchant nuclear plants. We continue to reiterate our OW rating.

- **ZEC drives $3-8c of annual EPS vs. prior; NPV of $0.75-1.10/share:** We calculate each ZEC is worth $9-13/MWh or $158m-$226m annually. This equates to $3-8c of incremental EPS after netting out the annual -7c of higher costs for keeping Quad & Clinton open. We believe the ZEC program establishes a collar for Clinton and Quad's earnings contribution and represents a NPV of $0.75-$1.10/ share based on our high and low assumptions for the market price of energy. It is our understanding that the program won't begin until mid-2017 and EXC will record a year and a half worth of ZEC earnings contributions in 2018 and a full year of ZEC beginning 2019.
- **Legislative approval strengthens IL legal footing compared to NY or OH:** From our understanding, IL's ZECs stands on sturdier legal footing given approval from a state legislature rather than from a public utility commission as was the case for NY & OH. Logically, Pennsylvania appears to be the next area to pursue a ZEC program in early 2017 given similar economic characteristics with IL & NY such as the amount of merchant nuclear plants in the state.
- **Reduced ZECs still delays Quad & Clinton shutdown:** The ZEC program largely mirrors NY's ZECS by paying nuclear plants the social cost of carbon adjusted for current energy prices. Relative to the original bill introduced a few months prior, the final version caps the annual retail rate increase at 1.65% vs. 2.05% prior thereby reducing the maximum subsidy from $285m to $235m per annum. The final version also requires ComEd to spend $400m/year on energy efficiency and fully decouples ComEd rates though earnings impact appears minimal as IL already has forward test-years.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $36.00)*

Investment Thesis

ExGen continues to generate strong cash flow even in a challenging commodity environment, allowing it to fund a top-tier utility growth story and a growing dividend. We see the potential passage of legislation in Illinois and execution of the ZEC program and Fitzpatrick purchase in New York as potential catalysts, and these represent incremental earnings versus our current published forecasts. EXC shares are the cheapest integrated play on trough commodity prices, and we feel investors are dismissing these catalysts and not appreciating ExGen's value and de-leveraging.

Valuation

We are lowering our December 2017 price target of $37 to $36/share. Our valuation is based on a sum-of-the-parts analysis using our 2019 forecasts. We use an average 17.3x P/E multiple for the regulated utility and corporate business segments. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. The downward revision in our price target is driven by a lower regulated peer multiple relative to our prior estimate.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company’s earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), Dominion Resources (D), Duke Energy Corp. (DUK), Emera Inc. (EMA.TO), Entergy Corp. (ETR), Exelon Corp. (EXC), FirstEnergy (FE), Great Plains Energy (GXP), Hawaiian Electric Industries Inc. (HE), NextEra Energy Inc. (NEE), Nextera Energy Partners (NEP), NiSource Inc. (NI), PG&E Corp. (PCG), Pattern Energy (PEGI), Portland General Electric Co. (POR), Public Service Enterprise Group (PEG), Sempra Energy (SRE), South Jersey Industries (SJI), Spire Inc (SR), Westar Energy Inc (WR), Xcel Energy (XEL)

J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2016

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage	42%	46%	12%
IB clients*	51%	48%	34%
JPMS Equity Research Coverage	42%	50%	8%
IB clients*	68%	61%	43%

*Percentage of investment banking clients in each rating category.
For purposes only of FINRA/NYSE ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com.

Equity Analysts' Compensation: The equity research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. Further information about J.P. Morgan's conflict of interest policy and a description of the effective internal organisations and administrative arrangements set up for the prevention and avoidance of conflicts of interest is set out at the following link https://www.jpmorgan.com/jpmpdf/1320678075935.pdf. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch and J.P.Morgan Chase Bank, N.A., Frankfurt Branch which are regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. **Japan:** There is a risk that a loss may occur due to a change in the price of the shares in the case of share trading, and that a loss may occur due to the exchange rate in the case of foreign share trading. In the case of share trading, JPMorgan Securities Japan Co., Ltd., will be receiving a brokerage fee and consumption tax (shouhizei) calculated by multiplying the executed price by the commission rate which was individually agreed between JPMorgan Securities Japan Co., Ltd., and the customer in advance. Financial Instruments Firms: JPMorgan Securities Japan Co., Ltd., Kanto Local Finance Bureau (kinsho) No. 82 Participating Association / Japan Securities Dealers Association, The Financial Futures Association of Japan, Type II Financial Instruments Firms Association and Japan Investment Advisers Association. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com.sg. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: This material is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited. **India:** For private circulation only, not for sale. **Pakistan:** For private circulation only, not for sale. **New Zealand:** This material is issued and distributed by JPMSAL in New Zealand only to persons whose principal business is the investment of money or who, in the course of and for the purposes of their business, habitually invest money. JPMSAL does not issue or distribute this material to members of "the public" as determined in accordance with section 3 of the Securities Act 1978. The recipient of this material must not distribute it to any third party or outside New Zealand without the prior written consent of JPMSAL. **Canada:** The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed judgment upon these materials, the information contained herein or the merits of the securities described herein, and any representation to the contrary is an offence. **Dubai:** This report has been issued to persons regarded as professional clients as defined under the DFSA rules. **Brazil**: Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $40.00)*

Investment Thesis

We view recent developments as finally marking the beginning of the end of nuclear decision limbo for EXC, meaning earnings and cash flow improvement potential in both IL and NY. This coincides with an upcoming utility-driven refreshed cash deployment plan at next month's analyst meeting and an expected reinforcement of a solid balance sheet story with excess investment capacity in 2018-19. EXC shares are the cheapest integrated play on trough commodity prices, and we feel investors are dismissing these and other catalysts in 2H.

Valuation

We are lowering our December 2016 price target to $40 ($41 prior). Our valuation is based on a sum-of-the-parts analysis using our 2018 forecasts. We use an average 19.4x P/E multiple for the regulated utility and corporate business segments, a minor premium to regulated peers reflecting a constructive regulatory construct at PECO and growth potential from lag at PHI partially offset by a mildly challenging regulatory environment at BGE. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. The downward revision in our price target reflects a slightly lower regulated peer multiple relative to our prior update.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company's earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. Further information about J.P. Morgan's conflict of interest policy and a description of the effective internal organisations and administrative arrangements set up for the prevention and avoidance of conflicts of interest is set out at the following link https://www.jpmorgan.com/jpmpdf/1320678075935.pdf. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch and J.P.Morgan Chase Bank, N.A., Frankfurt Branch which are regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. Multiple Ways to Win in 2H16; Adding to Focus List

We are adding EXC to our U.S. Analyst Focus List (as a value strategy) and raising our price target to $41. We view recent developments as finally marking the beginning of the end of nuclear decision limbo for EXC, meaning earnings and cash flow improvement potential in both IL and NY. This coincides with an upcoming utility-driven refreshed cash deployment plan at next month's analyst meeting and an expected reinforcement of a solid balance sheet story with excess investment capacity in 2018-19. EXC shares are the cheapest integrated play on trough commodity prices, and we feel investors are dismissing these and other catalysts in 2H.

- **Multiple ways to win in 2H:** The second half could hold several positive catalysts for EXC shares, among them a refreshed long-term plan at the August 8 analyst day. We see risk to the upside from a larger long-term utility capex and earnings growth forecast partly from bonus depreciation cash not yet included in plan as well as higher POM lag catch-up/accretion estimates. Additionally, the IL nuke shutdowns could drive incremental cash flow and earnings as could potential NY zero energy credits and corresponding CENG put and Fitzpatrick purchase optionality.

- **Beginning of the end of nuclear limbo, a win/win:** A decision to move forward with the IL nuke shutdowns is less preferable than the legislative support avenue, but it still drives incremental cash flows ($115MM/year per management) and earnings even after taking into consideration decommissioning liabilities. Conversely, the encouraging recent progress in NY could mean a 12-year game-changing contract for the state's upstate units, which means 10c annually as proposed, excluding deals for Fitzpatrick or CENG.

- **Cheap utility and power story at trough of commodity cycle:** At 13.0x 2018E EPS, EXC shares are the cheapest integrated utility play despite being better positioned geographically and more levered within a power and capacity market recovery than most peers. The 13.0x multiple and 3.5% yield compare to regulated peers at 17.6x 2018E and 3.2%, respectively.

- **Worst case scenario already priced in:** We see expectations of continued power and capacity market weakness through 2019 as built into expectations at an implied open 2018 EV/EBITDA of 6.1x, as well as a worst case scenario of no NY energy credit plan, no benefit from IL nuke closures, and mediocre updated utility growth and POM accretion.

Beginning of the end of nuclear limbo, a win/win

We view both shutdown and continued operation under a state-support subsidy as preferable for EXC versus the alternative of continuing to run the units at both earnings and cash flow losses. Management has indicated the Clinton and Quad Cities units in IL have burned through approximately $114MM of cash on average between 2009 and 2015, a figure currently baked into forward EXC gross margin and consolidated earnings guidance of 3-5% growth. Shutdown will require material write-downs and some immediate cash obligations, but ultimate decommissioning liabilities are limited. The worst case company estimate forecasts a total of $790MM of radiological and non-radiological decommissioning liabilities, but we note this is using the worst-case of the three methods offered by the NRC and that the SAFSTOR method could mean a considerably lower amount.

Table 1: Incremental expenses incurred from early retirement of Clinton & Quad Cities

2009-2015 Aggregate Cash Loss from Clinton & Quad Cities	~$800m		
Annualized Cash Loss from Clinton & Quad Cities	~$114m		
	Clinton	**Quad Cities**

Source: Company documents

*Decommissioning charge represents the most expensive option of three alternatives

*EXC noted that Quad Cities is in a better position to avoid the maximum radiological and spent fuel management cost payment

*Unclear whether payments represent a NPV or future nominal payment

On July 8 NYPSC's staff outlined its recommendation to help delay the shutdown of Ginna, FitzPatrick, and Nine Mile. Under the proposed structure, each of these nuclear facilities would receive a Zero Emission Credit (ZEC) per MWh of carbon-free emission generated between April 2017 and March 2029. It remains unclear the degree to which intervenors might challenge the subsidy, though logical areas that may be addressed include the purported environmental benefits, size of the ~$7.6bn subsidy, and 12-year term length. These efforts, however, may not be consequential enough to warrant a full-rejection by the NYPSC. We note a decision may come as early as the next scheduled commission meeting on August 1. CENG has noted a desire for a decision to occur prior to Sept 2016. It stands to reason ETR would want a similar lead time before the scheduled closure of Fitzpatrick on Jan 2017.

Approval of at least a reduced subsidy appears logical given New York's environmental goals and vocal support from the government. We note it was originally Governor Cuomo who directed the NYPSC to establish a Clean Energy Standard to achieve the 50% RPS goal by 2030 in his December 2015 letter. Premature closure of these nuclear facilities would logically create a large setback, thereby hindering achievement of this already aggressive initiative. Importantly, both FERC and NYPSC have separately authorized a nuclear subsidy known as the Reliability Support Service Agreement (RSSA) on March 2016 and April 2016, respectively. Under this contract, RG&E would pay Ginna an amount sufficient to keep the nuclear facility open through March 31, 2017. Notably, the composition of the NYPSC hasn't changed since the unanimous approval of the RSSA, and three of the four commission members who sit on NYPSC were appointed by Governor Cuomo.

Table 2: Hypothetical Annual ZEC Subsidies Proposed by NYPSC Staff

Assumed Annual Output	(TWH)	Capacity (MW)
NineMile Point	15.9	1,937
Ginna	4.8	582
Fitzpatrick	7.0	852

Years	1	2	3	4	5	6	7	8	9	10	11	12
$/MWH per ZEC Subsidy	17.48	17.48	19.58	19.58	21.38	21.38	23.83	23.83	26.45	26.45	29.15	29.15
NineMile Point ($MM)	277	277	310	310	339	339	378	378	420	420	462	462
Ginna ($MM)	83	83	93	93	102	102	114	114	126	126	139	139
Fitzpatrick ($MM)	122	122	137	137	149	149	166	166	185	185	203	203
Annual Subsidy ($MM)	483	483	540	540	590	590	658	658	730	730	804	804
Cumulative Subsidy ($MM)	483	965	1,505	2,046	2,636	3,226	3,884	4,542	5,272	6,002	6,806	7,611

Source: Calculated subsidy represents subsidies received by nuclear facilities unadjusted for future energy and capacity prices assuming capacity and output do not change.

JPM European Utilities analyst Javier Garrido sees EDF (EDF.PA, Neutral) as likely exercising the CENG put option in the near future, with the probability having increased over the last six months. There might remain political pressure in France to hold on to U.S. nuclear assets because it sends a general message of support for nuclear power and U.S investment generally. However EDF requires funding for its nuclear construction/renovation projects in France as customer bills have decreased and the outlook for a carbon tax based on the latest proposals seems less beneficial than originally expected.

These factors may be enough to push the company to sell, especially if NY proceeds with the Zero Energy Credit proposal next month. The put option is exercisable from 2016 to 2022, with the price arbitration process taking up to 10 months or longer according to EXC.

Higher capex and rate base growth may flow from bonus depreciation cash

Incremental bonus depreciation-driven cash flow totals $2.5-2.8Bn from 2016-19 including the PHI impact, a meaningful amount considering EXC utility capex underlying guidance is currently ~$4.7-5.4Bn/year. We see potential for a sizable portion of the excess cash to be put to work here through 2019 and upside to the current utility component of guidance.

ExGen continues to generate positive FCF despite hedge roll-offs and power curve backwardation through 2019, helping drive our consolidated FFO-to-debt, debt-to-EBITDA, and interest coverage to 23%, 4.0x, and 3.8x, respectively, by the end of the period. The company is targeting 20% consolidated FFO-to-debt, leaving ~1,100MM of spare capacity according to our modeled forecast.

Cheap utility and power story at trough of commodity cycle

At 13.0x 2018E EPS, EXC shares are the cheapest integrated utility play despite being better geographically positioned and more levered within a power and capacity market recovery than most peers. The 13.0x multiple and 3.5% yield compare to regulated peers at 17.6x 2018E and 3.2%, respectively.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $41.00)*

Investment Thesis

We view recent developments as finally marking the beginning of the end of nuclear decision limbo for EXC, meaning earnings and cash flow improvement potential in both IL and NY. This coincides with an upcoming utility-driven refreshed cash deployment plan at next month's analyst meeting and an expected reinforcement of a solid balance sheet story with excess investment capacity in 2018-19. EXC shares are the cheapest integrated play on trough commodity prices, and we feel investors are dismissing these and other catalysts in 2H.

Valuation

We are raising our December 2016 price target to $41 ($37 prior). Our valuation is based on a sum-of-the-parts analysis using our 2018 forecasts. We use an average 20.0x P/E multiple for the regulated utility and corporate business segments, a minor premium to regulated peers reflecting a constructive regulatory construct at PECO and growth potential from lag at PHI partially offset by a mildly challenging regulatory environment at BGE. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. The upward revision in our price target reflects a slightly higher regulated peer multiple and higher GenCo multiple relative to our prior update.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company's earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), Dominion Resources (D), Duke Energy Corp. (DUK), Entergy Corp. (ETR), Exelon Corp. (EXC), FirstEnergy (FE), Great Plains Energy (GXP), Hawaiian Electric Industries Inc. (HE), ITC Holdings (ITC), NextEra Energy Inc. (NEE), Nextera Energy Partners (NEP), NiSource Inc. (NI), PG&E Corp. (PCG), Pattern Energy (PEGI), Piedmont Natural Gas Co. (PNY), Portland General Electric Co. (POR), Public Service Enterprise Group (PEG), Sempra Energy (SRE), South Jersey Industries (SJI), Spire Inc (SR), Westar Energy Inc (WR), Xcel Energy (XEL)

J.P. Morgan Equity Research Ratings Distribution, as of July 1, 2016

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage	43%	45%	12%
IB clients*	52%	49%	37%
JPMS Equity Research Coverage	42%	50%	8%
IB clients*	68%	65%	51%

*Percentage of investment banking clients in each rating category.
For purposes only of FINRA/NYSE ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above.

Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. Further information about J.P. Morgan's conflict of interest policy and a description of the effective internal organisations and administrative arrangements set up for the prevention and avoidance of conflicts of interest is set out at the following link https://www.jpmorgan.com/jpmpdf/1320678075935.pdf. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch and J.P.Morgan Chase Bank, N.A., Frankfurt Branch which are regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. **Japan:** There is a risk that a loss may occur due to a change in the price of the shares in the case of share trading, and that a loss may occur due to the exchange rate in the case of foreign share trading. In the case of share trading, JPMorgan Securities Japan Co., Ltd., will be receiving a brokerage fee and consumption tax (shouhizei) calculated by multiplying the executed price by the commission rate which was individually agreed between JPMorgan Securities Japan Co., Ltd., and the customer in advance. Financial Instruments Firms: JPMorgan Securities Japan Co., Ltd., Kanto Local Finance Bureau (kinsho) No. 82 Participating Association / Japan Securities Dealers Association, The Financial Futures Association of Japan, Type II Financial Instruments Firms Association and Japan Investment Advisers Association. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com.sg. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: This material is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited. **India:** For private circulation only, not for sale. **Pakistan:** For private circulation only, not for sale. **New Zealand:** This material is issued and distributed by JPMSAL in New Zealand only to persons whose principal business is the investment of money or who, in the course of and for the purposes of their business, habitually invest money. JPMSAL does not issue or distribute this material to members of "the public" as determined in accordance with section 3 of the Securities Act 1978. The recipient of this material must not distribute it to any third party or outside New Zealand without the prior written consent of JPMSAL. **Canada:** The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed judgment upon these materials, the information contained herein or the merits of the securities described herein, and any representation to the contrary is an offence. **Dubai:** This report has been issued to persons regarded as professional clients as defined under the DFSA rules. **Brazil**: Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not

intended as recommendations of particular securities, financial instruments or strategies to particular clients. The recipient of this report must make its own independent decisions regarding any securities or financial instruments mentioned herein. JPMS distributes in the U.S. research published by non-U.S. affiliates and accepts responsibility for its contents. Periodic updates may be provided on companies/industries based on company specific developments or announcements, market conditions or any other publicly available information. Clients should contact analysts and execute transactions through a J.P. Morgan subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

J.P. Morgan Securities LLC

Exelon reported a strong 3Q beat mostly driven by weather and lower storm costs and raised 2016 guidance. ExGen's outlook was extended through 2019 with slightly better gross margin than expected as the retail business continues to insulate against weak power, and additional costs cuts equating to ~8c/share annually were announced. We continue to monitor the challenge in Federal court to NY's Zero Energy Credit as the company moves to sign a formal agreement next month and close the Fitzpatrick transaction in 2Q. We are also awaiting potential IL legislative action before year end, but do not include this or ZEC in our forecasts. We are reiterating our OW rating.

- **Strong 3Q on weather, 2016 guidance raised:** EXC reported a $0.12 beat versus cons. of $0.79 and raised FY16 guide to $2.55-2.75 from $2.40-2.70 driven primarily by weather. The 15c beat versus our $0.76 est. was largely driven by warmer weather at ComEd & PECO, lower storm expense, and the impact from NJBPU's Aug 24th approval of ACE's electric distribution rate case. Despite hot weather and no planned outages, ExGen FY16 guide was maintained.

- **ExGen 2019 guidance intro slightly better than expected:** EXC provided earlier than expected transparency to ExGen earnings by disclosing FY19 guide today instead of at EEI. Given the large hedge roll off, the $6.8bn FY19 gross margin guide was solid and slightly above our expectation demonstrating the insulation provided by the Constellation retail business. Additionally, $100m & $125m of incremental cost cuts were announced in 2018 and 2019, respectively, on top of the large ExGen cuts seen since last year.

- **Another shot in IL legislature before year end; watching ZEC challenge:** We do not model any benefit from ZEC credits nor Fitzpatrick, which add $0.10-0.18 of annual EPS according to the company. Management highlighted the potential for an IL legislature vote on a clean-energy bill during either the Nov 15-17th or Nov 29th - Dec 1st veto sessions. In New York, we continue to monitor the Federal court challenge filed Oct 19th, in parallel with the signing of contracts with NYSERDA in November and the Fitzpatrick expected transaction closing by 2Q17.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $37.00)*

Investment Thesis

ExGen continues to generate strong cash flow even in a challenging commodity environment, allowing it to fund a top-tier utility growth story and a growing dividend. We see the potential passage of legislation in Illinois and execution of the ZEC program and Fitzpatrick purchase in New York as potential catalysts, and these represent incremental earnings versus our current published forecasts. EXC shares are the cheapest integrated play on trough commodity prices, and we feel investors are dismissing these catalysts and not appreciating ExGen's value and de-leveraging.

Valuation

We are introducing our December 2017 price target of $37. Our valuation is based on a sum-of-the-parts analysis using our 2019 forecasts. We use an average 17.9x P/E multiple for the regulated utility and corporate business segments. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company’s earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst’s (or the analyst’s team’s) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock’s expected total return is compared to the expected total return of a benchmark country market index, not to those analysts’ coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst’s coverage universe can be found on J.P. Morgan’s research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Allete Inc. (ALE), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), Dominion Resources (D), Duke Energy Corp. (DUK), Emera Inc. (EMA.TO), Entergy Corp. (ETR), Exelon Corp. (EXC), FirstEnergy (FE), Great Plains Energy (GXP), Hawaiian Electric Industries Inc. (POR), Public Service Enterprise Group (PEG), Sempra Energy (SRE), South Jersey Industries (SJI), Spire Inc (SR), Westar Energy Inc (WR), Xcel Energy (XEL)

J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2016

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage	42%	46%	12%
IB clients*	51%	48%	34%
JPMS Equity Research Coverage	42%	50%	8%
IB clients*	68%	61%	43%

*Percentage of investment banking clients in each rating category.
For purposes only of FINRA/NYSE ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com.

Equity Analysts' Compensation: The equity research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. Further information about J.P. Morgan's conflict of interest policy and a description of the effective internal organisations and administrative arrangements set up for the prevention and avoidance of conflicts of interest is set out at the following link https://www.jpmorgan.com/jpmpdf/1320678075935.pdf. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch and J.P.Morgan Chase Bank, N.A., Frankfurt Branch which are regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Hong Kong:** The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. **Japan:** There is a risk that a loss may occur due to a change in the price of the shares in the case of share trading, and that a loss may occur due to the exchange rate in the case of foreign share trading. In the case of share trading, JPMorgan Securities Japan Co., Ltd., will be receiving a brokerage fee and consumption tax (shouhizei) calculated by multiplying the executed price by the commission rate which was individually agreed between JPMorgan Securities Japan Co., Ltd., and the customer in advance. Financial Instruments Firms: JPMorgan Securities Japan Co., Ltd., Kanto Local Finance Bureau (kinsho) No. 82 Participating Association / Japan Securities Dealers Association, The Financial Futures Association of Japan, Type II Financial Instruments Firms Association and Japan Investment Advisers Association. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com.sg. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: This material is issued and distributed in Taiwan by J.P. J.P. Morgan Securities LLC

A September 19 tax court ruling on a 1999 sale-leaseback transaction will force EXC to pay ~$870MM after-tax to the IRS for taxes owed and interest. This amount was essentially expected by the company following rulings for utility peers on similar issues since 2012 and is already incorporated into cash flow guidance provided in August. An additional $190MM after tax for penalties was assessed that may be due at a later date following an appeal. The tax and interest component has already been reserved by EXC, and the 4Q payment will be funded by a planned ExGen debt offering. Our thesis remains unchanged, and we are reiterating our OW-rating on EXC shares.

- **Unfavorable tax ruling results in $870MM cash liability:** The total cash amount now due in 4Q16 is likely $1,190MM of tax and interest owed, partly offset by an interest tax shield of $320MM in subsequent years. The liability stems from a $1.2Bn gain on the 1999 sale of generation that was deferred via a sale-leaseback transaction, a tax strategy that had been already struck down for ED, PEG and POM, among others over the last 4 years.
- **Penalty component only piece not reserved:** EXC had already reserved the tax and interest component owed, but may take a charge for the $190MM penalty and begin an appeal process for this. It is not clear on when a penalty cash payment would be due or how long the process may take. Cash raised via a planned $1Bn ExGen debt offering will be contributed to Exelon parent and ComEd for the $1,190MM due this year.
- **Ruling already incorporated into guidance:** We are adjusting our ExGen numbers to incorporate higher interest expense and changes to the power prices since our last update. Our numbers still do not incorporate benefit from NY Zero Energy Credits.

Investment Thesis, Valuation and Risks

Exelon Corp. *(Overweight; Price Target: $37.00)*

Investment Thesis

We view recent developments as finally marking the beginning of the end of nuclear decision limbo for EXC, meaning earnings and cash flow improvement potential in both IL and NY. This coincides with an upcoming utility-driven refreshed cash deployment plan at next month's analyst meeting and an expected reinforcement of a solid balance sheet story with excess investment capacity in 2018-19. EXC shares are the cheapest integrated play on trough commodity prices, and we feel investors are dismissing these and other catalysts in 2H.

Valuation

We are lowering our December 2016 price target to $37 ($40 prior). Our valuation is based on a sum-of-the-parts analysis using our 2018 forecasts. We use an average 19.4x P/E multiple for the regulated utility and corporate business segments, a minor premium to regulated peers reflecting a constructive regulatory construct at PECO and growth potential from lag at PHI partially offset by a mildly challenging regulatory environment at BGE. ExGen is valued using an open EV/EBITDA multiple based on independent power producer peers and adjusted for hedged mark-to-market margins. The downward revision in our price target reflects a slightly lower regulated peer multiple relative to our prior update.

Risks to Rating and Price Target

- Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to regulations may cause future earnings power to differ materially from current expectations.
- A portion of the company's earnings are derived from wholesale power sales in deregulated markets. Changes in the price of natural gas are highly correlated to the price of electricity and impact revenues accordingly. Additionally, changes in the price of fuel or fuel transportation such as coal or rail services may have a material impact on gross margin.
- The company operates a fleet of nuclear power plants, exposing it to strict regulatory requirements regarding the operation and maintenance of plants. Changes to these requirements could significantly increase costs, resulting in a change to our earnings expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

31 August 2016

Exelon Corp.

Moving Forward

We reiterate our Overweight rating and update our earnings estimates and valuation. Our new price target is $2 lower at $39 as our utility valuation is increased but our genco valuation has decreased. Our updated earnings estimates for 2016/2017/2018 are now $2.60/$2.62/$2.82 compared to $2.55/$2.68/$2.80 previously.

The utility earnings profile has strengthened compared to our previous estimates, mainly accounting for earlier rate filings and modestly improved expectations for closing earned-to-allowed ROE gap. Although we have not yet seen a regulatory outcome for the legacy PEPCO Holdings jurisdictions, we believe that Exelon laid out a credible plan to support their projected utility earnings.

The generation earnings and EBITDA are lower for two reasons. First, the power curves have degraded as compared to the end of Q1. Second, the removal of Quad Cities and Clinton from numbers, starting in 2017 and 2018, respectively. Although ultimately the removal of these units will yield positive earnings and cash impacts (beginning in 2019), the removal of these plants lowered projected gross margin for 2017 and 2018 by approximately $100M and $350M respectively. Our numbers do not include any impact from the Clean Energy Standard in New York or from the pending acquisition of the FitzPatrick nuclear plant.

Price (29-Aug-2016)	**USD 34.05**
Price Target	**USD 39.00**

Why Overweight? We believe that that utility growth of 7-9% is achievable and will be funded by cash flow from the generation company even with the current forward curves. Any additional legislation similar to the CES in New York or the inclusion of the CES in our numbers is upside to our estimates.

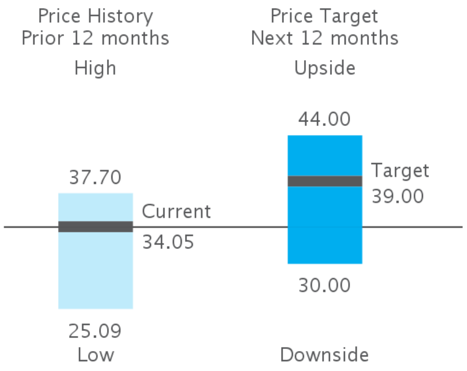
Upside case	**USD 44.00**

Our upside case assumes the impact of the zero emission credits in New York for the genco and assumes a 10% premium for the utility valuation given the above average growth.

Downside case	**USD 30.00**

Our downside case assumes a 10% discount for the utility and a 4x EBITDA at the genco based on current forwards, with no consideration of the CES or FitzPatrick acquisition

Upside/Downside scenarios



Source: Company data, Barclays Research
Note: FY End Dec

Regulated Focus Resonates

The enhanced focus on the utility growth provides for a top quartile growth story (excluding the earnings impacts from the genco). The 7-9% projected growth through 2020 is visible and relies on rate base growth of 6.1% annually combined with closing the earned-to-allowed ROE gap corporate-wide. The funding for the more than $25B in utility investment is supported without the need for external equity as cash flow from genco is used to offset this need.

The key to achieving the 7-9% growth rate is to execute on the regulatory rate cases in each jurisdiction. Although investor concern has focused on the legacy PEPCO Holdings jurisdictions, the growth plan appears achievable. Of the approximately $10.8B of increased rate base through 2020, more than 70% will be recovered through existing formula rates and tracker mechanisms. This leaves less than 30% exposed to traditional rate case filings. Another reason for optimism is track record: in many ways BG&E was in worse shape from a performance and earned return standpoint when Exelon acquired Constellation. Over a 3-year period operations and earned return increased significantly.

The expected range of utility net parent EPS for Exelon by year is shown in the following table, along with Barclays estimate.

FIGURE 1

Utility Net Parent EPS Projections (Exelon and Barclays)

	2016	2017	2018	2019	2020
Low	$1.15	$1.35	$1.50	$1.60	$1.70
Midpoint	$1.30	$1.50	$1.65	$1.75	$1.85
High	$1.45	$1.65	$1.80	$1.90	$2.00
Barclays	$1.27	$1.48	$1.68	NA	NA

Source: Company filings, Barclays Research

What About Generation?

Even though generation gross margin is down in 2017 and 2018, there are still plenty of positives to take away. Based on current forwards, Exelon projects over $8B of free cash flow from Exelon Generation through 2020. After accounting for committed ExGen growth capital, there is approximately $6B of free cash flow that will be split between utility investment funding and ExGen debt reduction. The target Debt to EBITDA for ExGen is 3.0x as compared to the current level of 3.4x. It should be noted that these projections are all based on current forwards and do not include the assumption of the zero emission credits in New York nor the acquisition of the FitzPatrick nuclear plant.

The company did provide expected benefits of the New York ZEC program as $0.08-$0.10 average annual accretive to EPS with an expected gross margin impact of $100M in 2017 and $150M in 2018, along with a cumulative free cash flow impact of $350M through 2020. It is further expected that a loan repayment from CENG together with a special distribution would provide an additional $400M in free cash flow. Without knowing the true economics of FitzPatrick, the impact is difficult to assess other than to say it will be accretive to both earnings and cash flow assuming the acquisition takes place. For reference, FitzPatrick's output is approximately 2/3's of the Exelon owned output from Ginna, Nine Mile 1, and Nine Mile 2. However, the benefit of the ZEC program is equivalent for every mwhr, but that assumes every mwhr is profitable at each plant without the ZEC program, which is not the case.

The announced closures of Clinton in 2017 and Quad Cities in 2018 are still planned and will occur, barring action from Illinois prior to year-end. The company has stated that by 2019 the expected annual impact to earnings will be a positive $0.07 from the plant closure/s along with a $75M pretax cash flow impact. For 2017 and 2018, the impact of gross margin is ($100M) and ($350M) respectively. At this point, although discussions are occurring, the likelihood of legislative action to save Clinton and Quad Cities is low and will rest entirely upon the lame duck session post the election.

Corporate-Wide Initiatives

Cost Controls

Exelon has announced initiatives on cost controls and expects the overall CAGR for O&M to be -1.1% through 2020. This will result in an absolute reduction of utility O&M of $200m through 2020 and an absolute reduction of $225M for ExGen through 2020.

Core Business at ExGen

Additionally, the company stated that for ExGen the only portions of the business that should be considered core are the nuclear plants and the retail business. As such, the renewable generation and the fossil plants could be monetized if they were worth more to another party than they were to Exelon.

Dividend

Finally, although no explicit statement was made, it appears that post-2018 the dividend growth rate could accelerate meaningfully beyond the 2.5% commitment through 2018. Both a straight increase or a share buyback keeping the annual dividend payment constant were mentioned as ways to increase the dividend.

Valuation Methodology and Risks

Our $39 price target is premised upon a 2018 group average multiple of 16.7x applied to our 2018 utility net parent EPS of $1.68 combined with our 2018 ExGen EBITDA of $2750M valued at 6.5x.

Our previous price target of $41 was premised upon the previous 2018 group average multiple of 17.7x applied to our previous utility net parent EPS of $1.53 combined with our previous 2018 ExGen EBITDA of $3000M valued at 6.5x.

The major risks to the investment are regulatory and commodity. As discussed previously the 7-9% utility EPS growth is premised upon reasonable regulatory treatment. To the extent that regulators do not approve what would be considered fair and balanced rate outcomes, growth would be below the 7-9% at the utility segment. On the ExGen side, operational risk for running the plants as well as power prices are key risks.

ANALYST(S) CERTIFICATION(S):

I, Daniel Ford, CFA, hereby certify (1) that the views expressed in this research report accurately reflect my personal views about any or all of the subject securities or issuers referred to in this research report and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this research report.

IMPORTANT DISCLOSURES

Barclays Research is a part of the Investment Bank of Barclays Bank PLC and its affiliates (collectively and each individually, "Barclays").

Availability of Disclosures:

Where any companies are the subject of this research report, for current important disclosures regarding those companies please refer to http://publicresearch.barclays.com or alternatively send a written request to: Barclays Research Compliance, 745 Seventh Avenue, 13th Floor, New York, NY 10019 or call +1-212-526-1072.

The analysts responsible for preparing this research report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by investment banking activities, the profitability and revenues of the Markets business and the potential interest of the firm's investing clients in research with respect to the asset class covered by the analyst.

All authors contributing to this research report are Research Analysts unless otherwise indicated.

The publication date at the top of the report reflects the local time where the report was produced and may differ from the release date provided in GMT.

Analysts regularly conduct site visits to view the material operations of covered companies, but Barclays policy prohibits them from accepting payment or reimbursement by any covered company of their travel expenses for such visits.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

AES Corp. (AES)
American Electric Power (AEP)
Aqua America (WTR)
Brookfield Renewable Energy Partners LP (BEP)
Calpine Corp. (CPN)
CMS Energy (CMS)
DTE Energy (DTE)
Edison International (EIX)
Eversource Energy (ES)
Fortis Inc. (FTS.TO)
Alliant Energy (LNT)
American States Water Company (AWR)
Brookfield Infrastructure Partners LP (BIP)
Brookfield Renewable Energy Partners LP (BEP_u.TO)
Canadian Utilities Ltd. (CU.TO)
Consolidated Edison (ED)
Duke Energy (DUK)
Emera Inc. (EMA.TO)
Exelon Corp. (EXC)
Great Plains Energy Inc. (GXP)
Ameren Corp. (AEE)
American Water Works (AWK)
Brookfield Infrastructure Partners LP (BIP_u.TO)
California Water Service Group (CWT)
CenterPoint Energy Inc. (CNP)
Dominion Resources (D)
Dynegy Inc. (DYN)
Entergy Corp. (ETR)
FirstEnergy Corp. (FE)
Hawaiian Electric Inds (HE)

Distribution of Ratings:

Barclays Equity Research has 1758 companies under coverage.

40% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 58% of companies with this rating are investment banking clients of the Firm; 78% of the issuers with this rating have received financial services from the Firm.

41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 50% of companies with this rating are investment banking clients of the Firm; 75% of the issuers with this rating have received financial services from the Firm.

16% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 44% of companies with this rating are investment banking clients of the Firm; 68% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to http://publicresearch.barclays.com.

Explanation of other types of investment recommendations produced by Barclays Equity Research:

M: Exelon Corp. is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: Our $39 price target is premised upon a 2018 group average multiple of 16.7x applied to the utility net parent earnings of $1.68 resulting in $28 of utility value. Exgen is valued at 6.5x 2018 EBTIDA netted against debt resulting in $11 of value for Exgen, The combined value is $39.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

October 28, 2016

COMPANY UPDATE

Exelon Corp. (EXC)

Neutral

Equity Research

Warming up a bit, but regulatory risks remain – Neutral on EXC

What's changed

Following EXC reported 3Q2016 results, we update estimates – moving our 2016/17/18/19 EPS estimates from $2.66/$2.81/$2.75/$2.67 to $2.74/$2.80/$2.84/$2.64 on revised rate case implementation, updated rate base, operating expense and financing assumptions. We raise our 12-month price target slightly – from $36 to $37 – and while we prefer, among Diversified Utilities, stocks like Buy-rated PEG and ETR over EXC, we become incrementally more positive on EXC here.

Regulatory risk remains – litigation challenges to the rules creating Zero Emission Credits (ZECs) in New York could present risk for $250-300mn in EXC’s revenues or EPS of roughly $0.18-$0.22 in 2018, on our estimates, based on the annual output of EXC's New York based nuclear plants (which varies slightly yoy due to outages) and an established price ($17/MWh or so) set by the NY state regulator.

Implications

EXC raised its 2016 guidance from $2.40-2.70 to $2.55-2.75, partly attributed to higher than expected customer demand, driven by weather positively impacting 3Q results – this does not impact future years. Rate cases filed across the various Pepco Holdings utilities should provide much needed rate relief to support regulated utility EPS. On our revised EPS estimates, EXC trades at 11.9x/11.7x/12.6x 2017-19 EPS, below Diversified Utilities with Merchant Generation peers who trade at 13.7x/13.3x/13.7x – but appears less attractive on a sum of the parts.

Valuation

We derive our 12-month price target of $37 by using a sum-of-the-parts valuation and applying a 16.75x 2018E P/E multiple on ComEd, PECO and BGE EPS, a 16.25x 2018E P/E multiple on PHI, and a 5.5x EV multiple on non-regulated 2018E EBITDA.

Key risks

Key risks include natural gas prices, power prices and regulation.

Disclosure Appendix

Reg AC

I, Michael Lapides, hereby certify that all of the views expressed in this report accurately reflect my personal views about the subject company or companies and its or their securities. I also certify that no part of my compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Investment Profile

The Goldman Sachs Investment Profile provides investment context for a security by comparing key attributes of that security to its peer group and market. The four key attributes depicted are: growth, returns, multiple and volatility. Growth, returns and multiple are indexed based on composites of several methodologies to determine the stocks percentile ranking within the region's coverage universe.

The precise calculation of each metric may vary depending on the fiscal year, industry and region but the standard approach is as follows:

Growth is a composite of next year's estimate over current year's estimate, e.g. EPS, EBITDA, Revenue. **Return** is a year one prospective aggregate of various return on capital measures, e.g. CROCI, ROACE, and ROE. **Multiple** is a composite of one-year forward valuation ratios, e.g. P/E, dividend yield, EV/FCF, EV/EBITDA, EV/DACF, Price/Book. **Volatility** is measured as trailing twelve-month volatility adjusted for dividends.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy aimed at long-term, long-only performance with a low turnover of ideas. The GS SUSTAIN focus list includes leaders our analysis shows to be well positioned to deliver long term outperformance through sustained competitive advantage and superior returns on capital relative to their global industry peers. Leaders are identified based on quantifiable analysis of three aspects of corporate performance: cash return on cash invested, industry positioning and management quality (the effectiveness of companies' management of the environmental, social and governance issues facing their industry).

Disclosures

Coverage group(s) of stocks by primary analyst(s)

Company-specific regulatory disclosures

The following disclosures relate to relationships between The Goldman Sachs Group, Inc. (with its affiliates, "Goldman Sachs") and companies covered by the Global Investment Research Division of Goldman Sachs and referred to in this research.

Goldman Sachs has received compensation for investment banking services in the past 12 months: Exelon Corp. ($33.27)

Goldman Sachs expects to receive or intends to seek compensation for investment banking services in the next 3 months: Exelon Corp. ($33.27)

Goldman Sachs had an investment banking services client relationship during the past 12 months with: Exelon Corp. ($33.27)

Goldman Sachs had a non-investment banking securities-related services client relationship during the past 12 months with: Exelon Corp. ($33.27)

Goldman Sachs had a non-securities services client relationship during the past 12 months with: Exelon Corp. ($33.27)

Goldman Sachs has managed or co-managed a public or Rule 144A offering in the past 12 months: Exelon Corp. ($33.27)

Goldman Sachs makes a market in the securities or derivatives thereof: Exelon Corp. ($33.27)

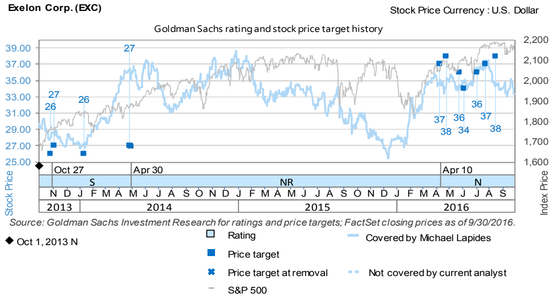
Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	31%	55%	14%	64%	59%	53%

As of October 1, 2016, Goldman Sachs Global Investment Research had investment ratings on 2,921 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and views and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Price target and rating history chart(s)



Source: Goldman Sachs Investment Research for ratings and price targets; FactSet closing prices as of 9/30/2016.

The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director, advisory board member or employee of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman, Sachs & Co. and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at http://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the issuers the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. **Brazil:** Disclosure information in relation to CVM Instruction 483 is available at http://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 16 of CVM Instruction 483, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Ratings, coverage groups and views and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's return potential relative to its coverage group as described below. Any stock not assigned as a Buy or a Sell on an Investment List is deemed Neutral. Each regional Investment Review Committee manages various regional Investment Lists to a global guideline of 25%-35% of stocks as Buy and 10%-15% of stocks as Sell; however, the distribution of Buys and Sells in any particular coverage group may vary as determined by the regional Investment Review Committee. Regional Conviction Buy and Sell lists represent investment recommendations focused on either the size of the potential return or the likelihood of the realization of the return.

Return potential represents the price differential between the current share price and the price target expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups and views: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at http://www.gs.com/research/hedge.html. The analyst assigns one of the following coverage views which represents the analyst's investment outlook on the coverage group relative to the group's historical fundamentals and/or valuation. **Attractive (A).** The investment outlook over the following 12 months is favorable relative to the coverage group's historical fundamentals and/or valuation. **Neutral (N).** The investment outlook over the following 12 months is neutral relative to the coverage group's historical fundamentals and/or valuation. **Cautious (C).** The investment outlook over the following 12 months is unfavorable relative to the coverage group's historical fundamentals and/or valuation.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce equity research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; in Canada by either Goldman Sachs Canada Inc. or Goldman, Sachs & Co.; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman, Sachs & Co. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman, Sachs & Co., the United States broker dealer, is a member of SIPC (http://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them

may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at http://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

August 17, 2016

Exelon Corporation

EXC – $34.23
Sector Perform – Price Target $37

Analyst Day Takeaways: *Increasing Price Target to $37*

Quick Take: The timing of the Company's analyst day was advantageous given all the puts and takes in the story over the past few months. Representatives from each of the operating segments gave detailed accounts of their strategy and outlook over the next five years, with a clear emphasis on growing utility rate base and returns. The targets laid out by the Company are ambitious and will require successful regulatory outcomes and continued operating improvements. A number of potential catalysts remain in the offing, including the implementation of the zero emission credits in New York, the addition of the FitzPatrick nuclear plant to the fleet, and the closing of the Con Ed retail segment, all of which would be accretive to our forward earnings estimates. **Our price target increases from $34 to $37, reflecting the higher concentration of income to be generated from the regulated segments and we maintain our Sector Perform rating.**

Utility Growth in Focus: Contributions from the utility segments will pace earnings growth for the next few years as the Company focuses on growing rate base and closing the gap between allowed and achieved rates of return. EXC plans over $25 billion in capital expenditures in its regulated businesses over the next five years, driving overall rate base growth in excess of six percent per year. The Company is targeting earnings growth of seven to nine percent from these segments during this timeframe by improving actual returns towards current and expected future allowed levels. The PHI utilities represent some of the clearest opportunities to execute on this strategy as they have been absent from rate case hearings during the merger proceedings and have been tracking in the second to fourth quartile on a number of industry operating benchmarks.

Revisions to Earnings Estimates and Price Target: The Company reiterated guidance for FY16 earnings of $2.40 to $2.70/share, with 3Q16 earnings to be in a range of $0.65 to $0.75/share following 2Q16 results of $0.65/share (about $0.09/share above consensus). Our FY16 estimate increases from $2.50/share to $2.55/share due to the 2Q16 beat, while our FY17 estimate decreases from $2.70/share to $2.60/share as ExGen gross margins move down, offsetting utility growth. We are initiating our FY18 earnings estimate at $2.75/share, indicating an improvement in ExGen bottom line contributions as the Clinton and Quad Cities plant retirements are more fully reflected. **Our new price target of $37 is derived by applying a 14x multiple to our FY17 earnings estimate, in-line with the recent high water mark.**

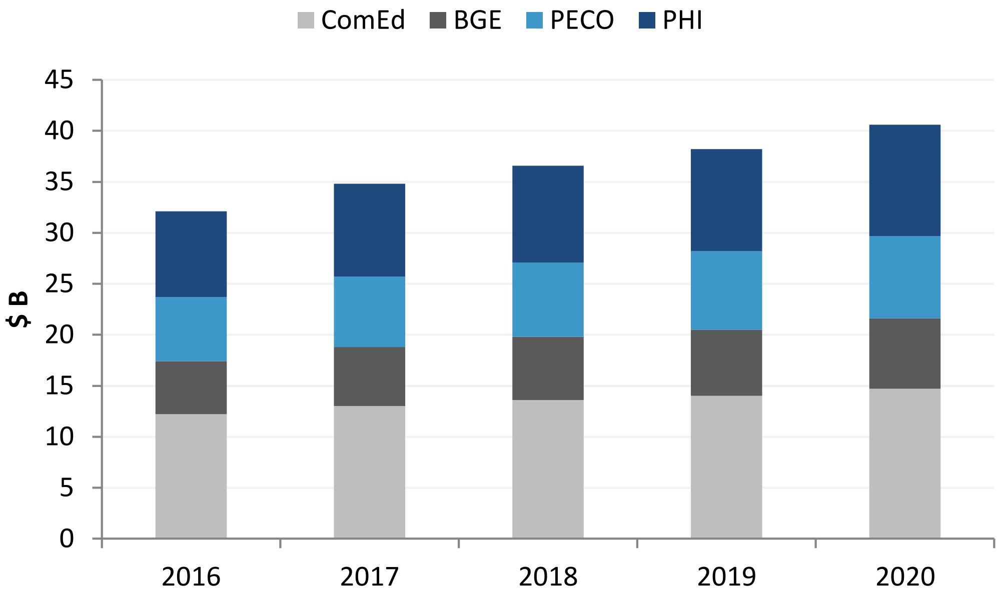
Utility Growth in Focus

Contributions from the utility segments will pace earnings growth for the next few years as the Company focuses on growing rate base and closing the gap between allowed and achieved rates of return. EXC is targeting earnings growth at its regulated utility segments of seven to nine percent annually through 2020, with the largest percentage increases slated to occur over the next two years.

The bulk of the expected earnings growth will be driven by a similar increase in the overall utility rate base. EXC rate base is expected to climb from about $32 billion as of year-end 2016 to almost $41 billion by 2020 (Figure 1), or a little more than six percent per year on a compound annual basis. BGE is anticipated to have the largest rate base CAGR at over seven percent, growing from the smallest beginning base and benefitting from double digit growth in 2017.

Figure 1: Utility Rate Base Growth Forecasts

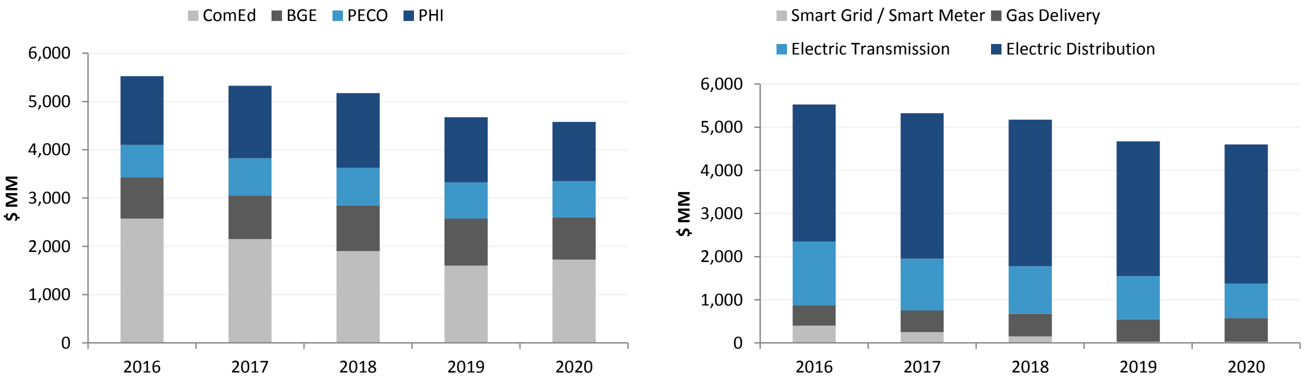


Source: Company Filings, SHW Research

Rate base growth will primarily be a function of a significant capital spending plan across each of the utility segments as the Company aims to invest over $25 billion between 2016 and 2020 across its four utility segments (ACE, DPE, and PEPCO are consolidated within the PHI reporting entity). Figure 2, Page 3, shows the capital spending program by utility and by investment type over the planning cycle.

As would be expected, the highest concentration of planned expenditures will occur at the Company's largest utility, ComEd. Investments at ComEd are front-end loaded during the next two years as spending associated with the Illinois Energy Infrastructure Modernization Act (EIMA) wind down. The EIMA called for $2.6 billion in CAPEX for reliability enhancements to the electric grid and "smart grid" upgrades such as smart meters, new substations, and cyber security over a ten-year period beginning in 2011. ComEd has completed 85 percent of the work and will have installed all of the 4 million smart meters three years ahead of schedule. All of the planned rate base additions at ComEd will be recovered through formulaic rate mechanisms during the next five years.

Figure 2: CAPEX by Utility and Type

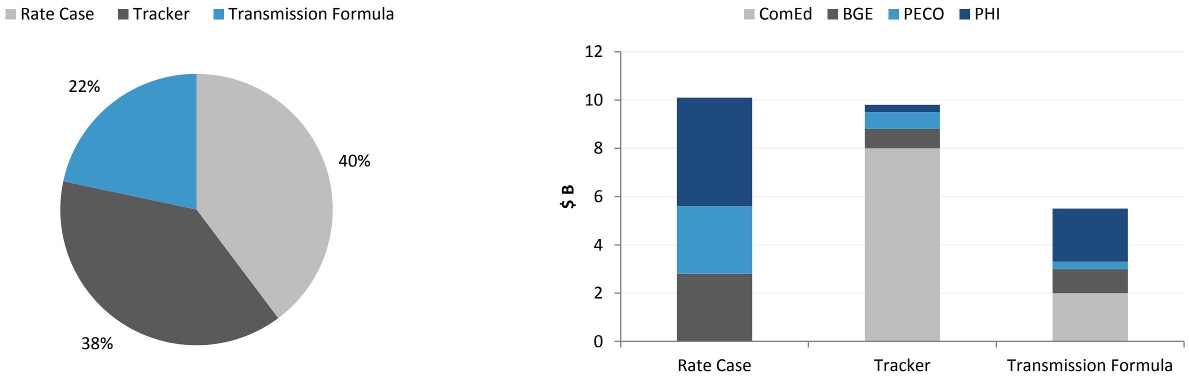


Source: Company Filings, Scotia Howard Weil Research

BGE and PECO are the Company's two smallest utilities by rate base, but are expected to have the highest growth rates in this metric over the next five years. These two utilities earned the highest returns on equity in 2015 (BGE 10.6 percent and PECO 11.9 percent) among the utility segments at EXC. About 55 percent of rate base increases at BGE and PECO are expected to be recovered through trackers and formulaic methods, though these are not expected to kick in at PECO until 2018. PECO will see a large increase in CAPEX for existing gas infrastructure (doubling on an annual basis from 2015 to 2020) as the segment accelerates the replacement cycle for these assets to 20 years. Results at BGE have also benefitted from significant improvements in operating metrics since its merger with EXC in 2012. Figure 5 highlights some of these results which will be a model for similar operating enhancements at PHI going forward.

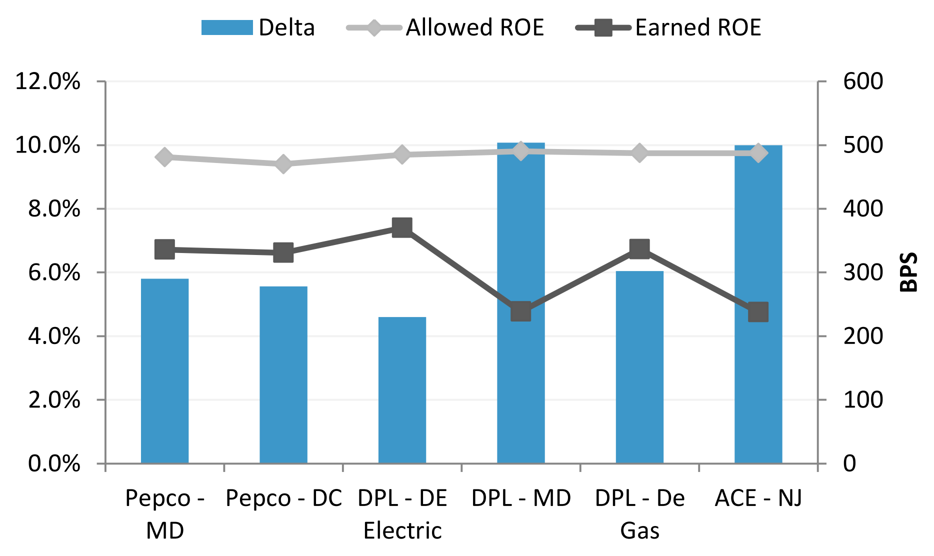
The consolidated PHI utilities (ACE, DPL, and PEPCO) start with the second highest rate base of the EXC utilities and will see commensurate capital spending additions to drive rate base growth above the average compound annual rate among the individual entities. About two-thirds of the projected investments will be directed towards electric distribution projects. Per terms of the merger agreement, EXC has made certain reliability commitments related to outage frequency rates and duration, driving the capital projects. Approximately half of the forecasted expenditures to implement reliability pledges are anticipated to be recovered via traditional rate cases.

Figure 3: CAPEX Recovery Mechanisms



Source: Company Filings, Scotia Howard Weil Research

Figure 4: PHI Earned vs. Allowed Returns



Source: Company Filings, Scotia Howard Weil Research

The difference between forecasted utility income growth (seven to nine percent) and rate base growth (about six percent) is predicated on the Company closing the gap between allowed and actual returns at the utilities. PHI currently has the widest gap to overcome, as shown in Figure 4 above. Earned returns on electric distribution rate base have been running about 200 to 500 bps below allowed rates at PHI. The utilities were absent from traditional rate cases while the proposed merger languished in the regulatory approval phase, creating a drag on the bottom line. Additionally, PHI metrics have generally fallen in the lower end of industry benchmarks across a variety of operating categories, including safety, outage rates, and customer satisfaction. Among 24 electric utilities, PHI came in 18th in overall rank in 2015.

The Company has embarked on an aggressive rate base filing schedule subsequent to the closing of the transaction in late 1Q16 to remedy some of the regulatory lag at PHI. Six electric and gas distribution rate cases have been filed across the Maryland, Delaware, New Jersey, and Washington D.C. territories, with final orders expected between late 2016 and 3Q17. Requested ROEs in the filings are generally in the mid 10 percent range, suggesting a healthy increase from current allowed rates and actual returns. Should the proposed rates be accepted, residential bills would be expected to increase in a range of about five to 15 percent, which is likely to create some pushback from the Commissions and intervenors.

EXC's integration of BGE provides a blueprint for enhancing operating results at PHI, in our opinion. BGE metrics had similar room for improvement when it was acquired by EXC and has quickly improved to the first quartile of comparable utilities. Management highlighted EXC's culture of collaboration and competition between its operating segments, where best practices are shared and individuals are held accountable for results. Figure 5 highlights how these standards have raised operating performance (and therefore returns) at all of the utilities over the past three years. Quickly improving these metrics will be key for the Company to deliver on the forecasted earnings growth, particularly given the higher expected increases over the next two years and the potential for some ongoing regulatory lag given all the current rate cases.

Source: Company Filings

The utility earnings growth targets will clearly depend on successful outcomes of the rate cases currently underway, and the Company's ability to foster constructive relationships with regulators and constituents in its new service territories as it expects a "steady diet" of regulatory actions over the next few years. An increasing proportion of capital recovery through tracker and formulaic mechanisms should support the overall outlook, but EXC will clearly be engaged in a number of traditional rate cases, particularly for the PHI companies. We note the commissions in these service territories are generally considered to be more difficult from an investor perspective, as shown in Figure 6 below.

As we saw in the PHI merger approval process, individual commissions could prove to be unpredictable. As noted in the presentation material, New Jersey has set a statute requiring rate case decisions in nine months, but enforcement of this requirement has not been successful and most fully-litigated cases take about a year to reach a conclusion. Similarly, the Washington D.C. commission targets a nine-month turnaround, but more often resolves its cases in about a year. These factors add some risk to the overall growth targets, in our opinion.

ExGen Outlook

Generation took a back seat to the utility segments in terms of airtime in the presentations as persistently low power prices have been a drag on gross margin outlook and the Company has worked to minimize exposure to merchant power markets. Details on the planned closure of certain nuclear plants and Zero Emission Credits in New York provided some clarity on impacts to forward earnings and cash flows in the segment.

There is clearly less attention on the segment as a long-term core business line as the EXC is focused on reducing operating expenses, minimizing capital expenditures (particularly for growth projects), and plans on diverting free cash flows towards investment in its utility segments and debt reduction.

Nuclear Retirements: The Company has been pushing for potential legislation in Illinois to support its nuclear generation facilities by recognizing the value created by their carbon-free, baseload generation that is not fully inherent in market power prices. After the legislature failed to enact a new law and the Quad Cities plant failed to clear the 2019/2020 PJM capacity auction, Exelon had announced plans to close its Clinton and Quad Cities nuclear plants, noting they had generated losses of about $800 million over the past seven years.

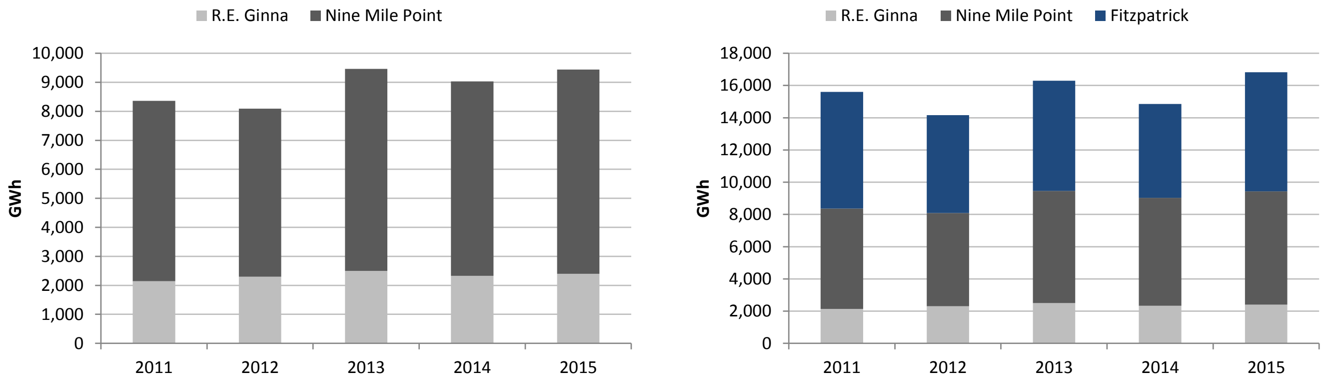
The units are scheduled to close in mid-2017 (Clinton) and mid-2018 (Quad Cities), providing an operating uplift of about $0.07/share to the bottom line and about a $75 million positive impact to pre-tax cash flows on a run-rate basis in 2019. Contributions from these facilities have been removed from the Company’s ExGen gross margin guidance going forward, driving some the year-over-year expected declines in this metric beginning in 2017.

Management has made it clear it is less willing to wait on future market improvements when making decisions on the viability of under-performing assets. In addition to these nuclear plants, EXC has retired an additional 1,350 MWs of fossil generation capacity during the preceding five years and we suspect more closures are likely over the current planning cycle. No specific plants were singled out, but the single-unit Three Mile Island nuclear plant in Pennsylvania would appear to be at the top of the watch list for future action, in our opinion.

New York Zero Emission Credits: On a brighter note, at the beginning of the month, the New York Public Service Commission approved the state’s Clean Energy Standard (CES), counting nuclear generation towards the state’s 50 percent zero-carbon energy target by 2030. The CES establishes a Zero Emission Credit (ZEC) program, similar to other Renewable Energy Credits (REC) in other jurisdictions that compensates generation for its environmental attributes.

Credits would start at about $17.50/MWh generated and gradually increase to about $29/MWh in the final two years of the plan. These credit prices would be based on an assumed $39/MWh wholesale electricity price and would decrease should the market increase from this level. The three plants considered under the proposal are R.E. Ginna (EXC 50.01% owner), Nine Mile Point (EXC 43.97% owner), and James A. FitzPatrick (ETR 100% owner). The plan would add about $100 million to gross margins at ExGen in 2017 and about $150 million in 2018, increasing EPS by about $0.08 to $0.10 per share. These amounts are not included in current guidance as the Company awaits formal contracts from NYSERDA (likely a 3Q16 event).

Figure 7: New York Nuclear Historical Generation



Source: Company Filings, Scotia Howard Weil Research

The CES and ZECs remain subject to judicial review, but the Company is confident the plan will overcome legal challenges for a number of reasons including:

- Similarity to RECs that have never been overturned in other jurisdictions,
- ZECs are not affiliate contracts like those previously proposed to support Ohio nuclear plants and the units will remain price takers in the competitive market,
- FERC has never applied its Minimum Offer Price Rule (MOPR) to existing assets, only for new entrants, and
- The plan has widespread support from a variety of stakeholders including the NY-ISO, New York executive and legislative branches, and a variety of public interest groups.

In conjunction with the adoption and approval of the CES, EXC has entered into an agreement to purchase the 838 MW FitzPatrick nuclear plant from Entergy for $110 million. FitzPatrick is the third facility that meets the standards to qualify for the ZEC program; ETR had previously announced plans to shutter the plant. The transaction remains subject to regulatory approvals and the appropriate transfer of de-commissioning trust funds and liabilities, and is expected to close in mid-2017.

EXC will invest about $400 to $500 million in operating and re-fueling costs for the three plants and will re-fuel the FitzPatrick facility in early 2017 while maintaining current staffing levels.

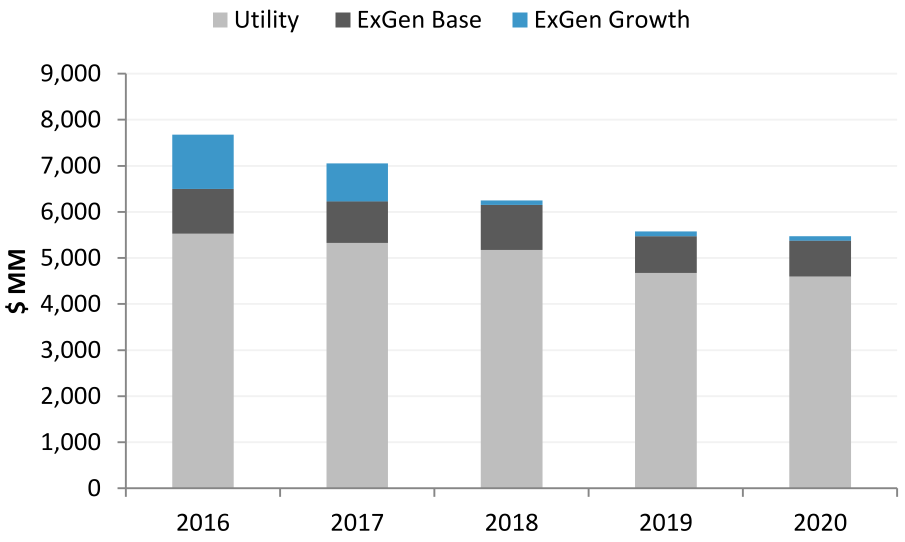
Free Cash Flows at Generation Fund Utility Investment and Debt Reduction: The removal of the contributions from the Clinton and Quad Cities plants lowers the near-term gross margin outlook for the segment, but offsets driven by reduced growth capital expenditures and operating and maintenance expenses support robust free cash flow during the next five years. This should help the Company to continue to grow rate base and earnings at the utility segments while improving the balance sheet through debt repayments.

Updated ExGen disclosures were provided during the Analyst Day and in conjunction with its 2Q16 earnings release. Gross margin forecasts were decreased by $100 million and $200 million for 2017 and 2018, respectively, as the Clinton plant is slated for closure in mid-2017 with the Quad Cities plant following in mid-2018. At this time, the revised guidance does not include any potential positive impacts from the ZEC subsidies or the addition of the FitzPatrick plant to the fleet.

The Company is currently investing in five growth projects in the ExGen segment that have planned commercial in-service dates ranging from 2016 to 2018. About $1.1 billion was spent on growth CAPEX at ExGen in 2015, with about another $2 billion planned for 2016 and 2017 (when four of the planned projects are expected to be up and running). From 2018 forward, the Company is only planning on a nominal ~$100 million of growth capital per year as it continues to transition away from merchant power exposure. Three of the five projects under construction have long-term PPAs and a fourth will receive seven-year capacity payments essentially equal to planned capital outlays.

Ongoing maintenance capital at existing facilities is also forecasted to decline over the planning period. The retirement of the Clinton and Quad Cities plants is the primary driver in reducing base CAPEX by about $200 million per year by 2020, or by about 5.6 percent on a compound annual basis from 2016.

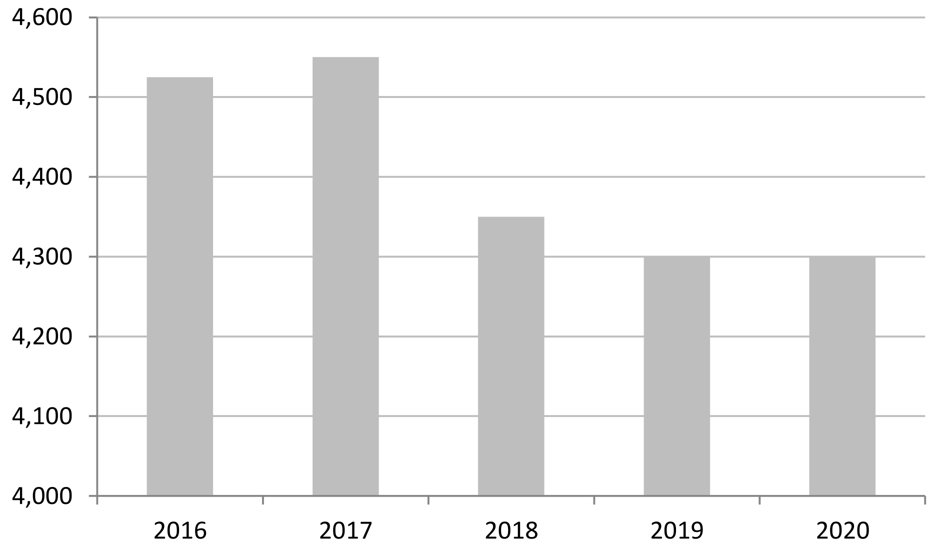
Figure 8: EXC Capex Plans by Segment



Source: Company Filings, Scotia Howard Weil Research

Free cash flow generation should be boosted by ongoing declines in operating and maintenance costs over the next five years. The elimination of the money-losing Clinton and Quad Cities plants is an obvious contributor to this trajectory, but this is also consistent with the cost savings initiatives the Company laid out late last year. The combination of these drivers is expected to result in absolute cost reductions of adjusted operating costs of about one percent per year on a compound annual basis as shown in Figure 9, Page 9.

Figure 9: ExGen O&M Costs Decreasing as Inefficient Plants Leave Fleet



Source: Company Filings, Scotia Howard Weil Research

EXC has sold about 3,000 MW of generation capacity since 2014 at an average price of about $600/kW. Management noted it will continue to be opportunistic in pursuing additional divestitures going forward. We believe there will be an emphasis on selling plants where contracts have expired and that are in jurisdictions without capacity markets. EXC currently owns and operates seven gas-fired plants in Texas with combined capacity of about 3,400 MWs.

Overall, the Company expects to generate a little over $8 billion in free cash flows at ExGen between 2016 and 2020. After accounting for growth CAPEX commitments of about $2.3 billion, the segment can fund close to $3 billion for both incremental utility investment and debt reduction at ExGen. Management reiterated its commitment to maintaining current credit ratings for the parent and the operating companies while targeting a 3.0x Debt to EBITDA ratio at ExGen (down from a 3.4x level estimated at YE16).

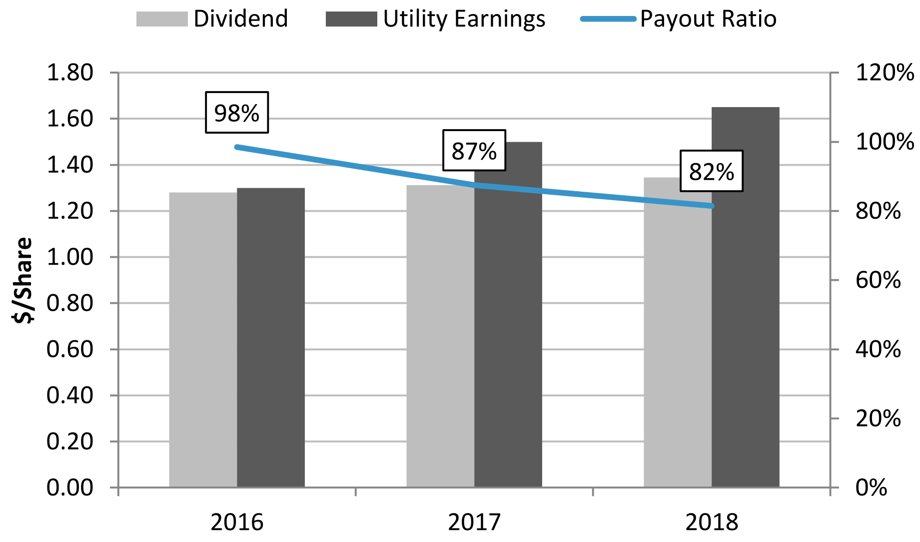
Constellation Grows to Match Generation to Load: Last month, the Company announced plans to acquire ConEdison Solutions for $53 million and about $130 million of net working capital adjustments. The transaction would add about 560,000 retail customers and about 18 TWh of retail load to the Constellation footprint. EXC indicated it will continue to look for similar deals to add retail exposure as a means to reduce volatility by “integrating” its merchant generation operations to retail sales. The Company’s scale and generation capabilities can create value relative to stand-alone or small retail operations and we would expect Constellation to continue to consolidate this fragmented market as opportunities are presented.

Dividend Growth Supported by Utility Operations: Earlier this year, the Board of Directors authorized a 2.5 percent annual increase to the Company’s dividend over a three-year period beginning in mid-2016. This represented the first increase in the dividend since it had been cut to $0.31/share (on a quarterly basis) back in early 2013. The current dividend yields about 3.7 percent, generally in-line with the average for the S&P 500 Electric Utility sub-sector index.

Forecasted earnings from the Company’s utility segments are sufficient to cover the current distributions. With anticipated net income growth at these businesses exceeding authorized dividend growth rates, the theoretical coverage ratio (only considering utility earnings) meaningfully declines over the next two years.

Management stopped short of extending the planned dividend growth rates beyond the current three-year authorization, acknowledging the Board’s responsibility to set this policy. That said, we would expect dividend payments to grow at least at current rates through the extended five-year planning cycle offered in the presentation material given the support of the regulated earnings from the utility segments.

Figure 10: Utility Earnings Cover Current Dividend Commitments



Source: Company Filings, Scotia Howard Weil Research

2Q Results / Updated Guidance: Prior to the Analyst Day, the Company reported 2Q16 adjusted earnings of $0.65/share, beating consensus by $0.09/share and 2Q15 results by $0.06/share. 2Q16 operating results included $0.06/share of contributions from PHI, which essentially offset the higher debt and capital costs associated with the merger that was completed at the end of 1Q16. Net income improvements from the Company’s legacy utility segments drove the beats versus consensus estimates and year-over-year comparisons primarily on higher transmission formula-rate earnings at ComEd and electric distribution rate increases at PECO.

The Company reiterated FY16 earnings to fall within a range of $2.40 to $2.70/share and initiated 3Q16 adjusted earnings guidance of $0.65 to $0.75/share. Expectations for the upcoming quarter are down versus last year on lower forward power prices and higher corporate costs associated with the PHI transaction. Assuming the mid-points of the updated guidance suggests 4Q16 adjusted earnings of about $0.50/share, or about $0.10/share above 4Q15 actuals. Results at the utility segments should drive the year-over-year improvements during 4Q, with contributions from PHI and assuming normal weather compared to the historically mild conditions experienced late last year.

Looking ahead, the Company has guided for earnings from the utility segments to grow at a seven to nine percent compound annual rate over the period 2016 to 2020, with larger annual percentage increases to be realized at the beginning of the planning period. Mid-point guidance suggests utility net income contributions will increase from about $1.30/share to about $1.50/share from 2016 to 2017 (or about 15 percent), driven by rate base increases associated with ongoing capital spending and the resolution of rate cases across multiple jurisdictions and formulaic adjustments. Reaching these targets will require successful navigation of various rate case proceedings across multiple jurisdictions as described above.

ExGen gross margins are expected to decline modestly from 2016 over the next couple of years as the Clinton and Quad Cities plants are retired. Lower forward power prices have also dampened near-term margin guidance, but the Company is behind its typical hedging pace on future generation, leaving room for upside to these forecasts should pricing improve to match internal views. The closing of these inefficient plants will eventually drive operating costs lower at the ExGen level, which combined with ongoing cost reduction efforts and capital spending focused on upgrading infrastructure should result in absolute declines in this metric over the five-year planning period.

Our FY16 estimate increases from $2.50/share to $2.55/share off of the 2Q16 beat, while our FY17 estimate decreases from $2.70/share to $2.60/share as ExGen gross margins move down, offsetting utility growth. We are initiating our FY18 earnings estimate at $2.75/share, indicating an improvement in ExGen bottom line contributions as the Clinton and Quad Cities plant retirements are more fully reflected. Our new price target of $37 suggests a 14x multiple on our FY17 earnings estimate, in-line with the recent high water mark. We note our forward estimates do not include contributions from the New York ZECs for the Company’s R.E. Ginna and Nine Mile Point plants, nor impacts from the proposed acquisition of the FitzPatrick nuclear facility from ETR (that would also be eligible to receive ZECs).

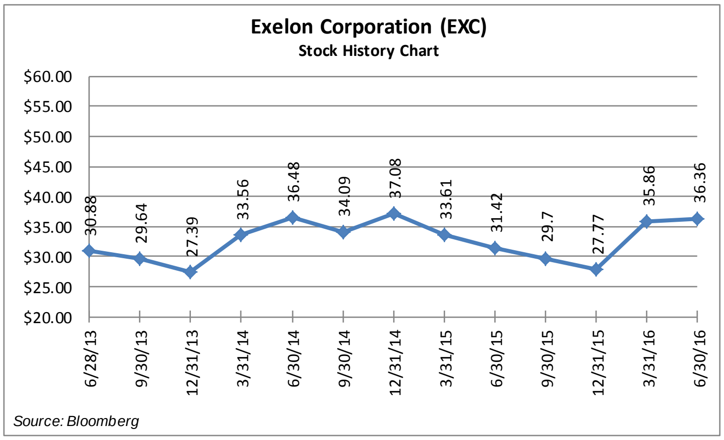
Price Chart

This price chart is provided to comply with regulatory requirements and reflects historical information about changes (if any) in Scotia Howard Weil's rating for this security as of the close of the *last reportable calendar quarter*.



Source: Bloomberg

Recommendation: SP **Price Target:** $37

Date	Rec	Price Target	Date	Rec	Price Target
11/17/15	SP	$34			
8/17/16	SP	$37			

We have a four-tiered rating system, with ratings of Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform. Each analyst assigns a rating that is relative to his or her coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

The rating assigned to each security covered in this report is based on the Scotia Howard Weil research analyst's 12-month view on the security. Analysts may sometimes express to traders, salespeople and certain clients their shorter-term views on these securities that differ from their 12-month view due to several factors, including but not limited to the inherent volatility of the marketplace.

Ratings

Focus Stock (FS)
The stock represents an analyst's best idea(s); stocks in this category are expected to significantly outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Outperform (SO)
The stock is expected to outperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Perform (SP)
The stock is expected to perform approximately in line with the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Sector Underperform (SU)
The stock is expected to underperform the average 12-month total return of the analyst's coverage universe or an index identified by the analyst that includes, but is not limited to, stocks covered by the analyst.

Other Ratings
Tender – Investors are guided to tender to the terms of the takeover offer.

Under Review – The rating has been temporarily placed under review, until sufficient information has been received and assessed by the analyst.

Risk Rankings
As of June 22, 2015, Scotiabank, Global Banking and Markets discontinued its Low, Medium, and High risk rankings. The Speculative risk ranking reflects exceptionally high financial and/or operational risk, exceptionally low predictability of financial results, and exceptionally high stock volatility. The Director of Research and the Supervisory Analyst jointly make the final determination of the Speculative risk ranking.

Ratings Distribution

As of 6/30/2016, Scotia Howard Weil has 139 companies in its coverage universe. Of the 139 securities under Scotia Howard Weil's coverage universe, 127 carry a recommendation. The percentages referenced below are based upon the 127-rated securities in the Scotia Howard Weil coverage universe.

51% have been assigned a Focus List (FS) or Sector Outperform (SO) rating. Within the last 12 months, 46% of companies with this rating are investment banking clients of the Firm.

48% have been assigned a Sector Perform (SP) rating. Within the last 12 months, 33% of companies with this rating are investment banking clients of the Firm.

1% have been assigned a Sector Underperform (SU) rating. Within the last 12 months, 0% of companies with this rating are investment banking clients of the Firm.

For the purposes of the ratings distribution disclosure FINRA requires members who use a ratings system with terms different than "buy," "hold/neutral" and "sell," to equate their own ratings into these categories. Our Focus Stock, Sector Outperform, Sector Perform, and Sector Underperform ratings are based on the criteria above, but for this purpose could be equated to strong buy, buy, neutral and sell ratings, respectively.

Valuation / Risk Factors

Valuation Method Used to Determine Price Target: Our current price target for Exelon Corporation (EXC) is formulated primarily by assigning an earnings multiple to our forward EPS estimates. The assigned multiple is determined using a host of parameters including historical average multiples, historical multiples at various periods of the oilfield cycle, and qualitative judgments.

Risk Factors Which May Impede the Achievement of the Price Target: (1) Industry fundamentals with respect to customer demand or product/service pricing could change and adversely impact expected revenues and earnings; (2) issues relating to major competitor or market shares or new product expectations could change investor attitudes toward the sector or the stock; (3) Unforeseen developments with respect to the management, financial condition or accounting polices or practices could alter the prospective valuation; or (4) external factors that affect the U.S. economy, interest rates, the U.S. dollar or major segments of the economy could alter investor confidence and investment prospects.

Oil and Gas Prices and OPEC: Financial and operating performance for companies in the Energy industry are affected by absolute and relative changes in oil and gas prices, which are influenced by a multitude of regional, national and global factors. As such, future stock price performance may also be influenced by such factors associated with changes to fiscal and royalty regimes in countries where it operates, or might operate, the potential for geopolitical upheaval (given its global presence) and may face various technical and operational risks associated with the products and services it provides. Agreements among OPEC members, including production limitations, may also affect worldwide commodity prices and financial and operational performance for companies in the Energy industry.

General Disclosures

This research report was prepared by employees of Scotia Howard Weil, a division of Scotia Capital (USA) Inc. who have the title of Research Analyst. Scotia Capital (USA) Inc., an SEC registered broker-dealer and a member of FINRA and the NYSE, is wholly owned by Scotia Capital Inc., a Canadian Investment Dealer, and indirectly owned by The Bank of Nova Scotia. Scotiabank, together with "Global Banking and Markets," is a marketing name for the global corporate and investment banking and capital markets businesses of The Bank of Nova Scotia and certain of its affiliates in the countries where they operate, including Scotia Capital (USA) Inc.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

Investment Thesis

Travis Miller, Sector Director, 24 March 2016

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Travis Miller, Sector Director, 09 August 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Exelon Corp EXC (XNYS)

Entergy Corp ETR	USD	13,248	10,952	-2.55	75.76

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

★★★ 04 Oct 2016 05:00, UTC	31.86 USD 04 Oct 2016	30.00 USD 13 Apr 2016 22:11, UTC	1.06	3.83 04 Oct 2016	3.99 04 Oct 2016	29.40 04 Oct 2016	Utilities - Diversified	Standard

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 24 March 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Are Utilities Overheated or Are Their Yields too Good to Pass Up?

Travis Miller, Sector Director, 20 April 2016

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Exelon Threatens to Close Clinton, Quad Cities Nuclear Plants...Again

Travis Miller, Sector Director, 06 May 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after management used its strongest language to-date regarding the fate of the beleaguered Clinton and Quad Cities nuclear plants, both in Illinois. Management said it will close the plants by 2017-18 but also said the decision depends on several developments. These are the same contingencies management has used for several years to justify postponing the plant closures.

We continue to assume Exelon closes Clinton, Quad Cities, and two other nuclear plants by 2020. But we think management remains hesitant to pull the cord. The plants could survive if Illinois politicians pass what effectively is a nuclear bailout bill; Clinton clears the Mid-Continent Independent System Operator's 2017-18 capacity auction next spring; or Quad Cities clears the mid-Atlantic capacity auction later this month. Quad Cities cleared last year's 2017-18 transitional capacity auction at $151.50 per megawatt-day but did not clear the 2018-19 auction at $215/MW-day. We expect similar clears in this year's 2019-20 auction.

Exelon earned $0.68 per share on an adjusted basis and reaffirmed its $2.40-$2.70 per share 2016 guidance, in line with our estimates. It continues running its nuclear fleet at world-class levels, achieving a 95.8% capacity factor in the quarter and proving it can capture the full upside if energy prices rebound. Exelon also filed rate cases at two of its newly acquired Pepco utilities, which should boost earnings and returns on the pricey acquisition if the utilities receive constructive decisions.

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results.

Andrew Bischof, CFA, Eq. Analyst, 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Andrew Bischof, CFA, Eq. Analyst, 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real

Travis Miller, Sector Director, 02 June 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

Travis Miller, Sector Director, 09 August 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

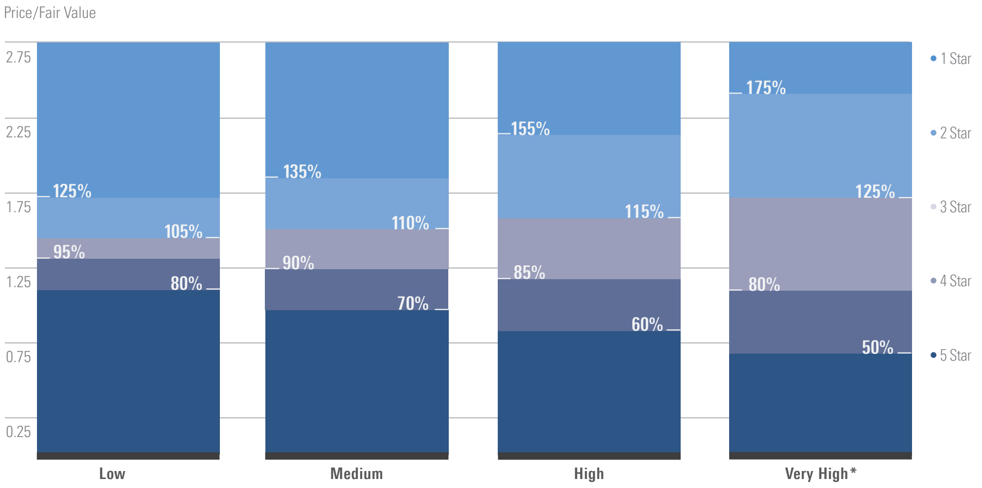
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- **Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- **Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- **None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- **One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- **Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- **Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- **Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- **Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

Exelon (EXC)

Finally a Victory for Clinton

BUY
Price target $39.50
(from $37.00)
Price $35.46^

Key Takeaway

Following approval of the Future Energy Jobs Bill we have updated our estimates to reflect the continued operation of Quad Cities and Clinton and the $0.07 benefit associated with the Illinois ZEC. Additionally we now include the benefit associated with the NY ZEC (~$0.09) and FitzPatrick acquisition ($0.02-$0.08). Partly offsetting these positives is an update of our ExGen commodity assumptions.

On December 7, the Governor of Illinois signed the Future Energy Jobs bill that included compensation in the form of a Zero Emission Credit (ZEC) for Exelon's Clinton and Quad Cities nuclear plants. The bill provides $16.50/MWh (up to $235M of annual gross margin benefit) to ExGen beginning June 1, 2017 and extending to 2027. Without the ZECs the two nuclear plants were operating at a loss that management previously estimated at $0.07. Jefferies estimates the annual benefit from ZECs to be approximately $0.08.

Included in the Future Energy Jobs Bill are three benefits to Exelon's regulated utility in Illinois which we estimate to be a $0.02 accretive beginning in 2018.

The NY ZEC program will provide Exelon with $0.08-$0.10 of incremental earnings. In August the NYPSC approved the ZEC plan that will benefit Exelon's Nine Mile Point and Ginna nuclear plants. While a federal court challenge was filed in October we believe the ZECs will survive and have included the benefit in our estimates. The program begins in April 1, 2017.

Earlier this month FERC approved Exelon's purchase of the 837 MW FitzPatrick nuclear plant which we assume adds $0.02-$0.08 The low end of the range will occur during years when the plant is scheduled for a refueling outage.

Our revised 2017-19 EPS estimates reflect the benefit associated with the NY and IL ZEC programs, FitzPatrick ownership, higher earnings at ComEd, partially offset by lower commodity prices at ExGen.

Valuation/Risks

Our $39.50 price target (was $37) is based on P/E analysis. Taking our 2019 EPS estimate of $2.80 in conjunction with a P/E group average multiple of 14.1x results in a price target of $39.50. Based on yesterday's closing price of $35.14 this would result in a 12-month price appreciation potential of 12.4% and total return potential of 16.0% including the current yield of 3.6%. **Risks** –Risks include exposure to change in the commodity prices and regulatory issues associated with the company's regulated subsidiaries.

Investment Summary

We believe that EXC is attractive at current levels trading at a discount to other utilities based on our P/E valuation. For investors looking for merchant exposure we believe EXC is the best way to play power.

On December 7, the Governor of Illinois signed the Future Energy Jobs bill that included compensation in the form of a Zero Emission Credit (ZEC) for Exelon's Clinton and Quad Cities nuclear plants. The bill provides $16.50/MWh (up to $235M of annual gross margin benefit) to ExGen beginning June 1, 2017 and extending to 2027. Without the ZECs the two nuclear plants were operating at a loss that management previously estimated at $0.07 and we estimate that the ZECs reverses the loss and provides $0.08 of incremental earnings.

Included in the Future Energy Jobs Bill are three benefits to Exelon's regulated utility in Illinois which we estimate to be a $0.02 accretive beginning in 2018. 1) Return-on energy efficiency investment: the utility currently invests $200-$250M a year in energy efficiency but is not provided any return on the investment. The recently signed bill will provide ComEd with a return on up to $350M a year. 2) Revenue decoupling: additionally the utility will now have a revenue decoupling mechanism which will protect the company from variations in load. 3) Extension of current rate plan through 2022: ComEd's formula rate plan requires annual filings and sets an ROE that is 580 bps about the 30Y Tsy.

The NY ZEC program will provide Exelon with $0.08-$0.10 of incremental earnings. In August the NYPSC approved the ZEC plan that will benefit Exelon’s Nine Mile Point and Ginna nuclear plants. While a federal court challenge was filed in October we believe the ZECs will survive and have included the benefit in our estimates. The program begins in April 1, 2017.

Earlier this month FERC approved Exelon's purchase of the 837 MW FitzPatrick nuclear plant which we assume adds $0.02-$0.08 The low end of the range will occur during years when the plant is scheduled for a refueling outage. The next refueling outage is scheduled for January 2017 followed by another one in August 2018. After that the plant will continue on a 24 month outage schedule. For 2017 and 2018 we are assuming the acquisition of FitzPatrick adds $0.02 to earnings and$0.08 in 2019.

We are maintaining our 2016 estimate of $2.70 which is within the company’s $2.55-$2.75 guidance range.

We are increasing our 2017 EPS estimate by $0.10 to $2.60 reflecting a partial year of the New York and Illinois ZEC programs and the benefit of Fitzpatrick ownership offset slightly by lower commodity prices at ExGen.

We are increasing our 2018 EPS estimate by $0.10 to $2.85 reflecting a full year of the ZEC programs and Fitzpatrick ownership, coupled with $0.02 of higher contribution at ComEd, partially offset by lower commodity prices at ExGen.

We are increasing our 2019 EPS estimate by $0.15 to $2.80 reflecting a full year of the ZEC programs and Fitzpatrick ownership (no outage in 2019), coupled with $0.02 of higher contribution at ComEd, partially offset by lower commodity prices at ExGen.

Table 1: Exelon Corporation Income Statement Forecast ($-millions)

Company Description

Exelon Corporation, through its subsidiaries, Commonwealth Edison Company (CWE) and Peco Energy Company (PECO), is engaged in the regulated distribution and transmission of electricity in Chicago and regulated transmission and distribution of electricity and natural gas in Philadelphia. In 2000, the company formed Exelon Generation, LLC to own and operate 25,543 megawatts (MW) of generation. Roughly 2/3 of the total generating capacity (16,945 MW) is nuclear, with the remaining 1/3 comprised of fossil and hydroelectric facilities.

Analyst Certification:

I, Anthony C. Crowdell, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

I, Benjamin Budish, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

As is the case with all Jefferies employees, the analyst(s) responsible for the coverage of the financial instruments discussed in this report receives compensation based in part on the overall performance of the firm, including investment banking income. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.

Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for

inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

FY ’16 Guidance Up After Strong Q3; Forecast Down on Power Pricing, Net of Cost Cuts

The Value Proposition Still Looks Good. Rating Buy, Target $40.

EXC reported 3Q16 adjusted EPS of $0.91 vs. $0.83 in 3Q15 and above both prior guidance of $0.65-$0.75 and consensus of $0.79. FY’16 guidance was raised from $2.40-$2.70 to $2.55-$2.75. The expected EPS contributions from both ComEd and PHI were raised by $0.05 each due to better than expected weather driven demand and a lack of summer storm expenses. ExGen’s expected contribution to operating earnings was maintained at $1.20-$1.30 despite a strong Q3 at Constellation and strong plant performance improving the outlook for ’16 gross margin by $50mm. In the quarter at the utilities, weather was a +$0.04 benefit at ComEd and PECO YoY, with higher rates / rate base adding another +$0.04. This was partially offset by an ROE decline due to Treasury rates at the former (-$0.01) and higher O&M at the latter (-$0.01). PHI contributed $0.14 in the quarter. BGE was flat YoY. ExGen was -$0.14 lower YoY in the quarter, primarily on higher taxes / DPAD (-$0.06) and lower capacity prices (-$0.02) with increases in nuclear decommissioning expense, share differential and other items a -$0.05 drag collectively. Cash flow for the year is looking a bit better, which mitigates the need for the additional financing we thought would be necessary to fund the recently deposited $1.25bn payment to the IRS relating to a recently lost tax court case (which EXC plans to appeal). Read our recent note on this issue for more details, here.

Our ’16 / ’17 / ’18 EPS forecast is now $2.65 / $2.65 / $2.85 from $2.60 / $2.70 / $2.90. Dividend growth should be 2.5% annually through ’18. Our forecast is based on 10/21/16 forward power curves. On a MTM basis we are higher than where EXC’s disclosures would drive results (particularly in ’17) as pricing is a bit better than the 9/30/16 “mark” used in their Q3 update. The assumptions driving EXC’s view of the earnings growth drivers in its core utilities business and Exelon Generation (ExGen) as well as the robustness of the cash flow profile supporting the utility investment, dividend growth and deleveraging goals articulated by management are still wholly credible. The core utilities are forecast to grow rate base at 6% from ’16-20, with earnings growth of 7-9% due to the assumption of improved earned ROE’s at recently acquired POM. With the ACE rate case recently settled, rate cases pending at most of the PHI companies and the ability to harvest operating synergies we see a turnaround similar to the one EXC engineered at BGE after the CEG acquisition as feasible. So, there is line of sight for EPS at EXC’s utilities (ex-parent overheads) growing from $1.38 in FY ’16 to $1.85 in 2020, consistent with our prior expectations. At ExGen, our forecast of ~$0.10/share uplift by FY ‘18 from passage of the NY Zero Emissions Credit (ZEC) program and our estimate of ~ $.05/share run-rate uplift from recently announced Fitzpatrick plant acquisition from ETR were corroborated by EXC in the Q3 release. The impact of the closing of the Clinton and Quad Cities power plants is $0.07 accretive to EPS with a $75mm improvement to cash flow but it won’t fully hit the P&L until FY 2019. In any case EXC has updated its total expected O&M forecast for ExGen through 2019 showing a $400mm reduction from FY 17 – ’19, vs. prior guidance of $250mm, with another $100m reduction in D&A and TOTI related to the Clinton and Quad plant retirement decisions. Taken in conjunction with their disclosure regarding ’19 gross margin expectations, including an already expected fall in in capacity prices, ExGen today looks like it faces a $0.15 EPS headwind year-over-year in 2019 vs. 2018 as compared to our prior estimate of $0.10. From a cash flow perspective we now see ExGen producing ~$3.1bn of free cash flow through FY ’18 down from $3.4bn, ~49% of the $6.3bn they are targeting through 2020 ($5.2bn base case plus $1.1bn at ExGen and repayment of a loan to their nuke JV partner EDF), with that money supporting utility investment, dividend growth, and debt reduction of at least $3bn. ExGen debt/EBITDA, currently at ~3.3X, should fall to ~3X over the forecast period. On the subject of the dividend, they are committed to 2.5% growth through 2018 but are confident the financial profile supports at least that level of growth through 2020.

Our price target remains $40, maintaining BUY rating. Our forecast for utility EPS contribution minus parent overheads (+/-$0.15) is $1.38/share which by 2018 we expect to be $1.70 per share. With EXC aspiring to grow rate base to >$40bn by 2020 that earnings power could theoretically grow to $1.85/share. That type of growth profile for a T&D only utility when compared to the regulated peer group today is worth $28/share in our view (16.5X ’18 EPS, an average multiple). That implies ExGen is worth only ~$5.25/share today, which is around 4.6X ’18 EPS or 4.5X ’18 EV/EBITDA and an unlevered free cash flow yield to EV of 19% with debt/EBITDA at YE ’18 of 2.9X. To put it more succinctly, EXC is trading at +/-11.7X overall FY ’18 earnings and a 3.8% dividend yield while pure regulated names are at 16.8X and yields averaging 3.5%. While the dividend growth commitment of 2.5% annually is lower than that articulated by purely regulated peers and ‘19 EPS and EBITDA at ExGen should moderate (we estimated those numbers above at ~$0.15/share / -$220mm of EBITDA the balance sheet will also shrink. Our view is that the overall valuation gap is just too high.

What’s next? EXC believes it is possible that the IL legislature might pass an energy bill that would reverse the retirement decisions regarding the Clinton and Quad Cities nuclear facilities during two veto sessions in November (from 11/15-11/17 and 11/29-12/1). Otherwise the plants will be shut down by 6/1/17 and 6/1/18, respectively. In NY, PSC and FERC approval for the purchase of Fitzpatrick from EXC – as well as execution of ZEC contracts with NYSERDA - is expected before the 11/23/16 deal termination date. The deal is expected to close before 4/1/17, after NRC approval in Q1’17. EXC has not yet provided a timetable on when the sale of the Mystic facility in ISO-NE might close. EXC will appeal the IRS’ assessed tax penalty for the 1999 gain on sale of fossil assets from ComEd in Q1’17, which could result in a refund of ~$200mm. On the utility front, a decision is expected in Pepco’s pending electric rate filing in MD (in which they are requesting $102.8mm premised on a 10.60% ROE) by 11/15/16. The IL PSC will issue a final order on ComEd’s electric FRP by December. A decision in DPL’s electric distribution rate case in MD (in which they are requesting $57.0mm based on a 10.60% ROE) is expected by 2/17/17. A decision in Pepco’s electric distribution rate case in DC (in which they are requesting an $82.1mm increase premised on 10.60% ROE) is expected by 7/25/17. A decision in Delmarva’s pending electric and gas distribution rate cases (in which they are requesting $84mm in aggregate based on a 10.60% ROE) is expected in Q3’17.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of regulation to bolster the revenue stream of the NY nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in NY to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst’s compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC (“Evercore Group”), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority (“FINRA”), and International Strategy & Investment Group (UK) Limited (“ISI UK”), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI (“Evercore ISI”). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners’ total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst’s judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst’s area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst’s long-term recommendation (Buy, Hold or Sell) that reflects a stock’s forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst’s long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI’s recommendations are based on a stock’s total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%

Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Investment Thesis

Travis Miller, Sector Director, 06 December 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings as it gains scale.

Analyst Note

Travis Miller, Sector Director, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in

Pennsylvania closes in 2018 absent state support.

Economic Moat

Travis Miller, Sector Director, 06 December 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 06 December 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10%

above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 06 December 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.

Management

Travis Miller, Sector Director, 06 December 2016

We assign Exelon's management team a Standard stewardship rating. The company's management faces a tough task given half the business is highly sensitive to commodity energy markets that they can't control.

Given this challenge, we're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. We're also impressed with the lobbying success they have had, particularly in New York and Illinois, to extend the distressed plants' lives. This is the one thing it can control and preserves the value-creation opportunities if power prices rise. President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' aggregate exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of the current 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

Travis Miller, Sector Director, 09 August 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Regulated Utilities Continue Driving Growth for Exelon

Travis Miller, Sector Director, 26 October 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Travis Miller, Sector Director, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities

Travis Miller, Sector Director, 09 November 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Electric Vehicles Offer No Support for Slowing U.S. Electricity Demand Growth

Travis Miller, Sector Director, 14 November 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life

Travis Miller, Sector Director, 06 December 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Morningstar Research Methodology for Valuing Companies

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

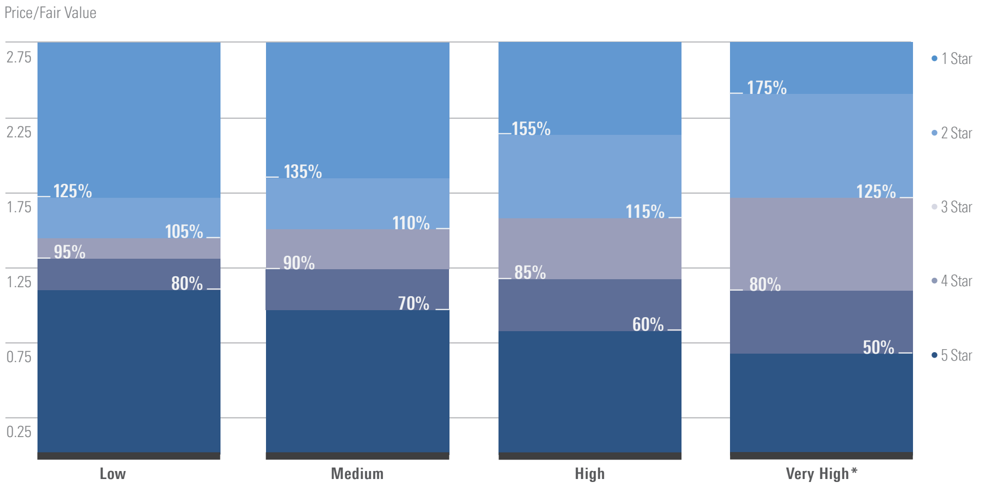
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ►**Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- ►**Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- ►**Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ►**Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ►**Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ►**None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- ►**One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- ►**Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- ►**Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- ►**Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- ►**Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Qualitative Disclosure

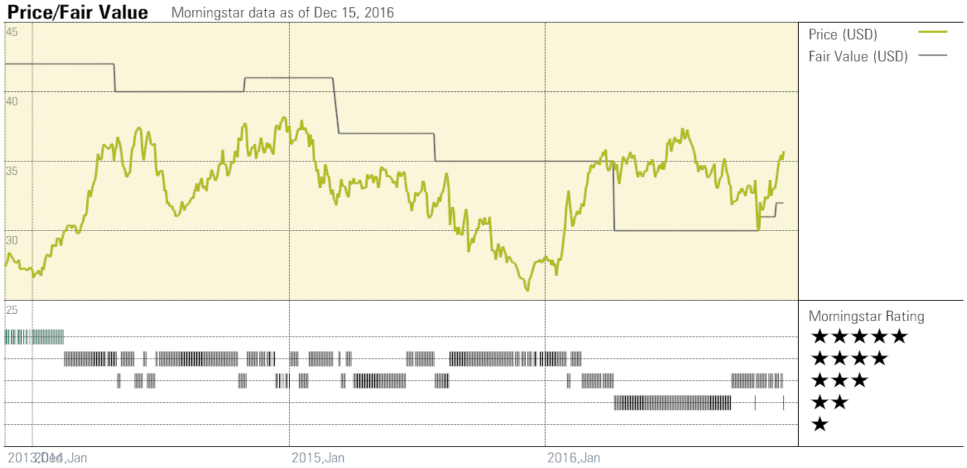
The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar. The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Morningstar commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

Morningstar believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources which we believe to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seek independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.



Price/Fair Value Morningstar data as of Dec 15, 2016

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

General Disclosure (applicable to both Quantitative and Qualitative Research)

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Inc., a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position.

The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, Morningstar makes no representation that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar and its officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report. Morningstar encourages recipients of this report to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a legal, tax, and/or accounting

professional.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, or Morningstar affiliates guarantee the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst or Morningstar. In Territories where a Distributor distributes our report, the Distributor, and not the analyst or Morningstar, is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

• No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

• Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

• Morningstar does not receive commissions for providing research and does not charge companies to be rated.

• Morningstar is not a market maker or a liquidity provider of the security noted within this report.

• Morningstar has not been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

• Morningstar affiliates (i.e., its investment management group) have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

• Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

• Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which Morningstar currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities we have covered, including their fair value estimate, please contact your local office.

For Recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products. To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. IL Governor Lends Support to Amended Energy Bill, Sessions Underway

If it is to pass, the vote must occur today.

On Wednesday, 11/30/16, EXC announced it had gained the support of Governor Rauner (and other stakeholders) through amendments to the Future Energy Jobs Bill. The key changes include additional protections for ratepayers in ComEd, such as removal of ratepayer-funded micro-grid spending and the inclusion of provisions that limit rate hikes for residential customers to $0.25 per month, and 1.3% annually for commercial and industrial customers (based on 2015 rates). Additionally, the Fixed Resource Adequacy Plan (FRAP) for Southern Illinois that would presumably have helped financially constrained DYN coal plants was removed. The controversial demand charges that would have been assigned to residential customers in IL was also removed.

The estimated annual Zero Emission Standard (ZES) revenue proposed for Clinton and Quad Cities appears lower by $50mm, at $235mm vs. $285mm as proposed in Amendment two issued on 11/15/16. The additional limiting factor here is the broader provision that limits these contract volumes so that the total cost increase does not exceed 1.65% of the total cost paid by retail customers for the year ending 5/31/2009. This increase had been higher, at 2.015% as proposed in the earlier second amendment. Otherwise, the substance of the ZES calculation is unchanged (as described in our 11/18/16 note here), but that the duration of the subsidy has also been reduced - from the end of those plants' useful lives previously to 10 years ending May 31, 2027 in the latest amendment. The current license at Clinton extends through 2026 and licenses at the two units at Quad Cities extend through 2032 (though these could be extended). In sum, the ZES still represents a +/-$0.15 EPS improvement at ExGen as compared to the $0.07/share run-rate benefit that ExGen would realize were the plants instead retired. We see a $235mm improvement in cash flow vs. $75mm of cash flow improvement in a shut-down scenario.

EXC would also be asked to spend $400mm at ComEd annually on energy efficiency, and be allowed a regulated return on the investment. It is not currently contemplated in the current capital plan, and would thus represent $0.015 in incremental earnings power annually, totaling $0.05 of EPS accretion by 2020.

The bill will have to pass with a legislative supermajority (3/5) in both the House and the Senate by the end of the day to reach the Governor’s desk. The general House session began at 10:00 AM CT and the Senate session began at 11:00 AM CT, both currently underway. You can follow the House and Senate sessions live, here and here, respectively. Without passage during this veto session, a bill would have to be reintroduced in January, and could conceivably pass during the short lame duck session; however it would be too late to save Clinton at that point (which must give notice to the MISO by the end of the day today) if that unit will retire on 6/1/17 as planned. Quad Cities is due to be retired on 6/1/18.

If the bill passes it is worth $2.50/share. Shut down is worth a bit less than $1/share. We come up with those numbers by doing a simple DCF of the cash flow impact at ExGen under both scenarios and putting a value on $0.05 of EPS accretion at ComEd in 2020 if the deal passes. Our current valuation assumes a shut down case.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of regulation to bolster the revenue stream of the IL nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in IL to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Buy, Hold or Sell) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%

Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

IL Legislature Passes Energy Bill

It only needs to be signed into law by the Governor.

Yesterday evening, 12/1/16, the Energy Future Jobs Bill (SB 2418) passed both houses. It now only needs to be signed into law by Governor Rauner. The bill passed in a 63-38 vote in the House before moving to the Senate where it passed 32-18 shortly after. A total of 5 additional amendments were introduced to the bill in rapid succession the last 2 days alone, some on additional feedback from the Governor. Among these was also a change to the effective date of the legislation yesterday that had the effect of reducing the necessary threshold to pass the bill to 60 votes. However, the core elements for EXC – including the subsidies that would keep Clinton and Quad Cities online – were unchanged. The deal will be effective June 1, 2017 and run for 10 years.

The estimated annual Zero Emission Standard (ZES) revenue proposed for Clinton and Quad Cities is $235mm vs. the $285mm as proposed in Amendment two issued on 11/15/16. The additional limiting factor here is the broader provision that limits these contract volumes so that the total cost increase does not exceed 1.65% of the total cost paid by retail customers for the year ending 5/31/2009. This increase had been higher, at 2.015% as proposed in the earlier second amendment. Otherwise, the substance of the ZES calculation is mostly unchanged (as described in our 11/18/16 note here), but that the duration of the subsidy has also been reduced - from the end of those plants' useful lives previously to 10 years ending May 31, 2027. The current license at Clinton extends through 2026 and licenses at the two units at Quad Cities extend through 2032 (though these could be extended). In sum, the ZES represents a +/-$0.15 EPS improvement at ExGen as compared to the $0.07/share run-rate benefit that ExGen would realize were the plants instead retired. Retirements for Clinton and Quad Cities were planned for 6/1/17 and 6/1/18, respectively, without legislation. We see a $235mm improvement in cash flow vs. $75mm of cash flow improvement in the shut-down scenario.

EXC would also be asked to spend $400mm at ComEd annually on energy efficiency, and be allowed a regulated return on the investment. It is not currently contemplated in the current capital plan, and would thus represent $0.015 in incremental earnings power annually, totaling $0.05 of EPS accretion by 2020. Other key changes include additional protections for ratepayers in ComEd, such as removal of ratepayer-funded micro-grid spending and the inclusion of provisions that limit rate hikes for residential customers to $0.25 per month, and 1.3% annually for commercial and industrial customers (based on 2015 rates). Additionally, the Fixed Resource Adequacy Plan (FRAP) for Southern Illinois that would presumably have helped financially constrained DYN coal plants was removed. The controversial demand charges that would have been assigned to residential customers in IL was also removed.

All things equal, the bill is worth $2.50/share as we articulated yesterday. For the sake of being conservative, we are maintaining our price target and estimates for the time being.

VALUATION METHODOLOGY

Our valuation is based on a sum of the parts analysis. We use a P/E multiple on the utility and an EBITDA multiple for the merchant power business.

RISKS

Higher or lower power / capacity prices and favorable / unfavorable outcomes in regulatory proceedings would cause our valuation to be either higher or lower. Higher interest rates would pull utility earnings up in IL but pressure multiples so the net impact would likely be negative overall. A favorable outcome in the upcoming PJM capacity auctions and/or passage of regulation to bolster the revenue stream of the IL nuclear units would be accretive but a significantly lower PJM capacity auction price would be negative. The lack of legislation in IL to bolster the nuclear units could be neutral to value if EXC abides by its commitment to then shutter those money losing units.

ANALYST CERTIFICATION

The analysts, Greg Gordon and Phil Covello, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Buy, Hold or Sell) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and / or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report..

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three ratings categories, with the following return guidelines:

Buy – the total forecasted return is expected to be greater than 10%
Hold – the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell – the total forecasted return is expected to be less than 0%
Coverage Suspended – the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended - Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

* Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended".

Historical Ratings Definitions

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy - Return > 20%
Buy - Return 10% to 20%
Neutral - Return 0% to 10%

Cautious - Return -10% to 0%
Sell - Return < -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight – the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight – the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight – the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended – the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Illinois Legislature Supports Nuclear Generation

Bottom Line: Late on December 1 (last day of the veto session), the Illinois legislature passed legislation (SB2814) that will provide much-needed relief to the state's ailing nuclear plants. Under the legislation, which is expected to be signed by Gov. Rauner, EXC stands to collect ~$235 million annually from nuclear subsidies. We regard this legislation as a positive for Exelon, which had stated it would shut down the Quad Cities and Clinton plants absent legislative support.

Key Points

- The Future Energy Jobs Bill (SB2814) is designed to maintain Illinois' competitive electric rates, preserve and create thousands of jobs and expand clean energy. The legislation also supports renewable energy development, expands aid and job training to low-income residents and supports high-paying jobs.

- EXC's utility, ComEd, would collect ~$235 million annually, or about $0.17 per share, from Illinois customers for the nuclear power plant subsidy via Zero Emission Credits that will keep the Quad Cities Clinton nuclear plants operating for 10 years. Absent enabling legislation, EXC was poised to shut the units as they were uneconomic.

- Although last minute changes to the bill could have occurred, we believe ComEd would be allowed to spend ~$400 million annually on energy efficiency (down from the original $500 million); the company currently spends about $240 million a year.

- We also believe the legislation includes customer protections, including an overall cost cap that will limit the impact to all business classes at 1.3% compared to their 2015 rates and to cap the impact to residential customers at $0.25/month for the average ComEd residential customer. Ameren business and residential customers received similar protections.

- The legislation also contains cost caps related to energy efficiency, the Renewable Portfolio Standard and the Zero Emission Standard.

- The legislation does not include subsidies for downstate coal plants as it had in an earlier incarnation.

Please refer to pages 2 to 4 for Important Disclosures, including Analyst's Certification.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities

Investment Thesis

Travis Miller, Sector Director, 24 March 2016

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Travis Miller, Sector Director, 09 November 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the

next few years to lock in current tax benefits.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 13 April 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

Exelon Corp EXC (XNYS)

Analyst Notes Archive

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results.

Andrew Bischof, CFA, Eq. Analyst, 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Andrew Bischof, CFA, Eq. Analyst, 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real

Travis Miller, Sector Director, 02 June 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management

finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

Travis Miller, Sector Director, 09 August 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Regulated Utilities Continue Driving Growth for Exelon

Travis Miller, Sector Director, 26 October 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon

goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Travis Miller, Sector Director, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Low Gas Prices, Stalled Environmental Policy Under Trump Mean Little Net Impact on Utilities

Travis Miller, Sector Director, 09 November 2016

We are reaffirming the fair value estimates, moat ratings, and moat trends for all utilities we cover following the U.S. presidential election outcome. We continue to think utilities are 6% overvalued, and we don't plan any material changes to our forecasts.

President-elect Donald Trump has been an outspoken advocate for natural gas and coal, which likely will keep gas and power prices low. We expect gas demand will continue growing, supporting infrastructure investment and earnings growth for many utilities. We think Dominion Resources and Duke Energy will benefit the most from gas-related infrastructure growth. Low gas and power prices will continue to make the economics challenging for coal and nuclear generation, hurting utilities like Exelon.

Environmental regulations, notably the U.S. Environmental Protection Agency's carbon-focused Clean Power Plan, likely are dead at least for the next four years. This reduces risk for fossil-fuel generators like Dynegy , NRG Energy, and Calpine. We think all three are undervalued. We always considered CPP implementation too uncertain to incorporate in our fair value estimates, and the election results validate our assumption.

We think renewable energy growth, especially wind energy, will continue despite the election rhetoric. State-level laws and regulations are driving most renewable energy investment, and we don't expect that to change. We also think it is unlikely Congress will repeal the renewable energy tax credits. A pro-manufacturing agenda should help the wind energy supply chain that has developed in the U.S.

We think the sell-off of renewable energy leader NextEra Energy could be a buying opportunity if it trades below our $111 per share fair value estimate. We expect its huge wind pipeline that drives part of our growth outlook will remain intact. Its growth could even accelerate during the next few years to lock in current tax benefits.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

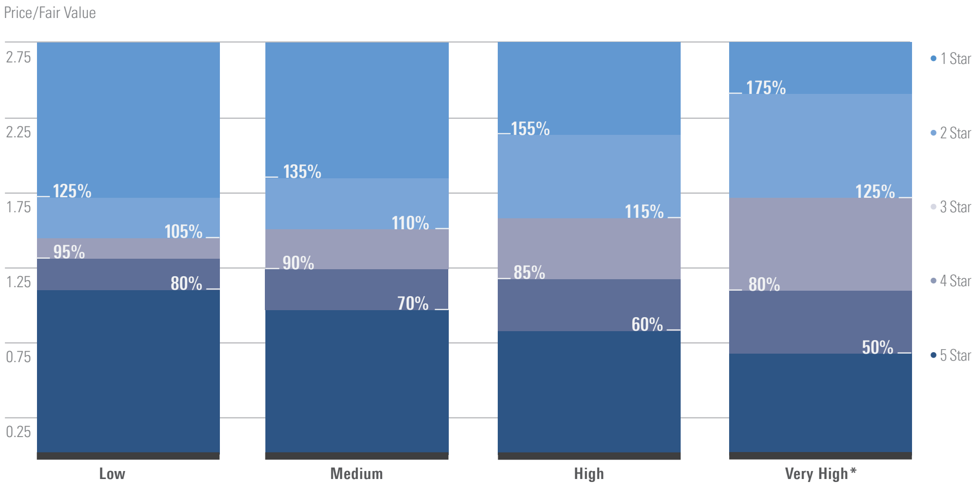
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- **Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- **Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- **None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- **One-Star:** the stock is overvalued with a reasonable margin of safety.
  Log (Quant FVE/Price) < -1*Quantitative Uncertainty
- **Two-Star:** the stock is somewhat overvalued.
  Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)
- **Three-Star:** the stock is approximately fairly valued.
  Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)
- **Four-Star:** the stock is somewhat undervalued.
  Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)
- **Five-Star:** the stock is undervalued with a reasonable margin of safety.
  Log (Quant FVE/Price) > 1*Quantitative Uncertainty

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Qualitative Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar. The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Morningstar commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

Morningstar believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources which we believe to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seek independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Investment Thesis

Travis Miller, Sector Director, 24 March 2016

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Analyst Note

Travis Miller, Sector Director, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Economic Moat

Travis Miller, Sector Director, 13 April 2016

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Valuation

Travis Miller, Sector Director, 13 April 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50%

higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Risk

Travis Miller, Sector Director, 13 April 2016

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.

Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.

As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management

Travis Miller, Sector Director, 13 April 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder

among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes Archive

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results.

Andrew Bischof, CFA, Eq. Analyst, 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results

Andrew Bischof, CFA, Eq. Analyst, 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real

Travis Miller, Sector Director, 02 June 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management

finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet

Travis Miller, Sector Director, 09 August 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Regulated Utilities Continue Driving Growth for Exelon

Travis Miller, Sector Director, 26 October 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon

goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Management Meeting: Work Under Way at Pepco to Achieve Higher Returns

Travis Miller, Sector Director, 08 November 2016

We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after meeting with senior management at the Edison Electric Institute Financial Conference in Phoenix, Arizona.

Exelon's key near-term challenge is improving earned returns at the newly acquired Pepco utilities. We think Exelon must raise the Pepco utilities' earned returns by at least 200 basis points to make the deal value-accretive. This first round of rate cases under way in New Jersey, Maryland, Delaware, and Washington, D.C., should stabilize earned returns, but we expect it will take one or two more rounds of rate activity to achieve earned returns on equity in the 9%-10% range.

Rate riders or other interim rate adjustments could speed up the improvement in returns, but Maryland is the only state likely to implement those types of structures in the foreseeable future. Following this round of rate cases, management said they would focus on using operating cost efficiencies and better reliability to offset some of the incremental capital investment planned and minimize customer rate increases. We think this could be an effective strategy.

At Exelon Generation, management already is assuming the Clinton (Ill.) and Quad Cities (Ill.) nuclear plants retire in 2017-18 as part of their operating cost guidance. We also assume the plants will close. The final hope is support from Illinois legislators during the so-called veto sessions on Nov. 15-17 and Nov. 29-Dec. 1, but Exelon has struggled to get enough support to pass the initiative for several years, and we don't think anything is materially different this time. We expect Exelon could start lobbying Pennsylvania and New Jersey politicians and regulators for nuclear energy financial support after resolving its efforts in Illinois and New York.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

Morningstar Research Methodology for Valuing Companies

Research Methodology for Valuing Companies

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

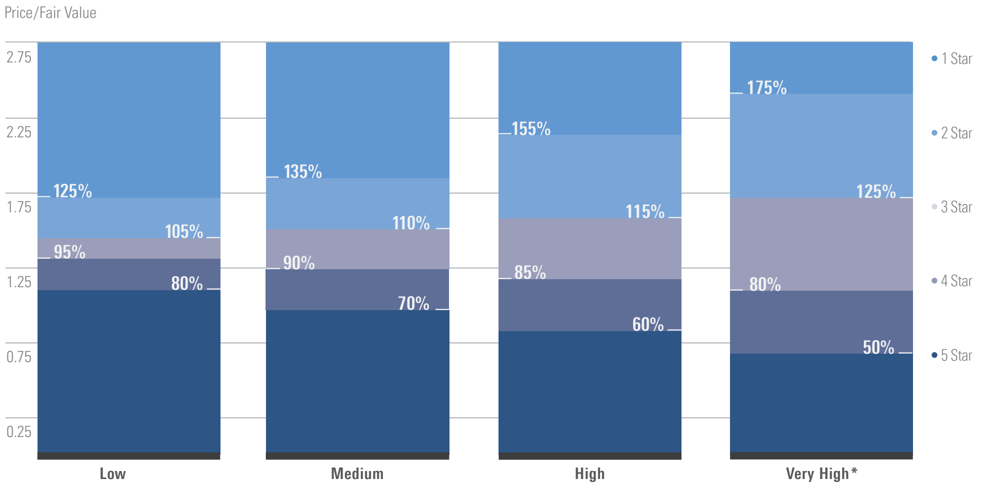
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview
The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings
Morningstar's quantitative equity ratings consist of: (i) Quantitative Fair Value Estimate, (ii) Quantitative Star Rating, (iii) Quantitative Uncertainty, (iv) Quantitative Economic Moat, and (v) Quantitative Financial Health (collectively the "Quantitative Ratings).

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. ("Morningstar", "we", "our") calculates Quantitative Ratings for companies whether or not it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the Quantitative Fair Value Estimate using a statistical model derived from the Fair Value Estimate Morningstar's equity analysts assign to companies. Please go to http://global.morningstar.com/equitydisclosures for information about Fair Value Estimate Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- **Narrow:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- **Wide:** assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- **None:** assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as One-Star, Two-Star, Three-Star, Four-Star, and Five-Star.

- **One-Star:** the stock is overvalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) < -1*Quantitative Uncertainty*
- **Two-Star:** the stock is somewhat overvalued.
  *Log (Quant FVE/Price) between (-1*Quantitative Uncertainty, -0.5*Quantitative Uncertainty)*
- **Three-Star:** the stock is approximately fairly valued.
  *Log (Quant FVE/Price) between (-0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)*
- **Four-Star:** the stock is somewhat undervalued.
  *Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)*
- **Five-Star:** the stock is undervalued with a reasonable margin of safety.
  *Log (Quant FVE/Price) > 1*Quantitative Uncertainty*

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the Quantitative Fair Value Estimate. Generally, the lower the Quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rat-

Research Methodology for Valuing Companies

ing is expressed as Low, Medium, High, Very High, and Extreme.

- **Low:** the interquartile range for possible fair values is less than 10%.
- **Medium:** the interquartile range for possible fair values is less than 15% but greater than 10%.
- **High:** the interquartile range for possible fair values is less than 35% but greater than 15%.
- **Very High:** the interquartile range for possible fair values is less than 80% but greater than 35%.
- **Extreme:** the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- **Weak:** assigned when Quantitative Financial Health < 0.2
- **Moderate:** assigned when Quantitative Financial Health is between 0.2 and 0.7
- **Strong:** assigned when Quantitative Financial Health > 0.7

Other Definitions:

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit www.corporate.morningstar.com.

General Qualitative Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar. The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Morningstar commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

Morningstar believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources which we believe to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seek independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst or Morningstar. In Territories where a Distributor distributes our report, the Distributor, and not the analyst or Morningstar, is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest:

• No interests are held by the analyst with respect to the security subject of this investment research report.
– Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.

• Analysts' compensation is derived from Morningstar's overall earnings and consists of salary, bonus and in some cases restricted stock.

• Morningstar does not receive commissions for providing research and does not charge companies to be rated.

• Morningstar is not a market maker or a liquidity provider of the security noted within this report.

• Morningstar has not been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.

• Morningstar affiliates (i.e., its investment management group) have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.

• Morningstar, Inc. is a publically traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12

• Morningstar may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar's conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which Morningstar currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities we have covered, including their fair value estimate, please contact your local office.

For Recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products. To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at http://www.morningstar.com.au/fsg.pdf .

For Recipients in Hong Kong: The Report is distributed by Morningstar Investment Management Asia Limited, which is regulated by the Hong Kong Securities and Futures Commission to provide services to professional investors only. Contents

Analyst Note 14 Nov 2016

We are reaffirming our fair value estimates, moat ratings, and moat trends for all utilities after developing a fundamental forecast for electric vehicle growth in the United States through 2025. We continue to believe battery electric vehicles will have an immaterial impact on our 1.25% annualized U.S. electricity demand growth forecast through 2030.

We assume U.S. EVs grow from an estimated 134,000 in 2016 to 1.6 million by 2025, representing about 10% of the U.S. automobile fleet. We assume plug-in electric vehicles grow from an estimated 73,000 in 2016 to 1.2 million by 2025. Key drivers include our assumption that EVs will reach cost parity with internal combustion engine vehicles by 2025 and will be required to meet government fuel-efficiency standards. The more mature U.S. automobile industry, lower gasoline prices, and less-strict fuel-efficiency standards result in a slower projected EV growth rate than our projections in other regions.

Estimates we've seen suggest EVs require about 10 kilowatt-hours per day and plug-in hybrid EVs require about 3 kwh per day for an average U.S. driver. If EVs and PHEVs meet our volume forecast, it would represent 2.8 terawatt-hours of demand, or less than 0.1% of our projected 2025 total U.S. electricity demand.

Even the EV-related infrastructure investment potential is immaterial for utilities during the next 5-10 years. Edison International has the most exposure to EV-related growth investment, but it's still so small that it doesn't affect our 7% annual earnings growth estimate. Investing in charging and distribution infrastructure to meet all projected EV demand in most of Southern California would probably cost less than $1 billion by 2020, representing less than 3% of Edison's total investment the next five years. We expect

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

California utilities to issue formal EV investment proposals in early 2017, but we don't expect the outlook to change our forecasts materially.

Our fundamental U.S. electricity demand forecast is detailed in the Utilities Observer we published in May, "U.S. Electricity Demand Outlook: Energy Efficiency Is No Death Knell." Our fundamental EV forecast is detailed in the Electric Vehicles Observer published Nov. 14.

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

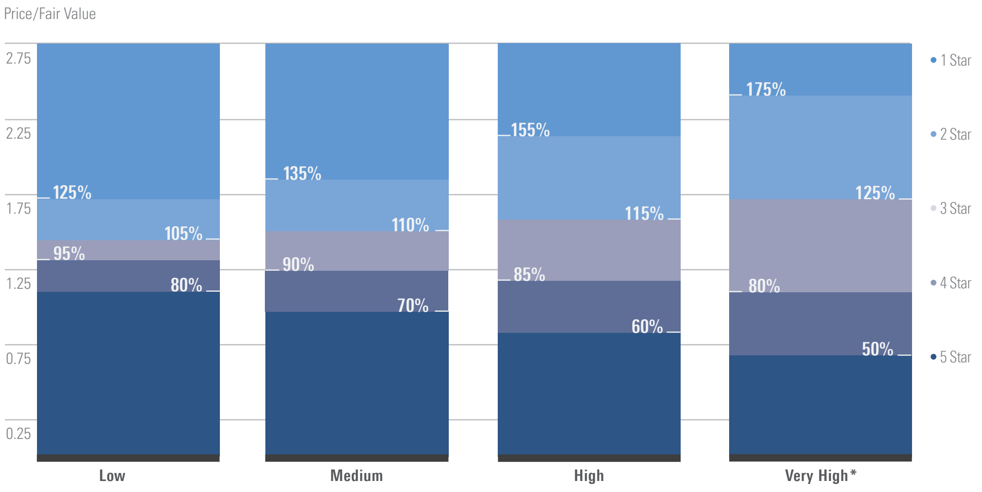
The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★
We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

Four Stars ★★★★
We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★
Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Research Methodology for Valuing Companies

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Investment Thesis 24 Mar 2016

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet 09 Aug 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Valuation, Growth and Profitability 13 Apr 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings

Price/Fair Value Morningstar data as of Oct 04, 2016

through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $500 million change in EBITDA. Our fair value estimate would change by $4 per share. On a mark-to-market basis as of mid-April, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 2 percentage points to near the industry average, it would change our fair value estimate by $3 per share. If Exelon does not retire the Clinton, Quad Cities, and Byron plants, it would add $3 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition.

These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

31.86 USD	30.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.

- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.

- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.

- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.

- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets. The 2007-08 commodity boom led management to raise the dividend and buy back stock. But as power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.The Pepco acquisition increases consolidated leverage, but most of that additional leverage will be debt at the regulated utilities. We don't expect a material change in parentco or Exelon Generation leverage.Based on current market conditions, we think Exelon will have sufficient cash coverage to keep its investment-grade credit rating and achieve management's recent pledge to increase the dividend at least 2.5% annually. Even through these lean years, we expect Exelon can generate at least $2 billion of cash flow after incorporating new financing and excluding discretionary growth investments. We project Exelon's consolidated EBITDA/interest coverage will remain near 6 times and leverage will remain below 4 times debt/EBITDA at least through 2018.More than half of Exelon's consolidated debt is secured at the regulated utilities, in line with its regulatory targets. Exelon Generation has an $805 million maturity in 2017 and $1.9 billion due in 2020. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing those maturities.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm could be forced to make contributions.

Enterprise Risk

Investors should pay the most attention to political

developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management 24 Mar 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real 02 Jun 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

ComEd zone cleared at $202.77/MW-day for CP and $182.77/MW-day for base, slightly below the strong 2018-19 results. Base capacity cleared in the Eastern Mid-Atlantic Area Council, or EMAAC, LDC cleared at CP clearing at $119.77/MW-day for CP and $99.77/MW-day for base generation, but well below last year's $210/MW-day for base

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results. 13 May 2016
We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

For a more detailed analysis, see our report, “Morningstar Outlook: PJM 2019-20 Capacity Auction," on Morningstar Select Investment Research.

Exelon Threatens to Close Clinton, Quad Cities Nuclear Plants...Again 06 May 2016
We are reaffirming our $30 fair value estimate, narrow moat rating, and stable moat trend rating for Exelon after management used its strongest language to-date regarding the fate of the beleaguered Clinton and Quad Cities nuclear plants, both in Illinois. Management said it will close the plants by 2017-18 but also said the decision depends on several developments. These are the same contingencies management has used for several years to justify postponing the plant closures.

We continue to assume Exelon closes Clinton, Quad Cities, and two other nuclear plants by 2020. But we think management remains hesitant to pull the cord. The plants could survive if Illinois politicians pass what effectively is

Exelon Corp EXC (NYSE) | ★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
31.86 USD	30.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

a nuclear bailout bill; Clinton clears the Mid-Continent Independent System Operator's 2017-18 capacity auction next spring; or Quad Cities clears the mid-Atlantic capacity auction later this month. Quad Cities cleared last year's 2017-18 transitional capacity auction at $151.50 per megawatt-day but did not clear the 2018-19 auction at $215/ MW-day. We expect similar clears in this year's 2019-20 auction.

Exelon earned $0.68 per share on an adjusted basis and reaffirmed its $2.40-$2.70 per share 2016 guidance, in line with our estimates. It continues running its nuclear fleet at world-class levels, achieving a 95.8% capacity factor in the quarter and proving it can capture the full upside if energy prices rebound. Exelon also filed rate cases at two of its newly acquired Pepco utilities, which should boost earnings and returns on the pricey acquisition if the utilities receive constructive decisions.

Are Utilities Overheated or Are Their Yields too Good to Pass Up? 20 Apr 2016

U.S. utilities haven't been this expensive in at least a decade. But utilities' dividend yields look incredibly attractive relative to bonds. So, are utilities stocks set to fall (and yields rise) or are yields set to fall (and stocks rise)? We think the former.

On many measures, utilities are exceedingly rich after a 14% run year-to-date and 21% run since mid-2015, well ahead of the S&P 500 (2.5%) and every sector. The 1.14 median price/fair value ratio for the 46 U.S. utilities Morningstar covers is a historic high after adjusting for a valuation methodology change in 2015. We are reaffirming our fair value estimates, moats and moat trends.

Utilities we cover trade at 19 times our 2016 earnings estimates and 22 times trailing earnings, well above the sector's average 15 trailing P/E during the last decade. Utilities are also trading near double their book values, higher than the 1.6 average during the last decade. The sector's 3.7% dividend yield is well below its 4.5% 20-year average.

But utilities' dividend yields have rarely been so attractive relative to interest rates. And we think utilities' dividends, credit metrics, and growth prospects are as strong as they have been in decades. The spread between utilities' 3.7% yield and the 1.7% 10-year U.S. Treasury yield is as wide as it has been since May 2013, a historically bullish signal for utilities and bearish signal for bonds.

In our discounted cash flow valuations, a key assumption is our 4.5% risk-free rate. This is in line with long-term average rates but well above current rates. If we cut our discount rates, our fair value estimates would go up and the sector would appear less overvalued.

We think investors should watch Duke Energy, Dominion Resources, and Southern Company. All have strong economic moats, trade at a discount to peers, and yield near 4%. We suggest avoiding more overvalued utilities like American Water Works, New Jersey Resources, and NiSource with sub-3% yields.

Cheap debt, low commodity prices, and a renewed focus on regulated infrastructure investment have contributed to the sector's financial health. We project the median dividend payout ratio will fall below 60% during the next four years, down from mid-60% in past years. We also forecast median 5% annualized dividend growth during the next four years, up from 3% in recent years.

Duke Energy, the largest U.S. utility, is a Morningstar Best Idea and yields 4.1% as of April 20. We think the market has focused too much on the weak Latin American unit and

pricey Piedmont Natural Gas acquisition. We believe investors should pay attention to Duke's strong management team that has long focused on regulated capital investment opportunities, supporting our 5.5% earnings growth estimate, divesting noncore no-moat assets, and driving efficiencies across all of its businesses.

In 2016-20, we anticipate Duke will invest $42 billion, of which nearly $30 billion is growth capital supporting our earnings growth estimate. We anticipate that Duke will be able to recover these costs through constructive regulatory outcomes. Adding Piedmont boosts its growth potential further.

We are hosting an investor call June 8 at 2 p.m. CST with Duke Energy CFO, Steve Young. Contact Andy Bischof at Andrew.bischof@morningstar.com or (312) 696-6433 if you would like to join.

Morningstar's Utilities Sector Outlook presentation for spring 2016 is now available.

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- **Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- **Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- **High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- **Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- **Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

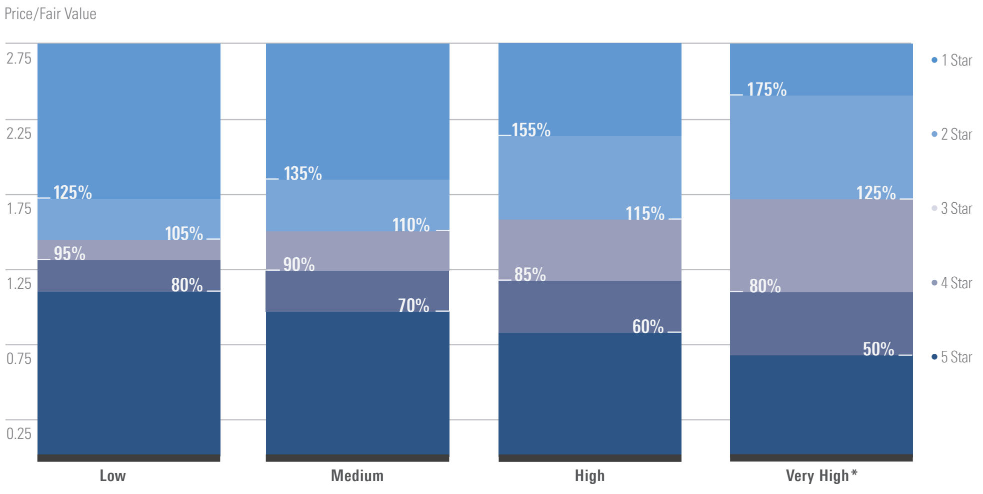
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★
We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★
Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Investment Thesis 24 Mar 2016

As the largest nuclear power plant owner in the United States, Exelon has long been a profit machine and an industry-leading source of shareholder value creation. But power prices have crashed hard since their 2008 highs and appear stuck at current levels for at least the next two years, primarily because of cheap gas that has lowered costs for competing generation sources.

That has resulted in a sharp drop in Exelon's returns, a 41% cut in the dividend in 2013, and a shift in strategy to increase contributions from its countercyclical retail supply and regulated distribution businesses. It acquired Constellation Energy in 2012 for $8 billion and Pepco Holdings in 2016 for $12 billion, both including debt. Management's ability to keep the Pepco deal alive through nearly two years of regulatory negotiations shows its commitment to adding more regulated earnings.

Even with increased earnings diversification, Exelon can't escape its overwhelming leverage to Eastern and Midwestern U.S. power prices, which drive almost half of earnings. The low operating costs and clean emission profile of its nuclear fleet make Exelon the utilities sector's biggest winner if our projections for higher power prices and tighter fossil fuel environmental regulations materialize.

Exelon's world-class operating efficiency ensures it can realize that upside. However, persistently low margins are making it difficult to justify continued investment in some of its nuclear plants. Even though we think there is long-term value in these plants, Exelon might choose to close some plants to preserve cash flow. This would reduce Exelon's upside.

We estimate Exelon's regulated distribution utilities will contribute about half of consolidated earnings in 2016, up from just 20% in 2008. Illinois state legislation in 2011 significantly improved the incentives for growth investment by introducing formula rates, annual true-ups, and adjusted allowed returns. We think the regulated utilities can grow 8% annually on average during the next four years.

Profile

Exelon's regulated distribution utilities deliver power and gas to 7.8 million customers in Illinois, Pennsylvania, Maryland, New Jersey, and Washington, D.C. Exelon owns 11 nuclear plants and 35 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Regulated Utilities Continue Driving Growth for Exelon
26 Oct 2016

We are reaffirming our fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported $0.91 per share adjusted operating earnings for the third quarter. As we expected, the March acquisition of Pepco Holdings accounted for most of the growth.

Consolidated adjusted earnings in the quarter were down 6% from the third quarter of 2015, excluding the earnings contribution from Pepco. We expect full-year 2016 earnings per share to be down 4% on a comparable basis adjusting for a partial year of Pepco. Management raised the midpoint of its 2016 EPS guidance range by 4% and tightened it to $2.55-$2.75 primarily due to favorable summer weather and in line with our estimate.

Exelon's generation business remains a drag, and we expect that to continue for several years. We expect the generation segment gross margin to remain near $7.5 billion for at least the next five years assuming Exelon goes forward with its plans to shut down the Clinton (Ill.), Quad Cities (Ill.), and Oyster Creek (N.J.) nuclear plants in 2017-19. We expect Exelon will receive a slight earnings uplift from its proposed acquisition of Entergy's Fitzpatrick (N.Y.) nuclear plant and the proposed New York state Clean Energy Standard, but both of those face legal and regulatory hurdles.

Exelon's legacy delivery utilities--ComEd, PECO, and BG&E--remain impressive growth areas. We expect that to continue based on Exelon's planned investment and regulatory activity. However, growth investment will require management to achieve constructive regulatory outcomes, which could be difficult with interest rates low and customer base rates climbing.

Valuation, Growth and Profitability 13 Apr 2016

We are lowering our fair value estimate to $30 per share from $35 after we cut our midcycle Henry Hub natural gas price to $3 per thousand cubic feet from $4/mcf and cut our midcycle power prices by a similar percentage.

The gas price cut is based on a more optimistic volume outlook for low-cost U.S. gas production as a result of slowing declines in associated gas volumes and improved productivity and resource potential from the Marcellus and Utica. We continue to assume a negative $0.60/mcf gas basis for PJM West and heat rates across all regions 10% above current 2017 forward heat rates.

We raised our assumed capacity factors for Exelon's gas generation fleet and retail margins, but those changes were only small offsets to the substantial cut in its nuclear fleet margins. On a consolidated basis, our midcycle earnings estimate fell to $3.10 per share from $3.70. Our midcycle EBITDA estimate at Exelon Generation fell to $2.8 billion from $3.7 billion primarily due to the change in our midcycle commodity price assumptions. This is 50% higher than our 2017 trough mark-to-market EBITDA estimate for Exelon Generation.

We continue to believe it is more likely than not that Exelon will retire the three nuclear plants that did not clear the 2018-19 PJM base capacity auction--Quad Cities, Illinois; Oyster Creek, New Jersey; and Three Mile Island, Pennsylvania--as well as the Clinton, Illinois, plant. We now assume a 50% probability that the Byron, Illinois, plant will retire beyond 2019 after it cleared the 2018-19 capacity auction. These closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin from these plants, making them cash flow-neutral in the near term.

We continue to forecast mostly flat consolidated earnings through 2017. Exelon's utilities, excluding Pepco, contribute $1.70 per share by 2019 in our forecasts. We assume the

Exelon Corp EXC (NYSE) | ★★

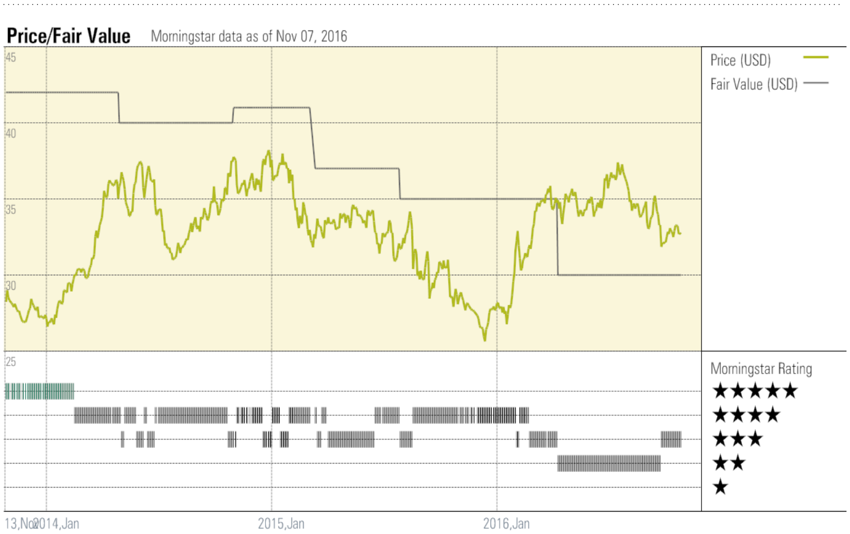
33.42 USD	30.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated



regulated utilities earn 10% returns on equity on average starting in 2018 and increase their rate bases 8% annually on average during 2015-19.

At the retail business, we assume 17% long-term normalized gross margins and volumes that remain near 215 terawatt hours beyond 2016.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $500 million change in EBITDA. Our fair value estimate would change by $4 per share. On a mark-to-market basis as of mid-April, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 2 percentage points to near the industry average, it would change our fair value estimate by $3 per share. If Exelon does not retire the Clinton, Quad Cities, and Byron plants, it would add $3 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Nuclear generation in general still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn at least their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low costs, and generate large profits, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets. The 2007-08 commodity boom led management to raise the dividend and buy back stock. But as power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.The Pepco acquisition increases consolidated leverage, but most of that additional leverage will be debt at the regulated utilities. We don't expect a material change in parentco or Exelon Generation leverage.Based on current market conditions, we think Exelon will have sufficient cash coverage to keep its investment-grade credit rating and achieve management's recent pledge to increase the dividend at least 2.5% annually. Even through these lean years, we expect Exelon can generate at least $2 billion of cash flow after incorporating new financing and excluding discretionary growth investments. We project Exelon's consolidated EBITDA/interest coverage will remain near 6 times and leverage will remain below 4 times debt/EBITDA at least through 2018.More than half of Exelon's consolidated debt is secured at the regulated utilities, in line with its regulatory targets. Exelon Generation has an $805 million maturity in 2017 and $1.9 billion due in 2020. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing those maturities.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm could be forced to make contributions.

Enterprise Risk

Investors should pay the most attention to political

developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk.

Management 13 Apr 2016

We assign Exelon's management team a Standard stewardship rating. We're particularly impressed by management's ability to operate its nuclear fleet at world-class levels. This is the one thing it can control, given the company's sensitivity to big moves in commodity prices.

President and CEO Chris Crane led the generation segment to world-class results in his five years as COO. Exelon's nuclear capacity factors routinely approach 94% across its nuclear fleet. The rest of the nuclear industry averages in the mid-80s. Exelon's operational excellence preserves the value-creative opportunities available if power prices rise.

Crane and board chairman Mayo Shattuck III have focused growth investment on the regulated utilities, continuing a strategic shift that former CEO and chairman John Rowe made before his departure in 2013. Crane's biggest move so far is the $12 billion (including debt) Pepco acquisition that closed in 2016. This increases Exelon's share of regulated utilities earnings and dilutes shareholders' exposure to wholesale power markets. Management showed strong conviction in the value of the deal based on nearly two years of regulatory negotiations.

Crane also faces tough decisions related to flagging profits at several of Exelon's nuclear plants. We wouldn't be surprised if Crane decides to close some plants in the absence of significant public policy support.

The Constellation acquisition reshaped the board along with the executive suite. Only 2 of 16 directors were on the board when Exelon formed in 2000. Shattuck, who came from Constellation, is by far the largest shareholder among executives and directors with 3.5 million shares and vested options as of January 2016.

Analyst Notes

Exelon's Performance on Track; Adds FitzPatrick Nuclear Plant to Fleet 09 Aug 2016

We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating after Exelon reported earnings of $0.65 per share in the second quarter on an adjusted basis, up from $0.59 per share in the second quarter of 2015. Management reaffirmed its full-year 2016 earnings per share guidance of $2.40-$2.70, in line with our estimate. We expect a more detailed outlook and update from management during Exelon's investor conference on Aug. 10. We don't anticipate any announcements that would affect our fair value estimate, but new updates might affect our 2017-19 projections.

The two key components of future value for Exelon--nuclear generation efficiency and regulated utilities investment--continue to track in line with our expectations. Exelon turned in another world-class nuclear capacity factor above 90% during the quarter. This preserves its upside to our forecast for a modest power price rebound in the eastern U.S. Regulated utilities earnings remain the growth driver in our forecast going into a stretch of critical regulatory activity during the next few months.

In a widely anticipated move, Exelon agreed to pay $110 million to acquire Entergy's FitzPatrick (N.Y.) nuclear plant. Although the purchase price appears low, the plant's economics are challenging and Exelon has committed to spend $400 million-$500 million during the next two years to keep the plant running. New York's Clean Energy Standard payments to nuclear generators will help, but the overall impact is immaterial to our fair value estimate. We think Exelon's $53 million purchase of ConEdison Solutions retail business during the quarter makes strategic sense but is too small to have a material impact on our fair value estimate.

Exelon to Close Clinton, Quad Cities Nuclear Plants--for Real 02 Jun 2016

After threatening for several years to close its Clinton and Quad Cities nuclear plants in Illinois, Exelon management finally announced it will begin making plans to pull the plug. We are reaffirming our $30 per share fair value estimate, narrow-moat rating, and stable moat trend rating. We already assumed these plants would close in 2017-18.

Although the plants likely won't stop operating until June 2017 for Clinton and June 2018 for Quad Cities, management said it plans no more maintenance investment, will make the relevant regulatory filings, and will begin planning for shutdowns. Management has continually postponed its decision, but we consider these steps irreversible even if the market outlook changes sharply in the next year.

Exelon's decision-making delay cost shareholders some $800 million of losses during the last seven years, according to management's calculations and consistent with our estimates. Other utilities have been much faster to close uneconomic plants, preserving shareholder value. We believe Exelon's stock price long has incorporated the assumption that those plants would close. Shareholders might realize some tax savings related to accelerated depreciation during the next two years but also will have to pay for any decommissioning costs above the funds Exelon already has reserved. We expect neither will have an impact on our fair value estimate.

The decision is no surprise following two developments in the past few weeks that we and many others have expected for a long time. First, Illinois legislators failed to pass the state energy reform bill that Exelon had championed. Second, Quad Cities failed to clear the 2019-20 PJM capacity auction last month. It didn't clear the 2018-19 auction last year and we didn't expect it to clear this year's auction.

New Generation Capacity Sparks Surprisingly Low PJM Capacity Results 24 May 2016

We are reaffirming our fair value estimates, moat ratings, and moat trend ratings for utilities with power generation in the Mid-Atlantic region following lower-than-expected PJM capacity auction results. Prices for 2019-20 cleared at $100 per megawatt-day for capacity performance, or CP, and $80/MW-day for base generation, lower than our $160/MW-day CP and $150/MW-day base forecasts.

We expect to cut our 2019-20 earnings forecasts but do not expect it to have a material impact on our fair value estimates since they impact cash flows for just one year. We are reaffirming our long-term capacity price assumptions. Dynegy is the clear loser with 15 GW of generation in PJM. Every $100/MW-day change in capacity prices represents $548 million of pretax earnings in our forecast. We plan to cut NRG Energy's 2019-20 cash flow forecast by $37 million, or 5%, based on the results. Bearish capacity prices hurt Calpine and FirstEnergy to a lesser extent.

We think new power plant developers might have driven prices lower assuming PJM capacity prices will remain strong for many years. The auction cleared 5.4 gigawatts of new combined-cycle gas generation, well above our expectations and bearish for capacity and energy prices. Demand response cleared the least capacity in at least five years, a slightly bullish indicator.

Results were mostly neutral for Exelon with premium prices in Northern Illinois offsetting the weaker Mid-Atlantic prices. We expect the Quad Cities nuclear plant likely did not clear and will shut in 2018 since it did not clear at higher prices last year. We assume it closes in 2018. The Byron nuclear plant, which we give a 50% probability of closing, likely did clear and will run at least through mid-2020.

Premium prices in New Jersey also demonstrate the competitive advantage of Public Service Enterprise Group's fleet, a key part of our narrow moat and positive moat trend ratings.

ComEd zone cleared at $202.77/MW-day for CP and $182.77/MW-day for base, slightly below the strong 2018-19 results. Base capacity cleared in the Eastern Mid-Atlantic Area Council, or EMAAC, LDC cleared at CP clearing at $119.77/MW-day for CP and $99.77/MW-day for base generation, but well below last year's $210/MW-day for base

Independent Power Producers Stand to Benefit from Supportive PJM Capacity Auction Results. 13 May 2016

We are reaffirming our fair value estimates and our moat and moat trend ratings for utilities in the mid-Atlantic region ahead of the 2019-20 PJM Reliability Pricing Model capacity auction. We expect results to be posted May 24.

Since the lower-than-expected New England Forward Capacity Auction clearing, generators have feared a similar outcome in the PJM 2019-20 capacity auction. We believe this fear is unwarranted. We expect the 2019-20 capacity performance to clear at $160 per megawatt-day and base capacity at $150/MW-day. These figures are mostly in line with the 2018-19 results and market consensus. We believe the base auction, which will clear the lowest-quality assets, will continue clearing at a small discount to Capacity Performance because of the high marginal cost of capacity of these assets.

We expect coal and peaking gas will be the marginal capacity sources. Coal plants face higher costs and lower energy revenue, while peaking gas units are facing lower option premiums in fixed-price forwards. We also believe

Exelon Corp EXC (NYSE) | ★★

33.42 USD	30.00 USD	Medium	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

that generators will continue to demand a performance premium associated with potential performance penalty risks in the energy market.

NRG Energy and Dynegy have the most exposure. With depressed margins for coal and nuclear plants, NRG Energy gets most of its value from its $2 billion of pretax contracted and capacity revenue, including $1 billion from PJM. Dynegy's 15 GW of generation in PJM represent 43% of its total fleet after closing its proposed Engie acquisition.

We estimate a $100/MW-day change in capacity prices represents $600 million of pretax earnings and $1.50 per share of value for NRG. For Dynegy, a similar move represents $548 million of pretax earnings and $4 per share of value. Calpine, Exelon, Public Service Enterprise Group and FirstEnergy also have material exposure but much smaller on a proportional basis relative to NRG and Dynegy.

For a more detailed analysis, see our report, “Morningstar Outlook: PJM 2019-20 Capacity Auction," on Morningstar Select Investment Research.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar, Inc. and its affiliates ("Morningstar", "we", "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total pres-

ent value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty around that fair value estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the Fair Value Estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- ►**Low:** margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ►**Medium:** margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ►**High:** margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ►**Very High:** margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ►**Extreme:** Stock's uncertainty exceeds the parameters we have set for assigning the appropriate margin of safety.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more detail information about our methodology, please go to http://global.morningstar.com/equitydisclosures

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

Five Stars ★★★★★

We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

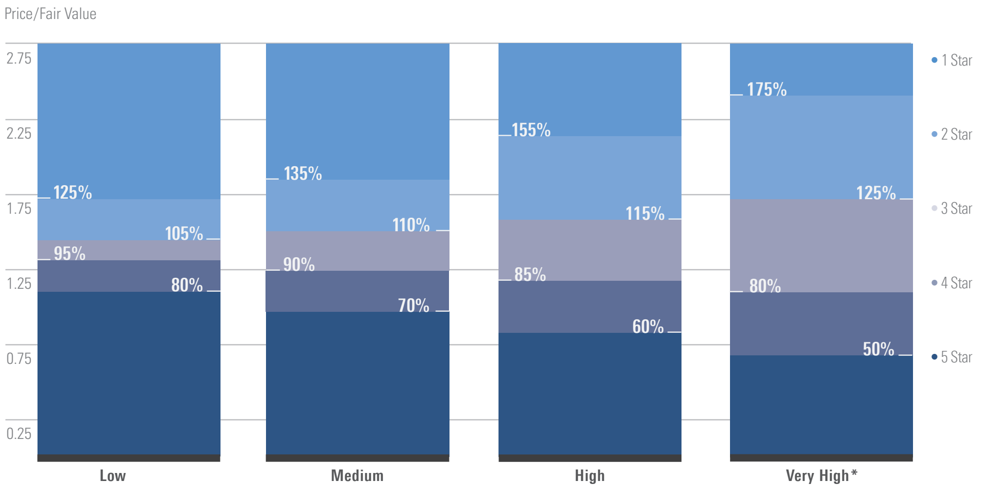
Four Stars ★★★★

We believe appreciation beyond a fair risk-adjusted return is likely.

Three Stars ★★★

Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

Morningstar Research Methodology for Valuing Companies



* Occasionally a stock's uncertainty will be too high for us to estimate, in which case we label it Extreme.

Two Stars ★★

We believe investors are likely to receive a less than fair risk-adjusted return.

One Star ★

Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions:

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- **Undervalued:** Last Price is below Morningstar's quantitative fair value estimate.
- **Farily Valued:** Last Price is in line with Morningstar's quantitative fair value estimate.
- **Overvalued:** Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Investment Thesis 06 Dec 2016

As the largest nuclear power plant owner in the United States, Exelon has struggled to maintain margins as low natural gas prices have slashed power prices since 2008. We think cheap gas will remain an advantage for competing generators and pressure nuclear plant returns for the foreseeable future.

Following the $12 billion acquisition of Pepco Holdings in March 2016, we expect Exelon's regulated electric and gas distribution utilities to drive all of our forecast 5% average annual consolidated earnings growth at least through 2019. By then, the regulated utilities' earnings should easily top Exelon's generation earnings based on current energy market conditions and management's plan to retire at least three nuclear plants.

Even with more diversified earnings, Exelon can't escape its leverage to Eastern and Midwestern U.S. power prices, which contribute about half of total earnings. Nuclear's low fuel costs and clean emission profile make Exelon the utilities sector's biggest winner if power prices rise, capacity markets tighten, and environmental regulations make fossil-fuel power generation more costly. Regulatory and legislative efforts at state and federal levels, particularly in New York and Illinois, should be a boon for Exelon as nuclear receives clean energy incentives like those for wind and solar.

Exelon's world-class operating efficiency preserves its nuclear fleet's upside. But persistently low margins in the short run make it difficult to justify investing billions of dollars annually to keep its nuclear fleet running. This is why we think Exelon will have to close as many as five plants once the state subsidies expire or if they fail to survive legal challenges.

Exelon has moved past its 41% dividend cut in 2013 and now should be able to grow the dividend modestly given the earnings growth from the regulated utilities. Exelon's generation unit still faces falling margins at least through 2018, so dividend growth will be limited until those earnings stabilize. Growth at the Constellation retail business it acquired in 2012 has cushioned some of that weakness and remains an area for growing albeit volatile earnings

Profile

Since acquiring Pepco in 2016, Exelon serves more customers than any other U.S. utility with 10 million power and gas customers at its six regulated utilities in Illinois, Pennsylvania, Maryland, New Jersey, Delaware, and Washington, D.C. Exelon owns 11 nuclear plants and 33 gigawatts of generation capacity throughout North America, producing 20% of U.S. nuclear power and 5% of all U.S. electricity. The company is the largest power retailer in the U.S., serving about 200 terawatt hours of load.

Morningstar Analysis

Hand Up or Hand Out? Exelon's Illinois Nuclear Plants Find New Life 06 Dec 2016

Call it what you will--a hand up or a handout--new Illinois legislation appears set to give Exelon's beleaguered Illinois nuclear plants another 10 years of life. After reviewing details of the Illinois Future Energy Jobs Bill, we are raising our fair value to $32 per share from $31 per share.

We previously assumed the Clinton and Quad Cities nuclear plants would close in 2017-18 and assumed a 50% probability that the Byron plant would close by 2019. We now assume all three will continue operating through our five-year forecasts. We expect Exelon could realize $250 million of annual incremental cash flow relative to our previous forecasts, primarily for those three plants.

We still think the three plants will struggle to reach breakeven economics in the long run based on our midcycle commodity price assumptions. Thus, we continue to exclude those plants from our long-term normalized cash flow estimate. However, the cash that we expect Exelon to receive for the next 10 years does boost shareholder value.

There remains a decent chance the Illinois legislation will not withstand anticipated legal challenges likely from other competing generators or will receive a rebuke from the Federal Energy Regulatory Commission. Legislation several years ago that would have offered state subsidies for select generators in Maryland and New Jersey failed to pass legal and regulatory challenges. Recent disputes in Ohio also suggest a strong legal precedent supporting competitive markets. We expect other generators in the region that will be at a competitive disadvantage, like Dynegy, will challenge the law.

On the flip side, Exelon could next target legislation in Pennsylvania given its success in Illinois and New York. We continue to assume the Three Mile Island plant in Pennsylvania closes in 2018 absent state support.

Valuation, Growth and Profitability 06 Dec 2016

We are raising our fair value estimate to $32 per share from $31 per share after incorporating the benefits from Illinois legislation passed in early December, which will result in additional cash flow for its Illinois nuclear plants.

On a consolidated basis, our midcycle earnings estimate is $3.15 per share. Our midcycle EBITDA estimate at Exelon Generation is $2.6 billion, in line with trough EBITDA we expect in 2017-18. We expect a jump in the generation segment's earnings in 2019 reflecting higher capacity prices, but we don't think that represents a midcycle earnings level. We assume a $3 per million btu midcycle Henry Hub gas price, a negative $0.60/mmbtu gas basis in the mid-Atlantic region and market heat rates 10% above current 2017 forwards in all regions.

We continue to expect earnings growth at the regulated utilities to drive 5% consolidated earnings growth through 2019. Our forecasts show Exelon's regulated utilities contributing two-thirds of consolidated earnings on a midcycle basis. We assume the regulated utilities earn 10% returns on equity on average starting in 2019 and increase their rate bases 5% annually on average during 2016-20.

Our midcycle forecasts assume Exelon retires as many as five nuclear plants even though we expect three of them to keep running for the next 10 years based on Illinois legislation that passed in December 2016. Exelon has announced its intention to close Oyster Creek, New Jersey, and we think its Three Mile Island, Pennsylvania, plant is at risk after it failed to clear the last two PJM capacity auctions.

Our projected long-term closures represent about 25% of Exelon's current nuclear capacity. Lower operating costs and capital expenditures partially offset the lost gross margin

Price/Fair Value Morningstar data as of Dec 15, 2016

from these plants, making them cash flow-neutral in the near term. We do not include the addition of FitzPatrick (N.Y.), pending regulatory approval, but don't expect it will have a material net impact on our fair value estimate.

At the retail business, we assume 17% long-term normalized gross margins and volumes that grow to 240 terawatt hours by 2019.

We assume a 9% cost of equity and a 6.7% cost of capital. Our cost of equity assumption is in line with the 9% rate of return that we expect investors to demand of a diversified equity portfolio. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Scenario Analysis

We assign a medium uncertainty rating. Exelon's higher-than-average degree of operating leverage and exposure to volatile power markets lead to a wider range of outcomes in our base, high, and low scenarios.

A $5 per megawatt-hour average move in our midcycle power price assumptions with no change in retail margins results in a 10% change in our open midcycle EPS estimate and a $650 million change in EBITDA. Our fair value estimate would change by $5 per share. On a mark-to-market basis as of mid-November, there would be no change to our fair value or midcycle earnings estimates.

If we reduce our assumption for the operating efficiency and utilization of Exelon's nuclear power plants by 4 percentage points to near the industry average, it would change our fair value estimate by $1 per share. If Exelon does not retire the Clinton, Quad Cities, and Three Mile Island plants, it would add $2 per share to our fair value estimate.

At the retail segment, every 100 basis points of long-term normalized margin expansion generates $100 million of pretax margin and $1 per share of value.

A 50-basis-point change in our cost of equity changes our fair value estimate by $4 per share.

Economic Moat

Considering Exelon's full suite of businesses, we think the firm earns a narrow economic moat.

Most nuclear generation still has wide-moat characteristics, with returns on capital above costs of capital for the foreseeable future. However, the spread between long-term returns on capital and Exelon's cost of capital has shrunk, based on our midcycle outlook for power prices in the Eastern United States. Exelon's increasing diversification into narrow- and no-moat businesses, together with the shrinking returns at its nuclear generation business, supports our narrow moat rating.

Nuclear generation's wide-moat economics are based on two primary competitive advantages. First, nuclear plants take more than seven years to site and build, cost several billion dollars, and typically face community opposition. These are significant barriers to entry, giving operators an

effective low-cost monopoly in a given region. Exelon's large fleet gives it scale advantages that allow it to add capacity at its plants at a fraction of the cost and risk of a greenfield project. It is unlikely a competitor would be able to earn sufficient returns on capital by building a nuclear plant in close proximity to any of Exelon's plants.

Second, no other reliable power generation source can match the cost or scale of a nuclear plant. Nuclear plants' low variable costs and low greenhouse gas emissions relative to competing fossil fuel power generation sources, such as coal and natural gas, reduce substitution threats. Renewable energy, with effectively no marginal costs, has depressed wholesale power prices and hurt Exelon's returns on capital in some of its regions. We believe this is a market distortion that fails to recognize the value of Exelon's nuclear fleet reliability relative to intermittent renewable energy. State policy and legislation particularly in Illinois and New York have recognized some of that zero-emissions power from nuclear plants.

As long as electricity remains a critical energy source in the U.S. and nuclear investment requirements remain near current levels, we expect nuclear plants will maintain a low-cost advantage and generate high returns on capital. To monetize this competitive advantage, Exelon must retain access to wholesale power markets. Any reregulation of its generation fleet would shrink its moat. In addition, nuclear generation must maintain regulatory and political support in the U.S. and states where Exelon operates. If that support erodes, it could affect the economics of routine maintenance investments and lead to plant shutdowns, as we've seen elsewhere in the U.S. and overseas.

We believe Exelon's regulated distribution utilities have narrow economic moats. Regulatory caps on profits offsets the service territory monopolies and network efficient scale advantages. Utility regulation in the U.S. aims to fix customer rates at levels that ensure capital providers earn fair returns on their investments while keeping customer costs as low as possible. We believe this regulatory compact ensures Exelon's utilities will earn greater than their costs of capital in the long run.

We believe Exelon's retail supply business has no economic moat. Retail power and gas markets are highly competitive with virtually no barriers to entry, switching costs, or product differentiation. Although customer relationships can be sticky, retailers mostly end up competing on price.

Moat Trend

We assign Exelon a stable moat trend. The regulatory environments in Illinois, Pennsylvania, and Maryland have stabilized, allowing its distribution utilities to earn more favorable returns. About 70% of the $11 billion of rate base growth in 2016-20 will have rate trackers or formula rates, minimizing regulatory lag. Exelon faces the biggest challenge boosting Pepco's earned returns some 400 basis points to approach its allowed returns. Rate cases in 2016-17 should give it a good start.

In the power markets, Exelon faces both positive and negative trend developments. We expect returns on capital will continue to face pressure from cheap gas moving west and increasing renewable energy penetration. However, environmental regulations, coal plant closures, and capacity market changes should help returns on capital. On balance, we think these positive and negative dynamics offset each other.

Since the retail supply business is relatively new following power market deregulation in the early 2000s, we're watching to see if any company can build a sustainable competitive advantage. Exelon and others are demonstrating some scale and cost advantages, particularly in marketing, customer aggregation, risk mitigation, and supply costs.

Morningstar Analysis

The one path we see to achieve excess returns in the supply business is to match customer load with wholesale generation. As liquidity has dried up in power markets, it is increasingly difficult and costly to hedge future expected generation. A retail supply business can improve hedging opportunities by reducing collateral and trading costs. This could give a retail supplier a low-cost advantage. As the nation's largest wholesale power generator and retail supplier, Exelon is well positioned to take advantage of these wholesale-retail pairing benefits.

Bulls Say/Bears Say

Bulls Say

- Nuclear power plants run year-round, produce electricity at low variable costs, and generate large energy margins, even with currently depressed power prices.
- Higher natural gas and coal prices, rising electricity demand, and environmental regulations help Exelon more than any other utility because of its large nuclear fleet.
- Exelon's regulated utilities have good growth opportunities and regulation that can support earnings and dividend growth.

Bears Say

- Exelon's performance in part is driven by volatile power prices that fluctuate based on natural gas prices, coal prices, and regional electricity demand.
- The Constellation and Pepco acquisitions diluted Exelon's economic moat by adding more no-moat retail business and narrow-moat distribution earnings.
- Many of Exelon's growth projects come with regulated or contracted returns, reducing shareholders' leverage to a rebound in power markets.

Financial Health

Exelon's biggest challenge is warding off cash constraints in unfavorable power markets as it tries to smooth cash flow at its generation unit. As power markets have fallen from their 2008 peaks, the company has focused on preserving its investment-grade credit rating. In 2011, the board spent $2.1 billion to reduce its pension liabilities instead of reinstating a $1.5 billion share-repurchase plan approved in September 2008 but never executed. In February 2013, the board cut the dividend 41% to $1.24 per share annualized, freeing up $740 million in annual cash flow.We see no immediate credit concerns based on current energy market conditions. We project Exelon's consolidated EBITDA/interest coverage will remain above 5 times and leverage will remain below 5 times debt/EBITDA at least through 2019. Even those these ratios are weaker following the Pepco acquisition, we think this is acceptable given the higher share of regulated earnings.Only about one-quarter of Exelon's consolidated debt is directly tied to its generation segment. As long as power markets remain relatively stable and Exelon maintains its investment-grade ratings, we don't expect it to have trouble refinancing its near-term maturities. Management has committed to reducing Exelon Generation debt by $3 billion during the next five years and use the remaining cash to fund the regulated utilities' growth.We also think management can meet its 2.5% dividend growth goal through 2018 with relative ease. However, this is rather unimpressive compared with most of its peers that we think can grow their dividends at least twice as fast.Exelon's pension and nuclear decommissioning funds are well funded now, but if interest rates stay low, the firm might have to make modest cash contributions. Plant closures also could increase cash decommission costs.

Enterprise Risk

Investors should pay the most attention to political developments that would reregulate competitive electricity markets in the Midwest and Mid-Atlantic. As the nation's

largest wholesale generator and retail supplier, Exelon's competitive edge requires Eastern U.S. power markets to remain deregulated. Similarly, Exelon is exposed to regulatory changes within deregulated power and capacity markets in the mid-Atlantic region since it has such a large presence in those markets.Even though sharp increases in power prices would result in an earnings windfall for Exelon's generation fleet, it could lead politicians and regulators to pursue price caps as they did when markets first deregulated. Although we think this is unlikely based on recent legal precedent, some regulators have made targeted attempts to bring back pseudo-regulation to encourage new generation or save plant retirements. If market power prices are capped or regulated, Exelon loses its primary profit source.As Exelon's regulated utilities generate a greater share of earnings, shareholders' returns will be more exposed to state and federal regulatory risk. Illinois and Maryland are two historically tough regulatory environments, and punitive rate decisions could have a material impact on earnings and growth. However, Exelon has done a solid job developing good regulatory relationships that mitigate some of this risk. We expect Exelon will be able to maintain solid-- albeit not spectacular--returns at its regulated utilities.
